Company employment is cut 20% in **1990** to 8,041. In January, **Air France** purchases 54.6% of **UTA French Airlines, S.A.** and thus gains control of IT. The two join Air Charter and their new parent on January 12 as subsidiaries of the new Air France Groupe. In debt \$17 million, **Lina Congo** leases its single B-737 to the French airline in May in an effort to raise funds. During the summer, the ICS cargo subsidiary is reformed into **Inter Ciel Service, S.A.** and its aircraft are given a new blue and yellow paint scheme.

Customer bookings for the year slide upward 3% to 16,163,000, but cargo slips 0.2% to 42.7 million FTKs. While parent **Air France** retains its world ranking in freight, IT, the nation's domestic airline, does still better with passengers and some find it ironic that IT, at number 17 in the world in that category, is a notch above its new owner. Although revenues climb 30.2% to \$1.8 billion, expenses rise faster. As a result, a huge \$91-million operating loss is suffered, along with a net loss of \$31 million, the first significant losses in recent memory.

The payroll grows 24.4% in **1991** to an even 10,000 and the fleet now includes 1 chartered and 15 owned A300B2-1Cs, 3 leased and 4 owned A300B4s, 5 chartered and 2 owned A320-111s, 7 leased and 13 owned A320-211s and 11 Dassault Mercure 100s. Orders are outstanding for 7 A320-211s, 7 A321-111s, and 15 A330-301s.

Early in the year, the carrier is given permission to inaugurate service to any destination within range of its aircraft. During the year, the EU Commission will force France to slightly alter its rigid domestic air traffic policy by allowing **Air Outre Mere, S.A.** to inaugurate frequencies between Paris and Nice.

On August 2, Flight 6489 from Paris (ORY) to Marseilles begins IT's final scheduled Caravelle rotation. Following special celebrations, complete with champagne and flowers, for the final Nantes-Paris (ORY) service on August 3, the last eight Caravelle XIs commence their retirement from service, with two being sold to **Air Provence International, S.A.**

Competition with the expanding TGV high-speed train system of French Railways becomes intense. Once the railroad's 2-hour service begins, IT bookings on the 250-mile Paris-Lyon route drop by 40%. A 27% interest is now taken in the newly created Orlyval, a ground-transport service between downtown Paris and Orly Airport.

Overall, passenger boardings for the year slip 2.2% to 15,801,000 as freight inches up 0.7% to 37.28 million FTKs. The year's loss totals \$7.8 million.

The Airbus component of the company's fleet is dramatically increased in **1992** as 24 A320-211s (19 leased) and 7 A320-111s (4 chartered) are received.

On January 10, the carrier's subsidiary, Sodetif, absorbs the **Air France** subsidiary Tourisme France International; IT interest is reduced from 65% to 30%.

En route from Lyon (Satolas Airport) to Strasbourg (Entzheim Airport) on January 20, Flight 148DA, an A320-111 with 6 crew and 90 passengers, crashes in fog and snow into a ridge of La Bloss mountain near Mont Ste-Odile, some eight mi. SW of Entzheim (87 dead).

During an A320-211 flight from Paris (ORY) to Malaga in July, a passenger notifies crew members that a fellow traveler has a gun; the aircraft returns to France where police discover that the bulge in the man's pocket is a banana.

The first A330-300 makes its maiden flight on November 2. It will become the first airliner ever awarded simultaneous airworthiness certifications by both the U.S. FAA and the European JAA.

Although only 3.6% of delays result from reasons that are part of the carrier's responsibilities, there are 15,000 late departures during the year, including 4,800 that depart more than 15 minutes behind schedule. Customer bookings on the 69-route system recover during the year and increase by 3% to 16.3 million; however, the company's financial loss deepens to \$11.8 million.

In **1993**, the workforce totals 11,142 and the company's 58-unit fleet flies to 50 domestic destinations; orders are outstanding for 15 A330-301s. On January 29, an agreement is signed that will lead to the liquidation of Orlyval.

The Paris to Dublin service of **Air France** is taken over on March 28 and operated by an IT A320-211.

While pushing back from Montpellier preparatory for departure on a service to Paris (ORY) on April 24, an A300B2-1C with 10 crew and 314 passengers strikes a light pole so severely that it is damaged beyond repair; there are no fatalities.

Weekly Airbus service is reintroduced on May 29 between Nice and Dublin.

In a further effort to boost ridership in competition with the high-speed TGV train, IT, taking a note from the book of America's **Southwest Airlines**, begins to make speed, punctuality, and flexibility a corporate priority.

As a protest against government interference in the airline's affairs, President Jean-Cyril Spinetta resigns in October; he is succeeded by Michel Bernard. Employees stage a 24-hour strike on November 10 causing delays.

A 35-year-old Algerian man takes over an A320-211, with 123 aboard, at Nice on December 10 and threatens to blow up the plane and passengers unless he is flown to Libya; he is talked into releasing his captives and surrenders.

The high-speed shuttle operations prove so successful that the company, despite bad weather and **Air France** strikes, is able to complete 99.3% of its departures, getting 89.5% of those aloft within 15 minutes of schedule; turnaround time is only 40 minutes.

Passenger boardings for the year inch up 0.3% to 16,583,491, but freight is down 5.2% to 36.97 million FTKs. A net \$49-million loss is suffered.

The number of employees is cut by 1.3% in **1994** to 11,000 and the company takes delivery of its first A330-301 in January. It is employed to inaugurate service on Flight 412, from Paris (ORY) to Marseilles, on January 17. However, after experiencing two incidents in which the landing gear cannot be retracted after takeoff, it is taken out of passenger service and returned to Toulouse in February to undergo testing. Also during the month, orders are placed for nine A319s for delivery two years hence. The company now begins to retire its eight Mercures.

President Bernard introduces a recovery plan designed to return the company to profitability without layoffs. To accomplish this goal, IT will concentrate on corporate restructuring, renegotiation of disadvantageous contracts, increased productivity, and new business. The company is unhappily involved in an historic EU Commission ruling in April. As part of its ruling, in response to a complaint filed by **TAT European Airlines, S.A.** the previous year, the Commission requires IT to end the monopoly it has always enjoyed on domestic routes out of Paris (ORY). Company staff calls a one-day strike to protest the decree.

TAT initiates its competitive service on June 20 over IT's once-exclusive route from Paris to Marseilles. In reaction to the requirement for the airline's domestic competition, the government now authorizes IT to inaugurate flights from Paris and Nice to Dublin, Marseilles to Tunis and Algiers, and twice-daily service from Paris to Madrid and Barcelona, as well as the other Spanish communities of Alicante, Ibiza, Malaga, Palma, Seville, and Valencia.

Orders are placed on June 30 for nine A319-113s that are to begin delivery in two years. At the same time, orders are placed for five Fokker 100s with which to replace the Mercure fleet.

On the year, customer bookings recover, growing by 3% to 17.5 million (including 250,000 on international services), and revenues advance by 5.4% to \$2.2 billion. The first net gain in five years is earned, \$4 million.

The workforce totals 200 in **1995** and the fleet is increased by the addition of 12 Fokker 100s and 3 A330-301s. The Fokkers replace the company's Dassault Mercures. In addition, one each A300B2-1C and A300B4-2C are leased to the new Turkish charter operator **Holiday Airlines, A.O.** During the first week of January, the EU Commission's demand that France open Orly Airport to other carriers is honored.

In addition, the privately owned **AOM French Airlines, S.A.** and **TAT European Airlines, S.A.** are authorized to begin flying over the Paris-Marseilles route, which had been exclusively held by AI; another former exclusive route, Paris-Toulouse, is opened to service from **Air Liberte, S.A.** and **TAT European Airlines, S.A.** Still, the company maintains exclusive traffic rights to 50 city-pairs in the country.

When **Air Liberte, S.A.** introduces \$100 roundtrip service between Paris and Toulouse during the year's first week, IT counters with \$49 tariffs; this pricing leads to the country's first domestic airfare war. **Air Liberte, S.A.** Chairman/CEO Lofti Belhassine charges IT with predatory pricing practices and promptly files suit in the Paris Court and before the European Court of Justice.

The rate war intensifies in March when **TAT European Airlines, S.A.** begins flying the route. Employing Canadair RJ100 jets, **Air Littoral, S.A.** and **Brit Air, S.A.** launch "Air France-Air Inter Express" services over IT routes.

Following the announcement from the **Air France** leadership that it plans to merge its European business center operations with IT into a

single Nouvelle Compagnie Européenne, S.A., job security fear grips much of the IT workforce, particularly pilots, flight attendants, and ground handlers.

A three-day strike by those opposed to the union occurs during the third week of March that severely disrupts flight operations and forces the carrier to cancel some 200 flights each day. Despite the use of wet-lease aircraft, worker demonstrations over the next couple of weeks cause almost 1,500 flights to be withdrawn by mid-April, and startup of a new route from Paris (ORY) to Amsterdam is postponed. Job action-related costs to the carrier approach \$20 million.

Unable to convince unhappy union leaders that the merger plan will be to their benefit, President Bernard resigns in mid-May; he is succeeded as acting chairman/CEO by the head of **Air France**, Christian Blanc.

To battle its private competitors, IT introduces a number of promotional fares at mid-year, including several as \$40–\$90 on certain domestic routes. It also increases the number of its international markets from 10-per-year earlier to 27. Former advertising executive Jean-Pierre Courcol is appointed CEO during the first week of September.

En route to Paris from Palma de Mallorca on September 3, an A300B4 with 298 passengers is taken over by a lone assailant who is protesting against French nuclear testing in the far Pacific. The aircraft is diverted to Geneva where the man is taken into custody.

Difficulties between the airline's management and workers continue. During the first week of November, flight attendants walk off the job for three days, disrupting operations on every route. Pilots and flight engineers strike on November 10–12, grounding most of the company's aircraft.

During those first two weeks, **Air France** management offers a generous financial buyout to those flight attendants willing to quit; hopes are held that about 1,200 cabin crew can be bought out within a year and a half. When flight attendant union delegates refuse to accept the idea, the airline's leadership states that it will reduce flight attendant costs anyway, a statement not calculated to improve the company's deteriorating relationship with its employees.

Nationwide strikes by ground transport workers paralyze the nation's surface transport system during the last week of November, including the TGV high-speed trains that have bitten into IT profits over the last couple of years. The job actions bring chaos on the roads to Paris airports, but increases the airline's traffic on the order of 30%. Still, pilots threaten to strike in further protest of the upcoming merger plan.

It will later be asserted that worker walkouts during the year have cost the company 600,000 boardings. At year's end, orders for 11 more A330-301s is cancelled.

Passenger boardings drop by 8.2% to 15.7 million and the company goes into a financial nose dive, losing an unprecedented \$100 million.

On January 1, 1996, **Air France** combines the carrier with its own medium-haul European services to create **Air France Europe, S.A.** The integration period will require 18 months, during which time the company will operate as **Air Inter Europe, S.A.**

AIR INTER EUROPE, S.A.: France (1996–1997). On January 1, 1996, **Air France** combines **Air Inter, S.A.** with its own medium-haul European services to create **Air France Europe, S.A.** The new Air France Europe unit, to be known for the next 18 months as **Air Inter Europe, S.A.**, is given a fleet of 126 aircraft and 18,000 employees. The same day, domestic deregulation in France takes full effect.

Frequencies continue between the 50 former **Air Inter** city-pairs and to the onetime regional destinations of **Air France**. Meanwhile, independents such as **Air Liberte, S.A.** and **AOM French Airlines, S.A.**, rapidly begin to expand the number of their domestic services.

The Air France Groupe demand that the company compete more economically with deep-discount independent carriers now forces AFE to ground its fleet of 10 A300B2-1Cs, 2 A300B4-2Cs, and 4 A330-301s in favor of 6 A320-111s, 29 A320-211s, 5 A321-111s, and 5 Fokker 100s.

CEO Jean-Pierre Courcol and his executives begin working to turn the company into a low-cost, no-frills airline that will operate a Euro-

pean route system larger than that of **British Airways, Ltd. (2)** or **Deutsche Lufthansa, A.G.**

Also during the first quarter, control is taken over **Air Littoral, S.A.** and its management is passed to Air France Europe. Thin routes are sub-contracted to this carrier, flying them with Canadair Regional Jets.

In March, the newly renamed carrier takes over a number of **Air France** routes from France to the U.K., including the thrice-daily Paris (ORY) to London (LHR) services and those from London (LHR) to major French provincial cities.

To make Air Inter more competitive, "Euroconcept," a new joint product with **Air France**, is introduced on April 1. Included in the package are low, special fares, reduced-fare cards for frequent flyers, enhanced boarding procedures, and upgraded in-flight services as flight attendants begin serving cookies and light snacks.

All through the spring rumors persist that Air France Europe will be merged into the major. The new unit starts off facing increased competition and its employees are soon faced with another reorganization plan that calls upon them for sacrifice and new efficiency. In late April, a pilot walkout forces the company to cancel 500 departures.

As competition with independent regionals intensifies over the busy routes from Paris to Nice and Montpellier, AFE is forced to reduce its fares by 20%–30% to stay competitive; consequently, fiscal loss is increased to \$20 million per month. The fare reductions also bring a legal challenge from **KLM Royal Dutch Airlines, N.V.**, **Deutsche Lufthansa, A.G.**, and **SAS (Scandinavian Airlines System)**. The three foreign competitors allege to the competition directorate of the European Union that Air France is in breach of the terms of the bailout agreement and ask it (unsuccessfully as it turns out) to disallow a final \$1-billion infusion in July.

During the third week of May, management announces that it will shortly begin implementation of a two-year restructuring plan. Key elements of the scheme include a further reduction in the number of unprofitable routes; a two-year wage freeze; a reduction in force of 900–950, including 150 pilots; closer cooperation with Air France Groupe, including combined ground operations; additional capacity cuts; and the route changes.

Air France Chairman Blanc boldly announces the forthcoming closure of 15 loss-making AIE routes to Britain, Spain, and Portugal and three domestic ones. To counterbalance the shutdowns, he also proclaims the creation of a shuttle service on Air Inter's three busiest routes, Paris (ORY)–Marseilles, Paris (ORY)–Toulouse, and Paris (ORY)–Nice.

In early June, the European Court of First Instance makes its first ever air transport ruling, upholding a European Commission finding that rejects the carrier's claim that it must have a monopoly of the lucrative routes from Paris to Marseilles and Toulouse in order to cross-subsidize its unprofitable services.

The first of six A319-113s delivered days earlier enters service on June 21 on a service from Paris (ORY) to Lorient; the planes have 142 seats in an all-coach configuration.

On June 28, the carrier suffers a one-day strike by unions representing 75% of its workforce. AFE pilots also oppose a new wage-cutting proposal that will allow the merger of the airline's European operations with those of the parent company. When they threaten further strike action on the eve of the summer holidays, management simply cancels all flights, neatly focusing the public's outrage on the airline's personnel instead of on its leaders.

Despite fierce union opposition, Air France Groupe Chairman Christian Blanc on July 4 officially introduces the long-anticipated plan to merge its international and regional carriers during the spring of 1997, just in time for the complete liberalization of internal air travel within the EU airline market. The Air France Groupe would then consist of the long-haul carrier **Air France** and the short-to-medium carrier **Air France Europe** (ex-Air Inter), both feeding passengers into each other's network. Again the workers strike, curtailing operations on July 5.

The next day, representatives of the union Force Ouvriere, the highest representative body of employees at Air France that does not support

the workers' job action, announce their support for Chairman Blanc's merger plan. During the month, two more A319-113s enter service.

The reorganization plan continues apace, the fleet begins rationalization, and new routes are started from Paris (ORY) to Madrid and Lisbon. Still, financial losses continue to mount; President Courcol admits, on August 1, that they total \$20 million per month.

Upon landing at Perpignan-Rivesaltes Airport on August 12, an A320-211 is met by two small vans and a group of armed men. The gang holds up a banner that reads: "Shut off the engines and open the hold." The crew complies and, to the utter amazement of passengers looking out windows, the robbers quickly help themselves to 60 pounds of bank notes and then escape, speeding down the runway and into the city in a scene right out of a movie.

Citing continuing deep disagreement with employees over job cuts, President Courcol resigns during the last week of August. He is the fifth Air Inter CEO to resign in the past five years.

The fourth A319-113 is delivered on October 1. In an effort to reduce costs, the 3 domestic and 15 regional routes targeted in June are suspended on October 27; among these are the international services from Paris (ORY) to London and to Madrid, the frequency from Lyons to London, and the route from Marseilles to London.

La Navette shuttle service, based on those offered in the Northeast U.S. but still requiring reservations (there are no guaranteed seats and no backup aircraft) and offering light meals, is started on October 31 from a dedicated portion of Paris (ORY) Quest Terminal 2.

Employing all 29 of its narrow-body A320-211s, 2 of its 6 A320-111s, all 5 A321-111s, and 4 of its 6 A319-113s, La Navette offers 26 daily roundtrips to Toulouse, 15 to Nice, 27 to Marseilles, and 12 to Lyons. A number of these aircraft are also stationed at the provincial airports in order to operate early morning services to the French capital. Another A319-113 arrives in November.

On December 1, 100 more mechanics and flight dispatchers, together with reserved apron vehicles and their drivers/handlers, are dedicated to La Navette and service is increased between Paris (ORY) and the shuttle-cities of Toulouse, Marseilles, and Nice. An effort will be made to keep in touch with social events (festivals, races, and sport championships) in order to have a sufficient number of aircraft available to meet traffic demand. The last A319-113 is delivered in December.

Amidst the turmoil, passenger boardings inch up only 0.2% to 15.5 million and 11.62 million FTKs are operated, a large 12.2% decline. With revenues of \$1.96 billion and expenses of \$2.09 billion, there are sizeable losses: \$128.3 million (operating) and \$85.16 million (net).

On April 1, 1997, the carrier and Air France are grouped together under a joint management structure created under a management-lease arrangement between the flag carrier and its subsidiary. Operations are split between the domestic hub at Orly Airport and the international airport of Paris, Roissy-Charles de Gaulle. La Navette continues to offer 70-times-per-day roundtrips between Paris (ORY) and Toulouse, Marseilles, and Nice.

AIR INTER GABON, S.A.: BP 240, Port-Gentil, Gabon; Phone 241 55 31 44; Fax 241 55 21 08; Code AIG; Year Founded 1956. Originally formed as a charter carrier in 1956, Air Gabon commences scheduled services in 1961, initially between Port-Gentil and Lambarene. The Piper operator is reorganized and changes its name slightly in 1977 when the national carrier is renamed **Air Gabon (Compagnie Nationale Air Gabon, S.A.)**. Ownership is held by **Heli Gabon, S.A.**, which in turn is controlled by private Gabonese interests (51%) and **Heli Union, S.A.** of France (49%).

During the remainder of the decade, the fleet is increased; not only does it retain its 3 Piper PA-28 Cherokees, 2 PA-23 Aztecs, and 1 PA-31-310 Navajo, it obtains 5 Britten-Norman BN-2 Islanders and a BN-2A Trislander. Additional destinations visited link the capital of Libreville with Gamba, Ombue, Iguela, Tchibanga, Ouanga, Sette-Cama, Mayoumba, Manega, Mandji, Mevang, Nkan, and Fougamou.

From the early- to mid-1980s, the fleet is increased by the addition of 1 de Havilland Canada DHC-6-100 Twin Otter, 1 Aerospatiale SN-601 Corvette executive jetliner, and two Piper PA-31-350 Navajo Chieftains.

Also available are the rotary-wing units of **Heli Gabon, S.A.**, which include 6 Aerospatiale Alouette IIIs, 2 Alouette IIs, and 1 Lama. Despite difficult economic times and low traffic patterns during the remainder of the decade, the carrier survives into the 1990s.

In 1990, the fleet comprises 2 Islanders, 1 Beech Super King Air 200, 1 DHC-6-300, and 1 Fokker F.27-500. Another Canadian turboprop is leased in 1991. In 1992, the company leases an Avions de Transport Regional ATR42-320 from **TAT French Regional Airlines, S.A.**

The fleet in 1993 comprises the leased ATR, 1 Beech Super King Air 200, 2 DHC-6-300s, and 2 Islanders. A pair of Cessna 402 Titan IIs is added in 1994.

Domestic scheduled services begin in 1995. One of the Islanders, with only its pilot aboard, is destroyed in a bad landing at Medouneu, Gabon, on July 8 (one dead).

A second ATR42-320 is leased from **TAT European Airlines, S.A.** in the fall of 1996 and is also employed to offer additional domestic and regional flights.

In 1997-1998, chairman Matre Louis Gaston Mayila's 160-employee carrier continues service as before. During 1999, the second ATR is withdrawn and replaced with a Beech 1900D, which is used to launch scheduled regional flights.

AIR INTER IVOIRE, S.A.: Ivory Coast (1979-1988). Originally formed at Abidjan in 1979 as **Interivoire**, this privately owned carrier is created as an affiliated company by the French rotary-wing operator **Heli Union, S.A.** It provides passenger charter and contract service flights within the country and to various other destinations in West Africa with light aircraft, primarily Piper equipment. Operations continue apace during the 1980s until the company is folded into **Air Ivoire (Societe Ivoirienne de Transport Aeriens, S.A.)** in 1988.

AIR INTERGULF, LTD.: United Arab Emirates (1975-1983). A GIBCA Group company, Air Intergulf is formed at Sharjah in September 1975 to provide charter flights, air taxi service, and contract cargo services. Vincent J. Derudder is named director/general manager. Operations are flown in the Persian Gulf area until 1977 employing leased Aerospatiale SN-601 Corvette executive jets. One B-707-320C is acquired to link the Emirates with European destinations. The government at Sharjah orders the carrier liquidated in 1983.

AIR INUIT, LTD.: 1985 55th Ave., Dorval, Quebec H9P 1G9, Canada; Phone (514) 636-9445; Fax (514) 636-8916; http://www.accent.net/adst/MakWeb/e_Airluit.html; Code 3H; Year Founded 1979. Based at Fort Chimo, Quebec, Air Inuit, Ltd. is founded in 1979 to provide both charter and scheduled essential air services to such provincial destinations as Aupaluk, Sugluk, Payne Bay, and Leaf Bay. Ownership is held by the region's native Americans, the Inuit, through the Makivik group. A subsidiary, Johnny May Air Charters, Ltd., is also created. Nonscheduled flights begin first with a de Havilland Canada DHC-4 Caribou.

In 1980, 1 Douglas DC-3 and 2 DHC-6 Twin Otters are purchased and they inaugurate scheduled passenger and express flights to the small communities of Port Nouveau, Payne Bay, Leaf Bay, Sugluk, Koartak, Nain Labrador, Wakeban Bay, and Aupaluk. A Grumman G-1 and a third DHC-6 Twin Otter join General Manager D. Popert's fleet in 1981, allowing replacement of the DC-3 in 1982.

Montreal-based Chaparral Charters, Ltd. is acquired in 1984 and its fleet of 2 DHC-6s and 1 DC-3 are incorporated. Simultaneously, a Hawker Siddeley HS 748 is purchased from **Austin Airways, Ltd.** A second DC-3 and another HS 748 are delivered in 1985.

Two years later, in 1987, the former **Inter City, Ltd.** HS 748 is obtained, the second DC-3 is withdrawn, and a DHC-6 is sold to **Austin Airways, Ltd.** President Kamal Hanna's fleet in 1989 comprises 3 HS

748s and 6 DHC-6 Twin Otters. Another HS 748 is purchased in **1990**. Revenues in **1991** are C\$22 million.

In **1992**, 2 Twin Otters are removed and replaced by 3 Convair CV-580s. Income climbs to C\$27.5 million. In **1993**, President Mark T. Gordon's workforce totals 200. Destinations visited include Akulivik, Aupaluk, Cape Dorset, Inukjuak, Ivujik, Kangisualujuaq, Kangirsuk, Kuujuaq, Kuujuarapik, La Grande, Povungnituk, Quaqtaq, Salluit, Sanikiluaq, Tasiujaq, and Umiujaq.

The owned fleet in **1994** includes 2 each British Aerospace (HS) 748-2As and 748-2AFs, 4 DHC-6-300s, 1 DHC-6-200, and 1 Beech Super King Air 200, plus 4 leased Convair CV-580s. The pattern and frequency of the scheduled route network in **1995** remains similar to that of previous years with all of the major communities receiving service five days a week with onward connecting service at Kuujuaq with **First Air, Ltd.** The company is awarded a three-year extension to continue operating four Convairs on behalf of Hydro-Quebec.

Services continue apace in **1996–2000**. During these years, the company improves upon its HS 748 scheduled services and increases aircraft reliability. A capacity problem on the Ungava Coast is effectively addressed by substituting the larger BAes for DHCs. The company's ground handling facility at La Grande is relocated and enhanced.

Additional charter activity occurs within Nunavik, particularly from the development of the Raglan Mining project. The company's pilots and flight attendants unionize.

AIR IOWA: United States (1971–1974). The newly formed commuter Air Iowa begins flying scheduled daily roundtrip Beech 18 passenger and cargo flights in the spring of **1971** from its base at Muscatine to Chicago (ORD) via Davenport.

Operations continue apace until April 19, **1973**, when a Beech 18 is involved in an accident at Davenport. The company is purchased by and merged into **Mississippi Valley Airlines** during **1974**.

AIR IRVINE: United States (1981–1983). AI is founded at Santa Ana, California, in late summer **1981** to offer scheduled passenger and cargo flights to Los Angeles and Palm Springs. A fleet is assembled comprising 2 Piper PA-31-350 Navajo Chieftains, 1 Cessna 421, and 1 PA-34 Seneca; these are employed to inaugurate revenue services on September 1.

Insufficient traffic or revenues are realized to justify service beyond the end of the recessionary year of **1982**. As a result, the company is sold to new owners in early **1983** who reform the airline and resume flights under the name **Dash Air**.

AIR IVOIRE (SOCIETE IVOIRIENNE DE TRANSPORT AERIENS, S.A.): BP 1207, Abidjan 01, Ivory Coast; Phone 225 27 90 27; Fax 225 27 88 03; Code VU; Year Founded 1958. *Compagnie de Transports Aeriens Intercontinentaux, S.A. (TAI)*, a large independent French airline, establishes this carrier to operate domestic services within the Ivory Coast colony. Provided with three de Havilland DH 89A Dragon Rapides, the subsidiary launches revenue flights in early **1958**, linking the capital of Abidjan weekly with Abengourou, Bouake, Daloa, Korhogo, Man, Seguela, and Tabou.

When **Air France** moves onto the Korhogo route in **1959**, Air Ivoire flights to that destination cease. The French major also provides Douglas DC-4 backup on all of these small-tour services, which it considers to be feeder routes of benefit to itself.

Later in the year, a de Havilland DH 1104 Heron 1B is obtained and employed to initiate a roundtrip service from Abidjan to Tabou via Sassandra. Although the route is suspended in August **1960**, it is resumed again in February **1961**.

In one of its final acts—before merging with UAT to become **UTA French Airlines (Union de Transport Aerien, S.A.)**—TAI reforms this carrier on October 1, **1963**. Ownership is shared between the Ivorian government (66%) and the French airline's subsidiary, Sodetraf (34%). The latter share is passed to **UTA French Airlines, S.A.** during the

fourth quarter. Capitalization is increased to FFr 10 million and Alcide Kacou is named president.

Employing a unit purchased on June 15, **1964**, after 18 years service with **Pacific Northern Airlines**, the carrier begins Douglas DC-3 services in August over routes from Abidjan to Berebi, Bouake, Daloa, Man, Korhogo, Sassandra, and Tabou. A second Douglas transport is received late in the year.

From **1965** to **1975**, service is developed to 18 domestic destinations as Beech King Airs and a Fokker F.27-600 join the reliable "Gooney Birds." Feeder services continue on behalf of UTA.

On July 24, 1971, less than two minutes after takeoff from Bamako, Mali, a DC-3 with two crew and four passengers crashes into a hill; there are no survivors.

In January **1976**, the Ivory Coast government buys out the French and consortium interests and assumes majority ownership. The consortium airline **Air Afrique, S.A.** also later obtains a shareholding and Air Ivoire begins to feed its long-haul routes.

Except for the removal of the DC-3, there are no corporate changes in **1977** and, by November **1978**, President Victor Niacadie's company employs 50 workers and has a fleet comprising 2 NAMC YS-11As, 1 Fokker F.27-400, 1 F.27-600, and 2 Piper PA-23 Aztecs. A presidential decree in March **1979** places authority for the carrier with two national ministries, planning and defense.

Domestic frequencies and services are improved at the end of the decade while long-haul operations continue to be handled by **Air Afrique, S.A.** Passenger enplanements in **1981** total 260,000. Service continues apace in **1982–1984**.

In **1985**, the fleet comprises 4 Fokker F.28-4000s, 3 F.27-400/600s, and 2 Beech King Air 200s.

While taking off from Tabou on July 25, **1986**, an F.27-600, with 3 crew and 26 passengers, suffers the failure of its nose gear tire. The plane runs off the end of the runway and is damaged beyond repair; there are no fatalities.

Regional routes are opened to Mali and Burkina Faso. Annual enplanements average some 100,000 this year and in **1987–1988**, reaching 129,024 in the latter year, when operating profit is \$1.96 million.

Airline employment is reduced by 1.6% in **1989** to 315. Three Fellowship jetliners are on inventory with the propeller equipment, as orders are placed for Fokker 100s. Beginning in January, a Fokker 100, acquired by the government for VIP services, is allowed to provide scheduled flights when not otherwise employed.

On December 30 an F.28-4000 with 70 passengers overruns the runway while landing at Man; although the aircraft is damaged beyond repair, there are no fatalities.

Passenger boardings jump 10.8% to 144,000 and revenues climb 15.6% to \$10.9 million.

Company employment is cut by 4.8% in **1990** to 300 and 1 F.28-4000 is withdrawn as the first Fokker 100 is received.

Customer bookings drop to 102,238. Unhappily, expenses, led by fuel prices in the wake of Iraq's August invasion of Kuwait, rise 16.6% and the operating profit falls to \$1.45 million.

The payroll is decreased by a large 47.6% in **1991** to 573 and the fleet now includes 1 each Beech Super King Air 200, F.27-400M, F.27-600, F.28-1000C, and 2 F.28-4000s. During the first nine months of the year, the airline reports that its passenger boardings are off 13.9% to 81,869 and freight is down 4.7% to 26,000 FTKs. International service is started in December, following delivery of the first owned Fokker 100, over a thrice-weekly route from Abidjan to Accra, Ghana.

The workforce is cut by a massive 60.7% in **1992** to 225. The second Fokker 100 is received, allowing plans to be made for retirement of the remaining F.28s. The new plane begins a weekly service, on behalf of **Air Afrique, S.A.**, from Abidjan to Togo and the Congo. Through July, the time span for which figures are published, customer bookings accelerate 20% to 75,171.

In **1993**, Director General Abdoulaye Coulibaly and General Manager Dosso oversee a workforce of 225. Regional services are provided to

Bamako, Conakry, and Ouagadougou in addition to flights reaching from Abidjan to Accra, Abengourou, Bondoukou, Bouaké, Bouna, Boundiali, Daloa, Gagnoa, Guiglo, Korhogo, Man, Monrovia, Odienné, San-Pédro, Seguela, Tabou, and Yamoussoukro.

Passenger boardings decline 8.8% through September to 90,823.

Although the employee population rises to 573 in 1994, the company suffers a traffic downturn and only reports its figures through May. During the first five months of the year, the flag carrier of the Ivory Coast sees its passenger boardings plunge 24.9% to 38,920.

While en route from San-Pédro to Abidjan on June 26, the F.27-400M with three crew and 14 passengers crashes into a wooded area 3 nm short of the runway at Abouabou; there are no survivors.

Col. Dosso's fleet in 1995 includes 2 Fokker 100s, 1 F.28-1000C, 1 F.27-400M Friendship, and 1 Beech Super King Air 200. The last Friendship is taken out of service in 1996. On June 28, the Super King Air 200, with 3 passengers, crashes near Bouafle; there are no survivors.

Operations cease at the end of 1997 as the bankrupt airline has its Fokker 100s seized by banks and its F.28-1000C grounded with engine problems. The carrier remains alive, however, as it seeks a rescue, preferably via privatization. Meanwhile, a private and independent airline, Air Continental, S.A. begins operations, flying between Abidjan and Bouaké, San-Pédro, and Korhogo.

Air Ivoire remains shut down during the first eight months of 1998. Its absence from the air transport scene is blamed on "technical" (read: financial) problems. Diabagate Aronna becomes director general during the spring and seeks to reassure the public that the carrier will be back now that it is under new management. A Fokker 100 is acquired and, on September 13, is employed to resume service to Robertsfield and Monrovia.

During the fourth quarter, arrangements are made for privatization and bids for equity investment on the part of foreign airlines are sought. Terms of the arrangement, for which Citibank is advisor, will include a demand that the entire workforce be retained. There is not a rush of bids.

On December 1, it is announced that the deadline for receipt of offers to take a 51% majority stake have been extended to December 29.

During the remainder of the month, inquiries come from eight airlines, including the majors **Air France**, **Sabena Belgian World Airlines, S.A.**, and **Air Afrique, S.A. (2)**.

When the government privatization committee opens the bid envelopes on December 29, it is found that only Air Continental, S.A. has made a serious offer. Even so, its chairman, Jean-Francois Guillotte, has put forward what he calls a "business plan," making it clear that his concern cannot meet all of the bid terms, particularly the full employment clause.

As the year ends, it is unclear whether Guillotte's bid will be accepted or whether the whole process will again be thrown open.

As 1999 begins, the company elects to continue the process of finding a private investor. It is announced on April 21 that the nation will write off the \$13.3-million debt of the national carrier; the decision applies to debts owed directly to the government as well as to private companies.

The **Pelita Air Service** Fokker F.28-4000 *Matak* is leased in September.

It is reported, early in 2000, that Air Continental, S.A., which has continued its low-key, nearly invisible service over the past two years, has added an ex-Burkina Faso Air Force Nord 262C with which to operate between Ouagadougou and Bobo Dioulasso.

AIR JAMAHIRIYA. See JAMAHIRIYA AIR TRANSPORT

AIR JAMAICA, LTD. (1): Jamaica (1963–1968). Late in 1963, the government of Jamaica establishes this national carrier, taking 51% of the stock. The other partners are **British Overseas Airways Corporation (BOAC)** and **British West Indian Airways (2) (BWIA International)** with 33% and 16% interest, respectively.

Employing a BWIA Boeing 727-78 in dual markings, the carrier inaugurates scheduled services on May 1, 1966 from Jamaica to New York via Miami. Operations continue apace until November 1968.

AIR JAMAICA, LTD. (2): Air Jamaica Building, 72–76 Harbour St., Kingston, Jamaica; Phone (809) 922-3460; Fax (809) 922-0107; <http://www.airjamaica.com>; Code JM; Year Founded 1968. Capitalized at a million dollars, this carrier, nicknamed "Air Jam," is formed in November 1968 by the Jamaican government (60% shareholding) and **Air Canada, Ltd. (40%)** to succeed the **British Overseas Airways Corporation** and **British West Indian Airways (2) (BWIA International)** wet-leased agreements with **Air Jamaica, Ltd. (1)**. Air Canada official P. C. Eyre is named president to insure smooth Canadian financial, administrative, technical, and operational assistance.

In late winter 1969, 2 DC-9-32s are purchased and 1 DC-8-61 is leased from **Air Canada, Ltd.**; scheduled service begins on April 1, the owned aircraft flying to Miami (MIA) and the chartered jetliner to New York.

Chicago–Kingston via Nassau DC-8-61 return service commences on June 1, 1970. Enplanements during the 12 months total 200,000. On December 1, 1971, a route is opened to Philadelphia. The year's enplanements are 221,730.

The workforce in 1972 stands at 759. Kingston–Toronto DC-9-32 flights are begun on March 1, via Miami. In July, 3 DC-8-51s, leased from **National Airlines**, join the fleet and are employed to add additional capacity on the New York, Toronto, and Miami (MIA) services.

Passenger boardings skyrocket 43% to 389,000, and freight traffic jumps 39%.

Advanced Booking Charters (ABC) are initiated in 1973 between Jamaica and the U.K. Kingston–Detroit (DTT) DC-8-51 service is inaugurated on December 1. The **National Airlines** DC-8-51 *Carolyn* is purchased on December 15. Airline employment is now 821.

Bookings accelerate 10% to 427,900; however, freight traffic is down slightly.

Airline employment in 1974 is 1,250, of which 91% is Jamaican. Jamaica takes over management of its carrier as Guillermo G. "Biggie" Machado succeeds **Air Canada, Ltd.**'s F. C. Eyre as president. The fleet now comprises 11 aircraft: 2 DC-8-61s, 3 DC-8-51s, 1 DC-8-62, and 3 DC-9-32s.

A lone assailant attempts to board a DC-9-32 at Kingston on January 3 in order to hijack it to Miami; he is overpowered by security guards.

In cooperation with **British Airways, Ltd. (2)**, transatlantic DC-8-62 service is inaugurated Kingston to London (LHR) on April 1. Two B-727-100s are acquired late in the year and are placed into service on the Miami run.

Passenger boardings zoom upward 53% to 687,000, while cargo balloons a spectacular 242%.

DC-8-62 service is started to Frankfurt on October 26, 1975 and a North American reservations center is opened at Valley Forge, Pennsylvania. Orders are placed for four more B-727-2J0As. Flights are canceled on December 4 because of a strike by ground employees. Passenger traffic advances a slight 1% to 697,000, and freight grows 9%.

In January 1976, the company receives the "Market Development Award" from *Air Transport World* magazine. A traffic drop is felt for the first time; passenger boardings dip 8% to 639,000. Cargo, however, is up 3%. Despite the arrival of the 4 new B-727-2J0As, enplanements drop for the second straight year, in 1977, down to 529,300.

On January 1, 1978, former **Air Canada, Ltd.** official and Air Jamaica, Ltd. Vice President-Marketing/Customer Services Donald V. Richardson is appointed president for a two-year term. A DC-8-43 is added to the fleet, which now includes, in addition to the Douglas, 2 DC-8-61s, 1 DC-8-62, 4 B-727-2J0As, 3 DC-9-32s, and 1 Cessna 150 trainer.

Service is inaugurated to Copenhagen via Prestwick in November. Passenger bookings rebound, up 21% to 670,000; freight rises 11%. Operations to Houston commence in 1979 as another DC-8-62 is placed in service. Enplanements advance 12% to 747,000, but freight is off 23%.

Airline employment is reduced 5.4% in 1980 to 1,325. President Richardson is succeeded on January 1 by Dr. Kenneth G. Rettray, Jamaica's solicitor general since 1972. Freight for the year drops 14% and passenger boardings dip 9% to 676,000.

As financial problems mount in **1981**, the London service is suspended on April 1. Also, the DC-8-43, 3 DC-8-51s, and 1 DC-9-32 are sold, as orders are placed for 2 Airbus Industrie A300B4s.

Bookings remain level at 676,522, but cargo accelerates a welcome 13% to 10.9 million FTKs.

Employing a **British Airways, Ltd. (2)** Boeing 747-136 in a pool arrangement with the British flag carrier, London service is resumed in **1982**. Weekly flights are started to Baltimore (BWI). The remaining DC-8s are sold at the end of the year as the carrier prepares to operate the European Airbus.

Meanwhile, in November, a B-747-148 is leased from **Aer Lingus Irish Airlines, Ltd.** to fly a weekly service from Kingston to Frankfurt via Montego Bay and London.

Passenger boardings increase 0.5% to 680,116, but cargo falls 21% to 8.6 million FTKs. The operating loss is \$11 million.

Airline employment is cut 13.6% in **1983** to 1,080. The two A300B4-203s are delivered in early February and enter service on the Toronto run on the 27th of that month. Atlanta service is added on December 15 with two A300B4-203 flights weekly from Montego Bay.

Despite the arrival of the new aircraft, passenger boardings dip 0.6% to 675,762; freight, however, soars 69.6% to 17.78 million FTKs. Revenues rise 7.2% to \$104 million and the operating loss falls to \$4 million.

Only three new employees are hired in **1984** as the leased Irish Jumbojet is returned in May and the year's emplanements total 709,800. Revenues total J\$431.32 million, but expenses force a net loss of J\$10.9 million.

The employee population in **1985** is 1,140. After nearly five tons of marijuana have been found on company aircraft landing at New York (JFK) since the previous October, an A300B4-203, in which customs agents again find drugs, is seized at the New York airport on August 2. It will be released once a heavy fine is paid.

Freight traffic is flat at 21.49 million FTKs, but passenger boardings jump 16% to 845,370. Revenues total J\$790.05 million and the net loss climbs to J\$39.6 million.

The payroll is increased by 6.7% in **1986** to 1,235 and, in cooperation with **British Airways, Ltd. (2)**, joint Concorde service is inaugurated from New York (JFK) to Jamaica. Nine A300B4 return flights per week are undertaken from Miami (MIA) to Jamaica as of November.

Late in the year, the B-747-148 *St. Kieran* is chartered from **Aer Lingus Irish Airlines**; retaining the Irish line's colors but with Air Jamaica titles on the nose and logo on the tail, the Jumbojet provides daily service from Kingston to New York (JFK) via Montego Bay for the winter season.

Customer bookings accelerate 16.3% to 985,458 while cargo rises 8.3% to 27 million FTKs. Revenues drop to J\$776.93 million, but the net loss also falls, to J\$26.27 million.

The workforce grows again in **1987**, by 22.1% to 1,420. The company's four B-727-2J0As are sold and leased back, thereby providing the airline with a J\$44.6 million gain. Orders are placed for two more A300B4-203s, which arrive under charter from **Air France**. The leased B-747-148, with 348 passengers and 12 crew aboard and en route to Jamaica on March 8, is forced to return to New York (JFK) when two tires blow out on takeoff; no injuries are reported. Soon thereafter it returns to Dublin.

In July, the gleaming all-white B-747-124 *Rena* is chartered from **Tower Air**; with Air Jamaica, Ltd. titles and logo on the tail, it provides winter seasonal flights to New York. Nonstop service to and from Atlanta is increased in September to four frequencies per week.

Passenger boardings swell 20.2% to 1,185,503 and freight does better, moving ahead by 28.6% to 26.71 million FTKs. Revenues increase to J\$909.5 million and the net loss of J\$5.2 million is a significant improvement.

The payroll continues to swell in **1988** by 2.5% to 1,456 and the fleet now includes 4 B-727-2J0As plus 2 owned and 2 leased Airbus A300B4-203s. Hurricane Gilbert causes severe damage on Jamaica, damaging the airline and associated resort-hotel facilities.

Although capacity is up, customer bookings now drop by 6% to 1,116,665. Cargo is also off, by 15%, to 22.64 million FTKs. Revenues

decline to J\$891.63 million, but expenses skyrocket, increasing the net loss to J\$67.35 million.

Company employment grows 6.5% in **1989** to 1,450 and the fleet now includes 3 A300B4-203s and 4 B-727-2J0As. **Air France** recalls 1 Airbus. In need of additional capacity, a Lockheed L-1011 is leased from **Hawaiian Air Lines** and a McDonnell Douglas MD-80 is chartered from **Latur (Lineas Aereas Latur, S.A.)** of Mexico.

Former Berger Paints Jamaica, Ltd. Managing Director Michael Fennell is appointed president/general manager in October.

Passenger boardings move ahead by 2% to 1,140,080, but freight falls another 21% to 17.82 million FTKs. Revenues, in U.S. dollars, total \$162.1 million, but expenses cause losses: \$3.8 million (operating) and \$18.8 million (net).

The workforce is cut by 9.1% in **1990** to 1,500; still, the airline carries nearly 60% of the air traffic to Jamaica. The company enters into a blocked-space agreement with **Air Canada, Ltd.** in March under which the Canadian airline agrees to operate all scheduled roundtrip services between Canada and Montego Bay/Kingston and the Jamaican airline agrees to purchase a predetermined number of seats aboard the flights.

A pair of A300B4-203s, acquired under a finance-lease arrangement, arrive from **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)** in May and June. Destinations visited include Miami, New York, Atlanta, Tampa, Philadelphia, Baltimore (BWI), Los Angeles, San Francisco, Toronto, Curaçao, Grand Cayman, Port-au-Prince, San Juan, and London. The latter stop is operated via a cooperative agreement with **British Airways, Ltd. (2)** employing BA aircraft using a joint code designation.

Joint fares are offered with a number of carriers, including **Delta Air Lines** (Atlanta/Miami); **USAir** (North and South Carolina, Philadelphia, Orlando); and **Japan Air Lines Company, Ltd. (2)** (New York/Miami).

While landing at Curaçao on November 16 after a service from Willemstad, a B-727-2J0, with 8 crew and 59 passengers, suffers the collapse of its left main landing gear; although the aircraft is badly damaged, there are no fatalities.

Customer bookings fall 19.9% to 911,903. Cargo remains strong, growing 16% to 20.68 million FTKs. Revenues are up 8.8% to J\$142.4 million, but costs are higher, creating an operating loss of J\$2 million. Net loss grows to J\$19 million.

The payroll is reduced another 4.7% in **1991** to 1,302 and the fleet now includes four each A300B4-203s and B-727-2J0As. Service from New York (JFK) to Jamaica is expanded on February 1 from twice daily to thrice daily.

At the same time, an additional Baltimore (BWI) stop is added on the thrice-weekly Philadelphia-Jamaica route in order to connect with **USAir** passengers. Twice-weekly roundtrips are launched between Jamaica and Nassau to fill a gap left by a reduction in **British Airways, Ltd. (2)** services.

Passenger boardings decline 11.1% to 820,977; however, freight rises 5.1% to 21.74 million FTKs. Revenues slide 12.3% to J\$136 million, but costs are down and there is a J\$1-million operating surplus. There is also, unhappily, a net J\$14-million loss.

The employee population recovers from its slide in **1992**, growing 2.9% to 1,340; a B-727-225A is also delivered. When U.S. Customs Agents at Miami again uncover a cache of drugs aboard a company aircraft, the airline is forced to pay a heavy fine.

The decline in passenger traffic is stopped as customer bookings ascend 10.8% to 909,907. Cargo, on the other hand, is just the reverse, dropping 4% to 20.78 million FTKs. Revenues total J\$156.2 million and with expenses held down, profits are made: J\$8.6 million (operating) and J\$3.1 million (net).

In **1993**, President Fennell oversees a workforce of 1,600, up 19.4% over the previous year. Markets are served from Kingston and Montego Bay to Atlanta, Baltimore (BWI), Grand Cayman, Miami, New York, Nassau, Philadelphia, and Orlando. Flights to Toronto continue to be jointly operated with **Air Canada, Ltd.** Plans are made to begin privatization.

Passenger boardings swell 7% to 966,268 while freight improves by 5% to 21.69 million FTKs.

In March 1994, a memorandum of understanding is signed between the Jamaican government and an investment group led by the former tourism minister, Hugh Hart, and the SuperClubs hotel chairman, John Issa. Under its terms, the airline will be privatized, although no non-Jamaican investor will be allowed to hold more than 25% interest and citizens must hold 51% of the airline's shares. Provision for employee ownership is also made.

The Issa bid is withdrawn in April and replaced by a second offer from the new Air Jamaica Acquisition Group (AJAG). Donald Banks, former managing director of the National Commercial Bank Group is to be chairman with local hotelier/businessman Peter Rousseau as deputy chairman. At the last moment, the major Canadian investor drops out, endangering the entire arrangement.

Resort tycoon Gordon "Dutch" Stewart moves into the breach, assumes the chairmanship, and saves the deal, although the actual privatization is pushed back from July 1 to October 1. AJAG pays J\$35 million and assumes a portion of the outstanding debt for 70% interest. At this point, the government retains 25%, with 5% set aside for employee investment. Stewart owns 65% of AJAG and, as such, with 46%, becomes the airline's largest single shareholder.

The reborn, privatized carrier is capitalized at J\$52.5 million, with a further equity injection from Canadian and Jamaican sources. Chairman Stewart also appoints an entire new management team, headed by President/COO David Taylor, who had formerly held the same position with **Air Ontario, Inc.** Staff cuts of 20% are announced for the upcoming year and a colorful new livery is unveiled in early December, initially by a B-727-2J0A. Also in December, the Miami-based U.S. regional carrier **Gulfstream International Airlines** becomes the official airline of Chairman Stewart's new Sandals Resorts International.

Weighing heavily on the airline during all of these changes has been the decision of the U.S. FAA to cite the carrier with Category II safety-compliance status. According to this action, the FAA has found that "AirJam" does not meet ICAO safety standards and reduces the number of flights it may make into the U.S. While the FAA works with the Jamaican government to affect necessary changes, its inspectors will heighten their operations inspections and surveillance of the airline.

Enplanements for the year total 984,000 and revenues reach J\$131.2 million.

Airline employment stands at 1,350 in 1995. Chairman Stewart institutes a significant amount of new advertising that promotes both the carrier and his Sandals Resorts. A new color scheme is introduced with much brighter colors. The Doctor Bird or "Lovebird," national bird of Jamaica, is joined on aircraft tails by variously hued horizontal stripes. Aircraft interiors are refurbished and cabin crews are provided with new uniforms. The airline contracts with a master chef to oversee the preparation of in-flight meals.

In April, a **Gulfstream International Airlines** Shorts 360-300s, previously flown by **Business Express**, becomes a "logo turboprop," displaying the sponsored multicolored motif of Sandals Resorts International. The plane flies between Miami and Nassau, where a Sandals Royal Bahamian facility is located.

Daily nonstop roundtrips are inaugurated on June 1 from Ft. Lauderdale to both Montego Bay and Kingston.

Midyear, the company begins a fleet renewal program by leasing six former **Delta Air Lines** Airbus A310-324s from their manufacturer; the Atlanta-based U.S. major provides flight crews under contract. Chairman Stewart is honored on Independence Day, August 7, with the Order of Jamaica, the highest civilian honor awarded by the government to a Jamaican citizen.

The company's cargo export service from Florida to Jamaica becomes daily on October 1, with the addition of Sunday freight on every one of the company's six daily flights from Miami to Kingston and Montego Bay.

Painted in the bright new multicolored livery, the first A310-324 arrives, also in October, followed by two more in December. Late in the year, majority interest is taken in **Trans-Jamaican Airways, Ltd.**

The company's nine aircraft transport a total of 1,064,541 passengers, a 15% increase; freight traffic rises 6% to 19.94 million FTKs.

The workforce is increased by 18.3% in 1996 to 1,597. The fourth A310-324, *Spirit of Negril*, enters service on January 12. The last two follow it onto company routes in March. Early in the year, **Trans-Jamaican Airways, Ltd.** is transformed into the feeder **Air Jamaica Express, Ltd.**

To assist in its expansion plans, the carrier wet-leases a pair of MD-83s, painted in "Air Jam's" new multicolored livery, from **Great American Airways** (GAA).

On February 10, nonstop roundtrip frequencies from New York (JFK) and Newark to Montego Bay and Kingston are increased to 25 each week. Employing a chartered DC-8F, Thursday and Sunday all-cargo roundtrip services are introduced on February 15 between Miami and Kingston via Montego Bay.

The two aircraft are operated by 4 Mexican pilots and 10 air hostesses under contract until such time as Jamaican nationals, unfamiliar with the McDonnell Douglas product, can be trained.

In the wake of the May **Valujet Airlines** disaster, the carrier's new American associate, **Great American Airways**, like similar U.S. airlines, becomes the focus of intensified and continuing safety audits by the FAA.

Air Jamaica, employing the GAA operating certificate and licenses as a way to obtain additional U.S. gateways during a time when it is subjected to Category II safety prohibitions, inaugurates new MD-83 routes on June 1 between Chicago (ORD) and Nassau and from New York (JFK) to markets throughout the eastern Caribbean.

During the fall, orders are placed for five A320-214s. Painted in the company's new color scheme, the first A320 is delivered on December 20.

Customer bookings jump to 1,218,053 and 22.91 million freight FTKs are operated. Revenues total J\$192 million, but a J\$49 million loss is reported.

Citing numerous falsifications of records and documents, the FAA pulls the operating certificate of **Great American Airways** in April 1997. The Reno-based airline files for Chapter XI bankruptcy protection and appeals the government action. The action severely impacts the wet-lease arrangement with Air Jamaica.

At the end of May, a memorandum of understanding is signed with **British West Indies Airways, Ltd. (2) (BWIA International)**; the document pledges mutual cooperation in areas that will reduce costs for both airlines, including joint purchases, engineering and support services, customer services, and some flight operations. A working group from both carriers is assembled to look into the possibilities of code-sharing and aircraft cross-utilization. A similar letter of intent is also signed with **Delta Air Lines**.

A hub for Caribbean-bound vacationers and business travelers is established at Montego Bay as of June 15.

Traffic figures are reported through July and show passenger boardings up 3.3% over the same period a year earlier to 793,738. Freight, however, drops 9.1% to 12.5 million FTKs.

On September 11, *The Jamaica Gleaner* reports that the Mexican pilots and flight attendants employed the previous year are still working for the carrier. The company's other new aircraft are manned by 90% Jamaican crews, together with a few other foreigners, mainly from BWIA.

Under terms of a March 12, 1998, block-seat, code-sharing agreement, on April 6 **Delta Air Lines** begins to purchase seats on Air Jamaica's service from Atlanta, Miami, and New York to Montego Bay, Kingston, Barbados, and St. Lucia. Air Jamaica, in turn, purchases seats on Delta's daily service from Atlanta to Boston, Cincinnati, Hartford, Memphis, and San Francisco, beginning on June 1.

In September, realizing that **British West Indies Airways, Ltd. (2) (BWIA International)** must make a profit in 1998, its new president, Conrad Aleong, backs off from the mutual cooperation pact signed with

Air Jamaica, Ltd. the previous year. No significant yield has been realized from the plan, which is aimed at growth through volume and profits in the new century, and its value to BWIA is limited.

On a more practical note, the company does engage in discussions with Air Jamaica concerning a possible cargo joint venture, as well as shared ground handling and check-in services at Miami (MIA).

When **Air Canada, Ltd.** pilots go out on strike during September, Air Jamaica flies to Toronto to transport home scores of stranded Jamaicans.

Being unwilling to continue rejecting bookings because of an inability to accommodate passengers, the airline, on October 30, increases to eight the number of weekly services operated from New York and Jamaica to St. Lucia and Barbados.

During the week of Thanksgiving in the U.S., Air Jamaica adds the first of 50 additional flights to be completed from Jamaica to Miami, Atlanta, New York, and Grand Cayman by New Year's.

Customer bookings climb 3.9% to 828,000, while cargo rises 14.1% to 12.3 million FTKs.

On takeoff from Montego Bay on January 2, 1999, an A310-324 blows a tire and thus becomes unavailable for service. The flight to Atlanta is cancelled. In Georgia the next day, a B-727-227A is leased from **Sun Pacific International Airlines** to operate the return flight to Jamaica. While en route from Atlanta as Flight 56, the trijet with 110 passengers is forced to divert to Jacksonville when passengers report smelling smoke. No problems are found and the flight to Jamaica is completed.

An ILFC Airbus Industrie A340-312, previously flown by **Air Mauritius, Ltd.**, is chartered for six years on February 11 and the first of two former **Flying Colours Airlines, Ltd.** A320-211s arrive in March from ILFC. The carrier's thirtieth year of Caribbean service is celebrated on April 1.

After a yearlong feud over government spending on the national airline, Chairman Stewart and Jamaican Finance Minister Dr. Omar Davies reach an accommodation on April 8, which is reported in the next day's issue of *The Jamaica Gleaner*. Davies praises the carrier's contribution to the nation's tourism industry.

Following an announcement by Finance Minister Davies that taxes on diesel, gasoline, and fuels would be increased by 30%, demonstrations on the island national flare up on April 19 and rage into full-scale civil unrest. Air Jamaica, joined by **British Airways, Ltd. (2)**, **British West Indies Airways, Ltd. (2)** (**BWIA International**), **Air Canada, Ltd.**, and **American Airlines**, are forced to cancel services to Jamaica on April 20.

Calm is restored on Jamaica on April 21, following three days of deadly protest, arson attacks, and clashes between demonstrators and police that leave seven dead. Air Jamaica resumes its services in an out of the country next day, with exception of one flight from Kingston to Miami, one from Miami to Montego Bay and Kingston, and the roundtrip between Kingston and Ft. Lauderdale. Full service is resumed on April 23.

A new A321-211 is delivered on May 5.

Daily nonstop A320-214 roundtrips commence on May 26 from New York via Montego Bay to St. Lucia and from New York via Montego Bay to Barbados, five times a week. Twice-weekly A320-214 return service is introduced on May 27 from New York to St. George's, Grenada, via Montego Bay.

The A340-312 "Air Limousine" is placed into transatlantic service from Jamaica to London (LGW) beginning on June 1. New direct all-cargo service is launched on June 14 from Castries, St. Lucia, to Grenada and Barbados. Weekly return flights commence on June 26 from Montego Bay to Bonaire, in the Netherlands Antilles. Much of the cost for the service is underwritten by the Bonarian government.

Christopher Zacca becomes president/CEO in July. Entry into service of the new A340-312 allows the chartered A310-324 to be returned to the manufacturer; Airbus repaints the wide-body for an **Air Maldives, Ltd.** lease.

On October 12, Zacca is able to report that, in August, the company had passed a milestone, transporting 200,000 passengers in a month for the first time.

Also in October, the number of DC-8F cargo roundtrips is increased to five per week.

At the end of January 2000, the company signs a wet-lease agreement with **Ecuadoriana Airlines (Empresa Ecuatoriana de Aviacion, S.A.)**. Honoring the commitment on February 1, an Air Jamaica A320-211 operates the first of 12 roundtrips from Guayaquil to New York (JFK).

Plans for a linkup between the carrier and **Helen Air, Ltd.**, under which it would be reborn as Eastern Caribbean Express, Ltd. fall through on February 1. A week later, Helen Air signs a franchise agreement with Air Jamaica rival **BWIA West Indies Airways, Ltd.**

Former vice president-sales/services John Lewis is appointed executive vice president/chief operating officer on March 1. With the collapse of **Air Maldives, Ltd.**, the A310-214 is returned to service at the beginning of April wearing a hybrid livery.

Twice-weekly direct roundtrips between Montego Bay and Phoenix, Arizona, commence on June 15. A320-214 roundtrips from Kingston to Port of Spain via Barbados are started on June 24.

On July 4, the government increases its stake in the airline from 25% to 45%; the parliament approves a \$45-million loan, which the airline will use to pay off a \$33-million short-term loan and to cover increasing operational expenses. Daily service from Montego Bay to Port of Spain, Trinidad, is resumed at the end of July.

Service is doubled between Montego Bay and Bonaire on October 4. On October 15, frequencies are boosted on the route from Montego Bay to Ft. Lauderdale. The introduction by **BWIA West Indies Airways, Ltd.** of thrice-weekly services from Jamaica to Trinidad causes Air Jamaica to terminate its newly resumed daily frequency on that route as of October 22.

Five-times-a-week A321-211 roundtrips commence on December 15 between Montego Bay and Boston.

AIR JAMAICA EXPRESS, LTD.: P.O. Box 34, Kingston, Jamaica; Phone (809) 952-3418; Fax (809) 924-8155; <http://www.airjamaica.com/express>; Code JM; Year Founded 1996. Majority interest in **Trans-Jamaican Airways, Ltd.** is taken by **Air Jamaica, Ltd.** on November 1, 1995. Shareholding is divided between the Air Jamaica Acquisition Group (55%), the government of Jamaica (20%), John Cooke (15%), and D. T. Brown (10%). Gordon Stewart is president of the renamed Kingston-based company, with David Taylor as president.

Services feeding the major are inaugurated on April 18, 1996 with a fleet that will grow to include 1 Avions de Transport Aerien ATR42-300 and 3 Dornier 228-202s, 2 of which are on hand for the opening day of flying. The airline features a total of seven daily, nonstop, 35-min. roundtrips from Kingston's Tinson Pen Airport to Montego Bay. In addition, twice-daily nonstops are operated to Negri from Kingston together with a daily flight into that community from Montego Bay.

Airline employment stands at 115 in 1997-1998. Frequencies between Kingston and Ocho Rios become daily, while the number of daily nonstop roundtrips from Montego Bay to Negri are increased to five. Interisland charters are also operated, for up to 30 passengers, to Nassau, Grand Cayman, Turks and Caicos Islands, Barbados, Havana, and Santiago de Cuba.

Daily nonstop A320-214 roundtrips by the parent commence on May 26, 1999, from New York via Montego Bay to St. Lucia and from New York via Montego Bay to Barbados, five times a week. Twice-weekly A320-214 return service is introduced on May 27 from New York to St. George's, Grenada, via Montego Bay. As with all Air Jamaica destinations, passengers wishing to stop over at various served Caribbean locations are given complementary connections via Air Jamaica Express.

During the year, the ATR42 and a Dornier are traded in on 2 Shorts 360-300s. Orders are placed for several de Havilland Canada DHC-8-100s.

New six-time-per-week DHC-8-100 roundtrips begin on November 9, 2000 from Montego Bay to Havana. These are followed with daily (except Tuesday and Wednesday) return flights to the Turks and Caicos Islands starting on November 11.

AIR JAPAN COMPANY, LTD. See **ALL NIPPON AIRWAYS COMPANY, LTD.**

AIR JET (COMPAGNIE AIR JET, S.A.): BP 10297, Roissy-Charles de Gaulle International Airport, F-95700, France; Phone 33 (1) 49 19 73 20; Fax 33 (1) 48 62 50 80; <http://www.airjet.fr>; Code BC; Year Founded 1980. A subsidiary of the Jet Services Group, S.A., Air Jet is established at Paris (ORY) in May 1980 to provide scheduled domestic passenger services as well as passenger and cargo charter services to holiday destinations to regional European and Mediterranean destinations. Roger Caille is president/director general and initial flight equipment comprises 2 Fokker F.27-600QCs and 1 Beech King Air 90.

Scheduled services begin between the southeastern French communities of Lyon and Avignon in 1981. Overnight parcel services are flown to Avignon, Bordeaux, and Lyon. Bookings at the 40-employee company that year total 3,007.

A route is extended to Paris (CDG) in 1982 and enplanements rise to 15,115, doubling to 31,389 in 1983. Operations continue apace in 1984–1985; night freighter operations continue to play a significant role in company services. A second F.27-400 is added during these years.

In 1986, Chairman Roger Caille and Managing Director Louis Ollivier add 1 Piper PA-31-310 Navajo and 2 F.27-600s. Enplanements now total 39,784. Bordeaux joins the route network in 1987 and passenger bookings jump to 45,000. Messier Sribabine succeeds Messier Ollivier as managing director in 1988. To accommodate increasing demand, a fifth F.27, a Dash-600QC, is acquired from the Guatemalan Air Force late in 1989.

Daniel Swiedziol becomes the new managing director in 1990 and he adds two more F.27-600QCs. Enplanements total 61,000. In 1991–1992, a British Aerospace BAe 146-200QC is obtained in October of the former year for use on night all-cargo runs between Avignon and the two major Paris airports (ORY and CDG) and daytime charters.

A total of 140 workers are employed in 1993 and a freight-configured BAe 146-300QT is leased late in the year. An F.27-600QC is leased to **Lina Congo (Lignes Nationales Aeriennes Congolaises, S.A.)** in 1994. In midyear, the Dash-300QT is replaced with another Dash-200QC.

The 2 BAe 146-200QCs are employed to launch twice-daily scheduled return services on October 2, 1995 between Paris (CDG) and London (LCY). The 5 Fokker freighters are now sold to **WDL Aviation (KOLM), GmbH**, in Germany.

A third BAe 146-200QC arrives under charter from its manufacturer in March 1996. First flown by **National Jet Systems (Pty.), Ltd.** of Australia, it is employed on overnight freight services and daytime passenger charters to Avignon, Strasbourg, and Toulouse.

Jet Services Groupe, S.A. in early 1997 decides to expand its parcel delivery service. To that end, the twice-daily scheduled BAe 146-200QC flights between London (LCY) and Paris are halted on June 9. All passenger operations under the Air Jet name cease on June 27.

Express parcel flights continue during the remainder of the year and into 1998–1999. In December of the latter year, Jet Services Group, S.A. is acquired by the TNT Post Group. The 3 BAe jets maintain cargo service without change thereafter.

In early July 2000, the entire B-737 fleet of Aeropostale (2) (L'Aeropostale/Societe de Exploitation Aeropostale, S.A.) must be grounded after cracks are discovered in a cargo door of one aircraft during a routine maintenance check. To cover commitments, a British Aerospace BAe 146-200QC is briefly wet-leased from Air Jet.

AIR JORDAN, LTD.: Jordan (1950–1961). H. E. Ismail Bilbeisi Pasha forms this carrier at Amman in fall 1950 to fly short-haul routes with two Airspeed AS.65 Consuls purchased from **Chartair, Ltd.**, of the U.K., in December. Needing a new base for charter operations following the revolution in French Somaliland, the American supplemental carrier **Transocean Air Lines (TAL)** is invited in 1953 to take an interest and provide technical and managerial assistance. TAL replaces the Consuls with Douglas DC-3s and Curtiss C-46 Commandos and opens

new routes for **Air Jordan, Ltd.** to Baghdad, Kabul, East Jerusalem, and Beirut, site of TAL's Middle East maintenance/administrative headquarters. In August 1955, new services commence to Benghazi, Cairo, Damascus, Kuwait, and Tripoli.

The carrier's greatest income during the TAL years is gained from a U.S. Navy contract to fly servicemen on liberty from Beirut to Jerusalem and contracts with Muslim groups in Kabul to fly pilgrims on the annual Hadj pilgrimage to Mecca. When competing **Arab Airways, Ltd.** ceases operations in 1958, the government of Jordan merges its assets with those of **Air Jordan, Ltd.** on December 1 to form **Air Jordan of the Holy Land, Ltd.**

Flight 601, a CV-240 with 4 crew and 11 passengers, attempts to fly below clouds while on approach to Amman from Jerusalem on January 22, 1959; the aircraft hits a line of trees and crashes 11.85 mi. from the runway and 2.8 mi. NW of Wadi-es-Sir (10 dead).

The carrier's single C-46 is damaged in a June crash and is sold as scrap. TAL's management contract remains unchanged until that U.S. carrier itself goes bankrupt in 1960. **Air Jordan of the Holy Land, Ltd.** fails in its efforts to operate independently and ceases trading on September 1, 1961. Its assets are absorbed into **Jordan Airways, Ltd.**

AIR JORDAN OF THE HOLY LAND. See **AIR JORDAN, LTD.**

AIR JUGOSLAVIA: Bul Umetnosti 16, Belgrade, YU-11000, Yugoslavia; Phone 381 11 311 2223; Fax 381 11 311 1454; Code YRG; Year Founded 1969. Air Yugoslavia is organized at Belgrade in April 1969 as a wholly owned charter subsidiary of **JAT (Jugoslovenski Aerotransport)**. Aleksander Avejic is named director general. Employing jetliners leased from the parent, charter, inclusive tour, and immigrant flights are conducted to such destinations as the U.S. (especially Cleveland and Detroit) and Australia.

During the 1970s and 1980s, airline employment grows to almost 7,500. A. Scepanovic becomes director general. The company continues to operate international passenger group charters from a growing number of domestic gateways outside the capital, including Dubrovnik, Skopje, Split, Ljubljana, and Zagreb. **JAT Yugoslav Airlines** provides a mixed variety of jetliners as individual charters require; Boeing 707-320s, B-737-300s, and B-727-200s as well as Douglas DC-9-30s are often employed.

In early November 1991 as a result of the political upheaval within the nation, the carrier becomes subject to a European Community embargo and suspends operations. As fighting continues, the embargo is expanded into a UN affair in late spring 1992.

After a period of Balkan conflict and political maneuvering, Serbia and Montenegro (constituting a revised federal republic of Yugoslavia) agree to UN requirements and, on September 24, 1994, economic sanctions are lifted. Under the direction of Manager Neda Lazic, the 10 full-time employees Air Yugoslavia will resume operations without fanfare.

In September 1998, parent **JAT Yugoslav Airlines** is banned for flying into any European Union country; the same restriction also applies to Air Yugoslavia.

Local and non-EU charters are operated on an *ad hoc* basis until March 24, 1999. On that date, NATO, having been unable to persuade the Yugoslav leadership to revise its policy toward the ethnic Albanian population in the Kosovo province, closes Balkan airspace and launches the bombing campaign, Operation Allied Force.

Limited charter work begins again on June 25, but international restrictions are not suspended until February 2000. They are finally lifted after the election in October removes the Milosevic government.

AIR KAMPUCHEA. See **KAMPUCHEA AIRLINES**

AIR KANGAROO ISLAND (PTY.), LTD.: Australia (1990–1996). **Air Transit, Ltd.** is renamed Air Kangaroo Island, Ltd. in 1990. Scheduled service is maintained between Adelaide and Kingscote, American River, and Parndana with a fleet comprising 2 Cessna 402s, 1 Beech 18, and 1 de Havilland Canada DHC-6-300 Twin Otter.

Enplanements in **1991**, the first full year of service under the new moniker, total 22,522 and grow by 4.5% in **1992** to 23,583.

By **1993**, Managing Director John Raye's fleet comprises 5 Twin Otters, 2 of which are leased to **Air North International, Ltd.**

Having encountered financial difficulty in the past several years, the carrier is purchased by new owners in the spring of **1994**. They replace the de Havillands with a single Embraer EMB-110 Bandeirante. During the summer, the carrier is shut down for four months; however, on September 1, it is able to resume operations, flying a Shorts 330 between Adelaide and Kingscote. Traffic figures are again unavailable and will not surface in **1995** either. The company shuts its doors in February **1996**.

AIR KAVANGO (PTY.), LTD.: Botswana (1991–1996). **Air Kavango (Pty.), Ltd.** is formed at Maun in **1991**. John Aliott is named general manager and Anthony Baker managing director. The fleet with which domestic commuter flights are provided comprises 2 Britten-Norman BN-2 Islanders, 3 Cessna 206s, 1 Cessna 404, and 1 Cessna 402. Services continue until the nation's **1996** civil war and the UN intervention forces the company out of business.

AIR KAZAKHSTAN: 14 Ogareva Street, Rm. 401, Almaty, 480079, Kazakhstan; Phone 7 (3272) 572157; Fax 7 (3272) 331192; http://www.airkaz.com; Code 9Y; Year Founded 1996. **Kazair (Kazakhstan National Airways)** encounters significant financial difficulties in **1995**. A consortium of local construction companies and banks sues the airline for \$11.1 million in damages in a dispute over the Almaty Airport runway construction. A number of aircraft are seized at Western airports for nonpayment of landing or parking fees.

An An-24B with four crew is destroyed as the result of a hard landing at Chimkent after a November 1 training flight; there are no fatalities. Other aircraft are grounded at year's end when their insurance coverage is allowed to lapse.

Enplanements for the year total 445,000.

The fleet flagship, a Boeing 747SP-31 named *Sunkar*, is leased to the government of Brunei in March **1996**.

On April 30, the Kazakhstan government announces a plan to restructure the troubled national carrier. The State Property Committee and Kazkommertzbank act as general managers for the airline during the early stages of reorganization. The latter conducts a financial and technical audit, which is published in August. The Transport and Communications Ministry puts forward its own suggestions for restructuring, including plans to spin off Kazair's holdings in the Almaty Airport and the Academy of Civil Aviation.

Some consideration is also given in various quarters to simply transferring all of the airline's assets over to **Kazakhstan Airlines**, which is also known as Air Kazakhstan. That option loses its viability when, on August 20, Air Kazakhstan also goes bankrupt. Thereafter, every effort is put into restructuring Kazair and upgrading its financial situation; a new group holding company is created and Alexandre Krinichansky becomes president.

In the third-deadliest air disaster and the worst midair collision in aviation history, Flight 1907, a Kazair Ilyushin Il-76TD with 10 crew and 27 passengers, is descending to New Delhi toward sunset on November 12, after a charter from Chimkent. The Il-76TD is below its assigned altitude of 14,000 ft. when Flight 763, a **Saudia (Saudi Arabian Airlines)** B-747-168B, with 23 crew and 289 passengers that has just taken off for Dhahran and Jeddah, is determined to be 8 mi. away, also at 14,000 ft. The Ilyushin descends another 310 ft., but by this time it is too late. Both aircraft collide and burst into flames, falling onto an arid farming area 3 mi. from the village of Charkhi Dadri in Haryana State, west of New Delhi. Wreckage is spread over a 6-mile-wide area. Controversy will surround the cause of the disaster.

Following the liquidation of **Kazakhstan Airlines** at the end of the previous year, Kazair, early in **1997**, takes over and begins to employ the Air Kazakhstan marketing name. The fleet, in addition to the *Sunkar*, which remains out on lease, is still comprised of 8 Tupolev

Tu-134As, 13 Tu-154Bs, 3 Tu-154Ms, 3 Ilyushin Il-76TDs, 7 Il-86s, and 25 Antonov An-24s.

Scheduled and charter markets visited include Akmola, Aktau, Aktyubinsk, Arkalyk, Atyrau, Balkhask, Beijing, Delhi, Dushanbe, Ekaterinburg, Frankfurt, Hanover, Kaliningrad, Karaganda, Kiev, Kokshetau, Kostanay, Mineralnye Vody, Moscow, Novosibirsk, Omsk, Osh, Petropavlovsk, Samara, Semipalatinsk, Sharjah, Shimkent, Tehran, Tel Aviv, Ufa, Ulgii, Uralsk, Urumqi, Vienna, Zhambyl, and Zhezkazgan.

On May 4, investigators looking into the previous November's crash are able to state that the Kazak freighter had descended nearly 1,000 feet below the 15,000-ft. altitude set for it by Indian air traffic controllers; the deviation put it squarely into the path of the ascending Jumbojet.

Service continues in **1998**, though initially with diminishing returns. The Transport Ministry announces in May that the company will be privatized within two years. The company joins the Amadeus reservations system in September.

By the end of the year, **British Airways, Ltd. (2), Deutsche Lufthansa, A.G., and KLM (Royal Dutch Airlines, N.V.)** control \$800 million of the \$900 million earned on international routes from Almaty and 90% of the airline market.

Determined to redress the airline's competitiveness and upgrade its service abilities, Kazakhstan begins an overhaul of its national airline in January **1999**. The effort begins with an announcement on February 15 by Transportation and Communications Minister Serik Burkibaev that the government will issue a \$200-million guarantee towards the purchase of 4 Boeing or Airbus jetliners. He also informs journalists that the state will form a single and unified national airline that will regain market share.

Shortly thereafter, 2 Airbus A310-322s, previously operated by **Swissair, A.G.**, are acquired and enter service during the summer. Two Boeing 737-200s are also brought in. The new planes, together with 12 Western pilots and 13 engineers working under contract, fly mostly to Istanbul, Moscow, and Peking.

To gain additional international business, the carrier switches its Moscow flights on April 8 from the internal Domodedovo to the international Sheremetyevo Airport.

The devaluation of the Kazakhstan tenge by approximately 30%, also in April, and its continuing decline, will have dire fiscal results for the carrier.

In the summer, the company's main air terminal at Almaty is gutted by fire. The company is forced to cancel many flights. Later, additional local services are cut and the company runs into even greater financial difficulty.

As reported by the Kazakhstan newspaper *Vremya* on December 22, the company, on November 18, has joined with several smaller Almaty-based carriers, including **Atyrau United Aviation Detachment**, to form Air Kazakhstan Group. President Krinichansky becomes group CEO, with Yerbol Yetekbay moving up to the Air Kazakhstan presidency. Under the new alliance, Air Kazakhstan operates all foreign routes and 70% of the domestic ones. In a news conference confirming the group's formation, Krinichansky notes that Kazakhstan still has 52 independent domestic airlines, but that, in his estimation, only two or three are required to meet the nation's air travel needs.

In late January **2000**, representatives of the expanding SAirGroup, parent of **Swissair, A.G.**, arrive at Almaty to open negotiations concerning their possible acquisition of a stake in Air Kazakhstan Group. A stumbling block will be the group's huge debt, estimated at \$110 million.

A new strategic agreement is signed with **Aeroflot Russian International Airlines (ARIA)** on March 15; the two companies agree that state support is required for cooperative ventures. Under its terms, the two begin to code-share on daily services between Almaty and Moscow where they will establish new hubs.

By spring, the fleet has been increased by the addition of 6 more B-737-200As and a leased B-757-200. The latter is employed on April 2 to launch weekly roundtrips between Tashkent and Rome.

A full regional tour package is undertaken with the beginning of the summer schedule in May, including flights to the Marmaris and Bodrum resorts in Turkey. Also in May, ground is broken for a new \$15-million terminal building at Almaty International Airport.

The media, in June and July, reports a growing dispute between the airline and its creditors concerning aircraft and debt repayment.

A fuel crisis strikes the Kazakhstan airports on August 11. With none of the domestic oil processing plants (OPP) producing avgas, airlines must stop flying until a stock of aviation fuel can be built up through transfers from national reserves and purchases from foreign sources, principally Russia. As a result of determined action by First Deputy Prime Minister Alexandre Pavlov and new Minister of Transportation and Communications Karim Masimov, the situation is resolved within five days. OPPs are ordered to produce fuel and arrangements are completed for the import of 1,400 tons in September and October.

On August 14, the airline reaches an agreement with the Kazkommertbank for a resolution of the carrier's debt questions.

A code-sharing agreement is signed with **Korean Airlines (KAL)** on September 7. Two days later, it is reported that Air Kazakhstan Tu-154s and Il-86s have transported 9,100 tourists to the Turkish resorts since May 29.

Statistics are released at the beginning of October covering the first nine months of the year. These show enplanements of 362,000 and a loss of KZT 755 million (\$5.3 million).

On October 17, Prime Minister Kasymzhomart Tokayev admits that the carrier is near bankruptcy and that the previous year's purchase of two Airbuses had been a costly mistake. He orders the Transport Ministry to take immediate steps to shore up the failing national airline.

On November 17, Air Kazakhstan Group swaps 50% of its equity to its principal creditor, the state fuel conglomerate Kaztransoil, which agrees to pay off the airline company's debts, now estimated to be in excess of \$20 million. Among the assets transferred is Atyrau Airport and **Atyrau Airways (Atyrau United Aviation Detachment)**, which officials at the oil concern indicate will be quickly merged into their own rotary-wing airline, **Euro-Asia Air**.

At the same news conference announcing the Kaztransoil arrangement, AKG President Krinichansky reveals that his concern is now partnering with Kazkommertbank, which will replace the Kazakhstan government as guarantor of aircraft leases. This changeover will permit the chartering of additional Western-built jetliners with which to replace the aging Soviet-made fleet, only 15 units of which are still flying. The first new aircraft, a B-737-2Q3A, is delivered at the beginning of December and allows retirement of a Tu-154B.

AIR KEDROS, S.A.: 96 V. Georgious Str., Athens, Glyfada, Greece; Phone 301 8983462; Fax 301 8947252; <http://www.airkedros.com>; Year Founded 1997. Air Kedros is set up at Athens in 1997 to provide nonscheduled all-cargo services to destinations worldwide. Revenue flights begin, and continue, with a single Ilyushin Il-76.

AIR KENTUCKY AIRLINES: United States (1974-1989). In late summer 1974, officers of the FBO Owensboro Aviation establishes this third-level carrier as its air transport division. Limon S. Cox, who had started the facility in the early 1940s and trained Army Air Corps pilots from a nearby grass field during World War II, is chairman and his nephew, Frank Shrively, is president. The two secure a fleet of 3 Beech 99s, which are employed to commence daily scheduled passenger and cargo flights on September 23.

Destinations visited at the beginning of 1975 include Paducah, Frankfort, Bowling Green, Louisville, London/Corbin, and Clarksville. During the next four years, routes are also opened to Mt. Vernon, Evansville, and St. Louis.

When **Ozark Airlines** pulls out of Owensboro in 1979, Air Kentucky has a monopoly on airline service from that city. Independent operations continue until October 26, 1980, when, following negotiations initiated

by Chairman Cox, the third-level operator joins the Allegheny Commuter network. Enplanements for the year total 58,000.

A Beech 99A is acquired in 1981 as passenger boardings, undisturbed by the summer PATCO air traffic controllers' strike, reach 65,117. Bookings climb 20.2% to 78,200 in 1982, as flights commence point-to-point throughout the state and from Louisville to Nashville.

Due largely to the national economic downturn, enplanements remain level in 1983 with only 700 additional passengers carried. Freight declines 15.5% to 101,661 pounds. The fleet in 1984 includes 4 Beech 99s and all are busy as passenger traffic improves. Customer bookings jump 31.9% to 104,071. Cargo, however, continues to fall, down 11.6% to 89,909 pounds.

In 1985, the fleet of the 72-employee small regional is increased by the addition of 2 more Beech 99s. When **USAir** reduces its services to Louisville and **Piedmont Airlines** begins flying jetliners from Cincinnati to Nashville, Air Kentucky begins to suffer a traffic decline.

The carrier desperately attempts to reverse this downturn, withdrawing two aircraft, cutting pay and services, and undertaking various cost-cutting measures. While retaining its Allegheny affiliation, the company is sold on December 28 to North American Aviation, Ltd. (later VOR Investment Group), the Albany, New York-based private investor firm headed by one-time **Mall Airways** executive Patrick Rogers. Although the sale price is not disclosed, it is reported in the aviation press that investors Rudy Paulsen and Robert Mitchell invest \$1.2 million and \$500,000, respectively, in the carrier.

Passenger boardings decline by 8.9% during the 12 months to 94,812, but freight is up to 174,000 pounds, a substantial increase.

Patrick Rogers becomes president on January 1, 1986. In March, monthly passenger boardings reach a low of 4,802. The same month the new owners undertake a system reorganization designed to boost local traffic and increase aircraft usage. At the same time, orders are placed for two Embraer EMB-110P Bandeirantes, which arrive late in the fall. The year's enplanements are level at 95,000.

In early 1987, the fleet includes 2 EMB-110Ps and 7 Beech 99s. In June, the owners hire Albany consultant David Gardner, who succeeds Rogers as president in July. With the airport authority's promise to pay moving expenses, the company transfers its headquarters in September to Indianapolis in order that Air Kentucky might feed **USAir** flights arriving at and departing from the Indiana capital. Passengers claim that they do not mind the three-minute ride on **USAir** buses from the main terminal to planes waiting on remote parking pads.

Enplanements for the year total 103,027.

Airline employment is increased by 23.2% in 1988 to 170 as a third Brazilian turboprop and eighth Beech 99 join the fleet.

Orders are placed for 12 Fairchild Metro IIIs, the first two of which arrive in June. Fairchild Aircraft not only provides the new aircraft under lease but also grants the commuter a short-term loan. By summer, the regional is offering daily service to Champaign, Chicago (MDW), Decatur, Fort Wayne, Lexington, Owensboro, Peoria, South Bend, Springfield, and Terre Haute.

The Allegheny Commuter boards a total of 133,248 passengers, a 29.5% increase, but finances deteriorate.

Early in 1989, the first three Metro IIIs arrive. GMF: Gene Morgan Financial, Inc., the Los Angeles owners of the Fairchild Aircraft Corporation, purchases Air Kentucky from VOR Investment Group in March as an investment. It is hoped that it can be upgraded financially into resalable condition, but these efforts fail. The last revenue flight is completed on May 15 and Air Kentucky shuts its doors on June 1.

AIR KENYA (COAST). See COAST AIR

AIR KENYA AVIATION, LTD.: P.O. Box 30357, Wilson Airport, Nairobi, Kenya; Phone 254 (2) 501 601; Fax 254 (2) 602 951; <http://www.airkenya.com>; Code QP; Year Founded 1987. John Buckley revitalizes the authority of the charter carrier **Wilkenair, Ltd.** (defunct in 1971) at Nairobi's Wilson Airport in 1986, renaming his concern

Air Kenya Aviation, Ltd. The country's largest passenger airline, **Sunbird Aviation, Ltd.**, is taken over in November 1987 and merged. A new corporate image, emphasizing the marketing name Airkenya, is introduced by Managing Director Buckley, complete with a sunbird logo.

In addition to its charter frequencies, the company, in 1988–1989, offers scheduled flights throughout Kenya and to the neighboring nations of Zaire, Somalia, and Sudan.

In 1990, the decision is taken by the government to allow Air Kenya to leave the international scene and to offer third-level scheduled services exclusively, with a fleet that now includes 5 Beech 58 Barons, 2 Douglas DC-3s, and 3 de Havilland Canada DHC-6-300 Twin Otters.

A third DC-3 and a Fokker F.27-200 (previously operated by **Kenya Airways, Ltd.**) arrive early in 1991. Daily "Coastflite" service is inaugurated in June between Nairobi and Mombasa, with most flights provided by the Fokker. In November, the government authorizes the small company to compete over domestic routes with **Kenya Airways, Ltd.**

In competition with the flag carrier, twice-daily weekday scheduled "Coastflite" service is inaugurated by the F.27-200 in December from Nairobi to Mombasa and to Kisumu.

The fleet is altered in 1992 as 1 Baron is retired and 1 DC-3 is damaged beyond repair in a hard landing at the Mara. These are replaced by another Twin Otter, 2 Piper PA-31-310 Navajos, and 1 Pentavia P-68B.

An F.27-400 is leased from **Schreiner Airways, N.V.** of the Netherlands and is placed on the Nairobi–Mombasa trunk line. Meanwhile, the original F.27-200 is chartered during the second half of the year to the UN for 18 months. Supplemented by a Shorts 360-300, the aircraft conducts cargo flights back and forth from Nairobi and Mombasa to Mogadishu.

Flights continue in 1993–1994 with 1 DHC-6-200, 6 DHC-6-300s, 1 F.27-200, 2 DC-3s, and 1 F.27-400 leased from **Schreiner Airways, N.V.** of the Netherlands. When the Dutch Fokker is returned early in the former year, it is replaced with a pair of Shorts 360-300s, including that employed on the UN service.

Operations continue apace in 1995–1996. During these years, Managing Director John Buckley and Chief Pilot Dino Bisleti begin to search for a DC-3 replacement. The investigation of possibilities leads them to visit **Tyrolean Airways, A.G.**, where the de Havilland Canada DHC-7 is tested. Two of the Canadian turboprops, first flown by **Atlantic Southeast Airlines**, are ordered at year's end, along with two Cessna 208 Caravan Is.

Meanwhile, a subsidiary, Regional Air Service, Ltd. is established at Arusha, Tanzania, to offer Piper T1040 tourist flights to destinations within that nation. Under the direction of General Manager/Chief Pilot Iris McCallum, the sister airline offers daily flights to Kilimanjaro, as well as to Manyara, Seronera, and Grumeti.

Enplanements during the latter year total 113,000.

Airline employment stands at 210 in 1997. During the first quarter, **Eagle Aviation, Ltd.** begins competing over the "Coastflite" route. The startling development forces Air Kenya Aviation to charter a DASH-7 from **Arkia Israel Airlines, Ltd.** and to revamp its corporate image. The makeover, which involves a new color scheme and uniforms, plus heavy advertising, is designed to emphasize the airline's schedule attributes. A Caravan I arrives in the early spring.

A DHC-7-102 is added in May and enters service on June 12. Arrival of the turboprop allows the company to retire its DC-3s, the first on June 21 and the second on September 1. A second DHC-7-102 arrives in October, followed by a second C-208 in November. Domestic destinations visited include Amboseli, Kiwayu, Lamu, Malindi, Masai Mara, Mombasa, Nanyuki, and Samburu.

Customer bookings for the year reach approximately 140,000.

The DHC-7s undertake twice-daily return services in 1998 between Nairobi and Mombasa. Working with a number of tourist agencies and tour providers, the airline continues to emphasize a heavy scheduled of vacation flights to East African game parks. Masai Mara is the most popular tourist destination, to which Air Kenya operates twice daily. Additionally, coach class service is provided five times a week from Nairobi to Kilimanjaro.

Late in the year, the DC-3s, which had been retired the previous year, are both brought briefly back into charter service prior to their departure to South Africa, where they had been sold to a private vintage aircraft concern. Enplanements exceed 155,000.

Regional Air Service, Ltd., early in 1999, introduces a new service from Arusha to Mwanza, on the shores of Lake Victoria.

Enplanements for the year reach 155,000.

During the summer of 2000, a baby DeBrazza monkey is transported to Mombasa at the request of the Kenya Wildlife Services; it is one of the few of this endangered species remaining in Kenya.

In Operation Smile, the carrier provides lift for dentists and surgeons, sponsored by Colgate Palmolive, who are flown from Nairobi to points around the nation where free cleft palate and hare lip corrective surgeries are performed.

New offices are opened in Mombasa on September 10 while, later in the month, the airline flies the Indian National Cricket Team when it visits Nairobi to participate in the Four Nations Cricket Tournament.

AIR KILROE, LTD.: Hangar 4, Western Maintenance Area, Manchester International Airport, Manchester, England, M90 5PR, United Kingdom; Phone 44 (161) 436-2055; Fax 44 (161) 436-2541; Code 9R; Year Founded 1978. Air Kilroe, Ltd. is organized at Manchester Airport in 1978 as a wholly owned subsidiary of the Kilroe Group, chaired by Timothy Kilroe. Passenger and freight charters are undertaken from Manchester Airport for the next 15 years. The company becomes an associate of the Irish airline **Aer Arann, Ltd.** Enplanements in 1990 total 27,000.

In 1991, the 34-employee carrier of Managing Director Brian Hetherington seeks permission to offer scheduled services linking the airline's base with Southampton and Teesside. Passenger boardings total 31,000.

The fleet in 1992 includes 1 leased British Aerospace BAe Jetstream 31, 1 Super Jetstream 31, and 1 Beech Super King Air 200. Scheduled flights begin and bookings reach 40,000.

The fleet in 1993 comprises 1 Piper PA-31-350 Navajo Chieftain, 3 BAe Jetstream 31s, 1 Partenavia P-68B, and 2 Beech Super King Air 200s. The workforce totals 40 and scheduled service is inaugurated between Manchester and Cardiff on September 13. Later in the fall, a code-sharing agreement is signed with the Scottish carrier **Business Air, Ltd.** Under its provisions, Air Kilroe inaugurates daily roundtrip feeder services linking the Welsh capital with Aberdeen, Dundee, and Inverness.

The 31-employee airline continues operations largely without change in 1994–1998. On March 1 of the latter year, a Jetstream 31 is leased to **Aer Arann, Ltd.**, which needs the turboprop for the initiation of a new service to and from Donegal International Airport.

Flight are maintained in 1999–2000.

AIR KIRBATI: P.O. Box 274, Bonriki, Tarawa, Kirbati; Phone 686 28405; Fax 686 28216; Code AKIR; Year Founded 1996. Air Kirbati is set up on Tarawa in 1996 to offer scheduled services around the national atolls. Capt. Beuitera Tabokai is operations manager and offers revenue flights with 1 each Harbin Y-12 and CASA C-212-200 Aviocar.

AIR KORYO: Sunnan Airport, Sunnan District, P'yongyang, North Korea; Phone 850 (2) 37917; Fax 850 (2) 4571; Code JS; Year Founded 1950. In early 1950, the Soviet Union and the P'yongyang government of the Democratic Republic of Korea form the Soviet-North Korean Airline (SOKAO) as a joint-venture company. Equipped with Tashkent-built Lisunov Li-2s (license-built Douglas DC-3s), the carrier links the North Korean capital with Vladivostok via Ch'ongjin and Peking, as well as Chita via the Manchurian towns of Mukden, Harbin, Tsitsihar, and Hailar.

These routes barely begin before North Korea invades South Korea on June 25, beginning a conflict that requires the company to stand down until 1953. When flights resume, a new connection to Moscow is offered via Chita.

The North Koreans acquire full control of SOKAO on September 21, 1955 and the Ministry of Communications, under which it is placed, re-names the carrier UKAMPS. Scheduled international services are maintained to the Soviet Union and the People's Republic of China. The capital is linked with the domestic cities of Ch'ongjin, Kaesong, Kimch'aek (Songjin), Sinuiju, and Wonsan. Haijoo, Kanggye, Hamhung, and Hyesan are added to the route network.

During the early 1970s, the company is again relabeled; with additional duties, it becomes **CAAK (Chosonminhang Korean Airways)** (Civil Aviation Administration of the Democratic People's Republic of Korea). The first jet type introduced is a Tupolev Tu-154B received in 1975; by 1978, the fleet's jetliner component comprises two Tupolev Tu-154Bs, with a third delivered in 1979.

By the early 1980s, CAAK is equipped with a fleet of 3 Tu-154Bs, 2 Ilyushin Il-62s, 4 Il-18s, 3 Il-14s, and 7 Antonov An-24s. Weekly An-24 flights are made to Beijing and Khabarovsk while the Tu-154Bs undertake services from P'yongyang to Moscow via Irkutsk and Novosibirsk.

A chartered Il-62M, with 23 passengers, crashes in the mountainous region of Fouta Djallon near Labé, Guinea, on July 1, 1983; there are no survivors.

The Ilyushin jetliners replace Tu-154Bs on routes to Prague and East Berlin. The fleet in 1988 is reported to include 5 Il-62s, 4 Tu-154Bs, and 10 turboprops.

During the remainder of the decade, the fleet is upgraded. One An-24, 2 Il-18s, 3 Il-14s, and 2 Il-62s are deleted and replaced by 4 Il-62Ms, 3 Il-76TDs, 1 Tu-154B, and 2 Tu-134Bs. Berlin and Sofia are added to the route network and charter services are undertaken to destinations in Asia, Africa, and Europe.

In 1992, the carrier is reformed and given a corporate makeover, complete with its present name. Based at Sunnan Airport, Director General Kim Yo Ung's airline in 1993 employs 2,500 workers. No figures are available for 1994.

The fleet in 1995-1996 includes 8 An-24s, 4 Il-18s, 4 Il-62Ms, 3 Il-76MDs, 2 Tu-134Bs, and 4 Tu-154Bs. Regularly scheduled destinations visited from P'yongyang include Bangkok, Beijing, Berlin, Ch'ongjin, Hamhung, Kaesong, Kanggye, Khabarovsk, Kilchu, Moscow, Sinuiju, and Sofia.

A new scheduled route to Macau is opened in the fall of the latter year. The company simultaneously joins IATA.

An arrangement is reached during August 1997 by **DHL Worldwide Express** with both **Air Koryo** and **China Northern Airlines Company, Ltd.** to provide all-cargo shipments between Beijing and P'yongyang, employing belly space aboard the airliners of those two companies.

At the same time, a separate freight agreement is reached with Air Koryo. Under its terms, the North Korean airline will employ an Antonov An-26 to fly trading documents and light machinery between Japan and Europe on behalf of DHL.

Also in August, an airline office is opened at Vladivostok as plans are initiated to operate scheduled service between that Russian city and P'yongyang.

In mid-April 1998, the North Korean airline completes negotiations with **DHL Worldwide Express** for the lease of a Mil Mi-17-8P. The heavy-lift helicopter will be employed to run a daily all-cargo circuit between Yanji Airport in China, the Rajin-Sonbong free trade zone and the nuclear reactor construction site at Sinpo (both of which have no airstrip), and P'yongyang. Connections will be made at Yanji and P'yongyang with Air Koryo or **China Northern Airlines Company, Ltd.**

In early May, SAS Cargo, the freight division of **SAS (Scandinavian Airlines System)**, takes 50% of the capacity of a second Air Koryo An-26 leased by **DHL Worldwide Express**; the two carriers will offer joint services from Copenhagen to destinations along the Baltic coast.

Airline employment stands at 2,500 at the beginning of 1999. Scheduled service is maintained to Bangkok, Beijing, Berlin, Macau, Sofia, and Vladivostok.

Twice weekly Tu-154B roundtrips commence on April 5, 2000 between P'yongyang and Shenyang, China. Tu-154B charters are

launched on April 29 between P'yongyang and Nagoya. With service from P'yongyang to Macau having been reduced from thrice weekly to weekly, the carrier, on April 12, seeks permission to launch non-scheduled roundtrips to Hong Kong.

As a result of June discussions between the leaders of North and South Korea, a goodwill gesture by both governments permits four days of reunions between separated families in mid-August. A company Tu-154B with a group of 100 North Korean family members aboard, kicks off the exchange on August 15 when it flies to Seoul from P'yongyang. The plane returns with 100 South Korean family members.

Plans to initiate charter flights from P'yongyang to Hong Kong are put on hold on August 8 when local officials prohibit flights into the former British colony, due to insurance and noise considerations, of Air Koryo's Tu-154Bs.

AIR KOSOVA: Pristina, Kosovo, Yugoslavia; Year Founded 2000.

Air Kosova is founded at Geneva by Milazim Berisha in June 2000 for the specific purpose of returning Kosovar refugees to their homeland from all over Europe.

Four-times-per-week roundtrips from Geneva and Zurich to Pristina are begun on July 3 with a Fokker 50 wet-leased from **Newair Air Service, A.S.** Another Newair Fokker 50 is acquired on July 21.

Nonstop roundtrips from Pristina to Munich are launched on August 15.

The contract with **Newair Air Service, A.S.** is unhappily concluded on September 28 when Newair, which has not received its leasing fees, withdraws its aircraft. Flights to Switzerland are suspended. Mr. Berisha seeks a new carrier and new support.

On October 2, a \$15-million bid is accepted from **Transaer International, Ltd.** for a new 18-month contract. The upgraded arrangement, which includes training and management consultancy services, will be paid for by the U.S.-based Foundation for the Reconstruction of Kosovo.

Just 18 days later, on October 20, **Transaer International, Ltd.** suspends operations and goes into liquidation. At this point, Air Kosova's future is uncertain.

AIR KRUISE, LTD.: United Kingdom (1946-1958).

Ex-RAF Wing Commander Hugh Kennard founds Air Kruise, Ltd. at Lympne in the summer of 1946 to offer pleasure and charter flights with a Miles M.38 Messenger 2A, a Percival Q.6, and a Percival Proctor 1. In February 1947, an Airspeed AS.65 Consul is acquired and, while the other aircraft handle local pleasure and charter flights, the Consul provides on-demand service to Belgium and French coastal towns. These services continue in 1948 and 1949.

The first de Havilland DH 89A is acquired in April 1950; christened *Nicole*, it initiates thrice-daily Lympne-Le Touquet flights on July 15. This service proves so popular as to require the purchase of another Dragon Rapide. In June 1953, the company takes over operation of Ramsgate Airport; however, its three DH 89As fly scheduled operations to the Continent from Lympne under the marketing name **Trans-Channel Airways, Ltd.** British Aviation Services acquires the company late in the year, but allows it to continue flying under its own name and upgrades its fleet by the transfer of two Douglas DC-3s.

During 1954, scheduled services are inaugurated not only to the trans-Channel towns, but to Basel, Birmingham, and Zurich as well. On the year, a total of 25,000 passengers are carried. Three more Douglas transports are received in 1955 and are used to step up inclusive-tour work.

In addition to the transport of refugees after the Hungarian Revolution in 1956, Air Kruise, Ltd., by its flights throughout Europe, becomes the U.K.'s most significant inclusive-tour operator. During the year, three Bristol 170 Wayfarers are transferred to the carrier from **Silver City Airways, Ltd.** On September 22, a DH 89A is lost at Gerdes El Adol.

Company operations continue during 1957 and 1958; however, during the latter year, aircraft are gradually shifted to **Silver City Airways, Ltd.** and at the end of the summer tour season, Air Kruise, Ltd. is amalgamated into the larger carrier.

AIR L.A.: United States (1979–1996). MentalMed Systems Founder/COO Wayne Schoenfeld sells his interest in his firm in July 1979 and, together with Kenneth Dickey, acquires the nonscheduled operator **Pacific Airways, Inc.** in September. The company is now incorporated as Air L.A. and begins to offer both “quasi-scheduled” air tour flights and direct intercity charter services to both Las Vegas and the Grand Canyon.

Former American Express Corporation executive William Wolf buys into the company in 1980 and operations continue apace in 1981.

President Schoenfeld’s Cessna 402Cs commence scheduled passenger and cargo commuter services on May 1, 1982 and services, over the original nonscheduled network, continue without change in 1983–1984.

By 1985, the fleet comprises 2 Cessna 402Cs, 3 Cessna 414s, and 4 Piper PA-31-310 Navajos. These are withdrawn in 1987–1988 and replaced by 2 Cessna 421s and 2 PA-31-350 Navajo Chieftains. Orders are placed for 3 Embraer EMB-110P Bandeirantes. In October of the latter year, thrice-daily nonstop service begins from Bermuda Dunes Airport at Palm Desert, California, to Los Angeles (LAX).

Airline employment is increased by 73.3% in 1989 to 52. The 421s are removed as the fleet is enlarged with another Chieftain and the first two Bandeirantes. Services are inaugurated to Las Vegas from Palm Springs and Bullhead City. Enplanements climb 66.7% to 50,000.

On May 13, 1990, the company merges with a wholly owned subsidiary of Delaware-based 900 Entertainment Network; the latter changes its name to Air L.A. and assumes Air L.A.’s business. The flight equipment is altered, yet again; all of the previous aircraft are replaced by two British Aerospace BAe Jetstream 31s. In December, the company is merged with **Air Resorts Airlines**, but is allowed to operate separately.

An Embraer EMB-110P1 is acquired in 1991 as scheduled regional services are inaugurated, beginning in May, to the Mexican cities of Tijuana, Ensenada, and San Felipe from Los Angeles, Ontario, and Burbank. Two more Bandeirantes are purchased in late 1992.

Airline employment at the beginning of 1993 stands at 50. In February, the carrier becomes a code-sharing partner of **AeroMexico (2) (Aerovias de Mexico, S.A. de C.V.)**. Two Fairchild Metro IIIs replace the EMB-110s on the Mexican routes. Traffic figures for the year are not released; it is learned that financial losses are suffered: \$1.7 million (operating) and \$1.6 million (net).

Chairman Hershey Moss and President Wayne Schoenfeld place orders on January 24, 1994 for 10 Metro 23s at a cost of \$3.8 million per unit. Service is started from Bakersfield, Ontario, and San Diego to the Mexican city of San Felipe. The first Metro 23 is received at the end of March and, by May 1, the carrier offers 84 weekly international flights from southern California to Tijuana, Mexicali, Ensenada, and San Felipe. It also operates 63 weekly flights from Los Angeles to Monterey and from Bakersfield to Ontario and San Diego.

The company “goes public” during May. The conversion is not overly successful and the carrier will lose money ever after.

After receiving the third Metro 23, Air L.A. becomes a marketing partner of **Mexicana Airlines, S.A. de C.V.** Under terms of the arrangement between the two airlines, the American regional, in July, begins connecting services to Phoenix in addition to the California and Mexican cities already served. Tucson joins the route network later in the summer.

In the fall, Chairman/CEO Schoenfeld signs a letter of intent to purchase **Capitol Air**, a subsidiary of Idaho-based **Empire Airlines**, which had been established at Minneapolis (MSP) in 1993.

Passenger boardings total 34,796 and revenues reach \$900,542. Expenses increase and for a pretax loss of \$4.1 million and a net loss of \$3.9 million.

The fleet at the beginning of 1995 includes 6 Metroliners.

Just after New Year’s, the acquisition of **Capitol Air** is completed. The acquisition is a stock transaction with Chairman Schoenfeld paying Empire with 800,000 common shares of Air L.A. stock.

Employing a Metroliner transferred from California, scheduled services between Minneapolis and Chicago (MDW) begin on January 30.

Although route authority is received for services to Milwaukee, Madison, Fargo, Bismarck, Omaha, and Des Moines, these are not immediately started.

Although the enlarged airline soldiers on over two fronts, it loses \$8.82 million this year.

At the beginning of 1996, Air L.A. is in debt by \$3 million. In March, a letter of intent for sale is signed with Conquest Industries and Co., parent of Texas-based **Conquest Airlines**. The deal is canceled in early April, but concluded, for \$6 million and debt assumption, on June 20.

AIR LA SARRA, LTD. See **QUEBECAIR, LTD.**

AIR LABRADOR, LTD.: Box 310, Goose Bay, Labrador A1A 1S0, Canada; Phone (709) 753-1240; Fax (709) 753-7787; http://www.airlabrador.com; Code WJ; Year Founded 1983. Gander-based **Newfoundland Airways, Ltd.**, together with the FBO Labrador Aviation Services, Ltd., is purchased in 1983 by Provincial Investments, Inc. owner Roger W. Pike and is renamed. The company base is transferred to Goose Bay where Mr. Pike becomes chairman/CEO, with W. G. Pike as executive vice president and B.L. Pike as director.

Floatplane charters continue and, in 1985, a new hangar is constructed at the carrier’s base. There, a Transport Canada Maintenance facility is established, one of only three in the province.

Service is maintained over the next 12 years during which time scheduled flights throughout Newfoundland and Labrador are introduced, while charters are continued. Captain Harold G. Oake, a noted flyer who has served as chief pilot and operations manager, becomes vice president-operations in 1990.

Operations continue in 1991–1995, during which years the company becomes a Canadian Partner affiliate of **Canadian Airlines International**. A year after his 1995 retirement, on December 5, 1996, 56-year-old Capt. Oake dies.

In 1997, Chairman Pike’s fleet includes 4 de Havilland Canada DHC-6-300 Twin Otters, 3 Shorts 330s (1 employed only for freight), and 2 DHC-8s.

Destinations visited include Black Tickle, Cartwright, Charlottetown, Davis Inlet, Deer Lake, Fox Harbour, Goose Bay, Hopedale, Makkovik, Mary’s Harbour, Nain, Port Hope, Simpson, Postville, Rigolet, St. Anthony, St. John’s, and Wabush.

A new CS6.5-million Beech 1900D enters service as fleet flagship on May 1, the same day a new nonstop return service is introduced from St. John’s to St. Anthony. Simultaneously, new early-morning roundtrips commence from Goose Bay to Deer Lake and St. John’s, along with new evening service with a second flight from Wabush, Goose Bay, and St. John’s.

In a special May 4 Goose Bay ceremony, the carrier’s new Beech flagship is christened *Captain Harold Oake*.

Flights continue apace during the remainder of the year and throughout 1998.

On February 1, 1999, the company enters into a major marketing and code-sharing agreement with **InterCanadian Airlines, Ltd.** Under terms of the arrangement, the company inaugurates an enhanced schedule of weekday Canadian Partner flights: four-times-a-day roundtrips between St. John’s and Goose Bay; daily service from Goose Bay to Deer Lake and twice-daily departures from Deer Lake to Goose Bay; twice-daily roundtrips from St. John’s to St. Anthony and from St. Anthony to Goose Bay; daily roundtrips between St. John’s and Wabush and Deer Lake, between Deer Lake and Wabush, between Deer Lake and Blanc-Sablon, between Blanc-Sablon and St. John’s, and between Blanc-Sablon and Goose Bay.

Flights continue apace during the remainder of the year, during which the last Shorts 330 and a DHC-8 are retired as an additional Beech 1900D arrives.

The company is not immediately impacted by the January 2000 acquisition of **Canadian Airlines, Ltd.** by **Air Canada, Ltd.**, except that it becomes, at least indirectly, an affiliate of both.

Beech 1900D dual designator service with the two majors begins on May 23 from Quebec City to Moncton via Charlo and Miramichi.

The northern New Brunswick schedule is altered on October 15 to better assist business customers; the three principal destinations visited continue to include Quebec City, Miramichi, and Charlo.

AIR LANGUEDOC, S.A. See **TAT FRENCH REGIONAL AIRLINES, S.A.**

AIR LANKA, LTD.: Sri Lanka (1979–1999). To succeed **Air Ceylon, Ltd.** (founded in 1949), which had ceased trading at government request on March 31, 1978, and to spur tourism, President J. R. Jayawardenne specifically orders the creation of a national airline. With seven-year tax-free status, the carrier is formed at Colombo on January 10, 1979 by combining the assets of **Sri Lanka Airways, Ltd.** and **Sri Lanka International Airways, Ltd.**, which had been formed the previous January and had begun operations in April.

Principal owners are the government (60%), two national banks and the Ceylon Shipping Corp. (40%), with initial capitalization set at \$15.7 million. Captain S. Rakkhita Wikramanayake is named chairman/managing director under a management contract signed with **Singapore Airlines, Ltd.** for which he had previously flown. International flight services from Colombo to Bangkok and Singapore begin on September 1 with two leased Singapore Airlines Boeing 707-312 Stratoliners.

Ceylon Airways, Ltd., which had continued flying its Trident 1E and Avro 748 until the new entity was ready for launch, now quietly fades away under liquidation. After a two-year cessation of European services from Sri Lanka, flights to the major cities of London, Paris, Frankfurt, and Zurich are now resumed.

A B-737-212, also leased from **Singapore Airlines, Ltd.**, arrives in the spring of 1980, allowing regional services to begin in April from Colombo–Bombay and Madras. In June, the company begins to share revenues with **Indian Airlines Corporation (IAC)** on a route from Colombo to Madras, Tiruchirappally, Bombay, Trivandrum, and Delhi. A route is opened to Hong Kong by the Stratoliners, which will be maintained there by HAECO.

An initial Lockheed L-1011-50 is received in the fall and launches flights Colombo–Paris (ORY) on November 2. An annual \$34- to \$40-million injection of government funding begins at year's end and the airline, labeling itself "A Touch of Paradise," begins an intensive marketing campaign aimed at attracting tourists to Sri Lanka, "Paradise Island."

During 1981–1982, 2 L-1011-500s and 1 L-1011-100, the latter leased for a year from **Air Canada, Ltd.**, are placed into service on routes to Amsterdam, Copenhagen, London, Rome, Vienna, Zurich, Abu Dhabi, Bahrain, Dhahran, Doha, Dubai, Kuwait, Muscat, Hong Kong, Bangkok, Kuala Lumpur, Tokyo, Singapore, Karachi, Trivandrum, and Tiruchirappalli. Enplanements in the latter year are 590,000.

Expansion of the Colombo technical base is begun in 1983 with a projected 1985 completion date. The fleet now includes 5 Lockheeds and 1 Boeing 737-200. Arrangements are completed for the purchase of 2 Boeing 747-238Bs from **Qantas Airways (Pty.), Ltd.** A total of 598,000 travelers are carried on the year; freight jumps 14.9% to 45.42 million FTKs.

Airline employment reaches 2,602 in 1984. A major cost-cutting campaign is undertaken and the first Australian B-747-238B is delivered on June 8; christened *King Vijaya*, it is placed on the European routes to Zurich, Paris, and London, as well as services to Dubai, Muscat, Karachi, and Singapore. The Singapore destination is suspended late in the year.

Freight traffic soars 34.7% to 60.23 million FTKs and passenger boardings jump 10.7% to 681,000.

The workforce grows 13.8% in 1985 to 3,798. In cooperation with **Malaysian Airline System (MAS)** under a marketing agreement signed in February, joint service is inaugurated in April between Colombo and Kuala Lumpur; the second ex-Qantas B-737-238B is delivered on October 23 and christened *King Tissa*. Singapore service is resumed, but the addition of the second Jumbojet creates an over-

capacity problem that is solved by leasing three TriStars to **British Airways, Ltd. (2)** for a three-year period.

The technical base at Colombo is completed and features a \$13.5-million, Canadian-built hangar large enough for three wide-bodied aircraft. The airline's catering and duty-free services receive special recognition and awards; however, ethnic violence increases dramatically.

Cargo is up 9.3% to 65.66 million FTKs and passenger bookings rise 2.5% to 698,614.

Employment grows 1.7% in 1986 to 3,861. At the end of March, the two Jumbojets are taken out of service and leased, the *King Vijaya* to **Qantas Airways (Pty.), Ltd.** for 20 months and the *King Tissa* to **EgyptAir, S.A.E.** for a year.

On May 3, Tamil separatists plant a bomb in the cargo hold of Flight 101, the L-1011-50, which explodes while 128 passengers are boarding on the ramp at Colombo Airport (18 dead, 40-plus wounded). The blast destroys all of the glass in the front of the airport terminal building and photos of the disaster, the airline's first fatal incident, are a public relations disaster. The government orders all Tamils employed at nonexecutive levels placed on paid leave, which severely impacts the carrier's engineering department. A customs agent will later be arrested as the perpetrator.

While being loaded for a May 5 service from Colombo to Male, the L-1011 TriStar 100 *City of Colombo* is damaged. While repairs are underway, a bomb, hidden in the ship's "Fly Away Kit" explodes, destroying the Lockheed. There are no fatalities.

The B-747-238B *King Tissa*, leased to **EgyptAir, S.A.E.**, becomes available and is reintegrated as the search for TriStar replacements begins. Route and other expansion plans are placed on hold as the government initiates an official presidential investigation into corruption and inefficiency. Having been made the scapegoat for the line's bad luck, Chairman Wikramanayake resigns on November 26 and, on the financial front, the company loses the tax-free status granted at start-up.

Customer boardings decline 12.5% to 611,434 and freight drops 20.1% to 52.48 million FTKs. An operating loss of \$3.8 million is suffered.

The payroll inclines upward again in 1987 by 3.5% to 3,626. The two leased Jumbojets come back in and are sold back to **Qantas Airways (Pty.), Ltd.** Having been found wanting by the previous year's government investigation, Air Lanka receives a new board of directors in January; Lakshman de Mel succeeds Wickramanayake, but after November's national elections, he is followed in December by John Fleming.

Passenger boardings dip an additional 3.8% to 588,440 and cargo is off 11% to 46.73 million FTKs. Revenues advance 3.4% to \$132 million and costs drop 1.8% to \$129 million. The operating profit is \$2.99 million.

The personnel boost is smaller in 1988, but still 0.6% higher, to 3,648. New service is extended to Riyadh. A long-term equipment program is planned that will bring in 10 new jetliners to replace the Lockheeds.

Customer bookings rebound, climbing 19.4% to 702,606, as freight increases 29% to 59.93 million FTKs.

The workforce is decreased by 9.3% in 1989 to 3,308 and the fleet now includes 2 L-1011-500s, 1 each L-1011-50/100 and B-737-2A6A. In May, a code-sharing agreement is signed with **Gulf Air, Ltd.** covering joint operations to Bahrain and Muscat. The contract of CEO John Fleming is not renewed when it expires on June 30. Another new chairman/managing director, Dunstan Jayawardena, is named and he receives a mandate from President Ranasingho Premadasa to make the airline succeed or shut it down.

Passenger boardings ascend 6% to 744,494 and freight moves upward 22.2% to 73.22 million FTKs. Income slightly exceeds costs and an operating profit of \$3.3 million is generated—the first annual profit ever achieved.

Company employment inches upward by 0.6% in 1990 to 3,572 as Chairman Jayawardena's fleet is enhanced through the addition of a third L-1011-500, leased from **Royal Jordanian Airlines**. The new unit is employed to inaugurate services to Australia in the spring—35 frequencies to Sydney and Melbourne.

Revenue pooling begins with **Pakistan International Airlines Corporation (PIA)** during July on routes from Colombo to Karachi, Karachi to Bombay, and Male to Colombo.

Customer bookings rise 19.7% to 891,791 and cargo swells 24.5% to 91.19 million FTKs. Revenues advance 52.6% to \$209.9 million and with expenses low, operating income swells to \$11.26 million and net profit reaches \$7.2 million.

The payroll is cut 7.6% in **1991** to 3,300. The fleet is unchanged since 1989, although orders are outstanding for 2 Airbus Industrie A320-231s and 5 A340-311s. A Swede, Erkki Mandelin, is appointed vice president of engineering and maintenance.

Traffic moves ahead as passenger boardings inch up 0.7% to 897,802 and freight jumps 8.2% to 98.7 million FTKs. Income exceeds expenses and there are profits: \$12.3 million (operating) and \$7.7 million (net).

The employee population is increased by 12.8% in **1992** to 4,229 and the fleet now includes 7 Lockheeds and 2 Boeings. Two more TriStars are leased from **British Airways, Ltd. (2)** in August. Brian Coombes is appointed CEO in November.

Customer bookings increase 17.3% to 1,053,189 while cargo advances 11.3% to 109.85 million FTKs. Revenues ascend 20.3% to \$289.5 million and expenses rise 26.1% to \$287.9 million; the operating profit is cut to \$1.64 million and there is a \$4.4-million net loss.

In **1993**, the workforce of Chairman Attygalle is cut by 3.3% to 4,091. The first of two A320-231s arrives in January and enters service in February; it is followed by the second in April. During the summer, the lone remaining B-737-200, employed on regional routes, is withdrawn and **Royal Jordan Airline's** Lockheed is returned.

The route structure is now rationalized and markets dropped are Berlin, Munich, Vienna, Brussels, Sydney, Melbourne, and Jakarta. Destinations visited from Colombo include Abu Dhabi, Amsterdam, Bahrain, Bangkok, Bombay, Delhi, Dharan, Dubai, Frankfurt, Fukuoka, Hong Kong, Jeddah, Karachi, Kuala Lumpur, Kuwait, London, Madras, Male, Muscat, Paris, Riyadh, Rome, Rumjatar, Singapore, Tiruchirappalli, Tokyo, Trivandrum, and Zurich.

Partial privatization begins and, in November, code-sharing and joint operations begin with **Middle East Airlines, S.A.L. (2)** on a route from Colombo to Beirut.

Passenger boardings climb 5.1% to 999,585 while freight declines 4.9% to 104.43 million FTKs. Revenues fall 8.5% to \$264.9 million and with costs under control, an operating surplus of \$13.7 million is generated. Net gain reaches \$5.4 million.

The employee population grows a strong 8% in **1994** to 4,417. On August 19, following lengthy negotiations with the manufacturer and the completion of arrangements with a consortium of international banks, the company becomes the first in Asia to take delivery of an A340, a Dash-311. The World Bank criticizes the acquisition as extravagant and the orders for two more of the aircraft beyond the original three are cancelled. The premier A340-311 enters service on September 25 on the routes from Colombo to Amsterdam, Paris, Hong Kong, and Tokyo.

For the year, overall customer bookings ascend 7.4% to 1,073,489 while cargo recovers, up 5.3% to 109.95 million FTKs. Revenues rise 2.5% to \$271.4 million and permit profits of \$24.07 million (operating) and \$7.24 million (net).

Another 28 employees join the company in **1995**. The recovery from depression being enjoyed by the world airline industry continues to make its way, at least partially, to Sri Lanka. Meanwhile, in January, the government announces airline privatization plans.

Passenger boardings increase by 8.4% to 1,163,586 while freight swells 42% to 156.16 million FTKs. Operating revenues advance by 7.3% to \$291.15 million and expenses are up by 2.1% to \$252.55 million. Although operating income climbs to \$38.6 million, net gain falls to \$2.02 million.

Airline employment stands at 4,000 in **1996** and the fleet now includes 3 A340-311s, 2 each A320-211s and Lockheed L-1011-500s, and 1 each L-1011-1 and L-1011-100.

In April, the company enters into a code-sharing arrangement with **British Midland Airways, Ltd.** covering flights from Colombo via London (LHR) to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

Customer bookings inch up 1.7% to 1,183,283 and 159.4 million freight FTKs are operated, a 2% increase. Operating income slides to \$285.5 million, but costs allow a \$28.1-million operating gain and a \$2.9-million loss.

The workforce swells 24.1% to 4,965 during **1997**.

For the third time in two weeks, a near-midair collision over India occurs on January 11.

A company A320-211 on approach to Bombay from Trivandrum is mistakenly authorized by an air traffic controller to land at that city's airport at the same time he has granted permission to land to a **Kuwait Airways Corporation** B-747-269BC; a collision is avoided by several hundred feet.

The government, later in the year, makes plans to sell up to 40% of the carrier early in 1998.

Passenger boardings rise 4.8% to 1,239,613 while cargo does twice as well, climbing 9.6% to 174.24 million FTKs.

On March 30, **1998**, the available 40% stake in Air Lanka, Ltd. is purchased by **Emirates Airlines, Ltd.** for \$70 million. Under terms of the equity sale, the government of Sri Lanka will hold 51% majority control and the remaining 9% is distributed among the airline's employees.

The Arab carrier's funding passes to Air Lanka, Ltd. in two tranches, beginning with \$45 million up front on signing day. Management of the carrier passes to Emirates under a 10-year contract when the arrangement is finalized in May.

On April 1, the carrier orders 6 Airbus Industrie A330-200s with which to replace its aging fleet of L-1011s and the 2 A320-211s. The former, to be powered by \$150-million worth of Rolls Royce Trent 700 engines, are scheduled for delivery beginning in October 1999. Plans are made to begin flying to points in Africa, Australia, and New Zealand and to increase frequencies to Europe.

Customer bookings fall 6.7% to 570,000 while freight traffic is down 9.3% to 77.73 million FTKs.

It is announced on January 27, **1999** that, after heavy (albeit undisclosed) losses in previous years, the company earned a \$23.3-million net profit in 1998.

An announcement concerning the first major service enhancement in some time is made on May 14. Employing the first of the new long-haul Airbus jetliners to be delivered in October, the company will, on November 12, launch twice-weekly roundtrip service from Colombo to Stockholm via Dubai. Connections will be provided to the Maldives, Sydney, Singapore, Bangkok, and Hong Kong. From December 5, the frequency will be increased to thrice weekly.

In early May, arrangements are completed with Airbus Industrie for the seven-year lease of a pair of A340-312s originally chartered to **Gulf Air Company**.

The first aircraft, wearing the new flying peacock logo of the airline, is delivered on June 13, on which day the company is renamed **Sri Lankan Airlines, Ltd.**

AIR LAOS, S.A.: Laos (1952-1961). With 30% ownership by **Air France** and 20% by **Societe Aigle Azur, S.A. (SAA)**, AL is formed as the principal airline during the fourth quarter of **1952**. Douglas DC-3s and a de Havilland Canada DHC-2 Beaver provided by SAA inaugurate services in December from the capital of Vientiane to Luang Prabang and four other district towns and villages. Fifteen additional local destinations are visited beginning in **1953** and it is during one of these services that a DC-3 crashes in the Laotian jungle on June 17 (29 dead).

The First Indochina War ends with the Geneva accords of July 21, **1954**. In Laos, however, civil war continues between the Communist Pathet Lao and pro-Western forces, led by General Phoumi Nosavan.

A DC-3, with 3 crew and 25 passengers, is lost near Luang Prabang on December 4; there are no survivors.

Even after SAA becomes a part of **Union Aeromaritime de Transport, S.A. (UAT)** in 1955, the autonomous Saigon-based French subsidiary **Aigle Azur Extreme Orient, S.A.** continues to support AL.

On March 14 a DC-3 must be written off following its failure to climb away from Phong Savanh, Laos; it is too badly damaged in the subsequent forced landing to be salvaged.

In 1956, the former **Trans World Airlines (TWA)** Boeing 307 Stratoliners *Apache* and *Navajo* are wet-leased to the Vientiane-based company, allowing it to reopen a route from the capital to Hong Kong via Da Nang, South Vietnam.

A Bristol 170 Mk. 31E is lost at Vientiane on November 30 under unknown circumstances.

The Laotian civil war intensifies during 1957–1958, with AL local services more or less suspended. On July 23 of the latter year, the Laotian ruler Prince Souvanna Phouma is forced to abdicate. Much of the air activity in the country is now covertly flown by the Nationalist Chinese airline **Civil Air Transport, Ltd.**, backed by the U.S. CIA. The war continues to escalate until May 1961, when a cease-fire, arranged by the U.S. government, returns Prince Souvanna Phouma to office. At this point, Air Laos, S.A. shuts its doors and is replaced by **Royal Air Laos, S.A.**

AIR LAURENTIAN, LTD. See **AIR SCHEFFERVILLE, LTD.**

AIR LEASE EGYPT, LTD. See **MISR OVERSEAS AIRWAYS, LTD.**

AIR LESOTHO (LESOTHO AIRWAYS CORPORATION): P.O. Box 861, Mejametalana Airport, Maseau, 100, Lesotho; Phone 266 312 453; Fax 266 310 126; Code QL; Year Founded 1982. The government of Lesotho alters the name of **Lesotho Airways, Ltd.** in January 1982. The workforce is increased by 3.8% to 135 and the fleet includes 3 de Havilland Canada DHC-6-300 Twin Otters, 1 Dornier Do-28, and 2 Britten-Norman BN-2 Islanders, which latter aircraft remain available for sale. Scheduled service is provided to points in Botswana, Mozambique, Swaziland, and the Republic of South Africa, in addition to 10 domestic destinations; charter, supply, and mail flights are laid on to some 15 remote additional airfields.

Passenger boardings jump 9.2% to 40,532. Revenues advance 5.9% to \$2.36 million while expenses jump 3.4% to \$2.5 million. As a result, there are losses: \$132,000 (operating) and \$90,000 (net).

Enplanements total 55,000 in 1983. Within two years, Managing Director J. A. B. Smit's traffic has increased by about 2,000 boardings annually.

Operations continue during 1984–1985 as the fleet grows to include 1 Fairchild Hiller FH-227, 3 de Havilland Canada DHC-6-300s, 1 Dornier Do-28, 2 Britten-Norman BN-2 Islanders, and 1 Dornier 228-200.

On July 13 of the latter year, a chartered DHC-6-300 that has lost engine power, makes an emergency landing at Mokhotlang. During the landing a wing is broken off and although there are no fatalities, the aircraft must be withdrawn.

The employee population in 1986 stands at approximately 75 and enplanements average some 50,000 per year. In March, Dornier 228-200 regional flights are started from Maseru to Johannesburg, Manzini, and Maputo.

Managing Director Smit resigns in early 1988 and the fleet is altered by the removal of the FH-227, which is replaced by a second of the German-made turboprops. The FH-227 is leased to **Air Botswana (Pty.), Ltd.** in April and, in May, Acting Managing Director Duke Moroosi gives up his position and returns to his previous post of operations manager. He is succeeded by Q. Molapo.

In April 1989, the governments of India and Lesotho sign an agreement under which **Air India** provides training for the carrier's flight deck crews and cabin attendants. During the first nine months of the year, enplanements total 47,378.

Michael MacDonough is named managing director in 1990 and the Dorniers are withdrawn and replaced by another DHC-6-300. The

FH-227 is sold in 1991 and the fleet in 1992 includes 1 F.27-600 and 2 DHC-6-300s.

Operations continue in 1993–1996. Domestic destinations visited during these years include Leba Keng, Lesobeng, Letete, Matebeng, Matsaile, Qacha's Nek, Semongkong, and Sehonghong. The company also flies to Manzini and, in cooperation with **South African Airways (Pty.), Ltd.**, to Johannesburg.

The company is privatized in September 1997 and an 80% stake is sold to South African-based **Rossair Executive Air Charter (Pty.), Ltd.** Frequencies are maintained until February 1999 when, after suffering huge financial losses, it is shut down.

AIR LIBAN (LIGNES AERIENNES LIBANAISES, S.A.L.): Lebanon (1945–1965). **Compagnie Generale de Transports (CGT)** is formed at Beirut late in 1945 with **Air France** as majority shareholder. Using French-made Junkers Ju-52/3ms, the company begins service in summer 1946 to several Mideast destinations. Although it retains a management contract, private interests buy out the French flag carrier's control in 1948. That year, monthly flights are undertaken from Beirut to Dakar and Lagos.

Operations continue without incident until July 25, 1950. On that date, a company Douglas DC-3 with 28 passengers accidentally crosses the border into Israeli territory, near the Sea of Galilee N of Rosh Pinna. The transport is intercepted by a patrolling Israeli Air Force Supermarine Spitfire, which opens fire. Bullets slam into the Douglas, killing the radio operator and a passenger. The plane is able to zigzag its way back across the border, forcing the IAF fighter to break off its pursuit. Government officials will claim that the flight was 3 mi. N of the border in Lebanese territory when it was assaulted.

CGT is renamed **Lignes Aeriennes Libanaises (Air Liban)** in 1951 and its fleet and route network are upgraded by the addition of several Sud-Est SE-161 Languedocs. The addition of Douglas DC-4s in 1954 allows the introduction of scheduled services to West Africa as well as a new line from Beirut to Paris, via Rome.

Toward decade's end, the carrier is reequipped with DC-6s, including a DC-6B purchased before its delivery to **Trans-Caribbean Airways**. In September 1959, Air Liban refuses a \$10-million purchase offer from **Pan American World Airways (1).**

A chartered Avro 685 York C.1 with four crew fails its takeoff from Tehran on May 27, 1960, and makes a forced landing; although the aircraft must be written off, there are no fatalities.

In 1962, Sheikh Najib Alamuddin begins campaigning for the amalgamation of all Lebanese airlines into a single national carrier. In March 1963, Air Liban enters into a joint agreement with **Lebanese International Airlines, S.A.L.** and **Middle East Airlines, S.A.L. (1).** With **Air France** retaining a 20% interest, the associates operate under joint schedules and merge the operations of their aircraft. Air Liban is fully subsumed by 1965 and the amalgamated carrier continues operations as **Middle East Airlines, S.A.L. (2).**

AIR LIBERIA (LIBERIAN NATIONAL AIRLINES): Liberia (1974–1990). Under the management guidance of **Hughes Airwest**, Liberian National Airlines (also known as Air Liberia) acquires and merges with **Ducor Air Transport/Datco Airlines** in 1974. The fleet of 2 Fokker F.27s, 2 DC-3s, 3 Britten-Norman BN-2 Islanders, 3 Cessna 334s, 1 Cessna 185, 1 DHC-2 Beaver, and 1 Piper PA-34 Seneca commence service over the predecessor's domestic routes while inaugurating the airline's first international flights to Freetown and Abidjan. Enplanements total 11,800.

Ticketing services are expanded in 1975 into neighboring countries and additional new personnel receive training.

While on its takeoff roll from Robertsfield, Liberia, on April 19, a DC-3, with 25 passengers, suffers a flat tire, which causes it to veer off the runway, losing its main landing gear and coming to rest in a field; there are no serious injuries.

A fleet standardization program results in the disposal of the F.27s, DC-3s, Cessna 334s, the Cessna 185, the DHC-2, and the Piper Seneca.

Lack of capacity, in turn, forces the passenger boarding total to drop to 5,200.

The association with **Hughes Airwest** is severed in 1976 and a new three-year contract for management services is signed with **British Caledonian Airways, Ltd.** in March. Three Britten-Norman BN-2A Trislanders join the fleet while additional aircraft are evaluated. The employee populations stands at 129 and passenger traffic soars 67.5% to 15,822. Freight is also up by 9% to 22,000 FTKs.

Between 1977 and 1978, President/General Manager Leonard J. Crosbie of BCAL has a fleet comprising 1 Hawker Siddeley HS-748, 2 Trislanders, and 3 Islanders, supported by a workforce of 122. Services are maintained to Greenville, Zwedru, and Harper.

Scheduled international service is abandoned in 1979-1989 in favor of passenger and cargo charters and the maintenance of domestic services. At home, the route network grows to include 12 destinations and the fleet is realigned to comprise 1 BN-2A, 3 BN-2As, 1 Cessna 402, 2 Cessna 337s, and 2 CASA C-212s.

A chartered HS 748-2A, with 3 crew and 6 passengers, suffers an engine failure on its climb away from Khartoum on April 16, 1983; while attempting to return, the plane crashes 4 km. S of the town (8 dead).

Enplanements average some 65,000 per year and airline employment remains around 200. The world economic situation bring staggering losses. In 1990, the airline stops flying.

AIR LIBERTE (COMPAGNIE AIR LIBERTE, S.A.): 67 Rue de Monthlery, Rungis, 94533, Rungis Cedex, France; Phone 33 (1) 49 79 23 33; Fax 33 (1) 49 79 89 34; <http://www.air-liberte.fr>; Code VD; Year Founded 1987. Air Liberte, S.A. is organized by "Group A" in July 1987 to offer charter and inclusive-tour flights to holiday destinations in southern Europe and the Mediterranean. Shareholding is divided between the insurance concern GMF and the tour operators Nouvelles Frontieres, Go Voyage, and Club Aquarius.

The flamboyant Lotfi Belhassine is named chairman and president. After acquiring a leased Airbus Industrie A300B4-622R, flights are launched in April 1988 from the base at Paris (ORY) to Saint-Denis de la Reunion, Port-de-France, and Pointe-à-Pitre.

The fleet is expanded in 1989 to comprise the A300B4-622R, 1 leased A310-324, and 5 chartered McDonnell Douglas MD-83s. Enplanements for the year total 527,600.

Airline employment stands at 465 in 1990 as a sixth MD-83 and an second A300B4-622R arrives. The associate company **Air Liberte Tunisie, S.A.** is formed and while orders are placed for two replacements for itself, the French carrier subleases two MD-83s to the new Tunisian airline. Air Liberte's passenger boardings shoot up 32% to 696,600

In March 1991, the parent company, Club Aquarius, is taken over by the French holiday group Club Mediterranee and its air charter subsidiary, **Minerve, S.A.** The two requested MD-83s are received under lease, as the French government grants authority for the carrier to initiate scheduled services in June from Paris to Rome and Montreal.

In August, a management contract is signed with **Sierra Leone National Airways, Ltd.** Under terms of the agreement, the French carrier will pay off \$20 million in debt incurred under the previous Sierra management of **Royal Jordanian Airlines** executives in order to allow the company to operate to London and a number of European capitals. Employing an Airbus A310-324 chartered from **Air Liberte**, weekly service is inaugurated by SLNA to Paris on October 26; the frequency becomes twice weekly on December 20.

In 1992, a new scheduled service is introduced to Montreal by the A310-324. Later in the year, an MD-83 is subleased to **Air Aruba**. During the fall, the French courts reverse an attempt to downsize the carrier's workforce. The workers will receive no salary increases the following year and will, in fact, take reductions.

Airline employment in 1993 stands at 600 and the fleet now includes two A300B4-622Rs, 1 A310-324, and 8 MD-83s, 2 of which remain chartered to **Air Liberte Tunisie, S.A.** The Montreal frequency is maintained while flights are undertaken from Paris to Saint-Denis de la Reunion, Fort-de-France, and Pointe-à-Pitre. Enplanements for the year total 835,000 and fiscal losses are suffered: \$2 million (operating) and \$3.5 million (net).

The workforce is increased by 18.2% in 1994 to 650 and MD-83 scheduled service is inaugurated on January 29 from Paris (ORY) to Oporto and Lisbon. In April, orders are placed for 5 Fokker 70s.

Later in the year, scheduled flights are also initiated to London (LGW) and Bangkok. Plans are made to add a pair of Douglas DC-10-30 and merger discussions are held with **AOM French Airlines, S.A.** parent Credit Lyonnais. Late in the year, 3 DC-10-30s arrive under charter from **Finnair O/Y**.

While landing at Kajaani, Finland, after a November 3 service from Monastir, Tunisia, an MD-83, with 7 crew and 164 passengers, makes a hard landing, during which the left wing strikes the ground. Although the aircraft is damaged, no injuries are reported.

Also in November, a two-tier wage scale is introduced for newly hired pilots and cabin crew.

Passenger boardings jump 16.7% to 1 million and revenues accelerate 12.5% to \$180 million. Expenses are up 9.3% to \$177 million and, as a result, there are profits: \$3 million (operating) and \$2 million (net).

The number of employees grows by 32.3% in 1995 to 860. As a result of pressure from European Union officials for France to open Orly Airport, the company during the first week of January inaugurates return \$100-roundtrip service from that Paris facility to Toulouse. As part of the new service, the company unveils a new fixed-price annual tariff for frequent travelers.

Air Inter, S.A., which had previously flown the route as a monopoly, reacts with fares of \$49, which leads to a fare war, the first in French domestic history. Air Liberte Chairman/CEO Lotfi Belhassine files suit against the state competitor in the Paris Court and in the European Court of Justice charging predatory fare practices. **TAT European Airlines, S.A.** intensifies the price war when it begins flying the route in March.

A code-sharing compact is now signed with **Air France** under which the regional will fly replacement services with a newly delivered Fokker 100 and the first Fokker 70 when it enters service toward the end of April.

Not only does the company expand in France, but undertakes international growth as well. In late April, a \$32.6-million arrangement is concluded with **Finnair O/Y** under which the French line will lease all four of the major's Douglas DC-10-30s and inaugurate flights to Reunion Island in the Indian Ocean and the Caribbean during the upcoming holiday season. The first wide-body is received in mid-June, with two more following in October and November.

In September, a code-sharing agreement is signed with the French independent **Euralair, S.A.**; under its provisions, the two will jointly operate roundtrip service from Paris to Toulouse.

During the second week of October, the financial company Air Invest, S.A. is formed; the venture-capital concern has 10 equal partners, including the ILFC. The following week, Chairman/CEO Belhassine, with the backing of the new Air Invest, presents an unsolicited merger offer to competing **AOM French Airlines, S.A.** It is not accepted.

By the end of November, all four Fokker 70s are in **Air France** replacement service. In December, the company joins with **AOM French Airlines, S.A.** in cutting the return service fare between Paris (ORY) and Nice to \$138, a 50% reduction.

In the year to October 31, revenues total FFfr 1.7 billion and allow a net gain of FFfr 13 million (\$2.6 million). The latter amount will represent the last profit for some time.

Customer bookings accelerate 44.4% to 1,010,500 and a net \$2.5-million profit is posted.

The French domestic market is fully deregulated on January 1, 1996. During the first few months of the year, a total of 23 new routes will be

started by Air Liberte from Paris, as the airline shifts some of its operations from Orly Airport to Charles de Gaulle International Airport. A former **Euralair, S.A.** A310-221 is chartered in January from International Lease Finance Corporation (ILFC) for a year.

During January and February, five routes are launched from Nice—to Paris (ORY), Strasbourg, Lille, Toulouse, and Bordeaux. In March and April, flights begin from Paris (ORY) to Biarritz, Toulon, Pau, Perpignan, and Mulhouse. A B-737-210C is added to the fleet in April.

Route starts continue in May and early June, with frequencies added from Paris (ORY) to Lyon, Nantes, Brest, and Grenoble. The fourth **Finnair O/Y** DC-10-30 is received in early June.

The Credit Lyonnais subsidiary CDR, in something of a surprise move, dismisses Marc Rochet, chairman of rival **AOM French Airlines, S.A.** during the second week of June. He is succeeded by Euralair Group CEO Alexandre Couvellaire, who is given a mandate to conclude a merger with Air Liberte.

On July 14, the company launches a code-sharing agreement with AOM that also includes a variety of other partnership arrangements. The two independents begin to coordinate their programs, linking their frequent flyer programs and undertaking dual-designator frequencies over their domestic routes. They also coordinate schedules and long-haul operations to the French Caribbean.

The financially troubled company is placed into receivership on September 26 and its chartered Douglas wide-bodies are returned to Finland. Debts amounting to FFfr 650 million have been incurred since January, bringing total debt to FFfr 1.5 billion.

Given six months by the Creteil bankruptcy court (located at Orly where Air Liberte is based) to develop a workable reorganization plan, Chairman Belhassine promises to write a recovery program by the end of October, at which time \$120-million in fiscal year losses must be reported. At this point, 30 pilots are laid off and all pursers are downgraded to flight attendant status.

Following further exploration into the company's finances during the first week of October, the Creteil bankruptcy court determines that Air Liberte's fiscal situation is worse than was originally reported. Even though a number of unprofitable routes are now cut, the court announces that it must have outside acquisition bids by October 14 in order to avoid ordering the company liquidated.

Suitors for the stricken airline begin to emerge late in the week. With pressure to keep it in French hands and its unions seeking acquisition, **Air France** expresses interest. Under European Commission restrictions against acquisition of other carriers during the time of its \$4-billion state bailout, it appears unlikely that the independent will go to the major.

Other companies expressing an interest include **AOM French Airlines, S.A.**, which has been seeking a merger, along with **British Airways, Ltd. (2)**, **Virgin Atlantic Express, Ltd.**, **TAT European Airlines, S.A.**, and **Corsair, S.A.**, the in-house airline of France's largest tour operator, Nouvelles Frontieres. Seeking to protect the interest of its TAT subsidiary, BA CEO Robert Ayling complains to the European Commission that AOM should not be allowed to seek ownership as it, too, is up for sale as the result of restructuring plans announced in the wake of a 1995 state-aid package to its parent, Credit Lyonnais.

With **AOM French Airlines, S.A.** and **Air France** out of the picture, two airlines, Nouvelles Frontieres, and a group of private investors submit offerings for Air Liberte, S.A. to the Creteil court on October 14.

The weakest offering is made by an unnamed French pilot acting on behalf of a group of private investors; no details are provided. **Virgin Atlantic Express, Ltd.**'s offering, for which details are also not provided, is not, as company officials put it, "fully compliant with the court's requirements."

Nouvelles Frontieres notes that it has partners in the Rivaud Bank and **Royal Air Maroc, S.A.** who would be willing to take over Air Liberte (including its \$300-million debt) and make it profitable within 18 months. It would also make an offer to acquire **AOM French Airlines, S.A.** The two independents would be merged with its own in-house car-

rier, **Corsair, S.A.**, to create a major independent airline that could then compete with **Air France**.

Working together, **British Airways, Ltd. (2)** and **TAT European Airlines, S.A.** agree on a three-year plan for Air Liberte, S.A. TAT Chairman/CEO Marc Rochet is tasked to manage the offering on behalf of the British major.

In addition to an initial payment of \$5 million for AL's assets, the BA/TAT plan would essentially retain the airline's fleet and routes, concluding a code-sharing agreement for routes now flown in competition and pledging not to begin new routes that overlap. French management would be maintained, 1,250 employees would be hired, and the British would make a major capital investment. The company would be reformed into the new French carrier Societe Nouvelle Air Liberte, S.A.

During the last week of October, Banque Rivaud and Nouvelles Frontieres abandon their efforts to take over **Air Liberte, S.A.**; Rivaud throws its support behind **British Airways, Ltd. (2)**, with the two pledging to invest \$124 million in the ailing French independent. BA would hold 70% interest with the remaining 30% stake held by Rivaud. Meanwhile, **Virgin Atlantic Express, Ltd.** is joined by a number of unnamed investors in presenting an alternative to the French bankruptcy court handling the case; the court extends the deadline for its decision from October 30 to November 5.

Virgin Atlantic Express, Ltd. does not submit a bid and, on the fifth day of November, the Creteil court accepts the BA/Rivaud joint offering to acquire Air Liberte. Under terms of the agreement, which will become final on December 15, TAT Chairman/CEO Rochet will assume the same post at Air Liberte. He will be joined by other TAT officials, as well as BA Investment and Joint Ventures Department Head Warren Tucker. No immediate plans to merge the carriers are announced; however, schedules will be coordinated and flight operations will be streamlined. Air Liberte's recently suspended routes to Africa and Canada will not be restarted and those to Portugal and Tunisia are to be dropped.

Beginning on November 18, the two companies undertake revised and coordinated flight schedules, including code-sharing on the 18 daily flights they offer from Paris (ORY) to Toulouse, which is the only route over which they had directly competed. From the Paris hub, two more daily frequencies are initiated to Nice and Bordeaux.

Although the acquisition of the company is scheduled for completion on December 15, paperwork complexities will force a delay into the new year.

Enplanements for Air Liberte and its soon-to-be sister **TAT European Airlines, S.A.** total 4.5 million. A FFfr 1-billion (US\$181-million) loss is reported; the figure will later be adjusted to \$250 million.

On January 4, 1997, the Creteil court officially approves the **British Airways, Ltd. (2)** purchase of a 67% stake in Air Liberte, with the remainder held by Banque Rivaud. **TAT European Airlines, S.A.** Chairman Rochet is also confirmed as chairman of Air Liberte's board of directors. He, in turn, brings in a new management team, including several executives from **TAT European Airlines, S.A.** and others from outside the group. Rochet divides his time between the old and new carriers.

French government permission is simultaneously acquired by the British major to take over complete control and to integrate AL's operations into those of its other French franchise partner, **TAT European Airlines, S.A.**

The carrier emerges from bankruptcy on January 9 and, by February, has settled with its major domestic and overseas creditors, including ILFC. With FFfr 1.5 billion (\$274.2 million) in long-term debts, the carrier offers creditors either immediate cash payments of 20 cents on a dollar or 100% repayment spread over a decade. Two-thirds of the carrier's creditors choose the long-term payout.

TAT and Air Liberte, under a substantial code-sharing agreement signed at the end of March, begin to more deeply integrate their services as of April 1, the day on which the process of liberalization within the European civil aviation industry is completed. At this point, Chairman Rochet demands that the working conditions of TAT pilots be cut to the level of their Air Liberte opposite numbers.

It is also required that pilots from both lines perform to the European Union legal limits for flight and duty time. Believing this to be unsafe, flight crews from TAT and Air Liberte, with support from the European Cockpit Association, walk out on indefinite strike on April 9. Flight crews at other airlines facing similar difficulties offer support; on April 24–25, pilots at **TAP Air Portugal, S.A.** declare a 48-hour strike. The work stoppages will continue off and on for over a month.

The leases on all 4 of the **Finnair O/Y** DC-10-30s are extended; however, 1 aircraft is, on May 1, subchartered to **Garuda Indonesia** for 10 weeks for Hadj flights. The process of amalgamation continues throughout the spring, summer, and into the fall, with the combined carrier based at Rungis, near Paris (ORY). On July 1, the associate company **Air Liberte Tunisie, S.A.** is renamed **Nouvelair Tunisie, S.A.**

Plans are made to withdraw all B-737s and F28s, replacing them with Fokker 100s that are out on lease. On September 25, a code-sharing partnership agreement is reached with **Regional Airlines, S.A.** On October 1, the two carriers launch dual-designator services over seven domestic routes: Saint-Brieuc–Paris (ORY), Brest–Bordeaux, Metz–Bordeaux, Lille–Bordeaux, Toulouse–Lyon, and Marseilles–Lyon. The arrangement also provides Air Liberte passengers with seamless access to Spain, via the Regional Airlines mini-hub at Bordeaux.

A strategic agreement is signed on October 13 with **American Airlines**; 27 French cities are to be opened to AA passengers via Orly Airport as soon as a new France–U.S. bilateral air agreement is ratified. Late in the month, feeder pacts are entered into with **Air Toulouse International, S.A.**, **Flandre Air, S.A.**, and **Air Normandie, S.A.** These compacts, together with the **Regional Airlines, S.A.** arrangement, will assist the company to compete in the French market with the 3,000 weekly flights provided by **Air France**; 2,000 services will become quickly available.

Although legalization of the merger is not complete, the company trade name is no longer employed after November 1.

In December, the carrier opens a secondary hub at Bordeaux and prepares to inaugurate flights to Madrid, Barcelona, and Lisbon. Enplanements total 3.6 million. A \$125-million loss is reported on operating revenues of \$660 million.

Air Liberte, S.A. completes integration of **TAT European Airlines, S.A.** on March 15, 1998 and sets its sights on achieving a position as the nation's second largest domestic carrier behind **Air France**. A new homepage on the World Wide Web is unveiled.

Chairman Rochet continues to pursue a 27% cost reduction plan, which will be fully implemented by summer. Additionally, service to Canada, Asia, and Africa is withdrawn and plans are made to rationalize the fleet. All MD-83s and Fokker 100s will be replaced with advanced medium-range aircraft of a type to be determined.

In an effort to attract passengers who usually travel by train, the airline, on March 17, introduces a \$34 one-way domestic companion fare; the sole condition of purchase is that an additional ticket be purchased no earlier than 24 hours prior to departure.

Company pilots go on strike on July 1 to protest corporate plans to cut salaries and institute a two-tier wage structure. Flights are sporadic, with many cancellations.

Once the job action is resolved, service is resumed in an orderly fashion. Destinations visited include Annecy, Bordeaux, Brest, Brive, Carcassonne, Figari, Lyon, Marseilles, Metz/Nancy, Montpellier, Mulhouse, Nantes, Nice, Poitiers, Rodez, Strasbourg, Toulon, Toulouse, La Rochelle, Lille, Paris (ORY), Perpignan, and Tours.

Thrice-daily MD-83 return service is started on August 1 from Paris (ORY) to London (LHR); the flights replace those offered earlier by **British Airways, Ltd. (2)**.

On October 6, the company unveils its involvement in parent BA's multicolored tail program. The first scheme entitled "La Pyramide du Louvre" appears on an MD-83, while an F-100 bears "L'esprit Liberte."

With the beginning of the fall schedule, new routes are opened to Cork, Epinal, Fort de France, Pointe-à-Pitre, St. Denis de la Reunion, St. Lucia, and St. Martin.

American Airlines places its AA code on Air Liberte domestic flights on November 4. Passengers traveling on American to and from the U.S. are able to transfer at Paris (ORY) to Air Liberte's services to Bordeaux, Montpellier, Nice, Perpignan, Strasbourg, Toulon, and Toulouse.

A code-sharing arrangement is entered into with the new French regional **Air Open Sky, S.A.**, which begins scheduled operations in December. Employing the first of four Avions de Transport Regional ATR42-320s to be delivered, the company launches revenue flights from Brive to Paris (ORY) and from Metz to Marseilles and Nice.

At the end of the month, a franchise agreement is signed with **Flandre Air, S.A.**; under the accord, the BA affiliate will assume control over the 18-aircraft fleet and the routes of this code-sharing partner.

Flights continue in 1999. Seeking an improvement in general working conditions, as well as an extra holiday for pilots flying short- and medium-haul routes, the company's pilots stage a three-hour strike on August 20.

Although traffic and revenue figures are reported with those of **British Airways, Ltd. (2)**, it is widely understood that the company has lost almost \$38 million on revenues of approximately \$528 million.

Service between Paris (ORY) and Strasbourg ends on March 26, 2000.

Never having enjoyed French market success even after a £60 million investment, **British Airways, Ltd.**, negotiates during the first quarter to sell its 86% stake in the loss-making Air Liberte subsidiary. French unions protest the proposed sale with a one-day strike on April 21 that forces the carrier to cancel three-quarters of its 180 daily flights.

On May 5, BA sells its 86% stake for FFfr 457 million (£47 million) to Taitbout Antibes, B.V., a **Swissair, A.G.** affiliate that is owned by the French investment houses of Alpha Group and Marine Wendel. Taitbout is already joined with SAirGroup in the total ownership of **AOM French Airlines, S.A.** with the two also holding 66% of **Air Littoral, Ltd.** Plans are announced for a merger of the three into a single carrier that can offer domestic French competition for **Air France**.

For its part, BA requests that the "World Image" tailfin livery on Air Liberte's aircraft be removed, along with the "Speed Marque" (ribbon), as soon as possible. It also announces an end next March to the Air Liberte contract for service from Toulouse and Bordeaux to London (LGW).

While preparing for departure from Paris (CDG) to Madrid on May 25, a company MD-80 returning 154 Spanish football fans home from the European Cup Final, is involved in a runway incursion accident with a Streamline Aviation Shorts 360 freighter. Although no injuries are reported aboard the jetliner, its wing smashes into the cockpit of the turbo-prop, killing its copilot.

Work toward the merger of Air Liberte, AOM, and Air Littoral later in the year moves ahead in June, even in the face of stiff union resistance. AOM President Alexandre Couvelaire is tapped to head the new, but (as yet) unnamed entity within the framework of the "Qualifyer" group. Ownership plans are put into place for a new airline holding company, Participations Aeronautiques, to be held by SAirGroup (49%) and Taitbout Antibes, B.V. (51%).

At the end of July, SAirGroup President/CEO Philippe Bruggisser announces creation of a "Conseil de Surveillance," a revised management structure for the airlines that are about to be merged. Chaired by Alexandre Couvelaire, the body's executive management will be headed by Paul Reutlinger, current **Sabena (Belgian World Airlines, S.A.)** CEO, who will move to Paris to guide the fusion of the three into one, but will also become vice chair of the Belgian airline's board of directors.

Merger approval for creation of the new airline is sought from the European Commission and is granted on August 1. The process of creating a single French carrier comes unglued at month's end as SAirGroup CEO Bruggisser announces that not one, but two companies will be formed. One, comprised of elements of Air Liberte and Air Littoral, will be created at Nice and operate all aircraft up to the size of Fokker 70s. Meanwhile, AOM will be left as the second, intact entity at Paris (ORY) to operate all jetliners of 100 seats or more. The revised idea will be put to the French unions for approval, hopefully by October.

During late summer, arrangements are completed to lease 4 McDonnell Douglas MD-82s from **Safair (Pty.), Ltd.**, all of which will be in service by the end of the year.

On September 4, the carrier begins operating an MD-82 painted in the new "L'Esprit Liberte" color scheme, the livery chosen to replace on an interim-basis the BA-inspired paint previously worn.

Labor problems and integration concerns prove a significant complication CEO Reutlinger admits in a September 18 interview with *Aviation Daily*; completion of arrangements may not be completed for a year.

AIR LIBERTE TUNISIE, S.A.: Tunisia (1989–1996). With 60% shareholding held by the Tunisian government, ALT is formed at Tunis/Belvedere in November 1989 as a charter associate of the French holiday airline **Air Liberte, S.A.**

Under the chairmanship of Aziz Milad, General Manager Siaheddine Kastalli leases a pair of McDonnell Douglas MD-83s from Air Liberte in 1990 and assembles a workforce of 169 employees based at the resort of Monastir. Revenue operations begin on October 5 to seven European destinations: Birmingham, Brussels, Cagliari, London, Milan, Turin, and Vienna.

Flights continue apace in 1991 and, in 1992–1994, the fleet still includes 2 MD-83s leased from the parent. During the latter year, Chairman Aziz Milad oversees a workforce of 150. After a largely uneventful 1995, the company is renamed **Novelair Tunisie, S.A.** on July 1, 1996.

AIR LIFT ASSOCIATES: United States (1979–1990). John Hoffman forms a scheduled air taxi division of his Air Lift Associates at Raleigh-Durham Airport, Morrisville, North Carolina, in 1979 to offer scheduled daily passenger flights to Wilmington, Raleigh/Durham, and Rocky Mountain. Under the name **Air Lift Commuter**, Hoffman's pilots commence roundtrip revenue flights in the spring with 2 Piper PA-31-350 Navajo Chieftains.

Operations continue apace in the 1980s; airline employment in 1985–1986 stands at 15.

During its takeoff from Wilmington, North Carolina, on April 23, 1987, a Swearingen Metro freighter, with two crew, suffers an uncontained engine failure that causes the aircraft to crash into trees near the runway; both crewmen are killed and the plane is destroyed.

In 1988, the fleet is altered by the addition of 2 Beech King Air 90s and service is inaugurated to Newburn. The national recession begins to impact the carrier in 1989.

Economic hard times bring disaster for the small regional, which is forced to shut its doors in 1990.

AIR LIMOUSIN, S.A. (1). See **AIR ALPES, S.A.**

AIR LIMOUSIN, S.A. (2): France (1978–1989). The second Air Limousin is formed at Aeroport de Limoges-Bellegarde in September 1978; principal owner Joel Blais becomes chairman/managing director. Thirteen employees are hired during the fall and a fleet is assembled comprising 1 de Havilland Canada DHC-6 Twin Otter, 1 Beech 99, and 1 Cessna 401. Scheduled services are inaugurated on January 1, 1979 linking the company base at Limoges with Brive, Perigueux, and Bergerac.

During the next five years, destinations on the route network in southern and western France are added: Agen, Tulle, Ajaccio, Lyons, Nantes, and Nice, although Ajaccio is a summer-only stop. All of these communities are visited on behalf of **TAT (Touraine Air Transport, S.A.)**. The fleet is enhanced by the addition of 3 Nord 262s.

In 1986, managing director Blais adds 2 more Nord 262s and enplanements reach 64,904. Aurillac, Paris, and Marseilles join the route network in 1987; during the year, the Beech 99 is withdrawn and replaced by a Beech Super King Air 200. Another pair of Super King Air 200s join the fleet in 1988, but more important is the receipt of 2 SAAB SF340Bs, acquired for the airline by the local chamber of commerce.

Toulouse and Angers become company markets in early 1989 as Managing Director Blais radically changes his fleet. Gone is all of the

Beech equipment, replaced by 6 Fairchild Metro IIIs. All of this expansion and airliner acquisition proves fatally expensive in a recessionary economy. Following several failed rescue attempts, the carrier is forced into bankruptcy.

AIR LINCOLN: United States (1982). Linda Pendleton sets up Air Lincoln at Chicago (MDW) in the first quarter of 1982 to offer scheduled passenger and cargo services to Detroit (DDT) via Grand Rapids and Kalamazoo. Anticipating growth, orders are placed for six Piper T-1020s.

Employing two available Piper PA-31-350 Navajo Chieftains, the small regional inaugurates daily roundtrips on April 26, maintaining them only until October 18.

AIR LINES OF KUBAN (ALK KUBAN AIRLINES): Krasnodar Airport, Krasnodar, Southern Zone, 350026, Russia; Phone 7 (8612) 321 935; Fax 7 (8612) 321 935; Code GW; Year Founded 1932. Originally set up in 1932 as a division of Aeroflot Soviet Airlines, this carrier is partially privatized in 1992. Ownership is divided between the Southern Regional Management of Federal Aviation Service of the Russian Federation (51%) and ALK workers (49%). Ivan R. Babichev is director general and his mission of providing scheduled and charter passenger and cargo services throughout the Russian Federation and beyond continues.

By 2000, the largely short-haul fleet includes 10 Antonov An-24s, 6 An-26s, 1 Tupolev Tu-154M, 12 Yakelov Yak-42s, and 3 Let L-410s. Orders are outstanding for 35 Tu-204s.

Destinations visited include Adler/Sochi, Ekaterinburg, Gelendzik, Gyumri, Kazan, Kirovograd, Krasnodar, Mariupol, Mineralnye Vody, Moscow, Naberevnye Chelny, Nefteyugansk, Nizhnevartovsk, Norilsk, Odessa, Saratov, Surgut, Tashkent, Ufa, Volgograd, Voronezh, and Yerevan.

AIR LINK: United States (1981–1984). Founded at Fort Collins, Colorado, in January 1981, this new commuter entrant purchases **Fort Collins Flying Service**. With a workforce of 29 and a fleet comprising 2 Cessna 207s and 2 Piper PA-31-350 Navajo Chieftains, the company undertakes scheduled service to Denver on the basis of 14 weekday and 12 weekend flights. Late in the year, a Britten-Norman BN-2 Islander is purchased to meet traffic demands. Enplanements total 10,737.

Early in 1982, the Pipers are diverted to open a new route from Fort Collins to Craig via Steamboat Springs and Hayden. A Fairchild-Swearingen Metro II is acquired and employed during the summer to inaugurate return flights from Denver to Vernal, Utah.

Operations cease in 1984.

AIR LINK AIRLINE, S.A.: Brazil (1992–1995). Air Link is established by Roger Foster at Natal in 1992 to offer regional passenger and cargo services. A workforce of 20 is assembled and revenue flights commence with a fleet of 3 Fairchild Metro IIIs, 1 Avions de Transport Regional ATR42-300, and 5 Piper PA-31-310 Navajos.

A second ATR42-300 arrives in 1993 and operations continue in 1994. Operations cease in 1995.

AIR LINK INTERNATIONAL AIRWAYS: Air Link Building, Domestic Road, Pasay City, 1300, Philippines; Phone 632 833 3891; Fax 632 833 3891; Code DR; Year Founded 1983. This flight school is opened at Pasay City on October 10, 1983. To help bring in additional income, charter flights begin in the spring of 1984. A large maintenance service will also be started.

By 2000, the company employs 200. Flights, both educational and business, are operated with 2 Beech Travel Air 95s, 1 Beech B-80 Queen Air, and 1 Cessna 414.

AIR LINKS, LTD.: United Kingdom (1958–1965). Denis Martin registers Air Links, Ltd. as an airline company at London on April 21, 1958. With capitalization of £100, the company offers no services. In May

1959, a DC-3 is purchased from **Aer Lingus Irish Airlines**; refurbished, it is placed in revenue service on July 22. A variety of ad hoc charters are undertaken during the remainder of the year to such destinations as Dublin, Dusseldorf, Paris, Manchester, Pisa, and Jersey.

In 1960, the Douglas transport is leased by **Skyways Coach-Air, Ltd.** to fly some of its Lympe-Beauvais frequencies. At the same time, long distance charters are also undertaken, on behalf of **British European Airways Corporation (BEA)** from London to Dusseldorf, employing a DC-3 leased briefly from **Autair, Ltd.**

Early in 1961, an office is opened at Leeds Airport. Destinations for holiday charters this year increase; new offerings include Basel, Dinard, Le Havre, Le Touquet, Nice, and Vichy. A second DC-3 is purchased on July 4. Replacement flights are again undertaken for **Skyways Coach-Air, Ltd.**

Ad hoc and inclusive-tour flights continue in 1962 with Corfu added as a new destination. *Hecuba* and *Hector*, two Handley Page HP-81 Hermes 4s, are purchased from failed **Air Safaris, Ltd.** beginning in August. Formerly owned by the **British Overseas Airways Corporation (BOAC)**, one is employed for spare parts and the other is refurbished. A DC-3 is sold in October. The upgraded Hermes 4 *Hecuba* is delivered to the company base at London (LGW) on December 7 and is placed in service on December 21, flying a subcharter on behalf of **British United Airways, Ltd.** to Dusseldorf. It is the only existing Hermes 4 in flying condition.

Technical difficulties plague the Hermes 4 during January and February 1963 and the aircraft is not without fault until February 28, when it undertakes an Air Ministry contract flight to West Germany. The last DC-3 is sold to **Tyne Tees Airways, Ltd.** in April. Inclusive-tour services and ad hoc charters are again provided, often on behalf of other carriers. Enplanements for the year total 13,993.

On January 27, 1964, an ex-**British Overseas Airways Corporation (BOAC)** Canadair C-4 Argonaut is purchased from **Flying Enterprise, Ltd.**; refurbished, it is placed in service on April 28 on a charter to Ostend from London (LGW). During the year, the aircraft flies inclusive-tour operations while the Hermes 4 undertakes long-range charters to such destinations as Amsterdam, Manchester, Marseilles, Milan, and Brindisi.

Another C-4 Argonaut is purchased from the Royal Rhodesian Air Force (RRAF) and begins company service on August 15 with a charter flight to Algiers. Ministry of Defense contract flights to Gibraltar and Hanover are also flown. Two more RRAF Argonauts are acquired in July and August and added to the fleet. The final Hermes 4 revenue flight in airline history is completed on December 13, after which the aircraft is withdrawn and scrapped. Eighteen Southend-Amsterdam Argonaut charters are flown at year's end.

Two Bristol Britannia 300s are purchased in May and June 1965 and undergo overhaul. Meanwhile, the company's Argonauts launch the summer inclusive-tour season with new destinations of Bergen, Jersey, Malmo, Naples, Rome, and Malaga. The first Britannia enters service in July, flying a replacement service on behalf of **British United Airways, Ltd.** On August 1, the company officially changes its name to **Trans-globe Airways, Ltd.**

AIR LITHUANIA, A.B. See **LIETUVA AIR COMPANY, A.B.**

AIR LITTORAL, S.A.: 417 Rue Samuel Morse Le Millenaire 2, F-34961 Montpellier Cedex 2, France; Phone (33-46) 720-6720; Fax (33-46) 764-1061; <http://www.airlittoral.com>; Code FU; Year Founded 1976. This regional carrier is formed at Montpellier-Frejorgues Airport in spring 1976 to offer scheduled international commuter services to points in southern France, Spain, and Italy. Employing a fleet of 4 Embraer EMB-110P2 Bandeirantes, the first of the Brazilian aircraft flown by a European operator, flights are inaugurated to Clermont-Ferrand and Nice.

Between 1977 and 1981, a domestic route network is built up linking Montpellier with Perpignan, Lyon, Nice, and Bordeaux and Lyon with Pau and Biarritz. International service is offered from Nice to Milan and

from Perpignan to Valencia. The fleet grows to include 2 Nord 262s and 4 Embraer EMB-110P2s.

Passenger boardings in 1981 total 49,000.

In 1982-1983, as additional regional services are undertaken on behalf of **Air France**, enplanements rise to 60,000 in 1982 and 76,800 in 1983. Total revenues received during the latter year are FFfr 60 million. An additional EMB-110P2 is added to the fleet in 1984 as one Nord 262 is retired. Orders are placed for the Avions de Transport Regional ATR42.

Passenger bookings soar 28% to 98,300 and revenues accelerate to FFfr 62 million.

The first of two ordered ATR42-200s is delivered on November 13, 1985 and the carrier agrees to operate them on regional replacement service on behalf of **Air France**; the flights begin in January 1986. Chairman Robert Da Ros's fleet now also receives its first Embraer EMB-120 Brasilia. The route network now includes stops at Barcelona, Beziers, Biarritz, Bordeaux, Grenoble, Lyon, Marseilles, Milan, Montpellier, Nice, Paris, Pau, Pise, Perpignan, and Venice. While on final approach to Bordeaux on a December 21, 1987 service from Brussels, an EMB-120RT with 3 crew and 13 passengers hits a line of trees in the fog and crashes 1,500 m. short of the runway; there are no survivors.

Enplanements for the year total 314,000.

In 1988, the company is reformed and merged with **Compagnie Aérienne du Languedoc, S.A.**, also based at Montpellier; a 35% interest is taken by **KLM (Royal Dutch Airlines, N.V.)** and a third ATR42-200 is acquired.

Flight 440, a Swearingen Metro II with 2 crew and 2 passengers, fails its takeoff from Montluçon for a November 18 service to Paris (ORY) and crashes 600 m. beyond the end of the runway; there are no survivors.

In 1989, General Manager Dominique Leonardon increases his fleet, adding 7 Brasilias, 2 ATR42-200s, and 6 Fairchild Metro IIs. Requests are made to KLM for the lease of up to 6 Fokker 100s.

Passenger boardings jump 8.8% to 375,962 and freight traffic is ahead by 15.6% to 12.2 million FTKs.

Marc Dufour becomes general manager of the 160-employee firm in 1990 as M. Leonardon takes the post of corporate planning director; the fleet is altered once again. Gone are all but 1 each of the Nord and EMB-110s, replaced by 2 more EMB-120s and 3 Fokker 100s, the latter leased from **KLM (Royal Dutch Airlines, N.V.)**.

Plans are made for a new European regional network and on June 17, Air Littoral begins operating daily EMB-120 return flights on behalf of **KLM (Royal Dutch Airlines, N.V.)** from Marseilles, Toulouse, and Bordeaux to Amsterdam.

Also in June, daily flights are opened from Bordeaux and Lyon to Manchester, England. During late summer, **KLM (Royal Dutch Airlines, N.V.)** increases its shareholding to 49%. Customer bookings move ahead by 11.7% to 420,000 and revenues increase 34% to \$97 million.

The fleet in 1991 includes 5 leased ATR42-300s, 1 EMB-110P2, 9 chartered EMB-120 Brasilias, 3 leased Fokker 100s, 1 Nord 262A, and 5 leased Metro IIs. Orders are outstanding for 2 ATR72s. As one of the conditions of the **Air France** takeover of **UTA French Airlines, S.A.**, the flag carrier is forced to hand over several of its regional routes to other French carriers.

Routes awarded to the regional in January are Paris (CDG) to Amsterdam, Belfast, Dublin, Florence, Manchester, and Newcastle; Marseilles to Lisbon and Madrid; Montpellier to Brussels; Nice to Dublin and Manchester; and Toulouse to Oporto. Rights to fly from Montpellier to Madrid are also received.

Passenger boardings jump 14.3% to 480,000 and revenues total \$110 million. The operating loss is \$18 million.

Airline employment stands at 860 in 1992. The first ATR72-202 is added in the spring and three Metro IIs are restored. New services are started from London (STN) to Montpellier and Biarritz and from Bordeaux to Manchester. An austerity program is put in place by the **KLM Royal Dutch Airlines, N.V.** management team; however, due largely to the French line's inability to expand, the Dutch flag carrier sours on its ownership participation and elects to end its commitment.

Before that, however, KLM arranges for Air Littoral to fly additional wet-leased Fokker 100s on its French-speaking routes, four in March and six in October. On November 20, KLM sells its stock to a **Euralair, S.A.** subsidiary, Compagnie Francaise d'Investissements Aeronautiques (CIFA). It agrees, however, to continue its wet lease of the Fokkers for the next 17 months.

Customer bookings slide downward by 2.2% to 448,011 and cargo drops 22% to 98,000 FTKs. Revenues jump up to \$126 million and a net \$17.2-million loss is posted.

Airline employment in 1993 stands at 859, a 23.4% decline, as Marc Dufour becomes the carrier's new president. A second ATR72-202 is delivered in May. Services are maintained between London (STN) and Biarritz/Montpellier and from Bordeaux to Manchester. Two Canadair RJ100s are delivered in October and enter service in November. One provides replacement services for **Air France** throughout Europe while the other operates between Paris and Beziers on behalf of **Air Inter, S.A.**

Passenger boardings plunge another 18.3% to 365,945. Revenues fall to \$116.3 million and there is a \$516,000-net profit.

Orders are placed in January 1994 for 1 Fokker 100 and 5 Fokker 70s. Six Fokker 100s on wet lease from **KLM (Royal Dutch Airlines, N.V.)** are returned to the Dutch flag carrier on April 1. The first of four new Canadair CRJ200 Regional Jets ordered in the spring are placed into service during December.

The Fokker 100 ordered 14 months earlier is delivered in March 1995 along with the second Canadair CRJ; they are followed in April by the first Fokker 70. Two more Canadairs arrive by summer.

When the "Air France-Air Inter Express" program is established during the fall, Air Littoral becomes a code-sharing partner, agreeing in exchange for subsidy to repaint its aircraft and to fly medium- and low-density domestic or regional routes for the Air France Groupe. Painted in modified "Air France Express" livery, the new Fokker 70s are employed to inaugurate 30 weekly return frequencies between Paris and London (LCY). Orders are now placed for 15 ATR42-512s.

Control of the company is purchased by Air France Groupe during the first quarter of 1996. The first ATR42-512 is delivered in early May; it displays a novel white, red, yellow, and blue color scheme. A new hub is launched at Nice during the early summer. The first of 3 Canadair CRJ100ERs joins the fleet in July.

Just prior to the inauguration of the fall schedule in October, the subsidiary Air Littoral Riviera, S.A. is created to takeover the company's Nice operations. Service is launched by the new unit to Barcelona, Genoa, Naples, and Rome employing the parent's wet-leased aircraft.

Enplanements reach 1.6 million, 30% of which figure is transported on "Air France Express" flights. A \$1.5-million profit is reported on operating revenues of \$170 million.

The leased fleet in 1997 includes 3 CRJ100ERs, 2 ATR42-300s, 10 ATR42-512s, 9 CRJ200s, 8 EMB-120s, 6 Beech 1900Cs, 5 Fokker 70s, and 1 Fokker 100. During the first quarter, an order is signed for 7 more RJ200s, with options for a further 5.

On June 1, a strategic franchise alliance is entered into with **Deutsche Lufthansa, A.G.** Under terms of the agreement, the companies link their frequent flyer programs and undertake joint marketing, customer, and ground support services. The regional will represent the German major in 29 French markets while Lufthansa will become general sales agent for Air Littoral in Germany, Italy, and Spain. The partnership also contains financing provisions that could allow Lufthansa to acquire up to a 15% stake and a clause under which the Germans become committed to assisting in the completion of the Air Littoral hub at Nice.

Coming into Florence on July 30 after a service from Nice, Flight 701, an ATR42-512 with 3 crew and 14 passengers lands long, skids off the runway, and comes to rest with its nose against highway A11 (1 dead).

The strategic agreement with Lufthansa becomes a full code-sharing partnership in September. Meanwhile, Air Littoral's previous arrangement with **Air France** withers during the summer as the major comes to rely upon its new franchise partner **Brit Air, S.A.**, which, in effect, becomes the French flag carrier's regional feeder from Paris (CDG) in October.

Enplanements for the year total 1.06 million. On sales of FFfr 1.5 billion, the carrier suffers a FFfr 80-million (\$15-million) loss.

Flights continue apace in 1998. The fleet now includes 14 ATR42-512s, 6 Beech 1900s, 13 Canadairs, 2 Embraer EMB-120s, 5 Fokker 70s, and 1 Fokker 100.

Late in the third week of September, SAirGroup purchases a 44% state in Air Littoral, which will now become a member of the **Swissair, A.G.**-led "Qualiflyer" alliance. In order to comply with European Union regulations, the commuter's controlling shareholder, the MSC holding company, retains the majority interest and Air Littoral retains management control.

The acquisition is of concern to **Air France**, which has an important hub in Nice, where Air Littoral is now the second largest carrier. The code-share with **Deutsche Lufthansa, A.G.** between Nice and six German destinations is also threatened. Swissair requests that Air Littoral, which maintains management control, abandon its Lufthansa link, but the regional does not, at least initially, comply.

Passenger boardings total 1.07 million.

Airline employment at the beginning of 1999 stands at 1,365.

Enplanements for the year total 2.1 million and revenues of \$340 million are generated.

As 2000 begins, the company is 66% owned by Taitbout Antibes, B.V. and SAirGroup, parent of **Swissair, A.G.**

In a surprise January action, the Corsican Regional Assembly cancels its public service tender for a link from Ajaccio, Calvi, and Bastilla to Marseilles and Nice. The carrier's \$30.8-million bid to operate the services with ATRs and Fokker 100s is thus not considered and **Corse Mediterranee, S.A.** remains the sole operator on routes to the island from southern France.

Under a contract with Air Littoral, the British company **Atlantic Airlines, Ltd.** stations an L-188AF at Marseilles in February to operate nightly Air Littoral Express mail and parcel roundtrips to Paris (CDG).

A code-sharing agreement is signed with **Sabena Belgian World Airlines, S.A.** on February 18; under its terms, the major places its code on all Air Littoral services except those from Nice to Geneva and Marseilles to Zurich. Air Littoral will shortly begin dual-designator flights with Sabena on the Belgian carrier's flights from Brussels to both Marseilles and Nice.

On February 22, daily CRJ roundtrips are initiated between Marseilles and Venice.

In May, plans are announced to merge Air Littoral with **AOM French Airlines, Ltd.**, which had been taken over by the two investors the previous August, and **Air Liberte, S.A.** purchased from **British Airways, Ltd.** on May 5. The new combine will then compete with **Air France** over French domestic routes.

Work toward the merger of Air Liberte, AOM, and Air Littoral later in the year moves ahead in June, even in the face of stiff union resistance. AOM President Alexandre Couvelaire is tapped to head the new, but (as yet) unnamed entity within the framework of the "Qualiflyer" group. Ownership plans are put into place for a new airline holding company, Participations Aeronautiques, to be held by SAirGroup (49%) and Taitbout Antibes, B.V. (51%). Merger approval sought from the European Commission is granted on August 1.

At the end of July, SAirGroup President/CEO Philippe Bruggisser announces creation of a "Conseil de Surveillance," a revised management structure for the airlines that are about to be merged. Chaired by Alexandre Couvelaire, the body's executive management will be headed by Paul Reutlinger, current **Sabena (Belgian World Airlines, S.A.)** CEO, who will move to Paris to guide the fusion of the three into one, but will also become vice chair of the Belgian airline's board of directors.

Merger approval for creation of the new airline is sought from the European Commission and is granted on August 1. The process of creating a single French carrier comes unglued at month's end as SAirGroup CEO Bruggisser announces that not one, but two companies will be formed. One, comprised of elements of Air Liberte and Air Littoral, will be created at Nice and operate all aircraft up to the size of Fokker 70s.

Meanwhile, AOM will be left as the second entity, intact at Paris (ORY) to operate all jetliners of 100 seats or more. The revised idea is put to the French unions for approval, hopefully by October.

In a September 18 interview with *Aviation Daily*, CEO Reutlinger admits that labor problems and integration concerns prove a significant complication. Completion of arrangements may not be completed for a year.

AIR LITTORAL RIVIERA, S.A. See AIR LITTORAL, S.A.

AIR LIVONIA, LTD.: Tallinn, Estonia; Year Founded 1999. The only domestic scheduled airline in Estonia, Air Livonia is established at the capital city in the fall of 1999. Flights to local destinations commence and continue with a single brightly liveried PZL Mielec (license-built Antonov) An-28.

AIR LOGISTICS: 1915 Donald Ave., Fairbanks, Alaska 99706, United States; Phone (907) 452-1197; Fax (907) 452-4539; Year Founded 1973. Air Logistics and its **Air Logistics of Alaska (2)** subsidiary are established in April 1973 as the principal subsidiaries of Offshore Logistics' new Aviation Services Division to provide passenger and cargo charters in the Gulf of Mexico and in Alaska in support of the energy interest. The main corporate base is at Lafayette, Louisiana, while **Air Logistics of Alaska (2)** flies from bases at Anchorage and Fairbanks.

Operations continue apace throughout the 1970s, with Offshore's founder Burt H. Keenan continuing as chairman/president, with David O. Smith, vice president and general manager of the aerial section. On February 27, 1979, Air Logistics accepts delivery of the first fully certified IFR production model Sikorsky S-76 Spirit.

In 1980, a Heliflight Systems, Inc. facility is opened at Conroe, Texas. Airline employment reaches 1,268 in June 1981. With the onset of a decline in the Gulf oil industry sets in during 1982, the company begins to reduce its employment rolls and revise its fleet structure. Revenues for the year reach \$11 million.

In the next three years, the company fleet grows to include a large variety of both fixed- and rotary-wing aircraft. Among the former are 4 CASA C-212 Aviocars, plus Piper PA-31-350 Navajo Chieftains, PA-34 Senecas, Cessna 404 Titans, and Britten-Norman BN-2 Islanders. The 150-unit helicopter component includes 65 Bell 206B JetRangers, 25 Bell 206L LongRangers, 14 Bell 212s, 4 Bell 412s, 4 Bell 222s, 16 Sikorsky S-76 Spirits, 15 Aerospatiale AS-355s, AS-365 Dauphins, and Hughes 500s.

In 1983, the company acquires a one-quarter interest in Cairo-based **Petroleum Air Services**. Air Logistics personnel are sent to Egypt to provide operational, maintenance, and management assistance; its pilots and mechanics assist the partner's fleet of 11 Bell 212s, 6 Bell 206L LongRangers, 2 Bell 206B JetRangers, and 5 de Havilland Canada DHC-7s in their support of the oil industry offshore in the Gulf of Suez. Income falls to \$6 million.

In 1984, the company begins trading its stock on the NASDAQ exchange. A technical service contract is now signed with Mexico's **Heliservicio Campeche, S.A.** to provide maintenance and training assistance; 49% minority control will later be assumed.

During its takeoff from Whittier, Alaska, on June 14, a Bell 206L LongRanger with 3 passengers loses engine power and descends into marshy terrain. Although no one is injured, the craft must be written off.

During the year, a Bell 212 is leased to the **CAAC (Civil Aviation Administration of China)** and a minority interest is acquired in **Helicopteros Andes, S.A.** of Chile. The company suffers a \$35-million loss on the year.

Airline employment in January 1985 stands at 700 and the fleet now includes 50 Bell 206Bs, 35 Bell 206Ls, 14 Bell 212s, 4 Bell 412s, 3 Bell 205s, 2 Bell 214STs, 1 Sikorsky S-222, 23 S-76s, and 15 Aerospatiale TwinStars. The number of Aviocars is reduced to 2 and the fixed-wing component also includes 2 Cessna Titans, 2 Piper Navajos, and 2 Piper Cessna Conquests.

On January 5, 1986 an S-76A, with 1 pilot and 5 passengers, is rolled over by a high wind while deplaning passengers on a moving barge at Grand Isle BL73 in the Gulf of Mexico; three persons are killed and the others are injured, two seriously.

In the fall, a Bell 412 comes down in the same area injuring two passengers. Marine operations in Canada are discontinued and the decline in the oil industry brings reduced demand for company services in international offshore markets.

Parent Offshore Logistics completes a restructuring of all of its long-term loan and lease agreements on December 31, at which point James B. Clement becomes president/CEO. Gross revenues for the year total \$14.8 million.

In January 1987, the company averages 175 helicopters active in offshore support roles. Just after takeoff from an offshore oil platform at Matagorda 665 in the Gulf of Mexico on February 5, a Bell 206L LongRanger, with 1 pilot and 3 passengers, crashes into the sea; the helicopter sinks. A shrimp boat arrives in about 30-40 min. and all occupants of the helicopter are retrieved; three are badly injured and the pilot and one passenger later die.

The company now completes its reorganization and, in September, **Pumpkin Air** and its 32 helicopters is taken over at a purchase price of \$10.05 million. Gross revenues reach \$15.3 million and net gain is \$2.9 million following \$1.5 million in debt forgiveness occasioned by the reorganization.

In January 1988, Wimpey Marine, Ltd. in England is acquired for \$11.17 million in cash, installment notes, and assumption of liabilities; it will be renamed OLOG Marine, Ltd. The Offshore Logistics, Inc. parent is now incorporated in Delaware as successor to the company of the same name founded in April 1969.

As the Gulf support market improves slightly, the carrier announces a 7% rate increase on September 1. Late in the year, 3 MBB BO-105 helicopters are delivered and 100 aircraft are active in offshore support roles, a figure that dramatically represents the downturn in the oil business over the past year. The parent, Offshore Logistics, reports gross income of \$71.7 million for the year.

Airline employment in 1989 stands at 768. At the Paris Air Show, company officials discuss a joint venture operation with executives from Louisiana-based **Helikopter Services, A.S.** On July 11, while flying in clear weather approximately two miles offshore from Galveston, Texas, a company Bell 206L LongRanger collides midair with a **Petroleum Helicopters, Inc. (PHI)** Aerospatiale AS-350D; both pilots are killed in the crash.

A new Bell 412SP is delivered late in the month and, in August, a \$35-million order is placed by Offshore Logistics for 31 Bell 206L-3 LongRangers. In October, the Gulf Coast helicopter operation of **Omni-flight** is taken over at a cost of \$2.6 million in cash and assumption of lease obligations and other liabilities valued at \$3.8 million. The arrangement increases the Air Logistics fleet by 18 aircraft.

Howard Wolf is chairman in 1990, with J. B. Clement as president/CEO. With the energy business making a slight recovery, the average number of aircraft active in offshore support roles grows to 128. **HS Logistics, Inc.** is formed in February as a joint venture with **Helikopter Services, A.S. (HS)** of Norway; each company holds a 50% stake in the new operator, which is based at Lafayette, Louisiana. The new joint activity is announced during the Helicopter Association International's Heli Expo '90 at Dallas, Texas. In October, the parent's Marine Division is sold to Gulf Applied Technologies for \$17.2 million.

Under contract for the Shell Oil subsidiary Pecten, **HS Logistics** helicopters, a Bell 212 (leased from Air Logistics) and two Bell 214Bs (chartered from **Helikopter Services, A.S.**), commence offshore support flights in Papua New Guinea in February 1991. The former ship is American registered and the latter two Norwegian. At the same time, **HS Logistics** places an AS-332L Super Puma in service to two oil rigs in the Bay of Bengal under contract to Amoco.

On April 6, an **HS Logistics** Bell 212, leased from Air Logistics, begins flying offshore support missions for Pecten at Trinidad. Two more

Bell 212s chartered from the American **HS Logistics** partner are dispatched to Kuwait in July on a two-year medevac contract.

In February **1992**, Offshore Logistics General Manager Harris Albert announces that Air Logistics has redeemed the stock in **HS Logistics** held by **Helikopter Service, A.S.**, primarily because of work for the partnership's larger helicopters outside of the North Sea. The joint venture becomes a wholly owned subsidiary of the American firm. The ongoing contracts of **HS Logistics** in Brazil and Trinidad will be completed by Air Logistics machines under that company's direction.

In July, PPI-Seahawk Services is taken over by Offshore Logistics and through it, an agreement is signed with Noble Drilling Corporation for 50% shareholding in Seahawk. The new acquisition provides platform and production management services.

During the fall, the company is contracted to provide helicopter support services throughout the Gulf of Mexico on behalf of The Coastal Corporation and its subsidiary, ANR Pipeline Company. The new obligation is satisfied by the use of 8 Eurocopter AS-355 TwinStars, 1 Bell 412, and 1 Bell 206L-3 LongRanger.

The workforce totals 619 in **1993** and the fleet includes 162 aircraft, of which 150 are owned. In April-July, Offshore Logistics acquires the production management firm Grasso Corporation. Offshore Logistics now also holds minority interest in several other rotary-wing operators, including **Petroleum Air Service, Ltd.** of Egypt (25%), **Hemiscope International, S.A.** of Panama (49%), **Heliflight Services of Texas** (49%), and **Heliservicio Campeche S.A.** of Mexico (49%).

Operations continue apace in **1994**. On April 15, the oil industry production management firm Grasso Corp, in which Offshore Logistics already holds 27.5% shareholding, becomes a 100%-owned subsidiary.

L. Michael Rizk is general manager in **1995** and his fleet now includes 2 JetRangers, 3 LongRangers, 2 Bell 412s, and 2 MBB BO-105s.

Since 1990, the company has flown in excess of 600,000 flight hours with an accident rate of less than one accident per 100,000 flight hours annually. That record now takes a turn for the worse.

En route to Vermilion Bay, Louisiana, from an offshore platform on February 14, a Bell 206L LongRanger with five passengers crashes 12 miles out to sea in bad weather. Search and rescue efforts are hampered until February 19, at which point pieces of the helicopter and four bodies are recovered. The fifth occupant is not located.

While attempting to land on an offshore site on May 2, another LongRanger, with three passengers, crashes into the platform's edge and falls into the sea (one dead).

In June, Offshore Logistics parent president Clement becomes both group chairman and CEO.

The number of BO-105s is doubled in **1996**. Flights continue from five Louisiana bases: Venice, Fourchon, Houma, Patterson, and Intracoastal. When on the night of October 18-19 a semisubmersible breaks away from its tow, an S-76 crew helps to evacuate oil workers from an oil platform in the Gulf of Mexico.

On March 29, a letter of intent for purchase of up to a 49.9% stake in Redhill, Surrey, England-based **Bristow Helicopters, Ltd.** is signed by Offshore Logistics. The arrangement, concluded with an investment syndicate led by London's Morgan Grenfeld Development Capital, Ltd., will include a strategic alliance. Longtime Bristow Managing Director Bryan Collins, who is due to retire on April 1, agrees to stay on in an advisory capacity for the next two years. Until a new CEO is appointed, CFO Stephen Palframan is named deputy managing director.

While en route to an oil platform 90 nm offshore of Sabine Pass, Texas, in the Gulf of Mexico on June 21, a BO-105 with four passengers disappears. After a four-day search, the USCG finds the machine's wreckage in 134 ft. of water, 60 mi. SE of Galveston; there are no survivors.

With approval from the British Civil Aviation Authority, Offshore Logistics converts its letter into a purchase by mid-November. The cost is \$300 million cash, plus 1.37 million shares of stock and assumption of Bristow's \$145-million debt. In terms of annual revenues, the combined company is second in size only to Helikopter Service Group of Norway.

As a result of the Bristow transaction, Offshore Logistics in January **1997** issues \$87.5 million of 6% convertible subordinated notes due in 2003. A \$38-million, five-year contract is received from the U.S. government at month's end and, under its terms, the company on February 7 begins to provide flight services in support of the Mineral Management Service of the Department of Interior and Gulf of Mexico activities of the U.S. Coast Guard.

While en route on June 1 from the company base at Intracoastal City for Chenier, a Bell 206B JetRanger collides with a Houston Helicopters Bell 206L LongRanger, which is en route from Abbeville to an offshore oil platform in the Gulf of Mexico. Both helicopters plunge into the water and the Houston pilot is killed.

In September, company pilots vote to unionize. Despite a growing increase in the value of the company's stock, Offshore Chairman/CEO Clement resigns on October 9. He is succeeded by Louis F. Crane, a board member with 10-year's experience. Chief Financial Officer George Small is elected the group's new president.

Flights continue in **1998-1999**. On August 10 of the latter year, a BO-105S is badly damaged when it collides with an unmanned Bell 206 on an offshore platform in the Gulf of Mexico. The pilot and three passengers are not injured.

In July 2000, the company joins with Bristow Helicopters, Ltd. to form the joint venture United Helicopter Maintenance to offer technical services for rotary- and fixed-wing operators worldwide. UHM branches will be housed at the main bases of both companies.

AIR LOGISTICS OF ALASKA (1): United States (1980-1981). Leslie Bays establishes this small commuter at Bethel in **1980** to operate as an affiliate of **Wien Air Alaska**. Scheduled revenue flights are introduced linking the company base with local destinations. Unable to achieve economic viability, the airline closes its doors in **1981**.

AIR LOGISTICS OF ALASKA (2). See **AIR LOGISTICS**

AIR LOWVELD (PTY.), LTD.: South Africa (1970-1978). Created to provide commuter service in the Transvaal Province of South Africa, this concern launches scheduled flights from Johannesburg's Jan Smuts Airport on September 7, **1971**. Initial frequencies are offered with 2 Piper PA-31-350 Navajo Chieftains to Durban, Mkuze, and Nelspruit.

Two Beech 99As are acquired in the fall of **1972**, flying roundtrips from Durban to Nelspruit.

Although flights continue apace in **1973-1976**, the operator is unable to maintain its viability against steadily increasing expenses. In March **1978**, it is sold as part of a three-way merger with **Avna Airways (Pty.), Ltd.** and **Mafeking Aviation Services** that results in the creation of Johannesburg-based **Magnum Airlines (Pty.), Ltd.**

AIR LUTON, LTD.: Luton International Airport, 77 Colwell Rise, Luton, Bedfordshire, England, LU2 9TJ, United Kingdom; Phone 44 (0) 1582 72449; Fax 44 (0) 1582 72449; Year Founded 1986. Initially established by Brian W. Hewison as an aircraft maintenance concern in **1986**, Air Luton establishes an all-cargo charter division late in **1997**. The unit acquires 1 each Boeing 707-320C, Fokker F.27-500, and Shorts 330, which launch worldwide, U.K., and European revenue services on January 1, **1998** from bases at Luton, plus London (STN) and Ostend, in Belgium.

AIR LUXOR, S.A.: Luxor Plaza, Av. Da Republica No. 101, Lisbon, 1050-190, Portugal; Phone 21 (351) 781-6267; Fax 21 (351) 847-1328; <http://www.airluxor.com>; Code LXR; Year Founded 1983. Air Luxor is set up at Lisbon's airport in **1983** to offer executive passenger, air express, cargo, air taxi, and air ambulance service to domestic and regional destinations. By **1994**, Paulo Mirpuri is managing director and oversees the flights of 1 each Dassault Falcon 50, Falcon 20, Cessna 500 Citation I, Cessna 501 Citation I/SP, Learjet 35A Century 3, Eurocopter AS-335F Twinstar, SA-341 Gazelle, and SA-365 Dauphin.

Flights continue in **1995–1997**. During January **1998**, an Antonov An-12B is leased from **Air Sofia** for use as a mail plane. Loaded with 3 tons of mail, the Russian-made turboprop fails its takeoff from Lajes AFB in the Azores for Lisbon on February 4 and crashes 80 m from the runway. All seven crewmen are killed.

The company operates a route between Lisbon and Toronto employing a Lockheed L-1011-500 TriStar 1 leased from **TAP-Air Portugal, S.A.**, and on May 3 takes over the service and flies it on its own.

During the remainder of the decade, the TriStar also regularly operates long-haul charters to Montreal, Cancún, Punta Cana, Varadero, and, on occasion, to Miami. At the dawn of the new millennium, Mirpuri Group Chairman Dr. Paulo Mirpuri arranges to charter 4 Airbus Industrie A320-200s from GATX Capital Corporation.

The first A320-212 is received at the end of March **2000** and introduces the company's new corporate makeover and color scheme. At the start of April, it begins holiday flights from Lisbon to Faro and Madeira. Upon arrival, the other three join it in also flying to Palma and Las Palmas in the Spanish Canary Islands.

AIR MACAU COMPANY, LTD.: P.O. Box 1910, Av. Prada Grande 693, Tah Wah Building, 9-12 FL., Andar, Macau; Phone 853 396-6888; Fax 853 396-6866; <http://www.airmacau.com.mo>; Code NX; Year Founded 1994. Air Macau is set up at Andar, Macau, in September **1994** as the sole-designated carrier of the Portuguese colony for the next quarter century. Shareholding worth \$50 million in start-up capital is divided between China National Aviation Corporation, an arm of **CAAC (Civil Aviation Administration of China)** (51%), SEAP Servicos, Administracao e Participacoes, Limitada (25%), the colonial government (5%), and private investors. Wong Guixang is chairman with Dr. Leonel Miranda as president and David Young as CEO.

Displeased with limitations imposed by the company's executive committee, CEO Young resigns on January 9, **1995**, taking with him the company's new maintenance manager, Dick Cross, and the communications manager, Peter Marks. **Singapore Airlines, Ltd.** veteran Ng Kian Wah is appointed chief operating officer as Young's replacement.

During the spring, a workforce of 269 is recruited. Orders are placed with the International Lease Finance Corporation (ILFC) for the charter of two Airbus Industrie A320-232s. Painted in red-and-purple, the tail art depicts both a lotus flower and a dove of peace. The first jetliner is delivered in early November and is employed on November 9—the day the new Macau Airport opens—to inaugurate scheduled passenger and cargo services to Bangkok, Beijing, and Shanghai. The second Airbus is handed over in December, allowing frequencies to start to Kao-hsiung and Taipei.

During the year's last month, the new entrant hauls 22,398 passengers and 175,000 FTKs. Operating revenues total \$3.04 million, but start-up costs push expenses to \$8.04 million. The losses that follow (\$5 million operating and \$5 million net) are anticipated.

Airline employment grows by 50% in **1996** to 408 and two A321-131s are leased from ILFC, with one each arriving in January and April. Xiamen is visited for the first time in January. Code-sharing begins with **EVA Air, Ltd.** in August over a route from Macau to Kao-hsiung.

When Flight 662, an A320-232 from Macau, lands at Kaohsiung on October 30 more than 12 hours late, its passengers, in what is known as "passenger piracy," refuse to leave the aircraft and stage a 2-hour sit-in, during which they demand a roundtrip ticket good for another service between the two cities and a cash payout of \$280 per person. The carrier, unlike others caught in this situation, refuses to accommodate the demands and police eventually disperse the angry customers.

Enplanements for the first full year total 664,460 and 9 million FTKs are operated. Although revenues are \$84.15 million, costs total \$93.6 million. Consequently, there are losses: \$9.45 million (operating) and \$6.39 million (net).

The workforce is boosted 17.2% in **1997** to 478. The first of two ILFC-provided A321-131s to be delivered this year arrives from France during February; the second will arrive in April. New service begins to addi-

tional Chinese destinations in the spring, including Qingdao (March), Haikou, and Wuhan (May). Twice-weekly scheduled return flights to Manila commence on July 21 and, also during the summer, charters are inaugurated from Macau to Osaka (KIX) and plans are made to launch scheduled routes in 1998 to Singapore, Seoul, and Kuala Lumpur.

A total of 89 weekly frequencies are flown by the airline from Macau; 32 transport passengers from Taiwan and, indeed, 65% of all travelers arriving at Macau by air come from the Nationalist Chinese island. Toward the end of the year, an order is placed for an A320.

Customer bookings shoot up 48.9% to 989,623 while cargo traffic rises 35.1% to 12 million FTKs. Revenues advance 58.6% to \$133.32 million while costs jump 37.3% to \$127.67 million. The operating profit reaches \$5.65 million and there is a net gain of \$9.89 million.

An A320-231 arrives in April **1998** under a seven-year lease from ILFC. Plans are made to initiate flights by fall to additional Chinese communities, as well as Singapore, Phnom Penh, and Kuala Lumpur.

On October 11, a twice-weekly, one-way A320-232 charter service sponsored by five Ningbo companies is inaugurated from Ningbo to Kao-hsiung via Macau.

Passenger boardings jump 14.4% to 1.13 million, while freight traffic surges 30.5% to 15.69 million FTKs.

Airline employment is increased 6.9% in **1999** to 511. The first purchased A321-231 is delivered on February 5.

Under terms of a new code-sharing agreement, the carrier, together with **Myanmar Airways International, Ltd.**, launches thrice-weekly roundtrips between Macao and Yangon on March 13.

The fourth anniversary is celebrated in November. Twice-weekly A320-232 roundtrips begin on November 5 from Macau to Guilin, China. On November 15, twice-weekly roundtrips are initiated from Macao to Seoul.

A route is stretched to Kunming.

Customer bookings jump 12.5% to 1,274,000 while cargo rises 14.9% to 18.08 million FTKs. Revenues shoot up 15.4% to \$142.75 million, while costs dip 0.8% to \$138.52 million. The previous year's losses now become profits: \$4.23 million (operating) and \$6.42 million (net).

The company workforce is unchanged through the first half of **2000**.

AIR MADAGASCAR (SOCIETE NATIONALE MALGACHE DE TRANSPORTS AERIENS, S.A.): BP 437, 31 Ave. de l'Indépendance, Antananarivo 101, Madagascar; Phone 261 (2) 222 22; Fax 261 (2) 257 28; <http://www.air-mad.com>; Code MD; Year Founded 1947. Air Madagascar is formed by the French carrier **Compagnie de Transports Aériens Intercontinentaux, S.A. (TAI)** and **Air France** in March **1947** to provide feed to their existing routes through the island colony. **Air France** provides two Douglas DC-3s, which join a fleet of 6 de Havilland DH 89A Dragon Rapides in opening revenue flights from Antananarivo.

A decade later, in **1957**, TAI acquires a major financial stake in the carrier and a third DC-3 enters service in **1958**. Madagascar receives its independence from France on June 26, **1960**.

Air Madagascar is reorganized on January 1, **1961** by the government of the Malagasy Republic and TAI. Shareholding is divided between the Malagasy Republic (39%), TAI (20%), and **Air France** (44%).

The fleet now includes 4 DC-3s, 1 DC-4, 6 DH 89As, and 1 Broussard. Four months later, the company is renamed **Madair, S.A.**

An Antananarivo–Paris route, via Djibouti and Marseilles, is opened on October 20 with a Douglas DC-7C leased from the French partner.

Service is taken over or started to 58 domestic points on January 1, **1962**. The company is again reorganized on October 14, and the Madair name is dropped in favor of the current title.

On July 15, **1963**, a Douglas DC-3, with 4 crew and 8 passengers, crashes on takeoff from Farafangana; there are no survivors.

In August, former **Air Afrique, S.A.** Director Jacques Alexandre is appointed general manager. Arrangements are concluded with **Air France** during October for a new service to Paris. The TAI interest is assumed when that concern is merged to create **UAT French Airlines, S.A.**

Early in **1964**, orders are placed for a B-707 Stratoliner and several Piper and Beech lightplanes. In July, employing a wet-leased **Air France** B-707-328B in Air Madagascar livery, Air Madagascar inaugurates weekly Antananarivo to Paris service via Djibouti and Marseilles. The flights replace those previously offered by the chartered **Air France** DC-7C, which is returned.

During the first and second quarters of **1965**, 2 Beech 18s, 2 Piper PA-23 Aztecs, and 3 PA-28 Cherokees are added to the fleet. A second DC-4 arrives in November and joins the first in flying to the Comoro Islands.

The airline is again reorganized in **1966**, with shareholding again redistributed. Shareholding is divided between **Air France** (38.2%), the government of the Malagasy Republic (30.4%), and the Aeronautical Society of Madagascar (31.2%). A Nord 262 is delivered in August. Adrian Andriantisitohaina is now chairman and employs a workforce of 600.

The new Ivato Airport is opened at Antananarivo on June 23, **1967**. On July 1, DC-4 service is extended to Reunion.

A DC-4, with 3 crew and 39 passengers, touches down 720 m. after takeoff from Antananarivo's new aerodrome on July 19, becomes airborne again, and then, out of control, crashes; there are no survivors.

The remaining DC-4 is employed, beginning on August 6, to offer a weekly roundtrip service to Johannesburg.

In **1968**, the company employs 1,000 workers and possesses a fleet comprising the leased Boeing 707-328B, 1 each DC-4 and Nord 262, 3 DC-3s, 2 Piper PA-31-310 Navajos, 5 Piper PA-23 Aztecs, and 2 Piper PA-28 Cherokees. A replacement DC-4 is delivered in February and orders are placed for 2 B-737-2B2s. An agreement is signed with **South African Airways (Pty.), Ltd. (SAA)**; under its terms, SAA will maintain the new "Baby Boeings."

The first B-737-2B2 is delivered in September **1969** and is christened *Boina*. Following workup and proving flights, the new aircraft begins a weekly return service to Johannesburg on October 15, flying to South Africa on Saturdays and returning on Thursdays. As a way of gaining currency to help pay for the new machine, it is wet-leased to SAA Sundays through Wednesdays for service on South African domestic routes. This arrangement will last for a year.

On February 1, **1970**, Lourenco Marques becomes a stop on the weekly Johannesburg route. The *Boina* replaces DC-4s on the Comoros Island service as of November 1, with another route opened by the aircraft to Tamatave.

Four de Havilland Canada DHC-6-300s are delivered during the second and third quarters of **1971**, allowing the transfer of several DC-3s to the military.

During the first and second quarters of **1972**, the *Boina* inaugurates flights to Diego Suarez, Nosy Be, and Sambava. Badly required by this time, the second B-737, a Dash-2B2A, arrives on December 21; it is christened *Sambirano* and allows retirement of a DC-4. The **Air France** B-707-328B is purchased outright in **1973** and added to the national register.

B-737-2B2 service is initiated on April 1, **1974** to Fort Dauphin, Mananjary, and Tulear. Maurice Rajaofetra becomes director general.

The Nord is withdrawn by **1975** as orders are placed for three Hawker Siddely HS 748s. Another Twin Otter is delivered in May **1976**, while a DC-3 is sold to **Ethiopian Airlines, S.C.** Flights continue apace in **1977** and an order is placed for a Boeing 747-200B in **1978**. **Air France** is contracted to maintain the Jumbojet after its arrival.

The B-747-2B2BC is delivered on January 26, **1979**; christened *Tolom Piavotana*, the fleet flagship inaugurates weekly service in March with a nonstop flight from Antananarivo to Paris. In cooperation with **Air Mauritius, Ltd.**, the company undertakes a joint venture service between Antananarivo and Mauritius.

International destinations now served include Paris, Marseilles, and Rome via Djibouti, while regional flights are made to Nairobi, Dar-es-Salaam, Maputo, the Comoro Islands, Mauritius, Reunion, and the Seychelles. Under a new agreement, royalties are paid to **Kenya Airways, Ltd.** on the Nairobi segment. The first customer for the British Aero-

space BAe (HS) 748 Series 2B, the company takes delivery of the first of three on November 28, **1980**. It is christened *Kandreho*.

Service continues apace in **1981**. A DHC-6-300, with 2 crew and 17 passengers, crashes into a Madagascar mountain on July 24; there are no survivors.

During **1982-1985**, domestic flights are undertaken to some 50 destinations with international service to Johannesburg suspended; regional operations are undertaken to Reunion, Kenya, Mauritius, and the Cameroon Republic.

Airline employment reaches 1,346 and the fleet is altered to include 1 B-747-2B2BC, 1 B-737-2B2, 1 B-737-2B2A, 3 BAe (HS) 748-B2s, 6 DHC-6-300s, 2 Piper PA-31-310s, 2 Piper PA-23s, and 3 Piper PA-28s.

Early in **1986**, the government announces a decision to develop tourism to the island nation. As a result, expansion plans are undertaken for the 1,300-employee carrier, which now joins IATA.

Flights begin to Zurich in July and in October the carrier contracts with **Air Mauritius, Ltd.** for certain consultative services, including the seconding of Lai Sikka to Madagascar as special advisor to the new director general, Rene Rasata Rainiketamanga.

Orders are placed for an Avions de Transport Regional ATR42-320 with which to replace the last remaining BAe (HS) 748-B2s; however, the order will eventually be cancelled due to economic reasons. Enplanements for the year total 356,000.

Passenger boardings decline 3.6% in **1987** to 410,645. Revenues total \$67 million and allow a \$9-million net profit. Guy Ramahay Mandimby is named director general in March **1988**. In September, with financial assistance provided by the European Development Fund, construction begins on a new technical base at Ivato Airport, serving the Madagascan capital of Antananarivo.

The 1,300-employee flag line enjoys mixed traffic results. Customer bookings fall another 5.8% to 386,990, but freight swells 11.2% to 23.4 million FTKs. Income exceeds expenses and profits are generated: \$7.4 million (operating) and \$10.2 million (net).

Airline employment is decreased 0.3% in **1989** to 1,236 and the fleet now includes 1 B-747-2B2BC, 2 B-737-2B2, 1 B-737-2B2A, 2 BAe (HS) 748-B2s, and 4 Twin Otters. Two DHC-6-300s and the smaller propeller equipment are largely withdrawn.

A joint-venture Fokker F.27-200 service is inaugurated with **Air Comores, S.A.**, using the latter's equipment, between Comores and Madagascar.

Passenger boardings drop 9.6% to 349,000, but freight rallies upward by 17.9% to 30 million FTKs. Revenues fall 7.2% to \$84.1 million, the operating profit is \$3.7 million, and net gain drops to \$9.4 million.

A fourth Madagascar-France B-747 service is started by the 1,211-employee airline during **1990** in cooperation with **Air Austral** and **Air France**; the Antananarivo-Reunion route is now also flown in a code-sharing arrangement between the two other carriers. In addition, the new agreement also covers passenger and freight handling services as well as flights by **Air France** to Singapore.

Statistics are only reported through September and show customer bookings of 310,009. In addition, 20.98 million FTKs are flown.

The payroll is cut a slight 0.9% in **1991** to 1,200 and the fleet now includes 5 DHC-6-300 Twin Otters, 2 BAe (HS) 748-B2Fs (one of which is leased to **Ecuato Guinea de Aviacion, S.A.** in Equatorial Guinea), and 1 each B-737-2B2, B-737-2B2A, B-747-2B2B/C, and 1 BAe (HS) 748-B2. The carrier makes its statistics available only for the first four months of the year. These show passenger boardings up 11.7% to 136,267 and freight up 5.9% to 10.72 FTKs.

In addition to its domestic routes, the company in **1992** offers international flights to Paris over two routes: via Djibouti and via Nairobi and Zurich. Regional destinations include Johannesburg, Mauritius, Nairobi, Reunion, and the Comoros Islands, all of which are visited from Antananarivo. Traffic and financial data is not released.

Thirty-seven new employees are hired in **1993** and, in April, a code-sharing arrangement is entered into with **Air Mauritius, Ltd.** and also with **Air Austral, S.A.** The latter provides for partnership on routes

from Antananarivo to Reunion, Singapore, and Mauritius. Through the first half of the year, customer bookings rise 1.6% to 162,714 while freight is up 3.2% to 12.6 million FTKs. Revenues for the whole year total \$95.82 million, the operating profit is \$12.42 million, and net profit finishes at \$8.46 million.

The workforce is cut by 3% in 1994 to 1,200 as the airline suffers an off year in traffic. Through April, passengers boardings are down 5% to 114,157 while cargo declines by 4.2% to 8.32 million FTKs. A quarter later, a B-737-3Q8 is chartered from ILFC and is delivered on September 12. The new aircraft enters service on routes from Antananarivo to the Comoros and Seychelles Islands, Mauritius, Nairobi, and Reunion.

For the whole year, just over half a million people fly with the airline. Operating revenue increases by 4.3% to \$100.12 million, but operating expenses swell 19.8% to \$100.13 million. Consequently, there is an operating loss of \$15,000. Nevertheless, a net profit of \$2.59 million is generated.

Reflecting some improvement in 1995, a total of 66 new employees are hired and Emmanuel Rakotovahiny is appointed director general.

Customer bookings climb 4.4% to 503,233 while freight increases by a healthy 31.9% to 32.3 million FTKs. Although operating revenues are down 2.4% to \$97,704,000, expenses also decline, by 7.6% to \$92,547,000. The operating profit accelerates to \$5,157,000 while net gain jumps to \$3,715,000, later adjusted downward to \$2,268,000.

The workforce is reduced by 1.6% in 1996 to 1,262 and the owned fleet now includes 1 each B-747-2B2BC, B-737-2B2A, and BAe (HS) 748-2B, along with 5 DHC-6-300s and 2 BAe (HS) 748-2BFs, which are leased to **Ecuatorial Guinea de Aviacion, S.A.** A leased B-737-3Q8 is also operated and new routes are opened to Rome and Munich.

Enplanements ascend 6.1% to 565,765 and 30.27 million FTKs are also operated, a 14.2% increase. Operating income falls another 2.1% to \$92.92 million and costs dip 1.4% to \$92.02 million. Operating profit declines to \$903,000 and the net gain is reduced to \$1.94 million.

Airline employment inches up 1.2% in 1997 to 1,277. In addition to 20 domestic markets, the company also undertakes international flights to Djibouti, Kenya, Mauritius, Munich, Paris, Reunion, and South Africa. During the spring, orders are placed with Aero International (Regional) for three used ATR42-320s. The first aircraft is delivered on September 12 and the others within two weeks.

In October, all are placed into service on domestic routes to destinations around the nation. The carrier enters into a process of reorganization, due to be completed by July 1998, which will prepare it for privatization.

With secessionist rebellions raging on the islands of Anjouan and Moheli, the airline in November halts its service to the Comoro Islands.

Passenger traffic continues to rise as bookings increase 6.6% to 609,000 and cargo moves ahead 4.4% to 30.33 million FTKs. Revenues ascend 6.7% to \$96.8 million, while costs climb 7.8% to \$95.72 million and leave a \$1.98-million operating profit.

The workforce is unchanged in 1998 as the reorganization effort continues. Service is launched to Singapore with a chartered B-767-216ER, but cannot prevent a drop in enplanements to 607,000. FTKs slip to 29.53 million. The operating profit is also down, to \$1.1 million.

Airline employment declines to 1,228 at the beginning of 1999.

In an Everett, Washington, ceremony attended by Chairman Nirina Andriamanerasoa on June 22, the carrier takes delivery of a leased B-767-336NER. It will join the first on service from Antananarivo to Paris, Rome, Munich, Johannesburg, and Singapore.

Passenger boardings move ahead by 4.5% to 635,000 while freight grows by 8% to 32.38 million FTKs. Operating revenues fall 12.4% to \$94.07 million, while costs, though down 4.9% still total \$99.52 million. The previous year's operating profit now becomes a \$5.44 million loss.

The workforce stands at 1,276 at the beginning of 2000, a 1.3% increase over the same period a year earlier.

In March, a cooperative agreement is signed with **Air Gabon, S.A., Cameron Airlines, S.A., and Air Afrique, S.A.** Under its terms, the

four will provide joint handling, coordinate schedules, and purchase common equipment.

The B-747-2B2BC *Tolom Piavotana*, the carrier's longtime fleet flagship, is retired at Chateauroux, France, on August 31.

AIR MADEIRA, S.A.: Portugal (1997–1999). With backing from the Portuguese travel group Pestana Hotels, Air Madeira is established by Tonaz Metello at Lisbon, Portugal, in late spring 1997 expressly to operate charter passenger roundtrips to Canada, tapping into the large expatriate Portuguese population there. A former **TAP-Air Portugal, S.A.** Lockheed L-1011-500 TriStar is leased at the end of June and flights commence in July.

Flights continue in 1998–1999, though President Metello's 42-person workforce grows no larger. Early in 1999, Presidnet Metello's 42-employee carrier is renamed **Air Zarco, S.A.**

AIR MAHE, LTD.: Seychelles (1972–1979). **Air Mahe, Ltd.** is formed by John Faulkner Taylor with British assistance in the spring of 1972 to provide scheduled interisland services. Employing a single Piper PA-34 Seneca, Taylor inaugurates air taxi service between Victoria and Praslin on July 1. The Seneca is replaced with a Britten-Norman BN-2 Islander a month later.

A de Havilland DH 89A Dragon Rapide is received in February 1973 and operates until it is replaced by a second Islander in February 1974. The small company now undertakes regularly scheduled twice-weekly flights, which also visit Bird Island.

Both scheduled and charter services are maintained for four more years. Taylor's fleet is increased by the addition of a third Islander, plus a BN-2A Trislander.

In July 1979, the carrier is merged into **Inter-Island Airways** to form **Air Seychelles, Ltd.**

AIR MALAWI, LTD.: P.O. Box 84, Robins Road, Blantyre, Malawi; Phone 265 620 811; Fax 265 620 042; <http://www.africaonline.co.ke/airmalawi>; Code QM; Year Founded 1964. Preparatory to Malawian independence (the country had previously been known as Nyasaland) in 1964, this carrier is formed in March under the management of **Central African Airways Corporation (CAAC)** to provide domestic passenger and cargo services. Philip Howard is appointed chairman, with R. D. "Digby" Hartle as managing director. CAAC provides technical and support services under contract, seconds personnel, and provides a start-up fleet comprising 3 de Havilland Canada DHC-2 Beavers and 2 Douglas DC-3s.

Revenue flights commence on August 1 over a route from Blantyre to Ndola via Salima. In cooperation with **DETA (Divisao de Exploracao des Transportes Aereos, S.A.)** of Mozambique, a service is also inaugurated from Blantyre to Beira. Air Malawi DC-3s operate the route on Saturdays and DETA flies it on Wednesdays.

Service to Mzuzu begins in January 1965. On February 18, DC-3 flights commence from Salisbury, Rhodesia, to Mauritius, via Blantyre, Nampula, and Antananarivo. Service continues apace in 1966.

In association with CAAC, DC-3 all-cargo and express parcel service is initiated between Blantyre and Salisbury on July 21, 1967. Flown via Lilongwe, Mzuzu, and Karonga, the freight operation is the last significant enterprise launched by Air Malawi under auspices of CAAC. The Beavers are replaced on domestic routes by DC-3s.

The decision having been taken to dissolve the consortium airline, CAAC provides Air Malawi with 1 each Vickers Viscount 748, Viscount 754, and Beech 55 Baron.

With the dissolution of CAAC on December 31, Air Malawi becomes fully independent, becoming the national airline. G. T. "Porky" van Rooyen, founder of **South West African Airways (Pty.), Ltd.**, succeeds Digby Hartle as managing director.

Technical support is provided by **British Overseas Airways Corporation (BOAC)** under a newly negotiated contract.

The workforce totals 199 in 1968 and the fleet includes 2 Douglas DC-3s, 1 each Vickers Viscount 748 and 754, and 1 Beech C-55.

Viscount services are inaugurated on April 2 between Blantyre and Johannesburg. The British-made turboprops soon thereafter start flying from Blantyre to Salisbury and from Salisbury to Mauritius via Blantyre and Nampula.

Enplanements for the year total 29,745.

Beginning in 1969 and continuing over the next three years, regional and local services and frequencies are increased as the fleet undergoes standardization that will result in the eventual retirement of the Beech and DC-3s. Two Hawker Siddeley HS-748s are ordered in May, along with 2 Britten Norman BN-2A Islanders.

During the summer, a contract is signed with gold mining interests. Under its terms, the carrier's DC-3s transport in excess of 6,000 miners, in over 100 flights, from local communities to Francistown.

The first Islander is delivered in November, followed by the first HS-748 just before Christmas.

The second HS-748 arrives in January 1970, allowing the sale of the last DC-3 to go forward in March. When the second Islander is delivered in September, the Beech 55 Baron is sold. A British Aircraft Corporation BAC 1-11-207 is chartered for two years from **Zambia Airways Corporation** in November.

BAC 1-11-207 flights to Nairobi commence in April 1971, with flights south to Johannesburg starting during the following month. In September, the company orders a BAC 1-11-489.

The fleet is, in fact, strengthened in 1972 by the addition, in early February, of a wet-leased **British Caledonian Airways, Ltd. (BCAL)** Vickers VC10. The BCAL aircraft, in its owner's colors, begins flying from Blantyre to London (LGW).

The first owned jetliner, a BAC 1-11-489, arrives on February 23. It joins the four Viscounts in providing or upgrading services from Blantyre to various central and southern African destinations, including Johannesburg, Nairobi, Lusaka, and Dar es Salaam. The **Zambia Airways Corporation** BAC is returned in April.

Bookings for the year are 137,108. Enplanements in 1973 reach upward by 9.2% to 151,000.

The employee population is 648 in 1974. A second BAC 1-11, a Dash-479 leased from **Air Pacific, Ltd. (2)**, joins the fleet on July 9. The company now inaugurates or increases flights to Beira, Johannesburg, Lusaka, Mangini, Ndola, Nairobi, Salisbury, and the Seychelles. Blantyre to Manzini HS-748 service is also initiated.

Air Malawi's Vickers VC10, acquired from **British Caledonian Airways, Ltd. (BCAL)**, is delivered on November 27 and enters service on a Blantyre-London (LGW) via Nairobi and Amsterdam return route on December 3. Five days later, the VC10 appears in full Air Malawi livery for the first time.

Freight traffic grows 16% and passenger boardings jump 22% to 170,000.

VC10 service is launched in 1975 to Johannesburg and the Seychelles and in March the former BCAL jet also undertakes a second weekly roundtrip to London. The BAC 1-11-489 replaces company Viscounts on the Mauritius service on April 1. The Blantyre to Manzini service is shut down in October.

Blantyre to Johannesburg service is advanced to thrice weekly on November 1 while the chartered BAC 1-11-479 is returned to **Air Pacific, Ltd. (2)** on November 16.

In the four years after 1976, Chairman A. K. Banda's owned fleet comprises the VC10, 1 BAC 1-11-489, 2 HS 748s, and 2 Britten-Norman BN-2 Islanders; airline employment grows to 800. The company continues to employ chartered BACs for its winter schedules. The first is the BAC 1-11-501 *Isle of Islay*, leased from **British Caledonian Airways, Ltd. (BCAL)** from December 3 to 17, 1977.

The Vickers Viscount 754 is sold to **Air Zimbabwe Corporation** during the spring of 1979. In October, the BAC 1-11-530 *Isle of Raasay* is chartered from BCAL.

The *Isle of Raasay* is returned in April 1980. The carrier now encounters severe traffic and financial difficulties that force grounding of the VC10. The Vickers Viscount 748 is now also sold to **Air Zimbabwe Corporation**.

A BAC 1-11-524 is chartered from **Hapag-Lloyd Flugdienst, GmbH**, on October 30. In addition, 1 Beech King Air C90 and 3 Shorts SC-7 Skyvans are purchased during the fourth quarter.

Enplanements for the year total 101,270.

Enplanements total only 101,483 in 1981 as the impact of the world economic and fuel crises hit home.

The workforce is increased by 6.4% in 1982 to 779. The airline's 2 BAC One-Elevens and 2 HS 748s fly 130,274 passengers, an increase of 22.1%; cargo also increases 22% to 1.61 million FTKs. A net loss of \$389,873 is suffered atop operating losses of \$734,556.

Airline employment is up 8.6% to 846 in 1983. With the opening of the new Kamuzu International Airport at Lilongwe, the company's headquarters and international services are moved to the new facility; the maintenance shops, however, remain at Blantyre.

The world recession continues to be keenly felt as passenger boardings dip 1.9% to 127,845. Figures for cargo are not released. Operating income falls 3.4% to \$11.9 million, but expenses are reduced 8.4%; as a result, the operating loss declines to \$58,160. Unhappily, net loss skyrockets to \$1 million. Bookings decline further in 1984 to 122,707.

On April 1, 1985, the B-747SP-44 *Outeniqua* is leased from **South African Airways (Pty.), Ltd. (SAA)** just for the purpose of providing an executive transport for a state visit to London. Painted by April 12 in Air Malawi colors and given the temporary name of *Mulanje*, the Jumbojet, on April 16, flies President Hastings Banda and his official party from Blantyre to London (LHR) via Amsterdam for a conference. Paying fees all the while, the giant aircraft is parked at the U.K. aerodrome for three weeks until, on May 11, it returns Banda and his party back to their country and is returned to SAA.

During the year, passenger traffic rebounds: boardings are up 20.3% to 154,000. Freight, however, declines 9.02% and a \$3.9-million operating loss is taken, together with a net loss of \$4.9 million.

The workforce is reduced by 10.8% in 1986 to 817 and the fleet includes 1 each BAC 1-11-489 and 1-11-524, 2 British Aerospace BAe (HS) 748-B2s, 1 Beech 90 King Air, and 3 Shorts SC-7 Skyvans.

Fokker is able to outbid Boeing in January and as a result of its financing package, a new F28-4000 is delivered in September.

In October, a two-man consultant team (Bill Yeoman and John O'Rourke) begin reorganizing the carrier under a one-year grant from the U.K.'s Overseas Development Administration.

Customer bookings fall 18.5% to 125,273 and cargo traffic plunges 88.9% to 649,621 FTKs. Revenues decline 3.5% to \$10.8 million. Losses are \$1.2 million (operating) and \$2.5 million (net).

Tragedy strikes in 1987 when, en route to Lilongwe from Blantyre on November 6, a chartered SC-7 with 2 crew and 8 passengers is shot down over Ulongwe, Mozambique; there are no survivors. The Mozambique military, which has not received advance notice of the flight, expresses its regret, but warns that carriers wishing to overfly the country must first receive permission to do so.

Enplanements for the year total 83,768 and the company suffers a loss of \$624,000.

In 1988, the F28-4000 is leased to **Air Botswana (Pty.), Ltd.** and passenger boardings rise 9.6% to 92,663; cargo increases 66.2% to 738,000 FTKs.

The workforce is cut 39.5% in 1989 to 787 and the fleet includes 1 each BAC 1-11-489 and 1-11-524 and 2 BAe (HS) 748-B2s. In June, orders are placed for 2 Boeing 737-300s, although the order will subsequently be cut in half.

Former **British Airways, Ltd. (2)** official Ian Walker is appointed general manager in May, with Capt. Lewis P. Mbilizi as deputy general manager. Passenger boardings accelerate to 121,173, but freight plunges to 661,000 FTKs.

Company employment grows by 6.7% in 1990 to 840. Customer bookings are level at 120,000, but cargo accelerates to 1.1 million FTKs. Revenues are \$18.2 million and costs are kept low enough to allow generation of a \$4.68-million operating profit.

The payroll is increased another 2.3% in 1991 to 859 and the fleet now includes 1 each BAe (HS) 748-B2. The 2 BAC 1-11s are withdrawn

from service and put up for sale in April in impending anticipation of the outstanding order for a B-737-300.

During the summer, a new Avions de Transport Regional ATR42-320 is ordered. Passenger boardings through October are down by 6.8% to 98,157, but freight climbs 49.9% to 1.05 million FTKs.

When the new ATR42-320, named *Shire*, arrives in December, it replaces the BAe (HS) 748-B2 on domestic routes and on its international services to Mozambique, Zambia, and Zimbabwe.

Delay in adding the Boeing short-hauler leads new Chairman J. Z. U. Tembo and General Manager Rex Lezard to reintroduce a leased BAe (BAC) 1-11-481FW early in 1992. Routes operated include: one from Blantyre to Johannesburg and Durban; one from Lilongwe to Johannesburg, Harare, Lusaka, Dar es Salaam, and Nairobi; and, jointly with **Air Tanzania Corporation**, one from Dar es Salaam to Kilimanjaro and Johannesburg.

Enplanements total 120,521, income exceeds expenses, and there are profits: \$796,000 (operating) and \$796,000 (net).

Airline employment climbs 2.3% in 1993 to 619. The *Shire* undertakes weekly all-cargo roundtrip flights in January linking Blantyre and Johannesburg.

The HS-748 is sold during the first quarter. Following receipt of the B-737-33A *Kawcha* in May, the leased BAe (BAC) 1-11-481FW is returned. A Dornier Do 228-212 is delivered in December and is christened *Nyika*.

Customer bookings are ahead for the year as a whole by 4.5% to 126,200. Freight increases 56.2% to 1.88 million FTKs, but operating income is down by 0.8% to \$18.6 million. Still, with expenses of \$18.47 million, an operating surplus of \$137,000 is allowed. Net profit swells to \$1.6 million.

The employee population is reduced by 1.8% in 1994 to 594.

An agreement is concluded with **Air Tanzania Corporation** in September; under its terms, the two will operate additional joint services to South Africa sharing costs and revenues. During the same month, Managing Director Lezard is succeeded by his deputy, Capt. Lewis P. Mbilizi; Capt. A. Mehungula becomes the new managing director.

The joint venture operations help to boost traffic significantly. Passenger enplanements climb 10.7% to 135,900 and cargo increases by 13.2% to 43 million FTKs. Revenues are \$22.4 million and expenses dip to \$13.6 million. The operating profit is \$8.8 million and net gain or loss is not reported.

Airline employment stands at 687 in 1995 and enplanements total 131,376. The workforce is reduced by 5.8% in 1996 to 659 and the fleet now includes 1 each ATR42-320, B-737-33A, and Dornier 228-212. Cooperative service with **Air Tanzania Corporation** begins on a route to Dubai. Service, halted earlier, to Mfuwe and Beira is restarted by the *Nyika*.

Although customer bookings drop 12% to 117,300, operating income soars 28.8% to \$22.8 million. Costs climb 29.6% to \$14.8 million, but still leave an \$8-million operating profit.

Service continues in 1996-1997. During these years, lack of funding causes airport facilities to deteriorate to the point of becoming unsafe. Although the fleet remains the same, Mary Nyandovi-Kerr becomes chairman, with Capt. Wisdom Mchungula as general manager. Plans are made for restructuring and cost-cutting as a survey is conducted for the company by Speedwing, Ltd., a subsidiary of **British Airways, Ltd.** (2). The addition of a second "Baby Boeing" is also sought.

Regional cooperative service is discussed with **Air Zimbabwe Corporation** and **LAM (Linhas Aereas de Mocambique, S.A.)** in 1998. Destinations visited now include Beira, Dar es Salaam, Harare, Johannesburg, Lilongwe, Lusaka, Makokola, Mangochi, Mfuwe, Mzuzu, and Nairobi.

Work begins on privatization and restructuring in accord with the findings of the Speedwing study.

On September 13, a code-sharing agreement is reached with **Air Zimbabwe Corporation**; under its terms, the Harare-based flag carrier will

inaugurate a sixth weekly London service the following February, via Lilongwe.

The first 40 of 200 employees to be laid off are fired during the last week of October. A staff of 550 is sought.

While taxiing for takeoff from Blantyre on February 5, 1999, a **South African Airways (Pty.), Ltd.** A300B2 with 143 aboard, suddenly stops and then returns to the gate. A bird has flown into the engine, damaging 10 blades and making it impossible to takeoff. An Air Malawi B-737-33A is chartered to ferry the stranded passengers on to Johannesburg.

New services from Blantyre commence on April 1 to Mbeya in Tanzania, Mfuwe in Zambia, and Entebbe in Uganda, the latter an extension of the current route to Nairobi.

Although traffic or financial figures are not available, it is reported that the company is unprofitable.

During the spring of 2000, Finance Minister Mathews Chikaonda makes a scathing indictment of the carrier for its costly overstaffing practices. Plans are written for the carrier's privatization.

To make the company more attractive, certain of its peripheral units are spun off over the summer. On August 28, Capt. Mcunungula reports that the Lilongwe Handling Company has been formed and Air Cargo, Ltd. has been relaunched in an effort to avoid continuing delays in passenger and cargo transfers.

AIR MALDIVES, LTD.: Maldives (1974-2000). Formed on October 1, 1974 at Male, Air Maldives, Ltd. commences operations as the national flag carrier on October 9. Purchased six years earlier with assistance from the Sri Lankan Air Force, two Convair CV-440s, christened *Flying Fish I* and *Flying Fish II*, link Male and Gan, as well as Colombo, on a scheduled daily basis, while the company also serves as general sales and ground handling agent for several visiting major carriers.

After the Sri Lankan Air Force removes its help (now primarily consisting of trained pilots) on May 31, 1976, the airline is reorganized in June, at which time controlling interest is taken by the Tri-9 Corporation of Singapore.

In May 1977, the Maldives government grounds the carrier's two Convairs and freezes its accounts, forcing it to cease operations. While legal negotiations ensue, a new flag carrier, **Maldivian International Airlines, Ltd.** (MIA)—formed as a subsidiary of **Indian Airlines Corporation** (IAC)—is created with IAC assistance on November 1. On November 2, employing leased Indian B-737-2A8As, flights are undertaken linking Male and Trivandrum via Colombo. The Maldives service replaces a recently started service to South India.

The national carrier Maldives Airways begins domestic operations in 1981, flying between Male and Gan with a Dornier SC-7 Skyvan borrowed from the government.

Unsuccessful, MIA is succeeded on September 30, 1984 by **Maldives Airways, Ltd.**, a new state operation with ambitious Mideast backing. Three Douglas DC-8-51s and three Fokker F.27 Friendships are ordered and revenue flights to Madras and other subcontinent destinations commence on March 3, 1985.

Only two Douglas transports and one Fokker are delivered and this company is no more successful than its predecessor was. Financially overwhelmed, **Maldives Airways, Ltd.** also fails, during the summer of 1986.

A local travel bureau now resurrects the Air Maldives, Ltd. name and is allowed to resume operations as a third-level, domestic carrier. In 1987, Managing Director Anbaree Abdull Sattar's fleet consists of only the lone government Skyvan, which continues to fly between Male and Gan via Kaddu Island in South Maldives.

With the formation of the holding company Maldives Air Services, Ltd. on January 5, 1988, Air Maldives becomes its principal subsidiary. The new concern is governed by a board of directors, of which Managing Director Sattar becomes chairman.

The Skyvan is withdrawn in favor of a Fokker Friendship, but the Dutch-made transport proves unsuccessful and the SC-7 is returned to

service in **1989**. Two Dornier 228-212s are acquired in **1990**, allowing the Skyvan to be placed in storage, and the airline is again reorganized during **1991**. The Shorts is returned to service in **1992** and an order is placed in **1993** for a British Aerospace BAe 146-100.

Maldives Air Services and its offspring are replaced on January 1, **1994** by the state enterprise Air Maldives, Ltd. Company officials cancel the BAe request in order to lease and employ an Airbus Industrie A300B4 from **Malaysian Airlines, Ltd.**

Just after landing at Male on October 18, **1995**, a Dornier 228-212, with 3 crew and 5 passengers, runs off the right side of the runway, hits the sea wall, and plunges, upside down, into the sea; all aboard manage to escape, but the plane is lost.

Airline employment stands at 360 in **1996** as the carrier, in January, enters into a management and equity contract with **Malaysian Airlines, Ltd.** The Maldivian government retains a 51% majority interest.

The company's three aircraft transport a total of 52,596 passengers during the first quarter. The figure is a 113.3% improvement over the same period a year earlier.

In June the company begins to code-share with MAS over a route from Male to Kuala Lumpur; the Malaysian line superintends the service. Also during the summer, a long-term lease is signed with **Adria Airways** for an A320-231, which enters service during the fall on a route to Frankfurt via Dubai and Zurich.

A de Havilland Canada DHC-8-202 is delivered on November 4 and, after flying from the factory to the Republic, begins service over domestic routes.

A total of 374 workers are employed by the carrier in **1997**. Again, figures are provided only through the first half. These show enplanements down 4.6% to 106,022 and cargo off 3.7% to 3.08 million FTKs.

Destinations visited from the company's Male base in **1998-1999** include Colombo, Dubai, Frankfurt, Gan, Hanimaadhoo, Kaadedhoo, Kadhdhoo, Kuala Lumpur, Trivandrum, and Zurich.

Airline employment during the latter year stands at 435. A total of 11 scheduled weekly services are operated to four international destinations and 22 scheduled weekly flights are made to four domestic destinations.

Employing an A310-324 that had previously flown with **Air Jamaica, Ltd.**, which is leased from Airbus Industrie and had arrived the previous month, the company, on November 9 launches the first scheduled air connection between the Maldives and the United Kingdom. The twice-weekly flights from Mahe into London (LGW) are part of an ambitious company plan to acquire two more of the long-range Airbuses and, at the first of the year, open service to Paris, Bangkok, Kuala Lumpur, and Johannesburg.

Serious financial concerns force the company to shut down its international operation on February 28, **2000**, the same day on which Managing Director Fauzi Ayob is replaced with Baharudeen Hassan, another employee from the Malaysian investment concern Naluri. Hundreds of tourists are left stranded by the sudden decision.

Domestic services are maintained with the Dornier 228-212s and DHC-8-202 as company representatives and the Maldives government work to regain capitalization for the carrier.

Board members and shareholders' representatives meet on April 18, but are unable to agree on a refinancing package. The A310-324 is returned to **Air Jamaica, Ltd.**, while the A320-231 goes back to Airbus.

In June, the Maldives government establishes a new airline, Island Aviation Services, Ltd., to operate domestic services with the single remaining Dornier and the Dash-8.

AIR MALI (1) (SOCIETE NATIONAL AIR MALI, S.A.): Mali (1960-1986). With technical support from the Soviet Union, plus a gift of three former **British European Airways Corporation (BEA)** Douglas DC-3s from the U.K. government, the SNAM is formed at Bamako on October 27, **1960**, just over a month after the nation gains its independence from France. A. G. Maiga is named director general.

The new entrant receives exclusive authority to provide domestic and international air services on behalf of the nation. An initial stock offering of up to 45% of shareholding to the public is a failure; most of the start-up capital is provided by the government.

Mali's new flag carrier begins flying in early **1961**, primarily as a government VIP service from the capital of Bamako to the country's larger communities. In July, Air Mali joins IATA and inaugurates twice-weekly DC-3 return services from Bamako to Gao over a route recently turned over by **Air France**.

A pair of Ilyushin Il-18Ds, provided as a gift to Mali by the Soviet Union, arrives in July. The big aircraft, wearing Air Mali livery and with Soviet crews, commence scheduled roundtrip service in August from Bamako to Casablanca, Marseilles, and Paris. Flights to Ghana commence in December.

The fleet is increased in **1962-1965** by the addition of 1 Il-14, 2 Antonov An-2s, and 5 Aero 45s. Regional destinations served come to include Abidjan, Accra, Brazzaville, Conakry, Dakar, Douala, Monrovia, and Robertsfield.

Following the February **1966** coup in Ghana, service to Accra is halted. Weekly Il-18D East Berlin services begin in the fall.

An Ilyushin Il-14 with a crew of 17 being ferried to Mali from Russia, crashes at Cayolle Pass, France, on November 5; there are no survivors.

The route to Accra is restarted in the spring of **1967**, twice weekly, with the Il-14. Two An-24s are ordered late in the year and are delivered in mid-**1968**.

The new Antonovs are placed into service in **1969** on a route from Bamako to Niamey via Mopti, Goundam, Tombouctou, and Gao. By **1970**, the route network, domestic and into North Africa and to France, totals some 15,000 unduplicated miles.

The service to East Berlin ends in **1971**. A Boeing 707-173C Stratoliner is acquired and is employed to provide jetliner services from Bamako to Paris in place of the aging Il-18Ds.

A DC-6 is acquired in **1972** as the world energy crisis begins to reach into Africa. In Ronald Seth's classic *Encyclopedia of Espionage*, published by Doubleday in the fall, Air Mali is the only airline included, primarily because of its role in ferrying arms and agents from Prague to Brazzaville during the earlier Simba war in the Congo.

All domestic flights must be cancelled on September 4, **1973** because of a fuel shortage.

On August 12, **1974**, en route from Jeddah to Bamako, a chartered Il-18V with 10-man Soviet flight crew and 47 passengers, encounters a storm over Niamey, Niger, and is forced to detour to Ouagadougou, Upper Volta, where, out of fuel, it crashes on a highway while trying to make an emergency landing; there are no survivors.

During the years **1975-1978**, Berlin services cease; however, routes are extended to 10 points within the country and to the Ivory Coast, the Congo Republic, Senegal, Sierra Leone, Nigeria, Togo, Liberia, and Niger. During the latter year, General Manager Maigi's company employs 506 workers. The fleet is upgraded by the addition of 2 de Havilland Canada DHC-6 Twin Otters and 1 Boeing 727-173C.

During **1979-1984**, an ex-**Air Afrique, S.A.** Sud Est SE-210 Caravelle XB and a DHC-6-300 are purchased and a government-owned Hawker Siddeley HS 748 is made available. Airline employment during these years averages 580.

A Twin Otter with 2 crew and 5 passengers is destroyed as the result of a bad landing at Niela on June 21, 1983; there are no survivors.

Just after takeoff from Tombouctou on a service to Bamako on February 22, **1985**, an An-24B with 2 crew and 49 passengers, suffers engine failure and elects to return to its point of origin. The aircraft crashes in the Sahara Desert en route and all aboard, except for one passenger, perish in the disaster.

Long in fiscal difficulty, the carrier goes into liquidation in April **1986**.

AIR MALI (2) (SOCIETE NATIONAL AIR MALI, S.A.): BP 2690, Square Patrice Lumumba, Bamako, Mali; Phone 22-9394; Fax

22-9403; Code L9; Year Founded 1986. This new national carrier is formed in June 1986 as replacement for **Air Mali (1)**; the government of Mali takes 51% majority shareholding. In July, officials of the new airline enter into discussions with **Air Afrique, S.A.**, aimed at securing a contract with the multinational carrier for the operation of the nation's long-haul services.

In the first quarter of 1987, **UTA French Airlines, S.A.** and **Sabena Belgian World Airlines, S.A.** also tender offers of assistance. A replacement B-737-2D6 is acquired, but is immediately leased to **Britannia Airways, Ltd.**, and, with the DHC-6 and Il-18 grounded at Bamako Airport, the active fleet includes only the Boeing trimotor and an An-24.

A decision is taken in 1988 to concentrate on domestic services. During the same year, a proposal from the Soviet government is accepted whereby **Aeroflot Soviet Airlines** begins to assist the financially depressed carrier. In 1989, Operations Manager Hachim Koumane's airline completes its last full year before shutting down in 1990. Without Soviet aid, it cannot operate at its previous level.

Service is restarted in 1992 under the direction of Chairman Abderrahmane Cherif Haidara and Director General Abderrahmane Berthe. A workforce of 63 is assembled and services are resumed with the An-24, as well as a leased Letov Let-410UVP. Destinations visited include Abidjan, Dakar, Gao, Goundam, Kayes, Keneiba, Mopti, Nioro, and Tombouctou.

A number of services are operated in cooperation with **Malitas (Mali-Timbouctou Air Service, S.A.)**. In 1995, a Yak-42 is wet-leased from **Lithuanian Airlines, A.S.**

Flights continue in 1996–2000 as the Yak-42 is returned. Service to Abidjan and Dakar is halted, while new flights are started to Yelimane.

AIR MALTA COMPANY, LTD. (1): Malta (1946–1950). In December 1946, the British independents **Chartair, Ltd.**, **Silver City Airways, Ltd.**, and **Instone Airlines, Ltd.** each subscribe one-third capital to form this company to operate services around the Mediterranean. **Chartair, Ltd.** obtains a fleet of 4 Airspeed AS.65 Consults and delivers it to Malta, where, in 1947, scheduled services are started to Rome, Palermo, Naples, Benghazi, El Adem, Cairo, Tripoli, and Tunis.

These services continue in 1948, during which year a total of 5,240 passengers are carried by the Airspeeds. **Chartair, Ltd.** pulls out of the enterprise in December. Operations continue in 1949 as the fleet is upgraded by the addition of two de Havilland DH 104 Doves. On December 29, 1950, Air Malta Company, Ltd. (1) is purchased by **Malta Airways, Ltd.** and the two combine into **The Malta Airlines, Ltd.**

AIR MALTA COMPANY, LTD. (2): Head Office, Luqa, LQA 01, Malta; Phone 356 229990; Fax 356 692861; <http://www.air-malta.com>; Code KM; Year Founded 1973. This new flag line is formed on March 26, 1973 with 76.4% of the shares held by the island's government, 20% by **Pakistan International Airlines Corporation (PIA)**, and 0.6% by Cassar & Cooper Holdings. Albert Mizzi is named chairman with M. M. Salim as general manager. As part of its interest responsibility, PIA provides technical assistance and managerial support under a five-year contract. Services flown by Pakistani pilots begin on April 1 from Luqa Airport, near Valetta, over a Malta to London route with Hawker Siddeley Trident 3Bs leased from **British Airways, Ltd. (2)**.

The first of two Boeing B-720Bs leased from PIA joins the fleet in February 1974 and begins Malta–Rome service on April 1. The second aircraft begins flights to London (LHR) two weeks later. The two aircraft are purchased later in the year.

Enplanements for the first full year total 94,185.

The workforce in 1975 stands at 582. A B-727-100 is purchased and a BAC 1-11-500 is leased from **British Caledonia Airways, Ltd. (BCAL)** for the summer. Designed to replace foreign ground and flight crews, a new training program for Maltese nationals is started under contract to PIA. Routes are extended to Brussels and Amsterdam.

Passenger boardings soar 58.8% to 213,089. Freight traffic totals 2.77 million FTKs, a boost of 34.9%.

Employment is increased 15.9% in 1976 to 713. The charter subsidiary **Air Malta Charter, Ltd.** is formed in the spring and a B-727-173C is chartered from **World Airways** to augment capacity during the summer. PIA undertakes the training of 12 Maltese aircrew at its training center, along with 21 local ground and flight engineers.

Using a Fairchild Hiller FH-227 trip-leased from **Stellar Airways**, weekly flights are inaugurated between Malta and Tunis. A pair of Convair CV-880M-22s are wet-leased from Miami-based Orient Pacific Airways and are employed, beginning on November 24, to undertake inclusive tour charters to Mediterranean and European destinations.

Cargo traffic accelerates 40.3% and passenger bookings rise 10.8% to 230,891.

Service to Zurich and Vienna is opened early in 1977. A B-707-321 is leased from **Dan-Air, Ltd.** to assist with the summer traffic. To help market inclusive tours from the U.K. to Malta, the carrier forms a wholly owned air travel subsidiary, **Medallion Holidays, Ltd.**

Meanwhile, interest is taken in three hotel groups. Destinations served from Malta now include London, Rome, Paris, Manchester, Cairo, Tripoli, Vienna, Zurich, Frankfurt, Brussels, Amsterdam, and Tunis. Frequencies on the latter route become thrice weekly. Another wet-leased CV-880M is acquired during the year as enplanements jump to 275,303.

Maltese nationals take over key management posts from PIA personnel in 1978; Vincent Palzon becomes the carrier's first Malta-born managing director. Service is inaugurated to Munich. Air Malta acquires 25% interest in the charter carrier **Mediterranean Aviation Company, Ltd.**, which employs the marketing title **Med Avia**, set up to support the Libyan oil industry.

Passenger boardings advance 41.3% to 469,000. On total revenues of \$29 million, expenses are \$21.4 million; a net profit of \$1.22 million is realized.

In April 1979, frequencies are started to Kuwait, Dubai, and Lyon. Med Avia's five CASA C-212s begin operations in Libya in September. At the beginning of the winter season in October, a Douglas DC-9-32 is leased from **Austrian Airlines, A.G.**

Freight jumps 31.3% and passenger bookings rise 41.3% to 663,012.

The workforce in 1980 is reduced by 1.9% to 1,239. PIA transfers its 20% holding to the government of Malta, allowing the carrier to become a fully Maltese concern under the direction of Chairman Mizzi. The Austrian Douglas is returned in the first quarter.

En route to Karachi on March 9, a CV-880M is detained at Lisbon, Portugal, by government officials who report it is transporting illegal arms. With matters cleared up, the Convair is allowed to depart for Santa Maria, Azores, on May 4. Radio problems are encountered and the jetliner returns to the Portuguese capital, where its crew walks away.

Air Malta Charter, Ltd. is folded back into its parent. Three B-737-200As are wet-leased from **Transavia Holland, N.V.**

Passenger traffic rises a slight 0.3% to 665,310. On revenues of \$96.5 million, expenses are \$94.5 million, leaving a profit of \$1.3 million.

The employee population is increased by 0.3% in 1981 to 1,243.

Just after the deplanement of its 90 passengers at Cairo from a scheduled October 13 Tripoli service, a B-737-2K2C suffers the explosion of two bombs in its cargo compartment as luggage is being unloaded. Two baggage handlers are killed and eight others wounded; the little Boeing is severely damaged.

Two additional B-720Bs are placed in service, but the world recession now catches up with the carrier's passenger traffic, forcing boardings down 3.2% to 644,300. Freight, however, is up 6.9% to 4.37 million FTKs, and the net profit grows to \$6.6 million.

Nine new employees are hired in 1982 and three new B-737-200As are ordered. Passenger boardings decline 7.6% to 585,000 as freight falls by 5.4% to 3.79 million FTKs. On revenues of \$85 million, expenses are \$67.7 million and the profit drops to \$3.1 million.

The employee population is reduced by 1.5% in 1983 to 1,224. The three new B-737-2Y5As sporting a redesigned livery are placed in service in early spring, while the three wet-leased from **Transavia**

Holland, N.V. are returned. E. Micallef is appointed managing director and, in October, the new Boeings establish a record for their type with 14.9-hours-per-day utilization.

Cargo accelerates 0.5% to 3.29 million FTKs, but boardings rise significantly, up 4.2% to 616,000. Revenues total \$70.7 million and produce a \$653,000 net profit atop an operating gain of \$13.85 million.

The payroll is cut 2.5% in **1984** to 1,203. Passenger bookings climb 5.2% to 647,471 and freight grows 2%. Revenues fall to \$61.8 million, but expenses are kept to \$47.7 million; the net profit is \$575,371.

The employee population falls 2% to 1,197 in **1985**. In April and in cooperation with **Singapore Airlines, Ltd.**, a joint weekly service is begun Malta–Australia. Meanwhile, **Aer Lingus Irish Airlines**, under contract, completes computerization of the carrier's reservation system.

In July, Louis Grech becomes the company's fourth managing director since 1978, and helps the carrier make the decision to emphasize an increase in tourism.

After several years of attempts to unload the CV-880M left in Lisbon back in 1980, Portuguese government officials declare the plane abandoned and sell it to an unknown individual for \$15,700. When the new owner does not come forward, the government holds an auction and sells the derelict craft to Ribeiro Matias for a nominal sum. Matias moves the Convair about one kilometer from the airport and turns it into a bar/restaurant, which will be very successful for several years.

Passenger boardings are up 6% to 749,439, but freight is up 21.7% to 4.26 million FTKs. On revenues of \$107.4 million, profits posted are \$5.55 million (operating) and \$3 million (net).

The payroll grows by 2.3% in **1986** to 1,171. Agreement is reached to purchase space in the computer reservation systems of **American Airlines, United Airlines**, and **Eastern Air Lines**. At London, the company moves into the new Terminal 4 at Heathrow Airport. Construction is started on a new Luqa terminal. In August, 2 Airbus Industrie A310-300s are ordered, together with 2 B-737-300s. This is the last year B-720B crews undertake their simulator training with **Pakistan International Airways Corporation (PIA)** in Karachi and longtime PIA Capt. S. U. Khan steps down as general manager-flight operations, being succeeded by Capt. Franz Sturmair.

Customer bookings advance 21.8% to 813,166; however, cargo is down by 7.5% to 4.05 million FTKs. Revenues move ahead by 29.4% to \$109.7 million and expenses are held down, allowing profits of \$8.1 million (operating) and \$8.4 million (net).

The workforce is increased another 28.1% in **1987** to 1,500. Passenger boardings are also up, climbing 41.4% to 1,111,829. Freight jumps 18.6% to 4.77 million FTKs.

A pair of Boeing 727-14s is leased from Louisiana-based **Gulf Air** from May–November **1988**. Customer bookings climb again, swelling 4.7% to 1,163,624. Cargo also moves ahead, by 7%, to 5.1 million FTKs. Profits are earned: \$14.2 million (operating) and \$15.1 million (net).

In February **1989**, weekly, weekend British Aerospace BAe 146F service is introduced from London to Malta's new Luqa Airport. The B-727-14s are again leased from May to November from **Gulf Air**, now renamed **Sun International Airlines**. Scheduled services are provided to 18 destinations in Europe and North Africa and charter flights are undertaken to 35 European destinations.

A new color scheme is unveiled by one of the B-737-2Y5As on December 15 and the last B-720B is phased out at year's end.

Still, charter operations suffer a downturn that is reflected in a 4.9% overall drop in passenger boardings to 1,106,848. Freight, on the other hand, surges 25.7% to 6.41 million FTKs.

Company employment is cut by 4.3% in **1990** to 1,435; Anthony J. Paris is named managing director in February as the company becomes the only non-U.K. airline to win the Thomson Tour Operations Award for Outstanding In-flight Service. The first A320-211 arrives in the spring, which brings about the introduction of a new livery.

In May, the subsidiary **Malta Air Charter, Ltd.** is established to provide a helicopter service to Gozo. Permission to operate twice-weekly

service to Australia is obtained from the Canberra government, but will not be immediately exercised.

Customer bookings decline again, falling 5.8% to 1,042,484. Cargo plunges 13.9% to 5.52 million FTKs. The payroll is increased by 4.5% in **1991** to 1,500 and the fleet now includes 1 A320-211 and 6 B-737-2Y5As. Orders are outstanding for another A320-211 and 3 B-737-3Y5s.

Passenger boardings dip 2% to 995,672, but freight climbs a welcome 17.3% to 5.6 million FTKs.

Sixty-five new employees are hired in **1992** as a second A320-211 is placed into service along with a British Aerospace BAe ATP (Jetstream 61) leased in November from the Portuguese airline **SATA Air Acores (Servico Acoreano de Transportes Aereos, S.A.)**. Orders are outstanding for three B-737-500s. The ATP is employed to inaugurate services in December to the Sicilian destinations of Catania and Palermo. During the year, the company takes 30% interest in the new British inclusive-tour carrier **Excalibur Airways, Ltd.**

Enplanements recover and grow 18.3% to 1,205,640, while freight climbs 13.5% to 7.27 million FTKs. A record \$16-million profit is banked.

In **1993**, new Chairman/Managing Director Joseph N. Tabone oversees a workforce of 1,500. Destinations visited now include: Amsterdam, Athens, Bahrain, Barcelona, Berlin, Brussels, Cairo, Catania, Damascus, Dubai, Dublin, Dusseldorf, Frankfurt, Geneva, Graz, Hamburg, Istanbul, Lisbon, London (LHR and LGW), Lyons, Madrid, Manchester, Marseilles, Munich, Oslo, Palermo, Paris, Rome, Salzburg, Stockholm, Tel Aviv, Tunis, Vienna, and Zurich.

Routes to Benghazi and Tripoli remain suspended under UN sanctions against Libya. In November, the **SATA Air Acores, S.A.** BAe ATP is again leased for six months.

Passenger boardings inch up 1.2% to 1,220,705 while cargo skyrockets 115.5% to 15.7 million FTKs. A \$25.8-million profit is earned.

A \$100-million order is placed with Avro in January **1994** for four RJ70s with which to replace B-737-200s. In March, the company begins to code-share with **Gulf Air** on a new route from Malta to Bahrain. New markets are opened at Stockholm and Oslo in the spring.

In May, a **Deutsche Lufthansa, A.G.** A310-304 is wet-leased for six months to give the carrier its first wide-bodied experience. The first RJ70 arrives on September 21 and enters service the next day with a flight to Tunis from Luqa. Two more of the type will be delivered through December.

Customer bookings accelerate 13% to 1,380,007 while freight increases by 22.1% to 19.13 million FTKs.

The workforce is not changed during **1995**. Chairman Joseph Tabone resigns from the board of **Excalibur Airways, Ltd.** in January and divests Malta's 30% stake just before the British charter operator fails.

The final RJ70 is delivered in March. At the same time, the **Deutsche Lufthansa, A.G.** Airbus is returned and is replaced by another chartered from the manufacturer. When the new Italian regional **Azzura Air, S.p.A.** is established, Air Malta acquires a 49% stake, as well as management and support contracts. Former Air Malta executive Dominic Attard becomes chairman of the start-up, with Air Malta Chairman Tabone joining former **Alitalia, S.p.A.** official Alberto Denzler as joint vice chairman. Air Malta also agrees to provide the new entrant with regional jets.

In November, the company begins to code-share with **Balkan Bulgarian Airlines** on a weekly flight from Sofia to New York (JFK) via Malta.

The year's traffic figures are mixed. Passenger boardings climb another 2% to 1,407,916, but cargo drops 13% to 16.65 million FTKs.

Although the airline population is increased by 17.2% in **1996**, traffic falls. Three Avro RJ85s are delivered to **Azzurra Air, S.p.A.** and once the first two are in hand and have been route proven, the new Italian carrier receives its operating certificate and, four days later on December 10, begins scheduled regional services.

Enplanements for the year decline 2.5% to 1,373,032 and a total of 13 million FTKs are operated, a 21.9% drop.

The workforce is increased a slight 0.7% in 1997 to 1,770. Louis Grech returns as chairman/managing director in January; he is also named principal advisor to the nation's new minister of tourism, Karmenu Vella. The third Avro RJ85 is turned over to **Azzura Air, S.p.A.** in April. On June 8, two gunmen hijack a B-737 enroute from Malta to Turkey and divert it to Cologne, Germany, where they peacefully surrender to police.

In September the company decides to move away from the hub concept and it puts its RJ70 up for lease via Fortis Aviation. The RJ70s goes to **Azzurra Air, S.p.A.** at month's end.

Passenger boardings increase by 4.3% to 1,431,468 and freight increases 33.3% to 17.3 million FTKs. Higher revenues and cost containment produce an operating profit of \$3.38 million.

Flights continue apace in 1998. With the beginning of the summer schedule at the end of March, service is launched to Gothenburg, Rotterdam, Stuttgart, and Thessaloniki.

On October 25, weekly B-737-3Y5 roundtrips commence between Malta and Beirut.

Customer bookings this year increase by 7.4% to 1.53 million, while cargo traffic drops 18.2% to 14.17 million FTKs. Revenues increase 5.3% to \$213.19 million, while expenses are up 1.2% to \$201.31 million. An operating profit of \$11.87 million is widely heralded.

Following Libya's handover of Pan Am 103 bombing suspects to the UN at the beginning of April 1999 and the lifting of UN air restrictions on Libya, Air Malta, on April 6, becomes the first carrier to initiate service to Tripoli. Company officials begin discussions aimed at an early regular resumption of flights both to that city and to Benghazi.

During the third week of May, Air Malta receives an initial \$5-million payment from the Libyan government on an airfare debt for which payment had been blocked by the 1992 UN imposition of sanctions. The carrier is still owed \$8 million.

Just after takeoff for Liverpool on August 16, a fault develops in one of the landing gear of a fully loaded RJ70. After circling the Malta Airport for an hour dumping fuel, the aircraft is able to make a safe emergency landing.

Enplanements for the twenty-fifth anniversary year total 1.57 million while revenues advance to Lm 108 million and allow a Lm 6.2-million profit. It will later be reported that the company has transported over 22 million passengers since its beginning.

The U.S. FAA upgrade of Malta to Category 1 safety status at the beginning of 2000 allows Air Malta to enter into a code-sharing agreement with **Trans World Airlines (TWA)** on February 21. In addition to shared flights, the two will coordinate their frequent flyer programs and scheduling.

Two Next Generation B-737-7L9s are chartered from **Maersk Air, A.S.** in time for the start of the summer schedule on March 26. The company now flies to a record 53 international destinations, an increase of 4 over the previous year.

The marketing alliance with TWA takes effect on May 1. Air Malta places its "KM" designator on the American major's flights from London (LGW) to St. Louis, Los Angeles, San Francisco, Dallas/Fort Worth, Houston, and Orlando and its services from Milan to New York (JFK), Los Angeles (LAX), and San Francisco. At the same time, TWA places its "TW" code on Air Malta connecting services from London (LGW) and Milan to Malta.

As an extension of its Dubai schedule, the carrier begins weekly flights to Kuwait on May 31. An interline agreement with **Kuwait Airways (Kuwait Airways Corporation, Ltd.)** facilitates connections for its passengers to other Mideast destinations.

The highlight of the year is the operation of twice-weekly "trip charters" from Malta to New York (JFK) via Shannon flown between June 22 and September 4. The service, on behalf of the airline's charter arm Flyaway Tours, is provided with a B-757-2Q8ER subleased from **American Trans Air**.

For the 12th consecutive year, 25 children from Russia's Chernobyl area are invited to spend time in Malta courtesy of Dr. George Hyzler and the airline. Air Malta brings the youngsters in on September 1.

AIR MANCHESTER, LTD.: United Kingdom (1982). Formed in early 1982 to offer holiday charter flights on behalf of its owner, Sureway Holidays, Ltd., this operator orders a pair of BAC 1-11-400 with which to fly inclusive tours to destinations in central and southern Europe and Scandinavia.

The first of two ex-**Cambrian Airways, Ltd.** BAC 1-11-416s is delivered on May 18. It is employed to launch charters to the Spanish locations of Palma, Ibiza, Barcelona, Alicante, and Malaga, Faro, and Nice. Flights to these points are stepped up after the second BAC 1-11-416 arrives in early September.

The carrier ceases operation at the end of the summer season as the parent firm, unable to generate a profit, is forced into liquidation.

AIR MANDALAY (PTY.), LTD.: 146 Damazedi Road, Bahan Township, Yangon, Myanmar; Phone 258 (1) 465 143; Fax 258 (1) 465 132; <http://www.paris-org.com/mandalay>; Code 6T; Year Founded 1994. Air Mandalay is established at Yangon by Singapore-based Techmat Holdings on October 6, 1994 to provide charter passenger services to destinations in Myanmar, formerly Burma, and Thailand. Dr. Tun Shin is elected chairman, with Eric Kang as managing director; revenue flights commence on October 18 with a pair of Avions de Transport Regional ATR72-210s.

Two more ATR72-210s join the fleet in 1995 as the company begins to cooperate with **Myanmar Airways**. Enplanements approach the 90,000 mark.

Operations continue apace in 1996-1998. During these years, airline employment reaches 238. Destinations visited include Bagan, Chiang Mai, Heho, Mandalay, Nyaung-U, and Sittwe.

Early in 1999, the carrier enters into an arrangement with Groupe Paris Organisation, which will see additional flights into the country from Europe. The French organization opens a homepage on the World Wide Web supporting the new services.

Following the completion of arrangements in April 2000, the carrier receives 2 ATR42-320s under lease from ATR in July and November.

AIR MANGO, S.A.: Airport, St. Barthelemy, French West Indies; Phone (590) 27 88 81; Fax (590) 27 50 88; <http://www.st-barths.com/descriptivepgs/airmango.html>; Year Founded 1989. Air Mango is established by Larry Gray in 1989 to provide air taxi flights to San Juan and Nevis. Over the next decade, Gray, who is also chief pilot, operates his six-seat Piper PA-23 Aztec on an almost-daily basis. During these years, a visa waiver agreement is worked out with the U.S. Immigration and Naturalization Service, but no transfers to St. Martin are available in 1998-1999.

AIR MANILA: Philippines (1960-1976). A group of retired Philippine Air Force officers and local businessmen, led by former U.S. Ambassador Amelito Mutuc, establish Air Manila at its namesake city on February 14, 1960. An operating certificate is received from the government on August 12, after which the new entrant remains dormant for four years, finally purchasing a fleet of 12 Douglas DC-3s from the U.S. local service carrier **Frontier Airlines (1).**

Nonscheduled passenger and cargo charters to the nation's larger cities commence on January 2, 1965. Two DC-6Bs are acquired and join their smaller cousins in opening scheduled flights on March 30 over 6 of the nation's trunk routes and 12 of its secondary routes. Orders are placed with Handley Page in November for a pair of Dart Herald HPR-7 204s.

The year's enplanements total 135,000.

The Handley Pages enter service in 1966 and passenger bookings by 1967 reach 265,000.

1968 constitutes a disaster for the small operator. Flight 507, a DC-3 with 4 crew and 10 passengers, crashes near Ibayay on March 8 during a scheduled service from Manila; there are no survivors.

A DC-3 is destroyed by a bad landing at Davao on May 9; there are no fatalities.

On top of pilots' strike and resulting financial difficulties, a typhoon strikes the company's base, destroying seven of its remaining airliners.

Undaunted, Air Manila maintains its domestic schedules in competition with the government carrier, **Philippine Air Lines (PAL)**, and another private operator, **Filipinas Orient Airways (FOA)**, over the remainder of the decade and into the early 1970s. During these years, the fleet is increased by the addition of several Fokker F.27-100 Friendships. One of these suffers the collapse of its landing gear while landing at Roscas on April 14, 1969; there are no injuries reported in the accident.

On November 30, 1970 a company HP HPR-7 Herald 204 is destroyed when the Manila hangar it was in collapses.

In February 1971, PAL is authorized to drop service to 18 Rural Air Service domestic communities; 13 are quickly divided between Air Manila and FOA. Late in the year, Air Manila attempts to introduce a pair of former **Eastern Air Lines** Lockheed L-188 turboprops; they are quickly damaged beyond the ability of the concern's maintenance personnel to keep them airborne.

An L-188A is written off at Manila on January 9, 1972, following a bad landing after a training flight; there are no fatalities.

The local air taxi Delta Air Corporation comes forward early in the year and injects fresh equity capital, while the Philippine National Bank converts an earlier loan into 48% shareholding. Ricardo Silverio is named president. The company now purchases three Boeing 707 Stratoliners, including one first operated by **Pan American World Airways (1)** but lately by the fugitive American investor Robert Vesco.

Just after takeoff from Romblon for Roxas on September 15, an F-27-100 with 42 passengers is rocked by the explosion of a grenade. Lightly damaged and with no one aboard injured, the turboprop continues to its destination, where two more grenades will be found in the plane's cargo compartment.

As the result of widespread dissatisfaction with his government and an armed insurrection by Muslim guerrillas in Mindanao, Philippine President Marcos declares martial law on September 23. The Air Force is given the unwelcome responsibility of supervising the airlines and a series of fare increases and decreases follow.

In October, the company announces its new mission when it changes its name to Air Manila International. The first international service is operated from Davao to the Indonesian island of Sulawesi.

Air Manila International's foreign operations come to a close on January 1, 1973 when the Stratoliners are grounded and one is leased to **Egyptair, S.A.E.** A former **American Airlines** L-188A is chartered and is christened *Miss Voyager*.

On March 31, President Marcos directs that all of the nation's airlines should merge under PAL.

The nosegear of an F-27-100 with 4 crew and 20 passengers, fails during the turboprop's takeoff roll from Daet on September 6, causing the aircraft to veer off the runway into a pile of gravel; there are no fatalities.

By Letter of Instruction No. 151 of January 1, 1974, PAL is confirmed as the nation's sole flag carrier and the National Bank is authorized to acquire the assets of both Air Manila and FOA, turning them over to PAL.

AMI is authorized by its new parent to continue independent charter operations. Inclusive and affinity tours become big business for the division in 1975 as the fleet is increased by the addition of two more ex-AA Lockheed L-188A Electras. Thirty thousand passengers are transported on the year.

Flight 702, a chartered L-188A with 12 crew and 45 passengers, fails its takeoff from Agana, Guam, on June 4, 1976 and strikes rising terrain at the 100-ft. level. The plane drops down a 13-ft. embankment, crashes through a perimeter fence, and collides with an automobile on a highway causing both to burst into flame; all aboard the aircraft and the driver of the car are killed. Investigators find that its flaps had been inoperable.

The safety scandal leads the Philippine government to ground the airline almost immediately.

AIR MANILA INTERNATIONAL. See **AIR MANILA**

AIR MANITOBA, LTD.: Canada (1993–1997). Based at Winnipeg, Manitoba, **Northlands Air Manitoba, Ltd.** is renamed in 1993. President/CEO Ken Bittle oversees a workforce of 100 and a fleet that includes 3 British Aerospace BAe (HS) 748-2As, 2 BAe (HS) 748-2Bs, and 1 each Cessna 208 Caravan I, Curtiss C-46F Commando, and de Havilland Canada DHC-8-102. Scheduled passenger services (and C-46F all-cargo flights) are undertaken throughout northern Manitoba and from Churchill to the Northwest Territories.

Flight 7N205, an HS 748-2A with 3 crew and 26 passengers, arrives at Sandy Lake from Winnipeg on a November 10 flight. At Sandy Lake, 22 customers deplane, while 4 remain aboard for a continuation of the service to St. Theresa Point, Island Lake, and back to Winnipeg. The turboprop fails its initial climb away from Sandy Point, impacts trees, and crashes 1 nm. N of the runway; there are no survivors.

The DHC-8-102 is leased to **Air Alliance, Ltd.** in 1994 and the Caravan I is replaced by a 748-2AF.

While on its initial climb away from Lokichokio on April 23, the No. 1 engine of a C-46F with two crew fails; unable to maintain its height, a forced belly landing is made, during which the Commando slides into trees. Although the aircraft is damaged beyond repair, there are no fatalities.

Services continue apace in 1995 and, in 1996 the four 748s continue to transport people and cargo to nine communities. Flights cease in 1997.

AIR MANOS, LTD.: 168–172 Old Street, London, England, EC1V 9RE, United Kingdom; Phone 44 (0) 20 7216; Fax 44 (0) 20 7972; <http://www.manos.co.uk/airmanos.html>; Year Founded 1999. A subsidiary of the Greek travel group Manos, Air Manos is established at London (LGW) during the first quarter of 1999. Two Shorts 360-300s are acquired and, beginning on April 6, these undertake regularly scheduled flights linking the carrier's base and Manchester with points in Greece.

AIR MARGARITA: United States (1993–1994). Air Margarita is established at New York in 1993 to offer services to Margarita. Revenue operations commence and continue with a single Boeing 727. A year later, a Douglas DC-9-14 is also employed. Unable to achieve economic viability, the company is shut down before Christmas.

AIR MARITIME, LTD. See **EASTERN PROVINCIAL AIRWAYS, LTD.**

AIR MAROC (COMPAGNIE CHERIFIENNE DE TRANSPORT AERIENS, S.A.): Morocco (1953–1957). The French government announces during the spring of 1951 that plans are being prepared for the creation of a single large Moroccan airline. This intention is realized on June 23, 1953, when **Air Atlas (Compagnie Cherifienne de l'Air, S.A.)** and **Air Maroc (Societe Avia Maroc Ligne Aerienne, S.A.)** combine to create the second Air Maroc. Shareholding is divided between the government (34%), Compagnie Paquet (33%), and **Air France** (33%).

The merger partners provide a fleet of 2 Douglas DC-4s, 5 DC-3s, 4 Curtiss C-46 Commandos, and 6 Sud-Ouest SO-30P Bretagnes. The Commandos and Bretagnes are sold and replaced with a third DC-4. The DC-4s assume the European routes previously operated by the partners, while the DC-3s are employed for domestic service as well as on the principal regional route from Casablanca to Algiers.

Morocco receives its independence from France on March 2, 1956, while the northern territories of Spanish Morocco receive their freedom in April. A scheme is now unveiled for the creation of a new national carrier.

The second Air Maroc is reorganized on June 28, 1957. Shareholding is divided between the Kingdom of Morocco government (55%), **Air France** (30%), Societe Air Transport (10%), and Aviaco (**Aviacion y Comercio, S.A.**) of Spain (5%). The airline is renamed **Royal Air Maroc, S.A.**

AIR MAROC (SOCIETE AVIA MAROC LIGNE AERIENNE, S.A.): Morocco (1947–1953). Late in 1947, Air Maroc is set up at Casablanca to offer charter services throughout Morocco. Revenue flights commence in early 1948 with a pair of Douglas DC-3s.

Authority is received in 1949 to offer scheduled services from Casablanca to Europe. As a result, roundtrip flights are started linking the company base with Marseilles, Bordeaux, Toulouse, Paris, Geneva, and Frankfurt. Three additional Douglas transports are acquired during the year.

All-cargo services throughout Morocco and to Europe are launched in 1950 with 4 Curtiss C-46 Commandos. Orders are placed for 6 Sud-Ouest SO-30P Bretagnes.

The first Bretagne is acquired in July 1951 and enters service on the route between Casablanca and Bordeaux. Five more machines are delivered during the year and in 1952.

On June 28, 1953, the company is merged with Air Atlas (Compagnie Cherifienne de l'Air, S.A.) to form Air Maroc (Compagnie Cherifienne de Transport Aeriens, S.A.).

AIR MAROOCHY (PTY.), LTD.: Australia (1993–1994). Air Maroochy is established in early 1993 to operate scheduled regional services. Flights to five cities commence, and continue, with 2 Cessna 402s and 1 Partenavia P-68. Traffic and financial data is not released, but the lack of success becomes evident in 1994, leading to the company's shutdown at year's end.

AIR MARSHALL ISLANDS: P.O. Box 1319, Majuro, 96960, Marshall Islands; Phone 625-3731; Fax 625-3730; Code CW; Year Founded 1989. Upon independence of the Marshall Islands in 1989, Airline of the Marshall Islands receives its present name and is designated as the national flag carrier for the government of Tuvalu. The new nation's president, Amata Kabua, becomes chairman; Neville Hill is managing director. A \$1.5-million annual subsidy is provided by the republic's government, which is justified on the grounds that it will ensure the airline's independence from Continental Air Micronesia.

The previously operated GAF-Nomads are replaced by a pair of Dornier 228s (a Dash-101 and a Dash-201); a Dornier 228-212 is acquired in 1990. These maintain a variety of routes, the most important of which runs from Majuro to Kwajalein, site of a USAF base.

A McDonnell Douglas DC-8-62CF is leased from Arrow Air in 1991, allowing scheduled twice weekly return services Majuro/Kwajalein-Honolulu. A British Aerospace BAe (HS) 748-B2 is acquired in 1992 and begins services from Majuro to Suva and Nadi.

In 1993, Managing Director Stephen Fulk's company employs 147 workers and provides scheduled domestic services to 26 destinations. The Douglas jetliner increases the number of weekly frequencies to and from Hawaii to three in 1994. A \$60-million order is placed for two SAAB 2000s, plus an option.

The first of the two new SAAB 2000s arrives in June 1995. When it enters service in July, it replaces the BAe and allows an increase in the frequency on the Fiji route from twice weekly to thrice weekly. The second Swedish-made turboprop is slated to enter service in December.

Mounting national debts force the Majuro government into fiscal crisis early in 1996. Consequently, state aid to many different enterprises is ended or severely cut, including that to AMI, now the country's largest financial drain.

New Zealander Thomas Ryan becomes the new managing director, on an interim basis, and is faced with the task of cutting costs and restoring profitability. His first step is to ask President Kabua to return the DC-8 and end the unprofitable Hawaiian frequencies. The leader is in poor health and is not receptive to the idea.

On the other hand, the HS 748 is put up for sale and SAAB agrees to lease the second SAAB 2000, as yet undelivered, to the French commuter Regional Airlines, S.A. until August 1997. The HS 748 remains in service while a buyer is sought; the first SAAB 2000 is chartered to Air Vanuatu for one day each week.

In 1997–1998, the company continues to provide flights to 28 domestic locations, as well as Nadi and Tarawa, plus Honolulu, Los Angeles, and Tuvalu. The DC-8 and a SAAB 2000 are withdrawn while Managing Director Ryan departs in October of 1997.

Flights continue without change during the remainder of the decade.

AIR MARTINIQUE (COMPAGNIE ANTILLAISE D'AFFRETEMENTS AERIENS, S.A.): French West Indies (1981–2000). Founded at Fort de France on July 25, 1981, this carrier succeeds Satair-Air Martinique, S.A., which had failed earlier in the year. Employing a Beech 99 and a de Havilland Canada DHC-6, the carrier inaugurates scheduled flights on August 1. Eastern Caribbean destinations served from Aeroport de Fort de France include Barbados, Dominica, Grenada, Mustique, Port of Spain, St. Lucia, St. Martin, St. Vincent, and Union Island. Enplanements during the inaugural year total 2,704.

Two Britten-Norman BN-2 Islanders and a Piper PA-23 Aztec are added to the fleet in 1982. Passenger boardings rise to 33,723. Airline employment in 1983 is 28. During the remainder of the decade, the company also undertakes charters while adding Antigua as a stop on the scheduled network. The fleet is upgraded by the addition of 3 Dornier 228-202Ks and orders are placed for 2 Avions de Transport Regional ATR42-320s.

Martinique-Guadeloupe ATR42-320 flights commence on October 28, 1990. In 1991, a Boeing 747-200 is wet-leased and employed to provide a frequency to Paris; it is replaced by a Douglas DC-10-30 leased from Minerve, S.A. A British Aerospace BAe 146-300QC is evaluated on regional services between June and October.

Beginning in the fall, an ATR42-320 is flown on night cargo services between Fort de France and Pointe-à-Pitre under the product name Caribexpress. In cooperation with Air Guadeloupe, S.A. and Air Guyane, S.A., and on behalf of Air France, a Boeing 737-328 is employed, beginning in December, to link Pointe-à-Pitre with Fort de France, Cayenne, Port-au-Prince, San Juan, St. Martin Juliana, Belem, and Miami (MIA).

In 1992, CEO Michael Ziegler and General Manager Michael Gouze operate 2 ATR42-320s and 3 Dornier 228-202Ks, in addition to the Douglas and Boeing transports. Work begins on a FFr 16-million headquarters and maintenance center at Fort de France le Lamentier Airport.

Airline employment stands at 176 in 1993. In addition to a full slate of Lesser Antilles charter services and the Paris frequency, the company continues to offer scheduled flights to Antigua, Barbados, Canouan, Dominica, Mustique, St. Lucia, St. Martin, St. Vincent, and Union Island.

Schedules are maintained without change during 1994–1996. The most significant development of these years is the signing, in May 1995, of a joint marketing agreement with BWIA International Airlines, Ltd. (2). Plans are made to inaugurate services between the French West Indies and Puerto Rico. The workforce totals 102 in 1997–1998.

On January 6, 1999, Air France enters into a new partnership agreement with SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe), Air Saint Martin, S.A., and Air Martinique designed to increase the major's market share in North America and to maintain French-flag air presence in the Caribbean region.

During the first quarter, the B-737-2M8A of Islandsflug, H.F. is wet-leased to Caraibenne des Transportes Aeriens, the joint venture established to replace the French major on its Caribbean routes from Fort de France and Pointe-à-Pitre to Cayenne, Miami, and Port-au-Prince. The Icelandic Boeing will be returned as soon as the combine is able to secure a pair of B-737-300s. The Air France-sponsored combine transports a total of 600,000 passengers on the year.

In order to create a larger carrier in fact as well as alliance, the small airlines of the French Caribbean, which had been flying the Antilles as part of the umbrella Caraibenne des Transportes Aeriens joint venture, are actually merged into SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe) during July 2000. The surviving partner is then renamed Air Caraibes, S.A. (2).

AIR MAURITANIE (1) (SOCIETE NATIONALE AIR MAURITANIE, S.A.): Mauritania (1962–1974). Formed at Nouakchott in September 1962, **Air Mauritanie, S.A.** is the national airline of the former French colony. Shareholders initially include the government (60%), **Air Afrique, S.A.** (20%), and **Compagnie de Transports Aeriens Intercontinentaux, S.A.** or **TAI** (20%). With technical assistance and Douglas DC-3s provided by **Spantax, S.A. (Transports Aereos)**, revenue flight activities commence in October 1963 over the small internal network previously operated by **TAI**, now **UTA French Airlines, S.A.**, and **Air France**.

During the remainder of the decade, services are enhanced, with special attention given to the provision of transport to the nation's southern agricultural section. Among the destinations visited are Atar, Bir Mogrein, Dakar, Fderik, Kayes, Las Palmas, Nouadhibou, Nouakchott, and Tidjikdja.

During these years, Director General Abdoul Aziz-Ba's fleet is increased by the addition of 1 Nord 262 (1965), 1 DC-4 (1968), and 1 Ilyushin Il-18. The latter, operated by Soviet crews, provides the services to Dakar, Las Palmas, and Nouadhibou.

By 1970, the workforce totals 170 and the fleet comprises 6 aircraft: 3 Douglas DC-3s, 1 Ilyushin Il-18, 1 DC-4, and 1 Piper PA-31-310 Navajo. Operations continue apace in 1971–1973 and another Il-18 and DC-4 are added to the fleet.

In February 1974, a five-year training contract is signed with **Hughes Airwest**. The company is now reorganized into **Air Mauritanie (2) (Societe D'Economie Mixte Air Mauritanie, S.A.)**.

AIR MAURITANIE (2) (SOCIETE D'ECONOMIE MIXTE AIR MAURITANIE, S.A.): P.O. Box 41, Nouakchott 174, Mauritania; Phone 222 522 211; Fax 222 253 815; Code MR; Year Founded 1962. **Air Mauritanie (1) (Societe Nationale Air Mauritanie, S.A.)** is reorganized into **Air Mauritanie (2) (Societe D'Economie Mixte Air Mauritanie, S.A.)** in 1962. Shareholding is divided between the government of Mauritania (60%), **Air Afrique, S.A.** (20%), and **UTA French Airlines, S.A.** (20%).

Within four years, new Director General Sidi Ould Zein's carrier employs 73 workers and possesses a fleet of 3 Douglas DC-4s, 2 Fairchild Hiller FH-227As, 2 Douglas DC-3s, and 1 Piper Navajo. Domestic passenger and cargo services are provided serving Atar, Ayoun el Atrous, Kaedi, Nema, Nouadhibou, Nouakchott, Selibaby, Tidjikdja, and Zouerate. International frequencies link Nouakchott and Nouadhibou with Dakar and Las Palmas.

An FH-227A is destroyed as the result of a bad landing at Nouakchott on April 13, 1979; no serious injuries are reported.

Between 1980 and 1985, scheduled services are continued to previous destinations; however, the fleet is upgraded by the deletion of previous equipment in favor of 2 Fokker F.28-4000 jetliners and 1 F.27 Friendship. Operations continue apace in 1986–1987. In October of the latter year, a code-sharing alliance is entered into with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** for service on a route from Nouadhibou to Las Palmas via Nouakchott.

In 1988–1989, General Manager Moulaye O. Boukhreiss's two F.28-4000s link their Nouadhibou base with Dakar, Las Palmas, and Casablanca. Sidi Ould Zein returns as director general in 1990 and the fleet is enhanced by the delivery of a Piper PA-31T Cheyenne and a Pilatus-Britten-Norman PBN-2 Islander.

Operations continue apace in 1991 and the fleet in 1992 includes two F.28-4000s and the Cheyenne. In 1993–1994, Director General Zein oversees a workforce of 259 and acquires a third Fairchild Hiller FH-227A.

While landing at Tidjikdja on July 1 of the latter year in a sandstorm, an F.28-4000 with 4 crew and 89 passengers touches down hard, causing the landing gear to collapse and the plane to slide off the runway and into a rock outcrop, bursting into fire (80 dead).

In 1995, orders are placed for a pair of Aero International (Regional) ATR42-320s with which to replace the FH-227As. The first ATR is de-

livered in June 1996, followed by the second in September. A replacement Fellowship is also acquired.

Flights continue through 1997–1999 to Aioun Atrouss, Atar, Banjul, Casablanca, Dakar, Fderick, Gran Canaria, Kaedi, Kiffa, Las Palmas, Nouadhibou, Nouakchott, Selibaby, Tidjikdja, and Zouerate.

Airline employment grows to 259. The stake held by **Air Afrique (2) (Societe Aerienne Africaine Multinationale, S.A.)** is increased from 20% to 32% on July 1, 2000.

AIR MAURITIUS, LTD.: Air Maritius Center, President John F. Kennedy Street, St. Port Louis, Mauritius; Phone 852 230-7770; Fax 852 208-8331; <http://www.air-mauritius.com>; Code MK; Year Founded 1967. Jointly owned by the government (52.2%), a local freight company, Rogers and Co. (17.5%), and **British Overseas Airways Corporation (BOAC)** and **Air France** (15% each), **Air Mauritius, Ltd.** is formed on June 14, 1967. Amedee Maingard is appointed chairman.

A five-year, joint service agreement is entered into with the founding partner airlines in December.

From 1968, the year of the nation's independence from the U.K., on through 1971, the carrier's personnel provide ground-handling support at Plaisance Airport to the two foreign airline owners. Cockpit crews trained by the partners occasionally fly aboard **Air France** aircraft en route to Reunion Island.

During the summer of 1972, a Piper PA-31-310 Navajo is leased from **Air Madagascar (Societe National Malagache de Transports Aeriens, S.A.)** allowing the airline to start a 353-mile domestic route on September 13 from Port Louis to the island of Rodrigues.

In 1973, the 1967 agreement with the French and British flag carriers, the latter now **British Airways, Ltd. (2)**, is renewed for another five years and now includes a new partner, **Air India, Ltd.** Shareholding is now revised to the government of Mauritius (42.5%), Rogers and Co. (17.5%), British Airways Associated Companies (15%), **Air France** (15%), and **Air India, Ltd.** (10%).

Through the use of its own aircraft, the last-named now establishes a connection with Bombay, while the British and French shareholders provide links to London and Paris, respectively, employing a Super VC10 leased from the former.

While the international carriers provide foreign service during 1974–1976, the domestic network is flown with small aircraft, including a de Havilland Canada DHC-6-100 acquired with the assistance of **Air Madagascar (Societe National Malagache de Transports Aeriens, S.A.)** in 1975. Flights are also initiated to the French island of Reunion.

The international pact is not renewed in 1977; instead, **Air Mauritius** launches its own foreign service on January 1 with a wet-leased **British Airways, Ltd. (2)** Boeing 707-465 repainted in its own livery. Destinations visited from Plaisance International Airport are Nairobi, London, and Bombay (via the Seychelles), together with Reunion and the adjacent island of Rodrigues. Chairman Maingard's fleet employs 300 persons and also owns a de Havilland Canada DHC-6-100 Twin Otter.

During 1978, 2 B-707 Stratoliners are ordered for international operations while 2 de Havilland Canada DHC-6-300s are placed on the domestic and Reunion network. In April, Rome joins the European route network.

A code-sharing agreement is signed with **Air Madagascar (Societe National Malagache de Transports Aeriens, S.A.)** in April 1979 covering flights between Mauritius and Antananarivo.

Employing the **Air Madagascar B-737-2B2**, pooled service is initiated in November 1980 from Tananarive to Nairobi via Mauritius and Comoros and from Mauritius to Reunion.

Former Ministry of Communications Secretary Harry K. Tirven-gadam becomes chairman in 1981 and, as the chartered British B-707-465 is returned, services are inaugurated to Durban and Johannesburg with a B-707-344B acquired from **South African Airways (Pty.), Ltd.**

Enplanements for the year total 97,098, climbing to 105,187 in 1982. During the latter year, a Stratoliner route is opened to Jeddah. A second

B-707-344B is delivered in June 1983, allowing the European services to be extended to Zurich. Passenger boardings soar to 122,837.

Airline employment jumps 18.4% in 1984 to 534. The Boeing 747SP-44 *Maluti* is leased from **South African Airways (Pty.), Ltd.** on October 28; christened *Chateau du Reduit*, it inaugurates service to Paris and London on November 3. A week later, flights commence from Mauritius to Paris via Rome.

Passenger boardings ascend 24.6% to total 152,238 and cargo traffic skyrockets 124% to 8.06 million FTKs. A net \$4.4-million profit is earned on revenues of \$32.8%, up 71.3%.

Airline employment stands at 600 in 1985 and the fleet now includes the leased Jumbojet, plus 2 DHC-6s, 2 B-707-344Bs, and 1 Hawker Siddeley HS 748. An order is placed for an ATR42-320.

A Bell 206B JetRanger is received in March and is employed for short-haul charter and agricultural work, including spraying. In April, weekly B-707-344B service is started to Singapore and in June the carrier joins the African Airline Association.

B-747SP-44 service to Europe becomes thrice weekly in November, and, employing the Air Madagascar B-737-2B2, two weekly flights are now offered to Nairobi instead of one.

Freight traffic skyrockets 92.1% to 15.48 million FTKs and passenger bookings climb 20.6% to 182,754. Revenues total \$37.3 million, but expenses are \$38.4 million; the net profit drops to \$2.4 million atop an operating loss of \$1.1 million.

The payroll is increased 4.7% in 1986 to 628 and the fleet includes 1 leased B-747SP-44, 2 B-707-344Bs, 2 DHC-6-300 Twin Otters, and 1 Bell 206 JetRanger. Orders are placed for 2 B-767-200ERs. Under an understanding concluded with **Air India, Ltd.** in January, the two companies begin to explore joint route development.

Toward the end of the first quarter, shareholding in Air Mauritius is revised and is divided between the government (51%), Rogers & Co. (15%), **British Airways, Ltd. (2)** and **Air France** (12.5% each), and **Air India, Ltd.** (8.51%).

In April, the two new partners, Air Mauritius and Air India, begin shared service on a route from Mauritius to Bombay. In October, the company signs a consultancy contract with **Air Madagascar (Societe National Malagache de Transports Aeriens, S.A.)** and seconds an official, Lai Sikka, to that carrier to act as advisor to its director general.

The newly received ATR42-320 *Agalega* is introduced on the Rodrigues and Reunion routes in November, replacing the Twin Otters, and, in December, Air Mauritius assumes responsibility for the Perth and Sydney routes of **South African Airways (Pty.), Ltd.**

Customer boardings climb 16.2% to 212,318 and cargo increases 43.8% to 22.26 million FTKs. Revenues total \$65 million and an operating profit of \$13.5 million is reported along with net income of \$15.8 million.

The employee population grows again in 1987, up 15.9% to 728. A second leased SAA B-747SP-44, *Matroosberg*, joins the fleet in April; named *Chateau Mon Plaisir*, it replaces one of the two Stratoliners on the Bombay and Singapore routes and permits expansion of the European network to include stops at Geneva and Munich. Orders remain outstanding for a pair of B-767-23BERs.

Passenger bookings swell again, up a happy 42.1% to 296,133; freight skyrockets 103.6% to 46.24 million FTKs. Revenues ascend 56.9% to \$94.7 million and costs are held low, allowing operating profit to accelerate to \$22.9 million and net gain to \$24.4 million.

Enplanements in 1988 increase to 375,050. The first of two B-767-23BERs—the first 767ERs produced by Boeing—is received in early March and is christened *City of Curepipe*.

Also in March, an alliance is entered into with **Malaysia Airlines, Ltd. (MAS)** for joint service on a route from Mauritius to Kuala Lumpur. At month's end, Air Mauritius contracts with **Britannia Airways, Ltd.** for B-767 technical support.

City of Port Louis, the second B-767-23BER, arrives on April 18. Its 8,728-mile delivery flight from Halifax, Nova Scotia, to Port Louis is completed in 16 hrs. 27 min. and establishes a new distance record for

the aircraft's weight category and a point-to-point record from Halifax to Port Louis.

In August and September, wide-body services are initiated to Kuala Lumpur, Harare, and Dubai. Income exceeds expenses and there are profits: \$19 million (operating) and \$17.7 million (net).

The workforce grows by 39.2% in 1989 to 1,256. During the fall, the company joins the Amadeus computerized reservations system and forms a subsidiary company, Amadeus Mauritius, to link it to its worldwide offices as well as the island's travel agencies.

The company acquires the **South African Airways (Pty.), Ltd.** B-747SP-44 *Soutpansberg* on a September 30 short-term lease; the aircraft is not renamed.

On October 29, the company begins to code-share with **Cathay Pacific Airlines (Pty.), Ltd.** over a nonstop return route from Mauritius to Hong Kong.

Customer boardings jump 15.6% to 444,372 and cargo increases 28.2% to 74.63 million FTKs. Revenues advance by 19.4% to \$137.3 million and the operating profit accelerates to \$24.4 million. Net profit skyrockets to \$21.7 million.

Company employment is cut by 12.5% in 1990 to 1,100. In January, a B-747SP-27, christened *Chateau La Bourdonnais*, is purchased from **Aerolineas Argentinas, S.A.** It will enter service in June. The acquisition allows return of the B-747SP-44 *Soutpansberg* to **South African Airways (Pty.), Ltd.**

Traffic figures are only reported through August, the month Iraq invades Kuwait, creating much higher fuel costs. During these eight months, passenger boardings rise 25.5% to 336,297 and freight moves ahead by 15.5% to 41.94 million FTKs.

When a second ATR42-320, the *Port Mathurin*, is delivered in October, the company's sole remaining Twin Otter is withdrawn.

In December, the French government provides the airline with two significant loans. The first, for \$8.9 million, represents 85% of the cost of a new ATR42 while the second, for \$9.8 million, will allow construction of a new cargo center and for the training of company pilots.

The payroll is increased by 36.4% in 1991 to 1,500 and the fleet now includes 2 ATR42-320s, 1 B-747SP-27, 1 B-747SP-44 leased from **South African Airways (Pty.), Ltd.**, 2 B-767-23BERs, and 2 Bell 206B JetRanger helicopters.

Traffic statistics are reported only through July; customer bookings are down to 281,998 and cargo is up a slight 1.3% to 37.23 million FTKs. Income exceeds costs for the year and there profits: \$20.4 million (operating) and \$23.1 million (net).

On November 1, the B-747SP-44 *Hantam* is leased from **South African Airways (Pty.), Ltd.** and is rechristened *Chateau Labourdonnais*. Weekly roundtrip B-767-23BER service to Perth begins in December.

The workforce grows 7.8% in 1992 to 1,548. The B-747SP-44 *Chateau Labourdonnais* is returned to **South African Airways (Pty.), Ltd.** on June 15 and resumes its original identity as the *Hantam*.

Air Mauritius celebrates its twenty-fifth anniversary, also in June, and code-sharing begins with **Condor Flugdienst, GmbH.** in November over a weekly route from Mauritius to Munich.

Passenger boardings for the year as a whole jump 8.4% to 582,627 while freight climbs 6.3% to 86.27 million FTKs. Revenues ascend 13.8% to \$222 million and the operating profit is \$16.5 million. Net gain hits \$25.4 million.

Airline employment inches up 0.9% in 1993 to 1,562 as Chairman Sir Harry Tirvengadam also becomes managing director.

In addition to visiting the adjacent island of Rodrigues, the company also flies from Mauritius to Antananarivo, Bombay, Durban, Frankfurt, Geneva, Harare, Hong Kong, Johannesburg, Kuala Lumpur, London, Moroni, Munich, Nairobi, Singapore, Paris, Perth, Reunion, Rome, and Zurich.

Orders are placed at year's end for 5 A340-300s, which will succeed the Jumbojets. A contract is also signed with **Deutsche Lufthansa, A.G.** for their maintenance.

Customer bookings slide 2.2% to 376,384, but cargo is ahead by 3.4% to 50.36 million FTKs.

The workforce is cut by 4% in **1994**. The SAAB-747SP-44 *Chateau de Reduit* is returned on May 31, following delivery on May 19 of the first A340-312, which is chartered from ILFC and christened *Paille en Queue*, in honor of the tropical birds that grace the tails of company aircraft. Roundtrip flights to Brussels commence in July.

Traffic, reported through August, shows improvement. Passenger boardings rise 11.2% to 418,407 and freight rises 4.3% to 52.54 million FTKs.

The second B-747SP-44, *Chateau Mon Plaisir*, goes back to Johannesburg on November 10 after the second long-range Airbus, an owned unit named *Pink Pigeon*, arrives on October 29. Roundtrip service to Cape Town begins on November 30.

A total of 1,500 workers are employed in **1995**. The company is listed on the Mauritius stock exchange.

The third A340, a Dash 313X also from ILFC, is delivered on April 3 and is christened *Kestral*. The service with **Condor Flugdienst, GmbH**, becomes twice weekly.

Traffic figures are only reported through July. During the first six months of the year, a total of 401,340 passengers are transported, along with a cargo total of 64,321,000 FTKs.

In September, the company begins a code-sharing route, employing its own aircraft, with **Austrian Airlines, A.G.** between Mauritius and Vienna.

The workforce declines 1.3% in **1996** to 1,481. The owned fleet now includes 2 ATR42-320s, 3 A340s, 2 B-767-23BERs, 2 Bell 206B Jet-Rangers, and 1 B-747SP-27. The latter is sold to **Qatar Airways, Ltd.** early in the year.

Caribjet, S.A. of Belgium leases a Lockheed L-1011-500 TriStar from **TAP-Air Portugal, S.A.** on March 8. After it has been repainted, it begins flying on behalf of Air Mauritius on March 15.

A joint service route is inaugurated in April with **Air Austral, S.A.** between Mauritius and Reunion. Munich is dropped from the schedule during the spring, allowing initiation of a weekly A340-313X service to Manchester. A B-767-328ER is leased from **Royal Brunei Airlines** in May.

Traffic is reported through October and shows customer bookings up 5.7% to 578,745. In addition, 100.63 million FTKs are also operated, a 5.9% increase. For the whole year, an after-tax profit of \$25.6 million is generated.

An A340-313 catches fire while on the ground at Mauritius and is badly damaged. The aircraft, which is not covered by insurance, begins a restoration that will take until the following June 13 to complete. Another A340-311 is chartered for four years from ILFC in November.

Airline employment climbs 6.2% in **1997** to 1,642. Figures are offered through April and show customer bookings up 9.4% to 252,487 and cargo rising a huge 65.6% to 50.1 million FTKs.

Former British Aerospace executive and advisor to Prime Minister Sir Navin Ramgoolam, Nashirudeen Mallam-Hasham is named chairman/managing director on February 17. He succeeds Sir Harry Tirvengadam, who becomes chairman of **Air Afrique, S.A.** A pair of ATR42-500s is acquired in April and June.

Under the leadership of new Chairman/Managing Director Mallam-Hasham, Air Mauritius now begins a campaign to federate the airlines of the Indian Ocean area. To this end, a protocol is signed in July with the airlines of Madagascar and the Seychelles, the Comoro government, and **Air France**.

The company receives its fifth A340, a Dash 313X, at the beginning of October. It is employed on October 28 to inaugurate dual-designator services between Mauritius and the Seychelles in cooperation with **Air Seychelles, Ltd.**

Destinations visited in **1998** include Antananarivo, Bombay, Brussels, Durban, Frankfurt, Geneva, Harare, Hong Kong, Johannesburg, Kuala Lumpur, London, Melbourne, Moroni, Munich, Nairobi, Paris, Perth, Reunion, Rome, Singapore, Vienna, and Zurich.

During the spring, an effort is made to acquire a \$22.1-million, 51% stake in **LAM (Linhas Aereas de Mocambique, S.A.)**; however, the bid is unsuccessful when privatization of that carrier is shelved. The airline now moves to become one of the prequalified bidders for **Uganda Airlines Corporation**.

In addition to these acquisition activities, Chairman/Managing Director Mallam-Hasham oversees the establishment of a regional air transport consultancy; the subsidiary is christened Consulting for African and Regional Air Transportation, Ltd. (CARAT).

A strategic alliance document is signed with **Air France** on April 3. The companies share codes on their five weekly roundtrips between Paris and Mauritius and begin to develop joint purchasing and airport handling activities.

Flights continue apace during the remainder of the year. Half-year traffic statistics show bookings of 535,000.

Airline employment in **1999** stands at 1,794, and another A340-313X is received in April. Partial figures for the year show bookings of 366,000 and 84.38 million FTKs.

The workforce is increased in **2000** by 11.5% to 2,000. A code-sharing agreement is signed with **Air Europe, S.p.A.** on March 10 for flights between Mauritius and both Rome and Milan. For its part, AM flies the new schedule with an A340-313X.

Weekly flights from Mauritius to the Indian city of Chennai begin on October 29.

AIR MELANESIAE, S.A.: Vanuatu (1969–1989). Growing out of a **1969** pooled services agreement between **Air Hebrides** (controlled by **UTA French Airlines, S.A.**) and **New Hebrides Airways, Ltd.** (backed by **British Overseas Airways Corporation (BOAC)**), Air Melanesiae is created to fly scheduled, lightplane, interisland services throughout the New Hebrides (renamed Vanuatu upon independence in July 1981) region. Destinations served include Aneityum, Craig Cove, Dillons Bay, Emae, Ipota, Lamap, Lamen Bay, Longans, Lonorore, Luganville (Espiritu Santo), Motalava, Norsup, Redcliffe, Sola, Tanna Island, Tongoa, Valeadir, Vila, and Walaha.

By the middle **1980s**, the fleet comprises 1 DeHavilland Canada DHC-6-300 Twin Otter, 1 Britten-Norman BN-2A Trislander, and 3 BN-2 Islanders. During the remainder of the decade, General Manager Peter Booth's company adds another Twin Otter and 2 Embraer EMB-110 Bandeirantes, retiring the Islanders.

Early in **1989**, merger discussions are undertaken with the start-up **Vanair (Vanuatu Internal Air Service)**. When these fail, Air Melanesiae ceases operations in November. The assets pass to Vanair on November 29.

AIR MEMPHIS, S.A.E.: 2/1316 Elnozha Elgedida, Heliopolis, Egypt; Phone 20 (2) 297-5762; Fax 20 (2) 297-5762; Code MPS1; Year Founded 1995. Air Memphis is established at Heliopolis in **1995** to provide ad hoc, worldwide, all-cargo charters. Founder Hamid Eisa is chairman. Revenue flights begin with a single Boeing 707-336C Stratofreighter and operations continue apace in **1996–1997**.

On March 10, **1998**, en route from Mwanza to Cairo via Mombasa with 34 tons of fish, the Stratofreighter, with a crew of six, fails its initial climb away from the intermediate point. It strikes and destroys the airport landing lights and crashes into a small hill beyond the end of the Moi International Airport runway, rolls, disintegrates, and catches fire; there are no survivors. One woman on the ground is injured when shrapnel hits her in the hand.

Efforts begin to find a replacement aircraft and soon 2 more B-707-320Cs are purchased from the used aircraft market.

Airline employment at the beginning of **1999** stands at 110. Flights continue apace during the remainder of the year.

A BAC 1-11-500 is acquired from Romania in late June **2000**.

AIR MERCURY: United States (1991–1992). Air Mercury, Inc. is founded at Los Angeles in the summer of **1991** to provide international

all-cargo charters with a Boeing 727-100F. Weekly revenue flights begin to Guadalajara and Mexico City in August and then are increased to twice weekly in September.

Unable to make money in the midst of recession, the newcomer shuts its doors early in **1992**.

AIR MERCURY INTERNATIONAL CARGO, S.A.: Belgium (1991–1992). AMIC is established at Brussels in **1991** to fly all-cargo charters to the Mideast, Far East, and east Africa. Revenue services commence with a single Boeing 707-365C and permission is sought to begin services to the U.S. Recession prohibits the freight operator from achieving traffic and financial viability and it is forced to shut down in **1992**.

AIR METRO, LTD.: United Kingdom (1988–1989). Air Metro, Ltd. is established at Bournemouth International Airport in **1988**, taking its name from the aircraft in its two-ship fleet, Fairchild Metro IIIs. The American-made, 19-passenger airliners inaugurate revenue services to Manchester, but are unable to generate sufficient revenues to cover mounting debts. The company folds in **1989** before reaching its first anniversary.

AIR METRO AIRLINES: United States (1975–1976). AMA is set up at Traverse City, Michigan, in **1975** to offer scheduled intrastate passenger and cargo services. Daily Beech 99 frequencies are duly inaugurated, linking the commuter's base with Pontiac, Detroit, Lansing, Marquette, and Hancock. Operations cease in July **1976**.

AIR MEUSE (BELGIAN REGIONAL AIRLINE, S.A.): Belgium (1992–1995). Air Meuse is set up at the National Airport in early **1992** as the operational component of the **Sabena (Belgian World Airlines, S.A.)** subsidiary DAT Wallonie. Employing a British Aerospace BAe 146-200, Managing Director Michel Houtart's carrier commences regional services from Brussels in the spring. Later in the year, an Embraer EMB-120 Brasilia is placed into service.

Operations continue apace in **1993–1994**, but cease in **1995**.

AIR MIAMI: United States (1978–1982). AM is originally formed in **1978** as a south Florida-based charter operator, flying extensively throughout the southeastern U.S., the Caribbean, Bahamas, and Mexico. The initial fleet comprises 1 de Havilland DH 114 Heron 2 and 3 Cessna 402s.

In March **1980**, the carrier elects to begin scheduled CASA C-212 service to Ft. Myers; during the summer, the route is stretched to Tampa/St. Petersburg and Titusville. In July, the third-level company is tapped to replace **Air Florida** on the expanding airline's Miami to Marathon route.

The arrangement proves so successful that, in October, Air Miami becomes the first member of the new **Air Florida** Commuter system. Flights to Palm Beach from Miami begin in December with a second Spanish turboprop purchased in late fall. Enplanements rise to 10,588 for the first complete year.

Airline employment at President Fred deWitt's commuter totals 76 in **1981** and his fleet now consists of 2 DC-3s, 2 CASA C-212-200 and 1 C-212-100 Aviocars, and 3 Cessna 402s. In April, services are initiated from Miami and Palm Beach to Naples, Freeport, and Ft. Lauderdale.

In addition to an increase in its Miami (MIA) accommodations, the carrier initiates increased frequencies over its routes and watches as passenger boardings skyrocket 811% to 96,468.

In December, Air Miami breaks with **Air Florida**; the carrier is reformed and renamed **North American Airlines (2)**. The workforce is increased a spectacular 114.3% to 105. Revenues exceed \$3 million and captured expenses allow a \$4,853 operating profit.

AIR MICHIGAN: United States (1969–1972). Dr. Curtis Benson establishes Air Michigan at Kalamazoo during the early summer of **1969** to provide intrastate scheduled passenger and cargo services. The fleet

consists of 1 Cessna 310, 1 de Havilland Canada DHC-6-200 Twin Otter, and 1 Beech 99, the livery of the latter featuring a map of the state on the forward fuselage. Benson's airline inaugurates daily roundtrips in July. Destinations visited include Benton Harbor, Detroit, Grand Rapids, and Lansing.

Largely unheralded operations continue apace over the next three years until the company fails in January **1972**. The company is remembered today primarily for its policy of hiring only the shortest flight attendants for its Beech 99.

AIR MICRONESIA: United States (1967–1993). As the result of the bankruptcy of the supplemental carrier **Transocean Air Lines (TAL)**, the U.S. government is forced to find some other concern to serve as its designated air carrier and to provide air transport in the Marshall, Caroline, and Mariana Islands. Part of the island chain known as Micronesia, these islands are supervised by the U.S. as part of the UN's Trust Territory of the Pacific Islands.

In the spring of **1967**, the Interior Department reviews bids and chooses to offer its contract to a new firm, **Air Micronesia**, which is a partnership between **Aloha Airlines** (20%), **Continental Airlines** (31%), and the United Micronesia Development Association (UMDA) (48%). Former **Western Air Lines** official Dominic P. Renda is appointed president and, with private and FAA officials aboard, a **Continental Airlines** aircraft, flown by that company's chief pilot M. P. "Barney" Barnwell, undertakes survey flights around the islands between December 11–22.

The UMDA will eventually come to control 60% of "Air Mike," as the airline is sometimes known, but the carrier itself will remain, essentially, a shell with a profit-sharing arrangement with the major, its operator. Within **Continental Airlines**, the operation is considered primarily as a division, Continental Air Micronesia, based at Honolulu.

Amphibian services between Truk and Ponape are provided by Grumman SA-16 Albatrosses, leased from **Pan American World Airways (1)**, while **Continental Airlines** provides a surplus Douglas DC-6B, nicknamed **Granny Goose**, to service the route network formerly covered by **Trust Territory Air Service**. These Micronesian destinations include Guam, Truk, Majuro, Saipan, and Yap. Continental also provides a Boeing 727-24C, given a special Teflon underbelly coating to protect it against coral runways and christened **Ju Ju**, and the technical support for it.

On behalf of the company, the **Ju Ju** initiates the 4,300-mile service from Saipan to Honolulu via seven different islands on May 16, **1968**. To aid its operation, Air Mike turns on the first single sideband radio network in the island chain in July and, later in the year, flights begin to Okinawa. A total of 45,772 passengers are carried by December 31, along with a cargo load of 3 million FTKs. The on-time performance is 83% and 96.7% of all flights are completed.

The **Ju Ju** begins stopping at Johnson Island, between Majuro and Honolulu, on behalf of the U.S. military, on June 18, **1969**. During the summer in response to a pledge made by Continental President Robert F. Six, construction begins on six hotels, one in each Trust Territory district. On December 4, a brief service is inaugurated from Majuro to newly independent Nauru to the south.

Enplanements for the year are 84,520.

With the island's new airport completed, Ponape, on February 9, **1970**, becomes the next Micronesian stop for the Boeing transport. The Albatrosses are returned. In July, the CAB recommends that **Continental Airlines** (which has lost \$3 million on the service since its start-up) be stripped of its authority and that it be given over to **Pan American World Airways (1)**. This proposal is opposed by Micronesian officials.

During the year, passenger boardings jump 8.6% to 92,473.

In January **1971**, Air Micronesia halts service to Majuro when the U.S. military begins employing the island as a storage facility for chemical warfare agents. As a result of a CAB ruling in the Pacific Islands Local Service case, Air Micronesia, on August 11, is granted permanent authority and is awarded routes to American Samoa and its first foreign

destination, Nauru. President Nixon approves Air Micronesia's permanent certificate on October 5. The route to Okinawa is limited to five years' duration.

When Okinawa is returned to Japan in 1972, that island becomes the carrier's second foreign stop. On December 15, a second B-727-24C, the *Nu Ju*, is acquired, allowing jetliner service to Yap and Palau. The DC-6B and two SA-16s are retired in early 1973 and the largest Continental Hotel is opened on Saipan on March 15, 1974.

Operations continue apace in 1975 and, a year later, in 1976, the Northern Marianas (Saipan and surrounding islands) vote to leave the Trust Territory and become a U.S. Commonwealth. On May 10, the CAB recommends to President Gerald Ford (who agrees on August 28) that Air Micronesia be allowed to commence flights from Saipan to Japan.

On March 1, 1977, the *Ju Ju* is sold to Air Micronesia by Continental Airlines, which immediately leases it back to employ as a flight support tool. Air Micronesia now provides personnel, equipment, facilities and ground operations services to Continental Airlines, which reimburses AM for all operating costs except corporate fiscal expenses. Fiscally, the arrangement with United Micronesia Development Association also changes. UMDA shareholding increases to 60% and Continental is now a 30% owner; Aloha interest shrinks to 10%. Donald L. Beck is now president.

Service from Saipan's new airport as well as Tokyo begins on October 1. Airline employment in 1978 totals 267 and the Commonwealth of the Northern Marianas is officially established. The Nation of the Federated States of Micronesia is set up in 1979.

Belau's constitution is approved and the Saipan Continental Hotel is sold in 1980.

Flight 614, a B-727-92C with 6 crew and 67 passengers, is destroyed as the result of landing short of the runway at Yap on November 21; the aircraft skids out of control and slides off the runway into the jungle some 1,700 ft. beyond the runway and catches fire; all aboard are safely evacuated.

In 1981-1982, service is restarted to Johnson Island and new revenue operations begin, including a daily flight from Guam to Nagoya via Saipan. The Philippines is also opened by the carrier with two routes from Guam—to Manila and to Manila via Koror. Two more B-727-24Cs are introduced by the end of 1983, allowing an increase in regional frequencies. Enplanements for the year total 161,000.

In 1984, Continental makes an attempt to take over controlling interest of the United Micronesian Development Association, 60% owner of Air Micronesia. As the four B-727-24Cs operated under "Air Mike" colors continue to service their routes, negotiations with the Pacific islands involved continue. Simultaneously, the mainland major combines its south and mid-Pacific operations under George Warde's Continental Air Micronesia division, based in Honolulu. The U.S. trusteeship for the Federated States of Micronesia formally ends in 1986.

Two new DC-10-30s are now placed on the transpacific run, but are replaced in 1987 with 1 more Boeing trimotor, bringing the fleet to 2 B-727-224s, 2 Dash-24Cs, and 1 Dash-24. During the year, the Federated States become an independent nation. There is no change in service during 1988.

Although traffic figures remain unavailable, financial figures are released for the first time in 1989. Revenues for the year total \$2.2 million and with costs down, the operating profit is \$989,112 and net gain is \$955,882.

In 1990, Continental Airlines entertains thoughts of selling this division, but does not, primarily because it continues to be profitable. Revenues increase 45.1% to \$3.18 million, expenses (led by fuel prices in the fourth quarter) are up a staggering 92.1% to \$2.32 million, and operating income slides to \$867,114. Net profit falls to \$669,646.

Now operating under Chapter XI bankruptcy, Continental Airlines decides to sell its Air Micronesia division in 1991. Revenues ascend 10.3% to \$3.5 million and with costs under control, the carrier is still profitable. Operating income is \$500,386 and net gain reaches \$1.99 million.

Early in 1992, Continental Airlines reverses its sale decision and elects to hold onto the Guam-based operation. Senior Vice President Operations Donald Breeding is dispatched to serve as president/CEO. As part of the reorganization plan prepared for and accepted by Air Canada, Ltd. and Texas-based Air Partners I.P. in November, Continental Airlines reports that the Air Micronesia division will be spun off into separate company to operate the Micronesian business.

Although traffic figures are presented with those of the parent, Breeding allows, at year's end, that revenues of \$25.1 million have been earned. Additionally, the year has seen profits: \$928,310 (operating) and \$830,179 (net).

By the time Continental Airlines emerges from Chapter XI bankruptcy on April 27, 1993, Continental Micronesia is operational.

AIR MID-AMERICA: United States (1969-1970). Established at Chicago's Meigs Field in the spring of 1969, Air Mid-America undertakes scheduled Douglas DC-3 roundtrips daily to East St. Louis via Springfield. Services last just over a year.

AIR MID-EAST: United States (1968-1971). The charter operator Air Mid-East is established at New York (JFK) in 1968 to operate passenger and freight flights throughout the Middle East. Revenue operations commence with a single Lockheed L-1049H Super Constellation.

By 1970, the carrier is operating a fleet that includes 8 Super Constellations, as well as 4 DC-6s and 6 DC-7s. Severe financial difficulties and Mideast energy developments cause the company to shut down in 1971.

AIR MIDWAY: Rte. 1, Box. 120-B, Municipal Airport, Kearney, Nebraska 688447; United States; Phone (308-237-2111); Year Founded 1992. Air Midway is established by Clyde Mikelson at the Kearney Municipal Airport in Nebraska in 1992. Five employees are hired and charter operations commence and continue with 5 Cessna 185s and 1 Piper PA-23 Aztec. A flight school and FBO is also operated.

AIR MIDWEST: P.O. Box 7724, Wichita, Kansas 67277, United States; Phone (316) 942-8137; Fax (316) 945-0947; <http://www.mesa-air.com/amw.htm>; Code ZV; Year Founded 1969. Having replaced services by both Central Airlines and Frontier Airlines (1) over the past three years and obtained a number of lucrative airmail contracts from the U.S. government, Aviation Services, Inc., Gary M. Anderson's airline/FBO, based at Wichita, Kansas, attracts additional investment.

It is reformed on May 15, 1969 and renamed Air Midwest. The first of two Beech 99As ordered the previous fall join the fleet late in the year as do the first stewardesses. The company now owns 9 aircraft and employs 53 workers. Although a total of 16,600 passengers are flown on the year, the company suffers a loss of \$139,000 on revenues of \$471,000.

Operations continue apace during the first four years of the new decade. In 1970-1973, Garden City, Pueblo, and Colorado Springs join the route network. As part of a two-year CAB experiment, Air Midwest, beginning on August 1 of the latter year, becomes the first American carrier to receive a flow-through federal subsidy; under this arrangement, payments are made to Frontier Airlines (1), which funnels them back to Adamson. This subsidy concept is challenged in court early in 1974 by representatives of the motor coach industry.

Enplanements for the year are 44,935.

Airline employment in 1975 is 80; the "flow through" subsidy practice is ruled illegal by the courts in June 1975. Elements of the program will, however, be employed in the Essential Air Service (EAS) subsidy program of the Airline Deregulation Act. Air Midwest now applies for full CAB certification as a replacement feeder for Frontier Airlines (1) in eight more Kansas and Colorado communities.

The regulatory body announces in the fall that Adamson may provide "regional feeder" services with small aircraft, thus making Air Midwest the first commuter airline in the U.S. to be specifically certified as a third-level, or regional, airline. At this time, it is only the second airline (after Ozark Airlines in 1949) certified as a regional air carrier.

Beech 99 flights commence from Kansas City to Denver. Customer bookings decline 4.5% to 43,000, but still, as a result of the federal help, the company is able to earn its first net profit: \$131,854.

Only nine more employees are hired in **1976**. Having sold its 2 Beech 99As, the company acquires 4 new Swearingen Metro IIs and places them into service on the former **Frontier Airlines (1)** route from Denver to Kansas City.

Passenger boardings decline 28.6% to 30,423 and freight is off 41.6% to 8,302 FTKs. Company officials optimistically plan a better next year.

Air Midwest's Metros in **1977** account for enplanements totaling 75,276. Revenues reach \$4.17 million and expenses are \$4.06 million, leaving a \$120,000 profit.

In **1978** the Airline Deregulation Act becomes law and the company's the workforce totals 171. The company begins to replace **Texas International Airlines** on several of its New Mexico routes late in the year and the carrier undertakes Essential Air Service (EAS) routes in Kansas.

Bookings accelerate 12% to 84,501 and freight grows by 23.1% to 799,092 pounds. Operating income rises 27% to \$5.3 million and costs climb 25% to \$5.07 million, leaving \$230,000 to bank.

The workforce is increased by 35.7% in **1979** to 232. The fleet is now doubled to 10 Metroliners. These are employed to begin new routes to the Oklahoma and New Mexico communities of Carlsbad, Clovis, Albuquerque, Enid, Ponca City, Oklahoma City, Tulsa, Hobbs, Roswell, and Lubbock. In July, the route network totals 19 destinations.

During the year, Michael J. Scheidt is recruited as a pilot; he will become senior vice president/chief operating officer a decade later.

Passenger boardings jump 47% to 124,281. Costs, led by fuel prices, balloon 54% to \$7.8 million while revenues earned are up only 46% to \$7.2 million. Still, when the year's ledgers are closed, a \$530,517 net gain is found.

The employee population jumps 62.8% in **1980** to 350. New frequencies are extended to Kansas City, Springfield, and St. Louis, plus seven other communities in Texas, Oklahoma, New Mexico, Nebraska and Iowa. Seven more Metro IIs join the fleet, and with 15, the company now owns more of this type than any other airline in the world.

Orders are placed for five SAAB-Fairchild SF340s.

Enplanements skyrocket 85.1% to 230,091 and freight traffic rises 78.4% to 239,000 FTKs. An operating loss, \$131,690, is accepted as expenses climb 102.8% to \$15.77 million on revenues of \$15.75 million, themselves up 102.6%. Still, a net profit of \$86,767 is generated.

Ten new employees are hired in **1981** and the fleet grows to include 16 Swearingen Metro IIs, with 5 SAAB-Fairchild SF340s on order. The airline becomes a public corporation, registering with the Securities & Exchange Commission and receives permission to sell its stock beyond the borders of Kansas. Service is discontinued to Des Moines and Omaha, but extended to Liberal, Kansas, and Farmington, New Mexico. Other schedules are adjusted, with some increased and others decreased.

Passenger boardings continue to rocket upward, climbing 24.4% (largely prior to the PATCO air traffic controllers' strike) to 283,874, with freight climbing another 15% to 401,000 FTKs. An even financial larger loss is, however, suffered. On revenues of \$22.5 million, a 43.9% boost, expenses are up 34.6% to \$21.23 million, leaving an operating gain of \$1.28 million. Expenses incurred during the third and fourth quarters cause a 232.8% increase in net red ink to \$436,000.

In **1982**, the payroll is increased again, by 13.6% to 410 and the company now operates the largest fleet of civil Metroliners (15) in the world. Orders are placed for 5 SAAB-Fairchild SF340s. Air Midwest again expands its route system, including Joplin, Missouri, and Grand Island, Nebraska.

Enplanements climb 9% to 309,390, but cargo plunges 20.5% to 290,000 pounds.

The financial picture brightens considerably. Operating income advances 21.3% to \$27.17 million and expenses are kept at \$23.78 million, an 11.9% increase. The operating profit is \$3.39 million and a net profit of \$1,974,900 is banked. The first cash dividend in company history is paid to stockholders as shares are split on a two-for-one basis.

Airline employment rises further in **1983**, climbing 14.3% to 488. In January, the company receives the 1982 "Regional Airline of the Year Award" from *Air Transport World* magazine.

Flights to Arizona destinations are opened. Preparations are made for the introduction of the new SAAB-Fairchild turboprops in the following year.

Bookings advance to 388,530 and cargo climbs to 1.91-million pounds. Revenues climb 22.5% to \$33.3 million, costs rise an equal percentage to \$29.06 million, and a \$4.23-million operation profit is generated. A net profit of \$1,814,700 is announced.

The payroll grows 22.5% in **1984** to 600 and the fleet includes 22 Metro IIs and 4 Metro IIAs, while orders remain outstanding for 5 SF340s and 5 Embraer EMB-120 Brasílias. Flights begin from Johnson County Industrial Airport, south of Kansas City, on February 1 to Wichita, St. Louis, and Des Moines. In October, service is kicked off from Bi-State Parks Airport at St. Louis to Chicago (MDW), from Sioux City to Minneapolis (MSP), and from Sioux City to Omaha.

In addition to the route expansion, Anderson's firm adds its first 2 SAAB-Fairchild SF340s to its fleet and, late in the year, papers are signed for the acquisition of Fayetteville, Arkansas-based regional carrier **Scheduled Skyways**. The nation's leading regional now visits 51 cities with a fleet of 42 aircraft. During the year, it operates 1,500 scheduled departures.

Enplanements swell by 22.4% to 475,586 and freight rises 6.1% to 2.08 million pounds. Revenues jump 18.7% to \$39.52 million and costs are held to \$34.19 million, a 17.7% boost. The operating profit swells to \$5.33 million while a record \$4.23-million net gain is celebrated.

The purchase of Scheduled Skyways is completed with stockholder ratification on January 17, **1985**, largely in anticipation of a feed agreement with **Republic Airlines** at Memphis. Growth continues as the former **Scheduled Skyways** begins flying as a wholly owned subsidiary, **Air Midwest Skyways**. Work is soon afoot, however, to end this autonomous status and have the former independent merged completely into its parent.

An unsuccessful effort is made to take over **Air Illinois** and in the spring, the carrier loses out on the bidding to feed **Republic Airlines'** Memphis hub. The third airline to take delivery of the SAAB-Fairchild SF340, the Wichita-based commuter places the first 2 of 5 ordered Swedish-made turboprops into service on April 1 and 15, respectively.

On May 1, interline partner **Eastern Air Lines** supports an increase of AM daily departures at Kansas City from 60 to 70 per day, including 5 additional shuttle flights to St. Louis bringing the daily total to 14. The company's twentieth anniversary is celebrated on May 15 and, as a result of losing the Memphis arrangement, growth targets are shifted from west Tennessee to St. Louis and Kansas City.

Integration of **Scheduled Skyways** is completed on June 3 and the former Arkansas-based commuter is integrated into its new parent by June 25. The amalgamated network now allows service to 57 communities in 15 south and central states. The fleet now includes 2 SF-340s, 38 Metros, and 2 Nord 262s.

In a major change of policy, officials of the Kansas independent announce on July 1 that the company will become an **Ozark Airlines** commuter partner, serving the national's St. Louis hub as "Ozark Midwest Express" beginning on October 1. Between June and August, three more SAAB SF340s arrive.

In August, Air Midwest also becomes the fourth American Eagle partner, with plans to inaugurate flights from **American Airlines'** new Nashville hub in the next the spring. The first of five ordered Embraer EMB-120 Brasílias is delivered in September and it is almost unnoticed, but the Essential Air Service contract for certain New Mexican routes is lost to **Mesa Air**.

However, a third code-sharing agreement is reached with **Eastern Air Lines** whereby the large regional begins to serve on November 1 as "Eastern Midwest Express" from the major's Kansas City hub to 15 outlying communities. Also in November, a public stock offering brings in \$11.4 million with shares of common stock selling at \$10.25 apiece.

Although passenger boardings jump 8.6% to 761,083, the surge cannot overcome the adverse impact of unusually heavy training requirements for newly integrated personnel plus aircraft repairs and bad weather in November–December.

Revenues are up 1.7% to \$59.49 million, but costs ascend 15.9% to \$62.73 million and cause rare losses of \$3.23 million (operating) and \$3.67 million (net).

In February 1986, service is suspended on numerous unprofitable routes, particularly all of those in New Mexico formerly operated under the EAS contract, plus Springdale, Arkansas, and Amarillo, Texas. Following a \$3.2-million first quarter loss, the fifth quarterly loss in a row, the board of directors authorizes the issuance of two million shares of preferred stock and changes in the company's profit sharing plan, both measures designed to counter the declining situation.

In the spring, the large regional inaugurates two separate code-sharing arrangements. The company originates American Eagle flights from the major's new hub at Nashville on April 15. Four newly purchased Embraer EMB-120 Brasilias and 10 Fairchild-Swearingen Metro IIs are assigned to the new enterprise. Meanwhile, "Eastern Midwest Express" service is started to 15 cities on the spokes leading into the second major's hub at Kansas City.

During the second and third quarters, the fleet grows to include 42 Metro IIs, two Metro IIAs, five SAAB SF340As, and four Brasilias. Most of the Metro Is acquired in the **Scheduled Skyways** acquisition are now sold or leased. With completion of the Ozark-TWA merger in November, the "Ozark Midwest Express" service centered on St. Louis becomes "TWExpress" in support of the surviving partner, **Trans World Airlines (TWA)**.

Unhappily, the route reorganization that the major imposes upon its two local feeders requires Air Midwest to eliminate six Illinois and Missouri cities from its route while gaining only two, Cape Girardeau and Quincy. St. Louis bookings decline by 30% while, at the same time, **Eastern Air Lines** inaugurates jet service over the regional's most profitable route, Kansas City to Wichita.

Customer bookings ascend 21.3% to 923,124 and revenues advance 15.7% to \$68.78 million. Expenses rise 9.6% to \$68.6 million and allow an operating profit of \$178,000. The net loss, on the other hand, climbs a million dollars to \$4.31 million.

A non-dual designator service is resumed to Downtown Airport in Kansas City in 1987. Flights are discontinued to a number of EAS destinations in Tennessee and Arkansas. Costs involved in taking over the smaller companies together with less-than-anticipated returns from the code-sharing agreements bring total losses since 1985 to \$9 million.

In June, a large number of employees are laid off, a wage giveback program is implemented, and six of its Brazilia delivery positions are sold. The same month, the Metro fleet is voluntarily grounded when the FAA requires the company to begin the immediate repair of previously allowed nonstructural skin cracks.

It will require three months for all units to be properly handled and the repairs documented. In October, **Atlantic Southeast Airlines** co-founder Robert Priddy acquires 6.5% interest (251,300 shares) and, in November, is elected to the board of directors and asked to prepare a plan for the carrier's resurgence.

On December 31, the assets of the carrier's American Eagle operation at Nashville are sold to AMR Corporation, parent of **American Airlines**, for \$8 million. The transaction is not as profitable as it would appear; after paying off a \$2-million loan to the major and the cost of the 11 Metros, which are also turned over, Air Midwest realizes only \$3.3 million in cash and from that a mere \$117,000 net profit.

On the year, passenger enplanements surpass the million mark in annual boardings for the first time (1,030,497) in an 11.6% increase. Cargo, on the other hand, declines by 9.3% to 1.94 million FTKs. Revenues swell 20.8% to \$83.31 million, expenses jump 15.6% to \$79.33 million, and the operating profit is up to \$3.98 million. The year's net loss "improves" to \$1.21 million.

The workforce is reduced by 23.2% in 1988 to 988. On January 14, following three months of publicly submerged friction, the board dismisses founder Gary Adamson as president/CEO, replacing him with his antagonist, Robert Priddy, who is asked to implement his rescue plan. Adamson remains board chairman, but has no management role. Simultaneously, Cayman Islands-based Templeton, Galbraith & Hansberger purchase 12.26% shareholding, becoming the airline's single largest stockholder.

President Priddy initiates cost-cutting measures in April, led by a reduction in force of 735 of the carrier's 1,050 employees. Simultaneously, it is decided to abandon the company's multistop route structure in favor of a pure hub-and-spoke system. Now concentrating on feeding passengers to **Trans World Airlines (TWA)** at St. Louis and **Eastern Air Lines** at Kansas City, Priddy's fleet comprises 10 Embraer EMB-120s, 7 SF340s, and 35 Fairchild-Swearingen Metros.

After eliminating most one-stop routes, the number of Brasilias is reduced to four. In June, sale and leaseback are negotiated for six Metro IIs and several spare engines. Traffic and income fall significantly when **Eastern Air Lines** closes its KC hub on August 31 and the affiliation, in effect since 1985, ends.

Nearly two weeks of boardings are lost until, on September 18, a new code-sharing arrangement is reached with **Braniff, Inc.** for "Braniff Express" service from the same city.

Customer bookings increase 17% to 874,000, but revenues decline 11.1% to \$74.09 million. Expenses are down by 10.9% to \$70.75 million and allow operating income of \$3.46 million. The net loss is \$1.38 million.

The workforce is reduced by 11.2% in 1989 to 836. Early in the year, an order is placed for 15 British Aerospace BAe Jetstream Super 31s. The carrier's headquarters building is concurrently sold and leased back while flights commence from Kansas City to Peoria and Madison. Within a year of signing the code-sharing pact with **Braniff, Inc.**, Air Midwest's national partner is in bankruptcy and the Braniff feed arrangement ends on September 28.

"TWExpress" flights continue to St. Louis; however, the major takes Robert Priddy's large regional to court over alleged third-party booking fees. By May, the company is serving 44 cities in 13 states with some 370 daily departures.

In July, the company's board of directors rejects an \$8-per-share takeover bid by **Resort Airlines**.

Despite these difficulties, passenger boardings still manage to grow by 4.4% to 912,032. Revenues recover to move up by 9.4% to \$81.1 million. Although an operating profit of \$1.2 million is posted, the net loss deepens to \$2.39 million.

The number of employees is reduced by 4.3% in 1990 to 800. Nine EMB-120s are now on the line, along with 34 Metroliners and 7 SAAB 340As. Six additional Metros will be received during the year. Early in spring, Air Midwest settles its third-party booking dispute with **Trans World Airlines (TWA)** by paying the major almost one million dollars.

In July, daily nonstop "TWExpress" service begins from St. Louis to Birmingham, Alabama. During the fall, the Kansas City feeder operation, together with 8 Brasilias and the previous year's order for 15 Jetstream 31s, is sold to **Trans States Airlines (TSA)** for \$12 million. Simultaneously, given the departure of both **Eastern Air Lines** and **Braniff, Inc.**, Priddy affiliates with **USAir** at the same town, flying as "USAir Express."

Customer bookings decline by 12.6% during the 12 months to 797,456. Revenues ascend a slight 0.4% to \$81.44 million, expenses decline 2.3% to \$78.07 million, and operating income doubles to \$3.36 million. A net profit of \$3.98 million is generated.

The last EMB-120s are removed in 1991, together with 4 SAAB-340As and 20 Metros. **Trans States Airlines** takes over the Kansas City operation in early January and the code-sharing agreement with **USAir** takes effect on January 15, as "USAir Express" flights begin. The "TWExpress" operation at St. Louis is officially purchased by **Trans States Airlines** on January 31 for \$12 million. Transferred or

sold to TSA President Huldus Kanoida are 8 EMB-120s, 15 Jetstream 31s, plus associated spare parts, and options on 15 more Jetstreams. In addition, Trans States takes over maintenance and ground station equipment, plus fuel in the ground, at 19 cities, along with \$7.4 million in long-term debt.

Following the successful conclusion of negotiations during the first quarter, the carrier is purchased for \$27 million in stocks and cash by Mesa Holdings on July 12, becoming a subsidiary of **Mesa Airlines**. It continues to operate as a "USAir Express" carrier at Kansas City.

The company's 15 Beech 1900s fly a total of 423,017 passengers during the troublesome 12 months, a decline of 47%. Revenue figures are now released as part of the new parent's annual figures.

Larry Risley becomes president in 1992. The company continues its "USAir Express" affiliation and trades all of its fleet in for 14 Beech 1900Cs. Destinations visited include Cedar Rapids, Des Moines, Dodge City, Fayetteville, Garden City, Great Bend, Hays, Kansas City, Liberal, Lincoln, Little Rock, Manhattan, Omaha, Salina, Sioux City, Sioux Falls, Springfield, Topeka, and Wichita.

The year's enplanements total 371,943, a 26.6% boost.

Passenger boardings dip 1.4% in 1993 to 366,966. Airline employment stands at 290 in 1994 and the fleet comprises 13 leased Beech 1900Cs. **Mesa Airlines** becomes Mesa Air Group and Air Midwest becomes a division. Air Midwest's independent operations are now suspended.

"USAir Express" service continues apace and passenger boardings inch up 1.1% to 370,899.

"USAir Express" flights from Kansas City continue with the same fleet during the first eight months of 1995. Beginning in August, the carrier accepts the first of 12 Beech 1900Ds, which will, over the next 18 months, replace the Model Cs.

Enplanements, however, fall again this year, dropping 3.3% to 358,600.

In July 1996, Congress eliminates \$1.2 million in EAS payments to **Mesa Air Group**. As a result, the carrier is forced to halt "USAir Express" services to the Kansas cities of Dodge City, Great Bend, Garden City, and Hays served from Kansas City, plus a number of **Mesa Air Group** "United Express" communities visited from Denver. The last of the Beech 1900Cs are retired by the end of the year as all of the Model Ds are in service.

Customer bookings advance slightly, rising to 361,062.

On February 27, 1997, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." **Mesa Air Group** is reorganized into four new divisions, which also include the marketing and customer service units of Air Midwest and **WestAir Commuter Airlines**. During the year, the regional will begin repainting its aircraft in a modified style of the major's grey and dark blue livery.

Recognizing the higher costs of operating at the new Denver airport, Congress, under the leadership of U.S. Senator Pat Roberts (R.-Kansas), restores—and increases—the lost EAS monies on July 1 for the next fiscal year, in the amount of \$2,797,280. Consequently, twice-daily "USAirways Express" roundtrip Beech 1900D flights are resumed on October 1 from Hays to Kansas City via Great Bend and from Garden City to Kansas City via Dodge City. Additionally, **Mesa Air Group** "United Express" resumes twice-daily Beech 1900D roundtrips from Great Bend to Denver via Dodge City and twice-daily roundtrips from Hays to Denver, plus thrice-daily roundtrips from Liberal to Denver via Garden City.

Passenger boardings climb 13.6% to 410,296.

Information concerning activities in 1998 into 1999 is largely reported with **Mesa Air Group** and **USAirways Express (Mesa Air Group)**. During these years, Archie "Dick" Paquette is in charge and the fleet comprises 12 Beech 1900Ds. Enplanements during 1998 reach 505,000, a 23% increase.

The Mesa Airlines, Air Midwest, and **CCAair** divisions of **Mesa Air Group** all complete 100% of their flights on May 2 of the latter year. To celebrate this achievement, Mesa President/CEO Jonathan Ornstein, on May 6, hosts a company-wide pizza party for all 3,800 employees in every unit spread over 100 locations.

Customer bookings surge 32% to 666,000.

The workforce at the start of 2000 stands at 750, a huge 150% over the previous 12 months. President Dick Paquette retires in January and is succeeded by Greg Stephens.

AIR MIKE EXPRESS: P.O. Box 8778, Tamuning, 96911, Guam, United States; Code CO; Year Founded 1990. Air Mike Express is established on Guam in early 1990 to offer scheduled passenger and cargo services to Rota and Saipan. The company is a joint venture between **Continental Airlines** and **Air Micronesia**. The initial fleet, which employs Continental's IATA code, comprises two Fokker F.27s. Operations continue without change, although one Friendship is reported out of service in 1993–1994.

Even as **Air Micronesia** becomes **Continental Micronesia**, services to points on Guam, Rota, and Saipan continue.

AIR MIKISEW, INC.: Rte. 1, Box. 2, Compartment 2, Fort McMurray, Alberta T9H 5B5, Canada; Phone (780) 743-8218; Fax (780) 743-8225; http://members.home.net/air-mikisew; Year Founded 1990. Air Mikisew is established as an FBO and charter operation at Fort McMurray in 1990. Over the next decade, the company provides ground support for various fleets and charter flights to bush locations throughout Alberta and Western Saskatchewan. Aeromedical services are also provided, as is the charter of aircraft to certified parties. The fleet employed is the usual mix of Cessna 185s and 207As, plus de Havilland Canada DHC-2 Beavers.

In mid-decade, Air Mikisew begins a scheduled passenger and freight service between Fort McMurray and Fort Chipewyan employing two Piper PA-31-350 Navajo Chieftains, one based at each location. As the millennium approaches, the fleet is enhanced by the addition of a Beech 99 and a British Aerospace BAe Jetstream 31.

AIR MISSOURI: United States (1976–1978). Kirksville-based **Horizon Airways, Inc.** (founded in 1969) is reformed in April 1976 and renamed. Cessna 207 routes formerly operated to Quincy, Illinois, via Kansas City and St. Louis are maintained and, in 1977, new Spencer–Pocahontas–Des Moines services are inaugurated.

Operations cease in 1978.

AIR MOLDOVA, S.A.: Chisinau Airport, Chisinau, MD 2026, Moldova; Phone 373 (2) 525 162; Fax 373 (2) 524 040; http://www.aeolos.com/moldova.htm; Code 9U; Year Founded 1992. Air Moldova is set up at Chisinau Airport in 1992 to provide scheduled and charter passenger and cargo services throughout the new republic (which borders on Romania) and the Russian Federation. Peter A. Chebak is appointed president with Shtefan Fulga as general director. A fleet is assembled comprising 7 Tupolev Tu-154s, 12 Tu-134s, 10-plus Antonov An-24s/26s, 1 An-74, and 1 An-82.

Significant support is acquired, under contract, from **Aeroflot Russian International Airlines (ARIA)** and revenue flights are inaugurated in May to Frankfurt. Additional destinations added during the remainder of the year and into 1993 include Bucharest, Donetsk, Ekaterinburg, Frankfurt, Chisinau, Krasnodar, Mineralnye Vody, Minsk, Moscow (Vnukovo), Murmansk, Samara, Sochi, St. Petersburg, Tbilisi, and Volgograd.

The fleet is altered in 1994 to include 1 An-74, 10 Tu-134As, and 4 Tu-154B-2s.

Frequencies are increased in 1995 along with the number of units in the fleet; added or returned to service are 1 Tu-154B-2, 7 An-24s, 4 An-26s, 2 An-32s, 1 Il-18, and 10 Tu-134As.

Flights continue in 1996. Although seven airlines fly into Chisinau Airport in 1997, Air Moldova and **Air Moldova International** account for 50% of passenger services. A strategic marketing agreement is entered into with **Balkan Bulgarian Airlines** late in the year.

Scheduled destinations visited in 1998–1999 include Athens, Bucharest, Istanbul, Larnaca, London (LGW), Moscow, Paris, Sofia, and Vienna. A total of 99,000 passengers are flown during 1998, with boardings sliding to 47,000 in 1999, due largely to the Kosovo crisis.

The media reports on June 29, 2000 that German investors have assumed a 49% minority stake. On October 6, orders are placed for 2 Embraer ERJ-145s for delivery in May and June 2002; the small jets will be assigned to routes from Chisinau to Amman, Athens, Beirut, Frankfurt, Istanbul, Larnaca, and London (LGW).

AIR MOLDOVA INTERNATIONAL, S.A.: Chisinau Airport, Hotel 4th Floor, Chisinau, MD 2026, Moldova; Phone 373 (2) 529 396; Fax 373 (2) 526 414; <http://www.ami.md>; Code 3R; Year Founded 1995. Air Moldova International is founded by private interests in 1995 to undertake scheduled and charter international passenger and cargo services. Ownership is divided between Exicom and WS Touristic Import and Export. Viorei Ous is appointed director general, with Oksana Sultan as commercial services manager. Revenue flights begin on April 1 with a pair of Yakovlev Yak-40s.

One each Tu-134A and Tu-154A are acquired in 1996. Air Moldova International, in February, becomes the official airline of the annual MoldExpo, a series of exhibitions by various organizations from regional nations set up at the Chisinau Exhibition Center. The company becomes an IATA member on October 8.

Although seven airlines fly into Chisinau Airport in 1997, Air Moldova and Air Moldova International account for 50% of passenger services. In September, the company begins scheduled services to Volgograd and Vladivostok. Offices are now maintained at six locations in Moldova, as well as at Frankfurt, Warsaw, Amsterdam, Kiev, Dnepropetrovsk, Odessa, Donetsk, and Volgograd.

Twice-weekly An-24 joint venture flights with Air Ukraine (Avialinii Ukrani) commence in October between Simferopol and Chisinau.

Destinations visited in 1998 include Amsterdam, Berlin, Dnepropetrovsk, Donetsk, Ekaterinburg, Frankfurt, Iasi, Kiev, Larnaca, Mineralnye Vody, Minsk, Munich, Odessa, St. Petersburg, Vladivostok, Volgograd, and Warsaw.

A homepage is opened on the World Wide Web in August.

A code-sharing agreement is signed with Turkmenistan Airlines at the beginning of 1999. In March, the two companies offer twice-weekly, dual-designator Boeing 737-300 roundtrips between Chisinau and Ashgabad.

On July 3, 2000, the carrier begins to code-share with Transaero Airlines on a route from Chisinau; seven flights are made into Moscow (Vnukovo) and three to Moscow (Sheremetyevo 1).

AIR MOLOKAI: United States (1982–1996). Late in 1982, the Connecticut-based Concord Development Corporation purchases Tropic Air, reforms it, and renames it Air Molokai. Suzanne Garcia is named executive vice president. Employing a fleet of 2 Douglas DC-3s and 5 Cessna 402s, the Honolulu-based operator begins in 1983 to expand its frequencies around Oahu and to Molokai, Maui, and Lanai. Enplanements for the year total 73,200 and airline employment is 70.

Operations continue apace in 1984–1986 and, by 1987, the Douglas transports have been replaced by 4 additional Cessna 402s. Passenger boardings total 131,875. Enplanements decline in 1988 as the company encounters financial difficulties. Operations cease in October 1989, by which time the small regional has transported 101,723 passengers on the year.

Three Maui businessmen purchase Air Molokai in early 1990 and resume operations on Molokai and to Kahului and Lanai during the second half of the year. The recession causes a significant downturn in 1991. In 1992, Don Johnson is president and the fleet comprises only 4 402s.

Another 402 is purchased in 1993. Airline employment stands at 57 in 1994. A total of 41,308 passengers and 929,309 pounds of freight are flown on the year. Operations cease in 1996.

639. AIR MONACO, S.A.: Monaco (1980–1982). The Monacan flag line is established in December 1980 to operate scheduled passenger services to Andorra with a fleet of 6 Convair CV-990s. In 1981, passen-

ger boardings increase by 1,612% to 342. The economics involved require that the company cease operations in 1982.

AIR MONARCH, S.A. de C.V.: Mexico City, Mexico; Year Founded 2000. Former Aeropostal de Mexico executive Julian Aparacio forms this new cargo airline at Mexico City during the first quarter of 2000. The first of 4 Convair CV-580s chartered from Kelowna Flightcraft Air Charter, Ltd. arrives in March and is employed to begin nightly freight flights to Monterrey.

AIR MONGOL. See MIAT (MONGOLIAN AIRLINES)

AIR MONT: United States (1975–1984). Captain Yves Dumont establishes this tiny commuter at Vieques, Puerto Rico, on November 15, 1975. Employing a Beech Bonanza, he launches revenue flights from his base to San Juan, Culebra, and other island airfields on November 15.

The Bonanza is traded in for a Piper PA-34 Seneca and operations continue apace until 1984.

AIR MONTENEGRO: Airport Podgorica, P.O. Box 73, 81000 Podgorica, 81304, Montenegro; Phone 381 (81) 37 704; Fax 381 (81) 52 648; Code AMN; Year Founded 1991. This private carrier is formed at Titograd, the Montenegrin capital, in 1991 to provide scheduled service to Bari in southern Italy. Employing a leased Yakevlov Yak-42, flights are hardly underway before the UN embargo on air flights from the former Yugoslavia causes the carrier's grounding on May 31, 1992. Plans to restart await lifting of the sanctions.

UN sanctions are withdrawn in November 1995. Chairman Vladislav Popovic and Director General Kristo Krajevic lease 1 each B-737-200, Yakovlev Yak-40, and Yak-42. Scheduled flights are inaugurated from Podgorica (formerly Titograd) on February 16, 1996.

Destinations visited this year and in 1997–1998 include Bari, Istanbul, Nis, and Tirenna.

In an effort to reverse the political situation in the Yugoslav province of Kosovo, NATO begins an attack on military points in that area, as well as Serbia, on March 24, 1999. Yugoslav air space is closed and services by this tiny carrier are significantly curtailed for the duration of the conflict.

AIR MONTREAL, INC.: 10105 Ryan Avenue, Dorval, Quebec H9P 1H2, Canada; Phone (514) 631-2111; Fax (514) 631-8335; Code F8; Year Founded 1995. Reginald Overing sets up this new third-level carrier at Montreal (YUL) in 1995 to offer scheduled passenger and cargo services to 11 communities throughout eastern Canada. Revenue flights commence with 4 Fairchild Swearingen Metro IIs and 1 Metro III.

The fleet is increased in 1996 by the addition of 4 Piper PA-31-350 Navajo Chieftains. Orders are placed for a second Metro III, which enters service in 1997. Flights continue in 1998–2000.

AIR MOOREA, S.A.: P.O. Box 6019, Faa International Airport, Papeete, French Polynesia; Phone 689 86 41 00; Fax 689 86 42 69; Code QE; Year Founded 1969. In early 1969, Air Tahiti, S.A. (AT), is formed at Papeete by local business interests to provide lightplane services. In January 1970, it purchases control of competing Air Moorea, S.A. and allows it to continue flights as a subsidiary under its previous name. During 1971–1987, operations continue apace with Piper and later Twin Otter equipment.

In January 1987, the parent is consolidated with its offspring under the Air Moorea name in order that Air Polynesie, S.A. might receive the Air Tahiti, S.A. name. The fleet is strengthened by the addition of AT's 5 Britten-Norman BN-2 Islanders. Enplanements in 1988 total 145,311.

Airline employment is increased to 77 in 1989 and the fleet now includes 6 Islanders, 3 Piper PA-31-310 Navajos, 1 de Havilland Canada DHC-6-200 and 1 DHC-6-300. Orders are outstanding for three more Islanders. Passenger boardings increase to 157,946.

The 3 Islanders arrive in 1990 and, in May, Air Tahiti, S.A. orders 2 Dornier 228-212s, 1 of which will be turned over to Air Moorea, S.A. Operations continue apace in 1991–1992, with the German-built turbo-prop received during the former year. In 1993, President Marcel Galenon's fleet includes 1 Twin Otter, 4 Islanders, 1 Dornier 228-212, 2 Piper PA-23 Aztecs, and 1 PA-31-350 Navajo Chieftain. Enplanements total 160,000.

Flights in 1994 continue from Tahiti to Moorea as roundtrip frequencies reach 19 per day. A second Dornier 228-212 is received.

In 1995–1996, a charter subsidiary, Air Archipela, S.A. is set up on Tahiti to offer on-demand flights to all destinations in French Polynesia. Francois Martin is named managing director of the new concern and is given a workforce of 6 and 1 each Cessna 441 Conquest and Beech Super King Air 200.

Flights continue in 1997–2000. Airline employment during the latter year stands at 66.

AIR MORAVIA, LTD.: Czech Republic (1991–1995). Originally organized in early 1991 as an all-cargo carrier with a headquarters at Lugano, Switzerland, Air Moravia is initially equipped with a single Tupolev Tu-154B. The decision is taken during the fall to offer both passenger and long-haul cargo flights, concentrating on the Far East. Revenue flights begin on December 1 on a Prague–Singapore–Hanoi route.

Early in 1992, the Tupolev is withdrawn and replaced by an Ilyushin Il-62M and an Il-86, plus a Let L-410. A second Il-86 is ordered. Operations continue in 1993–1994, during which years the Let is leased to Topair, Ltd. and the company emphasizes only long-haul cargo flights. Flights cease in late 1995.

AIR MUSKOKA, LTD.: Canada (1992–1993). Air Muskoka is established by Dave Groufours at the Gravenhurst Municipal Airport in Ontario in 1992. Charter passenger and cargo flights commence and continue with a fleet of 2 Piper PA-31-350 Navajo Chieftains and 2 Beech King Air 100s. Flights cease a year later.

AIR NACOIA (EXPLORACAO DE AERONAVES, S.A.): Rua Commandante Che Guevara 67-1e Andar, Apart 1, Luanda, Angola; Phone 244 (2) 395 477; Fax 244 (2) 395 477; Code AN; Year Founded 1993. Air Nacoia is established at Luanda in 1993 to provide domestic and regional all-cargo charters. Salvador Silva is president and he recruits a workforce of 40 and purchases 1 each Boeing 707-321C and B-727-227A with which to begin revenue flights.

Services continue in 1994–1996, during which years a B-727-27C is also leased, along with several Antonov An-12Bs, and an order is placed for a Douglas DC-8F.

While on final approach to Lucapa Airfield in Angola on March 12, 1997, an An-12B with 4 crew and 16 passengers, crashes in dense fog 150 m. short of the runway; there are no survivors.

Flights continue in 1998–2000. Airline employment reaches 40.

AIR NAMIBIA (PTY.), LTD.: P.O. Box 731, TransNamib Building, Eros Airport, Windhoek, 9000, Namibia; Phone 264 (61) 223 019; Fax 264 (61) 221 910; <http://www.airnamibia.com.na>; Code SW; Year Founded 1991. Namib Air, Ltd. the national airline, is renamed Air Namibia, Ltd. on October 28, 1991. All shareholding is held by the government corporation TransNamib Holdings, Ltd., with the airline its subsidiary. General Manager D. Keith Petch's carrier employs 311 workers and possesses a fleet of 3 Beech 1900Cs, the Boeing 747SP-44 *Soutpansberg* leased for N\$5 million per month from South African Airways (Pty.), Ltd. (SAA), and 1 B-737-2A5A, the *Ondekaremba*.

Services are continued to previous destinations from a base at Windhoek, including Cape Town, Frankfurt, Harare, Johannesburg, Keetmanshoop, Luanda, Luderitz, Lusaka, Maun, Mpacha (Katima Mulilo), Runda, Oranjemund, Oshakati, Swakopmund, Tsumed, and Victoria Falls. As the result of a February agreement, the company, in cooperation with Deutsche Lufthansa, A.G., is able to begin twice-weekly

B-747SP-44 flights to Frankfurt in late summer. Other cargo and passenger charters are also undertaken.

The South African Airways (Pty.), Ltd. B-747SP-44 *Soutpansberg* is renamed *Etosha* on October 15.

On November 3, the airline opens Sunday flights from Windhoek to Luanda, with onward connections to Johannesburg. As neither SAA nor TAAG Angola Airlines, S.A. have reciprocal landing rights as yet, this is the most direct link between Angola and South Africa.

In competition with SAA and British Airways, Ltd. (2), twice-weekly B-747SP-44 flights are begun by the *Etosha* from Windhoek to London (LHR) via Johannesburg on July 6, 1992. One service is flown with an additional stop in Frankfurt and a third service is inaugurated in November.

In 1993, General Manager Petch's workforce totals 393. The B-747SP-44 *Hantam* is leased from South African Airways (Pty.), Ltd. on March 25 in order to increase frequencies on the London route to thrice weekly. In addition, Beech 1900C service is provided to 7 regional and 10 domestic communities, including new markets at Walvis Bay and Lingstone.

On May 12, after less than two months service, the *Hantam* is returned to South African Airways (Pty.), Ltd.

Enplanements for the year total 176,357.

The number of company employees is reduced by 3.8% in 1994 to 380; scheduled for inauguration in April, service to Paris from Windhoek is postponed. The joint venture agreement with Deutsche Lufthansa, A.G. ends in June, along with flights between Windhoek and Frankfurt.

Still, passenger boardings increase 11.3% to 198,824 while cargo increases by 16.5% to 25.43 million FTKs. Revenues reach N\$48.59 million, but expenses are N\$49.34 million, causing a N\$736,135 operating loss and a net downturn of minus N\$2.15 million.

A contract is entered into with Namibia Commercial Aviation, Ltd. (NCA) in March 1995. Under its terms, NCA will employ its restored Douglas DC-6B *Fish Eagle* on a weekly scheduled replacement service from Windhoek to Victoria Falls. NCA also agrees to keep its Douglas ready to stand in for Air Namibia scheduled flights that must be cancelled for technical reasons.

The B-747SP-44 *Maluti* is chartered from South African Airways (Pty.), Ltd. in October.

Destinations visited by Air Namibia in 1996 include Cape Town, Harare, Johannesburg, Keetmanshoop, Luanda, Luderitz, Lusaka, Maun, Mpacha (Katima Mulilo), Oranjemund, Oshakati, Rundu, Swakopmund, Tsumeb, Victoria Falls, and Walvis Bay. The regional fleet is increased by the addition of 3 de Havilland Canada DHC-8-301s, with the first delivered on May 12.

Meanwhile, a new and private local competitor, Kalahari Express Airline (Pty.), Ltd. (KEA) formed by Sheik Hani Yamani, prepares to take to the skies.

In June, the South African Airways (Pty.), Ltd. B-747SP-44 *Outeniqua* is leased. It replaces the B-747SP-44 *Maluti*, returned the previous month.

The company enjoys a mixed year in 1997. Although customer bookings are off by 5.4% to 221,309, freight rises a nice 19.4% to 35.3 million FTKs. Revenues drop 9.4% to N\$52.9 million and there is a N\$9-million operating loss.

Early in 1998, plans are made to inaugurate new international or improved services to Lisbon, Frankfurt, and London. The B-747SP-44 *Etosha* is removed and replaced by a B-767-33AER, leased from Ansett Worldwide Aviation Service for N\$3 million per month (\$526,000). Painted in a new livery and christened *Erongo* after a Namibian mountain, it will be employed to launch the upgraded services in July.

TransNamib Holdings, Ltd. Chairman Willy Klein informs his colleagues that the holding company and its airline subsidiary have reached a "crossroads," due to continued financial loss. Difficult and unpalatable decisions need to be taken, he points out, in order to avoid a crisis.

During the spring, two-year-old Kalahari Express Airline (Pty.), Ltd. (KEA) finds itself in dire financial straits. Led by its Managing

Director Sattar Aboobakar, the company approaches Air Namibia offering to sell it 51% controlling interest. The flag carrier's managing director, Andreas Guibeb expresses great interest, but when he refers the matter to the board of directors for consideration, it becomes split on the issue. As the decision-making process drags on, KEA elects to seek other partners. Its air service license expires and, during the last week of May, all 61 employees are laid off.

On June 5, it is reported in *The Namibian* that plans by Air Namibia to purchase a controlling interest in the beleaguered KEA have collapsed and Namibia Harvest, a company in which local businessman Aaron Mushimba and Air Namibia Board Chairman Petrus Damaseb have interests, has purchased the carrier outright. In addition, KEA Managing Director Aboobakar confirms that, while Namibia Harvest will finance the arrangement, **SA Express (Pty.), Ltd.** of South Africa, will operate it under a management contract.

Air Namibia Chairman Damaseb and TransNamib Managing Director Peingondjabi Shipoh both deny on June 8 that they know anything about the collapse of the Air Namibia-KEA negotiations. Damaseb indicates that his board had approved acquisition of a 51% majority stake following a positive due diligence report and that only required funding approval from TransNamib Holdings stands in the way of the deal's completion.

By June 9, Chairman Damaseb has become the center of a conflict-of-interest controversy for his role on the board of Namibia Harvest. He claims to be innocent of such charges and notes that both he and Air Namibia's board believed it had an arrangement to takeover KEA on June 1 in partnership with Namibia Harvest which, it now appears, has hijacked the entire arrangement to its own benefit. Indeed, Damaseb protests that it was through his intervention that KEA was able to renew its license, an authority that was conditioned on Air Namibia's acquiring a controlling stake.

Air Namibia Managing Director Guibeb reports on June 12 that the company's loss in April alone is N\$6.9 million. He is quick to point out, however, that the airline had underspent by N\$4.3 million on budgeted expenditures during that month as a result of lower operating costs due to its newly arrived B-767-33AER. At the same time, Member of Parliament Johan de Waal speculates in the assembly that losses for the month are closer to N\$13 million.

The airline's continuing fiscal problems and the continuing controversy over **Kalahari Express Airline (Pty.), Ltd. (KEA)** heats up again toward the end of the month. On June 24, Vice President Katuutire Kaura informs the national assembly that he will personally request that Works, Transport and Communications Minister Hampie Plichta undertake a review of the latest development, the transfer of KEA ownership from Air Namibia to TransNamib Holdings. Such a move, he contends, is also contrary to government liberalization policy. Indeed, he recommends that the entire relationship between TransNamib and the government be investigated.

Next day, Managing Director Guibeb addresses a group of Namibian and French business representatives accompanying French President Jacques Chirac on his southern Africa tour. Encouraging investment, he also reveals that his carrier is in negotiation with **Air France** concerning a possible strategic alliance and code-sharing on a route from Paris to Cape Town via Windhoek.

The government review of TransNamib is undertaken during the summer and fall. At the same time, TransNamib enters into discussions with **Deutsche Lufthansa, A.G.** concerning a strategic alliance; Air Namibia is not involved in the talks that would greatly impact its operations.

During the fall, Air Namibia and **Kalahari Express Airline (Pty.), Ltd. (KEA)** reach an understanding and will work in tandem much as **South African Airways (Pty.), Ltd.** does with **SA Express Airways (Pty.), Ltd.**

Without informing TransNamib's Klein or Shipoh, the government cabinet on November 11 cuts the airline loose from the holding company in an effort to boost its economic viability. Works, Transport and Communications Minister Plichta informs *The Namibian* newspaper

that TransNamib will be phased out and that the airline will be partially privatized, with the government holding 51% and private owners, preferably Namibian businesses, holding a 49% stake. He further indicates that, until the changeover can occur, the cabinet will agree to guarantee N\$20 million (\$3.7 million) to Air Namibia to help it overcome its immediate operational and financial problems.

TransNamib Chairman Klein and Managing Director Shipoh, who had not proposed the N\$20-million bailout, read about these developments and confirm to the press that they are in the dark on these developments.

Over the next month, the government acts on its promise to begin the dissolution of TransNamib into two partially privatized companies, Air Namibia and Namrail. Additionally, Minister Plichta steps in to end the strategic negotiations with **Deutsche Lufthansa, A.G.**

At Air Namibia, Managing Director Guibeb is demoted to deputy managing director, while Dr. Jaafar Ahmed, the former governor of the Bank of Namibia, is appointed acting managing director/CEO on a renewable six-month contract.

In a further effort to transform itself into a viable carrier, Air Namibia, on January 7, 1999, signs an agreement in Johannesburg with **South African Airways (Pty.), Ltd.** Under terms of the document, the two carriers pledge to explore such joint business opportunities as combined customer services, linked frequent flyer programs, and code-sharing. The arrangement is extended to **Kalahari Express Airline (Pty.), Ltd., SA Express Airways (Pty.), Ltd.,** and **SA Airlink (Pty.), Ltd.**

It is announced on March 15 that **Kalahari Express Airline (Pty.), Ltd.** will initiate daily flights between Windhoek, Johannesburg, and Cape Town by midyear using a pair of Fokker F.28-3000s. The services will complement rather than compete with the frequencies offered on those routes by Air Namibia or **SA Airlink (Pty.), Ltd.**

Having found it too expensive to continue the lease of the Ansett B-767-33AER when its charter expires in April, the carrier announces, on March 29, that it has leased a B-747SP-44 from **South African Airways (Pty.), Ltd.** Hired for six months, the Jumbojet arrives at Windhoek on April 4.

On April 5, the company begins to lay off 150 workers, spending between N\$8 million and N\$10 million on the retrenchment package.

Boeing Commercial Airplanes Group representative Paul Bride joins with airline officials on April 22 to announce the company's purchase of a new B-747-400C that will be delivered in October.

The chartered B-737-300 is returned in late summer and replaced on an interim basis with a leased **South African Airways (Pty.), Ltd.** B-747SP-44, pending delivery of a new Jumbojet requested in July.

Originally built for **Asiana Airlines, Ltd.** but not delivered due to the Asian economic crisis, a new B-747-48EC arrives in October and is christened *Welwitschia*. It takes over the carrier's European schedule and also flies weekly from Lusaka to London (LHR) on behalf of **Zambian Express Airways, Ltd.**

Kalahari Express Airline (Pty.), Ltd. finally launches service on October 31.

Customer bookings inch up only 1.8% on the year to 228,000 but cargo skyrockets by 104.4% to 19.04 million FTKs. Although operating revenues are down 11.4% to \$47.15 million, costs also drop, by 10.2%, to \$43.56 million. There is a \$3.59-million operating gain and the net loss is cut to \$10.8 million.

During the first half of 2000, a five-year strategic plan is developed which, if successful, will reverse the unprofitable picture. Mismanagement is to be halted, cargo capacity will be reviewed, leasing practice will be reviewed, and new routes may be started, including a route to Uganda.

A **Kalahari Express Airline (Pty.), Ltd.** Fokker F.28-3000 is acquired and is ready to enter service on September 3 when Air Namibia and **SA Express Airlines (Pty.), Ltd.,** employing a Canadair CRJ, launch an intense twice-daily return flight competition over a new route from Johannesburg and Eros Airport, near Windhoek.

On September 18, a contract is signed with **Safair (Pty.), Ltd.** for the lease of 2 B-737-700s at the end of 2001. The same day, a new air service pact is entered into between Namibia and Uganda. Under its terms,

Air Namibia will launch its first direct scheduled service into East Africa on September 26 with flights code-shared with **Uganda Airlines, Ltd.** between Windhoek and Kampala. Last minute instructions to the management of their carrier from the Uganda privatization authorities put the flights on hold.

A new marketing and code-sharing agreement is signed with **Comair (Commercial Airways [Pty.], Ltd.)** on October 9; the two offer 15 weekly roundtrips between Windhoek and Johannesburg.

All hope for any arrangements with **Uganda Airlines, Ltd.** is crushed on October 13 as that airline is liquidated.

Weekly B-747-48EC return service is inaugurated to Munich on October 30.

AIR NASHUA CORPORATION: United States (1977–1979). ANC is established at Nashua, New Hampshire, in 1977 to offer small plane commuter flights to local destinations. Unable to maintain viability in light of the oil crisis, the company shuts down two years later in 1979.

AIR NATIONAL: United States (1981–1984). Established by Michael Garrihy at Monterey, California, in early 1981, Air National leases a Douglas DC-9-15MC from **Air Florida**, as well as several Aerospatiale Corvettes from other sources. These are employed to operate contract cargo flights on behalf of **Purolator Courier** and **Airborne Express**.

Late in 1982, the company receives government authority to operate passenger charters. A Boeing 727-214 is chartered from Pacific Southwest Airlines (PSA) and employed to inaugurate these services.

A Boeing 747-133 is leased from **Air Canada, Ltd.** in 1983 with which to begin charter passenger and cargo services from the East Coast of the U.S. to London, Greece, and the Middle East. Operations commence in May with these seasonal services ending in November, at which time the Jumbojet is returned. Bookings for the seven months of operation total 38,000.

In March 1984, a B-747-257B is chartered from **Swissair, A.G.** It also receives scheduled authority for a return service from New York (JFK) to Athens via Brussels.

Retaining the brown and black cheatline of the lessor on the Jumbojet, Air National undertakes a second season of transatlantic charters beginning in May. Contract difficulties between the carrier and a number of major inclusive-tour agencies at the height of the summer travel season results in Air National's stranding a significant number of passengers on both sides of the Atlantic.

A dismal string of lawsuits, adverse publicity, and fiscal drain culminates in early July when the Jumbojet, undergoing maintenance at St. Louis, is attached by a Missouri court for nonpayment of rental fees. Unable to find additional capital, the company ceases all operations on July 28 and files for Chapter XI bankruptcy on September 1. The Jumbojet having been returned in August, the remainder of the carrier's assets are now liquidated, with the lease on the DC-9-15MC ending.

AIR NATIONAL, LTD.: Level 1, Air New Zealand Domestic Terminal, Auckland International Airport, Auckland, New Zealand; Phone 64 (9) 256-8550; Fax 64 (9) 256-8552; <http://www.airnational.co.nz>; Year Founded 1989. Air National is set up by Carlo Vaccari and Ian A. Gray in 1989 to operate contract scheduled services in the Pacific states. Gray becomes managing director, with Merv R. Falconer as director of flight operations.

Contracts are also signed with the Airways Corporation of New Zealand to operate calibration flights. Revenue services commence in early 1990 and are maintained.

By 2000, airline employment stands at 19 and the fleet includes 1 each British Aerospace BAe Jetstream 32EP, Embraer EMB-110P2 Bandeirante, and Mitsubishi Mu-2.

AIR NAURU CORPORATION: Government Building, P.O. Box 40, Yaren District, Nauru; Phone 674 44-3168; Fax 674 444 3173;

<http://www.airnauru.com.au>; Code ON; Year Founded 1970. Established by the island republic in the west Pacific Ocean on February 12, 1970, Air Nauru acquires a Dassault Falcon 20 executive jet under lease and, two days later, inaugurates scheduled semimonthly flights to Brisbane, Australia, via Honiara, Solomon Islands. Falcon flights continue apace in 1971. In July, a 1,600-mile route is opened from Nauru to Majuro in the Marshall Islands.

The carrier obtains 1 Fokker F.28 in 1972 and employs it to replace the Dassault. By 1976, Air Nauru has acquired 1 Boeing B-727-100C and 1 B-737-200C and introduced 2 more long-haul, over-water routes: Nauru to Apia and Nauru to Guam, Okinawa, and Kagoshima. A B-727-100 is purchased in December 1977.

In 1978, President Kenas Aroi's carrier links the 8.2-square-mile tropical nation, famous for its phosphate mines, with 24 destinations in the central, southern, and western Pacific, including Brisbane, Noumea, Ponape, Port Vila, Tarawa, Tonga, Hong Kong, Kagoshima, Manila, Nadi, Okinawa, Suva, Taipei, and Melbourne.

During the 1980s, the B-727s are withdrawn in favor of 4 B-737-200s. Additional stops added include Auckland, Honiara, Majuro, Pago Pago, Ponape, Rarotonga, Saipan, Sydney, and Vila. Orders are placed in 1990 for 2 B-737-400s.

Operations continue apace in 1991 and in 1992, the fleet includes 1 each B-737-2L7A, B-737-2L9A, and B-737-2L7CA. Operations continue to link Nauru Island in 1993–1994 with Auckland, Christchurch, Christmas Island, Guam, Honiara, Honolulu, Kosrae, Manila, Melbourne, Nadi, Noumea, Pohnpei, Suva, Sydney, Tarawa, and Truk.

While the B-737-200 fleet of **Air New Zealand, Ltd.** is down for engine repairs during March–April 1995, the company's B-737-2L9A is wet-leased to the New Zealand flag carrier. With the island's supply of phosphate starting to run out, the airline—the national government's single largest expenditure item—runs into trouble. A total of \$180 million in bonds come due and cannot be paid; the carrier's overseas accounts are closed by various banks due to overdrafts.

Australian aviation consultant Peter Roberts is retained as interim CEO and is tasked to "make Air Nauru commercial." One of the three small Boeings is sold and unprofitable routes are significantly cut back or ended altogether.

Having existed since its start as an adjunct to a government department, in 1996 the airline becomes the Air Nauru Corporation, a statutory corporation. Its objective remains the continuation and enhancement of strong air links with Melbourne, Sydney, and Brisbane in Australia and expansion of its participation in the commercial development of the central Pacific area. To meet these goals, Rex Barnes is appointed CEO in July, with Eddie Dufrenne as chief financial officer.

Flights to Melbourne, Brisbane, Manila, and Guam continue during 1997 as the company acquires a B-737-4L7. It replaces the last two older B-737-200s and operates a single south–north route from Melbourne to Guam via Brisbane, Nauru, and Pohnpei, with side segments to Fiji and Kiribati.

Beginning in January, the new jetliner is leased to **Qantas Airways (Pty.), Ltd.**, which employs the airliner on domestic Australian routes three days each week. Plans are made to acquire 2 Next Generation B-737-700s during the next few years, which will allow the launching of flights to Hawaii.

Airline employment stands at 250 in 1998. On February 3, 1999, the carrier's B-737-4L7 inaugurates weekly return charters from Melbourne and Sydney to Norfolk Island on behalf of "Norfolk Jet Express." Non-scheduled flights to the holiday destination are added at the beginning of March.

AIR NAVIGATION TRANSPORT AGENCY OF UKRAINE: Gogolevskaya Str. 25, Kiev, 252054, Ukraine; Phone 380 (044) 219-1204; Fax 380 (044) 244-6643; Year Founded 1994. The company is set up at Kiev in 1994 to offer domestic and regional all-cargo charter services. Yuri Kisseliov is general director and begins revenue operations with a fleet of 5 Antonov An-32s and 6 Ilyushin Il-76Ds.

AIR NEBRASKA: United States (1976–1981). Air Nebraska is formed at Kearney in the summer of 1976 to offer scheduled third-level flights to various destinations in the area. Revenue operations commence with a single Beech 99 and a Cessna 402.

In 1977, points visited include Denver, Omaha, Grand Island, Hastings, and McCook. Enplanements reach 6,416 by year's end. Passenger boardings skyrocket 158.2% in 1978 to 7,621. Another Beech 99 is acquired in 1979. Customer bookings accelerate 41.2% to 11,000, but cargo is down 21.3% to 6,000 pounds.

Kansas City is substituted for Denver in the route network in 1980. Passenger traffic declines by 4.5% as the number of passengers flown falls to 10,270. Freight is down another 14.1% to 4,952 pounds. Despite customer bookings of 5,237 by May 1981, this financially troubled commuter is unable to maintain its services and closes its doors in July.

AIR NEGRIL, LTD.: P.O. Box 477, Montego Bay, Jamaica; Phone (876) 940-7747; Fax (876) 940-6491; <http://www.airnegril.com>; Year Founded 1997. Air Negril is set up at Montego Bay in 1997 to offer scheduled flights to Negril on behalf of Runway Tours. Revenue flights begin with a fleet made up of 2 Cessna 206 Stationair IIs and 1 each C-T210 Turbo Centurian II and Britten-Norman BN-2A Islander.

AIR NELSON, LTD.: Private Bag 32, Nelson, New Zealand; Phone 64 (3) 546-7484; Fax 64 (3) 546-6272; Code RLK; Year Founded 1978. A flying school is established by Robert Inglis and Nicki Smith at Motueka on the South Island in 1978 to train airline pilots. Six years later, in 1984, a Piper PA-23 Aztec is acquired specifically to inaugurate two-per-day "quasi-scheduled" roundtrips to Wellington. When the nation's airline industry is deregulated in 1985, Air Nelson, Ltd. is formed at Nelson, at the top of the South Island, to provide a potential access to it; Inglis is managing director and Smith is secretary.

In 1986, Inglis decides to go ahead and start scheduled regional services. In addition to the Aztec flights, a PA-31 Navajo is acquired to fly local businessmen from Nelson to Wellington. Five more Navajos are obtained later in the year and in 1987. These launch scheduled frequencies, as many as 18 per day, to four other points on the South Island, as well as to Palmerstown North and Wellington on the North Island.

In the spring of 1988, Air Nelson enters into a marketing alliance with another commuter, Hamilton-based **Eagle Aviation, Ltd.** In late summer, the national flag carrier **Air New Zealand, Ltd.** forms a commuter/regional feeder system, "Air New Zealand Link," modeled on that sponsored by **Delta Airlines** in the U.S. In November, the major purchases a 50% shareholding in both Eagle and Air Nelson, which latter, in turn, acquires a pair of Fairchild Metro IIIs.

Inglis's company in 1989–1990 undertakes feeder and replacement flights unprofitable to the flag line; destinations served grow to include Christchurch, Hokitika, and Westport. The fleet is increased dramatically as 7 more chartered Metro IIIs are obtained, together with 4 SAAB 340As, the latter on lease from the Swiss regional **Crossair, Ltd.** Enplanements during the latter year reach 250,000 as the flag carrier grounds its Fokker F.27 fleet and leaves Air Nelson to fill the regional feeder void.

In 1991, 2 more SAAB 340As arrive, chartered from their manufacturer. Additional destinations visited during the year and in 1992 include Gisborne, New Plymouth, Napier, Wanganui, Takaka, Blenheim, and Timaru. By 1993, Managing Director Inglis's company employs 220 workers and possesses a fleet comprising 6 SAAB 340As, 1 340B, 9 Metro IIIs, 4 Piper PA-31-350 Navajo Chieftains, and the original Piper Aztec. Passenger boardings pass the 750,000 mark.

Early in 1994, the original **Crossair, Ltd.** aircraft are purchased and 3 more SAAB 340As are acquired, formerly operated by **Swedair, A.B.** and delivered under charter from **SAS (Scandinavian Airline System)**. Five of the Swedish-made turboprops are based at Nelson, with the remainder hubbing on North Island satellite fields at Tauranga, Napier, Palmerston North, and New Plymouth.

The number of destinations visited reaches 18. Approximately 160 flights are made each weekday and a thousand per week, making Air Nelson, Ltd. the largest airline in New Zealand in terms of the number of sectors flown. Enplanements reach 693,575.

Airline employment grows by 7.7% in 1995 to 445 and the fleet now includes 12 SAAB 340As and 8 Fairchild Metro IIIs. Passenger boardings jump 18.5% to 851,000.

There is no change in either the workforce or the fleet in 1996.

An Air Nelson SAAB 340 aircraft, carrying 19 passengers, makes an emergency landing at Hamilton Airport on January 20 after a fire warning light comes on. Checks reveal no problem and the flight resumes 45 minutes later. The company must also abort three flights to Wellington from Nelson on May 5 because of mechanical problems. The first involves a Metroliner, the next two were SAABs.

Enplanements through July total 412,944.

During the first quarter of 1997, two former **Brit Air, S.A.** SAAB 340As are subleased from **Air New Zealand, Ltd.**, which had chartered them from MCC Financial Corporation. Traffic figures are not released.

Flights continue in 1998 and into 1999 as airline employment grows to 420. On January 18 of the latter year, all Metroliners are replaced with SAAB 340As on routes from Auckland to New Plymouth, New Plymouth to Wellington, and Wellington to Napier. A fourth daily direct service is introduced between Auckland and Nelson.

As the new millennium begins, Air Nelson flies exclusively under the Air New Zealand Link marketing name, with its aircraft liveried accordingly.

AIR NEVADA (1): United States (1970). The first Air Nevada is set up at Las Vegas in 1970 to fly gamblers in and out from Hawthorne, Oakland, and San Francisco. Revenue flights do not last the year.

AIR NEVADA (2): United States (1974–1998). In 1978, the air taxi operator **Capair Services** (formed in 1974), based at Las Vegas, is reformed and renamed, offering Grand Canyon tour services on a charter basis while awaiting the outcome of a license request made of the CAB. With the license in hand, President Myron L. Caplan employs his Cessna 402 and one Cessna 441 to inaugurate scheduled passenger flights from Las Vegas to the Grand Canyon in January 1979.

In 1980, two more C-402s are acquired and flights begin to Death Valley, California. The license is upgraded to full 401 certification on January 14, 1981. Sales offices are opened overseas. Full commuter services are now launched and a total of 38,534 revenue passengers are carried on the year with a fleet now comprised of 9 C-402s and 1 C-340.

The second largest carrier to the Grand Canyon in 1982, Air Nevada (2) opens additional foreign offices and begins scheduled services to Palm Springs. Bookings rise to 80,000, but recede to 61,250 in 1983. Still, new tour products are offered as the fleet grows to comprise 10 Cessna 402s.

Airline employment in early 1984 is 45. Boardings decrease somewhat as a result of the increase in the value of the dollar; however, the company is now the leading Grand Canyon carrier. Orders are placed for 2 Convair CV-580s.

Renewed domestic marketing emphasis is instituted in 1985.

With the decline in the dollar's value, overseas passenger bookings reach an all-time high in 1986. Traffic increases significantly in 1987 as the base of operations is transferred to McCarran International Airport. The company's fifteenth anniversary is celebrated in 1988; boardings accelerate and the marketing force operates from two dozen international offices.

The fleet in 1989 includes 8 Cessna 207s and 14 Cessna 402s. Scheduled tour service is inaugurated to Bryce Canyon, Utah. From Los Angeles, a special joint program is marketed with **Delta Air Lines** worldwide. Special joint fares are also offered with **Northwest Airlines** and **American Airlines**, as well as **Delta Air Lines**. Enplanements total 75,000.

One-day Bryce Canyon/Grand Canyon group flights are launched in 1990. Night cargo flights are started between Las Vegas and Los Angeles

as the marketing staff is increased further at the McCarran headquarters. Passenger boardings, due to recession and war fever, plunge, but the exact figures are not disclosed.

One-day Bryce Canyon/Grand Canyon individual flights are launched in 1991. A joint program is developed with **America West Airlines** allowing customers the opportunity to take the one-day tour on a special fare from any AWA city in California, Nevada, or Arizona. Two more Cessna 402s are acquired and enplanements total 61,270.

A Convair 580 is introduced on May 24, 1992; it is the largest aircraft to fly scheduled service on a daily basis between Las Vegas and Grand Canyon. Employment stands at 48 as passenger boardings jump 29.7% to 79,475.

Scheduled service is opened from Las Vegas and Grand Canyon to Monument Valley in 1993 and the international office network is extended to 31. A marketing and code-sharing agreement is signed with **Air Resorts Airlines**. Customer bookings climb 9.2% to 86,770.

Destinations served by the 75-employee company of Chairman/CEO Myron Caplan in early 1994 include San Francisco, Death Valley, Los Angeles, Las Vegas, Bryce Canyon, and the Arizona attractions of Indian Country, Monument Valley, and the Grand Canyon. Passenger boardings inch up 1.1% to 87,755.

The workforce is increased by a dramatic 73.6% in 1995 to 125. Still, enplanements decline by 5.7% to 83,290.

The employee population is reduced a dramatic 30% in 1996 to 80 and passenger traffic is down again, by 7%. The company's 11 Cessna 402Cs haul 77,501 passengers. Operations continue in 1997 as company pilots evaluate a number of 19–30 passenger aircraft for future delivery. They need not have bothered. Despite a 10% cut in the workforce to 72, customer bookings fall 8.3% to 71,064.

The company shuts down its Las Vegas business in January 1998 and moves to Hawaii, where it reopens shop as **Pacific Wings**. In its last month of mainland life, the company transports 6,936 passengers.

AIR NEW ENGLAND: United States (1970–1981). On November 15, 1970, Joseph C. Whitney, Nelson Lee, and colleagues, formerly of **Executive Airlines**, join George Parmenter of Hyannis-based **Cape & Islands Flight Service** in founding this large Boston-based regional. Half a million dollars in backing is provided by Robert Kansler of Detroit and Farleigh Dickinson Jr., who becomes board chairman. Transair, an FBO that had acquired Cape & Islands, is itself taken over in October, together with its 4 de Havilland Canada DHC-6-100 Twin Otters. The operating certificate is changed from **Cape & Islands Flight Service** to Air New England. Flight 741, a DHC-6-100 piloted by Capt. John Santos, inaugurates the company's passenger and cargo services on November 1.

Destinations visited in December and throughout 1971 include New York, New Bedford, Augusta, Portland, New Haven, Hartford, Providence, and Martha's Vineyard. The fleet is increased to also include Beech 99s, Aero Commander 500Bs, and the first of five Douglas DC-3s. Captain Santos also has the honor of placing the first Douglas transport, originally flown by **American Airlines**, into service on July 9.

With these aircraft and a workforce of 45, the new airline boards a total of 88,092 passengers. Revenues of \$1.84 million are generated, but a \$404,000 loss is suffered.

Two more DC-3s are acquired in the first half of 1972. A Douglas, en route from New York to Boston on August 24 must make an emergency landing at Tweed–New Haven Airport after experiencing engine trouble. When **Executive Airlines** fails in midyear, Whitney acquires its routes from Boston to Lebanon and Montpelier and several DHC-6-200s and DHC-6-300s.

Enplanements for the year total 143,653 and income jumps to \$3.08 million. The first of four profits in the airline's history can be reported—\$20,500.

Following its 1973 purchase of **Northeast Airlines**, **Delta Air Lines** transfers to Air New England a number of Northeast's former routes to and in Vermont and New Hampshire. Passenger boardings jump 43% to

204,802. Even though the load factor averages 45% for the year, start-up costs and higher fuel prices prevent the airline from making a profit. On revenues of \$4.7 million, a \$450,000 loss is taken.

Airline employment in 1974 stands at 350 (including 86 pilots) and the fleet includes 27 aircraft. Orders are placed for 6 Shorts 330s. Air New England receives word from the CAB on October 15 that it will be granted a local service certificate early in the new year. As such, it will qualify for subsidy and will operate under an entirely new set of regulations.

At the end of the year, ANE is the second-largest regional airline in the U.S., bested only by Los Angeles-based **Golden West Airlines**. To meet the CAB's requirement for larger aircraft, the company, in November, purchases 6 Fairchild-Hiller FH-227s (and a quantity of spare parts) from **Delta Air Lines** for just \$3 million.

Customer bookings skyrocket 61% to 329,000 while cargo traffic climbs to 62,000 FTKs, a huge jump of 260%. On operating income of \$8 million, the net profit is \$78,553, the company's best showing to date.

Since the previous summer and into 1975, 50 new employees are hired, including a young Twin Otter copilot, Rand K. Peck, whose helpful personal history of the company will appear in the November 1998 issue of *Airways*. Air New England is officially redesignated a local service carrier (the first and only since **Ozark Air Lines** a quarter-century earlier) by the CAB on January 24.

While on the ground at Hyannis, Massachusetts, on March 2, a company Twin Otter, with only the pilot aboard, is boarded by a lone assailant who demands to be flown to New Haven, Connecticut. As the aircraft has not been fueled, the flight is impossible and the perpetrator is taken in hand by police. Given a trial, he will be sent to prison.

The company's largest new-hire class of 31 pilots begins training on April 14.

President Whitney's contract is terminated in September when investor Robert Kanzler decides that he should hold the post. The same month, Capt. Jim McDevitt and Financial Officer Frank Moss fly the carrier's last DC-3 service, from Waterville to Boston. Thereafter as the FH-227s arrive, the Douglas transports are retired.

Enplanements climb a healthy 27.1% to 408,719 while freight traffic grows even more, up 53.2% to 95,000 FTKs. Revenues jump to \$11.76 million, but a huge \$1.46-million loss is experienced.

Four hundred are employed in 1976. To maintain the ex-Delta FH-227s, ANE builds a large hangar at Hyannis; by summer, company headquarters are, however, transferred to the former **Northeast Airlines** building at Boston's Logan International Airport.

Tiring of the responsibility, Kanzler turns the presidency over to Charles F. Butler late in the year and sells his stock to co-owner Dickinson.

Passenger boardings rise a modest 1% to 410,216. Freight, on the other hand, jumps 33.8% to 126,000 FTKs. Income reaches \$15.54 million; however, neither profit nor loss is reported.

In 1977, employment at Chairman Dickinson and President Butler's company totals 415 and the fleet comprises 7 Fairchild Hiller FH-227s and 10 de Havilland Canada DHC-6-300 Twin Otters. Destinations served include New York (LGA), New Bedford, Nantucket, Hyannis, Martha's Vineyard, Portland, Lewiston, Auburn, Augusta, and Waterville, Keene, Lebanon, Burlington, and Montpelier.

Enplanements total 462,000. The operating profit is \$154,000 and net gain is \$56,000, on operating income of \$17.9 million.

The number of employees is increased by 23.7% in 1978 to 538. Edward H. Bauerband is appointed senior vice president operations. Under an agreement with the local chapter of the Air Line Pilots Association, the company leases a pair of Convair CV-580s from **Aspen Airways** for use during the summer tourist influx.

The CAB now grants ANE, which is offering over 900 weekly departures, the authority to serve as both a Part 121 certified air carrier and as a Part 298 commuter airline; the ability to fly as an "Area Air Carrier" permits the local service airline to fly Twin Otters—a class of aircraft much smaller than ordinarily allowed an airline as large as President Butler's—to smaller communities.

Following passage of the Airline Deregulation Act, the route system is expanded in October to Hartford.

In November, an aviation column in *The Boston Globe* notes that Air New England is the only scheduled airline still operating large propeller equipment out of Logan International Airport.

Passenger boardings accelerate 15.2% to 550,000. Total revenues jump 16% to \$20.8 million, but \$21.97 million in costs associated with expansion bring a \$1.2-million operating loss and a net downturn of \$1.93 million.

The workforce is reduced by 0.5% in 1979 to 535. The reduction in force begins to sap employee morale and a number of pilots begin to move to other airlines. Air New England adds a stop at Providence in February and benefits from a \$3.2-million financing arrangement with **Delta Air Lines**. The fleet is increased by the addition of one more FH-227 from **Ozark Air Lines** (1).

While on final approach from New York on June 17, Flight 248, a DHC-6-300 with 2 crew and 8 passengers, descends below minimum altitude and crashes into a heavily wooded area near Barnstable on Cape Cod. One pilot, company cofounder George Parmenter, is killed.

An FH-227, with 50 aboard, including former Peace Corps director and actor Sargent Shriver, lands safely at Boston eight days later despite problems with its nosewheel landing gear.

Flights to Presque Isle begin later in the year.

Customer bookings these 12 months rise 7.8% to 593,000, but cargo is down a huge 70% to 93,000 FTKs. Although revenues are up by 26.5% to \$26.31 million, expenses jump 29.1% to \$28.36 million. As a result, the operating balance falls by \$2.05 million and a net \$2.77 million loss is suffered.

The employee population is decreased by 8.3% in 1980 to 505. President Butler's carrier, once profitable but now fighting for survival, is forced to rely on its Delta agreement, an annual \$4.7-million Federal Essential Air Service subsidy, and the persistence of two major stockholders, Chairman Fairleigh Dickinson Jr., and former President Robert Kanzler, who have seen a \$64-million investment erode to a total stockholder equity of \$237,000.

The company now agrees to add a number of Convair CV-580s to its fleet of 6 Fairchild Hiller FH-227s and 10 de Havilland Canada DHC-6 Twin Otters.

Passenger enplanements fall by 27.5% to 432,759 and freight falls again, down 41.1% to 747,560 pounds carried. Operating income declines by 2.7% to \$21.56 million as expenses rise 2.1% to \$28.8 million. A \$290,000 operating loss is absorbed as investors rejoice in a \$273,367 net gain.

The first of several expected Convair CV-580s is received in February 1981 and employed to start, later in the first quarter, service to Rochester and Cleveland.

Despite the fiscal downturn, the carrier moves into three more markets—Albany, Baltimore, and New York (JFK). Hardly had this growth started when it was met by two major hurdles: competition by large airlines flying Boeing 727s and the PATCO air traffic controllers' strike.

A small profit earned during the first two quarters cannot, in the end, overcome large operating losses. On October 31, reeling from losses incurred as a result of the PATCO air traffic controllers' strike and after merger talks with **Wright Airlines** fall through, the 10-year-old large regional shuts its doors. The final service, Flight 53, is operated by the FH-227 of Capt. Paul Johnson and Financial Officer Ken Hughbanks between Burlington and Boston.

During its last year, Air New England transports a total of 284,381 passengers (down 35.7%) and operates 76,000 FTKs (up 13%).

AIR NEW MEXICO: United States (1980–1981). In late May 1980, six-year-old **Zia Airlines**, based at Las Cruces, New Mexico, changes its name to Air New Mexico. Cessna 402B, British Aerospace BAe Jetstream 31, and Fairchild-Swearingen Metroliner flights continue to link the company's base with Albuquerque, Santa Fe, Taos, El Paso, Silver City, Denver, Farmington, and Alamogordo.

Poor finances, combined with the effects of the summer PATCO air traffic controllers' strike, force it to shut down in 1981.

AIR NEW ORLEANS: United States (1981–1988). Equipped with 1 Piper PA-31-350 Navajo Chieftain and 1 PA-31-310 Navajo, Air New Orleans begins scheduled passenger and cargo flights on August 10, 1981, linking its base with Mobile and Pensacola. During the next five years, the route network is increased to include stops at Panama City, Tampa, Walton Beach, Jacksonville, and Orlando.

In 1983–1985, the fleet is increased by the addition of 1 Beech 99 and 5 Piper T-1020s. Consideration is given to the purchase of failed **Skyway of Ocala**, but a deal is not closed. Enplanements in the latter year total 92,936.

The 142-employee small regional acquires another Beech 99 and a pair of British Aerospace BAe Jetstream 31s in May 1986. In July, the carrier signs a "Continental Express" code-sharing contract with **Continental Airlines**, agreeing to feed the Texas Air Corporation (TAC) flagship at Crescent City.

President Tony Jobe now removes the T-1020s and replaces them with 2 additional Beech 99s and 2 Jetstream 31s. So successful is this expansion that passenger boardings jump 11.1% to 104,539 and the carrier is able to move into the ranks of the large regionals.

The fleet in 1987 includes 7 Beech 99s, 4 Jetstream 31s, and 5 Navajo Chieftains.

Operating as "Continental Express," Flight CO962, a 10-day-old BAe Jetstream 31 with 2 crew and 9 passengers, aborts its takeoff from New Orleans on May 26. The aircraft is unable to stop and overruns the runway, bounces off a chain-link fence, skids across State Rte. 61, and comes to a stop in a parking lot. Amazingly, no fatalities are reported. The accident is reviewed by Peter Garrison in his "Control Conundrum," *Flying* 106 (March 1989): 26–27.

A new minihub is opened at Birmingham, Alabama, a move that helps customer bookings ascend to 126,362.

During the first week of January 1988, Beech Aircraft informs Air New Orleans that it is in default on \$543,000 in lease payments on 7 of its 9 Beech 99s. Unable to come up with the necessary funds, the carrier, in mid-month, files for Chapter XI bankruptcy protection at New Orleans Federal District Court. According to the filing, the commuter owes its creditors \$2.1 million. Still, the full schedule of 80 flights per day is operated.

In early spring, while continuing to operate from Birmingham, the carrier loses its "Continental Express" affiliation. The loss is fatal; unable to recover, the carrier ceases operations and surrenders its operating certificate to the FAA.

AIR NEW SOUTH WALES (PTY.), LTD.: Australia (1981–1989). On July 2, 1981, **Ansett Airlines of New South Wales (Pty.), Ltd.** is renamed **Air New South Wales (Pty.), Ltd.** General Manager J. Buchanan's operation employs 281 workers (down 0.3% from the previous year) and has a fleet comprising of 6 Fokker F.27-500s. All are painted in the company's "Sunshine" livery of yellow fuselages and red tails.

Scheduled services are maintained from Sydney to Merimbula, Cooma, Wagga Wagga, Narrandera, Griffith, Dubbo, Mudgee, Coonabarabran, Coonambie, Walgett, Narrabri, Moree, Caloundra, Casino, and Coff's Harbor.

Combined enplanements for the carrier under its two names this year are 426,651, a decline of 4.3%; cargo falls further, dropping 13% to 729,000 FTKs.

Passenger enplanements for 1982 decline 17.7% to 399,000, as freight falls by 9.4% to 677,000 FTKs. The workforce is cut 3.6% in 1983 to 270. Traffic declines persist. Customer bookings drop 7.4% to 370,258 while cargo is off another 8.6% to 619,000 FTKs.

An F.28 jetliner is acquired in 1984. It, like the carrier's 6 F.27-500s, is painted in the company's bright yellow, red, and orange livery and becomes known as "The Big Canary." In March 1985, the carrier's holding

in **Air Queensland (Pty.), Ltd.** are purchased by **Trans-Australian Airlines, Ltd. (TAA)**. Operations continue apace until 1989 when the company is renamed **Ansett NSW (Pty.), Ltd.**

AIR NEW ZEALAND, LTD.: Private Bag 92007, Quay Tower, 29 Customs Street West, Auckland, New Zealand; Phone (64-9) 366-2400; Fax (64-9) 309-4676; http://www.airnz.co.nz; Code NZ; Year Founded 1965. Tasman Empire Airways, Ltd. (TEAL), founded in 1940, changes its name to **Air New Zealand, Ltd.**, on April 1, 1965 in order to demonstrate that it is 100% government-owned. The employee population at this time is 1,219 and the fleet includes three Lockheed L-188C Electras.

The company's third L-188C, the *Akaroa*, which had been lost in a training accident at Whenuapai Airport on March 27, is replaced by the addition of another aircraft on April 18, the former **Qantas Empire Airways (Pty.), Ltd.** unit *Pacific Endeavor*.

Two Douglas DC-8-54s are also delivered, beginning in September. DC-8-54 Christchurch-Sydney flights commence on October 3 and, upon the completion of Auckland's new Mangere Airport, jet service to Los Angeles via Fiji and Honolulu, is inaugurated on December 14.

During the year, the company's unduplicated route miles are more than doubled, from 15,000 to 34,000, seating capacity is tripled, and cargo space is increased by 450%. A total of 156,780 passengers are carried on the airline's all-international service. Revenues of NZ\$14 million are earned.

Service is launched to Hong Kong in March 1966 and Singapore in April. A DC-8-52, with five crewmen aboard, crashes at Auckland on July 4 during a training flight (two dead). A total of 221,000 travelers are carried.

The workforce is 2,317 in 1967 and 1 L-188 is sold. The fleet now comprises 2 DC-8-54s and 1 L-188C. A third DC-8-54 remains on order. The route network rises to 42,658 unduplicated miles. Originating passengers accelerate to 227,818 and revenues of NZ\$27 million are earned.

Airline employment is reduced in 1968 to 2,229. Two additional DC-8-54s are placed in service while the carrier's L-188C *Akaroa* is sold on February 17, along with an unnamed Electra. The carrier's first European office is opened at Frankfurt.

A total of 229,663 passengers are carried and revenues advance to NZ\$29 million. The first Canadian office is opened in Toronto in 1969. Enplanements during the year are 250,748.

The workforce in 1970 stands at 2,217. Three DC-10-30s are ordered with an option on a fourth and an L-188C Electra is chartered from **Qantas Airways (Pty.), Ltd.** on April 30 to operate a joint trans-Tasman service between Auckland and Sydney with the Australian flag carrier.

A 10% interest is taken in the restructured **Polynesian Airlines**. Hawker Siddeley HS 748s are acquired to launch an interim charter service between Fiji and Cook Island pending the opening of jet-capable Rarotonga Airport in 1972.

A former **United Air Lines** DC-8-52 is acquired in November. Route mileage is expanded during the year to 47,647 covering 16 destinations in 11 nations.

Passenger boardings jump 17.4% to 303,570 and freight traffic grows 11.6%.

An unnamed L-188C is sold on April 23, 1971 and a total of 393,820 passengers are carried, a significant increase. Airline employment in 1972 is up to 2,833. The fleet now comprises 8 DC-8-54s as the L-188Cs *Atarau* and *Aotearoa IV* become the last Electras sold.

Cargo traffic grows 14.9% and passenger bookings are up 18.8% to 485,000 and freight advances 18%. A new 20-story corporate headquarters building, Air New Zealand House, is opened at Auckland in December. A net NZ\$1.2-million profit is reported.

The first of two DC-10-30s to arrive during 1973 is accepted at Long Beach by General Manager C. J. Keppel and Chief Pilot F. F. Le Couteur in January; it enters service on February 7. At the same time, a new color scheme and aircraft logo are adopted, the logo being the Maori art sym-

bol known as the "Koru." The DC-8-54s are also refurbished. DC-10-30 flights are launched from New Zealand to Australia, Fiji, Singapore, and North America, the latter featuring a daily frequency to Los Angeles.

A computerized reservations system is introduced and a NZ\$6-million ground facility expansion allows opening of a new company headquarters. Air New Zealand cohosts the 1973 IATA meeting and its chairman, Sir Geoffrey Roberts, becomes the trade group's 1974 president. The workforce totals 3,571 and enplanements are 487,281.

A total of 4,106 people are on the payroll in 1974. Two additional DC-10-30s join the fleet, as orders are placed for three others. A daily interchange service is started with **British Airways, Ltd. (2)** from Auckland to London via Los Angeles.

Freight traffic skyrockets 85% and passenger boardings swell 31% to 706,205. Freight skyrockets 85% to 86.54 million FTKs operated.

Airline employment grows to 4,514 in 1975. Two more DC-10-30s arrive. Passenger bookings are up 7.6% to 759,820 and cargo rises 2.3%. The employee population is increased 4.12% in 1976 to 4,700. One more DC-10-30 is delivered as three DC-8-54s are sold. Passenger boardings soar 26.2% to 958,670 while freight climbs 21.8%. Passenger enplanements exceed 1 million on the year for the first time in 1977. Net income is NZ\$11.6 million.

The workforce is increased 7.5% in 1978 to 5,194. On April 1, the domestic carrier **New Zealand National Airways Corp., Ltd.** (founded in 1945) is taken over and merged. The fleet now comprises 8 DC-10-30s, 3 DC-8-54s, 9 Boeing 737-219s, 12 Fokker F.27-100s, 4 F.27-500s, 13 Bristol 170s, and 2 Hawker Siddeley Argosy 200 freighters.

The carrier of the new chairman, C. W. Mace, now serves 37 domestic destinations as well as 11 foreign nations. On February 25 and in co-operation with **Polynesian Airlines**, a B-737 route is inaugurated from Apia to Auckland via Nuku Alofa, Tonga. The process of amalgamation continues throughout the year.

Passenger boardings rise 11.9% to 3,640,716 and cargo accelerates by 13.9%.

Caught in a rain squall while on final approach to Auckland on February 17, 1979, a chartered F.27-500 with 2 crew and 2 passengers crashes into Manakau Harbour (2 dead).

At 6 p.m. local time on November 27, Flight 901, a chartered DC-10-30 with 20 crew and 237 passengers, takes off from Auckland for a scenic tour 200 mi. southward to Antarctica, passing over South Island, Auckland Islands, Baleny Islands, and Cape Hallett to McMurdo in Antarctica. The aircraft is scheduled to return via Cape Hallett and Campbell Island to Christchurch. Approaching Ross Island, the area below 16,000 ft. is obscured by cloud, so permission is sought and received to descend. However, the plane wanders 1.5 mi. E of its planned track and crashes into 12,000-ft. Mount Erebus, an active volcano on Ross Island, breaks up, and catches fire; there are no survivors.

Because of the unusual aspects of this charter, it becomes the subject many books. Among the titles available are *The Erebus Papers: Edited Extracts from the Erebus Proceedings with Commentary* (Auckland, N.Z.: Avon Press, 1991); Michael Grey, *White Out!: A True Account of Air New Zealand's DC-10 Crash on Mount Erebus* (Auckland, N.Z.: A. Taylor, 1980); Kenneth D. Hickson, *Flight 901 to Erebus* (Christchurch, N.Z.: Whitcoulls, 1980); Peter Mahon, *Verdict on Erebus* (Auckland, N.Z.: Collins, 1984); and Gordon Vette, with John MacDonald, *Impact Erebus* (Dobbs Ferry, N.Y.: Sheridan House, 1984).

Despite these two tragedies and the grounding of the DC-10 fleet earlier due to the May **American Airlines** crash in Chicago, the first full year of merged operations proceeds smoothly. Freight climbs 7.9% and passenger bookings increase 18.5% to 4,421,661.

The workforce grows 1.1% in 1980 to 8,974. The Bristols and Argosys are retired, together with 3 F.27-100s; 1 B-737-219 and 2 F.27-500s join the fleet. Orders are placed for 5 B-747-219Bs.

Although freight soars 27.4% to 185.53 million FTKs, passenger boardings dip 3.9% to 4.2 million.

The first B-747-219B is delivered on May 22, 1981; christened *Aotea (Long White Cloud)*, it is placed into service in June to various

Australian cities and also to Singapore. Two more B-747-219Bs arrive on June 9 and 21, respectively; christened *Tainui* (*Big Sea*) and *Takitimu* (*Company of Chiefs*), they are placed in service on the carrier's long-haul routes from Auckland to Los Angeles in July, via Fiji, Hawaii, or Tahiti. The Jumbojet arrival leads to the sale of the DC-10-30s, two of which are disposed of during the year. A DC-8-54 is converted into a freighter while 4 more F.27-500s join the fleet, displacing 1 B-737-219 and 6 F.27-100s.

The world economic decline leads to a dip in passenger boardings, off 4.1% to 4,025,000; cargo, however, is up 7.2% to 198.86 million FTKs.

The workforce is cut by 9.8% to 7,506 in 1982. A company-wide restructuring program is undertaken by new managing director Norman M. T. Geary aimed at matching the airline to the adverse marketing and economic conditions of the day. Emphasis is placed on strengthening the marketing division and adopting a market-led philosophy with reduced staff numbers. Meanwhile, the last two B-747-219Bs, *Te Arawa* (*The Path of Time*) and *Tokomaru* (*A Stone*), are delivered on June 22 and August 25, respectively.

In cooperation with **Cathay Pacific Airways (Pty.), Ltd.** and **Air Niugini (Pty.), Ltd.**, flights commence from Auckland via Port Moresby to Hong Kong on August 1. The partnership requires that each company take turns every three months flying the service, with ANZ beginning the process.

The Jumbojets are placed in service (the former on a new extension of the LAX service on to London) as the 2 DC-8-54s and final 5 DC-10-30s are sold, the last departing for Mozambique in December.

Cargo grows 2.2% to 203.23 million FTKs, but passenger bookings slip again, down 5.2%, to 3,814,931. Despite the realignment of approach, the traffic drop results in an operating loss of NZ\$59.1 million and a NZ\$29.4-million net loss.

Airline employment drops another 14.6% in 1983 to 6,980. During the spring, B-737-219 flights commence across the Tasman Sea from Christchurch to Hobart. Cost-cutting efforts, the stronger marketing emphasis, the DC-10-30 sales, and the introduction of a new London service help to stem the traffic and financial hemorrhage. One-stop Auckland to London via Los Angeles service is initiated in August.

Passenger enplanements rebound somewhat, up 4.7% to 3,992,576, and freight jumps 26.3% to 256.6 million FTKs. Revenues soar 18.6% to NZ\$513.6 million, but expenses swell to NZ\$534.1 million, leaving a NZ\$21.4 million operating loss; net income, however, is up to NZ\$22.1 million.

The payroll is cut another 1.7% in 1984 to 6,864. In April, nonstop Los Angeles to Auckland Jumbojet services commence and, in late summer, NZ\$300 million in orders are placed for 3 B-767-219ERs. Operations are resumed on December 24, following the settlement of a flight attendants strike.

Bookings accelerate 12.4% to 4,488,276 and cargo climbs 13.2% to 290.46 million FTKs. An operating profit of NZ\$45.1 million is posted as well as a net profit of NZ\$58.3 million.

After years of layoffs, the workforce is increased 5.2% in 1985 to 7,290; orders are placed for 6 B-737-219As. A marketing agreement is signed with **Japan Air Lines Company, Ltd. (JAL)** in August that provides for participation in each other's frequent flyer program as well as joint weekly services from Tokyo to Auckland via Christchurch. Also in August, Los Angeles to London frequencies are increased to thrice weekly and the first of three ordered B-767-28QERs is delivered in September. Christened *Aotearoa*, it is employed on the trans-Tasman Sea route from Christchurch to Hobart, beginning in October.

Elsewhere, B-747-219B flights are inaugurated Auckland-Vancouver and Christchurch-Los Angeles in late October. In November, a B-737-219, *Piripiri*, is leased for six months to the Welsh carrier Cymru Airways International, Ltd. and a second weekly flight is added to Tokyo. Also and more importantly, a minority 30% interest in Mount Cook Group is raised to 77% control; the private holding company's airline subsidiary is allowed to continue operating as a separate entity. Weekly Sunday night Vancouver to Auckland frequencies begin on October 27.

In December, 50% interest is acquired in Melbourne-based **Jetset (Pty.), Ltd.**, Australia's largest travel organization.

Passenger boardings accelerate 9.7% to 4,922,000, and freight is up 7.3% to 311.65 million FTKs. Revenues jump 12.7% to NZ\$ 574.1 million, and expenses are NZ\$497.8 million; profits are NZ \$76.3 million (operating) and NZ\$67.2 million (net).

The last 2 B-767-28QERs, *Arahina* and *Atarau*, are placed in service in 1986, together with 6 B-737-219As, the *Piopia*, *Piwakawaka*, *Parera*, *Parakareka*, *Pateke*, and *Pihoihoi*. In February, a restored de Havilland DH 89A helps celebrate the fiftieth anniversary of commercial flight in New Zealand, reenacting the **Union Airways, Ltd.** flight from Palmerston North on the North Island to Taleri on the South Island. A management shakeup occurs in April, as Managing Director Geary appoints two new general managers, Norman Macfarlane and Jim McCrea. In July, the carrier protests the sale of a 50% interest in the small domestic airline **Newman's Air, Ltd.** to Ansett Transport Industries.

By summer, the carrier is making 220 daily flights between 42 airports (23 domestic) in 15 nations. On November 15, 3,520 weekly roundtrip seats are added to Australia. On December 4 and in cooperation with **Cathay Pacific Airways (Pty.), Ltd.**, joint weekly Hong Kong-Auckland service is reintroduced, operated by a Cathay Jumbojet. Late in the year, in an effort to counter the entrance of the new Ansett New Zealand into the nation's domestic scene in early 1987, a comprehensive marketing arrangement is signed with **Australian Airlines (Pty.), Ltd.**

Customer bookings jump 9.3% to 5,382,235 and cargo rises 4.1% to 324.49 million FTKs. Revenues advance 11.5% to NZ\$611.2 million, but costs grow 18% more. Operating income falls to NZ\$50.4 million, but net earnings reach a record NZ\$89-million level.

The payroll grows 4.3% in 1987 to 8,105. Daily Auckland-Cairns B-767-28QER service is inaugurated in April, with frequency increased to 10 times per week in May.

On May 19, a B-747-219, with 129 passengers and en route from Tokyo to Auckland via Fiji is taken over at Nadi International Airport by a single pirate claiming to have dynamite strapped to his body. The man demands the immediate release of the 11-man governing body of Timoci Bavadra, which is now under house arrest. The flight crew jumps the perpetrator and ends the skyjacking.

Improvements are completed at a number of domestic terminals during the summer. Caught up in a domestic battle with its competitors, the airline now introduces three classes of services on its B-737-219As; in addition to business- and economy-classes, a new City Saver service single-class layout is provided featuring no-frills fares 25% lower than economy.

Beginning on October 25, the carrier inaugurates a weekly service from London to Dallas (DFW), Papeete, and Auckland; five days later, on October 30, weekly nonstop B-747-219A flights are initiated from Los Angeles to Frankfurt in cooperation with **Deutsche Lufthansa, A.G.** Thrice-weekly frequencies from Los Angeles to Auckland begin in December.

Passenger boardings ascend 10.7% to 4,411,496 and freight rises 7.6% to 354 million FTKs. Revenues swell 10.5% to NZ\$1.4 billion and with costs again held down, operating income rises to NZ\$66.8 million and net gain reaches NZ\$108.4 million.

Airline employment rises by 3.1% in 1988 to 8,236. In January, the company shares receipt with **Ansett Australia (Pty.), Ltd.** of the 1987 "Passenger Service Award" from *Air Transport World* magazine.

Workers unloading a B-747-219B, which had flown to Auckland under the joint pact with **Cathay Pacific Airways (Pty.), Ltd.** on April 27, are unable to find NZ\$300,000 (US\$181,000) shipped in the diplomatic locker of a service container. The Hang Seng Bank of Hong Kong and the Bank of New Zealand file suit against the two airlines seeking restitution.

In June, Managing Director Geary retires and is succeeded by R. James Scott on July 1. Under contract to the state carrier, **Heli-taxis, Ltd.** begins 14-times-per-weekday City Shuttle service in August, linking downtown Auckland with the airline's domestic airport

terminal. Effective October 1, the Los Angeles–Pepee service is increased to twice weekly; twice-weekly Los Angeles to Nadi service is introduced; and weekly flights to Japan are increased from three to four, most of which are by Jumbojet. Twice-weekly B-747-219B Auckland–Singapore frequencies are introduced, along with a third undertaken by B-767-2Q8ERs.

Weekly roundtrips are started in November between Auckland and Cairns. During the same month, a regional/commuter feeder system, "Air New Zealand Link," is set up, modeled on that operated by **Delta Airlines** in the U.S. Anchored on the activities of **Mount Cook Airlines, Ltd.**, the new system during the month adds Hamilton-based **Eagle Air, Ltd.** to serve nine points on the North Island and Motueka-based **Air Nelson, Ltd.** to serve four on the South Island, plus Wellington and Palmerston North; 50% shareholding is purchased in each of these two small airlines.

Two "consortiums" begin to bid for the carrier; one is comprised of **Japan Air Lines Company, Ltd.**, **Qantas Airways (Pty.), Ltd.**, **American Airlines**, and New Zealand-based Brierly Investment, Ltd. while the other side is made up of **British Airways, Ltd. (2)**, New Zealand's DFC investment bank, and the EIE Development Company, Ltd. of Japan. In cooperation with **Cathay Pacific Airways (Pty.), Ltd.** and employing a Cathay B-747-267B, frequency on the Hong Kong to Auckland return service is increased in December from one weekly service to two.

Customer bookings climb 3.6% to 5,820,902 and cargo is up a slight 0.5% to 340.57 million FTKs. Revenues grow by only 0.2% to NZ\$871 million. The operating profit increases to NZ\$118.5 million while net gain drops to NZ\$39.55 million.

The payroll is boosted 7.1% in 1989 to 8,621 and the fleet now includes 37 aircraft: 1 leased B-747-419, 5 B-747-219Bs, 5 B-767-2Q8ERs, 11 B-737-219As, 10 F.27-500Fs, and 5 B-727-100s. Orders are outstanding for 2 more B-747-419s and 6 B-737-419s.

In January, the company, in cooperation with **Mount Cook Airlines, Ltd.**, offers a reduced-fare Freedom Pass for travelers visiting New Zealand during the year from North America. Early in the year, the number of Jumbojet business-class seats available is tripled and, in February, a new departure terminal is opened at Auckland Airport.

Flying over the Pacific Ocean on March 8, a B-747-219B with 350 aboard must swerve to avoid a lightplane less than 500 feet away. Twice-weekly direct service from Los Angeles to Sydney via Honolulu begins in the month, followed by weekly Auckland to Honolulu via Nadi flights on March 30; that day, the carrier becomes the first to land a B-767-2Q8ER at Honolulu.

Due to weak load factors, Auckland–Dallas (DFW) service is suspended on April 1. Government approval for privatization is received on April 6. For the April to September tourist season, the carrier, in cooperation with Jetset Tours, introduces for its North American passengers five-night, NZ\$5-per-night accommodations in several hotels in Australia, New Zealand, the Cook Islands, and Fiji. Also during the month, the size of the business-class section on the company's Jumbojets is increased from 16 to 56 seats.

Twice-weekly B-747-219B direct service from Los Angeles to Sydney via Honolulu begins in May. In conjunction with **Qantas Airways (Pty.), Ltd.**, weekly nonstop flights are also started from Auckland to Adelaide. In early June, purchase of the airline is completed by a consortium that includes **Qantas Airways (Pty.), Ltd.** (19.9%), **Japan Air Lines Company, Ltd.** (7.5%), **American Airlines** (7.5%), Brierly's New Zealand (65%), and the New Zealand government (1/10 of 1%, the "Kiwi share"); the acquisition price is NZ\$660 million (\$403.7 million U.S.). Under terms of privatization, Brierly is required to sell 30% shareholding to airline employees and the public. During the same month, 2 B-767-209ERs are purchased from **China Airlines, Ltd. (CAL)** and, on July 1, Brierly's CEO Robert H. Matthews becomes the airline's new chairman.

Also in July, the company introduces a special summer children's fare of NZ\$99 for travel from Los Angeles or Honolulu to Auckland,

Wellington, or Christchurch; youngsters must be accompanied by an adult travelling at regular fare. In August, new menus, wines, and tableware are added to its business-class in-flight service; economy-class passengers are also offered new tableware and menu selections.

On September 10, Brierly Investments, in accordance with the terms of the June sale, places 30% of its ANZ holdings on the market; the NZ\$200-million offering pegs the value of the entire airline as NZ\$672 million. Having failed to reach agreement with its pilots to fly it, the company announces on September 28 that it will sell or lease its new B-747-419 without ever having placed it into service.

Employing a company B-747-219B, joint service is inaugurated with **Cathay Pacific Airways (Pty.), Ltd.** in November over a third weekly route from Auckland to Hong Kong. Also in November, the company begins code-sharing flights with **Japan Air Lines Co., Ltd. (2)** from Auckland and Christchurch to Tokyo (NRT) and Fukuoka.

A major service expansion occurs in December, with most of it between the trunk cities of Auckland, Wellington, and Christchurch, as well as Dunedin, Hawkes Bay, and Palmerston North. All together, B-767 departures are increased from 18 to 54 and B-737-219A take-offs increase from 53 to 656. The first B-767-209ER purchased from **China Airlines, Ltd. (CAL)** arrives just before Christmas and is christened *Awatere*.

Also during the year, the company joins the frequent flyer programs of the American carriers **Trans World Airlines (TWA)** and **Midway Airlines**.

Passenger boardings ascend 2.8% to 4,604,685 and freight climbs 5.2% to 1.32 billion FTKs. Revenues advance 10.6% to NZ\$1,013,881,000, expenses are up 11.5% to NZ\$888.21 million, and the operating profit is NZ\$125.66 million. Net gain rises to NZ\$42.2 million.

Company employment grows another 4.4% in 1990 to 9,000 as 2 more B-767-200ERs join the fleet. The company's celebration is a year-long event, marked by the restoration of the TEAL Short S.45 Solent Mark IV flying boat *Aranui* (ZK-AMO) at Auckland's Museum of Transport and Technology and its installation in a special museum building. Discounted KSUN Islander fares are offered between February and April 30 for roundtrip flights between San Francisco and Los Angeles to New Zealand and feature, in one direction only, an island stopover at Fiji, Tahiti, or Hawaii.

Beginning in April, as the result of a commercial alliance with **British Airways, Ltd. (2)**, ANZ is able to offer an around-the-world daily service in both directions. Kuala Lumpur joins the network in May with a single weekly roundtrip via Singapore. At this time, a hub coordination agreement is signed with **SAS (Scandinavian Airlines System)** covering onward travel from Southeast Asia to points in New Zealand. The two also agree to frequent flyer program cooperation.

In June, a fourth weekly flight is added from Los Angeles to Nadi, Fiji, while in July, in cooperation with **Cathay Pacific Airways (Pty.), Ltd.**, a fourth weekly joint service is operated from Auckland to Hong Kong. A new commercial agreement is signed with **Canadian Airlines International, Ltd.** in late October. Employing a chartered B-747-419, nonstop flights begin under a code-sharing agreement with **Qantas Airways (Pty.), Ltd.** from Sydney and Auckland to Los Angeles on October 28, the same day daily service is initiated from Los Angeles to Rarotonga in the Cook Islands.

The first owned Dash-419 Jumbojet arrives two days later and is placed on the Auckland to L.A. run at the end of November.

On December 2, joint services are initiated with **Canadian Airlines International, Ltd.** between Auckland and Toronto, via Vancouver. ANZ joins Canadian's Canadian Plus frequent flyer program and as fuel prices spiral, the Safe Air and F.27 divisions are closed.

Also in December, the company begins to fly jointly with **Air Canada, Ltd.** on 15 flights each week between New Zealand and Canada; in addition, the two flag carriers agree to joint marketing and frequent flyer programs.

Customer bookings decline 6.7% to 5,028,726 and cargo drops 5.3% to 315.53 million FTKs.

The payroll is cut 4.4% in 1991 to 8,600 and the fleet now includes 1 each leased B-737-3M6A and B-737-205A; 9 B-737-219As; 5 B-737-219Bs; 2 leased B-747-419s; 2 chartered B-767-209s; 1 B-767-3Q8ER; 5 Fokker F.27-100s, 1 of which is leased to **Mount Cook Airlines, Ltd.** and the other 4 stored; 2 out of service F.27-500Cs; and 8 out of service F.27-500Fs. Orders are outstanding for six B-737-319s, two B-747-419s, and five B-767-3Q8ERs.

In addition to a reduction in force, the airline, due to increased costs, institutes an efficiency program designed to cut costs. In January, the carrier is restructured. Six separate operating divisions are established covering international and domestic flights, catering, computer, engineering, and air cargo services. The international division is identified as the core business of the company.

When the second B-747-419 arrives in February, it is chartered to **Cathay Pacific Airways (Pty.), Ltd.**; the 15 withdrawn F.27s are put up for sale. Managing Director Scott resigns at the end of April amidst publicity surrounding news that, at the time of its privatization, purchaser **Qantas Airways (Pty.), Ltd.** had secretly negotiated a standby agreement with **Japan Air Lines Company, Ltd. (2)** and **American Airlines** to purchase their ownership upon request. The situation is triggered when **American Airlines** elects to sell its holdings, which Qantas purchases for \$US23.3 million. Deputy Managing Director James McCrea, who fills in following Scott's departure, is named CEO in October.

Passenger boardings fall another 11.5% to 3,763,143, but freight swells 17.5% to 370.63 million FTKs. Revenues fall to NZ\$1.33 billion and the operating loss is NZ\$7.89 million. There is a NZ\$2.99 million net loss.

The workforce of Chairman Matthews and Managing Director McCrea is sliced again in 1992, by 16.3% to 7,200. The retired F.27-500F fleet is sold to **Merpati Nasantara** in Indonesia.

In May, the carrier begins to code-share with **Mandarin Airlines** on a route from Auckland to Taipei via Brisbane and Bangkok.

On November 5, the wholly owned subsidiaries Travel Communications, Ltd. and Multi Access Airlines Reservation Systems, Ltd. are both sold and 25% shareholding is taken in Travel Industries Automated Systems (Pty.), Ltd.

Customer bookings slide to 2,287,000, but cargo is up 10.6% to 388.43 million FTKs. Revenues decline to NZ\$1.19 billion and the operating profit is NZ\$72.2 million. The net gain is NZ\$61.9 million.

In 1993, the employee population is increased 22.6% to 8,825 and a B-737-2M6 is leased to the Argentine carrier **LAPA (Lineas Aereas Privadas Argentinas, S.A.)**. Discussions on the investment of equity are held with **Ansett Australia (Pty.), Ltd.**; no decision is taken on joining the Australian carrier. During the year, Anasazi Productions releases the motion picture *Mercy Mission: The Rescue of Flight 771*. The film, starring Robert Loggia and Scott Bakula, details the vectoring rescue by Capt. Gordon Vette and the crew of a company B-767-28QER, with passenger consent, of a Cessna 188 AGwagon and its pilot lost over the Tasmanian Sea while on a delivery flight from the U.S.

A code-sharing and block space agreement with **Korean Airlines/Korean Air (KAL)** is inaugurated in November on services from Auckland and Brisbane to Seoul.

Customer bookings accelerate 7.9% to 4,172,406 while cargo rises 15.5% to 464.66 million FTKs. There are profits: NZ\$75.7 million (operating) and NZ\$75.3 million (net).

The workforce grows another 2.8% in 1994 to 7,404. The company joins with **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** in March to announce the inauguration of code-sharing flights, on a block-seat basis, between New Zealand and Australian destinations and Santiago de Chile via Tahiti. Actual initiation of the joint venture will be delayed until July 1996.

A turbine blade in a hush-kitted Pratt & Whitney JT8D-15A engine of a B-737-219A unexplainably fails on June 3; it will be the first of nine such failures suffered by the carrier over the next nine months.

Flights, code-shared with **Japan Air Lines Co., Ltd. (2)**, begin to Osaka's new Kansai International Airport in September, as well as to

Nagoya. During the same month, Australian Prime Minister Paul Keating, in a meeting with ANZ Director Paul Collins, CEO of Brierly Investments, strongly urges the Kiwi carrier to buy into **Ansett Australia (Pty.), Ltd.**

Following a meeting with the chairmen of **Qantas Airways (Pty.), Ltd.** and **British Airways, Ltd. (2)**, Australian Transport Minister Laurie Brereton cancels, on October 26, the "open skies" agreement previously negotiated for the entrance of ANZ into Australia's domestic market. Under a beyond-agreement with Australia allowing up to a dozen nonstop Jumbojet services each week, B-747-419 flights commence thrice weekly from Sydney to Los Angeles in November. Efforts to buy into **Ansett Australia (Pty.), Ltd.** begin.

Passenger boardings jump 21.3% to 5,062,554 as freight moves ahead a welcome 17.4% to 545.6 million FTKs. Revenues swell 22.4% to NZ\$1.54 billion and expenses climb 20.2% to NZ\$1.42 billion. Consequently, there are profits of NZ\$118.2 million (operating) and NZ\$113.3 million (net), later adjusted to read NZ\$132.6 million and NZ\$127.05 million.

Employment grows by 6.9% in 1995 to 7,916. Backdated to December, a B-747-419 is chartered from ILFC in January for 54 months. The **Japan Air Lines Company, Ltd. (2)** stake, which has by now shrunk to 5%, is sold to Brierly Investments, Ltd. for \$64.8 million. The sale in no way interferes with the introduction of new service to Fukuoka.

Following the ninth unexplained failure of a hush-kitted B-737-219A engine in nine months, the company's entire B-737-200 fleet is grounded on March 1 for repairs. To cover services in the repair month, the company makes use of SAAB 340Bs and Fairchild Metro-liners from its regional affiliates, shifts over a B-767-204ER from Australia, and wet-leases one B-737 from **Air Nauru, Air Pacific, Ltd. (2)**, **Polynesian Airlines, Ltd.**, and **Britannia Airways, Ltd.** Meanwhile, rival **Ansett New Zealand, Ltd.** adds additional BAe 146 frequencies in an effort to capture traffic.

Northwest Airlines joins with ANZ in March to unveil a large cooperative program. The two carriers will now share airport facilities in the U.S. and New Zealand and collect joint fares on ANZ flights from U.S. cities to ANZ destinations throughout the South Pacific. It is also agreed that the two will cooperate in their frequent flyer programs.

During the spring and summer and under terms of the beyond-agreement with Australia, ANZ increases its services from Sydney to Los Angeles via Auckland to five per week; the remaining seven rights are employed to fly Jumbojets, with connections at Brisbane and Sydney, to Seoul, Taipei, Osaka, and Bangkok.

To compete with the new entrant **Kiwi Travel International Airlines, Ltd.**, ANZ now assists its subsidiary, **Mount Cook Airlines, Ltd.**, to establish a charter subsidiary of its own, **Freedom Air International, Ltd.**

The company continues its efforts to purchase shareholding in **Ansett Australia (Pty.), Ltd.** in order to increase the New Zealand flag carrier's trans-Tasman presence. In July, the company enters a code-sharing agreement with **Air Pacific, Ltd. (2)** for twice-weekly return flights on Air Pacific aircraft flying from Nadi to Christchurch and Wellington.

During the third week of November, a memorandum of understanding is signed with TNT Transport. Under its terms, the New Zealand flag carrier will purchase from TNT a 25% stake in **Ansett Australia (Pty.), Ltd.** for A\$200 million. In addition, it has the option through February 15, 1998, to purchase another 25% for A\$225 million. If this second stock option is not taken up, TNT will have the option to buy back the initial 25% share. The deal must be reviewed by both the Australian Foreign Investment Review Board and New Zealand's Commerce Commission.

Air traffic controllers go out on strike December 4-6 and 12-15; nearly half of the passengers booked on company flights between Auckland and Wellington on December 14, for example, are turned away as ANZ cuts its usual 13 daily roundtrips to 6.

The national air traffic controller strike, stronger competition from rivals, and a stronger New Zealand dollar will have an impact on the bottom line. Results on the traffic front are pleasing.

Enplanements climb 9.8% to 6,382,000 (3,293,000 international), while cargo jumps 27.4% to 577 million FTKs. Operating revenues increase 10.7% to NZ\$1.91 billion and costs accelerate 8.4% to NZ\$1.73 billion. Operating income reaches NZ\$184.05 million while net gain totals NZ\$173.37 million.

Airline employment rises 4.1% in 1996 to 8,240. A B-767-35DER is leased from **LOT Polish Airlines, S.A.** and a B-737-3S1 is leased from El Salvador's **TACA International Airlines, S.A.** In a preliminary January ruling, the New Zealand Commerce Commission disapproves the carrier's arrangement with TNT, Ltd. It advises all interested parties that they may make written comments on the proposed sale until February 29 and give oral presentations in March, but that it will make a final determination on April 3.

Code-sharing begins with **Polynesian Airlines** in February on routes from Auckland and Wellington to Apia, Samoa.

The Commerce Commission, fearing a monopoly over New Zealand's domestic routes, rules on April 3 that the carrier may not purchase the TNT, Ltd. interest in **Ansett Australia (Pty.), Ltd.** At the same time, a code-sharing agreement is struck with **British Midland Airways, Ltd.** on flights from Auckland via London (LHR) to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

Also in April, the company begins code-sharing with **Royal Tongan Airlines** on services from Auckland to Tongatapu, Tonga. It also introduces the Pacific Wave program, designed to improve its service quality and commercial competitiveness. Numerous activities will commence under the program banner, including an image makeover.

LTU (Lufttransport Unternehmen, K.G.) signs a code-sharing agreement with ANZ in May covering flights between Frankfurt and Los Angeles. The Commerce Commission reverses its April decision in late June after the News Corp., which also holds 50% interest in **Ansett Australia (Pty.), Ltd.**, steps forward at mid-month and acquires 100% ownership of **Ansett New Zealand, Ltd.** The new equity arrangement ends the New Zealand government's monopoly concerns; however, the TNT, Ltd. purchase still must be approved by two Australian bodies, the Foreign Investment Review Board and the Competition and Consumer's Commission.

On August 23, the Auckland-Melbourne route is increased from 7 to 9 B-767-204ER flights weekly. The two early morning B-767-204ER services from Auckland to Sydney are consolidated into a single B-747-219B flight. Five other daily B-767-219ER roundtrips are also offered between the two communities.

The formal A\$325-million buyout of the TNT, Ltd. interest is approved by the TNT board in early September. ANZ pledges to invest A\$150 million in Ansett, while the Australian airline's remaining half owner, the News Corp., pledges a third of that amount. **Kiwi Travel International Airlines, Ltd.** collapses during the month, claiming its failure is due to predatory practices by Air New Zealand and its subsidiaries **Mount Cook Airlines, Ltd.** and **Freedom Air International, Ltd.** The Commerce Commission will clear the three of unlawful wrongdoing.

The courtship of **Ansett Australia (Pty.), Ltd.** finally pays off as on October 1 the company is able to acquire both Ansett stockholder and Australian government approval for its purchase of a 50%, A\$475-million stake in the Australian independent's parent, Ansett Holdings. The two airlines now become reciprocal frequent flyer partners and share airport clubs and lounges and code-share on selected Australian routes and flights across the Tasman Sea.

To replenish the carrier's coffers after the Ansett purchase and to increase the number of shares held by foreign investors from 35% to 49%, ANZ now offers a pro rate issue of 121 million shares for sale. The offering brings in NZ\$242 million, including NZ\$47 million (US\$32.9 million) from rival **Qantas Airways (Pty.), Ltd.**, which now holds a 19.4% stake.

Having been unable to lease the additional capacity usually brought in to cope with the crush of the Christmas holiday season, the company, beginning on November 24, reschedules up to 42 weekly trans-Tasman

flights (through February 7) to ensure all its available B-747 and B-767 capacity dedicated to Tasman services is fully utilized. Over 6,500 passengers already booked need to be rescheduled.

Additionally, several B-737-219As normally used to provide services between New Zealand and Hobart will be pressed into service to provide 17 scheduled weekly flights between Sydney and Auckland and seven weekly flights between Auckland and Melbourne.

A sixth weekly B-767-319ER roundtrip service is added on November 30 from Auckland-Singapore-Christchurch-Auckland. At the same time, two more weekly B-767-319ER roundtrips are added between New Zealand and Seoul. One is routed via Sydney and the other via Brisbane.

A reciprocal marketing and code-sharing agreement is signed with **United Airlines** on December 3, covering routes between Australia and the U.S., via New Zealand gateways, on selected U.S. domestic routes and on the trans-Tasman route between New Zealand and Australia. As part of the arrangement, which will commence in March, ANZ gains two new American entry points: San Francisco and Chicago (ORD).

In addition, other positive highlights of the year include unofficial conclusion of a marketing alliance with **United Airlines**, the introduction of ticketless travel, the beginning of a cost-cutting program designed to save NZ\$70 million in two years, the introduction of the new Pacific Wave image, and completion of the refurbishment of the interiors on the international fleet.

Negatives this year include higher fuel costs and labor disruptions.

As of December 21, travelers booking flights via the company to Australia can now receive permission to enter the country through a new program that issues electronic travel authority.

Enplanements total 3.46 million and 648.09 million FTKs are operated, a 13.7% increase. Operating revenues move up to NZ\$2.04 billion and costs hit NZ\$1.86 million. Operating gain slides to NZ\$173 million while net gain falls to NZ\$153 million.

On January 28, 1997, the company is one of seven airlines chosen to be official carriers for the Sydney 2000 Olympic Games.

Code-sharing flights with **Ansett Australia (Pty.), Ltd.** commence on February 1 on 66 weekly flights connecting Auckland with Sydney and Brisbane.

On February 25, the company and **Qantas Airways (Pty.), Ltd.** cancel their six-year-old "airshare" arrangement (effective May 1), involving shared seats on each other's services between certain cities, mainly Wellington and Christchurch, and promise to lay on extra flights between Wellington and Australia with the aim of improving trans-Tasman flight frequency.

Code-sharing with **United Airlines** is authorized on March 1. Seamless service between the two will feature one-stop check-in, seat assignments, and baggage connections.

On March 9, in an effort to combat regional fare wars in which passengers are being lured with all manner of food products, the company places a full-page advertisement in the Sunday newspaper on Western Samoa promising a 50-piece "mouth-watering feast of KFC" with every ticket it sells for a New Zealand flight. On March 19, **Qantas Airways (Pty.), Ltd.** sells its 19.4% stake in ANZ to ANZ Securities, Ltd. for A\$295 million.

At an extraordinary shareholders general meeting on May 1, approval is given for the reregistration of the company under the Companies Reregistration Act of 1993 and the adoption of a new constitution.

Dual-designator flights with **United Airlines** are significantly expanded on May 15. Covered are ANZ services from Sydney to Los Angeles and to Auckland; Auckland to Los Angeles, Honolulu, and Melbourne; and Melbourne and Los Angeles. ANZ is able to place its code on United flights from Los Angeles to Auckland, San Francisco, Chicago (ORD); Sydney and Los Angeles, San Francisco; Melbourne and Los Angeles and Auckland; and Auckland and Melbourne. A United B-747-422 inaugurates the new partnership with an early morning dual-designator service from Auckland to Melbourne.

Discussions between the carrier, **Ansett Australia (Pty.), Ltd.**, and **Singapore Airlines, Ltd.** are revealed in May. Plans are afoot for a code-sharing arrangement that will grant the two Australasian carriers new inroads into Europe via Singapore as well as marketing, sales, and pricing cooperation with this Southeast Asian major. Meanwhile, Ansett elects to delay any decision on a long-term fleet replacement program until the year's second half, by which time it will have had a chance to consult with ANZ.

Ansett, in early June, announces that it will close its own offices at Auckland, London, Frankfurt, Singapore, and Los Angeles and combine its operations in those cities with its partner.

The "airshare" agreement with **Qantas Airways (Pty.), Ltd.** technically ends on June 17, at which time the New Zealand major puts on two extra weekly return flights per week between Wellington and Australia.

On June 21, Air New Zealand, **Ansett Australia (Pty.), Ltd.**, and **Singapore Airlines, Ltd.** sign a memorandum of understanding for the creation of the largest airline alliance in Southeast Asia. The compact contains what has become the normal large-scale partnership ingredients of shared networks, codes, marketing, scheduling, reservations, planning, purchasing, cargo, frequent flyer programs, information technologies, and ground and passenger services. Arrangements for certain kinds of financing, fleet rationalization, and relationships with other partners remain to be sorted out. The pact wins approval from the nation's antitrust agency.

When **Qantas Airways (Pty.), Ltd.** is unable to obtain funding to purchase the ANZ stake in Australia's largest travel group, Jetset Travel, Air New Zealand, which has held half of the shares in Australia's largest travel agency for 11 years, elects to purchase the outstanding 50% stake in July, making the firm 100% New Zealand-owned.

During the month, the carrier and **Ansett Australia (Pty.), Ltd.** merge their New Zealand domestic courier and air cargo units. Air New Zealand also sells its in-flight catering business to SC International Services, a U.S. firm.

At this point, the company releases the last set of traffic results available through mid-1998. They show a total of 1.9-million international passengers and 455.7 million FTKs.

A B-767-319ER, with 225 passengers, makes an emergency landing at Brisbane Airport in Australia on July 6 after suspected structural damage occurs; no injuries are reported.

On July 29, the carrier retains **Burlington Air Express (BAX)** to handle its logistics under an open-ended, multimillion dollar contract. BAX does not fly goods, but manages the carrier's supply chain to ensure that Air New Zealand parts are received where and when they are needed.

According to an article by Dave English, ANZ now operates one of the longest routes in the world, Los Angeles to Sydney (shared with **United Airlines** and **Qantas Airways (Pty.), Ltd.**). The 7,489-mi. distance is flown in 14 hrs. 25 min. out and 13 hrs. 25 min. back (*Airways* (July-August 1997): 21).

A strategic alliance is signed between Air New Zealand and **Federal Express** on August 6; First Express, Ltd., a wholly owned subsidiary of the New Zealand flag carrier, will handle the ground portion of the agreement, designed to significantly enhance express and document services to Kiwi businesses.

On August 25, after a nine-year legal battle waged in the Hong Kong courts, Judge William Waung finds that, under terms of the Warsaw Convention governing civil aviation, neither the company nor **Cathay Pacific Airways (Pty.), Ltd.** are liable for the loss of NZ\$300,000 (US\$181,000) that mysteriously disappeared from a jointly operated Hong Kong to Auckland service on April 27, 1988. The two airlines are ordered to pay the Hang Seng Bank of Hong Kong and the Bank of New Zealand the maximum legal compensation of NZ\$100 and the two banks are required to pay the cost of the legal action.

On September 10, a ninth weekly nonstop return service is introduced between Los Angeles and Auckland. The company also offers five

weekly flights to Auckland via Sydney, two via Tahiti, four via Fiji and Honolulu, and one via the Cook Islands, Tonga, and Honolulu. Negotiations for a code-sharing alliance commence during the month with **Deutsche Lufthansa, A.G.**

It is at this point that a world speed record is set by the company when the carrier's ninth B-767-319ER completes its nonstop delivery flight from Everett, Washington, to Christchurch in 14 hrs. 54 min.

Underscoring its alliance with **Ansett Australia (Pty.), Ltd.** and its trans-Tasman presence in Australia, the company, in early October, lists 277.7 million B shares on the Australian Stock Exchange. It is the carrier's first listing outside of New Zealand.

On October 23, the carrier begins to give passengers free 10-15 minute prepaid telephone calling cards on flights delayed two or more hours.

The code-sharing agreement with **Canadian Airlines International, Ltd.** ends on October 26. The same day, a new dual-designator pact begins with **Air Canada, Ltd.**, the "Star Alliance" partner of **United Airlines**. The previous twice-weekly Auckland-Vancouver roundtrips offered in partnership with **Canadian Airlines International, Ltd.** are relaunched as part of the new partnership with Air Canada.

Twice-weekly B-767-375ER return flights are launched by **Canadian Airlines International, Ltd.** from Vancouver to Auckland via Honolulu on October 29. The one-stops replace a service previously provided by Air New Zealand, which the Kiwi line now flies in partnership with **Air Canada, Ltd.**

As the Asian economic and currency crisis deepens during the fall, the company withdraws from markets in Indonesia, Thailand, and Malaysia. A new Auckland to Apia service is introduced during November.

On December 19, much of the international flight schedule is reshuffled. A sixth weekly service is offered from Auckland to London via Los Angeles. All six flights will be operated as same-plane B-747-419 services, thereby avoiding any aircraft changes at Los Angeles. A sixth frequency is added between Los Angeles and Sydney.

On Thursdays, nonstop service is launched from Nadi to Los Angeles, with a return to Nadi on Saturdays. These flights are simultaneously employed to create a one-stop service between Nadi and Frankfurt. B-767-319ERs replace B-747-219Bs on the route from Auckland to Los Angeles via Papeete.

The existing weekly Auckland to Honolulu via Apia service is extended to Los Angeles, as is the Coral Route from Auckland to Papeete via Nadi and Rarotonga.

At the end of the year, the carrier joins **Ansett Australia (Pty.), Ltd.** and **Singapore Airlines, Ltd.** in applying to the Australian Competition and Consumer Commission for permission to proceed with their strategic alliance.

A total of 1.9 million passengers are flown this year, while cargo traffic increases 73.7% to 455.73 FTKs. Annual revenues for the year drop 2.3% to NZ\$1.72 billion and there are NZ\$1.61 billion in costs. The operating profit falls to NZ\$110 million and there is an NZ\$89.4-million net gain.

At the beginning of 1998, Air New Zealand is the 25th largest airline in the world in terms of operating profit.

The fleet now includes 34 aircraft, 73.5% of which are Stage III certified; this number includes 12 B-737s, 10 B-747s, and 12 B-767s.

Noting that traffic is down by over 65%, the company, in January, joins with **Qantas Airways (Pty.), Ltd.** and **Ansett Australia (Pty.), Ltd.** in suspending service to Seoul and other Korean cities. At the same time, the carrier enters into an agreement with **EVA Airways, Ltd.** to undertake six weekly roundtrip code-sharing services between Taipei, Brisbane, and Auckland.

Following the bankruptcy of **Western Pacific Airlines (Westvaco)** early in the year, ANZ agrees to takeover acquisition of 3 B-737-3U3s that the colorful U.S. carrier has had on order. Employment of the 3 new little Boeings will bring about a 46% increase in trans-Tasman services.

Domestic Air Points are offered beginning on February 5.

A three-way code-share with **Ansett Australia (Pty.), Ltd.** and **EVA Airways, Ltd.** to Taipei six times a week begins on April 1. Plans by the three to offer dual-designator frequencies to Hong Kong, Osaka, and China are temporarily shelved because the bilateral between the nations involved do not permit third-party code-shares.

Painted in hybrid colors, a B-747-219A, leased to **Airtours International, Ltd.**, is delivered in April. It is placed into service for the summer flying charters from Belfast, Cardiff, and Manchester to the Canary Islands, the Caribbean, and to Orlando.

Also during the month, the carrier receives the "Best Pacific Airline" award at the Asian Travel Industry Awards banquet. Air New Zealand sells its light aircraft operations and coach touring business to Tourism Holdings, Ltd. while also announcing major America's Cup sponsorships of Team New Zealand, America's Cup 2000, and the America's Cup Village.

The first Westpac "Baby Boeing," a B-737-3U3, arrives in May, painted in a multicolored livery designed to celebrate the upcoming Millennium.

On May 14, the company joins with **Ansett Australia (Pty.), Ltd.** in signing a memorandum of understanding to join the "Star Alliance" in 1999. Certain unspecified "customer benefit" prerequisites must now be fulfilled.

At this point, the carrier sells all 5 of its B-747-219Bs to **Virgin Atlantic Airways, Ltd.** for just US\$130 million. In addition, the carrier agrees to refurbish the aircraft to Virgin's specification before delivering them between March 1999 and January 2000.

In addition to the daily B-747-412 service from Singapore to Auckland operated as a code-share with Air New Zealand, **Singapore Airlines, Ltd.**, on June 1, extends the two-airline, dual-designator agreement to cover its thrice-weekly flights to London and Manchester. Customers arriving in Singapore from Auckland on code-shared flights are able to seamlessly travel on to the U.K. and return the same way.

On June 8, the Australian Competition and Consumer Commission gives its draft approval for the airline's alliance with **Ansett Australia (Pty.), Ltd.** and

Just after takeoff from Auckland on June 16 on a service to Los Angeles via Nadi and Honolulu, Flight 050, a B-747-219B with 16 crew and 356 passengers, suffers an engine fire. The Jumbojet returns to its point of origin and completes a safe emergency landing, having extinguished its fire in the process. No injuries are reported.

The Los Angeles service suffers two more non-starts within the next week. On June 21, an engine fire causes Flight 050 to abort its takeoff. The next day, the B-747-219B actually lifts off from Auckland, only to return safely an hour later when its instruments begin to show abnormal readings.

Later in the month, arrangements are completed with International Lease Finance Corporation for the charter of a B-747-4Q8, beginning in October 1999.

On July 1, Deputy Chairman Selwyn Cushing moves up following the resignation of Chairman Matthews.

While en route from Sydney to Hong Kong on July 19, a B-747-219B's collision avoidance alarm sounds and it is discovered that a B-737 from an unnamed airline, flying from Sydney to Port Vila, has come within 274 m. of the Jumbojet, as it passes at an altitude of 9,755 m., 600 km. E of Brisbane. The New Zealand 747 captain radios the Brisbane tower, which advises the little Boeing to shift position away.

On July 31, the Australian Competition and Consumer Commission grants regulatory approval of the tripartite alliance between ANZ, **Ansett Australia (Pty.), Ltd.**, and **Singapore Airlines, Ltd.**

As part of an upgrade of first class, Air New Zealand begins to offer a fully reclining sleeper-seat service on August 4.

An arrangement for the inauguration of dual-designator service with **Air Canada, Ltd.** within a week is signed at Montreal on October 2. Future plans are made for daily service between Auckland and Toronto via Honolulu and Los Angeles.

Thrice-weekly, dual-designator service is inaugurated with **Air Canada, Ltd.** on October 8 over a shared route from Auckland to Van-

couver via Honolulu. The Canadian major flies the Vancouver to Honolulu leg with its B-767-333ER while Air New Zealand handles the Honolulu to Auckland segment with a B-767-319ER. Each airline sells seats on the other carrier on a code-share basis and both airlines offer customers one-stop check-in, baggage ticketing, and a bypass of U.S. customs and immigration checks.

Domestic code-share services with **Singapore Airlines, Ltd.** commence on October 25 on flights from Christchurch and Auckland to Dunedin, New Plymouth, Queenstown, Rotorua, and Wellington. Customers from both of the major carriers are able to move seamlessly back and forth between seven New Zealand destinations and Singapore.

On December 16, the carrier announces the addition of a sixth weekly nonstop B-747-419 flight from Los Angeles to London (LHR), as well as a sixth weekly B-747-419 service from Los Angeles to Sydney. Additionally, a weekly nonstop service is introduced connecting Los Angeles and Fiji. This schedule enhancement also creates a one-stop service between Fiji and Frankfurt. The new flights are made possible by both consumer demand and the addition of two new B-767-319ERs to the fleet.

On the year, parent Brierly Investments loses NZ\$904 million.

Overall customer bookings inch up 0.5% to 6.39 million, while freight traffic climbs 6.9% to 651 million FTKs. Revenues advance by 5.4% to NZ\$1.66 billion, while costs are up 7.2% to NZ\$1.56 billion. There is a NZ\$98.1-million operating profit and a net gain of NZ\$78.3 million.

Weekly B-747-412 roundtrip service is introduced on March 1, 1999 between Auckland and Portland, Oregon, via Fiji.

When the ATC radio frequency jams at Sydney Airport on March 3 during the testing of a new Precision Radar Monitor, a catastrophe almost results. Arriving on a service from Auckland, a company B-747-419 with 220 passengers, pulls up just 61 m. above the runway after the pilot follows emergency procedures for not receiving final landing clearance. The giant aircraft executes a go-around, by which time the jam has been cleared. Most aboard the Jumbojet are unaware—until later—that a de Havilland Canada DHC-8-102 from **Eastern Australia Airlines (Pty.), Ltd.** had been just below them preparing for departure or that they had nearly landed on top of it.

Airservices Australia, in its report of the incident, refuses to label the go-around as a "near miss," because safety procedures had been appropriately followed by the Jumbojet's pilots. It also states that the larger aircraft had passed safely over the smaller at a height of about 244 m.

On March 22, accompanied by **Ansett Australia (Pty.), Ltd.** Chairman Rod Eddington and Deputy Chairman/CEO Cheong Choong Kong of **Singapore Airlines, Ltd.**, News Corp. Executive Vice President Lachlan Murdoch, on behalf of owner Rupert Murdoch, meets with Australian Prime Minister John Howard and Treasurer Peter Costello in Canberra. Singapore Airlines had unsuccessfully attempted to gain shareholding in **Qantas Airways (Pty.), Ltd.** in 1992 and has remained desirous of gaining a larger foothold in the big Australian domestic market. The conference follows on the heels of a visit to Canberra earlier in the month by Singapore Prime Minister Goh Chok Tong.

As reported in *The Age* the next day, the men lobby the government leaders for permission to have Singapore Airlines buy a stake (unstated, but believed to be the same 25% that **British Airways, Ltd.** holds in Qantas Airways) in Ansett, which is now jointly owned by News Corp. and Air New Zealand. Doreen Siow of Reuters, Ltd. simultaneously reports that the arrangement will see News Corp. turn over its 50% stake in Ansett for more than A\$500 million.

As Prime Minister Howard tells the Australian Broadcasting Corporation, Ansett is already half foreign-owned and any sale to Singapore Airlines would be a simple foreign transaction that should be worked out by the companies involved under Australian law. Approval is expected from the Foreign Investment Review Board, which will next review the offer.

Also at the time of their visit, Murdoch and Eddington ask Howard and opposition leader Kim Beazley to oppose a national "open skies" policy toward foreign airlines.

At a joint news conference on March 25, News Corp. Chairman Murdoch, Chairman Eddington, and Deputy Chairman/CEO Kong formally announce the understanding under which News Corp. is selling its 50% stake in Ansett to Singapore Airlines for A\$500 million. Several hurdles remain to be jumped before the deal is officially completed, including regulatory approvals, due diligence, Air New Zealand, Ltd.'s preemptive right to buy News' stake in place of Singapore Airlines, and the conclusion of a sale and purchase contract. If these conditions are satisfied, the transaction will be finalized in the months after July 1 and Eddington will remain in his post for at least two years.

At a news conference on March 27, Sir Selwyn Cushing, chairman of Air New Zealand and of its major shareholder, Brierley Investments, indicates that his airline may exercise its preemptive right to match the Singapore Airlines offer. To that end, a task force is put together to investigate the possibility of full ownership of Ansett.

Air New Zealand and **Ansett Australia (Pty.), Ltd.** formally become the seventh and eighth members of the "Star Alliance" on March 28; **Singapore Airlines, Ltd.**, which hopes to purchase Ansett as well as a stake in **Thai Airways International, Ltd. (THAI)**, has indicated that it, too, wishes to join the multinational alliance.

Dow Jones reports on April 12 that Air New Zealand is still waiting for official notification by News Corp. of its intention to sell its 50% stake in Ansett before initiating its preemptive right to acquire the stake. ANZ, which has already begun due diligence on the possibility and held preliminary discussions with **Singapore Airlines, Ltd.**, has 30 days from official notification to activate its claim.

After receiving notice, the company team, under Managing Director Jim McCrea assesses its options regarding the sale and, on May 4, the *Sydney Morning Herald* reports that Air New Zealand has given its approval of Singapore Airline's purchase. The two offshore airlines will jointly operate Australia's second largest carrier.

After completing its repainting at Portland-based Pride Aviation, a B-747-4Q8 leased from ILFC completes the first-ever nonstop flight between the Oregon community and Auckland on May 13. In cooperation with the Portland tour operator Sunspots International, the New Zealand major will inaugurate discounted roundtrips between the two cities that will halt at Fiji on the way north or Hawaii en route south.

After 16 months of on-again, off-again negotiations with the New Zealand Air Line Pilots Association, which represents two-thirds of the company's flyers, ANZ, on May 21, puts forward an across-the-board offer of an 8% salary increase.

Brierley Investments, Ltd. announces on May 25 that it has spent approximately NZ\$106 million (US\$57 million) to purchase ANZ shares on-market to lift its stake in the flag carrier from 42% to 47.11% and increase its influence in the wider Australasian airline scene now being played with **Ansett Australia (Pty.), Ltd.** and **Singapore Airlines, Ltd.** Some analysts suggest that the next step may be for ANZ to exercise its preemptive right to acquire the News Corp share in Ansett and when fully in control of the Australian line to invite Singapore Airlines to buy into a merged entity. Others speculate that Brierley is seeking a way to prop up an unprofitable asset for an eventual sale. Neither Ansett nor Singapore Airlines offer comment.

On June 9, News Corp., Ltd. recesses its talks with both ANZ and Singapore Airlines, but indicates that, once the two have come to terms concerning their equity investment in Ansett, discussions may continue. A day later, Singapore Airlines pulls out of the negotiations altogether, indicating that it will now look at investing in the flag carriers of Thailand or South Africa.

The smaller Pilots Society accepts the May 21 company offer, but the Air Line Pilots Association stages a morning strike over the plan on June 16. Some 440 of the carrier's flyers walk off the job, disrupting 15 domestic and 11 international flights.

Wearing a visual salute to New Zealand's "All Blacks" team, a brand new B-747-419 flies the nation's rugby team to Wales on September 24 for the finals of the Rugby World Cup that start on October 1.

In the fall, Brierley Investments announces that it will move its headquarters from Wellington to Singapore. In Parliament, the Opposition Alliance Party consequently calls into question the airline's right to continue as the nation's flag carrier, even though Brierley's 47% stake remains in a company with New Zealand status. Talks with **Singapore International Airlines, Ltd.** concerning acquisition of an ANZ stake collapse late in the year after Dr. Cheong Choong Kong's negotiators demand the right to name the New Zealand line's chairman and managing director and to assert major influence over operational activities. At the same time, the share value of ANZ stock falls and Brierley Investments suffers a 46% reduction in value of its 16.7% holding in B shares, the only kind available for sale to foreigner operators like SIA.

Former Credit Suisse First Boston executive Greg Terry is appointed CEO of Brierley Investments in October. Terry spends the first quarter of his new tenure reviewing his new concern's efforts to raise capital, to attract foreign interest into ANZ, and to take over **Ansett Australia (Pty.), Ltd.** Meanwhile across the Tasman Sea, Ansett employees are able to make an A\$500-million counterbid to buy out the News Corporation's 50% interest in their airline. At the end of the year, Ansett Express, the half-owned domestic freight concern, is sold to the New Zealand Post. Also, by this time, all of the B-747-200s have been withdrawn.

The last of 1,112 B-737-300s constructed, a Dash-319, is delivered to the carrier in December.

With growth in Australia, the U.K., and North America leading the way, customer bookings move up 1.9% to 6.52 million. Cargo, on the other hand, drops 2.1% to 833 million FTKs. Revenues rise 8.7% to \$1.78 billion, while costs of \$1.70 billion are generated. Operating gain climbs to \$79.6 million and the previous year's net loss is turned into a \$6.42-million net gain.

Air New Zealand, Ltd. and Brierley move in on **Ansett Australia (Pty.), Ltd.** on February 18, 2000, taking the remaining News Corporation's 50% stake for A\$680 million. Payment includes A\$580 million (\$443 million) up front plus another installment within a two to four year period equal to 10.5% of ANZ's issued shares (or a cash equivalent). When the transaction is completed, Ansett will have an effective value of A\$1.36 billion. Although **Qantas Airways (Pty.), Ltd.** objects, the Australian government, which has eliminated ownership requirements on foreign ownership of domestic carriers in order to pump up airline competition, permits the sale. The new airline combine boasts A\$6.7 billion in assets, an A\$5.8-billion revenue base, and 24,000 employees.

Also during the first quarter, negotiations resume between Brierley and SIA over the possible acquisition by the latter of significant shareholding in ANZ. In March, Dr. Cheong takes the unusual step of directly approaching New Zealand Prime Minister Helen Clark; in a brief Wellington meeting, the SIA chief asks the prime minister to ease offshore restrictions and allow him to acquire a 40% stake. Clark agrees to consider the idea.

In a move planned for some months, ANZ and **Ansett Australia (Pty.), Ltd.** both join the "Star Alliance" on March 28. On April 1, **Qantas Airways (Pty.), Ltd.** offers to acquire an A\$1-billion stake; the tender is rejected on April 10.

Instead, **Singapore International Airlines, Ltd.** takes a NZ\$141.3 million (\$70 million), 8.3% stake later in April and wins New Zealand government approval to purchase 16.7% more (bringing it to the legal 25% limit) for NZ\$285 million (\$130 million). Brierley Investments/ANZ Chairman Sir Selwyn Cushing insists, however, that this minority sell-off will not be finalized until Air New Zealand completes its fiscal takeover of **Ansett Australia (Pty.), Ltd.**

On April 4, a meeting of ANZ shareholders authorizes the carrier's executives to pay the NZ\$744 million (A\$580 million) in up-front tranche for **Ansett Australia (Pty.), Ltd.** as soon as the paperwork for the acquisition is completed. As earlier agreed, the second installment will come later.

During the spring, ANZ begins to review future group opportunities, including personnel and fleet requirements, as well as the stalled CRJ strategy of Ansett subsidiary **Kendall Airlines, Ltd.** and potential competition from, among others, Sir Richard Branson's newly formed **Virgin Blue, Ltd.**

By May, SIA has finalized its 25% investment, agreeing to give Brierley Investments NZ\$426.3 million for a 25% stake in ANZ. It also secures a regional alliance with ANZ, three seats on the New Zealand line's board of directors, and veto rights over certain management appointments. At the same time, Dr. Cheong promises to abandon previously mentioned possibilities of linkage with the new **Virgin Blue, Ltd.** Although he recognizes that the New Zealand government is not ready to approve, Cheong repeats his interest in acquiring more than a 25% stake in the Kiwi flag carrier.

On May 30, Ansett General Manager Garry Kingshott announces that, after the merger, neither carrier will change its name.

Permission for the Ansett takeover is granted by the Australian Competition and Consumer Commission in late June. The authority requires that Ansett International be ensured of continued service development in and out of Australia and subjects ANZ to conditions limiting its right to rationalize Ansett personnel and routes.

The Ansett purchase is completed on June 23. Three days later, ANZ Managing Director Jim McCrae indicates that the integration of Ansett's business fully into ANZ will take up to 18 months, although most work is expected to be finished within a year.

On July 7, Managing Director McCrae resigns; Chairman Cushing launches a replacement search while simultaneously taking on McCrae's executive duties. A total of 17 ANZ/Ansett executives now report directly to Cushing.

Despite fuel hedging that has provided NZ\$40.70 million in the last year, avgas costs have still risen 44% to NZ\$463.7 million.

Political problems in the Fiji islands this summer have caused the airline to make a case-by-case assessment of each Nadi service. After two **Air Fiji, Ltd.** pilots are taken hostage by rebels on July 27, the company's July 28 Auckland-Nadi-Honolulu service overflies Nadi without landing.

SIA is able to complete its 25% investment in Air New Zealand on August 9 and gains three seats on the ANZ board, one of which is filled by Dr. Cheong.

Chairman Cushing announces a regrouping of the two merger partners on August 10 into a new Air New Zealand Group, Ltd. structure. When the new entity comes into effect on August 14, it features three coordinating core units and special purpose business units. The core units include a strategic leadership, Corporate Centre, a Commercial and Operational Core, and an Australasian Airline System Core, which coordinates the group's three domestic airline families—Ansett Australia, the Ansett regionals in Australia, and the New Zealand domestics. Ansett International and Air New Zealand International are left as separate entities, along with cargo, terminal, and engineering services.

Cushing also announces certain personnel changes. Ansett's interim CEO Wallace is now replaced by ANZ's domestic operations chief Andrew Miller, while ANZ marketing boss Garry Kingshott is named to lead the Ansett International division. Three other Ansett and six other top ANZ executives have also been dismissed.

With assets of NZ\$8.58 billion (A\$6.69 billion), 24,000 staff, 186 aircraft, and 19 million annual passengers, the new group is viewed as one of the top 20 airline groups in the world.

Qantas Airways (Pty.), Ltd. deputy CEO Gary Toomey is named ANZ CEO on September 28, effective in December.

Ansett begins code-sharing on ANZ domestic services in New Zealand on October 2.

AIR NEW ZEALAND LINK. See **AIR NELSON, LTD.;** **EAGLE AIRWAYS, LTD. (2);** **MOUNT COOK AIRLINES, LTD.**

AIR NIAGARA: United States (1982–1985). Originally established on paper by hotelier John Prozeralik in 1977, Air Niagara is physically constituted at Niagara, New York, in the spring of 1982 and receives government authorization in August to commence passenger services. A Boeing 727-25 is leased from **Eastern Air Lines** and, crewed by former **Braniff International Airways** pilots and flight attendants, is employed to launch charter flights. Seven-times-per-day scheduled, \$98 roundtrips commence on December 15 from Niagara Falls to Newark (EWR).

Competition on the Newark route from **PEOPLEExpress** (flying from Buffalo) is severe during the holiday season, forcing Air Niagara to reduce its roundtrip fares to \$58 and cut its frequencies to twice daily.

The load-factor on its scheduled services having fallen to just 10% by January 31, 1983, regularly posted flights are dropped in favor of a return to charter operations while additional capitalization is sought. In addition to a few subservice charters, the Boeing performs cargo flights to St. Petersburg, Florida, and also offers tour group flights to Atlantic City. Scheduled services are briefly resumed in the spring, but all services are suspended in late June. The trijet is repossessed by **Eastern Air Lines**.

In early 1984, the dormant company changes ownership. Plans are made to restart services over a route from Rochester to San Juan via Buffalo and Orlando. In preparation, financially troubled **PRINAIR (Puerto Rico International Airlines)** is purchased in the spring of 1985. The start-up does not occur as the government finds the carrier unfit to operate and takes back its operating certificate.

AIR NIAGARA EXPRESS, INC.: Canada (1978–1998). Air Niagara Express, Ltd. is formed on July 21, 1978 to offer scheduled passenger and cargo regional services from the company's base at Mississauga, Ontario. Within a decade, President/CEO Arie Tall's fleet is made up of 3 Cessna Citation Is, 1 Citation II and Citation III, 1 Convair CV-580, and 1 Swearingen Merlin IV.

While on a ferry flight from Toronto to Hamilton on February 11, 1988, the Merlin IV with two crew suddenly plunges into Lake Ontario; there are no survivors.

The Citation III and 2 Citation Is are removed in 1990 and replaced by a second CV-580. The executive jets are removed in 1991–1992. Airline employment in 1993–1994 stands at 14 and the fleet comprises 1 CV-580 (with 1 taken out of service), the Merlin IV, and 1 Piper PA-31 Navajo Chieftain.

Although the Piper is withdrawn, operations continue apace in 1995–1996. J. Pierre Gosselin is chairman/CEO in 1997, with Peter Dmythe as president. They oversee a workforce of 15 and operate a fleet comprising 2 CV-580s and 2 Merlin IVs. Preparations are made for the introduction of the company's first jetliner, a Fokker F.28-1000 that is purchased from **Horizon Air (Horizon Air Industries)** in the fall.

Overextended, the company shuts down in mid-1998.

AIR NIGER, S.A.: Niger (1966–1986). With assistance from **UTA French Airlines (Union de Transporte Aerienne, S.A.)**, Air Niger, S.A. is formed in 1966 to succeed an earlier air taxi and charter operator, **Aero Niger (Societe Aero-Niger, S.A.)**. Shareholding is divided between the government (50.5%), Sodetraf (22.25%), and **Air Afrique, S.A.** (22.25%).

Scheduled passenger and cargo flights previously provided within the country by **Air France**, as well as air taxi flights offered by Aero Niger, are taken over and provided from Niamey to Agadem, Arlit, Maradi, Tahoua, and Zinder plus the international destinations of Sebha, Libya, and Tamanrasset, Algeria. Douglas DC-4, DC-3, and DC-6 services are maintained throughout the remainder of the decade and during the early 1970s.

Enplanements in 1974 total 8,730. The fleet of 1 each DC-6, DC-4, and DC-3 hauls 3% more souls in 1975, a total of 9,385. Cargo rises 3.5% to 291,000 FTKs and plans are made to expand freight services to Europe.

The workforce totals 56 in 1976. En route from Tahoua on June 10, 1977, a DC-3 with 2 crew and 19 passengers loses its No. 1 engine. The flight crew carries out an emergency belly landing near Founkoueye and no serious injuries are reported. With both engines torn off, the plane is declared a write-off.

In 1978, Director General Abdoul Wahidi's company employs 58 workers. Services are continued in 1979-1980, during which years the government stake becomes almost total (94.5%).

The fleet is revised in 1981 and equipped with 2 Hawker Siddeley HS 748-2As and, in 1982, a new twice-weekly frequency is opened to Lome, Togo.

Operations continue apace in 1983-1984, but, in May 1985, the company ceases operations for financial reasons. Limited operations are resumed in July 1986, but cannot be maintained, causing the company to be liquidated.

AIR NIGERIA, LTD. See **NIGERIA AIRWAYS, LTD.**

AIR NIPPON COMPANY, LTD.: 2-2-8 Higashi-Shinagawa, Shinagawa-ku, Tokyo, 140, Japan; Phone 81 (3) 5462 1911; Fax 81 (3) 5462 1941; <http://www.ananet.or.jp/ank>; Code EL; Year Founded 1987. The domestic subsidiary of **All Nippon Airways Company, Ltd.**, Tokyo-based **Nihon Kinkyori Airways, Ltd.** is renamed Air Nippon Company, Ltd. in April 1987. Equipped with 2 Boeing 737-281As, including 1 leased from All Nippon, 2 de Havilland Canada DHC-6-300 Twin Otters, and 10 Nihon YS-11As, President Kanichi Marui's 350-employee company maintains services between Tokyo, Oshima, Miyake Jima, Sapporo, Hakodate, Monbetsu, Wakkanai, Rishiri, and Okushiri.

Company unions joins those from **All Nippon Airways Company, Ltd.** (ANA) and **Japan Air Lines Company, Ltd.** (JAL) in a 48-hour strike on April 22-23 as labor and management negotiations on annual wage hikes collapse. Officials report that the job actions are the first for JAL in two years and the first for ANA in eight. Nearly half of domestic and international services are cancelled during the two days.

Traffic figures for the first three quarters only are available and show an increase of 16.4% in passenger boardings over the same period a year earlier, to 1,110,965. Operations continue apace in 1988 and enplanements climb to 1,354,531.

The regional enjoys a good 1989 as its customer bookings accelerate 53.4% to 2,337,250 and freight skyrockets by 137% to 2.11 million FTKs.

Passenger boardings leap ahead by 17.9% in 1990 to 2,754,973 and freight rises 25.3% to 2.65 million FTKs. In addition to the 2 Boeings and 2 Twin Otters, the fleet is increased in 1991 from 3 Dash-11As and 5 Dash-11A-500s to 3 Dash-11As and 7 Dash-11A-500s. Passenger boardings are up to 3,227,960 and cargo climbs 11.9% to 1.34 million FTKs.

The carrier obtains 3 A320-211s under charter from All Nippon in 1992. Orders are outstanding for 7 B-737-581s. In the spring, a total of 200 daily flights are offered over a 35-point route network. Service begins to Osaka, Yonago, and Miyazaki.

Customer bookings swell 12.2% to 3,676,493 and cargo flies upward 37.2% to 4.24 million FTKs.

In 1993, President Marui's fleet includes 2 Twin Otters, 12 YS-11As, and the 1 of eventually 9 B-737-281As leased from the parent, along with the 3 A320-211s. Markets served include Tokyo, Oshima, Miyake Jima, Sapporo, Hakodate, Monbetsu, Wakkanai, Rishiri, and Okushiri. Passenger boardings leap ahead by 8% to 3,969,382 while freight is up 30.5% to 5.54 million FTKs.

The workforce at the **All Nippon Airways Company, Ltd.** domestic subsidiary stands at 1,200 in 1994 and the fleet totals 37 aircraft. Among these are 8 additional B-737-281As and 2 A320-211s.

During the first week of May, Air Nippon establishes its own subsidiary, **Air Hokkaido, Ltd.** (AH), to help cut labor costs and provide greater flexibility in flight frequencies to three remote islands served from Hokkaido. AH revenue flights commence during the summer with

the parent's 2 Twin Otters, flown under lease. Customer bookings ascend 9.8% to 4,356,647 while cargo jumps 20.5% to 6.67 million FTKs.

There is no change in personnel or fleet in 1995. The first of 6 B-737-54Ks is received on April 12.

Traffic figures are only reported through September. These show 3,704,409 passengers flown and 6.76 million FTKs are operated.

Employment at Japan's largest regional airline stands at 1,296 in 1996 and, with the retirement of **Japan Air System, Ltd.**'s YS-11A fleet in March, Air Nippon is now the major Japanese operator of this local product. YS-11As continue to fly from Tokyo (HAD) to Miyakejima, Oshima, and Wakkanai and from Sapporo to Wakkanai, Okhotsk-Monbetsu, Nemuro-Nakashibetsu, Kushiro, and Hakodate.

This year the company's 37 aircraft transport a total of 5,035,880 passengers, a 3% increase. Additionally, cargo increases 9.3% to 10.37 million FTKs.

There is no change in the workforce during 1997.

A total of 155 domestic flights are cancelled on June 27 by **Japan Air System, Ltd.**, **Japan Air Lines Company, Ltd.** (2), **All Nippon Airways Company, Ltd.**, Air Nippon, and **Japan Transocean Airways Company, Ltd.** as the result of a tropical storm and tornado.

Passenger boardings climb 5.8% to 5,325,464 while FTKs jump 18.8% to 12.3 million.

In a cost-cutting move, the carrier announces in February 1998 that it will eliminate 13 money-losing services before the end of the year.

Customer bookings jump 9.2% to 5.81 million, while 756.41 million FTKs are also operated.

It is announced on February 25, 1999, that **All Nippon Airways Company, Ltd.** (ANA), to cut operational costs, will transfer some 20 unprofitable domestic routes to its affiliate Air Nippon over the next three years.

The last of 389 B-737-500s to be built, a Dash-54K, is delivered to the carrier on July 21.

The first nine of the ANA-transferred routes are turned over by December 31 and include the service from Kansai to Sendai. Partially as a result, the year's passenger boardings jump 5% to 6.1 million and 16.14 million FTKs are operated as well.

The workforce stands at 1,300 as 2000 begins, a 0.3% boost. Japanese fares are fully liberalized under a February revision of the basic aviation law.

Service between Sendai and Asahikawa is suspended in April as the company takes over the Osaka (KIX) to Miyazaki route transferred from **All Nippon Airways Company, Ltd.** In May, All Nippon also turns over the routes from Osaka (KIX) to Shonai and Shonai to Sapporo.

On July 14, the company begins to fly two more routes from Osaka (KIX) to Memambetsu and to Nagasaki that have been turned over by its parent.

Wearing "Super Dolphin" markings, a newly delivered B-747-44K begins flying from Haneda to Hachijo Island on August 7.

AIR NIUGINI (PTY.), LTD.: P.O. Box 7186, Boroko, Port Moresby, Papua New Guinea; Phone 675 259 000; Fax 675 327 3482; <http://www.airniugini.com.pg>; Code PX; Year Founded 1973. In anticipation of the upcoming 1975 independence of this region of New Guinea, a new national airline is in early fall 1973 as successor to **Ansett Airlines of Papua New Guinea (Pty.), Ltd.** The results of a newspaper competition held earlier to choose the new company's name are disallowed when the government of Papua New Guinea determines that Kumul (the pidgin English name for the Raggiana Bird of Paradise) Air Services is unsuitable. Instead, the moniker Air Niugini (the pidgin English spelling of New Guinea) is chosen instead.

The major shareholders in the new enterprise are the government of Papua New Guinea (60%), **Qantas Airways (Pty.), Ltd.** (12%), **Trans-Australian Airlines (Pty.), Ltd.** (TAA) (12%), and **Ansett Airlines of Australia (Pty.), Ltd.** (16%), with the latter two operators providing aircraft.

Twelve Douglas DC-3s (at \$A15,000 each) and 8 Fokker F.27-200s (at \$A1 million each) are purchased from TAA while Ansett chooses to lease 4 F.27-200s to the new entrant. Formerly TAA station chief for Papua New Guinea, Ralph Conley, is appointed general manager.

On November 1, the territory's Chief Minister Michael Somare, who will become Papua New Guinea's first prime minister and who is remembered as the father of his country, comes to Port Moresby's Jackson International Airport to officiate at the opening of Air Niugini domestic services. After Somare cuts the ribbon attached to an F.27-200, Flight 100 departs for Lae, New Britain, and Kieta, Bougainville.

Trans-Australian and Ansett continue international services under contract. A total of 17,200 passengers are carried in two months.

The employee population in 1974 is 1,600 and the fleet now includes 22 aircraft: 10 Fokker F.27-200s, 5 Douglas DC-3s, and 7 DC-3Fs. Possible introduction of NAMC YS-11As as F.27 replacements is considered, as one of the type, a Dash-213, is operated under lease from **All Nippon Airways Company, Ltd. (ANA)** beginning on November 30. At year's end, TAA and Ansett turn over their international routes, effective upon the country's independence day.

Passenger bookings for the year are 343,508, a 5% jump, while 4.45 million FTK are operated, a .03% boost.

The All Nippon YS-11A-213 is returned on February 1, 1975. Company F.27-200s on July 1, take over the Port Moresby to Honiara (Solomon Islands) sector previously operated by a British Aircraft Corporation BAC 1-11-479 of **Air Pacific, Ltd. (2)**. This is the company's first international route.

On September 16, the company becomes the official airline of newly independent Papua New Guinea. Simultaneously, the payroll is increased by 100 persons as the new national carrier becomes an international operator by taking over the services formerly operated by TAA and Ansett between Port Moresby and Brisbane and by **Qantas Airways (Pty.), Ltd.** to Singapore and Manila. The latter service is provided by a B-707-138B wet-leased from Qantas.

Passenger boardings rise 14% to 344,516 and cargo does even better, up 28% to 2.1 million FTKs.

In February 1976, the government buys out the Qantas and TAA shares, acquiring 84% majority control. The carrier's new livery appears for the first time in February on a Boeing 720B, leased from **Tempair** to replace the Qantas Stratoliner, and employed on the Manila route beginning in March. Also in March, Byron Gray becomes general manager. Another B-707-338C is requested.

The new Stratoliner, a Dash-338C, also on charter from **Qantas Airways (Pty.), Ltd.**, is delivered in February 1977 and replaces the B-720B, which is returned as the Tempair lease ends. During the year, 3 Fokker F.28-1000s are ordered.

When the 12 DC-3s begin retirement on July 31, their routes are taken over by the F.27s. Originally intended for **Ansett Airlines of Australia (Pty.), Ltd.** and **Air Nauru** but not delivered, two F.28-1000s are available and thus delivered on October 22; both enter service in November.

The bird of paradise tail logo on the first F.28-1000 brings on a dispute with **Air Lanka (Pty.), Ltd.**, which complains that the symbol is too close in appearance to that of its own. A month later, Air Niugini paints its Fokker jets in another experimental livery, but it is so displeasing that it is removed within 24 hours.

Enplanements for the year total 415,688.

One more F.27-200 and an F.27-600 arrive in 1978 as the last DC-3 is turned into a display in front of the newly opened Air Niugini House headquarters at Jackson International Airport. Once the personal aircraft of British Field Marshal Sir Bernard Montgomery, the Douglas will later be dedicated to the memory of the carrier's Capt. Larry Blackman.

With the addition of the first of two F.28-1000s from **Transair, Ltd.** of Canada, the domestic jet network can now be stretched to Kavieng, Kieta, Lae, Madang, Manus Island, Rabaul, and Wewak.

Although freight traffic is off 3.2%, passenger boardings at Chairman Paul Pora's 1,626-employee carrier jump 13.8% to 524,000.

Airline employment is increased by 5.9% in 1979 to 1,785. General Manager Grey declines to renew his contract and is succeeded by his deputy, Gerry Fallscheer.

The last **Transair, Ltd.** F.28-1000 and another B-707-338C are placed in service, the latter in July. The previous B-707-338C is returned to its owner following the completion of a service from Port Moresby to Sydney. Flights are initiated to Honolulu and to Singapore via Jakarta.

Cargo traffic grows by 11.2% and passenger boardings swell 9.1% to 571,000.

Two F.27-200s are retired in 1980 and the first New Guinean, Joseph Tauvasa, the former national director of civil aviation, is appointed general manager.

Passenger boardings dip 2.3% to 559,000 as the result of world economic conditions; however, freight is up 4.5% to 9.5 million FTKs.

In early 1981, the government purchases the shares of **Ansett Airlines of Australia (Pty.), Ltd.** (16%) to make the airline entirely state-owned. During the first part of the year, the workforce is increased by 1.7% to 1,815 and the first of three de Havilland Canada DHC-7s arrives on November 4.

Late in the year, the McKinsey consultancy firm, appointed earlier by the National Executive Council of Air Niugini to help it find ways of redressing its fiscal distress, delivers its report. It is recommended that a more experienced management be acquired under contract with a foreign airline and that the international network be operated with wet-leased aircraft.

As the fiscal situation worsens, the effects are felt as passenger boardings fall another 1.4% to 493,000; cargo is up, however, to 9.5 million FTKs, a gain of 8.9%.

The workforce is reduced 8.2% in 1982 to 1,700. All 3 DHC-7s are placed in service along with 1 new F.27-600, replacing 5 F.27-200s. The new Canadian turboprops begin to open the interior of the nation to regularly scheduled services; towns such as Kundiawa, Mendi, and Tari, previously visited only by air taxi operators, now see the national company on a constant basis.

In cooperation with **Air New Zealand, Ltd.** and **Cathay Pacific Airways (Pty.), Ltd.**, flights commence from Auckland via Port Moresby to Hong Kong on August 1. The partnership requires that each company take turns every three months flying the service.

Led by former operations director and B-747 pilot Leen van Ryswyk, a four-member management team arrives in November under contract from **KLM (Royal Dutch Airlines, N.V.)** to help restore some measure of profitability by automating the airline and reviewing its flight equipment. In the case of the latter, it is determined that the F.27s should be retired, along with the leased Stratoliners.

Passenger boardings inch upward 0.8% to 496,000 and cargo is up 7% to 10.13 million FTKs.

Airline employment remains level in 1983. The 3 remaining F.27-200s and the new F.27-600 are replaced by 4 F.27-400s. An order is placed with TAA for the three-year lease of an Airbus Industrie A300B4. Van Ryswyk and his colleagues turn on a new computerized reservations system in May.

Service to Honolulu is replaced with a route to Guam and an unprofitable route to Kagoshima, begun a few years earlier, is dropped.

Enplanements dip 2% to 528,000, while cargo plunges 19% to 6.39 million FTKs. On revenues of \$78.7 million, expenses are \$87 million, leaving an \$8.3-million operating loss.

General Manager Tauvasa is succeeded in 1984 by Masket Iangalio, the former managing director of The Development Bank. Company aircraft are proudly allowed to provide complementary lift for Pope John Paul II's visit to Mount Hagen, in the Papua New Guinea Highlands, and to Honiara, Solomon Islands.

Three F.27-400s are replaced by the arrival of the Airbus A300B4 on November 27; nicknamed "Big Bird," its livery features a stylized bird known as the Raggiana Bird of Paradise. (The beak of the bird's full head begins at the forward end of the fuselage windowline.)

In December, the company begins joint flights with **Philippine Airlines (PAL)** between Manila and Port Moresby employing the Papuan B-707-338C. Enplanements for the year fall again, down to 496,000.

In March **1985**, the chartered A300B4 enters service. The B-707-338C acquired in 1979 is sold to TRATCO on April 1.

General Manager Iangalio institutes a home-ownership plan for company employees as a way of reducing the subsidized housing historically provided to workers. Government ministers, continuing to complain about poor service as they had since the days of the McKinsey Report, warn Iangalio that they are considering domestic deregulation.

The remaining Stratoliners are retired at year's end. Bookings for the year rebound, climbing to 528,000, but freight is off by 4.52%.

In **1986**, scheduled international destinations include Brisbane, Cairns, Sydney, Jayapura, Manila, Auckland, Singapore, and Honiara; the company also flies to 21 domestic stops. At the end of the year, General Manager Iangalio resigns to enter politics.

Former **Deutsche Lufthansa, A.G.** official Peter Dieter Seefeld is appointed General Manager in **1987**. In August, the carrier begins to code-share with **Singapore Airlines** between Port Moresby and Singapore, employing the Papuan Airbus.

The airline's route network now includes 21 domestic points and 9 international destinations, including Brisbane, Cairns, Hong Kong, Honiara, Jayapura, Manila, Port Vila, Singapore, and Sydney.

Enplanements (through September) advance 8.5% to 418,575.

The fleet in **1988** includes 1 leased A300B4, 7 Fokker F.28-1000s, and 2 DHC-7-102s. An A310-224, financed by a group of European banks led by Banque Paribas, is ordered from its Toulouse-based manufacturer.

The 1,607-employee state airline, which celebrates its fifteenth birthday throughout the year, reports only first-half traffic figures. These show a total of 357,298 enplanements, a 9.6% increase over the same period a year earlier. Freight is up by 43.1% to 6.83 million FTKs.

The A310-224, boasting the carrier's new contemporary and modernized "Bird" livery, arrives under lease in January **1989** and, in co-operation with **Cathay Pacific Airways (Pty.), Ltd.**, is employed in April to launch joint, weekly, nonstop service between Port Moresby and Hong Kong.

The A300B4 "Big Bird" is returned to TAA on May 3.

Through the first 11 months, Papua New Guinea's national carrier flies a total of 628,410 passengers and 12.48 million FTKs of freight. Revenues for the entire year total \$110 million and allow an operating profit of \$3.5 million.

Airline employment stands at 1,894 in **1990**. Again, data is only made available for the first 11 months and it pictures a carrier in stagnation. The tripartite agreement with **Cathay Pacific Airways (Pty.), Ltd.** and **Air New Zealand, Ltd.** is cancelled, necessitating the acquisition of additional flight equipment.

A B-737-200, leased from the U.K. for evaluation the previous year, has been found unacceptable, largely because only three Papua New Guinea airfields (Port Moresby, Manus, and Nadzab) can handle it. It is returned.

Passenger boardings are up just 0.4% to 630,868, with freight ahead only 0.1% to 12.52 million FTKs.

Operations continue apace in **1991** as recovery is begun by the addition of two owned A310-324s, one of which is leased to the Bulgarian carrier **Jes-Air** in June for two years.

In **1992**, General Manager Seefeld's fleet includes 2 A310-324s, 2 DHC-7-102s, 7 F.28-1000s, and 1 F.28-4000. Statistics are released through September and demonstrate an 11% increase in customer bookings to 569,707 and an 8.4% boost in freight to 11.76 million FTKs.

When **Jes-Air** fails in November, it leaves the Papua New Guinea carrier holding the bag for months of unpaid A310-324 lease bills, as well as obligations for fuel, parking, and landing at London, where the plane is impounded.

Airline employment stands at 1,783 in **1993** and the fleet includes 2 A310-324s, 1 F.28-4000, 7 F.28-1000s, and 2 Dash 7s.

In addition to 20 domestic destinations, the company flies from Port Moresby to markets at Cairns, Brisbane, Honiara, Hong Kong, Jayapura, Singapore, and Manila.

During the first half, efforts are finally completed to transfer the **Jes-Air** A310-324 to Singapore, where it is refurbished and placed into storage.

In July, an agreement is entered into with **Philippine Airlines (PAL)** that provides for joint services on a route from Dominica to Manila employing an Air Niugini aircraft and crew. The carrier publishes figures through the first six months of the year showing that its passenger boardings are up 16.5% to 419,314 and freight traffic is off 8.2% to 7.1 million FTKs.

When **Talair (Tourist Airlines of Niugini [Pty.], Ltd.)** ceases operation, Air Niugini is called upon by the government to assist several third-level operators to maintain the level of domestic service previously offered by the failed second-level operator.

The workforce is reduced by three employees in **1994**.

A massive volcanic explosion in September practically destroys Rabaul and closes its airport. Few people are hurt, however, due to an accurate prediction from scientists. A small satellite airfield is opened at Tokua and is served by the DHC-7s until it can be upgraded to F.28 standard.

Traffic figures are reported through September and show customer bookings up 11% to 718,817 while cargo recovers by an equal 11%, climbing to 12.03 million FTKs. Much of the boost is due to the business taken over following the demise of **Talair**.

In October, the carrier enters into a code-sharing agreement with **Solair (Solomon Islands Airways, Ltd.)**, replacing the latter's twice-weekly roundtrip service from Honiara to Port Moresby. A Fokker F27-100 is leased from **Air Cruising Australia (Pty.), Ltd.** in December.

Just after landing at Madang on a May 31, **1995** service from Port Moresby and Nadzab, Flight 128, an F.28-1000 with 4 crew and 35 passengers, hydroplanes off the wet runway into a ditch. Although the aircraft is badly damaged, there are no fatalities.

Operations continue apace in **1996** and destinations visited include Alotau, Brisbane, Buka, Cairns, Daru, Goroka, Hong Kong, Honiara, Hoskins, Jayapura, Kavieng, Kundiawa, Lae, Lihir, Madang, Manila, Manus, Mendi, Moro, Mount Hagen, Popondetta, Rabaul, Singapore, Sydney, Tabubil, Tari, Vanimo, Wapenamanda, and Wewak.

In April, General Manager Seefeld is replaced by the company's secretary, Moses Malinda. Orders are placed for a pair of upgraded Canadian-made turboprops.

Two de Havilland DHC-8-200s are acquired in late spring **1997** and begin to replace the DHC-7s on the company's rural routes. After a 16-year absence, an A310-324, with 62 passengers, resumes company service to Osaka on July 19.

Traffic and financial figures for the year are again not reported, but it is known that the fiscal situation is not good, particularly after the Asian currency problem gathers steam at mid-year. General Manager Malinda is succeeded by Chris Mek.

In an effort to strengthen its increasingly weak financial position, the carrier, in May **1998**, closes four overseas sales markets, lays off one-third of its staff, halts flights to Sydney and Hong Kong from Port Moresby, stops flying to Osaka, and puts one of its A310-324s up for sale.

By summer, Air Niugini, despite additional infusions of credit from the Papua New Guinea Banking Corporation made at the behest of Prime Minister Bill Skate, is technically insolvent and is \$100 million in debt.

In September, under the direction of Civil Aviation Minister Kala Swokin, the government begins to liberalize air service as a way of addressing national lift requirements. This allows fifth freedom rights to foreign carriers in order that they may take Papua New Guinea passengers on international routes abandoned by Air Niugini. The first such service is provided by the Australian regional **Flight West Airlines (Pty.), Ltd.** on October 12.

The company celebrates its twenty-fifth anniversary on November 1, on which date Andrew Ogil becomes general manager/CEO. At the same time, the government injects K 50 million in cash to boost the carrier's capital base to just over K 60 million (\$22 million). The infusion is designed to allow Air Niugini to lower its debt to the Papua New Guinea Banking Corporation.

When Papua New Guinea air traffic controllers go on strike on November 24, a total of 29 Air Niugini flights, both international and domestic, are disrupted. The job action, according to a report by the Australian Broadcasting Corporation, costs the cash-strapped airline over A\$500,000.

A total of 128,000 passengers are flown during the 12 months, while 756.41 million FTKs are also operated.

Flights continue in **1999**, during which year airline employment stands at 1,200. Twice-weekly roundtrips commence on March 29 from Cairns to Mt. Hagen and Lae.

A total of 38 engineers are fired at the end of July over an inflation-linked pay increase. When another 58 launch a sympathy strike on August 4, they, too, are sacked. Contract workers are brought in to replace them.

In the wake of the government action in the engineer job action, the Australian Civil Aviation Safety Authority dispatches two airworthiness inspectors to Papua New Guinea in early August to review the situation. The CASA warns that it may bar company flights into Australia, but that drastic action proves not to be necessary.

Continuing to suffer financially in **2000**, the company, on February 17, is one of several state enterprises pinpointed for sale by the government. In announcing the privatization plan, which is designed to raise \$640 million to cover the nation's budget deficit, Prime Minister Sir Mekere Morauta notes that Air Niugini will go on the block during the first quarter of 2001, with all details concerning it to be worked out by year's end.

An AVRO RJ70 leased from **National Jet Systems (Pty.), Ltd.** is returned on May 22. Due to an armed conflict between rebels from the island of Malaita and Isatabu soldiers on the island of Guadalcanal, the airport at Honiara in the Solomon Islands is closed for two weeks in early June; Air Niugini is able to resume service in on June 18.

With ethnic fighting in the Solomons resumed, Air Niugini's insurance carrier again forces it to stop flying into Honiara on July 4.

AIR NOOTKA, LTD.: Canada (1982–1994). A.B. Ellis forms Air Nootka, Ltd. at Gold River, British Columbia, in **1982** to offer passenger, scheduled cargo, and charter services to such destinations as Tausis, Regallos, and Kyoquot. M. R. Mayor becomes general manager and revenue flights commence with 1 Cessna 180 and 1 de Havilland Canada DHC-2 Beaver.

Operations by the 5-employee small regional continue apace for the next decade without much change; however, by **1993**, the fleet also includes 1 Dornier 228-81. Operations cease in **1994**.

AIR NORDIC, A.B.: Sweden (1988–1992). Air Nordic is formed at Vasteras Airport in **1988** to provide scheduled third-level regional service. General Manager Haken Wahlstrom's initial fleet comprises 3 British Aerospace Jetstream 31s. Revenue flights are inaugurated linking the company base with Gothenberg, Sundsvall, and Vaasa. Enplanements for the year total 16,380.

Passenger boardings jump 61% in **1989** to 42,000. A fourth Jetstream 31 is acquired and the route network is increased in **1990** to include stops at Helsinki, Orebro, and Oslo.

Early in **1991**, 3 Jetstream 31s are withdrawn and replaced by 3 Fokker F.27-100s. Rapid expansion and reequipment in a time of world airline recession forces the carrier into bankruptcy in December. Unsuccessful efforts are made during **1992** to reorganize and reconstruct Air Nordic.

AIR NORDIC SWEDEN AVIATION, A.B.: Sweden (1993–1996). Unable to revive **Air Nordic, A.B.** before its failure, A. B. Sewtrail and Jan Fahlen form this new regional at Vasteras Airport on April 5, **1993**.

Assets of the former carrier are acquired, including the 3 Fokker Friendships, which are now joined by 2 more. Eric Lunden is named president/managing director. Fifty workers are hired and services are undertaken from Borlange to Goteborg, Helsinki, Morlange, and Oslo.

Two more F.27-100s are purchased in **1994** and flights begin to Visby. The company is unable to maintain its viability and shuts its doors in July **1996**.

AIR NORMANDIE, S.A.: Aeroport du Javre, Le Havre, F-76620, France; Phone 33 3546 0209; Fax 33 3544 8747; http://www.ibsfr.com/airno/airnor1.htm; Code ID; Year Founded 1991. Air Normandie is established at Le Havre in **1991**. Revenue flights commence to Paris with a single Fairchild Merlin IV. The fleet is upgraded by the addition of 4 Beech King Air 100s in early **1992**.

Operations in the north of France continue in **1993–1997**, during which years the fleet of Managing Director Jean Borie is altered to include 1 each Beech King Air 90 and British Aerospace BAe Jetstream 32 and 2 each King Air 100s, Super King Air 200s, and Cessna 500 Citations. Bases are also established at Montpellier, Nevers, and Tours, from which charter flights are undertaken. In October of the latter year, a code-sharing agreement is signed with **Air Liberte, S.A.**

Flights continue in **1998–2000**. During these years, the Beechcraft equipment is replaced and the fleet is standardized on 4 BAe Jetstream 32EPs. Scheduled destinations visited include Bordeaux, Clermont Ferrand, Dijon, La Rochelle, Metz, Montluçon, Moulicent, Nantes, Paris (ORY), Poitiers, and Toulouse.

AIR NORTH: United States (1967–1984). Founded by E. Andrew Deeds II at Burlington, Vermont, in **1967** as a subsidiary of ANA, Ltd.—the exclusive service center for Pratt & Whitney in the northeast—this carrier quickly begins scheduled Beech 18 service in New England and New York for hubs at Albany, Burlington, and Binghamton. Among the cities visited are Massena and Syracuse.

Later in the decade, the commuter becomes a feeder for **Mohawk Airlines (1)**. The company joins the Allegheny Commuter network in September **1972** and John A. Sullivan Jr. is named president. Employing de Havilland Canada DHC-6 Twin Otters, flights are undertaken to Watertown, Ogdensburg, Massena, Plattsburg, and Saranac Lake.

Operations continue apace in **1973** and by **1974**, enplanements total 95,040. Airline employment in **1975** stands at 104 and the fleet includes 5 de Havilland Canada DHC-6 Twin Otters. Replacement service from Albany to Glens Falls is opened. Passenger boardings accelerate 1% to 96,000.

Employment is level in **1976** as operations continue to be undertaken from Burlington to Plattsburg, Islip, Massena, Ogdensburg, Watertown, Syracuse, Binghamton, White Plains, and Poughkeepsie. From Albany, flights are scheduled to Islip, Syracuse, and Plattsburg.

The carrier exceeds the 100,000 mark in annual passenger boardings (114,265) with a 20% increase. Freight is also up 21%.

By **1977**, enplanements reach 115,445 and increase by another 9% in **1978** to 117,717. The workforce is increased by 34.5% in **1979** to 195. In June, Air North quits its Allegheny Commuter affiliation to fly as an independent. Having applied for the first federal subsidy under the Essential Air Service (EAS) program, the regional receives \$750,000 to maintain its previous routes. The fleet now comprises 4 Shorts 330s and 4 de Havilland Canada DHC-6 Twin Otters.

Passenger boardings rise 3.2% to 122,286; however, cargo is down by 24% to 613,000 FTKs.

Service is provided in **1980** to 15 markets, including Boston and Washington, D.C. During the year, the company becomes the world's first operator of the Grumman Gulfstream G1-C turboprop. Receiving CAB Part 121 certification upon the aircraft's delivery, Air North also maintains its EAS contract to service cities in northern New York. These destinations have been abandoned by trunk lines moving to more advantageous positions as a result of deregulation. The first Gulfstream enters service on the Rochester to Washington, D.C. route.

Bookings for the year advance 11.4% to 141,759, as freight falls 35.7% to 394,093 FTKs.

Due to the PATCO air traffic controllers' strike, services to Rochester are suspended on October 25, 1981. Still, passenger boardings for the year climb 3.4% to 148,559.

The workforce is cut 11.1% in 1982 to 200. Following the transfer of President Sullivan to **Clinton Aero Services**, Andrew Deeds, founder and board chairman, becomes president. The fleet of 1 Gulfstream G1-C, 4 Shorts 330s, and 2 DHC-6 Twin Otters is enhanced in April by the delivery of 3 Fokker F.27s. In an effort to increase traffic and cut losses, the route network is redrawn to eliminate stops in upper New York state.

Enplanements for the recessionary year fall 7.8% to 136,483.

The Twin Otters are replaced in 1983 and despite the EAS support, the company cannot generate a profit, due largely to higher fuel prices and the expensive Shorts. A request for additional EAS funding is turned down by Washington. The CAB refuses to allow the carrier to quit the EAS routes, which must be maintained.

Still, customer bookings rebound to 155,375, a 13.8% boost; additionally, 168,000 pounds of cargo are hauled.

During the spring of 1984, thrice-daily nonstop flights are added from Boston to Nantucket Island and weekday service from Boston to Burlington is expanded to six flights per day. Operations continue apace until summer when the carrier is purchased by the Pennsylvania-based Brockway Corporation.

The new owners amalgamate their new company with Clinton Aero Services, taken over in the spring; John Sullivan becomes president of Brockway's new airline division, while former Clinton President Anthony von Elbe becomes vice president/general manager. On September 1, **Brockway Air** begins new services over the previous routes of the merger partners, now referred to (internally) as Brockway (Vermont) and Brockway (New York).

AIR NORTH, LTD. (AIR NORTH CHARTER & TRAINING, LTD.): P.O. Box 4998, Whitehorse, Yukon Territory Y1A 4S2, Canada; Phone (403) 668-2228; Fax (403) 668-6224; <http://www.airnorth.yk.net>; Code 4N; Year Founded 1977. Established at Whitehorse, Yukon, in January 1977, Air North Charter & Training, Ltd. begins regional air tour, sight-seeing, cargo charter, and contract service flights with a fleet made up of 2 de Havilland DHC-6 Twin Otters, 2 DHC-2 Beavers, 1 Britten-Norman BN-2 Islander, 1 Piper PA-34 Seneca, 1 Cessna 206, 1 Cessna 185, and 2 Cessna 172s.

Two Douglas DC-3s are acquired in 1979; christened *Yukon Sour-dough* and *Yukon Musher*, they are the first to introduce the company's kelly green and yellow livery. Airline employment in 1985 stands at 25.

During the next eight years, the fleet is revised again, as 2 more DC-3s (*Lady Lou* and *Klondike Explorer*) and a DC-4, *Yukon Trader*, arrive, replacing all of the smaller aircraft except the Navajo. In addition to charter services, scheduled flights link the company's base with Dawson City and Old Crow in the Yukon, as well as Juneau, Fairbanks, and Anchorage, Alaska.

In 1993, President Joseph T. Sparling's carrier still employs 25 workers; however, the fleet has been changed to include 4 DC-3s, 1 DC-4, 1 Piper PA-31-310 Navajo, and 1 Beech B-80 Queen Air. The fleet is increased in 1994-1995 by the addition of a fifth DC-3.

On August 14, 1996, just after takeoff from the Snip Mines airstrip for a return flight to Bronson Creek, the DC-4 *Yukon Trader* with three crew aboard suffers a fire in its No. 2 engine. While attempting to return to its point of origin, the engine falls away, hitting the No. 1 propeller. An emergency landing is made on the Iskut River and, although all aboard survive the impact, the captain is unable to swim to shore and is lost.

Services continue apace in 1997-2000. Destinations visited include Dawson City, Fairbanks, Inuvik, Juneau, Old Crow, and Whitehorse.

AIR NORTH (ALASKA). See **AIR NORTH (YUKON AIR SERVICES)**

AIR NORTH (YUKON AIR SERVICES): United States (1967-1984). Based at Fairbanks, Yukon Air Services, employing the marketing name Air North (Yukon Services), but also known as Fairbanks Air Service and Air North (Alaska) is formed at Whitehorse in 1967 by Joseph Sparling and Tom Wood to undertake Cessna 206 passenger and cargo flights throughout Alaska and into northern Canada. The majority of this service is charter; however, following the company's name change in early 1976, a scheduled route is operated to Fort Yukon.

Operations continue apace during 1977-1978 and new destinations are added: Arctic Village, Birch Creek, Eagle, Galena, and other central Alaskan bush communities. The fleet grows to include Beech 18s, Britten-Norman BN-2 Islanders and BN-2A Trislanders, Piper PA-31-310 Navajos, and a Fairchild Hiller FH-227C. As the result of regulatory difficulties, the FAA cancels the company's certificate in 1979.

After spending 1980 putting its administrative house back in order and securing new financing, the Fairbanks-based regional is able to resume operations in March 1981, with its fleet upgraded to include 2 Cessna 206s, 3 Cessna 207s, 1 Piper PA-31-310 Navajo, 2 Cessna 402s, 3 Britten-Norman BN-2 Islanders, 1 BN-2A Trislander, 3 Douglas DC-3s, and 1 Curtiss C-46. The fleet is increased in 1982 by the addition of several de Havilland Canada DHC-2 Beavers and DHC-3 Otters. During the year, a total of 20,432 passengers and 128,417 pounds of freight are flown.

The fleet by 1983 has come to comprise 2 Douglas DC-3s, 1 Britten-Norman BN-2 Islander, 1 Curtiss C-46, 2 Cessna 206s, 3 Cessna 207s, 1 Piper PA-31-310 Navajo, and 2 Cessna 402s. In addition to the points previously served in its scheduled operation, the carrier now starts routes to such Alaskan towns and villages as Wiseman, Umist, Stevens Village, Tanana, Nenana, Rampart, Eagle, Chanadalar, Circle, Central, Birch Creek, Nettles, Barter Island, and Allskaket. The Yukon cities of Dawson and Whitehorse are also visited. Bookings for the year total 29,791.

Air North (Yukon Air Services) is purchased by **Liberty Air** in August 1984, but goes bankrupt within days of the takeover. The last scheduled service is completed on September 4, after which the airline shuts its doors.

AIR NORTH AMERICA. See **AIR U.S.**

AIR NORTH INTERNATIONAL (PTY.), LTD.: Australia (1978-1994). Employing Hughes 500Ds and Bell 206B JetRangers, Leach Aero Services (Pty.), Ltd., named after founder Roger Leach, is established at Darwin in 1971. The Leach concern, renamed Central Australian Helicopters (Pty), Ltd., introduces the first helicopters in the region used for cattle mustering.

Air North International (Pty.), Ltd. is set up at Darwin in 1978 as a subsidiary of the Henry Walker Group of Companies to provide fixed-wing charter and scheduled services throughout Australia's "Top End" and into Indonesia. Employing 2 Douglas DC-3s and a variety of single-engine lightplanes, regularly scheduled commuter services are inaugurated by Managing Director John Hardy on July 4 to destinations in the Tiwi Islands area and Arnhem Island.

During the early 1980s, scheduled service is also launched from Darwin to Bathurst Island, Elcho Island, Garden Point, Lake Evella, Ramininging, and Snake Bay. Alice Springs, Katherine, Yulara and other points are served as ANI establishes itself as a scheduled regional operator.

A Skyport subsidiary is established by Roger Leach in 1985 to operate fixed-wing operations and the group's expanding tourist activities. Ayers Rock Air Services (Pty.), Ltd. is taken over and a fleet is available comprising 1 Beech Super King Air 200, 2 Cessna 404s, 2 Cessna 402s, and 1 Britten-Norman BN-2 Islander.

In 1986-1987, the Skyport group initiates scenic safaris to Ayers Rock via Palm Valley, Kings Canyon, and Lake Amadeus. Under an agreement signed with the Mutujulu Council, a Bell 206B JetRanger is based at Ayers Rock to start the Central Australian and Barley Tableland Outback mail runs.

The bush operator Chartair is acquired in **1988–1989**, allowing Skyport to start flying into Alice Springs and Yulara. The company is now the largest general aviation operator in Central Australia as the fleet is increased through the addition of 2 Cessna 310s, 4 C-402s, and 1 C-421.

The other Darwin operator is renamed Air North Regional (Pty.), Ltd. in **1990** and a DC-3 is replaced with an Embraer EMB-110 Bandeirante.

In **1991–1992**, the Skyport subsidiary is awarded the sole operating rights to the Centre Run by the Northwest Territories state government. A Shorts 330-100 is purchased to fly Timor Sea freight and personnel transfers. Schedules are boosted with the introduction of Australian domestic deregulation.

The Darwin based operations of Air North Regional (Pty.), Ltd. are taken over late in **1993** and the new board of directors reforms the company into an integrated Northwest Territories-wide operation. The combined fleet is changed as 5 C-402s are withdrawn and replaced with 7 C-210s, 2 C-221s, and 1 C-182. Additional scheduled services are introduced with a pair of de Havilland Canada DHC-6-300s leased from **Air Kangaroo Island (Pty.), Ltd.**

A dedicated maintenance facility is opened at Darwin in **1994** at which point Air North Regional is renamed **Airnorth (Pty.), Ltd.**

AIR NOSTRUM (LINEAS AEREAS DE MEDITERRANEO, S.A.): Calle Francisco Valdecabres 31, Valencia, E-46940, Spain; Phone 34 (96) 196-0200; Fax 34 (96) 196-0209; <http://www.airnostrum.es>; Code YW; Year Founded 1994. Air Nostrum, S.A. is set up at Valencia in late **1994** to offer scheduled passenger services to regional destinations. Emilio Serratos is president with Carlos Bertomeu as general manager; Revenue flights duly commence in December with 3 Fokker 50s.

The fleet is increased in **1995** by the addition of 4 more Fokker 50s. Destinations served come to include Barcelona, Biarritz, Bilbao, Ibiza, Madrid, Nice, Palma de Mallorca, and Vitoria.

During January **1996** orders are placed for 3 previously used Fokker 50s. These are delivered in April and May and assist in increasing the number of domestic cities visited to 20 with the inauguration of new routes in northern and central Spain. In December, the carrier enters into a franchise agreement with **Iberia Spanish Airlines (Lineas Aereas de Espana, S.A.)** to serve as its regional affiliate. A total of 18,041 scheduled departures are made and enplanements total 406,674.

The formal franchise agreement with Iberia Spanish Airlines (2) begins on May 12, **1997**. Employing 12 (later 14) Fokker 50s, the partner will operate its 400 weekly departures under Iberia code, livery, and other branding.

On October 26, Iberia Spanish Airlines (2) integrates its own resources, together with those of its domestic subsidiary **AVIACO (Aviacion y Comercio, S.A.)**, its charter operation, **VIVA AIR (Vuelos Internacionales de Vacaciones, S.A.)**, and its regional Air Nostrum under one centralized operational holding company. Long-term plans are made to institute a single Iberia branding over all three, but due to potential union problems, this plan will be implemented in phases. Meanwhile, coordination becomes the theme of the day in the short run.

Although the companies are held as separate legal entities, a management committee made up of the commercial directors from each airline, now allocates the group's fleet, crew, and scheduling according to perceived daily requirements for each route. All passenger revenue receipts are turned into a central office, while all marketing activities are also centralized. Under this reorganization, VIVA begins to drop unprofitable charters, while AVIACO dumps unprofitable routes off on Air Nostrum, thereby freeing up capacity for Iberia.

At the end of the year, a \$108-million order is placed for 5 Canadair CRJ200ERs, plus five options.

Passenger boardings skyrocket 112.4% over the previous year to 874,511; there are 33,094 scheduled departures.

While awaiting delivery of its own RJs during the second quarter of 1999, the carrier begins operating leased units in March **1998**. At the same time, 3 Fokker 50s are leased from **Kenya Airways, Ltd.**

The first owned Canadair is received in November. It is immediately put into service on the Zaragoza to London (LGW) route, replacing one of the Kenyan Fokkers.

The fleet at year's end includes 4 ATR72s, 5 Canadairs, and 18 Fokker 50s.

Customer bookings increase 76.5% to 1.56 million.

This Spanish regional, at the beginning of **1999**, offers almost a thousand weekly flights to 23 domestic and 6 foreign destinations. Airline employment stands at 439, a 2.4% decline from the previous year.

The 3 **Kenya Airways, Ltd.** Fokker 50s, out on lease to Air Nostrum during the past 15 months, are withdrawn by the African carrier on June 17 and sold to the Spanish airline.

During the fall, a BAC 1-11-518FG is chartered from **British World Airlines, Ltd.**

The rapidly growing regional boards 1,748,000 passengers during the year.

Airline employment stands at 943 as **2000** begins, a figure that represents a whopping 114.8% increase over the previous 12 months. Expansion continues during the first quarter. The Iberia feeder, with a 53.1% increase to 586,410 people carried, posts the second highest (after **BASE Regional Airlines, B.V.**) increase in passengers carried during the period of any member of the European Regions Airline Association. Plans remain in place to increase capacity by year's end through the addition of six previously requested Fokker 50s, 1 ATR72-520, and 1 CRJ200ER.

In late March, an \$818-million order is placed with Bombardier Aerospace for 29 Dash-8-Q300s and 15 CRJ200ERs. As deliveries begin, the regional jets will take over several **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** international routes from Madrid and Barcelona and its own Fokker 50s on longer domestic segments such as Bilbao to Seville. The turboprops will replace Fokker 50s on shorter legs.

On May 1, a wet-leased British Aerospace BAe 146-300 operated by **WDL Aviation (KOLN), GmbH.**, launches Iberia Regional weekday return flights from Zaragoza to Madrid, Nice, and Frankfurt. These are complemented with weekend services to Bologna from Madrid and Barcelona.

The **Spanair, S.A.** subsidiary **AeBal (Aerolineas de Baleares, S.A.)** launches competing service from Palma de Mallorca on July 4 employing a pair of Boeing 717-200s. Air Nostrum is able to counter with a fleet that includes 5 CRJ200ERs, 5 ATR72-520s, and 25 Fokker 50s. On July 25, it converts part of the earlier DHC-8/CRJ200ER order into a request for 8 CRJ900s.

Under a new code-sharing agreement between **Air France** and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, the Spanish regional on October 29 launches twice-daily roundtrips between Madrid and Toulouse.

AIR NOVA, INC.: 310 Goudey Dr., Halifax International Airport, Enfield, Nova Scotia B2T 1E4, Canada; Phone (902) 873-5000; Fax (902) 873-3897; <http://www.airnova.ca>; Code QK; Year Founded 1986. This small, third-level operation is established at Halifax International Airport, Enfield, Nova Scotia, in May **1986** to provide **Air Canada, Ltd.** with a commuter entrance into the Maritimes market. As such, it is the first regional airline of the "Air Canada Connector" network. Shareholding is divided between the state carrier (49%), **Labrador Airways, Ltd.** owner Atlantis Investments, Ltd. (34%), and the company's board chairman, Roger Pike, (17%). **Labrador Airways, Ltd.** agrees to feed President Joseph Randell's 43-employee new entrant with its Labrador and Newfoundland traffic.

A pair of de Havilland Canada DHC-8-101 turboprops are acquired and employed to inaugurate services on July 14 linking the carrier's Halifax hub with Sydney, Deer Lake, St. John's, and Goose Bay. A Beech 99 is also placed into service. Another Dash 8 is leased in October and used to initiate replacement service for **Air Canada, Ltd.** from Halifax to Yarmouth and a new frequency to Charlottetown.

The St. John's terminus is stretched to Gander in January **1987** and 2 more DHC-8-101s arrive, 1 each in February and March. Three new

services are inaugurated in August, including two from Halifax (to Moncton and to Saint John) and one from Yarmouth to Boston. Enplanements for the first full year of service total 226,000. Start-up costs bring a loss of \$C694,000.

In March 1988, Roger Pike's interest is purchased by Atlantis Investments, giving it 51% majority control; Angus Bruneau is appointed chairman, with Joseph D. Randell as president/CEO.

The Maritimes are connected to Quebec in June when Air Nova, Inc., employing another new Dash 8 received in May, opens routes from Halifax to Moncton and Quebec City and to Bathurst and Montreal. A Toronto-based merchant bank, Sheildings, Ltd., purchases the 51% ownership of Atlantis Investments; Air Canada, Ltd., holds the remaining 49%.

In September, orders are placed for 5 British Aerospace BAe 146-200s and two 146-100s are simultaneously leased and used to initiate Halifax to Montreal and Ottawa jetliner flights. Beginning in late fall, the chartered aircraft are employed to operate a Halifax-Orlando charter on behalf of **Air Canada, Ltd.**

One of the leased BAes is returned in December when the first purchased Dash-200 is delivered. Orders are placed at year's end for DHC-8-300s and, operating from hubs at St. John's, Halifax, and Montreal, the airline now provides scheduled services to 18 destinations in eastern Canada, plus Boston, Massachusetts.

Passenger boardings increase by 68% to 380,000, and the loss declines to \$C686,000.

A second BAe 146-200 arrives from the U.K. in January 1989, to be followed by two more in June. That month, the second leased Dash-100 is returned to its manufacturer, delivery positions are reserved for 10 of the newly designed Canadair CRJ Regional Jets, and work begins on a \$C4.8-million maintenance and repair facility at Halifax.

During late summer and early fall, a new Atlantic Canadapass program is introduced for foreign travelers. The fleet at year's end comprises 3 BAe 146-200s, with options for 2 more, 2 de Havilland Canada DHC-8-101s, and 5 DHC-8-102s, including 1 leased from **Air Ontario, Inc.** The last remaining "Air Canada Connector" partner in which **Air Canada, Ltd.** does not have controlling interest, the carrier becomes 100% owned by **Air Canada, Ltd.** before the year is out. Overall enplanements increase to 641,312.

The workforce is increased by 7.3% in 1990 to 502 and the BAe 146-200 fleet increases to 6 and DHC-8-102s to 8, including 3 more obtained from **Air Ontario, Inc.** Options are taken for 10 Canadair Regional Jets. Service is inaugurated to the New Brunswick communities of St. Leonard and Newark.

Passenger boardings jump 21.6% to 818,000 and revenues move ahead by 36.8% to \$C91.9 million.

Company employment grows 3.6% in 1991 to 520 and one BAe 146-200 is withdrawn, as is a DHC-8-102. On May 25, daily nonstop round-trip jet service is inaugurated from Halifax to Newark while turboprop flights are initiated from Montreal to St. Leonard. The "Air Canada Connector" subsidiary is, like its parent, plagued by recession.

Customer bookings slide 4.8% to 780,000. Revenues, on the other hand, advance 3.3% to \$C110 million.

In 1992-1993, President/CEO Randell's carrier operates to 20 U.S. and eastern Canadian destinations; charter flights are also offered. Airline employment is 540. Flights between Yarmouth and Boston are introduced during the latter year.

The fleet in 1994 includes 5 BAe 146-200s, 2 DHC-8-101s, and 12 DHC-8-102s, including 3 leased from **Air Ontario, Inc.**, 1 from **Air BC, Ltd.**, and 1 chartered from **Air Alliance, Ltd.**

As a result of **Air Canada, Ltd.**'s January corporate makeover, the company will spend the remainder of the year having its fleet color scheme changed to match that of its major partner. The work will be performed at the West Virginia Air Center at Bridgeport. A new \$C4.5-million training and administrative center is opened at the company base during the fall. Traffic and financial data is again unavailable.

A total of 50,499 scheduled departures are made in 1995 and enplanements reach 1,127,590. In March 1996, a five-year lease is signed

with Asset Management Organization for the charter of its 5 BAe 146-200s. Traffic and financial data for this year is not made public. Enplanements reach 942,953 on 52,642 scheduled departures.

The workforce is increased by 8.3% in 1997 to 650.

On January 10, the company's pilots join their 900 colleagues from the other "Air Canada Connector" carriers in a strike over merged seniority lists. The company operates with replacement workers and charter aircraft, but many flights must be cancelled.

The job action ends on March 1 following a marathon 24-hour negotiating session in a downtown Quebec City hotel. It is decided to leave it to the Canada Labor Relations Board to decide whether **Air Canada, Ltd.** is to be considered a common employer of both regional and Air Canada pilots.

After weeks of negotiation, the company's pilots, on March 9, ratify a new 4-year contract with **Air Canada, Ltd.** Initially tentative, the pact, providing increased benefits and income, is approved by 88% of the eligible flyers voting in a special election.

Pilots for the four "Air Canada Connector" airlines begin to return to work on March 10. Among the first new services they operate is a BAe 146-200 route from Halifax, Gander and Deer Lake—the only jet service in central Newfoundland.

Bell Mobility Skytel Airfones become available for customers on company BAe 146s on April 3.

With the beginning of the new spring schedule on April 6, flights are restored to every Air Nova destination in Atlantic Canada.

Joined by representatives of the government of Newfoundland and Labrador and the Cabot 500 Foundation at an elaborate kick-off breakfast at St. John's on June 16, Air Nova officials dedicate a BAe 146-200 and a DHC-8-100 to the celebrations being held in honor of the 500th anniversary of John Cabot's expedition. The aircraft, wearing special logos, will serve as celebration ambassadors.

On October 27, DHC-8-100 service is inaugurated from Ottawa to Boston, eight-times-daily.

As a result of the job action, there are 48,425 scheduled departures. Passenger boardings are off by 4.2% to 904,146 and cargo drops 35.3% to 2 million FTKs. Operating revenues fall 3.8% to \$C163.04 million; however, a \$C3.6-million net gain is generated.

Airline employment stands at 725 in 1998 and the fleet includes 5 BAe 146-200s and 17 DHC-8-100s.

Destinations visited include Bathurst, Blanc Sablon, Boston, Deer Lake, Gander, Goose Bay, Halifax, Montreal, Ottawa, and St. John's.

During the first week of January, Air Nova contacts the Canadian Red Cross to donate its services in transporting persons and supplies to aid in the relief effort during the great ice storm. On January 16, a DHC-8-100 flies 5,000 personal-hygiene "Storm Comfort" kits to Montreal (YUL) from Halifax.

A DHC-8-100 is configured in a 21-seat passenger/cargo combi arrangement and, on April 5, is assigned to the company's schedule in Newfoundland and Labrador.

Daily nonstop roundtrips commence on June 1 between Halifax and Boston; three frequencies are operated by DHC-8-100s and two by BAe 146-200s.

Previously thought-out contingency plans come into effect on September 2 with the beginning of the strike by pilots at **Air Canada, Ltd.** The plan involves all manner of points from proactively contacting customers to positioning aircraft throughout the region and adding additional BAe 146-200 flights between Halifax and the cities of Montreal, Ottawa, and St. John's.

Executives from **Air Alliance, Inc.** and Air Nova jointly announce on November 12 that the two carriers will consolidate both operations into one before the introduction of the summer schedule on April 5. The company will be based in Halifax and Quebec City and will initially retain independent branding. The consolidated DHC-8-100 and BAe 146-200 service will operate under the brand name Air Nova, while the Beech 1900D service will retain the Air Alliance name; independent liveries based on the aircraft types will be maintained for brand-recognition purposes. The

companies will work diligently together over the next few months toward implementation of the merger; in the interim, there will be no immediate changes in the services provided by either.

Affected union pilots from both carriers begin to negotiate simultaneously with management from Air Alliance and **Air Nova, Inc.** concerning new contracts.

For the holiday season between December 18 and January 5, additional flights are added across the network and the airline switches to the use of the larger BAe 146-200s from the DHC-8-100s whenever possible.

The company's one-millionth passenger of 1998 is transported on December 15, for a total of 9.1-million passengers carried since the airline's first day.

A code-sharing agreement is signed with **United Airlines** on December 22.

Passenger boardings jump 16.6% to 1.05 million, while cargo traffic accelerates 27.2% to 2.6 million FTKs. Revenues shoot up 23.1% to C\$200.73 million.

By the start of **1999**, airline employment has been increased by 9.1% to 745. Under terms of the new dual-designator pact, United Airlines, beginning on January 4, sells blocks of seats on Air Nova DHC-8-100s return services between St. John, New Brunswick, and Boston.

The new contracts between the pilots and management at both **Air Alliance, Inc.** and Air Nova are ratified on February 26.

On March 1, **Air Ontario, Inc.** Chairman David McCamus and Air Nova President/CEO Joseph Randell agree to discuss with **Air Canada, Ltd.** a consolidation of their two airlines. Toward that end, Mr. Randell is immediately appointed interim president of Air Ontario, while maintaining his current Air Nova posting.

The consolidation with **Air Alliance, Inc.** is officially completed on March 12. Hoping to gain greater flexibility and productivity in terms of fleet utilization, the enlarged Air Nova projects 1999 revenues of almost C\$300 million. Schedule improvements for customers throughout Atlantic Canada and Quebec are implemented on April 5.

With the consolidation of Air Nova and **Air Alliance** proving successful, a review of the additional opportunities to be derived from a further consolidation of those two with **Air Ontario** and **AirBC, Ltd.** is undertaken during the remainder of the year.

On January 20, **2000**, **Air Canada, Ltd.** announces that the process of consolidating Air Nova, **Air Ontario**, and **AirBC, Ltd.** will begin immediately under the leadership of Joseph Randell. It is anticipated that the integration process, which will be facilitated by representatives of the three lines, will require a number of months. In the interim, the three will continue operations under their original names.

Daily roundtrips are started on April 3 from Stephenville to Goose Bay and Halifax and from Montreal to St. Johns. The same number of frequencies begins on June 4 from Stephenville to Halifax and on June 18 from Montreal to Charlottetown.

During the summer, the three regionals, **AirBC, Ltd.**, Air Nova, and **Air Ontario** take a major step towards their consolidation into a single unit when a head office for a joint carrier is established in Halifax and a western hub at Calgary. Having failed to find a buyer, **Air Canada, Ltd.** is permitted to take over **Canadian Regional Airlines, Ltd.** on August 30 and add that feeder into its regional airline consolidation process. When the integration process is completed at year's end, it is anticipated that the (as yet) unnamed airline will be one of the largest regional airlines in the world, with over 5,000 employees and some 135 aircraft, mostly Dash-8 turboprops.

After several months of study, executives from **Air Alma, Ltd.**, **PropAir, Inc.**, and **Air Satellite, Inc.** approach Quebec Finance Minister Bernard Landry on October 25 and request \$84 million to help them merge into a larger regional. If the arrangement can be concluded, the new airline, to be named Air Quebec, Inc., will form a credible alternative to **Air Nova**, which enjoys the majority of local market share.

AIR NUNAVUT, LTD.: P.O. Box 1239, Iqaluit, Northwest Territories X0A 0H0, Canada; Phone (819) 979-4018; Fax (819) 979-4318;

Code YH; Year Founded 1989. Established as **Air Baffin, Ltd.** by President Jeff Mahoney at Iqaluit, NWT, in **1989** to provide charter and bush flights, this, the only local carrier in the eastern Arctic, and also the only to be entirely owned by the Inuits, is renamed late in **1996**. After three years of scheduled service that links the company's base with Broughton Island, Cape Dorset, and Pangnirtung, Mahoney in **1998–2000** oversees a workforce of 14 and a fleet that includes 1 each Piper PA-31-310 Navajo, PA-31-350 Navajo Chieftain, Cessna 337 Skymaster, and Cessna 206 Stationair.

AIR OCEAN INDIAN, S.A.: Namibia (1989–1992). **Air Ocean Indian, S.A.** is established on the island of Reunion in **1989** as a subsidiary of the French carrier **Air Outre Mer, S.A.** Louis Gordon, chief of the parent, is named general manager and revenue services commence and continue with a fleet of 3 Dornier 228-200s. A Douglas DC-10-30 is leased to provide an air link with Paris. The company is merged into its parent when it becomes **AOM French Airlines, S.A.** in **1992**.

AIR OLYMPIA: United States (1981–1982). Air Olympia is formed at Olympia, Washington, in early **1981** as the airline operating division of the FBO Vagabond Aviation. Employing a Piper PA-31-350 Navajo Chieftain, the new entrant inaugurates scheduled passenger and cargo services to Spokane on March 2.

Recession, the PATCO air traffic controllers' strike, a reduction in traffic, and fiscal difficulties cause President Robert B. McElhose to suspend operations in March **1982**.

AIR ONE (1): United States (1981–1985). Founded by Kenneth Wide-man and Mark G. Morris in June **1981**, Air One elects astronaut Eugene Cernan chairman, with Morris as president/CEO. The company hopes to acquire 5 DC-9-32s from **Delta Air Lines** and to provide first-class service at coach fares from Dallas (DFW) and Houston (HOU) to Kansas City beginning on August 1. Unfortunately, the PATCO air traffic controllers' strike and subsequent ATC restrictions conspire with financing difficulties to delay start-up.

Edward Beauvais becomes chairman in **1982** and while launch plans continue to be laid, unrealized plans are made to transfer the base to Phoenix and seek Boeing 737-200s instead of DC-9s. At year's end, a fleet is finally obtained: 3 B-727-21s leased from **Pan American World Airways (1)** and 4 B-727-101s chartered from **Piedmont Airlines (1)**.

The 400-employee new entrant launches charter service on February 18, **1983**. Scheduled business-oriented Boeing 727 flights ("First-Class Service at Coach Prices") are inaugurated on weekdays and Sunday nights from the St. Louis base, beginning on April 1, over initial routes to Dallas (DFW), Washington, D.C., Kansas City, and Newark.

Despite strong competition from **Trans World Airlines (TWA)**, by year's end, 142,478 passengers have been transported; however, the financial picture is bleak. Revenues earned are \$19.9 million and expenses total \$40.9 million, leaving an operating loss of \$23 million.

Early in **1984**, founder Morris is elected chairman/CEO, with James C. Johnston as executive vice president. Plans are made to expand to Boston, Philadelphia, and New York (LGA) in late spring as the Houston (HOU) and Los Angeles markets are entered in March–April with 2 B-727-2H3s purchased from **Tunis Air**. As the year wears on, mounting financial difficulties force suspension of the Dallas (DFW) and Houston (HOU) routes.

Two unsuccessful attempts are made to merge with planned new airlines. The most promising would involve the takeover of **McClain Airlines** in a stock transaction; however, for unstated reasons, the deal is never closed. Another plan would have Scott Spencer, CEO of the Texas-based "paper" airline Southern Express, contribute \$2 million for 55% majority shareholding and merge his start-up into Air One. The money does not arrive and this arrangement is abandoned.

Intense competition with TWA, a paucity of passengers, and continued economic loss force Air One to cease operations on October 25 and to declare bankruptcy the next day. Prior to its collapse, the new entrant

has flown 211,000 passengers since January. A few charter flights will continue into January 1985, after which all remaining assets are sold to **Interstate Airlines**.

AIR ONE (2): United States (1998–1999). Air One (2) is established at Ketchikan in the spring of 1998 as a Part 121 “sister” carrier to CEO Jerry Scudero’s **Taquan Air Services**. A pair of refurbished British Aerospace BAe Jetstream 32EPs are acquired from BAe AMT and 38 additional personnel are hired.

Following receipt of the company’s operating certificate, the new Alaskan commuter opens scheduled service on June 1 with daily flights linking the company base with Wrangell, Petersburg, Juneau, Sitka, and Klawock. Plans are made to acquire a third J-32 in the spring.

Rather than proving a success, Air One becomes nonviable. It is shut down in March 1999.

AIR ONE, S.p.A.: Via Sardegna, 14 00187 Roma, Via Tiburtina Nr. 41, S. Giovanni Teatino, Chieti, I-66020, Italy; Phone 39 (6) 478761; Fax 39 (6) 4885913; <http://www.flyairone.it>; Code AP; Year Founded 1995. Following the deregulation of Italy’s domestic airline industry, Air One is established in the fall of 1995 as the first major domestic challenger to **Alitalia, S.p.A.** Employing 1 leased Boeing 737-3K2 and 2 B-737-230As, the company inaugurates six-times-per-day roundtrip scheduled passenger services from its Rome base to Milan on November 23. A deep discount carrier, the company offers a \$112 one-way fare on weekdays and an \$84 tariff on weekends.

Airline employment stands at 400 in 1996. In February, **Alitalia, S.p.A.** hires away the independent’s managing director, appointing him vice president operations. The corporate raid triggers a government inquiry into the major’s commercial practices.

Three B-737-3Y0s are leased from General Electric Capital Aviation Services early in the year and the number of daily frequencies is increased to 13. New destinations added to the route network during the year include Bari and Reggio Calabria. In October, service is inaugurated from Turin to Rome and from Milan to Naples.

On November 24, the national antitrust authority, after a nine-month investigation, releases a report finding that **Alitalia, S.p.A.** has attempted to block competition from Air One and **Meridiana, S.p.A.** by controlling the allocation of airport landing slots, by monopolizing ticket writing, and by anticompetitive scheduling. The major is ordered to pay a L 415-million (US\$277,000) fine.

In December, an arrangement is concluded by the engineering and contracting concern Toto Group (owned by Carlo Todo) with **Noman, S.p.A.**, once known as **Fortune Aviation, S.p.A.**, to lease that aeronautical company’s airline operation for three years, with an option to purchase. Noman is combined with **Aliadriatica, S.p.A.**, to become the airline operating unit of Air One, S.p.A., under new Chairman Giovanni Sebastiani and General Manager Franco Giudice. A total of 98.8% ownership is held by Toto Group.

Noman’s 2 Douglas DC-9-15RCs and 1 Dassault Falcon 10 join a former **Aliadriatica, S.p.A.** B-737-229A, and the leased B-737-3K2, and 2 B-737-236Es. Also acquired is the maintenance concern Italian Technics, S.p.A. and 12 slots at Milan’s congested Linate Airport.

Enplanements this year total 714,000 and revenues reach \$75 million.

The fleet in 1997 includes 7 B-737-300s and 3 B-737-200s. It is not obtained without difficulty as owner Todo, seeking to gain better jetliner prices at a time when an equipment seller’s market exists, is unable to gain needed capacity and thus cannot begin advertised services as scheduled.

In February, a wet-lease agreement is entered into with Palermo-based **Air Sicilia, S.p.A.** Under its terms, the regional operator will fly its 3 ATR42-320s on behalf of Air One and in competition with **Alitalia, S.p.A.** over its route from Palermo to Rome. It will also fly services for Air One between Rome and Bari and over a new route from Bari to Bologna. The company also enters into a code-sharing agreement with the Bergamo-based new entrant **Azzurra Air, S.p.A.** for services from Rome to London and Paris.

By spring, Air One is also able to increase frequencies on its existing routes from Milan to Rome, Naples, and Bari.

In mid-June, the company’s first international route is inaugurated as twice-daily, dual-designator roundtrip frequencies with **Azzurra Air, S.p.A.** begin from Milan (Linate Airport) to London (STN). At the same time, a marketing agreement is signed with **Air UK, Ltd.**

In September, a preliminary equity agreement is signed with **Swissair, A.G.**, under which the major will sponsor the carrier’s membership in the “Qualiflyer” program jointly operated by the Swiss company, **Austrian Airlines, A.G.**, and **Sabena Belgian World Airlines, S.A.**

Destinations visited at year’s end include Aberdeen, Bari, Crotone, Edinburgh, Glasgow, London (STN), Milan, Naples, Reggio Calabria, Rome (Fiumicino Airport), and Turin. A total of 26 daily roundtrips are flown on the main Milan to Rome trunk route.

The embryonic cooperative agreement with **Swissair, A.G.** is intensified on December 29 under a new memorandum of understanding. Although the two airlines already cooperate in a number of areas, including frequent flyer benefits, the new relationship will provide Swissair with greater access to north Italian markets and give SAirGroup the opportunity to acquire a substantial minority equity stake during the following April.

Enplanements for the year reach 1,382,000. A net loss of L 60 is suffered.

The workforce in 1998 stands at 480. After acquiring a large minority interest in Air One during April, **Swissair, A.G.** begins daily roundtrip services to Bologna and Venice on June 22. The flights to the Swiss major’s destinations are operated in association with Air One, employing a SAAB 2000 wet-leased from **Crossair, Ltd.**

During the summer, the carrier moves all of its domestic flights (save those between Milan and Rome) to Bergamo–Orio al Serio Airport, near Milan. Simultaneously and into the fall, negotiations are held with SAirGroup, parent of Swissair, concerning its acquisition of the remainder of the airline.

Employing one of its BAe 146-200s painted in “Swissair Express” colors, **Debonair, Ltd.** takes over the major’s route from Zurich to Venice and Bologna on November 5. The service, also flown as a code-share with Air One, replaces that previously operated with the **Crossair, Ltd.** SAAB.

Passenger boardings accelerate 14.5% to 1,583,013. The net loss “improves” to L 8.9 billion (\$4.9 million) on revenues of \$163 million.

Former Italian manager for **British Airways, Ltd. (2)**, Marco Benincasa is appointed the carrier’s new managing director on February 15, 1999.

At the beginning of March, a BAe 146-200 is leased from **Debonair, Ltd.** and placed into “Swissair Express” service.

New daily B-737 roundtrips are inaugurated on October 31 from Turin to both Bari and Naples. Enplanements for the year total 1.4 million.

Eight-times-per-day B-737 return service is inaugurated on February 1, 2000 between Rome and Venice.

Twice-daily B-737 roundtrips from Milan to Catania begin on September 4.

A major marketing and code-sharing agreement is signed with **Deutsche Lufthansa, A.G.** on October 5. Under its terms, the German major is able to place its designator on flights to all 15 Air One destinations, while the Italian line will place its code on all DLH flights out of Rome.

AIR ONE SWEDEN, A.B.: Sweden (1989–1994). Air One Sweden, A.B. is established at Ljungby in 1989 to offer regional nonscheduled passenger services. I. Johansson is appointed managing director and he begins revenue charter services with 1 each B-737-200 and Cessna Citation.

AIR ONTARIO, INC.: 1000 Air Ontario Dr., London Airport, London, Ontario N5V 3S4, Canada; Phone (519) 453-8440; Fax (519) 453-0063; <http://www.aircanada.ca/inflight/partners/ifp203a.html>;

Code GX; Year Founded 1981. London-based **Great Lakes Airlines, Ltd.** is reformed at London Airport on April 27, 1981, receiving a new name and corporate identity. The carrier's 5 Convair CV-580s are given new paint schemes.

All previous routes and services are maintained. In December, the DeLuce family of Timmins, owners of **White River Air Service, Ltd.** and **Austin Airways, Ltd.**, purchases half interest through its holding company, Delplax Holdings, Ltd. and William DeLuce becomes president.

An interline agreement is signed with **Wardair Canada, Ltd.** in April 1982 and rights are received allowing direct flights from London to Ottawa and Montreal. Company Convairs fly replacement flights from Montreal to Chatham and Charlo in January 1983 during the **Eastern Provincial Airways, Ltd.** strike. Later in the year, the carrier begins international services when it inaugurates direct services from London to Cleveland, Ohio.

An unsuccessful bid to acquire **Nordair, Ltd.** is mounted by Delplax Holdings, Ltd. in early 1984. Following the corporate battle, new aircraft liveries are introduced. Two new routes are opened from Toronto in September: to Hartford, Connecticut and to North Bay. A CV-580 is purchased from **Air Cape (Pty.), Ltd.** of South Africa in October and is used to start a Toronto-Sudbury frequency in November. Two additional CV-580s arrive from **Freedom Airlines** in December.

Three more former **Freedom Airlines** CV-580s are delivered in early 1985, one in January and two in March. These allow significant domestic expansion of services between Montreal, Ottawa, London, and Windsor and between Montreal, Ottawa, and Sudbury. In July, the Sudbury run is stretched to Winnipeg.

Scheduled service from Toronto to Atlantic City's casino hotels is inaugurated on October 27; although only six passengers are initially flown, the carrier is confident additional Canadians will travel to the American resorts. Also in October, Delplax Holdings, Ltd., having gained complete control, sells minority interest to **Air Canada, Ltd.** (24.5%) and **Pacific Western Airlines, Ltd. (PWA)** (24.5%). The company now provides commuter support to both major operators.

Sault Ste. Marie joins the route network in May 1986. In October, a multimillion-dollar order is made for 15 de Havilland Canada DHC-8-102s and 5 DHC-8-300s. The first DHC-8-102 is delivered on loan in September. Late in the year, **Air Canada, Ltd.** purchases 75% control from PWA and Delplax. The company is now named a member of the "Air Canada Connector" commuter network.

Air Canada, Ltd.'s schedule designator replaces Air Ontario's in airline schedules as of early 1987. The DHC-8-102 demonstrator is returned in March and is replaced by the first purchased unit in April; it proudly inaugurates "Air Canada Connector" services to Detroit (DDT). **Austin Airways, Ltd.**, control of which nonunion operation was taken by the state carrier at the same time as that of Air Ontario, Inc., is merged into Air Ontario, Inc. in June.

A pair of leased Fokker F.28s are acquired at the same time. Four more DHC-8-102s are delivered in July and one in November. Meanwhile, August sees the delivery of 28 aircraft: 11 British Aerospace BAe (HS) 748s, 2 DHC-6 Twin Otters, 6 Beech 99s, 4 Douglas DC-3s, 1 Beech King Air 90, and 2 Cessna Citation 501s. All are painted in **Air Canada, Ltd.**'s red, white, and gray "Air Canada Connector" livery. Four CV-580s are sold, one each in July, August, September, and December.

Airline employment is cut by 22.6% in 1988 to 625. Two more DHC-8-102s are delivered in January-February. Coming as the result of the efforts to integrate union and nonunion flight crews, a pilots' strike grounds Air Ontario, Inc. from early March to May 4.

On May 7, an agreement for full representation for all pilots is signed with the Canadian Air Line Pilots Association; similar pacts will be signed for the mechanics and ground personnel with the Canadian Auto Workers and for flight attendants with the Canadian Union of Public Employees. Some services are not resumed; among those suspended or cancelled are flights to Homepayne, Sachigo, Round Lake, Bearskin Lake, Kasabonika, Geraldton, and Cleveland.

Aircraft deliveries continue. Two Fokker F.28-1000s, leased from **TAT (Transport Aerien Transregional, S.A.)**, arrive in April and May and are employed on the route from Toronto to Winnipeg via Sault Ste. Marie and Thunder Bay. A Toronto-Albany via Syracuse route is started. A total of 8 more DHC-8-102s will be delivered by year's end, together with 7 Commuter Air Transport Catpass 200s (modified Beech Super King Air 200s).

As a result of all the deliveries, the carrier is able to withdraw large numbers of aircraft, including 1 Catpass 200, 2 Citation 501s, 4 DC-3s, 1 Beech 99, 1 Twin Otter, and 3 CV-580s.

While hauling a shipment of diesel fuel out of Red Lake on November 1, a DC-3C with 2 crew and 1 passenger crashes nose first into Pikangikum Lake (2 dead).

Late in the year, the routes in northern Ontario are sold to **Air Creebec, Ltd.** while those emanating out of Thunder Bay are passed to **Bearskin Lake Air Service, Ltd. Air Creebec, Ltd.** also purchases the Air Ontario, Inc. facilities at Pickle Lake and Timmins, Ontario. Flights from Thunder Bay to Minneapolis (MSP) are withdrawn. Enplanements climb 5.3% to 593,000.

The workforce is cut by 34% in 1989 to 549. The final ordered DHC-8-102 is delivered in January. Seven of the last eight HS 748s are sold to **Air Creebec, Ltd.** in February; the eighth is withdrawn in March. Also in February-March, the last Twin Otter, four Beech 99s, and the King Air 90 are sold.

Flight 1363, an F.28-1000 with 4 crew and 65 passengers, arrives at Dryden, Ontario, on March 10 following a flight from Thunder Bay. There, in preparation for departure on a continuing service, the aircraft is refueled with one engine running, there being no serviceable auxiliary power unit (APU). As both the company and the manufacturer prohibit deicing with either engine running, this procedure is omitted, while up to one-quarter inch of snow accumulates on the wings. Just after noon, the aircraft starts its takeoff roll, but is unable to gain altitude, settles back, strikes trees, and comes to rest in a wooded area 3,156-ft. past the end of the runway, catching fire (24 dead).

The disaster is the first fatal crash of a scheduled commercial plane in Canada since the **Quebecair, Ltd.** crash of 1979. The government appoints a special commission to inquire into the crash and eventually publishes its *Final Report* in two volumes (Toronto, Ont.: Canadian Minister of Supply and Services, 1992) with a volume of *Technical Appendices* (Toronto, Ont.: Canadian Minister of Supply and Services, 1992).

Service to Elliot Lake, Ontario, is suspended on April 2 and taken over by **Voyageur Airways, Ltd.** of North Bay the same day. Also in April, 4 more Beech 99s are withdrawn; the remaining F.28-1000 is returned to **TAT (Transporte Aerien Transregional)** in the fall.

The fleet at year's end comprises 3 Beech 99s, 7 Beech Super King Air 200s, including 3 Catpass 200s; 5 CV-580s, 18 DHC-8-102s, with orders outstanding for 10 more; and 1 F.28-1000. Of the DHC-8-102s, 4 are leased to **Air Alliance, Inc.** and 1 to **Air Nova, Inc.**

Passenger boardings for the 12 months jump 17.8% to 699,795.

The payroll jumps 20% in 1990 to 660. The last F.28-1000 is withdrawn as 7 more DHC-8-102s join the fleet; the leases to **Air Alliance, Inc.** and **Air Nova, Inc.** are increased to 5 and 4 units, respectively. Four new DHC-8-300s are also delivered, with leases let for 5 more.

In February, the "Air Canada Connector" expands services to four markets yielded over by its parent. On March 30, a court issues denies a request from the Toronto City Council for an injunction from prohibiting the airline from starting Rapidair Metro services from Toronto Island Airport in competition with **City Express, Ltd.** As a result, Rapidair Metro flights commence on April 1 to Ottawa and Montreal. A second attempt to enjoin the service is likewise unsuccessful.

In December, a cooperative agreement, including joint fares and scheduling, is signed with **Air Creebec, Ltd.**

Customer bookings increase 31.4% to 920,000. Revenues climb 37.7% to C\$95 million and expenses allow operating income to reach C\$13.9 million.

Two of the five CV-580s are leased to **Canair Cargo, Ltd.** in 1991. Two more DHC-8-102s arrive. Six of this type are now chartered to **Air Alliance, Inc.** and three to **Air Nova, Inc.**; the machine formerly leased to **Air Nova, Inc.** is chartered to **Air Creebec, Ltd.**, which, beginning in January, feeds Air Ontario's hub at Timmins. Thrice-weekday flights begin from Toronto Island Airport to Newark in September, the same day thrice-weekday roundtrip flights also begin from Ottawa to Windsor.

Like its parent, the regional is visited by recession. Passenger boardings drop 8.9% to 838,865 and revenues slip 0.3% to C\$78.5 million. Costs increase and cut the operating profit to C\$11.5 million.

Only 1 Beech 99 and 7 Beech Super King Air 200s remain in the fleet in 1992. Only the 2 CV-580s out on lease to Canair Cargo are retained as 2 DHC-8-311s and 1 more DHC-8-102 are obtained. The charter to Air Alliance now covers 9 DHC-8-102s. New service is inaugurated from Toronto to Baltimore (BWI) in July.

Airline employment in 1993 stands at 700. Destinations served by President Tom Syme's company include Baltimore (BWI), Cleveland, Hartford, the Ontario towns of London, Montreal, North Bay, Ottawa, Sarnia, Sault Ste. Marie, Sudbury, Thunder Bay, Timmins, Toronto (Pearson/Toronto Island), Windsor, and Winnipeg. A new route is stretched from Ottawa to Newark and enplanements for the 12 months total 915,800.

In January–February 1994, the company begins to adopt Air Canada's new color scheme, complete with "evergreen" tails that serve as background for red maple leaves. Following a two-week summer strike by station and maintenance personnel, a two-year collective bargaining agreement is signed with their representative, the Canadian Auto Workers Union, in September. During the same month, service ceases between Newark and Toronto Island Airport. Late in the year, plans are made to initiate scheduled roundtrips to Columbus and Indianapolis the following May.

David McCamus becomes chairman with Stephen C. Smith as president/CEO. The fleet now comprises 6 DHC-8-311s and 17 DHC-8-102s. Bookings grow to 936,876.

Four-times-per-day DHC-8-311 roundtrips commence in April 1995 between Toronto and Columbus, Ohio. The service to Indiana, with similar frequencies, is started as scheduled in May.

Flights continue without much change in 1996. In December, the carrier's 146 flight attendants, operating without a contract since August, go out on strike, seeking the same wages, benefits, and working conditions as their counterparts at **Air Canada, Ltd.** The company hires 85 replacement workers. There are a total of 61,594 scheduled departures and 1,183,097 enplanements.

On January 10, 1997, the company's pilots join their 900 colleagues from the other "Air Canada Connector" carriers in a strike over merged seniority lists. The action forces a suspension of service to several destinations, including Baltimore (BWI), and six of nine flights from Toronto.

The company, on January 17, resumes four of its five daily roundtrips from Toronto to BWI using replacement pilots. The company continues to operate with replacement workers and charter aircraft, but many flights must be cancelled.

The job action ends on March 8 following a marathon 24-hour negotiating session in a downtown Quebec City hotel. It is decided to leave it to the Canada Labor Relations Board to decide whether Air Canada is to be considered a common employer of both regional and **Air Canada, Ltd.** pilots.

After months of negotiation, the company's pilots, on March 10, ratify a new four-year contract with **Air Canada, Ltd.** Initially tentative, the pact, providing increased benefits and income, is approved by 88% of the eligible flyers voting in a special election. Pilots for the four "Air Canada Connector" airlines begin to return to work on March 10, although flight attendants at this carrier remain on strike until March 26, on which date they ratify a new contract. A tentative agreement had been negotiated two days earlier.

As the result of a loss of both federal grants and provincial subsidy, Toronto City Centre Airport now has only Air Ontario, Inc. as a customer. The carrier completes 44 DHC-8-102 movements from the destination each day.

On June 15, **Chautauqua Airlines**, a **USAirways** affiliate, challenges dominance of Air Ontario's service from Toronto to Columbus when it launches thrice-daily nonstops. Thrice-daily "Air Canada Connector" DHC-8-311 roundtrips begin on July 20 from Toronto to Richmond, Virginia.

Thrice-daily nonstop DHC-8-311 roundtrips commence on October 5 from Toronto to Providence, Rhode Island. These are the first direct, regularly scheduled services between Rhode Island and a foreign country.

Air Ontario adds 2 more nonstops from Toronto to Baltimore (BWI) on October 20, increasing its daily frequencies over the route to 6; 1 more daily roundtrip is simultaneously added from Toronto to the Ontario communities of London (to 16), to Windsor (to 13), and to Sault Ste Marie (to 8).

The number of scheduled departures are down to 57,587 during the year and passenger boardings slip to 1,146,048. Financial statistics are not released at the end of the year, but like all of the stricken "Air Canada Connector" partners, they are expected to be down.

Flights continue in 1998. In a holdover rule from the time it was a crown corporation, **Air Canada, Ltd.** and its regional affiliates continue to be required to provide bilingual service on flights to and from Montreal, Moncton, and Ottawa. In early April, Commissioner Victor Goldbloom, head of the Office of Official Languages, files suit against the major and its affiliates after the agency received 24 complaints, primarily against Air Ontario, that flight attendants on the those routes fail to offer passengers their choice of beverages in both official languages. Air Canada, which treats its regionals as separate entities, refuses to acknowledge the complaints.

A significant air travel crisis occurs at Detroit (DDT and DET) on August 29 as **Northwest Airlines** pilots go on strike. To assist those who would fly between the Detroit and Toronto, Air Ontario increases its capacity between Windsor, Ontario, and Toronto to 900 seats on August 30. That figure is increased to 1,200 seats on September 1 and each day thereafter until the Northwest job action is settled.

Frequencies and schedules for the "Air Canada Connector" are enhanced in the days following the strike by **Air Canada, Ltd.** pilots on September 2. Daily service is increased from Toronto's City Centre Airport to Ottawa (20 flights) and Montreal (19 flights).

On September 8, the daily return frequencies of certain transborder flights from Toronto are also increased, through September 11. These include services to Allentown, Pennsylvania (to 4), Baltimore (to 7), and Providence (to 5).

The carrier announces on November 4 that it will launch thrice-weekday DHC-8-311 roundtrips between Toronto and Syracuse on January 4. On November 25, it is announced that four-times-a-day roundtrips from Kingston to Toronto will begin on January 17.

Coincidence and a pair of Traffic Alert and Collision Avoidance System (TCAS) miscues nearly cause a tragic midair collision at a point 30 mi. SW of Albany on December 1. Misreading the movements of a **USAirways** flight, the TCAS aboard an Air Ontario DHC-8-311 en route from Providence to Toronto inadvertently sounds, directing it to climb so as to avoid a **Northwest Airlines** DC-9-41. The TCAS aboard Northwest's Douglas transport has directed the aircraft to descend. An air traffic controller notices the difficulty and calls out a warning as the two planes speed toward one another on a collision course. The jetliner and the commuter plane come within less than a mile (800 meters) of each other horizontally and within 300 feet (90 meters) vertically. FAA regulators launch an immediate investigation.

The thrice-weekday DHC-8-311 service from Toronto to Syracuse, scheduled to commence on January 4, 1999, must be postponed due to unusually heavy snowfalls that prevent travel in the region of the city-pair. The flights commence on January 10, with ceremonies at

Syracuse, and represent the only nonstop air service available between the two communities.

A severe winter storm assaults Toronto on the evening of January 14, forcing the airline, together with **Air Canada, Ltd.**, to cancel over 30 departures. Additional manpower is laid on at Montreal, Calgary, and Vancouver to accommodate customer inquiries. Blizzard conditions continue at Toronto the next day forcing the two carriers to cancel all of their departures.

Air Ontario President/CEO Smith is appointed on February 11 to the same posts with **Westjet Airlines, Ltd.** On March 1, Air Ontario Chairman McCamus and **Air Nova, Inc.** President/CEO Joseph Randell agree to discuss with **Air Canada, Ltd.** a consolidation of their two airlines. Toward that end, Mr. Randell is immediately appointed interim president of Air Ontario, while maintaining his current Air Nova post.

Air Ontario Vice President-Human Resources and Administration Ruthe-Anne Conyngham is named interim chief operating officer on March 4.

With the consolidation of **Air Nova** and **Air Alliance** proving successful, a review of the additional opportunities to be derived from a further consolidation of those two with Air Ontario and **AirBC, Ltd.** is undertaken during the remainder of the year.

On January 20, 2000, Air Canada announces that the process of consolidating **Air Nova**, Air Ontario, and **AirBC, Ltd.** will begin immediately under the leadership of former **Air Nova** CEO Joseph Randell. It is anticipated that the integration process, which will be facilitated by representatives of the three lines, will require a number of months. In the interim, the three will continue operations under their original names.

On February 9, the Oro Station-based commuter **Air Georgian, Ltd.** enters into a pact with the large regional, under which it will continue its previous "Canadian Partner" service in new colors to points in southern Ontario and expand flights into the northeastern U.S. The partnership begins on April 2.

Thrice-daily return service is inaugurated on April 3 from Windsor to Montreal and Ottawa.

During the summer, the three regionals, **Air BC, Ltd.**, **Air Nova**, and Air Ontario take a major step towards their consolidation into a single unit when a head office for a joint carrier is established in Halifax and a western hub at Calgary. Having failed to find a buyer, **Air Canada, Ltd.** is permitted to take over **Canadian Regional Airlines, Ltd.** on August 30 and add that feeder into its regional airline consolidation process. When the integration process is completed at year's end, it is anticipated that the (as yet) unnamed airline will be one of the largest regional airlines in the world, with over 5,000 employees and some 135 aircraft, mostly Dash-8 turboprops.

AIR OPEN SKY, S.A.: Frei 4, Bat 3514, Rue des Voyelles, BP 10256, Roissy-Charles de Gaulle International Airport, F-95704, Paris, France; Phone 33 (1) 48161111; Fax 33 (1) 48161192; Code OPN; Year Founded 1998. Among the last new entrants to become operational in the time frame of this book, Air Open Sky is established at Paris in November 1998 to offer passenger and cargo services. A pair of Avions de Transport Regional ATR42-320s are ordered by President Stephen Brun and a marketing agreement is signed with **Air Liberte, S.A.** In addition, negotiations are undertaken with a major freight company for the operation of night cargo charters from an unnamed European airport.

With the receipt of the first ATR painted in a modified Air Liberte color scheme, revenue flights commence in December linking Brive with Paris (ORY) and Metz with Marseilles and Nice.

A second ATR42-320 is delivered in January 1999 followed by a third later in the year. Flights continue into the new millennium.

AIR OPERATIONS OF EUROPE, A.B.: Sweden (1993–1996). Captain Thomas Johansson founds this Swedish ad hoc charter operation, headquartered at Sollentuna, in February 1993. Shareholding is divided between Johansson and ING Aviation Lease Amsterdam. A workforce of

75 is assembled and revenue services are inaugurated in May with a pair of Lockheed L-1011 TriStar-1s leased from Electra Aviation. An order is placed for several L-1011-50s.

Three L-1011-50s, previously employed by **Hawaiian Airlines (HAL)**, arrive under charter in 1994, allowing one of the earlier TriStars to be leased to **Impala Air, Ltd.** The company, yet to standardize on a livery, flies its routes with aircraft displaying the varied color schemes of previous operators with Air Ops markings.

The company continues to expand both its capacity and worldwide destinations in 1995. Early in the year, an L-1011-50 TriStar is purchased from **Trans World Airlines (TWA)** and two leased Airbus Industrie A300B4s also enter service. A standard all-white livery, with red markings, is adopted. One of the ex-**Hawaiian Airlines (HAL)** TriStars is leased to **Sudan Airways, Ltd.** to operate that carrier's weekly service from London (LGW) to Johannesburg via Khartoum.

Overextended, the company fails in May 1996. Still, it will have one more glorious operation. At the end of November 1998, one of its former TriStars, in storage at Manchester, England, is fixed up enough to be flown to Manston on just two engines and at an altitude of 6,000-ft. with its flaps down. After its safe arrival, the wide-body is scrapped.

AIR OREGON: United States (1980–1982). In 1980, the two-year-old Portland-based charter operator **Executive Flight Services** elects to establish a scheduled airline subsidiary Air Oregon, giving it a new and independent logo and its leased aircraft new liveries. At this point, the fleet comprises 6 Metro IIs, 1 Metro IIA, and 1 Piper PA-31-310 Navajo.

Plans are made to affiliate with **Golden Gate Airlines** and **Swift Aire** in a large commuter network serving points in California, Idaho, Nevada, Colorado, Utah, and the Northwest. However, with the collapse of **Golden Gate Airlines**, the possibility of a union dissolves.

Meanwhile, destinations include Seattle, Salem, Medford, Reno, Boise, San Francisco, and Sacramento.

Passenger boardings climb 31.9% to 158,050; freight, however, falls by 37% to 787,000 pounds. Expenses, led by fuel costs, outpace income, rising 67.6% to \$10.1 million on revenues of \$9.8 million. The loss skyrockets by 231% to \$356,398.

Airline employment in 1981 totals 218. Bookings climb a slim 2.4% to 161,862, but cargo is down 11.3% to 697,810 pounds. Still, optimism remains as shown by orders for 2 SAAB-Fairchild SF340s for mid-decade delivery. The reservoir of red ink continues to deepen as expenses jump 19.7% to \$12.1 million on revenues, up only 12.5%, of \$11 million. The loss is \$1.13 million.

Strapped for cash as a result of the PATCO air traffic controllers strike and subsequent air traffic control reductions, the carrier sells out to **Horizon Air** in June 1982.

AIR ORIENT, S.A.: France (1929–1933). This airline is created in 1930 through the merger of **Air Union-Lignes d'Orient, S.A.** (founded in 1927) and **Air Asie, S.A.** (formed in Indo-China in 1926); its mission would be the continued development of regular services to the nation's Southeast Asian colonies. In December, the company's Marseilles–Syria mail route, started in June 1929, is extended to Baghdad.

Early in January 1931, Saigon-based **Air Asie, S.A.** is acquired, together with its fleet of 4 Potez 32s, 1 Liore et Olivier LeO 198, and its mail route from Saigon to Bangkok. On January 17, a 10-day multistop route is opened by Air Orient to Saigon with full passenger service from Paris to Baghdad. The Mediterranean segment is flown by LeO 242s and CAMS 53s and the remainder by Bruguet 280Ts.

A new corporate emblem, "L'Hippocampe," is created in 1932; it will be transferred to **Air France** and worn thereafter.

On August 30, 1933, Air Orient, S.A. and three other companies join under the label of **Societe Centrale pour l'Exploitation de Lignes Aeriennes, S.A. (SCELA)**, negotiate with the government, and are merged to form **Air France**.

AIR ORLANDO CHARTER: 400 Herndon Ave., Suite 110, Orlando, Florida 32803, United States; Phone (407) 896-1368; Fax (407) 896-6027; Year Founded 1987. AOC is set up at Orlando Executive Airport in 1987 to provide on-demand passenger charters; the operator is certified to offer service throughout the U.S., Canada, Mexico, the Caribbean, and Central America. Revenue flights begin, with emphasis on service to the Bahamas, Virgin Islands, Turks and Caicos Islands, Dominican Republic, and Puerto Rico.

Operations continue apace without incident until 1995. Just after takeoff from Orlando on June 23, a Beech 58 Baron, with two passengers, loses power to its left engine. While attempting to return for an emergency landing, the plane strikes trees and crashes, killing both passengers.

By 1998–2000, the fleet includes 1 each Cessna 550 Citation II, Beech King Air 90, and a replacement Beech 58 Baron.

AIR OSTRAVA SPOL, S.R.O.: Czech Republic (1994–2000). Ostrava-based Air Vitkovice undergoes a change in its corporate identity during 1994, choosing to identify with its base city as a public limited company (S.R.O.).

With continued financial backing from the Chemapol Group, Managing Director Josef Homak makes plans to replace his 3 Let-410s with 3 British Aerospace Jetstream 31s. Revenue flights are continued from Ostrava to Prague, Nuremberg, Brno, and Vienna.

Pavel Hradec becomes managing director in early 1995 following the company's purchase in April from the Vitkovice Iron & Steel Company by the Chemapol Group, a large Czech chemical and pharmaceutical trading concern. The new executive's fleet now includes the 3 Lets, 1 Cessna Citation III, and 2 SAAB 340As. Although 2 BAe Jetstream 31s arrive during the year, they do not replace the Lets; the order for the third is cancelled.

Return flights commence in June from Ostrava to Amsterdam via Prague seven-times-a-week. Also during late spring and summer as CSA Czech Airlines withdraws from the Ostrava to Prague route, it enters into a block-seat, code-sharing agreement on Air Ostrava's six daily return flights between the two cities.

Scheduled flights begin to Salzburg and Poprad/Tatry, the airline's third and fourth international destinations, and holiday charters to Mediterranean points commence in late fall.

Operations continue apace in 1996 as a pair of SAAB 340As are acquired. Airline employment stands at 160 in 1997. During the summer, additional code-sharing flights commence with CSA Czech Airlines. Principal destinations visited now include Cologne, Kosice, Ljubljana, Prague, Strasbourg, Vienna, and Zilina.

Flights continue without fanfare in 1998. During the first quarter of 1999, a SAAB 340A becomes a logo-turboprop, painted in a color scheme designed to promote Skoda's latest automobile, the *Felicia*.

Fiscal difficulties for the regional force it to shut down and seek bankruptcy protection on March 2, 2000. The company's 4 leased SAAB 340As are returned and website closed. On March 10, CSA Czech Airlines launches replacement service between Ostrava and Prague.

AIR OUTRE MER, S.A.: France (1987–1992). Air Outre Mer, S.A. is founded by Rene Micaud, in association with the Les Creolies hotel chain, on the Indian Ocean island of Reunion on July 1, 1987. Naming his carrier for the first Air Outre Mer, S.A., which operated in Indochina between 1950 and 1954, Micaud makes plans to offer luxury air service between Reunion and France, but start-up plans are delayed in 1988.

In a public ceremony at the Paris Salon in June 1989, Micaud and his associates sign an order with McDonnell Douglas for the purchase of 4 MD-11s. Pending their delivery, the company signs a lease/purchase agreement with SAS (Scandinavian Airlines System) for the acquisition of 3 DC-10-30s.

AOM employs the first Douglas wide-body, received on May 21, to commence thrice-weekly roundtrip revenue flights between Paris and

St. Denis de la Reunion on May 28, 1990, just after Air Ocean Indien, S.A. is established as a domestic subsidiary. Three Dornier 228s are purchased for AOI in November.

Another pair of leased DC-10-30s is acquired in 1991 and charter authority is granted to Guadeloupe and Cairo, the latter city already a technical stop on the return flight from Reunion to France. As a result of the recession that has occurred in the wake of the Gulf War, company efforts to sell its luxury service are frustrated and financial losses mount. Twice-weekly Paris to Miami roundtrips commence on October 5; however, the service is suspended in December.

Following the resignation of founder Micaud late in the year, the airline is purchased by the Credit Lyonnais subsidiary Sega, a banking group.

Still, during this first full year of service, a total of 111,197 passengers and 32 million FTKs are flown. Revenues total \$72.2 million, but expenses are more and leave an operating loss of \$40 million.

On January 1, 1992, Sega joins the company with another independent carrier, Minerve, S.A., reforming the enlarged aerial enterprise into AOM French Airlines, S.A.

AIR PAC AIRLINES: United States (1978–1986). Formed in Anchorage in August 1978, privately owned AirPac begins charter and contract service operations in the fall. In cooperation with Alaska Airlines, the carrier inaugurates scheduled service to Dutch Harbor in March 1982. The fleet now includes Cessna 441s, a Grumman G-21 Goose, and a Fairchild Hiller FH-227B. The company name is changed to Air Pacific Airlines in December.

A British Aerospace BAe 146-100 is now acquired and employed, beginning in 1984, to provide replacement services for its national associate to the following destinations: Adak, Akutan, Cold Bay, Dillingham, Dutch Harbor, King Salmon, Kodiak, Nikolski, St. George Island, St. Paul Island, and Sand Point. This is the first pur-jet service to the Aleutians. The jetliner is supplemented by the fleet's propeller equipment, which includes 1 Fokker F.27, 1 Fairchild Hiller FH-227, 1 Cessna 441, and 3 Grumman G-21 Geese.

Operations continue apace in 1985 as enplanements jump 53.1% to 49,000.

During the first quarter of 1986, plans are made to change the company name to Alaska Pacific Airlines (so as not to confuse its identity with that of the Seattle-based Airpac Airlines, launched two years earlier) and initiate a jet service from Anchorage to Seattle, via Dutch Harbor and Sitka. Notice of rising insurance costs received in May, however, forces the company to return its BAe to its manufacturer in June.

AirPac files for Chapter XI bankruptcy on July 11. Plans made to reorganize and reemerge are not realized.

AIR PACIFIC. See AIR PAC AIRLINES; GOLDEN GATE AIRLINES

AIR PACIFIC, LTD. (1): Fiji (1967–1971). Air Pacific, Ltd. is formed at Suva in June 1967. Employing a lightplane fleet of Beech and Cessna aircraft, the carrier begins nonscheduled charter flights in July to local South Pacific islands. Late in the decade, a Britten-Norman BN-2 Islander is acquired and scheduled frequencies are undertaken to Cicia, Gau, Koro, Lakeba, Ono-i Lau, Pacific Harbor, Rabi, Rotuma, Savusavu, and Vanuabalvu.

When Fiji Airways, Ltd. is renamed Air Pacific, Ltd. (2) in April 1971, the first Air Pacific, Ltd. is retitled as Fiji Air, Ltd.

AIR PACIFIC, LTD. (2): Air Pacific Centre, P.O. Box 9266, Nadi Airport, Raiwaqa, Fiji; Phone 679 720 777; Fax 679 720 512; <http://www.fijifvb.gov.fj/airlines/airpac.htm>; <http://www.singapore.com/pata/airpac.htm>; <http://www.supersite.net/airpn2/docs/home.htm>; Code FJ; Year Founded 1971. The former Fiji Airways, Ltd. receives its present name in April 1971 as the island government, Qantas Airways (Pty.), Ltd., British Overseas Airways Corporation

(BOAC), and **Air New Zealand, Ltd.** remain the major shareholders. Local services are provided within the Fiji group. The fleet's 4 de Havilland DH 114 Herons and 3 Hawker Siddeley HS 748s are joined on March 4, 1972 by the company's first jetliner, a BAC 1-11-479, delivered from Hurn, England, via Brindisi.

The new British-made jetliner inaugurates service on April 2 over a route from Nadi International Airport to Port Moresby via Port Vila and Honiara. Enplanements total 206,371.

Airline employment in 1973 stands at 512. Regional routes are initiated linking Fiji with New Caledonia, Tonga, Western Samoa, Nauru, the Gilbert Islands, and Tuvalu.

A second BAC 1-11-479 is acquired on August 14 and it initiates service to Brisbane via Port Vila and Honiara. Customer bookings advance 19.7% to 257,000 and freight traffic climbs 29.2%. Still, the financial situation is bad, due largely to large increases in fuel and labor costs.

On July 4, 1974, 1 of the BAC 1-11-479s is leased out to **Air Malawi, Ltd.** for 18 months. A total of 268,320 passengers are flown.

The employee population stands at 460 in 1975. One HS 748 is replaced by three Britten-Norman BN-2A Trislanders. **Air Niugini (Pty.), Ltd.** Fokker F.27-200s assume the Honiara to Port Moresby sector on July 1, the same day that Air Pacific's remaining BAC 1-11-469 re-routes its Nadi to Brisbane midpoint stop from Honiara to Noumea, New Caledonia. Simultaneously, it launches a new route from Nadi to Auckland via Tongatapu, capital of Tonga in the Friendly Islands.

The chartered BAC 1-11-479 returns to service on November 16. Consequently, frequencies on the Australian service are increased to five per week and to New Zealand, four per week. Freight soars 32%, but passenger boardings dip 4% to 258,000.

The employee population numbers 507 in 1976. In honor of the company's twenty-fifth anniversary, all aircraft are repainted in new livery.

Passenger bookings rise a modest 2.8% to 265,169, but freight balloons 21% to 1.59 million FTKs.

The fleet is radically altered in 1977 as 1 BAC 1-11-479, HS 748s, and BN-2As are all leased out or sold; they are replaced by 4 BN-2 Islanders, 1 de Havilland Canada DHC-6, 1 Beech Baron, and 1 Beech B-80 Queen Airliner.

The Fiji government in 1978 acquires the holdings belonging to **British Airways, Ltd. (2)**, **Qantas Airways (Pty.), Ltd.**, and **Air New Zealand, Ltd.**, gaining full majority control of the airline; shareholding is divided between the government of Fiji (89.78%), Kiribati (1.11%), Solomon Islands (1.11%), Tonga (1.11%), Western Samoa (0.51%), and Nauru (0.37%), with private interests holding the remaining 6.01%.

Qantas Airways (Pty.), Ltd. continues to provide technical service and to fly long-haul, regularly scheduled flights. S. H. Quigg is named managing director of the 478-employee airline. Delivered via Bahrain, a BAC 1-11-408, previously operated by **Bavaria Fluggesellschaft, mbH. & Co.**, arrives on June 26 and enters service on July 1.

Passenger boardings fall 0.5% to 280,000, but freight grows 20.4%.

Airline employment is increased by 1.2% in 1979 to 513. Service is launched to Pago Pago and Papeete. Two Embraer EMB-110s join the fleet with two more on order. The Islanders, Twin Otter, Baron, and Queen Air are sold or leased as two chartered BAC 1-11-479s and one HS 748 are returned to service. A five-year contract is obtained from **Air Tuguru** to operate that carrier's Honolulu service. Bookings fall again, down 2.6% to 275,364.

The BAC 1-11-408, having rusted out, is withdrawn in 1980 as is an HS 748. Two owned EMB-110s are delivered and a Boeing 737-219 is leased from **Air New Zealand, Ltd.** to fill the gap until an ordered machine is delivered.

Cargo grows 3.3% to 2.91 million FTKs, but passenger traffic falls a dramatic 15% as only 262,244 passengers are carried.

A total of 272,450 passengers are transported in 1981 and 260,456 in 1982. The operating loss in the latter year is F\$5.9 million.

Airline employment in 1983 is 562, a 2.4% boost. The fleet now includes 1 B-737-219B leased from **Air New Zealand, Ltd.**, 4 EMB-110s, and 2 BAC 1-11-479s. Employing a DC-10-30 leased from

Western Airlines, thrice-weekly Fiji-Honolulu joint services are inaugurated as "Project America." This is Air Pacific's first experience on a major trunk route.

Passenger boardings increase 4.9% to 280,202 while freight traffic rises 0.4% to 39.8 million FTKs. A F\$5.9-million operating loss is again suffered, this time on revenues of F\$87 million, an 8% increase.

During 1984, the Nadi-Honolulu DC-10-30 joint service with **Western Airlines** is flown, but then discontinued. Joint services with **Qantas Airways (Pty.), Ltd.**, employing Jumbojets, are also maintained from Nadi-Noumea, Sydney, and Melbourne during 1984. Although the 2 BAC 1-11-479s are withdrawn in March, regional jetliner services are maintained by the 565-employee airline with another newly delivered B-737-219, the one already on hand, and other leased from **Polynesian Airlines**.

The three domestic Fiji Island destinations of Nadi, Suva, and Labasa are served by the company's four Bandeirantes, while all other routes are turned over to the privately owned local operators, **Fiji Air, Ltd.** and **Sunflower Airlines, Ltd.** As traffic has not materialized at the rate hoped for, the DC-10-30 service to Hawaii is terminated in December and replaced by a joint operation with a **Qantas Airways (Pty.), Ltd.** B-747-267s, from Nadi to Honolulu and Los Angeles.

Enplanements total 277,426 and revenues of F\$43.17 are earned. Expenses, however, total F\$53.73 million and cause the carrier an operating loss of F\$10.55 million, putting it into technical bankruptcy.

Airline employment is reduced to 470 in 1985. In January, the airline's lengthy association with **Qantas Airways (Pty.), Ltd.** is renewed in the form of a three-year Management Support Agreement. The Australian flag carrier sends John Schaap out to become CEO, along with two other Qantas executives, Allan Moore and John Campbell. This agreement will subsequently be modified and extended through 1995.

A B-747-267 is leased from **Qantas Airways (Pty.), Ltd.** on March 25; christened *Island of Viti Levu*, it receives a colorful, banded livery and is placed into service from Nadi to Sydney via Auckland, Brisbane, Christchurch, and Melbourne. As expenses increase, Air Pacific offices in Australia and North America are closed, with **Qantas Airways (Pty.), Ltd.** becoming the company's general sales agent.

Unnecessary assets, including a stockpile of BAC 1-11 spare parts, are sold and the thrice-weekly Suva to Western Samoa service is cut to weekly, employing the Polynesian Boeing under a joint service arrangement.

Passenger boardings leap to 289,785 and revenues ascend to F\$52.13 million. Expenses swell to F\$63.05 million and the operating loss increases to F\$10.86 million. A small F\$143,000 net profit is earned.

The workforce is increased 4% in 1986 to 498 and the fleet includes 1 B-747-267, 1 B-737-219B, 2 EMB-110s, and 1 DHC-6. The latter, leased from **Fiji Air**, is employed for Nadi to Suva roundtrips. "Mate's Rate" fares are introduced for traveling couples.

In September, 2 Avions de Transport Regional ATR42-320s are ordered for 1987 delivery; an agreement is reached to lease 2 of the type from **Air Queensland, Ltd.** until then. The chartered aircraft allow the company to increase the number of its flights from Fiji to Tonga from one to six each week and to Vanuatu from one to three each week. A third weekly B-737-219B service is initiated to Auckland. Meanwhile, 2 additional EMB-110s are placed in service.

Passenger boardings decline 4.4% to 271,439 and freight is off by 5.7% to 6.03 million FTKs. Largely as a result of Australian and New Zealand currency devaluation, revenues fall by 6.6% to F\$43.9 million. A F\$100,000 operating loss is suffered.

The payroll is cut 9.8% in 1987 to 449 as **Qantas Airways (Pty.), Ltd.** now takes a 20% financial interest in the Fijian carrier, atop its management consultancy. In July, the decision is taken to postpone the launch of Fiji-Japan service for two years. Due largely to two coups in the country during the year, traffic figures are mixed. **Continental Airlines** now withdraws from Fiji, leaving the nation with no service to the U.S.

In November, the original *Island of Viti Levu* is put on the joint **Qantas Airways (Pty.), Ltd.** service and is replaced by an older, ex-**Qantas**

Airways (Pty.), Ltd. B-747-149, which is given the same name and takes over its predecessor's duties under a revised code-sharing agreement. The new arrangement calls for code-sharing between Australia and Fiji employing the B-747-149 and Qantas aircraft and between Fiji and Los Angeles via the Fiji Jumbojet.

People stay away from the airline and customer bookings drop another 4.3%, to 259,690. Cargo, on the other hand, swells by 69.5% to 10.23 million FTKs. Revenues of F\$41.1 million are earned and losses are again taken: F\$1.76 million (operating) and F\$624,000 (net).

Airline employment is increased by 13.4% in 1988 to 509 as Jumbojet flights begin linking Fiji with Tokyo (NRT). In the spring, the **Qantas Airways (Pty.), Ltd.** CEO Schaap is relieved by another executive from that airline, Andrew Drysdale. Two ATR42-320s join the fleet.

Passenger boardings recover and climb 13% to 311,200. Freight continues its upward march, by 35.6%, to 19.11 million FTKs. Revenues increase 52.2% to F\$67.8 million. Costs are held down and F\$5.3 million in operating income is generated. Net profit surges to F\$5.3 million.

Employment climbs 12.2% in 1989 to 571 as B-747-149 service to Melbourne begins in the spring. Dissidents burn the control tower at Port Vila Airport in Vanuatu, restricting the carrier's ATR42 services to that point.

Customer bookings swell 12.1% to 348,914 and cargo jumps to 50.22 million FTKs. A record operating profit of F\$11 million is reported.

The workforce is increased by 3% in 1990 to 575 and the fleet includes 1 B-747-149, 1 B-737-219B, and 2 ATR42-320s. Two B-767-205ERs remain on order. One of the two B-767-205ERs arrives in July; christened *Island of Vanua Levu*, it is placed into service on the route to Auckland via Brisbane and Melbourne. The B-737-219B is withdrawn in August, the same month that the government purchases 9.16% of the **Qantas Airways (Pty.), Ltd.** interest, reselling the new shares to a Japanese firm developing resorts in Fiji.

Passenger boardings fall 5.6% to 324,990, but freight climbs 10.5% to 25.33 million FTKs. Revenues advance 11.9% to F\$108 million.

The payroll climbs 3.5% in 1991 to 595. A two-year transfer of headquarters from Suva to Nadi is begun as is a second weekly service to Tokyo.

Customer bookings decline another 6% to 305,560, but cargo jumps 39.3% to 35.3 million FTKs. Revenues rise 17.1% to F\$126.6 million.

During late spring 1992, Air Pacific sells its two ATR42s to GPA Group, which, in turn, provides the carrier with a B-737-5Y0 in September under a lease-purchase arrangement. Given a colorful livery and christened *Island of Taveuni*, the "Baby Boeing" is employed to resume Suva to Auckland service. Later in the year, a B-767-205ER is chartered and initiates flights from Fiji to Cairns, Wellington, and Christchurch. An order is placed for a B-767-3X2ER.

Enplanements total 309,908, the operating profit is F\$2.7 million, and net gain is F\$2.65 million.

Five new employees are hired in 1993 as the B-767-3X2ER arrives and the B-737-219B is re-leased from **Air New Zealand, Ltd.** Destinations now served by Chairman Gerald Barrack and CEO Drysdale's airline include Melbourne, Sydney, Brisbane, Auckland, Tokyo, Suva, Tonga, and Moniara. The company's head office and engineering base are shifted from Suva to Nadi. In September, the company begins code-sharing flights with **Air Vanuatu** with its B-767-205ER from Nadi to Port Vila.

Late in the year, a number of events transpire that give the carrier reason to believe it can profitably restart services to Hawaii and even fly beyond. Chief among these are the decision by **Continental Airlines** to abandon the South Pacific, the availability of new slots at Tokyo (NRT), and more U.S. tourists, in the wake of the American economic recovery, are visiting Fiji.

Passenger boardings decline another 10.6% to 280,207, but freight climbs 9.1% to 37.56 million FTKs. Revenues jump 6% to F\$211.9 million and expenses are F\$206.7 million, a 4% gain. As a result, the operating gain is F\$5.2 million and net profit reaches F\$3.7 million. The excellent financial showing results in shareholders receiving their first dividend in company history.

The airline's paid-up capital totals \$F19,480,300 in 1994 and ownership is split between the government of Fiji (79.55%), **Qantas Airways (Pty.), Ltd.** (10%), the Sea Com Corporation of Japan (7.5%), **Air New Zealand, Ltd.** (1.94%), and the governments of Kiribati, Tonga, and Solomon Islands (0.27% each), Nauru (0.8%), and Western Samoa (0.12%).

The B-747-149 inaugurates services to Los Angeles via Hawaii on July 2. Osaka (KIX) becomes a destination in October.

Enplanements inch up slightly to 280,866 and there are profits: F\$3.36 million operating and F\$2.41 million net.

Airline employment grows by 11.6% in 1995 to 640. In January, the carrier joins with **Royal Tongan Airlines** in the joint lease of a B-737-33A, which is employed to code-share flights between Fiji and Tonga. While the B-737-200 fleet of **Air New Zealand, Ltd.** is grounded for engine repairs in March-April, the company briefly subleases the B-737-219B back to the New Zealand flag carrier from whom it had been leased originally. In May, the Royal Tongan Boeing beings a new service from Tonga via Auckland to Sydney.

Return service is started twice weekly to Wellington and Christchurch from Nadi on July 11 under a new code-sharing agreement with **Air New Zealand, Ltd.** and the company enters into the frequent flyer program of **Qantas Airways (Pty.), Ltd.**

Passenger bookings jump 6.9% to 301,682 while freight traffic increases 47.8% to 50.55 million FTKs. Revenues climb 17.5% to F\$161.61 million, while expenses move up by 14.2% to F\$153.19 million. The operating profit swells to F\$8.42 million while net gain reaches F\$5.63 million.

Forty-eight new employees join the company, a 10.6% increase, during 1996 and the chartered fleet now includes 1 each B-767-3X2ER, B-737-5Y0, B-737-33A, and B-747-219B, the latter leased from **Air New Zealand, Ltd.** The B-767-3X2ER begins joint venture service with **Air Caledonie International** in July over a route from Nadi to Papeete. An order is sent to Boeing for a Next Generation B-737-700, for which the carrier will become South Pacific launch customer.

Enplanements accelerate 8.5% to 436,429 while 70.7 million FTKs are operated, a 7.4% increase. Operating income surges 11.3% to F\$186.52 million and costs are up an almost-equal 11.4% to F\$176.41 million. Operating gain moves to F\$10.13 million and a net F\$6.19-million profit is posted.

Airline employment grows 6.9% in 1997 to 757. Early in the spring, **Polynesian Airlines** begins to code-share on Air Pacific flights from Nadi to Apia, Samoa. **Solomon Airlines, Ltd.** enters into the same sort of pact covering flights between Nadi and Honiara using Solomon aircraft.

The executive vice president/chief operating officer of **Hawaiian Airlines (HAL)**, Michael J. McQuay, is named managing director/CEO in November. New weekly roundtrips to Honolulu begin and a code-sharing pact is entered into with **Canadian Airlines International, Ltd.**

Passenger boardings move ahead by 9.2% to 333,499, while freight traffic improves by 12.3% as 76.41 million FTKs are flown. Revenues inch up 2.1% to F\$188.97 million as costs increase 31.9% to F\$180.61 million. Although operating profit declines to F\$8.36 million, the net gain advances to F\$5.43 million, later adjusted upward to F\$8.27 million.

In May 1998, the company sells another 28.5% stake to **Qantas Airways (Pty.), Ltd.**, bringing the Australian major's shareholding to 46%. Qantas also leases the Fijian national carrier a second B-747-219B, as flights to Sydney begin.

The Next Generation B-737-7X2 is delivered to Nadi on September 28. The first of its type to operate in the South Pacific, the new Boeing inaugurates service from Suva to Sydney on October 2.

The pact with **Canadian Pacific Airlines, Ltd.** is expanded on October 16. Under its terms, the two carriers, beginning on December 7, combine their marketing and fleet strengths to provide three weekly flights between Auckland and Honolulu. Canadian offers daily non-stop flights from Toronto to Honolulu and 13-times-a-week service from Vancouver to Honolulu. At Honolulu, passengers may seamlessly

transfer to the Air Pacific B-767-3X2ER for any of the three onward nonstop weekly flights for which they may be booked.

In a move designed to strengthen its route network in the South Pacific, **American Airlines** concludes a code-sharing agreement with Air Pacific on December 18. Under the arrangement, American will, in the new year, place its "AA" code on Air Pacific's four weekly return flights between Los Angeles and Nadi.

Passenger boardings jump 12.3% to 35,000, while cargo traffic accelerates 11.7% to 5.87 million FTKs. Revenues advance 30.4% to F\$370.8 million, while costs climb 23.8% to F\$344.2 million. The operating profit reaches F\$28.5 million, while a net gain of F\$13.20 million is reported.

On February 18, 1999, **American Airlines** begins to code-share on the Air Pacific nonstop B-747-219B return routes operated between Nadi and Los Angeles (LAX). The Fiji-based carrier simultaneously announces that a fifth weekly roundtrip between the two cities will commence in June.

The first of two Next Generation B-737-8X2s is delivered on May 24; it will be followed by a second in August. During the ceremony at Seattle, it is announced by Managing Director/CEO McQuay that the company is examining the possibility for year 2000 of new routes to the Cook Islands, linking Nadi, Auckland, and Rarotonga, as well as to Cairns in north Queensland.

The new Next Generation B-737-8X2 enters service on June 2 on the company's route from Nadi to Melbourne. The second aircraft begins revenue flights in August, at which point the airline's earlier model B-737s are withdrawn. The carrier becomes the first in the world to achieve 180 min. ETOPS certification for the Dash-800 type.

During the remainder of the year, the interiors of the carrier's 2 Jumbos and the B-767-3X2ER are completely renovated. A fifth Los Angeles service is introduced.

Fuel prices continue to escalate, rising 58% to a 9-year high. The cost for fuel reaches 50.4% of the company's total expenditures.

Although traffic figures are not available, financial data is released showing operating income rising 27% to FJ\$471.7, with expenses climbing 28% to FJ\$441 million. Operating profit reaches a record FJ\$30.4 million, while net gain surges 48% to FJ\$19.49 million.

On March 30, 2000, the code-share with **Qantas Airways (Pty.), Ltd.** is expanded on the Melbourne-Nadi route; the weekly Qantas B-767 service is replaced by a dual-designator flight using Air Pacific's B-747-219B.

Due to the political unrest and hostage situation in Fiji in late May into June, the carrier, on June 5, cancels its flights from Brisbane to Fiji for a week. It does, however, maintain its links from Nadi to Sydney and Melbourne. A number of government restrictions, particularly with regard to the uplifting of freight and mail, are encountered.

Twice-weekly B-737-8X2 return service is inaugurated on October 1 from Nadi to Vancouver via Honolulu.

AIR-PAK AIRLINES: United States (1967-1973). This third-level scheduled all-cargo freight line is founded at Dallas in 1967. U.S. launch customer for the Shorts SC-7 Skyvan, Air-Pak begins freight services between its base and the Texas cities of Houston, Beaumont, Sherman, Mineral Wells, and Graham.

It does not survive the first great oil crisis of 1973.

AIR PANAMA INTERNATIONAL, S.A.: Panama (1966-1991). Air Panama is formed in September 1966, but is reorganized on April 27, 1967, with substantial support from the Spanish flag carrier **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, which had (eventually unfulfilled) plans to form a Spanish-speaking South American airline consortium. Employing DC-9-30s acquired from the Madrid-based major, Air Panama launches services in July from Miami to Lima via Gyaquil. Mexico City and Guatemala City join the route network in 1967-1968.

In August 1969, the company succeeds **PAISA (Panamena de Avia-cion Internacional, S.A.)** as Panama's primary international airline. Its fleet is strengthened by the addition of a leased DC-9-15.

Service is started to Bogota and in 1970, 3 Boeing 727-81s are acquired to replace the **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** DC-9-30s. Bogota joins the system in October 1972.

The Mexico City frequency is extended to Los Angeles in 1975 while the Miami route is lengthened to New York and Montreal. In January 1976, Guatemala City and Montreal flights are suspended and replaced by operations to Caracas. By 1977, airline employment totals 665.

In November 1978, the shares of the Spanish flag carrier are purchased by a group from Panama led by President Carlos Elea; **British Airways, Ltd. (2)** takes over the carrier's management and support in August 1979. By 1980, the fleet also includes a Boeing 727-46. Enplanements total 142,583.

Customer bookings decline 2.8% in 1981 to 138,700 and cargo plunges by 11.6% to 236 million FTKs.

Enplanements in 1982 total 150,237. The employee population is cut 2.3% in 1983 to 511. Passenger boardings dip 0.7% to 140,409, but freight jumps 37.8% to 1.75 million FTKs. On revenues of \$30.2 million, the carrier suffers a \$3.1 million operating loss.

Enplanements total 130,779 in 1983. Airline employment increases 21.1% in 1984 to 403. Passenger boardings jump 26.2% to 177,207 and cargo skyrockets 84.3% to 3.24 million FTK.

The workforce is increased again in 1985, growing 5.2% to 424. Customer bookings accelerate 13.6% to 201,248 and freight increases 33.6% to 4.33 million FTKs. Operations continue apace in 1986-1988.

The fleet at the beginning of 1989 includes 1 owned B-727-81 and 1 B-727-247, the latter leased from **Faucett Peruvian Airlines, S.A.** Services are maintained to Miami, San Jose, Bogota, Lima, Caracas, and Mexico City until December 20-21, at which point U.S. forces invade the country to remove its government. At the time of the assault, both aircraft are out of the country; one is stranded at Lima and the other at Bogota. Unable to get its aircraft home because the nation's airports are closed, the carrier is now shut down.

Plans are made by Operations Manager Guillermo Earle to resume operations in January 1990, even as **Faucett Peruvian Airlines, S.A.** reclaims its chartered Boeing, leaving the carrier with only the B-727-81, which is still at Bogota.

In September, the competing carrier **COPA (Compania Panamena de Avia-cion, S.A.)** announces its plans to purchase the airline, still over \$1 million in debt. The transaction will not occur. Instead, the carrier is purchased from the government by a group of private Panamanian and U.S. investors on November 6, 1991 and is reorganized under the name **Panama Air International, S.A.**

AIR PARABAT, LTD.: 4/5 Jobal Road, Mohammadpur, Dhaka, 1207, Bangladesh; Phone 880 (0) 2912 0589; Fax 880 (0) 2956 1668; Code ASJ; Year Founded 1994. The Karim family and the Karim group of companies, with private funding from the Dhaka-based IFCB bank, establish the Air Parabat Flying Academy on January 8, 1994. The company trains pilots and flight crews as well as other personnel for the aviation industry.

During late 1997, Chairman Abdul Karim Khandker and Managing Director Nadera Alam determine that domestic scheduled and charter operations should be inaugurated. To this end, the concern's workforce is increased to 45 and 2 Let L-410UVPs are acquired.

Revenue flights commence on January 11, 1998, linking the carrier's base with Barisai, Chittagong, Jessore, Rajshahi, and Sylhet.

An L-410UVP goes inoperative at Cox's Bazaar during the first week of June. The second is damaged beyond repair as the result of a forced landing at Savar on June 28. At this point, the company, without flight equipment, is forced to suspend operations while replacements are sought.

The Let damaged at Cox's Bazaar is returned to the Czech Republic for repairs at the Let factory, which has been purchased by the U.S.-based Ayers Corporation. Huge losses are incurred over the next six months.

A pair of upgraded Let-410s are finally delivered to Dhaka in mid-December. With decreased fares offered for an introductory period, Air Parabat resumes thrice-weekday roundtrip flights from Dhaka to Cox's

Bazaar via Chittagong on December 27. On Fridays, however, there is just one roundtrip.

Airline employment stands at 40 as 1999 begins. In January, a third L-410UVP is acquired.

AIR PARAGUAY. See LAP PARAGUAYAN AIRLINES (LINEAS AEREAS PARAGUAYAS, S.A.)

AIR PARIS, S.A. See TAT FRENCH REGIONAL AIRLINES, S.A.

AIR PENNSYLVANIA: United States (1980–1982). Eugene Plum's FBO and charter operator **Perkiomen Airways**, which had operated a 1976–1979 scheduled service under its own name from its base at Reading, Pennsylvania, establishes an airline division in January 1980 and commences operations under the marketing name Air Pennsylvania.

The fleet comprises 2 Convair CV-240s, 1 Piper PA-31-310 Navajo, and 1 PA-31-350 Navajo Chieftain; these link the company's base with Philadelphia, Allentown, Bethlehem, Easton, and Atlantic City. The Chieftain crashes at Philadelphia on July 25 (three dead).

Traffic downturns and cash-flow difficulties brought on as a result of the ensuing crash publicity, combined with the summer 1981 PATCO air traffic controllers' strike cause the company to cease operations in 1982.

AIR PHILIPPINES (1). See PACIFIC EAST ASIA CARGO AIRLINES

AIR PHILIPPINES (2): 15th Floor, Multinational Bancorporation Centre, 6805 Ayala Ave., Makati City, Metro Manila, Philippines; Phone 63 (2) 845-1901; Fax 63 (2) 845-1975; <http://www.airphilippines.com>; Code 2P; Year Founded 1995. AP-2 is set up at Manila's Domestic Airport on February 13, 1995 as one of the new carriers to challenge Philippines Airlines (PAL) in the wake of the nation's deregulation of air transport. Founder William Gatchalian, a corporate magnate known as "The Plastic King," announces plans to acquire a large fleet and launch services from Subic Bay to Manila, Cebu, and Davao by December.

As this ambitious goal is sought, Lisandro G. Abadia is named chairman, with Rodolfo E. Estrellada as president/CEO. A workforce of 600 is recruited and a Boeing 737-222, first flown by **United Airlines**, is chartered at year's end from International Air Leases while a B-737-266A is leased for a year from **Air Atlanta Icelandic, H.F.**

The 2 Boeings are able to inaugurate low-fare, no-frills services on February 1, 1996, from Manila to Subic Bay, Iloilo, and Zamboanga. During the spring, the company agrees to purchase 6 Nihon YS-11A-109s from Japan. In April and May, 2 Nihons arrive in Manila, 1 each formerly operated by **All Nippon Airways Company, Ltd.** and **Japan Air System, Ltd.** The turboprops inaugurate frequencies to Kalibo, Legazpi, and Naga.

In early June, a third B-737, a Dash-291, is leased from Sydney-based **Pacific Transair (Pty.), Ltd.** and is used to commence service from Manila to Cotabato and Davao.

While taxiing at Naga on June 24, a YS-11-109 with 34 passengers strikes a ground power unit, catching fire. All aboard are safely evacuated before the turboprop burns up.

On August 30, the airline is grounded when government inspectors find landing gear cracks on two of the Boeings during a routine safety check. With repairs made, the company is back in the air on September 15.

The Interlease Boeing is purchased on October 10, along with two other Dash-222s. It is announced that the carrier will purchase 12 more from Interlease over the next three years at a reported cost of \$90 million. These, together with the last of the YS-11As, arrive at Manila by Christmas and flights to Puerto Princesa by the end of December.

Early in 1997, YS-11A flights commence from Cebu to Iloilo, Kalibo, and Tacloban, with onward connections to Manila. Augustus Paiso becomes president/CEO and plans are made to expand into international services in 1998, though these considerations are slowed by the regional

economic downturn of the year's second half. Orders are placed for 6 B-737-222s. It will be reported, midway through the next year, that the company has turned "a small profit" (later learned to be \$150,000) for these 12 months.

The Asian fiscal crisis causes the carrier, during the first quarter of 1998, to cut its "Baby Boeing" order in half and to shelve its international growth ideas in order that it can, in the words of CEO Paiso, "ride out the turmoil." It is pointed out that the likely effect of the devalued Philippine peso will be negative and that the devaluation will increase the cost of imported spare parts.

The initial dismal view is offset by activities during the second quarter, particularly towards late June. A pair of MD-88s are acquired during the third week and plans are made to initiate international services in August from Manila to Taipei and Kaoshiung on Taiwan as well as the Vietnamese community of Ho Chi Minh City.

The expansion plan crashes well before it can get off the ground. On September 18, the Philippine government's Air Transportation Office (ATO) grounds all of the company's B-737-222s and YS-11s as the result of a safety audit that finds deficiencies in maintenance and flight operations procedures.

After a heated summer of protest and negotiation, **Philippine Airlines (PAL)** is headed for closure by mid-month. On September 21, the ATO lifts its suspension order against Air Philippines and the government summons President/CEO Paiso to a meeting with Philippine President Joseph Estrada in Malacanang next day.

Meeting with Estrada on September 22, Paiso and the leaders of **Cebu Pacific Air**, **Grand International Airways**, **Asian Spirit**, and several other small operators promise to acquire additional aircraft and fill any vacuum left by PAL within a month. The government, for its part, agrees to allow an increase in fares and notes that it may provide loans necessary to help speed a build up in capacity. Specifically, President/CEO Paiso indicates that his company will increase its seat offering from 6,990 seats-per-day to 8,552 within two weeks. Simultaneously, Air Philippines adds two routes to its current three.

Philippine Airlines (PAL) closes down at 12:01 a.m. local time on September 23. The next day, the government instructs Air Philippines to take over nine of PAL's aircraft and employ them under charter to operate domestic services. It cannot, for legal and technical reasons, take over PAL's fleet of 9 Fokker 50s as requested, but does make arrangements to lease another B-737-200.

Within a week, the government is able to make arrangements for PAL to resume at least domestic services, which it does on October 9. Still, by the end of the month, Air Philippines has managed to gain a 15% share of the domestic market, which is much larger than it had operated before.

In October, Taiwan-based **U-Land Airlines, Ltd.** purchases a quiet 30% minority stake.

In the fourth quarter, the company visits Bacolod, Cagayan, Cebu, Davao, Iloilo, Kalibo, and Tacloban from Manila. Additionally, 15 smaller destinations also receive service. The only flights originating other than from Manila are one each from Cebu to Davao and Cebu to Iloilo.

Pending runway repairs, the carrier ceases service to Iloilo and Cotabato between January 12 and 25, 1999. Flights to Iloilo are rerouted to Roxas City. Otherwise, the carrier continues to offer scheduled flights within the Philippines to Bacolod, Cebu, Cotabato, Davao, Kalibo, Legazpi, Manila, Naga, Puerto Princesa, Subic, and Zamboanga.

The on-line news service **Asia Pulse (Pty.), Ltd.** reports the results on March 10 of a two-week snapshot of domestic market share, compiled for February 1–15. Between them, Air Philippines, **Cebu Pacific**, and **Philippine Airlines (PAL)** offered 31,714 seats during the period (not all were occupied). Of the total number of passengers boarding planes of the 3 airlines, PAL got 15,250 or 63%, followed by Cebu Pacific with 7,715, and Air Philippines with 1,350.

Having received government authority to divest upwards of 90% of its shares, the company, during the week of March 15 holds discussions with **U-Land Airlines, Ltd.** concerning the possible partnership in which the Taiwan-based carrier will take a 50% stake.

The following week, the carrier receives regulatory approval for an extensive expansion of both regional and long-haul services. Under the program, which company officials hope to start as early as June, the company will initiate new domestic flights from Cebu City to Osaka and Fukuoka in Japan and from Manila to Taipei, Kaoshiung, Los Angeles, San Francisco, and Hong Kong. Acquisition of several Boeing 747 Jumbos and route authority to enter the overseas nations remains to be obtained.

Following repairs made to the runway at Cotabato Airport, the company on April 16 resumes flights from that point to Manila. The company also opens a homepage on the World Wide Web at this time.

Having detached from its tow truck while being taken off a Manila taxiway, an unmanned B-737-222 is damaged on June 29 when it rolls into a hangar.

All aircraft are grounded for a week in September because the carrier is not in compliance with Air Transportation Office maintenance procedures.

Details concerning the year's traffic are not available. Sketchy financial figures show a \$1.3-million net profit generated through September. Service between Manila and Subic is resumed on December 20 with twice-weekly roundtrips.

As 2000 begins, the company continues to seek Manila's approval for the initiation of international services to Taiwan and Hong Kong. It also forms a new subsidiary, **PhilAir**, or **Philippine International Airways**.

In a further effort to boost the economic recovery of **Philippine Airlines**, the Securities and Exchange Commission, on March 16, approves an agreement between Air Philippines (2) and the flag carrier under which the domestic airline will lease 3 B-737-200s for local service flights.

Inbound to Davao on an April 19 service from Manila, Flight 541, a B-737-2H4 with 7 crew and 124 passengers, crashes into a coconut plantation 7 miles from the runway, disintegrates and takes fire; there are no survivors.

Stockholders of the holding company Air Philippines International Corporation vote on August 11 to change the company's name back to Forum Pacific, Inc. and to cancel the planned buy into Air Philippines Corporation.

AIR PLAINS: United States (1978–1980). Also known as **Four Sons Flying Service** during the first year of its existence, Air Plains is set up at Dodge City, Kansas, during the first quarter of 1978. Employing a Beech 18, the carrier inaugurates scheduled passenger and cargo services on June 26, linking its base with Garden City, Liberal, Topeka, Wichita, and Kansas City.

Operations halt in April 1980.

AIR PLUS ARGENTINA, S.A.: Buenos Aires, Argentina; Phone 54 (114) 393 9935; Fax 54 (114) 328 3609; Year Founded 1999. Formed in late summer 1999 by Luis and Florencia Lupori, in association with **Air Plus Comet, S.A.**, this company is originally, and briefly, known as Flight Bus. The new concern is renamed in October, just before receipt of an Airbus Industrie A310-324 on charter from the Spanish associate.

Holiday tourist flights to points in the U.S. begin in November and continue.

AIR PLUS COMET, S.A.: Edificio Barjas 1, Madrid, Spain; Phone 34 (91) 329-4929; Fax 34 (91) 329-4929; Code ZZ; Year Founded 1996. APC is established at Madrid's international airport late in 1996 to provide holiday charter flights from Madrid and Palma de Mallorca to the leisure market in Spain, the U.S., and the Caribbean.

Authority is sought and received from the U.S. Department of Transportation and transatlantic revenue flights to New York and Miami begin in late March 1997 with a single Airbus Industrie A310-324.

Four more A310-324s join the fleet during the next four years as unscheduled flights are also undertaken to Cancún, Aruba, Margarite Is-

land, Caribe, Cartagena, and Varadero. One is chartered to **Air Plus Argentina, S.A.** in late 1999.

AIR POLYNESIE, S.A.: French Polynesia, (1970–1987). On January 1, 1970, the **UTA French Airlines, S.A.** subsidiary **Reseau Aerien Interinsulaire, S.A. (RAI)** is renamed. Scheduled passenger services are maintained to some 30 destinations in French Polynesia. Equipped with 2 Douglas DC-4s, 2 de Havilland Canada DHC-6s, 1 Britten-Norman BN-2 Islander, and 1 Short Sandringham 7, the company operates from Papeete to the Society Islands, Austral Islands, Marquesa Islands, Gambier Islands, and Tuamotu Archipelago.

Having been relegated to secondary service for most of a decade, the four-engine Sandringham flying boat makes its last flight on September 29. Enplanements in 1971, the first full year under the new name, total 144,150.

In 1972, 2 Fokker Fairchild FH-227-200s are acquired, replacing 1 DC-4 and 1 Twin Otter on routes to Raiatea, Huahine, Bora-Bora, Rangiroa, and Tubuai. New services are started to Tubuai, Maupiti, and Hiva Oa. Airline employment is 480 as passenger boardings climb 7% to 155,000 and freight traffic grows by 15.5%. The fleet in 1973 includes 3 F.27s, 2 Twin Otters, and 1 Islander. The workforce totals 400 and passenger traffic is up by 11% to 201,000.

Enplanements in 1974 total 239,206.

Airline employment in 1975 is 460. An older model Twin Otter is replaced by a new DHC-6-300. An intensive landing field program is initiated on the various islands.

Passenger boardings accelerate 8.73% to 262,000 while freight is up 5.2% to 120,000 FTKs.

The number of workers is reduced by 8.7% in 1976 to 420. The retired administrative council head, Roger Carour, is succeeded by Guy Sene while the retiring director general, Joseph Lesne, is replaced by Henri Ruer. During the year, service is inaugurated to Rurtu, Kaukura, Anaa, and Tikehau and by year's end, the company is serving 16 islands in French Polynesia.

Customer bookings accelerate 10.5% to 289,100 and cargo is up to 123,000 FTKs, a 2.5% increase.

Flights begin in 1977 between Tahiti and the eastern Tuamotu and Gambier Islands. Enplanements total 307,020. In 1978, Director General Henri Ruer's carrier employs 410 workers. The neglected and retired Short Sandringham 7 is recovered and shipped to France, where it will be come a prize exhibit of the Musee de l'Air et L'Espace at Le Bourget Airport.

Passenger boardings jump 16% to 365,500 while freight traffic accelerates 34.7% to 188,000 FTKs.

Sixty new employees are hired in 1979. Britten-Norman BN-2 Islander flights begin within the Marquesas while F.27 service is launched from their new Nuku Hiva Airport to Papeete.

Customer bookings accelerate 12.5% to 321,400 while cargo traffic drops 2.7%.

A fifth F.27 is acquired in June 1980. The world economic recession of the early 1980s impacts the Air Polynésie traffic as enplanements fall from 311,800 in 1981 to 273,117 in 1983. After the sale of 1 F.27 early in the latter year, the fleet includes 4 F.27s, 2 de Havilland Canada DHC-6 Twin Otters, and 1 Islander. Michel Nouailee is named director general in 1984 and 2 Fokker F.27 Friendships are acquired.

In 1985–1986, as the result of a program of airfield building begun in 1975, the company serves a total of 35 stations. In January 1987, after **UTA French Airlines, S.A.** departs, the company is renamed **Air Tahiti, S.A. (2).**

AIR PORTUGAL, S.A. See TAP AIR PORTUGAL, S.A.

AIR POST NEW ZEALAND, LTD.: Ardmore Airfield, P.O. Box 516, Papakura 1733, New Zealand; Phone 64 (9) 298-7202; Fax 64 (9) 298-1455; Code P3S; Year Founded 1991. Air Post New Zealand, Ltd. is established at Auckland in 1991 to provide all-cargo mail service

under contract to the national postal service. A fleet of 2 owned and 1 leased Fairchild Metro IIIs is placed into service.

The fleet is increased during **1992** by the purchase of the leased Fairchild and the addition of 1 Piper T-1040 and 2 Fokker F.27-500s. A Piper PA-31T Cheyenne is delivered in **1993** and operations continue apace into **1994**.

Hugh Jones is managing director in **1995–2000** as airline employment grows to 140. The fleet is increased by the addition of 2 Fairchild Metro 23s, as well as 2 Eurocopter AS-355 Ecureuil IIs and 4 Eurocopter BK-117s.

AIR POST OF BANKS, LTD.: United Kingdom (1920). With two Westland Limousines lent by their manufacturer, this obscure special-duty carrier flies bank documents London–Paris between September 13 and November 2, **1920**.

AIR PROVENCE CHARTER, S.A. See AIR PROVENCE INTERNATIONAL (COMPAGNIE AIR PROVENCE INTERNATIONAL, S.A.)

AIR PROVENCE INTERNATIONAL (COMPAGNIE AIR PROVENCE INTERNATIONAL, S.A.): France (1985–1997). Air Provence, S.A. is formed by the J. P. Rozan travel group in **1985** at Aeroport de Marseilles–Provence to offer executive passenger charters from southern France to destinations throughout Europe, the Mediterranean, Africa, and the Middle East. The initial fleet comprises 1 BAe HS 125, 1 Gates Learjet 24, 1 Beech Super King Air 200, 3 Beech King Air 90s, 3 Beech B-55 Barons, 1 Piper PA-23 Aztec, 1 Cessna 172, and 1 each Aerospatiale Lama, Alouette III, Gazelle, and Ecureuil helicopters.

In **1986–1988**, the fleet is upgraded by the addition of 3 Grumman Gulfstream G-159s, 2 more Super King Air 200s, and 1 more King Air 90. In **1989**, President Jean-Pierre Rozan's carrier begins to offer scheduled services to destinations in southern France. The fleet is further enhanced in **1990** by the acquisition of 7 additional G-159s and 2 more King Air 90s.

Company employment is increased 6.9% in **1991** to 156 and the leased fleet now includes 5 Beech King Air 90s, 3 Beech Super King Air 200s, 1 Dassault Falcon 20C, 10 Grumman G-159 Gulfstream Is, and 1 Gates Learjet 25C.

The corporate identity is changed and the carrier is renamed Air Provence International, S.A. Scheduled passenger and cargo services are now opened to stops in the Middle East. A total of 55,000 passengers are flown on the year and revenues total \$18 million, a 12.5% increase over 1990.

To facilitate better service to its newer destinations, the carrier deletes 1 G-159 in **1992**, replacing it with 2 Aerospatiale (Sud) Caravelle XIIs. In **1993–1994**, President Rozan oversees a workforce of 110. His fleet now comprises 8 G-159s, 4 Beech Super King Air 200s, 1 King Air 100, 1 Gates Learjet 25C, and 12 Caravelle XIIs. During these years, the company becomes a subsidiary of **EuroBelgian Airlines, S.A.**

Just after landing at Lyon at the completion of a service from Rouen on June 28 of the latter year, the wing of a Gulfstream I, with 3 crew and 24 passengers, strikes the runway, forcing the aircraft to flip over and catch fire. Although the aircraft is damaged beyond repair, there are no fatalities.

The Caravelle fleet is reduced to 2 in **1995** as a pair of British Aerospace BAe (HS) 748s are acquired. Charters continue to be offered from Paris (CDG) throughout Europe, the Mideast, and Africa.

One more Caravelle is removed in early **1996** as operations continue to decline. When, in April, **EuroBelgian Airlines, S.A.** is purchased by **Virgin Atlantic Airways, Ltd.**, its Air Provence subsidiary is also taken over. Employing its Caravelle XII, the company completes the final SE-210 European scheduled service in October.

Air Provence continues operations under its own name until November **1997**. At that point, it is reformed and resumes flying as **Virgin Express France, S.A.**

AIR PUERTO RICO: United States (1986–1992). Air Puerto Rico is founded at San Juan in the late spring of **1986** to offer scheduled feeder flights in a code-sharing arrangement with **World Airways**. Equipped with 5 Shorts 330s, CEO Mark Morro's new entrant begins revenues services on July 11, competing with the interline partners of **American Airlines** and **Eastern Air Lines**. World Express flights commence five days later from San Juan to Mayaguez and Ponce.

When **World Airways** ends its experiment with scheduled services in September, APR finds itself out on its own without the support enjoyed by its rivals.

Employing a pair of Douglas DC-9-10s leased from **Emerald Airlines**, charter service is begun on December 20 from Miami to La Romana, Puerto Plata, and Santo Domingo, with continuing flights to San Juan. Traffic figures are not available, but are believed to be slight.

The intra-island Shorts flights cease on Puerto Rico in January **1987**, due largely to increased insurance costs. Unable to continue, the company files for Chapter XI bankruptcy in March. The carrier cannot successfully reorganize and remains dormant. It is finally ordered liquidated by the bankruptcy court in early **1992** under Chapter VII of the bankruptcy code.

AIR QUEENSLAND (PTY.), LTD.: Australia (1982–1988). In January **1982**, **Bush Pilots Airways (Pty.), Ltd.**, is renamed Air Queensland (Pty.), Ltd. and is given a new livery—white fuselage, yellow tails, black cheatline, titles, and markings.

The following year, **1983**, sees bookings of 265,000.

In **1984**, the carrier continues to serve a route network that includes 40 points in Queensland, plus Groote Eylandt in the Northern Territory. Flights are also undertaken to a pair of holiday resorts—Lizard Island Lodge and Top of Australia Wilderness Lodge.

The fleet now comprises 2 Britten-Norman BN-2A Trislanders, 5 Fairchild Metro IIs, 3 Fokker F.27-200s, 5 de Havilland Canada DHC-6-300 Twin Otters, 5 Douglas DC-3s, and 6 Cessnas (2 each of the 310, 402, and 404).

A total of 274,320 passengers are carried on the year and a net A\$117,385 profit is earned.

The employee population in **1985** is 319, a 3.9% increase, and orders are placed for 2 Avions de Transport Regional ATR42s. In March, the carrier becomes a subsidiary of **Trans-Australian Airlines (Pty.), Ltd.**, when the national acquires 95% interest.

Passenger bookings dip 0.8% to 254,000 and freight is off by 4% to 917,000 FTKs. A A\$1.96-million operating loss is suffered; however, the net profit is A\$473,881.

One DC-3 and all 5 Fairchild Metro IIs are retired in **1986**; just after delivery, in September, the 2 ATR42-320s are leased to **Air Pacific, Ltd. (2)**.

In every way, the situation continues to deteriorate in **1987**. In July, the 2 ATR42-320s are returned and leased to **JAT Yugoslav Airlines**. Operations from the Brisbane hub are halted; operating only from the Cairns hub, the carrier is forced to stop flying in April **1988**.

In **1990**, the regional is combined with **Resort Airlines (Pty.), Ltd.** to form a new third-level feeder carrier, **Australian Regional Queensland (Pty.), Ltd.**

AIR RAINBOW, LTD.: Nanaimo, British Columbia, Canada; Year Founded 1992. Murray LaSage forms this small passenger and cargo charter operation at Nanaimo, British Columbia, in **1992**. Revenue operations commence with 1 Beech 18, 4 de Havilland Canada DHC-2 Beavers, and 2 Cessna 185s. Services continue.

AIR RAROTONGA: P.O. Box 79, Rarotonga, Cook Islands; Phone 682 22890; Fax 682 20979; http://www.ck/edairaro.htm; Code GZ; Year Founded 1977. Founded in December **1977**, this carrier initiates sight-seeing and charter Cook Island service with a Cessna 337 on July 7, **1978**. After four years of low-key operations, the company is reorganized and refinanced in **1982**, receiving new equipment and beginning scheduled interisland operations.

Daily nonstop flights are now undertaken from Rarotonga to Aitutaki and in 1983, air taxi flights are undertaken from Rarotonga to Penthyn and Rakahanga every two weeks. Passenger boardings during this period grow steadily from 6,241 in 1981 to 9,472 in 1983. Later in the decade, the 12-employee company inaugurates services to Manihiki, Penrhyn, and Rakahanga in the northern Cook Islands with its fleet of 1 each Beech B-80 Queenair, Piper PA-31-350 Navajo Chieftain, and Cessna 172.

By the early 1990s, Managing Director Evan P. Smith's 52-employee airline has grown to a point where the single-engine equipment is replaced by 2, later 3, leased Embraer EMB-110P1 Bandeirantes.

Airline employment stands at 50 in 1998–1999. Destinations visited include Atju, Mangaia, Manihiki, Mauke, Mitiaro, Penhyn, and Pukapuka.

In July 2000, the carrier receives a former **British Midland Commuter, Ltd.** SAAB 340A under lease from its manufacturer. Christened the *Ewan F. Smith*, it replaces a pair of EMB-110 Bandeirantes and is the first plane of its type outfitted with a life raft. Under an interline agreement with **Air New Zealand, Ltd.**, the SAAB flies regularly to the Cook Island points of Aitutaki, Manihiki, and Penrhyn and also makes a weekly run to Niue.

AIR RESORTS AIRLINES: United States (1975–1996). Privately owned ARA is established at Carlsbad, California, in March 1975 as an air taxi operator and flying school. In 1979, the company establishes an airline division and undertakes intermittent scheduled flights linking its base with Burbank, Los Angeles, Oxnard, San Diego, and Santa Barbara, and Las Vegas with Arizona's Grand Canyon. The company begins to assemble one of the largest all-Convair CV-440 Metropolitan fleets in the world. Many of these are employed on charter and contract service operations.

Late in 1982, the former **American Airlines** subsidiary **American Inter-Island**, which had operated scheduled flights in the Caribbean, is purchased, together with its 5 CV-440s, and merged. The Caribbean services are resumed on December 15.

Eleven CV-440s are on hand in 1983 as significantly more charter services are introduced and scheduled flights are cut back. Operations in the Virgin Islands are wound up and the ex-AII CV-440s are flown to California.

Scheduled service is abandoned entirely on April 1, 1984.

Flight 953, a CV-440 with 5 crew and 39 passengers (members of the East Tennessee State University basketball team from Johnson City) and chartered by **Tennessee Valley Airways**, loses power to both engines after takeoff from Jasper, Alabama, on December 16. An emergency landing is made, during which the tires blow out, causing the plane to veer off the runway into a ditch. Although there are no fatalities, 9 players are injured and the Convair must be written off.

The charter carrier voluntarily grounds its aircraft on December 20 and upon inspection the next day, the FAA suspends the company's operating certificate for safety violations.

The operating certificate is reinstated in early January 1985 and the company orders several of its Metropolitans converted into Convair Super 580s.

Charter and contract service operations are undertaken in 1986–1987 and in 1988, 4 Convairs are wet-leased to **Resort Commuter Airlines**. Consideration is given to resumption of scheduled services. Planning and preparation takes all of 1989.

After a six-year hiatus, regularly scheduled passenger revenue flights are resumed on May 14, 1990 from San Diego to Tucson. In December, the company merges with **Air L.A.**; however, both airlines are allowed to operate separately under their previous identities. Scheduled cargo service is started from Tucson, but is abandoned in January 1991.

By 1992, the company is one of the largest Convair operators in the world, flying 6 CV-440s, 4 CV-580s, and 1 CV-340. Merger discussions are held with an unnamed competitor and revenues reach \$4 million.

Operations continue apace in 1993–1995, during which years the fleet is altered to include 3 CV-340s, 5 CV-440s, and 4 CV-580s.

Unable to maintain economic viability, the company closes its doors in 1996.

AIR RESPONSE/ORLANDO JETS: 469B Herndon Ave., Hangar 72, Orlando Executive Airport, Orlando, Florida 32803, United States; Phone (407) 898-0098; Fax (407) 898-0520; Year Founded 1986. Specializing in 24-hour quick response service, Air Response is established at Orlando Executive Airport in 1986 to offer passenger charters throughout the U.S., Canada, Mexico, the Caribbean, and South America. Revenue flights begin and continue.

By 1998–2000, a flight staff of 9 full-time and 2 part-time pilots is employed to operate the company's Learjet 25B and Learjet 35A from Florida. A larger base has also been established at Albany County Airport in New York. From there, Manager Don Jones flies 2 Learjet 25s and 1 each Learjet 24, Learjet 35A, Piper PA-31-350 Navajo Chieftain, Cessna 340, and Mitsubishi Mu-2.

AIR REUNION, S.A.: Reunion (1989–1990). Affiliated with **Air France** and **Heli Union, S.A.**, **Air Reunion, S.A.** is formed in 1989 to succeed **Reunion Air Service, S.A.** New General Manager Michael Pipeineau's fleet comprises 1 British Aerospace BAe 748-B2, 1 Piper PA-31-310 Navajo, and 1 Fokker F.28-1000, the latter leased from **TAT (French Regional Airlines, S.A.)**.

Regional charters and contract service flights are undertaken into East Africa and throughout the western Indian Ocean area. In addition, weekly scheduled services are maintained between St. Denis and Dzaoudzi, in the Comoros Islands. Other destinations visited include Mayotte, Johannesburg, Nairobi, Noroni, Takatave, and Ndjunga.

Enplanements total 26,570 in 1990. Revenues are MF 105,000, expenses are MF 99,244, and the net profit is MF 5,670. Late in the year, the carrier is renamed **Air Austral, S.A.**

AIR RHODESIA, LTD. (1): Southern Rhodesia (1964–1967). The first Air Rhodesia is formed in 1964 as a wholly owned subsidiary of **Central African Airways Corporation (CAA)** to provide scheduled service with a pair of provided Douglas DC-3s to points in the country and throughout southern Africa. The principal route is flown roundtrip from Salisbury to Ft. Victoria 10 times a week.

Late in 1966, frequencies on the Ft. Victoria route are advanced to 12 times a week. A third DC-3 is provided and, early in 1967, a thrice-weekly roundtrip begins between Salisbury and Gwelo.

On September 1, in anticipation of the disbandment of CAA, a second Air Rhodesia is legally chartered. The multistate CAA shuts its doors on December 31.

AIR RHODESIA, LTD. (2): Southern Rhodesia (1967–1980). In anticipation of the disbandment of Central African Airways Corporation, a second Air Rhodesia is chartered at Salisbury on September 1, 1967. Mervyn E. Eyett is named general manager and he expands the workforce to 1,000. Pending the end of CAA, flights with four Douglas DC-3s continue as before over the next four months, linking the capital with Gwelo and Victoria Falls.

When CAA shuts its doors on December 31, the national airline assumes its responsibilities for its own operation with the 4 DC-3s and 5 Vickers Viscount 782s (*Lundi, Shangani, Mazoe, Sabie*, and an unnamed unit) on foreign and domestic routes.

In 1968, the fleet comprises 8 aircraft. These are now given aircraft livery consisting of a white top with dark blue and light blue cheatlines along the side of the fuselage. Sloping light and dark blue lines appear on the tail fin, meeting at an angle at the top. Superimposed over the tail lines is a stylized Zimbabwe bird, nicknamed named a "twiggi bird."

Scheduled service is inaugurated to Beira, Blantyre, Durban, Johannesburg, Lourenco Marques, and Vilanculos.

A total of 173,000 passengers are carried and revenues earned are \$6.6 million. A small profit is reported.

The workforce in 1969 is 975 and enplanements total 192,962. In 1970, the employee population is increased by 4% to 1,016. Now operating

6 Viscount 782s and 3 DC-3s, the carrier flies 229,717 passengers, an increase of 16% over 1969; freight traffic, however, dips 3%.

International sanctions are put in place against Rhodesia during **1971–1972**, even as the carrier faces ever-stiffening competition from **South African Airways (Pty.), Ltd.** Secret plans are put in place to break the embargo and gain new aircraft. Enplanements during the latter year total 202,146.

Without warning, 3 former **Eastern Air Lines** Boeing 720Bs, obtained by covert means, arrive at Salisbury on the evening of April 14, **1973** and are quickly taxied away from public view to the company's hangars. Without fanfare, the trio is christened (*Manicaland*, *Matabeleland*, and *Mashonaland*) and prepared for service. The first Rhodesian B-720B commercial flight occurs on June 6, a charter from Salisbury to Bulawayo and Durban.

Scheduled service—begun just as the Yom Kippur Mideast war breaks out—is stillborn, as fuel prices jump a huge 35% to an annual total of Rhs\$820,000. The last scheduled DC-3 service is flown in October, although the venerable aircraft will remain available for use. The tightening trade ban causes service to Gwelo to be suspended.

Passenger traffic this year grows by 9.2% to 394,000 while freight skyrockets 53.2%.

At this point, new General Manager Pat Travers's workforce totals 1,113 employees. Cargo soars a massive 117% in **1974** while passenger boardings jump 14% to 448,847. The revolution in Portugal will have a dramatic impact on company activities several years hence.

Passenger bookings increase 1.7% in **1975** to 456,000, but freight falls 25%. Late in the year, the B-720Bs are placed on the company's Victoria Falls routes.

In **1976–1977** the growing political isolation of the minority-white-ruled nation forces the carrier to begin constricting its international route network. In March of the former year, newly independent Mozambique bans company flights not only from Blantyre and Beira, but also from overflying its territory. Traffic is static.

Foreign service in **1978** is flown only to the South African cities of Durban and Johannesburg. Chairman F. E. Buch's carrier employs 1,235 workers and possesses a current fleet of 3 Boeing 720Bs and 7 Viscount 700s.

On September 3, in the first successful ground-to-air missile attack on a civilian airliner in scheduled service, Flight 825, a Viscount 782D, piloted by Capt. John Hood with 3 other crew and 52 passengers and en route from Kariba to Salisbury, is shot down some 55 km. S of its point of origin by Joshua Nkomo's ZAPU guerrillas using a Soviet-made 9M32 Strela or SAM-7 heat-seeking missile (38 dead); of the 18 survivors, 10 are murdered by guerrillas at the bush crash site.

The disaster also has political cost to the government of Prime Minister Smith, which had recently held secret discussions with Nkomo in Lusaka. White public opinion against the freedom movement hardens.

Freight traffic this year grows by 5%, but enplanements are down to 423,000.

On February 16, **1979**, a guerrilla SAM-7 missile destroys Flight 827, a Viscount 782D piloted by Capt. Jan Andre de Plessis with 4 other crew and 54 passengers, shortly after its takeoff from Kariba for the continuation of a flight to Salisbury that had originated at Victoria Falls; there are no survivors. Nkomo will announce that the downing had been a "mistake," caused by bad intelligence that the commander-in-chief of the Rhodesian armed forces would be aboard.

Immediately after this attack, seven of the company's 50 flight attendants quit. **South African Airways (Pty.), Ltd.** cancels its twice-weekly Salisbury to London service, as well as its twice-weekly roundtrips between Johannesburg and Victoria Falls.

To protect the remaining Viscounts, all of their shiny metal surfaces, including propeller blades and hubs, are painted in a special yellow-green matte paint. Special engine guards, designed to fend off heat seeking missiles, are attached to nacelles.

On March 1, Air Rhodesia terminates all flights to Wankie and all services between Kariba and Victoria Falls.

Hoping to win permission to obtain larger aircraft, the company begins construction of a large new Salisbury hangar on the grounds of the Airways Club playing fields.

As the nation approaches a change from minority to majority rule, the carrier is briefly labeled **Air Zimbabwe-Rhodesia, Ltd.**, but in June **1980**, is rechristened **Air Zimbabwe Corporation**.

AIR ROSE, A.S.: Turkey (1997–2000). This Turkish charter operator is established by Alaeddin Szdemir and Mesut Sever at Antalya in October **1997**. One each Boeing 737-33A and Next Generation B-737-7L9 are leased, the latter, from **Maersk Air, A.S.**, is christened *Berkcan*. They are employed on May 21, **1999**, to launch flights to coastal holiday destinations from Paris, Brussels, Rome, and Amsterdam. The workforce grows to 91 and plans are made to initiate services to the U.K. and northern Europe.

Unfortunately, heavy losses and rising costs force the company to suspend operations in late March **2000**. It will be reborn as **EuroSun, S.A.** in time for the winter tourist season in late October.

AIR ROUERGUE, S.A.: France (1970–1980). Organized at Aerodrome de Rodez-Marcillac in December **1970**, this charter carrier is initially known as **Uni-Air Rouergue, S.A.** Employing a Piper PA-31-310 Navajo, the company undertakes passenger and cargo charters to destinations in France and the Mediterranean.

The Beech 99 operator changes its name to Air Rouergue, S.A. in January **1974** and begins scheduled operations linking Rodez with Paris and Albi, Aurillac with Paris, and Le Puy and Lyons with Marseilles. Within four years, Managing Director M. Grimas's fleet grows to comprise 5 Fokker F.27s, 3 Beech 99s, 1 de Havilland Canada DHC-6 Twin Otter, and the original Navajo.

Unable to maintain economic viability in the face of rising expenses (led by fuel price increases in **1979**), the company is forced to cease operations in **1980**.

AIR RUIDOSO: United States (1987–1989). Air Ruidoso is established at Sierra Blanca Regional Airport, the new facility at Ruidoso, New Mexico, during the fall of **1987**. Outfitted with a single Piper PA-31-310 Navajo, it begins scheduled services to El Paso in December. Flights to Albuquerque begin in January **1988** and continue apace until October, at which point the Navajo is seized as security for unpaid fuel bills.

In early **1989**, the FAA revokes the small regional's operating certificate, claiming Air Ruidoso had employed unqualified pilots and falsified its training records. Company officials fight the charges and at the same time, make arrangements with **Yute Air** to lease two aircraft and begin operations in Alaska.

The FAA allows New Mexico operations to resume during the summer. The carrier's administrators do not, however, file for a required fitness redetermination from the DOT, which cites this failure when it revokes the company's certificate for a second and final time in December.

AIR RWANDA (SOCIETE NATIONALE DES TRANSPORTS AERIENS DU RWANDA, S.A.): Rwanda (1975–1994). Formed at Kigali on July 17, **1975** as the national airline, Air Rwanda undertakes domestic passenger and freight charters as well as local scheduled flights. Destinations served within Rwanda come to include Gisenyi, Kamebe, and Butare, much of it in the mountainous tropical highland.

During the early **1980s**, the fleet of 2 de Havilland DHC-6-300 Twin Otters is upgraded by the addition of a Boeing 707-328C first flown by its previous owner, **Air France**. The freighter, christened *Impala*, is employed to begin international freight flights to Mombasa, Bujumbura, Ostend, Tanzania, Uganda, and Zaire.

Operations continue apace for the remainder of the decade. In **1987**, a grant from the UN Development Fund's civil aviation program permits the carrier to begin a three-year training program for pilots and technicians.

By 1989, airline employment is 215 and the fleet has been increased by the addition of a Britten-Norman BN-2 Islander and a Piper PA-31-310 Navajo.

During this year, passenger boardings total 10,782 and 7.21 million FTKs are flown.

The B-707-328C spends the first six months of 1990 in maintenance. In October, the country is invaded by rebel Tutsi forces from Uganda. The nation disintegrates in civil war, severely impacting domestic air services.

In October 1991, joint weekly all-cargo service to Frankfurt is begun in cooperation with **German Cargo Airlines, GmbH** (GCA), a subsidiary of **Deutsche Lufthansa, A.G.** The airlines fly the service in alternate weeks, with GCA employing a DC-8-73F and Air Rwanda its B-707-328C.

By 1992, Chairman Juvenal Uwilingiyimana's fleet employs 250 workers, but is otherwise unchanged. Domestic operations have all but ceased because of the civil war between the Hutu and Tutsi tribes, despite the peace agreement signed in August 1993.

The joint operation with GCA ends in early 1994. Following the establishment of a coalition government in July, the company is reformed into **Rwandair Cargo (Societe Nationale des Transports Aeriens du Rwanda, S.A.)**.

AIR SAFARIS, LTD.: United Kingdom (1952–1962). Three ex-Royal South African Air Force pilots form **Tropic Airways (Pty.), Ltd.** on September 21, 1950 to offer charter flights from South Africa to Europe. Equipped with a single ex-military Douglas C-47 converted to civil DC-3 standard, the company initiates service on March 18, 1951, flying multistop Johannesburg–London. During the remainder of the year, Dutch and German immigrants are flown to South Africa from Amsterdam and Hamburg.

Early in 1952, Tropic purchases an ex-RAF Dakota; however, British regulations require that, for the purchase to be consummated, a U.K. subsidiary be formed. As a result, **Meredith Air Transport, Ltd.** is formed and registered on August 12. In December, radio parts are hauled to Khartoum.

In 1953, inclusive-tours are undertaken to the Mediterranean from London while the South African Dakota continues to fly immigrants southward. In June, the Meredith DC-3 is sold to raise capital that will allow Tropic's founders to reform their South African company into **Trek Airways (Pty.), Ltd.** The Meredith subsidiary continues in Britain.

Left without aircraft, **Meredith Air Transport, Ltd.** is reformed into African Air Safaris, Ltd. on November 29, 1954. In October 1956, the British entity purchases an ex-British Overseas Airways Corporation (BOAC) Handley Page Hermes 4, the *Hero*, for **Trek Airways (Pty.), Ltd.**; however, the aircraft proves unsuitable and is thereafter leased to **Britavia**. When **Trek Airways (Pty.), Ltd.** introduces DC-4s in 1958, its English subsidiary receives two Trek Vikings, which are used to initiate low-cost tourist flights to Johannesburg from Southend.

In 1959, **Trek Airways (Pty.), Ltd.**'s English agent initiates a final season of Viking flights to South Africa as well as inclusive tours to such European destinations as Basel, Dusseldorf, Jersey, Bergen, Geneva, Palma, Nice, Rotterdam, Munich, Lyon, Zagreb, and Toulouse. The base of operation is moved to London (LGW) late in the year and on November 26, the company, now independent of **Trek Airways (Pty.), Ltd.**, is renamed Air Safaris, Ltd.

Two more Vikings are acquired, together with the Hermes 4 *Hero* returned from Britavia, and a significant number of inclusive tours to Europe are undertaken during the summer of 1960. Meanwhile, on May 29, the Viking *Alouette II* with 3 crew and 27 passengers makes a hard landing at Tarbes, France, on May 29; although the aircraft must be written off, there are no fatalities.

The flying division of **Don Everall (Aviation), Ltd.**, together with its Viking and scheduled route network, is purchased in November, along with the last two Hermes 4s, once BOAC's *Horsa* and *Hecuba*, of **Falcon Airways, Ltd.**

The company's first scheduled service is launched twice weekly in April 1961 with Vikings from Bournemouth–Ostend and Amsterdam; later in the month, Bournemouth–Dublin and Belfast operations commence. In April, the ex-BOAC HP-81 *Hector* is purchased from **Skyways, Ltd.** The Birmingham–Jersey route begins on May 27 and on June 3, Vikings begin Newcastle–Birmingham–Bournemouth scheduled flights and simultaneously, employing leased de Havilland DH 114 Herons, initiates Birmingham–Sandown service. The ex-BOAC HP-81 *Hestia* is acquired in June and using aircraft of her type, the company also begins a full summer of inclusive tours to southern Europe as well as Don Everall's old but frequent Birmingham to Dublin and Paris (LBG) charters.

Financial problems bring cutbacks in the fall. The Bournemouth–Newcastle service is suspended on September 4 while the last inclusive tour of out Newcastle is flown on October 8. The Dublin route is closed on October 27 and when a Hermes 4 lands at London (LGW) from Lisbon on October 31, inclusive tours cease. The HP-81 *Hector* is sold back to **Skyways, Ltd.** in December.

On January 11, 1962, the Air Transport Licensing Board cancels all of the carrier's tickets and the company ceases, £500,000 in debt.

AIR SAFARIS, LTD. (AIR SAFARIS AND SERVICES, LTD.): P.O. Box 71, Lake Tekapo, New Zealand; Phone 03 680-6880; Fax 03 680-6740; <http://www.airsafaris.co.nz/>; Code SRI; Year Founded 1969. Formed at Lake Tekapo in early 1969, Air Safaris is equipped with 3 Cessna 207s. Regular scenic air tours are flown over Mount Cook and the Milford Sound regions, South Island. The company builds an infrastructure and base at Lake Tekapo in 1974.

During the 1970s and early 1980s, the company also begins flying out of Glentanner Park/Mt. Cook. The fleet grows to include 1 GAF Nomad N-22A, and 1 Pilatus PC-6 Turbo-Porter, in addition to the Cessnas. Bookings reach 18,300 in 1983. Services change little over the remainder of the decade, although one Nomad is lost.

As the result of sawdust frozen atop the wings, the Nomad N.24A, with a single pilot, stalls during its initial climb away from Lake Tekapo Airfield, New Zealand, on July 20, 1987, and crashes; although the plane must be written off, the pilot walks away from the wreck.

Enplanements in 1990 total 19,000, including a thousand flown on charter. That figure moves to 21,600 in 1991. Over the next four years, the company offers a variety of alpine scenic flights, including its most popular service, the 50-min. "Grand Traverse," which covers all the major attractions of both the Mount Cook and National Parks, plus 12 major glaciers.

By 1998, Managing Director Richard C. Rayward's fleet has been upgraded by the addition of 3 GAF Nomad N.24As, 1 Cessna 207A Stationaire, 1 Cessna 177 Cardinal, and 1 Piper Cherokee. Flights, largely nonscheduled, continue without incident through the summer.

While on a September 14 flight-seeing tour of the Southern Alps, the Cardinal, with one pilot and two Japanese passengers, crashes on Rudolf Glacier, about 30 km. from the peak of 12,350-ft. Mount Cook. It takes rescue teams two days to reach the wreckage where no survivors are found.

Service is maintained in 1999–2000.

AIR SAHARA, LTD.: 7th Floor, Ambadeep Building, 14 Kasturba Gandhi Mang., New Delhi, 110001, India; Phone 91 (11) 332-6851; Fax 91 (11) 332-6858; <http://www.saharaairline.com>; Code S2; Year Founded 2000. Having changed the name of **Sahara India Airlines, Ltd.** to Sahara Airlines, Ltd. early in 2000, President S. Roy Sahara finds that a smaller **Sahara Airlines, S.A.** had already been established under that name in Algeria. Consequently, the company is again renamed in October.

Although a third base is opened at Calcutta, revenue flights continue as before with a fleet that comprises 4 Boeing 737-4Q8s on charter from ILFC, along with 2 B-737-800s leased from Tombo Aviation.

By mid-October, President Sahara has sold 3 retired B-737-200s to **Blue Dart Aviation, Ltd.** for use as freighters.

AIR SAINT BARTHELEMY, S.A.: French West Indies (1981–2000). This privately owned charter operator is formed by Barth's Aviation at St. Barthelemy on Guadeloupe on October 1, 1981. Employing 2 Cessnas and 1 Britten-Norman BN-2 Islander, it undertakes ad hoc passenger and cargo flights into the eastern Caribbean from its bases at Pointe-à-Pitre and St. Barthelemy.

Flights continue apace for the next 12 years with little change. The fleet in 1994 includes 2 Australian-made Government Aircraft Factories, Ltd. N-24A Nomads, 1 Dornier 228-201, and 1 de Havilland Canada DHC-6-300 Twin Otter.

Operations continue apace in 1995–1999; the Nomads, however, are withdrawn. In 1999, the Air France-sponsored combine transports a total of 600,000 passengers.

In order to create a larger carrier, the small airlines of the French Caribbean, including this unit, are merged into **SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe)** during July 2000. The surviving partner, controlled by 70% majority owner Groupe Dubreuil, which had previously owned the French carrier **Regional Airlines, S.A.**, is then renamed **Air Caraïbes, S.A. (2)**.

AIR SAINT MARTIN, S.A.: French West Indies (1994–2000). Air St. Martin is formed at St. Barthelemy, Guadeloupe, in 1994 to offer scheduled cargo and express services. Revenue operations commence with an all-leased fleet of five Cessna 208 Caravan Is and three Cessna 406 Caravan IIs. Orders are placed for a Beech 1900D.

The Beech 1900D is delivered in the fall of 1995.

While flying 18 illegal Haitian immigrants back to Port-au-Prince from Cayenne, via Guadeloupe, on December 8, a Beech 1900D, with two crew, descends prematurely and crashes into a 5,030-ft. mountain at Belle-Anse, Haiti; there are no survivors.

Operations continue apace in 1996. During the first quarter of 1997, a Dornier 228-202 is purchased from Fairchild Dornier. Flights continue apace in 1998.

During the first quarter of 1999, the B-737-200A of **Islandsflug, H.F.** is wet-leased to Carabenne des Transportes Aeriens, a joint venture established on January 6 by **Air France, Air Martinique, S.A., Air Saint Martin, S.A.,** and **SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe)** to replace the French major on its Caribbean routes from Fort de France and Pointe-à-Pitre to Cayenne, Miami, and Port-au-Prince. The Icelandic Boeing will be returned as soon as the combine is able to secure a pair of B-737-300s. The Air France-sponsored combine transports a total of 600,000 passengers on the year.

In order to create a larger carrier, the small airlines of the French Caribbean, including this unit, are merged into **SATA (Societe Antillaise de Transports Aeriens, S.A.-Air Guadeloupe)** during July 2000. The surviving partner, controlled by 70% majority owner Groupe Dubreuil, which had previously owned the French carrier **Regional Airlines, S.A.**, is then renamed **Air Caraïbes, S.A. (2)**.

AIR SAINT-PIERRE, S.A.: 18 Rue Albert Briand, BP 4225, St.-Pierre, 97500, St.-Pierre et Miquelon; Phone 508 41 4718; Fax 508 41 2336; <http://www.205.250.151.22/aspweb>; Code PJ; Year Founded 1964. Albert Briand forms this third-level operation on March 6, 1964 to provide nonscheduled passenger and cargo flights between the French Overseas Department of St.-Pierre and Miquelon and the Nova Scotian town of Sydney. Between March and June, service between the French islands off the Newfoundland coast and the Canadian province is conducted as part of a pooling agreement with **Eastern Provincial Airways, Ltd. (EPA)**.

The carrier's initial owned aircraft is a Piper PA-23 Aztec, placed into service during 1965.

An Aztec C is purchased in 1966 as a maintenance agreement is signed with EPA. Founder Briand dies on May 29, and is succeeded as president by his son Remy L. Briand. Lightplane services continue

in association with EPA in 1967–1970. During the latter year, international traffic rights to launch scheduled service are successfully negotiated.

The route between St.-Pierre and Sydney is flown with a Beech 18 and a leased EPA DC-3 in 1971–1975. The latter is replaced in 1976 with a leased EPA Hawker Siddely HS-748. A route is opened from St.-Pierre to Miquelon and is flown in 1977–1978.

In 1979–1980, the routes between St.-Pierre and both Miquelon and Sydney are merged and operated under pool with EPA. A new route is stretched to Halifax. A Piper PA-31-350 Navajo Chieftain is placed into service during 1981 and a maintenance contract is signed with Fundy Aviation.

Operations are continued in 1982–1985. A second and owned HS-748 is acquired in 1986; it is christened *Ville de Saint-Pierre* and joins the leased unit in service.

HS-748 service is inaugurated on July 1, 1987 between St.-Pierre and Montreal. Flights continue in 1988–1989. During these years, the carrier becomes a member of **Canadian International Airlines, Ltd.'s** Canadian Partner commuter network. Frequencies are started to Montreal and Halifax, now with two HS 748s in addition to the Navajo.

A second owned HS-748 is delivered in 1990 and christened *Ile de Miquelon*. Operations continue apace in 1991–1993 and the fleet is increased by the addition of 2 PA-31-350 Navajo Chieftains and 1 Piper Aztec. The first Avions de Transport Regional ATR42-320, named *Albert Briand*, is placed into service on January 19, 1994.

At the end of 1995, the *Ville de Saint-Pierre* and *Ile de Miquelon* are sold to an African operator. Service is maintained with the *Albert Briand* and the Pipers.

Thrice-weekly ATR42-320 roundtrips commence on September 25, 1996, between Saint Pierre and St. John's.

On June 2, 1997, a French-language homepage is opened on the World Wide Web. On the year as a whole, a total of 28,508 passengers are transported.

Flights continue without change in 1998–1999. During the latter year enplanements reach 24,000.

Airline employment stands at 38 at the beginning of 2000, a 2.7% increase over the previous 12 months.

AIR SAINT THOMAS: P.O. Box 302788, Charlotte Amalie, St. Thomas, U.S. Virgin Islands 00803, United States; Phone (809) 776-2722; Fax (809) 776 2992; Code ZP; Year Founded 1993. Originally formed in 1970 as **Virgin Air** by Paul and Margaret Wilkander at St. Thomas to provide all-cargo services to destinations in the Leeward Islands. Providing almost exclusively passenger services with a fleet of Piper PA-23 Aztecs, Cessna 402Cs, and Pilatus-Britten-Norman PBN Islanders, by the early 1990s, the small regional files a trademark/name infringement and unfair competition suit against the U.K.'s **Virgin Atlantic Airways, Ltd.** The case is settled out of court in December 1993. Under terms of the settlement, the U.S. company agrees to drop its charges and receives \$30,000 to be employed in changing its corporate identity to Air St. Thomas.

A total of 15,372 passengers are flown in 1994 and operations continue apace in 1995.

The employee population stands at 20 in 1996 and the fleet includes 5 Piper PA-23 Aztecs and 1 Cessna 402C.

On August 5, while taking off from St. Barthelemy Island enroute to St. Thomas, a Cessna 402B with a pilot and six passengers aborts its takeoff, but cannot stop prior to overrunning the runway. The plane comes to rest in three feet of water and one passenger is slightly injured.

Passenger boardings for the year total 8,986.

One person is hired in 1997, a 5% employee population increase. Destinations visited include Fajardo, St. Barthelemy, St. Thomas Island, San Juan, and Virgin Gorda.

Customer bookings fall 6.8% to 8,372.

Service is maintained in 1998 and business significantly improves. Passenger boardings increase 54.2% to 13,000. By the beginning of

1999, airline employment has been reduced by 4.8% to 20. Customer bookings drop 19.6% to 10,000.

The workforce of 12 that remains at the beginning of 2000 represents a 40% reduction in force over the past 12 months.

AIR SALZBURG, GmbH: Flughafen, Salzburg, A-5035, Austria; Phone 43 (662) 85 1212; Fax 43 (662) 85 1215; Year Founded 1987. Air Salzburg is established as an FBO at Salzburg Airport in 1987. Over the next decade, General Manager O. Ganzenhuber's concern adds aircraft handling, air ambulance, executive and public passenger charter and small group services. By 2000, nonscheduled flights are operated with a fleet comprised of 5 Cessna Citation bizjets and 1 CASA C-212-200 Aviocar.

AIR SANTO DOMINGO, C. por A.: Edificio Grupo Air Europa, Avenida 27 de Febrero #272, Esquina a Calle Seminario, Santo Domingo, Dominican Republic; Phone (809) 683-8248; Fax (809) 683-8436; http://www.g-air-europa.es/air_sdo; Code EX; Year Founded 1997. An affiliate of the Spanish line Air Europa, S.A., Air Santo Domingo is established in the spring of 1997 to operate domestic and Caribbean region passenger service. Former Tourism Minister Fernando Rainieri is chairman, with Carlos Pereira as managing director. Revenue flights are started on July 8 with a fleet of 6 Let L-410UVPs. Many of the services are undertaken on behalf of the tour company Caribe Spain.

Flights continue in 1998-1999. During these years, the fleet is revised as 4 Beech 1900Ds, 1 1900C, and 1 Embraer EMB-120 Brasilia arrive under charter from Servicios Aereos Profesionales, S.A.

Destinations visited in 2000 include Puerto Plata, Punta Cana, El Portillo, La Romana, and Santiago. Beech 1900D return flights to San Juan, Puerto Rico, begin on July 20.

AIR SAO TOME E PRINCIPE (LINHAS AEREAS DE SAO TOME E PRINCIPE, S.A.): CP 45, Ave. 12 de Julho, Sao Tome e Principe; Phone 239 (12) 21 160; Fax 239 (12) 21 375; Code GJ; Year Founded 1993. After years of managerial changes and uncertain direction, Equatorial International Airlines of Sao Tome e Principe, S.A. is reformed in October 1993. Shareholding is divided between TAP-Air Portugal, S.A. (40%), the government (35%), GIAS (24%), and Mistral Voyages (1%).

The entire management team is reborn in 1994 as the former general manager, Joao E. Dos Reis, returns to serve under Chairman K. R. G. Hellinger. The F.27-400M, which had been returned to service the previous year, is again retired, leaving the 2 Nord 262s to carry all loads. Flights are maintained from Sao Tome to Principe and onshore to Libreville, Gabon.

Operations continue apace in 1995-1996. Felisberto Neto is chairman in 1997, with Raul Bragaco as president. The workforce totals 54 and the company operates a single de Havilland Canada DHC-6-300 Twin Otter.

Operating on May 10 as Flight 205, the Twin Otter, with 3 crew and 14 passengers, is badly damaged in a crash at Principe; there are no fatalities, but it will take some time for the turboprop to be repaired.

Flights continue in 1998-2000. Airline employment grows to 54.

AIR SARDINIA, S.p.A.: Italy (1989-1994). Air Sardinia, S.p.A. is established at Cagliari in 1989 to offer scheduled service between the island and the Italian mainland. President Corrado Corrias's initial fleet comprises 2 Pilatus Britten-Norman PBN-2 Islanders and 2 Beech Super King Air 200s.

Two leased Fairchild Metro IIIs are acquired in March 1990 and employed to inaugurate scheduled revenue flights to Rome, Bergamo, and Milan.

The Islanders and King Airls are withdrawn in 1991 and in 1992-1993 the carrier flies 1 leased Metro III.

Flights cease in 1994.

AIR SARNIA, LTD.: United States (1989-1990). Air Sarnia, Ltd. is set up in early 1989 to provide scheduled third-level passenger flights between the Channel Islands. Employing two chartered Pilatus Britten-Norman PBN-2 Islanders and a PBN-2A Trislander, revenue service begins in June. By year's end, a total of 14,000 passengers have been flown.

Due to mounting debt, the company is forced to cease operations in September 1990, at which time its aircraft are repossessed. Through June, the last time statistics are provided, a total of 8,227 passengers have been flown on the year.

AIR SATELLITE, LTD.: Aeroport de Baie-Comeau, Pointe Lebel, Quebec G5C 2S6, Canada; Phone (418) 589-8923; Fax (418) 589-7416; <http://www.air-satellite.com>; Code QR; Year Founded 1968. This small third-level operator is established by Jean Fournier and Real Poulin at Hauterive, Quebec, in early 1968 as the airline division of their charter company and flying school. Scheduled services are undertaken, beginning in May, over a route from Mont Joli to Quebec City via Rimouski, Riviere du Loup, and La Malbaie. Over the years, President Real Poulin's fleet grows to comprise 1 Cessna 404, 1 Cessna 411, 2 Cessna 310s, 2 Cessna 337s, and a number of even smaller Cessnas.

Airline employment by 1981 stands at 22. Other destinations served in the early 1980s include Baie Comeau, Forestville, Matane, and Sept-Iles. Another Cessna 404 is added in 1984. Operations continue with little change for the remainder of the decade and the small regional becomes an "Air Canada Connector" partner.

The fleet in 1990-1992 includes a variety of Cessnas and a newly acquired de Havilland Canada DHC-6-200 Twin Otter. In 1993-1994, Edith Fournier is chairman with Jean Fournier as president. Airline employment is 35 and the fleet comprises 2 Cessna 152s, 2 Cessna 172s, 1 Piper PA-23 Aztec, 2 de Havilland Canada DHC-6-200 Twin Otters, 5 Cessna 315s, 1 Cessna 335, 1 PBN-2 Islander, and 1 PBN-2A Trislander.

From bases at Baie Comeau, Havre Saint Pierre, Rimouski, and Sept-Iles, the independent regional, in 1995-2000, visits Mont Joli and Port Menier, in addition to its four hubs. The Fourniers change position, with Jean becoming chairman/president and Edith vice chairman/director general. Yannick Pereault is chief pilot.

After several months of study, executives from Air Alma, Ltd., PropAir, Inc., and Air Satellite approach Quebec Finance Minister Bernard Landry on October 25 of the latter year and request \$84 million to help them merge into a larger regional. If the arrangement can be concluded, the new airline, to be named Air Quebec, Inc., will form a credible alternative to Air Nova, Inc., the Air Canada, Ltd. regional feeder that enjoys the majority of local market share.

AIR SCANDIC, LTD.: 4A Britannia Place, Bath Street, St. Helier, Jersey, Channel Islands, JE2 4SU, United Kingdom; Phone 44 (0) 1534 870887; Fax 44 (0) 1534 519044; Code SCY; Year Founded 1997. Air Scandic is established on the Island of Jersey in late 1997 to offer seat-only charters for various U.K. tour operators. Chairman John Welsh and Managing Director Colin W. Cosham acquire a pair of Airbus Industrie A300B4-203s, which are employed, beginning in May 1998, to offer holiday flights from Manchester and Glasgow to various European vacation destinations.

To provide backup during the delay-plagued summer of 1999, a Lockheed L-1011-385 TriStar 1 is leased from Aer Turas, Ltd. in May.

Flights continue in 2000. On May 17, Flight 731, an A300 enroute from Manchester to Larnaca, is forced to make an emergency landing on Malta after the crew reports a complete loss of hydraulic power.

AIR SCHEFFERVILLE, LTD.: Head Office, Lindbergh Place, Ottawa, Ontario K1V 1H7, Canada; Phone (613) 738-2434; Fax (613) 738-9184; Code ASF; Year Founded 1981. Air Schefferville, Ltd. is founded by the Bogie family at the airline's Quebec namesake city (800 miles north of Montreal) in 1981 to offer scheduled passenger and cargo service as well as charter and contract service flights throughout the northeastern area of the Canadian province, with emphasis on flights to Wabush.

Chairman John Bogie and President Jack Layden's fleet is all de Havilland Canada equipment, ranging downward in size from DHC-6 Twin Otters to DHC-3 Otters and DHC-2 Beavers. At decade's end, the company is down to 1 DHC-6-200, plus 3 DHC-3s, 1 DHC-2, and 1 Cessna 180. Late in the decade, the small regional becomes a member of the "Air Canada Connector" commuter service.

The twin-engine DHC-6-200 is traded in 1990 in favor of a Beech 99. New services are undertaken to Sept-Îles. Operations continue apace in 1991; most of the airline's passengers remain hunters, who come from the U.S. and southern Quebec, and their numbers continue to increase by approximately 10% per year.

Indeed, another Beech 99 must be acquired as a temporary measure in 1992. During the year, Chairman Bogie's company becomes part of the **Laurentine Air Services, Ltd.** reorganization and assumes the joint marketing title **Air Laurentian, Ltd.** Two Beech Catpass 200s are delivered in early 1993 and flights continue into the new millennium.

AIR SCOTLAND EXPRESS, LTD.: United Kingdom (1994–1996). Air Scotland Express is founded by Brian H. and Jeremy Hart at Glasgow Airport in late 1994. With Jeremy acting as managing director, the carrier acquires a pair of Beech 1900Ds and launches revenue services to destinations throughout Britain.

Flights cease in 1996.

AIR SEA SERVICE, A.G.: Switzerland (1974–1980). Peter Furrer forms Air Sea at Basel–Mulhouse Airport in May 1974. Employing a single Convair CV-440 Metropolitan, he inaugurates passenger and charter flights to southern European and Mediterranean destinations during the summer. A Britten-Norman BN-2 Islander is acquired in 1975 as airline employment grows to 12.

A scheduled route is opened to Luxembourg in October 1976 and is maintained. A route linking Basel with Munich is opened at the end of the decade, by which time the fleet has been upgraded by the addition of 2 Nord 262s and 1 Piper PA-31-310 Navajo. On April 1, 1980, the carrier is reformed and renamed **Rhine-Air, A.G.**

AIR SEDONA: United States (1983–1993). Air Sedona is founded by Jack Seeley at Sedona, Arizona, in the summer of 1983. Employing a Cessna 182 and Cessna 172, it inaugurates scheduled regional flights in September, emphasizing nonstop service from its base to Phoenix. A total of 248 passengers are flown during the year's fourth quarter. During 1984, the two aircraft transport 1,624 passengers, a 63.4% increase.

Airline employment is increased 166.7% in 1985 to eight workers and President Seeley's fleet is enhanced by the addition of a Cessna 206 and a second Cessna 172. Customer bookings jump 61% to 2,614. Passenger boardings climb again in 1986, rising 31% to 3,423.

In February 1987, scheduled service is inaugurated between Sedona and Bullhead City. Passenger boardings fall off 4.1% to 3,283.

Traffic recovers nicely in 1988 as customer bookings accelerate by 25.1% to 4,106. The workforce is increased by 14.3% in 1989 to 8. Passenger boardings jump another 17.5% to 4,824.

Airline employment is increased 25% in 1990 to 10. Frequencies to Phoenix are increased and customer bookings swell 36.7% to 7,000. In 1991, a new route is opened from Phoenix to Payson. The expansion is not a help as the recession causes enplanements to decline by 7.7% to 6,087.

A slight upturn is seen in 1992 as passenger boardings move to 6,244. In March 1993, the carrier is purchased by Aviation Services West, a subsidiary of **SkyWest Airlines**, and renamed **Arizona Air Sedona**.

AIR SENEGAL (COMPAGNIE SENEGAL DE TRANSPORTS AERIENS, S.A.): Senegal (1962–1971). The first Air Senegal is created by the new government in late 1962, with assistance from **Air France** and **UAT (Union Aeromarine de Transport, S.A.)**, to operate domestic services. Etienne Costa is named general manager and is able to recruit a workforce of 30.

Flights to 11 local points plus Bathurst in Gambia commence in 1963 with a mixed fleet. Depending on loads, operations are conducted with 1 Douglas DC-3, 2 de Havilland DH 104 Doves, 1 DH 89A Dragon Rapide, 2 Beech 18s, 2 Jodel D.140 Mosquetaires, 3 Piper PA-18 Super Cubs, and 1 Scottish Aviation Twin Pioneer leased from **Sierre Leone Airways, Ltd.**

A total of 32,000 passengers are transported in 1964, the first full year of service. The fleet is enhanced during 1965–1966 as 3 DC-3s, 1 DH 104 leased from **Sudan Airways, Ltd.**, and 1 Piper PA-30 Twin Comanche are acquired. Thrice-weekly roundtrips begin in 1967 linking Dakar with Yundum, Gambia.

During the remaining years of the decade, the fleet is further expanded by the addition of 3 PA-23 Aztecs, 1 PA-31-310 Navajo, and 2 PA-32 Cherokee Sixes. The company is reformed in 1971.

AIR SENEGAL (COMPAGNIE SENEGALAISE DES TRANSPORTS AERIENS, S.A.): Senegal (1971–1981). The first Air Senegal is reformed in mid-1971. The fleet this year and over the next six includes 3 DC-3s, 1 Piper PA-23 Aztec, 3 PA-25 Pawnees, 1 PA-32 Cherokee Six, and 1 PA-31-310 Navajo.

Services are undertaken to Bakel, Kedougou, Matam, Kaedi, Podor, Richard-Toli, Saint-Louis, Simenti, Niokolo-Koba, Tambacounda, Kayes, Ziguinchor, Kolda, Banjul, and Cap Skirring. Charter and contract service flights are also offered. Only 23 days after start-up, the company suffers its first fatal accident when a Douglas DC-3 crashes near Bamako, Mali (six dead).

By 1977–1978, General Manager Fernand Brigaud's fleet comprises 3 Douglas DC-3s, 1 de Havilland Canada DHC-6 Twin Otter, 1 Piper PA-23 Aztec, and 1 Piper PA-32 Cherokee Six.

Services are maintained to these domestic points and over the next three years, regional frequencies are initiated to Praia, Banjul, Bissau, Kaedi and Nouakchott. The company, which has since added a second Twin Otter, is nationalized in 1981.

AIR SENEGAL (SOCIETE NATIONALE DE TRANSPORTS AERIENS DU SENEGAL, S.A.): BP 8010, Dakar–Yoff Airport, Dakar, 200968, Senegal; Phone 221 23 62 29; Fax 221 20 00 33; <http://www.primature.sn/tour/airsen.htm>; Code DS; Year Founded 1981. Also known as SONATRA–Air Senegal, this state carrier is formed at Dakar–Yoff Airport on July 1, 1981 when the previous **Air Senegal (Compagnie Senegalaise de Transports Aeriens, S.A.)** is nationalized. Stockholders in the carrier include the government (50%), **Air Afrique, S.A.** (40%), and private interests (10%). Three DC-3s, 1 PA-23 Aztec, 3 PA-25 Pawnees, 1 PA-32 Cherokee Six, and 2 Twin Otters comprise the fleet.

In 1982–1984, 2 DC-3s are withdrawn and are replaced by 2 more DHC-6s and 2 Hawker Siddeley HS 748-A2s.

Operations continue apace in 1985–1988. Early in 1989, twice-weekly Douglas DC-8-62 charter flights, employing leased equipment, are started from Dakar to Paris. The workforce is increased 4.1% to 128; however, the remainder of the fleet is as it was in 1984, except that the HS 748s are now B2 models. Overall passenger boardings total 56,792, a decline of 14.6% from 1987. Revenues, however, increase by 4.7% to \$7.2 million. The operating profit is \$316,000 and net gain reaches \$120,600.

Company employment is increased by 17.4% in 1990 to 135. Customer bookings decline another 3.9%, to 72,042 and revenues drop to \$7 million. Still, operating income rises to \$492,877. A number of routes are abandoned in 1991 and as a result, passenger boardings decline 12.1% to 39,503.

The fleet in 1992 includes 2 each DHC-6-300s and British Aerospace BAe (HS) 748-B2s.

Having arrived in the Dakar area on a December 9, 1993, service from Saint-Louis, the DHC-6-300, with a pilot and two passengers, is ordered to circle while a NAMC YS-11 from an unnamed concern takes off; both aircraft fail to respect their assigned altitudes and meet in a head-on collision.

Although the Twin Otter crashes and all aboard are killed, the YS-11 is able to make a safe emergency landing back at its point of origin.

In 1994 Chairman Alioune Ndiaye and General Manager Abdoulaye Ndiaye oversee a workforce of 135; temporarily, routes to Bamako, Conakro Kaedi, and Nouakchott are suspended. Otherwise, services in 1995 continue as before.

On February 1, 1996, a BAe (HS) 748-B2, with 23 aboard, loses its engines upon takeoff from Tambacounda; there are no survivors. Destinations visited this year include Banjul, Bissau, Cap-Skiring, Conakry, Kedougou, Kolda, Matam, Nouakchott, Praia, Saint-Louis, Tambacounda, and Ziguichor. A DHC-8-102 is received in September.

On February 1, 1997, exactly a year after the carrier's last fatal accident, a BAe (HS) 748-A2, with 3 crew and 49 passengers, crashes shortly after takeoff from Tambacounda on a charter to Dakar. The crash site is not far from the spot where the same sort of plane went down a year earlier; this time there are 29 survivors. Reports cite water contamination of the plane's fuel tanks.

Flights continue in 1998–1999. During these years, the fleet is increased by the addition of 1 each Avions de Transport Regional ATR42-320 and Fokker F28-1000.

An agreement is signed with **Royal Air Maroc** on February 15, 2000, under which the Moroccan airline takes a 51% (\$10 million) stake in the company's newly created long haul division, Air Senegal International. The minority stake is held by the Senegalese government. Royal Air Maroc will provide a Boeing 737-200 with which to begin operations.

AIR SENEGAL INTERNATIONAL. See **AIR SENEGAL (SOCIETE NATIONALE DE TRANSPORTS AERIENS DU SENEGAL, S.A.)**

AIR SERV INTERNATIONAL: P.O. Box 3041, Redlands, California 92373, United States; Phone (909) 793-2627; Fax (909) 793-0228; Year Founded 1991. Robert E. Leanhart forms this regional at Redlands, California, in 1991 to operate scheduled passenger and cargo services. The fleet grows to include 4 Cessna 208 Caravan Is, 2 de Havilland Canada DHC-6-300 Twin Otters, 3 Cessna 206s, and 2 Cessna 210s. Enplanements for the year total 41,728.

1992 is not a good year for the privately owned, 90-employee newcomer. Passenger boardings decline 33.2% to 31,328 while freight falls 33.7% to 3,354,000 pounds.

Flights continue in 1993–2000. During these years, the mission of the company is changed from a scheduled to a nonscheduled carrier, flying on behalf of nonprofit humanitarian and international relief organizations.

Kenneth Frizzel is now president. His 90-employee airline operates 1 Beech King Air 90, 2 Super King Air 200s, 3 Cessna 206s, 2 C-210s, 3 C-402Cs, 5 C-208 Caravan Is, and 4 Twin Otters. Income average \$17.5 million per year.

AIR SERVICE COMPANY: Iran (1962–1979). Formed as an associate of the Tehran-based **Air Taxi Company** in 1962, Air Service undertakes contract flights and charters on behalf of the oil industry, plus logistics flights to Persian Gulf islands. Over the next 15 years, the fleet comes to comprise 4 Fairchild Hiller FH-227Bs. Like many other Western concerns, the carrier ceases operations during the Iranian revolution of 1979.

AIR SERVICE GABON, S.A.: P.O. Box 2232, International Airport Leon M'Ba, Libreville, Gabon; Phone 241 73 24 08; Fax: 241 73 60 69; Code AGB; Year Founded 1965. Privately owned ASG is formed at Libreville in 1965 to provide local, domestic passenger and charter services. Operations continue apace for the next quarter-century using single-engine Cessnas.

In 1993–1994, General Manager Francis Lascombes oversees 52 employees and a fleet comprising 2 Beech King Air 200s, 1 each CASA C-212-100 and -200 Aviocars, 1 Cessna 310, 2 Cessna 404s, 1 Cessna 402, and 1 PBN-2 Islander.

Flights continue in 1995–2000, although the C-310 is retired.

AIR SERVICE HUNGARY, LTD.: Koerberki ut 36, Budapest, H-1112, Hungary; Phone 36 (1) 185-1344; Fax 36 (1) 166-8118; Year Founded 1990. This domestic operator is formed at Budapest in 1990 as an air taxi, agricultural, charter, and air ambulance operation. Director General Laszlo Kozma's 1,300-employee company possesses a fleet comprising 64 Antonov An-2s, 3 Let L-410s, 70 Kamov Ka-26 and 9 McDonnell Douglas MD-500 helicopters. It is the largest collection of small fixed- and rotary-wing aircraft in the nation. The year's enplanements total 2,000.

In 1991, airline employment is cut 36.7% to 760 and a total of 5,000 souls are flown. Revenues reach \$9 million, producing a \$1-million operating profit.

During the summer of 1992 scheduled passenger and cargo flights are initiated to and from domestic destinations. In 1993, general director Kozma's workforce is cut to 800 and the fleet is reduced to 10 An-2s and 2 Let 410s, plus helicopters. Operations continue apace in 1994. Dr. Pat Horvath becomes president under Kozma and a Tupolev Tu-134 is acquired.

Flights continue in 1995–2000. During these years, Zoltan Jancsi becomes chairman, with Dr. Istvan Lovro as general director. Airline employment grows to 89 and the fleet is altered to include 3 An-2s, 3 Kamov 26s, and 1 MD-500.

AIR SERVICE LIMBURG, B.V.: Vliegveldweg 12, Postbus 301, Maastricht–Aachen Airport, Maastricht, N-6192, The Netherlands; Phone 043 3646949; Fax 043 3646944; <http://www.asl.nl>; Year Founded 1992. Capitalized at six million guilders, ASL is established by Bill Kuiper and Willy Waldhausen in 1992 to offer executive and small group passenger charters. Revenue services begin with a fleet that includes Beech King Air 90s, Super King Air 200s, and 1 each Beech Bonanza, Beech 60 Duke, Piper Turbo Arrow IV, and Cessna 172.

AIR SERVICE NANTES, S.A.: France (1988–1992). Organized at Nantes in 1988, President Andre Beladine's 15-employee carrier undertakes charter passenger and cargo flights to destinations in North Africa and the Middle East. The initial fleet comprises 1 each Dassault Falcon 20 and Aerospatiale Caravelle XR.

Two Beech Super King Air 200s are added to the fleet in 1990 along with another Dassault Falcon 20. A Boeing 737-217, once flown by **CPAir**, is acquired in 1992; however, it adds too much capacity for the company's requirements and is leased to the new Vietnamese carrier, **Pacific Airlines**. Unable to maintain either traffic or financial viability in a recession, the company folds at year's end.

AIR SERVICE UKRAINE: Klimenko 23, Klimenko, 252110, Ukraine; Code ASG; Year Founded 1994. ASU is set up at Klimenko in 1994 to operate international, regional, and domestic all-cargo charter services. Revenue flights begin with a fleet of 10 Ilyushin Il-76MDs and 2 Beech Super King Air 200s.

AIR SERVICES OF INDIA, LTD. (ASA): India (1936–1953). Capitalized at a million rupees, privately held ASA is formed on September 5, 1936 to provide scheduled services north of Bombay in the Kathiawar district. Equipped with an Airspeed Courier and a de Havilland DH 89, christened *City of Bhavnagar*, the company begins four-times-per-week services Bombay–Porbandar on November 1, 1937, via Bhavnagar, Rajkot, and Jamnagar.

Flights continue into 1938; however, operations are suspended during the annual monsoon season from June–September. Twice-weekly Baroda–Amreli flights begin in November.

On January 5, 1939, twice-weekly Bombay–Kolhapur via Poona operations commence and in January 1940 the service, subsidized by Cutch State, is extended to Bhuj. Despite assistance, the company is unable to maintain economic viability and ceases operations in February 1941.

Acquired in 1943 by the steamship company Scindia Steam Navigation Co., Ltd., ASA resumes services as "The Scindia Line" on May 3, 1946,

flying a daily Bombay–Bhuj service, via Jamnagar, with Douglas DC-3s. On June 28, Bombay–Lucknow flights begin via Indore, Bhopal, and Kanpur. A Bombay–Indore–Gwalior–Delhi DC-3 frequency is started in April 1947; in August, the Bombay–Lucknow route is suspended.

When **Ambica Airlines, Ltd.** collapses in February 1949, its routes from Bombay to Morvi and Bangalore via Rajkoi and Poona are taken over. A pair of French-built SNCASO SO-95 Corse IIs are acquired and are placed on three services out of Bombay: to Bangalore via Hyderabad; to Bangalore via Poona; and to Delhi via Indore and Gwalior. Both are withdrawn in October 1950.

Bombay–Belgaum–Cochin services are launched on April 10, 1951. As the result of parliamentary study and debate, it is decided to nationalize the Indian air transport industry.

On May 9, 1953, a DC-3 is lost on takeoff from Juhu Airport at Bombay when its gear is retracted prior to liftoff; although the aircraft is damaged beyond repair, there are no fatalities.

An Air Corporation Bill receives presidential assent on May 28 and on August 1, **Indian Airlines Corporation** is formed, taking over ASA and other carriers.

AIR SEYCHELLES, LTD.: Victoria House, P.O. Box 386, Victoria, Seychelles; Phone 248 381 000; Fax: 248 373 111; <http://www.airseychelles.it>; Code HM; Year Founded 1977. Formed at Victoria, on the island of Mahe in the Seychelles, in September 1977, this state-owned carrier is initially known as **Seychelles Airlines, Ltd.** Plans are put afoot to begin the operation of scheduled local and international services.

In July 1979, the nonflying company is reformed at Mahe through the merger of **Air Mahe, Ltd.** (founded in 1972) and **Inter-Island Airways, Ltd.** (established in 1976) and is renamed. Chairman Guy Morel's initial fleet comprises 1 Britten-Norman BN-2 Islander and 2 BN-2A Trislanders. Scheduled flights are flown to Bird Island and Praslin while charters are opened to St. Denis, Fregate, Astove, Desroches, Coetivy, and Farquhar.

Employing 3 Trislanders and 2 Islanders during 1980–1982, the little airline provides scheduled and charter services to the nation's islands. When tourism to the island nation collapses during the world recession of the latter year, the government orders the carrier to begin flights to Europe to replace those dropped by all European carriers except **Air France**.

A Douglas DC-10-30 is wet-leased from **British Caledonian Airways, Ltd. (BCAL)** and on October 26, 1983 begins weekly flights via Jeddah to Amsterdam, Frankfurt, Rome, and London. The aircraft retains its BCAL livery (except for a small sticker) and crew. In 1984, a **Martinair Holland, N.V.** DC-10-30 is rented to replace the British airliner and flights now feature Seychelles flight attendants working with the Dutch cabin crews.

The workforce grows to 33 in 1985 and, in January 1986, an Airbus Industrie A300B4 is leased from **Air France** and employed to launch twice-weekly London service via Jeddah and Frankfurt and via Jeddah, Rome, and Zurich. The Airbus is the first major transport to be painted in the carrier's own colors and to employ an all-Seychelles cabin crew.

The Airbus lease is allowed to expire in 1987 as the carrier elects to obtain its own jetliner; the French aircraft is replaced with a hush-kitted "Super Q" B-707-341C acquired from **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)** under terms of a seven-year agreement with the Equator Bank. A flight crew, recruited by the airline, ferries the aircraft to Mahe after its refurbishment at Santa Barbara, California and places it into nonstop service to Europe. Late in the year, the private ground-handling company **Ligne Aerienne Seychelles, Ltd.** is taken over, together with its scheduled route to Nairobi and Singapore and charters to Perth, Australia.

Airline management is centralized in the Seychelles in 1988 as London-based Executive Vice President Martin Harewood is dismissed. A second hush-kitted ex-**VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)** Stratoliner, also leased under terms of a seven-year agreement with the Equator Bank, arrives in July.

The two aircraft, in addition to their previous services, begin flights to Athens and Paris in November, the same month that the airline takes over the domestic flights of Aviation Seychelles, Ltd. Orders are also placed with the International Lease Finance Corporation (ILFC) for the charter of 1 each B-767-2Q8ER and B-757-28A. A total of 40,000 passengers are flown on international services and 123,000 over domestic routes.

The workforce in 1989 totals 330 and Operations Manager Gilbert Boucheron, a French technical expert, employs 2 Islanders and 2 de Havilland Canada DHC-6-300 Twin Otters to service Praslin, Fegate, Bird, and Denis. In February, Chairman Maurice Loustau-Lalanne is named the government's minister for transport and tourism; he is succeeded by Conrad Benoiton.

The Stratoliners continue their flight operations under the direction of new General Manager Colin Williamson, recently retired from **Qantas Airways (Pty.), Ltd.** On June 26, the leased Boeing 767-2Q8ER is delivered; christened *Aldabra*, it enters service on a schedule of three roundtrips per week to Europe. B-767-2Q8ER flights to Singapore begin in October and a B-707-341C is sold in November.

In 1990, the Boeing 767 is joined by 2 more Twin Otters and the final Stratoliner is sold. The first year of B-767-2Q8ER service is completed on July 26, during which time the wide-body has carried 51,596 passengers to and from Europe. During the fourth quarter, a revenue pool is entered into with **Air France** on a joint service from Mahe to Paris (CDG) operated by **Air Seychelles, Ltd.** aircraft.

Enplanements total 213,211 and with costs exceeding income, there is a \$2.16-million operating loss. On the plus side, there is a net profit of \$2.1 million.

The workforce is cut 1.4% in 1991 to 415 as government subsidies end completely. Weekly service is inaugurated to Johannesburg and passenger boardings climb 2.2% over the previous year to 62,297 as an order is placed for a B-757-200. Freight, however, is down by 3.2% to 10 million FTKs. Revenues jump 6.4% to \$45.3 million and with costs down, there is an operating profit of \$4.7 million and a \$4.1-million net gain.

In 1992, J. P. Dugasse is named general manager of the 400-employee carrier. When **British Airways, Ltd. (2)** and **Air France** introduce a number of nonstop Asian services bypassing the Mideast, **Air Seychelles, Ltd.** adds a service to Bahrain. The second Boeing arrives and operational statistics are reported for the first half of the year. These show bookings of 113,774 passengers and the transport of 7.82 million FTKs. Toward year's end, the company suffers a \$5.8-million loss due to disadvantageous exchange rates and is forced to secure a commercial loan to cover its operating costs.

Chairman Benoiton's workforce grows by 3.8% in 1993 to 415 and the fleet now includes 4 Twin Otters and 1 leased B-767-2Q8ER. The jetliner inaugurates Johannesburg service on March 27.

A B-757-28A, leased from ILFC on March 29, is christened *Aride*. Just one of these \$65-million jetliners, if purchased, would represent a \$930 investment by every citizen.

In April, a strategic alliance is entered into with **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)** under which the two carriers agree to code-share on a route from Mahe to Madrid via Nairobi. Destinations now served from Mahe include Bahrain, Dubai, Frankfurt, Johannesburg, London (LGW), Madrid, Nairobi, Paris, Rome, Singapore, and Zurich.

It is reported in September that, despite no claims, the company's insurance premiums have increased 37% over the past three years. In December, a code-sharing agreement with **Gulf Air** comes into effect on the service from Seychelles to Bahrain.

The year's passenger boardings more than double to 289,261 while cargo totals 10.58 million FTKs.

A total of 450 workers are employed in 1994 as traffic continues to fluctuate. Customer bookings move ahead by 2.8% to 297,370, while freight dips 1.2% to 10.45 million FTKs. There are losses: \$1.18 million operating and \$1.48 million net.

The carrier still has the smallest home market of any scheduled international air carrier while the Seychelles remains the smallest nation with an airline capable of mounting international scheduled flights.

Airline employment is increased by 3.8% in 1995 to 435 and no changes are made in the fleet from 1993. The *Aride* begins weekly roundtrip service on April 28 from Seychelles to Bombay via Dubai. This route is followed by introduction of a frequency to Madrid in July. Flights to Tel Aviv commence in December, with an unnamed B-767-37DER delivered early in the month.

Passenger boardings climb 5.6% to 314,014 while cargo jumps 22.7% to 12,830,000 FTKs. The financial picture brightens as operating revenues accelerate 6.7% to \$60.79 million; expenses rise only 6.4% to \$61.87 million. The operating loss is reduced to \$1.08 million while the net loss declines to \$1.06 million.

Norman Weber becomes chairman in 1996, with Freddy A. Karkaria as general manager. Over the next year, the two come to supervise a workforce of 415. Marketing alliances are entered into with **Emirates**, **Gulf Air**, and **Kenya Airways**. New service to Manchester, England, begins on February 10.

Seeking greater capacity, the carrier's B-757-28AER is traded in to help cover the cost of the leased B-767-3Q8ER.

International destinations visited from Mahe include Bombay, Dubai, Frankfurt, Johannesburg, London (LGW), Madrid, Manchester, Nairobi, Paris, Rome, Singapore, Tel Aviv, and Zurich. The Twin Otters continue to serve Praslin Island, Denis Island, Bird Island, and Fregate Island. Enplanements for the year surge to 376,632.

Under the leadership of its new chairman, Nashirudeen Mallam-Hasham, **Air Mauritius, Ltd.** launches a campaign at the beginning of 1997 to federate the airlines of the Indian Ocean area. To this end, a protocol is signed in July with the airlines of Madagascar and the Seychelles, the Comoro government, and **Air France**. The signature of Air Austral is momentarily expected.

Joint dual-designator services is launched with **Air Mauritius, Ltd.** on October 28 between the Seychelles and Mauritius.

Customer bookings for the year move ahead by 2.9% to 384,318, while freight doubles, up 44.8% to 24.18 million FTKs.

Flights continue in 1998. Passenger boardings drop 4.1% to 369,000, while cargo traffic falls 29.3% to 17.1 million FTKs.

Another B-767-3Q8ER is chartered from ILFC on December 4.

Enplanements drop 6% this year to 347,000, but cargo traffic rises by 14.9% to 19.65 million FTKs. Although operating income is down by 8.1% to \$64.01 million, costs plunge 25.8% to \$44.16 million. As a result, the operating profit jumps to \$19.85 million and there is a net gain of \$1.32 million.

The workforce is increased by 5.7% in early 2000, reaching 579.

AIR SHANGHAI. See **CHINA EASTERN AIRLINES COMPANY, LTD.**

AIR SHANNON: United States (1966–1967). Established at Fredericksburg, Virginia, in early 1966, Air Shannon inaugurates daily, roundtrip, scheduled Piper PA-31-310 Navajo third-level commuter flights to Washington, D.C. (DCA) on February 25.

Unable to cover the cost of start-up, the carrier is forced to stop flying on April 24, 1967.

AIR SIAM AIR COMPANY, LTD.: Thailand (1965–1977). Former British RAF pilot HRH Prince/Capt. "Nicky" Varanand, dissatisfied with the SAS (Scandinavian Airlines System) stake in **Thai Airways Company, Ltd. (TAC)** that had resulted in the creation of its SAS-managed subsidiary **Thai Airways International, Ltd. (THAI)**, establishes Varanair Siam at Bangkok on September 15, 1965 as a private enterprise, wholly Thai intercontinental carrier.

The prince's new enterprise will remain a paper airline for the remainder of the decade. Still, there is activity. Varanand recruits a corps of British aeronautical advisors and is able to secure traffic rights and/or

authority from four nations in 1967: the United States (April 27); Thailand (permission on August 19 to begin transpacific flights); Japan (October 26); and Hong Kong (from Great Britain, on October 31). At the beginning of 1968, the company name is changed to Air Siam, Ltd.

The remainder of the 1960s is occupied by a search for capital and overseas partnerships. The best hope appears to be an alliance with **The Flying Tiger Line**, but negotiations fail. The company's first aircraft, a used Douglas DC-4, is acquired from **Trans-Australian Airlines (Pty.), Ltd.** in February 1970. It is employed to launch Air Siam's inaugural service on March 1, a thrice-weekly all-cargo route to Hong Kong.

Airline employment stands at 112 at the beginning of 1971. Employing a DC-8-63 wet-leased from **Overseas National Airways (ONA)**, Varanand's company initiates freight and also a twice-weekly passenger service from the nation's capital to Los Angeles on March 31. These flights continue during the remainder of the year; however, the company has insufficient capacity to make a profit and, in fact, loses money.

In fiscal and labor difficulty, Air Siam is shut down on January 11, 1972. The DC-8 is returned to ONA, which is left holding an Air Siam IOU for \$2 million in lease fees. The carrier remains shut down for the better part of six months while Prince Varanand seeks additional capital and, with the assistance of former **Thai Airways International, Ltd. (THAI)** executives Virachai Vannukul and Andreas Hansen, additional aircraft and markets. The ONA debt is settled when Varanand transfers several choice parcels of Bangkok property to the American supplemental carrier.

Revenue flights resume on May 25 employing a British Aircraft Corporation BAC 1-11-416 leased from a Singapore millionaire. As the plane does not have the range for transpacific service, the company's route ends at Tokyo. Disillusioned by his experience, Prince Varanand resigns in October, turning leadership over to President Vannukul. A total of 17,589 passengers are carried during the rest of the year. Despite its many problems, the company registers a \$110,000 profit.

The company employs 300 workers during 1973. A German Boeing 707 Stratoliner is leased on January 5 and is employed to replace the BAC 1-11-416 in February. It offers large discount fares on the route to Japan.

A Boeing 747-148 leased from **Aer Lingus Irish Airlines, Ltd.** joins the fleet on September 29; christened *Doi Suthep*, it inaugurates thrice-weekly transpacific service Bangkok to Honolulu via Hong Kong and Tokyo. Passenger boardings skyrocket an unbelievable 561% to 114,000 and freight traffic is even better, advancing 1,781%. A handsome profit is recorded during the year, one-sixth of which is derived from air cargo flights on the Pacific route.

Additional service is initiated in 1974 to Europe in an effort to cater to a large number of German tourists who visit Thailand on vacation. In the spring, offices are opened in Los Angeles, New York, Chicago (ORD), San Francisco, and Honolulu. An Airbus Industrie A300B2 is leased from its manufacturer and employed on the Bangkok(Hong Kong) route, beginning on October 21. This service is deeply discounted.

In addition, a DC-10-30 arrives under lease from **KLM (Royal Dutch Airlines, N.V.)** and is placed in service to Los Angeles via Tokyo and Hawaii. The chartered Dutch airliner's premier Thai flight encounters bureaucratic problems as the airline has not completed all of the paperwork required to operate its certificate. After arrival, the jetliner is forced to remain grounded at LAX until company officials resolve questions relating to their landing rights.

Still, these two new wide-bodies help passenger boardings advance by 144% to 283,036. Freight skyrockets 258% to 23.32 million FTKs. A net profit of \$1.5 million is earned on total income of \$56.3 million. Late in the year, the Thai government orders the carrier merged with Thai International in two years.

The workforce in 1975 is 723. A second leased A300B2 enters service from the Thai capital to Singapore. Chairman Vannukul enters into discussions with **Air Ceylon, Ltd.** on November 10 concerning possible joint operations in Europe. Customer bookings accelerate 61.3% to 456,568 while freight zooms upward by 47.5%.

In January 1976, reacting to complaints from **Cathay Pacific Airways (Pty.), Ltd.** concerning the Thai company's discount policies, the government of Hong Kong suspends traffic rights for both Air Siam, Ltd. and **Thai Airways International, Ltd. (THAI)**. Frequencies to the U.S. West Coast are now increased. In accordance with the government's decree, the carrier begins to cooperate somewhat more closely with **Thai Airways International, Ltd.** in terms of scheduling, equipment, and various other services.

When the original B-747-148 lease expires on April 15, the aircraft is returned to Ireland and is replaced by a B-747-206B, also named *Doi Suthep*, chartered from **KLM (Royal Dutch Airlines, N.V.)**. On October 30, the company, now in severe financial trouble, contracts with **Air Ceylon, Ltd.** to operate the Dutch DC-10-30 over Air Ceylon's European routes. Meanwhile in Bangkok, Air Siam, Ltd. is in such financial distress that it all-but-collapses during September as leases on the two Airbus end, forcing Chairman Vannukul to flee the country.

Air Siam, Ltd. ceases all of its own operations on January 12, 1977. When **KLM (Royal Dutch Airlines, N.V.)** repossesses its only remaining wide-body on January 17, the **Air Ceylon, Ltd.** arrangement is also finished. Air Siam is now grounded. On February 3, the government of Thailand confirms **Thai Airways International, Ltd. (THAI)** as its only flag carrier and the next day Air Siam's operating license is revoked. The last of the independent's assets are liquidated by order of a Thai bankruptcy court in September 1978.

AIR SICILIA, S.p.A.: Via Sciuti 180, Palermo, I-90100, Italy; Phone 39 (91) 625-0566; Fax 39 (91) 625-2510; <http://www.airsicilia.it>; Code BM; Year Founded 1994. Air Sicilia, S.p.A. is established at Palermo during the first quarter of 1991 to offer passenger charter and inclusive-tour services. Revenue flights to Lampedusa commence in June employing a single leased British Aerospace BAe 146-200.

Charters between Palermo and Lampedusa continue without change in 1992-1993. A scheduled airline division is launched at the beginning of 1994, with flights operated from Rome to Palermo via Bergamo and Lampedusa. By year's end, 60,000 passengers have been transported.

In January 1995, an Avions de Transport Aerien ATR42-320 is ordered. The leased turboprop is received in April and placed into scheduled service connecting Palermo with Lampedusa, Pantelleria, Bari, and Cagliari. Still, the number of passengers flown this year falls to 55,141.

The BAe is replaced on March 25, 1996 with a leased Fokker F.28-3000 Fellowship, which launches regional scheduled service to Rome, Parma, and Milan. The ATR continues to fly to Cagliari, Bari, Lampedusa, and Pantelleria, with another ordered before the end of the year.

In February 1997, a wet-lease replacement agreement is entered into with Rome-based **Air One, S.p.A.** Under its terms, the regional operator will operate its ATRs on behalf of Air One a year hence. Meanwhile, receipt of the second ATR42-320 allows inauguration of an air bridge shuttle service between Palermo and Pantelleria.

A leased Boeing 737-228A is acquired on April 8, 1998; replacing the Fellowship, it inaugurates competition, on behalf of **Air One, S.p.A.**, with **Alitalia, S.p.A.** over the return route from Palermo to Rome. It also introduces scheduled services, again on behalf of **Air One, S.p.A.**, between Rome and Bari and over a new route from Bari to Bologna.

A new route is opened on March 1, 1999 between Catania and Rome. Later in the year, new service is also launched from Palermo to Bologna and Verona. Enplanements for the year total 250,851.

In April 2000, new return flights are inaugurated from Palermo to Paris via Catania. Biweekly roundtrips commence on May 19 from Palermo to Paris (CDG).

On November 10, a Fokker 100 is wet-leased for a year from **Alpi Eagles, S.p.A.**

The company makes plans to celebrate its tenth anniversary in early 2001.

AIR SIERRA: United States (1980-1982). Larry Crane forms **Trans-Sierra Airline** at Fresno, California, in spring 1980 to offer scheduled

passenger and cargo services from the company's base to Bishop. Employing a Piper PA-31-350 Navajo Chieftain, he undertakes flights in May.

In July, the small regional's name is changed to Air Sierra and over the next year frequencies are also extended to Mammoth Lake and Lake Tahoe.

As a result of cash flow problems caused both by recession and by air traffic restrictions in the wake of the 1981 PATCO air traffic controllers' strike, Crane's operation must cease in early 1982.

AIR SINAI, LTD.: 12 Kasr el Nil Street, Cairo, Egypt; Phone 20 (2) 760 498; Fax 20 (2) 574 711; Code 4D; Year Founded 1982. Formed at Cairo as an **Egyptair, S.A.E.** subsidiary in early 1982 to succeed **Nefertiti Airlines, Ltd.**, the new entrant begins scheduled service in April (the same month that Israel completes the return of the Sinai to Egypt) over Nefertiti's previous route from the Egyptian capital to Tel Aviv, Israel.

Equipped with 1 B-737-266 leased from **Egyptair, S.A.E.** and 3 owned Fokker F.27-500s, services are maintained throughout the remainder of the decade to the domestic points of Al Arish, Hurghada, Mersa Matruh, Ras an Nagb, Santa Katarina, and Sharm el Sheikh. Four-times-per-week B-737 service is offered to Elat and Tel Aviv and charter flights, including many for Hadj pilgrims traveling to Mecca, are also undertaken.

Operations continue apace during the remainder of the decade and into the early 1990s with only one tragic incident. On June 10, 1986, an F.27-500, with 5 crew and 21 passengers, is diverted to Alexandria because of a sandstorm; it crashes short of the runway during its return to Cairo later in the day, runs into a building, and catches fire (23 dead).

Employing an Airbus Industrie A300B4 leased from **Egyptair, S.A.E.**, the company inaugurates a new weekly Cairo to Tel Aviv via Sharm el Sheikh return service in March 1993; the route is pooled with **Arkia Israel Airlines, Ltd.**

In 1994-2000, General Manager Sobhi Sami and his successor, Ahmed Talaat, oversee a workforce that averages 150 and a leased fleet that includes 1 B-707-366C, 1 B-737-2N7A, and 2 F.27-500s. During the latter year, a B-737-566 is chartered from **Egyptair, S.A.E.**

Destinations visited include Al Arish, Hurghada, Mersa Matruh, Ras an Nagb, Santa Katarina, Sharm el Sheikh, and Tel Aviv.

AIR SLOVAKIA BWJ, LTD.: P.O. Box 2, Airport M. R. Stefanik, Bratislava, SK-82001, Slovak Republic; Phone (7) 434 22 742; Fax (7) 434 22 744; <http://www.airlovakia.sk>; Code GM; Year Founded 1994. Kosice-based Air Slovakia is started in 1994 to serve regional destinations. Revenue flights commence with a single leased Boeing 727-230 once flown by **Deutsche Lufthansa, A.G.** Traffic figures for the start-up year are not released. In late December 1995, company officials report to ICAO that a total of 72,131 passengers have been flown on the year.

Airline employment stands at 30 in 1996 as the lone Boeing flies 77,762 passengers. Tiny profits are generated: \$2,000 (operating) and \$2,000 (net).

Augustin Bernat is general director in 1997 and he oversees a workforce of 44. A second B-737-230 is acquired. Passenger boardings plunge 11.3% to 68,981.

Operating revenues, however, increase by 5.6% to \$9.71 million as costs climb 5.2% to \$9.68 million. The operating profit grows to \$34,000 and there is a \$32,000 net gain.

Flights continue apace in 1998. Customer bookings fall to 64,000. The company also operates 103,000 FTKs, a 23.8% decline over the previous year. Revenues drop 26.1% to \$7.18 million, while expenses are off 39.4% to \$5.86 million. There is a \$1.31 million operating profit and a net gain of \$236,000.

Passenger boardings recover in 1999 ascending 41% to 92,000; cargo is also up, by 5.9%, to 110,000 FTKs. Operating revenues increase 53.4% to \$11.01 million, while expenses skyrocket 68.8%, but still

reach only \$9.9 million. Although the operating profit dips \$100,000 to \$1.11 million, net gain reaches \$372,000.

Despite improvements the previous year, dramatically higher fuel costs severely impact the company during the first half of 2000, forcing it to withdraw one of its B-737-230s. On August 31, the airline stops flying after its remaining B-737-230, just received on May 1, is seized, for failure to make lease payments, during a maintenance check in England and sent to Southend for storage.

The Ministry of Transport loans the carrier its VIP Tupolev Tu-154M, but warns that the company's license will be revoked if it doesn't soon gain return of its Boeing.

Unable to gain return of its British-leased aircraft, the company, on September 12, takes delivery at Bratislava of a former **Southwest Airlines** B-737-2H4. After the plane is repainted, it replaces the Tupolev on flights to Tel Aviv, Larnaca, and Kuwait.

AIR SOFIA: 64 Patriarch Evtimi Blvd. Sofia, BG-1000, Bulgaria, Phone 359 (2) 980 29 01; Fax 359 (2) 980 29 07; <http://www.airsofia.com>; Code CT; Year Founded 1992. Successor to the defunct Sigi Air Cargo, Air Sofia is founded at the Bulgarian capital in February 1992 to provide regional passenger and cargo services, both scheduled and nonscheduled. Revenue operations commence with 2 Antonov An-22s and 5 An-12Bs, 1 of which is leased from **Aeroflot Russian International Airlines (ARIA)**.

Following a year of ad hoc business, an agreement is signed with **THY Turkish Airlines (Turk Hava Yollari, A.O.)** in late 1993 to provide contract all-cargo services on its behalf from Istanbul to Basel, Maastricht, and London (STN). Two more An-12Bs are acquired during the year, including one leased from the Antonov Design Bureau.

Flights continue in 1994–1995, during which years two more An-12Bs are received, one of which is configured for passenger services. Georgy Ivanov is now managing director and towards the end of this period, scheduled services are abandoned. In its place, the carrier's remaining An-22 and the An-12Bs are dedicated to international and domestic cargo flights.

A marketing division is established at London (LGW) and an An-12B is leased to the new **Avioimpex Macedonian Airways**.

Austrian Airlines, A.G. leases an An-12B and, at the end of October 1996, launches joint all-cargo services into Eastern Europe in cooperation with Air Sofia. During the year, an An-24B is sent to a new base at Cotonou, Benin.

A number of wet-lease contracts are operated in 1997–1998 on behalf of the United Nations, the International Red Cross, and **Lufthansa Cargo, A.G.** The company becomes the first An-12 airline ever approved to operate into Hong Kong, while an An-12 and an An-26 are based in Singapore. It also establishes offices and maintenance facilities at Sharjah, a United Arab Emirates destination now quite popular.

During January of the latter year, an An-12B is leased to **Air Luxor, S.A.** for use as a mail plane. Loaded with three tons of mail, the Russian-made turboprop fails its takeoff from Lajes AFB in the Azores for Lisbon on February 4 and crashes 80 m. from the runway. All seven crewmen are killed.

The workforce stands at 400 in 1999 and the fleet includes 1 An-22, 5 An-12Bs and 1 An-24B. Two Ilyushin Il-76Ds and 1 Antonov An-124-100 Ruslan are chartered during the year.

AIR SOMALI, S.A.: French Somaliland (1962–1971). **Air France** and **Les Messageries Maritimes** form this carrier in 1962 to provide local service flights within the French colony. The owners provide aircraft and crews. In July 1971, the company purchases another operator, **Air Djibouti, S.A.**, and, following reorganization, re-emerges with the latter name.

AIR SOUTH (1): United States (1967–1975). Established by founder/owner William "Bill" Evans as **Nationwide Airlines Southeast** on St. Simons Island, Georgia, in the fall of 1967. In January 1968, the

company begins daily, roundtrip, scheduled third-level Beech B-80 Queen Air commuter service linking its base with Atlanta and several other Georgia and Florida cities. In December, F. E. "Pete" Howe is appointed president/CEO and the company name is changed.

During 1969, Air South undertakes replacement service for **Eastern Air Lines** to Waycross and Bowling Green. The fleet is increased by the introduction of several Beech 99s. En route from Atlanta to Greer, South Carolina, on July 6, one of these new aircraft, with 2 crew and 12 passengers, crashes over Winder, near Monroe, Georgia; there are no survivors.

Operations continue apace in 1970–1971. In July of the latter year, President Howe, unhappy with board plans to purchase several Martin 4-0-4s from **Southern Airways**, resigns to take a similar position with Killeen, Texas-based **Hood Airlines**. Enplanements for the year reach 49,000.

A number of additional communities join the route network in 1972–1974, including Birmingham, Nashville, and Greenville.

A Beech 99A with two crew aboard is destroyed in an aborted takeoff from Malcolm McKinnon on March 31 of the latter year; there are no injuries reported.

An **Allegheny Airlines** Fairchild F-27J is leased, and later purchased. The company is purchased by and merged into **Florida Airlines (2)** in 1975 under the name **Florida Airlines-Air South**.

AIR SOUTH (2): United States (1981–1982). The next Air South is set up at Mobile, Alabama, in 1981 to provide scheduled passenger and cargo services to regional destinations. Employing Swearingen Metroliners, the company duly inaugurates daily roundtrips to Pensacola, Gulfport, and New Orleans.

Recession and the effects of the summer's PATCO air traffic controllers' strike combine to force the company out of business in 1982.

AIR SOUTH (3): United States (1984–1985). With the Air South name vacant on government registration books, Homestead, Florida-based **Aero International Airlines** assumes the title late in 1984. Equipped with 1 Britten-Norman BN-2A Trislander, 1 BN-2 Islander, 1 Beech 18, 1 Piper PA-34 Seneca, and 2 Cessna 402s, the company continues to provide on demand air taxi services, linking its base with Ft. Lauderdale, Miami, Marathon, Marco Island, Freeport, and Bimini. Additional destinations served include Orlando, Tampa, Ft. Pierce, and Titusville.

Scheduled services commence in May 1985. A victim of recession and overexpansion, the carrier ceases operations during the fall.

AIR SOUTH (4): United States (1993–1997). With funds provided under a \$12-million federal loan, guaranteed by the state of South Carolina and the city of Columbia, plus \$5 million in grants and training from state and local governments, the fourth Air South is established at Columbia Metropolitan Airport in January 1993. The remainder of the year is spent in infrastructure and organizational development of CEO Clifford Haley's carrier, which is modeled after **Southwest Airlines**.

A total of 300 employees are hired and trained during the first two quarters of 1994 while a pair of Boeing 737-247s are leased. A \$12-million loan is negotiated with the State of South Carolina. On August 29, four-times-per-day, scheduled, all-coach-class passenger services are inaugurated, linking the company's base with Raleigh/Durham and Baltimore (BWI). Tickets are sold through travel agents, with neither assigned seats nor meals available.

The fleet is enhanced during the fall by the arrival of 1 chartered B-737-242A and 3 B-737-2P6As. These are employed, beginning on November 15, to initiate four-times-per-day flights linking the North Carolina and Maryland airports with Atlanta and five-times-per-day to St. Petersburg and Clearwater. Five-times-per-day service is also introduced between Columbia and Tallahassee; all Florida frequencies continue on to Miami (MIA).

Enplanements for the first four start-up months total 115,855.

Revenues total \$6.75 million, but expenses are \$15.86 million. Consequently, there is a \$9.11-million operating loss and a net loss of \$6.65 million.

In 1995, the company's leased fleet includes 2 B-737-247s, 4 B-737-2P6As, and 1 B-737-242A. Two former **American Trans Air** executives, John P. Tague and John Affeltranger, who have formed their own consulting concern, The Pointe Group, are brought in as advisors.

The brakes of a B-727-247, with 28 passengers, fails after the plane lands at Atlanta on January 19; the trijet departs the end of its runway and comes to a stop about 200 ft. further in the grass with its left outboard main tire blown. No injuries are reported.

In an effort to gain funds, the company sells its entire stock of spare parts to Florida-based Aviation Sales and then leases the parts back for company use.

The seven aircraft transport a total of 995,000 passengers during the 12 months. Costs again exceed operating income and again there are losses: \$7.1 million (operating) and \$7.23 million (net).

The employee population stands at 558 in 1996.

Service in Tallahassee, Tampa, and Raleigh/Durham is terminated on April 1. On April 10, the company starts daily, nonstop flights to New York (JFK) from Myrtle Beach and a daily one-stop between the two points that connects via Hilton Head Island and Savannah, Georgia.

Twice-daily nonstop roundtrips commence from Myrtle Beach to Chicago (MDW) on May 1, followed by daily nonstop roundtrips from Newark (EWR) to Myrtle Beach, Hilton Head Island, and Charleston, S.C.

In July, Pointe Group CEO John Tague becomes chairman/president/CEO, with John Affeltranger as vice president operations. On November 1, supported by major investor Hambrecht & Quist, Tague also becomes chairman/president/CEO of **Vanguard Airlines**, dividing his time equally between Air South's base and VA's headquarters at Kansas City. To assist, Vice President Operations Affeltranger becomes Air South's new chief operating officer.

Customer bookings plunge 27.1% to 725,139 and revenues are off by 8.4% to \$53.01 million. Expenses rise 22.1% to \$79.32 million and the reverses recorded on the bottom line deepen as a \$26.31-million operating loss and a \$26.85-million net loss are reported.

The dismal situation continues into 1997 as the workforce is cut 49% to 300. During the first quarter, \$7.8 million is lost on revenues of \$14 million.

Throughout the first half of the year, every effort is made to renegotiate both the 1994 South Carolina loan and the company's aircraft leases.

Chairman/President Tague departs for **American Trans Air** on June 23, and Affeltranger takes over Tague's responsibilities.

On July 31, company officials call in the media and report that things are looking up financially.

The carrier is, however, unable to renegotiate its obligations and, consequently, the fourth Air South suspends operations on August 28 and files for Chapter XI bankruptcy protection. Most of the company's 700 employees are laid off (without three weeks pay) and no one is left to do the paperwork surrounding the filing.

A lack of interline agreements leaves Labor Day holiday passengers booked on Air South to make alternative arrangements to complete their travel. **Kiwi International Airlines** and **Midway Airlines (2)** offer them tickets for the same fare they had paid for their Air South tickets and **United Airlines** offers travelers bereavement fares.

For eight months, passenger boardings have risen significantly, up to 453,350—so too have revenues, climbing 12.6% to \$31.5 million. Expenses, on the other hand, leap ahead by 21.3% to \$46.07 million and cause an operating loss of \$24.52 million. The net loss deepens to \$15.36 million, with four months left in the year. The airline has only \$11.5 million in assets as against \$67.4 million in liabilities. Of the original government loans, only \$172,000 has been repaid.

Air South's Chapter XI is officially converted to Chapter VII liquidation on October 16.

AIR SOUTH WEST, LTD.: Plymouth City Airport, Plymouth, Devon, England, PL6 8OW, United Kingdom; Phone (0) 1752 770056; Fax (0) 1752 770097; Code 8H; Year Founded 1995. G. Hitchen and N. Gough's **Newquay Air, Ltd.** is reformed during the summer of 1995 and transferred to Plymouth City Airport where it receives its new name. Tony Mooney is managing director and he brings in a pair of Embraer EMB-110 Bandeirantes that join the Piper PA-31-350 Navajo Chieftain already available. Scheduled and charter flights commence in October linking Blackpool and Dublin.

Service is inaugurated from Exeter to Dublin and Cork in 1996 and plans are made to acquire a Shorts 330. The Shorts arrives in 1997 as the company continues both scheduled services and charter flights into the new millennium.

AIR SOUTHWEST. See **SOUTHWEST AIRLINES (2)**

AIR SOUTHWEST, LTD.: Canada (1988–1992). G. F. Jacobs establishes Air Southwest, Ltd. at Chilliwack, British Columbia, in 1988 to provide scheduled passenger and cargo services to Victoria. Operations commence with 1 Cessna 206, 1 Piper Aztec, and 2 Piper PA-31-350 Navajo Chieftains. A Piper PA-31T Cheyenne is acquired in 1991. Services continue for another year.

AIR SPAIN, S.A.: Spain (1970–1975). Based on the island of Palma, Air Spain is established in 1970 to provide passenger and cargo flights to European destinations. A pair of Douglas DC-8-21s are leased from **Eastern Air Lines** and when the company fails in 1975, they are returned to their American owner.

AIR SPECIALTIES See **AIR AMERICA (1)**

AIR SPEED: United States (1974–1975). Air Speed is set up at Bedford, Massachusetts, in 1974 to provide scheduled passenger and cargo services to Boston and New York. Daily Beech 99 roundtrips are duly inaugurated, but are only maintained into 1975.

AIR SPIRIT: United States (1984–1985). Formed by Troy Post to provide feeder connections with **Braniff, Inc.**, Air Spirit is established at Dallas (DFW) in early 1984. Equipped with 4 Embraer EMB-110P Bandeirantes, the new third-level entrant inaugurates daily roundtrip service on April 1 to Austin, College Station, Houston, Tyler, Waco, and Wichita Falls in Texas; to the Oklahoma cities of Lawton and Altus; and to Texarkana, Arkansas.

As **Braniff, Inc.** encounters difficulties in the fall and winter, so too does Air Spirit, which is unable to weather them and stops flying in early 1985.

AIR SRPSKA: Veselina Maslese 28, Banja Luka, 78000, Republic of Srpska, Bosnia and Herzegovina; Phone 381 (78) 212 806; Fax 381 (78) 211 348; <http://www.angelfire.com/biz3/AirSrpska>; Code R6; Year Founded 1999. This small carrier is established at Banja Luka on January 22, 1999 as the flag carrier of the Republic of Srpska, the Serbian-dominated part of Bosnia and Herzegovina. Milan Kovacevic is chairman/managing director and his new airline receives rich assistance from **JAT Yugoslav Airlines** and Airports of Republic Srpska. One each Avions de Transport ATR72-202 and Boeing 737-2H9A are wet-leased from JAT.

Although plans are quickly put in place to obtain slots at several western European airports, the initial route, inaugurated on January 29, is between Banja Luka and Belgrade. Over the next two weeks, flights are also started to Tivat, Zurich, and St. Gallen.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, Air Srpska, on March 24, halts all scheduled service into Belgrade as Yugoslav airspace is closed. A spokesman, in making the announcement, indicates that the

situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade remains halted on March 25–31. Following the conclusion of the Kosovo conflict, Air Srpska operates only the ATR72-202 on scheduled flights to Zurich. Service to Belgrade remains halted not only for the duration of the NATO bombing campaign, but for the next 17 months.

In association with **JAT Yugoslav Airlines**, twice-weekly ATR72-210 service from Banja Luka to Belgrade is restored on August 4, 2000. Once an air service agreement is signed, it is anticipated the flight will also be started from Banja Luka to Sarajevo.

AIR STARLINE, LTD.: Kenya (1990–1994). In November 1990, **African Safari Airlines, Ltd.**, a Kenyan charter operation with Swiss affiliations based at Basel, establishes **Air Starline, Ltd.** as a privately owned subsidiary. Frederick Hofer is named managing director of the new charter airline. A workforce of 60 is recruited for it and revenue operations commence with a single Douglas DC-8-63H, painted in an all-white color scheme with ASA titles and a tail given a zebra pattern.

Europe–Africa charter operations begin in early 1991 and flights continue apace in 1991–1992. In January 1993, the carrier is folded into its parent; however, its name is adopted for certain combined operations. K. J. Rudin remains general manager of the enlarged company and his fleet now includes the Douglas DC-8-63H and a DC-10-30, the latter leased from **KLM (Royal Dutch Airlines, N.V.)** late the previous year. A new logo and aircraft livery are introduced and passengers continue to be flown on holiday packages to Africa and the Seychelles, as well as on worldwide charters, during the remainder of the year.

In January 1994, the DC-8-63H is sold to **Airborne Express** and the wide-body is returned to ASA livery.

AIR STORD, A.S.: Norway (1996–1999). Air Stord is established at Stord Airport, Sagvaag, Norway in the first quarter of 1996, with ownership held by the Amundsen Group. Hans Orjagaeter is named managing director and is given the mission of initiating scheduled regional and domestic passenger service with a pair of Beech Super King Air 200s.

Orders are placed in mid-March for 2 Dornier 328-110s. The 32-seat turboprops are delivered several weeks later and enter service in late spring, flying between Stord Airport, Oslo, and Skien Airport at Bergen.

Enplanements by December total 9,225. Flights continue in 1997–1998. During these years, the fleet is upgraded by the addition of a Fairchild Dornier 328-110. Enplanements reach 38,000.

A workforce of 42 is employed at the beginning of 1999.

Unfortunately, heavy financial losses have been suffered during the last few years and the carrier's inability to make good on them now forces it to shut down.

AIR STYRIA, GmbH.: Feldkirchen, A-8073, Graz-Thalerhof, Austria; Phone 43 (316) 29-1008; Fax 43 (316) 42-6997; Year Founded 1992. Air Styria is set up at Graz in 1992 to provide executive passenger charters. By 2000, the company, which specializes in flights to and from Eastern Europe, operates a single Cessna 550 Citation II.

AIR SUL, S.A.: Portugal (1990–1992). Air Sul is established at Lisbon during the summer of 1990 to operate holiday flights throughout the Mediterranean area. Despite the Gulf War, the company's single Boeing 737-2K5 is able to complete a number of charters during the winter and following summer. The summer schedule includes flights to northern Europe and the U.K.

Finding itself in major financial difficulty, the company shuts its doors in January 1992.

AIR SUNSHINE (1): United States (1971–1978). **American Air Taxi** of Key West, Florida (founded in 1951) establishes an airline division,

AAT Airlines, in 1971 and begins scheduled Douglas DC-3 flights to Miami and Tampa in July. Several routes are taken over from **Executive Airlines** during 1972, including a run from Ft. Lauderdale to Sarasota via Marathon.

In November 1973, the carrier is sold and the new owners rename it Air Sunshine. Frank V. Bervaldi is named president/CEO. An increased number of frequencies are started to Miami and stops are made en route at Kissimmee and Orlando. Operations continue apace in 1974–1975, with enplanements in the latter year reaching 50,524.

Airline employment grows 43% in 1976 to 105. The 5 DC-3s transport 112,174 souls on the year, a major 55% jump. Freight is also up 50% to 2.1 million FTKs.

On January 15, 1977, the No. 1 engine of a DC-3 with 3 crew and 30 passengers fails just after takeoff from Miami. The pilot loses control while attempting an emergency landing and the Douglas crashes; there are no fatalities, but the aircraft must be written off.

A Convair CV-440 Metropolitan is placed into service in June and helps the year's enplanements reach 135,879.

In 1978, airline employment stands at 174 and the fleet comprises 4 DC-3s and 2 CV-440s. Passenger boardings jump 24% to 178,787 and freight traffic rises 16% to 657,069 pounds. Control of the company is taken in late December by rapidly expanding **Air Florida**.

AIR SUNSHINE (2): P.O. Box 22237, Ft. Lauderdale, Florida 33335, United States; Phone (954) 434-8900; Fax (954) 359-8229; Code YI; Year Founded 1983. Taking the name of an earlier commuter, Air Sunshine is formed at Ft. Lauderdale in early 1983 to offer scheduled weekday Cessna 402 passenger flights to Sarasota. Operations continue apace for a decade, during which time additional frequencies are added, as is service to Orlando, Tampa, and Miami.

A Cessna 402C crashes at Clewiston, Florida, on January 23, 1992 (two dead). In 1993, President Alan Adili's fleet comprises 5 Cessna 402s. It is increased during the spring of 1994 by the addition of 1 Embraer EMB-110P1. Enplanements for the year total 10,326. Operations continue apace in 1995.

The employee population stands at 22 in 1996. In December, the company begins to offer flights to destinations in the Caribbean. The 6 aircraft in the fleet transport a total of 18,329 passengers.

President Adili's fleet in 1997 includes 5 Cessna 402s and 2 Bandeirantes.

While on final approach to the airport at St. Thomas, Virgin Islands, on the night of February 8, a Cessna 402C with a pilot and four passengers lands in the sea, three mi. short of the runway (two dead).

Customer bookings this year increase 42% to 26,030.

Flights continue in 1998. Enplanements are level at 26,000.

While departing Ft. Lauderdale for the Bahamas on June 8, 1999, in heavy rain, a chartered Cessna 402C, with a pilot and nine passengers, goes off the side of the runway and crashes into an airport taxiway sign; although no injuries are reported, the aircraft is badly damaged.

Customer bookings jump 16.8% to 31,000.

A company Cessna 402C with 10 passengers aborts its March 16, 2000 takeoff from Ft. Lauderdale on a service to Bradenton; the aircraft veers off the runway and into a fence, where one passenger is hurt.

AIR SUPPLY (PTY.), LTD.: P.O. Box 3799, Halfway House 1685, South Africa; Phone (11) 315-2504; Fax (11) 805-3365; Year Founded 1990. Air Supply is set up in 1990 to offer executive passenger and small group passenger charters throughout South Africa and to neighboring countries. Revenue flights commence with 2 Mitsubishi Mu-2s, 1 Beech King Air 90, 1 Super King Air 200, plus 2 Bell 206B JetRanger helicopters.

In 1995, the company seeks approval from the government to offer jet service, but this bid is denied. In 2000, Bradley Amolis is managing director, with Ivan Kier continuing, as he has for eight years, as chief pilot. The fleet comprises the 2 JetRangers, 1 McDonnell Douglas MD 500, and 2 Robinson R22s.

AIR SUR, S.A.: (1987–1991). Air Sur is formed at Madrid in early 1987 to offer regional flights with 2 Douglas DC-8-61s. Santiago Abril Lozano is named president with Juan Ruiz Arce as general manager. Enplanements reach 354,554.

Airline employment falls 33.9% in 1988 to 74 and the 2 older Douglas aircraft are replaced by 4 McDonnell Douglas MD-83s. Passenger boardings decline by 59% to 222,990 and revenues drop 30.5% to \$24.55 million.

The workforce is rejuvenated in 1989, growing by 24.3% to 92. Customer bookings drop sharply again, falling 26.2% to 243,192.

In an effort to redress its traffic failures, Air Sur details a fleet of 2 MD-83s and 1 SAAB 340A and inaugurates domestic third-level scheduled services in June 1990 to Almeira, Granada, and Seville.

A DC-9-10 is chartered from Intercredit Corporation on January 29, 1991, but is sold, lease in place, to a new owner, ILFC, on April 18.

The scheduled service gambit is not successful and unable to achieve viability after this start-up, the carrier suspends operations in June. The DC-9 is repossessed on July 24.

AIR SWAZI CARGO, LTD.: Swaziland (1987–1995). This all-cargo charter operation is formed at Mbabane by Brian Parmenter and T. M. Longmore (the latter is also a player in **African International Airways, Ltd.**) in 1987 to offer regional and international all-cargo services. The 20-employee carrier is outfitted with a single Boeing 707-320C that in April begins a weekly service from Manzini to Amsterdam via Mauritius and Cairo.

Freight charters are continued throughout Africa and Europe until the company shuts its doors on August 31, 1995.

AIR SWEDEN, A.B. See TIME AIR SWEDEN, A.B.

AIR SWIFT, LTD.: United Kingdom (1994–1996). Air Swift is established at Cairns in the summer of 1994 to offer domestic and regional passenger charters. Revenue flights commence with 1 each British Aerospace Jetstream 31 and Beech Super King Air 200. The fleet is altered in 1995 to include 2 Cessna 402s and 3 Cessna 310s; scheduled flights commence linking the carrier's base with Hope Vale. Operations continue into 1996.

AIR SWIFT (PTY.), LTD.: Australia (1992–1997). Air Swift is established at Cairns in 1992 to offer scheduled, charter, and contract service flights with a fleet of 5 Piper PA-31-350 Navajo Chieftains. Scheduled service is offered to Hope Vale and continues apace in 1993. The fleet in 1994 includes 2 Cessna 402s and 3 Cessna 310s. Flights continue until the company shuts its doors in April 1997.

AIR TAHITI, S.A. (1): French Polynesia (1951–1953). The first Air Tahiti, which is also known as **Tahiti-Hawaii Airlines**, is a privately owned amphibious operation established in 1951. Employing a single Grumman G-73 Mallard, the airline undertakes to fly mail between Papeete, Bora Bora, and Aitutaki in the Cook Islands. Unable to maintain viability, the company is sold to the colonial government of Oceania in 1953, which reorganizes the carrier into **Regie Aérienne Interinsulaire, S.A.**

AIR TAHITI, S.A. (2): French Polynesia (1969–1987). Created at Papeete by local business interests in 1969, Air Tahiti is equipped with light aircraft in order to undertake local scheduled services. Controlling interest in another local carrier, **Air Moorea, S.A.**, is purchased in 1970; the new subsidiary is allowed to continue operations under its previous name.

By 1978, the fleet comprises 1 de Havilland Canada DHC-6 Twin Otter, 4 Britten-Norman BN-2 Islanders, 3 Piper PA-23 Aztecs, 1 Piper PA-34 Seneca, and 1 Cessna 206. In addition to charter flights, daily scheduled seven-minute frequencies link Papeete with Moorea and Tetiaora.

During the early 1980s, the carrier adds two more Islanders and an Aztec. The company now emphasizes its scenic tour business, adding

one-day interisland charters. In 1983, airline employment is 53 and 142,588 passengers are flown. Operations continue apace in 1984–1987.

Upon the departure of **UTA French Airlines, S.A.** in January of the latter year, the carrier's assets are merged with those of **Air Moorea, S.A.** under its name, in order that the French independent's subsidiary, **Air Polynésie, S.A.**, might assume the **Air Tahiti, S.A. (3)** name.

AIR TAHITI, S.A. (3): Boulevard Pomare, BP 314, Papeete, Tahiti, French Polynesia; Phone 689 86 4000; Fax 689 86 4069; <http://www.airtahiti.pf>; Code VT; Year Founded 1987. Upon the departure of **UTA French Airlines, S.A.** in January 1987, the assets of **Air Tahiti, S.A. (2)** are merged with those of **Air Moorea, S.A.** under its name in order that **Air Polynésie, S.A.** might assume the **Air Tahiti, S.A. (2)** name. Ownership is divided between the French Polynesia Territorial Government (14%), financial institutions (32%), individuals (30%), employees (12%), and UTA (7%). Former **Air Polynésie, S.A.** Managing Director Christian Vernaudeau succeeds President Jean F. Lejeune and the fleet is dramatically altered; gone to **Air Moorea, S.A.** are 5 Islanders and acquired are 2 Fairchild Hiller FH-227s and 2 Avions de Transport Regional ATR42-320s. The new aircraft benefit from the application of a fresh logo and livery.

The fleet is changed again in 1988–1989; all of the Islanders and both American-made Friendships are replaced by 2 more ATR42-320s. In October of the former year, the carrier purchases **UST (UTA Service Tahiti, S.A.)**, which provides ground handling at Papeete Airport.

Christian Vernaudeau is named chairman of both **Air Tahiti, S.A. (3)** and **Air Moorea, S.A.** in 1990 with Marcel Galenon as CEO. Orders are placed in May for a pair of Dornier 228-212s, one of which will be turned over to **Air Moorea, S.A.**

Enplanements reach 308,800, including 7,800 flown on charter. In addition, 10,385,000 pounds of freight are transported. Revenues total US\$4.62 million, expenses are US\$4.5 million, and net profit is US\$123,270.

The two airlines each acquire a Dornier 228-212 in 1991.

While on final approach to Nuku Hiva on an April 18 service from Hiva Oa, a Dornier 228-212 with 2 crew and 20 passengers loses an engine and ditches at sea off the runway at Nuku Hiva (10 dead).

Despite the tragedy, overall passenger boardings jump to 354,280, all but 4,480 of which is scheduled service. Cargo climbs to 14.29 million pounds and revenues ascend to US\$4.94 million. Net profit drops to \$12,000 as the world airline recession begins to take hold.

Air Tahiti, S.A. (3)'s Dornier is replaced by an ATR72-202 in 1992 as the number of destinations served reaches three dozen. Also added are three ATR42-320s.

Enplanements are up to 364,810, including a boost in charter boardings to 4,610. Freight poundage rises to 14.71 million and revenues rise to US\$5.19 million. The net profit moves up to US\$49,474.33.

Chairman Vernaudeau oversees a workforce of 520 in 1993 as a second ATR72-202 arrives. Markets served include Bora Bora, Huahine, Maupiti, Moorea, Raiatea, Rangiroa, Manihi, Nuku Hiva, Hiva Oa, Mangareva, Rurutu, and Tubuai.

Customer bookings slide to 350,000, on 15,500 flights. The year's profits are US\$1.73 million (operating) and US\$1.49 million (net).

The workforce is increased to 550 in 1994 and the fleet now includes 2 ATR72-202s, 3 ATR42-320s, and 2 Dornier 228-212s. Orders are outstanding for 2 ATR72-202s and 2 ATR42-320s.

The year's 400,285 bookings increase revenues by 21% to US\$60.55 million. Expenses climb 18% to \$56.99 million, leaving an operating profit of US\$3.56 million and a net gain of US\$1.49 million.

Thirty-eight new employees join the company in 1995 and changes are made in the fleet. Gone is a Dornier, replaced by another ATR72-202 and a de Havilland Canada DHC-6-300. The ATR42 order is revised; three ATR42-520s are now requested for delivery during the next two years.

Passenger boardings jump 7.5% to 432,740 while cargo climbs twice as much, by 15.5%, to 1.67 million FTKs.

A third ATR72-202 is delivered in May 1996 and the first ATR42-520 arrives in November. Beginning on October 31, local investors lay the groundwork for the creation of a long-haul operation that will be known as **Air Tahiti Nui, S.A.** Air Tahiti, S.A. (3) takes a 12.2% stake in the new enterprise. In December, orders are placed for three new ATR72-210As.

Two more ATR42-520s arrive in 1997, one each in February and May. The ATR72-210As are received during the summer and a fourth is ordered in October for delivery the following May. With this request, the company's fleet renewal program is completed as three ATR42-300s and three ATR72-202s have been replaced.

The last ATR72-210A is delivered on June 1, 1998. Plans are made for the receipt of the A340-200 at the end of the year and the inauguration of services to such Pacific Rim communities as Los Angeles, Osaka, Tokyo, and Vancouver.

At the end of January 1999, airline employment stands at 739. Enplanements for the year total 643,000 and 4.13 million FTKs are also operated.

AIR TAHITI NUI, S.A.: P. O. Box 1673, Papeete, Tahiti, French Polynesia; Phone 689 46 0202; Fax 689 46 0290; <http://www.tahitiniui-usa.com>; Code TN; Year Founded 1996. Beginning on October 31, 1996, local Tahiti investors lay the groundwork for the creation of a long-haul operation that will be known as Air Tahiti Nui, S.A. **Air Tahiti, S.A. (3)** takes a 12.2% stake; other investors include AWAC, Brassaire de Tahiti, the CPS pension fund, the French Polynesian government, Group Moana Nui, SEGC, Socredo Bank, Tahiti Tourisme, and the Wan Holding company.

Nelson Levy is named chairman, with Jacques Bankir as president/CEO. Plans are made to serve the travel and tourism market that has always existed in this romantic corner of the South Pacific.

Late in 1997, Air Tahiti Nui, S.A. orders an Airbus Industrie A340-200, which will wear the island's Tiare flower as its tail logo.

Plans are made for the receipt of the A340-200 at the end of 1998 and the inauguration of services to such Pacific Rim communities as Los Angeles, Osaka, Tokyo, and Vancouver.

A contract is entered into with SABRE group for reservations and other computer operations, while an arrangement is completed with **Delta Air Lines** for use of its facilities in Terminal 5 at Los Angeles LAX. The chartered Airbus, an A340-211 previously operated by **Air France**, is received in October and christened *Bora Bora*.

Air Tahiti Nui receives DOT operating approval on November 5 and thrice-weekly roundtrips commence on November 20 from Papeete to Los Angeles. In December, the Air Tahiti Nui Airbus launches twice-weekly roundtrips between Papeete and Tokyo (NRT), replacing those previously flown by **Air France**.

At the end of January 1999, the 130-worker airline establishes its own homepage on the World Wide Web.

Weekly A340 roundtrips commence on April 4, 2000 between Papeete and Osaka (KIX).

On May 21, the company enters into a code-sharing alliance with **Qantas Airways (Pty.), Ltd.** under which the two will operate joint flights between Papeete and Auckland. The new arrangement begins on June 21 with the Tahitian Airbus operating down and back weekly on Wednesdays and Thursdays and a Qantas service offered Sunday through Monday.

AIR TANZANIA CORPORATION (ATC): P.O. Box 543, ATC House, Ohio Street, Tancot House, City Drive, Dar es Salaam, Tanzania; Phone 255 (51) 38 300; Fax 255 (51) 46 545; <http://www.mwebmarketplace.co.za/airtan>; Code TC; Year Founded 1977. The tri-national **East African Airways Corporation**, in which Tanzania is a partner, ceases trading in January 1977. With no air service available in the country, ATC is formed on April 19 as the Tanzanian successor and national carrier. New domestic and international routes are inaugurated on June 1. A two-year technical and managerial contract is signed with **Finnair O/Y** in November.

In 1978, Chairman J. K. Chande and Managing Director Yahya Rubama oversee a fleet that includes 2 Boeing 737-2R8Cs and 4 Fokker F.27-600s. Airline employment stands at 800. Enplanements for the first full year of business are 192,707.

A total of 260,952 passengers are carried in 1979, together with 1.27 FTKs of freight.

The workforce is increased by 5.5% in 1980 to 1,756 and the fleet is increased by 4 F.27-600s and 4 de Havilland Canada DHC-6-300s. New routes are opened to Europe and Asia.

Freight traffic skyrockets 51.3% to 1.92 million FTKs and passenger boardings jump 32.8% to 388,322. An operating loss of \$1.3 million is reported on total revenues of \$42 million.

Two F.27-600s stand down in 1981 as world economic conditions impact the carrier. On July 31, a B-737-2R8C is involved in an accident at Dar es Salaam under unknown circumstances. Enplanements are down to 309,200.

The workforce falls to 1,407 in 1982, a drop of 6.3%. Four hijackers, demanding the resignation of President Julius K. Nyerere, seize Flight 206, a B-737-2R8C with 99 passengers, during a February 26 domestic flight from Mwanza to Dar es Salaam. After killing two hostages, the pirates force the pilot to fly to Nairobi, Kenya, and then on to Jeddah, Saudi Arabia.

The next day, the Boeing flies to Athens and then on to London (STN), where it is immediately surrounded by police, who force the hijackers' surrender. Tried in a British court, the perpetrators will receive prison terms ranging from three to eight years.

Cargo for the year dips 1.6% to 1.18 million FTKs, but passenger traffic accelerates 23.8% to 405,774.

The two F.27-600s are reinstated in 1983. Airline employment drops to 1,390. Cargo accelerates 22.4% to 1.44 FTKs, but passenger bookings grow only 0.7% to 406,148.

Only six new employees are hired in 1984. Two F.27-600s are again withdrawn. While on final approach to Karege from a December 20 training flight, a DHC-6-300 with three crew crashes; there are no survivors.

Passenger boardings, nevertheless, rise 22.7% to 498,533 while freight soars 63.9% to 2.36 million FTKs.

In 1985, the workforce is level at 1,396. Passenger boardings drop 10.5% to 450,995, but cargo soars again, up 40.1%, to 3.31 million FTKs.

Six new employees are hired in 1986 and the fleet now comprises 2 B-737-2R8Cs, 3 F.27-600s, and 3 DHC-6s. Silva L. Rwebangira becomes managing director in November.

The year's customer bookings fall another 2% to 444,661 and freight drops 39.3% to 2 million FTKs. Revenues total \$26 million, but costs are higher and leave an operating loss of \$3.99 million and a net decline of \$1.37 million.

Two new workers arrive in 1987. Employing a leased B-767-200ER, service is inaugurated in early November from Dar es Salaam to London via Rome and Frankfurt.

Passenger boardings jump 3.4% to 455,063. Freight ascends 25.8% to 1.49 million FTKs.

The 1,402-employee flag carrier enjoys a mixed year in 1988. When the government fails in January to make available the funds required for the acquisition of equipment, the carrier postpones its plans to operate to Europe.

Because it has not been properly locked down, the left main landing gear of an F.27-600RF with 4 crew and 47 passengers, collapses when the turboprop lands at Dar es Salaam on January 31; although the aircraft is damaged beyond repair, there are no fatalities.

En route from Dar es Salaam to Mount Kilimanjaro on the night of February 13, a B-737-2R8C with 76 passengers is hijacked by 4 young men wielding knives and who demand to be flown to London. The pilot, tricking the perpetrators, returns to Dar es Salaam, where the pirates attack both him and the copilots once their situation becomes known. The hijackers are overpowered by police and they will be tried and sent to prison for 15 years.

Customer bookings fall 10% to 410,322 while cargo is up again, by 10.2%, to 2.7 million FTKs. A net loss equivalent to \$5 million is suffered for the year.

Two employees are laid off in **1989**, in which year the fleet includes the same 2 B-737-2R8Cs and 3 DHC-6-300s as earlier, but 1 fewer F.27-600. E. N. Olekambainel, a longtime Tanzanian civil aviation department senior executive, is appointed general manager in May.

Passenger boardings plunge 35.1% to 267,016 as freight does worse, falling by 42.6% to 1.57 million FTKs.

Company employment inches up 0.1% in **1990** to 1,402. A DHC-6-300 with two crew crashes at Dodoma on May 3; both flyers escape injury.

Customer bookings reverse their decline and grow by 8.6% to 289,890. Cargo, on the other hand, continues to slide, dropping 3.7% to 1.51 million FTKs.

The payroll is cut a slight 0.5% in **1991** to 1,395 and the fleet now includes 2 B-737-2R8Cs, 3 each DHC-6-300s and F.27-600RFs. On June 1, a B-767-260ER is leased from **Ethiopian Airlines, S.C.** and is employed to operate from Dar es Salaam to London (LGW) and Bombay.

The former service is expanded to Frankfurt on June 6, operating via Kilimanjaro, Rome, and London (LGW).

Passenger boardings decline by 1.5% to 188,000 while freight skyrockets 73% to 1.96 million FTKs.

Managing Director Silva L. Rwebangira's workforce is sliced another 6.3% in **1992** to 959 and the Ethiopian lease expires in February. For failure to meet its interline Clearing House debts, the company's IATA membership is suspended in April. Destinations visited include Bujumbura, Djibouti, Dubai, Entebbe, Gabarone, Harare, Kigali, Lilongwe, London, Lusaka, and Muscat.

Customer bookings increase 24.2% to 216,361, but cargo slips to 1.94 million FTKs.

In **1993**, the new general manager, Alfred Carere, oversees a 45.5% increase in his employee population to 1,395 and the reduction of his fleet by removal of the Twin Otters and one F.27-600RF. The latter had been involved in a nonfatal accident on December 12.

Enplanements drop by 15% to 183,642, as a result of the suspension by the company of its international service. Freight traffic falls 16.1% to 1.62 million FTKs. Company books show a \$195,000 loss.

The workforce is cut a huge 45.6% in **1994** to 760. Shannon Aerospace, Ltd. of Ireland receives a contract to maintain the company's two Boeings.

In September, an agreement is signed with **Air Malawi, Ltd.**; under its terms, the two airlines will operate joint services to South Africa, sharing costs and revenues.

ATC, under the arrangement that in December creates **Alliance Airlines (African Joint Air Services)**, surrenders its international routes—particularly those to Europe—to the new entity.

Traffic figures, reported through October, show an increase of 3.3% in bookings to 159,405, while cargo rises 10.6% to 1.59 million FTKs. Operating income for the whole year totals \$18.43 million, while operating expenses are \$17.75 million. As a result, a \$677,000 operating profit is realized and a net gain of \$4.85 million is celebrated.

There is no change in the number of employees in **1995**. Although the Twin Otter is removed, the company joins in support of the multinational **Alliance Airlines (African Joint Air Services)**, which flies a leased South African B-747SP-44.

Enplanements accelerate 20.3% to 241,116 while freight increases 41.9% to 2,948,000 FTKs.

Airline employment holds firm in **1996** and the fleet now includes 2 each B-737-2R8Cs and Fokker F.27-600RF Friendships. One of the latter is out of service; however, a "Baby Boeing" participates in the launch of a code-sharing route with **Air Malawi, Ltd.** to South Africa and Dubai.

Passenger boardings climb 3.5% to 249,673 and 3.26 million FTKs are also operated—a 10.7% increase.

Destinations visited in **1997** include 20 domestic markets, plus Bujumbura, Dar es Salaam, Djibouti, Dubai, Entebbe, Harare, Kigali, Lusaka, Mahé, Muscat, and Nairobi.

During October, plans are completed that will have Air Tanzania and **Uganda Airlines, Ltd.** merge with **Alliance Airlines**, forming the core of **Alliance Express, S.A.; South African Airways (Pty.), Ltd.** and Transnet, the government-owned parent firm, are expected to cover costs.

Customer bookings slip 2.2% to 220,652 while cargo moves ahead by 3.5% to 3.1 million FTKs.

A crisis erupts with **Alliance Airlines (African Joint Air Services)** during the late spring of **1998**. For several years, it has been claimed that ATC has not cleared its investment debts dating from the commencement of the airline in 1994. The dispute reaches such a point of hostility that ATC Chairman Abbas Sykes announces that his airline will withdraw from Alliance Airlines on expiration of the shareholders agreement on June 30.

Just after landing at a regional airport on May 11, a B-737-2R8C runs off the runway into a muddy field, where it gets stuck. No one is hurt and all aboard are eventually able to leave the aircraft, climbing down an emergency ladder three hours later.

On July 1, a check is found in the AJAS office that effectively clears up the fiscal matter. Dated December 10, 1997, it is for the full amount of \$59,000 owed by ATC. How it had been received and why it had not been entered into the company ledger is not explained.

Still, ATC officials indicate that they require negotiation of a new shareholder's agreement in which they may add written remedies to their long-standing objections to company policy. The Tanzanian government now steps in and reserves to itself the future of the relationship between the state carrier and the consortium.

The dispute continues throughout the summer and fall. ATC is finding it impossible to proceed toward privatization without the international traffic rights it had given away in 1994. Prospective investors inform the airline that they will not provide equity without the rights.

In August, ATC joins in the economic sanctions and flight embargo placed on Burundi by regional leaders. Burundi had been a lucrative market for Tanzania and was served by all modes of transport, largely from Dar es Salaam.

On October 28, Tanzania's Minister for Transport and Communications Ernest Nyanda is quoted with permission by Reuters, Ltd. and in local newspapers as indicating that ATC is no longer a viable transport entity. It will prove impossible to privatize ATC without return of the traffic rights. Whether to remain a part of the consortium or pull out will be decided by the minister in the new year.

In an effort to encourage peace talks between the government of Pierre Buyoya and Hutu rebels, regional leaders on December 23 suspend economic sanctions against Burundi.

Passenger boardings inch up 0.8% to 222,000, while freight traffic rises 14.2% to 3.5 million FTKs.

Scheduled passenger air service between Dar es Salaam and Bujumbura, the capital of Burundi, resume on January 14, **1999**, via Kilimanjaro.

Leaders of East Africa end their two-and-a-half year embargo of Burundi on January 26; Air Tanzania, which has honored the sanctions since their imposition in July 1996, resumes flights to Bujumbura on February 1.

Unable to compete successfully with local carriers, ATC suspends service to Dubai on February 1.

A code-sharing agreement is signed with Gulf Air Company on May 14. On May 19, the government rejects an airline request to continue collecting royalties from foreign airlines entering its market. The old practice is seen to be dying out in the era of liberalization.

Under terms of the new dual-designator pact with Gulf Air, ATC is able to place its code on Gulf Air flights from Zanzibar and Dar es Salaam to Dubai, Muscat, and Jeddah on May 29.

Service is maintained without detail through the remainder of the year. The dispute between **Alliance Air (African Joint Air Services, Ltd.)** and the governments of Tanzania and Uganda is unresolved.

After stepping back from a call for Alliance's April **2000** closing, Transnet, parent of **South African Airways (Pty.), Ltd.**, instead gives warning that it wishes to pull out of the joint venture within six months.

It does, however, agree to provide funding as long as Uganda and Tanzania agree to a new business plan and contribute monthly funding of \$126,000 each.

During the third week of May, ATC and **Uganda Airlines, Ltd.** inaugurate joint daily service over a direct route from Dar es Salaam to Entebbe. The flights upgrade a previous twice-weekly schedule and allow connections to international destinations, as well as points within Tanzania.

Uganda fails to make payment of any kind after May and Tanzania escapes the cash contribution by providing the carrier with in-kind services, such as landing fees and ground handling. The two national governments, acting in consultation, do agree to sell their shares into the private sector, thereby minimizing state involvement in the joint venture. Their national carriers, meanwhile, concentrate on a new daily roundtrip schedule jointly introduced between Dar es Salaam and Entebbe.

Blaming leaders of its partner nations, particularly Tanzania, for its inability to perform to a higher level, the airline, during the first week of September, reports a \$50-million loss since 1994.

On October 2, **DAS Air Cargo, Ltd.** and the Tanzanian Chamber of Commerce step forward with an offer to purchase 30% stakes (the Uganda and Tanzania holdings) each in Alliance, with DAS also bidding \$5 million to take over the 40% stake held by Transnet. The deal is conditional in that DAS must also be given traffic rights to the Alliance routes and the Alliance debt must be satisfied.

The **DAS Air Cargo, Ltd.** rescue effort collapses on October 10. With both Uganda and Tanzania having failed to pay their part of expenses, **South African Airways (Pty.), Ltd.** refuses to continue operating its Boeings for the partnership airline. Without lift, the company is forced to suspend all operations the same day.

AIR TARA, LTD.: GPA House, Shannon, County Clare, Ireland; Phone 353 (61) 360-0000; Fax 353 (61) 360-0070; Year Founded 1994. Air Tara, Ltd. is organized at GPA House at Shannon in the summer of 1994 to provide passenger charter and inclusive-tour flights with units of the huge GPA Group. Brian Hayden is named managing director and he inaugurates and continues revenue flights with three Boeing 737-300s.

AIR TASMANIA (PTY.), LTD.: Australia (1968–1981). Air Tasmania (Pty.), Ltd. is formed at Hobart in 1968 to provide scheduled commuter services throughout the island as well as to the Australian mainland. Employing single-engine Pipers, the carrier undertakes flights linking Hobart with Queenstown, Wyngard, Devonport, Smithton, Strahan, and Launceston plus Flinders Island and the mainland towns of Moorabin and Tullamarine.

Services are maintained; however, in early 1980, the company is purchased by Bassair. D. Darbyshire is named chairman and the fleet is upgraded over the next year to include 3 Piper Navajos, 3 Navajo Chieftains, and 3 Embraer EMB-110P Bandeirantes. Late in 1981, the company is merged with **H. C. Sleight Airlines (Pty.), Ltd.** to form **Airlines of Tasmania (Pty.), Ltd.**

AIR TAXI. See **FLORENCE AIRLINES**

AIR TAXI, LTD.: Singapore (1966–1968). Air Taxi, Ltd., literally an air taxi service, is established at Singapore in 1966 to provide local non-scheduled, on-demand services, both passenger and cargo. Revenue flights begin with several small Cessnas and a Douglas DC-3 and continue until the company is reorganized into **Singapore Air Services (Pty.), Ltd.** in 1968.

AIR TAXI ASSOCIATES (EASTERN AIR TAXI): United States (1964–1966). Established by Edward Brown at Monmouth County Airport in New Jersey during the summer of 1964, this company inaugurates daily roundtrip scheduled Piper lightplane commuter services to New York (JFK) on November 23.

The company is purchased by the Castanea Corporation on February 23, 1965 and merged into its third-level operator (**Eastern Air Taxi**), which is also based at Monmouth. In 1966, the combined carrier is sold to Thomas Hartford, son-in-law of William "Bill" Piper, who reforms the airline into **Piper Twinair**.

AIR TAXI COMPANY: Iran (1958–1980). To operate passenger and cargo charters, Air Taxi Company is formed at Tehran in 1958. In addition, maintenance, repair, overhaul, and contract service flights are also performed. The associate firm **Air Service Company** is established in 1962. Managing Director A. Djanhanbani's 400-employee nonscheduled operation undertakes its revenue services with 5 Douglas DC-3s and 8 Rockwell Aero Commanders.

Operations continue apace over the next 17 years, with but two recorded accidents.

A chartered DC-3, with 2 crew and 23 passengers, fails its takeoff from Ahwaz, Iran, on April 13, 1970, and slides off the runway after settling back down; there are no fatalities. Another DC-3 is written off at Shiraz on June 13, 1971.

Like other Western-oriented firms, Air Taxi ceases operations in 1979. It is taken in hand by the new Islamic government and merged in 1980 with **Pars Air** to form **Iran Asseman Airlines**.

AIR TAXI COMPANY (RED BANK): United States (1960–1968). Organized at Red Bank, New Jersey, in the fall of 1960, this scheduled air taxi service inaugurates daily Britten-Norman BN-2 Islander roundtrip frequencies to New York City on December 8.

The route network is expanded in 1961–1965 to include services to Allentown, Reading, Lancaster, Philadelphia, and Buffalo.

In September of the latter year, it joins with several other small third-level operators and **American Airlines** to provide "Metro Air Service" (traffic feed) to the major's gates at New York. On July 29, 1968, the company is merged with **Reading Aviation** to form **Suburban Airlines**.

AIR TAXIS (PTY.), LTD.: Australia (1938–1939). P. H. Moody forms a small charter company at Rockhampton in early July 1938. Employing small de Havilland aircraft, the carrier begins Rockhampton to Mount Coolon service on July 7. Unable to find sufficient traffic or revenue, Moody is forced to cease operations on November 10, 1939.

AIR TCHAD (COMPAGNIE NATIONALE TCHADIENNE, S.A.): 27 Ave. du President Tombaibaye, BP 168, N'Djamena, Chad; Phone 235 51 5090; Fax 235 51 3581; Code HT; Year Founded 1966. Created at N'Djamena (formerly Fort Lamy) on June 24, 1966, this state carrier is owned by the government (66%) and the **UTA French Airlines (Union de Transports Aeriennes, S.A.)** associate company Sode-traf (34%). Marcel Bourdin is named general manager and is given a fleet consisting of 2 each Douglas DC-3s and Cessna 206s.

Revenue services begin on August 4 and are conducted with operational and technical assistance contracted from the French partners. A leased DC-4 provides the connection to Paris from the former French colony via Algiers and replaces a service previously offered on Chad's behalf by **Air Afrique (2) (Societe Aerienne Africaine Multinationale, S.A.)**.

Enplanements by the end of 1967 total 7,000, with 240 tons of cargo also transported.

Flights continue throughout the decade and into the 1970s. By 1977–1978, President Adoum Aganaye's fleet comprises 1 DC-4, 2 DC-3s, 1 Piper PA-28 Cherokee, and 1 Beech 58 Baron. Destinations linked to the capital include Mongo, Ati, Abecher, Fort Archambault, Faya, Am Timan, Largeau, Pala, Bongor, Moundou, Geneina, Boi, Abou Deia, Oum Hagier, and Bokoro.

During the years that follow, Air Tchad is often inactive due to severe domestic political turmoil and a continuing war with Libya. Regularly scheduled operations resume in 1982–1983 at which time the fleet comprises 1 Fokker F.27-600RF Friendship and 1 DC-3.

Operations continue apace in an on-again, off-again manner in **1984–1988**. The difficulties with Libya cause all kinds of security problems and frequent suspensions of service.

In **1989**, General Manager Mahamat Nouri continues to provide domestic services; however, his fleet has been upgraded by the addition of two de Havilland Canada DHC-6-300 Twin Otters in place of the Douglas. In **1990**, one of the Twin Otters is replaced by a Cessna 402 and Cessna 310. Domestic services continue into the new decade.

A Boeing 707-347C joins the fleet in **1991**, but due to recessionary pressures must be withdrawn in **1992**. During the latter year, the factions that have been in conflict for almost 30 years reach a peace accord. When **Air France** takes over **UTA French Airlines, S.A.**, the original UTA stake passes to the Paris-based survivor, which now enters into a cooperative agreement.

In **1993**, General Manager Nouri oversees a 61-employee workforce and one each Fokker F.27-600RF and DHC-6-300. Flights link N'Djamena with Abecher, Bol, Bongor, Mao, Pala, Mongo, Am Timan, Sahr, and Moundou. Two DC-3 freighters are acquired in **1994**. These are withdrawn in **1996**, along with the Fokker.

Djibangar Madjirebaye is president in **1997**, with General Manager Nouri continuing in office. Destinations visited from N'Djamena include Abecher, Moundou, and Sarh. A total of \$4.4 million in sales are generated.

Flights continue in **1998–2000**, during which time the airline employment numbers 61.

AIR TERREX, LTD.: KA Kablu 971, Praha 10 CZ-100 00, Czech Republic; Phone 42 (2) 70 50 89; Fax 42 (2) 70 44 93; Year Founded **1992**. Air Terrex is founded at Prague in **1992** to offer passenger and inclusive-tour charters to regional and Mediterranean destinations. Revenue operations commence with a single Boeing 727-230A once flown by **Deutsche Lufthansa, A.G.** In **1993**, the fleet is increased by the addition of 2 chartered trimotors, 1 B-727-51 originally operated by **Northwest Airlines**, and 1 B-727-2D3A first delivered to **Alia Royal Jordanian Airlines**.

With flights to North Africa and Mediterranean holiday destinations continuing in **1994**, a second hub is set up at Bratislava. The B-737-230A is leased to **Air Pacific, Ltd. (2)**.

It is understood that flights continue largely without change during the remainder of the decade; exact information is, however, unavailable.

AIR TEXANA: United States (1980–1981). Employing one each Beech 18 and Convair CV-580, this Beaumont, Texas-based regional inaugurates scheduled passenger and cargo services in **1980** linking its base with Dallas (DFW and DAL) and New Orleans.

In the wake of the **1981 PATCO** air traffic controllers' strike, Air Texana is unable to function with the restrictions placed on ATC at its large destinations and is forced to shut down.

AIR TEXAS: United States (1968–1971). Walter S. Miller establishes Air Texas at Waco in **1968** to provide scheduled air taxi flights to McGregor via Dallas. Daily Aero Commander 500B and Beech 99 revenue flights are duly inaugurated and maintained until **1971**. Aircraft tails wear a circular "Lone Star" logo taken from the blue, red, and white fields of the state flag.

AIR TEXAS AIRWAYS: United States (1980). ATA is set up at Dallas in early **1980** to offer scheduled daily roundtrip shuttle flights to Houston. Although Piper lightplane flights are duly inaugurated, they cannot be maintained for more than a few months.

AIR 3000 AIRLINES, LTD.: Canada (1988–1989). **Air 2000 Airlines, Ltd.** is formed at Toronto on April 1, **1988** as a Canadian associate of the U.K. charter operator by that name, which is the airlift arm of the tour group Owners Abroad. The Manchester-based airline, with quarter ownership, holds too much "foreign" interest, and is forced to divest itself in order for the Canadian operation to get started.

Accordingly, the 25% shareholding is sold to Toronto-based Deluce Investments, Ltd. and Robert Deluce becomes president. Other shareholders include Colin Hunter, Paul Jervis, and Chairman John Lecky.

A Boeing 757-28A leased from **Air 2000, Ltd.** in the U.K. arrives in late November; it is painted in Air 2000 livery with a maple leaf painted on the forward passenger door.

The company receives an operating license from the National Transportation Agency (NTA) of Transport Canada on November 29. On December 1, certification allows the Canadian company to begin non-scheduled flights to holiday destinations in the Caribbean, Mexico, and Florida.

Airline employment in **1989** stands at 165. In accordance with the terms of its license, the company begins seeking a new name with which to replace the one employed. An initial idea, Air 3000, Ltd., is submitted to the NTA at the end of April; the regulators will turn the concept down.

The company receives the first B-757-28A it has chartered from the International Lease Finance Corporation (ILFC) on May 5, allowing return of the leased unit. The new plane, with Air 3000, Ltd. titles, will have to be repainted.

Agreeable to NTA, the carrier disassociates itself entirely from the British carrier on May 10 by changing its name to **Canada 3000 Airlines, Ltd.** With two chartered B-757-28As in hand by mid-month, the company is able to launch its first service on May 17 from London (LGW) to Toronto.

AIR TINDI, LTD.: P.O. Box 1693, Yellowknife, Northwest Territories X1A 2P3, Canada; Phone (403) 920-4177; Fax (403) 920-2836; <http://www.airtindi.com>; Code 8T; Year Founded **1988**. Members of the Arychuk family found Air Tindi, Ltd. at Yellowknife, Northern Territories, in **1988** to offer regional scheduled and nonscheduled passenger and cargo services. "Tindi" means "big lake" or "great slave lake" in the native Dogrib language.

Alexander Arychuk is chairman/president; Peter Arychuk is vice president; Teri Arychuk is operations manager; and Sheila Arychuk is treasurer. Operations commence with a single de Havilland Canada DHC-3 Otter.

Services continue apace during the remainder of the decade and into the next, with a leased de Havilland Canada DHC-6-300 Twin Otter committed to a dedicated service on behalf of the Echo Bay Mines. The company's first owned DHC-6 arrives in **1990**, acquired with assistance of the Rae-Edzo Development Corporation.

Air Tindi merges with Latham Island Airways, Ltd. in **1991**, thereby acquiring additional aircraft, including 1 Twin Otter, 1 medevac-equipped Beech Super King Air 200C, 1 DHC-2 Beaver, and 1 Piper PA-31-310 Navajo. All of Latham's experienced personnel are taken on and a floatplane base is taken over. By the summer of **1992**, the company is also flying another Twin Otter, float-equipped like the others, along with a new Cessna 208B Grand Caravan.

Although traffic figures are not released for these two years, the privately owned company, in something of an about-face from the usual release of traffic numbers, does reveal its revenue figures. In the former year, income is C\$6.91 million and the net profit is C\$259,959. During the latter period, revenues slide to C\$5.09 million, but net gain jumps to C\$394,432.

Air Tindi acquires its first large aircraft in **1994**, when it purchases a DHC-4 Caribou for seasonal resupply to various exploration companies. **Loganair, Ltd.** of Scotland sells the carrier a fifth Twin Otter, while a Beech King Air C90 arrives from the U.S. A flying school, christened the Northern Flight Training Center, is opened at Yellowknife Airport. Four small Cessnas are acquired for schooling purposes.

A DHC-3T Turbo Otter arrives in **1995**. At the same time, construction is begun on a new three-story office building at Yellowknife.

A large passenger plane is acquired from de Havilland Canada in **1996**, a DHC-7-102. It is employed to upgrade scheduled service to Lutsel K'e, Rae Lakes, Snare Lake, and Wha Ti. The new office building is

opened later in the year. The workforce stands at 65 in **1997** as a second Grand Caravan enters service. Revenues reach C\$11 million.

Flights continue in **1998**. On April 1, scheduled service is expanded with daily roundtrips started from Yellowknife to Fort Simpson.

Flights continue apace in **1999–2000**. During July of the latter year, another DHC-6-300 is acquired, this one from an airline in Abu Daibi, U.A.E.

AIR TIWI (PTY.), LTD.: Australia (1996–1998). This tiny regional is established at Darwin in June **1996** as a subsidiary of **Airnorth (Pty.), Ltd.**, which also enjoys shareholding by Pimtubula, a trustee for the Tiwi native peoples. Employing a brightly painted Shorts 330-200, the new entrant launches scheduled third-level flights from Darwin to Bathurst Island and Melville Island.

Additional services are laid on in **1997–1998** as the company works to enhance the tourist industry on the two islands. Unhappily, this upgrade cannot achieve viability and the company shuts its doors during the latter year.

AIR TORONTO, LTD.: Canada (1988–1991). Owned by Soundair, Ltd. and its founder, Brian Child, the **Air Canada, Ltd.** commuter partner **Commuter Express, Ltd.** is renamed Air Toronto, Ltd. in March **1988**. At the time of this image makeover, undertaken to improve marketing in the U.S., President Stephen Smith's "Air Canada Connector" carrier is operating a fleet of 11 Fairchild-Swearingen SA-226 Metro IIs and Merlin IVs. Scheduled international passenger commuter return frequencies from Toronto include Columbus, Dayton, Saginaw, Grand Rapids, Allentown, and Harrisburg.

During May, the acquisition of 1 Douglas DC-4, 1 Fokker F.27, and 3 Cessna 402s further upgrades the fleet. Later in the month, 3 Merlin IVs are replaced by 1 Convair CV-580, which begin flights to Louisville, Kentucky. Twice-daily nonstop Convair service between Toronto and Indianapolis begins in June.

In July, finding that the former **Commuter Express, Ltd.** fleet and the recent acquisitions are inappropriate for the route structure, President Smith requests 6 British Aerospace BAe Jetstream 3201s (upgraded Jetstream 31s known as Super Jetstream 31s) for lease from their manufacturer, pending delivery of an equal number of ordered machines.

When the purchased BAes, for which Air Toronto is launch customer, begin to arrive on February 21, **1989**, the 4 remaining Merlins and 5 of 6 Metro IIs are transferred to another Soundair subsidiary. The first Super Jetstream 31 service is flown on February 26 from Toronto to Louisville, Kentucky.

The Grand Rapids route is revised in March to include stops at Kalamazoo and Battle Creek. The last of the leased Jetstream 31s departs Toronto for **Air BC, Ltd.** at Vancouver on April 28. The service to Saginaw is eliminated, but flights begin to Green Bay and Madison, Wisconsin, on May 14. The CV-580 is withdrawn from service on July 2 and the ninth Super Jetstream 31 arrives later in the month.

The Convairliner, the F.27, and a Fairchild are assigned to an Air Toronto charter division, two more daily frequencies are added in October from Toronto to Indianapolis, and the number of daily transborder flights is increased to an even 50.

Passenger boardings increase 68.1% to 116,000.

The workforce is cut by 11.8% in **1990** to 150 and the fleet comprises 9 BAe Jetstream 3201s, the Fokker, and the Convair. Soundair Corp. is placed into receivership by the Royal Bank of Canada on April 15. The airline division briefly assumes independent status, which is surrendered when it is purchased by **Air Canada, Ltd.** late in the month.

The new "Air Canada Connector" continues its operations from Toronto to eight northeastern U.S. cities as before; however, the number of frequencies are increased by 15% in May. Negotiations with Soundair's receivers, Ernst & Young, over the airline's cost are terminated in September.

Customer bookings ascend 3.4% to 120,000 and revenues total C\$22.4 million.

The Fokker and Convairs are removed in early **1991** as the carrier battles its parent in court over the right of **Air Canada, Ltd.** to take over its assets. Weekend Jetstream 31 roundtrips from Toronto to Dayton commence in January.

In April, the company, having lost its side of the legal proceedings, is liquidated. The remnants and the U.S. routes are sold and merged into the **Canadian Airlines International, Ltd.** partner, **Ontario Express, Ltd.**

AIR TOULOUSE INTERNATIONAL, S.A.: France (1969–2000). Organized at Aeroport de Toulouse Blagnac in the fall of **1969**, Air Toulouse operates for 21 years as an air taxi service. During this entire period, the company's largest airplane is a Beech Super King Air 200.

During the summer of **1990**, the company is reformed into Air Toulouse International, S.A., a seasonal French charter carrier that will offer services to holiday destinations in Europe, Africa, and the Middle East. President/Director General Jean-Pierre Murracioli employs a workforce of 40, soon to be expanded to 140 during the summers.

Revenue flights commence on December 8 with one Boeing 737-200 and an Aerospatiale (Sud-Est) SE-210 Caravelle XB leased from **Europe Aero Service, S.A.** Both wear a plain white color scheme with red tails wearing the *croix occitane* (occidental cross) logo of the city of Toulouse. Scheduled charter weekday flights between Toulouse and Bristol commence two days later on behalf of Airbus Industrie.

Operations continue apace in **1991** as two more Caravelle XB are delivered, also leased from **Europe Aero Service, S.A.** Like the earlier aircraft, these wear a red and white livery (white fuselage with black titles and red tail) adorned with the *croix occitane*.

During the recessionary year of **1992**, the independent French carrier is unable to maintain either traffic or financial viability. Consequently, it is forced early on to enter *sous administration judiciaire*, or receivership. The company does not disappear, but is rescued in the spring by Saint Fiacre, the financial concern controlled by Francis Lagarde. Saint Fiacre also owns **Europe Aero Service, S.A.**, which reorganizes it as its new subsidiary, Societe Nouvelle Air Toulouse International, S.A. (SNATI). The previously owned Boeing 737-200 is removed, but the 3 Aerospatiale (Sud-Est) SE-210 Caravelles XBs transport 120,000 passengers on the year.

Operations continue apace in **1993**. On March 2, **1994**, a charter route is opened weekly from Toulouse to Lisbon via Oporto. It is replaced in April by a scheduled nonstop Caravelle service between Toulouse and Lisbon, flown in competition with **Air France**. The route, the last in the world flown by the SE-210, becomes twice weekly in September.

At the end of January **1995**, Europe Aero Service files for bankruptcy and SNATI's plan to replace its Caravelles with B-737s is temporarily put on hold.

On May 27 the company celebrates the fortieth anniversary of the first flight of a Caravelle. On its regular Toulouse to Lisbon flight, the celebratory aircraft is flown by former Concorde pilot Commandant Boyer.

One Caravelle remains in the fleet during **1996–1997** as the "Baby Boeings" enter service. Added are 1 owned B-737-2D6A and 1 each leased Dash-2A1A, Dash-2L9A, Dash-2M8A, Dash-2S3A, and Dash-219A. Two Embraer EMB-110 Bandeirantes provide service over thinner routes.

During the spring of **1998**, the owned B-737-2D6A is repainted in a new color scheme, featuring a white fuselage and red tail.

Managing Director Francois Hersen's carrier continues operations in **1999**, but rising fuel prices, falling traffic, and bad weather negatively impacts finances. Scheduled replacement services previously operated for other airlines are dropped on July 1 as the carrier concentrates on regional charters.

With 51% backing from French investors Charles-Henri Rossignol and Jean-Francois Felix and a 49% stake by the U.S. fund investor DPI, Air Toulouse is reformed during the first quarter of **2000** into **Aeris, S.A.** Employing a pair of wet-leased B-737-300s, the reformed carrier, which retains Hersen at the helm, now performs wet-lease charters and subcharters for other European operators.

AIR TOUR ACQUISITION CORPORATION: United States (1992–1993). ATAC is established at Honolulu in 1992 to offer charter and flight-seeing trips around the islands. President Thomas R. McCroskey and Vice President/General Manager Ken Fletcher hire a workforce of 90 and commence operations with a fleet of 10 Piper PA-31-350 Navajo Chieftains. Flights cease within a year.

AIR TOURS, INC. See ISLAND AIRLINES

AIR TRACIA, S.A.: Str. Gh. Doja, No. 11, Cluj-Napoca, 34000, Romania; Phone 00 40 (0) 64-197806; Fax 00 40 (0) 64-193221; <http://www.dntej.ro/tracia>; Year Founded 1994. Air Tracia is established in October 1994 as a sales agent for the major airlines operating into Bucharest. In February 1996, the company introduces a twice-daily smallplane shuttle service between Cluj-Napoca and Bucharest. Services continue.

AIR TRACK LINEAS AEREAS, S.A.: Calle San Francisco de Sales 35-3, Guzman el Bueno 133 30, Madrid, E-23003, Spain; Phone 34 (1) 535-2159; Fax 34 (1) 535-2374; Code ZH; Year Founded 1996. Air Truck, S.A. is renamed in June 1996. Gerardo Herrero remains chairman, with Jose Parries as managing director. The workforce stands at 130 and the fleet includes 5 Antonov An-26s, 2 Kamov Ka-32s, 7 Mil Mi-8s, and 4 Dassault Falcon 20s. The company also owns 3 Avions de Transport Regional ATR42-320s that are flown under contract by the subsidiary associate company **Lineas Aereas Navarres, S.A.**

Concentrating on cargo, construction, and passenger charters, Air Track flies from its main Pamplona hub to Barcelona, Madrid, Munich, San Sebastian, Almeria, Meonorca, and many nonscheduled destinations.

AIR TRADER OF SWEDEN, A.B.: Sweden (1972–1973). AT of S is established at Malmo in early 1972 to offer charter passenger and cargo flights to world destinations. Three former **Trans-Canada Airways, Ltd.** Vickers Vanguard 952s are leased from Air Holdings, Ltd. and employed to inaugurate services on February 12 from Stockholm to Dacca.

The cost of business skyrockets as a result of the oil crisis and the company is soon in fiscal difficulty. In October, the airline is forced to declare bankruptcy. New investors step forward to attempt a rescue, but this move fails and the carrier shuts its doors at the end of February 1973.

AIR TRAILS: United States (1981). Air Trails is set up at Salinas, California, during the first quarter of 1981 to offer scheduled passenger and cargo flights to Oakland and San Francisco. Cessna 310 revenue flights commence on April 1, but due to ATC restrictions of the PATCO air traffic controllers' strike, cannot be maintained beyond August 14.

AIR TRAIN: United States (1987–1989). Air Train is an all-cargo carrier established in 1987 to serve as a contractor to **CF AirFreight**. When CF AirFreight and **Emery Air Freight** merge in 1989, Air Train is bought out and folded into the new joint enterprise, **Emery Worldwide**.

AIR TRANS AFRICA (PTY.), LTD.: Southern Rhodesia (1965–1980). Formed at Salisbury in August 1965, **Air Trans Africa (Pty.), Ltd.** undertakes nonscheduled passenger and cargo charters to a variety of destinations in central and southern Africa. Operations are maintained over the next 12 years with a few heavy aircraft and a number of lightplanes, primarily de Canada Havilland DHC-2 Beavers.

Jack M. Malloch is named managing director. The major units of his fleet include 1 Douglas DC-4, 2 DC-7Cs, and 1 de Havilland DH 114 Heron. The latter is employed in 1966 to offer Salisbury to Victoria Falls tourist services. The Douglas freighters operate up the west coast of the continent via Luanda, Sao Tome, and the Canary Islands, to Lisbon.

In cooperation with the South African independent carrier **Protea Airways (Pty.), Ltd.**, roundtrips to Mauritius begin in January 1967.

Interesting events in the company's history now occur. The company, which has acquired a Lockheed L-1049G Super Constellation from

VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.), commits its support to the Biafran airlift. Following the secession of Biafra from Nigeria in May, a group of mercenaries under Capt. Hank Wharton are contracted to begin providing night supply flights from Sao Tome or Libreville into rebel aerodromes. Following the capture of Enugu and Port Harcourt, the principal destination becomes the airfield at Uli. To counter the mercenary missions, the Nigerians commandeer six **Nigeria Airways, Ltd.** DC-3s for use as night bombers against the rebels.

The night flights continue into 1968, with the airlift ending in mid-February. Although several aircraft have been lost, that from Air Trans Africa is not one of them. A second Super G Constellation is purchased from **TAP-Air Portugal, S.A.** at year's end.

Operations continue apace during the remainder of the decade and into the 1970s. In 1977, the subsidiary **Air Gabon Cargo, S.A.** is formed and registered at Libreville. The following year Managing Director Malloch acquires another DH 114 Heron. The carrier ceases operations in 1980 when the nation becomes Zimbabwe.

AIR TRANSAT, LTD.: 11600 Cargo Road A1, Montreal International Airport, Mirabel, Quebec J7N 1O9, Canada; Phone (514) 476-1011; Fax (514) 476-0338; <http://www.airtransat.com>; Code TS; Year Founded 1987. This international charter airline is established at Montreal's Mirabel Airport by the local tour wholesaler Traffic Voyages, Ltd. during the **Air Canada, Ltd.** strike of January 1987. Jean-Marc Eustache is president. In addition to a purchased unit, two Lockheed L-1011 TriStar Is are leased from **Air Canada, Ltd.** and employed to operate several of the state carrier's charters during the job action, including those for Treasure Tours. Destinations visited, via refueling stops at Goose Bay or Gander, include London (STN), Dublin, and Shannon.

One of the leased Lockheeds is replaced by a second purchased TriStar I in May 1988 and is used to initiate flights from Montreal, Toronto, and Quebec City to Paris in June. Late in the year, Treasure Tours cuts back its inclusive trip demand. Still, winter flights are offered to the Caribbean, Florida, Mexico, and Las Vegas.

In the spring of 1989 new services are opened from Toronto to Manchester and Prestwick. A third L-1011 is purchased from **Eastern Air Lines** in June and undertakes Montreal–Paris charters on behalf of French travel agencies. The earlier TriStars are upgraded to L-1011-50 standard in order to provide nonstop transatlantic service. Enplanements reach 424,000 in 1990.

Company employment is increased by 20% in 1991 to 600 and the fleet now includes 4 L-1011s and 3 Boeing 727-233As acquired from **Air Canada, Ltd.**, the latter in May and June.

The company's first scheduled service is inaugurated in December between Montreal and Ft. Lauderdale, Fla.

Enplanements for the year nearly double, to 806,000, and revenues total C\$125 million.

The payroll grows a further 16.5% in 1992 to 699 as 2 B-757-200ERs join the fleet. Orders are outstanding for another TriStar and 4 more B-757-200ERs.

Passenger boardings jump 10.6% to 891,000 and revenues reach C\$138.8 million.

In 1993, President F. LeGault oversees a workforce of 750 and provides flights to cities in the Caribbean and Mexico, as well as the European destinations of Belfast, Birmingham, Dublin, Frankfurt, Glasgow, London, Manchester, Newcastle, and Shannon. Two bays of a hangar facility are acquired at Montreal's Mirabel Airport. Enplanements total 1,417,769.

Airline employment is cut by 8.8% in 1994 to 706 and company headquarters are transferred into the new Montreal hangar facility. The leased fleet now includes 2 B-757-23As, 3 L-1011-100s, and 1 each B-757-236, B-757-28A, L-1011-1, and L-1011-50. The 3 B-727-233As are withdrawn.

Passenger boardings inch up 1.5% to 1,424,893 and revenues decline 0.5% to C\$196 million. Still, a net C\$5.6-million profit is reported.

The three B-727-233As retired the previous year are sold in **1995**. European travelers rush to Canada during the summer to enjoy the advantages of Canada's weak dollar; much of the traffic from Germany to Montreal is dominated by Air Transat. In November, an unsolicited takeover bid is received from Montreal-based **Royal Aviation, Ltd.**; it is not accepted. Net profit triples to C\$16.9 million.

A former **TAP-Air Portugal, S.A.** L-1011-500 is acquired under a lease-purchase arrangement from Fortis Aviation during January **1996**. It is employed to open new services to Portugal, followed by Poland.

The French carrier **STAR Europe (Societe de Transport Aerien Regional, S.A.)** is purchased at the end of the year by the company's parent, the travel concern Look Voyages. Look Voyages is part of the Transat Group and thus becomes the European associate of Air Transat, Ltd. Philippe Bureau is now president/CEO of the carrier.

Enplanements for the year total 1.75 million.

A B-757-2Q8 arrives in April **1997** under charter from the International Lease Finance Corporation (ILFC). Just after takeoff from Toronto on May 22 on a service to Las Vegas, the B-757-28A is forced to return to its point of origin by what turns out to be a faulty engine monitor box.

In June, another TriStar formerly operated by the Portuguese flag carrier is also leased from Fortis.

In September–October the company leases two B-737-46Ms operated by the Belgian carrier **Virgin Express Airlines, S.A.** to assist with the winter season's Florida charters. The two aircraft will be returned in late March **1998**.

On April 3 a company L-1011-500 completes a 12-day contract to provide lift for the media entourage accompanying President Clinton to Africa. Seven destinations in six countries are visited and the crew—4 in the cabin, 13 flight attendants, and 6 support personnel—work in shifts in various capacities.

While en route from Newcastle-upon-Tyne to Toronto on August 25, Flight 311, a B-757-2Q8 with 8 crew and 221 passengers, is forced to make an emergency landing at Shannon Airport after one of its engines shuts down. Fire crews standing by at the Irish aerodrome are not required and no injuries are reported.

The company's other B-757 is sent to Shannon to pick up the stranded passengers, who reach Toronto next day. Each of the travelers is given C\$150 compensation by the airline, which also arranges to pay for their trips home and reimburses them for wages lost due to the delay.

Capt. Jean Guertin, the carrier's first chief pilot, is on hand at Montreal on December 15 as the company unveils a new aircraft livery. The Air Transat name will now appear in billboard letters on the all-white fuselages of its aircraft. On the tail, a white star peers out from the clouds. The change reflects the strategic development of a synergy within the Transat Group with **STAR Europe (Societe de Transport Aerien Regional, S.A.)**, whose activities are complementary to those of Air Transat.

At the end of the year, Air Europe leases the former **TAP-Air Portugal, S.A.** long-range L-1011-500. Enplanements for the year total 2.5 million.

In ceremonies at Toulouse on February 23, **1999**, the company accepts delivery of the first of two new Airbus Industrie A330-243s. The second aircraft is delivered in April. Both of the new A330s, chartered from ILFC, are assigned to Air Transat's summer transatlantic routes, particularly on nonstop flights from Vancouver to Europe and from Toronto and Montreal to Portugal and Greece. The planes will also be assigned to Hawaii service during the fall schedule.

The Canadian Industrial Relations Board on May 17 certifies the Air Line Pilots Association (ALPA) as the new collective bargaining unit for the company's pilots.

Arriving at Toronto for a 300-mi. flight to Montreal on June 26, businessman Michel Tasse ends up making the longest day-trip in history. In an error uncaught by either departure gate or cabin personnel, Tasse is boarded aboard the company's Manchester-bound L-1011-500. By the time the error is discovered and corrected, Tasse has nearly arrived in

England. Air Transat returns him to Toronto and gives him a ticket aboard a rival airline to Montreal—a 7,000-mi. detour.

Enplanements these 12 months total 2.5 million. For the year ending in October, the carrier's parent, Transat A.T., has revenues of C\$1.1 billion and record net income of C\$20.4 million.

At the beginning of **2000**, airline employment is 1,500. Early in the year, the company receives government approval to offer scheduled services to Germany and the U.K. in order to insure competition for the Air Canada/Canadian Airlines combine.

In order to provide additional capacity for these scheduled transatlantic routes, the company, in mid-August, orders 6 refurbished A310-304s, the first of which will begin delivery in December.

A B-757-23A and Dash-2Q8 are employed on June 15 to launch twice-weekly scheduled roundtrips from Montreal to Vancouver via Toronto and Winnipeg.

Arrangements are completed with **Emirates Airlines** on July 11 for the purchase of the Mideast airline's 6 A310-304s. When the Airbus begin to arrive in December, they will start to replace the TriStar fleet.

AIR TRANSIT: United States (1959–1968). Organized at Show Low, Arizona, in the spring of **1959**, this scheduled third-level operator is outfitted with a fleet of Beechcraft lightplanes. Beech 18 and Cessna 205/310 revenue flights commence on May 12 linking the company's base with Douglas, Prescott, Phoenix, and other local destinations.

Service continues until **1968**.

AIR TRANSIT, LTD.: Canada (1974–1976). To demonstrate the effectiveness of STOL (Short Takeoff and Landing) aircraft for commuter shuttle operations, **Air Canada, Ltd.** receives a C\$20-million grant in **1974** from the Canadian Department of Air Transport to provide the manpower and management necessary to undertake a trial under the name "Air Transit."

Operated with six de Havilland Canada DHC-6-300s, roundtrip hourly flight operations from Rockcliffe Airport (Ottawa) to the Expo '67 parking lot (Montreal) commence on July 24. Deemed a complete success, the experimental service ceases on April 30, **1976** and the Twin Otters are turned over by the flag carrier to the DOT.

AIR TRANSIT (PTY.), LTD.: Australia (1986–1990). Air Transit (Pty.), Ltd. is formed at Adelaide Airport in **1986** to provide scheduled services to Kangaroo Island. The initial fleet comprises three Cessna 402s. By the time the third-level carrier is renamed **Air Kangaroo Island (Pty.), Ltd.** in **1990** it has acquired a third Cessna 402.

AIR TRANSPORT: 7007 Boeing Drive, El Paso International Airport, El Paso, Texas 79925, United States; Phone (915) 772-1448; Fax (915) 772-1467; Year Founded 1979. AT is set up at El Paso in **1979** to offer executive charter, cargo, and air ambulance services. Certification is received for flights throughout the U.S. and Canada, Mexico, the Caribbean, Central and South America.

Revenue operations begin and by **2000** General Manager Jerry Wingett's concern flies 3 Learjet 25s and 1 each piston-engine Cessna 206T Turbo Skywagon, C-210, C-402 Business/Utiliner, C-404 Titan, and C-421.

AIR TRANSPORT CHARTER, LTD.: United Kingdom (1946–1952). Founded at Jersey Airport in July **1946**, Air Transport Charter (Channel Islands) does not begin operations until March **1947** after 2 Miles M.57 Aerovan 4s are delivered. Following a month of produce charters, the first ex-military Douglas C-47A is purchased on April 1; christened *St. Martin*, it begins flying holiday charters from the Channel Islands to U.K. cities on April 2. The Aerovan 4s are sold in June and by fall the fleet includes 3 DC-3s and 3 de Havilland DH 89As Dragon Rapides.

The Dakotas begin produce charters to Bovington Airport from France and Italy in early **1948**. On May 20, the *St. Martin*, en route to Bovington from Valencia, is destroyed in a crash at Bovington (three dead).

It is replaced in June by another DC-3, named *St. Saviour*, allowing summer Channel Island charter flights to continue without interruption. On August 4, the *St. Saviour* is diverted to Fassberg for participation in the Berlin Airlift; upon its withdrawal on November 10, the DC-3 has flown 205 sorties into the former German capital.

Produce and passenger charters continue from 1948–1950 without incident or undue excitement. In October 1950, the airline is purchased by the London-based travel consultants Lambert Brothers, which moves the carrier's Dakotas from the Channel Islands to Blackbushe Airport.

In 1951, the airline flies a significant number of replacement flights for both **British Overseas Airways Corporation (BOAC)** and **British European Airways Corporation (BEA)** as well as military personnel flights under contract to the Royal Air Force.

While climbing away from Manchester on March 27, the DC-3 *St. Saviour*, with three crew, loses an engine in icing conditions and crashes (two dead). Summer flights to the Channel Islands resume in June.

Military contracts see the carrier through the winter. The summer of 1952 marks the company's last series of European and Channel Islands flights as the company is successfully prosecuted for operation of an unlicensed Blackbushe–Jersey service. Flight operations cease on October 31, the aircraft are sold, and the firm is reconfigured into an avionics company.

AIR TRANSPORT EUROPE, A.S.: Tatry Airport, Poprad, SK-05898, Slovak Republic; Phone 421 (92) 61 911; Fax 421 (92) 61 945; <http://www.trynet.sk/ate>; Year Founded 1991. ATE is set up at Poprad in 1991 to provide charter passenger services to regional destinations. Operations into Yugoslavia become spotty during that nation's civil war in mid-decade.

By 1999, Managing Director Milan Hoholik oversees a 28-person workforce and flights by his single Tupolev Tu-134A generate \$6.6 million in sales.

With the start of NATO military operations on March 24 against Yugoslavia on behalf of the province of Kosovo, flights into Belgrade cease. They are allowed to resume in early July.

AIR TRANSPORT INTERNATIONAL, L.L.C. (ATI): 3800 Rodney Parham Road, Little Rock, Arkansas 72212, United States; Phone (501) 224-8175; Fax (501) 224-8164; <http://www.baxworld.com>; Code 8C; Year Founded 1980. ATI is established at Miami in November 1980 to offer contract service flights and engage in the aircraft leasing business. A fleet is assembled, including 2 Douglas DC-8-55Fs and 2 DC-8-62Fs. Revenue flights are inaugurated in January 1981 over routes to Latin America. Operations continue apace for the next three years, but lacking the kind of aircraft necessary to meet Stage 2 noise regulations, the company shuts down in 1985.

During 1987, the two, grounded DC-8-62Fs are taken in hand and outfitted with hush kits. The 21-employee company, now based in Arkansas, reenters the contract game in July 1988. In September, the assets of bankrupt **Interstate Airlines** are purchased.

By year's end, a total of 13.83 million FTKs are flown. Revenues total \$9 million and costs allow both operating and net profits \$1.7 million.

The fleet in 1989 includes another DC-8-62F and 2 DC-8-61Fs, all appropriately silenced. Worldwide cargo charters are undertaken on behalf of the U.S. Department of Defense, the automotive industry, and other express-package operators.

Charters are also flown on demand for other charter and freight-forwarding companies. Cargo increases to 67.9 million FTKs and revenues reach \$29.2 million. The profits are \$2.93 million (operating) and \$3.02 million (net).

The workforce declines 0.1% in 1990 to 90, but traffic and revenues balloon. Freight skyrockets 133.1% to 186.2 million FTKs and revenues jump 47.4% to \$43.06 million. Expenses rise only 42.4% to \$37.41 million and allow an operating profit of \$5.64 million. At \$5.82 million, net gain almost doubles.

The employee population swells 30.3% in 1991 to 142 and the fleet now includes 2 each DC-8-61Fs and DC-8-62Fs plus 3 DC-8-63Fs. Orders are outstanding for 2 Boeing 747-100Fs, which will be wet-leased out or employed on charters.

Having decided to abort takeoff from New York (JFK) on a March 12 Brussels service, the pilot of a DC-8-62H-AF, with two other crew, is unable to stop the aircraft before it goes off the end of the runway. It hits a sand berm and an instrument landing system (ILS) shack, losing both its landing gear and four engines. Although the freighter is damaged beyond repair, there are no fatalities.

Cargo inches up by 0.9% to 187.54 million FTKs and revenues move ahead by 3.5% to \$44.55 million. Expenses rise 8.1% to \$40.31 million, causing the operating income to slide to \$4.12 million. Net profit also slips to \$4.58 million.

While on final approach to Toledo on a February 15, 1992 service from Seattle, the cockpit crew of Flight 805, a DC-8-63F, apparently becomes disoriented and the freighter is placed into an unusual attitude from which recovery is not possible. The Douglas crashes 3 mi. NW of the runway and there are no survivors.

A fourth DC-8-63F is acquired as a replacement. Recession, however, has a more significant impact on the carrier than the loss of a freighter. Through November, cargo is down 5.7% to 192.6 million FTKs. Revenues plunge 43.7% to \$25.07 million, but expenses drop 40% to \$24.25 million. Consequently, operating profit declines to \$821,916 while net gain is cut to \$996,567.

Airline employment stands at 250 in 1993 and President David Clark's fleet now includes 2 each DC-8-61Fs and DC-8-62Fs plus 9 DC-8-71Fs and 3 DC-8-63Fs.

Freight recovers and increases 62% to 344.59 million FTKs. Revenues skyrocket 70.6% to \$42.77 million, expenses are up 55.5% to \$37.73 million, and operating profit jumps to \$5.04 million. The net profit hits \$5.13 million.

Operations continue apace in 1994 as a total of 7,000 charter passengers are flown. ICX International Cargo Express is merged on October 1. Two more DC-8-63Fs are acquired, including 1 received from the Irish airline **Aer Turas, Ltd.** together with 5 DC-8-62Fs. Four of these will be operated as pure freighters and the rest will be placed in a combi configuration. Simultaneously, the company receives a contract to operate 9 DC-8-71Fs of **Burlington Air Express** from that concern's Toledo hub to 30 domestic U.S. destinations.

Cargo swells 7.1% to 369.2 million FTKs. Revenues skyrocket 104.2% to \$87.33 million as expenses jump 92% to \$72.47 million. There is an operating surplus of \$14.86 million and a net gain of \$15.1 million.

The workforce stands at 460 in 1995. Approved by FAA Inspector Jeffrey Lashbrook to fly to Massachusetts for maintenance with but three engines, a DC-8-63F fails its takeoff from Kansas City Airport on February 17 and crashes into the ground, sliding 2,300 m. before stopping (three dead).

Lashbrook will be censured by Federal safety officials in their March 30 report for allowing an inexperienced crew to depart with the ineffective jetliner.

During the summer, the company undertakes nightly return cargo flights from Hartford, Connecticut, and San Juan, transporting raw, semifinished, and finished pharmaceutical and accessories on behalf of several major drug companies. The DC-8-63F service, arranged by Lep Profit International, insures a return in daylight via Columbus, Ohio.

At year's end, the Little Rock-based charter operator is granted national status by the DOT.

Enplanements skyrocket 80% to 27,000 while freight rises 5.5% to 553 million FTKs. There are profits: \$11.95 million (operating) and \$12.24 million (net).

The employee population is increased by 8.7% in 1996 to 500. Customer bookings ascend 7.4% to 29,000 and 626.69 million FTKs are operated, a 13.3% increase. Operating income dips 1.4% to \$128.78 million

and expenses jump 10% to \$130.42 million. The previous year's operating profit is turned into a \$1.66-million loss while the net picture turns from positive to negative with a \$5.91-million loss.

The employee population is cut by 10% to 450 in 1997. The fleet now includes 9 DC-8-62CFs, 11 DC-8-71Fs, 8 DC-8-63Fs, and 1 DC-8-61F, all configured for freight services. Some are wet-leased to other carriers. Others continue to provide worldwide all-cargo services for the U.S. auto industry, air freight forwarders, computer and oil exploration concerns, the DOD, and the express-package delivery industry.

Passenger boardings plunge 24.2% to 22,000 while freight declines 16% to 526.62 million FTKs. Revenues reach \$132.9 million, but losses are higher and there are losses: \$4.72 million (operating) and \$15.53 million (net).

BAX Global purchases the company in February and begins to operate it as a subsidiary in April 1998. Domestic and international all-cargo services are continued on behalf of integrated express companies and the U.S. military. Four DC-8-63Fs are withdrawn.

Customer bookings jump 9.1% to 24,000, while cargo traffic plunges 17.1% to 435.57 million FTKs. Revenues drop 19.6% to \$106.97 million, while expenditures are down 19% to \$111.46 million. The operating loss improves slightly to \$4.48 million and there is a net gain of \$17.47 million.

Airline employment at the beginning of 1999 stands at 450.

The year's passenger boardings drop 4.2%, but cargo surges 9.2% to 475,757,000 FTKs. Operating revenues jump 22.8% to \$131,348,000 while costs are up 22.1% to \$136,082,000. The operating loss deepens slightly to \$4.73 million, but the previous year's net profit becomes a \$4.7-million net loss.

Airline employment stands at 655 at the start of 2000, a 20% increase during the past 12 months.

AIR TRANSPORT OFFICE, S.A. (ATO): Zaire (1994–1995). ATO is established at Kinshasa to offer charter passenger and cargo services to regional destinations. Operations commence with a single Boeing 737-200C. Flights cease within a year.

AIR TRANSPORT PYRENEES, S.A.: France (1989–1995). This French commuter is established at Aeroport de Pau in late 1989; Lucien Bertrand is named managing director. A fleet is assembled comprising 1 Beech Super King Air 200 and 4 Beech King Air 100s. Scheduled passenger services are inaugurated in the spring of 1990; destinations served include Nantes, Biarritz, St. Etienne, and Toulouse.

A Beech 1900 is purchased, but is returned in 1991. At the same time, one King Air 100 is sold and replaced by a Cessna 310. Plans are made to merge the company on January 1, 1992, with **Air Exel France, S.A.**, **Airlec, S.A.**, and **Air Vendee, S.A.** to form **Regional Airlines, S.A.** The takeover does not occur.

Operations continue apace in 1993–1994 and the fleet is increased by the addition of one Embraer EMB-110 Bandeirante. Flights continue linking Pau with Nantes, St. Etienne with Toulouse, and Castres with Rodez and Lyon. Early in 1995, the company is purchased by **Proteus Air System, S.A.** and merged.

AIR TRANSPORT SCHOOL: Russia (1993–1995). Essentially an advanced flight-training facility at Moscow's Zhukovski Airport, General Director M. I. Didenko's operation begins to offer charter services to various Russian Federation destinations during 1993.

The fleet, drawn largely from **Aeroflot Russian International Airlines (ARIA)**, includes 2 Antonov An-32s, 2 Ilyushin Il-76s, 2 Il-86s, 2 Tupolev Tu-134s, and 2 Yakovlev Yak-40s. Services continue into 1994–1995.

AIR TRAVEL, LTD.: New Zealand (1929–1931). With a de Havilland 50 borrowed from the New Zealand government, Squadron Leader M. C. McGregor begins a daily Christchurch–Dunedin service on behalf of Air Travel, Ltd. in 1929.

Traffic is poor and the passenger service ceases on April 12, 1931. The carrier remains in service as a charter operator through the fall and on November 12, McGregor, flying a Spartan, carries the first all-New Zealand airmail from Invercargill to Auckland.

AIR TRAVEL (N.Z.), LTD.: New Zealand (1934–1945). Captain J. C. "Bert" Mercer forms New Zealand's first sustained regular airline at the South Island town of Hokitika in the fall of 1934. With a de Havilland DH 83 Fox Moth, he inaugurates service along the west coast on December 31 to the isolated communities of Haast and Okuru. In addition to scheduled passenger and cargo frequencies, Mercer also operates charters and flies the mail. The latter is the earliest surcharge-free mail service in the nation.

This route is extended from Hokitika to Inchoybonnie in early 1935. A second Fox Moth is now acquired that had previously been the personal aircraft of the Prince of Wales. Nicknamed the "Royal" Fox Moth, this DH 83 is piloted by another former World War I pilot, James Hewitt.

Flights continue over the remainder of the decade and into the 1940s, with the fleet increased by another Fox Moth, 2 DH 90 Dragonflies, 2 DH 89A Dragon Rapide, and 2 DH 84 Dragon. All are painted in a bright orange-and-white livery.

While en route from Hokitika to Wellington in December 1942, one of the two propellers of a DH 90 flies off the aircraft, causing it to crash into the sea; all five passengers are killed.

Being flown on a flight-seeing tour for four members of the Women's Auxiliary Air Force, the "Royal" Fox Moth crashes high onto the Franz Josef Glacier in October 1943. Although none of the five people aboard are seriously hurt, it requires two days for a rescue. The remains of the Fox Moth, including its engines, are carried off the ice in pieces; it will be rebuilt within seven months. The aircraft remains airworthy in 1998.

While return from a flight to the west coast in June 1944, the carrier's Dragon crashes on an isolated ridge. All five aboard, including Capt. Mercer who is travelling as a passenger, are killed.

Despite these accidents, flights continue, largely without change, until December 7, 1945 when the carrier is one of three combined to form **New Zealand National Airways Corporation**.

AIR TROIKA SP: 6/3 Kuznetski Most, Moscow, 103775, Russia; Phone 7 (095) 927-8303; Fax 7 (095) 924-3582; Code TK; Year Founded 1994. Air Troika is established at Moscow in 1994 to provide domestic all-cargo services. Sergi E. Andreyev is appointed general director and he commences revenue flights with a single Ilyushin Il-76D.

Flights continue in 1995–1997. During these years the fleet is increased by the addition of 5 Antonov An-26s, 7 Mil Mi-8s, and 2 Kamov Ka-32s. The helicopters are employed to operate external load and construction flights.

By 2000, Director General Andreyev oversees a 45-person workforce. His fleet has been increased by the addition of 2 Yakovlev Yak-40s and 1 Tupolev Tu-134A. UN charters, begun during the Kosovo crisis, are continued between points in Eastern Europe and Russia.

AIR TRUCK LINEAS AEREAS, S.A.: Spain (1990–1996). Air Truck is set up at Madrid in 1990 to offer domestic all-cargo services with a fleet of three Dassault Falcon 20s. Much of the business consists of feeding such giants as **UPS (United Parcel Service)** and **DHL Airlines**. A total of 2.28 million FTKs are flown on the year.

A fourth Falcon 20 is acquired in 1992 and freight traffic accelerates to 5.6 million FTKs. Operations continue apace as Managing Director Jose Parries's carrier during 1993.

Late in 1994, the subsidiary associate commuter, **Lineas Aereas Navarres, S.A.**, is formed and orders are placed for three Avions de Transport Regional ATR42-320s. These are delivered in the spring and fall of 1995 and enter regional service.

In June 1996, Air Truck is renamed **Air Track, S.A.**

AIR TUNGARU CORPORATION: P.O. Box 274, Bonriki International Airport, Bikenibeu, Tarawa, Kiribati; Phone 686 28 088; Fax 686 28 277; Code VK; Year Founded 1977. Formed on October 31, 1977 as the national airline for the Republic of Kiribati, Air Tungaru initially operates interisland services beginning in April 1978. The company's two Britten-Norman BN-2A Trislanders, operating from Bonriki Airport, link the capital of Tarawa with Butaritari, Marakei, Malana, Abemama, Nonouti, Tabiteuea North, and Beru.

In 1979, **Air Pacific, Ltd. (2)** obtains a five-year contract to provide scheduled services to Honolulu from Kiritimati and Tarawa.

By the early 1980s, the carrier's fleet has grown to comprise 1 CASA C-212 Aviocar, the 2 Trislanders, and 1 de Havilland DH 114 Heron. Regional services are offered, connecting Tarawa with Funafuti, Majuro, and Nadi.

The **Air Pacific, Ltd. (2)** contract ends in March 1984 at which time a Douglas DC-8 is leased from **Hawaiian Airlines** to fly a weekly non-stop Kiritimati-Honolulu frequency.

The long-haul operation is given up in 1987, along with the Heron. In 1988, Managing Director Capt. R. Cooney's fleet and network are the same as in 1981. Maate P. Moniba is named general manager in 1989. Under a charter agreement signed in October with **Aloha Airlines**, the flag carrier of Kiribati begins weekly roundtrip service in December from Honolulu to Kiritimati Tarawa, and Nadi.

In 1991, a Boeing 737-214 is purchased and the Hawaii service is resumed. Airline employment is 45 in 1992, but the expensive jetliner service is discontinued. CEO Moniba's 1993-1994 fleet includes the CASA C-212 Aviocar and two Trislanders.

Flights continue during the remainder of the decade.

AIR TUNISIA. See **TUNIS AIR, S.A.**

AIR TURKS AND CAICOS, LTD.: Turks and Caicos Islands (1976-1979). Air Turks and Caicos is formed at Providenciales during the first week of October 1976 to replace the former **TIGAS (Turks and Caicos Islands Government Air Services, Ltd.)**. Initial shareholding is held by the government (30%), **Trans-Jamaican Airlines, Ltd.** (35%), and private interests (35%).

Equipped with a Douglas DC-3 and a Britten-Norman BN-2 Islander, the national airline undertakes service on October 11. Domestic schedules link Grand Turk, Salt Cay, South and Middle Caicos, Pine Cay, and Providenciales while international routes link the islands with Cap Haitien and Santo Domingo.

In 1979, the carrier is renamed **Turks and Caicos National Airline, Ltd.**

AIR 21: United States (1995-1997). Mark Morro, who had founded **Wings West Airlines** some years earlier, establishes this large regional at Fresno Airport, California, in the fall of 1995.

A pair of Fokker F.28-4000 Fellowships, painted in a gray and navy blue livery, are leased from **USAir**. The first aircraft, flown by a USAir crew, arrives at Fresno on October 30, where it is christened *Spirit of Fresno* in a ceremony held at the hangar the airline is renting from the city. The second Fokker arrives the following week and both begin route testing; the company completes its certification process.

The start-up receives its FAA Part 121 Certificate on November 17. Scheduled no-frills, low-fare services are inaugurated on December 20 to Las Vegas, Palm Springs, and San Francisco.

Another F.28-4000 enters service during the first weeks of 1996. On March 1, a few days later than advertised, a daily nonstop return flight is initiated from Colorado Springs to Grand Junction, Colorado, with continuing service to Las Vegas, Fresno, and Los Angeles. Nonstop frequencies are also started from Grand Junction to Salt Lake City, continuing on to Fresno.

Confusion surrounds the new service starts because facilities are not initially ready at the Colorado Springs Airport. The airline has neither an

office nor a local phone, not even a desk prepared to sell tickets or answer inquiries. The matter is quickly put right. Travel agents at Colorado Springs agree to form an advisory board to assist the airline in developing and implementing a business plan.

Sixty daily frequencies are now offered to nine destinations, including San Francisco, Los Angeles, and Grand Junction. Still, it must be admitted that passengers flying into the latter point aboard Air 21 must wait at least two hours for their connections and, as a result, company flights to Colorado Springs are often only half full. On the bright side, flights from Grand Junction to Las Vegas are almost always sold out.

On May 23, President Morro announces that service to Colorado Springs and Salt Lake City from Fresno will be dropped because the route has not lived up to its expectations. He does not mention that **Delta Air Lines** had cut its prices to compete over the same route, overwhelming the new entrant and, in fact, forcing it out.

The three Fokkers are redeployed into the current market. Plans to start flying from San Francisco north to Bend and Eugene, Oregon, and Seattle on June 17 are postponed; however, a new route is opened on June 19 from Monterey to Las Vegas.

A marketing agreement is signed with **Reno Air** in July; the pact will, as it turns out, be short-lived. Possibilities are discussed with Atlantic City casino owners to provide long-haul charters, but result in no actual service contracts.

Traffic and fiscal reports are only released through October. In the year's first 10 months, a total of 157,259 passengers are flown and \$5.91 million in revenues are generated. Costs are high and losses result: \$2.03 million (operating) and \$2.42 million (net).

On November 8, it is announced that the company has retained On-Flight Media to paint scenes on its jetliners in an "outdoor" advertising AirLogo program similar to that used by **Frontier Airlines (2)** and **Western Pacific Airlines (Westpac)**.

The financially troubled regional leaves thousands of holiday travelers stranded when it halts regular flights in late December.

On January 8, 1997, the airline begins formal bankruptcy proceedings. A spokesman announces on March 12 that the carrier will convert its Chapter XI status to Chapter VII and liquidate and distribute its assets to its creditors. The process is completed by summer.

AIR 2000, LTD.: First Choice House, London Road, Crawley, West Sussex, England, RH10 2GX, United Kingdom; Phone 44 (1293) 518 966; Fax 44 (1293) 524 642; http://www.air2000.co.uk; Code DP; Year Founded 1986. Air 2000 is founded in July 1986 at Manchester by former **Air Europe, Ltd.** Managing Director Errol P. Cossey as the airline of the Owners Abroad Group (OAG) to operate flights in the package holiday industry, with a goal of offering 300,000 seats per year in the U.K. market. About half of this capacity will be taken by the OAG, the major (76%) shareholder. Cossey becomes the new Air 2000 CEO and, together with senior management of the new company, hold the remaining 24% interest. Orders are placed for two, leased Boeing 757-28As.

On April 11, 1987, the 290-employee enterprise begins 35 weekly leisure charter and inclusive-tour services to 12 European and Mediterranean destinations. Late in the year, one Boeing is subleased to **British Airways, Ltd. (2)**.

Explanations total 513,000 and an operating income of \$6.76 million is generated, along with a net gain of \$2.39 million.

The workforce is increased a huge 88.4% in 1988 to 275 and the fleet now includes 4 leased B-757-28As and 1 B-737-33A, the latter chartered from **British Midland Airways, Ltd.** Glasgow is added as a base from which to operate charter flights to the Continent and long-haul flights are initiated from London (LGW) to destinations in Canada, Kenya, Gambia, Mexico and the Caribbean.

A **Canadian 2000, Ltd.** subsidiary is formed, but as a result of protests from other Canadian carriers the Canadian Transport Ministry revokes its license late in the year, just before it is scheduled to open revenue services.

Local investors move in and purchase the company from its British parent. The winter season wet-leasing of certain of the U.K. airline's aircraft to its one-time offspring continues.

Passenger boardings skyrocket 103% to 860,379 and revenues increase 137.5% to \$82.8 million. Profits total \$11.6 million (operating) and \$6.45 million (net).

Airline employment increases 75% in 1989 to 483 as two additional B-757-225s, equipped to Extended Range Twin-Engine Operations (ETOPS) standard, are acquired. Direct Glasgow to Orlando service is launched in September and represents the first time that a British airline has successfully challenged the U.K. government policy that requires the use of Prestwick for international flights originating from Scotland.

Service to Boston and Newark also opens. Customer bookings surge 59% to 1,372,939 and revenues jump 71.2% to \$125 million.

In 1990 the number of company workers increases by 55.4% to 673 and the fleet comprises 10 leased B-757-200s. In April, the OAG pays \$11.2 million to acquire the 24% shareholding in the airline that it does not already possess. At the same time, Britain's third largest tour operator acquires the fourth largest operator, Redwing Holidays, in a three-year deal worth \$8.8 million.

Flights now begin from a new London (LGW) base. In December, the company is granted a license to inaugurate scheduled flights to Larnaca from a new base at Birmingham, as well as Manchester, Glasgow, and—for the first time after the government relaxes its restrictions—from London (LHR).

Passenger bookings increase 34.7% to 1,848,825 and the operating profit is \$17.6 million.

At the time the new flights begin in early 1991, the leased fleet includes 1 B-737-33A on charter from **British Midland Airways, Ltd.**, 2 B-757-225s; 4 B-757-23As; 3 B-757-236s, 4 B-757-28As, including 2 subleased to **Canada 3000, Ltd.**, and 1 chartered B-757-2Y0. Simultaneously, airline employment is increased 30% to 758.

Following the collapse of the International Leisure Group and its flagship airlines, **Air Europe, Ltd.**, in March, the OAG raises £28.9 million (\$50.6 million) in a public stock offering to be employed on expansion. In one six-day period in early April, over 100,000 vacations that would have gone to ILG are booked.

Customer boardings swell 30.4% to 2,443,512 and revenues jump 29.6% to \$290 million. The operating profit reaches \$24.4 million and net profit is \$15.2 million.

Airline employment grows 28.1% in 1992 to 1,002 and the B-737-33A is returned and replaced in April by 4 chartered Airbus A320-231s, 2 of which are placed in storage late in the year. Antigua, Bucharest, Funchai, and Skiathos are added as new holiday stops, with a number of flights being initiated, beginning in May, from a new hub at Bristol.

Passenger boardings leap upward by 32.3% to 3,404,843 while revenues climb 30.9% to \$369.9 million. Expenses are up 31.2% to \$339 million and leave an operating surplus of \$30.9 million. Net gain reaches \$15.7 million.

Airline employment in 1993 stands at 1,200. CEO Errol Cossey becomes chairman and former Finance Director Ken Smith is appointed managing director. Two more A320-231s are delivered and new charter markets are opened at Cancún and Verona.

The carrier, with its parent Owners Abroad Group, is able to defeat a hostile takeover bid by **Airtours International, Ltd.** The merger is largely derailed due to an inquiry by the U.K. Monopolies and Mergers Commission as well as by obstructive tactics of First Choice Holidays, which also takes a large stake in OAG.

Air 2000 introduces scheduled service in October over an inaugural route from London (LGW) to Larnaca and Paphos on Cyprus.

Customer bookings accelerate 19.1% to 4,063,064 as revenues swell 14.5% to \$403.5 million. Expenses rise only 14% to \$367.5 million and leave an operating profit of \$36 million. The net gain climbs to \$21 million.

The workforce is increased 0.7% in 1994 to 1,250 as scheduled flights to Cyprus are initiated from Birmingham. Plans are made to initiate services from Birmingham and Manchester to Larnaca and Paphos during spring of the upcoming year.

Late in the year, a B-757-236 is leased to the new Argentinean charter operator **Dinar Lineas Aereas, S.A.**

Passenger boardings move ahead by 3.4% to 4,200,500.

There is no change in the size of the workforce during 1995; however, all of the new services announced the previous year are started during the spring. New hubs are opened at Newcastle and Belfast. Following a change of senior management, the Owners Abroad Group is renamed First Choice Holidays. Approximately 75% of the airline's passengers come from First Choice, with more than 25 other tour operators contributing the balance.

In September–October, company pilots, flying wet-leased B-767s on behalf of **Alitalia, S.p.A.**, become the object of displeasure and job action by the pilots' union of the Italian state carrier.

The year is not good as the company suffers a 10.4% decline in customer bookings to 3,762,900.

Airline employment is reduced 4.3% in 1996 to 1,196. A third major base is opened at Dublin from which flights are started.

Traffic recovers and enplanements increase to 4,742,000. In addition, 1.16 million FTKs are operated.

The workforce grows to 1,350 during 1997. At the beginning of the year, the carrier unveils a new corporate color scheme, designed by Landor Associates, in which jetliners are painted in a variety of liveries, some including advertisements for specific destinations.

Destinations visited from Birmingham, Bristol, Dublin, London (LGW), Glasgow, Manchester, and Newcastle include Antigua, the Baleric Islands, Barbados, the Canary Islands, Cuba, the Dominican Republic, Florida, France, Greece, Israel, Italy, Malta, Mexico, Portugal, Spain, Sri Lanka, Thailand, Tunisia, Turkey, and Venezuela.

Customer bookings climb 3.7% to 4,676,149. It is revealed sometime later that a massive accounting error has erased £8.6 million from the parent's corporate balance sheet.

During the first quarter of 1998, a three-year program is launched. The new plan is designed to increase pre-tax profits to 4% of sales by the third quarter of 1999.

While en route from Birmingham to Malta on an April 7 holiday charter, an intoxicated father and son begin to brawl with other passengers. When the fracas cannot immediately be settled, Capt. Hugo Vonwiller is forced to divert the packed B-747-28A aircraft to Milan. Anthony and Roy Psaila are arrested and returned to the U.K. for trial, where they will eventually be sentenced to prison for a year (with six months suspended).

Also in April, a B-757-2Q8ER is acquired under charter from ILFC. Also during the second quarter, the B-757-2Y0 that has been operated on long-term lease, is sub-chartered to Thomas Cook Travel for an around-the-world trip, a TCS Expedition. The jetliner is painted in the colors of the tour operator and is temporarily christened *Explorer I*.

A deal is now struck for the lease of two chartered B-767-300ERs, to be delivered in April 1999 and April 2000, respectively. They will be the first wide-bodies operated by a British charter airline to feature two classes of service.

The company unveils a homepage on the World Wide Web during May.

When a minor fire breaks out in the cockpit of Flight 63 on June 22, a B-757-2Q8ER with 9 crew and 205 passengers returns to Larnaca, Cyprus, its point of origin.

Also during June, First Choice Holidays, the carrier's tour-operator parent, purchases Unijet Group, parent of **Leisure International Airways, Ltd.**, and will now be able to form a combined carrier the size of **Monarch Airlines, Ltd.**, the country's third largest charter carrier. All seven Leisure International aircraft are incorporated into the Air 2000 fleet in time for the opening of the winter holiday season at the end of October.

Reports begin to circulate in late December that an unnamed bidder has come forward in a series of "preliminary approaches concerning possible offers" to take over First Choice Holidays, all of which are "highly conditional."

Passenger boardings accelerate 22.6% to 5.94 million.

By the beginning of 1999, airline employment has increased by 45% to 1,958. It is announced on January 18 that Air 2000, the U.K.'s second largest charter airline, will launch Scotland's only nonstop scheduled service to Cyprus during the spring.

On January 20, the Golden Globe award for the U.K.'s Best Charter Airline, is presented to Air 2000 at the travel industry's awards banquet in London. This is the sixth time in the award's nine-year history that Air 2000 has been the recipient.

The rumors concerning a possible takeover by an outside source continue to circulate during the first quarter and increase the value of First Choice Holidays by 56%. Finally, the accuracy of the speculation is confirmed by First Choice on the London Stock Exchange on March 1 and revealed to the public in the on-line version of *The Guardian* on March 2. The media speculates that the potential bidder is thought to be Europe's largest tour operator, Preussag, A.G. Analysts suggest that the move may not be successful since the German concern holds a stake in rival Thomas Cook Holdings, parent of **Flying Colours Airlines, Ltd.**, which, in turn, owns 10% of First Choice Holidays.

The Guardian notes on March 7 that the approach to First Choice had been made not only by Preussag, A.G., but also by Airtours, parent of **Airtours International Airways, Ltd.** First Choice shares have soared 27p each in value over the last week. In a brilliant stroke, Airtours Chairman David Crossland is able to persuade Preussag to sell its remaining 10% stake in First Choice and remove itself from the bidding process.

On March 10, it is reported that First Choice is at an advanced stage of merger talks with Kuoni Reisen Holdings, A.G., a Swiss-based travel concern. Within days, the two companies agree to merge via stock swap, in which Kuoni shareholders obtain 53% of the combined group and First Choice shareholders the remainder. The offer from Kuoni is valued at 148.8p per share. Under terms of the arrangement, First Choice Chairman Ian Clubb becomes executive chairman, while CEO Riccardo Gullotti becomes group CEO. A new 14-member board will be drawn from both companies that will continue to trade in London and Zurich. The new joint enterprise will have £1.5 billion in capitalization.

The company's first new B-767-38AER is delivered on March 30. Simultaneously, the company completes the repainting of the fleet of the former **Leisure International Airways, Ltd.**, including a pair of B-767-39Hs.

On April 19, First Choice Holidays Chairman Ian Clubb warns Airtours not to continue its attempt at a hostile takeover in a bid now valued at £852 million. Such a "reckless gamble" is certain to require at least six months of regulatory agency investigation, while corporate profits would be badly damaged by the uncertainty of a review during the peak summer trading period. Unspoken is an additional First Choice fear that the 229p per share of common stock offer from Airtours will crush the Kuoni deal.

During the last week of April, the Swiss tour operator Kuoni and First Choice Holidays formally agree to the merger worked out earlier; the union will create the second largest European tour operator (after Preussag, A.G.'s TUI-Hapag Lloyd). The combined airline that will eventually result through a union with **Edelweiss Air, A.G.** will be the fifth largest charter carrier in Europe; in 1998, the two combined transported 6.8 million passengers.

On April 30, it is reported that Airtours has officially made its hostile takeover bid and that its chairman, David Crossland, has elected to avoid hearings by U.K. competition agencies by appealing directly to the European Commission (EC), which has final jurisdiction. It is also noted that rival Thomson Holidays, parent of **Britannia Airways, Ltd.** and Britain's largest travel group, is planning a price war designed to dilute any value of an Airtours-First Choice merger. The counteroffensive will bring something of a revolt among Thomson

shareholders, many of who would rather accept a number-two listing than suffer large financial losses.

Concerned about the possible creation of a monopoly in the U.K. travel market, the Association of Independent Tour Operators on May 1 petitions the U.K. and European Union competition authorities to disprove the hostile takeover of First Choice by Airtours.

A boozy stag party of 37 men from Sunderland, South Tyneside, and Liverpool show up at Newcastle Airport on May 1 intent upon taking the company's 2-hr. B-757-2Q8ER service to Ibiza. After acting in an "ungentlemanly" manner before the flight's other passengers at the departure terminal, ground staff notify the jetliner's captain, who orders the party barred from boarding. Still making a nuisance of themselves two hours after the aircraft's 8:40 p.m. local time departure, the men are finally escorted off the premises by police, who make no arrests. This "Sun Jet Ban for Rowdies" is reported in the on-line issue of *The Newcastle Chronicle & Journal Limited* on May 5.

Employing a B-757-2Q8ER, the new daily Glasgow to Paphos roundtrips commence on May 5. These are in addition to the Air 2000 scheduled frequencies to Paphos and Larnaca already operated from London (LGW), Manchester, and Birmingham.

The Guardian reports on May 9 that early signs are that an Airtours move to bypass U.K. regulators and apply directly to the EC—which has the final word—for approval of its First Choice takeover will be successful. This despite an expected negative submission from U.K. competition authorities expected to arrive in Brussels during the following week.

On May 26, the U.K. Department of Trade and Industry announces that it will not review the First Choice takeover on competition grounds and will not ask the EC for authority to undertake a separate investigation.

Rather than rubber-stamp the arrangement, the EC, on June 3, indicates that the deal will be subjected to an in-depth investigation that could last until October and may well result in its denial on competition grounds. As Airtours becomes aware of its growing first-half losses, it withdraws its bid for First Choice on June 10. This reversal revives the possibility that the March merger between First Choice and Kuoni will be completed.

Just after takeoff from Glasgow on September 3, the right engine of an Edinburgh Air Charter Cessna 404 with 1 pilot and 10 passengers stops, causing the aircraft to crash; 8 aboard are killed, including an entire Airtours cabin crew.

New EU antitrust commissioner Mario Monti, on September 23, shoots down the Airtours takeover of First Choice Holidays. A company B-757-28A, wet-leased to **Aero Continente, S.A.** for six months, allows the Peruvian carrier to inaugurate daily roundtrips on November 17 between Lima and Miami.

Although Airtours drops the bid for its rival, it does, however, formally appeal the ruling on December 2, charging that, by failing to recognize the industry's competitiveness, the regulator's ruling is flawed and should not stand as precedent.

Passenger boardings at Britain's second largest charter airline jump 32.8% on the year to 6,046,000. Cargo makes an even more spectacular jump, climbing a remarkable 879.2% to 13,414,000 FTKs.

Airline employment at the beginning of 2000 stands at 2,032, a 3.8% increase over the past 12 months.

During the first quarter, 2 B-757-28As are wet-leased to TCS Expeditions. Airtours, on May 16, sells its 3% stake in First Choice Holidays.

In July, the First Choice carrier becomes the first charter airline to mount a serious challenge to the low-cost carriers **easyJet, Ltd.**, **Ryanair, Ltd.**, and **GO**. The company, which has flown scheduled service to Cyprus since 1994, now launches scheduled leisure flights from eight U.K. airports to Alicante, Faro, Lanzarote, Malaga, Palma, and Tenerife. Unlike the no-frills airlines, passengers are offered free drinks and in-flight entertainment.

AIR 2000 AIRLINES, LTD. See **AIR 3000, LTD.**

AIR U.K., LTD.: United Kingdom (1980–1998). Britain's third largest scheduled airline is created on January 16, 1980 through the merger of **Air Anglia, Ltd.** (founded in 1970), **Air Wales, Ltd.** (founded in 1977), **Air Westward, Ltd.** (founded in 1976), and **British Island Airways, Ltd. (1).** Air U.K. is a subsidiary of British Air Transport Holdings, Ltd., which in turn is 90% controlled by the British and Commonwealth Shipping Group. Neil Foster, a former professional hockey player, is named chairman.

Initial operations are flown with various equipment, including Fokker F.27s and an F.28, to 21 scheduled destinations in Britain and 8 international points in Europe: Amsterdam, Bergen, Brussels, Copenhagen, Dusseldorf, Esbjerg, Paris, and Stavanger.

Charter flights are also run; however, the company must coordinate its operations from the provincial centers of Crawley (head office), Stansted Airport (hub building), Norwich (maintenance), and Aberdeen (overnight center for crews and aircraft). An alliance is immediately entered into with **KLM (Royal Dutch Airlines, N.V.)** in which the Dutch flag carrier provides ground handling in Europe on behalf of the new British carrier; code-sharing will later be introduced on routes between the U.K. and the Netherlands.

On February 18, the company joins the Royal Mail program known as "Spokes from Speke," flying a BAe (HP) Dart Herald each night from London (CTN) to the sorting hub at Liverpool (Speke Airport) and on to Belfast for distribution. Another Herald simultaneously flies from Northern Ireland–Liverpool–Luton.

As a result of the world economic recession and fuel and start-up costs, severe, but unspecified, financial reversals are suffered in 1981, the first full year of service. The flow of red ink continues into 1982, during which year the tour division is sold to a new British and Commonwealth Shipping Group subsidiary, **British Island Airways, Ltd. (2)**, which receives the name of the 1980 merger partner.

To end the slide, the company consults with **KLM (Royal Dutch Airlines, N.V.)** and appoints **British Airtours, Ltd.** CEO Stephen Hanscombe managing director in August 1983. The company ends three years of losses with a profit just under £1 million.

In 1984, certain domestic routes are turned over to **Manx Airlines, Ltd.** and one F.27 and the F.28 are sold. London (STN) to Guernsey flights begin in the spring while frequencies are increased to Amsterdam, Bergen, Brussels, Copenhagen, Dusseldorf, Esbjerg, Paris, and Stavanger.

An HPR-7 Herald 203 is struck by a truck at Bournemouth's Hurn Airport on June 11 and damaged beyond repair.

The original F.28-1000 is leased in November from Fokker for a year. Enplanements reach 202,808 and a £2-million profit is generated.

In 1985, operating primarily from 15 provincial U.K. centers, the airline continues to service its routes with a fleet that includes 16 Fokker F.27s, 1 Shorts 330, and 2 BAC 1-11-400s, the latter leased from **British Island Airways, Ltd. (2)**. Employment is 1,000 and boardings skyrocket to 950,000. The profit reaches £2.6 million or roughly \$4 million.

Managing Director Hanscombe's fleet is altered in 1986 as 3 Fokkers and the Shorts 330 is replaced by 4 Shorts 360s. A new office is opened at Norwich Airport with D. L. Henry as operations manager. A total of 50 international roundtrip flights are operated weekly from Stansted to Amsterdam, Paris, and Brussels. On December 1, Air U.K., Ltd. places the first British-registered F.27-500 in service on the London (LHR)–Guernsey route. Enplanements fall to 850,000.

Airline employment grows 2.6% in 1987 to 975 and the fleet includes 15 F.27s, 5 Shorts 360s, and 2 BAC 1-11s-400s. The first British airline to introduce a no-smoking rule, Air U.K., in a four-month experiment beginning on May 1, bans smoking on services from London to Exeter, Southampton, and the Channel Islands.

In June, the company is reorganized; **KLM (Royal Dutch Airlines, N.V.)** purchases 14.9% shareholding (and receives two board seats) in what has now become, after itself, the second largest operator at Amsterdam's Schiphol Airport. It is allowed to appoint one board director. The arrangement allows an experimental code-sharing arrangement on

one London to Amsterdam service. An autonomous sister charter carrier, **Air U.K. Leisure, Ltd.**, is formed the same month.

The new holding company, Air U.K. Group, operates both airlines as subsidiaries under the chairmanship of C. J. Parker. The first of three ordered British Aerospace BAe 146-200s enters service in November from London (LHR) to Guernsey, introducing the carrier's new livery. The million mark in passenger boardings (1,000,000) is reached.

In 1988 the employee population is reduced by 2.6% to 950 and 2 more BAe 146-200 are acquired, allowing retirement of the BAC 1-11-400s. A new office is opened at London (STN) and in September orders are placed for 3 BAe 146-300s. For the nine months in which figures are given, customer bookings rise 32.2% to 986,860. In September, the company is able to assume the London (LGW) to Edinburgh and Glasgow services formerly operated by **British Airways, Ltd. (2)**. The year's profits are \$1.3 million (operating) and \$1 million (net).

The payroll grows by 17.5% in 1989 to 1,340 as a Fokker F.27-600 is added. In January, an interline agreement is signed with **Virgin Atlantic Airways, Ltd.** Air U.K., Ltd. becomes the first European operator to fly the type when its first BAe 146-300 is delivered on February 28; it is employed on March 2 to initiate service from London (STN) to Brussels. Although full code-sharing is not implemented, interlining is made possible through bookings on the **KLM (Royal Dutch Airlines, N.V.)** computerized reservations system.

Following receipt of the second BAe 146-300, the company places it into service on routes from London (LGW) to Edinburgh and Glasgow. British and Commonwealth sells its stake in British Air Transport Holdings to Caledonia Investments and Yattendon Investment Trust, Ltd., both of which receive 45% interest.

Full-year traffic statistics reveal that customer bookings are up 34% to 1,810,000 and revenues have risen 36.1% to \$217 million. Operating income moves ahead to \$4.4 million and net gain totals \$3.2 million.

Company employment is increased by 34.3% in 1990 to 1,800. In February, the subsidiary firm, Air UK Engineering, Ltd., occupies a new 30,000-sq.-ft. hangar at Norwich Airport. Six additional BAe-146-300s begin delivery, replacing two Shorts 360s and an F.27-100. In May, one of these, before entering commercial services, visits Eastern Europe and the Soviet Union.

Beginning in late June, the company contracts with **Virgin Atlantic Airways, Ltd.** to provide discount airfares throughout the U.K. for Virgin's transatlantic passengers.

While landing at Schiphol Airport at Amsterdam after a flight from London (STN) on July 19, it is discovered that the right hand main landing gear of Flight 872, an F.27-200 with 4 crew and 17 passengers, has not locked down. A forced landing is made with the right gear retracted and, although the aircraft is badly damaged, there are no fatalities.

Managing Director Robert Frost resigns, also in July, for personal reasons; his duties are assumed by group Managing Director Hanscombe. Enplanements during the 12 months total 2,235,578.

Andrew Gray becomes managing director in 1991. The fleet now comprises 1 owned and 1 leased BAe 146-100, 5 owned BAe 146-200s, and 1 chartered and 5 owned BAe 146-300s, plus 10 F.27-200s, 2 F.27-500s, 1 each F.27-100 and F.27-600, and 2 Shorts 360s.

Destinations visited include Aberdeen, Belfast, Glasgow, Guernsey, Jersey, Edinburgh, Humberside, Newcastle, Leeds/Bradford, Teesside, Norwich, and Southampton, and Amsterdam.

Scheduled service from the new £400,000 terminal at Stansted Airport to Nice and Florence begins on March 15, followed in May by twice-daily flights to Frankfurt and Dusseldorf. Passenger boardings for the year as a whole are down 1.3% to 2,206,889.

In 1992, 2 BAe 146s are withdrawn and replaced by 5 chartered Fokker 100s, the first of which is delivered in late June and enters service in August. In celebration, a new livery is introduced. New services or frequencies are introduced to Aberdeen, Amsterdam, Dusseldorf, Brussels, Frankfurt, Nice, Florence, and Paris.

The airline joins the KLM frequent flyer program and passengers interlining through Amsterdam's Schiphol Airport receive boarding

cards for both Air U.K. and KLM flights on departure. In October, the "Spokes from Speke" program is revised and becomes known as Royal Mail Skynet.

Customer bookings recover and grow by 8.6% to 2,397,300.

In 1993, Chairman Hanscombe and Managing Director Gray oversee a workforce of 1,200. Four more leased Fokker 100s are delivered, along with the first of 8 chartered Fokker 50s. With 325 weekly flights at Amsterdam Schiphol, Air U.K. is now the largest foreign user and allows that facility to boast that it is "London's third airport."

A marketing agreement is signed with **Northwest Airlines** and traffic on the routes to the Dutch airport from London (STN) and Newcastle increase by 17% and 21%, respectively. In December, orders are placed for 8 Fokker 50s, plus 8 options, as well as 3 leased F.27-500s.

Overall scheduled departures total 63,636, passenger boardings swell 6.6% to 2,557,680, and there are profits: \$5.04 million (operating) and \$5.13 million (net).

Airline employment is increased by 14.6% in 1994 to 1,482 and, in January–February, scheduled services are inaugurated from London (STN) to Munich and Copenhagen. The arrival of the first of the additional Fokker 50s in March allows retirement of a number of older F.27s and their replacement with leased F.27-500s.

During May, a multimillion-pound contract is received from **KLM (Royal Dutch Airlines, N.V.)** for the line maintenance of the Netherlands carrier's 6 Fokker 100s. Belfast becomes a destination on June 13.

On September 1, daily flights are initiated from Stansted to Linate Airport at Milan, Italy. Two BAe 146-300s are leased in October–November. One replaces a BAe 146-200 and the other is placed on a route from Manchester to Amsterdam that the company takes over from **KLM (Royal Dutch Airlines, N.V.)**. In December, after just over three year's service from London (STN), the airline boards its one-millionth passenger. During the 12 months, scheduled departures increase to 68,557.

Customer bookings leap upward 13.9% on the year to 2,914,239 and revenues increase by 14.6% to \$421.63 million. With operating expenses rising only 12.5% to \$412.49 million, the company is able to post an operating profit of \$9.14 million and a net gain of \$15.1 million.

The workforce grows a slight 1.8% in 1995 to 1,509 as 4 B-737-42Cs and 3 B-737-4Y0s arrive under charter. The B-737-42Cs are soon subleased out to **KLM (Royal Dutch Airlines, N.V.)** and the B-737-4Y0s to **Modiluft, Ltd.** Two new BAe 146-300s are placed into service, one as replacement for a BAe 146-200.

Early in the year, the company takes over the Amsterdam–Manchester route previously flown by **KLM (Royal Dutch Airlines, N.V.)**. Replacement service is provided with one of the new BAe 146-300s. Other new routes are opened to Hamburg, Zurich, and Madrid.

The KLM interest in the airline climbs to 45% as new cooperative agreements are discussed. The company enters into a code-sharing, blocked-seat agreement with **Jersey European Airways, Ltd.** and employs its BAes in support of its new partner over a route from Belfast to Amsterdam.

Scheduled departures total 73,574 and passenger boardings ascend 15.7% to 3,370,776.

Airline employment grows a dramatic 19.9% in 1996 to 1,810 and the mostly leased fleet now includes 4 B-737-42Cs, which are leased out to **KLM (Royal Dutch Airlines, N.V.)**, 11 BAe 146-300s, 1 146-100, 4 F.27-200s, 5 F.27-500s, 9 Fokker 50s, and 9 Fokker 100s. The "Baby Boeings" subleased to **Modiluft, Ltd.** are returned.

Scheduled roundtrips begin to Rotterdam from London (LCY and STN). A code-sharing agreement with **Eurowings Luftverkehrs, A.G.** begins during the spring, as does a weekday-only partnership flight with **Deutsche Lufthansa, A.G.** from London to Cologne and Bonn.

On May 1, the carrier's 60% stake in **Air U.K. Leisure, Ltd.** is sold to Unijet, which will rename the airline **Leisure International, Ltd.**

Also on May 1, a new entrant **World Airlines, Ltd.**, launches business-class luxury flights to Amsterdam's Schiphol Airport from London (LCY) with a single British Aerospace BAe 146-200, leased from **USAir**. On

July 1, Air U.K. inaugurates a new daily roundtrip BAe 146-300 service between London (LCY) and Amsterdam, bringing to 11 the number of daily frequencies between the two destinations. Passengers flock to these less-expensive frequencies, sending the new entrant, **World Airlines, Ltd.**, into a fiscal tailspin. Also during the month, the carrier's frequent flyer program is merged with that of **KLM (Royal Dutch Airlines, N.V.)**.

In August, an agreement is signed with the Dutch flag carrier under which it will swap 4 F.28-4000s to Air U.K. in exchange for the right to purchase the 4 B-737-42Cs it is already leasing.

Air UK now begins service between Inverness and London (STN).

On October 1, the **World Airlines, Ltd.** BAe 146-200 is impounded at London (LCY) for nonpayment of landing fees. Without flight equipment, World goes into liquidation on October 10. **USAir** pays the landing fees to regain its BAe and **Air U.K., Ltd.** honors tickets held by passengers for World. World Airlines now has the distinction of being the first casualty in a fare war that will soon encompass other low-cost carriers, such as **easyJet, Ltd.**, and majors like **British Airways, Ltd. (2)** and Air U.K.'s partner **KLM (Royal Dutch Airlines, N.V.)**.

Scheduled departures leap to 77,695 and enplanements ascend 6.9% to 3,601,969.

The workforce grows by 10.5% in 1997 to 2,000. Two new routes to KLM's Amsterdam hub are introduced in early spring, bringing the number of British destinations from which feeder services are offered to 14.

The company and **KLM (Royal Dutch Airlines, N.V.)** merge their marketing and sales operations on April 1, creating a strong competitor for **British Airways, Ltd. (2)** in the British air transport market.

During the spring, a code-sharing agreement is signed with the U.K. regional **Suckling Airways, Ltd.** In mid-July, **KLM (Royal Dutch Airlines, N.V.)** reaches agreement with the carrier's owners, British Air Transport Holdings, Ltd., to purchase its 55% majority stake. The Air U.K. takeover, subject to European Commission approval, leaves the company as Dutch-owned, but, at least initially, operationally independent. EC approval is given on September 23.

During the summer, orders are placed for 4 (later 5) Aero International (Regional) ATR72-212As.

While taking off from London (STN) on a scheduled September 30 service to Dublin, a **Ryanair, Ltd.** B-737-200 comes within 200 ft. vertical and 0.91 nm. horizontal distance from an Air U.K. BAe 146-200 that is descending into London (CTY) after a service from Edinburgh.

The first ATR72-212A is delivered in October and, like the others that will be received through May next, is employed to replace the 4 F.27-200s on existing routes to the Channel Islands.

To provide additional frequencies on existing routes, services from London (STN) to Munich are withdrawn on October 25.

A new return route is opened on October 26 from London (LCY) to Manchester. Fokker 50s fly the route four times a day on weekdays and daily on weekends.

The code-sharing agreement with **Deutsche Lufthansa, A.G.** is expanded on October 27. The existing weekday route from London (STN) to Cologne and Bonn is extended to Dresden. The twice-daily return service from Aberdeen to Teesside and Humberside ends on November 21.

Just after landing at Gurnsey following a December 7 service from Southampton, the left main landing gear of a Fokker F.27-500 with 4 crew and 49 passengers, collapses. No injuries are reported.

For the year, passenger boardings accelerate 13% to 4,172,087.

In January 1998, to better integrate its feeder operations, **KLM (Royal Dutch Airlines, N.V.)** renames Air U.K., Ltd. as **KLM U.K., Ltd.** and **Air Exel Commuter, C.V.** as **KLM Exel, C.V.** The combined 72-aircraft fleet, including that from **KLM Cityhopper, N.V.**, is repainted in a new blue and white livery with silver accents.

AIR U.K. LEISURE, LTD. (LEISURE INTERNATIONAL AIRWAYS, LTD.): United Kingdom (1987–1996). Established at London (STN) in June 1987, Air U.K. Leisure, Ltd. is an autonomous sister of **Air U.K., Ltd.** formed to operate long- and medium-haul charter and

inclusive-tour services. The two airlines operate as subsidiaries of Air U.K. Group, a new holding company that holds 60% equity in the holiday carrier.

The aircraft charter and brokerage group Unijet holds a 40% stake and is given an exclusive contract to sell all of Air U.K. Leisure's charter capacity to British and overseas tour and travel organizers through its Viking International Air Chartering, Ltd. subsidiary.

With advice from **KLM (Royal Dutch Airlines, N.V.)**, Chairman C. J. Parker and Managing Director Jeremy R. Dixon acquire 2 leased Boeing 737-200s and place orders for 4 B-737-42Cs. The new charter operator inaugurates holiday flights to European, Mediterranean, and Canary Island resorts on April 30, 1988 from two London airports (STN and LGW), plus Birmingham, and Manchester. The 4 Dash-42C "Baby Boeings" arrive under charter late in the year. Enplanements for the year's three remaining quarters total 225,600.

In early 1989, the fleet is altered by the removal of the Dash-200s and their replacement in service by 3 B-737-4Y0s, 2 of which are briefly leased to **MAS (Malaysian Airline System, Ltd.)**. Enplanements total 450,000.

Company employment is increased by 25% in 1990 to 150 and in May Christopher Parker is named chairman. Passenger boardings for the year remain level, revenues total £54.37 million, and a £957,016 net profit is generated.

Company employment increases by 66.7% in 1991 to 250 as one of the Malaysian leases ends, leaving the fleet at 3 chartered B-737-42Cs and 3 owned B-737-4Y0s, one of which remains out with MAS. An order is placed for an Airbus Industrie A310-304 and the year's enplanements advance to 726,883.

The workforce is increased by 9.3% in 1992 to 258 and the Airbus request is withdrawn in January and replaced by an order for a pair of B-767-39HER to be employed by a new enterprise now in pre-launch phase. The leased fleet now includes three B-737-4Y0s and four B-737-42Cs.

Leisure International Airways, Ltd. (LIA) is organized at London (LGW) on February 18 as a new Unijet subsidiary and autonomous sister to expand the number of long-haul charters with the leased B-767-39HERs. Chairman Parker and Managing Director Dixon recruit a workforce of 160 and order a pair of Boeing 767-39HERs on lease from its sister.

Customer bookings jump 30.4% to 1,044,372. Revenues total \$102.3 million, but costs are higher. Losses are \$2 million (operating) and \$232,978 (net).

In 1993, Chairman Parker and Managing Director Dixon oversee a workforce of 271, up 5.9% over the previous year. European, Mediterranean, and Canary Island holiday destinations are visited from Manchester, Birmingham, and London (LGW and STN).

In early March, a B-737-4C2 is wet-leased by **South East European Airlines, S.A.** and is employed to inaugurate daily feeder service between London (LGW) and Athens on behalf of **Virgin Atlantic Airways, Ltd.**

Air U.K. (Leisure) is contracted to operate the big Boeing twins assigned to LIA after they arrive in early spring. LIA revenue flights begin from London and Manchester in April to holiday destinations in the Bahamas, Santo Domingo, and St. Martin. Roundtrips from the U.K. to Orlando start on May 1.

Passenger boardings decline 4.3% to 999,678 and, although a \$14,000 net profit is posted, there is an operating loss of \$130,000.

Airline employment grows to 442 in 1994 and the B-737-4C2 out on lease to **South East European Airlines, S.A.** is returned in January.

During the spring, the B-767-39HERs begin holiday flights to Barbados, as well as the airports at Holguin and Varadero in Cuba. Customer bookings recover, jumping skyward by 20.4% to 1,145,025. Revenues advance by 13.4% to \$123.21 million, but expenses climb 13.9% to \$123.86 million. Consequently, there is an operating loss of \$656,000. On the plus side, there is a net gain of \$125,000.

The workforce is reduced by 14% in 1995, dropping to 380. Passenger boardings move ahead by 5.6% to 1,208,700. Airline employment is

cut to 160 in 1996 and in June the 60% stake held by **Air U.K., Ltd.** is sold to Unijet, which takes the associate company over and operates it as part of their concern. Enplanements at Air U.K. Leisure through June total 666,000.

AIR UKRAINE (AVIALINII UKRANI): Prospekt Pobedi 14, Kiev, 252135, Ukraine; Phone 380 (044) 216-7109; Fax 380 (044) 216-8235; <http://www.airukraine.com>; Code 6U; Year Founded 1992. Kiev-based Air Ukraine, a directorate of **Aeroflot Soviet Airlines**, is reformed into a national carrier in the spring of 1992 to offer international and domestic scheduled and charter services, both passenger and cargo. Leonid V. Pogrebnjak is named general director and his workforce totals 40,000. The fleet includes 45 Antonov An-24s, 22 An-26s, 10 An-30s, 3 An-32s, 2 Ilyushin Il-18s, 7 Il-62Ms, 3 Il-76s, 17 Tupolev Tu-134s, 27 Tu-154B-1s, 3 Tu-154Ms, 17 Yakovlev Yak 40s, and 14 Yak-42s.

In addition to domestic and regional destinations, the company also schedules visits to Lvov, Prague, Shannon, and New York (JFK). The subsidiary Air Ukraine Cargo is formed to transport freight between the Ukraine and New York.

A Tu-154B-1 is destroyed as the result of a bad landing at Kiev on September 5; there are no fatalities.

In October, the subsidiary **Air Ukraine International** is formed to take over the company's long-haul charter services to Western Europe. The domestic subsidiary Kharkov United Air Detachment now flies domestic charters.

Flights continue apace in 1993. On April 15, the Odessa-based Schlepper gang, having received \$5,000 per head, contracts with the carrier (also in need of hard currency) to transport a planeload of Asian refugees into Germany. The next day, a Yak-40 arrives at Berlin's Schoenefeld Airport and deplanes 43 Indians and 6 Pakistanis who immediately demand sanctuary. The Asians are immediately transferred to the asylum center at Eisenhuettenstadt for processing.

On October 27, while taxiing at Tumen-Roshino, the pilot of an L-410UVP with one other crewman and six passengers, takes the wrong turn and enters into a construction area, where the nosegear collapses. There are no injuries reported.

In 1994, the company places an order for three Dornier 328-110s that would become the first Western turboprops to operate in the Ukraine. It also reports its enplanements for the first time; through November, a total of 585,461 passengers are flown.

The Dorniers will not be delivered in 1995, as top management changes when Ilyin Viacheslav becomes president.

Having just departed Agadyr on a delivery flight to Honduras on February 1, a Let 410UVP with two crew and a passenger crashes onto a frozen lake near Provdenia, Russia; although the aircraft is lost, there are no fatalities.

While en route from Petropavlovsk to Pakhachi on April 4, an An-26 with six crew and three passengers makes a refueling stop at Palana. While taking off from this intermediate point, the crew fails to take off the brakes, preventing the plane from becoming airborne. It overruns the runway by 410 m. and is badly damaged. There are no fatalities.

Traffic increases dramatically this year as customer bookings jumps 85.9% to 1,262,478 and freight skyrockets 171.1% to 47.69 million FTKs.

In 1996 there is a 40,000-member workforce and a fleet of 199 aircraft. Plans are made to acquire additional Western aircraft to replace some of the Soviet equipment now being operated.

Destinations visited include Baku, Beijing, Bratislava, Budapest, Cairo, Damascus, Delhi, Istanbul, Kiev, Khabarovsk, Lvov, Moscow, Murmansk, New York (JFK), Novosibirsk, Prague, Sharjah, Sofia, Tashkent, Tbilisi, Tunis, Tyumen, Vilnius, and Warsaw.

Enplanements turn downward this year, falling 9.9% to 1,137,263. A total of 44.2 million FTKs are operated, a 7.3% drop.

The three Dornier 328-110s are finally delivered during the spring of 1997. They enter service from Borispol Airport at Kiev to Charkiv, Donetsk, Dnipopetrovsk, Lvov, Odessa, and Simferopol.

Weekly Ilyushin Il-62M return service from Lvov to New York (JFK) via Kiev begins on May 14. Twice-weekly nonstops are offered between Kiev and New York on Fridays and Sundays and from Toronto to Lvov, with continuing service to Kiev, on Saturdays.

In a further effort to improve services, the company forges interline agreements with **Delta Air Lines**, **Continental Airlines**, and **Pan American World Airways (2)**. In an exclusive arrangement, Delta provides Air Ukraine passengers with continuing service out of New York to all of its domestic destinations while Pan Am offers reduced fares to all AU passengers whose final destinations are Los Angeles, San Francisco, or Miami.

During the summer, the company undertakes the process of privatization, under which the government share will be reduced to 51%. A tender is also placed out for long-range Western aircraft.

Twice-weekly An-24 joint venture Flights with **Air Moldova International, S.A.** commence in October between Chisinau and Simferopol.

On December 17, a Yak-42 with 70 passengers crashes while coming around for a second approach to the airport at Salonika, Greece; there are no survivors.

For the year as a whole, customer bookings fall 25.2% to 851,240 and freight plunges 51% to 21.7 million FTKs.

Flights continue in **1998**. During the spring, the government announces plans to privatize the airline. Air Ukraine is scheduled for conversion into a joint stock company during July. A financial rather than a strategic investor is sought for the carrier and, as the government expects to retain 51% majority shareholding, analysts predict that the prospect of locating a Western investor is not good.

Passenger boardings plunge 51.7% to 388,000, even as cargo traffic climbs 19.4% to 23.68 million FTKs.

Airline employment stands at 9,500 at the beginning of **1999**. The huge fleet now includes 34 An-24s, 8 An-30s, 4 each Il-76Ms and An-32s, 7 each Tu-134As and Il-62Ms, 9 Let L-410, 16 Tu-154Bs, 2 Tu-154Ms, and 1 each An-26, Dassault Falcon 20, PZL-Mielec An-28, Tu-154A, and Yak-40.

A cooperative agreement is signed with **Uzbekistan Airways** on June 17 covering shared routes and services.

The Moscow media reports on October 7 that, having found much of its fleet largely redundant given current levels of business, the airline is placing a number of aircraft up for sale.

Enplanements total 149,000 and 5,257,000 FTKs are operated.

By the spring of **2000**, Air Ukraine has run up a \$2-million debt to Eurocontrol for the use of airspace. On May 28, in response to a Eurocontrol request, British authorities at London seize one of the company's Tu-154Bs, which had arrived on a charter. When Air Ukraine President Vadim Sorokyn indicates that the jetliner will be left in England to settle the debt, the Ukrainian Transport Ministry objects and demands that it be returned.

The carrier's fiscal problems continue and, on August 15, it is reported that its accounts have been seized to settle its tax debts.

Following several months of negotiations, a payment schedule is worked out and, on August 29, the plane held in England is freed to depart.

When the carrier is forced to drop its service between Kiev and Vilnius on September 11, frequencies on the route are increased on September 28 by **Lithuanian Airlines, A.B. (Lietuvos Avialinijos)**.

AIR UKRAINE CARGO. See **AIR UKRAINE**

AIR UKRAINE INTERNATIONAL (MIZH Narodni Aviolinii UKRAINE): Prospekt Pobedi 14, Kiev, 252135, Ukraine; Phone 380 (044) 216-7109; Fax 380 (044) 216-8235; Code PS; Year Founded 1992. A subsidiary of **Air Ukraine**, Air Ukraine International is formed at Kiev in October 1992. The Ukrainian government owns 88% of the airline, founded to offer charter services to Western Europe. The remaining 12% is controlled by the lessor Guinness Peat Aviation. Valery Nazerenko is named president with Guinness Peat Aviation official Richard Creigh as his deputy.

A workforce of 400 is recruited as the carrier acquires two Boeing 737-4Y0s under charter from the Guinness Peat Aviation group in November; these are the first Boeing aircraft delivered to any of the CIS republics. The title Air Ukraine International is painted above the wind-dowlines with Mizhnarodni Aviolinii Ukraine below.

Flights, designed to lure Western business passengers to the new nation aboard modern equipment, are inaugurated at the end of November to Brussels, Berlin, Amsterdam, Frankfurt, Milan, Munich, Paris, Vienna, Manchester, and London (LGW).

An interline agreement is signed with **Aer Lingus Irish Airlines** in March 1993. Under its terms, the two airlines are able to sell tickets on each other's flights. Later in the year, additional pacts are signed covering computerized reservations systems sales and sales representation in general.

Operations continue apace in **1994** and the fleet is increased by the addition of one each B-737-2T4A and B-737-247A. When the parent organization begins to release its traffic figures, those for this subsidiary are initially included with them. Enplanements for the nation's second largest airline total 146,551 in **1995**.

The workforce stands at 470 in **1996**. In July, the government divests its majority stake, allowing the airline to pursue external investment. When financial arrangements are completed in November, shareholding is divided between the Ukrainian State Property Fund (68.4%), **Austrian Airlines, A.G.** (14.3%), Guinness Peat Aviation Group, Ltd. (13.2%), and **Swissair, A.G.** (4.1%).

The company's four aircraft transport a total of 178,720 passengers, a large 18% increase. In addition, 2.75 million FTKs are operated.

Flights continue in **1997** with newly initiated services to Bangkok, Beijing, Delhi, Lvov, and Prague emphasized. Passenger boardings decline 5.9% to 168,218 while cargo traffic is off 11.8% to 2.4 million FTKs.

It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

AIR ULSTER, LTD. See **ULSTER AIR TRANSPORT, LTD.**

AIR UNION, S.A.: France (1923-1933). **Compagnie des Messageries Aeriennes, S.A.** and **Compagnie des Grands Express Aeriens, S.A.** merge their operations on January 1, 1923, together with at least 10 CMA Breguet 14s, 5 CMA Bleriot-Berline Spad 33s, 15 CMA and CGEA Farman F-60 Goliaths, and 10 CMA Breguet 14Ts. Officials now elect to concentrate on Paris-London service and abandon other routes, particularly those to Switzerland that are taken over by Farman's **Societe Generale de Transport Aerien, S.A. (SGTA)**.

To more successfully compete with the pioneering British companies on the Le Bourget to London (Croydon) route, the new carrier immediately challenges them to a fare war by reducing its tariff to only £4 10 shillings. Without the deep financial resources of the French, the British companies begin to suffer and the state-owned carrier Imperial Airways, Ltd will replace them within a year.

Late in the month, morning Goliath newspaper service is initiated from Paris to Lympne, England. A pair of Bleriot 135s join the fleet on August 1, 1924 and are placed into service between Paris and London a week later. On June 30, 1925, AU pilot Robert Bajac, with two passengers, makes an experimental flight in a Schreck Fba 19HMT3 amphibian from the Seine to the Thames Rivers.

The following year, 1926, the company takes over the small Mediterranean carrier **Aeronavale, S.A.** and uses CAMS 53 seaplanes to stretch that airline's Ajaccio, Corsica, destination on to Tunis and Bone. Five Bleriot-Berline Spad 56-4s are acquired and placed in service to Amsterdam, Brussels, and Marseilles. On May 26, two Bleriot 155s, christened *Clement Ader* and *Wilbur Wright*, begin service on the Paris to London route; *Wilbur Wright* is destroyed in a crash in Kent, England, in October. Meanwhile, on August 19, another airliner crashes at Aldington (three dead).

During May 1927, a specially equipped Farman Goliath, outfitted with four sleeping berths, makes an experimental night flight from London to

Marseilles. On July 30, Air Union responds to **Imperial Airways, Ltd.**'s "Silver Wing" luxury service to Paris by introducing "Le Rayon d'Or" ("Golden Ray") flights with two new twin-engine Liore et Olivier LeO 21s. Painted in a red, white, and gold color scheme and christened *Captaine Ferber* and *J. P. Mouillard*, the cabins of the two are designed on advice received from the restaurant *Compagnie des Wagons-Lits, S.A.* The two are supported by the fleet's first Breguet 280T Rapid Azurs. The first Bleriot 165 is received in October and is christened *Leonard de Vinci*.

These three new types also fly from Paris to Marseilles, via Lyons. These aircraft, like the Oiseau Bleu (Blue Birds) flown by the Farman-backed airline, also possess bars. They become, however, famous for their haute cuisine; the fare is consumed in sumptuous surroundings with choice of spirits in a travel time from Paris to London that is only 20 minutes longer than the same trip 50 years later.

During the year, four LeO 190s are obtained to supplement LeO 13s on the Antibes to Ajaccio service.

A second Bleriot 165 is acquired in September 1928 and is named *Octave Chanute*; it joins its sister on the "Golden Ray" service to London (Croydon). Late in the year, the subsidiary **Lignes d'Orient, S.A.** is formed to push service beyond France to Indochina; survey flights are undertaken.

On April 9, 1929, Paris-London night service is initiated. In June, the subsidiary **Lignes d'Orient** inaugurates regularly scheduled airmail service Marseilles to Beirut via Naples, Corfu, Athens, and Castelrosso, with two CAMS-53 flying boats; in the fall, it is merged with the Indochina-based **Air Asie, S.A.** to form the independent **Air Orient, S.A.** During the year, five Breguet 281Ts are delivered and are placed into service on the Paris to Marseilles via Lyons and Lyon to Geneva services.

By 1930, company passenger boardings are averaging some 19,000 per year. In 1931 the fleet includes 44 French-built aircraft, including the last 4 Farman F-60 Goliaths and 12 Liore et Olivier LeO 213s that have been placed on the "Golden Ray" London service, as well as on routes to Geneva and to Lyon and Marseilles.

In early 1933, two new Wibault-Penhoet 282.T12, *Le Vaillant* and *Le Temeraire*, replace several LeO 213s on the "Golden Ray" service. The service flown by these new trimotors is now marketed as "La Voile d'Or" ("The Golden Clipper").

Mindful of the shadow cast over continental air transport by the giant **Deutsche Luft Hansa, A.G. (DLH)**, French officials seek to build a national airline. On May 17, **Air Union, S.A.** becomes one of four carriers to combine into the **Societe Centrale pour L'Exploitation de Lignes Aeriennes, S.A. (SCELA)**, which negotiates with the government for creation of a state carrier. Following talks and decisions, **Air France** is created on August 30.

AIR URG (INTERNATIONAL JOINT STOCK AIR COMPANY): Debrovolskogo 1, Kirvograd, 316005, Ukraine; Phone 38 (0552) 271 451; Fax 38 (0552) 251 125; Code 3N; Year Founded 1993. In August 1993, upon its formation as a public limited joint stock company, URG joins with the 40-year-old State Flight Academy of Ukraine (SFUA) to create a charter airline. Ownership is divided between URG, SFUA, and the Lykto group of companies based in Athens.

Mikhail Rubets is named president with Leonid Shmayavich as director general. A staff of 140 is recruited and an all-Antonov fleet is purchased: 3 An-24Bs, 5 An-24RVs, and 8 An-26Bs. Revenue flights begin, with scheduled services soon thereafter added to domestic destinations.

In 1994-2000, domestic passenger and cargo charters are undertaken with a fleet that includes 6 An-26s, 1 An-24, 2 An-24Bs, and 3 An-24RVs. Scheduled services are maintained between Kiev and Prague and extremely profitable charters are flown to the United Arab Emirates. Regularly scheduled service from Kiev and to Zagreb and other points is added in May 1997.

AIR U.S.: United States (1974-1983). Jonathan and Clydelle Moore organize **U.S. Aviation** at Denver in 1974 and undertake charter flights to regional destinations. Air U.S. is established in the spring of 1977 to

offer replacement service, taking over the **Frontier Airlines (1)** passenger services to Riverton, Wyoming, in early 1978. When **Frontier Airlines (1)** reinstates its route in 1979, Air U.S. moves its markets from Riverton to Gillette and Sheridan.

Although both scheduled and nonscheduled operations are continued, the company obtains an Essential Air Services (EAS) contract in 1980 to replace **Western Airlines'** Sheridan and Gillette to Denver service with its own. Orders are placed for 5 Grumman Gulfstream G1-Cs as 2 Handley Page HP-137 Jetstream IIIs join the fleet to enhance the capabilities of 2 Piper PA-31-350 Navajo Chieftains. Enplanements total 35,222.

The Navajo Chieftains are phased out in 1981 when the carrier receives its first Gulfstream, and with it FAA Part 121 certification.

On April 17, Flight 716, a Handley Page HP-137 Jetstream III with 2 crew and 11 passengers, collides with a Cessna Tu-206 carrying 1 crew and 5 parachutists, over the Ft. Collins-Loveland Municipal Airport in Colorado. Although the Cessna pilot and three parachutists are able to bail out, everyone else is killed in the collision.

Passenger boardings this year climb 5% to 37,159 while freight jumps by a third. Airline employment is now 90.

Two more G1-Cs are received in March 1982 and begin EAS flights to Cody and Worland, Wyoming. Enplanements for the year jump 20% to 48,500. On January 16, 1983, Air U.S. is renamed **Excellair**.

AIR VALLEE (SERVICOS AERIENS DU VAL D'AOSTE, S.p.A.): Aeroporto 11020, Saint Christophe, Aoste, Italy; Phone 0 (165) 236966; Fax 0 (165) 32528; Code DO; Year Founded 2000. Air Vallee is established at Aoste, located in northwest Italy in a valley near Mount Blanc, in the early spring of 2000 to offer regional service to destinations in Italy and France. Wearing additional "Casino de la Valey" titles, the carrier's new Fairchild Dornier 328-311 turboprop, is received on April 18. The first of its type to be registered in Italy, it initiates revenue service on May 2 with twice-weekly roundtrips to Rome and Paris (CDG).

AIR VANTAGE AIRLINES: P.O. Box 17010, Minneapolis, Minnesota 55417, United States; Phone (612) 727-2019; Fax (612) 727-2949; Code 3N; Year Founded 1990. Minneapolis-based Air Vantage is established in 1990 to offer scheduled passenger and cargo regional services. Rod Skillman is chairman and Larry Kelly president. Within 10 years, the workforce totals 75 and the fleet is comprised of 6 Fairchild Metro IIIs. Operations continue from the city's downtown Holman Field.

AIR VANUATU (OPERATIONS), LTD.: P.O. Box 138, Port Vila, Vanuatu; Phone 678 23 838; Fax 678 23 250; http://www.pacificislands.com/airlines/vanuatu.html; Code NF; Year Founded 1981. Created at Port Vila in mid-1981, Air Vanuatu is the national flag carrier of the republic formerly known as the New Hebrides. The government holds 60% interest with the remainder taken by Ansett Transport Industries, Ltd., which also provides support under contract.

A Douglas DC-9-31 is wet-leased from **Ansett Airlines of Australia, Ltd.** for two months and is employed to inaugurate scheduled flights to Sydney, Brisbane, Nadi, and Apia. It is followed into service by a B-737-200 wet-leased from **Polynesian Airlines, Ltd.**

Enplanements total 17,000 in 1982 and 25,000 in 1983. Operations continue apace in 1984-1986.

The company is reformed in November 1987 as a completely state-owned enterprise, Air Vanuatu (Operations), Ltd. Late in the decade, a Boeing 727-276A, painted in company livery, is leased three days per week from **Trans-Australian Airlines (Pty.), Ltd.** Operations continue apace in 1988 and, in 1989-1990, flights begin to Adelaide and Auckland. The latter destination is flown as part of a code-sharing agreement with **Solair (Solomon Islands Airways, Ltd.)**, which employs its own aircraft to fly from Port Vila on to the New Zealand capital.

In 1991, enplanements total 60,720. Expenses exceed income and there are losses: \$1.77 million (operating) and \$1.8 million (net).

The workforce is increased by 19.6% in **1992** and the leased B-727-276 is replaced by a B-737-476 leased from **Australian Airlines (Pty.), Ltd.** Painted in Air Vanuatu livery, the aircraft is available four days per week. At the same time, an Embraer EMB-110 is chartered for use on flights to Noumea. Jean-Paul Virelala becomes the first Vanuatu national managing director/CEO.

Passenger boardings ascend 11.5% on the year to 68,619 while freight climbs 2.6% to 1.06 million FTKs. Revenues slip 0.9% to US\$16.3 million and the operating profit falls to US\$452,000. Net loss, however, swells to US\$6.3 million.

In **1993**, Managing Director/CEO Virelala's 140-employee company maintains scheduled return services from Port Vila to Auckland, Brisbane, Melbourne, and Sydney. Joint scheduled return services are also flown in cooperation with **Air Caledonie, S.A.** from Port Vila to Noumea and in cooperation with **Solair (Solomon Islands Airways, Ltd.)** from Port Vila to Nadi.

In October, the company's capitalization is restructured and reduced to 100 million vatus. When the government waves repayment of the balance due and outstanding on its loan to the airline, the company is able to report a 464-million vatu operating profit. Bookings for the year slip to 67,000.

Ten new workers are hired in **1994**. **Qantas Airways (Pty.), Ltd.**, employing aircraft it has leased to Air Vanuatu, begins to code-share with that airline in February over routes from Port Vila to Australia. Customer bookings remain level at 67,000.

An Embraer EMB-110P1 Bandeirante is acquired in July **1995** and is assigned to fly the company's regional services. Enplanements this year are 69,943.

Airline employment accelerates 22.8% in **1996** to 140 and passenger bookings climb 4% to 72,857.

Destinations visited from Port Vila in **1997** include Aniwa, Auckland, Brisbane, Craig Cove, Dillons Bay, Emae, Espiritu Santo, Ipota, Lamap, Lamen Bay, Longana, Melbourne, Nadi, Norsup, Noumea, Sydney, and Valesdir.

Customer bookings jump 4.1% to 75,872 while freight shoots up 9.1% to 1.3 million FTKs.

A B-737-3Q8 arrives under charter from ILFC during March **1998**. Christened *Spirit of Vanuatu*, the little Boeing wears an entirely new livery.

In late November, the national immigration office accuses the airline of bringing three undocumented Chinese men into the country from the Solomon Islands earlier in the month. According to a December 4 report by the Australian Broadcasting Corporation, the airline denies these allegations and cites immigration officials for not properly handling the visitors' travel documents.

Passenger boardings surge 17.8% to 89,000 while cargo traffic skyrockets 91.6% to 2.63 million FTKs. Revenues total \$20.98 million, but expenses are \$22.42 million. Consequently, there is an operating loss of \$1.43 million and a net loss of \$1.58 million.

Flights continue in **1999** as airline employment is reduced to 114.

In late summer, the government announces plans to sell a 49% stake in the financially strapped carrier. Preparatory to the action, a new board of directors is appointed. The year's customer bookings decline by 3.9% to 86,000 while freight traffic drops 26.9% to 1.92 million FTKs. Although costs are down 1.1% to \$22.18 million, revenues are also off, by 2%, reaching only \$20.57 million. As a result, the operating loss increases to \$1.6 million.

By the end of January **2000**, airline employment totals 183, a 10.7% decline over the preceding year.

DHC-8-100 weekly roundtrips are inaugurated on May 12 from Port Vila to New Caledonia via Tanna.

AIR VECTORS AIRWAYS: United States (1977–1985). Privately owned **Alector Airways** is reformed in **1976** and changes its name. Based at Stewart Airport in Newburgh, New York, President James O. Aspin's airline undertakes scheduled passenger and cargo services,

beginning in April, to Binghamton, Poughkeepsie, and Washington, D.C. (IAD).

These daily roundtrips continue apace in **1978** and by **1979** the carrier's four Piper PA-31-350 Navajo Chieftains are generating annual enplanements of 3,000.

Scheduled service begins on June 1, **1980** from Morristown, New Jersey, to Boston, Newark, and Newburgh, New York. Supplemental express flights are begun under contract to **Federal Express**. Passenger boardings skyrocket by 142.6% to 7,000. In June **1981**, the carrier's three Navajo Chieftains inaugurate new routes linking Morristown with Boston and Newburgh with Newark via Morristown.

Unable to make good on its expansion in a period of recession, Air Vectors begins to slide. One PA-31-350 is withdrawn in **1984**, but the carrier is unable to recover and disappears in **1985**.

AIR VEGAS AIRLINES: P.O. Box 11008, Las Vegas, Nevada 89111, United States; Phone (702) 736-3599; Fax (782) 361-8967; <http://www.airvegas.com>; Code 6V; Year Founded 1983. Founded at Las Vegas Airport in **1983**, Air Vegas begins chartered scenic air tour flights to the Grand Canyon with a fleet of three Cessna 402Cs. Charters are also undertaken. The privately owned operator releases neither traffic nor financial data. Operations continue apace during the remainder of the decade as the fleet grows to include 19 Cessna 402Cs. Scheduled services are added in **1989–1990**.

Early in **1991**, a FAA routine inspection uncovers record keeping problems. As a result, the carrier is shut down for the month of March. Permission is received to resume operations in April. These continue apace and without incident in **1992**.

In **1993**, President James Petty's fleet has grown to 17 402Cs and 4 Beech 99s. The fleet is altered in **1994** and 2 more Beech 99s are added. Enplanements for the year total 118,488.

The workforce stands at an even 100 in **1995** as 12 Cessna 402s are retired. Passenger boardings accelerate 22.5% to 145,178.

The employee population grows 25% in **1996** to 125 and the fleet now includes 9 Beech 99s and 3 Cessna 402Cs. At 145,527, customer bookings are level with the previous year. Revenues total \$12 million.

The workforce is cut 6.4% in **1997** to 117. A schedule of five daily flights to the Grand Canyon is maintained.

En route from Grand Canyon, Arizona, to Henderson, Nevada, on October 15, a Beech 99 with two crew collides with utility lines about 9 mi. S of Meadville, Arizona. Although no personnel injuries result, the damaged aircraft is forced to make a one-engine-out landing at Henderson. Citizens Utilities later reports that 3 miles of aluminum electrical wire and 38 wooden cross supports have been damaged.

Passenger boardings this year decline by 6.3% to 136,348.

Service continues apace in **1998**. At the end of the year, a homepage is opened on the World Wide Web. Customer bookings plunge 45.1% to 75,000.

By the beginning of **1999**, the workforce has been increased by 14.5% to 100. Customer bookings increase 100.3% to 151,000.

Airline employment at the start of **2000** stands at 200, a 100% increase over the previous 12 months.

AIR VENDEE, S.A.: France (1975–1992). In **1975**, the families of the food distribution company Dubreuil, S.A. and the modular building concern Cougnard, S.A., based in La Roche-sur-Yon on the west coast of France, purchase their own aircraft with which to provide executive services. At their aerodrome in **1980**, the two combine forces to create Air Vendee, S.A. and inaugurate scheduled passenger services to the up-market tourist destination of Ile d'Yeu, an island a half-hour's flying time into the Atlantic. With a fleet of 1 Beech King Air 90, 1 Beech B-58 Baron, 1 Britten-Norman BN-2 Islander, and 1 Cessna 172, the commuter then undertakes flights linking the its base with Les Sables-d'Olonne, Nantes, and St. Briec.

Services continue **1981–1985** and enplanements in the latter year total 6,900. A de Havilland Canada DHC-6-300 Twin Otter is placed into

service during 1985. By 1986, President Jean-Paul and Managing Director Michael Dubreuil's lightplane operation is also known for its air taxi work. Enplanements total 22,600.

The operation is significantly expanded in 1987. The workforce totals 60 and the earlier fleet is replaced by 4 Beech King Air 100s, with the Twin Otter retained; the new aircraft launch services to La Havre, Rouen, Bordeaux, and Brussels.

Initiation of an unusual strategy designed to bypass Paris and link two provincial capitals and a foreign capital is launched with flights from Nantes to Brussels via La Havre. In May, a Dornier 228-202 is tested. A total of 33,000 passengers are flown on the year.

A Beech King Air 90 is restored in 1988 and is joined by 2 Dornier 228-200s and 2 Fairchild-Swearingen Metro IIs; 1 King Air 100 is withdrawn. In March, frequencies are opened from La Roche to Paris and orders are placed for Metro IIIs. Scheduled flights are also inaugurated to Lyon and London (LGW). The year's enplanements total 39,552.

Airline employment grows 49.1% in 1989 to 85 and the fleet now includes 4 Metro IIIs, 2 Metro IIs, 2 Dornier 228-200s, and 1 Beech King Air 100. Orders are placed for 3 SAAB 340Bs.

Bordeaux from Paris (ORY) joins the route network as other new routes inaugurated include Rennes-Marseilles, Rouen-Amsterdam, and Nantes-Barcelona. Passenger boardings move ahead by 17.6% to 48,000.

The employee workforce is increased by 35.3% in 1990 to 115. N. Japy succeeds Michael Dubreuil as managing director. Air Vendee is one of several small airlines benefiting from the transfer of regional routes in the arrangement whereby Air France gains control of UTA French Airlines, S.A. and Air Inter.

New services are started from Clermont Ferrand to Geneva and from Nantes to Amsterdam and Geneva. The King Air 100s are replaced by 1 Super King Air 200 and 2 more Metro IIs. All of the new aircraft receive a new red, white, and blue livery. Customer bookings climb 35.4% to 65,000.

The fleet in 1991 comprises 2 Super King Air 200s, 5 Metro IIs, 2 SAAB 340Bs, and 1 Metro I, leased to Serib Wings in Italy. Late in the year, as the result of negotiations between President Dubreuil and Airlec, S.A. CEO Michel Le Collen, it is decided to merge the two carriers. Regional Airlines, S.A. is born on January 1, 1992, with Dubreuil as president and Air Vendee holding 79% controlling interest. Other partners in the new consortium include Airlec, S.A. and Air Exel France, S.A.

AIR VENEZUELA, S.A.: Aeropuerto Internacional Simon Bolivar, Rampa Exte, Hangares Taven, Maiquetia, 1161, Venezuela; Phone 58 (3) 126 711; Fax 58 (3) 122 259; Code VENZ; Year Founded 1996. AV is established at Caracas in 1996 to offer scheduled domestic services as well as international flights to neighboring countries. An American citizen, who owns seven Convair CV-580s that he is prepared to commit, largely owns the privately owned carrier. Painted in AV livery, three Convairs introduce low-cost services to Merida, Maracaibo, and to Margarita Island.

As the route network and load factors grow in 1997, four more CV-580s are added. In October, Miami-based AMRAI persuades company officials to purchase four Indonesian-built IPTN N250s and to take options on four others. The new turboprops, ideal for the carrier's hot-and-high requirements, are to be delivered soon after their certification.

Service is maintained without change during the remainder of the decade.

AIR VERMONT: United States (1981-1984). This privately held small regional is organized by Gene Karlow and John Porter at Morrisville-Stowe State Airport in September 1981, inaugurating service on November 15. Employing two Piper PA-31-350 Navajo Chieftains, 2 PA-31-310 Navajos, and 1 PA-34 Seneca, the company expands rapidly and, by the end of 1983, is providing service from Morrisville to Albany, Boston, Hartford, Burlington, Islip, New York City, Wilkes-Barre, Washington, D.C. and Portland, Maine.

This growth turns out to be a case of overexpansion (frequencies on the Burlington-Boston route are 12 per day), which leads the company into severe financial difficulties during a local fare war. Still, 66,000 passengers are carried on the year.

Air Vermont suspends operations and files for bankruptcy on January 20, 1984. Most of the 160 employees are laid off. Partial service is resumed in February, but it is halted again on March 2. Following reorganization, the carrier resumes New England commuter flights on September 17 to Boston, Montpelier, and Bridgeport, Connecticut. Only a few aircraft are operated and the workforce totals but 15. With insufficient traffic and revenues, the company is unable to continue beyond the end of the year.

AIR VIA BULGARIAN AIRWAYS: 54 GM Dimitros Blvd., Sofia, Bulgaria; Phone 359 (2) 722 587; Fax 359 (2) 720 584; Code VL; Year Founded 1990. A group of Bulgarian and Austrian investors come together in 1990 to create this charter airline that will undertake inclusive tours and other flights on behalf of the travel operator Balkan Holidays. Financing is provided by Balkanban, also a shareholder.

Five Tupolev Tu-154Ms are acquired by President Vassil Strinsky from Balkan Bulgarian Airlines and flights commence during the first quarter of 1991 linking Sofia with Bourgas, Varna, and (seasonally) Plovdiv.

Although a sixth Tu-154M is now acquired, three of the earlier units are leased to the Macedonian carrier Avioimpex Macedonian Airways.

Service is continued without fanfare during the remainder of the decade. Clients now include not only Balkan Holidays, but the German tour companies TUI Deutschland and BG Tours, Orient Plus in Lebanon, and the Slovak Republic-based Krassim.

AIR VIAS, S.A.: Av Sao Luiz 50, 39 O Andar-Centro, São Paulo, CEP-01046000, Brazil; Phone 55 (11) 259 3044; Fax 55 (11) 258 8818; Code AI; Year Founded 1993. Capitalized at \$30 million, Air Vias is established at Buenos Aires in the fall of 1993 as Brazil's first charter airline. Revenue operations commence in December with one each leased Boeing 727-247A and B-727-2J4A to leisure destinations in the northeastern part of the country as well as several locales in the Caribbean.

Operations continue in 1994 and service is expanded after the addition of a chartered Douglas DC-8-62. No significant changes occur in later years.

AIR VIETNAM, S.A.: South Vietnam (1951-1975). The largest airline to be formed in the French colony of Indochina is Air Vietnam, S.A. (Hang Khong Vietnam) established on October 1, 1951 as a joint French and Vietnamese company. Local and government interests hold 66% shareholding and Air France holds a minority (33%) stake. Equipped with Douglas DC-3s, the carrier begins flights from Saigon to Hong Kong and other Southeast Asian capitals the same day, taking over the Indochina network of the French flag carrier.

A block-space, code-sharing agreement is simultaneously entered into with Air France for a certain number of flights on the French flag carrier's four weekly Super Constellation services from Saigon to Paris. Domestic flights begin from Saigon on October 15, also replacing the internal flights of Air France.

Operations continue apace in 1952-1953. The DC-3 Robin, the last airliner in the fleet of KLM (Royal Dutch Airlines, N.V.) bearing the name of a bird, is sold to Air Vietnam in December of the latter year.

Following the July 21, 1954 division of Vietnam into north and south in accord with the Geneva Agreements, the company becomes the state-run airline of the southern Republic of Vietnam. Domestic flights cease to cities north of the 17th parallel, which forms the national boundary, and the northern terminus is moved from Hanoi to Hue.

Employed in a passenger configuration, a Bristol 170 Mk. 31, with 4 crew and 51 passengers and flown under contract to the government of Laos, crashes near Pakse, Laos, on August 16; there are no survivors.

With varying degrees of regularity, services are maintained in **1955–1959**. During these years, Lockheed L-749s, followed by L-1049s, are wet-leased from **Air France** to operate the company's Saigon–Hong Kong service.

Emphasis is placed on long-haul regional service to Laos, Cambodia, and Thailand; in pool with **Air France**, frequencies are opened to Paris and Hong Kong. Acquired from Paris during the former year, a five-year-old Douglas DC-4—formerly the **Skyways, Ltd. Sky Freedom**—is sold to **Indian Airlines Corporation** in December. During the next year, it will be replaced by another four-engine Douglas. In **1959**, the fleet comprises 1 DC-4 and 6 DC-3s.

Operations continue apace in **1960–1963**. During these years, a Vickers Viscount is leased from the carrier's French partner and takes over the service to Hong Kong formerly pooled with **Air France**. Other international destinations visited include Malaysia, Singapore, Formosa, Japan, and the Philippines.

There are gains and losses in **1962**. On August 31, a DC-6B is acquired from **Northwest Airlines** replacing the Viscount. On November 10 a DC-3 with 3 crew and 24 passengers crashes 20 km. NNW of Da Nang while on initial approach; there are no survivors.

In **1964**, the company employs 1,202 workers and flies 14 aircraft. In August, a Sud-Est SE-210 Caravelle III, first flown by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, is leased from **Air France** and is employed to replace the pooled services flown to Bangkok, Phnom Penh, and Bangkok. Enplanements are 305,000 and revenues of \$5.55 million are earned.

The employee population totals 1,200 in **1965**. The company now operates 30 aircraft, including 1 leased Boeing 307 Stratoliner, 1 Douglas DC-6, 1 DC-6B, 3 DC-4s, 5 DC-3s, 2 Beech 18s, 7 C-47s, 1 Sud-Est SE-210 Caravelle, 1 Cessna 310, and 4 Cessna 185s.

During the first quarter, the Caravelle initiates a new route from Saigon to Singapore via Kuala Lumpur. In need of additional cargo capacity as the war escalates, the first of six Curtiss C-46 Commandos are leased from **China Air Lines, Ltd. (CAL)**.

Just after takeoff from Quang Ngai on a September 16 service to Saigon, a DC-3 with 3 crew and 37 passengers is apparently hit by Viet Cong ground fire and crashes; 1 person survives, seriously injured.

Enplanements for the year total 623,914.

In December **1966**, the Caravelle extends the Hong Kong service up to Taipei, Taiwan. Bookings this year total 586,759. The workforce in **1967** is 3,011. The fleet now operates 39 aircraft, including 17 DC-3s, 8 DC-4s, 1 DC-6, 1 DC-6B, 1 Caravelle, and 11 smaller aircraft, plus 6 C-46s. Much of this fleet is leased from **China Air Lines, Ltd. (CAL)**.

On January 17, a reciprocal service agreement is signed with **Korean Airlines/Korean Air (KAL)**. The ancient relationship with **Air France** is practically at an end on December 31, as a new support contract is signed with **Pan American World Airways (1)**.

Passenger boardings skyrocket 90% to 1,117,934 and freight jumps by 86%.

For the bargain price of \$5.5 million per copy, 2 almost-new Boeing 727-121Cs, plus spare parts, are purchased from **Pan American World Airways (1)** on January 2, **1968** and 2 additional DC-4s also join the fleet. Upon its arrival, the first new trijet is christened *Thanh Long*.

Saigon to Hong Kong service is suspended during the February 3–10 Tet Offensive. The new Boeings enter domestic service on March 1 and the route network now includes 23 South Vietnamese cities plus 10 abroad. The Caravelle III is returned to **Air France** in September upon the arrival of the second American trimotor.

Airline employment climbs to 3,101 and enplanements jump 12% to 1,253,965. Revenues of US\$1.88 million are earned and **Air France's** holding is now just 6%.

Older aircraft employed on domestic routes are replaced in the spring of **1969** by Fokker F.27s and at least two are destroyed by enemy action. A DC-3 is destroyed on the ground at Hue during a North Vietnamese attack on April 2. A C-54B is destroyed in a rocket attack on Saigon on May 1.

As the peace talks begun in January drag on, the company, on July 30, extends its Taipei route to Osaka and Tokyo. In September, President Nixon announces that America's 550,000 troops will begin to withdraw and the Second Indochinese War will now enter a phase of "Vietnamization."

While on final approach to Da Nang on September 20 after a flight from Pleiku, a C-54D, with 5 crew and 70 passengers, collides with a USAF F-4 Phantom II. Although the fighter crew safely ejects, the passenger plane crashes, killing all aboard, plus 2 people on the ground.

En route from Saigon to Da Nang via Nha Trang on December 22, a DC-6B with 7 crew and 70 passengers suffers the explosion of a bomb in its forward lavatory during its descent for a landing at the intermediate point. The blast knocks out most of the plane's systems, including hydraulics, and creates a 5-ft. hole in the fuselage. A nose-high, flapless landing is made, during which the plane bounces. Without brakes, it veers off the runway, crashing into houses and a school, which catches fire. All but 10 passengers aboard the Douglas survive, but 24 school children are killed. Another 35 persons are injured.

On February 1, **1970**, an unexploded bomb is found aboard an airliner arriving at Saigon from Da Nang.

Coming into Tansonghut Airport at Saigon from Pleiku on July 22, a DC-4 is taken over by U.S. Army private G. M. Hardin, who holds a knife to the pilot's throat and demands to be flown to Hong Kong. With no one to fly the plane after he hurts the pilot, Hardin surrenders to military police two hours later.

Having diverted from Hue on September 30 due to bad weather, a DC-3 with 3 crew and 35 passengers en route from Ban Me Thout, slams into a hill while descending to Da Nang; the aircraft crashes and 3 aboard are killed.

En route from Saigon to Quang Ngai on November 1, a C-46 freighter with two crew makes a forced landing on a beach at Qui-Nhon. Although the crew walks away, the Curtiss sinks in the sand and is flooded when the tide comes in.

In December, a Boeing 707-351 is leased from **Northwest Airlines** for six months.

As American forces "Vietnamize" the war, the company begins a period of downturn prior to its eventual end.

As U.S. troops (who were also customers) depart, passenger boardings decline 18.6% in **1971–1972**; enplanements fall from 1.02 million in the former year to 868,000 in the latter.

A DC-3 is damaged beyond repair in a bad landing at Kampot Airport in Cambodia on August 22, 1971; there are no fatalities.

Cargo traffic climbs 2.5% in **1972**, but while en route from Vientiane to Saigon on September 24, a C-54D with 5 crew and 8 passengers crashes near Ben Cat (10 dead).

During these years, the 6 C-46s leased from **China Air Lines, Ltd. (CAL)** are returned.

In **1973**, airline employment is 3,597. The fleet now includes 2 B-727-121Cs, 8 DC-3s, 7 DC-4s, 1 DC-6, 1 DC-6B and 2 Cessnas.

A cease-fire is signed at Paris on January 27.

En route from Saigon to Ban Me Thuot on March 19, a DC-4 with 5 crew and 54 passengers crashes in the Central Highlands, 250 km. NE of the point of origin; there are no survivors. Upon examination, it will be determined that a bomb exploded in the cargo bay adjacent to the main wing spar.

The carrier joins with **Air France** on July 18 in establishing new reciprocal services between Saigon and Paris. On July 30, it is revealed that an increasing number of travelers have adopted other modes of transport, resulting in a 50% reduction in the carrier's requirements for capacity; domestic frequencies are reduced from 30 to 17 per day.

A DC-3 disappears on November 15 during a flight from Saigon to Quang Ngai; among the missing is American Quaker volunteer R. W. Thompson. Two days later, his body, together with those of 26 other victims, is located on a mountain near Bato, 20 km. NNW of Quang Ngai. Bookings drop further, down 23% to 668,360. Cargo traffic is up slightly.

The workforce in **1974** includes 3,109. The carrier's DC-6B is replaced by a Vickers Viscount, while another DC-4 and B-707-331, the latter chartered from **Pan American World Airways (1)**, join the 17 other units in the fleet.

On February 20, a 19-year-old South Vietnamese youth takes over a DC-4 with 52 passengers en route from Dalat to Qui Nhon, but is tricked by the plane's pilot into believing that the plane, which has actually landed at Hue, is in Hanoi. The youth begins to brawl with the copilot when he learns of the deception and kills himself and two boarding police officers with a grenade. Fifteen others are wounded and the plane is badly damaged.

Hijacker Le Duc Tan seizes Flight 706, a B-727-121C with 8 crew and 67 passengers en route from Da Nang to Saigon, on September 15, demanding to be flown to Hanoi. Enroute, he detonates a powerful hand grenade that causes the plane to explode in midair near Phan Rang airfield and crash. There are no survivors.

For the third consecutive year, traffic is down as the Indochina conflict approaches a climax. Passenger bookings decline 12% to 558,460 and freight traffic dips 8% to 3.27 million FTKs.

On March 12, **1975**, while en route from Vientiane to Saigon with 6 crew and 20 passengers, a DC-4 is hit at 11,000-ft. by a North Vietnamese SAM-7 missile and crashes in the Central Highlands, some 25 km. SW of Pleiku City; there are no survivors.

Operations continue until just before the Communist victory on April 30. When the company's Saigon base is overrun, the leased **Pan American World Airways (1)** Stratoliner is at Hong Kong and it returns directly to the U.S. The B-727-121C *Thanh Long* is at Taipei, where its crew requests political asylum. The aircraft is eventually taken over by the Republic of China's government. On July 2, North and South Vietnam are formally unified and Air Vietnam, S.A. ceases to exist.

AIR VIKING, H.F.: Iceland (1973). Air Viking is established at Keflavik in the late spring of **1973** to offer inclusive tour and other passenger charter services to worldwide destinations. A single Convair CV-880M is acquired and enters services on July 31. Flights cease in November.

AIR VIRGINIA (1): United States (1979–1985). Lynchburg-based Air Virginia is formed by Rodney H. Jaeger in January **1979** as successor to his earlier **Cardinal Airlines** and launches daily roundtrip service to Washington, D.C. on March 19. The carrier boosts its workforce by 332.4% to 147 and its 3 Swearingen Metro IIs and 3 Piper PA-31-350 Navajo Chieftains enplane 19,000 travelers by December 31.

Passenger boardings in **1980** are 176.9% greater than the previous year, and traffic increases steadily thereafter for Chairman Herbert H. Frazier and President Jaeger.

The fleet is increased in **1981** by the addition of 1 British Aerospace BAe 748-B2 and 2 Metro IIs; 2 748s remain on order. Enplanements balloon 59.1% to 81,641 and 49,000 pounds of cargo are also hauled.

A second BAe 748-B2 and a sixth Metro II are delivered in **1982**. Passenger boardings skyrocket 74% to 142,012, while freight traffic does even better, climbing 119.4% to 107,000 pounds. Enplanements in **1982** total 142,000.

The payroll jumps 34.7% in **1983** to 334 as competing **Mid-South Airlines** is purchased and merged. The route network grows to 17 destinations and the fleet now includes 3 BAe 748-B2s and 11 Metroliners. Customer bookings increase 52.8% to 216,991 and freight swells 28.3% to 137,000 pounds.

The growth trend slows somewhat in **1984** as the company encounters financial difficulties and FAR Part 135 enforcement attention from the Federal Aviation Administration. Nevertheless, its 3 British Aerospace BAe 748s and 5 Fairchild-Swearingen Metro IIs are able to maintain a schedule of over 130 weekday flight departures along its system, which extends to 17 points in Maryland, Virginia, New York, New Jersey, Ohio, North Carolina, Pennsylvania, and the District of Columbia.

In October, the carrier is purchased by Dimitri P. Nicholas and, on the year, a total of 248,000 travelers are carried, a 14.3% boost.

Early in **1985**, the BAe 748s are withdrawn from service in favor of an 18-unit Metroliner fleet. During the first quarter, the carrier is courted as a potential commuter partner by both **United Airlines** and **American Airlines**. The decision is taken in favor of the latter and, on April 1, the carrier inaugurates flights as the third member of the American Eagle commuter network.

The 18 Metroliners change their livery and adopted the AA eagle logo, while staff members receive new uniforms. On May 14, the carrier's new president, Curt Coward, announces an order for 10 new Metro IIs and changes the company's name to **AV Air**, effective November 1.

AIR VIRGINIA (2): Petersburg Municipal Airport, 23301 Airport Road, Petersburg, Virginia 23803, United States; Phone (804) 863-4900; Fax (804) 863-0153; Year Founded 1995. The second Air Virginia is a passenger charter operator established at Petersburg Municipal Airport in **1995**. Revenue flights commence and continue with 3 British Aerospace BAe Jetstream 32s, 1 of which is stationed at Atlantic City Airport in New Jersey.

Services continue in **1996–1997**, during which years 2 more Jetstream 32s enter service.

In February **1998**, it is announced that the company will transition from FAR 135 status to the more stringent FAR 121 category. Service is maintained thereafter into the new millennium.

AIR VITKOVICE, LTD.: Czech Republic (1992–1994). Organized at Ostrava in **1992**, Air Vitkovice, Ltd. names Vaclav Kupka its managing director. With a fleet of four Let 410s, regularly scheduled passenger commuter flights are inaugurated to large and mid-sized destinations throughout the country.

When Czechoslovakia is broken up in **1993**, this regional retains its registration in the republic. Nadezda Stankova becomes managing director and a fifth Let 410 is placed into service. The corporate identity changes in **1994** as the airline becomes **Air Ostrava, Ltd.**

AIR VOLGA (AEROVOLGA). See **AERO VOLGA CONCERN**

AIR VOLTA, S.A.: Burkina Faso (1967–1985). Formed at Ouagadougou, Upper Volta, in **1967**, this small airline is owned by the government (66%), **Air Afrique, S.A.** (17%), and **UTA (Union de Transports Aeriens, S.A.)** (17%). Revenue service flights commence in **1968** with a Piper Pa-31-310 Navajo to 10 domestic destinations. A decade later, Managing Director A. Kalenzaga's 22-man operation acquires a de Havilland Canada DHC-6 Twin Otter with which to start international flights to Bamako, Mali.

During the early **1980s**, airline employment grows to 60 as Air Volta obtains a Fokker F.28 and an Embraer EMB-110P1 Bandeirante. The Fokker is employed to initiate regional frequencies to Abidjan, Bouake, Cotonou, and Lome. Flights are also started to Niamey, Niger, but are suspended.

Upper Volta gains its independence from France in **1984** and, under the leadership of Prime Minister Thomas Sankara, is renamed Burkina Faso. In **1985**, the carrier is reorganized as **Air Burkina, S.A.**

AIR VOSGES, S.A. See **AIR ALSACE, S.A.**

AIR WAKAYA, LTD.: Fiji (1992–1996). Formed at Suva in **1992**, this new entrant begins scheduled services late in the year. Managing Director Lorna Christoffersen's little commuter operates a single Pilatus-Britten-Norman PBN-2 Islander until it shuts down in late **1996**.

AIR WALES, LTD. (1): United Kingdom (1977–1980). Organized at Cardiff in July **1977**, the company's principal shareholders are the Cosalt, Ltd. subsidiary Orbit Trust (75%) and DK Aviation, Ltd. (25%). Air Wales inaugurates services on December 6 over a scheduled route to

Chester. Later in the month, the two cities are linked to Cherbourg and to Brest, the latter via Bournemouth.

In May 1978, markets are opened at Bordeaux, Dinard, and Brussels and airline employment reaches 20. Chairman David V. King's 2 Embraer EMB-110P2s and 1 Piper PA-31-350 Navajo Chieftain begin flying to London (LGW) in early 1979.

The carrier is merged with **Air Anglia, Ltd., Air Westward, Ltd., and British Island Airways, Ltd. (1)** on January 1, 1980 to form **Air U.K., Ltd.**

AIR WALES, LTD. (2): Pembrey Airport, Pembrey, Carmarthen, Wales, SA16 0H2, United Kingdom; Phone 44 (1554) 890 875; Fax 44 (1554) 891 306; <http://www.cial.co.uk>; Year Founded 1997. The aviation broker IAG begins discussions with a group of Welsh investors in November 1997 regarding the possibility of opening scheduled flights from a Welsh airport in the new year. An application for an operating certificate is filed with the Civil Aviation Authority.

Air Wales is formally established under Managing Director Capt. John H. Evans at the Pembrey-West Wales Airport, Carmarthenshire, in January 2000, to offer ticketless discount service to Cardiff and London (STN). On February 7, the company announces that it will initiate its new service on March 26, hoping to appeal to business travelers.

Arrangements are completed with **Islandsflug H.F.** during the summer for the lease of a Dornier 228-212; it is employed to begin thrice-daily return service on September 4 from Cardiff to Cork. Twice-daily roundtrips between Cardiff and London (STN) follow on September 18.

AIR WASHINGTON: United States (1971-1972). Air Washington is set up at Seattle's Boeing Field in 1971 to offer scheduled de Havilland Canada DHC-6-100 Twin Otter passenger and cargo flights to Pasco via Yakima.

Unable to achieve viability, the carrier fails in 1972.

AIR WEST (1): United States; (1968-1978). Air West is formed on April 9, 1968 through the merger of **Pacific Air Lines, Bonanza Air Lines, and West Coast Airlines** after negotiations that had begun in August 1967. Routes of the merger partners, the total combined mileage of which is increased by 38%, are maintained and their fleets are largely combined. Following integration, 7 DC-9-11s are acquired.

Having encountered major financial difficulty, increased in magnitude by the failure of a new computerized reservations system, the carrier seeks a new owner in order to avoid bankruptcy. The purchaser turns out to be Howard Hughes, the pioneer aviator who, seven years earlier, had been forced out of his longtime association with **Trans World Airlines (TWA)**.

On August 12, a \$90-million sale is announced. A number of Air West directors, several of whom first hear of the deal over the radio, pillar Chairman Bez as a Hughes stooge and bring suit to halt the takeover. Still, sufficient boardroom support is found for Bez and Hughes, in the entity of his Hughes Air Corporation (Summa), to sign the legal papers on December 31.

During the year, a total of 3.01 million passengers are enplaned, a 13% increase over the combined 1967 figures of the three partners. Freight traffic is up by 42%. Revenues are \$66.14 million.

A computerized reservations system is installed in February 1969 as the company begins to share computer facilities with **Braniff International Airways**. A reciprocal agreement is signed with American President Lines for the booking of passengers between points on their systems as a stimulant to travel from the Orient to the U.S. and Mexico.

The three former **Bonanza Air Lines'** DC-9-11s are returned to Douglas on May 16 for conversion into DC-9-14s. Following various court appeals by Hughes opponents, the arrangement is completed with the CAB's final approval, given on July 21. During the next 10 months, the carrier is reorganized. Headquarters are transferred to San Mateo, California.

At this point, the fleet comprises 33 Fairchild F-27s, 15 DC-9-31s, and 4 DC-9-11/14s. The third largest U.S. regional airline, the carrier's revenue passenger mile total increases by 6.9%, its freight ton miles by 63.84%, and revenues are up to \$74.11 million. The change-over does not have sufficient time to work before the year's balance sheet is shown to be in the red; losses are \$15,222,000 (operating) and \$20,788,000 (net).

The employee population in 1970 is 3,500 and the fleet includes 44 aircraft. Several of the F-27s are converted to F-27Fs and leased out as freighters. The carrier is renamed **Hughes Airwest** in April.

AIR WEST (2): United States (1984-1985). The second airline by this name is established at West Houston (Lakeside Airport) in the fall of 1984 to offer multiple-frequency, daily, nonstop roundtrips to Dallas (DAL). Flights commence on December 25 with the fleet's only aircraft, a de Havilland DHC-7-103 formerly operated by **Air Wisconsin Airlines Corporation** and purchased in October.

President Ben Taylor resigns in May 1985 and his duties are assumed by Chairman/CEO Woody Lesikar. Although route expansion is planned, the carrier does not generate the traffic or revenues necessary to continue beyond October 15.

AIR WEST, LTD. (2). See **AIR WESTWARD, LTD.**

AIR WEST AIRLINES: United States (1992-1995). Air West Airlines is established at Long Beach in the spring of 1992 to offer regional passenger services with a pair of Fairchild Metro IIs. Revenues flights begin to Palm Springs and Bakersfield in July and by year's end a total of 23,000 passengers are flown.

President Asher Milgrom adds a third Metro II in 1993 and flights continue for another year until the company is forced, by poor returns, to shut down.

AIR WEST AIRLINES, LTD. See **AIR BC, LTD.**

AIR WEST AVIATION: Santa Fe Municipal Airport, Hangar C, Santa Fe, New Mexico 87501, United States; Phone (506) 471-4500; Fax (506) 471-7705; Year Founded 1993. The independent charter operator Air West Aviation is established at Santa Fe by CEO Edward Becvarik in 1993 to offer passenger flights around the U.S. By 2000, the owner operates 1 each Turbo Commander 690B, Piper PA-60-602P Aerostar, Cessna 210L Centurian, C-340, and C-182 Skylane.

AIR WEST EXPRESS, LTD.: P.O. Box 10217, Khartoum, Khartoum 2, Sudan; Phone 249 (11) 452 503; Fax 249 (11) 451 703; Year Founded 1992. Air West, Ltd. is established by Capt. Saif M. S. Omer at Khartoum, Sudan, in April 1992 to provide regional and domestic scheduled and charter passenger and cargo services. Employing light-planes and a single Fokker F.27-200, revenue flights commence in October.

En route from the Ethiopian capital of Addis Ababa on March 24, 1993, the F.27-200 with 35 passengers crashes 35 mi. from its point of departure. Although no injuries are reported, the aircraft must be written off.

In 1994-2000, Omer expands his workforce to 80 and builds his fleet to include not only an F.27-600C, but also a Boeing 737-200C, Antonov An-26, and An-12 as well. Marketing agreements are signed with **Egyptair, S.A.E. and Sudan Airways, Ltd.** and destinations visited include Egypt, Ethiopia, Kenya, and domestic points within Sudan.

AIR WESTWARD, LTD.: United Kingdom (1976-1980). This third-level carrier is established at Exeter in 1976 and, as a subsidiary of Westward Television, Ltd., is initially dedicated to its parent's business. The company is reformed in September 1977 becoming the holding company Air West, Ltd., with Air Westward, Ltd. as the principal subsidiary. Peter Cadbury is named chairman/managing director.

The commuter inaugurates scheduled passenger and cargo services in April 1978 with three Cessna 404 Titans, linking its base with Glasgow, Amsterdam, Paris, and London.

After two years of operation, the third level carrier is merged on January 1, 1980 with **Air Anglia, Ltd.**, **Air Wales, Ltd.**, and **British Island Airways, Ltd. (1)** to form **Air U.K., Ltd.**

AIR WHITSUNDAY (PTY.), LTD.: Australia (1973–1994). South Queensland pilot Kevin W. Bowe and his wife Sue found this carrier at Happy Bay in April 1973. With one single-engine Lake LA-4 Buccaneer, charter flights are inaugurated to the waters of Hardy Lagoon, Great Barrier Reef. Between 1974–1981, the fleet is increased by the addition of 4 additional Lake LA-4s and the base of operations is transferred to Shuts Harbor Airstrip, Arlie Beach, Queensland, in December 1977.

A Piaggio P-68 Partenavia is employed to inaugurate scheduled service Whitsunday–Townsville and Mackay in 1982. Two Grumman G-73 Mallards are purchased in Canada in 1983; christened *Frigate Bird* and *Tropical Bird*, the two are relocated and placed in service, instantly making Rowe the largest commercial seaplane operator in the southern hemisphere.

Charter operations continue in 1984–1986 to such points as the Whitsunday Group and Hardy Lagoon as scheduled services are flown not only to Townsville and Mackay, but Townsville–Orphens and Hinchinbrook Islands and Whitsunday–Hayman and Hamilton Islands. The employee population reaches 18.

By 1988, the company has changed its name to **Reef World Airlines (Air Whitsunday)** and the fleet now comprises 5 de Havilland Canada DHC-2 Beavers, 1 Grumman Mallard, 1 Piaggio P-68, and 2 PBN-2s. A branch office is opened in Townsville with Rodney W. Johnston as manager.

G. M. Schweikert replaces Kevin Bowe as managing director in 1991 as the company's aircraft are further rationalized and include 2 DHC-2s, 1 Cessna 206, 2 PBN-2s, the Piaggio P-68, and 2 Lake LA-4 Buccaneers. Operations continue until 1994.

AIR WINDSOR, LTD.: Canada (1961–1982). Originally formed as **Gordon Airways, Ltd.** in 1961, this third-level operator changes its name to Air Windsor, Ltd. in 1970 when it introduces scheduled passenger and cargo flights from Windsor, Ontario, to Pelee Island. The fleet grows to comprise 1 each Piper PA-34 Seneca, Beech 18, and Cessna 182. Charter flights are also continued.

Unable to weather recession and rising fuel prices, the carrier ceases operations in 1982.

AIR WISCONSIN AIRLINES CORPORATION: West 6390 Challenger Dr., Suite 203, Appleton, Wisconsin 54915, United States; Phone (920) 749-4188; Fax (920) 749-4158; <http://www.airwis.com>; Code ZW; Year Founded 1965. Air Wisconsin is created at Appleton in late spring 1965 to take over the services formerly flown into the Badger State by **North Central Airlines**. The backers of the carrier, which was originally formed as **Fox Cities Airlines** on December 2, 1963, promote a public stock offering of 50,000 \$5 shares. On June 30, its two de Havilland DH 104 Doves begin flying a route to Chicago (ORD).

Four de Havilland Canada DHC-6 Twin Otters are placed into service in 1967 and used to start a Chicago–Milwaukee–Appleton–Minneapolis route system. The company will continue to service these markets as a subsidized commuter until airline deregulation encourages major expansion. Passenger boardings in 1969 are 84,652. The employee population is 140.

In 1970, airline employment drops to 133 and the fleet includes 4 Canadian-made turboprops and 2 Beech 99s. Enplanements are 117,572 and 218,750 freight ton miles are operated. Enplanements total 120,690 in 1971 and help the company achieve its first net profit.

The workforce climbs to 158 in 1972.

An Air Wisconsin DHC-6-100, with two crew and six passengers, collides with a **North Central Airlines** CV-580, with three crew and five passengers, over Lake Winnebago, near Appleton on June 29. Both aircraft crash, killing all aboard the two planes plus three people on the ground.

The company is launch customer for the 16-seat Fairchild-Swearingen Metro II, purchasing 13 of the aircraft. The first three are delivered late in the year.

Passenger boardings jump 19% to 149,000 and cargo increases 25% to 496,000 FTKs.

In 1973, the number of employees is increased to 173. Seven more Metroliners join the fleet. Meanwhile, joint fare agreements are signed with eight trunk lines. A computerized reservations system, leased from **Braniff International Airways**, is leased and new services are inaugurated during the fall to Detroit and Battle Creek.

Customer bookings accelerate 11% to 166,000 and 777,000 FTKs are flown, a 19.7% boost. Net income totals \$78,228.

Three more Metro IIs arrive in 1974 and the workforce is increased by eight. The company begins to phase out its Twin Otters and Beech 99s.

Enplanements jump 18.8% to 197,000, but cargo traffic is down by 4.8%. Still, the net profit rises 74% to \$300,875.

The workforce in 1975 reaches 160. Airline Tariff Publishers inform the travel industry that the company now offers joint fares between some 300 cities. These are integrated, along with schedules, into computerized reservations systems. Over 80% of Air Wisconsin's passengers are now boarded outside the Badger State. The fleet is now completely standardized on Metroliners.

Passenger boardings climb 5.6% to 208,000, but cargo is down by 26.4%.

A computerized accounting system is unveiled in 1976. Small-package interline agreements are made with several certified airlines. The carrier applies to the CAB for subsidy-ineligible certification and, to develop its air freight, becomes fully bonded. The tenth Swearingen Metroliners is delivered.

Customer bookings accelerate 21.7% to 252,626 while freight skyrockets 105.4% to 809,000 FTKs.

By 1977, the carrier is offering exclusive scheduled airline service to the new inbound customs port at the Battle Creek Airport in Michigan.

Enplanements reach 324,581 and a \$1.2 million profit is earned on revenues of \$10.5 million.

Airline employment is increased by 55.9% in 1978 to 251. In January, the company receives the 1977 "Regional Airline of the Year" award from *Air Transport World* magazine.

Newly certified Air Wisconsin extends its system to Grand Island, Nebraska, and Toledo. Anticipating further expansion, the company places orders for two de Havilland Canada DHC-7-103s.

Passenger boardings increase 22.4% to 397,243 while cargo climbs 19.2% to 8.3 million pounds. Operating revenues jump 29.7% to \$13.73 million, and a record net profit of \$1.9 million (up 51.9%) is posted.

A total of 111 new employees are hired in 1979, a 35.2% increase. This is the first year Air Wisconsin provides unsubsidized certified service, which begins in April as it replaces **Northwest Airlines** at the North Dakota communities of Bismarck, Mandan, and Jamestown and also begins flying into Pittsburgh. The company's Chicago (ORD) gate is moved from the commuter to the main terminal.

Orders for de Havilland Canada DHC-7-103s are increased to four, the first of which enters service in September.

Passenger traffic rises 24.3% as 493,862 passengers are carried and freight is up by 2% to 1.78 million FTKs. Total income climbs 44% to \$19.82 million and expenses are held to \$15.09 million. As a result, the operating profit is \$4.73 million and the net profit is up 23% to \$2.3 million.

The employee population explodes 57% in 1980 to 518 as the first Dash 7-103 enters service in early spring. As major and national carriers abandon a host of smaller communities, Air Wisconsin begins to fly into

many of them, after first withdrawing from its own less-profitable markets in Nebraska and North Dakota. On April 27, frequencies are initiated to Fort Wayne, South Bend, and Cleveland.

A massive ingestion of water from a thunderstorm at 6,000-ft. on June 12 causes both engines of Flight 965, a Swearingen SA.226TC Metro with 2 crew and 13 passengers, to lose power simultaneously. Although both engines are restarted, the Metro cannot recover and crashes into a field near Valley, Wisconsin (13 dead).

Three more Dash 7s are added during the year to the 2 (plus 13 Swearingen Metros IIs) in its fleet.

Passenger boardings accelerate by 24% to 667,285, but freight falls 36% to 1.14 million FTKs. On the financial side, revenues soar by 82.75% to \$36.2 million and expenses rise 81.47% to \$27.39 million. The operating profit skyrockets 87.1% to \$8.8 million and net gain reaches \$4.29 million.

The workforce is cut by ten positions in **1981**. A major shift in holdings and preparations takes place as the company doubles its number of Dash 7s to 10, disposes of 9 Metroliners (keeping 4), and makes ready to receive the first of its ordered British Aerospace BAe-146-100s.

The financial picture is mixed on the year. Although passenger traffic rises 5.7% to 705,266 passengers carried, cargo declines by 28.2% to 250,000 FTKs. Operating income increases 26.1% to \$44.97 million and expenses soar 36.3% to \$36.6 million. The operating profit thus falls to \$8.4 million while the net profit dips slightly to \$4.17 million.

The workforce totals 524 in **1982**. Passenger boardings rise by only 14,105 (2.6%) to 723,924. Revenues jump 17.9% to \$52.97 million and expenses accelerate 17.2% to an acceptable \$43.87 million. The operating profit is \$9.1 million and still, net profit drops \$200,000, to \$4.016 million.

The payroll grows 8.9% in **1983** to 573 and the fleet now includes 10 Dash 7s. The first 2 of 3 BAe-146-200s (financed by a small-interest loan from the U.K.'s Export Credit Guarantee Department) to be received during the year arrive on May 20 and June 15, and enter service in July. The carrier also pushes new routes into Milwaukee and Green Bay. Air Wis Services, Inc. is set up as a holding company and takes over ownership of the airline in a share-for-share exchange of stock.

Passenger boardings for the year climb 10.9% to 802,997 and 25.92 million pounds of cargo are transported. Revenues rise by 9.2% to \$54.8 million and costs move up by 13.8% to \$46.71 million. The operating profit is \$8.05 million and the net profit remains the same as 1982—\$4 million.

The payroll grows by 20.4% in **1984** to 690 and the fleet now includes 2 BAe 146-200s and 8 DHC-7s. Orders remain outstanding for 3 BAe 146-200s, 4 BAC 1-11s, and 12 Fokker F.27-500s.

As the 100-passenger, 4-engine British-made jetliners live up to expectations, the carrier acquires three more during the remainder of the year. Frequencies are initiated to Flint, Michigan and Eau Claire, Wisconsin. A DHC-7-103 is sold to **Air West (2)** in October.

As a result of a CAB ruling requiring the elimination of bias from computerized reservations systems, the company, beginning in November, loses its "first screen" location on travel agency computer terminals; the move will have a significant impact on traffic levels later on.

Meanwhile, current passenger traffic surges by 36.3% to 1,094,484 passengers flown, passing the million mark in annual boardings for the first time, while freight poundage increases 22% to 31,637,000. Revenues are up 30.8% to \$71.62 million and costs are kept to \$61.53 million, a 31.7% boost. Operating gain swells to \$10.09 million and net profit spurts upward by \$300,000 to \$4.36 million.

The workforce is increased by 8.7% in **1985** to 750. Early in the year, the former commuter carrier's north-south boundary of Minneapolis-St. Louis is defined on the east and west by addition of new services to Bridgeport and Stratford, Connecticut and Grand Island, Nebraska. A dozen Fokker F.27-500s are ordered in April; the \$72-million purchase price will be generated internally.

On May 17, two months after the March 20 arrangement is announced, Air Wisconsin consummates its takeover of Illinois-based

Mississippi Valley Airlines (MVA). It acquires the MVA's routes, fleet of 4 Fokker F.27-500s, 6 Shorts 360s, and 6 Shorts 330s, and debts through a stock exchange (0.4621 for 1) that costs the surviving partner \$10 million.

Arthur Hailand Jr. becomes board chairman and the route network grows to 31 cities in 8 states as the company enhances its status from large regional to national carrier. The enlarged airline's headquarters will remain at Appleton, while maintenance will continue to be performed at Fort Wayne and the MVA center at Moline.

The marketing position is further enhanced by the airline's decision to sign an agreement with **United Airlines** for participation in the major's Apollo computerized reservations system. The company's twentieth anniversary is celebrated on August 23. One-per-month deliveries of the F.27-500s begin on September 16, at which point the Shorts 330s become surplus, along with 3 Dash 7s and the MVA Fokkers.

At the end of the year, the fleet includes 8 BAe 146-200s, 4 BAC 1-11s, 4 Dash 7s, 7 F.27-500s, and 6 Shorts 360s. Orders remain outstanding for 5 F.27s.

Customer bookings actually decline 6% to 1,727,000, but revenues increase a modest 2.2% to \$120.16 million. Costs, led by merger expenses, boom upward by 11.5% to 115.5 million, but do allow an operating gain of \$4.66 million and net profit of 1.33 million.

Airline employment rises again in **1986**, up 2.3% to 1,175. A code-sharing arrangement is concluded with United in the spring and Air Wisconsin begins flying as "United Express" (effective October 26), dedicated to providing feed to Chicago (ORD) and a new hub at Washington, D.C. (IAD).

An order is placed for a ninth BAe 146-200 as BAC 1-11 operations end in May; the 4 withdrawn BACs are replaced by 4 additional F.27-500s. One of these is the 786th—and last—Friendship to be constructed and sold since 1958 (including 205 built under license by Fairchild).

The 6 Shorts 360s are now transferred to a new Richmond, Virginia, base and on June 1, and begin feeding traffic from 6 cities in Virginia, Pennsylvania, and Delaware into United's midfield terminal at the Dulles hub.

In August, AW begins serving the major's "Terminal of Tomorrow" at O'Hare with all of its BAe and Fokker assets, providing interline traffic from 23 cities in six Midwest states.

DHC-8 "United Express" service is started thrice daily in August from Washington, D.C. (IAD) to Norfolk, along with twice-daily flights to Charleston, West Virginia. In late fall, orders are placed for 7 additional BAe 146-200s. As part of the arrangement, the manufacturer assists the large regional to dispose of its 4 Dash 7s, now withdrawn. Toward year's end, most of the fleet has been repainted in "United Express" livery and work has begun on upgrading aircraft interiors with United upholstery and other accoutrements.

Passenger boardings leap upward by 17.3% to 2,028,972 and revenues ascend 9.1% to \$124.19 million. With costs held to \$117.96 million, the operating profit is \$6.23 million and net gain climbs to \$5.33 million. Much of the latter figure is achieved through the sale of aircraft and slots at the former New York (LGA) and Washington, D.C. (DCA) airport destinations.

The workforce is further improved in **1987**, growing by 2.1% to 1,200. Although the company will enjoy record traffic and income, much of the year is taken up with fending off hostile takeover bids. The first attempt is made by two ex-**United Airlines** officials, backed by Citicorp Venture Capital. As soon as that push fails, another is mounted by two of the airline's own outside directors.

Following the failure of the second takeover bid, the carrier's board adopts a protective anti-takeover strategy. Customer bookings accelerate 6.6% to 2,160,078, but freight declines 24.7% to 213,000 FTKs. Revenues advance by 22.2% to \$145.6 million, expenses jump 16.6% to \$132.02 million, and the operating profit is \$13.57 million. Net profit advances a million dollars to \$5.78 million.

Airline employment grows 15.9% in **1988** to 1,391 and the fleet includes 14 F.27-500s, 6 Shorts 360s, 8 BAe 146-200s, and 2 BAe

146-300s, the latter being delivered in December. The carrier is also launch customer for the BAe 146-300s, which enter service this year. Meanwhile, on April 1, the board of directors adopts a shareholder rights plan designed to safeguard the company's interests, especially the unregulated accumulation of its common stock. Late in the year, **United Airlines** realigns the routes of its smaller code-sharing partner, assuming several of the more profitable segments for itself.

Passenger boardings jump 12% to 2,420,000 and cargo recovers, rising 37% to 292,000 FTKs. Revenues swell 22.57% to \$184.56 million and although costs are up by 18.63%, they still total only \$161.88 million. Operating income reaches \$22.67 million and the net gain nearly triples, rising to \$17.92 million.

The workforce of the newly elevated national airline grows only a slight 0.6% in **1989** to 1,400. The fleet now includes 5 BAe 146-200s, 14 F.27-500s, 5 Shorts 360s, and 5 BAe 146-300s. Orders are outstanding for 14 BAe ATPs. In March, Air Wisconsin returns to British Aerospace as North American launch customer for its Advanced Turboprop (ATP), which is later classified as the Jetstream 61. Orders are placed for 14, with options on 6 others. Simultaneously, the carrier petitions the FAA for a waiver that will allow use of the 64-seater in Chicago (ORD) 56-seat commuter slots. When the first three ATPs arrive in late fall, the F.27s are transferred to Washington, D.C. (IAD) to replace the Shorts 360s, which begin phaseout. It comes as a surprise and disappointment to company officials when **Atlantic Coast Airlines**, formed in December, receives from the **United Airlines** parent most of the Dulles-originating "United Express" routes of bankrupt **Presidential Airways**.

Customer bookings drop 9.3% on the year to 2,195,013, but freight climbs 19.5% to 349,000 FTKs. Revenues decline 3.51% to \$178.09 million, expenses jump 8.99% to \$176.45 million, and operating income plunges to \$1.64 million. Net gain is cut to \$355,000.

The employee population rises 1.2% in **1990** to 1,407. During the year, the fleet is increased to include 6 BAe ATPs and the last Shorts 360s are sold. With only a year and a half remaining on its marketing agreement with **United Airlines**, Air Wisconsin officials begin discussions with that corporation on contract renewal and with other majors as to possible realignment. The first ATP begins service from Chicago in March.

Negotiations are undertaken and successfully concluded on April 30 for the purchase of Denver-based **Aspen Airways**, minus its regional turboprop routes that pass to **Mesa Airlines**. To accomplish the acquisition, AW will provide \$3 million in cash, \$2.5 million in five-year 8.5% notes, and assume \$2 million in liabilities. Although Aspen will be operated as a subsidiary for the remainder of the year, its jet routes from Los Angeles to Chicago (ORD) via Aspen, when linked to the new parent's Chicago to Washington, D.C. (IAD), turn the new parent into a transcontinental carrier.

In May, President/CEO Preston Wilbourne gives up his position with the airline, while retaining his position as chairman of parent Air Wisconsin Services. His successor is longtime **United Airlines** official William J. Andres, who has been with the Wisconsin-based national for three years.

A new and more agreeable code-sharing agreement is signed with **United Airlines** and takes effect on November 1. Five de Havilland Canada DHC-8-100s are ordered in December.

Passenger boardings this year ascend 2.4% to 2,248,008, but cargo plunges 34.3% to 387,000 FTKs. Revenues move ahead by 10.42% to \$196.64 million, expenses jump 11.07% to \$195.97 million, and the operating profit is cut to \$671,000. Net gain, on the other hand, climbs by almost 75% to \$1.28 million. The airline's parent, Air Wisconsin Services, reports a net loss of \$1.1 million, blamed almost entirely on **Aspen Airways** losses.

The payroll is increased by 17.9% in **1991** to 1,668 and the fleet now includes 12 BAe 146s, 9 BAe ATPs, and 6 Fokker F.27s. During the year, the fleet is enhanced by the delivery and introduction into service of the 5 de Havilland Canada DHC-8-100s requested in December.

In January, a \$63-million order is placed for five DHC-8-300s; the aircraft will be delivered between June and September. On June 6, the

company joins with **United Airlines** to celebrate the fifth anniversary of their "United Express" partnership. **Aspen Airways** is merged into its parent in July.

Customer bookings climb 6.7% to 2,534,954, but cargo falls 11.7% to 340,000 FTKs. Although revenues are up by 7.45% to \$211.3 million, expenses surge 20.18% to \$235.53 million and guarantee an operating loss of \$24.22 million. There is a huge \$340.91-million net loss.

Company employment is cut by 5.6% in **1992** to 1,569. Negotiations begun during the previous fourth quarter are completed in January and Air Wisconsin, despite objections to the government by **American Airlines**, is acquired, via an exchange of stock, by **United Airlines**, which, at year's end, decides to dismantle its new prize.

Passenger boardings ascend 20.2% to 2,872,041 while freight declines 8.8% to \$11.75 million FTKs. Revenues move ahead by 2.7% to \$217.1 million, but costs increase 8% to \$254.31 million. The operating loss swells to \$37.21 million; however, net loss is cut to \$46.4 million.

Air Wisconsin reduces its workforce by 31.3% in **1993** to 1,078 as operations continue from Chicago with the 12 British-made jetliners. In late March, Air Wisconsin's Washington, D.C. (IAD) operation is sold to "United Express" carrier **Atlantic Coast Airlines**. In April, the BAe ATP feeder operation at Chicago is sold to Hulas Kanodia, who owns the "TWExpress" carrier **Trans States Airlines**, and is creating a new airline, **UFS (United Feeder Service)**.

At the same time, Air Wisconsin President/CEO Andres is replaced by Vice President-Operations Ronald Aramini. Gary Marsh becomes vice president-operations in June as the airline inaugurates nonstop BAe 146-100 flights from Aspen to Los Angeles timed to coincide with the start of the Aspen Music Festival.

The Kanodia transaction is completed on September 1 as **UFS (United Feeder Service)** launches scheduled BAe ATP flights from O'Hare International Airport to four Midwestern cities. UAL, Inc. seeks a buyer for the BAe 146 operation formerly known as **Aspen Airways**. One is found in September: the holding company CJT Holdings, controlled by former **Northwest Airlines** executive Geoffrey T. Crowley, with William Jordan and Patrick Thompson as major partners.

Effective back to December 1, the carrier and its 12 BAe 146s are turned over on December 29 and the once-proud national is renamed Air Wisconsin Airlines Corporation. The move concludes **United Airlines'** divestiture. The year's customer bookings plunge 27.9% to 2,066,000 and cargo declines 39.4% to 204,000 FTKs. Revenues are also off, by 13.1%, to \$188.6 million. Expenses are again high, but the operating loss is cut to \$29.4 million. Net loss is also lessened, to \$27.5 million.

Airline employment is increased by 4% in **1994** to 650 and the fleet now includes 2 leased BAe 146-100s, 6 BAe 146-200s (4 leased), 5 BAe 146-300s (4 chartered) and 1 Fokker F.27-500, which is leased out to the Indian carrier **NEPC Airways, Ltd.** Passenger boardings recover, shooting up 16.8% to 1,603,174, and revenues of \$102.8 million are earned. With expenses of \$99.8 million, profits are earned: \$3 million (operating) and \$2.54 million (net).

The workforce stands at 800 in **1995**, an 18.5% increase. To celebrate its second year as an independent, the company applies a new paint scheme to all of its aircraft. Scheduled departures reach 34,115.

Enplanements slide 0.1% to 1,600,735, but operating revenues increase 16.9% to \$120.07 million. Costs jump 16.8% to \$116.57, but still allow operating profit to rise to \$3.5 million. A \$3.12 million net profit is posted.

The employee population is increased by 4% in **1996** to 780.

In early December, a BAe 146-200 is leased from BAe Asset Management: Jets (AJM) for four years.

While on descent to Denver on December 20, "United Express" Flight 684, a BAe 146-200A with 16 passengers, encounters unexpected turbulence; 2 flight attendants are seriously injured.

The company's 15 BAe 146s make a total of 36,264 scheduled departures and transport 1,757,000 passengers, a 10.3% increase. In addition, cargo grows by 25.4% as 467,000 FTKs are operated. Operating income accelerates 10.3% to \$132.44 million and expenses are up

by the exact same 10.3% to \$128.6 million. Profits grow slightly to \$3.83 million (operating) and \$3.79 million (net).

In 1997, global positioning system (GPS) equipment and telephones are installed in units of the fleet. When **Atlantic Southeast Airlines (ASA)** returns its three BAe 146-200s to BAe AJM in June, arrangements are made to lease them to Air Wisconsin. The first aircraft is delivered in late October and is employed to increase capacity on services to the Colorado ski resorts.

During the fourth quarter, the two additional BAe 146-200s arrive. They assist the company in expanding its winter schedule from Denver to Aspen, raising the number of daily roundtrips to 18 on the weekends and 14 during the workweek. This is in addition to daily nonstop roundtrips to Aspen from Los Angeles.

Passenger boardings accelerate 10.6% to 1,943,255 on 39,695 scheduled departures, but freight falls 25.5% to 180,000 FTKs. Operating revenues advance 6.4% to \$140.89 million, while expenses grow 6.7% to \$137.26 million. The operating profit dips to \$3.62 million, while net gain also slides, to \$3.66 million.

On February 23, 1998, Air Wisconsin purchases bankrupt **Mountain Air Express (MAX)**, the former subsidiary of **Western Pacific Airlines** that had, itself, failed a few weeks earlier. Also during February, the two former ASA BAe 146-200s are delivered. They are immediately employed to increase United's turboprop feed capacity at Denver.

Just after landing at Aspen after a March 11 service from Denver, Flight 166, a BAe 146-200 with 4 crew and 77 passengers, blows a tire and runs off the runway; although the aircraft sustains damages, no injuries are reported.

Integration of the MAX Fairchild Dornier 328s into the "United Express" operation is completed on April 1, at which time MAX president Tom McClain departs. A number of routes are now taken over that had previously been operated under contract by **United Express (Mesa Air Group)**.

On the other hand, certain Air Wisconsin "United Express" services from points in Wyoming to Denver are turned over to **Great Lakes Aviation** on October 25. Destinations involved include Cheyenne, Gillette, and Sheridan.

A major package of "United Express" jet service enhancements and introductions for the new year is announced on December 21. The upgrade wins accolades from U.S. Senator Herbert Kohl of Wisconsin, Governor Don Sundquist and U.S. Senator Bill Frist of Tennessee, U.S. Senator Trent Lott of Mississippi, and U.S. Senator Byron Dorgan of North Dakota.

Twice-daily "United Express" Canadair CRJ roundtrips will be started on February 1, 1999, from Madison to Denver; ten days later, twice-daily roundtrips are set to begin from Memphis to Denver. Twice-daily Canadair CRJ roundtrips will be launched from Jackson, Mississippi, to Denver on March 1, followed on March 11 by the inauguration of twice-daily roundtrips from Fargo to Denver.

The fleet at the end of the year includes 10 Fairchild Dornier 328-110s, 1 BAe 146-100, 12 BAe 146-200s, and 5 BAe 146-300s.

Customer bookings this year increase 46.6% to 2.84 million, while freight traffic climbs 3.25% to 185,000 FTKs. Revenues grow 38.9% to \$195.64 million, while expenses are up an almost equal 38.2% to \$189.75 million. The operating profit climbs to \$5.89 million, while net profit doubles to \$6.02 million.

While on ascent from Aspen on a February 11, 1999, service to Denver, a BAe 146-200, with 4 crew and 84 passengers, suffers an uncontained failure of its No. 4 engine. The aircraft receives minor damage, the engine is shut down, and the flight is completed with no injuries reported.

The first of four new Canadair CRJ200LRs received are employed, beginning on March 1, to introduce daily nonstop "United Express" regional jet service from Denver to Omaha. Employing B-757-222s and B-727-222As, **United Airlines** continues to provide six daily main-line return flights between the two cities.

Twice-daily "United Express" BAe 146-200 service is resumed on March 4 from Denver to Fargo, North Dakota.

With the second two CRJs on hand, Air Wisconsin, on April 1, opens daily Canadair "United Express" roundtrips from Denver to Billings, Montana. **United Airlines**, using either or both B-737-322s and B-727-222As, continues to offer twice-daily main-line roundtrips between the two communities.

Twice-daily Fairchild Dornier 328-110 "United Express" roundtrips commence on June 10 between Denver and Amarillo, Texas. Frequencies are coordinated with those provided by fellow "United Express" carrier **Great Lakes Aviation**.

During the month, orders are placed for 6 additional Fairchild Dornier 328-110s, the first of which enters service in July.

Business at Denver continues to grow and, as a result, overall passenger boardings accelerate 18.4% to 3,373,000; cargo dips 0.8% to 184,000 FTKs. Revenues surge 38.8% to \$271,479,000, while costs climb an almost-equal 38.4% to \$262,647,000. The operating profit advances to \$8.83 million and net gain is up almost \$3 million to \$8,997,000.

Airline employment at the beginning of 2000 stands at 2,178, a 22.1% boost over the past 12 months.

"United Express" Dornier 328-110 roundtrips begin four times daily on September 6 between Chicago (ORD) and Bloomington, Illinois.

After 15 months of unsuccessful contract talks, the company's pilots and management call in a Federal mediator on September 21.

AIR X, A.S.: Norway (1986–1990). Air X is formed at Oslo Airport in 1986 with Christian Gundersen as president. A fleet is assembled comprising 1 British Aerospace Jetstream 31 and 1 Beech Super King Air 200. Regional third-level revenue services are launched linking the carrier's base with Orebo, Copenhagen, and Goteborg.

Two more King Airls and another Jetstream 31 join the fleet in 1988–1989; however, Copenhagen is dropped from the route network. As the world economic situation and general airline recession deepens, the carrier is unable to maintain its economic viability and ceases operations in 1990.

AIR YUGOSLAVIA. See **AIR JUGOSLAVIA**

AIR ZAIRE, S.A.: Zaire (1971–1997). When the Democratic Republic of the Congo becomes the Republique du Zaire in 1971, the name of the national carrier is changed in October from **Air Congo, S.A. (2)**. Ownership is reorganized and includes the government (80%), Institut National de Securite Social (8%), and the Caisse d'Epargne du Zaire (8%).

Private business interests hold the remaining 4% and the airline is registered not in Kinshasa but in Brussels. A previously held joint venture management contract with **Pan American World Airways (1)** is continued, as is the contract of American's director general, Francis J. Swayze.

The fleet includes 2 Douglas DC-8-33s, 8 Fokker F.27-600s, 2 Sud-Est SE-210 Caravelle IIIs, 6 DC-4s, and 4 DC-3s. Previously operated services are continued to Zambia, Tanzania, Kenya, Uganda, Nigeria, Belgium, Italy, and France, plus domestic stops. A Lockheed L-100-20 Hercules freighter is now periodically leased from the government to transport freight.

In late 1972, orders are placed for 3 Boeing 737-298Cs and 2 DC-10-30s and a request is made to exchange the DC-8-33s for DC-8-63CFs.

The first DC-10-30, christened *Mon Ngaliema*, enters service in February 1973, the same month that it is announced that Pan Am will supply an even larger aircraft. The B-737-298Cs arrive during spring and summer, and are christened *Lac Tumba* and *Lac Upemba*.

The B-747-121 *Clipper America*, leased from **Pan American World Airways (1)**, arrives in October and is rechristened *Mont Floyo*. Painted in full Air Zaire livery, including a gold-winged leopard on the tail and tiger-skin lavatory walls, the Boeing Jumbojet begins service from Kinshasa to Brussels, Geneva, and Rome in November. By year's end, Air Zaire is one of the largest carriers on the continent.

On April 7, 1974, a downdraft causes a chartered DC-4 to land 100 m. short of the runway at Gemena; there are no fatalities, but the Douglas is wrecked.

During the remainder of the year, the two requested DC-8-63CFs and the second DC-10-30 join General Director Joseph Gatt's fleet. The increase in capacity allows new markets to be entered at Abidjan, Bangui, Bujumbura, Conakry, Dakar, Libreville, Lome, Luanda, and Madrid.

On January 9, 1975 an F.27-600 with 4 crew and 15 passengers overruns the runway while landing at Boende; a ramp worker is killed on the ground.

On March 31, the *Mont Floyo* lease ends and is not renewed. In the spring, an agreement is signed with **UTA French Airlines, S.A.** for the joint development of mail and freight traffic between France and Zaire.

On March 3, 1976, an F.27-600 is destroyed on the ground at Vila Gagocutinho, Angola, by a rocket attack.

The **Pan American World Airways (1)** management contract ends in 1977. Geyoro Te Kule is named chairman/CEO.

An F.27-600 on a training flight with three crew, crashes and catches fire at Kisangani on January 6, 1978; there are no survivors. On a happier note, in May, the carrier becomes a wholly owned public corporation.

Airline employment grows to nearly 5,300 in 1979. On February 8, 1980 an F.27-600 with three crew on a training flight from Kinshasa goes into a spin, crashes, and catches fire; there are no survivors.

The world economic situation at the start of the new decade has a severe impact. Passenger boardings in 1981-1983 are, respectively: 535,000, 335,000, and 330,000. Airline employment reaches a height of 4,800. The 2 DC-8-63CFs are put into storage, but the final B-737-298C is acquired and an order is placed for 4 F.27-500s.

On January 16, 1984, a DC-3 with 17 passengers is destroyed as the result of a bad landing at Kissidougou, Guinea; there are no fatalities. To avoid collapse in the face of declining traffic and rising expenses, the fleet is now reduced by the withdrawal of 1 B-737-298C and 2 F.27-600s, while the new Fokker order is cancelled. All international routes are suspended, except Kinshasa-Brussels via Lagos.

During the spring of 1985, the government signs a 6-year management contract with the French carrier **UTA French Airlines, S.A.**, which assigns Joel de Cernon as CEO, replacing Geyoro Te Kule, who remains as chairman. A historical low point is reached when one of the debt-ridden flag carrier's DC-8-63CFs, which has just returned to service, is impounded at Brussels for several months while foreign pilots seek legal redress for lack of salary payments.

To obtain operating funds, both DC-10-30s are withdrawn and placed up for sale in June; one is immediately purchased by **British Caledonian Airways, Ltd. (BCAL)**. **Sabena Belgian World Airlines, S.A.** is also asked to undertake a survey of the carrier on behalf of the government.

The workforce in 1986 totals 2,625 and the fleet includes the last DC-10-30 (still up for sale), 2 DC-8-63CFs, 2 B-737-298ACs, and F.27-600s. The **UTA French Airlines, S.A.** management team, led by another new CEO, Hubert Andrade, arrives to operate the carrier, initially concentrating on route rationalization measures and staff pay. The airline is able to board 171,000 passengers on the year.

Operations continue apace in 1987-1988. The Douglas wide-body operates European long-haul routes, flying thrice weekly to Brussels, twice weekly to Paris, and weekly to Rome.

Orders are placed in 1989 for 3 McDonnell Douglas MD-88s. As the result of the failure of the Zaire government to provide required support, **UTA French Airlines, S.A.** cancels its management contract in January.

Enplanements total 202,503, with 47.29 million FTKs of freight also flown.

Company employment is increased by 2% in 1990 to 2,616 and the fleet now includes the still-unsold DC-10-30, 1 leased B-737-200, 2 B-737-298ACs, and 1 DC-8-63CF. Orders are placed for two McDonnell Douglas MD-83s; however, great difficulty is encountered in arranging the necessary financing.

Highlight of the year is the introduction of a B-737 route from Kinshasa to Nairobi via Goma and Kigali.

Passenger boardings inch up 1.8% to 206,215, but freight is off 4.3% to 55.8 million FTKs. Revenues decline 5% to \$82.4 million and, with costs higher, the operating loss is \$3.7 million. A net loss of \$1.3 million is also suffered.

The payroll declines 0.6% in 1991 to 2,600. Traffic figures are reported only through May and show customer bookings down 3.5% to 64,000 and cargo off 17.2% to 18.94 million FTKs. As a result of alleged financial irregularities, General Manager F. S. Musara is suspended in August.

The leased B-737-200 is withdrawn in 1992 and the DC-8-63CF is exchanged with **Connie Kalitta Services** for a DC-8-54F. The company operates its last intercontinental passenger services with its own aircraft on October 11. Thereafter, routes to Abidjan, Brussels, Conakry, Dakar, Libreville, Lome, Luanda, Paris, and Rome are all suspended. The Douglas wide-body is placed into storage at Ben Gurion Airport at Tel Aviv, Israel.

In 1993-1994, CEO Andrade and new General Manager Yuma Morisho Lusambia oversee a workforce of 2,616. The operational fleet includes 2 B-737-298Cs and 1 DC-8-54F. A variety of local communities are served from Kinshasa and Lubumbashi. At Tel Aviv, 2 of the DC-10-30's 3 GE CF6-50C engines disappear, supposedly "borrowed" by former company officials. Although an international search is undertaken, they are not located.

Little is heard of company business now as Zaire is engulfed in civil war. It is known that the DC-8-54F needs parts and services and one of the "Baby Boeings" is out of service at Kinshasa's Ndjili Airport. The other maintains local services and even reintroduces a route to Lagos, Nigeria.

While landing at Kinshasa in bad weather on January 2, 1995, the B-737-298C *Lac Tumba*, with 5 crew and 50 passengers, touches down heavily. The flight crew loses control of the aircraft and it runs off the side of the runway. The nose landing gear collapses and, as both engines strike the ground, they are ripped from the wings. Although the aircraft is damaged beyond repair, there are no fatalities.

A close associate of President Mobutu Sese Sek, General Kikunda Ombale, is named managing director.

In June, a Brussels commercial court declares the carrier, with BFr 1 billion in debts, to be bankrupt. Officials from the airline appeal, but when the court announces its final decision in December they are out of money and unable pay attorneys to seek a reversal.

Service to Lagos ends on January 26, 1996. Despite the decisions of the Brussels courts, Air Zaire maintains it is still operational. After all, it has a contract with **Scibe Airlift, S.A.** and it does receive traffic and handling fees from other carriers.

In March, General Kikunda, who has replaced CEO Andrade, decrees the resumption of services to additional domestic points with the remaining B-737-298C *Lac Upemba*.

A contract is also signed with the French financial group De Grimaldi for the weekly lease of a DC-10-30 from **AOM French Airlines, S.A.** with which to restart intercontinental operations. The plane will not be delivered, however, because the owner comes to fear that it will be seized should it land in Brussels, where the courts have declared the carrier bankrupt and any of its available local assets subject to takeover.

The last almost-event in this airline's history occurs on April 6 when the B-737-298C *Lac Upemba* departs Kinshasa for a flight to Goma. En route, the Boeing is diverted to Kamembe, Rwanda, where the crew and passengers are taken into custody. Although everyone is soon released, the plane is held.

In May 1997, following the success of rebel forces under Desire Kabila, both the country and its flag carrier are renamed, the latter eventually becoming **Lignes Aeriennes Congolaises, S.A. (LAC)**. A large number of Mobutu allies, including Gen. Ombale, are arrested just after the change in government and are charged with corruption and embezzlement. Most will be put on public trial, beginning with Gen. Ombale.

AIR ZAMBEZI, LTD.: Harare, Zimbabwe; Phone 2634 706 059; Fax 2634 707 151; <http://www.gsaairlines.com/airzambezi.htm>; Year Founded 1998. Air Zambezi is established at Harare in early summer 1998 to provide scheduled return service to the Safari Lodges and other smaller communities on a regular basis. Revenue flights are inaugurated on July 16 with 1 each Cessna 208 Caravan I and Piper PA-31-350 Navajo Chieftain. Destinations visited include Bumi Hills, Hwange, Kariba, and Victoria Falls.

AIR ZANZIBAR, LTD.: P.O. Box 1784, Zanzibar, Tanzania; Phone 255 (54) 32512; Fax 255 (54) 33098; <http://www.zanzibar.net/airzan>; Year Founded 1990. Air Zanzibar is founded by Peter Hendriks on its island namesake in 1990 to provide scheduled and charter services from the town to Pemba to Dar es Salaam. The 14-employee company inaugurates services with 3 Piper PA-34 Senecas and 1 Britten Norman BN-2 Islander.

Flights continue and, over the next ten years, scheduled service is launched to Arusha, Dar, Selous, and Ruaha. Flight-seeing, safaris, and scenic flights, as well as charters to various other national park and game reserves are offered.

In 2000, CEO Hendriks' fleet includes 2 PA-31-350 Navajo Chieftains, 1 PA-31-310 Navajo, 1 PA-32 Cherokee Six, and 2 Partenavia P.68s.

AIR ZARCO, S.A.: Portugal (1999-2000). With continued backing from the Lisbon-based travel group Pestana Hotels, **Air Madeira, S.A.** is renamed in early 1999. The 42-person workforce, under the direction of President Tonaz Metello, continues operations with a former **TAP-Air Portugal, S.A.** Lockheed L-1011-500 TriStar. The principal destination is Canada, where there is a large expatriate Portuguese population.

At the beginning of the fall holiday season in late October, a Boeing 737-33A, named the *Jose de Olivera Marques*, is chartered for 18 months. It is employed to fly tourists to Mediterranean destinations.

During the summer of 2000, the company is renamed again, becoming **Euro Atlantic Airways, S.A.**

AIR ZIMBABWE CORPORATION: P.O. Box AP 1, Harare Airport, Harare, Zimbabwe; Phone 263 (4) 575 111; Fax 263 (4) 575 068; <http://www.airzimbabwe.com>; Code UM; Year Founded 1980. Following the 1980 change in government, **Air Rhodesia, Ltd. (2)** is given this name in February. The fleet now includes 3 Boeing 720Bs, 3 Vickers Viscount 782s, and 4 Douglas DC-3s. Meanwhile, Viscount 782 service from Salisbury to Blantyre and Lusaka is resumed in January. Employing a B-707-344B Stratoliner leased from **South African Airways (Pty.), Ltd.**, the company begins flights to London (LGW) on April 2.

On April 29, Zimbabwe raises its first international bank loan since independence for its airline; an \$11 million credit is received from New York's Manufacturer's Hanover Trust Company and is employed in September to order 3 B-707-330Bs and spare parts from **Deutsche Lufthansa, A.G.**

Links with Europe and southern Africa that had shrunk during the final years of **Air Rhodesia, Ltd. (2)** are reestablished during the remainder of the year and in 1981. In addition to eight domestic points, service is provided to six cities in five African nations: South Africa, Kenya, Malawi, Zambia, and Botswana.

The first former-German Stratoliner arrives in Salisbury on February 19, the same day two more DLH Boeings are requested. Return flights to Frankfurt are inaugurated in May.

To replace the earlier models, two Vickers Viscount 810s are purchased from **Dan Air/Dan Air Services, Ltd.**

A B-707-330B, en route from Harare to London with 105 aboard, including Prime Minister Robert Mugabe, is forced to land at Paris (ORY) on June 6, 1982, because of a bomb scare; nothing is found. Athens joins the growing European route network in July.

Following a visit to the company's base by then-Minister of Transport Farai Masango, changes occur. A new livery is ordered for the aircraft (with a different color scheme for type), with the controversial "twiggy

bird" replaced by a new Zimbabwe Bird logo superimposed on a red star on all aircraft tails. In addition, cabin announcements are to be made in Shona and Ndebele as well as English.

In association with **Qantas Airways, (Pty.), Ltd.** and with a chartered Australian Boeing 747SP-38, a joint route is opened in November from Harare to Perth and Sydney.

The cargo carrier **Affretair, Ltd. (2)**, its routes and two DC-8-55Fs, are acquired in July 1983 and begin operations as a wholly owned subsidiary. The company joins IATA and flights to Europe are increased; London becomes four times a week and Frankfurt twice weekly. Enplanements reach 456,000.

In 1984, a B-737-2L9 is leased from **Maersk Air, A.S.** of Denmark. Passenger bookings decline to 430,000 and a net loss of Z\$19.3 million (US\$16.5 million) is suffered.

A poignant historical point is noted on May 31, 1985 when the first Viscount 782 is retired. The turboprop is flown to Gweru and turned over to the Aviation Museum. In August, orders are placed for three B-737-2N0s, with the help of a U.S. Export-Import Bank loan.

In November, while awaiting delivery of the little Boeings, the company leases a former **Maersk Air, A.S.** B-737-2L9.

Passenger boardings for the year rebound, up to 452,000. Still, the net loss grows to Z\$28.3 million.

The carrier's workforce approaches 1,500 in 1986 and the fleet includes 2 B-707-330Bs and 6 Vickers Viscounts; 3 B-720Bs and 2 Viscounts are retired. In February, fares are raised in excess of 20% as a result of the declining value of the Zimbabwean dollar.

Chiredzi-based Cane Air, Ltd., a Cessna and Piper charter operator, is contracted in September to provide replacement services between Masvingo and Buffalo Range. The first B-737-2N0 is delivered on December 19; christened *Mhuya Nehanda*, it enters service at month's end.

Enplanements for the year total 450,740 and the losses are \$9 million (operating) and \$14.5 million (net).

The employee population is cut 7% in 1987 to 1,548. The B-737-2L9 is returned to its lessor in early January.

Attracted by the possibility of attractive financing, company officials open discussions (ultimately unsuccessful) in February with Aviaexport of the Soviet Union concerning acquisition of Russian-made airliners; in April, talks are held with **Royal Jordanian Airlines** in an effort to obtain the use of a Lockheed L-1011 TriStar 1.

Fungai Musara succeeds A. T. Mutiyambizi as general manager in May and when negotiations for the Jordanian airliner collapse, Prime Minister Mugabe's British Aerospace BAe 146-200 is temporarily pressed into scheduled service to alleviate the carrier's capacity shortage on the route to Kariba.

The last two B-737-2N0s, *Great Zimbabwe* and *Matojeni*, are delivered in June and July, allowing phase-out of the remaining Viscounts to begin. The BAe 146-200 now flies from Harare to Kwange, Victoria Falls, and Hwange National Park.

Passenger boardings are up 2% to 459,939 and freight climbs 3.5% to 12.94 million FTKs. Revenues rise 19.6% to \$54.8 million, but costs still cause an operating loss of \$5.6 million and a net loss of \$13.4 million.

The workforce is increased by 1.7% in 1988 to 1,574. Orders are placed for two B-767-2N0ERs. During the spring, flights begin to Maputo, Manzini, and Dar es Salaam; in June, a B-737-2N0 service is opened from Harare to Mauritius.

A B-707-330B is destroyed in a hangar fire at Harare on November 15.

Passenger bookings ascend 14% by October to 431,658 while cargo is up by 12.8% to 11.2 million FTKs. With income exceeding costs, profits are generated: \$23.3 million (operating) and \$27 million (net).

Airline employment grows 7.6% in 1989 to 3,452. In a cooperative venture with **British Airways, Ltd. (2)**, joint service is started to London. This pact will later be upgraded into a code-sharing arrangement.

A maintenance agreement is signed with **Air Botswana (Pty.), Ltd.** in September; under its terms, the new British Aerospace BAe 146 of the Botswana carrier will be maintained in Harare. The first B-767-2N0ER

arrives in November and is christened *Victoria Falls*. At the same time, the last Viscount 782 is retired, along with the two Viscount 810s.

Customer boardings rise 3.3% to 502,495. Freight, conversely, drops by 15.6% to 12.39 million FTKs. Revenues swell 24.4% to \$129.5 million and with costs held down, the operating profit grows to \$48.2 million. Net gain declines to \$13.2 million.

Company employment is increased by 8.1% in 1990 to 1,853. The two B-707-330Bs are placed on regional routes to Bulawayo, Mauritius, and Victoria Falls. The second B-767-2NOER, *Chimanimani*, joins the fleet in October.

It is announced late in the year that government subsidies will end on December 31. Service is inaugurated to Windhoek in the fourth quarter.

Passenger bookings climb 3.1% to 596,320. Cargo moves ahead by 35.6% to 16.81 million FTKs and revenues ascend 12% to \$87.3 million. Costs leap 13.5% and cut operating gain to \$6.9 million. There is a \$4.36-million net loss.

The fleet in 1991 includes 1 leased British Aerospace BAe 146-200, 2 B-707-330Bs, 3 B-737-2NOAs, and 2 B-767-2NOERs. Flights are upgraded to Frankfurt and initiated to several new African locations during the second half.

Operations continue apace in 1992. Local routes link Harare with Buffalo Range, Bulawayo, Gweru, Hwange National Park, Kariba, Masvingo, and Victoria Falls. International services are flown to Frankfurt, London, Sydney, Perth, and Larnaca. The government halts its subsidies during the year and, thereafter, accrued interest is not paid on the huge debt the airline now creates.

Airline employment in 1993 stands at 1,800. In March, the executive chairman, Reginald Austin, is succeeded by former Public Services Commission Chairman Malcolm Thompson.

On May 9, demonstrating flying skills, the crew of a B-707-330B makes a flyby barely 50-ft. off the ground at Harare Airport during the Mashonaland Flying Club's Air Day '93 celebration.

The new managing director, appointed in November, is Hittush Muringi, a company executive a decade earlier, who succeeds Ticharwa Galrabga. One B-737-2NOA is leased to **Uganda Airlines, Ltd.**

Enplanements total 622,904 while financial losses are suffered: \$1.91 million (operating) and \$10.79 million (net).

The workforce is increased by 10% in 1994 to 1,830. To prevent the defection of pilots to carriers offering higher salaries, Managing Director Muringi is able, early in the year, to persuade the airline's board of directors to raise aircrew pay. With single-engine Pipers and Beechcraft, **United Air Charter, Ltd.** begins to take over a number of the less-profitable domestic routes, leaving the company to improve service on its busiest local route, that from Harare to Bulawayo. Muringi now begins a major restructuring while service ends to Mbabane, Swaziland.

Passenger boardings decline 7.4% to 579,986, but freight rises 2.9% to 39.76 million FTKs. Revenues advance 13% to \$92.65 million while expenses climb only 1.6% to \$85.28 million. The operating profit jumps to \$6,552,000 while a \$1,311,000 net gain is reported.

The number of employees grows another 3.2% in 1995 to 1,844.

A contract is entered into with **Namibia Commercial Aviation, Ltd.** in March. Under its terms, NCA will employ its restored Douglas DC-6B *Fish Eagle* on a weekly scheduled replacement service from Windhoek to Victoria Falls.

The fleet is increased in April and May by the addition of two leased Fokker 50s. New turboprop routes are opened from Harare and Victoria Falls to Cape Town, in addition to such tourist points as Kariba and Hwange National Park. In September, a "D" check is carried out on one of the company's Stratoliner's at the Harare base; the plane is simultaneously hush-kitted. The process proves so expensive that the decision is taken to ground the company's second B-707.

Traffic figures also show progress: enplanements climb 5.9% to 625,690, while cargo inches up 1.2% to 40,923,000 FTKs. Revenues jump 17.2% to \$108.91 million while expenses rise 16.3% to \$100.48 million. As a result, the operating profit grows to \$8,429,000 while net gain swells to \$4,620,000.

Management problems and staff unrest disrupts service in 1996 and no traffic figures are reported. Managing Director Muringi is dismissed in early spring, but not replaced.

The government Cabinet indicates that it will approve a plan to privatize the airline, which also begins discussions with **Air Malawi, Ltd.** on joint services.

Dissatisfied with their "hot and high" performance, the airline cancels the Fokker 50 lease in May. A B-737-2N0 is leased to **Uganda Airlines Corporation.**

Enplanements total 648,226. There is a large \$11.29 million operating loss and a slightly larger net loss of \$11.61 million.

The workforce is cut 1.6% in 1997 to 1,928. Destinations visited include Bulawayo, Cape Town, Durban, Gaborone, Hwange, Johannesburg, Kahba, Lilongwe, Lusaka, Manzini, Mauritius, Nairobi, Victoria Falls, and Windhoek. During the spring, weekly frequencies to Maputo, Mozambique, become thrice weekly.

Also at this time, the carrier's board presents the ministry of transport and industry with a draft memorandum and articles of association for the carrier once it is privatized. The ministry itself works on legislation that will permit repeal of the Air Zimbabwe act. Negotiations are also underway for the creation of a special relationship with **Singapore Airlines, Ltd.** for training and aircraft leasing.

Irish expatriate and former **Aer Lingus Irish Airlines, Ltd.** executive Brendan Donohoe becomes general manager on July 1; he promises to "shake-up" the airline in order to prepare it for privatization by returning it to profitability. Services will be halted on several unprofitable domestic and regional routes as a first step toward Donohoe's goal.

On September 1, a British Aerospace BAe 146-100 is leased, through Fortis Aviation, from **Air Botswana, Ltd.** A code-sharing agreement is reached with **Aero Gambia, S.A.** on September 13; under its terms, the Harare-based flag carrier will introduce a fifth weekly flight to London on November 1, via Lusaka.

An arrangement is also reached with **Air Malawi, Ltd.**, under which the corporation would institute a sixth weekly flight to the U.K. capital the following February, via Lilongwe. There being insufficient traffic, flights between Bulawayo and Victoria Falls are suspended on October 1.

Passenger boardings fall 7% to 605,819, while freight dips 1% to 38.92 million FTKs. Revenues are off by 7.6% to \$63.76 million, but costs are down to \$66.65 million. The operating loss is just \$2.88 million, but the net loss jumps to \$31.53 million.

The dual-designator service to London with **British Airways, Ltd.** (2) begins on February 1, 1998. The company begins to plan for a code-sharing service with **Uganda Airlines Corporation** between Entebbe and Dubai with a Zimbabwean B-767-2NOER in October. Flights to Luanda and Paris begin with the summer schedule.

During late May, the parliament enacts the Air Zimbabwe Repeal Act to form a new privatized company, Air Zimbabwe (Pty.), Ltd. According to the new legislation, all employees of the old corporation technically cease to be employed. Reacting to this clause, airline management, with the approval of the company board, elects to place all of the workers on contracts while working out severance packages for 400 people.

When news of the new employment arrangement reaches the workers at the beginning of June, all 1,600 go on strike. The workers threaten court action claiming the act is unconstitutional. As the controversy deepens, Transport and Energy Minister Enos Chikowore on July 1 orders CEO Donohoe to reinstate all of the workers.

Rebellion erupts in Laurent Kabila's Democratic Republic of the Congo on August 2 and, as the fighting develops, Uganda and Zimbabwe find themselves on opposite sides. Zimbabwe president Robert Mugabe sends troops to support Kabila, while Uganda finds itself supporting his opponents. Business ties between the two airlines now become strained.

In an early September letter to the Ugandan airline's acting managing director, Derek Else, Air Zimbabwe CEO Donohoe cancels the joint Dubai operation due to commence in October. At the same time, he refuses to renew the lease of the B-737-2N0, due in November, claiming

that Air Zimbabwe has new use for the Boeing. It will be claimed elsewhere that **Uganda Airlines Corporation** is employing the aircraft to ferry military supplies to the Congo. The Ugandan line will be left only with a single chartered B-737-53A.

While attempting to persuade officials at Harare that business should come before politics, the Ugandan company requests a six-month extension for the B-737-2N0 it has been chartering. When the Ugandan government learns of the airline's entreaties, it orders Managing Director Else to break off negotiations with Air Zimbabwe and find an alternative source for aircraft.

On September 22, dozens of company passengers are stranded in Hwange Airport when their B-767-3N0 is suddenly rescheduled to fly to Mauritius to pick up Zimbabwe's president, who is attending a summit conference.

It is reported on November 11 that **Uganda Airlines Corporation** will be privatized in four days. The next day, the airline's public relations director, Hadija Nakitende, informs the press that it will no longer pursue business opportunities with Air Zimbabwe, having turned to **Air Djibouti, S.A.** and achieved an agreement for an Entebbe-Dubai service beginning early in 1999.

With the return of the B-737-2N0 on November 15, all business dealings between the two companies are severed.

Passenger boardings drop 8.9% to 557,000, while cargo traffic climbs 7.4% to 41.79 million FTKs.

Airline employment is reduced 23.5% in 1999 to 1,400. During the first week of January, airline executives throughout the country are ordered by the government's Board of Airline Representatives to complete all transactions with the public in local currency only and to halt the use of U.S. dollars. Concern has grown that the strong foreign currency has so increased the cost of tickets that ordinary citizens are unable to afford them.

The nation is in turmoil throughout the year and consequently, enplanements on the national carrier plunge, dropping 20.8% to 460,000. Freight traffic also descends, falling by 16.1% to 35.06 million FTKs. Partial fiscal results show revenues of \$82.66 million, a \$12.73-million operating profit, and a net loss of \$25.05 million.

Airline employment stands at 1,434 at the beginning of 2000, a decline of 17.7% since the previous year.

Discussions with **China Southern Airways Company, Ltd.**, begun in December, for the lease of a Boeing 777 are shelved in the spring as the country continues its plunge into economic crisis and political unrest in the period of runoff to the June national elections.

Chronic fuel shortages force the withdrawal of a B-737 and BAe 146 while associated higher operating costs, to say nothing of political violence, force curtailment of regional flights from Harare to Cape Town and Durban in late April and early May.

A drop in load factor causes an additional suspension of all extra regional frequencies on May 17 (including those to Johannesburg), as well as a daily roundtrip between Harare and Victoria Falls.

In early June, the Transport Ministry, reacting to charges of alleged mismanagement and irregular procurement practices, begins an investigation of Managing Director Tich Garabga and his company colleagues.

On August 31, the special investigation committee reports that the carrier is technically insolvent and warns that the national airline risks having its planes impounded overseas by creditors who are owed more than \$4 million.

Claiming that the airline's feasibility study is incomplete, the Transport Ministry, on September 15, shelves the airline's plan to inaugurate a weekly B-767 route in November from Victoria Falls to London (LGW).

When an \$8-million debt to Air BP, a branch of British Petroleum specializing in aviation fuel, falls due during the last week of September, Air Zimbabwe is unable to pay. It is also unable to pay its navigation fee bill at London (LGW).

During October, arrangements are concluded between the company and **LAC (Lignes Aeriennes Congolaises, S.A.)** under which it would begin to service internal Democratic Republic of the Congo routes for the planeless Congolese airline.

The new arrangement on behalf of LAC begins on November 21 as wet-leased Air Zimbabwe aircraft operate roundtrip from Harare to Lumbumbashi, Mbujimayhi, and Kinshasa. The pact between the two companies is further extended on December 7 when Air Zimbabwe takes over the moribund international LAC frequencies to Paris and Brussels.

AIR ZIMBABWE-RHODESIA, LTD. See AIR RHODESIA, LTD. (2); AIR ZIMBABWE CORPORATION

AIRBAMA: United States (1978-1979). Airbama is established at Sheffield, Alabama, in 1978 to provide scheduled passenger and cargo services to regional destinations. Employing two Handley Page HP-37 Jetstreams, the company inaugurates daily roundtrips, linking its Muscle Shoals base with Montgomery in the south and Nashville via Chattanooga and Knoxville in the north.

Insufficient traffic does not support operations beyond 1979.

AIRBC, LTD.: 5520 Miller Rd., Richmond, British Columbia V7B 1L9, Canada; Phone (604) 273-2464; Fax (604) 273-1016; http://www.aircanada.ca/ac_world/services/connect/airbc.html; Code ZX; Year Founded 1979. James "Jimmy" Pattison, head of the Vancouver-based Jim Pattison Investment Group, borrows C\$17 million from the Bank of British Columbia. On November 1, 1979, with C\$6 million in corporate funds (C\$23 million total), Pattison buys out six small West Coast air companies and merges them to form a new third-level carrier. Merger partners in one of the largest single-stroke amalgamations of independent airlines on record are **West Coast Air, Ltd.**, **Air West Airlines, Ltd.**, and **Haida Airlines, Ltd.** (all based at Vancouver), **Gulf Air Aviation, Ltd.** and **Island Air, Ltd.** (both based at Campbell River), **Pacific Coastal Airlines, Ltd.** (of Nanaimo), and **Trans-Provincial Airlines, Ltd.** (of Prince Rupert), the latter being allowed to retain its own identity.

Two divisions are created: **Trans-Provincial Airlines, Ltd. (TPA)** serving out of its base to northwestern British Columbia, and Vancouver-based AirBC, Ltd. serving to the south. The combination brings to newly appointed president Waldon Walberg a total of 104 aircraft ranging in size from Cessna 180s to Douglas DC-3s, with most being Grumman Mallards and Gooses and de Havilland Canada DHC-2 Beavers.

Airline employment in 1980 is approximately 400. A Hawker Siddeley HS 748 is purchased in Singapore, painted in company livery—and sold before use. A decision to order DHC-8s is changed in favor of DHC-7s. Services with the mixed-fleet continue to such West Coast premerger destinations as logging camps, pulp towns, and mine sites, while future plans are drawn up. A second Islander is purchased in June. Aircraft are painted in new livery and the first finished, a DHC-6 Twin Otter, is rolled out in December. Startup costs bring a small initial loss.

In 1981, emphasis is placed on commuter services Vancouver-Victoria/Nanaimo, but the harbor-harbor service loses rather than gains traffic. A de Havilland Canada DHC-3 Otter is added in March and a DHC-6 Twin Otter acquired in May is sold to **Kimba Air** in August. Many of the old Vancouver Island bases of the merger partners are sold to **Air Nootka, Ltd.** in September. Vancouver-Victoria, Comox, and Nanaimo services are initiated. The beginning of a long recession in the local forest industry shrinks revenues on the up-country routes by 50% and, when combined with carryover startup costs and a 22-23% jump in interest rates, produces a C\$3-million loss.

The Campbell River route network (except the Vancouver-Campbell River segment) is sold to **Coval Air, Ltd.** in February 1982. Following union rejection of Walberg's call for a 10% pay cut for employees on April 1, the president temporarily steps aside to be succeeded by Pattison Group finance specialist Ian Harris. A rigid cost-cutting program is now instituted. Two of the six air services purchased in 1979 are sold, as are all but 35 of the acquired aircraft. Scheduled flights are reduced from 70 to 50.

By September 22, the workforce has been cut to 200; 50 additional positions would be cut by early December. On November 17, the press announces Pattison's decision to cease trading, a position confirmed by

board vote on December 1. That night at a union-management meeting called to announce the shutdown to employees, union resistance to salary cuts collapses and Pattison agrees not to close down and names Harris permanent president. For the year, 200,000 passengers have been carried and the company loss is C\$2 million.

Harris moves quickly in early 1983 to return AirBC, Ltd. to the plan worked out in 1980. After obtaining a no-strike pledge from the company's unions, new equipment is sought. In January, two Grumman G-73 Mallards (one a Turbo Mallard) are sold to the Australian third-level operator **Air Whitsunday (Pty.), Ltd.** In July, a DHC-7 repossessed by the manufacturer from the Spanish carrier **Spantax, S.A. (Transportes Aereos)** is purchased for C\$5 million. Repainted, it is placed in return service, Vancouver-Bella Bella, on July 29.

The president offers to become a feeder for **Air Canada, Ltd.**, **Pacific Western Airways, Ltd.**, and **CP Air, Ltd.** The latter enters into an arrangement with the company, which now becomes AirBC/CP Air Commuter (one of the first dual-designator airlines in North America). **CP Air, Ltd.** drops two of its three daily jetliner flights from Vancouver-Victoria and, in October, these are picked up by AirBC, Ltd.'s DHC-7, which times its service to connect with **CP Air, Ltd.** departures/arrivals at Vancouver. Additionally, the small carrier now enjoys access to a variety of services from the large international, including reservations. Meanwhile, new land- and floatplane-configured DHC-6s begin operations from Vancouver to Victoria, Nanaimo, Bella Bella, Powell River, and Port Hardy.

Additional fleet changes during the year include the purchase of two Douglas DC-3s in April and June and sale of another Mallard in July and the October sale of two DHC-6s to **Royal Hawaiian Airlines**. Airline employment is increased during the year to some 300 workers. Passenger boardings grow to 220,000 and the loss is reduced to C\$1 million.

The fleet in 1984 comprises 14 DHC-6s, 2 DC-3s, and 3 DHC-7s. **CP Air, Ltd.** drops its last Vancouver-Victoria jetliner service and turns the route over entirely to AirBC, Ltd., which, in turn, increases its number of daily frequencies over it to 33. In January, the Vancouver-Gulf Islands route, together with 2 Cessna 185s and 3 DHC-2s are sold to **Harbour Air, Ltd.** One of the two Islanders is sold in February. A pair of former **Golden West Airlines** DHC-7s is purchased in March and May, allowing sale of a DC-3 during the latter month.

Following the advent of Canadian airline deregulation in May, the carrier immediately applies for new routes. Later in the month, the Vancouver-Powell River service previously provided by **Powell Air, Ltd.** is purchased. During the summer, all Port Hardy operations and aircraft are transferred to the TPA division. A link to Port Hardy from Vancouver is inaugurated, twice daily, in October, the same month in which the company's route to Gillies Bay is subcontracted to **Aquila Airways, Ltd.**

In the fall, new scheduled services are inaugurated to interior British Columbia points, e.g., Williams Lake and Quesnel, and, by year's end, the carrier's network includes stops at ten communities. Passenger boardings skyrocket 90% to 420,000 and financially speaking, AirBC, Ltd. breaks even for the first time.

In March 1985, thrice-daily Victoria-Seattle service is started. The last DC-3 and final Islander are sold in June and replaced by a DHC-7 leased from its manufacturer. In September, the carrier becomes the first in the world to operate de Havilland Canada's full, commercial line, placing a C\$16-million order for four Dash 8s, the first of which is delivered in December. Meanwhile, in October, flights commence to Kamloops (Alberta), followed by service to Kelowna in December. Enplanements accelerate 26% to 552,000.

The first DHC-8-102 enters service in January 1986; however, it encounters difficulties that must be resolved before the other three ordered aircraft can be delivered. An application is made to extend the scheduled Seattle route to Portland. In connection with the May-July "Expo '86" at Vancouver, the airline flies 14-per-day charters from the Oregon City.

Additionally, Vancouver harbor-Victoria DHC-6 day excursions are made available. The second DHC-8-108 is received in August and is employed to open scheduled flights to Penticton, Cranbrook, and

Smithers in October, the same month the third Dash 8 arrives. Also in October, the TPA division is sold to a group headed by its former chief pilot, Gene Story. Included in the deal are two Twin Otters and the Prince Rupert base. Pattison retains three G-21 Geese, two DHC-2 Beavers, and one DHC-6 Otter, creating a new subsidiary using the dormant **Pacific Coastal Airlines, Ltd.** name. On November 28, the carrier is purchased by **Air Canada, Ltd.**, for C\$15 million. Enplanements grow by 28% to 685,000.

In March 1987, a fourth DHC-8-102 is delivered in **Air Canada, Ltd.** colors. The other three Dash 8s are now leased out to other operators. On April 26, the state carrier and **CP Air, Ltd.** exchange commuter affiliations, with AirBC, Ltd.'s former partner assuming responsibility for the **Air Canada, Ltd.** partner, **Time Air, Ltd.** New AirBC, Ltd. routes initiated on this date include Vancouver to Seattle (five times per day); Vancouver-Edmonton via Dawson Creek and Grande Prairie; and Kamloops-Calgary via Kelowna and Castlegar.

In May, two former **Air Wisconsin** Dash 7s are purchased and the company announces a C\$160-million order for 16 Dash 8s. Four-times-per-day Vancouver-Prince George flights now begin, along with services from Vancouver to Calgary via Cranbrook and Castlegar, from Edmonton to Penticton via Calgary and Castlegar, and from Edmonton to Kamloops.

In January 1988, AirBC, Ltd. becomes the first Canadian airline to order the British Aerospace BAe 146-200; three units are requested with options for three others. Two more DHC-8-102s are received, one in February and the other in April. Also in April, two more DHC-6s are sold. The first British-made jetliner is received in early May.

The BAe 146-200 is employed to inaugurate five-times-a-day service from Vancouver to Prince Rupert/Terrace on May 30. Also in May, Vancouver-Fort St. John Dash 8 flights begin. Two more British short-haulers arrive in early June and initiate flights twice daily to Whitehorse from Vancouver on June 12.

Two additional BAe 146-200s are delivered in January-February 1989. Under the title "Air Canada Connector," the available jetliners begin a new service on January 30 offering 14-times-daily shuttle service from Calgary to Edmonton. Four other Connector frequencies are provided by Dash 8s. Given the manufacturers delays, the state carrier now cancels its 1987 order for DHC-8-300s and in March, purchases five BAe Jetstream 31 turboprops. In April, direct Vancouver-Whitehorse BAe 146-200 service is inaugurated.

In early 1990, the fleet comprises 5 British Aerospace BAe 146-200s, 6 BAe Jetstream 31s, 3 DHC-6-100s, 5 DHC-6-200s, 4 DHC-7s, and 12 DHC-8-100s. Orders are placed for 6 DHC-8-300s and 1 DHC-8-103 is leased to **Air Alliance, Inc.** In May, four-times-per-day "Air Canada Connector" service is inaugurated from Vancouver to Portland, Oregon; the service is increased from four to five flights each day in November.

Two more DHC-8-100s are acquired in 1991 as the four DHC-7s are sold. With the arrival of six DHC-8-301s in 1992, four DHC-8-100s are temporarily withdrawn. They are returned the following year as the DHC-7 is retired. Airline employment stands at 1,200 in 1993. New services and frequencies are added from Calgary to Saskatoon, Regina, Winnipeg; from Edmonton to Saskatoon, Regina, Winnipeg; and to Seattle and Portland.

In 1994, President/CEO Iain Harris is succeeded by Al Graham and the fleet includes 11 DHC-8-102s (one of which is leased to **Air Nova, Inc.**), 6 DHC-8-311s, and 1 DHC-8-101, 3 DHC-6-100s, 1 DHC-6-200, 6 BAe Jetstream 31s, and 2 BAe 146-200s.

As a result of **Air Canada, Ltd.**'s corporate makeover in January, the company spends the remainder of the year changing the color schemes of its turboprops to match that of the major partner.

During 1995, arrangements are completed for the company to become wholly owned by **Air Canada, Ltd.** All of the Jetstream 31s are returned to their lessors and traffic/financial figures are henceforth combined with those of the parent. The company begins the practice of painting two DHC-8s to look like reindeer and flies them over its routes in the months before the holidays to share "The Spirit of Christmas." On

the two Saturdays before December 25, the carrier takes the aircraft, loaded with volunteers and passengers, to Kelowna and Victoria to raise money for children's charities the airline supports.

The carrier's floatplane division is sold in 1996, along with the four Twin Otters. In March, the company agrees to a five-year lease extension for its BAe 146-200s. "The Spirit of Christmas" flights are continued in November–December, as are the charity fund-raising flights to Victoria and Kelowna. Significant operational data becomes available for the first time in a decade. Scheduled departures total 96,000 and enplanements are now 1,566,138.

The fleet in 1997 includes 5 BAe 146-200s, 13 DHC-8-101/102s, and 6 DHC-8-311s. The company continues to feed **Air Canada, Ltd.** from 30 destinations in Western Canada, as well as at Portland and Seattle.

On January 10, the company's pilots join their 900 colleagues from the other "Air Canada Connector" carriers in a strike over merged seniority lists. The company operates with replacement workers and charter aircraft, but many flights must be cancelled.

The job action ends on March 9 following a marathon 24-hr. negotiating session in a downtown Quebec City hotel. It is decided to leave it to Canada Labor Relations Board to decide whether Air Canada is to be considered a common employer of both regional and **Air Canada, Ltd.** pilots.

After 26 years in the airline industry, President/CEO Al Graham retires on March 1; he is succeeded by **Air Canada, Ltd.** executive Melvin Cooper.

After weeks of negotiation, the company's pilots, on March 9, ratify a new four-year contract with **Air Canada, Ltd.** Initially tentative, the pact, providing increased benefits and income, is approved by 88% of the eligible flyers voting in a special election. Pilots for the four Connector airlines begin to return to work on March 10.

In April, the carrier drops six of its 24 destinations and begins to dispose of three DHC-8-101s. It also enters into a code-sharing agreement with **Central Mountain Air, Ltd.**, which will permit passengers to connect with Air Canada, Ltd. flights in Vancouver and Calgary.

Thrice-daily nonstop roundtrip DHC-8-311 "Air Canada Connector" service is inaugurated between Victoria, British Columbia, and Seattle.

Also in May, the services of a BAe 146-200 and of airline volunteers are donated to "Cares 4 Kids" to fly a number of terminally ill children and their families to Disneyland in California.

Four DHC-8-101/102s are withdrawn by year's end.

Service continues apace in 1998. It is announced on August 13 that the company and its parent will realign their operations in western Canada in order to increase profitability of under-performing routes while at the same time strengthening their Vancouver and Calgary hubs. It is hoped that the changes will bring annual savings of C\$50 million.

In September, the fleet is revised; 1 DHC-8 is retired and the fleet comes to include 5 BAe 146-200s and 15 DHC-8 turboprops.

On October 5, AirBC launches daily nonstop BAe 146-200 roundtrips between Edmonton and Denver, a hub of **Air Canada, Ltd.**'s "Star Alliance" partner **United Airlines**. Under the August plan, it also takes over the **Air Canada, Ltd.** routes from Calgary to Saskatoon and Regina and from Winnipeg to Regina and Thunder Bay.

In markets unable to sustain profitable nonstop service, customers are now offered connecting service via the Vancouver or Calgary hubs. Previously nonstop, the following services are now flown via Vancouver or Calgary: Edmonton–Regina, Edmonton–Kelowna, Kelowna–Victoria, Victoria–Edmonton, and Victoria–Seattle.

At the same time, AirBC transfers certain lesser routes to its partner, **Central Mountain Air, Ltd.** These include Vancouver to Kamloops, Campbell River, and Comox and Calgary to Kamloops and Grande Prairie.

These changes allow **Air Canada, Ltd.** to redeploy two A320s, an A319, and six Canadair CRJs to more profitable routes elsewhere in its route network.

Building on the success of its first Denver–Edmonton nonstop roundtrip service, the company adds a second daily BAe 146-200 nonstop

roundtrip on April 5, 1999. Like the first, it is a dual-designator service flown with **United Airlines**.

On July 5, daily nonstop BAe 146-200 roundtrips, again shared with **United Airlines**, are launched between Winnipeg and Denver.

With the consolidation of **Air Nova** and **Air Alliance** proving successful, a review of the additional opportunities to be derived from a further consolidation of those two with **Air Ontario** and AirBC is undertaken during the remainder of the year.

On January 20, 2000, Air Canada announces that the process of consolidating **Air Nova**, **Air Ontario**, and AirBC will begin immediately under the leadership of former **Air Nova** CEO Joseph Randall. It is anticipated that the integration process, which will be facilitated by representatives of the three lines, will require a number of months. In the interim, the three will continue operations under their original names.

During the month, the three regionals, AirBC, Ltd., **Air Nova**, and **Air Ontario** take a major step towards their consolidation into a single unit when a head office for a joint carrier is established in Halifax and a western hub at Calgary. Twice-daily DHC-8-100 roundtrips commence on April 3 between Vancouver and Spokane.

Having failed to find a buyer, **Air Canada, Ltd.** is permitted to take over **Canadian Regional Airlines, Ltd.** on August 30 and add that feeder into its regional airline consolidation process. When the integration process is completed at year's end, it is anticipated that the (as yet) unnamed airline will be one of the largest regional airlines in the world, with over 5,000 employees and some 135 aircraft, mostly Dash-8 turboprops.

AIRBORNE CARGO: United States (1945–1947). One of many new all-cargo airlines formed by returning World War II pilots, little is known about this small Douglas C-47 equipped operation—except for its 1947 termination date.

AIRBORNE EXPRESS: Airborne Air Park, 145 Hunter Dr., Wilmington, Ohio 45177, United States; Phone (513) 382-5591; Fax (513) 382-2452; <http://204.189.36.1/airborne>; <http://www.airborne.com>; Code GB; Year Founded 1946. The **Airborne Flower Traffic Association** is founded at San Francisco in 1946 to fly fresh flowers from the U.S. West Coast to the East Coast. The company is reformed and incorporated, under Delaware law, on April 23, 1947 and its name is changed to AFT Inc. and becomes an air freight forwarder. In 1948 CAB approval is received for the shipment of other kinds of commodities besides flowers.

Former U.S. Army Air Forces officer Holt W. Webster organizes **Pacific Air Freight** at Seattle in 1949 to transport perishables to Alaska. The carrier will continue operations apace for the next 18 years. Meanwhile, in 1953, the CAB certifies Airborne as an international freight forwarder.

On April 23, 1956, AFT, Inc. becomes **Airborne Freight Corporation**. The future president and COO, Robert Brazier, joins Airborne in 1959. The firm is "taken public" in 1964; its first stock is traded on the New York Stock Exchange at approximately 7 3/4 points. The future corporate chairman and CEO, Robert S. Cline, is named Pacific's vice president finance in 1965.

Airborne and Seattle-based **Pacific Air Freight** merge in late 1967. Although the name of the California-based firm survives, management direction is provided by the former officers of Pacific Air Freight from company headquarters in Seattle; Robert Brazier is vice president operations. The new concern is incorporated under Delaware law on May 10, 1968 and is now the second largest air freight forwarder after **Emery Air Freight**.

Operations continue apace through 1972 and income rises from \$53.87 million in 1968 to \$88.43 million in 1972; during the same year, net income climbs from a \$2.4 million deficit to \$1.45 million gain.

In 1973, Airborne's service standards are diminished when the first Arab oil embargo causes the airlines to eliminate or reduce services to many cities. Income in for this year and 1974–1975 still accelerates, totalling (in millions), respectively: \$98.03, \$109.93, and \$112.01.

The second embargo, in **1976**, again adversely affects company services. By this time, Airborne also finds that many of its time-sensitive shipments are being lost to the four-year-old small package operator **Federal Express**. Still, operating income rises, hitting \$132.88 million this year and \$150.39 million in **1977**.

Late in the latter year, the company joins with Greyhound Lines, Inc. to start a new bus and air freight service to move packages, with buses handling shipments to and from points not served by air. Airborne Freight continues as the second largest air freight forwarder in the U.S., but following enactment of legislation guaranteeing air freight deregulation, the company makes plans for direct, if contracted, aerial operations.

Following passage of the Airline Deregulation Act in **1978**, Airborne contracts with Wisconsin-based **Midwest Express**. Engaged with Beech 18s in the transport of Federal Reserve checks, Midwest will take over delivery of Airborne's small packages and time-sensitive shipments during October to 12 cities in the Midwest and east. In November, the company applies to the CAB for a domestic cargo certificate and, during the year, Vice President Operations Robert Brazier becomes president/COO.

In **1979**, Midwest begins additional service to the West Coast with its subsidiary, **Midwest Charter Express**. In April the carrier starts to acquire a fleet of NAMC YS-11As from **Piedmont Airlines**. The aircraft to be acquired will include the *Blue Ridge Pacemaker*, *Tide Water Pacemaker*, *New River Pacemaker*, *Potomac Pacemaker*, *Albemarle Pacemaker*, *Cherokee Pacemaker*, *Roanoke Valley Pacemaker*, *Manasas Pacemaker*, *Old Hickory Pacemaker*, *Pee Dee Pacemaker*, and *Great Smokies Pacemaker*.

In **1980**, Airborne officials adopt a major change in strategic direction and opt to expand into the fledgling overnight air-express industry. The Airborne Freight Corporation, still headquartered at Seattle, becomes a holding company in April, owning four other subsidiaries, including Midwest Charter Express, acquired for \$5.6 million (328,000 shares of common stock), and renamed **ABX Air**. Net earnings for the year total \$7.9 million.

During **1981**, Airborne completes its transition to a combined air freight forwarding and express package company operating an airline; ABX Air's new chairman is longtime manager Graham Dorland. The decommissioned Strategic Air Command base at Wilmington, Ohio, is purchased and a multimillion-dollar hub airport and sort center is completed at the renewed base. The fleet is standardized at 6 Douglas DC-9-32s, 2 Aerospatiale SE-210 Caravelles, and 13 former **Piedmont Airlines** NAMC YS-11As, the latter with cargo door conversions.

The company begins television advertising on October 21 with an ad campaign designed by Della Femina, Travisano & Partners. The initiation of express package service allows the carrier to record an 11.9% increase in shipments, to 4.9 million, but a decrease of 15.5% in poundage (141 million) is experienced in the process. The heavy investment involved in entry into the "overnight wars" results in a poor financial showing. Revenues drop 1.4% to \$280 million and the net profit falls sharply, down to \$3.1 million.

The fleet in **1982** includes 5 DC-9-32s, 2 DC-9-32Fs, 2 Caravelles, 13 YS-11As, 1 CV-600, 1 Piper PA-31-310 Navajo, and 2 Lear Jets. A total of 140 million pounds of cargo are flown (down a million pounds from 1981), but in reflection of the concentration on small packages, the total number of shipments accelerates 22.4% to just under six million.

Freight ton kilometers flown, the new measure of achievement, total 118.1 million. On revenues of \$295.2 million, a \$3.6 million net profit is recorded, a 17% boost.

Two additional DC-9-32s join the fleet in **1983**, replacing the Caravelles, Navajo, and Lear Jets. Space- and time-available charter operations are initiated as the company surpasses **Emery Air Freight** in shipment volume.

Freight ton kilometers operated climb 20% to 124.4 million as 142.4 million pounds are transported and a \$3 million net profit is posted.

The payroll grows 12.5% in **1984** to 900 and the fleet includes 4 DC-9-32s, 3 DC-9-31s, 2 DC-9-32Fs, 2 DC-9-33Fs, 2 DC-9-10s, 13 YS-

11As, and 1 Cessna 402. Cargo jumps 5.2% to 135.91 million FTKs (145 million pounds) as Airborne leads the express industry with record domestic shipment growth, up 63%. The U.S. government approves the company's application for a Foreign Trade Zone (FTZ) on the Wilmington base, making it the only privately operated FTZ in the nation.

Revenues jump 14.5% to \$79.35 million. Costs climb 11.9% to \$73.33 million and operating profit nearly doubles, up to \$6.02 million. Net gain rises to \$5.47 million.

The trade name Airborne Express is adopted in **1985** to define more closely the corporation's line of business—air express. The fleet now includes 11 YS-11As, 1 DC-8-62, and 17 DC-9s.

On February 5, a 0.15-inch layer of ice on the wings of a DC-9-15F raises its stall speed to a point too high for takeoff from Philadelphia. The aircraft, with two crew, lands back on the runway on its tail and right wingtip; although the freighter must be written off in the ensuing crash, there are no fatalities.

A joint venture is now announced for the construction of the nation's first air industrial park, the Airborne Commerce Park, at Wilmington.

A B-707-320C and a B-727-100 are chartered during the fourth quarter to boost capacity.

Both domestic and international traffic grows by more than 40%. Revenues jump 11.5% to \$465.99 million and with expenses held low, an operating profit of \$5.95 million is achieved and a net gain of \$6.16 million is celebrated.

Airline employment rises 20% in **1986** to 1,300 and the fleet includes 16 DC-9Fs and 12 YS-11As. The first 3 DC-8-62s and 2 DC-10-10s arrive, providing long-haul capacity. Orders are placed for 5 additional DC-9Fs and 6 DC-8-62s. A U.S. Customs station opens at Wilmington, expediting customs clearance for Airborne shipments.

Airborne becomes the first carrier to provide Electronic Data Interchange (EDI) transmission of freight information for its customers and, at midyear, the company announces that it has increased the number of nations it serves to 173, including Eastern Europe and China. In August, a joint agreement is signed with a large Japanese trucking concern, Fukuyama Transportation Company, Ltd., to feed Airborne's outbound service and handle its inbound shipments.

During the year, Australia's TNT, Ltd. makes an unsolicited bid to purchase 100% of the company's outstanding common stock for \$29 share. Airborne's board rejects the offer; however, TNT still manages to acquire 17.6% shareholding.

Cargo advances 18.7% to 219.38 million FTKs and revenues swell 21.3% to \$109.97 million. Expenses jump 18.3% to \$100.1 million and allow an operating profit of \$9.77 million. Net gain nearly doubles, to \$13.18 million.

The \$23-million Airborne Commerce Park opens at Wilmington in **1987**. The facility contains an on-site customs facility and brokerage service, an animal quarantine facility, the Central Printing Center, and a third-party inventory management and distribution service known as the Airborne Stock Exchange. A major expansion of the sorting operation is completed and automated, boosting sort capacity from 165,000 to 350,000 packages per night. New flight training, administration, and maintenance buildings are also occupied.

More aircraft are acquired as capacity is increased by 40%. The fleet now includes 13 DC-8-62s, 19 DC-9Fs, and 12 YS-11As. The fleet is increased by the delivery of 6 DC-8-62s and 3 DC-9Fs.

An agreement is signed with Purolator Courier, Ltd. of Canada that substantially increases corporate coverage north of the border. New service is provided to and from more than 8,000 Canadian locations.

The number of shipments handled increased by 30% to 36 million. Revenues advance 17% to \$632 million; however, expenses of the new Ohio center cause the net profit to fall to \$5.9 million.

Expanded EDI services are offered in **1988**, along with positive tracking and computer linkage. The fleet now includes 13 DC-8-61Fs and -62Fs, 19 DC-9Fs, and 12 YS-11As.

An exclusive contract is signed with IBM to transport all of that corporation's express packages (less than 150 pounds); the deal is worth

\$40 million annually. The company also acquires the operations of Sky Courier Network, which allows it to become the first air express carrier to provide same-day delivery.

A DC-8-63AF is purchased from **Air Canada, Ltd.** in November.

Despite an extremely competitive market and price discounting, shipments increase by 31% to 47.4 million and revenues jump 22% to \$768 million. Costs are kept down and allow an operating profit of \$22.37 million and net gain of \$7.03 million.

The workforce is increased by 26.4% in 1989 to 2,262 and the fleet grows to include 55 aircraft: 8 DC-8-62s, 9 DC-8-61s, 2 DC-8-63s, 23 DC-9-32s, 2 DC-9-10s, 1 DC-9-41, and 12 YS-11As. To position itself for competition with the likes of **Federal Express** and **UPS (United Parcel Service)**, in February the company signs an operating agreement with Tokyo-based Panther Express International, one of Japan's five major express carriers, to handle its express outbound shipments on a worldwide basis. A joint project is started with Pratt & Whitney to have all company DC-9s hush-kitted; orders are also placed for 26 additional DC-9Fs, all thus silenced.

To capitalize on the smash motion picture *Batman*, Warner Bros. contracts with Airborne in July for the speedy delivery of 10 million "bat-brochures" (200,000 pounds) to 300 locations throughout the U.S. Another unique transport occurs in August when the robot SICO—the only mechanical member of the Screen Actors Guild—is flown to Nagoya, Japan, for the opening of the World Design Expo '89.

Cargo tonnage grows by 25.4% to 467.71 million FTKs and revenues bounce upward by 23.7% to \$949.89 million. With costs held to a 20.8% rise of \$900.36 million, Airborne is able to generate operating income of \$49.51 million. Net gain more than doubles to \$19.06 million.

The number of employees is increased by 31.8% in 1990 to 3,341 and the fleet includes 61 aircraft. Added to the fleet are 1 YS-11A, 1 DC-8-63, 13 DC-9-31s, 6 hush-kitted Stage 3 DC-9-33s; withdrawn are 2 DC-8-62s and 14 DC-9-32s. Early in the year, stockholders learn that \$1,000-worth of common stock purchased in 1980 is now worth \$1,920. A joint venture is formed with the large Japanese trading company Mitsui & Co. and Airborne Express Japan becomes the fourth largest carrier in the Japanese market.

In America, a third sort building is opened at the Ohio base and two new regional hubs, at Roanoke, Virginia, and Columbia, Missouri, are opened.

Company statisticians note in December that, since January 1986, shipments have increased 35% per year while revenues have doubled. Freight increases by 16.6% to 545.31 million FTKs and revenues ascend 24.4% to \$1.18 billion. Expenses climb 23.6% to \$1.11 billion and allow a \$69.41 operating profit. The net profit again more than doubles to \$33.57 million.

Airborne mounts significant expansion into the Pacific Rim area in 1991. After two-and-a-half decades of air freight forwarder operations in Japan, Airborne signs a joint venture agreement with Mitsui & Co., thereby gaining access to large Japanese corporations as well access, via Mitsui, to markets in Bangkok. In addition, offices are opened in Australia, New Zealand, Singapore, Taiwan, and Hong Kong, but are registered as local companies operated by local personnel.

In August, the company performs a \$115-million convertible debenture to raise public money to underwrite some \$100 million in capital expenditures not covered by revenue income. For the first time, the company, which has previously flown only at night, introduces a limited daytime schedule for its second-day services.

The number of domestic shipments increases 23.5% to 106.2 million; international shipments rise 20% to 2.77 million. Revenues total \$1.4 billion, a 16.7% boost, and net gain slips to \$27.2 million.

Company employment in 1992 stands at 14,447 (4,700 in the airline division, including 465 pilots) and lift capacity is now 2.07-million pounds per night.

While on a training flight from Wilmington on March 6, a NAMC YS-11A-205 encounters landing gear problems and must make a wheels-up landing at Airborne Park; there are no fatalities.

A year of labor difficulties improve when a federal court dismisses charges by both company and union pilots of unfair labor practices, allowing the two groups to sign a new contract in June.

Flight Ready Letter Express is expanded in October to include Flight Ready Express Pack. The International Standards Organization, based at Geneva, Switzerland, awards the company ISO 9000 certification in December for its Chicago and Seattle facilities; the airline is the first air express carrier so recognized.

On the year, a total of 133,488,000 shipments are made. Revenues climb 8% to \$1.48 billion, but as costs rise, the net profit slides to \$23 million. Although, financially, the worst year in almost a quarter-century, comfort can be taken in the fact that Airborne is the only major U.S. operator besides **Southwest Airlines** and **UPS Air** to post net gain.

The workforce of President Carl Donaway's airline division is increased by 100 in 1993 and the fleet now includes 89 aircraft: 28 DC-9-30s, 13 DC-9-40s, 12 YS-11As, 10 DC-8-61s, 9 DC-9-30Fs, 6 DC-8-62s, 5 DC-8-63Fs, 4 DC-8-63s, and 2 DC-9-10s. Overnight small-package express services continue to be provided throughout the U.S. and to 183 other countries.

In May, the company subtracts its logistics operation from the airline, creating a new subsidiary, Logistics Services, at the Wilmington base. Former Vice President-Corporate Marketing Kenneth McCumber is placed in charge. Another new subsidiary, Advanced Logistics Services (ALS) is set up in October. The new concern provides outsourced warehousing and distribution services.

The number of shipments increases during the year by 25% to 164.1 million. Revenues jump 16% to \$1.71 billion and net profit reaches \$36.35 million, the 16th highest figure among all of the world's airlines. Airborne remains the third largest U.S. integrated, all-cargo corporation.

The DC-8-63H formerly operated by **Air Starline, Ltd.** is purchased from **African Safari Airways, Ltd.** in January 1994. Seaborne capacity is added to the company's international capacity in April. The new Ocean Service Division is headed by former Sea/Land executive Charles Ogle while Select Delivery Service, a second-day delivery, comes to represent 40% of the company's business. ALS establishes the first new film distribution program for the motion picture industry in the past 50 years.

On September 13, employing a DC-9F, Airborne begins overnight delivery to the company's San Juan hub for daily pickups and deliveries to most locations around the island.

Shipments increase by 16.5% to 191.4 million and revenues jump 14.5%, reaching \$1.97 billion and allowing a net gain of \$37.9 million.

Airborne introduces 1-3-day delivery service to American Samoa on February 21, 1995. During the first half of the year, the company establishes the Airborne Alliance Group, a consortium of transportation, logistics, third-party customer services operations, and high-tech companies providing value-added services.

In September, a second, parallel runway, new aprons, and taxiways plus a tenth warehouse are opened at the company's Wilmington base. By mid-month, the Seattle-headquartered air express carrier is shipping just under one million small packages per night is second in nightly air express package service, behind **UPS (United Parcel Service)**.

For the first time in the company's history, Airborne surpasses the one-million-shipments-per-day mark. The milestone is reached during the week of November 6 when 5,046,097 packages are shipped.

Two new ATC radars are turned on at Wilmington on November 30. On December 28, Airborne agrees to acquire 12 used B-767-281s, previously operated by **All Nippon Airways Company, Ltd. (ANA)**, from Itochu Corp. and Marubeni Corp. in Japan; they will be converted into freighters for delivery beginning in the fall of 1998.

The number of shipments climb by 20.2% to 230 million and operating income surges 13.6% to \$2.23 billion. Costs accelerate 15.3% to \$2.17 million, causing the operating profit to drop to \$68.98 million. A net profit of \$23.82 million is posted.

1996 is the fiftieth anniversary year. A severe winter storm throughout the northeast region of the U.S. and Canada hampers operations to a

degree between January 7 and 11. Twelve ground crewmen are nauseated at New York (JFK) on May 28 by fumes from a canister leaking a liquid sulfur product in a storage area.

Flying from Greensboro, North Carolina, a DC-8-63F with three crew and three passengers and conducting a maintenance-check flight crashes into White River Mountain near Narrows, Virginia, on December 22; there are no survivors. Six months later, the NTSB will fault the pilots for not employing revised stall recovery procedures developed by the carrier in 1991.

The crew of a DC-8-62F loses control of their aircraft during its take-off roll from Orlando on December 30; the plane goes off the right side of the runway where it comes to rest in dirt about 75 ft. away. None of the five crewmen are hurt.

The number of international shipments accelerates 9.7% to 5 million while domestic shipments jump 12.7% to 254 million. Revenues move up 10.9% to \$2.48 billion while costs are up an almost equal 10.8% to \$2.4 billion. Operating profit rises to \$79.18 million while a net \$27.4-million gain is reported.

On January 2, **1997**, the 3,500-employee carrier enters into a pair of new partnerships. The first is a joint venture with Van Ommeren Intexo Logistics Services, N.V. (Intexo), which provides the U.S. freight operator access to services and warehouses at Amsterdam's Schiphol Airport. The other is a \$2-million acquisition in Aramex International, Ltd., an air express and freight forwarding concern that hubs from London to Dubai, New York, and Amman.

Also during the month, a new handling facility is opened at Garden Grove, California. A Shareholders Rights Plan is approved on February 14 that is designed to protect the company from hostile takeover attempts.

A joint venture with Ribbon Technologies (Pty.), Ltd. of Johannesburg is concluded on March 11 and that concern, which holds a customs license and a bonded warehouse, is renamed Airborne Express South Africa (Pty.), Ltd.

The 800 members of the Airline Professionals Association (APA), Teamsters Local 1224, sign a new contract with management in June.

A 10-year agreement is signed with **Delta Air Lines** in August under which the Atlanta-based major will maintain, overhaul, and support the cargo line's 12 B-767-200s. The contract is valued at \$130 million.

Also during the month, the company generates an additional \$50 million in revenues that raise profits by 30%, largely as the result of additional business acquired during the strike at **UPS (United Parcel Service)**.

A total of 1.39 billion FTKs are operated and operating revenues swell 17% to \$2.91 billion. With expenses held in check, the net profit zooms up to \$120.07 million.

At the beginning of **1998**, Airborne is the 22nd largest airline in the world in terms of net profit and 25th in freight carried, fleet size, and operating income.

The fleet this year includes 4 B-767-200Fs, 13 DC-8-61Fs, 6 DC-8-62Fs, 17 DC-8-73Fs, 2 DC-9-10Fs, 43 DC-9-30Fs, and 25 DC-9-40Fs.

A new facility is opened at Jacksonville on March 19, featuring 50,000-sq. ft. of warehouse and office space. On May 26, two regional customer service centers are opened, at Boise, and Syracuse. They join the already operational regional centers at Phoenix and Chantilly, Virginia.

During the year, the APA and management become involved in a record number of grievances over scheduling and pay provisions under the pilot labor contract signed the previous June. In September, Capt. Charles Rodenberg and his crew refuse to make a check flight for which they believe themselves untrained and unprepared. When Rodenberg refuses to sign a letter admitting insubordination, he is terminated.

A 2,700-ft. station is opened in Fargo on October 27. Led by local APA president, Capt. Rick Ziebarth, the carrier's pilots on October 29 refuse to fly voluntary overtime and plan for informational picketing in the weeks ahead.

In a ceremony at Los Angeles (LAX) on November 13 attended by representatives from Walt Disney, Nestle, Paramount, Warner Brothers, Nissan, and other area corporate customers, the first of 12 B-767-281Fs, scheduled for delivery over the next 2 years, is unveiled by officials from Airborne and Boeing. The aircraft, the first ever to be converted from a passenger configuration under a special FAA type rating and wearing a revised company livery, enters revenue service later in the year from this California base.

The Sixth U.S. District Court holds a hearing on the termination of Capt. Rodenberg on November 23-24. The 3,500 company employees represented by the Teamsters ratify a five-year labor contract on November 29 by a margin of 90 votes. The carrier agrees to offer at least 50% of its current part-time work as full-time work by April 1, 1999.

On December 9, the company enters into agreements with the Itochu Corporation and the Marubeni Corporation, both of Japan, to purchase 11 additional B-767-281s currently under lease to **All Nippon Airways Company, Ltd. (ANA)**. At a cost of \$25 million per copy, the planes will be converted into freighters by Triad International Maintenance Corporation at Greensboro, North Carolina and will be delivered between 2000 and 2002.

Under the original contract, 6 B-767-281Fs are in service by year's end, flying from Wilmington to the U.S. West Coast.

The number of shipments for the year increases 6.7% to 323,041,000. Revenues climb 5.6% to \$3.07 billion and expenses are held to \$2.84 billion. The operating profit rises to \$234.46 million, while the net gain reaches \$137.28 million.

Flights continue in **1999**. On February 22, the FAA proposes fines of \$210,000 against Airborne and three of its contracts for failing to properly train their employees in hazardous materials handling procedures.

On March 10, in a move designed to significantly expand and enhance customer services for Airborne's European operations, the company buys out its former joint venture partner in The Netherlands and opens entirely new, wholly owned facilities at Birmingham, England.

In November, a 6-year, \$60 million contract is signed with Israel Aircraft Industries; under its terms, Airborne will handle all of the manufacturer's traffic in and out of the U.S.

Although traffic figures are not available, the year's revenue picture is not all that rosy. On operating income of \$3,140,226,000, the net profit falls to \$91.2 million.

Among the world's top 25 airlines at the beginning of the new millennium, Airborne is 24th in operating revenue.

During the first half of **2000**, a variety of new Internet-based services are introduced, including "Airborne @ home," a residential delivery service undertaken with the U.S. Postal Service.

In July, Bob Brazier is elevated to the new post of vice chairman and Carl Donaway is promoted to president/CEO.

AIRBORNE OF SWEDEN, A.B.: Sweden (1987-2000). Organized at Sveg in **1987**, founder Paul Hedman is managing director, with Ingrid Hedman as chief of administration and Hakan Olofsson as flight director. A Cessna 402C is acquired and regularly scheduled passenger services are inaugurated linking the company base with Arlanda. A second 402C and a Cessna 404 Titan II are purchased in **1990**.

The fleet is strengthened in **1992** by the addition of a Piper PA-31-350 Navajo Chieftain. Flights continue apace in **1993-1994**. During these years, one Cessna 402C is replaced with a second Titan II.

A Dornier 228-110 is acquired in **1995** and, in **1996-1999**, the fleet is altered to include 2 Dornier 228-110s, 1 Cessna 404, and 1 Navajo Chieftain.

A Dornier 228-110 is acquired in **1995** and, in **1996-1999**, the fleet is altered to include 2 Dornier 228-110s, 1 Cessna 404, and 1 Navajo Chieftain.

Total control of the carrier is taken by **Skyways, A.B.** in early **2000**. On October 1, Airborne is merged with **Highland Air, A.B.** and **Airborne I Norrköping, A.B.** to form Hultsfred-based **Skyways Regional, A.B.**

AIRCAL: United States (1981–1987). A bidding war with **Air Florida** is resolved in March 1981 when William Lyon and George L. Argyros (owners of the Seattle Mariners baseball team), representing AirCal Investments, purchase **Air California** from Westgate-California Corporation for \$61.5 million. In addition to a 2,200-member workforce, the company now includes 5 newly received McDonnell Douglas DC-9-80s (MD-80s) plus 13 Boeing 737-293s, and 2 B-737-193s; orders are outstanding for 2 more MD-80s, with options held for 4 others. The new owners change the name of their company to AirCal on April 6 and adopt a new corporate identification program. Lyon becomes chairman, president, and CEO.

Phoenix and Seattle are placed into the route system on June 1. While landing at John Wayne Airport at Santa Ana after a flight from San Jose a few days later, a B-737-293 with 109 aboard must swerve to avert a collision with a second small company Boeing on the ground; 34 people are injured.

Passenger boardings rise 16.9% to 3,490,422. Freight traffic accelerates a significant 75.5% to 1.67 million FTKs. Unfortunately, expenses of \$211.26 million, when combined with the effects of the PATCO air traffic controllers' strike and subsequent ATC restrictions, bring an operating loss of \$1.3 million on revenues of \$211.61 million. However, a net profit of \$5.6 million is posted.

The employee population is decreased by 20.9% in 1982 to 1,703. On January 1, in competition with **Pacific Southwest Airlines (PSA)**, five-times-per day shuttle service is inaugurated over the California corridor between Los Angeles and San Francisco. A B-737-293 skids off the runway in an emergency landing at Los Angeles (LAX) on February 16.

Burbank joins the route network in March. The Orange County Board of Supervisors during the same month pushes the company to expand when it adopts an access plan designed to reduce jetliner noise impact in the local area. The new plan limits authorized average daily departures at John Wayne Airport to a maximum of 41, divided between the five companies providing flights.

Financial difficulty forces AirCal to drop its Phoenix, Fresno, Monterey, and Las Vegas markets at year's end as traffic dips 1.2% to 3,408,533 passengers carried. Still, freight traffic rises 3.8% to 1.74 million FTKs. Although 4 Boeing 737-293s are eliminated (and replaced by the last 2 outstanding firmly ordered MD-80s), the carrier reports to the CAB that expenses exceed income. Revenues of \$214.7 million are earned; however, with expenses of \$235.4 million, a net loss of \$24 million is suffered, atop an operating decline of \$20.7 million.

The payroll is increased 10.9% in 1983 to 1,889 and the fleet now includes 7 MD-80s, 14 B-737-293s, and 2 B-737-193s.

In the spring, a number of aggressive actions are effected in an effort to enhance business. Passengers receive more legroom and a complementary snack service, in addition to seating assignments. After readjusting its routes, streamlining its cost management, and accelerating its marketing, AirCal experiences a remarkable turnaround.

As a result of redeployment of most of its fleet into California's north-south corridor, increasing scheduling there by 35%, and initiating service to and from the new Terminal One at LAX, AirCal generates a significant traffic improvement. Competing **Pacific Southwest Airlines (PSA)** is forced onto the defensive and into a \$9.8-million net loss.

In September, the carrier "goes public," selling 2.5 million shares of common stock. During the month, four additional daily nonstop roundtrips are introduced between Los Angeles and San Francisco for a total of 12. In response, both **United Airlines** and **Pacific Southwest Airlines (PSA)** increase their number of flights.

In addition, twice-daily roundtrips are inaugurated between Burbank and Reno, along with daily roundtrips from Burbank to Portland, and San Jose/Ontario to Seattle/Tacoma nonstops and direct service.

Enplanements advance 4.6% to a record 3,566,153 for the year. Revenues jump 11.3% to \$239 million while expenses decline 5.8% to \$221.79 million. The operating profit is \$17.2 million and the amount of net loss improves as the company is only \$2.9 million in the red.

As aggressive marketing continues during 1984 in the 13 cities served, AirCal's growth continues, including a 5.9% rise in employment to 2,000. Four-times-per-day service is inaugurated on January 23 from Los Angeles to Sacramento. At the same time, the company returns to Palm Springs, from which it offers nonstops to San Francisco, Ontario, and Los Angeles and direct service to San Jose, Reno, and Seattle.

During the first quarter, the company moves into a new passenger terminal at LAX, as work progresses on a new terminal at Oakland. Summer business flourishes as a direct result of the increased local capacity required for the Los Angeles Olympic Games and the Democratic National Convention.

Boarding records are set each month as enplanements race upward 11.9% to 3,989,867 and cargo skyrockets 76.3% to 3.42 million FTKs. Revenues jump 27.2% to \$303.94 million and expenses, although rising 26% to \$279.49 million, are sufficiently under control to allow an operating profit of \$24.45 million and a net profit of \$8.52 million.

The payroll grows by 38% in 1985 to 2,760. During the first quarter, the company profits from a 29-day strike by pilots at competing **United Airlines**. The first Boeing 737-393 is delivered in March and the carrier becomes an international airline on June 1 when it begins scheduled flights to Vancouver, Canada.

Meanwhile, David Banmiller is elected president and COO in May. Also during the spring, the company moves into a new passenger terminal at Oakland.

The entry of **Continental West Airlines** into the California market in September has an adverse impact.

Customer bookings ascend 11.6% to 4,451,000 and revenues jump 13.3% to \$344.5 million. With expenses held at \$331.69 million, profits of \$12.8 million (operating) and \$9.27 million (net) are celebrated.

Airline employment rises 26.7% in 1986 to 3,800 and the fleet includes 8 B-737-393s, 23 B-737-293s and 2 B-737-193s. In March, a new market is initiated at Anchorage. Simultaneously, the company begins to take delivery of 6 British Aerospace BAe 146-200s for use on flights into John Wayne Airport in Orange County. Thrice-daily nonstop B-737-393 service is launched from John Wayne Airport to Chicago (ORD) on August 15; San Diego is initiated later.

To meet competition, the carrier is forced to heavily discount its fares between spring and fall. Enroute from Los Angeles to Portland on June 6, a B-737-293 comes within 100 feet of a private aircraft before the jetliner's pilot banks to avoid a collision.

On November 17, **American Airlines** announces plans to beef up its West Coast presence by purchasing AirCal, which has lost \$6.2 million during the year's first half, for \$225 million.

Passenger boardings accelerate 12.9% to 5,024,090 and cargo increases 54.1% to 4.37 million FTKs. Revenues advance 9% to \$375.41 million, costs are up 14.3% to \$379.08 million, and the operating loss is \$3.67 million. There is a net loss of \$1.62 million.

American's takeover of 3,800 employee AirCal is approved by the DOT in March 1987. Integration of the national into the Dallas (DFW) major is smoothly completed in July.

During its independent first quarter, the carrier transports a total of 1,335,000, an 18.3% boost over the same period a year earlier. Revenues during the same timeframe ascend 33.5% to \$101.9 million; expenses, however, are high and force a \$6.3-million operating loss. The bottom line net is in the plus column, allowing the carrier to bow out with a net gain of \$6.25 million.

There are two websites relating to Air Cal on the World Wide Web. One, maintained by a "Veteran Air Californian," is <http://members.aol.com/aircal737/aircal.htm>. The other is <http://overworld.compuserve.com:80/homepages/aircal>.

AIRCALIN, S.A.: 8 Rue Frederic Surleau, BP 3736, Noumea Cedex 98846, New Caledonia; Phone (26) 55 11; Fax (27) 27 72; <http://www.air-caledonie.nc>, <http://www.pacificislands.com/airlines/caledonie.html>; Code SB; Year Founded 1997. On January 1,

1997, Air Caledonie International, S.A., the airline of New Caledonia (a French overseas territory), is given an entire corporate makeover, adopting a new name, new livery, new colors, and new advertising. Still, Charles Lavoix remains chairman, with Alain Balfereau as managing director.

The fleet comprises both an owned de Havilland Canada DHC-6-300 Twin Otter and a leased Boeing 737-33A, which features an eight-seat, full-leather business Hibiscus Class compartment. The jetliner continues to operate its weekly service from New Caledonia's capital, Noumea, to Brisbane, Sydney, and Melbourne on a joint venture basis with **Qantas Airways (Pty.), Ltd.** In addition to Australia, Aircalin serves Auckland, Nadi, Papeete, Port Vila, and the Wallis and Futuna Islands. International service features fine French wines and in-flight meals; the domestic network connects 11 airports on Grand Terre and the outer islands, providing quick access to the seven-island group.

The carrier operates invisibly in **1998–1999**. The company's first wide-body aircraft is an ex-Swissair, **A.G.** Airbus A310-325, leased for three years from its manufacturer, which arrives at Noumea on March 26, **2000**. Four days later, it is placed into service on routes to Osaka (KIX), Auckland, Papeete, and Sydney.

AIRCRAFT CHARTER GROUP: Hangar #1, Sikorsky Memorial Airport Stratford, Connecticut 06497, United States; Phone (203) 375-5211; Fax (203) 377-8919; Year Founded 1983. ACG is established at Stratford in **1983** to offer both domestic and international passenger charters. Flights continue over the next 15 years and, by **2000**, the company employs 6 full-time and 3 part-time pilots. From Sikorsky Memorial Airport, operations are undertaken with 1 each Learjet 35A and Learjet 24, plus 1 Beech 58 Baron. Another Learjet 35A is stationed at Allentown, Pennsylvania.

AIRCRAFT OWNERS ASSOCIATION. See **AOA ZAMRUD AVIATION CORPORATION**

AIRCRAFT SERVICES GROUP: 1032 First Street, Stewart International Airport, New Windsor, New York 12553, United States; Phone (201) 393-0500; Fax (914) 567-3567; Year Founded 1990. Aircraft Services Group is set up at New Windsor, New York, with two geographically separated divisions. The smallest contingent is a single Grumman G-1159 Gulfstream II stationed at Jackson Hole, Wyoming.

The principal unit is based at Teterboro Airport in New Jersey, where Vice President Jonathan Parker oversees the passenger flights made by 1 Gulfstream II, 1 Gulfstream IIB, and 1 British Aerospace BAe (HS) 125-800 Hawker executive jet.

AIRCRAFT TRANSPORT AND TRAVEL, LTD.: United Kingdom (1916–1920). On October 5, **1916**, air travel protagonist George Holt Thomas of Aircraft Manufacturing Company, Ltd., registers AT & T as Britain's first airline; initial capitalization is £50,000. World War I prevents the start-up of flying operations; however, four days after the Armistice, November 15, **1918**, RAF Major Sefton Brancker is appointed managing director and Thomas announces preparations for London–Paris service.

On February 1, **1919** at the request of the Belgian government, AT & T launches a Folkestone–Ghent air parcel service for areas of Belgium suffering acute winter difficulties. Seven RAF DH 9s (flown by RAF pilots) with AT & T fuselage stickers carry relief packages in their rear cockpits. During the spring, Brancker recruits flight personnel and assembles a fleet of 4 de Havilland DH 4s and 4 DH 9s. In March, orders are placed for DH 16s (reconfigured DH 9s), the first purely commercial aircraft to be built for carrying passengers in the U.K. following World War I.

On May 1, the Air Ministry's Air Navigation Regulations come into force. These require all civilian aircraft to be registered, to display the allocated nationality markings and letters (G = Great Britain), and to

have a certificate of airworthiness; crews are also required to possess flight certificates. The DH 9 (G-EAAA) becomes the first plane to be entered into the British Civil Aircraft Register, thus becoming the U.K.'s premier official civil and commercial airplane.

The same day, a company DH 9 (piloted by H. J. Saint with D. Greig as passenger) departs Hounslow for Bournemouth at 4:30 a.m. with a load of newspapers. This is the first civil flight under the new regulations, as well as the first from an officially appointed U.K. airport, and the first from London. The aircraft makes a forced landing on fog-shrouded Portsdown Hill at 5:30 a.m. Both of the de Havilland's occupants are injured in Britain's first civil aircraft accident and the plane is wrecked.

To coincide with the Paris peace celebrations, the Air Ministry now announces that, for a week after the 14th of July, civil flights to Paris and back from the Hounslow aerodrome would be allowed. The news is carried in the London *Evening News* and prompts Colonel Pilkington, prominent member of a glass manufacturing family, to approach Managing Director Brancker. Following some negotiation, Brancker, whose airline has yet to publish advertisements announcing its service, agrees to a £42 charter.

On July 15, a DH 9 piloted by Lt. Jerry Shaw, makes the Hounslow–Le Bourget charter for Colonel Pilkington the airline's first international proving flight (now recognized as the first British commercial flight). During the summer, four new DH 16s are delivered.

A famous charter flight is made early on the morning of August 25 by a DH 4A piloted by E. H. "Bill" Lawson. One passenger (journalist George Stevenson-Reese, who pays £21 for the honor of being first passenger) and a consignment of grouse, newspapers, leather, and Devonshire cream are carried on the 2½-hour flight from Hounslow to Le Bourget. At 12:30 p.m., a DH 16 piloted by Cyril Patterson departs Hounslow with four intrepid travelers on the world's first regularly scheduled, daily, international commercial flight for passengers; Lawson's DH 4A returns from Paris later in the afternoon, completing the carrier's three-frequency inaugural day.

With a standard £21 fare, AT & T now settles into the business of providing regular scheduled service to and from the French capital. Passengers willing to take advantage of this new service are offered complementary road transport from central London to Hounslow and from Le Bourget to downtown Paris.

On August 25, Sefton Brancker presides at the Hague as chairman of the first meeting of the International Air Traffic Association. Predecessor of today's IATA—the International Air Transport Association—the organization is officially formed by an agreement signed on August 28. During an October 1–6 rail strike, a company DH 10 is employed to fly mail from London–Glasgow via Bristol, Birmingham, Newcastle, and Manchester; DH 9s fly mail to Paris.

On October 29, a DH 4A, en route to Hounslow from Le Bourget, loses its compass; low on fuel, it is forced to ditch in the English Channel near a small ship. Pilot Shaw and his single passenger are taken aboard and then put ashore at Weymouth to complete their journey to London the next morning by train. The company completes its 147th flight on November 1.

The company now wins the first foreign airmail route to be awarded by the British post office. Each letter will cost its sender 2 shillings 6 pence, with the shillings paid to AT & T. In preparation for the service, emergency landing fields are laid out or identified every 20 miles between London and Paris (four in England and five in France). The towns of Redhill, Tonbridge, Ashford, and Edenbridge are identified when their names are painted atop the local railroad stations.

The first British contract overseas airmail service is begun by a DH 4A (J. McMullin, pilot) on November 10. Weather forces the plane to turn back and the inaugural is actually completed to Paris the next day on the first anniversary of the Armistice. A DH 4A crash-lands at Caterham on December 11. Winter weather, novelty, cost, and the speed of conventional delivery conspire to delay the regularity of postal flights and the airmail service does not catch on with the public.

It is announced on March 1, 1920 that Aviation Manufacturing Company is merging with the Birmingham Small Arms Co., Ltd. The carrier's first DH 18 (the initial de Havilland aircraft designed and built as a commercial transport) is delivered on March 5. Upon the opening of the main facilities at London Croydon Airport on March 29, AT & T operations are shifted from Hounslow.

The DH 18 prototype is placed on the Croydon–Le Bourget service on April 8. On May 17, in cooperation with the Dutch carrier **KLM (Royal Dutch Airlines, N.V.)**, a route is extended Croydon–Amsterdam; the DH 16 with two passengers flies the first of three weekly frequencies.

The last of 8 DH 16s is delivered on June 15. The carrier's first DH 18 is wrecked in an August 16 crash at Wallington in Surrey. On September 25, the de Havilland Aircraft Co., Ltd., is incorporated and takes over Aircraft Manufacturing Co., minus AT & T, which is in the process of being amalgamated into the Birmingham Small Arms Co., Ltd. Lack of traffic and subsidy translate into insurmountable debt by late fall. Despite a merger into the Birmingham Small Arms Company, Ltd., the pioneer is forced to cease trading on December 15. At year's end, the remaining assets are sold to **Daimler Air Hire, Ltd.**

AIRCRAFTS (PTY.), LTD.: Australia (1927–1945). Aircrafts (Pty.), Ltd., is formed late in 1927. Brisbane–Toowoomba service is inaugurated in 1930. The route is extended to Stanthorpe in 1933. Employing an American-made WACO biplane, a subsidized weekly Brisbane–Cracow service is launched in 1934. On November 17, 1935, flights are started Brisbane–Bundaberg; the route is stretched to Rockhampton on May 1, 1936. Employing two de Havilland DH 84s and a DH 50A, Monto is added as a stop on the weekly Brisbane–Cracow route on October 1.

This route network is maintained 1937–1941; operations are sporadic during World War II. The company name is changed to **Queensland Airlines (Pty), Ltd.** in 1945; in 1947 Butler Air Transport, Ltd. assumes a 93% majority shareholding.

AIRCUISE, LTD.: United Kingdom (1963–1970). Aircruise is formed at Cranfield airfield on August 28, 1963. Air taxi operations are initiated with 1 Piper PA-23 Aztec and 1 Beech 95 Travelair. In early 1964, the company is moved to Leavesden Airport and there receives 2 new de Havilland DH 104 Dove 1s, which are employed to initiate executive charters. Three additional Dove 2s/5s are acquired during the year and also undertake on-demand work, including a contract for Rolls-Royce.

On April 26, 1965, a Dove 1 is badly damaged as the result of a forced landing at Droitwich. The financial loss forces the sale of the remaining Doves and a reduction in fleet size to small craft.

On June 26, 1968, a Piper PA-23 Aztec is lost in a crash at Brest, France. Thereafter, financial misfortune accelerates until the company is forced to close down in the spring of 1970, with only 1 Cessna 172 remaining.

AIRES (AEROVIAS DE INTEGRACION REGIONAL, S.A.): Avenida Eldorado, Entrada 1, Hangar Aires, Bogota DE, AA 44102, Colombia; Phone 57 (1) 413-9024; Fax 57 (1) 413-9610; http://www.geocities.com/Cape_Canaveral/1776/Avire.htm; Code 4C; Year Founded 1980. Privately funded, AIRES is organized at Bogota on October 2, 1980. After obtaining a fleet of 5 Embraer EMB-110P Bandeirantes, the third-level operator inaugurates scheduled services on February 23, 1981 over a route to Ibagué. A total of 69,852 passengers are flown during the first 11 months.

Over the next eight years, the carrier extends routes and services throughout the nation, although there are losses in 1985.

An EMB-110P1 with 2 crew and 15 passengers, crashes into the mountains 16 km. from Buga, Colombia, on January 23; there are no survivors.

Another EMB-110P1 with 2 crew and 14 passengers suffers an engine explosion during takeoff from Mocoa on July 3. Control is lost and the

turboprop crashes into a line of trees 1,600 m. from the end of the runway; there are no fatalities.

In 1989, scheduled third-level passenger and cargo services link Aeropuerto Eldorado with such regional destinations as Cali, Florencia, Medellin, Neiva, Puerto Asis, San Vicente del Caguan, and Villa Garzon. President Hector Moreno Reyes maintains revenue services with a fleet that includes 3 owned and 1 leased Embraer EMB-110P1 Bandeirantes and 1 chartered Fokker F-27F Friendship.

An order for EMB-120 Brazilias is cancelled in 1990.

Just after its arrival at Villa Garzon on December 15, an EMB-110P, with two crew and six passengers, is seized by guerrillas, who force all aboard to make a hasty exit. Before airport security guards arrive, the pirates douse the aircraft with gasoline and set it afire. The aircraft and all of the baggage aboard are burned.

In 1991, a Fairchild Hiller FH-227J is leased. This is followed by a second American-made FH-227J in 1992–1993, which reduces the number of Bandeirantes in President Moreno Reyes' fleet to 3, as the Fokker freighter is also sold off.

The fleet is significantly increased during 1994. Through September, 2 each leased de Havilland Canada DHC-8-103s and DHC-8-301s are added and services are expanded accordingly.

While en route from Neiva to Cali on August 14, 1995, an EMB-110P with two crew and eight passengers, crashes into the volcano Nevado del Huila; there are no survivors.

The leased fleet in 1996 includes 2 each DHC-8-103s and Fairchild F-27Js, plus 3 DHC-8-301s. The 2 owned surviving Embraer EMB-110P1 Bandeirantes are also flown. In October 1997, a \$14-million order is placed for a DHC-8Q-300 that is delivered in December.

Flights continue in 1998–1999.

Enplanements during the latter year total 486,000 while 300,000 FTKs are operated.

While en route from Bogota to Neiva on September 8, 2000, a DHC-8-301 with 22 passengers is taken over by a male rebel prisoner who has managed to overwhelm his three guards and get hold of a pistol. At gunpoint, the flight crew is ordered to put down at San Vicente de Caguan, a town held by the Revolutionary Armed Forces of Colombia (FARC). After the man escapes, the turboprop is allowed to takeoff for its original destination.

AIREX, S.A. de C.V.: Juan Gilleno Villasana #147, Colonia Aviacion Civil, Mexico City D.F. 15740, Mexico; Phone 53 (5) 763-4400; Fax 53 (5) 558-6755; Year Founded 1983. Airex is set up as an FBO at Toluca, Mexico, in 1983. Over the next 17 years, the company not only provides the usual maintenance and fueling support expected by this kind of business, but also provides charters around the nation with a single Aero Commander 600.

AIRFAST INDONESIA (AIRFAST SERVICES INDONESIA): Kuningan Plaza, Suite 305, J1 HR Rasuna Said Kav C11-14, Jakarta, 12940, Indonesia; Phone 62 (21) 520-0696; Fax 62 (21) 520-0731; <http://www.airfastindonesia.com>; Code AFE; Year Founded 1971. With bases at both Jakarta and at Singapore's Seletar Airport, Airfast is formed in 1971 as a privately owned Australian–Indonesian joint venture providing passenger and cargo charter flights and contract services throughout Southeast Asia. Within a decade, the company employs 250 workers and has a fleet comprised of 3 Hawker Siddeley HS 748s, 1 Fokker F.27, 2 Douglas C-47As (military DC-3s), 1 Britten-Norman BN-2 Islander, 1 Beech B80 Queen Air, 1 Piper PA-23 Aztec, and 14 helicopters.

A chartered C-47A with 4 crew and 13 passengers, crashes two km. from Pekanbaru on April 28, 1981 while on final approach to the airport (9 dead).

The company is reorganized in 1982 and its shareholding becomes entirely Indonesian. Additionally, it also begins to focus its attention on aviation support for seismic and photographic surveys, the on- and off-shore oil industry, mining, and logging.

A C-47A with two crew and one passenger collides with a 10,500-ft. mountain near Wamena on August 15, **1984**; there are no survivors.

Operations continue apace during the remainder of the decade and into the next.

While on a January 25, **1990**, service from Ujung Pandang, an HS 748-2A with 3 crew and 16 passengers crashes into Mt. Rinjani in bad weather; there are no survivors.

The company upgrades to jet equipment in the summer-fall of **1991**, acquiring 2 B-737-223As from **American Airlines**. These are traded in for B-737-300s late in **1992**.

By **1993-1994**, President Frank. D. Reuneker's carrier has 300 employees. During the decade the fleet has been upgraded and now includes the 748s, the Queen Air, Aztec, and a DC-3, as well as 3 Boeing 737-200s (1 each Dash-230C, Dash-27AA, and Dash-2Q8A), 1 NPTN (CASA) 212, and 2 de Havilland Canada DHC-6 Twin Otters. The 14-unit helicopter fleet consists of 3 Bell 204s, 3 Bell 106s, 1 Bell 212, 2 Bell 412s, and 5 Sikorsky S-58s.

Airline employment grows to 480 during **1995-1997**; however, the rotary-wing fleet is reduced by one of each major type.

On October 2, **1997**, Airfast and **Merpati Nusantara Airlines** join two private companies in boycotting the mountain airport at Wamena in Irian Jaya, in the nation's easternmost province, citing the hazard posed by tribesmen and animals who routinely cross the runway as aircraft are departing or landing.

Catastrophic forest fires and Asia's economic crisis have a serious impact later in the year.

Indonesian aviation policy wavers during the opening months of **1998**. In late spring, Jakarta is rocked by political demonstrations and, on May 21, President Suharto resigns.

Flights continue in **1999-2000**. The workforce now numbers 430.

AIRFREIGHT EXPRESS, LTD.: 611 Sipson Road, West Drayton, Middlesex, England, UB7 OJD, United Kingdom; Phone 44 (20) 8759 5400; Year Founded 1999. Philip Bowles establishes Airfreight Express in late **1999** to operate regularly scheduled all-cargo services from London (LHR) to New York (JFK). Revenue flights are duly launched with a single leased Boeing 747-200F.

In **2000**, charters are also operated to other world destinations and orders are placed for 2 more Jumbojet freighters.

AIRFREIGHT 2100: Philippines (1989-1996). The freight forwarder Airfreight 2100 is established at Manila in **1989** with Albert Lina as chairman. Ground and air operations are undertaken during the next six years with a fleet that includes two Cessna 208 Caravan Is and a Convair CV-580.

The company's big break comes in the spring of **1996** when it signs a contract to operate daily Convair cargo flights from Subic Bay to Cebu on behalf of **Federal Express**. Frequencies on the route are doubled in July.

No information is thereafter available.

AIRGAVA, LTD.: Canada (1961-1983). Originally established at Shefferville, Quebec, in **1961** as **Lariviere Air Services, Ltd.**, this third-level operator is renamed Airgava, Ltd. in **1973** following its acquisition of competing **Fongava, Ltd.** Routes link the company's base with Wabush, Gagnon, Sept-Iles, and Port Cartier; Sept-Iles and Baie Comeau, Forestville, Mont Joli, Rimouski, and Mantane.

By **1981**, President Albert Fortier's fleet comprises 1 Douglas DC-3, 2 de Havilland Canada DHC-6 Twin Otters, 1 Embraer EMB-110 Bandeirante, 2 Fairchild-Swearingen Metro IIs, 1 Cessna 404, 1 Beech 18, and 3 DHC-3 Otters. Airline employment is 35.

Unable to weather recession and higher fuel bills, the carrier ceases operations in **1983**.

AIRGROUP HAVACILIK, A.O.: Turkey (1994-1995). This new Turkish domestic carrier is established at Istanbul in the summer of **1994**

to provide regional and domestic commuter services. Revenue flights commence with a pair of Avions deTransport Regional ATR42-320s, but continue for less than a year.

AIRKENYA. See **AIR KENYA AVIATION**

AIRLEC (AIR AQUITAINE TRANSPORTE, S.A.): France (1985-1992). Founded at Aeroport de Bordeaux in late **1985**, Airlec acquires a fleet of 3 Beech King Air 90s and 2 Cessna 310s. President/Managing Director Michel Le Collen's company begins air ambulance, air taxi, and charter operations in early **1986**.

Scheduled services begin in **1990**. With the carrier's 2 Fairchild Metro IIIs and 4 Beech King Air 200s, flights are undertaken linking Airlec's base with Dijon and Rennes.

In **1991**, 6 additional King Air 200s are acquired, along with 3 Bell 206B JetRanger helicopters. Late in the year, as the result of negotiations between Le Collen and **Air Vendee, S.A.** President Jean Paul Dubreuil, it is decided to merge the two carriers.

Regional Airlines, S.A. is born on January 1, **1992**, with Airlec holding 21% interest. Two other partners are taken in at the same time—**Air Vendee, S.A.** and **Air Exel France, S.A.**

AIRLIFT, A.S.: Foerde Airport, Bygstad, N-6815, Norway; Phone 577 18830; Fax 577 18815; Year Founded 1987. Airlift is established at Foerde, west of Oslo, in **1987** to fly power and telephone line surveillance. This service continues until **1993**, when the carrier wins its first Emergency Medical Service (EMS) helicopter medevac contract. Over the next two years, the number of EMS contracts is increased to three, one each for Forde, Bergen, and Dombas. Flights are provided with 3 Bell 212s.

Airline employment reaches 75 at the beginning of **1996**. The fleet includes 8 Eurocopter AS-350s, 3 Aerospatiale Lamas, and 3 Bell 212s. During the first half of the year, 1 more AS-350 is acquired, along with 3 AS-365C Dauphins that replace the Bells on the EMS contracts.

The company suffers a pair of crashes. On March 18, an AS-350 is lost at Svalbard (Spitzbergen) when its pilot becomes disoriented and lands badly on the ice. Just after departing Forde on October 14 to pick up a patient, one of the new EMS Dauphins with four crew aboard, flies into power cables, catches fire, and crashes; there are no survivors.

During the fall, the company accepts a contract from the territory government, paid for by the Norwegian government, to provide coastguard services from a base at Svalbard (Spitzbergen). A Bell 212 is immediately dispatched to the scene to open the new search and rescue (SAR) service.

In early November, the carrier, under an agreement signed on June 7, joins in a strategic alliance with **British International Helicopters, Ltd. (BIH)** from which it wet-leases a Eurocopter AS-332L.1 Super Puma for the coastguard contract. Its Canadian parent, **Canadian Helicopter Corporation, Ltd.**, takes 10% equity in Airlift, with the additional acquisition of 23% more in the future a possibility.

Piloted by expatriate U.S. Vietnam veteran Capt. James Spyker, the Super Puma has no sooner arrived at Svalbard, still in BIH livery, than it is called upon to perform a dramatic rescue.

On December 23, a Russian Antonov An-72 with 22 passengers crashes while taking off from Nagurskoye, in the Francois-Joseph archipelago, then a military reserve. Unable to dispatch a rescue mission from Murmansk, the Russians seek assistance from Norway. The new civilian SAR team at Svalbard is assigned the mission, which, in turn, assigns Capt. Spyker and his powerful helicopter.

Along with a medical team, the Super Puma with seven crew departs in -35° C weather for Nagurskoye at 00:10 a.m. on Christmas Eve. Due to bad weather, the helicopter must fly to Kong Karis Isle for refueling before proceeding 232 nm. to the crash point. The Bell 212 follows with additional medical personnel, who set up a medical center on Kong Karis Isle to treat those with minor wounds. After three hours of medical work at Nagurskoye, the refueled AS-332L returns to Svalbard with the three most seriously injured Russians. Meanwhile, the Bell shuttles

a number of Russian passengers to the medical camp where they are treated (mostly for frostbite).

The success of the Nagurskoye mission further cements good relations between the governments of Russia and Norway, assists Airlift in its goal to acquire additional SAR contracts, and deepens the commercial relationship between that company and BIH.

During the year the company puts in 700 hours of EMS flights. Overall revenues of NOK 125 million are generated on the year, leaving a NOK 5-million profit.

Early in 1997, Airlift purchases another Super Puma from BIH and has it modified at the Eurocopter facility at Marignane, France. Special attention is paid to the addition of avionics that will allow the helicopter to find fuel deposits that the company has stashed at various refueling points. It joins the leased unit at Svalbard.

Canadian Helicopter Corporation, Ltd.'s stake in Airlift is increased on January 30, 1998 from 10% to 45%, at which point CHC is the major shareholder in the Norwegian helicopter operator.

AIRLIFT INTERNATIONAL: United States (1963–1993). Pioneer air cargo carrier **Riddle Airlines** changes its name to Airlift International on November 29, 1963. The corporate changeover takes effect in March 1964, at which time airline employment is 494 and the fleet comprises 31 aircraft, mostly Curtiss C-46As and Douglas DC-7CFs, with a number of Lockheed L-1049H Super Constellations.

Under contract to **Alitalia, S.p.A.**, the company uses its DC-8F to inaugurate scheduled all-cargo flights from New York to Rome and Milan. A second DC-8F is acquired in June. Revamped, the old Riddle stations at Chicago, Cleveland, and Detroit are now reopened.

As a result, Chicago to Atlanta and Detroit to Atlanta via Cleveland services are begun and allow a connection to Florida via the Georgia center. In addition, new service is launched from New York to Boston and under a temporary authorization from the CAB, frequencies are started from Miami to St. Thomas. The workforce is 506 and the fleet includes 20 aircraft.

When Hurricane Cleo roars through Miami on August 27, it destroys two C-46Fs on the ground at the airport.

On the year, overall freight traffic grows by 18.8% as 51,610,000 freight ton-miles are flown. Fortunes, extremely questionable under the previous label, appear to improve. A profit of \$729,000 is posted on revenues of \$16.2 million.

The workforce is significantly increased in 1965, up to 741; the fleet, however, is reduced to 25 aircraft. These include 9 Curtiss C-46As, 14 DC-7CFs, and the 2 DC-8Fs. All-freight services to destinations throughout the U.S. and to Puerto Rico are maintained.

Following the May bankruptcy of Miami Springs-based **ASA (Aerovias Sud Americana, Inc.)**, Airlift attempts to buy a 42% stake in that carrier in order to acquire its certificate. The move will be appealed.

A Curtiss C-46D with three crew is destroyed as the result of a bad landing at Dover AFB, Delaware, on September 13; there are no fatalities.

An application is filed with the CAB for expanded route authority and the two DC-8F Jet Traders are refinanced. A total of 88.56-million ton-miles of freight are flown, along with 108,256 passengers, mostly on military charters. Revenues of \$26,285,198 are earned and a net profit of \$1,744,907 is recorded.

Events take a decidedly positive upturn in April 1966 when the assets of the Slick Corporation (formerly **Slick Airways**) are purchased, including its Douglas DC-7CFs. The CAB approves the arrangement on June 30, allowing Airlift to assume Slick's military air transport contracts the next day.

On September 12, Flight 184/2, a DC-7CF with four crew, aborts its takeoff from Tachikawa AFB, Japan, on a flight to Wake Island. The heavily laden plane (27,484 lbs. of cargo) is unable to stop before the end of the runway and goes over, striking a fence. There are no fatalities.

By the end of September, company officials are proclaiming a record \$3-million profit. While taking off from Saigon on December 30, another

DC-7CF with three crew, loses its landing gear, crashes, and catches fire; fortunately, no fatalities are reported.

For the year, 96,000 contract passengers are carried and 226.73-million freight ton-miles are flown.

In 1967, the workforce totals 1,224 and the fleet includes 36 aircraft: 1 Lockheed L-1049H, 5 Curtiss C-46As, 4 Canadair CL-44Ds, 2 Boeing 707-365Cs, 2 B-727-127QCs, 5 DC-7Bs, 11 DC-7CFs, 2 DC-8-63CFs, and 4 new Lockheed L-100 Hercules. One of the B-707-365Cs was received from **Worldways Canada, Ltd.** earlier in the year.

The B-727-127QCs are employed at night and are leased to **National Airlines** during the year.

While on final approach to Saigon on June 22, an L-1049H with seven crew, collides with a USAF F-4 Phantom II. The pilot of the fighter plane is able to safely eject, but all aboard the freighter are killed when it crashes.

A total of 145,951 customers are transported on the year and 245.23-million freight ton-miles are flown.

The employee population in 1968 numbers 1,208 and the fleet includes 39 aircraft. The CAB transfers the route of the former **ASA (Aerovias Sud Americana)** to Airlift on May 20. This allows the carrier's new B-707-365Cs to fly from Miami to Rio de Janeiro and Buenos Aires.

Meanwhile, on May 22, the CAB awards the company the coast-to-coast route formerly operated by **Slick Airways**, but abandoned in 1965 because of financial troubles. A B-707-372C is delivered on July 11.

Charter passenger traffic is up by 20.8% as 190,569 passengers are carried. Freight ton-mileage flown is 199,980,826. Revenues are \$55,945,657.

The fleet in 1969 comprises 3 B-707-365Cs, 4 B-727-172Cs, 5 DC-4s, 3 DC-8-63CFs, 3 Lockheed L-100s, and 5 CL-44Ds. In January, the CAB denies the company's attempt to acquire the certificate of **ASA (Aerovias Sud Americana, Inc.)**. This year, Military Airlift Command (MAC) charters account for 293,265 passengers.

The U.S. recession and cutback in Vietnam airlift operations bring a downturn for the carrier in 1970. An L-100 with a crew of three crashes while attempting to land at McGuire AFB, New Jersey, on October 10; the company refuses to divulge the fate of the crew.

Freight ton-miles operated are off by 24.7% to 163.71 million and only 287,233 passengers are boarded. Consequently, the workforce is cut by 65%, down to 600.

Bookings fall in 1971, down to 146,034; however, freight ton-miles are up significantly.

Sixty-three new employees are hired as the year merges into 1972. Highlight of this year comes when the CAB grants the 28-year-old carrier permanent certification and approves a route realignment, thereby improving operational flexibility.

Although Indochinese-related military passenger charters fall again, down 19.7% to 122,000, freight ton-miles flown increase a healthy 22.6%. Revenues are now \$43.28 million and with expenses in hand, profits are realized: \$2.02 million (operating) and \$491,000 (net).

As 1973 advances, Airlift pursues its request of the CAB for scheduled authority to certain Latin American markets and for unlimited cargo charter rights into Mexico, Central and South America. The workforce is now 672, but the carrier is the only one of the three U.S. cargo carriers to suffer a traffic slump.

Passenger boardings on behalf of the MAC are down 49.6% to 62,000 and cargo traffic is off by 3.3%. Income totals \$37.88 million, but expenses are up to \$41.13 million. Consequently, losses are taken: \$3.23 million (operating) and \$2.23 million (net).

Twenty-one new employees are hired in 1974. Consideration is given to augmenting the fleet of 5 DC-8-63CFs and 1 B-727-100QC, but a decision is not taken.

While under maintenance at Fairfield-Travis AFB in California on March 23, the inboard main fuel tank of a DC-8-63CF explodes and burns up the aircraft; one worker is killed.

The number of charter passengers drops a huge 64% to 22,465; however, the number of FTKs flown advances by 10% to 327,577. On

revenues of \$48.17 million and expenses of \$47.18 million, the operating profit is \$986,000 and the net profit is \$141,000.

Airline employment in **1975** is 633. In March–April, the DC-8-63CFs join the aircraft of **The Flying Tiger Line** and **World Airways** in making the last flights out of Cambodia and South Vietnam. A job action late in the year hurts productivity.

Although the number of charter passengers boarded grows by 11.8% to 26,000, freight traffic is off by 26.9% to 239.55 million FTKs. A loss of \$3 million is suffered on the year.

A total of 11 employees are laid off in **1976** or not replaced. The strike begun late in the previous year ends in the spring. With the reinstatement of service to Cleveland, the number of domestic cities served reaches an even dozen. Two more DC-8-63CFs are delivered. In the largest animal airlift to date, some 16,000 cattle are transported from Costa Rica to Venezuela.

As a result of the strike, FTKs drop 10% to 150.66 million and another \$3.4 million is lost.

During **1977**, scheduled all-cargo routes are maintained within the U.S. and Puerto Rico, in addition to a variety of worldwide passenger and freight charters and military contract services. The number of passenger charter bookings climbs to 40,774. FTKs operated are 350 million and \$6.2 million is earned.

The workforce is increased by 32.2% in **1978** to 937. Chairman/President Paul J. Finazzo's fleet of 3 DC-8-63CFs, 2 DC-8-50Fs, and 3 DC-8-30Fs boost cargo FTKs to 395.89 million, for 19.9% growth. Passenger boardings drop, however, down 7.3% to 38,000 and profits decline to \$4.5 million.

The workforce is increased by 6.7% in **1979** to 1,000 and the fleet grows to include 14 aircraft, all DC-8Fs.

Charter bookings skyrocket 73.7% to 66,000 while cargo is down 0.9% to 392.23 million FTKs. The company suffers a \$694,000 net loss.

Airline employment is reduced by 20% in **1980** to 800. The year is a failure as fuel prices skyrocket and economic recession swells. Charters drop 27.1% to 48,000 and freight falls by 47.2% to 207 million FTKs. Operating income declines 25.94% to \$70.17 million while expenses reach \$81.39 million. The financial crisis deepens as the operating loss is increased by \$11.21 million and a net loss of \$12.31 million must be absorbed.

By **1981**, Airlift International has fallen on such hard times that it has no physical assets and only \$44,000 in cash on hand; it is forced to file for Chapter XI bankruptcy on June 4. Although it continues to fly for a short time thereafter, a bankruptcy trustee, William D. Seidle, is appointed in November and the previous management team resigns.

The change brings about an FAA suspension of the company's operating certificate, which requires it to shut its doors and dispose of its last fleet elements, 2 DC-8-54Fs, by year's end. The number of FTKs operated plunges by 78.5% to 44.56 million, while the number of charter passengers flown drops by 87.5% to just 6,000.

While under reorganization, Al M. Oliver is appointed general manager and the carrier is able to operate military charters with leased aircraft. After much work, the operating certificate is restored by FAA on April 13, **1982**. General Manager Oliver manages to reacquire two DC-8-54Fs, one on an hours-operated lease.

New ad hoc worldwide charters are obtained, including a significant tonnage in livestock for premier customer Sierra International. A new reorganization plan is put forward in May and in June a DC-8-61 freighter is received. During this period of reorganization, traffic and financial data is not available.

In **1983**, three more DC-8-55Fs are acquired, the number of employees rises from 40 to 107, military charter flights and passenger charters are laid on for tour operators, and wet-lease service is provided for **Air Haiti, S.A.** Traffic and financial figures are again unavailable.

A positive cash flow begins in August and recovery is further eased when the company wins certification to perform a wide variety of maintenance for other carriers.

The company's **1984** reorganization plan is rejected and the CAB late in the year stops taking charter applications from those carriers that do not have noise-rule compliant fleets.

Still, Airlift is able to transport a total of 117,000 passengers and 7.8 million FTKs. Sales total \$24 million and a net in-bankruptcy profit of \$1.4 million is earned.

Airline employment in **1985** stands at 100. Early in the year, John Paul Riddle returns to help the company celebrate its fortieth anniversary. Having failed to meet the government's noise rule, the carrier is forced to ground its DC-8-54F and two DC-8-61s at year's end.

Since January, Airlift has flown 104,000 passengers, a decline of 11.1%; on the other hand, cargo booms upward by 60.7% to 18 million FTKs. Revenues of \$14.3 million are earned and expenses are held to \$13.8 million. As a result, the operating profit is \$524,064 and net gain is \$445,981.

Although its aircraft are grounded during the first half of **1986**, the airline remains in active business, even after returning to Chapter XI status. In February, a Fairchild Hiller FH-227 is leased to operate charters to various Caribbean destinations. The two DC-8-61s are leased to European operators for summer flights while the DC-8-54F goes into the Miami shop for an engine refit with a noise suppression nacelle kit from Quiet Nacelle Corp. Throughout the year, the maintenance facility helps to bring in operating funds.

The freighter is returned to service in July and after returning from overseas and their engine refits, the Dash-61s become available in late fall. Charter flights continue in **1987** and **1988**.

Airlift nearly, but not quite, emerges from Chapter XI in the spring of **1989**. General Manager Oliver remains in charge as CEO and the fleet now includes 1 DC-8-54F and 6 Fokker F.27s. The jet freighter is flown under contract to **Emery Worldwide**, a CF Company, while 5 of the Fokkers are employed transporting gamblers to holiday destinations in the Bahamas. The sixth Fokker is leased out.

Operational details for **1990** are lacking; another reorganization plan is presented to the federal bankruptcy court in **1991**. Like earlier ones, it, too, fails. In January **1992**, Chapter VII liquidation is filed. In March, George Batchelor purchases the remaining assets for \$3.9 million and pledges to rebuild the airline.

Based at Miami (MIA) in **1993**, the company's fleet comprises 5 Fokker F.27s, 1 Fairchild Hiller FH-227C, and 1 DC-8-54F. Unable to save the carrier, its new owner allows it to fold.

AIRLINAIR, S.A.: 21 Place de la Loire, Paris Rungis Cedex, 94563, France; Phone 33 (1) 45 12 17 17; Fax: 33 (1) 45 12 17 18; Year Founded 1988. President Lionel Guenn and three other investors establish Airlinair at Paris in December **1998** to provide wet-lease services to major and regional carriers.

During the spring of **1999**, 3 Avions de Transport Regional ATR72-212s are acquired and based at both Orly and Charles De Gaulle airports. These begin service in May.

By the beginning of **2000**, airline employment stands at 75.

AIRLINE FEEDER SYSTEM: United States (1937–1939). AFS is established at Springfield in the summer of **1937** to offer service connecting that western Massachusetts community with Newark (serving New York City). A pair of Stinson Model A Tri-Motors are acquired from **Pennsylvania-Central Airlines** and revenue flights are inaugurated on October 4, via Hartford, New Haven, and Bridgeport.

Passengers travelling east can connect at Springfield with the direct Boston service (opened the same day) of **Mayflower Airlines**. Despite the use of "commutation" fares that allow customers to fly at rates being charged by the railroads, the route does not generate sufficient traffic to achieve or maintain viability.

As a result, the company suspends operations in October **1939**. The route authority is acquired by **Northeast Airlines** on June 12, **1944**.

AIRLINE OF THE AMERICAS: United States (1992–1993). This new passenger charter operator is established at Smyrna, Tennessee, in the spring of 1992 to offer flights to destinations throughout the eastern U.S., the Caribbean, and to Mexico. Employing a pair of reengined Boeing 727-225As formerly operated by **Pan American World Airways (1)**, the company inaugurates revenue services on June 6. A total of 27,000 passengers are flown by December 31.

In 1993, President C. P. Caudle oversees a workforce of 100 and acquires two more B-727-221s. Later in the year, the carrier is renamed **Ultrair**.

AIRLINE OF THE MARSHALL ISLANDS (AMI): United States (1980–1989). Created at Majuro in the Marshall Islands, part of the U.S. Trust Territory of the Pacific Islands, in 1980, **Airline of the Marshall Islands (AMI)** undertakes scheduled passenger and cargo commuter flights between the area's 20-plus atolls. The service is initially provided under contract by **Air Tugaru**. The most important route is a weekday nonstop flight between Majuro and Kwajalein with other local services flown out of those two major islands.

Operations continue apace in 1981 and 1982. By 1983, the fleet comprises 1 BAe 748-2B and 2 GAF Nomads and enplanements total 12,461. Profits total \$1 million (operating) and \$438,303 (net).

The workforce is decreased 4.3% in 1984 to 44; however, orders are placed for 2 Dornier 228-200s.

Passenger boardings accelerate 9.6% to 13,784 while freight is up 14.2% to 56,000 pounds. Revenues dip 6.2% to \$1.8 million, while expenses swell 23.1% to \$1.1 million. As a result, gains are reduced to \$662,152 (operating) and \$95,178 (net).

The two Dorniers arrive in 1985. Enplanements in 1986 total 20,623 and an operating profit of \$142,540 is generated.

Four new employees are appointed in 1987 and the fleet now includes the 2 Dorniers and 1 BAe 748-2B.

Passenger boardings climb 5.4% to 21,800 and revenues ascend by 34.4% to \$1.25 million. The operating profit grows to \$238,155.

The workforce is increased by 17.9% in 1988 to 92 and the fleet remains the same.

Customer bookings swell 15.9% to 33,500 and freight is up by 33.3% to 21,000 FTKs. Revenues jump 50% to \$3.6 million, but expenses surge 52% to produce a \$200,000 operating loss.

Upon independence of the Marshall Islands in 1989, the carrier is renamed **Air Marshall Islands** and is designated as the national flag carrier for the government of Tuvalu.

AIRLINE TRANSPORT CARRIERS: United States (1947–1962). ATC is established in 1947 as an associate of the Colonel Charles C. Sherman's **California Central Airlines**. Two years later, the CAB orders the company to cease providing what had become practically scheduled services between Burbank and Oakland, California. The carrier goes dormant while Sherman assumes its activities.

ATC is reactivated in 1958 when it is granted CAB authority to provide supplemental service. Employing the marketing names California Central Airlines (which had gone bankrupt in 1954) and California Hawaiian Airlines, the company operates 2 each Douglas DC-3s, DC-4s, Curtiss C-46 Commandos, and Lockheed L-1049 Super Constellations on domestic and transpacific flights to Hawaii.

When the government refuses to extend the carrier's certificate in October 1962, the twice-run airline is forced to shut down.

AIRLINES (JERSEY), LTD. See JERSEY AIRLINES, LTD.

AIRLINES (WEST AUSTRALIA) (PTY.), LTD.: Australia (1935–1955). Capt. C. W. Snook forms his Airlines (West Australia) at Perth on December 2, 1935. Equipped with a Spartan Cruiser and a Monospart ST.25, twice-weekly, opposite-direction service is started eight days later from Perth–Mount Magnet–Wiluna–Kalgoorlie–Perth.

The Perth circular route opened in December 1935 is replaced on October 5, 1936 by a new subsidized weekly Stinson Reliant service from Perth–Kalgoorlie via Mount Magnet, Cue, Meekatharra, Wiluna, and Leonora.

Two new routes from Sydney to Melbourne and Narrandera are opened in 1937. Two de Havilland DH 84 Dragons are added to the fleet in 1939; however, service is sporadic during the war years, 1940–1945.

Outfitted with Avro Ansons and DH 104 Doves, the carrier, in 1946, begins flying from its Perth base to such mining towns as Wiluna and Kalgoorlie.

Services to these interior destinations is continued until October 1955 when the carrier is purchased by and merged into **MacRobertson-Miller Aviation, Ltd.**

AIRLINES OF AUSTRALIA (PTY.), LTD.: Australia (1935–1943). In order to acquire the assets of defunct **New England Airways (Pty.), Ltd.**, the British Pacific Trust, Ltd. forms this carrier in fall 1935. Using an Avro 10 and a Monospart ST.12, Airlines of Australia undertakes daily Sydney–Brisbane and Brisbane–Toowoomba service, along with twice-daily flights from Sydney to Newcastle and twice-weekly frequencies from Brisbane to Townsville.

The first of four Stinson Model A Tri-Motors is delivered in April 1936 and is christened *City of Lismore*. With seconded **American Airlines** pilot H. D. Bowyer at the controls, the plane, during its inaugural flight, completes the 510-mi. Sydney to Brisbane service in a record 2 hrs. 45 min. On July 1, the carrier is one of four merged to form **ANA (Australian National Airlines [Pty.], Ltd.)**; the partner, allowed to retain its previous identity and function as a subsidiary, is permitted to purchase **Rockhampton Aerial Services (Pty.), Ltd.** on September 14, along with its route from Rockhampton to Brisbane.

Weekly Townsville–Mount Isa services are initiated on February 27, 1937, following this with twice-weekly Cairns–Cooktown flights, beginning on May 17. Flights are inaugurated Cairns–Rutland Plains during the summer.

Employing an ANA Douglas DC-2, the company begins daily Brisbane to Adelaide service on August 30, via Sydney and Melbourne. ANA purchases the British Pacific Trust shares in the carrier late in the year.

Services, often integrated with those of ANA, are maintained in 1938. During the year, two Stinson Model As are lost in crashes, although one is replaced. On May 29–30, 1939, the new DC-3 *Kyilla* is employed to begin Sydney–Brisbane night flights, the first in Australian commercial history.

The *Kyilla* operates with ANA during 1940–1941 while the company's lone DH 89A, the *Memma*, and two Stinson Model A Tri-Motors, the *City of Grafton* and *City of Townsville*, fly the carrier's routes with increasing difficulty following the outbreak of war.

On July 1, 1942, the carrier is finally absorbed by ANA. The war, however, prevents the larger carrier from finally taking over the services of its subsidiary until January 1, 1943.

AIRLINES OF CARRIACOU, LTD.: Grenada (1992–1999). AOC is founded at Point Salines International Airport at St. George's on November 1, 1992 to provide scheduled regional services. Shareholding is divided between Capt. Arthur W. Bain, Curill N. Searles, L. de Gale, L. Ramdhanny, L. Lewis, and S. Hobson. Capt. Bain is named managing director, with Mr. Searles as general manager. Revenue operations commence the same day with a single leased Pilatus-Britten-Norman PBN-2 Islander, linking Grenada with Carriacou, Port Elizabeth, and Saint Vincent. A third Islander joins the first two and Union Island becomes the company's fourth scheduled destination.

On November 14, 1999, Airlines of Carriacou is merged with **SVG Air, Ltd.**, with the latter owning 75% shareholding. Under the direction of Managing Director Martin Barnard, the new **Vincent and Granada Air, Ltd.** resumes services from Granada almost immediately.

AIRLINES OF NEW SOUTH WALES, LTD. See **ANSETT AIRLINES OF NEW SOUTH WALES, LTD.**

AIRLINES OF NEW ZEALAND, LTD.: New Zealand (1999–2000). Ewan Wilson, founder of **Kiwi International Airlines, Ltd.**, establishes his second carrier in late fall 1999 to offer service from Wellington across the Tasman Sea to Tasmania. Employing a Boeing 737-4Q8 subleased from **Pegasus Airlines (Pegasus Hava Tasimaciligi, A.O.)** of Turkey, revenue flights commence at the end of November.

Poor loads bring in so little income that the company is forced to halt service and shut its doors on January 8, 2000.

AIRLINES OF NEW ZEALAND (PTY.), LTD.: Australia (1960–1986). During July 1959, Ansett Transport Industries, Ltd. purchases control of **South Pacific Airlines, Ltd.** The new acquisition is renamed Airlines of New Zealand, Ltd. on January 17, 1960. Two Douglas DC-3s are transferred to it from ATI, allowing the start-up of scheduled services on December 14.

Low key operations continue with little change for the next quarter century. In late 1986, when Ansett is invited to set up a private carrier to compete with **Air New Zealand, Ltd.**, this entity forms the basis upon which the new company is built.

AIRLINES OF NORTHERN AUSTRALIA (PTY.), LTD.: Australia (1981–1987). This wholly owned subsidiary of Ansett Transport Industries, Ltd. is formed in May 1981 to replace the defunct **Northern Airlines (Pty.), Ltd.** as the primary scheduled carrier serving the Northern Territories and parts of Queensland. A total of 28 staff are employed and the initial fleet is comprised of two Fokker F.28-1000s leased from **Airlines of Western Australia (Pty.), Ltd.** and Cessna lightplanes chartered from **Tillair, Ltd.** Ansett Airlines of Australia, Ltd.

Boeing 737s are available when necessary. From a base at Darwin, scheduled passenger and freight services are linked to Alice Springs, Ayers Rock, Cairns, Darwin, Gove (Nhulunbuy), Groote Eylandt, Katherine, and Tennant Creek. Enplanements total 52,886.

Passenger boardings are 76,913 in 1982 and 82,675 in 1983.

Operations continue apace in 1985–1986 and in 1987 the company is renamed **Ansett N.T. (Ansett Airlines of the Northern Territory [Pty.], Ltd.)**.

AIRLINES OF SOUTH AUSTRALIA (PTY.), LTD. (1): Australia (1981–1985). Ansett Airlines of South Australia (Pty.), Ltd. is renamed **Airlines of South Australia (Pty.), Ltd.** on July 2, 1981. With a fleet of four Fokker F.27-500s, services are flown linking Adelaide with Ceduna, Kingscote (Kangaroo Island), Mt. Gambier, Port Lincoln, and Whyalla in South Australia and Broken Hill in New South Wales. A pooled service to Streaky Bay in South Australia is continued with **Rossair, Ltd.** Enplanements for the 116-employee carrier total 204,842.

In 1982, bookings drop to 203,338; they fall to 195,410 in 1983.

Operations cease in 1985.

AIRLINES OF SOUTH AUSTRALIA (PTY.), LTD. (2): Port Augusta Airport, Port Augusta, South Australia, 5700, Australia; Phone (08) 8642-3100; Year Founded 1998. The second ASA is established in January 1998 employing the assets of the former **Augusta Airways (Pty.), Ltd.** and **Lincoln Airlines (Pty.), Ltd.** With the 2 Embraer EMB-110 Bandeirantes of the latter and the 3 Piper PA-31-350 Navajo Chieftains and Aero Commander 690 of the former, it flies a total of 37,853 passengers through June. Later figures are not available.

Traffic figures for 1999 are again only partial, but show an 8.1% increase in passengers through the first half to 41,000.

AIRLINES OF TASMANIA (PTY.), LTD.: Australia (1982–1997). Hobart-based **Airlines of Tasmania (Pty.), Ltd.** is formed on July 1, 1982 through the merger of **Air Tasmania (Pty.), Ltd.** and **H. C. Sleigh Airlines (Pty.), Ltd.** Employing three Piper PA-31-310 Navajos, and a Cessna 404, the company provides scheduled passenger and

cargo flights linking various destinations on the island of Tasmania and Tasmania with Melbourne. Specific destinations served include Devonport, Flindora Island, Hobart, King Island, Launceston, Queenstown, Smithton, Strahan, and Wynyard. The company also supplies aircraft and pilots for the Tasmanian division of the Royal Flying Doctor Service.

A de Havilland DH 114 Heron is purchased from **Southern Airways (Pty.), Ltd.** on March 29, 1983 and, prior to beginning service, is christened *Spirit of Bass Strait*. It is followed by three other Riley Heron 2Ds from **Northern Airlines (Pty.), Ltd.** between May and July, two of which are named the *Nammo* and the *Spirit of Tasmania*. Another Heron, carrying two crew and five passengers, makes a heavy landing at Launceston on August 4 and must be written off before it can be named. No injuries are reported in the incident.

Operations continue apace in 1984–1987, during which years three PA-31-350 Navajo Chieftains enter service. In 1988, the fleet is revised; two older Navajos are withdrawn and replaced with a fifth Heron; the ex-Tongair machine is unnamed. During 1989, the Herons *Spirit of Bass Strait* and *Spirit of Tasmania* are withdrawn from service and broken up.

In 1990–1991, Managing Director Dallas Hay's company returns to a three-ship Navajo component, while also adding an Embraer EMB-110P Bandeirante and a Shorts 360. Twelve weekly return flights are scheduled on the Launceston to Melbourne route. Enplanements in the latter year total 54,253.

The company still continues to fly the *Nammo* and two unnamed Herons, the last of their type in airline service, during 1992. Passenger boardings fall 19.1% to 43,094.

Operations continue in 1993–1994 and during the latter year, the fleet includes 3 Piper Navajo Chieftains, 1 Navajo, a Fairchild Metro III, the Bandeirante, and the 3 Herons. Enplanements drop to 37,489. At the end of the year, the company enters into a commercial agreement with **Tamair (Pty.), Ltd.**, which will see routes revamped and the Herons retired.

The EMB-110 and the Herons are placed into storage during 1995, while schedules and routes are altered. Passenger boardings inch up 1.2% to 37,944.

Operations continue apace in 1996. Unable to maintain economic viability, the company shuts down in February 1997.

AIRLINES OF WESTERN AUSTRALIA (PTY.), LTD.: Australia (1981–1984). On July 2, 1981, **MacRobertson-Miller Airlines (Pty.), Ltd.**, once an independent carrier by that name, but now a 536-worker subsidiary of Ansett Transport Industries, Ltd., parent of **Ansett Airlines of Australia (Pty.), Ltd.**, is renamed Airlines of Western Australia (Pty.), Ltd. The change occurs in order to identify the airline more closely with its state service area. The transferred fleet comprises 7 Fokker F.28-1000s jetliners; orders are placed for 4 F.28-4000s, 2 of which are delivered by December.

Scheduled passenger and freight services are maintained from Perth to Alice Springs, Ayers Rock, Broome, Carnarvon, Darwin, Derby, Geraldton, Kalgoorlie, Karratha, Kununurra, Learmonth, Newman, Paraburdoo, and Port Hedland. Combined passenger boardings under the new name and old are 364,100 and 6.78 million FTKs are operated.

The workforce is reduced 1.7% in 1982 to 527, even as 2 Fokker F.28-4000s are delivered.

Enplanements are up to 390,500, but cargo is down 5.3% to 6.42 million FTKs.

The employee population is cut another 3.2% in 1983 to 510; however, orders are placed for 2 British Aerospace BAe 146s. Customer bookings dip 1.8% to 383,500, while freight is off by 3.1% to 6.22 million FTKs.

The employee base is improved by 2.9% in 1984 to 525 as 2 more F.28-4000s and 2 British Aerospace BAe 146s arrive.

Enplanements jump 4.1% to 399,400, but cargo is down 2.3% to 6.07 million FTKs. In late December, the carrier is renamed **Ansett W.A. (Ansett Western Australia [Pty.], Ltd.)**.

AIRLINK (PTY.), LTD. (1): P.O. Box 1208, Madang, Papua New Guinea; Phone 675 852-2933; Fax 675 852-2725; <http://www.airlink.com.pg/airlink>; Code ND; Year Founded 1989. Colin V. Bubner forms Airlink at Rabaul, New Britain, site of a famous World War II Japanese naval base, in 1989 to offer regional passenger and cargo services. The new managing director's lone Cessna 310 inaugurates scheduled services feeding **Hazelton Airlines (Pty.), Ltd.** from Dubbo in June 1990. In October, Bubner buys out all **Talair (Tourist Airlines of Niugini [Pty.], Ltd.)** assets in the New Guinea Islands.

The fleet is increased in 1992 to include 3 Cessna 310s and 1 Piper PA-31-310 Navajo. In 1993, the workforce totals 100 and the fleet includes 4 Cessna 404 Titan IIs, 1 Beech 58 Baron, 4 Cessna 402s, and 4 Pilatus-Britten-Norman PBN-2 Islanders. Operations continue to link Rabaul with Boang, Emirau, Kavieng, Londolovit, Manga, Malekolon, Mussau, Mamatanai, and Silur.

The fleet is altered in 1994 to include 2 Cessna 404s, the Baron, the Cessna 402s, 3 Islanders, 3 Embraer EMB-110P2 Bandeirantes, and 3 de Havilland Canada DHC-6-200 Twin Otters. Heavy losses, including the destruction of four aircraft, are sustained when volcanoes on Rabaul explode.

Operations continue apace in 1995–1998, and airline employment reaches 130. Three Islanders join the fleet as replacement for those lost earlier. In late December 1998 Airlink begins to construct a homepage on the World Wide Web.

While en route from Hoskins to Kandrian in the province of West New Britain on February 3, 1999, an Islander, with 1 pilot and 10 passengers, crashes into a plantation in flat terrain SW of its point of origin. Witnesses report seeing the plane breakup in the air; there are no survivors from the company's first fatal accident.

Less than six months later, on June 16, an EMB-110, with 2 crew and 15 passengers and en route from Nadzab to Goroka, crashes 12 mi. SE of its destination; again, there are no survivors.

Four weekly DHC-8-100 roundtrips from Darwin to Deli, East Timor, commence on May 2, 2000, increasing to twice-daily on July 31.

AIRLINK (PTY.), LTD. (2). See **AUSTRALIAN AIRLINK (PTY.), LTD.**

AIRLINK AIRLINE (PTY.), LTD.: South Africa (1992–1995). Airlink Airline (Pty.), Ltd. is formed at Bonaero Park, in the Transvaal, in 1992 to provide scheduled services between South Africa's major cities. The initial fleet comprises 2 Avions de Transport Regional ATR42-300s, 3 Fairchild-Swearingen Metro IIs, and 8 Piper PA-31-350 Navajo Chieftains. Taking over from the defunct **Link Airways (Pty.), Ltd.**, the new third-level operator launches revenue services on June 10.

The Chieftains are removed in 1993 and are succeeded by a Dornier 228-100. Joint Managing Directors Barrie Webb and Rodger Foster oversee a workforce of 180 and provide flights linking their base with Bloemfontein, Durban, East London, Johannesburg, Maputo, Manzini, Maseru, Nelspruit, Phalaborwa, Pietersburg, Pietermaritzburg, Port Elizabeth, Richards Bay, and Umtata.

In 1994, orders are placed for 9 British Aerospace BAe Jetstream 41s with which to replace the ATRs. The company is renamed **SA Airlink (Pty.), Ltd.** in 1995.

AIRLINK LUFTVERKEHR, GmbH.: Salzburg Airport, P.O. Box 11, Salzburg, A-5020, Austria; Phone 43 (662) 850 863; Fax 43 (662) 850 864; Code JAR; Year Founded 1984. Airlink is established at Salzburg in 1984 to provide on-demand and group passenger charters to Eastern Europe, North Africa, and the Mideast. Flights continue over the next decade, and, by 1998–2000, General Manager Mrs. A. Wurzinger oversees the work of four full-time, and six part-time pilots. She also schedules 6 Cessna 421 Golden Eagles, 2 each Cessna Citation 551 Citation IIs, C-152s, and Piper PA-34 Senecas, plus 1 each Cessna 600 Citation I, Beech Super King Air 200, Beech King Air 90, and Piper PA-28R Arrow I.

AIRMARC AIRLINES: United States (1983–1984). The nonscheduled **Eastman Airways**, based at Asbury Park-Monmouth in New Jersey, is reformed in November 1983 and renamed. Employing a fleet of Cessna 402s and Piper PA-31-310 Navajos, the carrier inaugurates scheduled commuter flights to the two major airports of New York City and to Boston. Operations are suspended in the spring of 1984 and not resumed.

AIRMARK AVIATION: United States (1992–1993). Airmark Aviation is established at Orlando in the spring of 1992 to offer passenger charter and inclusive-tour flights to destinations throughout the eastern U.S., Mexico, the Caribbean, and Europe. Two, later four, Boeing 737-293s are leased from **American Airlines** and revenue services commence in June. A total of 30,000 passengers are flown by year's end.

A total of 99,000 passengers are transported during the first half of 1993, but the airline is unable to maintain economic viability and ceases operations in July. On revenues of \$6.6 million, losses of \$1.3 million (operating) and \$1.5 million (net) are suffered.

AIRMARK CORPORATION: United States (1980–1984). Airmark is established at Burbank, California, in October 1980 to offer executive passenger and cargo charter services to regional destinations. Employing a Grumman Gulfstream II bizjet, the company inaugurates services in May 1981.

In 1983, officials approach the CAB seeking authority to begin passenger tour and holiday flights from Los Angeles to New York, Houston, Honolulu, London, Dhahran, Tokyo, and Jeddah.

Certification is granted in 1984 and the 28-employee company purchases a Boeing 707 for the service. Service is, however, halted until installation of a hush-kit can be completed.

Serious cash-flow problems are now encountered and Airmark does not resume flying.

AIRNAUTIC AIRLINES, S.A.: France (1959–1964). The independent carrier Airnautic is established at Paris in the fall of 1959 to provide scheduled and chartered passenger and cargo services to destinations throughout France and West Germany. When its business in Saigon is completed, **Aigle Azur Extreme Orient Airlines, S.A. (AAEO)** sells its three remaining transports to the new entrant in November. These are the Boeing 307 Stratoliners once flown by **Trans World Airlines (TWA)** as the *Cherokee*, *Apache*, and *Navajo*.

Operations commence during the first quarter of 1960, and continue apace without incident until December 29, 1962. On that date, the former *Navajo*, en route from Nice to Bastia via Ajaccio with a crew of 3 and 24 basketball players as passengers, crashes near the 7,000-ft. level of Monte Renosa, Corsica; there are no survivors. The *Cherokee* and *Apache* fly on until the airline ceases operations in 1964.

AIRNET SYSTEMS (AIRNET EXPRESS): Port Columbus International Airport, 3939 International Gateway, Columbus, Ohio 43219, United States; Phone (614) 237-2057; Fax (800) 926-7283; <http://www.airnet.com>; Code USC; Year Founded 1974. AS is founded by its President/CEO Jerry Mercer at Pontiac, Michigan, in 1974, and, for the remainder of the decade, transports cancelled checks on a point-to-point basis under contract to large banking institutions.

The company's base of activities is moved to Port Columbus, Ohio, in 1980 and, in 1984, Mercer authorizes his small planes to begin the transport of other time-critical documents and small packages to on-demand locations throughout the U.S.

During the first five years of the 1990s, AirNet employs a variety of aircraft; the fleet by 1996 comprises 34 Beech 58 Barons, 20 Learjet 35AFs, 5 Learjet 25Fs, 14 Piper PA-60 Aerostars, 13 PA-31-350 Navajo Chieftains, and 10 Cessna 310s.

An initial public offering is successfully completed on May 31 as AirNet begins trading on the New York Stock Exchange under the symbol ANS. During the next five months, two other small operations are taken

over and merged: Dallas-based Midway Aviation and Express Convenience Center, a freight forwarder in Southfield, Michigan.

By fall, AirNet has expanded to five new communities and added 1,800 new customers. A total of 2.5 million shipments are delivered during the year.

In 1997, two Learjet 35AFs are stationed at Miami (MIA) for flights to and from Latin America. The fleet, which now approaches 100 aircraft, is delivering 15,000 time-critical shipments each working day. The company is profiled in the April 28 issue of *The Journal of Commerce*.

On June 5, San Diego-based Pacific Air Charter and its 8 aircraft are purchased for \$450,000. The acquisition increases AirNet's existing 90,000-mi. route network by 5,000 mi. and expands the service base to 19 West Coast cities. As part of the takeover agreement, AirNet promises to continue operation of Pacific Air College, a significant flight-training program.

At the beginning of 1998 the fleet includes 108 aircraft, including 28 Learjets. Over 100 cities in 40 states are visited. In addition, AirNet Express also operates ground pickup and delivery services throughout the nation, employing 350 independent agents and in excess of 110 company-owned motor vehicles.

In the spring, a letter of intent is signed for the acquisition of Boston-based Mercury Business Services, an express-delivery management company.

Flights continue during the remainder of the year and into 1999. While landing at Chicago (ORD) following a January 28 check flight from Columbus, Ohio, Flight 251, a Learjet 35AF with two crew strikes the runway with its right wing. Although the aircraft receives substantial damages, neither occupant is hurt.

The pilot of a company Beech 58 Baron, with a cargo of bank checks, is not so lucky. On July 17, 2000, en route to Hernando, Mississippi, from Memphis, Flight 484 crashes into Arkabutla Lake after reporting a in-flight electrical fire, killing its occupant.

AIRNEWS: United States (1949–1951). Established at San Antonio in early 1949, this all-cargo carrier is one of four to be awarded experimental five-year scheduled certificates on August 12, as a result of the findings in an air freight case held before the CAB.

Employing a pair of Douglas DC-3s, Airnews undertakes regular return flights to Corpus Christi until it ceases operations and yields up its certificate on October 12, 1951.

AIRNORTH (PTY.), LTD.: P.O. Box 39548, Winnellie, Northern Territory, 0821, Australia; Phone 618 (89) 452 999; Fax 618 (89) 453 559; <http://www.airnorth.com.au>; Code TL; Year Founded 1994. Airnorth, Ltd. is established at Darwin in 1994 through the merger of **Air North International (Pty.), Ltd.** and the Skyport group. Managing Director Roger Leach's enlarged company continues operations in the Northern Territory with a fleet that includes 1 Douglas DC-3, 1 Shorts 330, 1 Fairchild Metro III, 1 Metro II, 1 Cessna 441, 2 Cessna 404s, 10 Cessna 402s, and 3 Piper PA-31-310 Navajos. Traffic figures are reported through July and show a total of 55,000 passengers boarded.

A pair of Metro 23s are acquired in 1995 and enplanements total 42,497. Airline employment stands at 43 in 1996 and passenger boardings soar 20.4% to 53,388. During the year, the subsidiary **Air Tiwi (Pty.), Ltd.** is established at Darwin to fly scheduled, third-level services to three local destinations.

John L. Hardy is managing director in 1997 and airline employment stands at 43. Major activity in Timor Sea oil and gas exploration brings the company contracts with Shell Development, Santos, Woodside, BHP Minerals, BHP Petroleum, and Cultus Oil.

New scheduled feeder service is started to Gove on behalf of **Ansett Australia (Pty.), Ltd.** and regular charters are launched from Darwin to points in eastern Indonesia and Irian Jaya. Enplanements are reported down through June, off 7.7% to 58,382.

Scheduled destinations visited from Darwin, Alice Springs, and Katherine in 1998 include Bathurst Island, Burroloola, Elcho Island,

Garden Point, Gove, Hooker Creek, Kalkarang, Kings Canyon, Lake Evella, Maninghda, Ngukur, Numbulwar, Ramininging, Snake Bay, Tennant Creek, Victoria, River Downs, and Yulara.

Enplanements for the first 6 months of the year total 86,400. Other highlights of the year include the takeover of **Arnhem Air (Pty.), Ltd.** and the addition to the fleet of 1 each Cessna 208 Caravan I and Embraer EMB-120 Brasilia.

Airline employment in 1999 stands at 43 and the fleet now includes 2 Metro 23s, 1 Shorts 330-200, the Cessna Caravan and Embraer Brasilia, plus the former Arnhem fleet.

Traffic figures available through June show customer bookings up 20% to 108,000.

Flights continue in 2000. The company homepage on the World Wide Web now proudly proclaims that it has not had a major incident in 27 years of aviation.

AIRNOW: 1563 Walloomsac Road, Suite 1, William H. Morse State Airport, Bennington, Vermont 05201, United States; Phone (802) 753-5200, Code BE; Year Founded 1999. David Corey's **Business Air** is renamed in 1999. Scheduled cargo charter and contract service flights throughout the nation and into Canada are maintained with a fleet of 11 Embraer EMB-110 Bandeirante freighters.

AIRONE, S.p.A.: Italy (1947–1949). This small carrier is formed at Cagliari on April 14, 1947. Employing Fiat G.12s, it stretches three routes from that city during 1947–1948: to Rome and Turin via Alghero; to Naples and Palermo; and to Rome and Pisa via Olbia.

Like other postwar Italian independents, success proves elusive and thus, in 1949, the airline becomes one of three purchased by **Avio Linee Italiane, S.A.** and merged into the new Fiat-backed operation **Avio Linee Italiane-Flotte Reunite, S.A.**

AIRPAC AIRLINES: 7277 Perimeter Road, Seattle, Washington 98108, United States; Phone (206) 762-8006; Fax (206) 762-6357; <http://www.airpacairlines.com>; Code RI; Year Founded 1976. Airpac Airlines, not to be confused with the Alaskan operator **Air Pac Airlines**, is established at Seattle in 1976 to offer scheduled and contract cargo charters to Vancouver, British Columbia. Revenue operations are undertaken with a fleet that grows over the next decade to include 6 Piper PA-34 Senecas, 3 PA-31-310 Navajos, 1 Beech 18, and 1 Beech 99.

Freight services continue and, by 1989 the fleet is increased with leased equipment: one each Beech 99 and de Havilland Canada DHC-6-100 Twin Otter.

The Twin Otter is removed in 1990–1992; however, smaller aircraft are acquired. In 1993–1996, President Gregory S. Thompson's fleet comprises 1 Beech 99, 8 Piper PA-31-310 Navajos, 6 PA-34 Senecas, and 3 Cessna 404 Titans.

Flights are operated without incident in this period until late 1996. While en route from Seattle on October 8, a Piper PA-34 Seneca and its pilot disappear from radar. The wreckage and dead pilot are found near Cle Elum, Washington, 11 hours later. Investigation will reveal an in-flight separation of the right wing and horizontal stabilizer.

Service is maintained without significant fiscal or operational change during 1997–2000. During these years, the fleet, which is flown by 15 pilots, is revised to include 1 Beech 99, 3 Cessna 404s, 5 Piper PA-34s, and 6 PA-31-350 Navajo Chieftains.

AIRSPUR AIRLINES: United States (1981–1985). Founded at Los Angeles in early 1981 as an all-cargo airline, President John "Jack" Gallagher's Airspur begins regularly scheduled charter flights to San Diego on September 1 with an Israel Aircraft Factory Arava. Gallagher, founder/president of **New York Airways**, and his son Tim, Airspur executive vice president, begin planning a new helicopter airline for the southern California metropolis.

On March 17, 1982, the carrier begins scheduled passenger flights between Los Angeles and San Diego and places orders for 6 more Aravas

and 6 Westland 30 helicopters. The rotary wing aircraft enter freight charter and support service during the last quarter of the year, along with additional Israeli wide-bodies.

Passenger service is launched between Los Angeles (LAX), other local airports, and city locations with Westland helicopters on May 10, 1983. The initial schedule comprises a 15-min. segment between Fullerton and Anaheim and LAX, with on-the-hour departures from Fullerton and Anaheim and half-hour departures from LAX, operated between 7 a.m. and 10 p.m. weekdays.

With a similar hourly schedule, a link between LAX and Burbank is activated on September 15, followed by flights from LAX and John Wayne Airport at Long Beach.

Control of a Westland 30, with six passengers, is lost at 4,000-ft. over Long Beach on November 7; the aircraft rotates down quickly and collides with high-tension wires before hitting the ground. All aboard are injured, two seriously.

Following the November 7 accident, all passenger flights are cancelled until January 15, 1984. Deep in debt but continuing to show potential, the company is purchased by **Evergreen International Airlines** late in the year.

The corporate identity is changed to **Evergreen Airspur** and the emphasis is changed from rotary-wing to both fixed-wing and helicopter service. Equipped with de Havilland Canada DHC-6 Twin Otters, the revamped operator is only allowed to provide scheduled services for a short period. Low traffic and high cost cause the parent airline to close down **Evergreen Airspur** in February 1985.

AIRSTAR INTERNATIONAL: 79-880 Ave. 42, Bermuda Dunes, California 92201, United States; Phone (760) 322-6740; Fax (760) 322-7148; <http://www.thecanyon.com/airstar/plane.htm>; Year Founded 1972. Daryl Silverstein establishes Air Star at Palm Springs Airport in 1972 to provide on-demand passenger charters throughout the state and to Mexico. Flights continue over the next thirty years and, by 2000, Silverstein's concern operates 3 Learjet 25Ds, 1 Learjet 24D, and 1 Turbo Commander 690.

AIRTACO, A.B. See LINJEFLYG AKTIEBOLAG, A.B.

AIR TIMARU, LTD. See THE HELICOPTER LINE, LTD.

AIRTOURS INTERNATIONAL AIRWAYS, LTD.: Parkway Three, 300 Princess Road, Manchester, England, M14 7LU, United Kingdom; Phone 44 (161) 232 6000; Fax 44 (161) 232 6610; Code VZ; Year Founded 1990. Airtours International, Ltd. is established by Airtours, plc, the U.K.'s second largest package-vacation company, on October 1, 1990 to offer holiday passenger charters and inclusive-tour flights from London (STN and LGW), Liverpool, Manchester, Cardiff, Birmingham, Glasgow, and East Midlands.

David Crossland is chairman, with Hugh Collinson as managing director and Harry Coe as chief financial officer. Sir Michael Bishop, chairman of **British Midland Airways, Ltd.**, is a member of the board, along with Thomas Trickett and Tony Waslander. Orders are placed for 5 McDonnell Douglas MD-83s that arrive in early 1991 and allow the company to commence revenue operations to the Canary Islands and Mediterranean resort areas on March 18. In November, it is reported that 3 more MD-83s will be chartered.

Enplanements total 172,625 and revenues are \$56.7 million. The operating profit is \$7 million and the net profit is \$4.1 million.

The workforce is increased a whopping 59.2% in 1992 to 449 and 3 more leased MD-83s are added. Destinations visited include Egypt, Cyprus, Algarve, Yugoslavia (before the civil war), Greece, Spain, Turkey, Tunisia, Malta, and Paris.

Passenger boardings skyrocket 89.7% to 1,675,978 while revenues advance to \$140.2 million. The operating surplus is \$17.5 million and net gain reaches \$14.6 million.

CEO Lee's workforce in 1993 totals 450. An unsuccessful hostile takeover bid is made for rival Owners Abroad Group's carrier **Air 2000**,

Ltd. The deal is derailed as the result of an inquiry made by the U.K. Monopolies and Mergers Commission and the obstructive tactics of First Choice Holidays, which also takes a large stake in OAG.

In June, another rival operator, Cardiff-based Aspro Holidays and its in-house **Inter-European Airways, Ltd.** (formed in 1987) are purchased instead. The new Welsh airline acquisition is merged on October 31, contributing two A320-211s.

Customer bookings skyrocket 111% to 3,550,000.

Inter-European is absorbed in January 1994. Two of B-767-31KERS are acquired early in the second quarter and allow new transatlantic services to the U.S. and Caribbean to be initiated. During the summer, the airline flies 60% of the Airtour Group's northern summer services. Later in the year, flights begin to Las Vegas and Sydney, Australia. During the year, the A320-211s are replaced by two chartered A320-212s.

Enplanements climb 2% to 3,620,200.

Airline employment is increased by 27.3% in 1995 to 1,162 and the company's two main divisions are consolidated. As the tour business improves, the fleet grows throughout the year and comes to include 6 chartered MD-83s, 2 leased B-767-31KERS, 1 each chartered B-757-23A and B-757-236, 3 chartered A320-212s, 1 owned and 2 leased A320-231s, and 4 new owned B-757-225s.

While landing at Manchester on April 28 after a service from Las Palmas, Canary Islands, an MD-83, with 7 crew and 171 passengers, suffers the collapse of its main landing gear; four occupants are injured.

Passenger boardings accelerate 25.4% to 4,414,459 and freight traffic skyrockets 84.9% to 33.62 million FTKs.

The workforce grows by another 11.3% in 1996 to 1,293 and 3 MD-83s are withdrawn. In February, the company purchases control of Copenhagen-based Simon Spies Holdings, and thus gains control of its airline subsidiary **PremiAir, A.S.**, which is the largest charter airline in Scandinavia. Later in the year, the Carnival Corporation assumes a 29% minority stake.

A massive restructuring of the group board and corporate management occurs at the beginning of September and is announced on September 6. Sir Michael Bishop becomes board vice chairman, with Scandinavian Leisure Group Chairman Christen Sandahl the newest board member. Nonexecutive Director Trickett and Executive Director Waslander both retire.

CFO Coe moves up to become deputy CEO/managing director, while Group Controller Tim Byrne becomes deputy chief financial officer and Barry Nightingale becomes director of group treasury services. Managing Director Collinson becomes chairman of the new accommodation division, which includes hotels and cruise ships. Mike Lee becomes chairman of the newly created aviation division that includes both Airtours International Airways and **PremiAir, A.S.**

Enplanements ascend 4% to 4,589,036 and 41.98 million FTKs are operated, a gigantic 130.3% increase.

Airline employment jumps 16.4% in 1997 to 1,505. Destinations visited from Belfast, Birmingham, Bristol, Cardiff, East Midlands, Glasgow, Humberside, Leeds/Bradford, London (LGW and STN), Manchester, Newcastle, and Teesside include Australia, Austria, Canada, the Caribbean, Cyprus, Egypt, France, Greece, the Maldives, Malta, Portugal, Spain, Switzerland, Thailand, Tunisia, Turkey, and the U.S. (principally Florida for the first half of the year on behalf of **Carnival Air Lines**).

After an investigation, the U.K. Monopolies and Mergers Commission issues a preliminary finding in September concerning the relationship of travel agents and tour operators. Links between the two groups, the agency reports, encourages anticompetitive behavior. On behalf of the industry, Chairman Crossland responds, pointing out that there is no collusion between the two groups, which are very competitive.

Arrangements for the acquisition of majority ownership (80.7%) of the Belgian holiday group Sun International, S.A. for £53.5 million are completed in October. With it comes the charter carrier **Air Belgium, S.A.**, the aircraft of which will soon be painted in Airtours colors. The Airtours Aviation Division now has a fleet of 36 aircraft.

On December 17, arrangements are completed for the lease of two Airbus A330-200s that will be delivered during the second and third quarters of 1999.

Customer bookings swell 10% to 5,055,754 and cargo traffic grows by 17.6% to 51 million FTKs.

On January 1, 1998, the tail of a B-757-23A with 8 crew and 211 passengers, impacts the ground while the plane is landing at Puerto Plata after a flight from Bangor, Maine. The airplane over rotates on landing, at which point the pilot elects to abort the landing and divert to Santo Domingo. Upon inspection it is discovered that although no one is injured, the aircraft is badly damaged.

The acquisition of 80.7% of the issued and voting shares in Sun International, S.A. is completed on January 16. The £53.5-million cost is paid from the group's existing cash resources. In February, a public offer is initiated for the remaining 19.3% of Sun International's outstanding shares at the same BFr 4,900 per share price. Sun International is assigned to the group's new West European Leisure Group, a coequal with the already established U.K. Leisure Group, Scandinavian Leisure Group, and North American Leisure Group.

Anticipating a short-term capacity crunch, Airtours, on March 8, leases the DC-10-30 that **PremiAir, A.S.** had withdrawn on February 18; the wide-body will be retained through the end of May.

Painted in hybrid colors, a B-747-219A, leased from **Air New Zealand, Ltd.**, is delivered in April. It is placed into service flying charters from Belfast, Cardiff, and Manchester to the Canary Islands, the Caribbean, and to Orlando.

On May 13, the company enters the German package vacation market when it purchases a 29.03% stake in Frosch Touristik, GmbH. (FTi) for an initial cash price of DM 50 million (£17.2 million or \$28.5 million). Airtours has the option to purchase the whole concern by 2002. Dietmar Gunz, Frosch founder and managing director, joins the Airtours board while the British concern begins to make good on a pledge to invest DM 10 million in loan capital to enable Frosch to finance its short-term growth.

Direct Holidays, which sells air-inclusive and cruise tours directly to U.K. customers through various outlets, is purchased in July.

During an August 9 A320-212 service from the Canary Islands to Cardiff, an unidentified passenger acts aggressively and becomes abusive toward fellow passengers and cabin crew members. He is arrested after allegedly making bomb threats.

On September 7, Frosch Touristik, GmbH. (Frosch translates as "frog") announces that it will set up its own airline to operate a trio of Airbus A320s, leased from Airtours International, on routes from Germany to the major Mediterranean holiday destinations. It is noted that FTi's current contract with **Britannia Airways, GmbH.** for flight services, which is due to end in 2001, will be progressively scaled back even as Herbert Kracker, head of Britannia Airways, GmbH., is hired as the new airline's operations director. It is anticipated that, beginning during the fourth quarter, **Britannia Airways Germany, GmbH.**, which has been operating B-767-304ER services for FTi to Majorca and Malta, will restrict its flights to long-haul operations to the U.S. and Caribbean.

During the year ending on September 30, the U.K. Leisure Group division carries 3.9 million passengers.

Air rage raises its ugly head again on October 30 when British passenger Steven Handy, aboard a service from the U.K. to the Canary Islands, allegedly attacks flight attendant Fiona Weir with a vodka bottle he had brought aboard. The lady requires 18 stitches and, upon landing, Handy is arrested by Spanish police and charged under Spain's Air Navigation Act with endangering an aircraft and assault occasioning actual bodily harm. After appearing before Malaga city magistrates and posting bond, Handy is released pending trial. Twice the defendant fails to show for trial and after the second absence, the Spanish court, on November 20, issues a warrant for his arrest. In the meantime, he has been banned from travel on any British airline.

Handy is persuaded to return to Spain after having been found in an Essex pub and upon his arrival on November 23, is detained by police,

who have been tipped off that he and three companions are entering the country with illegal drugs. All four are released without charge when the warning proves false. Handy is again allowed to post bail, this time for a hearing on the Weir case on December 4.

On November 25 at an undetermined time en route from Las Vegas to Manchester, one of the B-767-31KERs, with 329 passengers, sustains substantial damage to the rear cargo hold. The damage is discovered upon an uneventful landing, where several containers in the rear hold of the cargo compartment are found unsecured.

The Travelworld Group, which sells air-inclusive tours in 120 travel agencies throughout the U.K., is purchased on November 30.

The successful issue of a £250 million (\$415 million) convertible bond is completed during the first week of December. The funds generated will be employed to finance future expansion.

FTi is not able to establish its short-haul airline subsidiary as quickly as anticipated during the fourth quarter and thus **Britannia Airways Germany, GmbH.** continues to operate to the Mediterranean on behalf of the German travel operator.

Reports begin to circulate in late December that an unnamed bidder has come forward in a series of "preliminary approaches concerning possible offers" to take over rival First Choice Holidays, all of which are "highly conditional."

For the year as a whole, 8.5 million package holidays are sold and passenger boardings climb 9.3% to 5.52 million.

Company employment at the beginning of 1999 stands at 17,334, including 1,483 employed by the airline.

Airtours suffers another spectacular air rage incident early in the new year. While en route from London (LGW) to Montego Bay on January 31, a midair brawl breaks out at the rear of Capt. John Austin's Flight 71, a B-767-31KER with 12 other crew and 385 passengers, at 37,000-ft. Cabin crew attempt to calm the situation, but are unsuccessful. At one point, 8 stewards and stewardesses are grappling with unruly passengers and there is some possibility that the crew might lose control of the cabin. Seven hours into the service, after pleading for police back-up, Austin is granted permission to divert.

The wide-bodied holiday aircraft is met on the tarmac at Norfolk, Virginia, by FBI officers, who escort away 12 passengers—6 men and 6 women from a Lewisham, South London, extended family. Several of those thrown off the plane protest their innocence and, after questioning by local airport police and the FBI, are released. The event, including the rapid departure of the Boeing, is widely reported on evening news broadcasts in the U.S. and U.K.

The group is required to finance its own way back to England, where, upon landing, all face charges on Air Navigation Order offenses plus a possible legal action by Airtours to recover £20,000 for fuel used in the diversion. The case is turned over for investigation to Chief Inspector Michael Alderson of the Sussex police. The London *Sunday Mirror* will reveal several weeks later that the group that had spent £16,000 on their holiday had claimed £57,000 in welfare payments over the previous year. The report causes the British Benefits Agency to launch a fraud investigation.

The rumors concerning a possible takeover by an outside source continue to circulate during the first quarter and increase by 56% the value of First Choice Holidays. Finally, the accuracy of the speculation is confirmed by First Choice on the London Stock Exchange on March 1 and revealed to the public by the on-line version of *The Guardian* on March 2. The media speculates that the potential bidder is thought to be Europe's largest tour operator, Preussag, A.G. Analysts suggest that the move may not be successful, as the German concern holds a stake in rival Thomas Cook Holdings, parent of **Flying Colour Airlines, Ltd.**, which, in turn, owns 10% of First Choice.

The Guardian notes on March 7 that the approach to First Choice had been made not only by Preussag, A.G., but by Airtours, plc, parent of Airtours International Airways, Ltd., as well. First Choice shares have soared 27p each in value over the last week. In a brilliant stroke, Airtours Chairman David Crossland is able to persuade

Preussag to sell its remaining 10% stake in First Choice and remove itself from the bidding process.

Displeased with the manner in which Airtours has represented her case and the fact that her alleged assailant, Steven Handy, has yet to be tried by a Spanish court, flight attendant Fiona Weir quits Airtours and is hired on at rival **Flying Colour Airlines, Ltd.** Indeed, as a result of certain elements in the handling of the case, Ms. Weir files suit against Airtours on March 8. On March 15, Airtours raises its stake in Frosch Touristik, GmbH, from 29.03% to 35.92%; the stake of FTi founder Gunz falls from 23.04% to 19.67%, with private investors holding the remaining stock.

On April 19, First Choice Holidays Chairman Ian Clubb warns Airtours not to continue its attempt at a hostile takeover with a bid now valued at £852 million. Such a "reckless gamble" is certain to require at least six months of regulatory agency investigation while corporate profits would be badly damaged by the uncertainty of a review during the peak summer trading period.

On April 30, it is reported that Airtours has officially made its hostile takeover bid for First Choice Holidays during the day and that Chairman Crossland has elected to avoid hearings by U.K. competition agencies by appealing directly to the European Commission, which has final jurisdiction. Crossland has been careful, over the preceding months, to make certain that Brussels has received extensive draft submissions prior to the actual bid launch.

It is also noted that rival Thomson Holidays, parent of **Britannia Airways, Ltd.** and Britain's largest travel group, is planning a price war designed to dilute any value of an Airtours-First Choice merger. The counter offensive will bring something of a revolt among Thomson shareholders, many of whom would rather accept a number two listing than suffer large financial losses.

Concerned about the possible creation of an operator with more than a total of the U.K. travel market, the Association of Independent Tour Operators on May 1 petitions the U.K. and European Union competition authorities to disapprove any hostile takeover of First Choice by Airtours.

Upon arrival at Palma, Majorca, on a late night Airtours service from Glasgow on May 1, Glen Morrison and Patrick McCarron are taken in hand by Spanish police after an airline flight attendant complains that the two had been caught smoking in their plane's toilet. As smoking is illegal, both men have their passports seized and their return tickets are torn up. Both are forced to arrange alternative flights home at their own expense, even as their families return home with Airtours. Both men protest their innocence.

Employing three leased German-registered A320-231s in livery similar to that of Airtours, **Fti Fluggesellschaft, GmbH.**, doing business as **Fly Fti, GmbH.**, begins revenue operations on May 1. The Frosch Touristik, GmbH, subsidiary operates from Munich to the 18 major Mediterranean vacation destinations in 11 countries previously visited on its behalf by **Britannia Airways Germany, GmbH.**

The *Guardian* reports on May 9 that early signs are that an Airtours decision to bypass U.K. regulators and apply directly to the European Commission for approval of its First Choice takeover will be successful. This despite an expected negative submission from U.K. competition authorities expected to arrive in Brussels during the following week.

Air rage problems continue. While en route from Orlando to Manchester on May 10, a B-767-31KER, with 205 passengers aboard, must be diverted to Bangor, Maine. Intoxicated passenger Bryan J. Neal, who has broken an interior window in the first-class section of the jetliner and assaulted a fellow passenger attempting to intervene, is restrained before he is able to break the exterior glass. When the plane lands, Bryan is handed over to the FBI; the next day, he pleads guilty in U.S. District Court to interference with a flight crew and is sentenced to prison.

By the last week of May, Airtours has received backing for its takeover from 51% of the First Choice Holidays shareholders.

On May 26, the U.K. Department of Trade and Industry announces that it will not review the First Choice takeover on competition grounds

and will not ask the European Commission for authority to undertake a separate investigation.

Rather than rubber-stamp the arrangement, the EC, on June 3, indicates that the deal will be subjected to an in-depth investigation that could last until October, and may well result in its denial on competition grounds. As Airtours becomes aware of its own growing first half losses, it withdraws its bid for First Choice on June 10.

With receipt of the first two (of four) A330-243s six days later, Airtours becomes the second U.K. charter operator to introduce the long-range Airbus. Following a brief workup, the new jetliner operates its first revenue service on June 27 from Manchester to Montego Bay, Jamaica. The remainder of the A330-243 order is still scheduled to arrive in October–November. It is revealed on June 30 that the hostile takeover bid for First Choice has so far cost the concern £2.8 million.

On July 26, Airtours receives a 36-page European Commission document that outlines its objections to additional holiday travel industry consolidation.

It is reported in the October issue of *Airways* (published in August), that the second pair of A330-243s will, upon their delivery in the fall, be transferred to **Premiair, A.S.** At this point, it is also expected that Airtours International, according to a July announcement, will adopt the Premiair moniker.

On September 23, new EU antitrust commissioner Mario Monti, shoots down the Airtours takeover of First Choice Holidays. Although Airtours drops the bid for its rival, it does, however, formally appeal the ruling on December 2, charging that, by failing to recognize the industry's competitiveness, the regulator's ruling is flawed and should not stand as precedent.

Passenger boardings for the year dip 0.9% to 5,531,000, while 5,257,000 FTKs are operated. On revenues of £1.43 billion, the year's net loss of £75.3 million more than doubles the tour operator's failure the previous year.

The company, on May 16, sells its 3% stake in First Choice Holidays. Later in the month, the company confirms that it is in merger talks with **LTU International Airlines, GmbH.**

German tour operator Frosch Touristik FTi, in which Airtours already holds a minority interest, is fully acquired on July 14 for £24.5 million (\$38.5 million).

Unhappily, attention must instead be given to stemming the losses at FTi and so, on August 9, Managing Director Jim Byrne announces that Airtours must quit the LTU negotiations.

As **Premiair, A.S.** receives its 3 A330-343Xs during the fall, the DC-10-30s previously employed are turned back to Airtours for seasonal flights.

AIRTRAN AIRWAYS/AIRLINES: 6280 Hazeltine National Dr., Orlando, Florida 32822, United States; Phone (407) 859-1579; Fax (407) 856-5867; <http://www.airtran.com>; Code FL; Year Founded 1994. On October 1, 1993, negotiations are completed for the takeover of the new Ft. Lauderdale-based charter operator **Sun Express Airlines** by AirTran Corporation, the parent of **Mesaba Airlines**, and plans are made to turn it over to a new subsidiary, Conquest Sun Airlines.

The \$2.5-million purchase of **Sun Express Airlines**, now Conquest Sun Airlines, along with its certificate and 2 Boeing 737-200s, 1 Dash-214 and 1 Dash-297A, is completed in May 1994. The arrangement is immediately condemned by the pilots' union of **Northwest Airlines**, which correctly points out that the purchase violates their scope clause in the collective bargaining portion of the major's contract with **Mesaba Airline's** parent AirTran Corp.

In June after AirTran charter flights commence, **Northwest Airlines**, concerned by both the Air Line Pilots Association charge and fear of a loss of jet traffic, threatens to withhold some \$894,000 in prorated payments to **Mesaba Airlines** if a resolution of the Conquest Sun Airlines issue is not immediately forthcoming.

AirTran Chairman Robert D. Swenson unveils a plan in August which, as soon as certain tax and legal problems are resolved with

Northwest Airlines, will result in the spin off of Conquest Sun Airlines to AirTran stockholders. This is completed and, on September 7, the wholly owned subsidiary is reformed into **AirTran Airways**. John Horn becomes president/CEO. The dispute with **Northwest Airlines** is not yet entirely resolved as officials from the AirTran and the major continue discussions.

From a base at Orlando, services—begun earlier as nonscheduled—are converted to scheduled flights made five days a week by the 40-employee firm on October 6. Company Boeings, flying under the “FL” flight code first used by **Frontier Airlines (1)**, visit destinations Providence, Hartford, Cincinnati, Omaha, Syracuse, Nashville, Albany, Dallas (DAL), Greenville, Norfolk, and Newburgh, plus Huntsville, Birmingham, and Knoxville.

Boardings for the start-up month of October total 5,977, climbing to 10,224 by the end of November. A B-737-22E1A is delivered in December as enplanements for the year’s final quarter reach 29,480. Revenues are \$2.43 million, but expenses are \$5.21 million. Consequently, there is an operating loss of \$2.76 million and a net loss of \$1.51 million.

It is announced on March 8, 1995 that, following eight months of talks, officials from AirTran and **Northwest Airlines** have reached an agreement on the dispute stemming from AirTran Airways foray into jet passenger service. NWA will increase its stake in AirTran from 2% to almost 30% while AirTran’s jetliner service will be spun off into an entirely separate concern, AirTran Airways, Inc., on August 31.

The company suffers losses of \$3.12 million at the end of the first quarter and \$334,000 at the end of the second.

Plans for fleet enhancement and route expansion proceed while the creation of an independent parent, Airways Corporation, is accomplished by September 1.

Meanwhile during the year, the fleet comes to comprise 6 owned “Baby Boeings,” including 3 B-737-219As and 1 each B-737-222, B-737-2E1A, and B-737-2P6A. A leased aircraft, a B-737-214, also enters service. Frequencies to Knoxville are increased to six per week, and is the also number of roundtrips introduced to Providence and Syracuse.

The NWA arrangement and added capacity assure that AirTran is able to increase its traffic and enplanements for these 12 months reach 438,017. Costs exceed operating income for the year as a whole and there are losses: \$3.2 million (operating) and \$2.83 million (net).

The employee population is increased by 27.2% in 1996 to 473. Two more leased small Boeings are acquired during the last week of January, one each B-737-2T4A and B-737-297A. When six-times-a-week round-trip service to Akron, Canton, Allentown, and Rochester begins on February 1, the total number of cities in the route network reaches 21. On July 17, Airways Corporation names Robert Swenson as its chairman/CEO, to the additional posts of president/CEO of its AirTran Airways unit, succeeding the retired John Horn.

Customer bookings skyrocket 126.2% to 1,078,822. Revenues increase 113.2% to \$98.78 million, but expenses soar 122.4% to \$110.14 million. The reverses on the bottom line deepen as both an \$11.36-million operating and \$6.52-million net loss are suffered.

Company executives join with their colleagues from **Comair** on May 1, 1997 in signing a letter of intent to enter into a code-sharing agreement that will connect the two carriers’ service through Orlando. The arrangement, when completed, will cover AirTran’s 23 cities as well as Comair’s 9-stop Florida network.

On July 1, officials of **Valujet Airlines**, having decided that they cannot return the company to profitability under its current identity, sign an agreement to merge with the AirTran Airways parent, Airways Holdings. Pending all necessary approvals that will be received, the union will occur within three months of July 10, with the AirTran name surviving. The arrangement calls for a straightforward one-for-one exchange of 9,067,937 shares of Valujet stock valued at \$61.8 million. Valujet, which will have \$139 million to bring into the deal from its more successful era, will be joining a carrier with a solid safety record and no history of accidents or incidents.

Valujet’s President Corr will become CEO of the enlarged operation, which will operate a fleet of 40 Boeing 737s and DC-9s. Valujet chairman Lewis Jordan will relinquish his role and serve as a board member and consultant; as Valujet’s second largest shareholder with 5.5 million shares, he will continue to have a vested interest in the success of the merger.

Service is inaugurated on September 3 from Islip to Boston and Orlando. On September 24, **Valujet Airlines** officially changes its name to AirTran Airlines. New president Corr unveils the airline’s changes, introduces a new business-class service, featuring two-by-two seating, displays the new corporate livery, and announces a number of other product and service enhancements, including preassigned seating and nationwide distribution of seats through travel agents.

Corr also outlines a code-sharing agreement with merger partner AirTran Airways. Simultaneously, thrice-daily nonstop roundtrips commence between Houston (HOU) and Atlanta.

The company introduces X-Fares on October 22; these allow people aged 18–22 to fly standby on its nonstop flights for \$35 one-way.

Despite lobbying efforts by **USA Airways**, **Delta Air Lines**, and **Trans World Airlines (TWA)** to keep discount airlines out of New York (LGA), the U.S. DOT on October 24 grants AirTran Airlines, AirTran Airways, and three other small carriers special permission to share 31 slots at New York (LGA) and Chicago (ORD).

In early November, shareholders of Valujet, Inc., parent of the airline, approve the merger and the renaming of their holding company. The same occurs with the owners of Airways Corporation. When the union is completed at month’s end, the new holding company, AirTran Holdings, Inc., will operate two wholly owned subsidiaries, AirTran Airlines and AirTran Airways. The combined carriers will initially serve 45 cities and operate a fleet of 42 aircraft, comprising 31 DC-9-32s and 11 B-737s, with 227 peak daily departures.

All of the carrier’s aircraft offer the new business coach section beginning on November 22. By the end of the month, all of the old Valujet livery has been painted over with the new AirTran Airlines colors; each aircraft now wears a large “a” on its tail, which President Corr indicates stands for “affordable.” Repainting of the B-737 fleet will continue into the spring and summer of the new year.

Twice-daily B-737 nonstop return flights between Knoxville and New York (LGA) commence in December 15. At the same time, four daily roundtrips commence to New York (LGA) from Atlanta.

On Christmas Eve, the company sponsors a 12-hour performance of minstrels, clowns, jugglers, and other entertainers at Concourse C at Atlanta.

Senior Vice President/Chief Financial Officer Stephen C. Nevin resigns on December 31.

Passenger boardings for the Valujet operation decline 6.1% to 2,821,000, while operating revenues fall 9.8% to \$198.07 million. With expenses up 13.2% to \$290.9 million, the operating loss reaches \$92.91 million. The net loss is \$86.83 million.

Customer bookings for AirTran Airways final year are up 1% to 1,086,000 while operating revenues reach \$105.59 million. With expenses of \$118.01 million, the operating loss is \$12.42 million and the net downturn reaches \$15.34 million.

The flight schedules of AirTran Airways and AirTran Airlines are combined in January 1998 under the AirTran Airlines marketing name. The carrier will continue to operate as two companies (with two FAA certificates), but employing the single FL code. As part of this route system integration, a number of new services are offered.

The Sunday January 11 edition of the *Cleveland Plain Dealer* reports that a recent FAA inspection of the airline had found numerous serious safety violations. The next day, President Corr holds a news conference in which he reports that the review had uncovered “no airworthiness problems” and that the newspaper had gained its information from incomplete and preliminary government data. He thereafter calls upon the Ohio newspaper to retract the story or face legal action. The dispute will be resolved short of either measure.

Beginning on February 16, the company reinstates over 60 midweek flights between Atlanta and 15 cities. It also adds one daily nonstop roundtrip between Atlanta and Ft. Myers, New Orleans, and West Palm Beach.

On March 1, thrice-daily flights are started between Atlanta and Dayton, twice-daily flights begin between Atlanta and Knoxville, and daily service commences from Atlanta to Bloomington, Illinois. Nonstop flights are simultaneously increased between Atlanta and Boston, Mobile, and Savannah.

On the same day, service is discontinued between Orlando and Omaha, Kansas City, Norfolk, Toledo, and Cincinnati.

Company officials at Atlanta announce an expanded frequent flyer program on March 16.

Flights are added on April 1 between Atlanta and Buffalo, Greensboro, N.C., and Richmond, Va.

Beginning on May 1, one additional daily roundtrip is added from Atlanta to Boston, Chicago, Newport News/Norfolk, and Raleigh-Durham. With these new services, AirTran serves 38 cities with 283 peak daily departures.

En route from Atlanta to Chicago on May 7, Flight 426, a DC-9-32 piloted by Vietnam War veteran Capt. Benton West and with 90 other passengers, encounters hail and high winds over north Georgia that tear away the nose cone and smash the cockpit window and some instruments. ATC at Lovell Field, Chattanooga, is able to talk the crippled jetliner into a safe landing, from which two people are sent to hospital with minor injuries. The dramatic landing is caught on home video and is first shown over WTVC-TV before being broadcast nationwide.

Thrice-daily DC-9-32 roundtrip service is inaugurated on May 18 between Bradley International Airport at Hartford/Windsor Locks, Connecticut, and Atlanta. Simultaneously, one additional daily flight is added (except on Saturdays) between Atlanta and Bloomington/Normal, Illinois.

Richard Schroeter is now appointed senior vice president/chief financial officer.

For lack of performance, Mobile is dropped from the route network on May 31. The next day, a fourth weekly nonstop roundtrip is initiated from Atlanta to Akron-Canton Regional Airport in Ohio.

It is announced on June 12 that the company has completed the installation of business class seating in all of its aircraft.

Nine more aircraft join the fleet in July and August.

Having worked with company management and the Association of Flight Attendants (AFA) since March 1997 on efforts to arrange a new contract for the carrier's 400-plus flight attendants, the National Mediation Board (NMB) declares negotiations at an impasse on August 5.

The next day the NMB offers to submit the outstanding issues to binding arbitration, a move that the union accepts, but the carrier rejects. At this point, both sides enter into a mandatory 30-day "cooling off" period, after which the flight attendants will be free to strike and the company may impose a contract.

Negotiations between the AFA and management resume on September 2, even as uniformed flight attendants conduct informational picketing outside company headquarters and at Orlando. If a contract is not signed, members plan random work stoppages, but that need does not arise when a settlement is reached.

In mid-September, the company dramatically increases its departures from Atlanta. On September 9, the number of daily nonstops to Orlando grows from 10 to 11; to Washington, D.C. (IAD) from 8 to 9; to Buffalo from 2 to 3. The same day, new thrice-daily roundtrips commence to Quad Cities/Moline, Illinois.

At the same time, flights are ended from Atlanta to Allentown, Des Moines, Islip, Syracuse, and West Palm Beach.

New four-times-a-day nonstop roundtrips commence on September 16 from Atlanta to Miami while new nonstop roundtrips to Newark begin on October 1, five times a day. During the month, it is realized that business expansion during the fourth quarter will slow. Consequently, two B-737s will be retired when their leases end and a number of workers in Atlanta will be laid off.

Just after takeoff from Atlanta on a November 1 service to Dallas (DFW), Flight 867, a B-737 with five crew and 100 passengers, suffers hydraulic problems. The flight returns to its point of origin, but after landing, control is lost and the landing gear collapses. A total of 11 passengers receive minor injuries.

Enplanements between January and December total 5,462,827, a giant 81.7% increase over the combined totals of the previous year. Revenues skyrocket 107.8% to \$439.3 million and expenses are up 46.2% to \$457.9 million; consequently, there is an operating loss of \$18.55 million and a net \$40.73 million downturn. The net loss is less than half the previous year's deficit.

Having successfully led the airline through its restructuring process, CEO Corr returns to his other businesses in Houston at the beginning of January 1999. In his place, Allied Signal executive Joseph B. Leonard is elected chairman/CEO/president on January 6.

Service to Richmond, Virginia, ends on January 11. During the month, AirTran receives the 1998 award from *Entrepreneur* magazine for "Best Domestic Low-Fare Airline."

The company receives an FAA award on February 3 for its participation in the agency's aviation maintenance technician safety training program.

Painted in the distinctive AirTran livery and with a complete airline interior, the carrier's first B-717-2BD makes its maiden flight on February 24 from Long Beach Municipal Airport. AirTran is launch customer for the 106-passenger short-haul jetliner, but because of developmental problems with its Rolls-Royce BR715 engines, deliveries of the first two aircraft must now be postponed until September. Pilot training for company aviators will begin in July.

The next day, it is announced that the company's 1999 business plan has been put in place; its three major goals are to reduce costs, conserve cash, and shore up liquidity.

On March 4, the company informs the press that, through May 31, it will upgrade customers to business class for just \$25 over any fare.

Daily nonstop return service is initiated on March 15 from Gulfport/Biloxi to Dallas (DFW), Houston (HOU), Nashville, Ft. Lauderdale, Tampa, and Atlanta. Simultaneously, a seventh daily nonstop roundtrip is offered from Atlanta to Tampa, and an eighth nonstop return service from Atlanta to Chicago (MDW). With over 130 daily departures, AirTran is now the second largest carrier (after **Delta Air Lines**) serving Atlanta.

Former **Northwest Airlines** and **USAirways** executive Robert L. Fornaro is elected president on March 24; Chairman Leonard retains that post and continues to also serve as CEO. Fornaro accepts the presidency on March 31 and the change becomes official.

Under terms of a joint marketing partnership entered into with Beau Rivage Resort on March 16, AirTran, on April 1, launches daily return service in support of the new complex from Orlando to Gulfport/Biloxi.

Other new management additions include Senior Vice President-Customer Service Marilyn L. Rogers and Vice President Operations Stephen J. Kolski; Thomas Kalil, the former senior vice president operations, becomes a special project consultant.

Chairman Leonard reports on April 15 that Atlanta's second largest airline has earned a modest \$3-million first quarter profit, compared to a \$7.9 million loss the year before. Additionally, cash reserves, which had dwindled to \$24 million at the end of 1998, had been rebuilt to \$58 million by the end of March, thereby lessening any threat of a liquidity problem.

After less than a year on the job, Senior Vice President/Chief Financial Officer Schroeter resigns on May 5; he will remain on through the end of June before returning to Minneapolis to be with his family.

Following on the heels of the May 13 DOJ antitrust suit against **American Airlines**, AirTran, on May 26, charges **Delta Air Lines** with matching its fares and adding flights in an effort to drive AirTran out of the major's markets and thereafter raise fares. AirTran executives, who claim to have been working on their brief before the May 13 American suit, cite a number of incidents to back up their claims, but indicate they are not going to file a lawsuit or seek specific remedy. Rather, the discount carrier's

leaders ask that DOJ and DOT review Delta's practices. In a strongly worded response, Delta indicates that the AirTran charges are "insulting and untrue."

A fourth daily nonstop roundtrip service is added on May 16 between Atlanta and Greensboro, High Point, and Winston-Salem. Simultaneously, a fifth daily nonstop roundtrip is started from Atlanta to Jacksonville.

On May 24, employing company pilots, flight attendants, mechanics, and service personnel, the first production-configured B-717-2BD, painted in AirTran colors, begins a 10-day "Pre-Aircraft Certification Airline Simulated Operation" that will take it to 25 airports in 12 states on the route network. The test is designed to give the airline in-service experience with the new aircraft before its September delivery.

Wearing the colors of launch customer AirTran, a B-717-2BD participates in this year's Paris Air Show. Afterwards, it makes a 10-city customer tour of cities in Europe.

A fifth daily B-737-269A roundtrip is inaugurated on June 16 between Atlanta and New Orleans.

On July 1, President Fornaro assumes the additional post of CFO. On the same day, the company initiates new nonstop roundtrips from Atlanta to Newark four-times-a-day.

A fifth daily nonstop roundtrip is added on September 7 between Atlanta and Philadelphia.

AirTran takes delivery of its first B-717-2BD on September 24 and the second a few days later. After successfully completing a week of route proving evaluations, the two smoothly enter the airline's system. The premier revenue service on October 12 is operated over a daily route from Orlando to Atlanta, Dallas (DFW), Washington, D.C. (IAD) and back to Orlando, while the second plane flies the next day from Orlando to Ft. Lauderdale, Dallas (DFW), Chicago (MDW), and returns to Orlando.

On October 14, frequencies are boosted between Atlanta and both Miami and Ft. Myers. One more flight is added from the Georgia hub to Dayton the next day.

Route rationalization, which has been underway for some months, continues, as the company withdraws from Knoxville and ends several non-717 services from Orlando. It does, however, start flying to Newark.

Meanwhile, a private \$179-million EETC placement is made to cover financing for the first 10 B-717-2BDs. It is reported that a totally revamped website is bringing in 17% of company sales by year's end.

Passenger boardings overall surge 18.3% to 6,461,000. Parent AirTran Holdings reports operating income of \$503,828,000, up 14.7%, and costs of \$447,721,000, up 4%. The operating profit leaps to \$56,107,000 while the previous year's net loss becomes a \$29,755,000 net gain.

Airline employment stands at 3,882 at the beginning of 2000, an 11.6% increase over the previous 12 months.

As sufficient B-717-2BDs join the fleet, the company, during the first quarter, is able to retire its remaining B-737s and to begin removal of its DC-9-32s.

On March 1, daily B-717-2BD return service is launched from Philadelphia to both Ft. Lauderdale and Orlando; the same day, twice-daily DC-9-32 roundtrips are launched from Atlanta to Myrtle Beach.

The South Carolina frequency becomes thrice daily on April 1, the same day twice-daily return service is begun from Philadelphia to Tampa.

One daily flight is added on May 10 from Atlanta to Houston, Myrtle Beach, and Savannah and from Philadelphia to Myrtle Beach.

In May, AirTran renegotiates its purchase agreement and delays delivery of 10 B-717-2BDs from 2001-2002 to 2003. The manufacturer, which has not sold many of the small jetliners and needs to facilitate sales, agrees to provide 18-year operating leases for the carrier's next 20 units. Still, with 10 already in service, AirTran is the largest operator of the type in the world.

Employing a B-717-2BD, the Atlanta-Chicago (MDW) route is extended to Minneapolis on June 10, four times daily. Another daily flight from Atlanta is also added to both Gulfport and Biloxi and to Newark.

Following disclosure in the *Wall Street Journal* and the *Atlanta Journal-Constitution*, Airtran confirms on June 16 that it is, and has been, in merger talks with **Trans World Airlines (TWA)**.

The merger discussions with TWA end on July 1. Also in July, a PROS revenue management system is turned on.

During the remainder of the summer and into the fall, the last 4 B-737s are withdrawn and phaseout of the DC-9s continues with 1 older plane withdrawn for every 2 of the new B-717s delivered.

Although the carrier has experienced a number of operational incidents since its change from **ValuJet Airlines**, one of the most serious occurs on August 8.

The pilots of Flight 913, a DC-9-32 with 5 crew and 56 passengers that has just taken off from Greensboro on a service to Atlanta, discover smoke in the cockpit. As the acrid smoke spreads into the passenger cabin, the flight deck must determine whether it is best to continue on and make an emergency landing at Piedmont Triad International Airport, to turn back 15 mi. to Greensboro, or to try to put the plane down on a highway. The middle course is chosen; the aircraft is safely landed and all aboard evacuate via chutes. Several people are treated for minor injuries and smoke inhalation.

Other than several new Florida nonstops, the company's expansion is now limited to filling in holes in its East Coast route network from Atlanta. For example, thrice-daily DC-9-32 roundtrips to Toledo commence on October 3.

On October 6, Grand Casino pulls out of the arrangement that it shares with Beau Rivage to underwrite gambling flights made by Airtran into Gulfport and Biloxi from Atlanta, Tampa, Ft. Lauderdale, Dallas (DFW), and Houston.

On October 12, the company celebrates the first anniversary of its B-717-2BD operations with the delivery of its 13th small Boeing.

Daily B-717-2BD return flights begin on December 12 from Atlanta to Freeport, Grand Bahama Island. This is the carrier's first international route. The same day, new return service is launched thrice daily from Pittsburgh to New York (LGA) and Chicago (MDW) and twice daily to Atlanta. The company's 34th destination, Pittsburgh is the first city other than Atlanta from which the airline has inaugurated new flights.

AIRTRANSIVOIRE (SOCIETE AIRTRANSIVOIRE, S.A.): Ivory Coast (1973-1995). ATI is formed by A. Barnoin at Abidjan in July 1973 to provide domestic and international passenger charters. Equipped with a fleet of Cessnas ranging in size from 402s to 310s and one Douglas DC-3, the 25-employee company enplanes some 4,000-5,000 passengers per year. The Douglas is withdrawn at the end of the 1980s and replaced with a Partenavia P.68B.

Operations cease in 1995.

AIRUMBRIA, S.p.A.: Aeroporto S. Egidio, Loc S. Egidio, Perugia, 0680, Italy; Phone 39 (75) 592-8084; Fax 39 (75) 592-8087; <http://www.krenet.it/assindpg/airumbria/welcome.html>; Year Founded 1996. Airumbria is set up at Perugia (located between Rome and Florence) in 1996 to offer scheduled passenger services to smaller communities in central Italy. Teresa Spoletini is president and revenue services commence and continue with a single Douglas DC-3.

AIRVIA TRANSPORTATION COMPANY: United States (1929). Established at North Beach Airport on the East River at 42nd Street, New York City, in March of 1929, Airvia is equipped with a pair of Italian-made Savoia Marchetti S-55 flying boats. The type offers the company significant prelaunch publicity when, on July 8-9, two other aircraft are flown by Roger Q. Williams and Lewis A. Yancey from Old Orchard, Maine, to Santander, Spain, and then on to Rome.

Daily return revenue services commence on July 22, linking the carrier's base to Boston. One-way fare (including lunch) for the daily frequency is \$30. When Williams and Yancey return from Italy four days later, they are invited to serve as president and vice president, respectively. A week later, the two resign for pressing personal business reasons.

Former Commerce Department executive James A. Stader is hurriedly named president on August 8. He confirms a rumor of August 1 that Airvia will merge on September 25 with local floatplane operator

Coastal Airways (1), with integration of the new Airvia Coastal Transportation Company slated for conclusion on October 15. Plans are made to initiate services northward to Montreal and south to Florida, the Bahamas, Bermuda, and Cuba.

On September 17, Airvia dies. On that date, postal inspectors inform President Stader that they have arrested Austin H. Montgomery and Harry Taylor on charges of selling some \$350,000 in unauthorized stock through the federal mail. During its entire period of operation, the company has only gained \$8,000 above expenses on its New York–Boston service. Unable to recover or cover the Montgomery–Taylor swindle, Airvia declares bankruptcy before dark.

AIRVOLGA. *See* AERO VOLGA CONCERN

AIRWARD AVIATION SERVICES, LTD.: The Business Aviation Centre, Glasgow–Prestwick International Airport, Prestwick, Ayrshire, Scotland, KA9 2PL, United Kingdom; Phone 44 (0) 1292 511100; Fax 44 (0) 1292 61120; <http://www.glasgow.pwk.com/airward>; Year Founded 1992. AAS is established at Prestwick in 1992 to provide executive and small group passenger charters. Flights begin and continue with one each Beech King Air 100 and Cessna Citation I.

AIRWAYS INTERNATIONAL: United States (1980–1997). Miami-based Airways International is established by Izad Djahanshahi, former advisor to the managing director of **Air Taxi of Tehran**, in 1980 to undertake passenger and freight charters within the U.S. and to Mexico, Canada, and the Caribbean. Operations commence with a single Convair CV-440 Metropolitan, a Cessna 402B, and several Piper lightplanes.

In 1985, Cessna 402Cs are employed to inaugurate scheduled daily roundtrips linking the company's base with the Bahamian communities of North Eleuthera, Governors Harbour, Rock Sound, and Marsh Harbour. In the middle years of the decade, Chairman/President Izad N. Djahanshahi's fleet is altered; gone is the Convair, replaced by five Cessna 402Cs.

Airline employment is increased by 33.3% in 1989 to 40 and the fleet now includes 2 Cessna 402Bs and 10 Cessna 402Cs. Orders are placed for 10 more Cessna 402Cs. Scheduled services are inaugurated in April between Miami and Marathon, the latter destination located in the Florida Keys.

Enplanements for the year total 13,999 and revenues reach \$2.1 million. Expenses are \$1 million, leaving an operating profit of \$1.1 million. Net profit is \$118,719.

In spring 1990, frequencies are increased to Marathon and service is started to Key West and three Bahamian markets. The number of 402Cs is increased by 15 and 1 more is added in 1991. The 35-employee regional transports a total of 49,428 passengers.

Expansion continues for the 35-employee carrier in 1992 as 7 additional Cessna 402Cs and 2 Shorts 330-200s are purchased. The latter are acquired in December from **Cayman Islands** and **Metroflight**.

Passenger boardings ascend 22.3% to 60,438.

In 1993, airline employment stands at 175. Destinations served by Chairman/President Djahanshahi's company from Miami include Ft. Lauderdale, West Palm Beach, North Eleuthera, Governor's Harbour, Rock Sound, Treasure Cay, Marsh Harbour, Georgetown, Androg Town, Key West, and Marathon. Passenger boardings skyrocket to 70,000.

Airline employment is decreased in 1994 to 140. Early in the spring, a Beech 99 joins the fleet. Enplanements total 73,753.

Operations continue apace in 1995.

The workforce still stands at 140 in 1996 and the fleet includes 15 Cessna 402Cs and 2 Shorts 330-200s. Traffic figures are reported through the first quarter and show customer bookings of 6,275. Sales of \$9 million are generated.

The workforce is increased to 160 by the start of 1997. Unable to maintain economic viability, the company shuts down before Christmas.

AIRWAYS INTERNATIONAL CYMRU, LTD.: United Kingdom (1984–1988). AIC ("Cymru" is Welsh for Wales) is founded at Cardiff

in early 1984. On March 22, equipped with a BAC 1-11-304, it inaugurates regional holiday charter tours and general passenger group flights to destinations in Europe. Points visited include Nice, Faro, Palma, Barcelona, Ibiza, Malaga, and Alicante.

On April 1, the BAC 1-11-432 *Island Esprit*, leased from **British Island Airways, Ltd. (2)** for eight months, enters service. A second BAC 1-11-304 is delivered in November, allowing return of the *Island Esprit*.

Over the next three-and-a-half years, the fleet is increased by the addition of two Boeing 737-200s. Operations cease in January 1988.

AIRWAYS OF INDIA, LTD.: India (1945–1953). Airways of India is founded at Calcutta in September 1945. Equipped with de Havilland DH 104 Dove 1s, it begins nonscheduled service to the demilitarizing wartime "Hump" airlift bases at Bagdogra and Gauhati in Assam during September 1946. Charters are also flown into Burma, the first postwar commercial flights into that country by a Western carrier.

Two Douglas C-47s (military transports converted to DC-3 civil standard) are acquired during the winter and in March 1947, a thrice-weekly Calcutta–Vishakhapatnam–Madras–Bangalore service is inaugurated. With a suspension of surface transport in the area, the Indian government contracts with the carrier to fly passengers and mail from Calcutta to North Bengal, Gauhati, Silchar, Dibrugarh, and Tezpur.

During 1948, all previous services are maintained and in February 1949, the company is granted new licenses to fly scheduled routes from Calcutta to Bagdogra and Mohanbari. During the year, two Sud Ouest S.O.-95 Corse transports are placed in service. They are withdrawn in October 1950. Low-cost "Airst" service is introduced between Delhi and Gauhati in December 1951.

As the result of parliamentary study and debate, the decision is taken to nationalize the Indian air transport industry. An Air Corporation Bill receives presidential assent on May 28, 1953, resulting in the August 1 creation of **Indian Airlines Corporation**, which takes over AI and other small carriers.

AIRWAYS OF NEW MEXICO: United States (1979–1985). Based at Alamogordo, founder and President G. Wayne Nelson's 5 Cessna 402s and 3 Beech 99s begin to operate scheduled passenger and cargo flights in 1979 linking the company's base with Albuquerque, Las Cruces, El Paso, and Tucson.

By 1984, the fleet includes 6 Cessna 402s and enplanements in total 24,000. The FAA, in the first of several actions against commuter carriers deemed to be operating outside of FAR regulations, shuts the carrier down on April 11, 1985 for pilot proficiency and maintenance violations.

Hopes to resume operations in May are not realized as company officials fight an unsuccessful appeal through government administrative channels.

AIRWORK, LTD.: United Kingdom (1928–1960). Alan Munz establishes his FBO/air charter service, Airwork, Ltd., at London (Heston) aerodrome in 1928. After four years of general work, Munz, in 1931, explores the possibilities of starting an airline in Egypt; authority for sole operations within that country is granted on December 31.

The subsidiary carrier Misr-Airwork, Ltd.—Misr being the Arabic word for Egypt—is formed at Cairo on June 7, 1932. The Misr Bank provides 85% of the ££20,000 start-up capital, with another 5% coming from private investors, while Airwork, Ltd. takes a 10% interest and assumes technical and operational responsibility.

Employing DeHavilland DH 84 Dragons, Misr-Airwork, Ltd. inaugurates domestic Egyptian service in early July 1933 over a route Cairo–Mesa Matruh. Meanwhile, the company also participates in the formation of **Indian National Airways, Ltd.** Twice-daily Cairo to Alexandria flights commence in August.

Misr-Airwork, Ltd. launches a route in 1934 from Cairo to Lydda, Haifa, and Palestine, via Port Said. Weekly Cairo–Lydda–Nicosia DH 86 mail flights commence on August 3, 1935.

New scheduled routes are opened in **1936–1937** from Alexandria to Asyut via Port Said and Minia; and from Cairo to Baghdad via Cyprus and Haifa. Charter flights are also arranged for Hadj pilgrims in the spring between El Medina and Jeddah. The fleet grows to include 2 each DH 82 Tiger Moths and DH 84 Dragons and 5 DH 89 Dragon Rapides.

In **1938–1939**, flights are also started from Cairo to Larnaca via Lydda and Haifa. The fleet is altered to include the 5 Dragon Rapides, 1 Dragon, 2 Tiger Moths, 1 each DH 60 Moth, DH 85 Leopard Moth, and DH 87 Hornet Moth, and 2 miscellaneous de Havilland types.

Following the outbreak of World War II on September 3, **1939**, the Egyptian government assumes majority control of the airline. Airwork, however, retains its management and support contract. During the war, the company's aircraft are employed at home to train RAF personnel. They also serve as transports.

In **1943**, service is launched to Palestine and Beirut and, in the fall of **1944**, the fleet is bolstered by the addition of 3 Avro 19s. Three Mideast accidents late in **1945** bring a public outcry. Service in Egypt is suspended on February 6, **1946**, but is restarted in May.

With the war over, Airwork now becomes an authorized Airspeed Consul dealer, acquiring its first AS.65 in April. A Percival 1 Proctor is added in June and a Bristol 170 Mk. 11 Freighter in August. In Cairo, site of an Allied war surplus depot, Misr-Airwork, Ltd. executives are able to purchase an entire new fleet. Included in this fleet are 2 North American AT-6 Texans, 4 Avro Ansons, 5 Beech C-45s, and 1 Beech AT-11. Only 4 Dragon Rapides remain from the 1945 aircraft complement.

Company official Sir Richard Barlow is sent to Ecuador at the end of November to discuss a business proposal with officials of the Shell Oil Company. While on a survey flight out of Quito on December 3, Sir Richard's Grumman G-21A Goose crashes 14,000 feet up in the Llanganate Mountains (5 dead).

On January 15, **1947**, the company signs a contract with Shell to operate and maintain that corporation's Ecuadorian air fleet. During the year, additional Consuls are acquired, along with 2 de Havilland DH 89A Dragon Rapides and 6 Vickers Vikings, which are also added to the revitalized Airwork, Ltd. operation. Flying out of the U.K. on charter, Airwork, Ltd. undertakes military-sponsored flights to the Middle East and Far East. In Egypt, two more Beech C-45s are added to the Misr-Airwork, Ltd. enterprise.

In need of additional capitalization, the South African carrier **Commercial Air Services (Pty.), Ltd.** sells a half interest in itself to Airwork, Ltd. during the year. Airwork, which is winding down its involvement in Egypt, is ready for a new challenge. Miles D. M. Wyatt, the chairman of Airwork, becomes chairman of Commercial Air Services, but the three cofounders, A. S. Joubert, Leon Zimmerman, and J. M. S. Martin, are left to operate the company on the scene.

A number of different aircraft types join the fleet in **1948**. These include 3 more Dragon Rapides, 1 Percival Proctor 4, 2 additional Vikings, and 1 Bristol 170 Mk. 21 leased from its manufacturer.

In May, a £1.2-million contract is received from the International Refugee Organization for the transport of displaced persons from Hamburg to Montreal.

Government charters continue and a subsidiary, **Airwork (East Africa), Ltd.**, is formed to develop East African air transport with two Bristols. Two Vikings are dispatched to provide additional lift for Misr-Airwork, Ltd.

On November 10, the company's Bristols begin limited participation in the Berlin Airlift from Hamburg, flying a total of 74 sorties before retiring on the following February 12. Meanwhile on November 30, a Viking flies urgently required currency to West Africa.

Another leased Bristol 170 Mk. 21 is acquired in January **1949**. A de Havilland DH 104 Dove is purchased in February, and is followed by a Percival Proctor 3 in September and the carrier's first ex-military Douglas C-47 (converted to civil DC-3 standard) in December. The last remaining interest in Misr-Airwork, Ltd. is relinquished during the year and the airline begins full concentration on troop charters from Britain under contract to the War Office. The government of Egypt now inau-

gurates its own airline, Misrair, Ltd., employing the equipment Airwork leaves behind.

On April 4, **1950**, the 345th roundtrip flight is undertaken London–Wadi Halfa/ Khartoum. The company's contract with Shell Oil Company also ends in April when that corporation departs Ecuador. In June, another Dakota and another Dove are added.

War Office contracts continue in **1951** and the fleet is increased by the purchase of a Percival Proctor 3. Among the contracts is a huge £1.25-million arrangement for the transport of soldiers between the U.K. and the Mideast. During the year and into the next, the company facilitates the delivery of two DH 104 Doves to **Commercial Air Services (Pty.), Ltd.**, one under lease.

The number of Airwork aircraft increases significantly in **1952**. One more Viking, another ex-military C-47, and 6 Handley-Page HP-81 Hermes 4s, the last acquired from **British Overseas Airways Corporation (BOAC)**, are acquired under lease and retain their names, *Hamilcar*, *Hecuba*, *Hadrian*, *Heron*, *Hebe*, and *Hermione*.

In the spring, the operator's DH 104s begin oil industry support operations in the Middle East. On June 14, Airwork, Ltd., joins with **Hunting Air Transport, Ltd.** to inaugurate low-fare "Colonial Coach" service; the first Viking departs Blackbushe for Nairobi, flying the two-day operation with two overnight stops via Nice, Malta, El Adem, Wadi Halfa, Khartoum, Juba, and Entebbe.

During June, four of the HP-81s begin a trooping contract for the British government. For political reasons, the aircraft are operated as military aircraft, with RAF markings and the serials WZ838–WZ841.

The Handley Page HP.81 Hermes 4A WZ839 and originally known as the *Hebe*, with 6 crew and 64 passengers, must be written off after a hard landing at Pitviers, France, on July 23; there are no fatalities.

On August 25, the Hermes 4 WZ841 originally known as the *Hadrian*, with 6 crew and 51 passengers and chartered by the government to return its employees from vacations, crashes off Trapani, Sicily (7 dead).

In September, the company applies for a license to operate an all-freight service to North America.

Three more C-47s join the fleet in **1953**. The Dove leased to **Commercial Air Services (Pty.), Ltd.** is returned in January as that South African carrier, after consultation, acquires a pair of Lockheed L-18 Lodestars from **East African Airways Corporation**.

Permission for an all-cargo route to Montreal and New York from London is authorized in February; however, the carrier has no aircraft with the range to undertake the operation. Under the marketing label "Safari Flights," "Colonial Coach" service is extended to Salisbury, Rhodesia, on June 26.

One more C-47 joins the fleet early in **1954**. A three-year Air Ministry troop contract for the Far East is awarded to the company; the largest such charter awarded to that time, it is valued at £1.25-million per year. On June 14, "Safari Flights" begin service to Accra; mail is added to the London–Dakar and Bathurst sections of this route on June 21.

A disabled Vickers 627 Viking 1B, with 5 crew and 32 passengers, crashes while on approach to the airport at Blackbushe on August 15; although the aircraft is burned out and must be written off, there are no fatalities. A hostess is credited with averting a disaster.

Airwork, Ltd., launches London–Frankfurt am Main DC-3 cargo flights on January 12, **1955**, the same day the carrier joins IATA. With two DC-4s leased from **Transocean Airlines (TAL)**, weekly London–Montreal and New York multistop all-cargo service begins on March 1; the frequency becomes thrice weekly on May 20. London–Basle and Zurich DC-3 all-cargo operations start on May 28, with a stop at Dusseldorf added on May 31. The New York City to London route is extended beyond London to East Africa on August 14.

Despite the addition of a DC-6A chartered from **Slick Airways** early in the fall, the unprofitable North Atlantic cargo service is suspended on December 18. Its failure is blamed on lack of government support. DC-3 all-cargo flights to the continent are discontinued on March 8, **1956**. During the year, the company assists in the formation of the German carrier **Deutsche Flugdienst**.

In January 1957, the company purchases from **British Overseas Airways Corporation (BOAC)** the HP-81 Hermes 4s *Hecuba* and *Hermione* while, in February, the Hermes 4A *Hamilcar*, which has been leased from the flag carrier, is also purchased. The HP-81 *Horsa* arrives in May. Concentrating exclusively on its Far Eastern and African routes, Airwork, Ltd., introduces the ex-BOAC HP-81 Hermes 4A *Horsa*, newly acquired, during July.

While landing at Dum Dum Airport, Calcutta, on September 1, the chartered Airwork HP-81 Hermes 4A *Hamilcar*, with 6 crew and 64 passengers, collides with an **Indian Airlines Corporation** DC-3, with 4 crew; all aboard the Indian aircraft are killed, along with 3 persons on the ground.

Two Vickers Viscount 736s are placed on the Nairobi weekly service on October 17.

Two Viscount 831s are placed on the Accra service on January 6, 1958, allowing discontinuance of the overnight stop at Las Palmas, and retirement of the Vikings. Late in the year, the independent British carrier **Transair, Ltd.** is taken over, but allowed to continue flying under its previous identity.

Air Charter, Ltd. and **Olley Air Services, Ltd.** are acquired on January 1, 1959 and both are allowed to continue flying under their prepurchase identities. On June 8, "Blue Nile" Viscount service is initiated from London (LGW)—Khartoum on behalf of **Sudan Airways, Ltd.** Troop work falters during the year and in the fall, the "Colonial Coach" flights are transferred to **Transair, Ltd.** Meanwhile, Airwork, Ltd. is reconfigured into a holding company and negotiations begin for the acquisition and merger of several independent airlines in addition to the three already obtained. The ex-BOAC Hermes 4s *Hecuba* and *Horsa* are sold to **Falcon Airways, Ltd.** in October.

On May 19, 1960, the following acquisitions are merged into **British United Airways, Ltd.**: **Airwork, Ltd.**; **Hunting-Clan Air Transport, Ltd.**; **Air Charter, Ltd.**; **Olley Air Service, Ltd.**; **Morton Air Services, Ltd.**; **Transair, Ltd.**; **Airwork Helicopters, Ltd.**; and **Bristow Helicopters, Ltd.**

AIRWORK NZ, LTD.: P.O. Box 516, Papakura, 1733, New Zealand; Phone 64 (9) 298-7202; Fax 64 (9) 298-7834; <http://www.airwork.co.nz>; Code NZ; Year Founded 1936. Airwork NZ, Ltd. is established as a general aviation company at Wellington, on the North Island, in 1936. Aircraft charter and leasing, engineering, and maintenance services for fixed-wing, and later rotary-wing, aircraft are undertaken and maintained over the next 50 years.

Having been relocated to Papakura, near Auckland, by 1984, Airwork NZ is purchased by Hugh R. Jones. Scheduled and charter passenger and cargo services to domestic locations, along with a full line of maintenance activities, are operated over the next decade. By 1994, Managing Director Jones oversees 120 employees and a fixed-wing fleet that comprises 3 Fairchild Metro IIIs, 2 Fokker F-27-500Cs, and 1 Piper T-1040. Destinations visited include Auckland, Christchurch, Dunedin, Invercargill, Palmerston North, and Wellington.

The carrier in January 1995 takes possession of two Fairchild Metro 23s. Although the aircraft will be available as necessary for passenger service, they are intended primarily for inauguration of a recently won New Zealand Post Office night-airmail contract. One Metro III is retired.

A rotary-wing division is set up under Hugh Jones. It is outfitted with 5 Eurocopter BO-117s, 3 AS-355F1s, and 1 each AS-350B, Bell 206B JetRanger, and Bell 222.

Operations continue apace in 1996–2000. By the latter year, airline employment stands at 120 and the helicopter unit has been increased by the addition of two BO-117s. Destinations visited include Auckland, Christchurch, Dunedin, Invercargill, Palmerston North, and Wellington.

AIRWORLD AVIATION, LTD.: United Kingdom (1993–1999). Airworld Aviation, Ltd. is established at London in September 1993 to provide international charter passenger service as the U.K. subsidiary of Grupo Viajes Iberia, S.A., the largest Spanish travel concern. Miguel

Fluxa is chairman with Shaun Dewey, a former **Inter-European Airways, Ltd.** executive, as managing director.

Bases are established at Cardiff and Manchester, and revenue flights are started in April 1994 with a pair of leased Airbus Industrie A320-231s to holiday destinations in Cyprus, Malta, Greece, Portugal, Spain, and Turkey.

The company adopts the unusual response to the winter slowdown in traffic; it simply goes dormant, returning its aircraft to ORIX, its Japanese Lessor, and laying off its operational staff, all but the senior managers of which are temporary workers. During the first full season, a total of 250,000 passengers are carried.

Operations continue apace in 1995 and flights are now undertaken for Sunworld, Ltd., as well as 33 smaller U.K. tour operators. Orders are placed for two A321s and flights begin from Bristol and London (LGW).

In 1996, the workforce stands at 250 and Sunworld, Ltd., part of the Thomas Cook Group and a major tour concern, purchases the company.

On November 13, one of the Airbuses, painted in a blue-and-white color scheme with yellow, red, and blue titles, is subleased to the new Spanish charter operator **BCM Airlines, S.A.** The company's two aircraft transport a total of 435,000 passengers through November and operate 28,000 FTKs.

The third A320-231 arrives in April 1997 under charter from ILFC. One of the earlier Airbuses remains out with **BCM Airlines, S.A.** Destinations visited include Cyprus, Greece, Malta, Portugal, Spain, and Turkey.

A fourth A320-231 is leased from ILFC in April 1998.

In June, Sunworld acquires the Flying Colours Leisure Group, and its carrier **Flying Colours Airlines, Ltd.**, as its parent, Thomas Cook Group, consolidates as a major European tour operator. The combined Airworld/Flying Colours fleet creates the U.K.'s sixth largest airline, with a huge European charter network.

Traffic figures are reported through October and show enplanements of 1.72 million. Additionally, 4.3 million FTKs are also operated.

By November 1, the U.K. charter airline business is rapidly approaching consolidation. In late October, Thomas Cook Group, which has recently purchased and begun to merge both Sunworld and its house carrier Airworld, as well as **Flying Colours Airlines, Ltd.**, acquires Carlson Leisure Group and its airlines **Caledonian Airways, Ltd.** (2) and **Peach Air.**

Through the move, Thomas Cook gains Caledonian's slots at London (LGW) and Manchester and, with 32 aircraft, now owns the second largest fleet among the nation's charter carriers. Plans are announced for an increase of service from London (STN), Bristol, Cardiff, Birmingham, and Glasgow. The fleet will also be rationalized, with only the TriStars seen as certain for retention.

As the year ends, Thomas Cook Group, which has assigned its own name to the enlarged travel group, is conducting marketing surveys to determine which airline brand name has the best public image and should be retained for the larger carrier. Early betting is that the names Caledonian (with its memory of delays and incidents) and Peach Air will disappear in addition to that of Airworld, with the romantic Flying Colours winning the label. A final decision is promised before the start of the 1999 summer holiday season.

Flying Colours is, indeed, the surviving name and its enlarged fleet of 34 aircraft begins the new summer holiday season at the end of March 1999. The amalgamation comes as the European Commission grants permission for Thomas Cook to merge with the Carlson Leisure Group's U.K. travel interests.

AIRZENA GEORGIAN AIRLINES: 49-A Chavchavadze Ave., Tbilisi, 380062, Georgia; Phone 995 (8832) 987 328; Fax 995 (8832) 221 179; <http://www.airzena.com>; Code NQ; Year Founded 1999. This new carrier is established on October 31, 1999 when **Air Georgia** and **Georgian Airlines** are merged. To supplement the Russian-made equipment in the combined fleet, arrangements are made to lease a pair of Boeing 737s from Germany.

A code-sharing agreement is signed with **Aeroflot Russian International Airlines (ARIA)** on February 1, 2000 allowing for joint service over the Tbilisi–Moscow route as well as combined maintenance and service activities.

During the spring, the company places 2 B-737-5K5s, leased from **Hapag-Lloyd Fluggesellschaft, mbH.**, into service. These are employed to maintain scheduled and charter services from Tbilisi to Tel Aviv, Moscow, Athens, Sochi, Frankfurt, Kiev, Samara, Tashkent, Tehran, Vienna, and St. Petersburg.

A third chartered B-737-5K5 arrives on June 30 and begins new twice-weekly return service to Amsterdam on July 11.

A European development bank announces safety rankings for the world's carriers on September 11; Airzena Georgian is ranked last, with a 1 in 333 chance of a passenger being in an airliner accident.

AIS AIR COMPANY: 6/3/84 Miyusskaya Square, Moscow, 125267, Russia; Phone 7 (095) 250-6325; Fax 7 (095) 251-3696; Year Founded 1996. AIS is established at Moscow in 1996 to provided international and domestic passenger and cargo charters. M. I. Denko is general director and he begins and continues revenue flights with one Antonov An-12, a Tupolev Tu-154B, and three Tu-134s.

AJT AIR INTERNATIONAL (AKTSIONERNOE OBSHCHESTVO): Leningradski Prospekt 37, Building 7, Moscow, 125167, Russia; Phone 7 (095) 155-6432; Fax 7 (095) 155-6466; Code E9; Year Founded 1991. Founded at Moscow in late 1991 as a charter subsidiary of **Vnukovskie Avialini**, AJT is principally owned by Teimouzaz Kazchava. President Alexander A. Tsomaya's company acquires 2 leased Ilyushin Il-86s. These are employed to inaugurate passenger flights to destinations in the Mideast and Europe at the end of 1992. AJT enjoys the distinction of being the first independent Russian aviation company to be founded after the breakup of **Aeroflot Soviet Airlines**.

A Tupolev Tu-154S joins the fleet in 1993–1994. During 1995–1997, a network of regional, international, and domestic routes is established between the company's base and such destinations as Antalya, Kinshasa, Bumba, Lisala, Istanbul, and Rimini.

To assist in revenue enhancement, strategic alliances and code-sharing arrangements are entered into with **Aeroflot Russian International Airlines** and **THY (Turk Hava Yollari, A.O.)**.

It is reported at the beginning of 1998 that, cumulatively, the company has boarded 2.5 million passengers since its start. The workforce stands at 80 and services are provided with 3 chartered Ilyushin Il-86s and 1 Tupolev Tu-154S.

Enplanements for the year total 457,000. AJT is now the largest holiday charter operator in Russia.

Airline employment at the beginning of 1999 stands at 117.

Despite a very difficult market, the company reports the following January that it has been able to increase its volume and produce good revenue figure.

AKDENIZ AIRLINES (AKENDIZ HAVA YOLLARI, A.O.): Turkey (1989–1995). Akdeniz is set up at Istanbul in 1989 to offer passenger charters throughout the Mideast and Mediterranean. Revenue operations begin with a pair of Airbus Industrie A300B4-103s, which visit destination in the Middle East and southern and eastern Europe.

Six years later, in 1994, the fleet comprises 2 Boeing 727-200As. Unable to maintain economic viability, the carrier is shut down in 1995.

AKHAL AIR COMPANY: Turkmenistan (1993–1995). AAC is reformed at Ashgabat Airport, Turkmenistan, in 1993 from the former **Aeroflot Soviet Airlines** division Turkmenavia. Commander Alexi P. Boldyrev is placed in charge and his fleet comprises 10 Antonov An-24Vs, 9 Tupolev Tu-154B-2s, 4 each An-24RVs and Yakovlev Yak-42Ds, 3 Tu-154B-1s, and 2 Ilyushin Il-76TDs.

Operated for the government are 1 each Tu-154B-2, British Aerospace BAe 125-1000B, and Boeing 737-341 originally delivered to **VARIG**

Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.), as well as 1 B-757-23A acquired from **Ansett Australia (Pty.), Ltd.** Scheduled and charter passenger services are continued over previous routes.

Three An-24RVs are retired in 1994 and, in 1995, the company becomes a division of the new state carrier **Turkmenistan Airlines**.

AKLAK AIR, LTD.: P.O. Box 1190, Inuvik, Northwest Territories OXE OTO, Canada; Phone (867) 777-3777; Fax (867) 777-3388; http://www.inuvialuit.com/aklak; Code 6L; Year Founded 1977. Aklak Air, Ltd., an associate of the Inuvialuit Development Corporation, Ltd., is established at Inuvik, Northwest Territories, in early 1977 to provide regional passenger and cargo charter services. The initial fleet comprises 6 de Havilland Canada DHC-6 Twin Otters, 1 Beech 99, 1 Piper PA-31-350 Navajo Chieftain, and 1 Cessna 207 Skywagon.

Operations continue apace throughout the remainder of the decade and into the 1980s. Traffic and financial information is not separately published.

Late in the 1980s, the company begins to offer scheduled flights. When president W. Hagan's carrier opens these flights in 1989, his fleet has been changed somewhat, now including 2 Beech 99s, 4 Twin Otters, 1 Cessna 310, 1 PA-31-310 Navajo, 1 Piper PA-31T Cheyenne, and 2 Beech T-1040s.

Two Britten-Norman BN-2 Islanders and a Fairchild-Swearingen Metroliner are added in 1990. Equipment changes continue and in 1992 2 new Dornier 228-212s, the first of which is delivered in March, replaces all but the T-1040, 2 Twin Otters, and 2 Islanders. General Manager John Hucal becomes president in early 1993, by which time only 1 Islander and the 2 Dorniers are available. Flights continue in 1994–1995.

A joint venture arrangement is entered into with **Kenn Borek Air, Ltd.** in June 1994, under which Aklak is able to access the Kenn Borek fleet as necessary. The largest aircraft borrowed from time to time is a Douglas DC-3 freighter, which is based in Inuvik with Aklak ground and management support.

A commercial agreement is signed with **Canadian Airlines International, Ltd.** in 1996. The owned fleet in 1997–1999 includes 1 each Beech 99, King Air 100, and Fairchild Dornier 228-212. Several de Havilland Canada DHC-6-300 Twin Otters are also obtained from **Ken Borek Air, Ltd.** After CAI is taken over by **Air Canada, Ltd.** in January 2000, the CAI compact comes under review.

AKLAND HELICOPTERS: United States (1980–1986). AH is established at Talkeetna, Alaska, in August 1980 to provide rotary-wing charter passenger and cargo services to a variety of local destinations. President Dennis Brown takes over a number of routes from **Great Northern Airways** and with a fleet of Cessna 206s and Piper PA-31-310 Navajos, introduces scheduled frequencies to Anchorage, Mt. McKinley, Clear, and Fairbanks.

Operations continue apace until the carrier fails in 1986.

AKRON AIRWAYS: United States (1937–1938). Akron Airways is set up at the Ohio city in the early spring of 1937 to operate scheduled regional passenger and cargo services. The Ford Tri-Motor 5-AT-86 is purchased from **Braniff Airways** and is employed to begin flights on April 30. Operations can only be maintained for a year; poor traffic and revenues force the company to shut down on April 13, 1938.

AKTA AIR COMPANY (AKTA AVIAKOMPANIYA): Russia (1993–1996). AKTA is established at Irkutsk in 1993 to offer domestic and Asian all-cargo charter services. General Director S. K. Kapitanenko begins revenue flights with a pair of Ilyushin Il-76s.

Services continue in 1994–1995 before ending in 1996.

AL JONES AIRLINES. See **ALASKA AIRLINES**

ALA (AEROTRANSPORTES LITORAL ARGENTINA, S.A.): Argentina (1955–1973). The same group of Argentinean air force of-

ficers, who would be involved in forming **Transatlantica Argentina, S.A.** three years later, found ALA at Rosario in early 1955. A fleet of Aero Commander 500s is purchased and employed to run an ultimately unsuccessful shuttle operation to Buenos Aires.

The carrier is reorganized in 1958 and the lightplanes are withdrawn in favor of 6 Douglas DC-3s. At the same time, its officials enter into a cooperative agreement with another new second-level airline, **PLAS (Primera Linea Aerea Santafecina, S.A.)**.

ALA continues to maintain its service, losing money. During 1961, a merger is proposed between ALA and **Austral (Compania Argentina de Transportes Aereos Saci, S.A.)**. Discussions will drag on through 1962.

In 1963, the national government announces a new master plan for domestic air service. Under this arrangement, 37 million pesos are granted to ALA to cover its 1962 losses and 41 million are provided to erase those of 1963. In return, the airline is now permitted to fly to its first foreign destinations, Asuncion, Paraguay, and Montevideo, Uruguay. Planning to merge with Austral is shelved.

The company's first fatal accident is suffered in 1964. On January 9, a DC-3 with 29 aboard crashes near Zarate; there are no survivors. In 1965, company headquarters are moved to Buenos Aires and, in 1966, the carrier begins to work in tandem with its rival **Austral Airlines (Compania Argentina de Transportes Aereos, S.A.)** in an arrangement that is almost a merger. When Austral receives Douglas DC-6s as part of its equipment contract with **Pan American World Airways (1)**, it is able to lease a number of Curtiss C-46s to ALA. At the same time, Austral takes a 30% interest.

The two carriers will work as a single unit, Austral-ALA (see the Austral entry, below) until they are fully amalgamated in 1973 as **Austral Airlines (Austral Lineas Aereas, S.A.)**.

ALA (SOCIEDAD DE TRANSPORTS AEREOS, LTDA.): Chile (1954–1961). Two small independent freight operators, **Air Chile** and **Lyon Air**, are merged in 1954, becoming ALA, a division of the nitrate conglomerate **Compania Salitrera de Tarapaca y Antofagasta, S.A.** Employing 3 Curtiss C-46s and 1 converted Consolidated B-24 bomber, ALA maintains domestic routes in support of its owners through 1956. During these years, only one new aircraft is added, a C-46 in 1954. The B-24 is damaged beyond repair in a crash on February 21, 1955.

Aware of the arguments being made by **CINTA (Compania Nacional de Turismo Aereo, S.A.)** official Jorge Carnicero for low-fare charter flights to North America, ALA now elects to enter the tour business. Two Douglas DC-4s are purchased and a Lockheed L-049 Constellation is leased from **Cubana (Compania Cubana de Aviacion, S.A.)**. The latter plane introduces cut-rate flights up the continent's west coast to Havana.

In competition with **CINTA (Compania Nacional de Turismo Aereo, S.A.)**, ALA inaugurates nonscheduled flights to New York in May 1957, via Antofagasta, Arica, Tatara, Guayaquil, Panama City, and Miami. Overextended in a slender market, ALA elects to merge with CINTA in December.

ALA/CINTA joint services are integrated and domestic routes are transferred to a third new Chilean airline, **LADECO (Linea Aerea del Cobre, S.A.)** upon its formation in December 1958. Meanwhile, the low-cost charters continue, although the route changes slightly. DC-4s provide a service from Santiago to Arica while the ALA Constellation, now joined by a chartered L-1049G Super Constellation, fly from Santiago up the west coast of South America and on to Havana, connecting there to the U.S.

After Fidel Castro takes power in Cuba on January 1, 1959, the Cuban air transport industry is nationalized and the Constellation lease to ALA/CINTA is ended. The DC-4s are insufficient to turn a profit and thus the Chilean operations suspend operations during the busy summer season. Unable to resume flying in 1960, the carrier is liquidated in February 1961.

ALA LITTORIA, S.p.A.: Italy (1934–1940). **Societa Anonima Navigazione Aerea, S.p.A.** and **Societa Italiana Servizi Aerei, S.p.A.** are

purchased by **Societa Area Mediterranea, S.p.A.** in August 1934; SAM also acquires **Societa Italiana Servizi Aerei, S.p.A.** in early fall. All four airlines are combined on October 28 to form a state-sponsored national airline, which is owned by the Instituto per la Ricostruzione Industriale (IRI). The only one of the nation's carriers not included is the Fiat-owned independent **Avio Linee Italiane, S.p.A.**

A government subsidy of L 15.34 per km. is provided and services are continued over previous routes with the aircraft of the merger partners. All of the carrier's personnel are employed by a single trade union, **Gente dell'aria (People of the Air)**, while all of the pilots are military or ex-military.

In November, the first Savoia Marchetti SM-74 is test flown. A total of 3.81-million km. are flown.

Societa Adria Aero Lloyd, S.p.A., operating in Albania, is acquired on March 20, 1935. The first of 21 trimotor Savoia-Marchetti SM-73s enter service on the European routes, including a new service to Budapest launched on April 1, and to North Africa, Mogadishu, and Addis Ababa; 3 SM-74 four-engine airliners also enter operations on the high-visibility Rome–Paris route. An SM-71 is destroyed in a crash late in the month.

Societa Nord Africa Aviazione, S.p.A., founded in December 1931 to operate a Tripoli–Benghazi and Benghazi–Tobruk service with 5 Caproni Ca-101s, is taken over on July 31, two days after Ala Littoria's 3 new SM-74s begin Rome–Paris via Marseilles flights. Oxygen is supplied to passengers for flight over the Alps.

The carrier now begins to acquire 12 Caproni Ca-133 trimotors. These enter service on the main East African route from Rome to Addis Ababa via Benghazi, Cairo, Wadi Halfa, Khartoum, and Asmara. They are also introduced on flights from Asmara to Diredawa via Assab; Asmara to Djibouti via Assab; Diredawa to Mogadishu via Gorrahe and BeletVen; and Addis Ababa to Djibouti via Diredawa. On November 11, a frequency is opened Asmara–Mogadishu via Djibouti, and in December, through service starts over that line to Rome.

Cant Z-506s enter service on the Rome–Benghazi, Cadiz, Marseilles routes in 1936. During the spring, 7 Caproni Bergamaschi Boreas (North Winds) are received and employed along the Libyan coast.

In June, 4 Breda 44s begin flights within Albania. Later in the summer, a Macchi C-94 flying boat is introduced on the carrier's Adriatic routes; 7 more of the type will follow within the year.

In September, a new Cant Z-506 catches fire and sinks while at anchor off Benghazi, cause unknown. New services are inaugurated during the third quarter: Rome–Pollenza, October 12; Pollenza–Melilla and Cadiz, December 7; and Rome–Asmara and Addis Ababa, December 8.

SM-73s begin two new services during 1937: Rome–Prague via Venice, Trieste, Klagenfurt, Bratislava on May 17 and Rome–Bucharest via Belgrade on October 4. Meanwhile, in April, new S.66 flying boats operate a frequency from Brindisi to Haifa via Athens and Rhodes. The old Cant 10ter flying boats inherited in 1934 continue to fly back and forth between Venice and Trieste.

On August 3, a Caproni Ca-133 crashes near Wadi Halfa in the Anglo-Egyptian Sudan (9 dead). Successor to the SM-73 and the first aircraft from its manufacturer with retractable landing gear, the SM-75 trimotor makes its maiden flight on November 6.

During the year, the company begins to build up a domestic network in Ethiopia; points visited will come to include not only the capital, Addis Ababa, but Asosa, Assab, Dessie, Dimbidollo, Dire Dawa, Gambela, Gondar, Gore, Jimma, Nekemte, and Qorahe.

Systemwide, a total of 17.29-million km. are flown.

The first of 30 Savoia-Marchetti SM-75 trimotors begin service on the European routes in 1938, which, late in the year, includes a new stop at Madrid. Two fatal accidents occur during the first half of the year. On February 16, an S.66 is lost in the Mediterranean (14 dead) and on May 1, while en route from Albania to Rome, an SM-83 crashes at Foggia. Nineteen aboard are killed in the latter tragedy and a cargo of gems worth \$1 million is (mostly) recovered.

During the last quarter, a de Havilland DH 89A Dragon Rapide is acquired for examination and, on November 19, the first of four

10-passenger SM-83s, a civilian modification of the SM-79 trimotor bomber, enters service.

The fleet in **1939** comprises a total of 113 aircraft, of which 57 are SM-73s/75s. Three new Macchi C-100 flying boats are received late in the year and enter service between Italy and Libya and also are used on a service from Rome to Lisbon via Cagliari and Barcelona.

Bruno Velani becomes operations manager before returning to the Regia Aeronautica from which he had been seconded. He will later become the carrier's last managing director and, in 1949, the first general manager of **Alitalia, S.p.A.**

On December 5, an SM-83 crashes into the Bavarian forest of Germany (three dead). Approximately 125,000 passengers are carried in this final year before the war.

A Macchi C-100, en route from Tripoli to Rome on March 18, **1940**, crashes in the Stromboli Islands (15 dead). When Italy joins World War II on June 10, the state carrier is employed to form the bulk of a new Regia Aeronautica transport unit, **Servizi Aerei Speciali**, which will not survive the conflict.

ALAIR: United States (1977–1978). Alair is established at Anniston, Alabama, in **1977** to provide daily roundtrip air taxi flights to Birmingham. Although Piper PA-31-310 Navajo frequencies are duly inaugurated, they cannot be maintained beyond **1978**.

ALAK (ANTIONERNAYA LIZINGOVAYA AVIA KOM-PANIYA): Leningradski Prospect Mira 37, Moscow, 125167, Russia; Phone 7 (095) 155-6789; Fax 7 (095) 151-9732; Code J4; Year Founded 1991. ALAK (the Joint Stock Leasing Company) is established at Moscow in **1991** under the leadership of General Director Boris A. Likhachev to supplement those **Aeroflot Soviet Airlines** divisions requiring additional aircraft. The company is provided with 3 Tupolev Tu-154Ms, 1 Ilyushin Il-76, and 12 Mil-8 helicopters.

When the aircraft are not out with Aeroflot, they are employed to undertake inclusive-tour charters, beginning in **1992**, on behalf of the nation's new holiday companies. Revenue flights are inaugurated to Turkey, Bulgaria, and Greece.

Operations continue apace in **1993** and, in **1994**, scheduled services are initiated between Moscow and Bratislava. Additional scheduled routes are opened in **1995–2000**; however, the fleet is cut back to include only the helicopters, 2 Tu-154Ms, and 1 Ilyushin Il-18.

ALAK AIR TAXI: P.O. Box 295, St. Petersburg, 192289, Russia; Phone 812-178-2725; Fax 812-178-2771; Code IC; Year Founded 1991. ALAK is set up at St. Petersburg in **1991** to provide charter passenger and cargo flights. By **2000**, Anatoly A. Khvoslovsky is president and he oversees the services provided by 1 each Antonov An-12, An-24, An-26, 2 Tupolev Tu-134As, and 2 Yak 40s. A Tu-154M is also owned, but is leased out.

ALAMO AIRWAYS: United States (1966–1968). Alamo Airways is set up at Las Vegas, Nevada, in **1966** to offer scheduled passenger and cargo roundtrips to Tonopah. Outfitted with a Beech 18 and Cessna 310, Alamo's services can only be maintained for two years.

ALAMO COMMUTER AIRLINES: United States (1979–1983). ACA is established at San Antonio's Stinson Municipal Airport in **1979** to offer scheduled daily passenger and cargo services to Eagle Pass, Laredo, Austin, Del Rio, and College Station. President Earl Wood's fleet comprises 2 Piper PA-31-350 Navajo Chieftains, 1 PA-31-310 Navajo, 1 PA-34 Seneca, and 1 PA-23 Aztec.

Unable to withstand either higher fuel bills or recession, the company is pushed into closure during **1983**.

ALAMO JET: Ft. Lauderdale Executive Airport, Ft. Lauderdale, Florida 33309, United States; Phone (954) 771-9511; Fax (954) 771-7159; Year Founded 1985. Alamo Jet is established at

Ft. Lauderdale's Executive Airport in **1985** to provide executive and small group ad hoc passenger services throughout the U.S., to Bermuda, and even on to Europe. Over the next decade, the company comes to employ seven full-time and six part-time pilots and operates two Learjet 55 Longhorns, both of which receive new livery in July **1996**. Service continues.

ALAS (ATLANTIDA LINEA AEREA SUDAMERICANA, S.A.): Uruguay (1978–1979). ALAS is formed at Montevideo in the fall of **1978** to operate all-cargo and charter flights to a variety of South American destinations. Employing a leased Canadair CL-44D, revenue flight operations are started in November. Unable to make a profit in the face of rising fuel prices, the new freighter entrant is forced stop flying in October **1979**.

ALAS AIRLINES, S.A. See ALAS DE TRANSPORT INTERNACIONAL, S.A.

ALAS CHIRICANAS (COMPANIA ALAS CHIRICANA, S.A.): Panama (1989–1996). Chiricanas is formed at the town of David in Chiriqui in late **1989**. Victor Manuel Mendez is named general manager and scheduled domestic and regional passenger and cargo services commence in **1990** with a fleet that grows to comprise 5 Embraer EMB-110P1 Bandeirantes.

By **1992**, there are 3 Bandeirantes, followed by 1 more in **1993**, along with a leased de Havilland Canada DHC-7-103. General Manager Mendez withdraws the Dash 7 in **1994** in favor of a fifth Bandeirante.

Just after takeoff from Colon on July 19 on a service to Panama City, an EMB-110P1 with 3 crew and 18 passengers, suddenly plunges into a wooded area some 5 mi. from the point of origin. There are no survivors and metal fragments later found in the wreckage suggest that the flight has been the victim of a bomb.

The fleet is reduced to 3 EMB-110s in **1995** and, late in **1996**, the company is acquired by **AeroPerlas (Aerolineas Pacifico-Atlantico, S.A.)**, which agrees to continue its operations.

ALAS DE TRANSPORTE INTERNACIONAL, S.A.: Dominican Republic (1989–1997). This company, also known as Alas Airlines, S.A., is established at Puerto Plata in **1989** to provide all-cargo charter services to Florida, plus Central and South America. Operations commence with 2 Douglas DC-8-55Fs and 1 DC-8-54F, all leased from the American concern Argo Air Associates.

Operations continue apace and, in **1992**, a DC-8-51F joins the fleet, also under charter from Argo Air Associates. When the new Miami-based freight operation **Fine Air** is established late in the year, the Argo leases pass to the newcomer, who maintains them with the Dominican carrier.

Make-up of the fleet changes in **1993**; Fine now provides 1 each DC-8-55F and DC-8-51F, plus 2 DC-8-54Fs. Transport services continue in **1994–1995**.

Alas elects to enter the passenger charter business in **1996**. After the B-767 scheduled to provide transatlantic service has hydraulic problems that force its grounding, the B-757-225, owned by the Turkish airline **Birgenair A.O.**, is wet-leased at the last moment to transport European tourists to and from the Dominican Republic, largely on behalf of the German tour operator Oeger Tours.

On February 6, Flight 301 for Gander, Berlin, and Frankfurt takes off from General Gregorio Lupero International Airport at Puerto Plata with 13 crew and 176 mostly-German passengers. Just after takeoff the jetliner crashes into the Atlantic Ocean; there are no survivors. The USN and NTSB assist and investigate, although their involvement is initially hobbled by a shortage of salvageable wreckage and dozens of missing bodies.

USN divers locate the "black box" flight recorders beneath the sea on February 15 and recover them on February 28. Dominican government officials announce the cause of the crash as a faulty airspeed indicator that had misled the crew into believing the aircraft had sufficient speed to maintain its altitude.

ALAS DEL CARIBE, S.A.: Dominican Republic (1967–1982). Alas del Caribe is founded at Aeropuerto Domestico Herrera in 1967 to provide scheduled lightplane shuttle services between Santo Domingo's two major airports, Herrera and Las Americas, with Britten-Norman BN-2 Islanders. A Curtiss C-46 Commando is employed during 1968–1969 to operate all-cargo charters.

By the 1970s, the fleet has come to comprise 3 Britten-Norman BN-2 Islanders and regularly scheduled commuter flights are also undertaken from Santo Domingo to Barabona, Dajabon, Puerto Plata, Sabana de la Mar, San Juan de la Maguana, and Santiago.

On December 22, 1971, a lone gunman attempts to take over an Islander en route from Santiago and Santo Domingo, but he is overpowered and subdued by the pilot and other passengers after the BN-2 lands at Dajabon for refueling.

On August 31, 1979 Hurricane David damages a DC-3 on the ground beyond repair at Santo Domingo. Unable to absorb higher fuel bills arising out of the world economic crisis of 1980–1981, the carrier ceases operations in 1982.

ALASA (AEROVÍAS LATINO AMERICANAS, S.A. de C.V.): Mexico (1945–1959). In 1945, William T. Churchill Morgan changes the name of his CAVSA (Comunicaciones Aereas de Veracruz, S.A. de C.V.). Operations continue apace with little fanfare in 1946–1951, except for November 13, 1946, when a Douglas DC-3 crashes near Mexico City (16 dead).

In 1952, an arrangement is made with ATSA (Lineas Transcontinentales de Aero-Transportes, S.A. de C.V.) for cooperative service; however, ALASA retains responsibility for a Villahermosa–Mexico City route initiated some years earlier. By 1959, the company has gone out of business, unable to compete effectively with the larger Mexicana Airlines, S.A. de C.V. that has now taken over ATSA.

ALASKA AERONAUTICAL INDUSTRIES: United States (1954–1986). AAI, originally founded in Anchorage in 1954 as a charter operation, signs a cooperative agreement with Western Airlines in October 1963. The company becomes a major Alaskan commuter airline in 1971 when, employing a mixed fleet of Beech 18s, de Havilland Canada DHC-2 Beavers, and DHC-6-100/200 Twin Otters, scheduled flights commence.

The initial Anchorage to Kenai route is expanded in 1972–1975 to include flights to Homer, Valdez, Kodiak, and McKinley National Park.

Operations continue without incident until 1976–1977 when two fatal accidents occur. On June 11, 1976, a Cessna 402 is lost at Summit Lake (2 dead). En route from Iliamna to Anchorage on September 6, 1977, Flight 302, a DHC-6-200 with 2 crew and 11 passengers, crashes into Mt. Iliamna; there are no survivors.

By the early 1980s, President Houton D. Haynes's fleet comprises 5 de Havilland Canada DHC-6-100 Twin Otters, 1 Embraer EMB-110 Bandeirante, and 1 DHC-2 Beaver. Scheduled passenger and cargo services are undertaken linking the company's base with Kenai, Homer, Sparrevohn, Cordove, and Valdez. Flights are also made to Denali and McKinley National Parks and charters are offered.

Enplanements in 1983 total 109,650. The company's fortunes tumble throughout 1984–1985 and operations cease on April 22, 1986.

ALASKA AIR GUIDES: P.O. Box 6989, Anchorage, Alaska 99502, United States; Year Founded 1954. AAG is organized at a base at Anchorage's Lake Hood in 1954 to offer passenger and cargo charter flights, contract services, and sight-seeing flights. These bush operations continue almost without change for the next 40 years; even the flight equipment is standardized on float-equipped Cessna 206s and de Havilland Canada DHC-2 Beavers.

The most unusual aircraft employed, and that only for a few years, is a float-equipped Pilatus PC-6B1 purchased from Fairchild in January 1967. Flights continue apace during the remainder of the decade and through the next, into the 1980s.

While transporting a party of hunters to remote Tutna Lake on August 18, 1985, a float-equipped DHC-2, with one pilot and three passengers, crashes into a 2,200-ft. mountain, 3 mi. from its destination; there are no survivors.

Over the next 15 years, Chairman D. Cogger's fleet consists of 2 Cessna 206s and 4 Beavers.

ALASKA AIR TAXI: 5045 Aircraft Drive, Anchorage, Alaska 99502, United States; Phone (907) 243-3944; Fax (907) 248-2993; <http://www.alaskaana.com/airtaxi>; Year Founded 1995. Alaska Air Taxi is established by Jack Barber at Lake Hood in 1995 to offer a wide variety of lightplane transportation and recreational services. Charters are flown on behalf of hunters, fishermen, flight-seers, as well as those needing delivery of freight and special cargo. Operations begin and continue with 1 each Cessna 206, C-185, and de Havilland Canada DHC-2 Beaver, all of which are float-equipped.

ALASKA AIR TRANSIT: 1000 Merrill Field Drive, Anchorage, Alaska 99501, United States; Phone (907) 276-5422; Fax (907) 276-5400; Year Founded 1985. AAT is set up at Merrill Field in downtown Anchorage in 1985 to offer air taxi and passenger/cargo charter services. Over the next decade and more, the company engages in sight-seeing tours and on-demand charters, the latter for corporate and government personnel, as well as tourists. Specialized flights over the Mt. McKinley and Columbia Glacier area are operated, along with camera flights for those desiring to photograph the area's wildlife.

The fleet in early 1999 includes 1 each Cessna 206 and Piper PA-31-350 Navajo Chieftain.

ALASKA AIR TRANSPORT: United States (1935–1939). With the idea of beginning his own airline, Alaskan bush pilot Sheldon B. "Shell" Simmons, in April 1935, obtains backing from Juneau business leaders Tom Morgan, Dr. W. W. "Bull" Council, Dan Moller, Joe Meherin, Grover Graham, and Tom McCall.

Simmons, who has obtained a wrecked Stinson SM-2A floatplane from defunct Panhandle Air Transport Company (PATCO), has his plane rebuilt in Seattle and, after christening it the *Patco*, uses it in July to begin Alaska Air Transport, a charter and contract service for passengers and cargo based in Juneau.

Additional pilots are hired and the fleet is enhanced in the summer of 1936 by the addition of an unnamed Fairchild 71, a Bellanca CH-400 Skyrocket floatplane, the *Totem*, and a Lockheed Model 5 Vega, christened the *Nugget*. The latter aircraft was the sole equipment of local competitor Irving Airways and its acquisition puts Wilbur "Wing Ding" Irving out of business. All of the aircraft are painted in a yellow and blue livery designed to enhance visibility.

Nonscheduled cargo and passenger services continue, as A.A.T. becomes the first commercial operator in southeast Alaska to offer year-round services. Despite competition from Marine Airways, Simmons's operation prospers, primarily because of its CEO's "go anywhere, anytime" approach.

During the year, Simmons generates well-earned publicity when he locates a honeymooning couple, the Almosolinos, after their Curtiss Robin crashes in Princess Bay off Behm Canal. Two float-equipped Lockheed Model 5 Vegas and another Fairchild 71 are acquired in 1937.

In June 1938, the Pacemaker *Totem* is lost when its Juneau hangar burns down. In late fall, the Fairchild is lost and Simmons is badly injured when a fuel stoppage causes the aircraft to crash in the water off Chichagof Island. Bleeding badly, the pilot first rescues his five passengers before seeking aid. The injury will require plastic surgery at the Mayo Clinic in Minnesota. Released, Simmons returns to the management of AAT wearing a face mask.

Flying a Vega, the masked Simmons participates in the December rescue of seamen stranded near the grounded freighter *Patterson* at Cape Fairweather, northeast of Juneau. In his most famous exploit, he air-drops food and supplies to the survivors' nearby camp until the Coast Guard can complete its rescue.

On May 27, 1939 the carrier is merged with rival Alexander Holden's **Marine Airways** to form **Alaska Coastal Airlines**.

ALASKA AIRLINES: P.O. Box 68900, Seattle, Washington 98168, United States; Phone (206) 433-3200; <http://www.alaskaair.com>; Code AS; Year Founded 1944. Linous "Mac" McGee forms this airline's ancestor, **McGee Airways**, with pilot Harvey W. Barnhill in the spring of 1932 to provide Stinson SM-8A floatplane service between Anchorage and Bristol Bay, Alaska. A second Stinson is acquired in 1933, allowing the operation of charter operations to bush destinations.

In 1934, McGee merges with **Star Air Service**, creating, with 22 aircraft, the largest airline in the territory; he serves as general manager.

Following the purchase of Alaska Interior Airlines in 1937, the company is reorganized by Donald Goodman and incorporated as **Star Air Lines** (SAL); its fleet is upgraded by the addition of Stinson Model A Tri-Motors and Bellanca Skyrockets. Mac McGee now finds the enterprise too large for his taste and sells out to Donald Goodman before leaving to open a liquor store.

A number of local mail contracts are acquired in 1938. In 1939–1941, SAL becomes the largest operator in Alaska; its fleet is increased to 15 aircraft and its routes and radio stations extend throughout the Yukon and Kuskokwim deltas to Bristol Bay.

A CAB operating certificate is received on December 5, 1942. Many of the most coveted routes are awarded; however, the major service to Seattle is given to **Pan American Airways (PAA)**. The northland carrier purchases **Mirow Air Service**, **Pollock Airlines**, and **Lavery Airways** on November 10, 1943 and is renamed **Alaska Star Airlines**.

Raymond W. Marshall now becomes chairman. The fleet comprises a variety of types, including the Stinson Tri-Motors, a Bellanca Pace-maker, Stinson SR Reliants, Lockheed Vegas, and its first modern airliner, a Lockheed Model 18 Lodestar.

The carrier now begins regular flights between Anchorage and Fairbanks via McGrath and Seward, over the mail route contributed to the merger by Lavery. The company continues to grow, despite a shortage of workers during the war, feuds with the CAB, and cash troubles that become so significant that employees are paying for fuel out of their own pockets. Alaska Star Airlines is reincorporated as Alaska Airlines on May 2, 1944.

By 1945, the carrier has been certified for 6,000 route miles in Alaska Territory, which it flies with a 50-ship fleet of mixed aircraft types, including new Douglas DC-3s and single-engine Noorduyt Norsemen. This network represents more than 75% of all air-traffic volume in the territory.

On June 6, 1946, a DC-3 arrives at Washington, D.C. with Governor Gruening and other VIPs aboard on the first commercial flight from the territory. A pair of ex-military C-54s are acquired from **American Airlines** and converted to civil DC-4 standard.

Raymond Marshall signs a management contract with James A. Wooten in June 1947, and turns direction of his carrier over to the new president. A DC-3, with 29 aboard, crashes into an automobile on a highway at Seattle on July 24 while attempting an emergency landing (6 dead). Charter operations still overshadow scheduled service, and Alaska now becomes the largest charter operator in the world.

On November 30, Flight 009, a C-54A with 3 crew and 25 passengers, is lost while landing on a wet runway at Seattle-Tacoma Airport; 1 crew member, 7 passengers, and 1 person on the ground are killed.

Many of the company's war-surplus aircraft fly a large variety of non-scheduled operations. For example, company aircraft fly food during the Berlin Airlift of 1948, and also fly refugees to the settlement of Israel. In September, however, the company recalls its planes from Germany to provide emergency Alaska-Seattle services.

On January 21, 1949, a DC-3 en route from Homer to Anchorage crashes (4 dead). A C-46F with 4 crew is lost at Asmara, Ethiopia, on January 26; although the aircraft must be written off, there are no fatalities.

Later in the year and into 1950, the carrier becomes the first to land Douglas DC-4s on North Slope ice runways and the first to fly a DC-4

to T-3 "Ice Island." Under CAB mandate, the carrier ends its far-flung charter business. Furthermore, nonscheduled flights to the contiguous United States are limited to eight per year.

In 1950, Alaska Airlines acquires two more small rivals, **Al Jones Airways** and **Alaska Airmotive Company**. On August 23, it signs a contract with the USN to transport men and supplies from Seattle to Kodiak and the Aleutians. The end of the company's civil charter program is fortuitous because, as the result of a CAB route award on May 24, 1951, the airline is able to inaugurate scheduled DC-4 flights from Fairbanks and Anchorage to Seattle under temporary authority on August 17. A company DC-4 makes the first commercial flight over the North Pole in December.

In 1953, a CAB-sponsored voting trust is established to help principal shareholder Raymond W. Marshall and the company avoid account irregularities then being experienced.

A DC-3 with two crew is lost near McGrath, Alaska, on August 8, 1954; there are no survivors. A DC-3 crashes near Cape Nome on October 3, 1956 (5 dead).

A C-54B with three crew and two passengers smashes into a hill 6 km. W of Blyn, Washington, on March 2, 1957; there are no survivors. Charles F. Willis Jr., former White House aide to President Dwight D. Eisenhower and founder of the cargo airline **Willis Air Service**, purchases most of chairman Marshall's interest and becomes chairman/president in May. The CAB, satisfied that the carrier's finances are in order, ends the voting trust and, in August, grants a permanent Fairbanks-Seattle route certificate.

Early in 1958, Alaska applies for permission to begin service to Irkutsk in the Soviet Union. The first pressurized aircraft, a DC-6, is delivered and begins service from Fairbanks to Seattle on April 25. On its inaugural flight the aircraft's stand-up bar is tended by Chairman Willis and his wife plays its piano. "Golden Nugget" service begins on that route, now extended to Anchorage, on August 4. In late summer, a group led by Willis purchases 200,000 shares of stock from Marshall. At year's end, the fleet comprises 20 aircraft, including 1 DC-3, 2 DC-4s, 2 DC-6s, 3 Curtiss C-46s, and a dozen miscellaneous lightplanes.

Also during the 1950s, the carrier's aircraft supply DEW Line construction sites for the Federal Electric Company and ferry passengers and cargo from Seattle to Amchitka Island in the Aleutians for the Holmes and Narver Company as well as the Atomic Energy Commission.

Unable to finance a big jetliner order, Alaska, in 1960, orders a single machine from the Convair division of General Dynamics. The company's bush operations are awarded by the CAB to **Wien Alaska Airways** and a four-year "commuter run"—Philadelphia to Fairbanks to Philadelphia—is inaugurated for RCA Corp. during construction of the latter's BMEWS (Ballistic Missile Early Warning System).

Coming in off a ferry flight, a leased C-118A (military DC-6A) with four crew, crashes short of the runway while landing at Elmendorf AFB at Anchorage on February 22; although the aircraft must be written off, there are no fatalities.

A Beech 18 is destroyed in a crash landing in heavy winds at Northeast Cape on August 10; fortunately, no injuries are reported.

The airline's first turbojet, a Convair CV-880, is delivered during the summer of 1961. On July 21, a DC-6A en route from California to Japan, crashes while on approach to Shemya, Alaska, killing its 6-man crew.

The CV-880 is placed into service on the Seattle to Anchorage via Fairbanks "Golden Nugget" route on August 30. Marketing of the service is heavy and even flight attendants are involved, dressing in Gay Nineties and Russian Cossack costumes.

By the summer of 1962, the single jet aircraft has captured 64% of all long-haul traffic flown between the three northwest cities. The captain of a taxiing Beech 18, with five passengers aboard, fails to see and avoid parked aircraft at Clear AFB, Alaska, on July 5 and crashes into them; although no one is hurt, several aircraft, including the Beech, are damaged.

During the year, two Lockheed L-1649A Starliners are chartered from **Trans World Airlines (TWA)** for use on military charters and an L-1049H Super Constellation, formerly operated by **Qantas Empire Airways (Pty.), Ltd.**, is chartered from Lockheed.

In December, Alaska signs a seven-year support and management contract with **Air Guinee (Compagnie Nationale Air Guinee, S.A.)**.

A small Alaskan contingent arrives at Conakry, Guinea, at the beginning of **1963**, along with a pair of Douglas DC-4s that have been purchased from the American carrier. The arrangement with **Air Guinee (Compagnie Nationale Air Guinee, S.A.)** is cancelled on June 30; the entire \$700,000-debt owed to the American carrier is paid by the U.S. Agency for International Development. The **Trans World Airlines (TWA)** Starliners are both purchased on December 31.

With corporate irregularities having appeared to resurface during the previous year, the CAB, on March 23, **1964**, forces certain directors off the board due to their continuing interlocking relationship with Raymond Marshall. In May, an L-1049H is chartered from **World Airways**. Two (later three) Boeing 727-90Cs are ordered for the seven-plane fleet late in the year and the RCA BMEWS contract is completed.

Airline employment is 378. Enplanements are 95,940 and 11.61 million FTKs are flown. Revenues are \$9.97 million.

The workforce in **1965** grows to 417. On March 8, Alaska Airlines becomes the first commercial operator of the Lockheed 382 Hercules freighter and the first to fly it (with drilling rig cargoes) to the North Slope (for Atlantic Richfield). Also during the month, a third L-1649A is purchased from **Trans World Airlines (TWA)**.

In May, orders are placed for two more Lockheed freighters to replace the initial (leased) unit; however, these requests are soon cancelled. By CAB order, the direct Seattle to Fairbanks route is suspended. Simultaneously, the government grants the company authority to operate jetliners nonstop from Anchorage to Seattle via Fairbanks.

Passenger boardings during the 12 months swell to 136,709.

The cancelled Lockheed 382 requests are revived later in **1966**. The CV-880 is sold during the fall, shortly after the first B-727-90C is delivered. It will be reported that the negotiations leading to the change from Convair to Boeing have been helped along with large deliveries of liquor over many months and that the initial draft order had been signed on the back of a dress shirt.

Customer bookings total 146,000.

The employee population in **1967** stands at 822 and the fleet now includes 2 B-727-90Cs, 3 L-382s, 1 leased L-1049H, and 2 L-1649As. The latter 2 pistonliners are withdrawn from regular service, although 1 will remain available for cargo charters. A B-727-93C remains out on order.

Merger discussions open with **Alaska Coastal Airlines** in March and are concluded during the summer. Meanwhile, the airline is the first to obtain FAA certification to land its B-727-90Cs on gravel runways; the first such landing occurs at Sitka on March 29.

At Kotzebue on April 17, the flight deck personnel of the chartered L-1049H, with 4 crew and 28 passengers, fails to put the landing gear down. The Super Constellation is forced to make a belly landing; there are no fatalities, but the aircraft must be written off.

To add additional lift, a single CV-990A Coronado is purchased in May from **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**. Alaska is the only airline in history to own and operate both the CV-880 and CV-990A.

On May 29, the B-727-90Cs take over the difficult Anchorage to Kotzebue route from the Starliners.

In accord, officials of Alaska and **Alaska Coastal Airlines** receive their stockholders' approvals and CAB permission for integration in September. On December 7, the government allows the company to purchase and merge **Cordova Airlines**, a move that will be executed the following February.

For the year, 217,699 passengers are flown and 5.58 million freight ton-miles are flown.

In March **1968**, President Lyndon Johnson approves the integration of Alaska Airlines and **Alaska Coastal Airlines**, which occurs from an exchange of stock on April 1. This expansion permits Alaska Airlines to extend service to almost every community in south central and southeast Alaska (94% of the state's populous areas) and requires

the purchaser to maintain the regional's routes until 1973. Sheldon "Shell" Simmons and Robert Ellis begin a decade of service on Alaska's board of directors.

Difficult to maintain, the Coronado is leased for 12 months to the Ecuadorian airline **AREA (Aerovias Ecuatorianas, S.A.)**. The last Starliner freighter is withdrawn in September and sold to **Red Dodge Aviation** for use as a bulk fuel-hauler; the third B-727-90C is acquired in the fall. The employee population numbers 1,092.

Passenger boardings jump 18% to 398,000. The number of freight ton-miles flown increases to 19.85 million. Revenues are \$26.26 million.

The fleet in **1969** is actually 6 aircraft smaller than it had been a decade earlier; however, capacity is significantly higher as provided by 6 B-727-90Cs, 3 L-382s, and 5 smaller types, e.g., de Havilland Canada DHC-6-100 Twin Otters. The CV-990A is sold to **Modern Air Transport** upon its return from Ecuador and, in anticipation of the receipt of long-haul routes to Europe, an option is taken on a B-747-100 Jumbojet.

All three of the Starliners are now sold to the Prudhoe Bay Oil Distributing Company, which will employ them to haul freight to northern Alaska. During the year, the company participates in the development and promotion of the Alyeska Ski Resort and takes over management of a fishing resort.

The workforce is 1,146 and enplanements for the 12 months total 469,614.

The employee population declines 13% in **1970** to 1,014 and a B-727-193 is leased from **Air West (1)**. For \$384,500 in notes, the airline acquires the North Star Hotel in Nome during April. The pioneer becomes a unique international carrier when it begins charter flights over the Bering Sea to Khabarovsk, Siberia. From there, **Aeroflot Soviet Airlines** carries enplaned travelers on to Leningrad.

The inaugural flight of this new "Golden Samovar" tour series is delayed for 4½ hours at Tokyo on June 8 when its pilot is advised that Khabarovsk Airport is closed. Permission to land is granted later in the day and the group of American travelers is given an honored welcome in that Siberian city before boarding an **Aeroflot Soviet Airlines** airliner to continue their Soviet visit.

When the air tour pioneers return from Khabarovsk, they receive a bonus when their Boeing 707-321, leased from the U.K. carrier **Donaldson International Airlines, Ltd.**, circles the North Pole. The company is now the predominant carrier in the 49th state. The beginning of the Russian service brings an end to "Golden Nugget" service and the system-wide inauguration of "Golden Samovar" service. Also in June, the assets of the Alyeska Ski Corporation, a resort, are acquired.

Passenger boardings climb 5.7% to 498,000 and freight ton-miles increase by 30.1% to 8.7 million.

On September 4, **1971**, the worst single aircraft disaster in U.S. aviation history to date occurs. Flight 1866, the chartered B-727-193 with 7 crew and 104 passengers en route from Anchorage to Seattle, crashes into the Chilkoot Mountains, 30 miles east of Juneau, while on a landing approach to Juneau Municipal Airport; there are no survivors.

Late in the year, Ronald F. Cosgrove and Bruce Kennedy of the Alaska Continental Development Company purchase significant shareholdings, giving the former a seat on the board of directors. Due to the adverse publicity caused by the crash, rising fuel prices, and recession, customer bookings drop sharply, down to 361,790. Debt, on the other hand, has grown alarmingly.

The workforce in **1972** is 842. New emphasis is now placed on improved customer services as the CAB in February grants exclusive authority for service within southeast Alaska. Simultaneously, the Voyager Hotel in Anchorage is purchased.

On April 17 in Seattle, an assailant claiming to have a pistol and who is, in fact, unarmed, shoves his way aboard Flight 1861. Before the B-727-90C departs for Anchorage, the man is overpowered and turned over to police. Upon examination, he will be found mentally unstable and will be sent to a psychiatric facility for a year.

Several years of financial difficulty culminate in a management change on May 12. Board member Ronald F. Cosgrove is appointed

acting president, succeeding Charles F. Willis Jr. Eight accident-free years of Hercules operations are completed on the North Slope and, more important for most shareholders, cost-cutting measures, such as staff reductions and the elimination of unprofitable routes, begin to reverse the fiscal problems.

During the summer, the last of approximately 30 roundtrip charter flights begun in 1970 are completed between Anchorage and Khabarovsk, Siberia. Permanent authority for Moscow and Leningrad is denied when the governments of the U.S. and Soviet Union begin to wrangle over reciprocal air services, and flights to the U.S.S.R. end. In September, the Golden Nugget Motel in Anchorage, along with Alaska General Properties, Inc., are purchased.

Passenger boardings accelerate 39.5% to 598,000 and freight ton-miles flown jump 58.1%. Revenues are \$38 million and a net \$2.5-million loss must be absorbed.

The employee population in 1973 numbers 1,045 and a new color scheme is unveiled. In addition, four new tail liveries (confusing for the public, it turns out) are introduced: Eskimo Alaska, Russian Alaska, Gold Rush Alaska, and Native Alaska.

In the fall, the former routes of **Alaska Coastal-Ellis Airlines** are discontinued and the carry-over fleet of Grumman G-21 Geese and Consolidated PB-5A Catalinas is sold. At this point, former Alaska Coastal-Ellis partner Benjamin "Ben" Benecke, who has held a number of top posts with Alaska Airlines since transferring over in 1968, becomes Alaska Airlines president.

Customer bookings drop 8.7% to 546,000 and a total of 12.6 million freight ton-miles are operated, off 35.6% from the previous year. Although income declines to \$36.6 million, a net profit of \$415,857 is achieved, the first such positive income since 1969 and the first of 17 consecutive years of profitability.

A total of 142 new employees are hired in 1974. The fleet now includes 11 aircraft, including 5 B-727-90s and 4 leased B-720Bs. An interchange agreement is arranged with **Braniff International Airways**; employing Braniff flight crew and a B-727-227, service to Alaska is initiated from Houston to Seattle via Dallas (DFW). At Seattle, Alaska Airlines takes over and flies the jetliner on to Anchorage and Fairbanks. Merger discussions begin with **Wien Air Alaska** and the Voyager Hotel is sold.

Enplanements climb 13.7% to 621,000 and FTKs flown jump 40.3% to 17.71 million.

The workforce in 1975 is 1,352. The planned merger with Wien is dropped as the Alaska pipeline generates significant amounts of new business. Petitions are laid before the CAB requesting nonstop authority from Anchorage to Denver and between Fairbanks and Anchorage and San Francisco and Los Angeles. Not only are these plans rejected but also the regulators force the carrier to cease service to cities in northwestern Alaska, including Nome.

The Alyeska Resort and the Golden Nugget Motel are now sold and the fleet standardization program is completed with Alaska now operating 9 B-727-93Cs exclusively. Former **United Airlines** and IATA executive Raymond J. Vecchi joins the company during the year; he will eventually become CEO.

Passenger boardings jump 25.8% to 780,386 and FTKs flown increase by 11.5% to 19.75 million. Revenues generated reach a record \$66.6 million and grant a \$6.1-million net profit.

The employee count is lowered 5% in 1976 to 1,284. The fleet comprises 6 Boeing 727-90s and 4 B-727-90Cs. Upon his retirement, President Benecke is succeeded by board member Cosgrove. Benecke does, however, retain his seat on the board of directors.

Orders are placed for two B-727-290s and a new livery, employing the state's blue and green colors, is adopted for the jetliners, with the Eskimo Alaska tail livery being retained. Scheduled destinations visited include Seattle, as well as the intrastate communities of Fairbanks, Juneau, Ketchikan, Sitka, Anchorage, Yakutat, Cordova, Glacier Bay, and Valdez. Charters, most notably those with the Hercules freighters, are undertaken and several subsidiary companies are purchased, including the Alyeska Ski Resort.

Unable to execute a go-around escape from a potential bad landing at Ketchikan after an April 4 service from Juneau, Flight 60, a B-727-81 with 7 crew and 50 passengers, is unable to gain takeoff. The Boeing overruns a wet runway, crosses a gully and service road, hits an antenna array support building, and comes to stop in a ravine (1 dead).

The remaining Twin Otters are withdrawn in midyear and the fleet now consists solely of jets. The Boeings now commence service to the communities of Wrangell and Petersburg. Flight attendants briefly walk out, beginning on September 27, and an application is made to the CAB for the inauguration of an Anchorage to Chicago route.

Customer bookings grow by 1.4%, but still deliver record enplanements of 782,499. Cargo is down, however, by a substantial 41.8% to 11.49 million FTKs. A net profit of \$7.6 million is earned on total revenues of \$69 million.

In 1977, airline employment stands at 1,500. During hearings on airline deregulation held in the U.S. Senate, Alaska is one of only three airlines to support the proposition. In the fall, the company secures what will become a long-term charter contract to fly the Seattle Seahawks to all of the club's away football games.

Enplanements are 848,444. A \$3.51-million net profit is made on total income of \$76.51 million.

The number of employees is decreased 2.7% in 1978 to 1,301. Alaska Airlines wins CAB approval to expand its route system to additional cities in the contiguous United States. Board member Bruce Kennedy succeeds Ronald Cosgrove as president/CEO.

Meanwhile, the airline records an 11.3% rise in passenger boardings to 956,532 while freight traffic grows by 5.2% to 11.98 million FTKs. Overall revenues advance 10.8% to \$83.5 million and expenses are \$76.94 million. This happy imbalance results in an operating profit of \$5.55 million and an incredible 111.8% growth in net profit to \$7.2 million.

The workforce is increased 8.8% in 1979 to 1,326. With the addition of the two ordered Boeing 727-290s, it inaugurates service to San Francisco and Portland in the spring. In Alaska, flights are offered to 10 cities. Simultaneously, a hard-fought battle to take over longtime rival **Wien Air Alaska** is lost. Bruce Kennedy now becomes chairman/CEO.

Traffic for the year rises 8.7% as 1,039,145 passengers are transported and freight increases by 13.6% to 13.6 million FTKs. Revenues advance 16.9% to \$97.59 million, but expenses leap 27.5% to \$98.12 million. The operating loss is \$533,000 and only the sale of 2 B-727-90s account for the company's \$3.37-million net profit.

The employee population is elevated by 3.7% in 1980 to 1,375. Two more B-727-290s are acquired and routes are opened to Kotzebue, Nome, Kodiak, and Palm Springs, California.

Passenger boardings rise 4.3% to 1,084,000 and a total of 27.17 million FTKs are flown. Financially, the year is good. Operating revenues rise 34.3% to \$131.08 million and, at \$128.95 million, expenses do not exceed income. An operating profit of \$2.13 million and \$5.12 million in net income are reported to shareholders. Under the CAB's reclassification schedule, Alaska Airlines is reclassified as a national carrier.

The number of employees is boosted again in 1981 by 20.4% to 1,715 as the company's fortunes dramatically rise. With the arrival of 3 B-737-290Cs and 2 more B-727-290s, frequencies are initiated to the California cities of Ontario, Burbank, Glendale, and Pasadena. Officials are able to raise \$20 million in new equity capital and Alaska Airlines commits itself to participation in the development of its state's North Slope resources by opening a route to Prudhoe Bay (servicing it from Deadhorse Airport) and constructing \$3.7-million worth of facilities at Deadhorse.

Passenger traffic jumps 22.8% as 1,324,000 passengers are carried; cargo does slightly better, climbing by 28.2% to 23 million FTKs. Overall revenues rise 39.6% to \$183 million, expenses increase only 33.2%, and a net profit of \$7.67 million is banked—the largest in the carrier's 49-year history to date—atop an \$11.3 million operating profit.

Hiring continues in 1982 as the workforce jumps 21.2% to 1,912; the fleet now includes 2 B-727-90s, 4 B-727-90Cs, 7 B-727-290s, and

3 B-727-290Cs. Alaska Airlines celebrates its fiftieth anniversary throughout the year.

In April, an aircraft and passenger interchange service is introduced with **American Airlines** that links Anchorage and Fairbanks with Houston and Dallas (DFW) via Seattle using the major's B-727-223s; the arrangement succeeds a similar deal with **Braniff International Airways**, which is about to collapse. Prudhoe Bay, Ontario, Burbank, and Long Beach are also added to the growing route network.

Boardings increase another 17.6% to 1,557,000 and freight doubles that percentage, jumping 32.6% to 30.58 million FTKs. Revenues escalate 28.6% to \$235.4 million and expenses grow 24.57% to \$214.1 million. The operating profit is \$21.27 million and another record net profit (\$10.56 million)—the 10th consecutive gain—allows the airline to sell an additional 1.5 million shares of its common stock in the equity market.

The payroll is increased another 20% in **1983** to 2,300.

The upward pace continues as Kodiak, Spokane, Oakland, and San Jose are brought into the route system. With an order for 6 and options for 3, Alaska becomes the launch customer for the McDonnell Douglas long-range DC-9-83 (MD-83). After 40 years on the American Stock Exchange, company shares are first traded on the New York Stock Exchange.

Passenger boardings spiral up by 26.4% to 1,967,553 and cargo jumps 4.8% to 45.11 million FTKs. Revenues accelerate 20.23% to \$282.98 million, costs advance 20.30% to \$257.57 million, and operating income swells to \$25.41 million. A third consecutive year of record profits is seen in the net income of \$15.72 million.

Employment booms upward by 14.6% in **1984** to 2,663 and 2 B-737-210s are acquired by purchase from **Wien Air Alaska**. A B-727-290, with 28 aboard, returns to Jackson International Airport on February 10 after one of the plane's three engines fails on takeoff; no injuries are reported.

An arrangement is entered into with the charter operator **ERA Aviation** under which it will become a unit of the Alaska Airlines Commuter Service and provide scheduled flights to villages in western Alaska from a base at Bethel.

In August, a B-727-2Q8 is tasked to become the official team plane of the Seattle Seahawks professional football team. Seahawk 1 titles appear on the aircraft's center engine duct and the head of a sea hawk emerges from the forward end of the fuselage window cheatline. Unique among dedicated sports team aircraft, the Alaska aircraft is initially kept in regular service when not required for team lift; team seating charts are made public and fans eagerly attempt to book the same seats assigned to favorite players. During the fourth quarter, flights are launched to Boise, Idaho.

On the year, traffic swells 29.6% to 2,551,000 and freight does nearly as well, being boosted 25.6% to 38.86 million FTKs.

The Seattle-based carrier posts its twelfth consecutive profitable year in a row, helped significantly toward Christmas by the demise of **Wien Air Alaska**. Revenues jump 30.9% to \$370.48 million, expenses are kept in check at \$342 million, and stockholders learn of yet another landmark net profit: \$25.9 million, which comes atop an operating gain of \$28.42 million.

The payroll grows by 23.9% in **1985** to 3,300. Early in January, the first of six MD-83s (from an order for nine) to be delivered to the launch customer during the year comes on line and begins service in March. Meanwhile, some 650 mechanics from the International Association of Machinists and Aerospace Workers (IAM) strike for 59 days, beginning on March 4.

A slot is taken at Phoenix Airport in April, from whence flights begin to Tucson. The mechanics job action is settled by a mediated agreement on May 4.

On September 3, B-727-290 service is initiated between Spokane, Pasco, and Los Angeles via Portland. Six used B-727-210s join the fleet in the fall and a new maintenance hangar is occupied at Seattle.

During the year, Raymond Vecchi and **MarkAir** President Neil Bergt, a one-time bush pilot, enter into a mutual-toleration pact. Under its terms, the two will feed passengers into each other's flights on routes

from Anchorage to Dillingham, Dutch Harbor, Kodiak, and King Salmon. The arrangement, which will last for just over five years, funnels Alaska passengers onto **MarkAir**, which, in turn, pays a portion of each fare to the Seattle-based company. The two will continue to compete for passengers and cargo between Anchorage and Fairbanks, Bethel, and Prudhoe Bay.

Despite the mechanics strike, Alaska's passenger traffic climbs 22.8% to 3,132,000 passengers boarded; freight, however, is off by 3.9% to 37.32 million FTKs. Revenues ascend 19.2% to \$443.71 million, costs climb 22.7% to \$419.63 million, and the operating profit is \$24.08 million. Net gain reported is another record, \$26.09 million.

Airline employment rises 3% in **1986** to 3,400 as Alaska Air Group, incorporated under Delaware law on the first day of the year, is formed as a holding company for the airline, which now becomes the principal subsidiary. Also in January, the company agrees to pay \$300,000 to settle safety violation fines levied by the FAA.

Low traffic volume and high operating costs bring about a cancellation of flights to Las Vegas on July 31.

On September 30, the Long Beach-based national **Jet America Airlines** is purchased and will be a \$32-million amalgamation, to be completed the following October 1 upon receipt of government approval for the takeover. Jet America's 14 slots at Chicago (ORD) and four at Washington, D.C. (DCA) are sold as surplus to **United Airlines** for \$10.5 million; the three at Long Beach and two at Orange County are retained. All 8 MD-82s are retained, along with 100 former **Jet America Airlines** pilots, who agree to accept positions on the bottom half of a two-tier wage structure.

The Seattle-based regional **Horizon Air Industries** is acquired for over \$60 million in December as a sister carrier, operated as an Alaska Air Group subsidiary; former Alaska Vice President John Kelly is named Horizon's president. Late in the year, **San Juan Airlines** attempts to negotiate a 50% sale of its holdings to the national.

Customer bookings jump 15.4% to 3,612,654 and cargo rebounds, up 7.6% to 40.14 million FTKs. Revenues swing upward by 3.1% to \$446.4 million, costs climb 1.7% to \$408.5 million, and the operating profit is ahead by \$6 million to \$37.9 million. Net gain, however, falls off to \$17.4 million.

Negotiations for a 50% purchase of **San Juan Airlines** end just after New Year's, **1987**. Five-times-per-day flights from Seattle to San Diego begin in January; two are nonstops while one visits Los Angeles en route.

En route from Seattle to Anchorage on March 7, Flight 93, a B-727-290 with 109 passengers, is subjected to an unsuccessful hijacking by a Cuban exile; members of the crew and several passengers overwhelm him.

A bald eagle drops a large fish onto a B-727-290 in flight on April 1, causing the jetliner to land at Yakutat to be inspected for damage.

While taxiing an empty B-727-90C at Anchorage on June 9, one of two mechanics accidentally deactivates the brake pressurization system, causing the trijet to run into a passenger jetway and catch fire. The mechanics are able to escape before the trijet is burned out.

Employing a B-737-210C, the company initiates overnight, all-cargo service five days a week between Seattle and Juneau in September. It also quadruples its fall schedule of frequencies between Southern California and the Bay area.

Integration of **Jet America Airlines** into Alaska Airlines is completed on October 1, and the resources of the ex-airline are deployed on the U.S. West Coast. Low traffic leads to a November cessation of B-727-290 service from Pasco to Seattle, which is picked up by **Horizon Air**; simultaneously, thrice-daily nonstop MD-82 frequencies are launched from San Jose to Burbank.

Alaska enjoys another successful year as passenger boardings climb 9.7% to 3,965,000 and freight grows by 18.3% to 52.16 million FTKs. Revenues advance 13.5% to \$541.87 million, expenses rise 13.4% to \$504.17 million, and the operating profit jumps by five million dollars to \$37.01 million. The net profit doubles to \$32.47 million.

Airline employment grows 6.6% in **1988** to 4,600 as the company wins special notices for the quality of its in-flight services.

Fares in the San Francisco Bay Area–Los Angeles basin market are cut by 28% in January; in February, the carrier files with the DOT and the Soviet government for permission to operate from Nome to Provideniya, 230 miles across the Bering Sea in Siberia.

Emphasis is placed on improving West Coast and Mexican operations and, in July, the carrier becomes the official airline of the California theme park Knott's Berry Farm.

Increased market share is achieved as are higher average fares. With technical support from **Bering Air**, the carrier mounts a Bering Land Bridge expedition to Anadyr in the U.S.S.R. during the summer; the B-727 "Friendship Flight I" is completed between Nome and the town of Provideniya. Daily service is started on September 6 from Seattle to San Francisco–Los Angeles–Los Cabos, the latter point servicing the resort communities of San Jose del Cabo and Cabo San Lucas.

Alaska Airlines and **Trans World Airlines (TWA)** become partners in each other's frequent flyer programs in November, allowing participants in either program to earn mileage toward awards in both. On December 1, daily flights commence from Seattle to San Francisco to Los Angeles and down to Puerto Vallarta and Mazatlan.

Customer bookings balloon 22.8% to 4,867,555 and cargo rises 17.4% to 59.38 million FTKs. Income exceeds costs and brings record profits. Revenues total \$708.85 million, a 15.51% increase, while costs are up 10.08% to \$646.9 million. Operating income moves ahead to \$61.94 million, as net gain climbs to \$37.6 million.

The workforce is increased by 18.7% in 1989 to 5,571 and the fleet now includes 8 owned and 12 leased MD-82/83s, 3 owned and 4 chartered B-737-200s, 1 leased B-727-100, and 1 owned plus 25 chartered B-727-200s. Orders are outstanding for 14 MD-82s, and 2 MD-83s.

In January, the carrier and **Northwest Airlines** become partners in each other's frequent flyer programs. Alaska becomes the first airline in the world to manually land a passenger-carrying jetliner (B-727-290A) in FAA Category III weather (dense fog) using a head-up flight guidance system. Also this month the company acquires two important pieces of property. One is a 70,500-sq.-ft. office in Phoenix, purchased for \$3.8 million and refurbished into a regional reservations center. The second is a 59,000-sq.-ft. maintenance facility at Oakland, leased for a decade.

In April, Alaska is one of five Alaskan air carriers subpoenaed by the U.S. Justice Department to provide information in an investigation of possible antitrust violations in the airline industry. Together with **Peninsula Airways**, **Frontier Flying Service**, **Ryan Air Service**, and **Reeve Aleutian Airways**, Alaska is required to supply documents (dating back to January 1, 1984) to a May 9 grand jury session or forward them directly to Washington. Although the airline subpoenas do not name a target, the May 6 issue of the *Anchorage Daily News* reports the subject is **MarkAir**.

In May, flights commence from Seattle and San Francisco to Guadalajara and Acapulco. As a supplement to the turboprop service provided by **Horizon Air**, thrice-weekday jetliner roundtrips to Bellingham, Washington, begin in June.

In July, Alaska Air Group sells \$75 million in 25-year convertible subordinated debentures; proceeds will be employed for further equipment purchases. When Soviet approval is not forthcoming, the airline must cancel its summer plans to offer services between Nome and Provideniya, on the Chukchi Peninsula.

Late in August, the carrier begins to offer weekend football vacation packages to all home games of the University of Washington and the Seattle Seahawks.

In the fall, Chairman Kennedy offers his views in a national magazine piece, "Alaska, the Best U.S. Airline," *CN Traveler* 25 (November 1989), 155+.

Physical facility damages, schedule alterations, and fiscal losses are incurred in the fourth quarter due to the eruption of Alaska's Mt. Redoubt volcano on December 15 and the San Francisco earthquake. The former event forces the cancellation of 150 company flights from Anchorage. Still, Conde Nast's *Traveler* magazine names Alaska the nation's best airline and, in late December, Hyatt Hotels joins its frequent flyer program.

During the year, Alaska's flight attendants first begin to report air quality problems aboard company aircraft.

Passenger boardings rise a more sedate 3.1% to 5,017,087 and freight moves ahead by 2.1% to 60.61 million FTKs. Revenues increase by 12.02% to \$794.07 million, costs jump 13.81% to \$736.23 million, and operating profit declines to \$57.83 million. Net profit reaches \$42.32 million.

The number of employees climbs 15.8% in 1990 to 6,454. The fleet is increased by 8 MD-82/8es and 1 leased B-727-200A. In January, the company receives the 1989 "Financial Management Award" from *Air Transport World* magazine.

In February, the carrier becomes the second U.S. airline customer for the V2500-powered MD-90 when it places a \$1.6-billion order for 20 MD-93s and takes options on a similar number; 6 of the firm orders are converted from earlier MD-80 orders. At the same time, Alaska agrees to lease 20 B-737-490s from ILFC, one of the world's largest aircraft lessors, with options for 4 more.

In a related transaction, corporate officials sell a \$59.4-million stake in Alaska Air Group to ILFC; the convertible, preferred shares pay a 10.2% dividend, represent almost 15% of Alaska Air Group's voting power, and have a face value of \$62.5 million. The difference between the face value and the ILFC price is covered by a \$3.1-million investment by a broad group of AAG management employees. At the same time, AAG agrees to fund a portion of its retirement obligations through the creation of an employee stock-ownership plan (ESOP), repurchasing for it stock in the open marketplace.

Also in February, Chairman/CEO Kennedy informs the board that, as the result of a decision-in-faith taken during a personal retreat the previous year, he will relinquish the post CEO in a year, holding on to the Alaska Air Group chairman's seat and concentrating on long-term corporate planning.

New aircraft livery and interior appointments are unveiled, beginning in June–July, as part of a total image changeover that affects everything from uniforms to swizzle sticks. While the Eskimo is retained to adorn aircraft tails, 10-ft.-high scripted letters transforms the "Alaska" written along the fuselage sides. **Reeve Aleutian Airways** joins the airline's Mileage Plus frequent flyer plan at the end of July.

As the result of fare discounting and higher fuel prices following Iraq's August 6 invasion of Kuwait, the third—and particularly the fourth—quarters bring fiscal downturn. In an effort to counteract this trend somewhat, triple and quadruple mileage is awarded to frequent flyers traveling from Seattle or Portland to the California cities of San Francisco, Oakland, and San Jose and between San Francisco and Long Beach.

On September 18, the board announces that COO Raymond J. Vecchi will succeed chairman/CEO Kennedy as CEO the following spring.

Meanwhile, beginning on October 1, direct service is inaugurated from Los Angeles to Guadalajara and from Los Angeles to Puerto Vallarta via Mazatlan.

Just after takeoff from Seattle–Tacoma International Airport on October 19 on a flight to Anchorage, a B-727-290A with 39 passengers registers low-oil pressure in one engine. The pilot shuts the powerplant down and returns to Seattle–Tacoma, where a safe emergency landing is completed. No injuries are reported.

Two new Mexican routes are initiated on November 15—San Francisco to Los Cabos and San Diego to Los Cabos.

On December 7, in a historic departure from Seattle, Alaska Airlines becomes the first U.S. carrier to take off in less than 600 feet of runway visibility with a passenger-carrying jetliner (B-727-290A) using a "fog busting" head-up HGS-1000 flight guidance system. Also in December, an agreement is signed with the interline cargo system Airmax to facilitate the movement of air freight to and from Alaska. At the same time, vacation packages to Los Cabos, Puerto Vallarta, and Mazatlan are unveiled for passengers flying from any U.S. city served by the carrier or its sister, Horizon Air.

Customer bookings for the year as a whole increase by 8.8% to 5,457,150 and cargo climbs 5.3% to 63.86 million FTKs. Revenues

ascend 12.8% to \$895.71 million, expenses swell 19.33% to \$878.59 million, and the operating profit is down to \$17.15 million, which is still the 25th highest among the world's carriers. Net gain declines to \$15.04 million; however, this is the 18th consecutive profit reported.

The payroll is increased by 6.3% in 1991 to 6,862 and the fleet now includes 63 aircraft. In January, the carrier receives the 1990 "Airline of the Year" award from *Air Transport World* magazine. Former president Benjamin "Ben" Benecke steps down from the board.

Beginning in February, the company coordinates thrice-weekly Alaska-bound service from New York (JFK) to Seattle by **Trans World Airlines (TWA)**, where passengers board MD-82s for Anchorage.

Before Alaska opens service to the Soviet Far East, Alaska Airlines, in April, begins to train 13 **Aeroflot Soviet Airlines** ticket agents in customer service at Seattle-Tacoma International Airport. The Soviets will graduate at the end of May and return to Magadan and Khabarovsk, where they will serve Alaska customers during their summer visits.

Same day or overnight delivery of letters and small packages throughout the route network is inaugurated as Goldstreak shipping service in May.

Corporate leader since 1979, Chairman/President/CEO Bruce Kennedy steps down as president/CEO, also in May, "to devote more time to Christian service." He is succeeded by COO Vecchi on June, just about the time Kennedy and his wife Karleen depart for Wei Fang, 270 miles SE of Beijing, to teach English. The once-powerful airline president also receives important perks in his new post—free housing and the use of a bicycle.

Also, on June 17, thrice-weekly roundtrip charter services are started from Anchorage to the Russian Far East cities of Magadan and Khabarovsk and are the first regularly scheduled by a U.S. company from the West Coast; tour packages are also available. Due to technical problems, **Aeroflot Soviet Airlines** transports the Magadan-Khabarovsk passengers for the first month of the arrangement.

The relationship between Alaska and **MarkAir** begins to deteriorate in July. MarkAir President Bergt is extremely displeased when the larger carrier seeks an increase in the percentage of its take from fares of Alaska passengers booking onto **MarkAir**. Alaska also rejects a plan to substitute smaller, more cost-efficient aircraft for some of the jets serving Kodiak. Bergt determines to unilaterally abrogate the 1985 pact, claiming that the other side does not want to continue the special relationship.

Twice-daily San Diego to Los Angeles to Toronto roundtrip service begins in October as the Ontario metropolis becomes the company's first city north of border and east of the Rockies. Customs clearance for both directions is accomplished in Toronto and, in a promotion, the carrier gives away Canadian-minted, 24-karat Gold Maple Leaf coins to each passenger flying the new route. **British Airways, Ltd. (2)** becomes a partner in Alaska's frequent flyer program during the same month.

Also in October, **MarkAir** President Neil Bergt informs his staff at a general employee meeting that he is planning an expansion that will put his aircraft deep within airspace previously dominated by Alaska Airlines. He is, however, willing to consider a last-minute possibility of selling his airline to the larger company. Thus he travels to Seattle-Tacoma International Airport for a meeting with Alaska President Raymond Vecchi. No arrangement can be achieved and, in the weeks that follow, an intense fare war will begin between the companies.

Daily nonstop roundtrips begin in November between Los Angeles and Boise. Alaska Airlines cancels its code-sharing pact with **MarkAir** in November, while suing **MarkAir** for breaking its mileage agreement and for fraud. Bergt files a \$150-million countersuit charging that Alaska has moved to squash the regional by illegally terminating its code-sharing and frequent flyer agreements.

The fare war with **MarkAir** in December approaches cutthroat intensity on routes from Anchorage to Nome and to Kotzebue. Normal \$400 fares are slashed in half. **MarkAir** also pushes into Southeast Alaska, where Alaska has long enjoyed monopoly jet service and U.S. government subsidies. In addition to deep discounts on published fares, Bergt's

airline offers bargains on group travel and begins to court cruise operators that require one-way transportation between Juneau and Seattle.

Passenger boardings grow 7.5% to 5,866,190 and freight rises 8.7% to 6.86 million FTKs. Revenues are up 2.23% to \$933.62 million and expenses are up 1.72% to \$914 million, providing an operating profit of \$28.3 million and a net profit of \$10.93 million.

Company employment inches up 0.8% in 1992 to 6,659. With the arrival during the year of 10 new B-737-4Q8s and 6 MD-80s (including, in April, the 1,000th of the later type built), retirement of the remaining 18 B-727-290As is accelerated. The company celebrates its sixtieth birthday this year.

Descending on final approach to John Wayne-Orange County International Airport on January 9 after a flight from Seattle, Flight 240, an MD-80 with 4 crew and 40 passengers comes within 100 ft. horizontally and 100 ft. vertically of a midair collision with a private Piper PA-31-310 Navajo over the San Diego (I-405) Freeway.

The price war with **MarkAir** takes a new direction in January. In previous years, both competitors had rejected attempts by the Alaskan state government to gain discounts. When the Department of Administration approaches the two airlines seeking discounts, Alaska Airlines rebuffs the approach. **MarkAir**, on the other hand, agrees to sell tickets a 27% below regular coach fares. The state purchases 100 Anchorage-Juneau tickets and makes plans to acquire additional tokens in bulk. Alaska Airlines files a protest pointing out that the acquisition was made outside the normal bidding process; the statehouse agrees that additional ticket purchases will follow bidding rules.

On January 31, Alaska launches nonstop roundtrip service from Seattle to the Mexican resort communities of Puerto Vallarta and Mazatlan. Three new Alaskan communities receive service and the Russian program is expanded. **Qantas Airways (Pty.), Ltd.** becomes the second foreign carrier to enter the frequent flyer program.

Five cities, including Spokane, are now under consideration as the site for a new heavy maintenance base. On March 2, service is inaugurated between Anchorage and Barrow.

Beginning in April, Russian tour packages are added to the summer charter program to the Russian Far East and allow connecting passengers to visit Harbin and Beijing in China or Irkutsk and Vladivostok in Russia.

Long-term contracts are now signed with the pilots and mechanics, but negotiations continue with passenger service personnel and flight attendants. Company officials express displeasure with the city of Spokane on May 8 when new entrant **Morris Air Service** begins daily nonstop roundtrips to that point from Seattle. Alaska Air and **Horizon Air**, which had dominated the air corridor between Washington State's two largest cities and charged roundtrip fares of \$190 to \$380 per trip, are forced to match Morris Air's \$78 ticket price.

In July, it is announced that the carrier will cut its planned capital spending, reduce aircraft deliveries, cancel construction of a heavy maintenance base, and end its unsuccessful Los Angeles to Toronto service.

B-737 service from Nome to Anchorage via Kotzebue must be curtailed on September 11 as airport authorities repair and upgrade the main runways. For the next five days, twice-daily roundtrips will, however, be provided by **Horizon Air** DHC-8-100s.

Beginning on September 12, flight attendants refuse to work on some of the company's flights out of California to protest the lengthy contract negotiations.

A customer satisfaction survey by J. D. Power and Associates ranks Alaska Airlines as winner among U.S. short-haul carriers.

Enplanements for the year rise 6.5% to a total of 6, 248,767 while freight increases 4.2% to 72.33 million FTKs. Operating revenues are down 1.2% to \$922.39 million and expenses are up 12.8% to \$1.03 billion, leaving an operating loss of \$101.01 million and a net loss of \$120.81 million. The losses are the first in two decades and come as a considerable shock to an organization so used to profitability. Meanwhile, Alaska Air Group has but a 1% increase in revenues to \$1.1 billion, but costs for the parent are also high and it, too, suffers losses: \$94.8 million (operating) and \$84.8 million (net).

The payroll is sliced 2.1% in **1993** to 6,522 and the fleet includes 38 MD-80s, 7 B-737-290C, 16 B-737-4Q8s/490s, 4 B-727-290A, and 1 B-727-90C. Hubs are maintained at Seattle, Anchorage, and Portland and service is offered to over 70 communities in Alaska.

On January 5, thrice-daily MD-80 and B-737-4Q8 roundtrips are launched between Oakland and Orange County Airports in California. Also, early in the year, an action program is designed to cut costs by at least \$50 million per year.

The move, announced in January, includes cancellation of plans to build a \$45-million light maintenance facility at Anchorage; a reduction of 98 positions beyond the reduction in force already planned; the retirement of 18 B-727-100/200s; an increase in MD-80 seating; and the scaling back or elimination of meal services on some flights. The company also begins discussions with shareholder ILFC aimed at a reworking of aircraft lease agreements.

Former president Charles F. Willis Jr. dies at age 74 on March 16. Daily roundtrip service is initiated in April between Anchorage and Dutch Harbor; however, service is soon cut to Bellingham, Boise, Toronto, Spokane, and Tucson and the reservation centers at Anchorage and Juneau are closed. These result in 1,000 lay offs, which come atop the elimination of 64 management positions. Long-term capital spending is chopped \$500 million by halving the outstanding MD-90 order to 10, with the delivery of those delayed by two years. Vladivostok flights, as part of the annual Russian charter service, commence in June.

Low-fare competition is started with **Reno Air** when daily "Lite Flight" roundtrips are inaugurated to that Nevada city and Las Vegas from Seattle and San Jose.

On August 30, the carrier wins a \$7.6-million contract to fly USN and USAF personnel and cargo five-times-a-week from Elmendorf AFB at Anchorage to installations in Adak, Shemya, Galena, and King Salmon with a B-737-210C. **MarkAir** and **Reeve Aleutian Airways** had previously operated the contract.

In December, the company begins to code-share its Seattle to Los Angeles routes with **Northwest Airlines**.

On its second approach to Long Beach on December 24, an MD-82 loses its hydraulic pressure; a safe landing is made, despite the fact that the nose landing gear, brakes, and thrust reversers do not work properly.

Two days later, another MD-82 is forced to return to Portland after an air duct breaks, causing a loss of cabin pressure.

According to a story in the *Seattle Post-Intelligencer* on March 4, 1999, FAA inspectors, during the year, have discovered that a number of company pilots, including the vice president-flight operations, have signed off as having attended required training sessions when they have not. The agency will eventually strip five pilots of their captain rank.

Customer bookings for the year move ahead by 3% to 6,437,000 while cargo ascends 3.2% to 75.5 million FTKs. Revenues decline 0.2% to \$908.8 million and even though expenses are down 7.8%, they still total \$931.11 million. Consequently, a \$24.31-million operating loss is taken, along with a net downturn of \$44.53 million.

In **1994**, the B-727-200s and B-727-100 are retired and replaced by 6 more B-737-4Q8s and 4 more MD-80s. A bitter three-and-a-half-year labor dispute with the flight attendants' union ends in January as a new agreement is reached.

On March 17, the U.S. government settles an antitrust airfare fixing suit against Alaska Airlines and five other carriers. Without admitting or denying the charges, the companies agree to changes in their computerized reservations systems and to end the practice of communicating proposed fare increases to each other through the reservations system maintained by the Airline Tariff Publishing Company.

Former president Benecke, aged 75, dies at Seattle on April 8.

Vacation tours to Russia and China are cancelled on June 4 because of IATA warnings of unsafe flying conditions by connecting Russian airlines. Additionally, Alaska cannot guarantee airline departures within the former Soviet Union.

When the two-year Essential Air Service (EAS) contract to link Petersburg, Wrangell, and Yakutat with Ketchikan and Juneau expires on

September 30, **Haines Airways**, with a \$678,000 bid to the DOT, becomes the first carrier to challenge the major's 14-year lock on the subsidy service. The regional's bid is not successful, primarily because the major employs B-737s.

Horizon Air CEO John Kelly becomes executive vice president/COO in December, succeeding the retiring 28-year veteran Patrick I. Glenn. Vice President Finance Kathleen H. Iskra is appointed **Horizon Air's** new president.

The year's passenger boardings leap ahead by 39.1% to 8,958,000 as freight climbs 17.1% to 88.41 million. The previous year's fiscal situation is reversed as revenues advance 17.1% to \$1.06 billion and expenses grow only 7.3% to \$998.72 million. Consequently, there is a pre-tax profit of \$62.87 million and net gain of \$39.28 million.

Airline employment is increased by 7.8% in **1995** to 6,993. On March 13, company officials announce the start of passenger service between Anchorage and Petropavlovsk-Kamchatski, Russia at the beginning of April. Although the MD-80 flights are regularly scheduled, they will be operated only weekly during winter.

On May 1 a new series of television commercials, developed by Goodby, Silverstein & Partners, begin airing on the West Coast; the content likens the carrier's service to that enjoyed by airline passengers in the 1930s. At the same time, cartoon-like "bubble quotes" are painted as coming from the mouth's of the Eskimos painted on aircraft tails; the bubbles contain one word: "Thanks!"

The company's inaugural flight to the Kamchatka peninsula city of Petropavlovsk is turned back on June 1 by Russian air traffic controllers, who claim that the airport is not open to international flights. The service is completed the next day, but local Russian authorities now postpone planned weekly flights.

After Alaska Airlines protests the Kamchatka turnback, the U.S. government refuses landing permission for a number of **Aeroflot Russian International Airlines (ARIA)** and **Volga-Dnepr Airline** flights. Following the intervention of U.S. Ambassador to Russia Thomas Pickering, a summit meeting is held at Anchorage in July between the airline, the FAA, and Maj. Gen. Viktor Voitenko, deputy commander-in-chief of Russia's northeastern Border Guard in an effort to resolve the causes of the turnback.

A comprehensive marketing and code-sharing alliance is entered into with **Northwest Airlines** on August 22. Under its terms, the two will not only enjoy reciprocal frequent flyer program participation but Alaska's 34 U.S. destinations will be connected to 14 major markets served by Northwest in Asia.

Also in late August, Russian Prime Minister Viktor Chernomyrdin decrees that Petropavlovsk Airport is indeed open to international flights. It is, unfortunately, signed just one week before the end of the airline's summer flight schedule for adventure-tourism.

During the summer and early fall, electronic "ticketless travel" is extended on routes out of Seattle to Ketchikan, Oakland, Spokane and from Oakland to Boise. At the same time, frequencies are increased from Seattle and Portland to San Francisco; daily roundtrips increased from 21 to 55; daily roundtrips from the northwestern hubs to Los Angeles grow in number from 21 to 54.

New nonstops are also introduced from Portland to San Diego, Las Vegas, and Palm Springs while nonstop routes are opened from Phoenix to Los Cabos and Puerto Vallarta.

Dual-designator flights with **Northwest Airlines** commence on September 15 as the Minneapolis-based major adds its code to Alaskan flights between Seattle and Los Angeles, San Francisco, San Jose, Sacramento, Portland, and Spokane that connect with NWA frequencies from Los Angeles and San Francisco. At the same time, Alaska codes are added to Northwest flights between Seattle and Honolulu that connect with Alaska's frequencies from Seattle to Fairbanks and Anchorage.

The Northwest designation is added to nearly all of Alaska's flights at the beginning of October.

On October 11, the electronic ticket option is extended from Seattle to San Francisco, San Jose, and Portland. At each of these locations, new

automated check-in procedures from kiosks, similar to bank ATMs, are made available. In November, nonstop frequencies between Seattle and Anchorage are increased from 11 to 15-per-day.

MarkAir completes its final service on November 18 and goes out of business. Its 1991 lawsuit against Alaska will live on long after its demise.

Despite intense competition from **Southwest Airlines (2)** and "Shuttle by United," the **United Airlines** division, Alaska is able to register significant improvements on the year. Enplanements rise 13.2% to 10,140,000 and cargo climbs 6.1% to 93.8 million FTKs. Operating income accelerates 7.6% to \$1.14 billion while costs climb just 7% to \$1.06 billion. Operating profit moves up to \$72.3 million and a net \$43.9-million profit is posted.

Airline employment in 1996 stands at 7,652, a 9.4% increase. On February 1, Alaska becomes the first U.S. carrier to offer direct bookings and payments with credit cards on the World Wide Web. A second weekly roundtrip service is inaugurated between Anchorage and Petropavlovsk-Kamchatski on April 7.

Twice-daily, nonstop, roundtrip B-737-4Q8 flights commence on May 6 between Vancouver and San Diego. A few days later, twice weekly B-737-200C all-cargo return service is inaugurated between Seattle and Sitka; the seasonal flights will end on September 7.

MD-80 services to Vladivostok, Magadan, Khabarovsk, and Petropavlovsk are flown thrice weekly, without incident, beginning on June 1.

Piloted by Capt. Kim Kaiser, a B-737-490 operates the carrier's first scheduled, revenue passenger service with an integrated GPS guidance system as its primary navigation source; the specially equipped "Baby Boeing" is flown from Seattle to Juneau via Ketchikan, completely without incident. Another aircraft is similarly equipped and, throughout the summer, the two fly regularly over the route proven by Capt. Kaiser.

It is announced on July 1 that the carrier has hired a total of 107 new pilots during the preceding 12 months. During the month, orders are placed for 8 B-737-300 Nordham hush kits and an MD-83 is chartered to **Trans World Airlines (TWA)**.

A \$540-million order is placed in mid-September for 12 B-737-490s, with an option for another dozen. In addition, \$10 million is allocated for the purchase of Allied Signal's Enhanced Ground Proximity Warning Systems (EGPWS) for the B-737-400 fleet.

A new code-sharing agreement between Alaska and **Reeve Aleutian Airways** begins on September 22. The marketing agreement is designed to coordinate flights and schedules to and from Cold Bay, Dutch Harbor, Port Heiden, St. Paul, and Sand Point.

A Grumman G-21A Goose, acquired in the acquisition of **Alaska Coastal-Ellis Air Lines** years earlier and which has been employed by the U.S. Department of the Interior is, through the intercessions of Sen. Ted Stevens (R-Alaska), donated to the Alaska Aviation Heritage Museum at Lake Hood on October 12.

The first EGPWS avionics unit is installed in a B-737-400 during October.

Significantly higher fuel costs and severe storms at the year's end have a dramatic impact on fiscal return.

En route from Juneau to Anchorage on December 22, Flight 67, a B-737-4Q8 with 5 crew and 37 passengers, encounters severe turbulence 30 mi. E of Yakutat; all three flight attendants are injured, two seriously.

Customer bookings soar 16.4% to 11,805,000 and cargo inches up 1.9% as 95.43 million FTKs are operated. Revenues jump 13.6% to \$1.29 billion and expenses rise 12.8% to \$1.2 billion. Operating gain grows to \$90 million and a \$74.5-million net gain is reported.

The employee population is reduced by 5.8% in 1997 to 2,774. By mid-February, 14 B-737-400s have been equipped with GPS and EGPWS avionics units.

The company signs a code-share agreement on February 28 with the American Eagle commuter, **Wings West Airlines**. Effective March 13, Wings West will provide connecting service for Alaskan passengers arriving from over 40 cities served by the major in the western U.S.,

Alaska, Canada, Mexico, and Russia with the airports at Los Angeles, San Diego, Orange County, Monterey, San Luis Obispo, Palm Springs, Bakersfield, Carlsbad, Fresno, and Las Vegas.

Alaska Airlines receives both good and bad tidings from the DOT on March 31. On the one hand, it is cleared to operate between the U.S. and Canada under the "open skies" bilateral between the two countries. On the other hand, it is fined \$180,000 for improperly modifying the main landing gear system of a B-737 in work performed between 1992 and 1996 and then operating the aircraft.

The company celebrates its sixty-fifth anniversary on April 16 by offering a special \$65 companion fare, available exclusively to residents of Alaska.

With a long-anticipated boom in oil and gold exploration in Russia's Far East finally under way, the carrier, on May 10, inaugurates weekly roundtrip service to Yuzhno-Sakhalinsk, capital of Sakhalin Island. This is the carrier's fifth Eastern Russian destination.

On May 23, thrice-weekly, late night, roundtrip B-737-4Q8 service is inaugurated from Juneau to Seattle. The Juneau-Seattle late night service becomes daily on June 8.

Following the lead of **American Airlines**, Alaska, on July 14, offers a 50% discount on fares for children, aged 2 and under, whose parents wish them seated in child-restraint seats. The discount is available for all destinations except Russia and parents must supply the safety seat.

The code-sharing agreement with **Northwest Airlines** is expanded on August 30 to include Alaska's flights to the Russian Far Eastern cities of Magadan, Khabarovsk, Vladivostok, Petropavlovsk-Kamchatski, and Yuzhno-Sakhalinsk.

While landing at Seattle-Tacoma International Airport on September 1 after a service from Los Angeles, an MD-82 with 111 passengers suffers a nosegear collapse that causes the aircraft to skid down the runway to a stop. Emergency chutes are deployed and all aboard are evacuated, with 15 passengers slightly hurt in the process. The entire airport is shut down for 10 minutes.

On September 15, the company's Anchorage to Petropavlovsk service is featured in the first episode of the BBC-TV production *Full Circle with Michael Palin*, shown over the U.S. Public Broadcasting System.

Twice-daily return service is inaugurated on October 5 from Vancouver to San Francisco; simultaneously, daily return flights start from that British Columbia community to Las Vegas. On October 14, the company and the Air Line Pilots Association (ALPA) reach tentative agreement on a new five-and-a-half-year contract, to May 2003.

On November 5, daily frequencies from Vancouver to Los Angeles are increased from three to four. The same day, a daily nonstop is initiated from Vancouver to Phoenix while another route is launched from Phoenix to Palm Springs via San Francisco.

Daily nonstop MD-83 return flights commence on November 6 between Los Angeles and Ixtapa/Zihuatanejo, while daily return service is simultaneously inaugurated from San Francisco to Ixtapa/Zihuatanejo via Los Angeles.

On November 10, Alaska becomes launch customer for the B-737-900, longest stretch of the "Baby Boeing" type. Orders for 10 machines, slated for delivery in 2001-2002, and 10 options, are placed as part of a \$1-billion order, which also includes requests for 2 more B-737-400s and 3 B-737-700s.

William S. Ayer, senior vice president-customer service, marketing, and planning at Horizon Air is appointed president during the month. Simultaneously, agreement is reached with ALPA on a new five-year contract.

On December 10, *USA Today* publishes the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; Alaska demonstrates a 78.9% achievement, good for sixth place.

On December 11, the carrier completes installation of hush kits on eight of its B-737-200s, making it the first major U.S. airline to operate

an all-Stage 3 fleet. President Ayer lauds the fact that the airline is two full years ahead of the federal mandate that requires all U.S. commercial carriers to meet the reduced noise standards by the year 2000.

On December 19, several 7 crew and 68 passengers of Flight 536 complain of nausea from noxious fumes. The captain of the MD-80, which has just arrived at San Francisco from Palm Springs, stops its taxi to the gate and orders an emergency evacuation of the aircraft. No injuries are reported from the leak that is later found to be from a hydraulic line.

Passenger boardings for the year accelerate 4.1% to 12,283,600, while freight inches up 1.6% to 97.2 million FTKs. Operating revenues advance 11.6% to \$1.44 billion, while costs advance 8.8% to \$1.31 billion. Operating gain is boosted to \$134.3 million while a \$127.4 million net profit is enjoyed.

At the beginning of 1998, Alaska is the 21st largest airline in the world in terms of net profit, 24th in terms of operating profit, and 25th in passenger boardings.

The 100% Stage III certified fleet features 78 aircraft, including 42 MD-80s and 36 B-737s.

En route from Seattle to Las Vegas on March 4, Flight 684, a B-737-242C with 116 passengers, encounters clear air turbulence 90 mi. NE of Reno; 6 people are injured, 1 seriously.

The company's senior flight attendant, 45-year veteran Marcia Broyles, completes her final service on March 27. When her B-737-4Q8 arrives at Seattle-Tacoma International Airport, she receives a water cannon salute from two Port of Seattle fire trucks. The water arch is believed to be the first such honor ever given to a retiring flight attendant.

Weekly summer roundtrip MD-83 service is resumed on April 28 from Seattle to Vladivostok via Anchorage, Petropavlovsk, and Yuzhno-Sakhalinsk.

Twice-weekly nonstop summer service is initiated on April 29 from Los Angeles to Ixtapa/Zihuatanejo, Mexico, with direct, one-stop service available from Seattle.

In May the carrier expands its alliance with **Northwest Airlines** to include the Minneapolis-based major's associates **Continental Airlines**, **America West Airlines**, and **Air China International Airlines**. All four will link their frequent flyer programs, coordinate schedules, offer joint marketing and maintenance where appropriate, share lounges, and plan for code-sharing.

While en route from San Jose to Portland on May 11, Flight 459, an MD-83 with 5 crew and 34 passengers, must make an emergency landing at Oakland due to an engine warning light. The problem turns out not to be a faulty powerplant, but a cockpit switch that must be replaced.

An MD-83 is hit by an eagle near Seattle on May 25, suffering fuselage damage; no injuries are sustained by anyone aboard.

A new code-sharing agreement begins on June 1 with **KLM (Royal Dutch Airlines, N.V.)**. The two will link their frequent flyer programs on selected routes, enter into schedule coordination, and share codes on certain Alaska flights connecting with KLM services at Los Angeles and San Francisco. The arrangement is also extended to KLM services operated by **Northwest Airlines** from Seattle.

The same day, a new nonstop service is put in place between Spokane and Los Angeles, replacing one of the carrier's five daily direct flights between the two cities through September 12.

After 600 of the carrier's 1,575 flight attendants have reported air quality problems aboard company aircraft since 1989, CBS News picks up on the situation and reports the carrier's alleged "bad air" problems on the *CBS Evening News with Dan Rather* on June 15. The airline denies any cabin environmental difficulties.

When **Wings West Airlines** is merged into the new **American Eagle Airlines** in June, the previous code-sharing agreement is transferred to the new entity.

On July 22, four days before the trial in the \$150-million 1991 **MarkAir** suit is set to begin, the major announces a \$19-million settlement with the bankruptcy trustee of its one-time competitor. Former **MarkAir** Chairman Bergt calls the arrangement a "bittersweet victory."

The Russian ruble is devalued in mid-August, leading to all sorts of domestic problems in the former Soviet Union. Traffic on Alaska Airlines flights to the Russian Far East begin to fall dramatically.

On August 30, as the result of an ATC error, Flight 257, an MD-83 en route from Mazatlan to Los Angeles, flies within 2.5 mi. of a **Delta Air Lines** L-1011, Flight 550, inbound to LAX from Atlanta, at 25,000-ft. some 30 mi. SE of Julian, California. TCAS aboard the Alaskan aircraft warns its crew of the Lockheed's presence and both aircraft are able to maneuver away, by just 8 seconds, from a potential collision.

Circumstances with the Russian economy having made operations there unprofitable, Alaska Airlines, on September 10, suspends its weekly winter service to Magadan, Khabarovsk, Vladivostok, Petropavlovsk, and Yuzhno-Sakhalinsk.

Thrice-daily return flights commence on October 4 between Las Vegas and Los Angeles.

The next day, the company celebrates the tenth anniversary of its Mexican service by introducing, for the next month, Caravali Cafe Custapec Mexican Coffee on all of its flights.

In line with actions taken by other U.S. majors and in compliance with impending federal mandates regarding airport security, Alaska stops issuing advance boarding passes on October 25.

Twice-weekly MD-83 roundtrips commence on October 28 between Seattle, Los Angeles, and La Paz, Mexico. Additionally, a daily roundtrip is added from San Jose to Palm Springs. Also from San Jose, four weekly departures are scheduled to Puerto Vallarta, with four more scheduled to Los Cabos.

On December 9, Alaska Air Group President Ayer announces that a letter of intent for the creation of a marketing partnership has been signed between its subsidiaries, Alaska Airlines and **Horizon Air**, and AMR Corporation and its subsidiaries, **American Airlines** and **American Eagle Airlines (2)**. The alliance will greatly expand travel and mileage opportunities for AAG passengers and strengthen the marketing presence of both corporations in California, the Pacific Northwest, and the West Coast. The four airlines will implement a fully reciprocal frequent flyer relationship; code-sharing is also under discussion, but remains subject to labor contract provisions.

Alaska also announces that notice has been provided to **Northwest Airlines** of its intent to modify an existing marketing agreement. Talks are underway and it is hoped that the 10-year-old alliance might be maintained.

To accommodate new transnational flights, Palm Springs Regional Airport in California is renamed Palm Springs International Airport on December 13; the carrier's Flight 565, a B-737-4Q8 with 140 passengers, departs on the first international service to Vancouver, British Columbia, right after the ceremony. A minute after the inaugural flight lands in Canada, Flight 560, another B-737-4Q8, pulls up to the gate at Palm Springs.

Alaska President Ayer and **Northwest Airlines** President/CEO John Dasburg jointly announce on December 22 that their commercial cooperative agreement, which includes **Horizon Air**, will be extended. To mark and celebrate this arrangement, both carriers offer their respective frequent flyers the opportunity to earn bonus miles for flights taken on the other carrier between January 4 and February 28.

Also during the month, FBI agents search company facilities in Seattle and Oakland seeking and seizing records relating to maintenance work on three MD-80s.

Customer bookings this year jump 6.3% to 13.05 million, while cargo traffic slips 1% to 96.24 million FTKs. Revenues jump 8.2% to \$1.56 billion, while costs are up 4.5% to \$1.37 billion. The operating profit climbs to \$194 million, while net gain accelerates to \$190.5 million.

On January 4, 1999, customer-service agents at Seattle are able to begin offering instant flight check-ins and boarding passes by using tiny handheld computers and printers worn on their belts.

The AP and *Seattle Post-Intelligencer* report on January 8, that Alaska Airlines is under investigation by a grand jury at Oakland concerning alleged irregularities in maintenance and maintenance record keeping.

Criminal investigations of airline practices are noted to be rare and factors prompting the investigation are not revealed.

On January 12 **Canadian Airlines, Ltd.** with Alaska and its sister carrier **Horizon Air** announce a comprehensive marketing agreement, effective April 1.

Far into a service from Fairbanks to Anchorage on a February 5, an MD-82, with 133 passengers aboard, experiences control malfunctions. An emergency is declared and, while fighting his yoke, the plane's pilot is able to safely put down at his destination. The outside surface temperature is way below 0°.

On February 25 an accord similar to that with **Canadian Airlines, Ltd.** is reached with **Continental Airlines**

The *Seattle Post-Intelligencer* publishes a major exposé of both the airline and the FAA on March 5 under the title "FAA Inspectors Say Bosses Protect Alaska Airlines." Based on FAA documents, transcripts of legal proceedings, and interviews, the story paints a picture of airline-agency collaboration and safety cover-ups or fine avoidance stretching back a decade.

Just before 7 p.m., Chairman Kelly and President Ayer issue a joint statement in response to the newspaper article expressing personal outrage and offense. They state that safety has not been compromised and emphatically advance their belief that the airline is the target of disgruntled FAA employees and that it has been caught in the middle of a circulation war between Seattle's two major daily newspapers. The men promise to "take the gloves off" in defense of the airline and the integrity of its employees.

While en route from Seattle to Phoenix on March 31, an MD-82 is forced to return to its point of departure after a high-flying party balloon is ingested by its left engine. No injuries are reported. No injuries are reported when an MD-82 en route from Seattle to Sacramento late in the day, must make an emergency landing at its destination because its failing main landing gear has had to be lowered manually.

When the code-sharing agreement between **Canadian Airlines, Ltd.**, Alaska, and **Horizon Air** takes effect on April 1, the three companies begin to participate in each other's frequent flyer programs and begin code-sharing on routes between Vancouver, Seattle, and numerous cities across the western U.S. and Canada.

Alaska begins serving Seattle's Best Coffee exclusively on all of its flights beginning April 15.

As negotiations with the IAM, which represents the carrier's 1,716 ticket agents and 886 baggage handlers, continues, 175 those personnel stage a suspected sick-out on April 16 that forces the airline to cancel 26 flights from Portland and Seattle. Alaska Airlines contacts the union to bring the possibly illegal action to its attention. The IAM requests workers to return to work and the carrier decides to temporarily delay seeking a federal court restraining order.

The unauthorized agents and baggage handlers' action is over by April 18 and operations return to normal as talks continue. Alaska will report that, during the three days, a total of 28 flights are cancelled and dozens more are delayed, disrupting the travel plans of 10,000 passengers and costing the company at least \$100,000.

The airline is soon faced with labor problems from another quarter.

While negotiations with the Aircraft Mechanics Fraternal Association (AMFA) continue toward the end of the month, repairs to aircraft begin to take an unusually long time to be completed, even though the airline is not experiencing significantly more mechanical problems. During the week of April 26, Alaska Airlines cancels some 10% of its flights at its Seattle hub as the apparent mechanics slowdown, illegal under the Railway Labor Act, gathers steam.

Eight IAM workers are suspended on April 22 after the alleged sick-out; all are investigated for further punishment.

Flights are cancelled for mechanical reasons again on April 30 and May 1, with the total number scrubbed now exceeding 200. The AMFA indicates that it is unaware of any slowdown by its members and pledges not to condone or support one. To date, all passengers affected by the cancellations have been given seats on other flights.

On May 3, the airline dismisses five suspended workers suspected of helping to organize the April sick-out, about which IAM Local 2202 continues to insist it has no knowledge. All are customer service agents, one each in Seattle, Portland, and San Diego and two in Las Vegas; all are IAM members. Two of those suspended are reinstated with back pay and one remains under review.

The next day, local IAM Secretary-Treasurer Steve Stanczyk pledges that the union will file grievances seeking their reinstatement. A rally is planned at the Seattle Museum of Flight on May 16 during the company's annual shareholders meeting.

On May 6, Alaska files suit in the U.S. District Court for Western Washington asking that the apparent slowdown by mechanics be halted and that the union pays damages. Simultaneously, the local IAM enters a grievance against the airline claiming that the carrier unjustly discharged the five customer service agents.

In an effort to bring labor peace and to halt worker-initiated slowdowns that have led to 650 flight cancellations since April 26, CEO Kelly addresses reporters, prior to the company's annual stockholders meeting on May 18. He praises personnel and indicates that his top goal is settling the five ongoing contract negotiations. A few dozen workers shout at Kelly and his party as they depart and some wave placards.

A tentative new 42-month contract with the Aircraft Mechanics Fraternal Association is reached on May 24; if ratified, it will cover 1,000 of the company's technicians (mechanics), technician helpers, fleet service employees, and janitors.

Beginning on May 25, **Qantas Airways (Pty.), Ltd.** is able to place its code on Alaskan flights from Los Angeles to Portland and Seattle.

It is announced on June 11 that the company will launch nonstop Saturday and Sunday roundtrip MD-83 service from Seattle to Los Cabos and Puerto Vallarta on October 31. A new 42-month contract with the Aircraft Mechanics Fraternal Association is ratified on June 23.

The first of 6 Next Generation B-737-790s expected during the year is delivered on July 28 and enters service on August 8, flying from Spokane to Santa Ana (Orange County) via Seattle and Oakland.

In late September, a new three-year labor agreement is signed with the IAM, covering the carrier's 3,270 customer service, reservation, and operations agents, accounting specialists, and certain other personnel. It will be ratified in November.

In early October, Alaska becomes the first airline to offer online check-in via the Internet. Weekend-only MD-83 return flights commence on October 31 from Seattle to Los Cabos and Puerto Vallarta, Mexico.

A joint-marketing and code-sharing agreement is signed with **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** on November 3; in the first phase, the South American carrier will place its designator on Alaskan flights from Los Angeles to Portland and Seattle. Three days later, weekly MD-83 roundtrips are begun from Seattle to Mazatlan, Mexico.

Later in the month, the carrier's 2,000 AFA-represented flight attendants ratify a new four-year labor contract. Nearly 1,000 IAM-represented ramp service workers and stock clerks come to terms with the airline in December on a new 4-year labor pact. As the year ends, Alaska has no open labor contracts.

Overall customer bookings advance by 4.3% to 13,620,000 while freight falls by an equal percentage to 92.13 million FTKs. Revenues for Alaska Air Group (including Horizon Air) jump 7.3% to \$1.68 billion, while costs climb 9.6% to \$1.5 billion. Operating profit dips to \$176.3 million, but net gain is up to \$196.4 million.

Among the world's top 25 airlines as the new millennium begins, Alaska is 22nd in operating profit and 28th in net gain.

En route from Puerto Vallarta to San Francisco and Seattle on January 31, 2000, Flight 261, an MD-83 with 5 crew and 83 passengers, suffers a jammed stabilizer. An emergency is declared and the plane begins to descend and divert to Los Angeles (LAX). While preparing to land, the jetliner tumbles, rolls, and corkscrews into the sea off Point Mugu in 650 ft. of water; there are no survivors. A key suspected element in the tragedy will be the alleged failure of the jackscrew assembly controlling up-and-down movements of the horizontal stabilizer.

Over the next several months the carrier, which conducts both an internal inspection and is reviewed by the FAA, develops a plan to institute permanent solutions to identified safety, operations, and maintenance concerns. The government, meanwhile, proposes to eliminate the carrier's authority to conduct heavy maintenance.

While en route from Puerto Vallarta to San Francisco on March 17, Flight 259, an MD-83 with 5 crew and 43 passengers, suffers an air rage incident during which a man breaks into the cockpit and attacks the flight crew. A call over the PA system brings several passengers to the rescue.

Assembly of the first B-737-900, which Alaska will put into service in April 2001, begins at Renton in March; the aircraft will be rolled out on July 23 and make its first flight on August 3.

Rising fuel and maintenance costs push expenses up dramatically and the carrier suffers a \$10.9-million first-quarter loss. To improve its on-time performance, the carrier reduces its flight schedule on April 10; three aircraft have been withdrawn to serve as backup for those encountering difficulties.

The airline's troubles continue. One of two pistols in the checked bag of a 66-year-old woman passenger goes off in the cargo hold of Flight 101, a B-737-790 with 86 passengers as it prepares to push back from the terminal at Portland on April 24 for a service to Anchorage. The bullet flies through the floor and into a diaper bag. All aboard are evacuated and the woman is taken into custody to be charged with reckless endangerment and concealing a weapon without a permit. On May 19, one of the airline's ramp workers is crushed to death by a baggage cart at Seattle.

Having enhanced its audit oversight program, redesigned its general maintenance manual, created an office of safety under a new vice president, and hired 130 new mechanics and 28 new flight operations employees, Alaska is notified on June 29 that this plan is satisfactory to the FAA. The regulators withdrawn their heavy maintenance proposal, but indicate that they will closely monitor the major to be certain its plan is fully implemented.

On June 28, a catering truck smashes into the wingtip of an MD-83 parked at Seattle, putting the jetliner out of service for the important upcoming holiday weekend.

An independent 21-member audit team hired by the airline certifies at the beginning of July that Alaska's jetliners are safe—but criticizes the company for short staffing in maintenance and operations, poor communications, and other difficulties. The group is invited to return in six months for a progress check.

Safety concerns resurface on August 3 when the carrier is forced to reinspect 17 MD-80s grounded because of potential new difficulties with their jackscrews. No deficiencies are found and all of the aircraft are returned to service by August 5.

During the third week of September company attorneys apprise a San Francisco court that, in return for a speedy conclusion, Alaska will pay any compensatory awards to families suing over the deaths of 88 people killed in the crash of Flight 261. Under the Warsaw Convention, it has already paid the families the \$140,000 treaty minimum for each death.

Twice-daily return service from Seattle to Tucson is resumed on October 1, along with daily roundtrips to San Jose. On October 29, **Qantas Airways (Pty.), Ltd.** begins to code-share on Alaska's 19 weekly roundtrips between Los Angeles and Vancouver.

On October 26, it is revealed that Microsoft Chairman Bill Gates owns 1.4 million shares in Alaska Air Group, a 5.3% stake valued at \$31.4 million. The next day, the group's stock rises nearly 10% in trading on the New York Stock Exchange.

ALASKA CENTRAL AIRWAYS: United States (1972–1983)

Tanana Air Taxi of Fairbanks is certified by the State of Alaska in August 1972 to offer intrastate passenger and cargo charter services. President James P. Hagglund assembles a fleet comprising 1 Piper PA-31-350 Navajo Chieftain and 2 Piper PA-32 Cherokee Sixes and inaugurates flights to Minto Manley, Tanana, Ruby, and Galena. The company is reformed in 1974 and renamed Alaska Central Airways.

Operations are taken over by Harold Esmaika's Arkansas-based **Harold's Air Service** in 1976. Scheduled commuter services are now inaugurated linking the company's base with Lake Minchumina, Minto, Manley, and Tanana. Late in the decade, the company acquires an Australian-built GAF Nomad N.24A.

In 1983, the carrier is acquired by new owners and renamed **Tanana Air Service**; Dale Erickson becomes president.

ALASKA CENTRAL EXPRESS: P.O. Box 60204, Anchorage, Alaska 99706, United States; Phone (907) 474-9327; Fax (907) 474-9314; <http://www.anc-biz.com/alaskacentral-express>; Code 4Y; Year Founded 1994. Kodiak, Alaska-based **Yutana Airlines** is renamed in September 1994. A part of the Athabaskan Air Group, the company's 1 Piper PA-31-310 Navajo and 2 PA-32 Cherokees continue to operate under the direction of President Dale E. Erickson. In 1995, the first full year under the new name, the company transports a total of 7,279 passengers.

During the spring of 1996, Anne Butler, wife of Neil Bergt, the former CEO of bankrupt **MarkAir**, purchases the airline and moves it to Anchorage. The couple's stepson Michael, former CEO of defunct **MarkAir Express**, is named president. An application is filed with the FAA for permission to operate a pair of Beech 1900Cs. The government conducts a full review of the airline's training and operating procedures and signs off on July 1.

The DOT, which also becomes involved, raises concern due to the ownership involvement of the insolvent Bergt. To alleviate this possible problem, San Diego-based Western States Investment Corporation (owned by Bergt friend Donald Swortwood) purchases 51% majority interest, also in July. The concern, which has no airline experience, operates a Yellow Cab franchise in the California city.

Service is inaugurated during the month to Aniak, Bethel, Dillingham, Fairbanks, King Salmon, McGrath, St. Mary's, and Unalakleet. Mail is flown over all of the routes except Aniak.

A third Cherokee is acquired later in the year, but customer bookings plunge 61% to 1,310.

The fleet is, nevertheless, upgraded in 1997–1998 to include 3 Beech 1900s as well as the previous units. In addition, 2 Cessna 207As, acquired out of the assets of **MarkAir Express**, are employed to transport mail and cargo from Bethel to small bush communities.

Arrangements are made late in 1999 to purchase an Embraer EMB-120 Brasilia from **Comair**. The turboprop must be reconfigured from a passenger into a freighter.

In May 2000, a 15-year, \$21-million fleet management program is signed with Pratt & Whitney Canada for all of the company's engine services, including overhaul.

The former **Comair** Brasilia arrives in late June and enters all-cargo service on July 1.

ALASKA COASTAL AIRLINES (1): United States (1939–1962).

Sheldon B. "Shell" Simmons's Juneau-based **Alaska Air Transport** merges with its chief local rival, **Marine Airways** (founded in 1936 by bush pilot Alexander Holden), on May 27, 1939 to form a larger carrier capable of beating back challenges from several new entrants. Simmons becomes CEO and the fleet comprises the aircraft of the merger partners, including AAT's Vegas and Marine's float-equipped Bellanca CH-300 Pacemaker and Fairchild 71. Frequencies previously flown in south-east Alaska are improved, allowing feeder enhancement.

At the end of the year, a profile of President Simmons, "Sheldon Simmons, Alaska Pilot," by Wirt Shirwood, appears in a territorial magazine, *Alaska Sportsman* (December 1939): 10–11, 25–27.

In 1940, **Pan American Airways (PAA)** becomes a serious commercial threat to all of the local southeastern regionals when it employs a Sikorsky S-40 flying boat, the *Alaska Clipper*, to launch biweekly passenger, mail, and cargo shuttles between Ketchikan–Juneau and Seattle. Alaska Coastal Airlines and its competitors now agree to coordinate their own Ketchikan–Juneau services by offering biweekly flights of their own, rotated between the companies competing with **Pan American Airways (PAA)**.

At year's end, Juan Trippe's major halts flying boat services and, although Simmons's enterprise is increased in fleet size and number of personnel, services are not expanded, primarily due to the threat of war.

In 1942, Benjamin "Ben" Benecke becomes office manager and bookkeeper at Juneau. He will later become a pilot for the air carrier and eventually a partner. Meanwhile, after Pearl Harbor and through V-J Day, operations are reduced.

Alaska Coastal, satisfied with its route network, does not undertake significant postwar growth. It does, however, improve its equipment, progressing to the increased use of Grumman G-21 Geese in an exclusively amphibian operation. Late in 1949, the company is able to purchase the first of three war-surplus Consolidated PB-5A flying boats.

During the 1950s, Alaska Coastal begins to coordinate routes, services, and maintenance activities with Robert Ellis's **Ellis Airlines**; between the two carriers, nine Geese are shared. Two Lockheed Model 5s remain in operation, although one is lost in a Sitka hangar fire in November 1952. **Alaska Island Airways** (founded in 1948) is purchased in 1954.

The last Lockheed Model 5 Vega, the *Nugget*, crashes near Tenakee in 1958. Operations continue without incident until November 11, 1961, when a G-21A, with eight aboard, crashes near Wrangell; fortunately, no one is badly hurt. On April 1, 1962 a merger is effected with **Ellis Airlines**; the combined and enhanced operation will continue as **Alaska Coastal-Ellis Air Lines**.

ALASKA COASTAL AIRLINES (2): 18731 Shell Simmons Dr., Juneau, Alaska 99801, United States; Phone (907) 789-7818; Fax (907) 789-4228; <http://www.ptialaska.net/~bears>; Year Founded 1980. A new Alaska Coastal is established at Juneau International Airport in 1980. A shadow of the former operation, this concern is a charter carrier which operates nonscheduled de Havilland Canada DHC-2 Beaver and Cessna 185 floatplanes to bush locations.

Flights continue throughout the remainder of the decade and into the 1990s. A Beech BE-18S is acquired to provide cargo services. At this point, the carrier becomes, for all intents and purposes, the air transport arm of Coastal Wilderness Tours.

While flying over Juneau's Douglas Island on July 27, 1994, one of the Cessna floatplanes is shot at from the ground and is hit by a bullet in its left float.

The plane lands safely and a bullet fragment is later removed from the float and sent to the FAA office at Anchorage. Neither Juneau police nor the FBI is able to find the rifleman.

Flights continue without further incident in 1995–2000.

ALASKA COASTAL-ELLIS AIR LINES: United States (1962–1968). Four pioneer Alaskan bush pilots combine fortunes in 1962 to continue their longtime air transport aspirations. Sheldon B. "Shell" Simmons, Benjamin "Ben" Benecke, and Alexander Holden of **Alaska Coastal Airlines** join Robert B. Ellis, who had founded **Ellis Air Lines** in 1936, in the establishment of the enhanced "Coastal-Ellis" on April 1.

With Simmons as president and Ellis as vice president, the company now owns \$2.5 million in facilities and equipment. Airline employment is 264, representing a \$2-million annual payroll. The fleet is increased to 24 aircraft, including 17 G-21s and the company as a whole is the world's largest scheduled commuter to operate amphibious aircraft exclusively. The new amalgamation now controls much of the local service offering in southeast Alaska.

A permanently certified international carrier, Coastal-Ellis provides scheduled services to 60 destinations in southeast Alaska and between

Ketchikan and the British Columbia city of Prince Rupert. In nine months of combined flights, a total of 8.07-million revenue passenger miles are recorded.

Operations continue without incident in 1963.

A G-21A, with three aboard, hits an obstruction at Petersburg on January 20, 1964 and crashes; only minor injuries are reported. As a result of the loss, there is one less aircraft; six fewer employees are on the payroll.

A Convair CV-240 is purchased and placed into service on the Juneau–Sitka–Ketchikan route now that the new Sitka Airport is completed. Unfortunately, while making a cargo flight to Chichagof Island on October 2, the aircraft, with three aboard, crashes after making a bounced landing (one dead).

Passenger boardings during the 12 months reach 110,403.

The workforce in 1965 totals 287 and the fleet includes 23 aircraft: 21 G-21A Geese, 4 Cessna 185s, and 4 Cessna 28s. A new sales office is opened to service Haines–Port Chilkoot. The Juneau facility is doubled in size as new hangar and maintenance facilities are occupied. A total of 127,091 passengers are originated.

The company name is shortened to **Alaska Coastal Airlines** in 1966. The same year, the Geese are upgraded with turboprops. All nine aboard a Goose are killed in a crash near Juneau on August 21. With over 30 years in the business and in light of the changing airline scene, Simmons and Ellis now elect, rather than purchasing large equipment and expanding to Seattle, to seek a merger with another airline. On the year, a total of 121,000 passengers are originated.

The workforce in 1967 totals 262 and the fleet includes 23 aircraft: 4 Cessna 185s, 1 CV-240, 13 G-21As, 4 PB-5A Cansos, and 1 PT-6. Merger discussions open with **Alaska Airlines** in March and are concluded during the summer. In accord, the two airlines seek and receive CAB approval in September. The state's Centennial Year celebration and increased commercial activity in southeast Alaska help passenger boardings to ascend to 136,350.

In March 1968, President Lyndon Johnson approves the integration with **Alaska Airlines**, which occurs from an exchange of stock on April 1. As part of the pact, Simmons and Ellis are given seats on Alaska's board of directors. Ellis recalls the work he and Simmons had accomplished in his memoirs, *What . . . No Landing Field?* (Haines, Alaska: Lynn Canal Publishing Co., 1969).

The Alaska Coastal-Ellis Air Lines route network is maintained until gradually integrated into that of **Alaska Airlines** in the fall of 1973. The same year, Benecke, who has held a number of top positions, becomes **Alaska Airlines** president, a post he will hold until 1976. On October 29, 1981 both Simmons and Ellis are made directors emeriti and retire.

ALASKA HELICOPTERS: United States (1951–1995). A subsidiary of Oregon-based **Columbia Helicopters**, Alaska Helicopters is formed in 1951 to provide passenger and cargo charter and contract flights from an Anchorage base. Operations continue apace over the next 30 years, by which time Alaska is heavily involved in helilumbering and energy industry support. The fleet in 1983 includes 15 Bell 206B JetRangers, 5 Bell 206L LongRangers, and 2 Boeing Vertol 107s. Two fixed-wing aircraft, a Beech B-55 Baron and a Cessna 206, are also operated.

A Boeing 234 Commercial Chinook is purchased by the **Columbia Helicopters** parent from **British Airways Helicopters, Ltd. (BAH)** in the spring–summer of 1984 and is delivered in September. Assigned to the **Alaska Helicopters** subsidiary, the first Commercial Chinook to be operated by a North American carrier is employed to make an inaugural passenger flight from Nome to an oil platform 400 miles offshore. A contract is now received to fly rig workers from St. Paul Island to Amoco Production Company rigs in the Navarin Basin of the Bering Sea, including the semisubmersible, *Ocean Odyssey*.

While en route from Kenai to an offshore oil platform on January 10, 1985, a Bell 206B JetRanger, with one pilot and three passengers, crashes in bad weather; one passenger is killed while the others are injured, two seriously.

On May 2, a **British Airways Helicopters, Ltd. (BAH)** Boeing is ditched in the East Shetland Basin. Alaska Helicopters acquires the damaged machine during the summer; repaired, it, too, enters service in support of Amoco's Bering Sea fields.

During late spring, an inbound Chinook is forced to circle a rig and hold for 10 minutes until a low-flying Soviet Air Force reconnaissance aircraft clears the area. On July 14, a Soviet twin-turboprop passes within 150 feet of another Chinook as it prepares to land at the Amoco semisubmersible rig *Sedco 708*.

Later in the year, Arco Alaska charts a Civil Chinook to fly non-stop from St. Paul Island to its rigs in the Navarin Basin, a distance of 300 nm.

Operations continue apace in **1986**. Founded by Fred Dure four years earlier, **HeliTour Alaska**, and its two each Bell 206L LongRangers and Bell 206B JetRangers, is purchased by Alaska Helicopters during the spring of **1987**. Allowed to maintain its identity as a **Columbia Helicopters** subsidiary, HeliTour transports over 1,000 sight-seeing passengers during the summer from its bases at Seward and Anchorage.

Also during the summer, the company flies its first forest fire fighting missions, supplying a 2 Bell 205s and 2 Bell 206L LongRangers to combat blazes in southern Alaska. Another Bell 205 is flown to California to assist the fleet of parent **Columbia Helicopters**, which is entirely committed to fighting fires in the Pacific Northwest through October 31.

In **1987–1988**, the company wages an unsuccessful campaign to obtain a landing site in Chugach State Park, bordering Anchorage, from which to undertake sight-seeing flights. Following the eruption of Mount Redoubt in December **1989**, the company, under contract to the Alaska Department of Conservation, stations 1 Bell 205, 1 Bell 206B JetRanger, and 2 Bell 206L LongRangers at endangered Drift River. From there, pilots fly several evacuation missions, removing geophysicists and employees of Mobile Oil just ahead of a creeping lava flow.

The company, in **1990–1992**, has 70 employees and 16 rotary-wing aircraft, including Bell 205s, 206B JetRangers, and Bell 212s. At Anchorage, the company continues to operate a repair and maintenance shop that supports its own machines and its parent's Boeing Vertol 107s and Civil Chinooks when assigned to the state.

A total of 5,200 flight hours are operated in **1993** charter, tourism, survey, and oil-related services. At the end of **1994**, negotiations begin for the **ERA Aviation** subsidiary Rowan Co. to purchase the assets of Alaska Helicopters.

In late August **1995**, a letter of intent is signed for the \$11-million purchase of Alaska by ERA. The assets turned over include 17 Bell helicopters, associated spare parts, and hangar and office space adjacent to ERA's location at Anchorage International Airport. The final agreement is signed in early October.

ALASKA INTERNATIONAL AIR: United States (1972–1984). Following the discovery of oil in Alaska in **1967**, the lightplane charter operator **Interior Airways** is reformed in **1972**. Becoming a wholly owned subsidiary of Fairbanks-based Alaska International Industries and renamed in its honor, the carrier changes its role to that of heavy cargo carrier. Chairman James S. Magoffin and President/CEO Neil G. Bergt assemble a fleet of 5 Lockheed L-100-30 freighters that undertake contract cargo flights throughout the world.

A total of 10.43 million FTKs are flown in **1973**.

Airline employment in **1974** stands at 310. Orders remain outstanding for 3 L-100-30s that will be delivered over the next two years. As work on the Prudhoe Bay project intensifies, renewed emphasis is placed on Alaskan services.

En route from Fairbanks for Bettles on October 27, an L-100-30 Hercules, with four crew, suffers the in-flight failure of its right wing and crashes near Old Man's Camp, Alaska; there are no survivors.

FTKs flown this year increase by 300% to 14.9 million.

Operations continue apace in **1975–1976**.

In **1977**, merger discussions are held with **Overseas National Airways**, but these fail. Airline employment in **1978** stands at 216 and al-

though the fleet is increased by two more Hercules freighters in **1979**, a three-year decline in cargo traffic continues.

The employee population is increased by 37.1% to 240 in **1980** and the fleet now includes 5 L-100-30s. Orders are placed for 2 Boeing 767-200Cs. In September, Alaska International takes over **Great Northern Airlines**. Destinations now served by the Hercules include Anchorage, Fairbanks, Prudhoe Bay, Barrow, Nome, Kotzebue, Bethel, Dillingham, Unalakleet, St. Mary's, Aniak, McGrath, and Galena.

A total of 11.9 million FTKs are operated during the year. Expenses exceed income and losses are suffered: \$988,000 (operating) and \$258,000 (net).

Twenty additional employees are hired in **1981**. CEO Neil G. Bergt, who is also chairman/CEO of **Western Airlines**, arranges for the major to acquire **Wien Air Alaska**; the plan is presented to the CAB for final approval.

Cargo traffic skyrockets 176.5% to 64.03 million FTKs. On revenues of \$6.19 million, expenses are held to \$3.97 million. As a result, the operating profit reaches \$2.21 million and net gain equals \$525,000.

The payroll is reduced 26.9% in **1982** to 190. Although the CAB approves the Western-Wien merger, it first requires that Bergt remove himself from the Western board and management; when he refuses, the amalgamation fails.

Freight plunges 34% to 45.11 million FTKs. Expenses of \$39.49 million are exceeded by operating income of \$46.33 million, thereby producing an operating profit of \$6.84 million and net gain of \$5.47 million.

Operations continue apace in **1983** and, in early **1984**, the carrier is renamed **MarkAir**.

ALASKA ISLAND AIR: P.O. Box 1167, Kotzebue, Alaska 99752, United States; Phone (907) 442-2468; Fax (907) 442-2205; Code 8Z; Year Founded 1988. The renamed and trimmed on-demand operations of **Alaska Island Airlines** resume in **1988**. New CEO Albert Newton Ball Jr.'s Part 135 carrier operates air taxi flights from Petersburg to Hobbart Bay and Kake, employing 1 each Beaver and Cessna 180. The FAA shuts down the company in mid-November **1989**. Inspectors from the Alaskan region charge that the operator has made fraudulent or intentionally false record entries to show compliance with FAA rules. Other infractions include failure to keep individual records for each pilot, employment of unqualified airmen, inadequate rest provisions for flight crews between flights, and using crewmen in operations for which they are not trained.

Most of **1990's** first half is taken up winning the regulator's approval to restart passenger flights. In February, NTSB Law Judge Jimmy Coffman overturns the FAA's emergency revocation of the company's operating certificate; however, the government appeals the bench's decision.

A single Beaver is allowed to get off the ground during the summer and transports a total of 243 passengers. President Ball's operation also carries mail and cargo throughout southern Alaska.

The one-plane airline continues flying in **1991**, transporting 72 passengers and 23,308 pounds of mail. Operations continue apace in **1992–1993**. Customer bookings skyrocket 174% in **1994** to 4,918, along with 130,000 pounds of express and mail.

Operations continue apace during the remainder of the decade. During these years, President Michael Spisak's fleet includes 2 Cessna 185s and 1 each C-208 Caravan I, C-206, and Douglas DC-3 freighter.

ALASKA ISLAND AIRLINES: United States (1959–1986). Having obtained a contract to fly for Pacific American Fisheries, Lon Merifern's **Lons Flying Service** commences nonscheduled operations from Petersburg in **1959**. During the **1960s**, the original Piper Cruiser is supplemented with 2 Cessna 180s and 1 de Havilland Canada DHC-2 is acquired in **1968**. The aircraft is the first of its type flown in Alaska and the last Beaver built.

In **1969**, the operation is purchased by Lloyd Roundtree, who renames it Alaska Island Airlines and begins scheduled third-level services. Destinations served from Petersburg include Port Alexander, Port

Walter, Saginaw Bay, Baranof, and Kake. A contract is also held from **Alaska Airlines** to fly U.S. Mail to these remote communities.

During the **1970s** and early **1980s**, the fleet comes to comprise 1 Grumman G-21 Goose, 1 de Havilland Canada DHC-2 Beaver, 1 float-equipped Cessna 185, and 3 Cessna 180s. A significant number of charters are flown throughout southeast Alaska and into British Columbia. Many are undertaken for the U.S. Forest Service and the Alaska Fish and Game Department, as well as the commercial fishing and logging industries.

Although frequencies change (e.g., introduction of six-days-per-week nonstop Petersburg–Kake flights), neither the carrier's route network nor fleet is enlarged and it continues to fly its niche until **1986**, when owner Roundtree has medical problems and operations cease.

ALASKA ISLAND AIRWAYS. See **ALASKA COASTAL AIRWAYS**

ALASKA JUNEAU AERONAUTICS. See **WINGS OF ALASKA**

ALASKA NORTH FLYING SERVICE: United States (1976–1987). This charter/flight-seeing operator is established at Anchorage in May **1976**. Revenue operations, primarily to bush destinations, begin from Lake Hood with a Cessna 185 and de Havilland Canada DHC-2 Beaver, both float-equipped, and continue until **1987**.

ALASKA RIVER SAFARIS: United States (1981–1987). Another Anchorage-based charter and flight-seeing company, ARA is also known as **Alaska Safaris**. Outfitted with a float-equipped Cessna 185, it begins business from Lake Hood in **1981** and continues into **1987**.

ALASKA SAFARIS. See **ALASKA RIVER SAFARIS**

ALASKA SEAPLANE SERVICE: 1873 Shell Simmons Dr., Juneau, Alaska 99801, United States; Phone (907) 789-3331; Fax (907) 789-3221; <http://www.akseaplanes.com>; Code UI; Year Founded 1954. Tracing its heritage back to **1954**, this bush operator turned scheduled commuter carrier is owned in the **1990s** by Aral and Craig Loken. Two de Havilland Canada DHC-2 Beavers continue to emphasize charters and "aerial adventures" throughout the southeast Alaskan panhandle. Meanwhile, 2 Cessna 180s maintain regular return flights linking Juneau with surrounding towns and villages.

A total of 35,000 scheduled passengers are transported in **1998**, but customer bookings plunge 93% in **1999** to just 3,000. Flights continue in **2000**.

ALASKA SOUTHCOAST AIRWAYS: United States (1960–1974). Pete Johnson and Mark Murdock found the charter carrier **Tamgass Aviation** on Annette Island in **1960** to provide flights to such local destinations as Ketchikan and Metlakatta, plus bush locations. Scheduled services are introduced on March 10, **1964**.

Operations continue throughout the decade with 1 each de Havilland Canada DHC-2 Beaver and Cessna 185, both float-equipped. The company name is changed to **Southcoast Airways** in **1969** and to Alaska Southcoast Airways a year later.

Unable to maintain economic viability in the face of recession and increased oil prices, the company closes its doors in **1974**.

ALASKA SOUTHERN AIRWAYS: United States (1933–1934). Established at Juneau as an FBO by Nick Bez, a canning industry official, Alaska Southern Airways becomes a charter airline operation in March **1932** when Bez purchases the remaining assets of **Alaska-Washington Airways** at a receiver's sale. The major components acquired are the float-equipped Lockheed Model 5 Vegas *Petersburg* and *Sitka*, which are renamed *Chichagof* and *Baranof*, respectively. Alaska-Washington pilots Robert "Bob" Ellis, Gene Meyring, and A. B. "Cot" Hayes are retained, the latter as manager. Later in the year, a Fairchild 71, christened *Pribilof*, and a Keystone-Loening K-84 Commuter, the *Kruzof*, are also acquired.

Renamed and reformed, Alaska Southern begins scheduled passenger and air express services in mid-**1933** to Sitka via Chichagof and Ketchikan, and Ketchikan to Klawock. The year's operations are successful and the company pays a dividend, the first by an American airline not on government subsidy.

Early in **1934**, the two Lockheed Model 5 floatplane Vegas begin flights from Juneau to Seattle via Ketchikan. One of the Vegas, the *Baranof*, piloted by Gene Meyring with four aboard, crashes while landing at Pinta Bay on October 10 (one dead). This service runs square across the developing route system of **Pan American Airways (PAA)** subsidiary **Pacific Alaska Airways**. Unable to compete with one Vega, Alaska Southern is sold to Pan Am on November 13 and merged.

ALASKA STAR AIRLINES. See **ALASKAN AIRLINES**

ALASKA TRAVEL AIR: United States (1978–1991). Based at Anchorage's Lake Hood, ATA inaugurates bush-bound passenger and cargo charters and flight-seeing services in **1978** with a float-equipped Cessna 185 and a similarly equipped de Havilland DHC-2 Beaver. A victim of recession, the company shuts down in **1991**.

ALASKA-WASHINGTON AIRWAYS: United States (1929–1932). An ambitious if short-lived carrier, AWA is established in Seattle, Washington, by furniture maker and flight school operator Joseph L. Carman Jr. during the spring of **1929** to offer services over four widely separated routes.

Revenue passenger and express services commence on April 15 as the Lockheed Model 5 Vega floatplane *Juneau*, piloted by Ansel Eckman with Robert E. "Bob" Ellis as navigator, is flown 940 miles nonstop from Lake Union to Juneau.

Other flights are inaugurated linking the Washington towns of Wenatchee, Pasco, Olympia, and Seattle plus the Alaskan towns of Ketchikan and Sitka via Juneau and the British Columbia cities of Victoria and Nanaimo via Vancouver.

Service is steady and the fleet, which grows to comprise 10 Fairchild 71s and 2 Lockheed Model 5 Vega floatplanes, transports a total of 12,000 passengers during its first year. Included in this total are some 2,000 passengers carried by the 2 Vegas (the *Wrangell* had arrived in the fall) in Alaska.

Seattle-based **Inter Cityair Express**, which had been formed in January to offer scheduled passenger flights to Yakima, is purchased in April **1930**. During the spring, four more float-equipped Vegas, christened *Taku*, *Petersburg*, *Sitka*, and *Skagway*, are sent up to Alaska.

On June 1, twice-weekly flights are begun from Seattle to Juneau. This new service, coming on top of earlier expansion in a time of depression, cannot, without such technical aids as weather forecasting and radio, be maintained.

As a result, traffic declines and within a month, on July 1, the carrier is sold to **Seattle-Wenatchee-Yakima Airways**. Services are continued under the new name. The float-equipped Lockheed Model 5 Vega *Taku*, piloted by W. A. Williams with five passengers on a charter, catches fire over Kingston, Washington, on August 4; a nonfatal forced landing is quickly made.

While participating in a search for the lost Canadian flyer E. J. E. "Paddy" Burke, the float-equipped Lockheed Model 5 Vega *Skagway*, piloted by Robin Renehan with two passengers, crashes in bad weather on October 28–29, 100 miles from Ketchikan (three dead). With the Washington component of the company losing significant money, the remaining three Vegas are returned to Seattle.

Wreckage of the Renehan aircraft is found on a beach at Annette Island in January **1931**. The 3 Vegas return to Alaska for the summer season, with Bob Ellis operating the *Petersburg* from Juneau and Gene Meyring flying the *Sitka* from Ketchikan. Clark Wings flies on-demand charters with the *Wrangell*. Seattle–Ketchikan–Juneau flight end on December 31.

The company, which represents the first significant effort to operate a real airline in Alaska, ceases operations on January 1, **1932**. President Carman returns to the furniture business and, in March, Alaska-Washington Airways' assets are purchased at a receiver's sale by Juneau canning industry official and FBO operator Nick Bez, who reforms them into **Alaska Southern Airways**.

ALASKAN AIRVENTURES: United States (1982–1992). Airventures Associates, Inc. form this charter operation at Palmer in **1982** to provide passenger charter and flight-seeing services into the surrounding bush country. Employing float-equipped Cessna 185s and de Havilland Canada DHC-2 Beavers, the company continues operations until **1991**, when it becomes a victim of recession.

ALASKAN AIRWAYS: United States (1928–1932). In **1928**, Carl Ben Eielson, who flew the first experimental Fairbanks-McGrath airmail service back in 1924, establishes Alaskan Airways. The company, owned by the Aviation Corporation (AVCO), which is also parent of **American Airways**, is an amalgamation of the charter operations of three FBOs—Noel Wien and Bennet and Rodebaugh, both based at Fairbanks, and Anchorage Air Transport.

Routes are flown with Fairchild 71s and other lightplanes from Fairbanks to Nome, Kotzebue, Point Barrow, and McGrath as well as points northwest of Anchorage.

En route to pick up furs from the icebound schooner *Nanuk*, stuck on the Siberian side of the Bering Strait, founder Eielson and mechanic Earl Borland are lost in a crash on November 9, **1929**. The wreckage is not found until January 25, **1930**.

Operations continue into **1932**, by which time the company owns small frame hangars at Nome, Fairbanks, and Anchorage, plus eight Star mail contracts. In April, company pilot Joe Crosson makes the first recorded glacier landing in Alaska, alighting on Mount McKinley's Muldrow Glacier.

Preparing to undertake services to the Orient, **Pan American Airways (PAA)** purchases the company from AVCO on September 1, merging it into its subsidiary, **Pacific Alaska Airways**, founded a scant five months earlier. All AA aircraft and the 40 employees, including the five pilots and manager S. E. "Robbie" Robbins, are transferred as well.

ALBANIAN AIRLINES MAK S.H.P.K.: R.R. Durrest Nr. 202, Tirana, Albania; Phone 355 (42) 28 461; Fax 355 (42) 42 857; Code LV; Year Founded 1992. Established at Tirana in April **1992** as Albania's national carrier, this new entrant is a joint venture between the government-owned Altransport and the Innsbruck-based carrier **Tyrolean Airways, GmbH**, which signs a technical assistance and management contract. Tyrolean officials Johann Messner and Josef Burger are named acting joint managing directors pending the appointment of a suitably qualified Albanian national.

Employing a de Havilland Canada DHC-8-100 and a DHC-8-300, both leased from Tyrolean, the company inaugurates scheduled services to Vienna in late July. Later in the year, flights are started linking the airline's base with Rome, Zurich, Frankfurt, and Munich. Operations continue apace in **1993–1994**. G. Esterhammer becomes managing director and is forced, by low traffic, to withdraw the DHC-8-300. Flights are suspended in August of the latter year.

The stagnant situation remains unchanged into **1995** and the decision is made to gamble on salvation through regional jetliner service. The Kuwaiti construction group M. A. Kharafi purchases majority shareholding. An Airbus Industrie A320-200 is leased in the fall and flights commence in October linking Tirana with Bologna, Munich, Skopje, Rome, and Istanbul.

The risky wager is unsuccessful and the company, out of money, is forced to again shut down in September **1996**. It remains inactive for some months thereafter.

Following the withdrawal of Kharafi's A320, the fleet is reformed in late **1997** and is provided with 3 secondhand Tupolev Tu-134As and

1 Tu-134B. Scheduled revenue service is resumed linking the company's base with Bologna, Frankfurt, Istanbul, and Rome.

Service is maintained in **1998** and into **1999**. In anticipation of air strikes by NATO countries against Serbian military targets in the campaign for an independent Kosovo, NATO, on March 24, halts all scheduled service in the Balkans by closing the airspace over Yugoslavia and surrounding countries. That evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Albanian remains unable to operate scheduled service throughout the Kosovo crisis. It is, however, chartered by the UN to operate a number of refugee flights to destinations in Western Europe.

Regularly scheduled flights are quietly resumed during the summer and fall.

Four-time-per-week return service is launched on February 1, **2000** between Tirana and Trieste.

ALBANY AIR SERVICE: United States (1977–1978). Albany Air Service is established at Albany, New York, in **1977** to provide scheduled passenger and cargo services to New York via White Plains. Daily Beech 18 roundtrips are duly inaugurated, but can only be maintained into **1978**.

ALBANY AIR SERVICE AND ATHENS AVIATION: United States (1964–1970). AAS and AA are set up at the two Georgian cities in the summer of **1964** to operate scheduled air taxi flights under both names. Employing 1 Beech 18 and 1 Piper PA-23 Apache, the company inaugurates revenue flights on September 7 from Albany to Atlanta and from Athens to Atlanta, Jefferson, Winder, and Gainesville.

Flights continue apace over the next four years and the fleet is upgraded by the addition of a Piper PA-32 Cherokee Six. In **1968**, service to Albany is halted and the company is renamed **Cherokee Airways**.

ALBARKA AIRLINES: Lagos, Nigeria; Year Founded 2000. Albarka ("Blessings") is established in March **2000** by retired Brig. Gen. Buba Marwa, the former military governor of Lagos state, to provide additional transportation choices for citizens in a bankrupt civil aviation environment. A particular impetus for creation has been the recent failure of the nation's existing airlines to provide adequate lift during the recent Hadj.

With financial support from foreign partners, Chairman Marwa is able to acquire 3 British Aerospace BAC 1-11-500s, recruit staff and pilots, a \$1.5-million stock of spare parts, and \$400,000-worth of ground-handling equipment.

Offering special Easter fares, daily revenue flights commence in April over routes from Lagos to Kano, Maiduguri, Abuja, and Port Harcourt. In June, Marwa enters into discussions with **Nigeria Airways, Ltd.** concerning the possibility of joint service to New York once the U.S. FAA gives clearance.

The company's fourth BAC 1-111-500, purchased in Romania, arrives on August 8 and is assigned to the route between Lagos and Abuja.

Flight 520, a BAC 1-11-500 with 94 passengers, overshoots the runway while landing at Lagos in a rainstorm on August 19 following a service from Maiduguri and veers into the airport perimeter road before returning to the tarmac. Following passenger disembarkment, the aircraft is checked, found to be undamaged, and is returned to service.

ALBATROSS AIRLINES (PTY.), LTD.: Australia (1980–1998). Privately held Albatross Airlines is established at Kingscote, on Kangaroo Island, in **1980** to offer third-level passenger and cargo flights to Adelaide. Thrice-daily services commence with a pair of Piper PA-31-350 Navajo Chieftains.

Flights continue largely without change until **1996**, when one Chieftain is exchanged for a Piper Aztec. By **1997**, the company, which has also added one each Learjet 55 and Learjet 35A for executive charters, enjoys the distinction of being the longest continuous air service in

South Australia that is still operational. That distinction is lost in 1998 when the carrier shuts down.

ALBATROSS HAVA YOLLARI, A.O.: Ataturk Hava Alani Centre, Yesilkoy 9, Istanbul, Turkey; Phone 90 (212) 663-6000; Fax 90 (212) 663-6010; Code 8Z; Year Founded 1992. AHY is established at Istanbul in 1992 to offer passenger charters throughout Europe and the Mideast, plus the Caribbean. Ibrahim Dincer is general manager and revenue operations begin and continue with a pair of leased Boeing 737-200s. A Yakovlev Yak-42 is acquired later.

ALBERTA CITYLINK, LTD.: P.O. Box 161, Medicine Hat, Alberta T1A 7E8, Canada; Phone (403) 527-3328; Fax (403) 527-4721; <http://www.telusplanet.net/public/banch/abcity.htm>; Code ABK; Year Founded 1995. Alberta Citylink is set up by Leslie Little at Medicine Hat in June 1995 to offer scheduled third-level passenger services to cities throughout the western Canada. With financial support from Bar XH Aviation, 3 British Aerospace BAe Jetstream 31s are acquired and flights begin to Calgary, Cranbrook, Edmonton, Grand Prairie, Kamloops, Lethbridge, and Lloydminster.

The company becomes an **Air Canada, Ltd.** commuter affiliate in 1996 and, in late 1997, the Canadian launch customer for the Enhanced Performance Jetstream 32EP.

Two J-32EPs join the fleet in 1998 and services continue apace thereafter.

ALBERTA EXPRESS, LTD.: Canada (1986–1995). AE is established at Edmonton in 1986 to offer ad hoc charter flights throughout western Canada. Ad hoc passenger and cargo services continue apace in 1987–1992.

In 1993–1994, President Christine Robertson oversees a workforce of 18 and a fleet that includes 1 Cessna 404 Titan, 2 Cessna 402Cs, 1 Cessna 414A, 1 Piper PA-31-350 Navajo Chieftain, and 1 Piper PA-34 Seneca. A scheduled route is inaugurated to Calgary.

In 1995, the company is renamed **Alta Flights, Ltd.**

ALCON SERVICIOS AEREOS, S.A. de C.V.: Aeropuerto Internacional, Plan de Gaudalupe 1 Carr., Saltillo, Mexico; Phone 52 (84) 88-0699; Fax 52 (84) 88-2218; Year Founded 1990. ASA is established at Saltillo Airport in 1990 to provide ad hoc passenger and cargo charters around the nation. Under the direction of Seroio Valdez, the company over the next ten years comes to fly 2 Convair CV-580 freighters and 1 each British Aerospace BAe (HS) 125-600 Hawker and North American NA-265-60 Sabreliner.

ALDERNEY AIR FERRIES, LTD. See **METROPOLITAN AIRWAYS, LTD.**

ALECTOR AIRWAYS: United States (1976–1977). Alector is established at Newburgh, New York, in 1976 to provide scheduled passenger and cargo flights to New York (LGA). Daily Piper PA-31-310 Navajo roundtrips are duly inaugurated and are maintained into 1977, the year the company is reformed into **Air Vectors Airways**.

ALFA (AEROLINEA FEDERAL ARGENTINA, S.A.): Argentina, (1985–1995). At its Resistencia base, in Chaco Province, ALFA is formed in 1985 by the process of renaming **Aerochaco (Lineas Aereas Chaquenas, S.A.)**. Scheduled, state-supported, third-level regional passenger and cargo services are maintained with a fleet of 2 Fairchild Hiller FH-227Bs. A SAAB 340A is leased in 1987. Operations continue apace in 1988–1992; however, recession makes a significant impression.

By 1993–1994, President Carlos Carabajal's fleet has been reduced to but one of the American-made Friendships. The company fails in 1995.

ALFA (AEROLINEAS FLECHA AUSTRAL, LTDA.): Chile, (1965–1978). ALFA is set up at Santiago in 1965 as a meat-hauling en-

terprise. Equipped with 1 Fairchild C-82 and 2 Curtiss C-46 Commandos and working in association with **Transporte Aereo Costa Atlántico, S.A.**, the company transports carcasses to Mendoza, Argentina. During 1966–1967, scheduled all-cargo services for the transport of other types of freight are inaugurated, linking the carrier's base with Arica via Antofagasta and Iquique.

Operations continue apace in 1968–1970, during which years the fleet of 4 C-46s begins to be replaced by 2 Douglas DC-6s.

Having suffered an engine failure during its initial climb, a C-46D with three crew and one passenger crashes at Santiago de Chile on May 25, 1971; there are no survivors.

While on initial approach to the Pudahuel Airport at Santiago de Chile on June 13, 1972, a C-46D, with three crew, crashes into El Ovejero Mountain, near Maipu township; there are no survivors.

Flights continue until the company ceases operations in 1978.

ALFA (AVIACION DEL LITORAL FLUVIAL ARGENTINA, S.A.): Argentina, (1946–1949). Shipping magnate and flying boat enthusiast Dr. Jose Dodero forms an air transport subsidiary for his steamship concern early in 1946, naming it **Compania Argentina de Aeronavegacion Dodero, S.A.** In early February, he participates in the founding of **FAMA (Flota Aerea Mercante Argentina, S.A.)**, taking a sizeable interest and hoping to use it to start a new flying boat service to Europe. Despite contribution of his own personal fleet of 4 Short S.25 Sandringhams, the water approach does not greatly interest FAMA officials. In response, Dodero purchases the remaining assets in the first week of May, including a Macchi C.94 and Short S.25 Sunderland 3, of the one-time Italian-backed flying boat operation **Corporacion Submarinica de Servicios Aereos, S.A.**, with the idea of restarting it as South America's first airline to Europe.

In order to insure greater Argentinean participation in the development of the country's air transport industry, the government in 1945 early 1946 establishes a policy of encouraging the creation of joint stock companies. The country is also divided into airline zones of influence that will be awarded to the new operators. Officials now encourage Dr. Dodero to purchase majority control in one of the new entrants, ALFA, which is created by decree on May 8.

Dodero buys in, submerging his **Compania Argentina** and the "Corporacion" into the new airline. When it is made known to him that his participation in both FAMA and ALFA, as well as his strident flying boat enthusiasm is not particularly welcome by his new colleagues, Dodero, while retaining his shares, retires from the airline business in August.

The remainder of the year is taken up with planning operations and assembling the fleet that includes Dodero's Macchi C.94, 5 Short S.25 Sandringhams (*Argentina, Uruguay, Inglaterra, Brasil, Paraguay*), and Short S.25 Sunderland 3 *Rio de la Plata*, as well as 1 Beech C-18S, 7 Noorduyn Norseman VIs, and 1 Douglas DC-3.

ALFA is ready to begin operations on January 1, 1947. Eight days later, it receives from the government the northeastern routes within zones of influence IV and VI, formerly operated by the special military air transport unit **LADE (Lineas Aereas del Estado)**. Important destinations therein include not only Buenos Aires, but Rosario, Posadas, Iguassu Falls and rights to Montevideo (Uruguay). The mail/express flights formerly undertaken by the LADE subdivision **SADE (Servicio Aeropostales del Estado)** are also awarded. Services are inaugurated to Montevideo and Colonia on April 15 and six days later, ALFA assumes all of LADE's routes. During the year, the fleet is enhanced by the addition of another Beech C-18S and one more DC-3.

Services are maintained throughout the remainder of the year and 1948. On December 24, 1948, two Sandringhams are destroyed in a hanger fire. On May 3, 1949 ALFA is one of four carriers merged to create the new state carrier **Aerolineas Argentinas, S.A.**

ALFA-92 AVIAKOMPANIYA: Kalinina 13, Komsomolsk na Amur, Khabarovsk Krai, 681022, Russia; Telex 29627; Year Founded 1994. Alfa-92 is established at Komsomolsk na Amur,

Khabarovsk Krai, Russia in **1994** to offer domestic services. M. I. Saulnov is appointed general director and he begins revenue services with an unspecified number of Antonov An-12s, plus several Mil Mi-6 helicopters.

ALFAAIRLINES, S.A.: Fatish Cad No. 21, Gunesli, Istanbul 34540, Turkey; Phone 90 (212) 630 3348-56; Fax 90 (212) 657 5869 70; http://www.airalfa.com.tr; Code H7; Year Founded 2000. The Istanbul-based charter operator **Air Alfa Havayollari Ve Tic A.S.** changes its name to the more manageable AlfaAirlines on July 1, **2000**. Employing leased Airbus A300B4-622R equipment, Chairman Hasim Bayram's airline maintains service to Dusseldorf, Stuttgart, Frankfurt, Hanover, Munich, Basel, Zurich, Maastricht, Amsterdam, Brussels, and the Turkish communities of Istanbul, Ankara, Izmir, Bodrum, Dalaman, Trabzon, Erzurum, Adana, and Antalya.

ALG AEROLEASING, S.A.: Peremogi Prospect 24, Kiev, 252135, Ukraine; Phone 380 (044) 216-4478; Fax 380 (044) 216-8235; Code FPG; Year Founded 1966. The largest executive air transport operator in Europe, ALG is established at Geneva in **1966** to provide jet charter operations, leasing, aircraft sales and management, finance, maintenance, handling, catering, and a variety of FBO activities.

With a fleet that includes Douglas, Dassault, Learjet, British Aerospace, and Cessna flight equipment, ALG launches on-demand services, largely on behalf of business personnel, to destinations largely outside the nation.

Operations continue apace for the next 15 years and, by **1990**, the fleet includes a 28-plane mix of Learjet 31s, 35s, 36s, and 55s and Dassault Falcon 10s, 20s, and 50s, plus 2 DC-9-32s. A total of 19,000 flight hours in charter are offered and, on October 2, a company Falcon 20 becomes the first civil aircraft to land at Berlin's Tempelhof Airport.

A new business aviation center is opened at Berlin on March 1, **1991** and services are maintained into **1994** with 86 pilots, 36 cabin attendants, and a large number of ground and marketing personnel.

Flights continue in **1995–2000**, during which years the company becomes a Swiss and Ukrainian joint stock venture based at Kiev.

ALIA DRIATICA, S.p.A.: Italy (1989–1995). Organized at Pescara in **1989**, Alia Driatica's board names Antonio Sutti as general manager. A fleet of 2 British Aerospace Jetstream 31s and 2 Cessna 550 Citation IIs is assembled. Services are initiated linking the company base with Turin and Palermo; operations continue apace in **1990–1991**.

Giacomo Babbucci becomes general manager in **1992** and oversees a workforce of 40. A Cessna 441 is acquired and service is inaugurated to Split and Munich. Enplanements total 15,000.

Operations continue apace in **1993–1994**. In September of the latter year, a Boeing 737-229, formerly flown by **Fortune Air, S.p.A.** is acquired. The company will be combined with **Noman, S.p.A.** in the fall of **1995** and relaunch services in November under the name **AirOne, S.p.A.**, a title employed by an early postwar Italian airline.

ALIA ROYAL JORDANIAN AIRLINES: Jordan (1963–1986). Ali Ghandour (who becomes the first chairman) forms this new national airline at the request of King Hussein in October **1963** to succeed the earlier **Jordan Airways, Ltd.** (founded 1961), which had ceased trading on September 1. Named for the King's daughter, Princess Alia, the carrier receives a royal decree allowing official authorization. Revenue flights begin on December 15 with 2 Douglas DC-7s and 2 Handley Page HPR-7 Herald over routes from Amman to Beirut, Cairo, Jeddah, Jerusalem and Kuwait. A French Caravelle jetliner is ordered at year's end.

The Sud-Est SE-210 Caravelle XR is delivered on July 28, **1964** entering service in early August. In February **1965**, a second Caravelle XR is received; routes are now extended to London, Paris, and Rome.

An HPR-7 Herald with 4 crew and 50 passengers crashes near Damascus, Syria, on April 10; there are no survivors.

A total of 117,950 passengers are flown on scheduled and chartered services as the workforce grows to 347.

Another SE-210 plus a Boeing 720B and a Fokker F.27 Friendship are acquired in **1966**.

Israeli air attacks on June 5, **1967** destroy two DC-7s, one each at Damascus and Beirut. Still, enplanements for the year total 111,424. A net profit is earned.

Airline employment reaches 550 in **1968–1969**. In March of the former year, the carrier becomes a 100%-owned corporation of the Jordanian government. Recovery from the effects of the 1967 Arab-Israeli war is slow.

Additional routes are started in **1970–1971** to destinations in Europe and Africa. During the late summer and fall of the latter year, the airline is subjected to a bombing and three hijacking attempts, of which one is successful. While parked on the tarmac at Madrid on August 24, a B-707-3D3C is extensively damaged when a bomb explodes in the rear lavatory. There are no casualties. On September 8, a Caravelle XR en route from Beirut to Amman, is captured by a lone gunman, who orders it to Benghazi, Libya—where he is arrested. Eight days later, security guards intervene and halt the takeover of a second Caravelle XR, once more flying between Beirut and Amman. This man will be tried and executed. Police halt the takeover of yet another Caravelle XR on October 4 on the ground at Amman. The captured would-be pirate is also tried and executed.

On February 19, **1972**, another lone gunman attempts to take over a Caravelle XR en route from Cairo to Amman and he, too, is taken in hand, tried, and shot.

Passenger boardings this year total 85,050 and the fleet comprises 2 Boeing 707-3D3Cs, 1 B0720B, 3 Caravelle XRs, and 1 Fokker F.27.

The subsidiary **Jordan World Airways** is formed in **1973** to operate tourist charters from Europe to Jordan. Three Boeing 727-2D3s are ordered. On January 22, a B-707-3D3C on charter to **Nigerian Airways, Ltd.** is diverted from Lagos because of bad weather. The aircraft with 9 crew and 193 passengers (mostly Nigerian Muslims returning from a pilgrimage to Mecca) suffers the collapse of its right main landing gear while landing at Kano, runs off the side of the runway, and catches fire (176 dead). The disaster is reported as the worst in civil aviation history to date.

Late in the year, a Caravelle XR is sold to **Air Afrique, S.A.**

Enplanements climb 30% to 121,500 and revenues accelerate 50%, allowing the first net profit since 1967.

The three 727-2D3s are placed in service in **1974**. En route from Amman to Aqaba on November 6, a Caravelle XR is seized by three hijackers, who divert the aircraft to Benghazi, Libya. The trio is given political asylum.

Despite this incident, bookings for the year skyrocket 50% to 243,000. A \$702,365 net profit is made on overall income of \$31.51 million.

Airline employment is 1,846 in **1975** and 2 B-747-2D3Bs are ordered. Service is inaugurated to Baghdad, Bangkok, Amsterdam, and Geneva.

On August 3 a B-707-321C, owned by Alia but chartered by **Royal Air Maroc, S.A.** to transport Moroccan workers from France for summer vacation, approaches Agadir for landing. The aircraft carrying 7 crew and 181 passengers crashes into a mountainside 30 mi. NE of the city of Imzizen; there are no survivors.

Boardings for the year jump another 50% to 379,911.

The employee population rises a full 20% to 2,116 in **1976**. Two B-707-384Cs purchased from **Olympic Airways, S.A.** are delivered in April. The charter subsidiary **Arab Wings, Ltd.** is created in May and equipped with the two Boeings purchased from the Greek flag carrier. Routes are opened to Damascus, Aleppo, Larnaca, Athens, Vienna, and Copenhagen. Although delivery of the two B-747-2D3Bs is delayed, freight traffic skyrockets 87% to 24.6 million FTKs and passenger traffic accelerates 25% to 475,470.

Both B-747-2D3Bs are received in **1977**; the first arrives at Amman on April 13 and is christened *Prince Ali* and is followed by the second, delivered on May 11 and named *Princess Haya*. Flights are now

launched to London, New York, Benghazi, Tunis, and Casablanca. King Hussein of Jordan, a certified pilot, personally inaugurates weekly flights from Amman to New York on July 10.

The B-707-384Cs, 727-2D3s, and B-720B are transferred to lower-density passenger routes. Chairman/President Ali M. Ghandour oversees a workforce of 2,150 and a fleet that now includes 2 B-747-2D3B/Cs, 2 B-707-384Cs, 1 B-707-3D3C, 1 B-707-321C, 1 B-720B, and 3 B-727-2D3s. Enplanements total 713,135.

The workforce in 1978 totals 3,098. Ras Al Khaimah is added to the route network and the New York service is undertaken, beginning in April, in cooperation with **Syrianair**.

Cargo accelerates 27.3% and passenger boardings are up 35.2% to 739,335. On revenues of \$127 million, a sixth consecutive net profit is earned, this time \$2.3 million.

While executing a missed approach at Doha on March 14, 1979, Flight 600, the B-727-2D3 *The City of Petra* with 15 crew and 49 passengers, is caught by windshear and forced into the ground (44 dead).

Service is inaugurated to San'a', Istanbul, and Houston; U.S. frequencies are increased to four per week. Sleeper seats are installed in the B-747-2D3s and offices are opened in Rio de Janeiro, São Paulo, and Buenos Aires. Business class is introduced and a computerized reservations system is installed.

The carrier's participation in the Paris Air Show is the first by any Mideast airline or Arab organization. On the technical side, a departure control system and maintenance reliability control program is launched. At the end of the year, orders are placed for 5 Lockheed L-1011 TriStar 500s.

Passenger boardings jump 23.7% to 914,483 and freight surges by 30.9%. On revenues of \$176.2 million, expenses are \$162 million, leaving a \$7.46-million net profit.

The workforce is increased 12.9% in 1980 to 3,891. Passenger boardings top one million for the first time, accelerating 21.7% to 1,112,556; cargo grows 20.1% to 80.19 million FTKs.

The employee population rises 3.9% in 1981 to 4,014 and a third Jumbojet, the Dash-2D3B *Prince Hamzah*, is delivered on March 26. Frequencies are extended to Chicago, Belgrade, and Bucharest and are increased on several other routes.

Freight soars 40% to 111.85 million FTKs and passenger traffic is up 30% to 1,443,281. A net profit of \$5.9 million is reported on total revenues of \$303.7 million.

Airline employment is 4,627 in 1982, an 8.2% boost. In March, the subsidiary **Arab Air Cargo, Ltd.** is formed. An additional B-747-2D3B is delivered along with 1 B-727-2D3A and 2 Lockheed L-1011-500s. The latter arrive in a test livery that is not adopted.

Routes are started to Istanbul and Belgrade. When **Sierra Leone Airways, Ltd.** is reformed into **Sierre Leone Airlines, Ltd.**, Alia holds a 20% stake and receives a three-year management contract.

The Jordanian carrier's B-707-3D3C is painted in Sierra Leone colors and wet-leased to the African airline as its flagship. Serving as Sierra Leone managing director, Capt. Khaja Yousufuddin and three colleagues are seconded to the African nation.

Passenger boardings rise 15.3% to 1,692,211 and freight jumps 15.8% to 129.49 million FTKs. On revenues of \$322.4 million, expenses are \$293 million, leaving a profit of \$4.2 million.

The employee population is increased by 35 in 1983. Three additional L-1011-500s join the fleet and the 2 B-707s are employed to launch **Arab Air Cargo, Ltd.** operations on May 1.

During the summer, Alia flight crews are seconded to **Sierre Leone Airlines, Ltd.** on a two-week basis to operate that carrier's B-707-3D3C on its twice-weekly services from Freetown to London and Paris.

In preparation for the introduction of service to the U.S. West Coast, a sales office is opened at San Francisco in late December.

Cargo traffic falls 8% to 119.26 million FTKs and passenger boardings decline 12.6% to 1,457,334. A net loss of \$2 million is suffered.

The workforce is increased to 4,760 in 1984. A sixth Lockheed TriStar 500 is received in March and the last B-707-3D3C is phased

out in May and given to Sierre Leone by King Hussein, along with his carrier's last B-720B.

Meanwhile, on March 3, the carrier becomes the first Arab airline to serve the U.S. West Coast when it launches twice-weekly L-1011-500 flights to Los Angeles via Chicago. Singapore and Riyadh are also added to the route network.

While rotating Alia crews continue to operate the long-haul European services of **Sierre Leone Airlines, Ltd.**, pilots from that company are sent to Jordan for Boeing training. Wide-body New York to Amman services via Vienna and Amsterdam are increased to five times per week in October.

Freight accelerates 17.3% to 139.89 million FTKs, but enplanements dip again, down 6.7% to 1,376,012. Losses are \$11 million (operating) and \$29.8 million (net) on revenues of \$294 million.

Airline employment is decreased by 3.8% to 4,581 in 1985. The B-747-2D3B *Princess Haya* is sold for lease to **British Caledonian Airways, Ltd. (BCAL)** in March.

A member of the Black September Palestinian terrorist organization fires rockets at a B-727-2D3A on April 4 as it prepares to takeoff from Athens for Amman; the target is missed, no injuries are reported, and the perpetrator flees in a waiting car.

Service begins to Moscow in May.

On June 11, a B-727-2D3A with 74 aboard is hijacked by 5 Shiite Muslim gunmen at Beirut Airport just before its departure on a scheduled service to Amman. The plane, which takes off under pirate control, returns to Beirut after being turned away from Larnaca, Palermo, and Tunis and 5 hostages are released. The Boeing takes off again, but returns less than two hours later after the pirates fail to persuade Syrian authorities to let them land in Damascus. On the ground in Lebanon, the gunmen demand to meet with Arab League Secretary General Chedli Kilbi. On June 12, the hijackers release the remaining captives, blow up the plane, and escape. The group's leader will later be captured and, after his conviction on charges of air piracy, will receive a 30-year prison sentence.

Also in June, a marketing agreement is signed with **Malaysian Airlines System, Ltd. (MAS)** that provides for joint service on a route from Amman to Kuala Lumpur.

Two gunmen fire into the company's downtown Madrid offices on July 1, but no serious injuries are reported. In cooperation with **Malaysian Airline System, Ltd. (MAS)**, the company opens a weekly L-1011-500 route from Amman to Kuala Lumpur in August.

Freight rises 9% to 152.05 million FTKs, but passenger bookings fall again, down 2.8% to 1.29 million. Revenues increase 4.7% to \$340.4 million, but expenses also grow, up 4% to \$349.6 million. There is an operating loss of \$9.2 million; however, a net profit of \$5.63 million is posted.

In April 1986, 6 Airbus Industrie A320s and 6 A310-200s are ordered. A TriStar 500 is leased to **Sierra Leone Airlines, Ltd.** In September, following the signing of a management contract with the African carrier. In a further effort to change direction and broaden appeal, at year's end, the carrier changes its name to **Royal Jordanian Airlines** and begins to implement a change in corporate identity. Plans are made for privatization during the near year.

Customer bookings are down 12.3% to 1,131,967; however, cargo is up by 9.2% to 165.91 million FTKs.

ALIBLU, S.p.A.: Italy (1987-1989). Aliblu, S.p.A. is established at Naples' Capodichino Airport in the spring of 1987 with ownership divided between ALI, Aeroleasing Italian (60%), FIMA (15%), Mario Valentino (15%), and the state carrier **Alitalia, S.p.A.** (10%). Eugene Buontempo is chairman, with Antonio Filecchia as managing director; **Aero Transport Italiani, S.p.A. (ATI)** provides technical support.

The new Italian third-level commuter inaugurates services in May linking its base with regional destinations in Italy and Germany, Switzerland, and Luxembourg. Equipped with 4 British Aerospace BAe Jetstream 31s, Chairman/CEO Filecchia's Aliblu, S.p.A. is Italy's first all-Jetstream operator.

Two more Jetstream 31s join the fleet in **1988** and, in October, three new routes are introduced: Bari to Florence, Florence to Turin, and Foggia to Rome. Enplanements for the first full year of service reach 54,000.

With the delivery of two more Jetstream 31s in January **1989**, eight new international services are started for **Alitalia, S.p.A.**, including Turin–Dusseldorf, Stuttgart, and Geneva and Bologna to Stuttgart. The small regional is taken over by **Avianova, S.p.A.** later in the year and merged.

ALIDAIR, LTD.: United Kingdom (1972–1983). Two Piper PA-30 Twin Comanches are acquired in **1971** to provide executive transport for the Alida Packaging concern. In January **1972**, Alidair Cargo is established at Hacknall Airport, Aberdeen, with Roger Dadd as managing director. Dadd purchases three former **Channel Airways, Ltd.** Vickers Viscount 812s and an ex-**British Midland Airways, Ltd.** Viscount 831 in May; they are converted and based at Castle Donington. Passenger inclusive one-day charters begin on June 12 to U.K., Belgian, Dutch, French, and Channel Island destinations.

Scheduled Viscount service is inaugurated in April **1973** from Castle Donington/Birmingham to Copenhagen and Malmo. Inclusive-tour charters resume in the summer. One Viking is leased to **British Air Ferries, Ltd.** The Copenhagen and Malmo service must be discontinued in December as the number of passengers transported does not cover increasing fuel prices.

In March **1974**, the Viscount 831 is sold to **Arkia Israeli Airlines, Ltd.** During the year, summer passenger charters are flown as well as flights carrying flower bulbs from Rotterdam to Goteborg on behalf of Volvo.

In February **1975**, Viscount charter flights are undertaken in support of the North Sea oil industry. In the summer, various tour flights are undertaken to the European continent and the fleet is increased by the addition of 1 Viscount 814, 1 Viscount 806, 4 Viscount 708s, and 1 Viscount 724; the Viscount 814 is badly damaged in a crash landing at Guernsey on September 14.

The subsidiary **Guernsey Airlines, Ltd.** is established in November **1978**.

Fuel starvation causes all four engines of a Vickers Viscount 708, with 4 crew and 58 passengers to lose power during a charter from Santander to Exeter on July 17, **1980**. The plane makes a forced landing into a wooded area at Ottery St. Mary and there are no fatalities.

Flying from East Midlands Airport, the 145-employee company of Managing Directors Roger Dadd and Trefor Jones remains a major charter operator through **1982** when it is reformed as **Inter-City Airlines, Ltd.**

Despite the sale of **Guernsey Airlines, Ltd.** to Jadeport, Ltd., in August **1983**, financial losses suffered since 1979 as a result of the world economic situation force the carrier to cease flying in the fall.

ALIDAUNIA, S.p.A.: c/o Aeroporto Civil Gino Lisa, Viale Degli Aviatori, Foggia, 71100, Italy; Phone 39 (0) 881 617961; Fax 39 (0) 881 619660; Code LID; Year Founded 1986. Alidaunia is established at Rome in **1986** to provide on-demand summer helicopter services between Foggia Airport and Tremiti Island. An Augusta A109 operates the seasonal service over the next six years.

Scheduled passenger and cargo services between Foggia and Milan begin in **1992** with 1 Cessna 310. A rotary-wing service is also offered to Tremiti with 3 Augusta helicopters. Enplanements for the year total 8,800.

Operations continue in **1993–1999**. President Roberto Pucillo's fleet now includes 3 Augusta A109s, 1 Sikorsky S-76A, and 1 Mitsubishi Mu-300. A Partenavia P.68 replaces the Mitsubishi during the latter year as a fourth A109 is acquired.

ALIGIULIA, S.p.A.: Italy (1983–1985). Aligiulia, S.p.A. is set up at Trieste's Ronchi Dei Legionari Airport in the spring of **1983** to offer scheduled regional passenger and cargo services. With a workforce of 35 and employing a pair of Nord 262s, weekday return flights are inaugurated by the commuter on May 18 linking the company's base with Mi-

lan, Florence, Venice, Turin, and Genoa. Enplanements through Christmas total 9,100.

Orders are placed in **1984** for two of Avions de Transport Regional ATR42s, but the company is unable to maintain its viability and closes down in **1985** before the advanced turboprops can be delivered.

ALII AIR HAWAII: United States (1969–1975). AAH is set up by Herman Brandt at Honolulu in the fall of **1969** to offer scheduled passenger and cargo roundtrips to Molokai. Beech 18 revenue flights commence on October 17. The company is also known, during **1970**, as **Brandt Air**; however, that name is discarded in **1971** and a new one is chosen.

Operations continue as AAH until Brandt renames his company **Hawaii Pacific Airlines** on January 1, **1975**. During these years, only one major incident occurs; on February 22, **1972**, a Beech 18 crashes into the Kalohi Channel (three dead).

ALINORD, S.p.A.: Italy (1986–1991). A subsidiary of the Acqua Marcia group, Alinord is formed at Milan in late **1986** to offer support for its parent's leisure activities. Operations are conducted with a single Yakovlev Yak-40, formerly flown by **Avioligure**, which is one of the few operated by any western European airline. In mid-**1987**, the company elects to begin scheduled domestic commuter service, linking its Milan base with Perugia and Rome and Rome with Parma.

Upon receipt of a second Yak 40 and an Avions de Transport Regional ATR42-320, Alinord, S.p.A. launches additional frequencies from Rome to Parma and from Milan to Perugia in early **1988**. The Yaks prove unsuccessful in regular operations and Managing Director Dr. Cosimo Paparo replaces them with two Fokker F28-1000s. Additional destinations added during the year include Bergamo, Rome, and Perugia.

Unable to maintain its economic viability following the collapse of sister carrier **Unifly**, the carrier ceases trading in **1991**.

ALIS JOINT STOCK COMPANY: 18/112 Ulitsa Mayakovskaya, Zhukovski, Moscow, 140160, Russia; Phone 7 (095) 556-7021; Fax 7 (095) 556-5390 Code LSI; Year Founded 1993. ALIS is established at Moscow in **1993** to offer domestic all-cargo charters. General director O. G. Smirnov assembles a fleet of 2 Antonov An-32s, 1 An-74, and 2 Ilyushin Il-76s with which to begin services.

Passenger charters are added in **1994** with a pair of Tupolev Tu-134As. Flights continue in **1995–2000**.

ALISARDA, S.p.A. (LINEE AEREE DELLA SARDEGNA): Italy, (1963–1991). Alisarda, S.p.A. is organized at Corso Umberto on March 24, **1963** to assist in the tourist development of the Costa Smeralda on the northeast coast of Sardinia. The new enterprise is an associate company of the Consorzio Della Costa Smeralda, in which Prince Karim Aga Khan holds majority interest. Lightplane charter and air taxi flights commence in mid-**1964**. A series of resort hotels are established by Aga Khan along the Sardinian coast during the year and into **1965**, which will become the new airline's major destination.

Scheduled services commence in May **1966** over routes connecting Olbia with Rome and Milan. Over the next nine years, routes are opened to Turin, Pisa, Bologna, Cagliari, Genoa, and Venice. Charter flights are also made during the summer holiday season to Paris, Geneva, Zurich, Dusseldorf, Frankfurt, and Nice.

Douglas DC-9-14s are first acquired in **1975**. By **1978**, President Paolo Riccardi and General Manager Franco Trivi employ 300 workers and possess an all-jet fleet comprising 2 DC-9-30s and 2 DC-9-14s.

In **1979–1982**, 2 DC-9-51s join the fleet and services are opened to Verona. Passenger boardings at the 520-employee company reach 600,000 in 1981, rising to 721,000 in 1982.

Two McDonnell Douglas MD-80s are acquired in **1983** for use in summer operations and replace the 2 DC-9-14s; they are leased to the U.S. carrier **National Airlines (2)** come winter. Enplanements are 72,773 and net gain totals \$18,325.

The payroll grows 0.2% in **1984** to 575 as a third DC-9-51 is purchased. Customer bookings accelerate 2.5% to 746,394 as freight shoots up 26.2% to 1.67 million FTKs. Operating income jumps 38.8% to \$53.5 million, allowing profits of \$6.5 million (operating) and \$317,000 (net).

Employment grows another 3.5% in **1985** to 598. Passenger boardings jump 6% to 794,439, but cargo falls 13% to 1.46 million FTKs. Revenues advance 3.3% to \$107.4 million and checked costs allow an operating profit of \$14.1 million and a \$1-million net gain.

The payroll is increased by 8.6% in **1986** to 650 and Managing Director Franco Trivi's fleet now includes 2 McDonnell Douglas MD-82s and 3 Douglas DC-9-51s.

During the first quarter, one of the former is leased to the American carrier **Northeastern International Airways**. In December, the third-level commuter operator **Avianova, S.p.A.** is organized, with Alisarda, S.p.A. and **Aero Transort Italiani, S.p.A. (ATI)** each owning half.

Customer bookings rise 6.4% to 842,759 and freight revives, up 40.1% to 2.04 million FTKs. Revenues ascend to \$75.8 million and costs are held down, granting operating income of \$2.98 million.

The workforce is cut 8% in **1987** to 598, but passenger boardings are up by 21.4% to 998,244.

The employee population grows by 25.1% in **1988** and the fleet now includes 3 DC-9-51s, 2 MD-82s, 2 leased MD-82s, and 1 Bell 412 helicopters. One more MD-82 remains on order as the airline takes over management of its base airport at Olbia.

Customer bookings increase by 13% to 1,147,406 while cargo climbs 13.4% to 2.37 million FTKs.

The number of employees is increased by 33.7% in **1989** to 1,000 and the fleet now includes 6 DC-9-51s and 5 MD-82s. The Consorzio Della Costa Smeralda sells 50% ownership in **Avianova, S.p.A.** to **Alitalia, S.p.A.** on June 12 and an 18% shareholding plus a seat on the board to the Luxembourg-based corporation, Infint, S.A., in July. Orders are placed for 20 Canadair Regional Jets and orders for 6 MD-82s remain outstanding. Passenger boardings accelerate 7.3% to 1,231,400.

In January **1990**, the airline receives government permission to launch scheduled services on the Italian mainland in competition with **Alitalia, S.p.A.** Consequently, flights are initiated in February from Rome to Milan, Venice, Catania, and Palermo.

Through June, the last month for which figures are available, customer bookings are up 23% to 635,131. Freight is also up 5.9% to 1.46 million FTKs.

Managing Director Franco Trivi accepts the first of 4 British Aerospace BAe 146-200s at the British manufacturer's Woodfield facility on May 24, **1991**. The other 3, ordered at the beginning of May, arrive in Italy during June and July. During the latter month, the first BAe 146-300 enters domestic service, flying to Catania and Palermo.

Twice-daily Florence to London (LGW) BAe 146-200 flights commence on September 1. Other new BAe markets inaugurated on this date are Barcelona, Frankfurt, Munich, Paris, and Zurich. To align with a Spanish sister airline, Alisarda, S.p.A. is renamed **Meridiana, S.p.A.**, also in September. Its statistics for the year are reported under the new name.

ALISUD (COMPAGNIA AEREA MERIODIONALE, S.p.A.): Italy, (1963–1964). During the spring of **1963**, Alisud is set up at Naples to operate a vehicle-ferry service to Palermo, Sicily. An Aviation Traders, Ltd. ATL-98 Carvair (heavily modified Douglas DC-4 freighter) is leased from **British United Air Ferries, Ltd.** and daily roundtrips commence on August 15. Operations end in February **1964** as a result of traffic rights problems and the aircraft is returned.

ALITALIA (AEROLINEE ITALIANE INTERNAZIONALI, S.p.A.): Viale A. Marchetti 111, Rome 00148, Italy; Phone (39-6) 65621; Fax (39-6) 6562 4733; <http://www.alitalia.it>; <http://www.italiatour.com/alitalia.html>; Code AZ; Year Founded 1946. The new entrant Alitalia, S.p.A. is incorporated on September 16, **1946** with support from the Italian government, via the Istituto per la Ricostruzione

Industriale (IRI), private interests, including Fiat, and **British European Airways Corporation (BEA)**, the latter holding 40% of the stock. The initial 11-aircraft fleet comprises Fiat G-12s, Avro Lancastrians, and Savoia-Marchetti SM-95s and the carrier will also come to manage Rome's airports.

Airline employment stands at 293. The fleet now includes 4 SM-95s, 4 Lancastrians, and 4 G-12s. Revenue services commence with 2 G-12s on May 5, **1947** over a new domestic route, Turin–Catania via Rome. On July 6, Cairo via Athens becomes the first international destination. Douglas DC-4s are acquired late in the year and the company base is moved from Rome to Ciampino.

Enplanements for the year total 10,306, with 110 tons of cargo also transported. Income totals L 175,000, expenses are L 304,000, and there is a L 130,000 loss.

Count Nicolo Carandini becomes chairman in **1948**. A Lancastrian en route to Cairo on February 16 crashes into the Tyrrhenian Sea (17 dead); among the victims of the tragedy is Princess Armena Sazil. An SM-95 crashes while en route from Florence to Rome on February 21 (five dead).

Scheduled international services begin in the spring as the new Douglas DC-4s and older Lancastrians open routes to Tripoli, Lisbon, and Buenos Aires. The Argentinean service is flown via Dakar, Natal, and São Paulo.

En route from Milan to Brussels on July 2, a DC-4 crashes near Keerbergen, Belgium (eight dead).

The final Lancastrian service is flown on March 1, **1949** over a Rome–Ammara route. On April 3, the Savoia-Marchetti SM-95 *Sebastiano Caboto* launches the first postwar Rome–London flight; London–Rome service commences next day. Three days later, on April 7, the SM-95 *Marco Polo* inaugurates Rome–Manchester via Milan and London operations.

Paris is added as a destination during early summer as former **Ala Littoria, S.p.A.** Managing Director Bruno Valani becomes general manager.

Central Atlantic DC-4 flights begin Rome–Caracas in **1950** via Lisbon, the Azores, and Fort de France. In April, three former **Linee Aeree Transcontinentali Italiane, S.p.A. (LATI)** SM-95s, the *San Antonio*, *San Francesco*, and *San Cristoforo*, are taken over.

The carrier's first air hostesses (female flight attendants) are hired late in the year. The fleet at the end of the year includes 8 SM-95Bs, 4 G-12s, and 4 DC-4s.

Customer bookings total 24,089 and 7.97 million FTKs are operated. Revenues reach L 2.58 million, but expenses are L 2.84 million, leaving a L 260,000 loss.

On January 27, **1951**, the SM-95B *Ugolino Vivaldi* crashes after encountering a thunderstorm near Civitavecchia and being hit by lightning (14 dead). Six runs are cancelled on February 3 because of operating losses; 401 personnel are dismissed. Financial difficulties also force a temporary suspension of Paris and London services as of February 7.

The DC-4 *Citta di Roma* reopens Rome–London via Paris flights twice weekly on August 20; the route is suspended again at year's end. Multistage transatlantic Rome–New York operations begin during the summer; 3,000 passengers will fly the DC-4s back and forth across the North Atlantic this year.

A number of routes are transferred to Alitalia, S.p.A. in **1952** from the collapsed carrier **Avio Linee Italiane-Flotte Reunite, S.p.A.** New Convair CV-340s and Douglas DC-6Bs are ordered. The surviving SM-95s are withdrawn in October.

North Atlantic traffic climbs to 5,000, out of the 17,692 passengers flown systemwide. Revenues total L 3.09 million, expenses are L 2.92 million, and there is a profit of L 169,000.

En route from Sardinia to Rome on January 26, **1953**, a DC-3 crashes near Sinnai, just after takeoff from the former point (19 dead). A strike grounds the airline between February 24 and March 7.

In May, orders are placed for a large fleet of Vickers Viscount 785s. On July 8, Rome–London via Milan and Paris service is resumed with CV-340s.

The Convairs and DC-6Bs now enter service and assist in significantly raising traffic. Transatlantic bookings accelerate to 7,000, out of a systemwide total of 36,563. Total FTKs operated equals 12.76 million. Revenues reach L 4.03 million, costs are held in check at L 3.76 million, and there is a L 269,000 profit.

Following resolution of a March 1, 1954 strike, which again grounds the airline, revenues climb from European routes as North Atlantic enplanements pass 11,000. The last SM-95 is retired during the year. On December 20, the carrier is recapitalized from national sources.

On March 31, 1955, **British European Airways Corporation (BEA)** sells 10% of its shares to **British Overseas Airways Corporation (BOAC)**; British investment, however, remains at 30%. DC-6B transatlantic services net 13,000 passengers. The fleet at the end of the year includes 1 DC-4, 4 DC-6Bs, and 4 CV-340s.

Convair CV-440s and Douglas DC-7Cs enter the fleet in spring 1956 and a route is extended to Johannesburg in April. Another strike, by the airline's pilots, grounds the company May 9–27.

The British contract with Alitalia is extended for another five years on June 8 in order that the BEA/BOAC equity stake might be maintained. Shareholding of Fiat and the other private owners of Alitalia is reduced from 16% to 8.65%, with the difference being acquired by the IRI.

North Atlantic traffic remains level, while overall passenger boardings are now 116,394. A total of 25.54 million FTKs are also operated. Revenues climb to L 8.54 million, costs are L 8.49 million, and there is a gain of L 49,000.

A DC-3 freighter with two crew is destroyed as the result of a bad landing at Reggio de Calabria on January 2, 1957; there are no fatalities.

On September 1, the airline is merged with **Linee Aeree Italiane, S.p.A. (LAI)** to form **Alitalia (Linee Aeree Italiane, S.p.A.)**; majority interest in the new operation is held by IRI, with **British European Airways Corporation (BEA)** holding an inherited 9%. The LAI shareholding of **Trans World Airlines (TWA)** is sold to IRI, which will soon be placed under the new Ministry for State Shareholding.

Linee Aeree Italiane, S.p.A. (LAI) operations, routes, and Vickers Viscount 785s are officially taken over on October 6 and the name Alitalia is officially adopted, as the airline becomes Italy's national carrier.

The fleet at the end of the year includes 12 DC-3s, 6 CV-340s, 6 Viscount 785s, 3 DC-6Bs, and 2 DC-7Cs.

Boardings rise dramatically throughout the year to 221,271, although North Atlantic bookings dip to 12,000. Revenues jump to L 13.58 million, costs hit L 13.57 million, and there is a profit of just L 5,000.

In June 1958, the carrier joins **Air France** and **Deutsche Lufthansa, A.G.** in a South Atlantic pooling arrangement. On June 17, services are extended to Athens, Tehran, Karachi, and Bombay. A June 22 to July 19 strike by 4,000 ground employees halts all domestic and some international services. Still, Alitalia's statistical rate of growth remains the highest in Europe, resulting in an order for Douglas DC-8 jetliners. On the North Atlantic, enplanements soar to 26,000, out of 362,844 passengers flown systemwide.

On May 29, 1959, the company joins the subsequently unsuccessful Air Union. Two DC-7CFs begin all-cargo services during the summer.

A Vickers Viscount 785D with two crew is lost while on a training exercise at Rome's Ciampino Airport on December 21; both men aboard are killed.

British European Airway Corporation (BEA)'s share is reduced during the year to 7% and transatlantic boardings accelerate to 40,000.

While taking off for New York from Shannon on February 26, 1960 to complete a flight from Rome, a DC-7C with 12 crew and 40 passengers loses height during initial climb and turn. The aircraft's left wing tip touches the ground, after which the left wing and Nos. 1 and 2 propellers strike the gravestones and stonewall of Clongloghan Church. At an airspeed of 180 kn. the DC impacts the ground (34 dead).

Rome to Montreal flights begin on March 3. The first DC-8-43 is delivered on April 28, followed the next day by the first Sud Est SE-210

Caravelle III; the French-made *Aldebaran* begins trijet Rome–London service on May 22. The first Douglas jetliner, *Amerigo Vespucci*, begins Rome–New York via Milan and London service on June 2.

The company is the official airline of the XII Olympiad, held at Rome in July. A second DC-8-43 begins flights to Johannesburg on November 3.

Transatlantic bookings total 59,000 and overall enplanements reach a million for the first time.

Ground crews strike the company at Rome on January 11, 1961. The company base is transferred from Ciampino to the new Leonardo da Vinci International Airport at Fiumicino.

On March 5 a DC-8-43 flies nonstop from Rome to New York in the first westbound express run by a jet on that route. **British European Airways Corporation (BEA)** sells its remaining shares to the Istituto per la Ricostruzione Industriale in April.

Additional DC-8-43s arrive during the spring, allowing the launch of service to Tokyo and Sydney on June 18 and across the South Atlantic two days later.

The British withdraw from their equity agreement in June, at which point their ownership share of Alitalia totals just 5.4%, valued at L 1350 million.

Systemwide, passenger boardings rise to 1.53 million (87,000 on the North Atlantic).

The fleet in 1962 comprises 4 DC-3s, 4 DC-6Bs, 3 DC-7Cs, 7 DC-8-43s, 14 Viscount 785s, and 14 SE-210s. Rome to Chicago services open on April 6; 12 Italian aviators aboard the maiden flight are honored at Chicago. Weekly jet service begins to Tokyo on May 20.

Flight 771, a DC-8-43 with 9 crew and 85 passengers and en route from Sydney to Rome, vanishes in a rainstorm on July 7 during its approach off the Bangkok leg to Santa Cruz Airport, Bombay. The wreck is found 56 mi. from Poona the next day and there are no survivors.

Late in the year and for the next 12 months, 7 Lockheed L-1049G Super Constellations are leased from **Deutsche Lufthansa, A.G.** and placed into service on the Italian flag line's route from Milan to Rimini.

Transatlantic bookings skyrocket to 122,000 out of an overall total of 2.07 million passengers flown. Revenues reach L 83.32 million, costs are L 82.26 million, and a L 1.05-million profit is generated.

The wholly owned subsidiary **Aero Trasporte Italiani, S.p.A. (ATI)** is formed on December 13, 1963 to operate Italy's largest domestic network and to bolster air transport development to the Mediterranean islands. Late in the year, two DC-6Bs are sold.

Systemwide, enplanements total 2,342,600.

En route from Rome to Naples on March 28, 1964, a Viscount 785D with 5 crew and 40 passengers crashes into Mt. Somma, near Mount Vesuvius; there are no survivors.

On June 3, **Aero Trasporte Italiani, S.p.A. (ATI)** inaugurates domestic service with three Fokker F.27s. The carrier is grounded between June 20–26 by a pilot strike; flight engineers and stewardesses also strike at month's end and into July.

With the arrival of the first of two Douglas freighters, Alitalia, on September 6, becomes the first carrier to offer nonstop DC-8F New York–Rome all-cargo flights.

DC-8-43 passenger service is inaugurated from Rome to Addis Ababa, Viscount service to Copenhagen and Amman, and SE-210 service to Taranto and Stuttgart. Late in the year, the Super Constellations are returned to **Deutsche Lufthansa, A.G.**

Passenger boardings climb 10% to 2.6 million, freight traffic jumps 35%, and airline employment reaches 8,673.

Airline employment is increased to 9,088 in 1965. The fleet now includes 65 aircraft: 20 SE-210s, 4 DC-3s, 2 DC-6Bs, 3 DC-7Cs, 2 DC-8Fs, 14 DC-8-43s, and 16 Viscounts. During the year, a DC-3 will be sold to the South African carrier **Commercial Air Services (Pty.), Ltd.**

A reciprocal agreement is signed with **Aeroflot Soviet Airlines** on February 22, with Rome to Moscow DC-8-43 flights beginning two days later. Jetliner frequencies are offered to Dar Es Salaam and Entebbe on February 28, giving Alitalia, S.p.A. a total of 16 African terminals.

On April 1, a pooling agreement is signed with **Alitalia, S.p.A., Deutsche Lufthansa, A.G.,** and **Japan Air Lines Company, Ltd. (2).** The arrangement provides for joint maintenance and technical support and is actually a preliminary pact to the larger ATLAS group accords signed later.

The board of directors announces on December 17 that it has placed an order with Douglas Aircraft Company for 28 DC-9-32s as a replacement for the carrier's Vickers Viscounts.

Enplanements are 2,958,142, with North Atlantic traffic up 12.5% to 189,300 and freight up by a third.

Four DC-8-62s and 28 DC-9-30s are ordered in **1966**, along with a fourth U.S.-planned SST. The last of 21 SE-210s is delivered to Rome's Fiumicino Airport. A March 22-28 strike by ground crews forces most flights that week to be cancelled.

Enplanements during the 12 months reach 3,264,000.

The first 2 DC-8-62s enter service in **1967** as all remaining DC-3s, DC-6Bs, DC-7C/Fs, and 2 Viscount 785s are retired. They will be sold to the Colombian operator **Aerolineas Tao, S.A.** the following year.

The first of 8 DC-9-32s to be delivered during the year arrives on August 17. The 1 delivered on November 30 is the 200th DC-9 built.

A new EUR glass-and-concrete skyscraper headquarters building is occupied in Rome and the ARCO IBM-based computerized reservations system is turned on. Boardings jump to 3.8 million this year.

The workforce in **1968** is 11,140. Count Nicolo Carandini retires, becoming honorary president. A network of mechanized cargo terminals is introduced and a new passenger terminal is opened at Milan. Orders are placed for 4 Boeing 747-143s as 3 DC-8-62s and 14 DC-9-32s enter service. Among the latter is a DC-9-30F, the first freighter model, which arrives on May 13.

Coming in from Rome on August 2, a DC-8-43 with 10 crew and 85 passengers crashes 11.5 km. from the end of the runway while on final approach to Milan Airport (13 dead).

Passenger boardings accelerate to 4,149,748 and cargo is up by 45%.

Four more DC-8-62s and 18 DC-9-32s are delivered in **1969**. Another Viscount is passed to **Aerolineas Tao, S.A.**

An SE-210 Caravelle VIN with 7 crew and 37 passengers overruns the runway at Marseilles while landing on August 2 and rolls into a lake; there are no fatalities.

During the year, a three-color "A" is substituted for the *freccia alata* (winged arrow) and becomes the new company trademark. The change is part of a large-scale makeover of the corporate image.

The workforce is 12,197 and bookings during the 12 months rise to 4,941,560.

On January 1, **1970**, Director General Velani becomes chairman and Cesare Romite becomes managing director (later director general). The employee population is up by 13.8% to 14,149. New routes are opened to Birmingham, Dublin, Nicosia, Dubrovnik, and Melbourne in January-March and a polar flight to Tokyo via Anchorage in April. Automatic passenger check-in, meanwhile, begins in March.

The first of two B-747-143s to be received on the year is delivered on May 13. En route from Genoa to Rome on May 30, a DC-9-30 with 35 passengers is taken over by a lone hijacker, using what turns out to be a toy pistol, and diverted to Cairo, Egypt.

DC-10-30s are ordered in early June. Christened *Neil Armstrong*, the premier B-747-143 enters service from Rome to New York on June 15.

On June 26, Flight 713, a DC-8-43 with 104 aboard and en route from Tehran to Rome via Beirut is hit at 30,000-ft. by a missile at a point 40-mi. E of Damascus. Although the plane's wing is badly torn, the Douglas is able to complete a safe emergency landing at Beirut and no injuries are reported. Upon examination, a 2-ft. hole will be found in the left wing, with both engines pockmarked by shrapnel.

The second B-747-143, *Arturo Ferrarin*, arrives on July 1. Because of a 24-hour walkout by pilots on July 25, Alitalia is forced to cancel over 50 flights. Having lost two engines while landing at New York (JFK) from Rome on September 15, Flight 618, a DC-8-62 with 10 crew and

146 passengers, splits in two and skids off the runway; no injuries are reported, but the plane must be written off.

Cargo traffic climbs 10% and passenger boardings jump 11.6% to 5,590,000. In terms of enplanements, the carrier is now the 18th largest in the world; it rates 12th in freight and 17th in employment. With 77 aircraft, the fleet is the 12th largest in the world.

A B-747-243B is acquired on March 30, **1971**; it is christened *Francesco de Pinedo*. It is followed into service on May 7 by the B-747-243B *Geo Chavez*. Flights are now inaugurated to Detroit, Philadelphia, Kuala Lumpur, and New Delhi. To publicize the inauguration of service from Detroit and Philadelphia to Milan and Rome, the airline places an advertisement in the newspapers of those cities, plus Washington, D.C., depicting New York's Statue of Liberty weeping over her loss as the carrier's exclusive port of entry.

The ad is scorned by the New York City Convention and Visitors Bureau and a dispute between the carrier and the city continues until May 15, when representatives of both sides meet and settle the matter over cocktails.

During the remainder of the year the last Viscounts are retired and, perhaps most importantly, the company is given authority to manage the allocation of slots at Italy's airports.

Enplanements during the 12 months are 5,794,050.

The workforce in **1972** stands at an even 15,000. Honorary President Carandini dies in early March.

Agents, clerks, and teletype operators, members of the International Association of Machinists and Aerospace Workers (IAM) local at New York (JFK), go out on strike on March 9.

Brandishing a pistol, a 55-year-old lady, A. Lazzeri, hijacks a Caravelle during a March 11 Rome-Milan flight and diverts it to Munich, where she is arrested while leaving the plane.

Operations are disrupted after ground personnel stage a four-hour walkout at Rome on April 10. Following the receipt of landing rights, Rome to Washington, D.C. return service is inaugurated on May 1.

En route from Rome to Palermo with 7 crew and 108 passengers on May 5, a DC-8-43 strikes the side of Mt. Lunga near Palermo while on final approach to Punt Raisi Airport; there are no survivors.

The New York (JFK) strike is settled by agreement between the parties on May 11 and a B-747-243B, *Carlo del Prete*, enters service on May 26.

A youth attempts to hijack an airliner from Trieste to Cairo on October 7 and is killed is on the plane at Trieste Airport after a gun battle with police.

In December, Umberto Nordio becomes director general.

Passenger boardings dip 7% this year to 5,415,000 while freight falls 7.2%.

The employee count in **1973** is down to 14,866. Thrice-weekly Rome-Washington, D.C. DC-8 service begins in late winter. The first of three DC-10-30s to be delivered on the year enters service on the Rome-Caracas route in June. New services and frequencies are extended to Nicosia, Moscow, and Palermo-New York while operations to Karachi, Kuala Lumpur, Djakarta, and Manila are terminated.

Customer bookings climb 10% to 5,948,000 and cargo traffic grows by 44%, but declines in the number of passengers on the North Atlantic; the fuel crisis forces Chairman Velani to report a financial reversal. On revenues of L 285.29 million, expenses are L 291.51 million. The loss is L 6.26 million.

Flights to Philadelphia, Beirut, and Damascus are suspended in **1974**; however, airline employment is up to 16,397. Most other scheduled flights are cancelled on June 28 because of a strike by flight attendants. A fourth DC-10-30 is acquired during the summer.

During the year a massive makeover of the route network occurs. Transatlantic service is cut to 27% of total capacity, with Europe, the Mediterranean, and North Africa receiving an equal allocation. The remaining 46% is divided between Africa, Central and South America, and the Far East, including Australasia.

Passenger boardings climb 3.8% to 6,175,000 while freight is up 7.2%.

In addition to new Italian political instability in 1975, the carrier is now forced to face frequent strikes (particularly in June and November) by ground and support personnel at Rome's Leonardo da Vinci International Airport, which result in the cancellation of 10,000 stretches (trips between one-city pairs).

During the year, all aircraft except 13 SE-210s, 4 DC-10-30s, and 6 DC-8-43s are sold or retired and orders are placed for 7 Boeing 727-243s, which will be used to boost domestic and regional services.

Overall, passenger traffic drops 5.4% to 5,841,986 and freight falls 7%.

All remaining DC-8-43s and 6 SE-210s are retired in 1976 as 7 new B-727-243s join the fleet. Routes are opened to Luanda, Baghdad, Kuwait, Dharham, Amman, and Dubai. The carrier's pilots end a series of daily walkouts on July 31 that have cost the airline \$2 million per day in lost flights.

Cargo traffic rises 12.1%, but boardings, at 5,790,000, are off 0.9%.

Service to Philadelphia, Beirut, and Damascus is resumed in 1977. The last 6 SE-210s are sold. Enplanements total 6,728,598. A \$12.6-million net profit is posted and consolidated long-term debt is reduced to \$118.6 million.

The employee population at Managing Director/General Manager Umberto Nordio's company stands at 16,066 in 1978. Orders are placed for 8 Airbus Industrie A300B4-103s and 5 additional B-727-243s.

Experiencing engine trouble while on final approach to Palermo after a December 23 service from Rome, Flight 4128, a DC-9-32 with 5 crew and 124 passengers, crashes into the Tyrranean Sea 3 km. short of Punta Raisi Airport (108 dead).

Passenger boardings rise 2.3% to 6,886,718, while freight is up 9%. A net profit of \$12.7 million is recorded while the debt falls to \$105.4 million.

Maurizio Maspes and Luciano Sartoretti are appointed joint managing directors in 1979. A \$580-million contract is signed for 9 B-747-243s, including 5 combis.

Three Lebanese Shiite Muslims hijack a DC-8-62 with 183 passengers en route from Beirut to Rome on September 7, in an attempt to win freedom for Imam Moussa Sadr, a spiritual leader who vanished in Libya a year earlier. The pirates express their determination to fly to Havana, Cuba, and press their case before a summit meeting of the Non-Aligned Movement.

The passengers are released at Rome and when French authorities refuse landing permission, the aircraft is flown to Tehran, where the pirates surrender to the new Iranian government after being allowed to state their objectives at a news conference broadcast nationwide on government-controlled radio and television. Its crew returns the Douglas to Rome.

A 40-day cabin attendant strike and the temporary grounding of the DC-10s following the Chicago **American Airlines** crash result in a 5% drop in passenger boardings to 6,591,400 and a 1.6% decrease in cargo traffic.

The workforce is increased by 3.6% in 1980 to 18,243. The DC-9-32 *Isola di Caprera* is destroyed in a hangar fire at Rome's Fiumicino Airport on January 7.

En route from Rome to Tunis on January 14, a DC-9-32 with 90 passengers, is taken over by a lone gunman who demands the release of 25 prisoners from Tunisian jails and a diversion of the aircraft to Tripoli. Bad weather prevents completion of the flight to Libya and the Douglas lands at Palermo, instead, where the terrorist surrenders.

The first 4 A300B4-103s enter service during the third quarter. The B-747-243C *Taormina* enters service on November 26, followed by the *Cortina d'Ampezzo* and *Portofino* on December 12 and 22, respectively. The B-747-243B *Carlo del Prete* is sold back to Boeing at month's end.

Passenger bookings climb 11.1% to 7.3 million and cargo soars 9.3% to 542 million FTKs.

The employee population is raised again in 1981, up 2.5% to 18,722. Pilots strike on January 20, forcing cancellation of virtually all of the international flights. Fleet modernization continues apace as

3 more A300B4-103s and 3 B-727-243-103s are delivered. New routes are opened to Chicago, Kano, and Santiago. First-class sections of the B-747s are reconfigured with sleeper seats. In March, Alitalia and its subsidiary **Aero Trasporto Italiani, S.p.A. (ATI)** create the new domestic airline **Aeromediterranea, S.p.A.** to take over the routes, services, and equipment of defunct **Itavia, S.p.A.** Mechanics at Rome strike between April 8-11.

Revenue DC-9-30 flights are begun by the new subsidiary on July 1 over a Rome-Lamezia Terme line. The B-747-243B *Cervinia* arrives on August 5, followed by the *Sorrento* on September 16, the *Porto Cervo* on November 5, the *Capri* on December 3, and the Dash-243F *Stresa* on December 18. Meanwhile, between September and December, the B-747-143s *Neil Armstrong* and *Arturo Ferrarin* and the B-747-243Bs *Francesco de Pinedo* and *Geo Chavez* are all sold back to their manufacturer and the remaining DC-8-62Hs are withdrawn.

Systemwide, passenger boardings fall 4.5% to 6,991,000 and freight traffic declines 9.1% to 492.67 million FTKs.

Airline employment is up by 2.6% to 18,243 in 1982. Service is started to Lyon and Casablanca as one more A300B4-103 and another B-727-200 join the fleet. Business-class service is introduced on most medium- and long-haul routes and a contract is signed with McDonnell Douglas for 30 DC-9-80s (MD-80s).

Sri Lankan Sepala Ekansyaka hijacks a B-747-243B with 261 aboard en route from New Delhi to Bangkok, where he holds the craft under threat of explosion over night before surrendering early on the morning of July 1. He will be returned to Colombo, where he will be tried and given a prison term of 20 years to life.

On September 25 Soviet citizen Igor Shkuro is seized at Catania, Sicily, where he has forced Flight 871, an A300B4-103 with 109 aboard, to divert from its Algiers-Rome flight. In the scuffle, both Shkuro and a policeman are injured.

During the fall, the SIGMA company is founded for the management and development of data systems for the tour and travel sector.

Boardings rebound, climbing 4.7% to 7,317,000 and cargo jumps 13.5% to 559.29 million FTKs. Revenues for the year approach \$1.5 billion; however, a \$30.8-million operating loss is suffered.

The workforce is increased a scant 0.9% to 18,412 in 1983. From a 30-plane order, the first 3 DC-9-82s (also known as McDonnell Douglas MD-82s) are delivered. The B-747-243B *Monte Argentario* enters service on February 28. Having disobeyed ground control guidance, two USAF fighter-bombers nearly collide with a DC-9-30 over Catania on October 7.

Although the airline is able to somewhat restrain its costs, it must still battle the decline of the lire in relation to the U.S. dollar. Despite money problems, the carrier is able to acquire a 45% stake in Aeroporti di Roma, S.p.A.

Enplanements rise only 1.5% to 7,370,000, while freight accelerates 8.4% to 607 million FTKs. A net \$11.6-million profit is recorded.

The employee population climbs to 20,509 in 1984. Los Angeles via Chicago service is inaugurated and in the spring a three-year labor pact is negotiated with the various Aeroporti di Roma unions. Planning for the implementation of the reorganization of domestic operations continues following the decision to amalgamate **Aero Trasporti Italiani, S.p.A. (ATI)** and **Aeromediterranea, S.p.A.** Nine additional MD-82s enter operations; 6 Avions de Transport Regional ATR42s and 2 B-747-243s are ordered.

Bookings jump 6.2% to 7,826,338, and cargo accelerates 12.2% to 681.23 million FTKs. Total revenues climb 2.3% to \$1.86 billion and expenses fall 1.8% to \$1.7 billion. As a result, the accounting department is left with an operating profit of \$142 million, double the previous year's, and a \$12.1-million net gain.

A total of 376 new employees are added in 1985. On March 1, **Aero Trasporto Italiani, S.p.A. (ATI)** and **Aeromediterranea, S.p.A.** are merged under the former's banner. The remaining 18 MD-82s arrive and begin to enter operations, 2 with **Aero Trasporto Italiani, S.p.A. (ATI)**, replacing the last 5 B-727-243s. A B-747-243C, the *Monte Catini*,

enters service on May 29, followed by the B-747-200B *Sestriere* on July 24. At this point, a DC-10-30 is sold to **Eastern Air Lines** in the U.S.

A "quiet privatization" is begun in November when the company begins to sell common and preferred stock valued at some 30% of the IRI consortium's holding in the airline. Capitalization is thus increased from L 280.8 million to L 421.2 million.

Passenger enplanements grow 7.6% to 12.7 million while freight rises 10.2% to 757.52 million FTKs. Revenue increases 14.2% to \$2.41 billion and the net profit doubles to \$32.6 million. In terms of total passenger traffic, Alitalia, S.p.A. now ranks as the world's 18th largest carrier; it is 14th in terms of freight hauled, 19th in fleet size, 15th in the number of employees, and 10th in total revenue generated.

The payroll grows a scant 1% in **1986** to 20,433. Partial privatization occurs in January as the Italian government reduces its shareholding from 98% to 74%. In February, a new door-to-door express service, "AliExpress," is begun New York-Rome and Milan. Another B-747-243B/C is ordered and on June 13 another Jumbojet, a Dash-243C, the *Spoletto*, is delivered. In the spring, a commuter network that will be operated by **Aero Trasporte Italiani, S.p.A. (ATI)** is established, employing the ATR42-300s. At the same time, a 10% interest is taken by Alitalia, S.p.A. in the new Naples-based regional airline **Aliblu, S.p.A.** On June 30 and in cooperation with **CAAC (General Administration of Civil Aviation of China)**, weekly cargo flights are started Rome-Beijing via Frankfurt and Sharjah.

In July, flights begin to Peru. The first two ATR42-300s are delivered and begin **Aero Trasporte Italiani, S.p.A. (ATI)** service to Florence and Milan on August 4. In September, ATR42-300 flights are kicked off Naples-Milan via Bologna and, in October, the carrier's single B-747F commences weekly roundtrip Turin-Detroit flights as an air bridge in the production of Cadillac's ultra-luxury Allante roadster. In December, a new commuter airline, **Avianova, S.p.A.**, which will be operated by **Aero Trasporte Italiani, S.p.A. (ATI)**, is established in partnership with **Alisarda, S.p.A.** Also, the carrier takes over Finavio, S.p.A.

During the year, the fleet is enhanced by the addition of 4 MD-82s, 4 more ATR42s, and 1 B-747-243B/C; retired are 1 DC-10-30, a DC-9-32, and 2 F.27s. Customer bookings jump 2.7% to 13,357,512 and freight climbs 11.1% to 844.3 million FTKs. Expenses are kept in check and a \$170.7-million operating profit is achieved.

Airline employment grows 2.9% in **1987** to 21,033. In early spring, service is launched to Shanghai. **Avianova, S.p.A.** inaugurates commuter services in August over the regional routes opened by **Aero Trasporte Italiani, S.p.A. (ATI)** the previous summer. During the summer, flights begin to Luxor and orders are placed for 6 McDonnell Douglas MD-11s and the Italian flag carrier joins in the development of a new Galileo computerized reservations system.

An ATR42-320 with 37 aboard en route from Milan to West Germany on October 15, slams into the Italian Alps during a heavy rainstorm; the wreckage is found the next day and there are no survivors.

Passenger boardings ascend 9.9% to 14,253,480 while cargo rises 8% to 909.54 million FTKs. Revenues swell 13.2% to \$3.16 billion and costs are held low enough to allow a \$222.8-million operating profit.

The workforce is cut by 12.3% in **1988** to 18,453. Labor strife closes down some 25% of the carrier's flight operations early in the year. Still, controlling interest is taken in the inclusive-tour operator Italtour, S.p.A., along with its English and German subsidiaries.

Biweekly nonstop B-747-243B Boston to Rome via Milan service is restarted on June 1 and will continue until September 23. At the same time, a 15th weekly passenger flight to New York is added. On July 1, the company increases its Rome to Toronto service to four flights per week (one a nonstop), along with four-times-per-week service from Rome and Milan to Chicago and Los Angeles. Weekly DC-8F flights are introduced from Rome to Kuwait and New Delhi.

The line's "AliExpress" door-to-door small package and document service, already in place between New York and Rome, is expanded during September to serve Chicago and Los Angeles. Carlo Verri, formerly of the domestic appliance firm Zanussi, succeeds Umberto Nordio as

chairman on October 1. The carrier's winter schedule, opened in November, includes 26 weekly flights between Italy and New York (JFK), Chicago (ORD), Los Angeles, Montreal, and Toronto.

A strike by pilots causes cancellation of 80% of the company's flights to and from Rome on December 10. As the work stoppage intensifies, the carrier is forced to cancel 28 national and 6 international flights on December 14.

The job action cuts into passenger traffic totals as customer bookings increase just 1.7% to 14,502,548. Cargo, however, is not impacted and rises by 12.9% to 1.02 billion FTKs. Revenues for the Alitalia Group rise 5% to \$3.16 billion.

The number of employees receives a major boost upward in **1989**, climbing 58.2% to 29,197, and the fleet now includes 121 aircraft. A total of 350 daily flights are made within Italy, with the Rome-Milan route the most popular. In March, DC-8F weekly all-cargo services are introduced from Rome to Bombay and weekly A300B4-103 flights open from Rome to Baghdad and Tehran. Direct Venice to New York service is inaugurated in April.

As part of the implementation of a marketing agreement signed with **United Airlines**, the Chicago to Italy roundtrip frequencies are increased to five per week in May and six per week in July, the same month hot meals are introduced on Airbus and MD-80 Eurobusiness classes. In June, a 15th passenger flight is initiated to Italy from New York.

A two-tier wage package is signed with the company's pilot union in September following a period of negotiation during which trade unions had abstained from industrial actions. During the fall, the board of directors vote to increase share capital by \$288 million through a stock and warrant offering to current shareholders. President Verri is killed in a November 6 automobile accident in Rome.

In December, a new corporate structure is announced consisting of an executive committee, 3 central committees, 3 central group departments, and 11 operating divisions. The central groups include administration, finance, and control, headed by Giovanni Lionetti; innovation, development and strategic control, led by Enrico Graziani; and international affairs and human resources, controlled by the airline's managing director, Giovanni Bisignani, who is also interim CEO. Daily flights are started during the month to Frankfurt and London from Catania and Naples. In addition, five-times-per-week flights are initiated to Frankfurt from Palermo along with twice-weekly frequencies from Bari.

Emotionally and physically, the year is hard. There is labor unrest and the death of Chairman Verri, who was also a race car driver. Bad weather forces the cancellation of many flights and word is received that, beginning next year the company's domestic monopoly will be broken when Sardinia-based **Alisarda, S.p.A.** is allowed to inaugurate flights between mainland destinations. On the plus side, a new 14,000-sq.-meter flight training center is opened near Rome's Fiumicino airport.

Passenger boardings rise 12.6% to 10,360,052 and freight is up 8.6% to 1.1 billion FTKs. Total revenues are \$4 billion. Losses are \$86.2 million (operating) and \$175.9 million (net).

Company employment inches up 1.4% in **1990** to 29,641, the 13th largest airline workforce in the world; Michel Principe is chairman with Giovanni Bisignani as managing director. Five-times-per-week service is opened from Palermo to London in February. Strategic marketing alliances are signed during the year with **Air France**, **Japan Air Lines Company, Ltd. (2)**, **Eva Air, Ltd.**, **Iberia (Lineas Aereas de Espana, S.A.)**, and **USAir**. All but the latter will lapse.

Under a new bilateral air agreement signed between Italy and the U.S., in April Alitalia is given the right to choose five new American gateway cities in addition to the eight already served. In May, code-sharing flights commence with **USAir** between Rome and Washington and Philadelphia via Boston.

A B-747-243B collides with a **USAir** B-737-3B7 as both are taxiing at New York (JFK) on June 16, causing minor wing and tail damage, but no injuries. The pact with **Eva Air, Ltd.** of Taiwan provides the Asian airline with pilot training and engineering assistance, while the arrangement with the Spanish flag carrier, also announced in June, calls for the

joint development of new routes, as well as cooperation in technical, operational, and commercial projects. Frequencies are initiated to Miami, Ankara, Braga, Berlin, and Budapest, but suspended to Damascus, Amman, Baghdad, Dubai, Tel Aviv, Jeddah, Cyprus, and Kuwait City in the weeks following Iraq's invasion of Kuwait on August 2.

The company joins **USAir's** Frequent Traveler frequent flyer program in September. Also during the fall, contract negotiations are opened between the company and its U.S. workers, who are represented by the IAM. Management makes drastic proposals that include substantial pay cuts and outsourcing.

While on final approach to Zurich on a November 14 service from Milan, Flight 404, a DC-9-32 with 6 crew and 40 passengers, flies below its glide path and crashes into a line of trees 5.2 nm. from the runway; there are no survivors.

In December, nonstop thrice-weekly B-747-243B service is inaugurated from Rome and Milan to Miami and daily service is launched from Palermo to New York.

Customer bookings increase 12% to 18,202,689 and rank the company as 15th largest in the world in this category. Cargo ascends 4.1% to 1.16 billion FTKs, again, 15th best. Revenues swell 13.8% to \$4.4 billion, the 11th highest among all the carriers. The operating loss is cut to \$4.48 million while net loss falls to \$78.2 million.

The payroll is reduced 2.4% in 1991 to 28,917 and the fleet now includes 2 A300B2-103s, 11 owned and 1 leased A300B4-103s, 1 B-747-230B, 6 B-747-243Bs, 5 B-747-243B/Cs, 1 B-747-243F, 6 owned and 27 chartered DC-9-32s, and 30 MD-82s. Orders are outstanding for 40 A321-100s, 20 MD-82s, and 4 MD-11Cs.

In January, twice-weekly service is inaugurated from Rome to Boston. Services, disrupted by Operation Desert Storm, in February, are quickly restored by the end of the first quarter. New services are initiated to Beirut, Oporto, Valencia, Dublin, and Warsaw.

As the result of an unstabilized approach, the nose gear of a DC-9-32 with 6 crew and 90 passengers, collapses as the plane touches down at Rome following a service from Warsaw on April 11; although the jetliner is damaged beyond repair, there are no fatalities.

An agreement is signed in August under which the airline acquires a 22.5% interest in the aero engine concern Alfa Romeo Avia.

A Tunisian claiming he has a bomb commandeer an A300B4 with 137 aboard en route from Rome to Tunis on September 19, but he is arrested with a suspected accomplice when the plane lands in Tunisia.

Also in September, an alliance is entered into with **Korean Airlines/Korean Air (KAL)**. Under its terms, the two agree to code-share flights from Rome to Seoul via Zurich and to initiate a twice-weekly joint freight venture on the Milan-Seoul route via Anchorage. Seoul will later replace the Anchorage stop.

In early October, new emphasis is placed on passenger service as Prima business-class seats are redesigned for greater comfort, flight attendants receive new designer uniforms, and an "in-flight boutique" is offered, featuring Italian designer merchandise.

Mario Perillo's Perillo Tours and Alitalia, S.p.A. form an alliance on October 28 that makes the airline the travel firm's exclusive carrier in Italy. Plans are offered to increase package tours to Italy (where the travel business has fallen by half in the last decade) and holiday locations in the Caribbean and Hawaii.

Biweekly Rome to Kuwait City B-747-243C all-cargo flights resume during October and during the month, a series of agreements are entered into with **Air Europe, S.p.A.** These provide for the occasional provision of capacity, insurance, fuel pooling, and wet-lease service by AE on Alitalia's Rome and Milan to Mauritius routes.

In November, under terms of its alliance with **Korean Airlines/Korean Air (KAL)**, the company begins a joint all-cargo B-747-243F weekly service from Milan to Seoul via Anchorage. Also during the month, the company's first two MD-11Cs, the *Ponte Vecchio* and *Vincente Bellini*, are delivered. The mixed configuration has accommodations for 204 passengers in an interior designed by Giorgio Armani plus six 88 × 125-in. freight pallets in an aft compartment.

A new company headquarters, the Centro Direzionale della Magliana, is opened at Rome during the year.

Despite a return to normalcy in the Mideast, the Gulf crisis and continuing recessionary factors push passenger boardings down 5.1% to 17,281,224. Freight, however, climbs by 4.9% to 1.22 billion FTKs. Revenues ascend 6.8% to \$4.7 billion, but expenses are more. The operating loss is rises to \$67.2 million, but the net loss is cut to \$21.6 million.

Eleven employees depart the company in 1992 and the fleet is increased by 1 leased DC-9-32, 2 MD-82s, and 3 MD-11Cs.

In addition to its five-times-per-week MD-11 flights, in February the airline inaugurates biweekly MD-11C all-cargo, roundtrip service from Italy to Los Angeles (LAX).

During the same month, an alliance is entered into with **Nippon Cargo Airlines Company, Ltd.** providing for cooperation on a twice-weekly freight route from Milan to Tokyo via Amsterdam. New markets are opened at Bucharest, Seville, Bogota, Santo Domingo, Manila, and Singapore, while the overall number of flights are increased by 33%.

A strategic alliance is sealed with **Air Canada, Ltd.** on September 24 that provides for an increase in the number of flights between the two countries and an extension of each other's global reach. At year's end, it is announced that the Italian flag carrier will purchase 33% of **Malev Hungarian Airlines** for \$77 million, receiving five of eight seats on the board of the Hungarian airline as well as signing a strategic marketing alliance and management contract.

Customer bookings recover and advance by 13.8% to 19,688,772, while cargo moves ahead by 3.9% to 1.3 billion FTKs. Revenues swell 15.7% to \$4.24 billion and expenses rise 14.5% to \$4.07 billion. Operating income increases to \$161 million and the net loss is cut to \$9.2 million.

In 1993, Chairman Principe and Managing Director Bisignani oversees a workforce of 27,859, down 3.6% from the previous year. The fleet now includes 15 A320-211s, 9 B-737-281As leased to **Air Nippon Airways Co., Ltd.**, 1 B-747-2D3B, 5 B-747-218Bs, 7 B-747-481s, 9 B-747-481Ds, 17 B-747SR-81s, 25 B-767-281s, 27 B-767-381s, 5 B-767-381ERs, 6 L-1011 TriStar 1s, 10 A300B4-103s, and 7 YS-11A-500s chartered to **Air Nippon, Ltd.**

The carrier, in January, replaces **British Airways, Ltd. (2)** as frequent flyer partner of **Ansett Australia, Ltd.** Flight plans and route networks begin to be integrated with those of **Malev Hungarian Airlines** effective March 31, while coordination continues to grow in almost every area of the two carriers, including maintenance, sales, catering, and charter services.

The agreement with **Malev Hungarian Airlines** is legalized in mid-June; after the alliance is finalized the Italian carrier turns over \$77 million to Malev for fleet modernization. Five Alitalia, S.p.A. directors join the Hungarian carrier's board of directors. A commercial agreement is signed with **TACA International Airlines, S.A.** of El Salvador in July; this comprehensive marketing arrangement calls for schedule coordination through Miami, Los Angeles, and Chicago. Code-sharing flights commence with **Aviateca (Aerolineas de Guatemala, S.A.)** on the route from Miami to Guatemala.

After a two-year mediation effort between the airline and the IAM fails to produce a contract, ticket agents and cargo handlers strike the company's U.S. operations on September 4. Alitalia will lock out its IAM-represented workers and hire permanent replacement workers.

Passenger boardings slip 0.6% to 19,569,812, but freight increases 13.7% to 1.37 billion FTKs. A \$204.83-million net loss is reported atop an operating downturn of \$27.11 million.

As a result of the huge loss, Alitalia, S.p.A., on January 1, 1994, freezes the annual wage increase due its pilots, flight technicians, and cabin crews, pending a restructuring agreement with its unions. The following week, Principe and Bisignani are replaced by Chairman/CEO Robert Schisano, previously CEO of Texas Instruments' European Division, and Managing Director Renato Rivero, a former IBM Europe senior executive. The two announce an American-style restructuring program designed to return

Alitalia to profitability; the new approach will combine cost-cutting measures with the signing of strategic alliances.

En route from Palermo to Rome on March 21, a DC-9-30 is taken over by a lone assailant who is captured when the Douglas arrives at its destination. The first A321 arrives on March 22.

A code-sharing agreement with **Continental Airlines** is entered into on May 1. Under its terms, the two begin to link their routes between Rome and Newark employing a Continental DC-10-30 painted in the Italian line's colors on one side and the American's on the other. Additionally, the two begin to code-share and jointly market 140 connecting flights per day from U.S. domestic points from New York, plus Newark, to Milan, Rome, and beyond.

Later in the month, the board of directors approves the restructuring plan. Under its terms, cost-cutting measures will include the elimination of 1,200 positions through early retirements and hours available for work and, additionally, European Union permission will be sought for \$950 million in fiscal recapitalization.

A new strategic agreement is signed in June with **USAir**. The carrier and its unions reach agreement on July 13 on a reorganization plan that calls for substantial job cuts, although fewer than the airline had originally planned. Cabin staff opposed to the staff cuts stage a series of strikes, leading the government to establish a committee of inquiry into the failure of management to anticipate the job action. Two of the company's MD-80 pilots (Alberto Nasseti and Paolo Racchetti) are lost in the fatal June 30 crash of an A330 undergoing tests at Toulouse Airport.

In July, joint **Alitalia-Continental** flights begin from Rome to Newark and New York. An agreement is signed during the month with **British Midland Airways, Ltd.** Flights from Rome, Milan, and Turin will be code-shared via London (LHR) to Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

Chairman/CEO Schisano and Managing Director Rivero announce a revised reorganization plan in October, designed to hoist the airline out of its red fiscal pit. With three senior management positions eliminated, the new corporate structure will have six corporate and eight line functions. In October, the company begins to plan a comprehensive marketing agreement, including code-sharing, with **VARIG Brazilian Airlines (Viacao Area Rio-Grandense, S.A.)**.

During the year, the workforce is cut 6.3% to 26,092. Customer bookings move ahead by 3.8% to 20,312,554 while cargo inches up 1.8% to 1.39 billion FTKs. Revenues advance by 8.8% to \$4.86 billion, but expenses are also up, by 6.2% to \$4.77 billion. As a result, there is an \$89.74-million operating profit but a net \$179.72-million loss is suffered.

Airline employment is reduced another 3.7% in 1995 to 17,982; however, the carrier begins the year \$1.8 billion in debt.

Biweekly flights to Algeria are suspended on January 11 for lack of passengers. Two B-767-33AERs are wet-leased from Ansett Worldwide Aviation Services, Ltd. and with relations tense between company and pilots, a short strike by the airline's flyers erupts when the two aircraft arrive in late February. Still, a third is requested from the Australians along with three from Singapore Aircraft Leasing Enterprises, Ltd. (SALE), a partnership between **Singapore Airlines, Ltd.** and Boullioun Aviation Services.

A new code-sharing service with **Gulf Air** is initiated in March linking Rome with Abu Dhabi and Bahrain.

In June, 15 Fokker 70s are ordered for replacement use on thin domestic and regional routes by subsidiary **Avianova, S.p.A.** and the third B-767-33AER from Ansett enters service. The first Singapore B-767-33AER is delivered on August 4.

As more B-767s arrive, most of which are received under wet-lease and manned by crews from the U.K. charter airline **Air 2000, Ltd.**, displeased Alitalia pilots stage a number of wildcat strikes from August to October. These are intensified during the same six-week period by labor-related disruptions within the Italian ATC network that force cancellation of from 50 to 70 of the airline's daily departures. The board of directors estimates labor problems have cost the airline L 80 billion (US\$50 million).

Bad feelings are further intensified when the company accuses over 300 unionized pilots of public-service interruption for failing to report to work on one of the strike days; 19 flyers are dismissed in an action that lands both the pilots' union and the airline in a Rome court. Job actions by cockpit crew will cost Alitalia upwards of another \$50 million by late fall.

As part of its recovery plan, the airline, during the first week of October, sells its 56.2% stake in Aeroporti di Roma, S.p.A. to Corfi & Partners for L 395 billion (US\$258 million). Also in October, the company agrees to cooperate with **American Airlines** on cargo flights from Italy to Miami, where connections can be made on services to Central and South America and to the Asian destinations of Hong Kong, Bangkok, and Shanghai.

With an exchange of seats, **Cyprus Airways, Ltd.** and Alitalia begin code-sharing the route from Larnaca to Rome. The same sort of arrangement is made with **CSA Czech Airlines** covering flights to Prague from Rome and Milan and with **Finnair O/Y** on frequencies from Milan to Helsinki via Stockholm.

Having encountered major labor roadblocks to his efforts at reform, Chairman/CEO Schisano now encounters problems with the state-owned holding company Istituto per la Ricostruzione Industriale (IRI), which owns an 86% stake in the airline. As a result of its dissatisfaction with the pilot strikes and with his lack of overall progress, Schisano is dismissed during the last week of October; Managing Director Rivero moves up and begins to operate the airline with an executive committee made up of three IRI vice presidents.

Under a new pact with **Canadian Airlines International, Ltd.**, Alitalia begins code-sharing on passenger and cargo frequencies seven days per week as of November 1 between Rome and Toronto. CAI will operate the routes during winter and spring and the Italian line during the summer. The former **Aliadriatica, S.p.A.** and **Noman, S.p.A.** are combined at Rome in the fall and launch service to Milan on November 27 as **Air One, S.p.A.** The new domestic carrier will be Alitalia's first serious local service competitor.

A number of assets are sold, including all interest in Aeroporti di Roma and a pair of B-747-243BCs to **Atlas Air**. The Jumbojets arrive at Hong Kong Aircraft Engineering Co., Ltd. (HAECO) for modification on November 1 and December 31.

With the arrival of four Fokker 70s in October–November, **Avianova, S.p.A.** is able to begin replacement services during the fourth quarter. The last two SALE Boeings also arrive during the year's final two months.

Traffic is not, however, affected by political or boardroom activities. Passenger boardings inch up another 2.9% to 20,897,688 while freight accelerates 5.4% to 1.46 billion FTKs. Revenues increase by 5.6% to \$4.84 billion and a small \$832,000 net gain is posted. Officials admit that, but for the asset sale, the account books would have shown a \$283-million loss.

The workforce grows 6.3% in 1996 to 16,850 and at the beginning of the year the fleet has been reduced by 3 Jumbojets, 6 A300B4-103s, and 14 DC-9s. Early in the year, the company will begin to equip its 8 MD-11s with an in-flight entertainment system that, among other things, allows passengers to choose from more than 20 movies on every flight.

When the French open their skies on January 2, ending the virtual monopoly previously enjoyed by **Air Inter** (now **Air France Europe**), Alitalia inaugurates its first flights between various French cities. Initial MD-80 frequencies are launched from Rome and Milan to Lyon, with continuing service to Toulouse and Nantes. At the same time, **Noman, S.p.A.** elects to begin its own deep-discount competing services, flying from Rome's Ciampino Airport to Milan. **VASP Brazilian Airlines, S.A.** Flight 844, an MD-11 with 12 crew and 197 passengers, collides during taxi after landing at Miami on January 23 with Alitalia Flight 631. The B-747-243B with 19 crew and 231 passengers was taxiing out for takeoff to Rome. Although both aircraft sustain substantial damage causing the two services to be cancelled, no injuries are reported.

At the end of January, Istituto per la Ricostruzione Industriale (IRI), the holding company that owns Alitalia, announces that it will not fund

recapitalization unless the airline can obtain labor accords and restore stability. In February, Alitalia hires away the managing director of **Air One, S.A.**, appointing him vice president operations. The corporate raid triggers a government inquiry into the major's commercial practices.

Domenico Cempella, former head of Aeroporti di Roma who had started with Alitalia as a check-in agent 40 years earlier, is appointed managing director on March 1. He quickly moves to change the company's administrative chain-of-command, reducing by several the number of levels in the company bureaucracy. Eight days later, Chairman Rivero, in deep disagreement with the recovery approach of IRI Chairman/CEO Michele Tedeschi, resigns and is succeeded by ex-Alenia President Fausto Cereti, a mechanical and aeronautical engineer by training.

In his first public speech, Managing Director Cempella announces to the airline's unions on March 12 that he has scrapped his predecessor's reorganization scheme and will disclose his own in two months.

True to his word, on May 16 Managing Director Cempella puts forth his own idea for the carrier's salvation. To stay afloat, he notes, Alitalia must split its operations in two, its workforce will need to be cut, and a \$1.74-billion injection of new capital from the state will be required. In addition, facilities at Milan's Malpensa Airport will be developed into a European regional hub.

The next day, the carrier's unions reject the rescue plan and accuse management of seeking to break up Alitalia and sell its parts. Still, leaders indicate that a compromise plan might prove acceptable and agree to negotiate one.

On May 29, Alitalia sells its new headquarters and 22.5% stake in Alfa Romeo Avio, part of the carrier's maintenance arm, to Fiat for L 45 billion. After a month of discussions, the carrier reaches accord with eight of its unions (representing pilots, ground staff, and some cabin crew) on June 20.

Under terms of the new agreement, the unions that are in accord will acquire a 20% stake in the company and three seats on the board of directors. Alitalia will be able to cut costs by \$340 million over the next four years, establish a new low-cost operation, and receive the needed \$1.74-billion infusion from the state holding company that owns it. The main cabin crew union, Sulta, initially rejects this restructuring.

Beginning on August 6, Consolidators International of Los Angeles offers shippers to South Africa the first wholesaling service to that country with direct flights that can meet time-definite standards at what are claimed to be competitive prices. The forwarder employs Alitalia, which has direct service to Johannesburg, to launch its new program.

A controversy erupts in September–October when the government antitrust commission accuses Alitalia of unfairly allocating takeoff and landing slots at Milan's Linate Airport in an effort to drive away both real and potential competitors. The charges are made at a time when the European Commission begins to examine the government's request to provide massive state aid. Politicians in Rome call for the withdrawal of the airline's slot management authority.

The subsidiary **Avianova, S.p.A.**, is absorbed on November 1 and forms the nucleus of Alitalia Team, a low-cost subsidiary that employs former Alitalia employees paid lower wages who are able to work under more flexible rules. Pilots from Alitalia are able to temporarily transfer to the division under fixed three-year contracts. The new unit, officially known as the Highly-Competitive Carrier (HCC), is assigned the mission of providing discount services to points in Europe, the Mideast, Southeast Asia, and Central America. Permission to fly to the U.S. is sought.

In a special ceremony at Fiumicino Airport, HCC receives its first new B-767-33AER. Another will also be leased from the Alitalia parent, along with 6 MD-82s, 14 A321-112s, 4 Fokker 70s, and 13 ATR turboprops. All will wear bright red "Team" logos.

Having arrived at Chicago (ORD) following a November 19 service from Rome, Flight 638, a main line B-767-33AER with 11 crew and 129 passengers, puts down on Runway 09R without landing clearance from the control tower. The wide-body touches down approximately 7,000 ft. behind **Japan Air Lines Company, Ltd.** (B) B-747 Flight 38, which is on its landing rollout.

On November 24, the national antitrust authority, after a nine-month investigation, releases a report finding that Alitalia has attempted to block competition from **Air One, S.p.A.** and **Meridiana, S.p.A.** by controlling the allocation of airport landing slots, by monopolizing ticket writing, and by anticompetitive scheduling. The major is ordered to pay a L 415 million (US\$277,000) fine.

At the beginning of December, the Italian government drops restrictions against private investment in the airline, thereby opening the doors to its privatization. The last A300B4-103s are withdrawn during the year's final month.

Enplanements jump 10.7% to 23,137,947 and 2.75 billion FTKs are operated, a 26.7% increase. Although revenues climb 3.3% to \$1.96 billion, costs, led by a \$539-million restructuring charge, leave a huge \$719-million loss, later adjusted downward to \$666.6 million.

The workforce is cut by 4.6% in 1997 to 15,740. In January, Alitalia, in cooperation with **Tunis Air, S.A.**, begins a joint weekly all-cargo route from Rome to Tunis. The HCC continues to expand, becoming an autonomous division with its own fleet, a workforce of 1,600 personnel, and 300 daily flights.

To protest European Union fines against them for breaking milk-production quotas, Italian farmers block access to the country's main airports between January 16–25. The action costs Alitalia over \$615,000 each day.

A letter of intent is signed with **Air France** on February 3; its purpose is to set up a strategic alliance, with dual-designator flights on routes between Italy and France. Later in the month, the airline files suit against the farmers for recovery of the losses it has suffered during their recent EU protest action.

It is announced in February that the company and **Continental Airlines** will increase their capacity on three daily nonstops between New York and Italy. Under terms of a new agreement, a daily frequency is added to the one already flown from Newark (EWR) to Rome, along with a daily service to Milan.

Also during the first quarter, an agreement is signed with **Dragonair, Ltd.** that allows passengers connecting in Hong Kong to check through to their final destinations.

A new code-sharing agreement with **LOT Polish Airlines, S.A.** takes effect on March 30. Daily, except Thursday and Sunday, LOT B-737-45Ds will fly roundtrip from Warsaw to Rome; the other two days will be serviced by the Italian major's MD-80s. At the same time, LOT begins dual-designator flights from Warsaw to Milan on Wednesdays, Fridays, and Saturdays (a second flight on Fridays stops in Cracow) while Alitalia MD-80s service the same route each weekday.

The new dual-designator agreement entered into with **Air France** begins on April 1. On that date, code-sharing begins on frequencies from Bologna, Florence, Turin, and Venice to Paris and from Milan to Lyon and Rome to Lyon and Strasbourg. Having taken a page from the logojet book first written by **Western Pacific Airlines (Westpac)**, on April 7 the carrier unveils a B-747-243B in the silver and dark blue color scheme of sponsor Bacio Perugina (Perugina Kiss), a chocolate candy manufactured by Perugina/Nestle. With titles that read *Baci dall'Italia*, *Baci da Alitalia* (Kisses from Italy, Kisses from Alitalia), the Jumbojet enters service next day on Flight 610 from Rome (Fiumicino Airport) to New York (JFK).

Also during the month, in an exchange of seats deal with **LOT Polish Airlines, S.A.**, the carrier begins new code-sharing services from Milan and Rome to Warsaw. By the end of the month, the HCC has increased its schedule by 100 weekly flights.

Approval of its restructuring plan and state infusion package is sought from the EU Commission. Meanwhile, the strategic alliance with **Continental Airlines** deepens as the number of daily roundtrips between Rome and Newark are increased from two to three.

In May, EU Transport Commissioner Neil Kinnock, acting on behalf of the body he heads, rejects the carrier's restructuring plan. It is pointed out that the Italian program has failed to shrink the carrier's route network sufficiently to generate adequate return while labor costs remain

too high. Alitalia suggests that the plan has not been rejected, but only that Kinnock seeks "clarifications."

On May 22, Flight 600, a B-767-33AER with 10 crew and 158 passengers, arriving at Newark from Milan, receives a windshear alert; the plane lands anyway, receiving nosegear and nose structural damages, probably from windshear. No injuries are reported in the safe deplanement that follows.

Just after takeoff from Rome's Fiumicino Airport on June 30, Flight 672, a B-747-243B en route to Rio de Janeiro, suffers an engine fire; a safe emergency landing is made back at the point of origin.

In early July, Alitalia reports a \$5.5-million profit for the year's first half, the carrier's first profit in nearly a decade. EU Transport Commissioner Kinnock announces on July 15 that Alitalia will be allowed to receive a \$1.6-billion government rescue package in three stages, all tied to heavy conditions.

In the last bailout program allowed an European airline, Kinnock notes that the carrier may have \$1 billion immediately, with the remainder coming in 1998 and 1999, if it meets these requirements: a staff reduction of 1,200; an acceleration of existing cost-cutting measures; and sale of various holdings, including those in **MALEV Hungarian Airlines**, the engine manufacturer FiatAvio, the Galileo computerized reservations system, and several Italian regional airports.

In addition, no new shareholding may be taken in other carriers and the company's fleet is to be frozen until the year 2000, although, in the event of a 5% growth rate, a 2.7% increase in capacity will be permitted. Receipt of the EU money allows the carrier to cut its huge debt from L 3.4 trillion to L 2.3 trillion and avoid bankruptcy.

On August 1, discussions begin with **KLM (Royal Dutch Airlines, N.V.)** and **Air France** concerning a possible strategic alliance. During late summer and early fall, the Italian flag carrier retires 14 aircraft, including all of its A300B4s, in order that it may remain within required capacity limits.

On October 1, the subsidiary **Alitalia Express, S.p.A.**, reformed from **Avianova, S.p.A.** and outfitted with the 13 Aero International (Regional) ATR42/72 turboprops previously operated by Alitalia Team, begins flying the major's thin domestic and regional routes. The Fokker 70s are sold.

With a delay of up to a year expected in completion of the new Malpensa Airport at Milan, the company begins to calculate that it will lose three million passengers as a result.

So positive are the negotiations between Alitalia and **KLM (Royal Dutch Airlines, N.V.)** that, on October 26, the cargo divisions of the two airlines, not waiting for a master agreement to be finalized, begin the first cooperative projects. Employing two KLM Cargo B-747-306Cs and three Alitalia B-747-243Fs as well as the KLM base at Amsterdam's Schiphol Airport and the Alitalia facilities at Milan and Rome, the two operate joint flights to 16 destinations in Europe, Asia Pacific, India, the Middle East, and Latin America. Although the two are able to expand their cargo networks in these areas as a result, they maintain, for political reasons, their individual freight services over the Atlantic and their separate alliances with various other partners.

At the end of November, EU Transport Commissioner Kinnock notifies Italian Minister of Transport Claudio Burlando that his office is investigating allegations that Alitalia is employing Italian-state funds to cut prices on its domestic services. If true, the action is clearly prohibited under EU subsidy rules.

In early December, IRI announces plans to reduce its 86% stake in the carrier to just 60%.

On December 17, the carrier and **KLM (Royal Dutch Airlines, N.V.)** complete negotiations and announce the formation of a no-equity strategic alliance. With a priority goal of creating a combined multihub system based in Amsterdam, Milan, and Rome, the two agree to concentrate initially on expanded, dual-designator European routes, transatlantic services, and cargo operations. A multihub system will be developed at the airports of Rome and Amsterdam.

In light of the new grouping, the company and **Air France** elect to discontinue, in 10 months, their recent compact.

Customer bookings advance 6% to 24,520,603, but freight dips 1.4% to 1.47 billion FTKs. Operating revenues for Alitalia Group jump 6.2% to \$4.5 billion and, with expenses in hand, a net \$243.3-million profit is celebrated.

At the beginning of 1998, Alitalia is the 13th largest airline in the world in terms of passenger boardings, 22nd in freight, 16th in net profit, and 17th in fleet size and operating revenues.

The fleet now includes 100 aircraft, 97.7% of which are Stage III certified: 3 DC-9s, 10 B-747s, 6 B-767-33AERs, 20 A321-112s, 8 MD-11s, and 90 MD-82s. Alitalia Team's fleet, chartered from its parent, continues to grow and now includes the 20 A321-112s, 20 MD-80s, all 6 B-767-33AERs, and all 8 MD-11s.

On January 21, an MD-11 transports Pope John Paul II on his historic visit to Havana, Cuba; it will return him to Rome five days later.

In response to EU Transport Commissioner Kinnock's November concern, the company, at the end of January, agrees to stop apparent violations of its state-aid rules by halting its aggressive predatory pricing actions against its domestic and regional Italian rivals. Previously announced plans to open a second daily MD-82 roundtrip from Bologna to London (LGW) are withdrawn on February 15.

MD-82 service from Turin to London (LGW) ends on March 29. It is replaced with an Avro RJ70 roundtrip from Turin to London (LCY).

In April, **Azzura Air, S.p.A.** ends its code-sharing pact with **Debonair, Ltd.** and becomes a franchise partner of Alitalia, S.p.A., reporting to **Alitalia Express, S.p.A. Minerva, S.p.A.**, operating its seven Dornier 328-100s on Italian domestic routes, also becomes a franchise partner.

Both airlines, in the manner of "British Airways Express," paint their aircraft in Alitalia colors, with Alitalia interiors. Alitalia uniforms are provided and check-in and ticket counters receive Alitalia branding; indeed, even the supplies used in in-flight meal services come from the Italian major.

Despite protests from Rome's local politicians, CEO Cempella, also in April, announces his determination to press ahead with plans to open a new hub at Malpensa Airport when refurbishments at the Milan facility are completed in October. Upwards of 10% of the company's operations will be transferred north from Rome's Fiumicino Airport.

During the month, the parent IRI begins to sell 27.6 million shares of Alitalia stock to institutional investors. Plans are made to launch a L 3-trillion capital increase at the end of May.

After 25-days of labor, workmen have completed the process of applying 1,300 lbs. of paint to the B-747-243B *Argentario*. The Jumbojet, perhaps the world's largest logojet, begins to promote the new aluminum wristwatch from Bvloart jewelry for a year on the airline's routes to North and South America, the Far East, and Australia.

Mud slides disrupt operations at the Naples Airport during the second week of May. On May 18, 2,800 company flight attendants, protesting against stalled contract negotiations, stage a 24-hour strike; consequently, Alitalia must cancel a third of its domestic flights.

The Istituto per la Ricostruzione Industriale (IRI), which owns Alitalia, sells 18.3% of the airline's shares to private investors in May as scheduled. The state holding company's stake is cut to 67%; however, it is anticipated that that figure will shrink to 53% when investment opportunities are offered to company employees.

Daily roundtrips commence on June 1 between Rome's Fiumicino Airport and Salonica.

The government decrees in July that, following the opening of Milan's Malpensa Airport on October 25, flights into the current Linate Airport will be restricted to carriers operating routes that handle more than two million persons annually. The only such service is Alitalia's to Rome. Domestic and foreign competitors complain to both the Italian government and to the European Commission.

After all of the coverage in previous years, this year's second tranche of the state-funded bailout approved by the EC comes into company coffers in July largely without public notice.

On August 15, the EC indicates that it may suspend the Italian government's huge bailout for Alitalia if rules for fair competition at Milan's airports are distorted according to the July proclamation.

In the third week of September Transport Commissioner Kinnock, acting on behalf of the EC, announces that the Italian government decree on the Milan-Linate situation is both discriminatory and illegal. On the other hand, he also notes that the EC has no power to impose an alternative plan on the Italian government. Italy agrees to a phased transition by other airlines from Linate to Malpensa rather than the overnight shuffle originally sought.

Malpensa Airport at Milan opens as scheduled on October 25 and, like the opening of new facilities at Hong Kong and Kuala Lumpur, does not go smoothly. Baggage handling and customer orientation problems dominate.

The winter schedule opens on October 28 with a number of schedule changes. A third daily MD-82 flight is started from Venice to London (LGW), while a third daily MD-82 return service is started from Milan to Amsterdam in code-share with **KLM (Royal Dutch Airlines, N.V.)**.

Also on October 28, four new weekly MD-82 return flights are begun from Milan to Tirana, Albania. New twice-daily MD-82 roundtrips simultaneously begin from Bologna to London (LGW), Paris (CDG), and Milan. Conversely, daily MD-82 return service from Pisa to London (LGW) and Paris (CDG) is suspended.

As the fourth quarter progresses, Alitalia continues its planning for Systema Alitalia, a scheme at Malpensa whereby its worldwide network will be integrated with that of **KLM (Royal Dutch Airlines, N.V.)** at Amsterdam's Schiphol Airport.

Customer bookings during the 12 months dip 2% to 24.1 million, while cargo traffic climbs 3.4% to 1.52 billion FTKs. Revenues ascend 5% to \$4.99 billion, while costs are up just 1.6% to \$4.69 billion. As a result, there are profits: \$298.85 million (operating) and \$221.48 million (net).

A slippery runway at Prague causes a company MD-80 to skid off the pavement just after landing on January 13, 1999. No injuries are reported.

A company MD-11, wearing the Papal seal, flies Pope John Paul II from Rome to Mexico City on January 22; the pontiff is seen off by Italian Prime Minister Massimo D'Alema.

While landing at Catania following a January 28 service from Venice via Naples an MD-82 with 78 passengers aboard reportedly encounters windshear, strikes a localizer antenna, lands heavily blowing a tire, and skids off the runway; no injuries are reported as the plane is evacuated via escape chutes. The aircraft, with substantial damage to its wing and main landing gear, is withdrawn from service.

Just after landing at Moscow on February 10, the tail of the **Aeroflot Russian International Airlines (ARIA)** Il-96 returning President Boris Yeltsin from the funeral of King Hussein at Amman, Jordan, strikes the wing of the Alitalia MD-80 that has just brought Prime Minister D'Alema to the city for talks. No injuries are reported aboard either aircraft, although the Italian plane is damaged to a point where a replacement aircraft will be sent. Russia admits responsibility and agrees to pay for repairs to the damaged Italian jetliner.

It is reported in the *London Sunday Times* on February 14 that the company is in discussions with **Air France**, **Continental Airlines**, **Delta Air Lines**, and **Northwest Airlines** concerning the possible formation of a global alliance with which to challenge the two other great airline pacts, "OneWorld" and the "Star Alliance."

On February 16, it is announced that **Canadian Airlines, Ltd.** will place its code on Alitalia's nonstop roundtrips between Milan and Toronto five times a week beginning on June 1.

The Italian news agency Ansa reports on February 21 that **Air France** is in discussions with **KLM (Royal Dutch Airlines, N.V.)**, **Northwest**

Airlines, and Alitalia concerning the possibility of Air France joining their global alliance. Northwest and KLM, with will be recalled, are also alliance partners of **Continental Airlines**, which is one of two U.S. airlines seeking a partnership with the French line. None of the suggested participants will confirm the story.

Breaking ranks with its partners, Alitalia, through an unidentified spokesman, on February 23, confirms that his carrier, along with **Northwest Airlines** and **KLM (Royal Dutch Airlines, N.V.)** are at the "very beginning" of alliance talks with **Air France**.

The CEOs of **KLM (Royal Dutch Airlines, N.V.)**, **Northwest Airlines**, and Alitalia meet with **Air China International Corporation** officials in Beijing, also on February 23, to discuss bringing the Chinese carrier into their global alliance.

An A320-214 joins the 22-unit A321-112 fleet of Alitalia Team on March 15. Eighteen of the aircraft type remain to be delivered.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, Alitalia, on March 24, halts all scheduled service into Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo begins.

Service to Belgrade remains halted on March 25-26 and for the duration of the NATO bombing campaign. Flights to south-central and southeastern Europe experience delays of 30-60 minutes due to airspace closure.

With the start of the summer schedule on March 28, a fifth daily MD-82 return service is started between Milan and Bologna. The NATO Stabilization Force on April 15 and 19 reopens the Bosnian airports at Sarajevo and Mostar, respectively.

At month's end, the carrier signs a revised agreement with the Italian transport ministry for the operation of certain routes to non-EU destinations. The arrangement, according to competitors, contains clauses that discriminate against them and lead to the filing of a complaint with the EU.

In a joint statement with **KLM (Royal Dutch Airlines, N.V.)** on April 30, Alitalia confirms that the two majors are offering dual-designator service under a temporary contract while the final documents of the commercial alliance are hammered out for signature. Original plans had called for the definitive alliance accord to be signed on April 15; the new projected date is November 1.

As the result of the lifting of the UN ban on scheduled flights to Libya in early April, Alitalia, on May 1, launches MD-82 roundtrips between Milan and Tripoli, three times a week. MD-82 twice-weekly return service is simultaneously started from Rome to Tripoli.

At a New York press conference on May 10, it is announced that Alitalia will join the multinational airline alliance operated by **Northwest Airlines** and **KLM (Royal Dutch Airlines, N.V.)**. The airline representatives indicate that their companies are asking the DOT to grant antitrust immunity to their joint venture, after which they will be able to set ticket prices together, code-share, manage seat inventories, and share services, costs, and revenues. Following approval, the first routes to be operated under the new joint venture will be from Detroit to both Rome and Milan.

This new partnership will form the core of a long-awaited fourth major global airline alliance, "Wings," which will be formally announced later in the year. Before that time, it is anticipated that **Continental Airlines** will also become an alliance partner.

The next day, a bipartisan group of 40 members of the U.S. House of Representatives sends a letter to President Clinton asking the White House to block approval of the pending "open skies" agreement with Italy. The Congressmen are petitioning on behalf of the U.S. employees of Alitalia, who were represented by the IAM prior to their replacement in September 1993.

It is reported, also on May 11, that Alitalia has integrated KLM's Italian sales operations within its own; meanwhile, KLM has absorbed the Italian line's sales operations in The Netherlands.

During the remainder of the month and in June, company and unions representing pilots and flight attendants bargain over a complex contract. On July 1, the airline personnel threaten a lunchtime strike on July 5.

EU Transport Commissioner Neil Kinnock, in a July 5 letter to Italian Transport Minister Tiziano Treu, expresses serious concerns that the flag carrier has violated certain terms under which it was granted permission for government subsidy in 1997. The problems identified (as the government is preparing to hand over the third and final L 250-million tranche) revolve around complaints from competitors concerning Alitalia's allegedly better slots at Milan's new Malpensa Airport.

The Master Cooperation Agreement between Alitalia and **KLM (Royal Dutch Airlines, N.V.)** is signed on July 30 and is granted final approval by European Union antitrust regulators on August 11.

The August 23 issue of Malcolm Ginsberg's *Air and Business Travel News* (<http://www.abtn.co.uk>) reports that the proposed "Wings" global alliance is in serious jeopardy. Abstracting a report from the previous day's London *Financial Times*, the newsletter notes that a significant disagreement between **Continental Airlines** and **KLM (Royal Dutch Airlines, N.V.)** concerning linkage and revenue sharing on transatlantic flights risks termination of the grouping and creation of a new alliance without Continental.

Pisa to London (LGW) return service is halted on October 31.

The union with **KLM (Royal Dutch Airlines, N.V.)** becomes effective on November 1. Mario Pascucci, formerly vice president-Alitalia Cargo is appointed managing director of the two lines' joint cargo venture while Henry Essenberg, former KLM executive vice president-network organizing is tapped to be managing director for the joint KLM-Alitalia Passenger Venture.

The same day, Alitalia becomes the first European Union carrier to resume flights to Algeria since January 1995; twice-daily roundtrips are launched from Rome to Algiers.

The KLM-Alitalia Passenger Venture is fully integrated by the end of December as over 100 joint managers are named and stationed at all 80 of the carriers' country organizations.

Overall passenger boardings dip 0.1% to 24,048,000 while freight traffic jumps 8.3% to 1,611,287 FTKs. Earnings are shown to have plunged to \$14 million when skimpy figures are belatedly released.

Among the world's top 25 airlines as the new millennium begins, Alitalia is 15th in passengers, 24th in FTKs, 25th in employees, and 18th in fleet size.

A code-sharing agreement is signed with **Meridiana, S.p.A.** on January 4, 2000; under its terms, Alitalia places its designator on Meridiana services from Rome to Olbia and Verona and from Milan to Cagliari and Olbia.

Also in January, **KLM (Royal Dutch Airlines, N.V.)** completes the earlier-promised infusion of 100 million euros (\$93 million) to Alitalia to assist the latter as it creates a joint northern Italy hub at the new Malpensa Airport at Milan.

When Italy reacts sluggishly in transferring flights to the new airport and privatizing Alitalia, KLM President Leo van Wijk is forced to take the unusual step of publicly announcing in February that the delay is forcing his carrier to completely reconsider the future of its joint venture with Alitalia. Under terms of the accord between the two airlines, KLM has the right to abandon the alliance if Malpensa's development into a joint hub is stalled beyond March 31.

Although the Italians in March announce an interest in fully integrating with the Dutch carrier, the privatization of their own airline is once more pushed back.

While on a March 20 state visit to Italy, top Algerian diplomat Youcef Yousfi asks that the Italian transport minister encourage Alitalia to form a strategic alliance with **Air Algerie, S.A.** On a lighter note, a company MD-82, wearing a special McDonald's livery, begins offering domestic services on March 15.

On April 20, despite bitter opposition from Europe's carriers, the Italian government begins implementation of a long-delayed program to move flights from Milan's Linate Airport to Malpensa.

All of this corporate and governmental confusion finally causes KLM, as is its right, to pull the plug on the pending Alitalia operational merger as of April 28. Upon notice of cancellation, the Amsterdam-based major also demands repayment of its 100-million euro (\$93-million) advance. The next day, Alitalia stock falls 5.7% on the Italian exchange.

Within a month, the Dutch and Italian flag carriers have restored their own sales offices in 80 countries. **Northwest Airlines**, KLM's U.S. partner, continues for the moment to pursue the established transatlantic dual-designator links.

"Alitalia Express" S.p.A. ERJ-145 service is inaugurated on May 18 from Rome to Pisa. The previous dual-designator Amsterdam-Sydney via Milan and Singapore service flown with **Singapore International Airlines, Ltd.** and **KLM (Royal Dutch Airlines, N.V.)** ends on June 14; it is replaced on June 19 with a B-747-243B route operated from Milan to Sydney via Bangkok. On June 20, a code-sharing agreement is signed with **Tarom Romanian Airlines, S.A.**

A legal battle between Alitalia and **KLM (Royal Dutch Airlines, N.V.)** is started on August 10 when the board of the Italian carrier files a 250-million euro (\$228-million) claim against the its erstwhile partner, claiming the split-up is "illegitimate." The case will be heard in Amsterdam by an international panel (one Italian member, one Dutch, one neutral) in Amsterdam applying Nederlands Arbitrage Instituut procedure and using Italian law.

Code-sharing, frequent-flyer program reciprocity, and shared lounges with KLM ends on August 31 and the "demerging" of the two airlines is completed the next day.

Due to rising fuel prices, the major, on September 1, suspends service to Addis Ababa, Bangkok, Nairobi, and Sydney and raises by 3% the price of its international tickets. The company's "AL" code is placed on **Air Europa, S.A.** domestic Spanish flights beginning on September 6.

Badly in need of a new alliance partner, the company announces on September 18 that it is holding partnership discussions with **Swissair, A.G.** ("Qualifyer") and **Air France** ("SkyTeam"). A record first-half loss (three times worse than the figure reported a year ago) of \$160 million is reported on September 29.

A strike by flight attendants at Rome's Fiumicino Airport on October 27 forces the company to cancel 80 domestic and 23 international flights.

The next day, the major begins to code-share on **Meridiana, S.p.A.** BAe 146-200 roundtrips from Florence to Barcelona, Paris (CDG), and London (LGW).

The company, on October 29, drops service from Bari to Bologna, Florence, Trieste, Venice, and Verona; MD-82s are placed on the route from Bologna to Paris (CDG). Flights from Rome to Addis Ababa, Bangkok, Berlin (Tegel), Nairobi, and Sydney also end, but flights from the Eternal City to Dubai and Mumbai are increased.

On November 1, **Japan Air Lines Company, Ltd. (2)** and Alitalia begin code-sharing on each other's weekly return services—eight Alitalia, seven JAL—between Italy and Japan. The same day, the company's five-times-a-week service from Milan to Bangkok is suspended.

ALITALIA EXPRESS, S.p.A.: Viale Alessandro Marchetti 111, Rome, I-000148, Italy; Phone 39 (6) 522 421; Fax 39 (6) 655 1502; <http://www.alitalia.com>; Code XM; Year Founded 1997. This subsidiary of the Italian flag carrier is established at Rome in October 1997 to operate replacement flights for its parent that include scheduled passenger and cargo services and charters. Claudio Carli is named president and is provided with a fleet of 9 Aero International (Regional) ATR42-320s and 4 ATR72-210s that had previously been operated by Alitalia Team. Revenue flights commence on October 1 linking the company's base with its principal destinations of Bologna and Florence.

During the remainder of the fourth quarter and into 1998, the number of points visited jumps to 24, including 11 international locations.

In April, **Azzurra Air, S.p.A.** ends its code-sharing pact with **Debonair, Ltd.** and becomes a franchise partner of **Alitalia, S.p.A.**, reporting to this subsidiary. By year's end, the link will account for 35%

of Azzura's business. **Minerva, S.p.A.**, operating its 7 Dornier 328-100s on Italian domestic routes, also becomes a franchise partner.

Both airlines, in the manner of British Airways Express, paint their aircraft in Alitalia colors, with Alitalia interiors. Alitalia uniforms are provided and check-in and ticket counters receive Alitalia branding; even the supplies used in in-flight meal services come from the Italian major.

Flights continue in **1999**. In late March, **Alitalia, S.p.A.** places a \$50-million order with Avions de Transport Aerien for 3 ATR72-520s, which are delivered to Alitalia Express between July and December. Requests are also sent to Brazil for regional jets.

Alitalia Express at Rome's Fiumicino Airport takes delivery of the first of 6 Embraer ERJ-145s on April 22, **2000**. ERJ-145 flights from Rome to Nice start on August 6.

ERJ-145 Alitalia Express service is inaugurated on September 1 from Milan to Zurich and Stuttgart and is followed by new roundtrips from Milan to Lyon, which commence on October 1.

ALITALIA TEAM. See **ALITALIA, S.p.A.**

ALK KUBAN AIRLINES. See **AIR LINES OF KUBAN (ALK KUBAN AIRLINES)**

ALKAIR FLIGHT OPERATIONS, A.S.: Skodsborgvej 240, Naerum, DK-2850, Denmark; Phone 45 (42) 802 088; Fax 45 (42) 802 488; Code LK; Year Founded 1973. Alkair Flight Operations is established at Naerum in early **1973** to operate regional executive passenger and air express services. Per Alkavesig is appointed president and he begins revenue flights during the summer with a pair of Fokker F.27-600 Friendships. Operations continue apace during the remainder of the decade and through the **1980s**.

Although the company's mission does not change during these years, business requires an increase in flight equipment. By **1994**, President Alkavesig oversees a workforce that includes 10 full-time and three part-time pilots and a fleet of 3 Fokker F.27-600s, 1 Gates Learjet 35A Century 3, and 1 Cessna 650 Citation III. In the fall, 1 Fokker is chartered to **Corporate Air** in the U.S. for operation with **Federal Express** contracts.

Flights continue in **1995–2000**, during which years the workforce totals 12. Emphasis is now given to hospital flights and the fleet is reduced to just 1 each F.27-600, Cessna Citation III, and Learjet 35A.

ALKOR PRODUCTION COMPANY (ALKOR PROIZVODSTVENNIYA KOMPANIYA): Bolshaya Gruzinskaya 4V, Moscow, 123242, Russia; Phone 7 (095) 254-3144; Year Founded 1994. APK is set up at Moscow in the spring of **1994** to offer ad hoc all-cargo services. G. A. Yushko is appointed general director and he launches and continues revenue services with a single Ilyushin Il-76.

ALL-AMERICAN AIRWAYS. See **ALL-AMERICAN AVIATION**

ALL-AMERICAN AVIATION: United States (1937–1953). Having invented a specialized nonstop airmail pickup and delivery system, Chicago dentist Dr. Lytle S. Adams founds All-American Aviation at Wilmington, Delaware, on March 5, **1937**. Nothing more than a holding company from which to negotiate, All-American becomes an operating airline in the spring of **1938** when Adams concludes a financial agreement with former national gliding champion Richard C. DuPont, who makes an \$85,000 investment and a \$45,000 loan. With the DuPont as president and Adams as vice president, the company bids on and receives an experimental airmail contract from the CAB late in the year. It also acquires 5 Stinson SR-10C Reliants, which are modified for dropping and retrieving the mail sacks per the system invented by Adams.

When all is prepared and a two-month period of testing is completed, All-American, with a base at Pittsburgh, inaugurates two routes on May 12 and 14, **1939** to 52 mountainous communities in Pennsylvania and West Virginia equipped with Adams's specialized ground release devices.

The reliable and punctual enterprise is concluded on May 13, **1940**, by which time the company is the successful bidder for Air Mail Routes 1001 and 1002 operating out of Pittsburgh. On July 21, the CAB grants DuPont (Adams has since left the company) a permanent mail certificate (the first granted a carrier by that new agency) and scheduled operations are resumed under that award on August 12.

In **1941**, AAA flies pick-up over 1,386 miles covering 111 destinations on five routes in six states; 46 points have no airports. The fleet grows to 12 Stinson SR-10C Reliants. Even as the unorthodox mail service is being flown on a 1,040-mile route over treacherous mountains in Pennsylvania and West Virginia, All-American Aviation undertakes cargo flights for the U.S. Army. Founder DuPont, while serving as special Army Air Forces advisor for glider operations, is killed in the crash of an Army glider on September 11, **1943**.

Two Stinsons are lost in fatal crashes, one each in **1944** and **1945**. Halsey R. Bazley succeeds DuPont as CEO and enters a postwar period of frustration. Without mail subsidy, with plunging mail traffic, and faced with the CAB's refusal to allow combined passenger-mail airborne pickup, the carrier faces oblivion. Still, the company provides mail flights to Washington, D.C. and 117 communities, some only minutes apart, in Delaware, Kentucky, New York, West Virginia, Pennsylvania, and Ohio. Its five routes cover 1,449 miles.

In **1946**, Robert M. Love is named president and he moves the carrier away from the mail-pickup business towards passenger carriage. From the company's general offices on Greenhill Avenue in Wilmington, Delaware, the new CEO applies for 66 new routes to provide frequencies to 1,156 communities east of the Mississippi River. Employing small aircraft, AAA continue to derive its **1947** revenues exclusively from mail contracts rather than freight or express. On September 20, **1948**, the company name is changed to **All-American Airways**.

War-surplus Douglas C-47s (military DC-3s) are acquired early in **1949** and application is made to the CAB for a permanent certificate. On January 13, the CAB approves service for a three-year period in the Pittsburgh-Cincinnati-Jamestown-New York-Philadelphia region. The number of Washington-Philadelphia frequencies is increased on April 16. Having halted all mail pickup operations at the government's request on June 30, the company receives a CAB certificate for regular passenger transport operations on November 11. Eight days later, a Douglas transport crashes into a house near Detroit Airport (three dead).

Scheduled Douglas DC-3 passenger service commences on March 7, **1950**. Three months later, corporate headquarters are transferred to Washington, D.C. (DCA). On June 1, **1951**, the carrier begins service from New York to Asbury Park, Atlantic City, and Washington, D.C.

On August 9, **1952**, air-freshening lamps are installed in the DC-3 cabins and, on January 2, **1953**, All-American Aviation is split into two concerns: All-American Engineering and Research Corporation and **Allegheny Airlines (1)**, with Leslie O. Barnes as first president.

ALL CANADA EXPRESS, LTD.: Canada (1993–1996). All Canada is formed at Vancouver in **1993** to provide all-cargo flights to destinations in British Columbia and throughout western Canada. Service begins with 2 Convair CV-580 leased from **Kelowna Flightcraft Air Charter, Ltd.**

Operations continue apace throughout the remainder of the year and in late **1994** operations are enhanced when Kelowna delivers 1 Boeing B-727-27F under charter.

The fleet is further increased in **1995** by the addition of 1 each B-727-22C and B-727-92C, both chartered from Kelowna.

Although Kelowna replaces the B-727-92C with 2 B-727-260AFs in **1996**, flights cease at year's end.

ALL ISLAND AIR: United States (1973–1980). All Island Air is established at St. Croix, U.S. Virgin Islands, in **1973** to provide scheduled and charter air taxi services to regional Caribbean destinations. Employing 1 each Piper PA-23 Apache, PA-23 Aztec, and Britten-Norman BN-2 Islander, All Island duly inaugurates daily

roundtrips connecting its base with St. Thomas, Tortola, Virgin Gorda, and Anegada in the British Virgin Islands.

Operations continue apace until 1980.

ALL LEISURE AIRLINES, LTD.: United Kingdom (1995–1997). With headquarters at West Sussex, ALA is established in May 1995 by All Leisure Travel Holdings, Ltd. With Bob Stevens as CEO, an operations base is set up at London (LGW) and a workforce of 50 is recruited. An Airbus Industrie A320-200 is acquired with orders let for 3 more. Revenue flights commence with the holiday season in the fall.

Through October 1996, the company's Airbuses transport a total of 119,000 passengers from London, Manchester, and Newcastle to destinations in Europe and the Mediterranean. It is decided not to begin a new tourist season and the company is shut down at the beginning of 1997.

ALL NIPPON AIRWAYS COMPANY, LTD. (ANA): Kasumigaseki Blvd., P.O. Box 100, 3-2-5 Kasumigaseki, Chiyoda-ku, Tokyo, Japan; Phone (81-3) 3592-3035; Fax (81-3) 3506-3596; <http://www.ana.co.jp> (Japanese); <http://www.ana.co.jp/index-e.html> (English); Code: NH; Year Founded: 1958. All Nippon Airways Company, Ltd. (ANA) is formed on March 1, 1958 through the merger of **Japan Helicopter & Aeroplane Transport Company, Ltd.**, and **Far East Airlines Company, Ltd.** The company administration is largely made up of JHAT officials, including President Masuichi Midoro. The merged fleet includes Douglas DC-3s, de Havilland DH 114 Heron 1Bs, and several DH 104 Doves.

Service is started using Far East equipment over a route Osaka–Fukuoka via Iwakuni. On August 12, a DC-3 with 3 crew and 30 passengers crashes into the sea near Izu Island, south of Shimoda; there are no survivors.

In October, a technical committee is formed for the prevention of accidents. It determines that the previous practice of employing cannibalized spare parts from out-of-service airliners to make repairs must be halted. With a government loan, orders are placed late in the year for Convair CV-440s and de Havilland DH 114 Herons. Start-up costs and lost business due to the accident bring a loss of ¥400,000.

The Japanese government grants the carrier full certification to operate over domestic trunk routes on April 1, 1959. Two Douglas transports inaugurate twice-daily direct service between Tokyo and Osaka. Capitalization is increased to ¥ 600 million (US\$2 million) on April 27.

In May, a cooperative agreement is signed with **Japan Air Lines Company, Ltd. (2)**. The first ANA CV-440 arrives at Tokyo (NRT) on August 19; it conducts its initial proving flight on September 1 as a DC-3 supplement on the Tokyo to Osaka trunk run. Following the September 26 typhoon that devastates Nagoya, causing 5,000 deaths, the government requisitions the CV-440 to help provide relief support.

CV-440 regularly scheduled service begins on October 10 from Tokyo to Osaka, Nagoya, and Sapporo. Pooled fares take effect with JAL-2 over these routes on the same day. During the fourth quarter, Sendai, Misawa, Nagasaki, Hakodate, and Kumamoto all join the company's network. Additional DH 114s are placed on feeder routes toward year's end.

Orders are placed in February 1960 for Fokker F.27-100s. On March 16, a DC-3, with 33 passengers and first flown by **Pacific Southwest Airlines** in California, collides with a JASDF F-86D fighter while landing at Komahi Airport, Nagoya; two passengers and a stewardess are killed aboard the civil aircraft.

Orders are placed on April 15 for Vickers Viscount 744s; the first 744 (formerly employed by **Capital Airlines** in the U.S.) is delivered on June 23 and enters service over the direct Tokyo to Sapporo route two days later. Joint founder Katsuyoshi Nakano is killed in the Hokkaido crash of an Auster J/5 Autocar on November 16.

The carrier's 3 F.27-100s are delivered in the spring of 1961, followed by 2 additional Viscount 744s.

A Vickers Viscount 744 with 5 crew and 44 passengers must be written off following a hard landing at Itami Airport on June 12; there are no fatalities.

Based at Osaka, F.27-100s enter service on July 10 on routes to Okayama and Fukuyama. On September 23, scheduled frequencies are initiated from Kagoshima to Naha, on the U.S.-administered island of Okinawa. Passenger enplanements are reported at 1,866,870.

The fleet in 1962 comprises 11 DC-3s, 5 CV-440s, 6 DH 114s, 5 Viscount 744s, and 3 F.27s. A period of cooperation with Hiroshima-based **Toa Airways Company, Ltd.** begins on August 22 when the two companies sign marketing agreements. ANA also inks similar arrangement documents with **Naka Nihon Koku (Central Japan Airlines Company, Ltd.)** of Nagoya on September 15 and **Nagasaki Airlines Company, Ltd.** two days later.

On November 19 training flight, a Vickers Viscount 828 with four crew crashes near Nagoya; there are no survivors.

Three Viscount 828s and 15 F.27-100s are acquired in 1963; orders are placed for Nihon YS-11s. Seeking under the Japan Air Lines Law of 1953 to become the nation's preeminent domestic trunk line operator, the carrier begins to takeover or influence the nation's smaller operators, turning the survivors into feeders. The process is begun on February 11 with the transfer of its Hiroshima fringe routes to **Toa Airways Company, Ltd.**

A DC-3 is lost at Sendai under unknown circumstances on May 10. Tokyo-based **Fujita Airlines, Ltd.** is purchased and merged on August 31. The thin routes out of Fukuoka are transferred to **Toa Airways Company, Ltd.** on October 16.

The workforce totals 2,086 in 1964. The last DC-3 is retired on March 15. The carrier's first jetliner, a leased Boeing 727-181, enters service on May 25 over the Tokyo to Sapporo route. The carrier's lesser routes out of Osaka are given over to **Toa Airways Company, Ltd.** on June 15. By the end of July, the Boeing trijet has proven so popular that it has performed 320 flights and suffers only two delays, both weather-related. Additional 727s are requested, also on charter from their manufacturer.

Flights to Yonago commence on August 1 and the prototype Nihon YS-11 transports the Olympic flame from Naha on Okinawa to Tokyo on September 9, stopping at several ANA stations en route.

A YS-11-111 with 5 crew and 45 passengers crashes while on initial approach to Matsuyama Airport on November 13; there are no survivors.

The last CV-440 is retired on November 30 and the 25th F.27-100 enters service on December 8. Bookings this year total 2,112,000.

The scheduled services of **Naka Nihon Koku (Central Japan Airlines Company, Ltd.)** are taken over on January 25, 1965. The first Viscount 828s enter service in March and the fleet now comprises 41 aircraft, including several more B-727-181s delivered during the year. In July, ANA becomes Japan's (and the world's) third operator of the Nihon YS-11, the first postwar commercial transport to be designed and manufactured in Nippon. The company nicknames the aircraft type the Olympian and places it into service on the Osaka–Kochi route on September 20.

The Tokyo–Osaka route is flown exclusively by B-727-181s as of October 1. The employee population grows to 2,423 this year and a total of 2,601,814 passengers are carried.

Coming in from Chitose on February 4, 1966, Flight 60, a B-727-81 with 7 crew and 126 passengers, crashes into Tokyo Bay 12 km. ESE of Haneda Airport and sinks; there are no survivors from the worst single-plane tragedy in commercial aviation history to date.

Holiday flights to Miyakejima commence on March 4 and Fukui joins the route network on July 1. A YS-11 crashes into the sea while attempting to land at Matsuyama Airport on November 13 (50 dead). The last CV-440s/DC-3s are retired as additional B-727-181s join the fleet later in the year. Bookings drop to 2,268,000.

Airline employment in 1967 is 2,740. The fleet now comprises 1 DH 114, 6 YS-11s, 7 B-727-181s, 8 Viscount 828s, and 25 F.27s; orders are placed for 11 more YS-11s and 5 B-737-181s. Accepting responsibility for the previous year's disasters, President Kaheita Okazaki resigns on April 22.

In July, the company assumes responsibilities for the route from Minami Daito to Yonaguni via Naha, Kunijima, Miyako, and Ishigaki,

which had been operated for four years by **Scheduled Air Services, Ryukyus (SASR)**, a subsidiary of the U.S. CIA's proprietary company, Pacific Corporation.

A route begins to Tottori on August 1 and **Nagasaki Airways, Ltd.** is purchased on December 1. Enplanements rebound to 2,697,968.

The workforce is increased in **1968** to 3,207. In February, a department is established to prepare for international services; it will lay the foundations for ANA's debut in the international market place. One B-727-181 and 2 YS-11As are added.

Passenger boardings increase 30% to 3,927,601 and freight traffic skyrockets 302%.

Nagoya to Shirahama frequencies commence on March 1, **1969**. Two B-737-214s are leased from the U.S. local service operator **Pacific Southwest Airlines (PSA)** in April and the first 2 owned B-737-281s are delivered in May. The first of the 11-ship order of YS-11As are also delivered. The PSA Boeings are employed, beginning on June 20, over the routes from Tokyo to Fukuoka via Osaka. The B-727-281s enter service on October 1.

A YS-11A with 4 crew and 49 passengers is destroyed as the result of a bad landing at Miyazaki Airport on October 20; there are no fatalities.

A short-lived pilots strike begins on December 12.

Enplanements jump to 4,484,000 as, at decade's end, almost all large- and medium-sized cities are served. Since 1960, passenger boardings have grown at an annual rate of 30% to 60%.

The payroll is up 28% in **1970** to 5,031 personnel. The fleet stands at 52 aircraft, including 2 additional B-727-181s, 8 B-737-281s, and 17 YS-11As delivered throughout the year.

The company operates its first international charter services on July 15 and 31, respectively, as YS-11s fly to Pusan, South Korea.

Intent upon suicide, a lone assailant, armed with what turns out to be a toy pistol, commandeers a B-727-181 en route from Nagoya to Sapporo on August 19. The pirate demands that the trijet land at a military base and that a rifle and ammunition be awaiting him when the aircraft arrives. A successful effort to distract the man occurs on the ground when a woman feigns labor pains; in the confusion, the hijacker is taken in hand by police. He will be tried and given a seven-year prison sentence.

ANA Trading Company, Ltd. is established on October 1 and, five days later, **Yokohama Airlines Company, Ltd.** is purchased and merged. In November, subsequent to the government's Civil Aviation Constitution of 1970, the possibility of offering short-haul international affinity charters on a regular basis is opened to ANA for the first time.

Cargo accelerates 12.57% and passenger boardings soar 41% to 7.6 million. As the new decade begins, the carrier, in terms of enplanements, is the world's ninth largest carrier. Its fleet is 22nd in size.

With 109 passengers boarded, a B-727-181 operates the carrier's first international affinity charter on February 21, **1971**, from Tokyo to Hong Kong. Later converted to firm orders, the company, in March, takes 6 Lockheed L-1011 TriStar 1s on option.

Just after takeoff from Tokyo on May 13 for a scheduled flight to Sendai, a YS-11A is captured by a lone assailant, who orders the plane to return to its point of origin. On the ground, the pirate meekly surrenders to police.

En route from Sapporo to Tokyo on July 30, Flight 58, a B-727-281 with 7 crew and 155 passengers, collides with a JADF F-86F Sabrejet over Morioka, Iwate Prefecture, 385 mi. NW of the capital city. Both planes crash, however, the fighter pilot is able to safely eject; all aboard the jetliner perish.

Incidentally, two of the six DC-10s that would have come to ANA are sold to other carriers—**American Airlines** and **THY (Turk Hava Yollari, A.O.)**—and suffer near-fatal (AA) or fatal (THY) accidents with them.

The first affinity group charter to Thailand from Nagoya to Bangkok is operated on August 3. In late October, the carrier begins flying skiers from Tokyo (HAD) to resorts on Hokkaido. Enplanements this year swell to 8,065,940.

Charter flights are begun to the Chinese cities of Peking and Shanghai in **1972**. The company in July records the first month during which it has transported a million passengers. Airline employment is now 6,331. The fleet is increased by 8 B-727-281s, 10 B-737-281s, and 6 Piper PA-31-310 Navajos.

Eight F.27-100s are sold as orders are placed on October 30 for 6 Lockheed L-1011 TriStar 1s. The Mitsui Corporation has originally ordered 6 Douglas DC-10-10s to lease to the airline, but in a startling about-face that will later lead to a government-rattling bribery scandal, the company chooses the competing wide-body instead.

Passenger boardings this year jump 17% to 9,718,000 while freight traffic doubles.

The last F.27s are disposed of in January **1973** as the TriStar order is confirmed, together with 15 options. International charter services, now including Inclusive Tour Charters, increase by 102%. Kumamoto to Bangkok charters begin on March 31. New services initiated include Fukuoka–Okinawa, Miyazaki–Kumamoto, Tokyo–Omura, and Omura–Kagoshima.

Charter service to Khabarovsk is launched and a variety of computerized systems are installed. The hotel subsidiary ANA Enterprises Co., Ltd. is established in November and the first L-1011 TriStar 1 is delivered on December 18.

Passenger bookings are up 37% to 13,313,660 and cargo traffic climbs by 41%.

The workforce reaches 8,568 in **1974**. A 10-year, \$70-million noise abatement program is announced. Six more L-1011 TriStars will be delivered through December. The subsidiary **All Nippon Helicopter Company, Ltd.** is created and provided with a fleet that includes 1 YS-11A, 2 Sikorsky S-61Ns, and 1 Bell 206B JetRanger.

In March, **Air Nippon Co., Ltd. (ANK)** is established as a domestic subsidiary, providing feed from regional destinations and linking remote islands to the mainland. Also in March, the carrier's first Lockheed L-1011 TriStar 1 is introduced on the Tokyo to Okinawa frequencies. The last B-727-181 is retired on May 9 and, after July 20, L-1011s are placed on the Tokyo to Okinawa, Sapporo, and Kagoshima frequencies.

Passenger traffic accelerates 10% to 13,820,000 passengers carried, but freight dips 2%.

The employee population in **1975** is 9,017. Continuing from the previous year, three new computerized systems come on line, including one for flight operations planning, one for the processing of flight information, and a digital flight data recorder to provide data analysis. The carrier's Okinawa Harbor View Hotel opens in June.

In association with Okinawa Marine Expo, YS-11 service is inaugurated on July 20 to Amami-O-Shima and Ii Shima.

A youth, claiming to have a knife, takes over an L-1011 en route from Tokyo to Hokkaido on July 28, forcing it to return to its point of origin. On the ground, the young man is overpowered by crew members and nearby passengers.

Seven additional TriStars are added and new services are initiated Kumamoto–Okinawa, Tokyo–Kushiro, Matsuyama–Okinawa, and Fukuoka–Tsushima, the latter city-pair on October 1.

Cargo grows 25.9% and passenger boardings inch upward another 3% to 13,839,000.

The employee number rises 1.5% in **1976** to 8,911. Four more L-1011s are acquired, but on July 4 the 1972 Lockheed arrangement becomes a huge public scandal. Prime Minister Kakuei Tanaka is arrested on July 27 and promptly resigns his office; he is indicted at Tokyo on August 16 for allegedly accepting \$1.6 million in bribes from Lockheed Aircraft Corporation to arrange the sale of the TriStars to ANA. Hearings before the U.S. Securities and Exchange Commission and U.S. Senate reveal the scandal to have been executed on a worldwide basis; however, ANA is shown to have been largely required to accept the airliners provided for it by Mitsui.

The company's one hundred-millionth passenger (cumulative) is boarded on September 6. On December 17, Tokuji Wakasa becomes chairman and Masamichi Anzai, president.

Passenger bookings rise 7.4% this year to 14,883,797 and freight jumps 13.1% to 70.3 million FTKs.

Three more TriStars are delivered in 1977 as 11 B-747SR-81s and 6 B-737-281s are ordered.

En route from Sapporo to Sendai on March 17, Flight 817, a B-727-281 with 180 passengers, is taken over by a lone gunman, who orders the aircraft to return to its point of origin. As it prepares to land at Tokyo, the assailant slips into a restroom, takes poison, and dies.

The carrier operates its first nonscheduled charter flights from Tokyo to Indonesia beginning on October 30.

Enplanements this year soar to 17,547,818.

Airline employment is increased 7% in 1978 to 9,822. Three B-727-281s and 1 YS-11A are placed in service during the year, and the first B-747-181B/SR or B-747SR is delivered on December 20, followed by another next day. The carrier is now owned by the Nagoya Railroad, **Japan Air Lines Company, Ltd. (2)**, the Tokyo Corporation, and the Tokyo Marine and Fire Insurance Company.

On September 21, the carrier joins with the steamship companies of Mitsui-NYI, Nihon Yusen, Kawasaki, and Yamashita to create **Nippon Cargo Airlines Co., Ltd.**, a charter operation. ANA World Tours Co., Ltd. is established on September 28. On November 16, Nippon Cargo applies for scheduled all-cargo operating authority.

Passenger traffic for the world's sixth largest airline increases 10.2% to 19,541,000 passengers carried and cargo swells 28.5%. Revenues rise 11.5% to \$1.27 billion and expenses grow 15.2% to \$1.22 billion. The operating profit falls 38.2% to \$49 million and the net income dips 16.2% to \$56.4 million.

Airline employment grows by 6% in 1979 to 10,413. B-747SR-81 service begins with the lead plane flying from Tokyo to Sapporo and Fukuoka in January. Three additional short-haul Jumbojets join Chairman Wakasa's fleet on February 28, September 5, and October 9, respectively, and orders are placed for 25 B-767-281s, with options for 15 more. Charters, meanwhile, are flown to Beijing from Sendai, Oita, and Kagoshima in August–October.

Rocks from Sakura Jima crack the windshields of two jetliners flying over the volcano on November 18.

Passenger boardings jump 15.8% to 22.7 million and freight advances 26.4%. Due to increased fuel costs, losses are significant: \$39.5 million (operating) and \$45.6 million (net).

The workforce is increased 3.7% in 1980 to 10,801. Six additional B-747SR-81s join a fleet that also includes 5 short-range Jumbojets, 22 B-727-281s, 28 YS-11As, 21 L-1011s, and 15 B-737-281s. The carrier's longest route, the 2,051-km. Sendai–Okinawa segment is opened.

Cargo grows 10.2% to 148 million FTKs and passenger bookings incline upward a slim 0.3% to 22.8 million. On revenues of \$1.7 billion, expenses are \$1.72 billion, leaving an operating loss of \$14.4 million; still, a net \$13.5-million profit is earned.

The workforce grows only 0.8% in 1981 to 10,892. Two more B-747SR-81s arrive on January 16 and February 15 and, in July, Japan's domestic airline boards its two hundred-millionth passenger since 1953. Cost-saving measures now implemented include the retirement of 1 L-1011, 9 B-727-281s, and plans are made for further reductions.

In October the company celebrates the tenth anniversary of its Ski Charters to Hokkaido, with the *Peanuts* cartoon character Snoopy chosen as mascot. Two short-range Jumbojets arrive on December 17 in a rare double delivery.

Passenger boardings increase 3.4% to 23.56 million and cargo is up 14.9% to 170.21 million FTKs. Revenues dip to \$1.61 billion and expenses are \$1.626 billion, leaving an operating loss of \$14.1 million, but a net profit of \$8.8 million.

The workforce is decreased 2.2% in 1982 to 10,665. Vice president-maintenance and engineering Ioshiyuki Funatsu is named executive vice president and 2 B-747SR-81s arrive, 1 each on June 17 and November 12. At year's end, the carrier's livery is changed.

Passenger bookings decline 3.8% to 22,632,000, but freight grows 7.6% to 170.24 million FTKs. Revenues total \$1.77 billion, a 6.5%

boost, and expenses decline to \$1.73 billion, thus allowing an operating profit of \$44 million and a net profit of \$30 million.

The employee population loses only 31 members in 1983. Taizo Nakamura is appointed president and 6 of the 25 ordered B-767-281s join the fleet, painted in the new livery adopted at the end of the previous year. These enter service on the routes from Matsuyama to Tokyo and Osaka on June 21.

An international charter service is started to Guam and a total of 364 nonscheduled flights are made to various destinations.

Passenger boardings dip another 2.4% to 22,088,000, but cargo rises again, up 6.3% to 191.77 million FTKs. On revenues of \$1.9 billion, the operating profit accelerates to \$43.3 million and the net profit to \$30.5 million.

The workforce is up 1.9% in 1984 to 10,783. Seven additional B-767-281s are received, bringing the fleet total to 13 B-767-281s, 17 B-747SR-81s, 17 L-1011s, 12 B-727-281s, 14 B-737-281s, and 19 YS-11As. The company sells 6 of its Lockheeds to Boeing on March 1 for \$8.6 million and then agrees to lease them back for 15 months. The one millionth charter passenger (cumulative) is boarded on August 24.

Passenger enplanements ascent 8.5% to 23,972,000 and freight climbs 11.4% to 199.17 million FTKs. Revenues decline 2.3% to \$1.8 billion; profits are, respectively, \$43.3 million (operating) and \$35.7 million (net).

The workforce is increased 1.9% in 1985 to 10,851. The charter season starts on April 1; fewer of the 342 total flights will be made on short-haul routes (e.g., Hong Kong) and more to such farther destinations as Singapore and China. **Nippon Cargo Airlines, Ltd.** B-747F flights Tokyo–San Francisco also commence in April. Orders are placed for 2 B-747-481s and 10 B-767-381s as the number of B-767-281s delivered is increased to 21 and 6 L-1011s are sold.

First-class service is introduced on domestic flights during July. On September 24, a B-747SR-81 charter flies Nagoya–Perth, the first time the carrier operates to Australia.

In December, the government opens international operations to all of the country's airlines by revising its air transport policy and deregulating the industry; domestic service is also opened to competition.

Traffic is severely impacted by the August **Japan Air Lines Company, Ltd. (2)** crash; on the year, passenger boardings rise only 1.3% to 24,282,000 and freight traffic climbs 8.3% to 215.19 million FTKs. The carrier retains its ranking as the world's 6th largest airline in terms of passengers carried; it is 18th in total fleet size and 15th in total revenues/operating profit. Revenues dip 1.8% to \$1.8 billion; the operating profit is \$76.7 million and the net gain is \$30 million.

Employment rises 11.1% in 1986 to 11,498. In January, orders are placed for 15 B-767-381s (with 10 options) to replace the B-727-281s/L-1011s over the next 7 years.

An application for scheduled L-1011 service from Tokyo (NRT) to Guam is approved in February; the route is opened four times a week on March 3, the first scheduled international service by a Japanese airline other than **Japan Air Lines Company, Ltd. (2)**. In the same month, the B-747-481 order is increased to three. In May, 20% weekend discount domestic fares are introduced.

Transpacific B-747-281LR service to Los Angeles from Tokyo (NRT) begins on July 16 and the first capital-to-capital nonstop scheduled service between Japan and the U.S. starts on July 26 with a Jumbojet service from Tokyo (NRT) to Washington, D.C. (IAD).

During the year, the carrier adds 4 B-767-281s and 3 B-747-281LRs (B-747LRs); in December, it places a \$1-billion order for 10 Airbus Industrie A320-200s, with 10 options. A Gold Pass frequent flyer program is inaugurated to the American market on December 31. Customer bookings slant upward a scant 1% to 24,503,000 while cargo does better, climbing 7% to 230.78 million FTKs.

The payroll is increased by 4.4% in 1987 to 12,004 and Akio Kondo becomes president. In April, ANA begins scheduled services to Asia, with flights to Beijing and Dalian.

Company unions joins those from **Japan Air Lines Company, Ltd. (2)** and **Air Nippon Company, Ltd.** in a 48-hour strike on April 22–23

as labor and management negotiations on annual wage hikes collapse. Officials report that the job actions are the first for JAL in two years and the first for ANA in eight. Nearly half of domestic and international services are cancelled on the two days.

The sophisticated ABLE computer reservation service comes on line in May. The same month, the weekly nonstop service from Tokyo to Los Angeles is increased from five to seven flights while that to Washington, D.C. grows from three flights to four. A fourth B-747LR is acquired on July 13 and a scheduled four-times-per-week route is opened to Hong Kong's Kai Tak Airport, also in July.

Tragedy occurs on August 11, just after a B-747-281B with 335 passengers, arrives at Washington, D.C. (IAD). The boarding step is placed about one foot away from the aircraft rather than against it. When the flight attendant opens the L5 door, she falls through the open doorway to the ground 20 feet below and is killed.

The first of 15 B-737-381s are delivered, also in August, the same month in which the first charter service to New York City is flown. B-747LR Tokyo to Sydney operations begin in late October, the first time that ANA has operated a regular service across the equator.

Passenger boardings rise 5.8% to 25,930,000 and freight pushes ahead by 36.1% to 330.3 million FTKs. Revenues climb 3.1% to \$3.29 billion and with costs held down, operating income of \$178.2 million is generated along with net gain of \$38.3 million.

Airline employment grows a further 1.7% in 1988 to 12,214 as an arrangement is worked out with **Command Airways** to offer ANA passengers free connecting service between Washington D.C. (IAD) and New York. The number of nonstops between Washington and Tokyo is increased to five per week at the end of March, while the number of Command connecting flights reaches the same number. Simultaneously, a second Tokyo to Sydney nonstop frequency is begun. In May, a new \$384-million ABLE computer center is opened near Tokyo (HAD) to house the company's domestic and international computerized reservations system.

Daily Tokyo to Hong Kong and Guam flights commence on June 1 and three-times-per-week flights are inaugurated to Beijing. The number of weekly flights to Beijing is increased to five in July; five-times-per-week Tokyo to Seoul B-767-281 flights commence in September. A 3.5% minority interest is acquired in **Austrian Airlines, A.G.** Full control is taken of the consortium subsidiary **Nihon Kinkyori Airways, Ltd.** and its name is changed to **Air Nippon, Ltd.**

Customer bookings rise 4.7% to 27,157,000 (736,631 international) and cargo is up by 23.2% to 406.91 million FTKs. Revenues continue their skyward thrust, reaching up 28% to \$4.2 billion. Operating income swells to \$262.4 million while net gain reaches \$47.9 million.

The payroll is cut a slight 0.2% in 1989 to 12,193 and the fleet now includes 102 transports, many of which are Jumbojets. The carrier joins IATA on January 1 and now offers 468 flights per day, all but 10 of which are over a domestic route system that serves 31 stations. Also in January, a contract is signed with **Trans World Airlines (TWA)** under which the American major begins to provide B-727-200 connecting service for ANA passengers between Washington, D.C. (IAD) and New York (LGA).

Continuing its rapid expansion, ANA adds a third region, Europe, to its international network. A letter of intent is signed with **SAS (Scandinavian Airlines System)** in February for the initiation of a jointly operated roundtrip service twice weekly, via the North Pole, from Tokyo to Stockholm.

On April 5, it is reported that the carrier will join with five other airlines in a Southeast Asian computerized reservations system. ANA, **Cathay Pacific Airways (Pty.), Ltd.**, **Singapore Airlines, Ltd.**, **China Airlines, Ltd. (CAL)**, **Malaysia Airlines, Ltd. (MAS)**, and **Philippine Airlines (PAL)** will not only be able to make reservations and issue tickets but make arrangements as well for car and hotel reservations.

The joint service to Stockholm is inaugurated in April. The same month the airline purchases 3.5% shareholding (77,000 shares) in **Austrian Airlines, A.G.**

As the result of an opening of slots at Tokyo (HAD) by the Ministry of Transport on May 17, ANA is able to inaugurate thrice-weekly B-747-281LR service on July 20 to London (LGW). Two of the flights are direct and one goes via Moscow. Incentives offered to travelers on the new services include free limousine service within 40 miles of Gatwick Airport or a free train ticket to London's Victoria rail station.

Bangkok also joins the route network during the month, along with London (LGW) once per week via Moscow. A joint service to Vienna is simultaneously opened in association with new partner **Austrian Airlines, A.G.** and **Aeroflot Soviet Airlines**; twice-weekly services, employing the Austrian A310-324, are inaugurated linking Tokyo via Moscow. The Airbus service is operated with Austrian flight deck crews and mixed cabin crews, with costs and revenues divided 40-40-20 between ANA, Austrian, and Aeroflot.

Flights also begin, twice weekly to Saipan, in November. Orders are outstanding for 26 B-747-481s, 20 A320-200s, and 30 B-767-381s.

Passenger boardings jump 9.3% to 29,693,287 and freight moves ahead by 16.1% to 472.24 million FTKs. Revenues ascend 9.5% to \$3.97 billion and profits of \$212.6 million (operating) and \$50.9 million (net) are generated.

Company employment grows 3.5% in 1990 to 12,617. Service between Tokyo and Saipan is doubled in January to four weekly frequencies. Also during the month, the company receives the 1989 "Market Development Award" from *Air Transport World* magazine.

The subsidiary **World Air Network Company, Ltd. (WAC)** is founded in March to offer charter flights to southeast Asia from smaller Japanese cities; this is the first such international charter company in Japan. The new entrant is based at Singapore to avoid Japan's bottlenecked airports; Australian pilots are hired and flights begin with a single B-767-281ER leased from ANA.

On April 2, the carrier, together with **Japan Air Lines Company, Ltd. (2)**, begins direct nonstop trans-Siberian flights between Tokyo and Madrid and Tokyo and Stockholm five times a week. These passenger flights will no longer stop in Anchorage.

When **Austrian Airlines, A.G.** undergoes another round of privatization in April, ANA raises its shareholding from 3.5% to 5%. At the same time and in response to a significant demand by Japanese tourists and businessmen for flights to Eastern Europe, ANA begins to link its Vienna service to Austrian's extensive route network into the east. The airline's last B-727-281, JA8355, completes its final service under the command of 20-year veteran trimotor Capt. Toshio Ishikawa late in the month and is retired with a gala party at a hangar at Tokyo (HAD). It is the last of 45 Boeings employed since 1964 to fly over 100 million passengers around the island nation.

In May, **Austrian Airlines, A.G.** issues another 400,000 shares of stock at \$358 per share and ANA increases its interest to 9%, paying \$65 million for an additional 157,000 shares, which brings its stake in the European airline to 234,000 shares. In May, an initial agreement is concluded with **USAir** for a block-seat purchase and connecting service on three weekly flights between Washington, D.C. (IAD) and Orlando. Reciprocal frequent flyer program participation is also planned.

The first of 43 B-747-481s on order is delivered at the end of August and, in cooperation with **SAS (Scandinavian Airline System)**, begins alternating nonstop service in September between Tokyo and Stockholm via the U.S.S.R.; the new routing cuts 6.5 hrs. from the previous service flown via Anchorage. In October, twice-weekly B-747-281LR services are started to Paris. Cooperative agreements are signed with **Sabena Belgian World Airlines, S.A.** and **Malaysian Airlines, Ltd. (MAS)**. The first B-747-481 "Techno Jumbo" is introduced on domestic routes in November. The carrier's international computerized reservations system, INFINI, goes on line as a joint venture with the consortium ABA-CUS. The **USAir** agreement goes into effect in December.

Customer bookings accelerate 11.3% to 33,048,000 and cargo climbs 12.8% to 532.75 million FTKs. In terms of passenger numbers, ANA is now Japan's largest airline as well as the 8th largest in the world and its 106-unit fleet is the 19th largest.

Airline employment grows by 4.2% in 1991 to 13,117 and the fleet increases by 14 aircraft. The first of 13 A320-211s on order is delivered in January. Also during the month, ANA receives the 1990 "Passenger Service Award" from *Air Transport World* magazine.

Doubling the number of its joint operations with international airlines, ANA, during January–February, commences operations to Brussels and Kuala Lumpur. The former service is flown with **Sabena Belgian World Airlines, S.A.**, employing the Belgian line's B-747-329C, from Tokyo via Moscow and Siberia. Flights begin to overseas destinations from regional Japanese cities during the month, beginning with a joint Nagoya to Kuala Lumpur service operated with **Malaysian Airlines, Ltd. (MAS)**, employing the Malaysian airline's DC-10-30. The first European hotel is opened at Vienna.

Club ANA business-class service is launched with the B-747-481 in March as the "Techno Jumbo" begins international service to Washington, D.C. (IAD). Tokyo to New York B-747-481 thrice-weekly flights begin on March 9 while, at the same time, the Airbus Industrie A320-211s are introduced on domestic routes. A Tokyo–Moscow–Paris route is opened on April 7. Construction is begun on an International Flight Training Academy at Bakersfield (California) in June. The charter subsidiary **World Air Network Charter (WAC)** begins nonscheduled holiday flights from its Singapore base in March with a dedicated B-767-381ER leased from its parent.

U.K. operations are transferred from Gatwick Airport on July 1 as company B-747-481s begin flying into London (LHR) from Tokyo thrice weekly. Having taken delivery of its 46th B-767 in July, ANA is now the world's largest operator of the type.

Company shares begin trading on the London Stock Exchange in August, the same month Fukuoka to Bangkok service is initiated. Tokyo to London frequencies are increased from three to five per week at month's end. Also at this time the decision is taken to postpone the creation of a domestic all-cargo airline.

Former transport ministry official Takaya Sugiura is named chairman in August, succeeding Tokuji Wakasa, who remains as honorary chairman. Also in August, daily nonstop connecting service is started between Washington, D.C. (IAD) and Orlando in conjunction with **USAir** and its B-737-300s. Thrice-weekly roundtrip Nagoya to Honolulu flights begin in September, along with Hiroshima to Seoul and Nanta to Berlin service. At the same time, the airline begins to make available a two-part, in-flight audio program designed to teach Japanese to American passengers and English to Japanese.

During the first week of October, an agreement is signed making **Air Canada, Ltd.** ANA's general sales agent in Canada. A new B-747-481 is simultaneously employed to increase frequencies on the New York run from three to five per week. After a lengthy waiting period, twice-weekly B-767-381ER roundtrip Tokyo to Singapore service is finally opened on December 3.

Passenger boardings also increase by 4.2%, to 34,438,000 while freight rises 10.3% to 586.01 million FTKs. Revenues are \$5.2 billion and with costs down, the operating profit is \$179.6 million and net gain totals \$75.8 million.

The payroll grows 4.5% in 1992 to 14,288. Customized for domestic use, the company's first B-747-481D, delivered in January, enters service on the routes from Tokyo to Sapporo and Nagasaki in February. Fukuoka–Dalian service is launched in April. A 13.5% interest is acquired in the ABACUS computerized reservations system and a hotel is opened at Beijing.

In an effort to slow a fiscal hemorrhage, the airline during the summer temporarily withdraws from its joint services with **Austrian Airlines, A.G.**, **Aeroflot Russian International Airlines**, **Sabena Belgian World Airlines, S.A.**, **Malaysian Airlines, Ltd. (MAS)**, and **SAS (Scandinavian Airline System)**.

The opening of Tokyo to Frankfurt service, scheduled for October, is postponed. ANA pilots begin training at the newly occupied International Flight Training Academy in California during November. At the same time, a new alliance is signed with **USAir** providing one stop ser-

vice from Charlotte, North Carolina to Tokyo via Washington, D.C.; the American airline operates six weekly connecting flights between the North Carolina city and Washington, D.C. (IAD) timed to catch the ANA morning flight. Five-times-per-week service is also launched between Orlando and New York (JFK) as ANA begins to participate in **US-Air's** frequent flyer program.

On December 20, the carrier launches a contest for the design of a full-fuselage aircraft promotional painting to be created by a Japanese student under the age of 15.

A total of 34,856,606 passengers are carried, a 1.6% boost and, in terms of passengers carried, ANA now ranks as the world's seventh largest airline. Freight traffic increases 8.4% to 635.62 million FTKs. On revenues of \$6.147 billion, expenses are \$4.525 billion; profits are \$301 million operating and \$20.8 million (net).

Airline employment in 1993 rises 3.6% to 14,800.

The carrier's first non-Japanese pilots (hired from Ansett Worldwide Wet Lease) begin flying the Tokyo to Sydney route in February. At the same time, weekly B-747-281B Tokyo to Frankfurt service is inaugurated.

Flights are suspended in March between Nagoya and Honolulu and Kuala Lumpur and Fukuoka and Bangkok. New service is opened from Tokyo to Shanghai.

Hoping to compete with discount travel agents for customers, the airline now begins to introduce more services for passengers paying full fare for economy-class tickets on international flights. In March, a number of first-class services are extended to full-fare economy ticket holders. For example, Yuttari Service (personal space) is introduced on routes to London, Paris, Frankfurt, and New York from Tokyo (NRT). The areas around each seat are enlarged and customers are provided with footrest cushions and slippers.

In-flight meals are upgraded in April. Flights to Stockholm are suspended in May.

In May, 12-year-old Yukie Obgaki's design of a whale is chosen from 20,110 entries as the winner of the previous year's promotional contest. A B-747-481 painted in that pattern instead of the usual ANA livery is accepted at Seattle in July. *Marine Jumbo* as it is called makes its first domestic flight on September 12 from Tokyo to Sapporo. A B-767-381 is also painted in the marine motif; *Marine Jumbo Jr.* is delivered on December 4 and is placed into service over the Tokyo to Toyama route on December 13.

During the year, the carrier moves into the new west terminal at its Tokyo hub.

As a result of the national recession, customer bookings slide 4% to 33,722,009. Cargo, however, swells 11.7% to 700.14 million FTKs. Revenues decline 4.9% to \$7.28 billion and a \$27.19-million net loss is suffered atop operating income of \$62.47 million. Still, the company is able to pay a small dividend.

In 1994 the workforce is cut by 6.8% to 13,800. In February, a joint agreement is signed with **Japan Air Lines Company, Ltd. (2)** for the purchase and repair of aircraft parts, shared hangars, engine test cells, and development of technical and training manuals for the Boeing 777, which both will acquire.

A \$136-million savings is realized in March through the sale and leaseback of 4 B-767-281s and 2 B-747-481s. Also in March, as part of a general route-restructuring plan, thrice-weekly roundtrips between Nagoya and Honolulu are suspended.

During the spring, Katuaki Kumagai, managing director of **All Nippon Helicopter Company, Ltd.**, reports a fleet comprising 2 Eurocopter AS-365N2 Dauphin IIs and 8 AS-355F2s. On June 18, it is announced that ANA and **Delta Air Lines** will forge a marketing alliance that could pave the way for the American major to fly to more Asian cities and for the Japanese line to increase its service in the U.S.

Although provisions for reciprocal ground handling in Japan, New York, and Los Angeles are implemented, code-sharing and blocked space arrangements for 13 weekly flights between Los Angeles and Tokyo will be held up by the U.S. and Japanese governments, which are involved in negotiating new bilateral air agreements.

In cooperation with **Air Canada, Ltd.**, a general sales agency is opened in Canada during August. Discussions begin on a strategic alliance that will include code-sharing, joint marketing, and reciprocal frequent flyer club participation. Meanwhile, the company begins to offer dual-designator or block-space flights with **Delta Air Lines** from Osaka to Honolulu and New York (ANA) and to Portland, Oregon (Delta).

Daily service is inaugurated in September from the new Kansai International Airport to Seoul, Singapore, and the northeast Chinese port city of Tsingtao. The route from Fukuoka to Beijing via Dalian is also expanded, with the departure point shifted to Osaka (KIX). The B-747-481 service to New York from Tokyo (NRT) becomes daily. On September 4, both *Marine Jumbo* and *Marine Jumbo Jr.* are present for an air show at Komatsu Air Base; the two uniquely painted Boeing aircraft are viewed by over 100,000 people.

Additional expansion from Osaka (KIX) occurs in October. Twenty-nine new daily departures are made to 13 Japanese cities. In addition, B-767-381ER flights commence thrice weekly to Hong Kong and Sydney via Brisbane.

As the result of difficulties between governments, plans to service Ho Chi Minh City are put on the shelf. Plans are, however, made to initiate services from Osaka (KIX) to Honolulu, Bangkok, Shanghai, Beijing, and Kuala Lumpur during the new year. Also planned is the commencement of operation for 3 of 18 new B-777-281s, the first of which is due for delivery the following October.

The joint service with **Austrian Airlines, A.G.** is resumed, minus the **Aeroflot Russian International Airlines** partner, with Austrian aircraft thrice weekly from Osaka (KIX) to Vienna and twice weekly from Tokyo (NRT) to Vienna. In addition, ANA aircraft operate a weekly code-shared Tokyo (NRT) to Vienna service.

In November, work begins at Tokyo (HAD) on a new maintenance dock and engine test cell for B-777s. At year's end, company officials must face the unhappy public relations prospect of ending their expensive but extremely popular 15-month-old marketing scheme with *Marine Jumbo* and *Marine Jumbo Jr.*

Beginning in December, in-flight meals on ANA long-haul flights from Tokyo (NRT) serve only organically grown vegetables purchased from farms around the airport.

On the year, passenger boardings continue to fall, down to 34,457,000. As in the previous 12 months, freight grows by 10.4% to 773.03 million FTKs. Revenues move ahead by 3.6% to \$8.98 billion, while expenses increase only 2.3% to \$8.8 billion. Operating income increases to \$179.92 million, while a \$49.43-million net gain is celebrated.

Fulltime airline employment in 1995 stands at 14,109, a 1.1% decline, as the company becomes launch customer for the B-777-381 with an order of 10. The devastating earthquake at Kobe in mid-January brings a demand for additional air capacity as the carrier attempts to transport citizens who would normally employ roadways or rail transit. Having added an 15 extra flights on January 20, the company lays on 113 more special flights over the next four days. Meanwhile, the West Japan Railway Co., Ltd. reports that it will take \$1.6 billion and four months to restore rail lines in and around the devastated city.

The announced February deadline for repainting the "Marine Jumbos" is extended to the end of May.

During the spring, new routes are opened from the new Kansai Airport at Osaka to Bangkok, Kuala Lumpur, Beijing, Shanghai, and Honolulu and services from that aerodrome are increased to Guam, Sydney, Brisbane, and Hong Kong. Frequencies are increased from Tokyo (NRT) to Paris and discussions are held with **Delta Air Lines** regarding a possible major alliance.

On May 21, the "Marine Jumbos" make special commemorative flights with 300 pairs of parents and children from Tokyo (HAD) and Osaka to Miyazaki, on Kyushu, where the passengers are able to visit a resort and take pleasure flights. Having flown 1.7 million passengers to all of ANA's domestic markets, the two aircraft are withdrawn on May 22 and May 31, respectively, and are sent to be repainted into regular ANA colors. The expensive, one-year-plus program had been a very effective promotion.

Bank clerk Fumio Kutsumi, a member of the Aum Shinrikyo religious sect, hijacks a B-747-481 with 365 passengers on June 20 following its landing at Hakodate Airport after a flight from Tokyo. The air pirate demands the release of sect leader Shoko Asahar, imprisoned on March 12 in connection with a poison gas attack on the Tokyo subway system. After a 16-hour stand-off, Japanese police, disguised as airport workers, storm the plane, capture the hijacker, and free all hostages; no injuries are reported. Still, ANA must cancel 10 flights from the closed airport and 105 passengers aboard the Jumbojet cancel their trips, forcing the airline to refund their tickets.

Anticipating delivery of the B-777-281, Pratt & Whitney, maker of the plane's JT9D engines, leases a 10,000-sq.-ft. facility from ANA at Tokyo (NRT) during the spring and opens a power plant parts center. Throughout the summer and into September, the airline hires 240 contract flight attendants, who represent part-time employees not entered upon the company's permanent payroll. Meanwhile, on August 12, the five hundred-millionth passenger is transported.

The premier B-777-281 is delivered during the first week of October; the usual tail markings are replaced with 777 titles reminiscent of those employed years earlier when **Eastern Air Lines** introduced its B-757s. Twice-weekly flights commence in October between Osaka (KIX) and London (LHR). The second B-777-281 arrives in November; both machines begin flying from Tokyo in December to Hiroshima, Miyazaki, and Osaka. The final L-1011 TriStar 1 service is flown on November 30 from Kagoshima to Tokyo (HAD).

During the year, a major cost-cutting approach, Program P1521, is announced. Its goal is to cut personnel costs by 20%, increase fleet utilization by 10%, and to boost income 15% within three years.

In December, a general agreement begins with **EVA Air, Ltd.**; it provides for cooperation on sales, reservations, and ground handling, as well as for crew exchange and code-sharing on a route from Fukuoka to Taipei.

Weekly B-747-281B roundtrips commence on December 22 between Osaka and Rome.

Passenger traffic and profits turn around this year. Customer bookings jump 9.3% to 37,680,422 while cargo increases 21.6% to 940.62 million FTKs. On revenues of \$4.32 billion and expenses of \$4.09 billion, operating profit climbs to \$232.26 million and net gain reaches \$63.55 million. The latter figures are later adjusted downward to \$220.4 million (operating) and \$24.91 million (net).

Employment grows to 14,396 in 1996. The company remains the largest domestic operator in Japan, offering over 500 daily departures over 91 different routes. During the first week of February, ANA joins with **American Airlines**, **Delta Air Lines**, and **Continental Airlines** in calling for renewed bilateral discussions between the U.S. and Japan. Hopes are expressed by President/CEO Seiji Fukatsu that operations originally authorized in 1952 will be liberalized for those airlines not original partners to the first bilateral.

In an effort to reach one of the goals of Program P1521, President/CEO Fukatsu aggressively engages the company's labor unions, seeking concessions. He also seeks to eliminate those ANA executives closely allied to Honorary Chairman Wakasa and Chairman Sugiura.

Between March 8 and 18, company routes are altered during Chinese military missile exercises off Taiwan; flights to Hong Kong, Bangkok, and other Southeast Asian destinations do not pass over Taipei.

On April 1, as part of a corporate restructuring, pilots salaries are changed to reflect actual hours worked. The flyers and their union are very displeased.

The company's withdrawn YS-11As are sold to **Air Philippines (2)** beginning in April. New services are initiated during the month from Nigata to Hakodate, Hiroshima to Hakodate, and Hiroshima to Aomori.

ANA joins with **Delta Air Lines** in April to announce the inauguration of code-sharing on weekly transpacific flights between Tokyo and Los Angeles. Under terms of their agreement, All Nippon will offer seven flights per week and Delta six.

In late May-early June, China, which has improved its ATC capabilities, grants the airline a more direct routing north to Beijing, Dalian,

and Qingdao than the old direction south to Shanghai from Tokyo, Nagoya, and Osaka and then north. The company quickly adjusts and begins to save 35–45 min. per flight. Service from Tokyo and Osaka to the PRC is increased to 40 flights per week; Qingdao and Dalian join the route network.

It is reported on June 1 that a GE CF6-50 engine mounted on one of the company's B-747-281s has, with 28,888 hours, established an industry on-wing longevity record.

Beginning on June 19, new 83-inch pitch seats allow for full-seat service in first-class sections on the company's flights from Tokyo to New York.

Also during the month, as deregulation progresses, the company introduces a new domestic fare system that features different ticket prices for normal, peak, and off-peak periods, as well as discount fares. It also starts a new route from Fukuoka to Akita.

The third owned B-777-281 arrives on July 1. With the addition of two new frequencies on July 15, service between Osaka and Hong Kong becomes daily. Hong Kong is the first ANA international destination to be served with daily services from both Tokyo and Osaka and is the airline's largest volume overseas destination.

Convicted of air piracy on July 20, former bank clerk Fumio Kutsumi is not only sent to prison but is, as part of the judgement against him, billed \$487,300 by the airline.

At the end of the month, twice-weekly, nonstop B-767-381 roundtrips commence from Osaka to Yangon. At the same time, a new Sendai–Matsuyama service is launched.

Code-sharing flights with **Air Canada, Ltd.** are initiated between Osaka and Vancouver on August 1. The daily service is the company's first transpacific route from Osaka (KIX).

On August 21, the carrier reduces its regular season fares by ¥500 on nine routes as well as other routes connecting Tokyo, Osaka, and Fukuoka to Okinawa, a total of 18 services. This is to better compete with **Japan Air Lines Company, Ltd. (2)**, who has announced price reductions on similar routes.

On August 29, ANA abandons the joint service with **Delta Air Lines**, due to commence on September 1, between Tokyo and Los Angeles due to a breakdown in the bilateral air agreement negotiations between the U.S. and Japan.

Direct twice-weekly frequencies are inaugurated on September 5 between Osaka and Bombay, marking the airline's first service to India. Dual-designator weekly B-747-281B flights with **Austrian Airlines, A.G.** are launched on September 9 from Osaka to Rome via Milan. Additionally, the carrier's twice-weekly Jumbojet flights to Rome direct from Osaka will increase to five times a week. Two services will be routed via Milan and two via Frankfurt.

On September 12 sharing codes with **Austrian Airlines, A.G.**, All Nippon inaugurates twice-weekly B-747-281B service from Osaka to Frankfurt. On Thursdays and Fridays, the new flight will be routed from Osaka to Rome and continue on to Frankfurt before returning to Osaka. On Sundays and Wednesdays, the flight is routed in the opposite direction with it leaving Osaka directly for Frankfurt and then on to Rome before returning to Japan.

The new Indian services from Osaka are followed on October 4 by the launch of flights from Tokyo (NRT) to New Delhi via Bangkok.

On October 24, to celebrate the twenty-fifth anniversary of the Hokkaido Ski Campaign, the carrier unveils a B-747-481D painted with *Peanuts* characters, including a Snoopy on skis on both the nose and tail. Six days later, twice-weekly B-767-381 roundtrips are launched from Tokyo (NRT) to Jakarta, with an extension on to Denpasar. Also during the month, the route from Tokyo (NRT) to Bangkok is extended to Delhi.

The pilots' union undertakes a partial 24-hour strike on December 16 to protest a salary restructuring that was put into place on April 1. Striking members comprise the entire B-767 cadre, while the remaining 1,397 members report to work as scheduled. ANA is forced to cancel 154 domestic flights.

Passenger boardings accelerate 4.1% to 39,377,380 while 1.04 billion freight FTKs are operated, an 11.3% increase. Operating income climbs 4.9% to \$7.15 billion, but costs move up only 6.2% to \$7 billion. Although operating profit falls to \$145.16 million, a larger \$31.54-million net profit is posted.

Airline employment inches up 1.3% in 1997 to 14,239. International capacity is boosted almost 25% during the year in an ambitious effort to expand into additional Asian and U.S. markets.

During January, a 177% increase in the number of business-class "superseats" is announced and the service is added to 19 new routes. The boost makes two-class service available on 60% of the carrier's domestic operations.

Thrice-weekly B-747-281B roundtrips are resumed on February 1 between Nagoya and Honolulu.

Flight 002, a B-747-481, completes the company's first FANS-1 (Future Air Navigation System) Jumbojet service on February 19, a flight from Tokyo (NRT) to Washington, D.C. (IAD). Thereafter, other tests will be conducted for five months.

In March, the Ministry of Transport announces that ANA will receive nine new slots that will be made available at Tokyo (HAD) following the summer opening of a new runway in March; six must be assigned to specific routes.

On the first of April, ANA agrees to lease 3 B-767s to potential new rival **Skymark Airlines Company, Ltd.** and maintain them; the new entrant, backed by the HIS Travel group, is scheduled to begin domestic service during the first half of 1998.

Also during the month, *Pokemon (Pocket Monster): The Series* premieres on Japanese television. Following the adventures of the 151 fanciful characters of the Nintendo "Gameboy" software that boast magical powers, *Pokemon* will have a significant impact on ANA advertising in the years ahead.

A new Japanese consumption tax put in place during April has an adverse impact on the airline's economics. During the month, ANA becomes the first Japanese airline to apply its international frequent flyer program to domestic flights. The loyalty program is renamed ANA Mileage Club.

As a result of strong competition from other domestic airlines as well as the bullet train, in early May the company seeking, to save money, drops its service from Tokyo (HAD) to Sendai.

On June 5, in its first service from the newly completed airport at Hiroshima, the company initiates four-times-a-week B-767-381 roundtrips to Guam. The new service complements the existing daily B-747-281B service to the island from Osaka.

Arrangements are completed with the Swiss Bank Corporation in June for the issuance of ¥30-billion worth of convertible notes, due in the year 2000; proceeds will be employed to cover aircraft purchases.

A total of 155 domestic flights are cancelled on June 27 by **Japan Air System, Ltd.**, **Japan Air Lines Company, Ltd. (2)**, **ANA**, **Air Nippon Company, Ltd.**, and **Japan Transocean Airways Company, Ltd.** as the result of a tropical storm and tornado.

At the end of the month, Tokyo (HAD) commences 24-hour operations, which allows ANA to increase its daily departures by four.

As the company enters the final year of Program P1521, the manner in which President/CEO Fukatsu has sought concessions from the company's unions brings a major corporate shake-up. When five members of the board, led by Honorary Chairman Wakasa and Chairman Sugiura, express their displeasure with Fukatsu's tactics, he is forced by honor to resign; the company next announces that ANA Real Estate Co. President/CEO Kenzo Yoshikawa will be his successor.

This appointment so angers many on the board that ten members resign, including Sugiura and Wakasa. Stabilization returns when it is announced that Yoshikawa will remain with the real estate company, while the airline's senior managing director, Kichisaburo Nomura, will take the president's chair. Former President Fukatsu now becomes the new leader's advisor; or, as some analysts put it, a "shadow samurai."

Also during July, the company receives its second B-747-481 equipped with FANS-1 gear; the aircraft is placed on regularly scheduled North American routes. Plans are progressing to equip the entire B-747-481 fleet with FANS by the end of 1999.

After the sixth B-777-281 is delivered in September, service is inaugurated from Tokyo (NRT) to Beijing and Hong Kong. Three more of the advanced jetliners will be delivered during the month.

Also in September, the TCAS sounds aboard an A320-211 en route from Komatsu to Chitose when a pair of USAF F-16s from Misawa AB in northern Japan approach too close. Although the jetliner takes evasive action and descends from 21,000 ft., the fighter planes continue to approach until breaking off at a distance of 3 km. (1.9 mi.).

On October 1, B-777-281 flights commence from Osaka (KIX) to Singapore, Hong Kong, and Shanghai. The company celebrates the rollout of its first B-777-381 with a reception in Washington, D.C. on October 21.

On October 27 frequencies between London (LHR) and Osaka (KIX) are doubled to 11. Departure to and return flights from Japan are operated on Mondays, Tuesdays, Fridays, and Saturdays. Twice-weekly B-767-381 roundtrips resume on October 28 between Fukuoka and Bangkok.

This year's Hokkaido Ski Campaign is promoted by a B-747SR-81 painted with the cartoon characters from *Peanuts*.

Customer bookings swell 3.4% to 40,697,231 while cargo climbs 18% to 1.24 billion FTKs. Revenues advance 2.6% to \$7.167 billion, while costs ascend 3.2% to \$7.162 billion. The operating profit plunges to \$5.08 million, while a \$21.03-million net loss is suffered.

At the beginning of 1998, ANA is the 8th largest airline in the world in terms of passenger boardings, 13th in operating revenue, and 18th in fleet size.

The fleet now includes 130 aircraft, all of which are Stage III certified, and features 39 B-747s, 62 B-767s, 9 B-777s, and 21 A320-211s.

In early January, the company receives the 1997 "Public Relations Award" from *Air Transport World* magazine.

On January 21, the carrier joins with **Vietnam Airlines** in announcing a cooperative connection service between ANA's Asian and VNA's Hanoi Network.

Following 11 days of around-the-clock negotiations, a new bilateral air agreement is hammered out between the U.S. and Japan on January 30. Under its terms, ANA and its **Nippon Cargo Airlines** subsidiary are given the same status as **Japan Air Lines Company, Ltd. (2)** and three U.S. carriers.

Bad weather during the month hampers operations and causes financial reversal.

On February 22, ANA provides free delivery of 4.5 tons of relief goods on its flight from Osaka (KIX) to Beijing on behalf of the Committee for the Hebei Earthquake Relief. The goods will be provided to the victims of the earthquake that killed 50 people and destroyed 130,000 houses in China's Hebei Province on January 10.

During the first two months, discussions concerning strategic alliances have been undertaken with **United Airlines** and **Deutsche Lufthansa, A.G.** On March 9, talks are completed for code-sharing arrangements with both.

The agreement with United provides for linkage of frequent flyer programs and schedule coordination, as well as code-sharing on selected transpacific routes and flights within the U.S. and Japan beginning on October 25. The Lufthansa deal also links frequent flyer programs and calls for development of a return dual-designator service from Frankfurt to Tokyo in the summer, as well as code-sharing on routes within Japan and Germany.

In response to domestic and regional financial problems that are causing the carrier fiscal difficulty, ANA, in early March, unveils a restructuring and cost-cutting plan, *Speed 21*. The document provides for a 3% reduction in salaries for managers and pilots over the next three year—and lesser percentages for 3,000 other employee—for an annual saving

of \$5.6 million. It also announces that it will have to forgo paying a dividend for 1997.

In addition, up to 1,000 employees will be laid off by 2001 and a 21% reduction will occur in investment and financing. During the next year, the fleet will retire 2 B-747SR-81s, 1 B-747-2D3B, and 3 B-767-281s. Two B-747-481s, 2 B-777-281s, 4 B-777-381s, and 2 A321-131s will be added.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14.

On March 29, the so-called "Tokyo-Hong Kong-Hanoi" connection is begun in cooperation with **Vietnam Airlines**. To help get around the inconvenience passengers suffer through lack of direct service between Tokyo and Hanoi, ground agents from both companies will meet flights and guide customers to the transit counters.

Additionally on March 29, thrice-weekly B-767-381 roundtrips commence from Osaka to Yangon via Bangkok.

When the company institutes a new plan on April 1 to trim flight times for some long-haul pilots to 50 hours a month (and restructure their benefits) and thereby save ¥1 billion (\$7.9 million) per year, the flyers' union balks. A clause in its contract with the airline guaranteeing a minimum of 65 hours flying time per month is triggered and the B-747-481 pilots vote to strike.

On April 5, two of seven A321-131s are delivered. In celebration of the company's forty-fifth anniversary, they arrive wearing an innovative livery designed by Airbus Industries. The color scheme comprises 22 images of Japanese locations (11 on each side of the fuselage) digitally shown on polyester support film; the adhesive images are protected by varnish and are heat and cold resistant.

The job action that begins on April 6 has an immediate impact on ANA flights from Tokyo (NRT) to Hong Kong, London, New York, and Los Angeles and from Osaka (KIX) to Frankfurt and Rome. It does not impact the carrier's domestic network.

A321-131 service is inaugurated on April 11 with twice-daily roundtrips from Tokyo (HAD) and Tottori and a daily roundtrip to and from Shonai.

The strike goes on for 14 days. Flight crews return to work on April 21, largely because they choose not to be involved in a disruption of "Golden Week," the traditional Japanese spring break which, this year, comes between April 29 and May 5. A total of 124 flights, including 94 B-747-481 services, must be cancelled costing ANA some \$31.8 million in lost revenues. Over 21,900 passengers are transferred to services operated by rival **Japan Air Lines Company, Ltd. (2)**.

It is not immediately known whether the pilots will return to the picket lines in May. Because ANA pilots earn more than their colleagues at other Japanese airlines do, this industrial action is labeled a "Cadillac strike" by the media.

Also on April 21, the formal signing of the code-sharing pact with **United Airlines** takes place in Tokyo.

At the end of the month, the company seeks permission to begin new services from Tokyo to Qingdao and from Osaka to Xiamen and Shenyang, the latter via Dalian.

ANA and **United Airlines** and ANA and **Deutsche Lufthansa, A.G.** formally integrate their frequent flyer programs on May 1.

Between May 10 and May 22, 10 extra flights per week are offered on the route between Tokyo and Jakarta. Under pricing pressure from **United Airlines**, **Delta Air Lines**, and **Northwest Airlines**, ANA in mid-May cuts its roundtrip economy fares to the U.S. by up to 48%.

B-767-381 thrice-weekly flights begin on July 18 from Osaka to Shanghai via Fukuoka. Thrice-weekly B-767-381 roundtrips are begun on May 19 from Osaka to Tianjin.

On May 29, two specially painted B-747-481s, commemorating the World Cup, are placed on international service. Across their fuselages is painted "Goal! Goal! Goal!" in bold print wishing success to the Japanese team.

As June begins, the carrier's 1,380 pilots again threaten not to operate international flights. In mid-month, ANA announces that it will delay delivery of nine unspecified aircraft during a three-year period beginning in April 1999.

The first B-777-381 is received in Everett, Washington, ceremonies, accompanied by Japanese *taiko* drummers, on June 29; its livery includes blue ribbons, which are meant to demonstrate "the swiftness of the wind as it [the aircraft] glides through the sky." Following its delivery flight to Japan, the huge twinjet will be employed on domestic routes.

ANA and **Deutsche Lufthansa, A.G.** launch eight-times-per-week dual designator service on July 1 between Tokyo (NRT) and Frankfurt. The same day, twice-weekly B-767-381 roundtrips commence from Osaka to Dalian and Shenyang and the thrice-weekly Osaka-Tianjin route is now flown four times a week.

The next day, weekly B-777-281 roundtrips start from Tokyo (NRT) to Qingdao, China. Also on July 2, ANA introduces two specially painted aircraft to the delight of children all over Japan, many of whom demand that their parents bring them to airports to view the aircraft. A B-767-381ER and B-747-481D previously painted in colors honoring the *Snoopy* cartoon characters are now unveiled in new liveries that feature the 10 *Pokemon* (*Pocket Monsters*) cartoon characters from the popular children's Nintendo software and TV series. Sadly, the special livery is scheduled to be repainted at the end of the third quarter.

Twice-daily B-767-281 roundtrips commence on July 18 between Tokyo and Yonago. A third *Pokemon* aircraft, a B-767-381, enters service on July 19. B-767-381ERs begin flying thrice weekly on July 20 from Osaka to Xiamen.

Twice-daily B-767-381ER roundtrips begin on July 29 from Tokyo to Saga. The Transport Ministry grants approval on September 18 for use of the 180-Minute Extended Range Twin-Engine Operations rule for its new B-767-381ER, which will enable the wide-body to be employed on routes from Japan to Hawaii.

Deep-discount operator **Skymark Airlines Company, Ltd.** inaugurates its first service on September 19 from Tokyo to Fukuoka. In response, ANA notes on September 21 that it will, beginning October 1, lower its fares on the route by 30% while offering three more roundtrip frequencies than the start-up.

As part of its broader restructuring of its non-airline businesses, the carrier, on September 23, sells two hotels, one each in San Francisco and Washington, D.C. to the Los Angeles-based real estate concern Lowe Enterprises for \$270 million.

Twice-weekly B-767-381ER return flights begin on September 30 from Tokyo (NRT) and Honolulu; the service will complement the thrice-daily flights to Hawaii from Tokyo and Osaka, and daily roundtrips from Nagoya, Fukuoka, and Sapporo.

Due to the response of children (and adults) around the world, the *Pokemon* livery is not retired as scheduled; indeed, it will be expanded.

It is announced on October 22 that ANA will, in 1999, become the ninth member of the "Star Alliance." Charter and current members of the pact include **Air Canada, Ltd.**, **Deutsche Lufthansa, A.G.**, **SAS (Scandinavian Airlines System)**, **Thai Airways International, Ltd. (THAI)**, **United Airlines**, and **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**.

Frequencies on the twice-weekly B-767-381ER route from Tokyo to Honolulu become daily on October 25.

On October 29, ANA and **United Airlines** implement their historic alliance—the first between a Japanese and U.S. carrier to include code-sharing and the first Japan-U.S. air alliance to be implemented following negotiation of the new bilateral agreement between the two countries.

The carriers begin to offer dual-designator service on 391 weekly flights. Under the agreement, ANA offers the new destinations of Boston, Chicago, Denver, Las Vegas, Miami, Orlando, Phoenix, San Diego, and Seattle. Additionally, members of ANA Mileage Club can earn miles in their program for all flights operated by the partner carrier and can redeem their earned miles for award travel on the worldwide network of both carriers. Customers whose travel itinerary includes flights of both

ANA and UAL receive boarding passes for all flights operated by both carriers at their first point of check-in. In addition, eligible customers have access to the lounges of the carrier on which they are traveling, regardless of whether their ticket was sold as an ANA or a UAL flight.

B-767-381 equipment is also employed to launch daily roundtrips on November 7 between Fukuoka and Qingdao.

A strategic alliance is entered into with **China Eastern Airlines Company, Ltd.** on November 11. Under its terms, code-sharing is scheduled to begin on February 1 over routes from Osaka (KIX) to Shanghai and also to Qingdao and Beijing.

Daily return service is inaugurated on December 1 between Tokyo (NRT) and San Francisco. The route is operated as a dual-designator service with **United Airlines**. Two days later, the carrier announces a strategic accord with **SAS (Scandinavian Airlines System)** as its first step into similar accords with the other members of the "Star Alliance." The pact will initially involve check-in services, frequent flyer programs, and the use of airport lounges. Code-share operations, joint marketing, and sales activities will also be considered as ANA moves into full partnership with the other carriers.

On December 9, **Airborne Express** enters into agreements with the Itochu Corporation and the Marubeni Corporation, both of Japan, to purchase 11 B-767-281s currently under lease to ANA. At a cost of \$25 million per copy, the planes will be converted into freighters by Triad International Maintenance Corporation at Greensboro, North Carolina, and will be delivered between 2000 and 2002.

President Nomura tells a news conference on December 17 that ANA lost 18,000 passengers to **Skymark Airlines Company, Ltd.** in October and 20,000 in November. Although he is reluctant to cut fares on the Skymark route from Tokyo (HND) to Fukuoka due to the revenue costs that would occur, Nomura indicates that such a move may be necessary after the first of the year.

Also during the month, ANA issues the first "incentive-attached bonds" in the airline industry; those purchasing the three-year certificates will receive a free five-day trip to Hawaii and discounts on domestic flights. The offering is very successful and nets ¥30 billion.

Passenger boardings this year increase 12.7% to 41.49 million, while cargo traffic rises 5.2% to 1.35 billion FTKs. Anticipating a loss of ¥5 billion (\$42.3 million) because of the economic slump, the net loss is actually closer to ¥11 billion (\$89 million), due primarily to competition with the new entrants.

The code-sharing agreement with **United Airlines** is enhanced on January 19, 1999, when the two carriers jointly affix their codes to daily flights between Tokyo (NRT) and Bangkok. The partnership is increased again on March 8 on joint daily services from Tokyo (NRT) to Singapore.

A code-sharing agreement with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** is announced by ANA on January 26; the two carriers will begin joint services between Japan and Brazil in May.

At the end of the month, the company notes that, because of restructuring, it will not recruit cabin attendants for the class of 2000. Normally, ANA brings on 500–600 new attendants every year.

It is announced in Tokyo on February 12 that ANA will officially join the "Star Alliance" in October. It will simultaneously cancel its cooperative agreements with four other nonalliance partners, including **British Airways, Ltd. (2)** and **Cathay Pacific Airways (Pty.), Ltd.**

The *Kyodo News* reports on February 19 that, for the month of January, ANA has lost ¥800 million in revenue on the Tokyo to Fukuoka and Tokyo to Sapporo routes as the result of competition from the deep-discount start-ups **Skymark Airlines Company, Ltd.** and **Hokkaido International Airlines, Ltd.** The company responds by lowering fares.

On February 24, employing a specially painted B-747-481D—the fourth fleet unit to be painted with *Pokemon* characters—ANA inaugurates daily "ANA *Pokemon* Jet U.S. Version" service from Tokyo (NRT) to New York (JFK).

It is announced on February 25 that ANA, to cut operational costs, will transfer some 20 unprofitable domestic routes to its affiliate **Air Nippon Company, Ltd.** over the next three years.

Company analysts project a 1998 fiscal year operating loss on March 3 (in data to be released at the end of the quarter) of ¥5 billion on revenues of ¥918 billion, as the reason for a suspension of dividend payments to shareholders for the first time in 30 years.

In reaction to the fiscal report, company executives now announce a radical three-year corporate restructuring plan. The new approach will include a consolidation of high-revenue international routes from Tokyo (NRT), suspension of service on three money-losing routes, and curtailing of frequencies on eight less-profitable routes. New efforts will be made to upgrade the Haneda (HAD) domestic hub, as well as reevaluate aircraft size and local service requirements in an effort to save ¥100 billion (\$826 million).

On March 8, ANA announces a worldwide "ANA *Pokemon* Jet '99 Design Contest." Children will be given the chance to design color schemes for the three additional aircraft (one B-747 and two B-767s) that will celebrate the new *Pokemon* movie slated to open in Toho cinemas throughout Japan during the summer. The new aircraft will begin service between the end of June and early July.

After a month's delay, the dual-designator service with **China Eastern Airlines Company, Ltd.** begins on March 15. CEA codes are placed upon ANA flights between Shanghai and Osaka (KIX) and between Osaka (KIX) and Beijing via Qingdao. ANA's flight codes are added to CEA's similar flights. ANA has more than 50 weekly flights to China and CEA more than 30 to Japan. The code-sharing automatically doubles the two airlines' flights between China and Japan.

Under terms of the code-sharing arrangement with **Ansett Australia (Pty.), Ltd.**, daily ANA service between Osaka (KIX) and Sydney via Brisbane is replaced on March 28 by Ansett-operated flights carrying ANA's code.

The carrier's 9% stake in **Austrian Airlines, A.G.** is sold on April 8, with Bank Austria and SKWB Schoellerbank taking shares worth a nominal Sch 160 million and Sch 74 million, respectively. Cooperation with the Vienna-based airline on the route between Tokyo, Osaka, and Vienna is not affected.

ANA and **United Airlines** significantly upgrade their dual-designator partnership on April 13 when the Japanese line introduces daily B-747-481 return flights from Tokyo (NRT) to Chicago (ORD). In addition to code-sharing on the new service, the date will mark placement of ANA's code on five daily United-operated domestic routes from Chicago to Cleveland, Cincinnati, Columbus, Indianapolis, and Miami for a total of 35 weekly flights.

The slashing of fares on those services flown in competition with **Skymark Airlines Company, Ltd.** and **Hokkaido International Airlines, Ltd.** begins to show results by the end of April. Both Skymark and Hokkaido show huge 69%-plus drops in their load factors over the contested routes.

Under the January code-sharing agreement and employing one of the Brazilian partner's B-747-341s, All Nippon and **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** inaugurate dual-designator services on May 13 between Rio de Janeiro and Tokyo (NRT) via São Paulo and Los Angeles. The All Nippon-VARIG code-share also includes one weekly service to Nagoya.

The new fourth member of the *Pokemon*-painted fleet, a B-747-481, arrives at San Francisco on a June 3 demonstration flight; it is placed on the five-times-a-week service from the California city to Tokyo (NRT) on July 3.

An order is placed on June 20 for 4 B-777-281ERs, the first of which will be delivered in October. Upon its receipt, ANA will become the first airline in the world to operate all three of the B-777 derivatives.

On July 1, the carrier's ANA Mileage Club frequent flyer program is linked to the frequent flyer programs of **Air New Zealand, Ltd.**, **Ansett Australia (Pty.), Ltd.**, and **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**.

En route from Tokyo (HND) to Hokkaido on July 23, Flight 61, a B-747-481 piloted by Capt. Naoyuki Nagashima with 13 other crew and 503 passengers, is taken over by unemployed Yuji Nishizawa, a fan of

computer flight simulation games. Having overpowered a flight attendant and gained access to the cockpit, the perpetrator forces out the copilot and demands that Nagashima steer toward a U.S. military base. When the pilot refuses, he is stabbed in the neck, whereupon the hijacker attempts to fly the aircraft, realizing a lifetime dream. The Jumbojet suddenly loses altitude and drops 2,000 ft. in five min. to a point just 660 ft. above metropolitan Tokyo. At this point, the copilot and an off-duty pilot are able to storm the cockpit, subdue Nishizawa, and regain control. The plane returns safely to its point of origin, but Capt. Nagashima dies of his wounds before touchdown, becoming the first fatality in the 20 Japanese hijackings on record. Nishizawa is immediately arrested.

While en route from Tsushima Island to Fukuoka on July 28, a fully loaded B-737-481 is struck by lightning; no injuries are reported.

On August 9, a B-767-381, painted with the logos of all the "Star Alliance" partners, enters service on the company's domestic routes. Plans to join the international grouping remain on target for October 31.

Plans to join the international grouping remain on target and are executed on October 31. Due to poor results on the route, service between Fukuoka and Bangkok is simultaneously suspended.

Before year's end, nine domestic routes are transferred to **Air Nippon Company, Ltd.**, including the service from Osaka (KIX) to Sendai. During the year, the company is able to reduce its personnel expenses by ¥8 billion.

Overall passenger boardings for the year accelerate 3.9% to 42,743,000 while cargo rises 5.5% to 1.5 billion FTKs. Revenues for the ANA Group, which includes **Air Nippon Company, Ltd.**, **Air Hokkaido Company, Ltd.**, and ancillary activities, jump 13% to \$11.3 billion, while costs climb only 9.1%, to \$11 billion. The previous year's operating loss becomes a \$294.94-million gain. Unhappily, the net loss increases to \$142.06 million. Revenues for the air transport segment of group earnings (approximately 70% of total) inch up only 1.5% to \$9.16 billion, but expenses decline 2.3% and leave a \$240-million operating profit.

Airline employment stands at 15,237 at the start of 2000, a 1.9% increase over the previous year. Among the world's top 25 airlines at the beginning of the new millennium, ANA is 8th in passengers and 20th in fleet size; All Nippon Group is 8th in operating revenues and 18th in operating profit.

Japanese airfares are fully liberalized under a February revision of the basic aviation law. On March 26, twice-daily B-767-381ER roundtrips commence between Osaka (KIX) and Honolulu, but flights from Osaka (KIX) to Yangon are dropped. Simultaneously, frequencies from Osaka (ITM) to Tokyo (HND) and Nagasaki are increased, while flights from Osaka (ITM) to Sendai and Kagoshima are decreased. From Tokyo (NRT), frequencies to San Francisco, Hong Kong, Singapore, and Dalian are decreased and those to Frankfurt, Washington, D.C. (IAD), and Bangkok are increased.

The same day, the Osaka (KIX) to Miyazaki route is transferred to **Air Nippon Company, Ltd.**

The carrier now begins to code-share with **Deutsche Lufthansa, A.G.** on all 16 weekly roundtrips between Tokyo (NRT) and Frankfurt (6 ANA and 10 DLH flights) while the German line places its designator on ANA's 2 weekly return flights between Osaka (KIX) and Frankfurt. Within Europe, ANA code-shares on DLH flights from Frankfurt to Amsterdam, Berlin, Dusseldorf, Munich, Hamburg, Geneva, and Vienna.

To celebrate the first anniversary of service to Chicago (ORD) on April 13, the carrier sends in a *Pokemon*-painted B-747-481 for a special ceremony.

The dual-designator arrangement with **United Airlines** is also expanded on April 18 to include an additional 20 daily flights on 20 domestic routes from Chicago (ORD), Los Angeles, and San Francisco.

Introduced earlier in the month, the code-shared flights aboard **Air Canada, Ltd.** A340-313s between Toronto and Tokyo (NRT) become daily on April 25. The routes from Osaka (KIX) to Shonai and from Shonai to Sapporo are turned over to **Air Nippon Company, Ltd.** in May. B-777-281ERs replace B-747-481s on May 16 on three of the carrier's

seven-times-a-week flights between Tokyo (NRT) to Chicago (ORD); the last Jumbojet on the route will be replaced with a Triple Seven on July 7.

On June 22, the carrier begins a cargo code-share—actually, transport of the U.S. Mail—with **Trans World Airlines (TWA)** on routes to Osaka (KIX) from Guam and Honolulu; to Tokyo (NAR) from Chicago (ORD), New York (JFK), Los Angeles, San Francisco, and Honolulu; and from Honolulu to Nagoya.

Because the company's fiscal picture has continued to deteriorate, company officials on July 1 institute wage cuts that will run through March 2003. Ranging from 25% for top management to 3% for non-management workers, the reduction is designed to save an overall ¥ 10 billion.

On July 14, two more routes out of Osaka (KIX) are turned over to **Air Nippon Company, Ltd.**—to Memanbetsu and Nagasaki.

With the united goal of gaining some of the 85% market share held by the Shinkansen bullet train, ANA joins with **JAS (Japan Air Systems Company, Ltd.)** and **Japan Air Lines Company, Ltd. (2)** during the second week of August to inaugurate 33 daily roundtrip shuttle flights between Tokyo and Osaka (KIX/ITM). Start-up of the joint venture has unavoidably been delayed six weeks.

A new subsidiary, Air Japan Company, Ltd., is created on August 31 to offer deep discount service on ANA's short- and medium-haul international routes with aircraft leased from the parent. The launch of B-767-381ER service from Osaka (KIX) to Seoul is announced for January 1.

Japan's first recorded incident of an on-duty pilot becoming incapacitated for poor health occurs on September 11. Capt. Fusao Hori, while piloting Flight 559, an A320-211 en route from Nagoya to Saga, loses consciousness minutes before landing at his destination. After its copilot safely lands the plane, Hori is hospitalized, where it is determined that he has suffered a stroke.

ANA, **JAS (Japan Air Systems Company, Ltd.)** and **Japan Air Lines Company, Ltd. (2)** open joint check-in counters on September 23 to handle passengers using their roundtrip shuttle service between Tokyo and Osaka (KIX).

Hoping for better results than the previous year's aborted linkup with **British Airways, Ltd. (2)**, ANA, on September 28, announces that it has signed an agreement to share its Tokyo–London routes with **Virgin Atlantic Airways, Ltd.** beginning at the end of March 2001.

On October 29, B-777-281ERs replace B-747-481s on the route from Tokyo to San Francisco. Under a decision first announced in June, service from Osaka (KIX) to Frankfurt and London (LHR) is now discontinued.

ALL NIPPON HELICOPTER COMPANY, LTD. See **ALL NIPPON AIRWAYS COMPANY, LTD.**

ALL SEASONS AIR PACIFIC (ASAP): United States (1981–1983). All Seasons is set up at Long Beach, California, in early 1981 to operate scheduled Piper PA-31-310 Navajo passenger and cargo flights to Santa Barbara, San Diego, Burbank, and Ontario.

Revenue services continue apace until the company goes out of business during the summer of 1983.

ALL STAR AIRLINES: United States (1983–1985). All Star is formed at Woburn, Massachusetts, in early 1983 to offer domestic and international jet passenger charters, emphasizing the transport of inclusive tours and contract services for sports teams, including the Boston Red Sox.

Certification is received in March and revenue operations commence on April 1 employing a Douglas DC-9-15 leased from **Air Florida**. The first major league baseball teams flown are the Baltimore Orioles and the Toronto Blue Jays. A second **Air Florida** DC-9-15 is obtained in November; it flies the Boston Celtics and other NBA basketball teams.

In addition to baseball team flights, the company, in 1984, agrees to operate a tour company's charters from Seattle and Portland to Reno, Nevada. Subcontracts are also taken from **Northeast International Air-**

lines and **Horizon Air**. The latter operates a wet-leased DC-9-14 in All Star colors from July to November on routes in the Northwest; the plane is returned after Thanksgiving.

Planes are made to inaugurate scheduled services from Boston to Atlantic City during the next 12 months and 2 DC-9-51s are purchased from **Finnair O/Y** at year's end.

All company dreams and preparations come to a halt during the summer of 1985 when its principal investors elect to withdraw. Without capitalization sufficient to maintain viability, let alone begin new services or accept the Finnish jetliners, the carrier is forced to cease operations on October 29. All of its assets are quickly sold.

ALLEGHENY AIRLINES (1): United States (1953–1979). On January 2, 1953, **All-American Airways**, based at Washington's National Airport, is split into two concerns: an engineering and research company and the flight operation, renamed Allegheny Airlines, in recognition of the mountains and river of the same name that lie in the heart of the airline's route network. Leslie O. Barnes is named first president of the latter. On January 27, the net assets of the research and engineering unit are transferred to an All-American Engineering Company subsidiary, in exchange for the entire capital stock, which is distributed to stockholders. Service is continued with a fleet of 13 Douglas DC-3s.

During the remainder of the decade, Allegheny flies local service routes which, by the early 1960s, stretch between Cleveland and Pittsburgh in the north and west to New York and Washington in the east and south. Cities served are both large and small; among the latter are Erie, Buffalo, Elmira, Johnstown, Parkersburg, and Clarksburg. In these years, President Barnes is responsible for an array of innovations and prescient management decisions that mark him as an inspired executive.

Among his most memorable—and copied—ideas are a no-reservation, on-board ticketing system and the concept of “hub-and-spoke” routing and scheduling. It is during the 1950s that Pittsburgh becomes Allegheny's main hub and site of the company's operations and maintenance facilities.

On August 20, 1954, a DC-3 with 18 aboard crash-lands at Newark; no serious injuries are reported. The company begins employing former **Trans World Airlines (TWA)** Martin 2-0-2s in early 1955 to supplement its aging fleet of Douglas DC-3s. One is scrapped after suffering an in-flight fire during a training flight.

On May 27, 1956, 15 **Air France** stewardesses arrive in New York to begin temporary assignment aboard Allegheny domestic flights as a way of promoting international air travel.

In 1957, Barnes meets a young CAB lawyer named Edwin Colodny and invites him to join the company as his assistant. On May 30, flights begin to Hazleton, Pennsylvania. An interline cargo handling accord is signed on August 17 with **Seaboard and Western Airlines**.

The 1958 fleet comprises 15 DC-3s and 8 Martins. In a May 24 safety experiment, a Douglas is painted with fluorescent paint for better daylight sighting. With CAB approval, the company begins to offer commuter books at 15% discount on October 5, 1959, followed by a unique no-reservation system, both on the Philadelphia to Pittsburgh Penn Commuter service.

En route from Philadelphia to Cleveland during a snowstorm on December 1, a Martin 2-0-2 with 4 crew and 21 passengers, crashes into Bald Eagle Mountain near Williamsport, Pennsylvania, after an instrument landing attempt at Williamsport Airport fails; there are no survivors. The tragedy is the carrier's first fatal accident in a decade.

A Martin 2-0-2 with 16 aboard is badly damaged following an aborted takeoff from Erie on February 25, 1960; three crewmen are hurt. Also in February, orders are placed for 5 Convair CV-540s (CV-340s equipped with British-made Napier Eland turboprop engines). As a result of Colodny's work, Allegheny receives a feeder route from Washington to Boston, which it begins to fly in April. This new frequency, to which no-reservation opportunities are attached during the summer, marks the start of the airline's expansion.

Flights from Trenton, New Jersey, commence on June 1.

While on a training flight from Avoca, Pennsylvania, on July 28, a CV-440 crashes, injuring the two crewmen aboard.

On September 15, service to Boston and Washington, D.C. is initiated from MacArthur Airport at Bohemia, New York; frequencies are increased on November 30.

On December 24, the company petitions the CAB for permission to begin a Baltimore to

Washington helicopter service.

Early in 1961, the company's maintenance and operations base is moved from Washington National Airport to Greater Pittsburgh Airport, which becomes the carrier's hub; corporate headquarters remain in the former location. The one-time **Trans World Airlines (TWA)** Martin 202A *Skyliner Burbank* is purchased, along with a second unit.

Competition with **Trans World Airlines (TWA)** on the Philadelphia-Pittsburgh run brings a fare increase in October and a CAB investigation. The regulatory body allows the increase and a second one in November, while adding a 20% tax in March 1962. The increases and tax cut reduce appeal of the no-reservation approach.

On October 19 over Windsor Locks, Connecticut, a stewardess, due to the insecurely latched rear service door, is swept out of a CV-440 with 52 aboard during a flight from Washington, D.C. to Boston. Late in the year, 2 old Martin 2-0-2s are converted to freighters and employed to inaugurate Night Owl all-cargo service.

In 1963 Napier cancels its Eland program and Allegheny is unable to import more than the one already in service. In addition to this lone example, Allegheny flies 23 CV-440s and 15 Martin 4-0-4 Executives are acquired to fill the gap until CV-580s, powered by Allison turboprops, can be obtained. The year's profits are \$260,235.

A CV-440 with 26 aboard runs off the end of the runway while landing at Lancaster, Pennsylvania, on January 21, 1964; no injuries are reported. The CAB approves a route transfer agreement on April 8 between **Trans World Airlines (TWA)** and Allegheny that allows the latter to mount flights from Pittsburgh to Boston. A CV-340, on a May 8 training mission from Newark, crashes upon landing. The left landing gear of another CV-340, with 41 aboard, collapses during a May 28 landing at Atlantic City; no injuries are reported.

On July 1, unsubsidized Pittsburgh to New York (LGA) services are initiated. In August, the company undertakes a special Atlantic City air-lift for those attending the Democratic National Convention.

As the carrier's route system grows, so does its need for new equipment; currently, its fleet is still comprised of mostly DC-3s and Martin 4-0-4s. A third Martin 2-0-2 cargoliner is placed into service during December.

Airline employment during the year is 1,733 and enplanements jump 13% to 1,264,514. Total revenues of \$27.8 million are earned, allowing a \$344,547-million net profit.

The workforce in 1965 is 1,931. The Pittsburgh-New York (LGA) frequency becomes full service in early spring. On June 1, Allegheny places 5 Convair CV-580s (CV-240s reengined with Allison turboprops) into operation.

On July 23, en route from Pittsburgh to Newark via Du Bois, Phillipsburg, Williamsport, and Wilkes-Barre Flight 604, with 4 crew and 36 passengers, suffers an engine fire. It strikes a ridge 5 mi. ENE of Montoursville, Pennsylvania, and although 18 people are injured there are no fatalities; the CV-440 will later have to be written off.

The fleet at year's end comprises 5 CV-580s, 16 CV-440s, 7 F-27Js, and 11 Martin 4-0-4s, including several employed as freighters. Orders are placed for 4 DC-9-31s.

Passenger bookings jump 16% to 1,465,141 while cargo traffic grows by 32%. Allegheny transports more freight this year than any other local service airline. Revenues grow 19% to \$33.27 million and earnings swell to \$1.3 million.

Three more F-27Js and 9 CV-580s arrive in early 1966. The first jetliner, a leased Douglas DC-9-10, is delivered on July 8, allowing Allegheny to enter the jet era September 1.

A CV-440 with 4 crew and 12 passengers aborts its takeoff from Harrisburg on November 29 and overruns the runway; there are no fatalities.

Enplanements for the year total 1,792,750. Profits are \$3.87 million (operating) and \$1.04 million (net).

The employee population in 1967 is 2,784. In April, company official L. Thomas Ferguson is appointed president of rival **Lake Central Airlines** as merger negotiations with that company intensify. Stockholders of the two companies and government regulators will be asked to approve the merger, which will take place the next summer.

Additionally, many of the previous CAB restrictions on company operating authority between major northeastern cities is loosened and the carrier's new Fokker F-27 Friendships are able to expand its market. The DC-9-10s are replaced by the first 6 of what will eventually become a fleet of 73 larger DC-9-31s.

During the early 1960s, a number of small American commuters began to provide shuttle service in areas not served—or served inadequately—by the larger airlines. It is during these years that Allegheny strategists Barnes and Colodny see this movement as a way of enhancing the company's markets without costly investment in new routes or equipment. Going to business and civic leaders in communities served, as well as those not served, by Allegheny, the two men gather a constituency of converts ready to accept the revolutionary commuter operation that would long bear the Allegheny name.

In the mid-1960s, Allegheny officials convince the CAB that it would be preferable, both economically and socially, for a commuter to provide frequent service to a small community under the guidance of a larger carrier. This would be in contrast to flights of only one or two per day directly into those same towns by larger local service airlines. The idea is in some ways similar to an earlier arrangement worked out in the U.K. by **British European Airways Corporation (BEA)**. Washington agrees to this replacement code-sharing concept and the Allegheny Commuter network is born.

Richard A. Henson had begun **Hagerstown Commuter** on October 1, 1964, as a division of his FBO operation, Henson Aviation. In August 1967, he enters into an associate agreement with **Allegheny Airlines** to provide four-times-per-day scheduled flights from his western Maryland base to Washington, D.C. For its part, Allegheny agrees to help with reservations and ticketing, station handling, market planning, and accounting, and to offer a financial guarantee against loss.

By September, Allegheny has a 100% turbine-powered fleet when it retires its last Convair CV-440 and takes delivery of a 10th F-27J. On November 15, the Barnes/Colodny commuter concept becomes reality as a Henson Beech B-80 Queen Air, with the words "Allegheny Commuter" painted on its sides in red, takes off for the nation's capital. At year's end, Henson adds flights to Baltimore and Salisbury and Robert Jackson is named vice president-commuter services. His new "Allegheny Commuter" system will grow until it is the largest in the United States.

Passenger boardings for the year jump 29% to 2,525,000. Revenues accelerate 20.5% to \$52.32 million. Although an operating profit of \$2.24 million is earned, costs of aircraft purchases and a 27% reduction in public subsidy lead to a net loss of \$696,846.

Bolstered by the success of the "Allegheny Commuter" gambit, now increased by the addition of **Pocono Airlines**, Leslie Barnes's airline begins to expand its size through merger.

The employee population in 1968 numbers 4,350. On March 14, shareholders and CAB officials approve Allegheny's acquisition of the routes and equipment, debts and liabilities of Indianapolis-based **Lake Central Airlines**. Holders of LCA common stock receive 0.44 of a share of Allegheny common stock for each LCA share held.

In one stroke on July 1, the Pittsburgh carrier is enlarged with frequencies to Dayton, Cincinnati, Columbus, St. Louis, and as far west as Chicago. When the merger takes effect on July 1, Allegheny, as the surviving airline, becomes America's largest local service passenger airline.

Nine ex-**Lake Central Airlines** Nord 262s are painted in royal purple with gold fleur-de-lis logos on their tails and noses. Hostesses wearing Parisian apache outfits (split skirts, striped jerseys, black net stockings, and black berets) are assigned to the aircraft. To complete the French look aircraft are given the names of French females: *Claudette d'Allegheny*,

Celeste d'Allegheny, Nanette d'Allegheny, Yvonne d'Allegheny, Nicole d'Allegheny, Michele d'Allegheny, Brigitte d'Allegheny, Collette d'Allegheny, and Monique d'Allegheny. At a November 25 ceremony, begun with the playing of *La Marseillaise*, the first Nord, *Claudette d'Allegheny*, enters service from Weir Cook Airport at Indianapolis.

Three more "Allegheny Commuter" services are added.

On December 24, while on final approach to the airport at Bradford, Pennsylvania, on a service from Detroit to Washington, D.C. (DCA), Flight 736, a CV-580 with 6 crew and 41 passengers, strikes a line of trees in light snow 2.5 mi. short of the runway and crashes upside down (20 dead).

Customer bookings skyrocket 71.6% to 4,334,000 (including 26,304 "Allegheny Commuter" passengers) and freight traffic is up by 50.6%. Revenues jump 39% to \$95.26 million and, although an operating profit of \$10.18 million is generated, a net \$4.83-million loss is suffered.

In almost the same manner as a sister flight in December, Flight 737, a CV-580 with 3 crew and 25 passengers, crashes into a line of trees 4.7 nm. short of the runway at Bradford, Pennsylvania, on January 6, 1969, and flips over (11 dead).

Three DC-9-31s join the fleet during the first quarter; nine more will be delivered before year's end.

On a September 9 service from Boston to Indianapolis on a descent from 6000 to 2,500 ft., Flight 853, a DC-9-31 with 4 crew and 82 passengers, collides at 3,550 ft. near Shelbyville, Indiana, with a Piper PA-28 Cherokee. The Piper is owned by the Forth Corporation and being flown cross-country by a student pilot; there are no survivors from the subsequent crash of either plane.

The fleet comes to comprise 42 CV-580s and 24 DC-9-31s. The company closes out the decade as the nation's largest local service or regional airline. Ridership of the "Allegheny Commuter" partners triples while **Crown Airways** joins the system.

Enplanements are 4,661,000 and revenues are \$120,911,000. Although a \$2.2-million operating profit is earned, a net loss of \$10.92 million is suffered.

The employee population in 1970 numbers 4,944, a 6% increase. Two B-727-2B7s are delivered in early spring. Later, 3 more DC-9-31s arrive. One of these, accepted in a ceremony on May 27, is the 500th DC-9 built.

On September 19, a 19-year-old ex-Marine, R. D. Watt, armed with a pistol, gasoline, and dynamite takes over Flight 730 en route from Pittsburgh to Boston. He demands that the B-727-2B7 with 98 aboard be flown to Cairo; the plane's range is insufficient for a trip to Egypt, so the man settles for a flight to Havana instead. Watt will make the mistake of returning to the U.S. in 1978; he will be captured, tried, and sent to prison for 15 years.

Passenger bookings advance 21% during the 12 months to 5.9 million and cargo traffic grows by an equal 21.6%. A \$10 million turnaround occurs on the financial side. On revenues of \$154.6 million, profits are \$9.46 million (operating) and \$528,000 (net).

The carrier announces on May 22, 1971, that it has added hot pants to its stewardesses' wardrobe.

While on approach to Tweed-New Haven Airport after a June 7 service from Groton, Flight 485, a CV-580 with 3 crew and 28 passengers, drops too low and strikes houses 4,890 ft. short of the runway and crashes (28 dead).

The landing gear of a CV-580 with 4 crew and 50 passengers collapses upon touchdown at Pittsburgh on August 20; there are no fatalities. Investigation shows that the gear had been disabled during an earlier unsuccessful landing attempt at Parkersburg, West Virginia.

Enplanements for the year are 8,105,915. Revenues are \$176.66 million; again, an operating profit is earned (\$17.9 million), but a net loss (\$1.57 million) is taken.

Having allowed four years for the digestion of **Lake Central Airlines**, Allegheny moves again to expand. During the first quarter, 11 BAC 1-11-103AEs are purchased from **Braniff International Airways**.

On April 12, 1972, it takes over the third largest local service carrier and an old rival, Utica, New York-based **Mohawk Airlines (1)**. To pro-

vide for the union, Barnes's carrier issues 704,000 common shares, 744,000 common stock purchase warrants, and 274,000 shares of convertible preferred stock to issue to Mohawk shareholders and holders of subordinated debt in Chairman Peach's airline.

This acquisition gives new northeastern territory to Allegheny and enriches its fleet with 15 BAC 1-11-203AE/-204s. It also allows it to become, in terms of passenger boardings, the seventh largest air transport firm in the country, ranking ahead of all but **United Airlines**, **Trans World Airlines (TWA)**, **American Airlines**, **Eastern Air Lines**, and **Delta Air Lines**. An extensive joint sales program is also undertaken with **Pan American World Airways (1)**.

Lost in the year's major events is a little-known event that some historians will later claim as the "opening salvo" in the battle for airline deregulation. On April 18, consumer advocate Ralph Nader is bumped from an Allegheny flight, thereby missing a speaking engagement. After refusing Allegheny's offer of a \$34.21 refund, Nader, with widespread media coverage, sues the airline, charging deliberate overbooking. He forms a watchdog group, The Aviation Consumer Action Project, and demands that the CAB investigate the nation's carriers.

A CV-580, on a Pittsburgh-Bradford flight on October 7, loses an engine after striking and killing a deer during its scheduled landing at Jamestown, New York; no injuries are reported. Customer bookings climb 13.5% to 9,371,000 and freight traffic increases by 29.4%. The workforce is now 7,100. Income is \$264.96 million and with expenses under control, profits are \$17.45 (operating) and \$5.48 million (net).

The employee population in 1973 increases by 721. Four more DC-9s join the fleet, while **Suburban Airlines** and **Pennsylvania Airlines** become regional affiliates. A joint marketing program with **Pan American World Airways (1)** gathers steam as the Washington, D.C.-based local service carrier moves into the major's Worldport terminal at New York (JFK) late in the year. To promote the new two-carrier cooperation, flight attendants from each airline fly aboard the other's flights.

A new in-flight magazine, *Executive*, is unveiled and the "Allegheny Commuter" service continues to expand with 12 contracting carriers flying to Pennsylvania, Ohio, Connecticut, and Indiana. A DC-9 simulator is obtained for newly consolidated simulator facilities at the Pittsburgh training base. On October 12, the government announces that, in light of the energy crisis, a mandatory jet-fuel allocation program will take effect on November 1.

On October 18, Federal District Judge C. R. Richey imposes a \$50,000 fine against the carrier for bumping consumer advocate Ralph Nader from a flight the previous year, and charges that the airline with consistently overbooked and denied 945 other customers seats during the same month as Nader.

In November, the company has its first-ever million-passenger month. As the result of cutbacks in the delivery of avgas, the carrier cancels services between New York City and Plattsburgh and between Plattsburgh and Saranac Lake beginning on December 7. The next day, late-night, low-cost flights from New York City to Buffalo, Pittsburgh, and Rochester are also cut.

Bookings on the "Allegheny Commuter" system exceed one million in a year for the first time while overall passenger traffic accelerates by 7.4% as 10,840,000 passengers are carried. Cargo grows by 18.2%. The nation's largest local service airline earns revenues of \$329.36 million and has expenses of \$309.39 million. The operating profit is \$19.97 million and the net is \$7.02 million.

Airline employment in 1974 is 8,129. Flight reductions of 30% occur on January 7 by the laying off 1,288 workers—15% of the carrier's work force.

The company's twenty-fifth anniversary is celebrated on March 7. An order is placed for eight DC-9-50s and the new maintenance and overhaul subsidiary Mohawk Air Services is created. **Chautauqua Airlines** becomes an Allegheny commuter partner. Mohawk begins to re-engine the Nord 262s with Pratt & Whitney of Canada PT6A-45 turboprops, turning them into Mohawk 298s. As a result of the new U.S.-Canadian

bilateral agreement, Allegheny is able to undertake new frequencies from Buffalo and Rochester to Montreal.

On October 25, a DC-9 with 95 aboard makes a safe emergency landing on a foam-covered runway at Rome, New York, after its tires blow-out during a takeoff from Rochester for Pittsburgh.

Enplanements are up .6% to 10,909,000, but freight is down 18.6%. The country's largest local service carrier takes in revenues of \$372.99 million and incurs expenses of \$354.33 million, a 13.4% increase due almost entirely to rising fuel prices. The operating profit is \$18.67 million and the net profit is \$6.03 million. A fiscal highlight of the year occurs when Allegheny becomes the first local service airline to be removed from the federal subsidy program.

A total of 653 employees are laid off or not replaced during 1975. The late-night, low-cost service between New York City and Buffalo, Pittsburgh, and Rochester is reinstated on January 26. A new corporate design is introduced for the nation's sixth-largest passenger airline and all aircraft are painted in new livery; **Southern Jersey Airways** joins the "Allegheny Commuter" system.

Leslie Barnes departs Allegheny in midyear to become chairman of Ryder Systems, Inc. and is succeeded as president/CEO by Edwin I. Colodny. A new terminal is dedicated at Boston where a new route is opened to Toronto. On May 3, the 1973 court ruling against the carrier in the Nader suit is overturned by the Federal Court of Appeals at Washington, D.C. Allegheny is also launch customer for 8 DC-9-50s, which are delivered during July–December.

Passenger boardings decline 5.6% and cargo is off by 13.5%. A net loss of \$9.9 million must be absorbed. The cost of the airline's expansion is heavy, and the new president's first task will be to restore black ink to the company's ledgers. Income inches up to \$373.11 million and a \$21.15-million operating profit is made, but expenses force a \$9.9 million net loss.

The workforce in 1976 is increased by 4.3% to 7,794. A new "big airline" marketing campaign is initiated and matches the inauguration of new nonstop service Baltimore–Norfolk, Cleveland–Toronto, Philadelphia–Syracuse, and Philadelphia–Rochester. Flights are resumed to Trenton.

A small plane narrowly misses colliding with a BAC 1-11 with 29 aboard on April 20 during the latter's landing approach to Long Islands' MacArthur Airport.

On June 8, the U.S. Supreme Court rules that consumer advocate Nader can, indeed, sue Allegheny for bumping him years earlier.

Flight 121, a DC-9-31 with 4 crew and 102 passengers, aborts its takeoff from Philadelphia in heavy rain and windshear on June 23; the aircraft slides 2000 ft. before coming to a stop; there are no serious injuries reported, but the Douglas is damaged beyond repair.

Customer bookings for the year grow 7.4% to 11,031,143 and freight is also up, by 8.6%, to 29.4 million FTKs. Expenses of \$420.91 million are submerged by total earnings of \$439.05 million. The operating profit is \$18.13 million while the net profit is \$13.81 million.

As the winds of change blow toward deregulation in 1977—which President Colodny opposes—Allegheny recoups its earlier losses and plans carefully for an uncertain future. In January, President Colodny, on behalf of the "Allegheny Commuter" system, accepts the 1976 "Regional Airline of the Year" award from *Air Transport World* magazine.

Control over its commuters is strengthened and the carrier refrains from jumping on the Boeing 747 Jumbojet bandwagon then rolling across the air transport landscape. The Mohawk 298 conversion of the Nord 262 is introduced on April 24 as 9 aircraft commence "Metro Express" flights up and down the East Coast from a hub at Harrisburg, Pennsylvania.

Pittsburgh to Atlantic City services commence in October and, by year's end, the last of the company's pure Martin 2-0-2s, after a long period in storage, have been cut up for scrap at Cape May, New Jersey.

Enplanements for the year total 11,628,706. A \$16.41-million net profit is earned on operating revenue of \$500.13 million.

Airline employment grows 8.1% in 1978 to 8,467 and the Horizon Hotels subsidiary is sold. Service is resumed from New York City to the

Catskills on March 19 after a seven-year lapse. In early spring, President Colodny succeeds Henry Satterville as board chairman/CEO. The remaining CV-580s are retired in June and the Mohawk 298s are transferred to the "Allegheny Commuter" partners.

Four used DC-9-30s are purchased from **Eastern Air Lines**, to which its 4 DC-9-50s are sold and its 4 chartered DC-9-50s are subleased. With a fleet of 11 Boeing 727-2B7s, 45 DC-9-30s, and 30 BAC 1-11s, the company now becomes an all-jet airline.

Flight 354, a BAC 1-11-203AE with 4 crew and 73 passengers, overruns the runway while landing at Rochester on July 9, crosses a drainage ditch, and stops 728 ft. from the end of the runway; although the jetliner is badly damaged, there are no fatalities.

When the Airline Deregulation Act is passed on October 24, Allegheny's lock on the upper right-hand corner of the U.S. airline map allows the carrier the option of not immediately lowering its fares.

After the books are closed on the year, Allegheny has expanded only to Florida and Texas, its traffic has risen 10.3% to just under 13 million passengers flown, and on revenues of \$566.3 million, a net profit of \$32.7 million is posted.

Passenger boardings of Allegheny's jetliners rise 9.2% in 1979 to 14 million as routes are stretched to Alabama, Arizona, Louisiana, and North Carolina.

The captain of Flight 561, a Mohawk 298 with 3 crew and 22 passengers, elects to takeoff from Benedum Airport at Bridgeport, West Virginia, on February 12 with an excessive amount of snow on the aircraft's wings and empennage surfaces. The aircraft flips over and crashes 14 seconds after becoming airborne (2 dead).

In March, stockholders approve a reformation of corporate identity and a new name to be introduced in the fall.

Revenues accelerate 28.6% to \$728.7 million, allowing a profit of \$33.4 million. On October 28, following eight months of preparation and external public relations, the company loses its regional identity and is rechristened **USAir**.

ALLEGHENY AIRLINES (2): 1000 Rosedale Ave., Middletown, Pennsylvania 17057, United States; Phone (717) 948-5400; Fax (717) 948-4714; Code US; Year Founded 1992. The second Allegheny Airlines is formed in August 1992 by the merger of two USAir Group wholly owned subsidiaries, **Pennsylvania Airlines** and **Suburban Airlines**, doing business as "Allegheny Commuter." William C. "Bill" Clark, leader of the former, is named president/CEO of the combined operation that now inherits a fleet of 17 de Havilland Canada DHC-8-100s, 23 Shorts 360s, 13 Beech 1900s, and 1 Fokker F.27-500 from the former and 3 Fokker F.27-500s, 8 Shorts 360s, and 3 DHC-8-100s. The remainder of the year is spent in upgrading services and rationalizing the fleet. Orders are placed for 5 Dash-8-300s.

Destinations served as part of the "USAir Express" feeder network include Albany, Allentown, Altoona, Atlantic City, Baltimore, Binghamton, Boston, Bridgeport, Buffalo, Elmira, Erie, Flint, Groton, Harrisburg, Hartford, Islip, Ithaca, Johnstown, Lancaster, Manchester, New Haven, Newark, Newport News, New York (JFK/LGA), Philadelphia, Pittsburgh, Portland, Providence, Reading, Rochester, Salisbury, Scranton, State College, Syracuse, Utica, Washington, D.C. (DCA), White Plains, Williamsport, Wilkes-Barre, and Worcester. Enplanements total 1,595,591, a figure 53.3% higher than that turned in by the merger partners the previous year.

Airline employment in 1993 totals 1,192 as Ronald A. Aramini becomes president/CEO. The rationalized fleet now comprises 13 Beech 1900s, 19 de Havilland Canada DHC-8-100s, 23 Shorts 360s, and 1 Fokker F.27-500.

Twice-daily Beech 1900 roundtrips commence on May 2 between Boston and Wilkes-Barre and Scranton.

Passenger boardings for the year climb to 2,090,000.

Eleven DHC-8-100s join the fleet during the first half of 1994. The carrier reaches a tentative four-year labor agreement with its pilots on April 12 that includes a 50% job reduction provision. On August 3,

USAir Group announces that it will lay off about 400 workers and agrees to sell a big portion of the carrier's assets to **Mesa Airlines**.

The latter move is not completed, even though customer bookings decline 7.4% to 1,935,354.

Traffic continues to fall during **1995**. Although 103,319 scheduled departures are made enplanements fall 10.1% to 1,738,913.

The fleet in **1996** includes 53 aircraft: 36 de Havillands, 11 Beech 1900s, 2 Shorts 360s, and 2 Shorts 330s.

Passenger boarding figures finally improve as the number of passengers carried increases by 3.5% to 1,800,248. Scheduled departures increase to 112,339.

On February 27, **1997**, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the year, this regional will begin to repaint its aircraft in a modified version of the major's new grey and dark blue livery.

Former **USAirways** Vice President-Special Projects Keith Houk is named president on September 2. He had earlier served as president of **Jetstream International Airlines**, now **PSA Airlines**.

Passenger boardings for the year recover and accelerate 13% to 2,035,162.

Flights continue in **1998**. Negotiations between management and the local Air Line Pilots Association (ALPA) chapter commence in June.

While on approach to Long Island's MacArthur Airport after a September 27 service from Philadelphia, "USAirways Express" Flight 3977, a DHC-8-102 with 3 crew and 22 passengers, encounters turbulence; the flight attendant is seriously injured, while one passenger is hurt slightly.

Customer bookings ascend 7.4% to 2.18 million.

Capt. Matthew Kernan, chairman of the Allegheny unit of ALPA, is able to announce on April 28, **1999**, that, after 10 months of negotiations, a new four-year collective bargaining agreement has been achieved.

Passenger boardings accelerate 12.8% to 2,465,000.

ALLEGHENY COMMUTER: United States (1989-1992). When **USAir** in mid-**1989** elects to reform and rename its "Allegheny Commuter" network as "USAir Express," the major's wholly owned subsidiary, **Suburban Airlines**, elects to change its name to Allegheny Commuter. Airline employment now stands at 300 and the fleet includes 11 Shorts 330s, 4 Shorts 360s, and 3 Fokker F.27-500s.

Under both new moniker and old, the carrier transports a total of 610,533 passengers, a 13.1% increase over the previous year. Freight poundage rises to 707,000.

The fleet is increased in **1990** by the addition of 2 Shorts 330s and 4 Shorts 360s. Passenger boardings shoot up 38% to 841,049, but cargo declines by 7.5% to 654,322 pounds.

The workforce is cut by 16.7% in **1991** to 250, but customer bookings shoot up 14.8% to 965,166. The carrier does not survive long enough to record its one-millionth passenger boarding.

In August **1992**, the company is merged with **Pennsylvania Airlines** to form **Allegheny Airlines (2)**.

ALLEGIAN AIR: 4995 E. Andersen Ave., Fresno, California, United States; Phone (559) 454-7781; http://www.allegiant-air.com; Code G4; Year Founded 1998. Allegiant Air is established at Fresno, California, by its chairman/CEO Mitchell H. Alice, in March **1998** to offer direct-sale public charters with a Douglas DC-9-21 purchased per-

sonally by Alice. The former **SAS (Scandinavian Airlines System)** jetliner is one of only 10 such aircraft built. Scheduled service is inaugurated in June from Fresno to Las Vegas and South Lake Tahoe and from Burbank to South Lake Tahoe. Enplanements for the year are less than 5,000.

The company's second aircraft, a former **Eastern Air Lines/Trans World Airlines (TWA)** DC-9-51, is acquired, via Boeing Capital, in August **1999**. When short-lived **Tahoe Air** begins service in October, Allegiant suspends its scheduled South Lake Tahoe service, though it continues charters. With Capt. Dave Beadle and First Officer Mark Overgaard at the controls, the completely refurbished DC-9-51 launches thrice-daily roundtrips on November 1 from Long Beach to Las Vegas.

Overall customer bookings for the year skyrocket 292.3% to 51,000.

Allegiant flirts with political history in February **2000** when presidential candidates lease its aircraft. On February 14-15, Senator Bill Bradley is transported by DC-9-51 from San Francisco to Atlantic City and New York (LGA) while, on February 19-20, the same plane flies Texas Governor George W. Bush from South Carolina to Grand Rapids and Detroit.

The DC-9-21, meanwhile, is briefly repainted in the colors of the fictitious Big Country Air for a role in the Chris Klein and Heather Graham motion picture *Say It Isn't So*.

Chairman Alice buys 2 more ex-Eastern/TWA DC-9-51s in mid-July and they are employed, beginning on August 15, to resume flights to South Lake Tahoe, this time from Long Beach, and to inaugurate daily roundtrips from Long Beach to Las Vegas via Fresno. Daily roundtrips commence on September 7 from Fresno to Portland via Reno.

ALLEGRO AIR (LINEAS AEREAS ALLEGRO, S.A. de C.V.): Jose Bentiez 2709, Obispa, Monterrey, NL, 64060, Mexico; Phone 52 (8) 333-9938; Fax 53 (8) 333-9940; http://www.suntrip.com/allegro_profile.htm; Code GRO; Year Founded 1992. Allegro Air is established at Mexico City in the fall of **1992** to offer domestic passenger and international charter and inclusive-tour flights. A contract is signed with San Jose-based SunTrips and revenue operations commence on December 26 with two leased Boeing 727-247As. The initial year is a huge success and requires the carrier to increase its fleet significantly in **1993**. Added under charter are 1 each B-727-225A, B-727-225, and B-727-214.

Destinations visited from Cancún include Albany, Boston, Bonoire, Cedar Rapids, Charlotte, Chicago (ORD), Dallas (DFW), Denver, Green Bay, Los Angeles, New York (JFK), Moline, Norfolk, Memphis, Phoenix, Richmond, Rochester, Salt Lake City, Seattle/Tacoma, Spokane, Syracuse, and Wasau in Wisconsin.

Three Douglas DC-9-14s are chartered from International Air Leases early in the first quarter of **1994** as replacements for the last two Boeings. Outfitted in a striking forest green livery with silver titles, the first aircraft is delivered from Miami to Mexico City on March 17—St. Patrick's Day. One plane is flown on behalf of the ABACO company, with billboard titles advertising that company painted along the fuselage.

Later in the year, the remaining B-727-225A and 3 Douglas transports are joined by 2 McDonnell Douglas MD-83s chartered to and from the German airline **Aero Lloyd Flugreisen, GmbH. & Co.**

When Club America Vacations abruptly shuts down on March 30, **1995**, it leaves nearly 2,000 passengers stranded at destinations in Mexico and the Caribbean. Although U.S. law requires airlines providing outbound transportation to return stranded passengers if a charter firm goes out of business, that is not possible in this case as the carrier involved, **Private Jet Expeditions**, has itself failed two weeks earlier. Consequently, Allegro becomes one of several U.S. and Mexican operators to assist in the return of the tour operators clients, transporting a total of 300 American vacationers back to Texas from Mexico.

While en route from Orlando to Cancún on May 14, **1996**, Flight 401, a DC-9-14 with 4 crew and 42 passengers, strays 300 mi. off course. Low on fuel, the aircraft is diverted to Tampico, but, at a point 65 mi. from that destination, the aircraft suffers fuel exhaustion and both

engines flame out. The aircraft glides toward a landing, but comes down 300 m. short of the runway, causing its right main landing gear and its nose landing gear to collapse and the plane to hit the concrete base of approach lights. Although the Douglas is damaged beyond repair, there are no fatalities.

Airline employment stands at 95 in 1997 and the **Aero Lloyd Flugreisen, GmbH. & Co.** exchange continues annually between December and April.

International scheduled service is inaugurated; frequencies are initiated to San Francisco from Concum, Puerto Valanta, and San Jose Cobo; to Los Angeles from Concum, Mazatlan, Puerto Valanta, and San Jose Cobo; and to Boston from Acapulco, Bonoire, Concum, Curaçao, and San Jose Cobo. Additionally, the company's flourishing charter business is continued.

During the year, a contract received from SunTrips for roundtrip charters between Los Angeles and Mexico is operated as a subservice by the Canadian carrier **Skyservice, Ltd.** An Airbus Industrie A320-231 chartered from **Airtours International, Ltd.** of the U.K.

The SunTrips contract for U.S.-Mexico service is awarded to **Ryan International Airlines** at the end of the first quarter of 1998. Until Ryan takes over the service, the Canadian Airbus maintains the link on behalf of the tour operator.

The company operates invisibly in 1999. The year's most important achievement is the hush-kitting of 2 B-727-2A1As, which are returned to the carrier in an all-white livery.

On April 17, 2000, it begins to fly an all-white Boeing 727-200A from Santo Domingo to Miami on behalf of **Aeromar International, C. por A.**

ALLEN AIR COMMUTER: United States (1967-1975). **Allen Aviation** is set up at Topeka, Kansas, in 1967 to provide scheduled air taxi services to Kansas City, Kansas, Kansas City, Missouri, Manhattan, and Lawrence. Piper lightplane operations continue apace during the remainder of the decade and into the 1970s, by which time the company has received a change in corporate identity, becoming Allen Air Commuter.

The company goes out of business on August 13, 1975.

ALLIANCE AIR, LTD.: Northern Region Building, Safdarjung Airport, Delhi, 110033, India; Phone 91 (11) 371-8951; Fax 91(11) 371-1730; <http://www.allianceair-india.com>; Code CD; Year Founded 1996. AA, Ltd. is established at Safdarjung Airport, Delhi, in the spring of 1996 as an **Indian Airlines Corporation** subsidiary. Veenu Kashyap is named managing director (as well as director of the parent's short-haul division) and is charged with taking up feeder services that halted earlier in the decade when **Vayudoot Airlines, Ltd.** was merged into IA.

All infrastructure support is provided by the parent, including ground handling, sales, marketing, computerized reservations system, ticketing, and airport facilities. The new concern employs its cockpit and cabin crew on a contract basis and subcontracts its maintenance to **Indian Airlines, Ltd.**

With the mission of providing tourist-oriented feeder services to and from its Bombay and Delhi hubs, the new entrant leases 3 B-737-2A8As and the former Vayudoot fleet of HAL-manufactured Dornier 228-212s from **Indian Airlines, Ltd.** Flights are launched on June 21 from New Delhi to Goa. Continuing service to Cochin. Bhopal, Bhuj, Gwalier, Indore, Jaipur, Jamnagar, Jodhpur, Mangalore, and Udaipur joins the network later in the summer.

Thrice-weekly roundtrips commence on September 10 between Kochi and Madras.

A fourth B-737-2A8A arrives on February 10, 1997 as plans are made to acquire 8 more "Baby Boeings" from the parent. Flights to Rajasthan commence in April. During the next 8 months, the company undertakes 45 daily departures to its many destinations.

Enplanements during the 12 months total 1,436,602.

During 1998, executives at **Indian Airlines, Ltd.** ponder the idea of turning the subsidiary into an independent airline.

During the first quarter of 1998, tenders are placed to lease 5 B-737-200s, 2 of which should enter service during the second quarter and 3 in the third.

With the arrival of 2 B-737-2A8As in April, flights commence to Calcutta and Chennai from Port Blair. In addition, daily roundtrip frequencies between Bombay and Mangalore are increased from 7 to 11.

Just after takeoff from Kochi to Thiruvananthapuram on the completion of a July 30 service from Agathi, Flight 503, a Dornier 228-212, with three crew and five passengers, nose dives into a building near the naval workshop and explodes; all aboard are killed, along with two people on the ground. Five persons in the naval facility are injured, one seriously.

A commission of inquiry begins an examination the next day. However, on August 4, Minister of Aviation Ananth Kumar tells the press, as reported in that day's edition of *The Hindu*, that there are no plans to phase out the Indian Airlines Dornier fleet.

When Civil Aviation Minister Ananth Kumar disbands the common board of **Air India, Ltd.** and **Indian Airlines, Ltd.** on December 11, he also dismisses its shared chairman, P. C. Sen, who is also managing director of **Indian Airlines, Ltd.** Considered a protege of Sen, Alliance Managing Director Kashyap is dismissed on December 14.

Passenger boardings inch up 1.4% to 1,457,000, while cargo traffic jumps 11.3% to 5.54 million FTKs. Revenues are \$223.44 million and costs are \$222.31 million. The operating profit is \$1.12 million.

In addition to Dornier 228-212s, the Alliance fleet, at the beginning of 1999, includes 12 B-737-2A8A, most of which are 17-18 years old. Only 10 planes are available for operations at any given time.

Following a VIP inaugural flight on March 13, by new Managing Director D. V. Gupta and others, thrice-weekly Dornier 228-212 roundtrips commence on March 15 from Delhi to Shimla and Kullu.

In April, Alliance floats global tenders to lease 4 B-737s of the 200, 300, or 400 series; tenders received will be opened on June 4. On May 22, *The Times of India* reports that the company will employ the new aircraft for planned expansion in the Rajasthan, Madhya Pradesh, and northeast.

Overall enplanements for the year reach 1.88 million and 8.15 million FTKs are also operated.

Inbound to Patna at the end of the first leg of a three-stop July 17, 2000 flight from Calcutta to Delhi, Flight 7412, a B-737-2A8 with 6 crew and 51 passengers, flies too low while making a second approach. The jetliner's left wing hits a neem tree and is torn off. The plane crashes into several single-story houses in a residential estate 2 km. SW of the airport and explodes. There are no survivors and four people are killed on the ground.

Two B-737-200s are grounded on August 20 for the repair of reported oil leaks and engine noises.

ALLIANCE AIR EXPRESS, S.A.: P.O. Box 808, Kigali, Rwanda; Phone 250 75492; Fax 250 72462; Code RWD; Year Founded 1997.

In 1995, as the nation of Rwanda recovers from the bloody events of the last few years, **Rwandair Cargo (Societe Nationale des Transports Aeries du Rwanda, S.A.)**—still known by its pre-1994 name of Air Rwanda—withdraws its Boeing from service and operates only a single de Havilland DHC-6-300 Twin Otter, flying it between Kigali, Entebbe, and Nairobi.

While the Canadian turboprop continues service in 1996, executives from the multinational **Alliance Airlines (African Joint Air Service)** recommend a different approach. During the summer of the former year, they enter into negotiations with the governments of Rwanda, Uganda, and Tanzania, as well as **South African Airways (Pty.), Ltd.**, for the establishment of a new carrier to replace Rwandair Cargo.

Agreement on establishment of the new concern is arranged with Rwandan Minister of Transport and Communication Charles Ntakirutika on August 7. Under its terms, shareholding in the new carrier, which will hopefully begin flying in October, is divided between the

Rwandan government (51%) and **Alliance Airlines (African Joint Air Service)** (49%). Mrs. F. Nkera is named general manager and plans are made to reintroduce jet equipment from Kigali and to fly to a number of destinations.

The initial date for start-up comes and goes, with the inauguration of services delayed for a variety of reasons. During October 1997, plans are completed that will have **Air Tanzania** and **Uganda Airways Corporation** merge with Alliance, forming the core of Alliance Express. SAA and Transnet, the government-owned parent firm, would be expected to cover costs.

In early January 1998, six Rwandans are selected and dispatched to Johannesburg for flight crew training. Alliance Airlines now introduces new financial, reservations, and administrative automated systems for the new venture and undertakes to provide extensive training programs in Rwanda.

Finally, on March 23, Alliance Air Express inaugurates services to Entebbe, Nairobi, and Johannesburg, employing 1 each Fokker 50 turboprop and Boeing 737-244A, the latter subleased from **Alliance Air (African Joint Air Service)**, which had chartered it from **South African Airways (Pty.), Ltd.**

Service is maintained during the remainder of the year and 1999, even as significant problems befall parent Alliance Air.

After stepping back from a call for Alliance's April 2000 closing, Transnet, parent of **South African Airways (Pty.), Ltd.**, instead gives warning that it wishes to pull out of the joint venture within six months. It does, however, agree to provide funding as long as Uganda and Tanzania agree to a new business plan and contribute monthly.

The funding problem is never satisfactorily resolved and, on October 10, SAA withdraws its aircraft, grounding not only **Alliance Airlines**, but the longer regional "Baby Boeing" services of Alliance Air Express as well. Domestic flights with the Fokker and a British Aerospace BAe (HS) 748-2B can be continued.

ALLIANCE AIRLINES: United States (1984-1994). Formed at Kenosha, Wisconsin, in early fall 1984, President James R. Beardsley's company assembles a fleet of 4 Cessna 404 Titans and 1 Cessna 421 with which to inaugurate operations. Alliance begins Essential Air Services (EAS) operations from Manitowoc, Manatee, Menominee, and Sturgeon Bay to a hub at Chicago (ORD) in November. Simultaneously, a Titan route is operated from Chicago's Meigs Field to Springfield, Illinois, under contract to **Mississippi Valley Airlines (MVA)**.

The merger of MVA and **Air Wisconsin** results in the transfer of the former's Business Express service to Alliance on June 1, 1985. The airline also takes over its own ground support at Meigs Field. A total of 7,907 passengers are flown during the inaugural year.

Two Titans are withdrawn in 1986 and the 421 is replaced with a Cessna 402. Enplanements, however, fall to 4,000. The company declines to make its 1987 traffic figures available, and on April 1, 1988, merges with the Iowa-based small regional **Great Lakes Airlines**.

Both carriers continue operations and, in 1993, President Robert L. Jones's 60-employee Alliance operates a fleet of 12 Cessna 402s. Three Shorts 330s are acquired in 1994, during which year Alliance is amalgamated with **Great Lakes Airlines**.

ALLIANCE AIRLINES (AFRICAN JOINT AIR SERVICE): Impala House, 13 Kimathi Ave., P.O. Box 2128, Kampala, Uganda; Phone 256 (11) 244 011; Fax 256 (11) 251 681; Code Y2; Year Founded 1994. With headquarters at Impala House in Kampala, Alliance Airlines is established as a consortium airline on December 20, 1994. Shareholding is divided between Transnet, the parent of **South African Airways (Pty.), Ltd.** (40%), **Air Tanzania Corporation** (10%), and **Uganda Airlines, Ltd.** (10%), with the Tanzanian and Ugandan governments holding 30% pending complete privatization of their state carriers.

SAA contracts to provide aircraft, maintenance, and other support services, including training of cabin and flight crews and access to the

Galileo computerized reservations system. All three agree to share traffic rights in order to extend the scope of the new entrant's air network, particularly key long-haul routes to Europe. Alliance becomes, in fact, the national airline of Uganda and Tanzania for all existing and potential international routes.

Adrian Sibo is elected chairman with Christo Roodt as managing director.

A workforce of 60 is employed during the spring of 1995 and a Boeing 747SP-44 is wet-leased from SAA. Scheduled international and regional passenger services commence on July 1 as the Jumbojet begins flying from Dar es Salaam and Entebbe to Bombay and London (LGW).

Later in the year, frequencies are initiated to Dubai and the United Arab Emirates.

Operations continue apace in 1996 and discussions are held with Kenya concerning possible membership in the consortium for that nation. A B-737-224A is leased from the South African flag carrier and is employed to fly in Alliance colors from Johannesburg to Entebbe, Dar es Salaam, Nairobi, and Kigali.

Enplanements during the 12 months total 12,871 and an \$8.45-million operating loss is suffered.

The workforce stands at 104 in 1997. During the summer, the company enters into negotiations with the governments of Rwanda, Uganda, and Tanzania for the establishment of a subsidiary carrier to be created in Rwanda. On August 7, an agreement is reached in Kigali between Alliance and the Rwandan Minister of Transport and Communications, Charles Ntakirutika. Plans are made to have the new company operational by October.

On August 25, Alliance introduces new direct services to Kilimanjaro designed to serve those tourists who had previously been compelled to transit through Nairobi or Dar es Salaam.

Five days later, the company announces that it will enter into a joint venture with the government of Rwanda to create a subsidiary carrier, **Alliance Air Express, S.A.** Shareholding will be divided between Rwanda (51%) and Alliance (49%).

During the fall, the company begins to develop Dar es Salaam as a hub for the Far East and Entebbe as a hub for European destinations.

During October, plans are completed that will have **Air Tanzania Corporation** and **Uganda Airlines, Ltd.**, merge with Alliance, forming the core of **Alliance Air Express, S.A.** SAA and Transnet, the government-owned parent firm, are expected to cover costs.

Passenger boardings for the year increase 48% to 42,331. Revenues reach \$22.3 million, with costs at \$30.63 million. The operating loss is down to \$8.32 million.

Inauguration of **Alliance Express, Ltd.** must be pushed back. In January 1998, six Rwandans are selected and sent to South Africa for cabin crew training. Finally, on March 1, revenue flights are launched employing the B-737-244A that Alliance has been flying on regional services to Entebbe, Dar es Salaam, and Johannesburg.

On July 6 it will be reported by the Dar es Salaam-based newspaper *The East African* that a travel agency in its city, Salama Tours, has now paid \$138,000 for a 10% stake in the carrier. It will seek a refund "for undisclosed reasons," one which the airline is reluctant to provide.

On May 13, the corporate secretary of the African Joint Air Service (AJAS), Frederick Ochieng-Obbo, calls a press conference to announce that the Ugandan government is not, in fact, investigating the carrier's legality. The story had earlier gained currency as the result of a letter to Uganda's transport minister, John Nasasira, written by Uganda Airlines General Manager Dickinson Turinawe. Ochieng-Obbo believes Turinawe had penned the "malicious" communication because his company does not "understand the way we are structured, even though they are a shareholder."

There the matter rests as **Uganda Airlines, Ltd.** itself begins privatization and is pursued as a joint venture acquisition by four major carriers, including SAA and Alliance.

Another crisis now erupts, this time with **Air Tanzania Corporation**. For several years, it has been claimed that ATC has not cleared its

investment arrears dating from the commencement of the airline in 1994. The dispute reaches such a point of hostility that ATC Chairman Abbas Sykes announces that his airline will withdraw from AJAS on expiration of the shareholders' agreement on June 30.

On July 1, a check is found in the AJAS offices that effectively clears up the fiscal matter. Dated December 10, 1997, it is for the full amount of \$59,000 owed. How it had been received and why it had not been entered into the company ledger is not explained.

Still, ATC officials indicate at the end of the month's first week that they require negotiation of a new shareholders' agreement in which they may add written remedies to their long-standing objections to company policy. The Tanzanian government now steps in and reserves to itself the future of the relationship between the state carrier and the consortium.

The dispute continues throughout the summer and fall. ATC and **Uganda Airlines, Ltd.** are finding it impossible to proceed toward privatization without the international traffic rights they had given away in 1994. Prospective investors inform the airlines that they will not provide equity without the rights.

On October 28, Tanzania's Minister for Transport and Communications Ernest Nyanda is quoted with permission by Reuters, Ltd. and in local newspapers as indicating that ATC is no longer a viable transport entity. It will prove impossible to privatize ATC without return of the traffic rights. Whether to remain a part of the consortium or pull out will be decided by the minister in the new year.

Asked for a response to Minister Nyanda's statement, an Alliance Air official admits that there is only room for one serious airline in the East African region. "It's all about the economies of scale . . . The reality is, on their own, ATC does not have a future. Neither does Alliance if it doesn't expand."

Ugandan Finance Minister Gerald Sendaula reports to key committees of the parliament on January 5, 1999, that three foreign carriers have informed the government that they have reservations concerning their bids to participate in the privatization of Uganda Airways Corporation, scheduled for March. The reservations are based on the fact that **Uganda Airlines, Ltd.** does not control its international routes, which are now operated by Alliance Airlines.

The finance minister informs the legislators that he will approach a shareholders' meeting of the African Joint Air Service consortium later in the month and seek a guarantee of its routes. If the issue is not resolved diplomatically by the end of January, the Ugandan government will issue a 12-month notice of withdrawal from the AJAS Accord and Shareholders' Agreement.

Leaders of East Africa end their two-and-a-half-year embargo of Burundi on January 26; Alliance, which has honored the sanctions since their imposition in July 1996, resumes flights to Bujumbura on February 1.

South African Airways (Pty.), Ltd. and its partner Alliance Air are, by late April ready to quit the bidding process for **Uganda Airlines, Ltd.** The two partners insist on several conditions: not being saddled with the entire Uganda Airlines debt, including the lease on a B-737; having less than parity on the board of directors; that business and capital investment plans already drawn up be binding; that certain airports become hubs; and that brand names and airline codes continue to reflect Uganda. All of these conditions are rejected by the Ugandans.

On April 21, the two airlines withdraw from the **Uganda Airlines, Ltd.** bidding process. So concerned is Uganda's privatization minister, Manzi Tumubweine, that he personally calls CEO Andrews and obtains a meeting to review the outstanding issues. Within several days, the two sides have convened and the Ugandan government has agreed to water down or delete entirely all of the requirements which SAA has found objectionable. Events will prove this decision on the part of the Ugandans to be a wise course of action.

After both **British Airways, Ltd. (2)** and **Sabena Belgian World Airlines, S.A.** pull out of the tender process, **South African Airways (Pty.), Ltd.** and its protege, Alliance Airlines, are the only prequalified bidders to make an offer for the available 49% stake in **Uganda Airlines, Ltd.**

On April 30, the Ugandan government via the cabinet subcommittee for privatization cancels the tender process and invites SAA and Alliance to negotiate the purchase during the week of May 3. This move should allay many of the concerns expressed by the Ugandan finance minister back in January. In a letter from Minister Tumubweine, SAA is informed that the Ugandan government will negotiate directly with the airline with a view of reaching an agreement by May 31.

The Tanzanian Cabinet, in a meeting on June 7, orders Transport Minister Ernest Nyanda to review the contract and consider future relations between Tanzania and the AJAS.

Debates within Ugandan circles will continue during the remainder of the summer concerning such matters as financing and surrender of the **Uganda Airlines, Ltd.** designator.

The dispute between the airline and the governments of Tanzania and Uganda are unresolved during the remainder of the year.

After stepping back from a call for Alliance's April 2000 closing, Transnet, parent of **South African Airways (Pty.), Ltd.**, instead gives warning that it wishes to pull out of the joint venture within six months. It does, however, agree to provide funding as long as Uganda and Tanzania agree to a new business plan and contribute monthly funding of \$126,000 each.

The marketing name SA Alliance Air (Pty.), Ltd. is now employed and a SAAB-767-244 takes over the route from Johannesburg to London (LHR) via Entebbe and Dar es Salaam, previously operated by the lion's head-painted Alliance B-747SP-44. Another SAA aircraft, a B-737-244, is employed by **Alliance Air Express, S.A.** to fly a weekly roundtrip route between Johannesburg, Kigali, and Entebbe.

Uganda fails to make payment of any kind after May and Tanzania escapes the cash contribution by providing the carrier with in-kind services, such as landing fees and ground handling. The two national governments, acting in consultation, do agree to sell their shares into the private sector, thereby minimizing state involvement in the joint venture. Their national carriers, meanwhile, concentrate on a new daily roundtrip schedule jointly introduced between Dar es Salaam and Entebbe.

On July 1, Tanzania shareholders are called to a July 20 privatization vote, but the meeting is postponed at the last minute pending further cabinet discussions. Further progress is put off due to national elections.

Blaming leaders of its partner nations, particularly Tanzania, for its inability to perform to a higher level, the airline, during the first week of September, reports a \$50-million loss since 1994.

On October 2, **DAS Air Cargo, Ltd.** and the Tanzanian Chamber of Commerce step forward with an offer to purchase 30% stakes each—the Uganda and Tanzania holdings—in Alliance, with DAS also bidding \$5 million to take over the 40% stake held by Transnet. The deal is conditional in that DAS must also be given traffic rights to the Alliance routes and the Alliance debt must be satisfied.

The **DAS Air Cargo, Ltd.** rescue effort collapses on October 10. With both Uganda and Tanzania having failed to pay their part of expenses, **South African Airways (Pty.), Ltd.** refuses to continue operating its Boeings for the partnership airline. Without lift, the company is forced to suspend all operations the same day. SAA, for its part, announces that it will begin a thrice-weekly return service between Johannesburg and Entebbe on December 1.

Seeking surety for owed salaries and benefits, workers for the grounded airline seize an SAA passenger jetliner when it arrives at Dar es Salaam, Tanzania, on October 13. **South African Airways (Pty.), Ltd.** quickly appeals to a local judge, who orders the aircraft released. Company workers in Tanzania also file suit against Managing Director Chris Zweigenthal for breach of trust.

Following an interview with police, the partnership carrier's managing director and two associates flee Uganda for South Africa on October 15. The next day, at the request of the airline's workers, the Kampala High Court freezes the Alliance Air records and orders that an inquiry into the company be launched. In a related story, **Uganda Airways, Ltd.**, which is being liquidated and sold its last Fokker three days earlier, is shut down on October 16.

Managing Director Zweigenthal, unable to discharge his duties from exile in Johannesburg, resigns on October 26. The same day, the workers in Kampala drop their suit. On October 27, Ugandan and Tanzanian private concerns step in to buy the suspended airline and announce plans for a revival.

ALLIED AIRWAYS (GANDAR DOWER), LTD.: United Kingdom (1937–1947). In March 1937, **Aberdeen Airways, Ltd. (1)** is renamed Allied Airways (Gandar Dower), Ltd.. Joint five-times-per-week Newcastle–Stavanger air-rail service is inaugurated on July 12; the Allied Airways sector, which connects with **North Eastern Airways, Ltd.** at Newcastle and **DNL (Norwegian Air Lines, A.S.)** at Stavanger, is flown by Capt. Eric Starling in a DH 86B christened *The Norseman*. The next day, the DH 84 *Silver Ghost* is lost in a crash at Thurso. On November 23, Starling flies the first airmail to the Shetland Islands in the de Havilland DH 84 Dragon *Sir Rowland*.

In accordance with the Air Navigation Order of September 16, 1938, the new Air Transport Licensing Board (ATLB) on October 21 confirms Allied Airways (Gandar Dower), Ltd.'s routes from Thurso to Aberdeen, Kirkwall, and Stromness and its subsidiaries.

Following the outbreak of war in 1939, Gandar Dower obtains a contract (separate from those provided other carriers) by the **British Associated Airways Joint Committee** to service the Orkneys, a contract which is terminated on December 31, 1945. During the war, the company obtains 3 DH 89As. Two planes are lost in crashes: a DH 84 *The Starling* at Dunbeath on May 21, 1941 and a DH 89A *The Don* at Orkney on December 27, 1945.

In August 1946, the **British European Airways Corporation (BEA)** is formed; during the month, Gandar Dower adds another Dragon Rapide. On April 12, 1947, the carrier's personnel, services, and one of its four DH 89As is purchased and merged into the new state airline, **British European Airways Corporation (BEA)**. Gandar Dower retains 3 Dragon Rapides for charter operations that end in early 1950.

ALLIED BRITISH AIRWAYS, LTD. See BRITISH AIRWAYS, LTD. (1)

ALM (ANTILLEAN AIRLINES, N.V.): Hato International Airport, Curaçao, Netherlands Antilles; Phone 599 (9) 338 888; Fax 599 (9) 338 300; <http://www.alm-airlines.com>; Code LM; Year Founded 1969. This carrier, begun in 1935 as **Antillaanse Luchvaart Maatschappij** or the West Indian division of **KLM (Royal Dutch Airlines, N.V.)**, gains its independence in 1969. The government of Netherlands Antilles purchases all but 4% shareholding from the Dutch flag line and renames its new carrier ALM (Antillean Airlines, N.V.).

Ciro Yrauequin is appointed president and begins to actively pursue the tourist trade into his base at Hato International Airport at Curaçao. The 3 Convair CV-340s obtained as part of the KLM buyout are retired as 2 Fokker F.27-500s join the fleet.

Late in the year, a contract is signed with **Overseas National Airways (1)** for the provision of services to New York. Airline employment is 677 and enplanements for the year total 266,418.

Direct DC-9-33 service is inaugurated by ONA on behalf of ALM between St. Martin and New York on January 14, 1970.

On January 24, an F.27-500 with 30 passengers en route from Santo Domingo to Curaçao is captured by 2 men and ordered flown to Havana.

After three missed approaches to St. Martin on May 2, Flight 980, a DC-9-33CF from New York with 6 crew and 57 passengers, is diverted to St. Croix. Out of fuel and caught in a tropical storm, the Douglas crashes into the sea 30 mi. ENE of its destination (23 dead).

On May 12, en route from Santo Domingo to Curaçao with 33 passengers, an F.27-500 is taken over by 8 heavily armed Dutch revolutionaries and diverted to Cuba.

Passenger boardings rise 8% to 290,128.

In April 1971, the fleet becomes all jet as the Fokkers are replaced by a third DC-9-10 and a DC-8-53, the *Saba*, leased from KLM. A total of

291,720 travelers are carried this year.

The employee population rises to 768 in 1972. A new cargo building is opened at Curaçao and an owned DC-6A freighter is placed in service. Passenger boardings grow 6.5% to 312,000.

The carrier enhances its New York service in 1973 with DC-8-63s leased from **KLM (Royal Dutch Airlines, N.V.)**. Bookings zoom upward to 439,920.

Windward Island Airways International, N.V. is purchased in 1974, together with its routes and aircraft.

Enplanements for the year dip to 423,000, a 4% decline.

The workforce in 1975 is now 814. Three DC-9-32s replace the 3 DC-9-10s and, simultaneously, a new corporate livery is unveiled. Longtime Vice President Operations Capt. J. Bak retires.

Freight traffic is up 6% and passenger boardings swell 13% to 370,600.

Four employees retire in 1976. The fleet is increased by the addition of a de Havilland Canada DHC-6-300. A switch over to computerized reservations is completed in late spring. Bookings jump 39.2% to 514,893.

A Boeing 727-100 is employed (on lease) in 1977 to haul U.S. vacationers to the islands. A total of 575,853 passengers are transported on the year.

Airline employment is increased 19.1% in 1978 to 1,077. On November 1, the New York–St. Martin route belonging to **KLM (Royal Dutch Airline, N.V.)** is acquired and flown by two DC-8-63s leased from the Dutch company. Two Shorts 330s are acquired to launch service from Aruba and Bonaire. Passenger boardings balloon 22.6% to 743,510, but cargo falls off 15.7%.

When the U.S. CAB grants the giant carriers **Eastern Air Lines** and **American Airlines** activity on the route, ALM withdraws its New York–St. Martin route in 1979. Simultaneously, the B-727-100 charter operation to the U.S. is closed down (the jetliner is retired), but the Shorts 330s launch Panama City and Maracaibo flights. Also during the year, ALM begins to participate with **KLM (Royal Dutch Airlines, N.V.)** on the Dutch carrier's mid-Atlantic routes on a limited pool basis.

The third-level subsidiary ABC Commuter Airways, B.V. is formed in 1980 to provide scheduled flights from Curaçao to Aruba and Bonaire with two de Havilland Canada DHC-6-300s. A full cooperative agreement is reached with **KLM (Royal Dutch Airlines, N.V.)** during 1981 that provides for joint flights between the Netherlands Antilles and Amsterdam. Discussions will continue, off and on, over the next two decades aimed at extending cooperation into other areas.

In 1982–1986, the fleet is revised as all of the DC-8s are returned and 2 new McDonnell Douglas MD-82s are acquired. Service to the U.S. is maintained by the DC-9-32s (passenger) and the DC-6A (freight). Additional international DC-9-32/MD-82 flights serve Caracas, Georgetown, Kingston, Maracaibo, Medellín, and Santo Domingo.

Operations continue apace in 1987–1988, with a third MD-82 arriving on lease from **Continental Airlines** in April of the latter year. In 1989, the fleet is changed to include 1 Lockheed L-188AF freighter leased from **TPI International Airways**, 2 Fairchild Hiller FH-227Cs, and 3 MD-82s.

In April, four-times-per-week service is initiated from Miami to Curaçao (two flights via Aruba and two via Port-au-Prince).

En route from Miami to Curaçao on May 31, an MD-82 is seized by two assailants claiming to have a bomb and demanding to be flown to Israel. The aircraft diverts to New York (JFK), a gateway for **El Al Israel Airlines, Ltd.**, but after arrival the perpetrators are taken into custody.

In August, twice weekly nonstops are added from Miami to Aruba. With the addition of Tuesday and Wednesday flights, the route to Miami becomes daily in September.

Two de Havilland Canada DHC-8-301s are leased in early 1990 and in February weekly nonstop MD-83 flights begin from New York to Bonaire and Curaçao. The carrier joins IATA in July and in October nonstop service is launched from Miami to Bonaire.

ABC Commuter Airways, B.V. is merged into its parent during the year and its Twin Otters are replaced by ALM's two FH-227Cs.

President K. Chung's carrier continues operations in 1991. In February, thrice-weekly nonstop flights begin from Miami to Bonaire and twice-weekly service is started to Bonaire from New York. Weekly MD-83 service begins from Atlanta to Bonaire and Curaçao in March and twice-weekly routes are operated to Aruba.

In September, a fourth weekly flight is opened from Atlanta to Aruba and Curaçao. At the beginning of the fourth quarter, a \$24-million order is placed for 2 DHC-8-311s.

In 1992, the fleet includes 2 leased DHC-8-311s, 1 chartered and 2 owned MD-82s, and 1 L-188AF. The DHC-8-311s ordered the previous fall are delivered in May and June.

Airline employment stands at 811 in 1993 and from Curaçao, flights are made to Aruba, Atlanta, Barcelona, Barquisimeto, Bonaire, Caracas, Kingston, Miami, Paramaribo, Port of Spain, Port-au-Prince, Santo Domingo, St. Martin, and Valencia.

In cooperation with ALM Antillean Airlines, twice-weekly service is started by KLM (Royal Dutch Airlines, N.V.) to Havana on March 28; KLM flies the Europe to Curaçao leg, with ALM providing the flights on to Cuba.

In November, a comprehensive joint marketing and code-sharing agreement is signed with United Airlines, connecting the two carriers at Miami via Curaçao, Bonaire, and Aruba.

Capt. W. J. Kopra is appointed president in 1994 as another leased MD-82 arrives. Enplanements total 515,380.

In 1995, the L-188AF is returned to its lessor, which in turn passes it to Atlantic Airways, Ltd. in the U.K.

Despite an on-time performance which has fallen to just 56%, passenger boardings ascend to 682,930.

Sunday roundtrip service is inaugurated on April 29, 1996 from Atlanta to Oranjestad, Aruba, with continuing service to Curaçao and Bonaire. Bookings soar to 801,480.

The fleet in 1997-1998 still includes 3 MD-82s and 4 DHC-8-311s. During these years, a code-sharing agreement is signed with United Airlines. Enplanements reach 831,650 in 1997 and 916,360 a year later. On January 1 of the latter year, the marketing name "Air ALM" is introduced.

Dr. P. Armand Kariembaks becomes president at the beginning of 1999. The UAL pact is renewed during the spring.

The current commercial and operational partnership with KLM (Royal Dutch Airlines, N.V.) for joint operations between the Netherlands Antilles and the Netherlands is terminated on April 1, 2000.

On June 16, a new agreement permitting schedule coordination, joint marketing and ticketing, and various other services is signed with Windward Islands Airways International, N.V.

To reduce skyrocketing costs, the airline, beginning on July 1, institutes a new cost-cutting program. Monthly flight hours are boosted for pilots, flight attendants are required to serve more passengers, a fuel surcharge is added, and reduction in force notices are sent to 120 staff.

The company's pilots, who have not been paid since January, win a suit for the funds against the company, which claims that it will go bankrupt if forced to pay. The Curaçao judge in the case initially threatens to fine the airline \$27,800 per day if it does not, but postpones implementation of his judgment on August 14 following a request to do so from the pilots' union.

Following a scheduling disagreement, the code-share with SLM (Surinam Airways, N.V.) between Paramaribo and Miami ends on November 2. Miami Air, which had wet-leased B-727-200s to ALM for the route, now transfers them to SLM.

Employing a wet-leased City Bird, S.A. McDonnell Douglas MD-11, the carrier, on December 3, introduces twice-weekly nonstop roundtrips between Curaçao and Amsterdam.

ALM (ANTILLAANSE LUCHVAART MAATSCHAPPIJ, N.V.): Netherlands Antilles, (1935-1969). In honor of the three hundredth anniversary of the Dutch presence in the Lesser Antilles, the KLM (Royal Dutch Airlines, N.V.) F-XVIII/3m *Snip*, outfitted with extra fuel tanks, flies Amsterdam-Curaçao in December 1934. Two more company air-

craft are sent to Curaçao, the F-XVIII/3m *Oriol* and the F-VIII/3m *Duif*; with the *Snip*, they are the nucleus of a new West Indies Division, Antillaanse Luchvaart Maatschappij (ALM), formed on January 19, 1935. Simultaneously, scheduled service is opened Curaçao-Aruba.

On July 1, 1936 F-XVIII/3m flights begin Curaçao-Maracaibo.

Curaçao-Caracas service begins on January 19, 1937. American authorities refuse permission for a Miami route. The first Lockheed Model 14H Super Electra is delivered on February 19, 1938 and is christened *Parkiet*. It is followed into service by the *Troepiaal*, which arrives on March 9, and the *Kolibrie* (Hummingbird) and *Meeuw* (Seagull), which reach the islands on June 22 and July 9, respectively.

Barbados and Port of Spain join the route network on May 6, 1939 and Lockheed 14 Curaçao-Barranquilla flights are inaugurated on May 16. Service to Paramaribo, Surinam, is started on September 4.

In May 1940, ALM becomes the world's first operator of the Douglas DC-5. Two of the aircraft that had been ordered for the parent company must, because of the German occupation, be sent to Curaçao, where they are christened *Wakago* and *Zonvogel*. The pair are placed into service on the route from Curaçao to Surinam via Venezuela. The fleet now comprises 4 L-14s, 3 new L-18 Lodestars, and the older Fokkers.

Lockheed service to Kingston begins on August 19, 1941 with charter flights started to Miami by summer. Later in the year, the *Wakago* and *Zonvogel* are returned to California for overhaul and are then transferred to KLM's East Indies associate KNILM (Koninklijke Nederlandsch-Indische Luchtvaart Maatschappij, N.V.).

Lockheed L-14s commence operations to Havana in July 1942. The Super Electra *Parkiet* crashes at Trinidad on August 22. L-14s and L-18s begin flights Curaçao-St. Martin on July 27, 1943 and with a temporary American permit, to Miami on August 17 via Jamaica, Haiti, and Cuba.

On February 14, 1946, a KLM (Royal Dutch Airlines, N.V.) C-54 flies an Amsterdam-Curaçao proving flight; weekly service between the two destinations begins on April 10. DC-3s are acquired for the West Indies Division in 1947 and Curaçao to Havana via Ciudad Trujillo, Port-au-Prince, and Kingston flights start on April 20.

Withdrawn from service, the Super Electra *Troepiaal* is broken up at Curaçao in July 1948 while the L-14H *Kolibrie* is disposed of in August by simply being thrown into the sea.

Curaçao-Panama service is inaugurated on January 3, 1949. The *Meeuw* is dumped into the sea in August.

Managua and San Salvador join the route network on May 5, 1951 and new Convair CV-340s, led by the *Saba*, are delivered in 1954. Operations continue apace during the remainder of the 1950s and into the 1960s.

On August 1, 1964 the West Indies Division is reformed into the wholly owned subsidiary Antillaanse Luchvaart Maatschappij, N.V. (ALM), its service aimed primarily at the transport of business passengers, especially those of Royal Dutch Shell.

Operations are undertaken with 3 CV-340s over the regional route network to Kingston, Managua, San Salvador, Havana, Ciudad Trujillo, and Port-au-Prince. Late in the year, ALM and Surinaamse Luchvaart Maatschappij, N.V. (SLM) begin pooled West Indian service.

Enplanements total 115,000, the workforce is 429, and revenues of \$1.7 million are earned.

In 1967 orders are placed for 2 Fokker F.27-500s and 2 Douglas DC-9-10s. A total of 153,800 passengers are carried on the year.

Airline employment in 1968 is 619. The fleet now comprises 2 DC-9-10s, 3 CV-340s, and 1 Beech B-80. Passenger boardings soar 37% to 311,300, and revenues exceed \$3 million.

The carrier gains its independence of the Dutch flag line in 1969 as the government of Netherlands Antilles purchases all but 4% shareholding and renames its new company ALM (Antillean Airlines, N.V.).

ALMA AIR SERVICE, LTD. See AIR ALMA, LTD.

ALOHA AIRLINES: P.O. Box 30028, 371 Ackear St., Honolulu, Hawaii 96820, United States; Phone (808) 836-4101; Fax (808) 836-

0303; <http://www.alohaair.com/aloha-air>; Code AQ; Year Founded 1959. As statehood approaches, the junior of Hawaii's two scheduled carriers, **Trans-Pacific Airlines (TPA)**, is renamed Aloha Airlines on February 11, 1959, and begins flying a Fokker F.27 Friendship as supplement to its Douglas DC-3 fleet during the summer.

Competition between Aloha Airlines and the more senior **Hawaiian Airlines** is particularly intense during the 1960s, leading both to change equipment several times in efforts to get ahead. At the end of 1960, the carrier retires its last DC-3, choosing briefly to rely on its 3 F.27s. Aloha introduces Vickers Viscount 745Ds in June 1961.

In 1962, employment climbs to 501. An F.27 with 20 aboard is involved in a ground accident at Kallua on July 9, 1963. Enplanements for the year are 412,579.

The workforce in 1964 is 501 and the fleet includes 8 aircraft. Passenger boardings climb 18.7% to 507,477 while freight traffic is up by 17%. The \$321,768 net profit, made on revenues of \$7,338,000, is the best in company history.

Airline employment in 1965 is 610 and the fleet is down to 7 aircraft: 3 F.27s and 4 Viscount 745Ds. Orders are placed on March 15 for 2 BAC 1-11-215s.

On October 11 two knife-wielding U.S. Navy sailors attempt to take over Flight 755, an F.27 boarding passengers at Molokai preparatory for a service to Honolulu. The crew overwhelms the would-be pirates and both will be court-martialed, sentenced to four-year prison terms, and dishonorably discharged.

Bookings increase by 11% to a record high of 644,357. The load factor, for the fifth consecutive year, is the highest for any U.S. scheduled carrier—61.8%. A \$517,436 net profit is posted, which is another company record.

The first BAC 1-11-215, known as Alohajets by the company, arrives at Honolulu on April 15, 1966 and, in public ceremonies, is christened *Queen Kapihani*. It enters revenue service on April 27 over a route from Honolulu to Maui on April 27.

A second BAC 1-11-215 is delivered on June 8, eight days ahead of schedule. A third BAC 1-11-215 is requested in October.

The jets help boost revenue passenger miles flown up to 95.61 million. Revenues are \$9,677,715 and a net profit of \$160,611 is reported.

Airline employment in 1967 is 726 and the fleet includes 3 BAC 1-11-215s and 4 Viscount 745Ds. A fourth BAC 1-11-215 is delivered in June. Instead of taking up an option for two more of the British-made jetliners, orders are placed for 2 Boeing 737s. Hilo is opened as a second gateway to Hawaii and in an effort to stimulate traffic, a common fare to Hawaii is introduced. Meanwhile, Aloha now becomes involved in an unusual partnership outside of Hawaii.

The U.S. government is forced by the bankruptcy of the supplemental **Trans Ocean Air Lines (TOAL)** to find some other concern to provide air transport to the Marshall, Caroline, and Mariana Islands, collectively known as Micronesia. During this year, the Interior Department reviews bids and chooses to offer its contract to a new firm, **Air Micronesia**, a partnership between the United Micronesia Development Corporation (49% shareholding), **Continental Airlines** (31% shareholding), and Aloha Airlines (20% shareholding).

Back in Hawaii, Aloha generates a total of 752,683 passengers and its revenues climb to \$10,546,097. Net profits are \$256,897.

Air Micronesia service is begun by a **Continental Airlines** B-727-24C on May 16, 1968, with Aloha entering the picture later on. During the year, the junior Hawaiian carrier elects to replace its BAC 1-11-215s and places an order for 6 B-737-297s.

The employee population now numbers 752. Passenger boardings climb to 825,172 and 74,000 freight ton-miles are flown. Revenues total \$10,156,000.

The first Boeing 737-297 Funbirds are placed into service in March 1969. In celebration of the increased capacity, the carrier unveils a new corporate image, including a "Flower Power" livery.

A Vickers Viscount 754D is damaged beyond repair on June 27 in a ground collision with a DC-9 parked at Honolulu.

The fleet at year's end comprises 4 B-737-297s and 5 BAC 1-11-215s. Enplanements are 975,201.

The employee population in 1970 is pared by 11.9% to 723. During the spring, it appears that a merger might occur between the islands two principal carriers as negotiations begin. Richard H. "Dick" King, longtime marketing vice president, resigns and is succeeded by Bert D. Thomas.

Passenger bookings climb only 1.1%, to 986,047 but freight skyrocketed a spectacular 116% to 381,972 ton-miles flown.

Merger discussions with **Hawaiian Airlines** are broken off in anger and continued distrust in April 1971. In four years, the Aloha has lost \$6 million to the rivalry with Hawaiian.

A Vickers Viscount 745D is destroyed in a ground fire at Honolulu on August 18.

Enplanements for the year are 994,840.

Sales offices are opened in Osaka and London in 1972. More importantly, the CAB rules that Aloha must be given a minimum of scheduling opportunities in the state in competition with its older rival. This decision, coupled with aggressive selling, allows the company to stage a dramatic turnaround.

Passenger boardings jump 33.5% to 1,496,000 and cargo rises 24.3%. A \$1.4-million profit is earned and the carrier enters upon a decade of success.

The employee population in 1973 is 880. Two additional B-737s, Dash-284s, are placed into service, bringing the fleet total to six. Four major union agreements are negotiated insuring cooperation on the labor side.

Customer bookings accelerate 21.6% to 1,819,000 and freight traffic is level with 857,000 freight ton-miles flown. The net profit is \$3.5 million, the highest in company history to date.

Employment falls by 54 jobs in 1974. A seventh "Baby Boeing" is leased during the year, this one a B-737-293 from **Air California**.

Even though the overall growth of the state's tourist market begins to slow, Aloha is able to book 1,942,000 passengers, a 6.8% increase. Cargo traffic is also up, by 3.7%, but net income falls to \$2.2 million.

The workforce in 1975 is 931. A new marketing strategy is unveiled that replaces the Funbird image with the slogan "Aloha, Your Airline, Your Spirit."

Passenger boardings increase 4.8% to a record 2,036,000, but cargo is down by 6.5%. On record revenues of \$37.7 million, a net gain of \$921,000 is posted.

Nine additional employees join the job force in 1976, a 1% gain. In addition, two new off-peak period discount fares are announced, the flight attendants receive new uniforms, and another chartered B-737-297 is received.

Customer bookings jump 14.4% to 2,316,000, but cargo is down by 6.9% to 774,000 FTKs. On record revenues of \$45.3 million, record net income of \$1.5 million is recorded. Enplanements in 1977 total 2,638,000. A net profit of \$1.56 million is realized on operating revenues of \$50.72 million.

Airline employment grows by 14.4% in 1978 to 1,115. Orders are placed for three more B-737-297s.

Customer bookings jump 5% to 2,776,000 while freight leaps even higher, up 34% to 1.25 million FTKs. Operating income is \$60.68 million and expenses are \$57.42 million. This happy imbalance results in an operating profit of \$3.25 million and a net gain of \$2.19 million.

The workforce is cut by 1.3% in 1979 to 1,100 and 2 of the 3 B-737-297s arrive in the spring. Mimi Tompkins is appointed the carrier's first female pilot.

Passenger boardings jump 7% to 2,970,000 and freight is off by 23.3% to 962,000 pounds. Revenues advance 11% to \$70.68 million, and expenses, led by fuel prices, jump 18.1% to a still-manageable \$67.78 million. The operating profit is \$2.89 million while net gain drops 43.7% to \$2.19 million.

The workforce is reduced by 8.7% in 1980 as the carrier, reclassified as a national company under the CAB's new airline classification

scheme, enters a three-year slide. The third new B-737-297 joins the fleet on lease as an older model is sold and two other, new aircraft are refinanced. Aloha is able to obtain several fare increases and introduces three new discount packages and a promotional game designed to stimulate enplanements.

Although traffic falls, revenues hold. Customer bookings drop 9.4% to 2,690,000 while cargo advances by 7.2% to 1.03 million FTKs. Expenses rise only 15.2% to \$76.7 million on operating income of \$81.6 million, a 17.1% boost that results in an operating profit of \$6.34 million and net gain of \$4.88 million.

The number of employees increases by a modest 2.5% in 1981 to 975. One B-737-297 and a BAC 1-11-215 are sold. Low-fare **Mid-Pacific Airlines** joins the competition for passengers and the economy slumps into the tourist-trade, causing Aloha to suffer additional traffic decline. To help alleviate the downturn, management takes a 10% pay cut and the local ALPA chapter agrees to work rule changes that bring additional savings.

Passenger boardings dip 2.8% to 2,614,000, even as cargo inches upward by 1.8% to 1.05 million FTKs. Operating income climbs only 4.03% to \$84.91 million while expenses accelerate 10%, but remain a manageable \$84.33 million. The profits are \$587,000 (operating) and \$2.58 million (net), with the latter coming almost entirely from the \$5.4-million jetliner realization.

Fifteen employees are laid off in 1982 as intense price competition with its rivals and sluggish tourist bookings during the recession bring further downturn. Two B-737-297s are leased out while 3 older B-737-293s are retired in favor of 3 new B-737-297As.

Customer enplanements decline for the third straight year, down 7% to 2,431,000; however, cargo is up a slight 2.6% to 1.07 million FTKs. Revenues fall 7.94% to \$81.34 million and expenses are also down, by 6.36% to \$81.04 million. Although an operating profit of \$296,000 is generated, only the sale of tax credits from the purchase of 2 of its new Boeings allows a net loss of \$325,000 instead of \$6.5 million in red ink.

The payroll is cut 4.8% in 1983 to 780. Early in the year, President/CEO Edward E. Swofford retires. He is succeeded on an interim basis by Board Chairman Hung Wo Ching until Joseph R. O'Gorman Jr., the former **AirCal** executive, can be recruited and appointed president; Jeffrey H. Erickson is named vice president operations. The new management team establishes an Aloha Pacific division and makes plans to initiate its first service outside the state. In addition, all aircraft are given new livery, which features an orange and yellow windowline cheatline on a white fuselage with large Aloha titles on the tail.

A fourth straight passenger traffic drop is suffered this year, as enplanements plunge 10.7% to 2,171,000; freight dips 8.8% to 981,000 FTKs.

Despite the downturn, the company is able to engineer a financial turnaround to post both net and operating profits. This success is due almost entirely to a U.S. Supreme Court ruling that releases the carrier from its liability of payment of Hawaii Public Service Company taxes. Operating income drops .90% to \$80.61 million and costs fall 1.77% to \$79.61 million. Consequently, the operating gain is \$1 million and the pretax net is \$6.65 million.

The workforce is decreased 3.8% in 1984 to 750. Employing a Douglas DC-10-30 leased from **Philippine Airlines**, company pilots inaugurate Aloha Pacific flights from Honolulu to Guam and Taipei on May 28. First-class service is introduced on certain interisland flights.

Customer bookings recover, climbing 7% to 2,323,000 and cargo swells 41.8% to 1.38 million FTKs.

The international service and intense interisland fare and schedule competition place a drain on the company, forcing it to post a net loss of \$1.86 million, despite a jump of 8.8% to \$88.09 million in operating revenues, expenses of \$78.15 million, and an operating profit of \$9.93 million.

The payroll grows 13.3% in 1985 to 850. Due to weak traffic and financial prospects, the Aloha Pacific division is closed down on January

12 and DC-10-30 flights to Guam and Taipei cease. Still, \$3 million are earned on the wide-body's appreciation, so the Aloha Pacific operation breaks even.

Additional service is provided for major carriers with feed from several islands. In May, President/CEO O'Gorman resigns to become president/CEO of **Frontier Airlines** (1). He is succeeded in June by Maurice Myers.

In September, employing a B-737-210C acquired from **Wien Air Alaska**, the company expands its interisland freight service by offering nighttime all-cargo flights on the islands of Oahu, Maui, Kauai, and Hawaii.

According to DOT figures, for the second straight year Aloha has fewer customer complaints than any other U.S. airline. Passenger boardings rise 7% to 2,508,000, but closure of the Pacific Division results in a plunge of 67.3% in freight, down to 3.15 million FTKs. Revenues for the country's 18th largest national grow by 5.8% to \$95.07 million, costs rise 14% to \$149.83 million, and the operating profit slips to \$7.98 million. The carrier's fiscal turnaround is marked by net gain of \$2.91 million.

Airline employment rises 20.6% in 1986 to 1,025. Employing a B-737-210C, Aloha launches a 1,175-mile route on February 19 from Honolulu to Christmas Island; the service, on behalf of **Air Tungaru**, is made under FAA 120-min. rules. Aloha is the first U.S. airline to gain government approval for B-737 ETOPS (Extended-range Twin-engine Operations). Emphasis upon such diversified activities as freight, contract services, and aircraft leasing is intensified. To mark the company's fortieth birthday, a Douglas DC-3 is painted to represent predecessor **Trans-Pacific Airlines**.

Customer bookings swell 13.6% to 2,849,000 and cargo rebounds by 84.6% to 5.82 million FTKs. Revenues jump 21.7% to \$115.71 million, expenses increase by only 12.7% to \$98.14 million, and the operating profit is up \$10 million to \$17.57 million. Net gain grows by nearly \$4 million to \$6.08 million.

The workforce is cut by 2.4% in 1987 to 1,000 and the fleet includes 12 B-737-210/-297s and 1 leased Lockheed L-188AF. Thomas F. Dering, former **Florida Express** and **Frontier Commuter** vice president-maintenance is named vice president operations in May as plans are made to upgrade the company's maintenance program.

In August, stockholders approve the transformation of Aloha, Inc., the former parent firm registered in Delaware, into the Hawaii-registered holding company, Aloha Air Group, with the airline its major subsidiary. Simultaneously, the small regional **Princeville Airways** is acquired for \$3.2 million.

Passenger boardings advance 6.8% on the year to 3,044,000 while freight increases 35.3% to 7.88 million FTKs. Group revenues move upward by 7.8% to \$124.7 million, expenses jump 10.1% to \$108 million, and the operating profit is \$16.7 million. The net profit is \$5.6 million. The profit figures are not, according to a company statement accompanying the annual report, "directly comparable with 1986 as a result of a going-private transaction completed."

Airline employment is increased by 22.3% in 1988 to 1,457. During the last two weeks of January, the company contracts for freight service with bankrupt **Mid-Pacific Airlines**. The large regional goes completely under when the larger carrier leases a **Reeve Aleutian Airways** Lockheed Electra with which to conduct its cargo services. Early in the spring, Aloha approaches the DOT for permission to undertake daily B-747 flights from Honolulu to Tokyo, with continuing service from Hawaii to Los Angeles.

A national debate on the replacement of aging aircraft is occasioned by a headline-generating April 28 incident. Metal fatigue, and the failure of company maintenance workers to spot it, causes an explosive decompression and structural failure aboard Flight 243, a B-737-297 with 5 crew and 90 passengers en route from Hilo to Honolulu at 24,000 ft. The in-flight incident peels off 18 ft. from the fuselage top, aft of the forward cabin entrance door, and causes flight attendant C. B. Lansing to fall to her death. A terrifying 13 minutes are required before Capt. Robert Schornsteimer and First Officer Mimi Tompkins are able to land

the Boeing safely at Kahului Airport on Maui. Three days later, the three surviving sisterships are grounded.

The U.S. Congress will later pass a resolution praising the airliner crew for its skill and bravery. In May, the damaged machine and one older B-737-297 are replaced by two new, leased B-737-3T0s and two B-737-297As previously ordered.

Late in the year, **Princeville Airways** is reorganized into the subsidiary **Aloha Island Air**. A fleet of 9 de Havilland Canada DHC-6 Twin Otters fly scheduled commuter and sight-seeing services into 7 small commuter airports from the new West Maui Airport.

Despite the April disaster, overall customer bookings accelerate 12.8% to 3,433,000 and cargo ascends 43.9% to 11.33 million FTKs. Profits total \$10.17 million (operating) and \$8.94 million (net).

The workforce grows 18.5% in 1989 to 1,726 and the fleet includes 8 B-737-297As, 4 B-737-200QCs, and the 2 new B-737-3T0s. Orders are outstanding for 4 B-737-397s. Eight daily flights are added to the schedule in August, bringing the number of daily frequencies during the peak tourist season to 176.

In October, an agreement is signed with the Republic of Kiribati to provide weekly roundtrip charter flights on behalf of **Air Tungaru** from Honolulu to Nadi via Christmas Island and Tarawa; the nonscheduled service begins in December.

Despite the adverse publicity of the previous year's tragedy, passenger boardings continue upward by 16.9% to 4,013,000. Freight is also up 5.4% to 11.65 million FTKs. Revenues jump 15.56% to \$155.08 million, costs climb 18.2% to \$146.61 million, and operating income slides to \$8.47 million. Net gain falls to \$2.24 million.

Company employment climbs by 13.3% in 1990 to 1,956 as the fleet is increased by a B-737-284.

Customer bookings jump 15.6% to 4,638,000 and cargo rises 7.7% to 12.52 million FTKs. Revenues shoot up 21.77% to \$188.52 million, expenses ascend 23.69% to \$181.33 million, and the operating profit slips to \$7.51 million. The net profit is cut to \$1.51 million.

The payroll is cut 2.9% in 1991 to 1,900 and the fleet now includes 21 aircraft. Beginning in June, a process of upgrading the first-class sections of the cabins of the B-737 fleet is begun. In October, the airline begins the first nonstop, scheduled services between Kona and Lihue.

Passenger boardings rise 6.2% to 4,925,000 but freight is down 4.6% to 11.95 million FTKs. Revenues climb 13.33% to \$214.02 million and costs accelerate 8.2% to \$196.21 million, guaranteeing an operating profit of \$19.62 million. Net profit surges to \$7.72 million.

Company employment is increased by 5.3% in 1992 to 2,000 as 4 new, leased B-737s, 2 Dash-3Y0QCs, and 2 Dash-497s, are delivered. These are painted in the company's new livery that includes a new corporate logo and other image changes designed by Seattle-based SGS Design. In June, the company registers a proposed public stock offering of 5.5 million shares of Class A common stock.

Traffic for the year is mixed as Hurricane Iniki causes loss of boardings. Customer bookings decline 5% to 4,677,000, but cargo inches up 1.4% to 12.11 million FTKs. Revenues fall to \$206.08 and with expenses nearly as high, operating profit is just \$9,000. There is a \$6.68-million net loss.

The payroll is sliced by 2.7% in 1993 to 1,945 and the mixed fleet now includes 12 Dash B-737-200s and 4 B-737-300s, plus 2 B-737-497s. Orders for two of the latter type remain outstanding. A new corporate image is adopted, with a new stylized livery applied to the little Boeings. With **Aloha Island Air**, the two companies offer the only daily services to 11 of the state's commercial airports, including Hana, Kauai, and Princeville on Maui.

A weekly charter flight is made to Christmas Island and, in April, a marketing and code-sharing alliance is entered into with **United Airlines** covering a number of interisland destinations such as Maui, Kona, Hilo, and Kauai via Honolulu. Beginning in September, Aloha becomes the first airline to offer drive-through check-in for departing passengers.

Passenger boardings inch up 0.8% to 4,713,000 and freight rises 1.4% to 12.29 million FTKs. Revenues move up 3.7% to \$213.96 million and

expenses jump only 2.3% to \$211.08 million. Consequently, a \$2.88-million operating profit is realized, along with a net gain of \$960,620.

Airline employment is reduced another 2.3% in 1994 to 1,900 and **Trans World Airlines (TWA)** Vice Chairman Glenn R. Zander is named president/CEO in June of both the airline and its parent, Aloha Air Group. The fleet now includes 1 each B-737-2M6C, B-737-2S2C, and B-737-2S5C, 2 each B-737-2Q9As, B-737-2T4s, B-737-3T0s, B-737-3Y0QCs, and B-737-497s, plus 6 B-737-297As.

Customer bookings are boosted 7% to 5,041,000, even as cargo slips 0.1% to 12.27 million FTKs. Revenues jump 7.4% to \$229.82 million, but expenses are up 9.1% to \$230.29 million. As a result, there is a \$475,000 operating loss. Net gain drops to \$560,000.

The workforce stands at 2,235 in 1995, an increase of 17.6%. Two B-737-3Y0QCs are leased to new entrant **Vanguard Airlines**, which is flying out of Kansas City.

Enplanements inch up 1.4% to 5,113,000 on 77,111 flights, but cargo falls 2.5% to 11.97 million FTKs. Expenses exceed income and there are big losses: \$8.3 million (operating) and \$6.9 million (net).

The employee population is increased by 1.7% in 1996 to 2,274 and the fleet is standardized on the B-737-200A, with all of those on hand refurbished during the year.

The airline wins a contract on May 29, effective July 1, to become the official airline for the State of Hawaii. The award, which makes Aloha the exclusive carrier of the executive and judicial branches of state government, may be renewed each year by consent of both parties.

Customer bookings dip 0.9% to 5,068,000 but cargo inches up 1% as 12 million FTKs are operated. Revenues ascend 5% to \$248.3 million and expenses are \$239.7 million. This year there are profits: \$6.17 million (operating) and \$4.33 million (net).

At the start of 1997, Aloha enjoys a steady 55% share of Hawaii's interisland flight market.

Following the arrival of a B-737-200A passenger jet in late January, one of the company's B-737-200Cs, which has been providing night cargo services for years, becomes a dedicated daytime freighter. The aircraft is employed, beginning on March 10, to launch a new twice-daily interisland service, with particular attention to the transport of high-value agricultural produce, as well as tropical plants and flowers, called "exotics."

During the summer, B-737-200A charters are inaugurated to Kiritimati on Christmas Island, one of the islands in the nation of Kiribati. The weekly flights, paid for by the Kiribati government, are viewed as a way to provide reliable air transport for passengers and incoming perishable goods.

Passenger boardings increase 2.6% to 5.2 million, but cargo dips 2.5% to 11.8 million FTKs. Revenues inch up 0.2% to \$233.04 million, while costs rise 0.3% to \$227.25 million. The operating profit is \$5.79 million while the net gain totals \$4.26 million.

The carrier and ALPA, representing Aloha's pilots, jointly announce on February 11, 1998, a tentative agreement on a new labor contract. Upon expected ratification, it will remain in force until 2002.

On June 23, the company announces purchase of the ForeRunner automatic external defibrillator (AED) from Heartstream. A promise is made to have all 17 of the carrier's aircraft equipped with the life-saving device by November, following the completion of AED training of all of the carrier's in-flight personnel by a consulting physician.

Christened *Kalani'opu'u*, a B-737-282A is designated on July 2 as the company's "Aloha Plane" that will focus on supporting the annual Aloha Festivals which occur statewide during September and October.

The labor contract having become amendable, negotiations between management and the local chapter of the Association of Flight Attendants (AFA) begin in August.

On November 24, Aloha announces that it will introduce ticketless travel on its interisland routes beginning sometime in the first quarter of 1999.

Beginning on December 1, the company offers automated flight crediting in conjunction with its frequent flyer program. As the year ends, Aloha provides 167 scheduled flights daily in Hawaii.

Customer bookings this year dip 0.77% to 5.16 million, while cargo is off by 3.51% to 13.31 million FTKs. Revenues dip 1% to \$228.62 million, while costs are down 3.1% to \$220.32 million. The operating profit is \$8.3 million, while net gain advances to \$5.26 million.

On January 20, 1999, Aloha announces that it will have added four more first-class seats on all of its aircraft by the start of the second quarter.

The AFA on March 2 applies for federal mediation in an attempt to accelerate talks with the airline over a new contract.

Having acquired a modified B-737-200ETOPs (extended range twin-engine operations) jetliner, the company, on August 17, announces the start of new weekly scheduled roundtrip service to the Republic of the Marshall Islands. Following a special inaugural flight on August 26, the new Honolulu to Majuro and Kwajalein flights commence on September 2, with a technical stop made en route at Johnson Atoll.

In late summer, a new five-year labor agreement is signed with the AFA on behalf of the carrier's flight attendants.

Customer bookings slide 1.3% to 5.09 million, while cargo rises 2.3% to 11.67 million FTKs. Operating revenues inch up 0.5% to \$229,827,000, while costs are up 6% to \$233,598,000. The previous year's operating profit becomes a \$3.77-million loss while last year's net gain is now a \$4.7-million loss.

Airline employment stands at 2,576 at the start of 2000, an 11.2% increase over the previous 12 months.

Employing a pair of B-737-73As leased from Ansett Worldwide Aviation Services, Aloha, on February 14, begins twice-daily roundtrips from Honolulu and Maui to Oakland, California. This is the first regularly scheduled passenger service from Hawaii to the mainland in company history.

Saturday B-737-297A roundtrips begin on February 18 between Honolulu and Midway Island. Tourists are requested to make their hotel arrangements directly with the Midway marketing office.

ALOHA ISLAND AIR: 99 Kapalulu Place, Honolulu, Hawaii 96819, United States; Phone (808) 836-7693; Fax (808) 833-5498; <http://www.alohaair.com/aloha-air>; Code WP; Year Founded 1987.

When its parent, Princeville Development Corporation, is purchased by the Australian firm Quintex in 1986, Princeville Airways must be sold under the U.S. law that prohibits foreign concerns from owning more than a 25% stake in any airline. Late in the year, Aloha Air is able to acquire the commuter for \$3.2 million.

Princeville Airways is established as a subsidiary of Aloha Airlines at Honolulu on April 1, 1987. The seven-year-old third-level scheduled and sight-seeing operator is reequipped with a fleet of nine de Havilland Canada DHC-6-200 Twin Otters.

Traffic and financial statistics are merged within those of the parent and not reported separately during the start-up year.

Operations continue apace to seven small commuter airports in 1988 from Honolulu and a secondary base at the new West Maui Airport. In addition, the carrier's reservations are automated and its employees attend the parent's in-house service training program.

In early 1989, Princeville Airways is renamed Aloha Island Air. Flight 1712, a DHC-6-300 with 20 aboard en route from Maui to Molokai, crashes in remote Halawa Valley of the Hawaiian island of Molokai in darkness on October 28; there are no survivors.

Still, the release of traffic figures show passenger boardings for the year increased 43.7% to 280,999.

In 1990, President James Williamson's fleet is reduced to 8 Twin Otters. Customer bookings ascend a further 24.2% to 349,081.

Larry Cabrinha becomes president in 1991 and yet another Twin Otter is purchased. Operations continue and enplanements total 358,304.

Airline employment in 1992 stands at 175. It is reported that the company's twice-daily roundtrips from Honolulu to Princeville Airport have begun to become unprofitable.

Passenger boardings this year increases 3.8% to 372,457.

Customer bookings slide 3.1% in 1993 to 361,017. Neil Takekawa is appointed president in 1994 and the company continues to fly 8 Twin

Otters and 2 DHC-8-102s are added. These are able to boost customer bookings 1% to 364,719.

The workforce totals 247 in 1995 as 2 Twin Otters are withdrawn. Enplanements for the year decline by 2.7% to 355,000.

Twenty-three new employees are hired in 1996 and the fleet now includes 2 DHC-8-102s and 3 Twin Otters.

Having arrived at Honolulu on December 15 after a flight from Lanai, the flight crew of a DHC-8-102 with 13 passengers is only able to extend its left main landing gear. When all efforts to lower the right main landing gear and nose gear fail, the aircraft is forced to make an emergency landing, during which it is badly damaged. No injuries are, however, reported.

Passenger boardings this year inch up 0.1% to 360,147.

As 1997 begins, the carrier is providing 84 daily flights between Honolulu, Hana, Kahului, and Kapalua, Lanai, Molokai, and Princeville. With its twice-daily roundtrips from Honolulu to Princeville having lost money since 1992, the company abandons them on January 5. They may be resumed if the state takes over the privately owned Kauai facility and makes improvements.

The workforce is reduced by 11.1% during the year to 240. Customer bookings soar 17.3% to 422,414.

Flights continue in 1998. On November 24, the company joins Aloha Airlines in announcing the launch of interisland ticketless travel sometime during the first quarter of 1999. As the year ends, the regional offers over 80 scheduled daily flights to Hawaii's resorts and smaller communities.

Passenger boardings rise 12% to 473,000.

By the beginning of 1999, airline employment has been increased by 12.5% to 270. Customer bookings drop 9% to 431,000.

ALPA (AEROLINEAS DEL PACIFICO, S.A.): Costa Rica, (1952–1958). This air taxi is formed at San Jose in 1952. Employing one or two Piper PA-18s, services are offered to Playa Hermosa, Carate, and Bijaguel. A paucity of traffic forces closure in 1958.

ALPAR BERN, A.G.: Switzerland (1929–1947). Early in 1929, local officials in the state-city of Berne form this carrier to operate from the Swiss capital via Lausanne to Basel and Geneva. Operations are started during the summer employing 1 Fokker F-II and 2 Comete AC-4 Gentlemen.

In 1930, the first full year of operations, one of only three existing Fokker F-XI Universals is acquired and approximately 2,000 passengers are carried. These low-key domestic operations continue even after the large carrier Swissair, A.G. is formed in 1931. In 1932, a General Aircraft ST-4 Monospar is acquired from England.

A Dutch-built Koolhoven FK-50 joins the fleet in the fall of 1935 and, by 1939, the airline's fleet comprises 5 aircraft, including 2 new de Havilland DH 89A Dragon Rapides. At the outbreak of World War II in September, operations are suspended. When Swiss civil aviation is restarted in mid-1945, a dispute arises over which of Switzerland's two airlines should be recognized as the official state airline.

The question is resolved in February 1947 when Swissair, A.G. acquires Alpar Bern and the government's approval as sole national carrier.

ALP'AZUR AIRLINES, LTD.: Switzerland (2000). One of history's shortest-lived little airlines is Alp'Azur, established at Courchval at the beginning of 2000. With great ceremony, thrice-daily roundtrips to Geneva are inaugurated on February 3 with a de Havilland DHC-6-300. The route—and the carrier—are closed on February 10 after the Twin Otter is damaged beyond economical repair in a nonfatal crash at its base.

ALPEN HELICOPTER, LTD.: 215-5333 216th Street, Langley, British Columbia V2Y 2N3, Canada; Phone (604) 644-1270; <http://www.primenet.ca/alpenhelicopters>; Year Founded 1980. Alpen Helicopter is founded by Robert Owens at Langley Airport in 1980 to provide a variety of ad hoc fixed- and rotary-wing services.

Over the next 17 years, these come to include passenger and express charters, flight training, fire fighting, forestry, long-lining, aerial photography, and general filming, the latter on behalf of the Film Board of Canada.

In **2000**, President Owens operates a fleet that comprises 3 Cessna 150s, 1 C-172, 1 float-equipped C-185, 3 Bell 206B JetRangers, 1 Bell 206L LongRanger, and 2 Robinson R-22 Betas.

ALPHA AIR: United States (1983–1995). This third-level carrier is founded at Van Nuys, California, in the summer of **1983** to offer scheduled Cessna 402 passenger and cargo services to Bishop, Los Angeles, and Mammoth Lakes ski resort.

In **1984–1987**, President Alan Berenstein's fleet grows to four Cessna 402s and flights are inaugurated to Oakland, San Jose, and San Diego and from those cities to Mammoth Lakes. Two 402s are withdrawn in late **1988** as an order is placed for a Beech 1300 and two Beech 1900s.

The Beech 1300 arrives in **1989**. Traffic figures for the private carrier are not released. The last two Cessnas are discarded in **1990** and replaced by a pair of Beech 1900Cs in **1991**. Enplanements for the 175-employee, 8-aircraft small feeder jump 2.8% to 358,800.

A de Havilland Canada DHC-6 Twin Otter is purchased in **1992**. The 64-employee carrier transports a total of 43,007 passengers, a 6.3% increase.

Airline employment in **1993** stands at 67 and a third Beech 1900C is placed into service. Customer bookings jump 9.8% to 47,000.

Early in **1994**, a code-sharing agreement is signed with **Trans World Airlines (TWA)**. Henceforth, Alpha will provide "TWExpress" feed from Lake Tahoe, Orange County, Palm Springs, Burbank, Mammoth Lakes, and Grand Canyon to the major's Los Angeles hub. Passenger boardings increase 46.1% to 68,646. Operations cease in **1995**.

ALPHA AIRLINES: United States (1969–1970). Alpha Airlines is set up at South Bend, Indiana, in the late fall of **1969** to provide daily scheduled roundtrip passenger and cargo service to Chicago's Meigs Field and Detroit. Beech 99 flights commence in December, but cannot be maintained beyond March **1970**.

ALPHA AVIATION: 7515 Lemmon Ave., Love Field Hangar P, Dallas, Texas 75209, United States; Phone (214) 351-6571; Fax (214) 350-4287; Year Founded 1982. Alpha Aviation is formed in **1982** at Love Field in Dallas to offer passenger and freight charter and contract service flights to local and regional destinations. The initial fleet comprises 1 Gates Learjet 25, 1 Beech King Air 100, 1 King Air 200, and 1 Piper PA-31-310 Navajo.

Operations continue largely without change at President James de Prett's company over the next decade, although late in that period the Navajo is withdrawn. There are 10 employees in **1993–1994** and a fleet of 3 Beech 1900s.

By **2000**, a total of 25 full-time and five part-time pilots are employed and the fleet now includes 3 Beech Super King Air 200s and 1 each IAI Westwind I, Learjet 25D, Learjet 35A, Beech King Air 100, Beech King Air 90, and Cessna 414 Chancellor. Air ambulance flights are also made.

ALPI EAGLES, S.p.A.: Van Gorizia 24, Thiene, I-36016, Italy; Phone 39 (445) 380180; Fax 39 (445) 380130; Code E8; Year Founded 1979. Alpi is established as an air taxi service at Thiene in **1979**. Owned by Ithify, a financial concern held by several north Italy manufacturers, the little carrier under the leadership of President Ambrogio Delachi, provides nonscheduled flights with 1 Learjet 55 and 2 Piaggio P-180 Avantis. These services are largely unnoticed by the outside for 17 years.

In March **1996**, following Italy's air transport liberalization the previous November, Alpi is reorganized into a scheduled domestic airline. Plans are made to offer domestic business-class services (with fares 20% lower than those of **Alitalia, S.p.A.**) and ticketless travel.

A fleet of 3 former **Swissair, A.G.** Fokker 100s is chartered from British Aerospace Asset Management-Jets during the second quarter, with the first delivered on June 1 in a day-glo livery designed by the Diesel Jeans dress studio. The new paint scheme begins to fade days later, forcing the carrier to repaint the Fokker in a more traditional hue.

Based at Verona, the jetliner, christened *Sant Antonio*, initiates regularly scheduled frequencies on June 10 from Venice to Rome's Fiumicino Airport. Flights from the inaugural cities to Verona and Cagliari commence in July. Charters are also flown, from time to time, between Verona and the Romanian city of Timisoara.

In a widely reported September 10 incident, the door of a Fokker 100 opens as the plane is taking off from Venice. In early December, government certification authorities discover irregularities in the carrier's maintenance records and grounds all of the Fokkers until the concerns can be addressed.

The weeklong maintenance crisis leads to a complete corporate restructuring. President Delachi is replaced by Patrizio Casalini, who determines that the future lies in cooperation with **Alitalia, S.p.A.** rather than competition.

A code-sharing agreement is now signed with the major and the remaining Fokkers arrive by year's end.

In **1997**, the company takes over 2 Fokker 70s from the former **Avianova, S.p.A.** Services are undertaken on behalf of **Alitalia, S.p.A.** over the new entrant's former routes.

Flights are maintained in **1998–1999**.

In October of the latter year, 2 Fokker 100s are chartered to **Air Dolomiti, S.p.A.** On November 7, a Fokker 100 crash-lands at Barcelona with its right landing gear unextended; no injuries are reported, but the aircraft will be written off and scrapped during the first quarter of the new millennium.

New Fokker 100 roundtrips begin on April 2, **2000** between Naples and Barcelona. Two weeks later, a daily return flight is introduced between Pisa and Zurich.

A revised corporate identity is unveiled in May, with the Fokker 100 *San Vincenzo* the first to be painted in the company's new color scheme.

Four-times-a-week Fokker 100 return service from Venice to Athens, code-shared with **Olympic Airways, S.A.**, begins on June 11.

Another Fokker 100 wearing the new livery arrives on June 27; it will be followed by others in October and November.

Twice-daily Fokker 100 return service is inaugurated on October 29 between Palermo and Naples.

On November 10, a Fokker 100 is wet-leased for a year to **Air Sicilia, S.p.A.**

ALPINE AIR: P.O. Box 691, Municipal Airport, Provo, Utah 84601, United States; Phone (801) 373-1508; Fax (801) 377-3781; <http://www.uvol.com/bullseye/alpair/homepage.html>; Code 5A; Year Founded 1977. An airline division of Eugene R. Mallette's Provo-based Alpine Aviation is established in **1977** and given this name. A fleet of 1 Piper PA-31-310 Navajo, 1 PA-34 Seneca, and 1 Cessna 421 is assembled with which to inaugurate scheduled passenger and cargo services to the Utah cities of Blanding, Cedar City, Moab, Monticello, Price, St. George, and Salt Lake City. Operations continue with little change for the remainder of the decade and into the **1980s**.

The fleet in **1983** includes 4 Piper PA-31-350 Navajo Chieftains and enplanements total 1,000. In **1984**, bookings increase 117.6% to 2,185. A Cessna 421 is purchased in **1985** and helps enplanements to ascend 6.3% to 2,322.

Passenger boardings climb a slim 2% in **1986** to 2,255, but freight skyrockets 329.3% to 1.22 million pounds. A net \$88,305 profit is generated.

In **1987**, President Mallette's fleet owns 3 Navajo Chieftains and 1 Seneca. Airline employment is increased by 27.3% to 28 and customer bookings increase by 27.8% to 3,433. Revenues climb 5.9% to \$2.16 million and with costs held low profits total \$244,000 (operating) and \$149,903 (net).

Airline employment grows by 45.4% in **1988** to 32 and the fleet is enhanced by the addition of 4 more Navajo Chieftains and 1 Beech 99. Several unprofitable passenger routes are discontinued as new emphasis is placed on cargo services to Salt Lake City.

Passenger boardings plunge 52.8% to 1,801, but freight grows 64.6% to 8,326,000 pounds. Revenues decline 15.1% to \$1.83 million, costs fall 12.2% to \$1.68 million, and operating income drops to \$151,655. Net gain, however, climbs to \$192,216.

The workforce is cut by 25% in **1989** to 24. Customer bookings recover and move upward 45% to 2,612. Cargo continues to grow, rising 4% to 8,657,000 pounds. Costs exceed income and there are losses: \$37,264 (operating) and \$86,665 (net).

The number of employees is increased by 20% in **1990** to 42 and the fleet now includes 7 Chieftains, 2 Beech 99s, and 1 each Piper Seneca, Lance, Arrow, and Archer. With the addition of 3 new markets, the route network now includes 51 destinations in 8 states.

Customer bookings fall 11.9% to 2,301, but cargo grows to 9.3 million pounds. Revenues decline 3.6% to \$2.75 million, but expenses plunge 11.8% to \$2.55 million. As a result, the previous year's operating loss is turned into a \$199,937 gain. Net profit ascends to \$125,991.

The flight equipment of the 42-employee regional is shuffled again in **1991**; gone is a Chieftain, replaced by another Seneca, 2 more Beech 99s, and 1 Piper PA-31T Cheyenne III.

Despite the changes, passenger boardings decline another 13% to 2,011. Revenues are \$5.18 million and generate an operating profit of \$23,000.

Company employment is increased 4.8% in **1992** to 44 as another Beech 99 is purchased and another Navajo Chieftain sold. Service is started between Grand Junction, Colorado, and Moab, Utah; cargo flights begin to Oregon.

Customer bookings regain their upward momentum, growing 52% to 3,305. Freight shoots up 8% to 11.23 million FTKs.

In **1993**, Chairman/CEO Mallette's company employs 45 and operates a fleet of 3 Cessna 150s, 1 Piper Turbo-Arrow, 1 Piper Lance, 1 Piper Seneca, 5 Navajo Chieftains, 7 Beech 99s, and a 1 Piper Cheyenne III. Traffic figures are not released.

Operations continue apace in **1994**. A total of 3,875 passengers are flown, along with 9.4 million pounds of freight, and profits are earned: \$516,528 (operating) and \$258,052 (net).

The workforce is increased by 16% in **1995** to 58. By July, the company is the second largest commuter airline in America, based on cargo volume.

Customer bookings advance by 17.2% to 4,399, but cargo drops off to 426,000 pounds. Revenues jump 30.6% to \$7.69 million while costs advance only 29.4% to \$6.94 million. Operating gains climb to \$742,000 while a net \$254,000 profit is posted. The last two figures are later adjusted to \$413,000 and \$97,000 respectively.

The employee population grows by 5.8% in **1996** to 55 and the fleet now includes 10 Beech 99s, 4 Navajo Chieftains, and 2 Cheyenne IIIs. New services are inaugurated in February between Salt Lake City and Ely.

Passenger boardings accelerate 19.5% to 4,541 and 10.59 million pounds of freight are flown. Operating income climbs to \$7.89 million while expenses swell 10% to \$7.29 million. Operating gain accelerates to 592,000 while a net \$351,000 profit is reported.

The workforce is increased 12.7% to 62 in **1997**. Daily Piper Cheyenne III scheduled passenger services are maintained from Salt Lake City to Moab, Utah, and Ely, Nevada. Passenger charters are also available. The company's Beech 99s, Navajos, and Cheyennes operate ad hoc cargo services to points in Colorado, Montana, Utah, and Nevada.

Customer bookings jump 10.5% to 5,016 and a total of 20.2 million pounds of freight are operated, a 3.9% boost. Operating revenues decline 8.1% to \$7.24 million, while expenses fall 7.8% to \$6.78 million. An operating profit of \$465,000 is generated, along with a \$308,000 net profit; both gain figures are down, but are still regarded as positive.

Plans are announced in early **1998** for the initiation of new cargo routes, as well as a profit-sharing plan for employees. A twelfth Beech 99 and two Beech 1990s are purchased.

Passenger boardings ascend 31.3% during the year to 6,584. In addition, 17.69 million pounds of freight are also flown. Revenues also jump 31.3%, to \$5.27 million while costs are up 19.8% to \$4.18 million. The operating profit is \$1.09 million.

By the beginning of **1999**, airline employment is increased by 15.2% to 68. Customer bookings plunge 66.2% to just 2,000.

ALPINE AVIATION CORPORATION: United States (1980–1981). The FBO at Rockport, Illinois, sets up a scheduled airline division in the fall of **1980** and, after acquiring a Beech 99, inaugurates daily roundtrips to Detroit in November. Services cannot be maintained beyond February **1981**.

ALPINE LAKE AVIATION: Reno–Tahoe International Airport, 655 South Rock Blvd., Reno, Nevada 89502, United States; Phone (702) 588-4748; Fax (702) 588-0433; <http://www.flyalpine.com>; Year Founded 1989. ALA is established at Reno to offer on-demand passenger charters to local destinations. Flights are undertaken with 1 each Cessna 550 Citation II and Cessna 210T Centurion. A Cessna 402B is also stationed at Douglas County Airport at Minden, Nevada. Service is maintained over the next decade.

ALPINE LUFT-TRANSPORT, A.G.: Postfach 1370, General Aviation Centre, Zurich Flughafen, CH-8058, Switzerland; Phone 813-0869; Fax 910-1054; Year Founded 1964. Christian P. Tschundi founds this small all-cargo charter operation at Zurich Airport in **1964**. Operations continue apace to regional destinations over the next 36 years with a fleet that comes to comprise 2 Dassault Falcon 10s.

ALROSA AVIA: 1 Zhukovski Street, Zhukovski, Moscow, 140160, Russia; Year Founded 1996. Alrosa is established at Moscow in **1996** to offer domestic and regional passenger charters. President Aleksan Dudik begins and continues revenue flights with a single Tupolev Tu-134.

ALSAVIA, S.A.: France (1989–1993). Alsavia is formed at Basel–Mulhouse–Freiburg Euroairport at St. Louis in Alsace in the spring of **1989** to offer scheduled regional services. Ownership is divided between **Air France** (14%), **Crossair, Ltd.** (33%), and **TAT (Transport Aerien Transregional, S.A.)** (20%).

Managing Director Joel Blais's new entrant inaugurates revenue flights from its base early in **1990** with a single SAAB 340B acquired from **Crossair, Ltd.**; destinations visited include Barcelona, Amsterdam, Mulhouse, Nice, Lyon, Marseilles, and Dusseldorf. All of these services are replacement flights for the owners, except for a single Basel–Marseilles frequency.

Two Embraer EMB-120 Brasilias leased from **TAT (Transport Aerien Transregional, S.A.)** are added to the fleet in **1991**, replacing the SAAB, and operate on behalf of TAT. Airline employment in **1992** stands at 36. Although revenues of \$7.4 million are earned, a net loss of \$778,000 is suffered.

A Beech King Air 200 arrives in January **1993** along with a new president, Andre Weber. He is unable to reverse the financial hemorrhage and Alsavia, S.A. is forced to declare bankruptcy in February, with debts of FFr 4.4 (\$786,000). For a while thereafter, the Brasilias are operated on behalf of **TAT European Airlines, S.A.**

ALTA AIRLINES, LTDA.: Santiago de Chile, Chile; Phone 600 301 600; <http://www.chilepac.net/~alta>; Year Founded 1995. ALTA is established at Santiago in the spring of **1995** to offer domestic third-level services in northeast Argentina with a fleet of 8 leased Beech 1900Cs, the first of which is delivered in mid-July. Revenue flights commence in September.

Enplanements in **1996**, the first full year of service, total 90,907. Customer bookings accelerate to 94,322 during **1997**.

Destinations visited in **1998–1999** continue include Iquique, Calama, Antofagasta, Copiapo, La Serena, Vina del Mar, Santiago, Talca, Chillan, Los Angeles, Concepcion, Temuco, Valdivia, Puerto Montt, Chaiten, Coyaique, and Puerto Natales.

ALTA FLIGHTS (CHARTERS), LTD.: P.O. Box 983, Edmonton International Airport, Edmonton, Alberta, T5J 2T2, Canada; Phone (403) 890-1330; Fax (403) 890-1331; <http://www.altaflights.com>; Code AL; Year Founded 1995. AF(C) is established at Edmonton in **1995** to offer nonscheduled passenger and cargo services to points in the nation's prairie and northern regions. Operations begin with a fleet that includes 2 Piper PA-34 Senecas, 3 Piper PA-31-310 Navajos, 1 Swearingen Metro II, and 6 small Cessnas.

Over the next five years, the company's nonscheduled business expands and the concern enters the aircraft-leasing arena. To provide specific lift, Telford Resources, Ltd. purchases a 65% majority stake. As the new millennium approaches, the fleet includes 5 Fairchild Metroliner IIIs, 1 Beech Super King Air, 2 Cessna 402s, 1 C-414, and 4 C-208 Caravans.

On May 3, **2000**, Northern Alberta's largest charter company purchases 9 Metro 23s, previously operated by **China Hainan Airlines Company, Ltd.**, from Fairchild Aerospace. Four serve as Metro III replacements and 5 are resold.

An expanded hanger facility is opened on the north side of Edmonton International Airport on June 10.

Company aircraft transport 67 Alberta firefighters to Missoula on August 9 to help fight the huge Montana wildfires.

ALTAI AIRLINES: Barnaul Aeroport, Barnaul 30, Altaiskii Region, 656030, Russia; Phone 7 (382) 224 383; Code BZN1; Year Founded 1997. In **1997**, **Barnaul State Aviation Enterprise** is reformed into a private stock company and renamed. It continues its original mission of providing both scheduled and charter passenger and cargo services to local and regional destinations. Andrei A. Frolov remains as director general and his fleet includes 4 Antonov An-26Bs, 5 Let L-401UVPs, 1 Tupolev Tu-154B, and 12 Yakovlev Yak-40s.

Service is maintained in **1998–1999**. In early **2000**, charges of fraud are made against the airline's administration. On May 25, the carrier is declared bankrupt.

Unable to reorganize in a manner sufficient to meet Federal FSVT administrative and safety requirements, the company is put on notice that it will be shut down and liquidated on June 21. Support is rallied and termination is avoided.

As part of a developing relationship between Barnaul and Iraq, Altai, on behalf of the Russian Committee of Solidarity with the Iraqi People, undertakes an An-26B humanitarian flight to Baghdad on October 29. In addition to medical and educational supplies, the flight, unsanctioned by the UN, also takes along representatives from various local corporations who seek to upgrade business contacts.

ALTAIR: United States (1963–1966). During the early summer of **1963**, Altair, Inc., the FBO at Frederick, Oklahoma, establishes a commuter airline division to provide scheduled regional passenger and cargo services. Certified by the FAA on August 6, the company inaugurates Cessna 205 revenue flights to Altus, Elk City, Clinton, Lawton, Dallas, Oklahoma City, and Wichita Falls.

Operations continue until **1966**.

ALTAIR AIRLINES: United States (1966–1982). Altair is organized at Philadelphia by Tristram C. Colket Jr. on November 4, **1966**. Like the Oklahoma commuter noted above, this concern is also named for a star in the Aquila (eagle) constellation. Early in **1967**, the new company begins Beech B-80 Queen Air scheduled air taxi service on routes to Scranton, Richmond, and White Plains. The commuter grows steadily through the remainder of the decade and into the **1970s**.

Direct flights begin on October 2, **1972**, from Philadelphia to Islip, New York, and Bridgeport, Connecticut. Operations continue apace without incident in **1973–1976**.

While on initial approach on April 9, **1977**, a Nord 262A on a ferry flight with three crew collides at 4,500-ft. with a Cessna 195 with one pilot. Both aircraft crash 6 mi. S of Reading and there are no survivors.

Enplanements for the year total 170,177.

During **1978**, the year the Airline Deregulation Act becomes federal law, Altair flies a record 195,156 customers with its fleet of 6 Aerospa-tiale Nord 262s and 6 Beech 99s.

Passenger boardings jump 12.1% to 195,156 while freight traffic rises 4.2% to 217,709 pounds.

Founder and President Colker becomes CEO/board chairman in **1979**, being succeeded as president by Michael L. Lehrman. The decision is taken to acquire jet equipment and orders are placed for 3 Fokker F.28-4000s.

Enplanements rise by 30.7% to 257,000. Still, losses are suffered: \$2.95 million (operating) and \$3.33 million (net).

Altair is subjected to a strike on April 13, **1980** by members of the local chapter of the International Association of Machinists and Aerospace Workers. The job action will be terminated by a mediated agreement reached on August 20.

Despite the acquisition of 3 Fokker F.28-4000s, the company, in opening its new jetliner service on October 15, has chosen to compete on routes already flown by the larger **USAir** and **Piedmont Airlines (1)**.

As a result, passenger traffic drops a sharp 38.9% to 182,552; cargo is also down, by 30%, to 141,378 pounds. The traffic decline coupled with higher fuel prices and recession results in a jump in expenses of 42.07% to \$18.94 million when overall operating income is up by just 2% to \$10.58 million. The operating loss deepens to \$8.36 million and a \$9.6-million net loss must be reported.

The workforce totals 481 at the start of **1981**. Henry T. Hill succeeds Michael Lehrman as CEO and after the PATCO air traffic controllers' strike is resolved, Altair expands its Florida and East Coast corridor route network, hubbing on Philadelphia. Three more F.28-4000s are placed into operation along with 4 Douglas DC-9-31s leased from **Air Canada, Ltd.** as the last Nord 262 is sold and orders are placed for 6 Douglas DC-9-32s.

As a result of this capacity and good fortune, enplanements rise a dramatic 27.6% to 232,876 and cargo skyrockets an unbelievable 790.9% to 143,000 FTKs. Still, most of this success came before the PATCO air traffic controllers' strike and subsequent FAA ATC service cutback. The carrier now goes into a fiscal tailspin.

The financial exigencies of deregulation and the reversals of 1981 prove fatal in **1982**. Severe cash-flow problems are encountered and even though 371,000 passengers (down 5.3%) are flown by September (including a number over a new route to Providence, Rhode Island, initiated in February), the carrier cannot go any further.

Having lost a reported \$34 million in two years, Altair ceases operations on November 9 and files for Chapter XI bankruptcy protection two days later, owing its creditors more than \$2.6 million. Flights to 16 East Coast cities are affected and 652 employees are put out of work.

ALTAIR LINEE AEREE, S.p.A.: Italy (1980–1986). Established at Parma in late **1980**, privately owned ALA is established to offer package holiday and inclusive-tour flights to resort areas in Britain, the continent, and throughout Italy. A fleet of 3 Sud-Est SE-210 Caravelle XBs and 2 Caravelle IIIs is assembled, allowing revenue flight operations to commence in March **1981** and continue without incident in **1982**.

While on its takeoff roll from Milan on July 2, **1983**, an SE-210 Caravelle III with 7 crew and 82 passengers suffers an uncontained engine failure that necessitates an immediate abort. Although the aircraft is damaged, no injuries are reported.

Services continue but deteriorate in mid-decade in the face of a growing recession. Operations halt in **1986**.

ALTUS AIRLINES: United States (1963–1989). Altus Flying Service is organized at the airport of its Oklahoma namesake in the summer of 1963 to offer scheduled passenger and cargo services to destinations in the southwest part of the state. Employing Piper lightplanes, revenue services commence on August 6.

Operations continue apace during the remainder of the decade and into the 1970s, by which time the company has been reformed into Altus Airlines, a certified commuter. The fleet is expanded during these years by the addition of Cessna 402s and Britten-Norman BN-2 Islanders and destinations visited now include Lawton, Oklahoma City, Dallas, Tulsa, and Wichita.

Although charters are offered, scheduled services are suspended between November 1974 and 1982. President Richard Maffry resumes scheduled offerings in midyear, flying 1 Cessna 402 over a single round-trip daily route to Oklahoma City.

Just after takeoff from Altus on February 6, 1985, a Cessna 402, with 1 pilot and 1 passenger, suffers the failure of its left engine; while attempting a return to its point of origin, the aircraft crashes and there are no survivors.

Also in February, Altus is purchased by John Gover, who increases the company fleet to 4 C-402s. Roundtrip scheduled services are resumed, eight per week-day between Oklahoma and Dallas-Fort Worth and four per day on weekends.

During the summer of 1987, Altus signs up with **Braniff, Inc.** to offer “Braniff Express” feeder services at Oklahoma City. These continue until the major partner goes out of business on September 28, 1989 taking its Altus affiliate with it.

ALYESKA AIR SERVICE: United States (1982–1989). Kenneth Triplett founds AAS at Anchorage in 1982 to provide scheduled passenger and cargo flights to local communities and bush destinations. Revenue flights commence with Piper and Cessna lightplanes and continue apace until the company encounters regulatory difficulties at decade’s end.

Alyeska’s certificate is pulled by the FAA on July 7, 1989.

ALYEMDA DEMOCRATIC YEMEN AIRLINES: South Yemen, (1971–1996). The new national carrier of the People’s Democratic Republic of Yemen, or South Yemen, is formed under a presidential decree at Khormaksar Airport on March 11, 1971. The new entrant replaces **Brothers Air Services Company, Ltd. (BASCO)** formed four years earlier.

Employing BASCO’s 3 Douglas DC-3 and DC-6B, Alyemda launches operations the next day over the former routes pioneered by **Aden Airways, Ltd.**

On August 22, 1972, the DC-6B en route from Beirut to Cairo with 59 aboard is hijacked by two men and a woman and forced to fly to Benghazi, Libya, via Nicosia, Cyprus; there the pirates surrender to Libyan authorities.

Gunman Ytemeni N. A. A. Bakr hijacks the same DC-6B with 15 passengers en route from Yemen to Ethiopia on August 25, 1973, and diverts it to Kuwait; there the pirate surrenders after receiving promises from his government to investigate certain problems in Yemen. Stolen twice in a year, the Douglas is returned to service in early September. It is now joined by a DC-6A and a second DC-6B.

The carrier’s first Boeing 720B, previously operated by **American Airlines**, is delivered on November 25, 1974 and employed early in 1975 to launch daily service to Jeddah. Expatriate British and Pakistani crews operate the new jet on Alyemda’s behalf.

In 1976–1978, General Manager Ahmed Masood Alalwani’s carrier employs 801 workers and possesses a fleet comprising 1 B-707-336C, 1 B-720B, 1 DC-6A/B, 1 DC-6Bs, and 4 DC-3s. The original DC-6B is retired during the former year.

A DC-3 with 3 crew and 16 passengers crashes into the sea off Aden on March 1, 1977; there are no survivors.

During 1979–1981, the airline’s average annual enplanement is 190,000. Airline employment reaches 1,180 and the fleet is altered to include 1 each B-707-336C, B-707-369C, and Tupolev Tu-154M. Regular

domestic services are maintained along with flights to 12 destinations in the Middle East, India, and Bulgaria. The first of 2 new de Havilland Canada DHC-7-103s arrives in June of the latter year.

A B-707-348C is destroyed at Damascus on January 26, 1982; there is no other information concerning the loss.

While on final approach to Aden on May 9 a DHC-7-103 with 4 crew and 45 passengers suddenly loses power and crashes into the sea 2 km. short of the runway (23 dead).

The original Dash 7 must be written off following a nonfatal crash at Aden in July.

Operations continue apace in 1983 and destinations visited include Abu Dhabi, Addis Ababa, Al Ghayday, Beihan, Bombay, Damascus, Djibouti, Jeddah, Kuwait, Mogadishu, Qishn, Riyan, Sana’a, Seiyun, Sharjah, and Socotra.

En route from Aden to Kuwait on January 20 the B-707-369C with 50 passengers is hijacked by 3 gunmen, who divert it to Djibouti. There the pirates surrender and they will receive suspended prison sentences.

In 1984, 2 B-737-2R4CAs join the fleet, paid for in cash, along with 2 replacement DHC-7-103s. Enplanements total 122,000 and a \$13-million operating profit is reported.

Frequencies are maintained in 1985 and a new international terminal building is inaugurated at the carrier’s Khormaksar International Airport base at Aden.

In January 1986, Chairman and Managing Director Abdulla Ali Abdulla’s carrier suspends operations and flees the country when civil disturbances destroy the workshops and stores at the Aden base. Six aircraft that are overseas are spared, as well as a DHC-7-103 stored in an undamaged hangar.

When the fighting stops, Technical Director Saeed Nagi Sinan becomes acting CEO and is faced with the task of repairing the terminal building, establishing workshops in temporary quarters, and the reestablishment of a pool of supplies. Chairman Ali Abdulla returns to duty and revenues for the year total \$4.6 million.

Operations resume in 1987 and with the assistance of Boeing Aircraft Company, Alyemda is able to reprovision the airline; enplanements are slightly over 70,000 and revenues are \$7 million.

The fleet in 1988 includes 1 B-707-336C, 1 B-707-369C, 2 B-737-2R4CAs, and 2 DHC-7-103s; the Soviet equipment is temporarily withdrawn. Passenger boardings climb to 104,200 and revenues total \$10 million.

During the spring of 1989, a new route is inaugurated to Moscow via Athens. Orders are placed for 2 B-737-2R4CAs, with a third of the financing coming from the airline and two-thirds from the Central Bank of Yemen. Operations continue apace during 1990 and in April, the carrier agrees to coordinate its services with **Yemenia Airways Corporation**, the North Yemen airline. The People’s Democratic Republic of Yemen is united with the Yemen Arab Republic to form the Republic of Yemen in May of the same year.

In 1991, the fleet includes 2 B-737-2R4CAs, and 1 Tu-154M. Enplanements in the latter year total just 90,620, due largely to domestic and regional political crises.

Orders are placed in 1992 for 2 A310-304s. In October, a proposal is made to merge **Yemenia Airways Corporation**, the flag airline of the former Yemen Arab Republic, with **Alyemda (Democratic Republic Airlines)** to form Alyemda-Air Yemen. Abdulla Ali Abdulla of Alyemda would be appointed chairman of the combined operation and flights would continue over the previous routes of the partners, now made into one network. An agreement is sought with the Saudi government, which would sell its 49% interest in Yemenia Airways Corporation.

The proposal goes unfulfilled and, in 1993, Chairman Ali Abdulla’s company continues to fly independently with a fleet of 2 Boeing 737-2R4CAs, 1 Douglas DC-6, 1 Antonov An-12, and 1 An-26. The B-707-336C and B-707-369C are now employed as freighters.

In storage at Frankfurt, Germany, since December 1990 when it could not be delivered to **Air Algerie, S.A.**, the first of 2 A310-304s is leased to the company by Airbus Industrie on June 22.

The workforce now stands at 1,258 as a new service is inaugurated to London. In July, a contract is signed with **Royal Jordanian Airlines** for the technical support of the airline's 2 Airbus.

The new London route is almost singly responsible for a 60.6% jump in passenger boardings to 230,000. A \$1.84-million profit is generated because of this good partnership.

Technical Director Sinan is elevated to the post of chairman/CEO in September 1994, succeeding Chairman Abdulla. In December, the carrier is renamed **Alyemen Yemen Airlines**.

Operations continue apace in 1995 and the union with **Yemenia Airways Corporation** is finally completed on May 26, 1996 and the two are reconstituted as **Yemenia (Yemen Airways)**.

ALYEMEN YEMEN AIRLINES. See **ALYEMDA DEMOCRATIC YEMEN AIRLINES**

AMA AIR EXPRESS (AMA-FLYG I GOTEBOG, A.B.): Sweden, (1976–1986). AMA Air Express (AMA-Flyg i Goteborg, A.B.) is created at Landvetter in November 1976, as a subsidiary of **AMA Flyg Norwing, A.B.**, initially operating as a charter carrier. Scheduled operations with a fleet of 3 Cessna 402Bs commence in January 1979. Destinations visited over the next seven years include Gothenburg, Linköping, Norrköping, Kalmar, and Ronneby.

In 1985–1986, Managing Director Ola Fahinaes's route network includes the additional markets of Stockholm and the Danish city of Aalborg. The fleet is revised to comprise only 1 Cessna 402B, 1 Swearingen Merlin IIIA, and 2 Fairchild-Swearingen Metro IIs.

When, late in the latter year, the parent is reformed as **Skyways of Scandinavia, A.B.**, this carrier is purchased by Salenia, A.B., a family enterprise devoted to shipping and offshore energy concerns, and is renamed **Salair, A.B.**

AMA FLYG NORWING, A.B.: Sweden (1963–1986). Originally known as **Aero Marketing, A.B.** when founded in May 1963, AFN is founded to provide lightplane air taxi, charter, and cargo services in the Stockholm area. In November 1976, the company establishes the subsidiary **AMA Air Express (AMA-Flyg i Goteborg, A.B.)** and at the end of the decade, scheduled services are initiated linking the capital's two airports, Bromma and Arlanda, with Mora and Gävle. By 1981, the fleet comprises 1 Shorts SC-7 Skyvan, 1 Cessna 402, and 1 Piper PA-23 Aztec.

In the early 1980s, the decision is taken to intensify commuter frequencies and the fleet is upgraded and altered. Managing Director Ola Fahinaes, who also serves as Managing Director for **AMA Air Express, A.B.**, obtains a fleet of 5 Fairchild-Swearingen Metro IIs in 1985–1986. Destinations now served include Linköping, Stockholm (Arlanda and Bromma), Kalmar, and Ronneby, as well as Mora and Gävle. Late in the latter year, the company is reformed and renamed **Skyways of Scandinavia, A.B.**

AMADEUS AIR, A.G.: Austria (1992–1995). Founded at Vienna in 1992 and taking advantage of the recent bicentennial celebration of the death of composer Wolfgang Amadeus Mozart in its title, Amadeus begins both charter passenger and executive passenger and parcel/cargo services. Shareholding in the private company is divided between Gustav Neujimal, Nadja Neujimal, and Willi Leitner; Gustav Leiter becomes chairman, his wife, Nadja Neujimal, is chief financial officer, and Willi Leitner becomes managing director. The inaugural fleet includes 3 Fokker F.27-500s and 1 each Cessna 550 Citation II, Gates Learjet 35A, Dassault Falcon 20D and Falcon 20E.

In 1993, Managing Director Leitner oversees a workforce of 24, half of whom are aircrew. Two Czech-made Let 410s are placed into service. Routes are flown from Vienna to Cologne, Nuremberg, Bratislava, and Budapest. In addition, services are available from Linz to Nuremberg, from Klagenfurt to Salonika, and from Graz to Cavalla.

The company is enhanced in 1994 by additional staff and the addition of 1 Airbus Industrie A320-200, 1 McDonnell Douglas DC-9-32

and 1 MD-83. From bases at Graz, Klagenfurt, Linz, and Vienna, these undertake charters to Bratislava, Budapest, Cologne, Nuremberg, and Salonika.

Unable to achieve economic viability in a time of recession, the company folds in February 1995.

AMAKUSA AIRLINES COMPANY, LTD.: 2080-5 Myokoden, Tyokha, Itsuwa-machi Amakusa-gun, Kumamoto, 863-2111, Japan; Phone 81 869 34 1517; <http://www.amx.co.jp>; Code AMX; Year Founded 1998. Amakusa is established on the Japanese island of that name, off the west coast of Kyushu, on October 8, 1998. Majority (80%) ownership is held by local prefectures, the largest of which is that of Kumamoto in southern Japan. Hiroki Uozumi is named president. In October, orders are placed for a de Havilland Canada DHC-8-102, which will be delivered a year hence.

The local government constructs a new island airport during 1999, one which is equipped with a 3,300-ft. runway. The Dash-8 arrives from Bombardier Aerospace in November and plans are finalized for the initiation of service in the spring.

Providing an air link to the popular tourist resort destination for the first time, the carrier inaugurates daily roundtrips to Kumamoto and Fukuoka on March 23, 2000.

AMARILLO AIRPORT CORPORATION: United States (1929). The owners of the airport at Amarillo, Texas, decide early in 1929 to offer a passenger service to Oklahoma City. Employing 4 Lockheed Model 5 Vegas, the company begins revenue flights in January, which continue until the **Universal Aviation Corporation** purchases the operation in July.

AMAV: Martin State Airport, 701 Wilson Point Rd., Baltimore, Maryland 21220, United States; Phone (410) 391-1738; Fax (410) 687-9368; Year Founded 1990. AMAV is set up at Baltimore in 1990 to provide passenger services upon demand to destinations throughout the U.S. and Canada. By 1998–2000, the company operates 1 each Cessna 550 Citation II and Beech King Air 90.

AMBASSADOR AIRLINES: United States (1963–1968). Ambassador is established at Las Vegas, Nevada, in 1963 to provide non-scheduled passenger charter flights to Palm Springs, California. Employing Beech 18s and Aero Commander 500s, the company expands its route network to San Diego, Oxnard, and Bakersfield during the next five years.

Scheduled flights commence in April 1968, but cannot save the company, which folds a few months later.

AMBASSADOR AIRLINES, LTD.: United Kingdom (1992–1994). Ambassador is organized in late 1992 as the air transport division of the U.K.'s seventh largest tour operator, Best Travel Group, Ltd., to offer passenger charter services to regional and Mediterranean destinations. The inaugural fleet includes 2 leased Boeing 757-236s, 1 of which is subleased to **Nationair, Ltd.** in Canada.

The aircraft are subleased to **Avianca (Aerovias Nacionales de Colombia, S.A.)** in 1993. On April 1, operations are inaugurated on behalf of the Colombian carrier. The carrier's own charters are launched on May 1 from Newcastle and Larnaca.

In fiscal difficulty for some time, the parent organization, Best Travel Group, collapses on November 29, 1994, following the failure of a late rescue bid. The subsidiary carrier must also cease operations and face liquidation. The bond the airline had posted with the Civil Aeronautics Authority covers the cost of repatriating 3,000 stranded passengers.

AMBER AIRWAYS, LTD.: United Kingdom (1988). The Welsh charter carrier Amber Airways, Ltd. inaugurates services in May 1988 with a single Boeing 737-2Q8 chartered from the International Lease Finance Corporation. Following the completion of the tourist season at the end

of October, the operator is purchased by competing British charter operator **Paramount Airways, Ltd.** No traffic or financial figures are available.

AMBICA AIRLINES, LTD.: India (1947–1949). The aviation department of the Ambica Steam Navigation Company is transformed into an air transport company on January 27, 1947. Service is started between Bombay and Morvi via Rajkot with 2 Douglas DC-3s. Thrice-weekly Bombay–Ahmedabad via Baroda flights begin in June.

Service between Bombay and Bangalore via Poona and Belgaum is launched in early 1948. In early fall, the company's DC-3s commence a multistop route from Bombay–Amritsar via Baroda, Ahmedabad, Palanpur, Jodhpur, and Bikaner. Financially unsuccessful, the company ceases operations and is liquidated on February 7, 1949.

AMC AVIATION, LTD.: 14 El Oubour Building, Saleh Salem Street, App 87, Cairo, Egypt; Phone 20 (2) 2915 818; Fax 20 (2) 2565 966; Code 9V; Year Founded 1994. AMC Aviation, Ltd. is established by Ashraf Aboughazoula at Cairo in 1994 to offer passenger and cargo charters to regional destinations. Operations commence with a single Boeing 737-266C.

Operations continue in 1995–1999, during which years President Aboughazoula also charts 1 Boeing 737-266C and 2 Boeing MD-90-30s.

Nonscheduled flights continue in 2000; in the spring, another MD-90-30 is leased.

During takeoff from Bologna on an August 29 charter to Cairo, Flight 1129, the MD-90-30, suffers a compressor stall that requires an emergency landing. As the jetliner is putting down, two tires burst. After the plane comes to a safe stop, it must be towed back to the gate; no injuries are reported.

AMELIA AIRWAYS: 2500 NW 62nd Street, Hangar A, Ft. Lauderdale Executive Airport, Ft. Lauderdale, Florida 33309, United States; Phone (954) 771-3151; Fax (954) 771-8053; Year Founded 1993. Amelia is established at Ft. Lauderdale's Executive Airport in 1993 to offer on-demand passenger services, with emphasis on air ambulance flights, in Florida, Texas, Virginia, and South Carolina. Simultaneously, the company also sets up stations at Miami and West Palm Beach. One each Piper PA-31-350 Navajo Chieftain and PA-23T Aztec rotate between the three bases. Flights are operated through the remainder of the decade.

AMERER AIR, GmbH: Airport Linz, Flughafenstr. 1, Horsching, 4063, Austria; Phone 43 (7) 221 88776; Fax 43 (7) 221 64753; Code AMK; Year Founded 1995. Heinz Peter Amerer establishes this all-cargo company in 1995 to fly scheduled and charter flights throughout Europe, often under contract to forwarders and large express operations such as **TNT Worldwide Express**.

By 2000, the workforce stands at 50 and the fleet includes 1 Fokker F.27-500 and 3 Lockheed L-188AFs. Destinations visited include Linz, Liege, and Belfast.

AMERICA TRANS-OCEANIC COMPANY: United States (1916–1921). Frustrated transatlantic flight backer Rodman Wanamaker, a wealthy New York City department store owner, establishes America Trans-Oceanic Company (ATO) in 1916. Wanamaker, in 1917, establishes bases for his company at Port Washington, on Long Island, New York, and West Palm Beach, Florida, in hopes of starting commercial services as soon as World War I ends. He also becomes an agent for Glenn Curtiss's flying boats and acquires a Curtiss Flying Cruiser, the civil version of the H-14 flying boat.

Following the signing of the Armistice on November 11, 1918, Wanamaker in early 1919 secures additional financial backing and purchases 1 each Curtiss HS-2L and H-16 flying boats, adapted to civil standard from their military configurations. On June 19, the Prohibition Act becomes law and, during the summer, former naval aviator David McCulloch, who

had piloted the USN's *NC-3* during its unsuccessful May attempt to fly the Atlantic, is appointed general manager and chief pilot. John M. Miller is the second pilot with George A. Page Jr. as a pilot/mechanic.

While modification of the H-16 is underway, the large steam yacht *Ballymena* hauls 30 visitors from south Florida to Bimini. In the late fall, a contract is signed with the Bimini Bay Rod and Gun Club and the Bahama Development Company making ATO the "official airline" of both concerns. Plans are made to inaugurate daily roundtrip revenue service to North and South Bimini Islands, just 50 miles from Miami, and to a second destination, Havana, Cuba, where knowledgeable passengers will find that alcoholic beverages are not subject to American Prohibition. Painted to resemble the *Big Fish*—a whale shark landed earlier by the Rod and Gun Club's president, Capt. Charles Thompson—the H-16, which is indeed christened the *Big Fish*, is converted to provide seating for 2 crew and 14 passengers, is delivered on December 19.

ATO, like **Aeromarine Airways, PBA (Provincetown-Boston Airline)**, and **Naples Airlines**, which will follow it over the years, is a seasonal undertaking. The first revenue flight to Bimini from the company's base at the Front Boulevard on Miami Bay by the *Big Fish* is completed on February 24, 1920. When not in flight, the H-16 is moored to a buoy offshore and guarded by a youth with a rowboat, who is also employed to take passengers, crew, and fuel to the Curtiss. On March 9, the H-16, with every seat occupied, carries the record number of passengers for a seaplane flight to date on its afternoon service from Bimini and Miami and receives front-page coverage in the next day's *Daily Metropolis*. ATO stops flying in Florida on May 1.

For the summer tourist season, the *Big Fish* and its smaller companion are transferred up to Long Island, where they fly passengers between the company's Long Island base and the lake region in upper New York State. When the *Big Fish* returns to Florida, it is given a new paint job by pilot Page, who affixes the shark scales more regularly along the fuselage and draws the craft's name on each side of the bow below large "eyes." For the season, 4,000 passengers are reported carried over 80,000 revenue miles.

A second flying season is undertaken during the winter of 1920–1921 and a second summer of New York frequencies is begun in late June of the latter year. At this point, the Curtiss-Metropolitan Airplane Company, which had been formed to take over the airline, acquires ATO. Unhappily, the *Big Fish* must be written off following a hard landing on the Hudson River in July that crushes the bottom of its hull. The Curtiss is beached and stripped. Unable to earn a profit with only one seaplane, ATO, which has had the honor, according to some, of offering the first international air passenger service by a U.S. carrier, stops trading. The Bimini route will be restarted by **Aeromarine Airways**.

In late June 1927, former ATO owner Wanamaker is finally able to participate in a transatlantic flight when he provides backing for Comdr. Richard E. Byrd's New York to Paris flight in the Fokker C-2 *America*.

AMERICA WEST AIRLINES: 4000 East Sky Harbor Blvd., Phoenix, Arizona 85034, United States; Phone (602) 693-0800; Fax (602) 693-5546; <http://www.americawest.com>; Code HP; Year Founded 1981. The second-largest of the deregulation-spawned new entrants (after **PEOPLExpress**), the largest to survive, and the only one to achieve major airline status, America West is founded by Edward R. Beauvais and seven associates in the summer of 1981. It is incorporated under Delaware law on September 4 with Phoenix as the principal hub and certified by the CAB two months later.

Future President Michael J. Conway joins the company from **Continental Airlines** in November as executive vice president. Two years of work, which continues into 1982, results in capitalization of \$20 million (\$18 million coming as the result of 2.68 million shares being sold in public stock offering), a workforce of 277, and 3 former **Pacific Western Airlines, Ltd.** Boeing 737-200s. In December, there is but \$1,800 left in company coffers.

Among the new hires of 1983 is Patricia Burr, the first woman appointed to a financial manager's position at **Continental Airlines** and

within a dozen years, America West's corporate treasurer. Regularly scheduled, low-fare service begins to Colorado Springs, Kansas City, Los Angeles, Wichita, and Phoenix on August 1.

On October 1, flights begin to Omaha, Nebraska, and Ontario, California, followed by thrice-daily frequencies to and from Las Vegas. Services are initiated on December 1 to Albuquerque, Des Moines, Oklahoma City, San Diego, and Tulsa.

By year's end, the company's 10 new Boeing 737-200s are flying into 13 cities and have transported 304,347 passengers. Revenues of \$18.2 million are realized, but expenses, including start-up costs of \$3.6 million, total \$26.46 million. As a result, the company is left with an operating loss of \$9.78 million.

In 1984, the first full year of operation, the workforce totals 806. Frequencies are launched from Phoenix to Palm Springs on February 1. The same day, Executive Vice President Conway succeeds the original president, Michael Roach. In March, \$15-million worth of preferred and \$9.6-million worth (1.07 million shares) of common stock are sold.

On June 1, new markets are entered at Austin, Durango, San Jose, and Tucson. Flights begin to San Francisco on July 15 and to Burbank on September 14. San Francisco flights are suspended on October 27, but new service is initiated to Oakland the next day just as service to Tulsa and Kansas City is being discontinued.

The first international route is opened on November 1 to Calgary, Alberta, Canada. Two weeks later, the company enters markets at El Paso and Salt Lake City. Seasonal ski flights to Montrose, Colorado, begin on December 8 and on December 15 a new route is opened to Grand Junction.

Daily departures from Phoenix reach 78 during the year and America West transports 2,397,953 passengers and 90,000 FTKs. Revenues of \$122.6 million are earned, but expenses are \$131.12 million. The operating loss is \$8.53 million and a net loss of \$15.4 million is suffered, brightened somewhat by a \$1-million net profit in December.

Sensing better times ahead, the company by 1985 has increased the number of employees from 280 to 1,650 and its fleet from 3 737-200s to 21. The first 2 B-737-3Q8s are delivered on February 28 and enter service to noise-sensitive California airports. Service to Palm Springs is suspended on March 15, but opened to Edmonton, Alberta, Canada.

On April 1, service is initiated to Orange County and Santa Ana and to Sacramento; 10 days later, a third public offering of stock (3.9 million shares) brings in \$25.3-million additional capitalization. In late May, a multifaceted Northwest Airlink marketing alliance is started with **Northwest Airlines**, providing a direct link from America West's cities to the latter's entire domestic and international system via connections at Phoenix and Los Angeles. Air cargo services are started on July 1.

Flights to Pueblo, Colorado, begin on November 15. On November 19, a single assailant, waving a lighter and an electrical switch, takes over Flight 261, a B-737-2Q8 with 63 passengers, which is on the ground at Sky Harbor International Airport, preparing to depart Phoenix for Ontario, California. Taken in hand by the captain, the man is escorted off the aircraft and turned over to security guards. Upon examination, the would-be pirate will be found to be mentally unstable and sent to a psychiatric facility.

On December 31, the company serves 26 cities with a workforce of 2,527 and a fleet of 3 B-737-300s, 24 B-737-200s, and 5 B-737-100s; orders remain outstanding for 10 Dash-300s and 12 Dash-200s.

Customer bookings skyrocket 113.8% to 5,126,000 and 930,000 FTKs are operated. Revenues increase 96.9% to \$241.3 million, costs rise 69.8% to \$222.63 million, and an operating profit of \$18.67 million is generated. A net gain of \$11.38 million is also achieved.

Airline employment rises 72% in 1986 to 4,246. Flights to Sioux City commence on January 14, followed by service to Cedar Rapids on February 15 and Springfield, Missouri, on April 27. Development of a hub at Las Vegas begins on July 1 as the 10 p.m.-1 a.m. low, unrestricted fare service called Nite Flite is launched from Phoenix to Albuquerque, Los Angeles, Oakland, Ontario, Phoenix, Salt Lake City, and Tucson. Two weeks later, frequencies are initiated to Chicago (MDW).

A corporate-sponsored employee child-care program is started on August 25. Ground is broken on September 11 for a new Technical Support Facility at Phoenix. Nite Flite fares are introduced in October on departures from Las Vegas to San Diego, El Paso, Colorado Springs, and Pueblo.

Flights begin to Denver and Reno on November 15, followed a month later by additional services. The new offerings are two direct flights from Seattle to Phoenix, two to Phoenix via Oakland, two to Phoenix via Las Vegas, two from Portland to Phoenix via Las Vegas, and one direct from Portland to Phoenix.

At year's end, airline employment is up to 4,596, the fleet totals 46 B-737s, orders are outstanding for 9 B-757-200s and 22 B-737-300s, and 35 cities are in the route network. Passenger boardings climb 39.3% to 7,140,160 and freight also advances. Revenues ascend 36.5% to \$329.67 million, expenses move ahead by 46.2% to \$325.72 million, and the operating profit is down to \$3.95 million. Net gain drops to \$3.02 million.

The workforce increases by 74.3% in 1987 to 7,400. America West begins new roundtrip service to Midland and Odessa, Texas, and Moline and Quad Cities, Illinois, on January 15. Also in January, roundtrips are added to and from Chicago (MDW), Omaha, and Colorado Springs and new Nite Flite destinations include Seattle, Portland, Sacramento, Calgary, and Edmonton.

In February, 18 daytime nonstop frequencies are opened from Las Vegas to Los Angeles (LAX), Burbank, Ontario, and Orange County. On March 2, a new market is opened at Yuma, Arizona.

Originally operated by **Republic Airlines**, the first 4 B-757-2S7s are delivered on May 1. Routes are inaugurated to Chicago (ORD) plus Flagstaff and the Grand Canyon Arizona on May 20.

Long Beach joins the route network on June 1, the same day a satellite reservations center is opened at Reno. Based on dollar accrual, the company's first frequent flyer program, FlightFund, is started on June 10.

The inaugural B-757-2S7 transcontinental service is begun on July 1 with flights to New York (JFK) and Baltimore (BWI). Simultaneously, nonstop B-757-2S7 flights commence from Tempe to Chicago (ORD). Twice-daily frequencies are initiated from Chicago (MDW) to New York (JFK) and BWI. Employing 3 new de Havilland Canada DHC-8s, turboprop flights begin in June from Flagstaff and Grand Canyon National Park in Arizona to Las Vegas and Phoenix.

Another public stock offering of 3.03 million shares is made on August 11, netting \$31.7 million; Transpacific Enterprises (Pty.), Ltd., an affiliate of **Ansett Airlines of Australia (Pty.), Ltd.**, purchases the entire 20% interest. The first luxury lounge operated by the carrier opens on September 15 and is named the "Phoenix Club." The same day, daily roundtrip B-757-2S7 service is initiated to New York and BWI from Phoenix and Las Vegas.

Two months later on November 15, flights begin to Lubbock. Daily roundtrip service commences on December 1 from Oakland to Las Vegas. Simultaneously, nonstop roundtrip service is begun from Oakland to Calgary, while another service originates in Edmonton and continues to Oakland via Calgary and then on to Las Vegas.

A package tour division, AmeriWest Vacations, is started on December 14, offering charter flights to Nevada gambling destinations. As of December 31, the fleet totals 19 B-737-300s, 40 B-737-200s, 7 B-757-2S7s, and 3 DHC-8-102s. Forty-five cities are served from the Phoenix and Las Vegas hubs. Competition at the latter point is now reduced as **Sunworld International Airways** transfers its operations to a new hub at Reno.

Although enplanements swell 57.3% to 11,121,607 and revenues rise 74.9% to \$576.63 million, the attempt to move into East Coast while securing dominance of the Phoenix and Las Vegas hubs cities proves costly. Expenses skyrocket 87.9% to \$611.99 million and the operating loss is \$35.35. A net \$45.67-million loss is suffered.

Airline employment grows another 19.4% in 1988 to 8,142. Attempts by ALPA, AFA, and the TWU to organize workers during the year all fail. Frequencies to Chicago (MDW) are suspended on January 5, but,

later in the month, daily nonstop service is initiated from San Francisco to Calgary and Edmonton. The 660,000-sq.-ft. Phoenix Hangar and Technical Support Facility is opened on February 23 while flights to Springfield end on February 29.

A "value pack" coupon book is introduced in March. Each book contains tickets good for 10 nonstops between 8 of the airline's western destinations for \$230. Also in March, two Baltimore-New York (JFK) daily nonstop roundtrips are launched. A new laser baggage system is unveiled at Phoenix on April 13.

Flights begin to Minneapolis (MSP) on May 1, with a daily roundtrip from Las Vegas, and on May 15, the carrier joins IATA. On June 23, America West is named the official airline of the NFL Phoenix Cardinals and begins a long-term charter arrangement for the transport of the club to its road games.

Fast Check Parking is inaugurated for passengers at Phoenix in July; customers may park, check baggage, and receive their tickets and seat assignments at the satellite parking facility and then board a free airport shuttle bus. The company's fifth birthday is celebrated on August 1 and service to Las Vegas is reestablished on September 11, along with thrice-daily nonstop, roundtrips from Kansas City to Phoenix.

Four daily roundtrip frequencies are started from Las Vegas to Boise (Idaho) on October 16. Also in October, the Phoenix to Minneapolis (MSP) frequency is increased to thrice daily.

The carrier provides special service from its markets to Vietnam veterans wishing to visit Washington, D.C. for the dedication of the Vietnam War Memorial on November 11. The same day a route request (eventually unsuccessful) is filed with the U.S. DOT for the inauguration of service from Honolulu to Sydney, Australia. Seasonal (December-March) ski service is opened on December 17 to Steamboat Springs, Colorado. Thrice-daily Phoenix to Kansas City flights also begin in December, along with a daily nonstop run from Kansas City to Las Vegas. Gateways increase during the year to 47 and the fleet receives 10 B-737-300s and removes 15 B-737-200s. Flight frequencies are cut 10% on certain routes and part-time help is cut back, although an additional 200 full-time employees are recruited.

Passenger boardings swell 19.9% to 12,795,163 and cargo skyrockets 96.9% to 24.09 million FTKs. Revenues shoot up 35.52% to \$781.46 million, expenses rise 24.73% to \$763.32 million, and the operating profit is a welcome \$18.14 million. Cost-cutting measures and well-considered expansion, along with well-manuevered debt swaps, lead to a \$9.36-million net profit.

The workforce grows by 38.2% in 1989 to 11,250 and the fleet is increased by the addition of 10 B-737-300s, 3 B-757-200s, and 2 B-747-206Bs. The latter are half of a purchase made from **KLM (Royal Dutch Airlines, N.V.)**. One DHC-8-102 is withdrawn.

A route request to serve Tokyo is filed with the DOT on April 11, but will not be approved; additional slots are, however, achieved at both New York (LGA) and Washington, D.C. (DCA). Also in April, the carrier issues \$54-million principal amount of 20-year 11.5% convertible subordinated debentures in a private placements accomplished by Werthein Schroder & Co.; even after the issuance, \$103.6-million aggregate principal amount of debentures are outstanding.

America West offers \$726 million for the **Eastern Air Lines** Air Shuttle and 10 B-757-200s; the offer is increased to \$751 million on May 10, but withdrawn on May 24. A route application is filed with the DOT in June requesting Honolulu to Tokyo authority.

On July 1, new twice-daily roundtrip service is introduced from Palm Springs to Las Vegas and from Phoenix to New York (LGA) via Omaha and Wichita. Thrice-daily roundtrips commence from Palm Springs to Phoenix and from Washington, D.C. (DCA) via Omaha and Wichita; however, several slots at the first two destinations, acquired on a temporary basis following the collapse of **Eastern Air Lines**, must be surrendered.

A third satellite reservations center is opened near Baltimore (Hanover) on August 1. The FlightFund frequent flyer program becomes mileage-based on September 1. Later in the month, introductory fares of

\$298 to \$742 are announced for the new Hawaii service, upcoming shortly. At the same time, a contract is signed with GTE Airfone, Inc. for the installation of the Seatfone system in the entire B-757 fleet. Also, an agreement is reached to become official airline of the Phoenix Suns NBA team and to sponsor a new sports complex for the Suns to be named America West Arena.

As the result of a mass strike by Australian pilots, 3 B-737-300s, complete with crews, are wet-leased to **Ansett Airlines of Australia (Pty.), Ltd.** at month's end to fly domestic services; in return, America West dry-leases 3 B-737-377s from the Australian airline.

Santa Barbara service is begun on October 1 and later in the month the company signs a contract with MedAire, Inc. for the provision of day-round medical consultation. Seating assignments up to 30-days in advance of departures is now offered. The first ex-**KLM (Royal Dutch Airlines, N.V.)** B-747-206B arrives at Phoenix on October 26.

San Antonio joins the route network on November 1 as the airline also begins nonstop service from Kansas City to Omaha. A second nonstop daily from Las Vegas to Denver and two new nonstops from Las Vegas to Kansas City are also added. Daily Las Vegas to Newark B-757-200 flights follow on November 6 as do two new daily nonstop roundtrips from Newark to Phoenix and from Washington, D.C. (DCA) to Kansas City.

Daily long-haul Jumbojet Bird of Paradise flights are begun by the first former Dutch B-747-206B from Phoenix and Las Vegas to Honolulu on November 16, the same day seasonal (December-April) B-737-200 ski service at Sun Valley and Vail are launched. Four-times-per-day DHC-8 service starts from Phoenix to Santa Barbara in December.

After landing at Tucson from a December 30 service from Phoenix, a B-737-204 with 5 crew and 125 passengers overruns the runway, collides with a concrete structure, loses its nosegear, and skids to a stop 3,803-ft. from the end of the concrete. Although the aircraft is damaged beyond repair, there are no fatalities.

Customer bookings increase by 5% to 13,431,310 and cargo skyrockets 71% to 41.19 million FTKs. Revenues jump 27.75% to \$998.31 million, expenses boom upward 24.48% to \$950.19 million, and the operating profit is \$48.11 million. Net gain more than doubles to \$20.01 million.

Airline employment jumps 27.8% in 1990 to 13,704 and the fleet grows to comprise 77 B-737s, 11 B-757-200s, 4 B-747s, and 12 DHC-8s. Orders are outstanding for 4 B-747-400s, 10 B-757-200s, 15 B-737-300s, and 10 DHC-8s, while lease-purchase requests are made for 74 Airbus Industrie A320-200s. The carrier stands 20th in the world in fleet size.

The DOT reclassifies America West from national to major carrier status on January 1. It is now the nation's 11th largest airline. The next day, the company inaugurates daily flights from Houston to Las Vegas and thrice daily from Houston to Phoenix and Palmdale and Lancaster, California. A code-sharing agreement is signed on January 7 with **California Air Shuttle**; under its terms, the new small regional will initiate feeder flights linking its Oxnard base with Las Vegas, Sacramento, San Francisco, and San Jose. The arrangement will fail with the commuter late in the year.

On January 16, Jose Manuel Gonzalez-Gonzales, claiming to have a bomb, hijacks Flight 727 and demands to be flown to Havana. The B-737-200 aircraft en route from Houston to Las Vegas makes a refueling stop at Austin, Texas. There a police officer climbs through an escape hatch and overwhelms the pirate who is taken to a hospital.

During the month, the company receives the "Labor Relations Award" from *Air Transport World* magazine. In February, service from Washington, D.C. (DCA) is reduced to one daily roundtrip.

On March 15, daily roundtrip frequencies are initiated from Boston to Las Vegas and Phoenix, followed by Bakersfield on April 15. The DOT grants Tokyo rights to **Continental Airlines** on April 25 and America West is given backup authority. Service from Phoenix and Las Vegas to San Francisco, halted in 1984, is resumed on May 1. During the month, two new marketing programs are announced: a Chairman's Club for

members of the FlightFund frequent flyer program and a Senior Saver Pack for senior citizens. In conjunction with its inauguration of London to Los Angeles service on May 16, **Virginia Atlantic Airways, Ltd.** begins participation in the FlightFund program.

A market at Dallas (DFW) is started on July 15 and an employee support group known as The Cactus Club is started on August 1. Five days later, Iraq invades Kuwait and fuel oil prices begin to rise. Membership in FlightFund exceeds the million mark on August 23. Also in July–August, a daily roundtrip is added from Albuquerque to Oakland, San Diego, and Las Vegas; from Las Vegas to Oakland; from Phoenix to Lincoln, Oakland, and Palm Springs; from San Diego to Las Vegas; from Seattle to Reno; and a second flight from Phoenix to Honolulu.

Beginning on September 14 and continuing for five months, American West and **Ansett Airlines of Australia (Pty.), Ltd.** flight attendants participate in a work exchange program.

A multiparty transaction completed on September 28 permits an order for the lease or purchase of 74 Airbus Industries A320s. Also in September, a daily roundtrip is begun nonstop from Chicago to Phoenix and from Dallas (DFW) to Las Vegas and thrice-daily nonstops commence from Dallas (DFW) to Phoenix. The following month, one roundtrip daily is launched from Las Vegas to San Diego and two from Las Vegas to San Francisco; one is added from San Francisco to Phoenix. The holiday tour division is renamed America West Vacations on October 31.

The America West Airlines Foundation is established on November 1 as a nonprofit, educational-support fund. Meanwhile, the introduction of child-care programs for employees will result in the carrier's listing in *Working Mother* magazine as one of the 60 best corporations for single parents. Phoenix operations are relocated on November 11 to the newly opened Barry M. Goldwater Terminal 4. Twice-daily roundtrips are added from Las Vegas to Grand Junction in November, along with daily roundtrips from Los Angeles to Las Vegas, Phoenix to Oakland and Palm Springs, and direct from Las Vegas to New York.

A half-price "50% Off Any Fare Anywhere" ticket sale is conducted at Phoenix on December 8 and results in 100,000 customers. Rain checks must be handed out for redemption the following month. Flights for skiers are resumed on December 15 from Los Angeles and Phoenix to Vail and from Phoenix to Steamboat Springs on December 22. Airline employment is 14,000 on December 31, not including 10 flight attendants from **Ansett Australia (Pty.), Ltd.**, engaged since November in a work-exchange program with a similar number of AWA customer service representatives. The route network now includes 62 cities.

Passenger boardings leap ahead by 16.3% to 15,624,000, making AWA the world's 19th largest airline in terms of enplanements. Freight skyrockets 132.99% to 95.96 million FTKs. Revenues kick upward by 32.39% to \$1.32 billion, but expenses grow even faster, by 42.42% to \$1.35 billion. The operating loss is \$31.63 million and the company's net loss is \$74.67 million, largely as the result of increased fuel prices caused by the Kuwait situation. Still, the revenue figure is a historic one as the carrier becomes the first company to generate \$1 billion in just six years of operation.

The "50% Off Any Fare Anywhere" tickets are redeemable beginning on January 7, 1991; flights cease to Sioux City on January 31. Also in January, the company inaugurates service from Long Beach to San Jose and from San Francisco to Santa Ana. A fourth roundtrip is added from Phoenix to Long Beach and one more roundtrip is introduced from Phoenix to Palm Springs and to Yuma. Thrice weekly B-737-300 service is introduced from Phoenix to Steamboat Springs and daily from Phoenix to Vail. In other business, the airline receives an FAA repair-station certificate, allowing it to perform maintenance for other airlines.

The first non-Western Hemisphere destination is inaugurated by a B-747-206B on February 1—Nagoya, Japan. The same day, nonstop Orange County–San Francisco return service begins. The first A320-232 is placed in service on a nonstop Phoenix to Chicago (ORD) service on February 11. Pay cuts begin for certain employees, primarily officers and managers, during the month ranging in severity from 10 to 25% and

in order to make capacity available for a Mideast airlift, the Nagoya service is suspended at month's end.

Contract flights for the return of Operation Desert Storm soldiers from Saudi Arabia begin on March 7. Deep discount fares for military personnel will be offered during the next nine months. Company pilots during the month reject unionization by a vote of 743–285. Winter season flights to Vail cease on March 31 and to Steamboat Springs on April 6.

Lubbock and Midland and Odessa service is halted on April 7 and during the month the company is forced to halve its capacity-growth plans for the year. Thrice-weekly Nagoya services resume in May and on June 1 aircraft lease payments are deferred in an effort to conserve cash. On June 27, as a result of the effects of the recession, high fuel costs, and the Gulf War, America West faces a severe cash-flow crisis and files for Chapter XI bankruptcy reorganization.

Thrice-daily nonstop flights are initiated from Phoenix to St. Louis on July 1, the same day an across-the-board pay freeze is imposed. New York (LGA), San Antonio, Bakersfield, Palmdale/Lancaster, and Grand Junction service is dropped on August 1 as a 10% pay cut is imposed on anyone not given a pay cut in February. The Fresno, Santa Barbara, and Grand Canyon frequencies are halted on August 25, but five days later on August 30, twice-daily B-737-300 flights begin from Atlanta to Las Vegas and Phoenix. The U.S. Bankruptcy Court approves a new \$55-million financing package and, although Edward R. Beauvais remains board chairman, President Michael J. Conway is appointed CEO on September 15.

Fiscal assistance in the form of debtor-in-possession financing is provided by GPA Group and **Northwest Airlines**, with the former contributing \$35 million and the latter the remainder. The largest portion of the aid will pay the Irish lessor for chartered A320s. In addition to cash, the company announces a joint marketing program with **Northwest Airlines** and also negotiates a two-year option to purchase the Honolulu–Nagoya route for \$15 million.

Also in September the company begins to code-share with **Northwest Airlines** on flights linking the Minneapolis-based carrier's transpacific services to the routes from Las Vegas to San Francisco, Phoenix to Los Angeles, and Tucson to San Francisco via Phoenix. Service to Pueblo is halted on October 1 and on October 31 the new joint marketing and code-sharing alliance with **Northwest Airlines** comes into effect, providing the Minneapolis-based megacARRIER with access to the Southwest.

Another \$23-million debtor-in-possession financing from Kawasaki Leasing International, Inc. is approved by the U.S. Bankruptcy Court on December 10. On December 14, the company begins nonstop B-737-300 thrice-weekly frequencies from Phoenix to Steamboat Springs. The next day, service is started to a new hub at Columbus with nonstop flights to the Ohio capital from Boston, Las Vegas, Phoenix, and Washington, D.C. (DCA). A five-times-per-week schedule is kicked off from Phoenix to Vail on December 21. Also in December, the Hanover, Maryland, satellite reservations system is transferred to Kansas City.

As might be expected, cost-cutting measures have resulted in a change of year-end statistics. The workforce is down by 11.4% to 12,000 and 2 B-737-200s, 1 B-747-206B, and 6 DHC-8-102s have been withdrawn and replaced by 16 A320-232s chartered from GPA, Ltd.. The number of served cities declines to 47.

Customer bookings ascend 8.2% to 16,907,000 and cargo jumps 9.7% to 105.29 million FTKs. Although revenues climb 7.45% to \$1.42 billion, expenses swell 12.67% to \$1.52 billion and cause a \$104.65-million operating loss. The net loss deepens to \$222.01 million, a 191% increase over the previous year.

Service is resumed to Chicago (MDW) on February 1, 1992 and launched to Orlando and Tampa. Flights to Nagoya, Japan, from Honolulu end on April 15 as the route authority is transferred to **Northwest Airlines**, with which AWA has a marketing agreement. A code-sharing and frequent flyer arrangement is entered into with **Aeromexico (2) (Aerovías de México, S.A. de C.V.)** on June 1, the same day code-shared new flights begin to Mexico City from Phoenix; flights also begin to Milwaukee. Service to Cedar Rapids is suspended on July 7.

Chairman Beauvais resigns on July 17 and is succeeded by President/CEO Conway. The new leader announces a cutback of 1,500 jobs (to save \$7 million per month), the deletion of 15 aircraft, and the retirement of the Jumbojets from the Phoenix-Honolulu run and their replacement with 2 Lockheed L-1011 Tristar 1s wet-leased from **American Trans Air**. With the beginning of the National Football League (NFL) regular season, the carrier finds itself with exclusive contracts to transport two teams, the Phoenix Cardinals and the Kansas City Chiefs.

The Calgary route is suspended on August 25 and flights to Moline and the Quad Cities end on September 8. The U.S. Bankruptcy Court approves \$53 million in expanded debtor-in-possession financing on September 9 from a consortium of Arizona lenders, GPA, Ltd., and Ansett Worldwide Aviation Services, Ltd. The state of Arizona provides a \$1-million loan and local businesses provide another \$7 million.

The board of directors is reconstituted from seven to nine members on September 17 with Chairman Beauvais voted off and Phoenix-area businessman William A. Franke elected to replace him. A code-sharing arrangement is entered into with **Mesa Airlines** on October 1, as new markets are opened at Farmington and Gallup, New Mexico. The Arizona cities of Kingman and Prescott become carrier destinations on October 15, followed by Sierra Vista and Fort Huachuca on November 1 and Bullhead City and Lake Havasu City on November 15. Seasonal ski service (December-March) is opened to Telluride in Colorado on December 19. As of December 31, company employment is down to 10,500. The fleet now includes 56 B-737s, 12 B-757-200s, and 18 A320-200s; gone are the B-747s and DHC-8s. The number of destinations rises by 10, but recession impacts both traffic and finances.

Passenger boardings decline 10.3% to 15,172,757 and freight falls 30.1% to 73.67 million FTKs. Revenues drop 8.6% to \$1.29 billion, which is the lowest amount earned by any U.S. major and smaller, indeed, than that of the country's third largest all-cargo operation, **Airborne Express**. Expenses slide 9.9% to \$1.36 billion, and the net loss is cut to \$74.81 million. The operating loss is cut in half to \$131.76 million. Looking for something to cheer about, statisticians point out that the \$294.6-million stockholder's deficit—the deficit of the nation's smallest major—was still better than that of **Continental Airlines** or **Trans World Airlines (TWA)**.

Honolulu service ends on March 31, 1993, and a Mexico City sales office is opened on April 16. A first quarter operating profit of \$17.2 million and net profit of \$2.1 million is announced on April 26. On August 1, the company celebrates its tenth anniversary; it is the only major carrier born of deregulation to survive. The carrier now becomes the official airline of the new MGM Grand Hotel and theme park in Las Vegas.

In early October, the U.S. Bankruptcy Court grants a seventh extension, through mid-February, of the airline's exclusive right to present a reorganization plan. Simultaneously, the debtor-in-possession lenders agree to extend the maturity of their loans until next July. On October 8, the **Mesa Airlines** code-sharing agreement is expanded into the creation of **America West Express** commuter service. All of the DHC-8-102s previously withdrawn are transferred to the new enterprise.

The third attempt to unionize the airline's pilots is successful as the carrier's pilots vote 802 to 224 on October 21 to join the Air Lines Pilots Association (ALPA). Also in October, AWA Partners, an investment partnership led by the Pritzker family of Hyatt hotel fame (and former owners of the second **Braniff, Inc.**), offers to insert \$150 million of equity into the bankrupt airline and help it create the reorganization necessary to emerge.

On December 1, new uniforms are introduced by flight attendants and other customer-service personnel. Additionally, a contract is let with Flight Phone Corp. for FlightLink entertainment and communications systems for passengers. Service is inaugurated to Indianapolis on December 15, with nonstop service to Las Vegas and Columbus. Systemwide at year's end, employment totals 11,000. The fleet total is down by one plane, as a B-757-200 is withdrawn. Sixty-seven cities are served with 270 departures from three hubs. During the year, the company

raises debtor-in-possession financing of \$131 million and obtains payment deferrals from suppliers of \$140 million.

On December 31, Chairman William Franke and other members of the board dismiss President/CEO Michael Conway in a power struggle over which group should be asked to help the company emerge from Chapter XI bankruptcy. Conway and New York financier Michael Steinhardt have joined forces in an unsuccessful takeover bid and Conway refuses to vacate his board seat.

Customer bookings decline another 2.9% to 14,739,644 and cargo is off by 25.4% to 54.92 million FTKs. Revenues rise 1.7% to \$1.36 billion and expenses fall 12% to \$1.2 billion. As a result, a \$121.05-million operating profit is made, followed by net gain of \$37.18 million.

Airline employment is increased by 3.4% in 1994 to 11,595. The fleet now includes 1 each B-737-112, B-737-2A6, B-737-281, B-737-291, B-737-2E3A, B-737-2K6A, B-737-2M8, B-737-2Q8, B-737-2U9A, B-737-3G7, B-737-297A, and B-757-225; 2 each B-737-222s, B-737-2T4As, B-737-284As, and B-747-206Bs, 3 each B-737-204s, B-737-275As, B-737-377s, and B-757-2G7s, 6 B-757-2S7s, 11 B-737-33As, 12 B-737-277As, and 21 B-737-3G7s.

After the selection of former **Aloha Airlines** head A. Maurice Myers as president on January 1, Conway resigns from the board of directors in early February. Chairman Franke (who assumes the CEO mantle) and the board, also in February, choose as their corporate savior AmWest Partners, a group formed around the Texas-based Air Partners I.P. investment organization which, together with **Air Canada, Ltd.**, acquired majority interest in **Continental Airlines** in November. **Mesa Airlines** is also an AmWest associate, and its president, Larry Risley, is one of 10 new members added to an expanded 15-member board of directors. The winning group pledges investments of up to \$220 million in return for minority 35.5% shareholding and 71.2% voting interest.

The company begins taking reservations on February 28 for four daily nonstop flights from Philadelphia to Columbus and Las Vegas that begin on April 18.

A competing bid by Michael Steinhardt is allowed to expire during the month as Air Partners I.P. increases its offer by \$25 million, winning support from the carrier's unsecured creditors. Under the new proposal, those creditors will receive up to 59% of total equity (or partake in a share of \$100 million to be set aside for them), existing stockholders will obtain 5%, and Air Partners will still take 35.5% shareholding.

After 38 months of Chapter XI reorganization and a record 6 consecutive profitable quarters, the company emerges from formal bankruptcy on August 25; \$240 million in unrestricted cash is on hand and the long-term debt has been reduced from \$957 million to \$550 million. The major immediately enters into a code-sharing agreement with **Continental Airlines**.

At the same time, a code-sharing pact is signed with another rescuer, **Mesa Airlines**. To celebrate the event, a B-757-2S7 is given a special "Teamwork" livery designed by the 11-year-old child of a company employee. To recognize the spirit of teamwork and cooperation that allowed the airline to end bankruptcy, childlike human figures adorn a white fuselage between the cockpit windows and wings with the word "teamwork" in similar childlike script written above the windowline. Rolled out on August 29, the Boeing is quickly nicknamed "The Romper Room."

In September, the carrier's flight attendants vote to join the Association of Flight Attendants (AFA).

On October 1, the company begins implementation of its alliance with **Continental Airlines**. In addition to reciprocal frequent flyer participation, joint marketing and purchasing, shared airport facilities, and consolidated ground handling, the two carriers code-share to a variety of domestic destinations via CA's Houston and Newark hubs and AWA's hubs at Las Vegas and Phoenix.

At the same time, AWA delays acquisition of 24 A320s for 2 years. On a positive note, AWA becomes the last U.S. major to join the Air Transport Association of America. During the same month, flight attendants formally join AFA.

A leased B-757-2G7 is acquired in late November, along with a B-737-3Y0; the former, *City of Las Vegas*, is painted in a special livery based on the state flag of Nevada, prominently featuring the state motto "Battle Born" as part of the color scheme.

In December, fleet service employees refuse to join the Transport Workers Union and mechanics vote not to be represented by the Teamsters. Negotiations begin with the AFA on a new contract—they will drag on for almost three years.

The *City of Las Vegas* enters service on December 15. Also during the month, service is halted to Lansing and Flint; however, it is started from Phoenix to Chicago (MDW) as well as to Mazatlan and Los Cabos, Mexico.

On the year, passenger boardings recover, growing 6.3% to 15,668,798 while freight moves ahead by 18% to 64.8 million FTKs. Revenues jump 6.3% to \$1.4 billion, while expenses rise only 4.8% to \$1.26 billion. Consequently, the pretax gain swells to \$146.37 million and there is a net profit of \$62.32 million.

On January 9, 1995, the company announces that it must lay off 1,100 employees to cut costs. During the remainder of the year, overall employment declines 18.7% to 8,712.

Beginning on February 2 and continuing through April 23, the carrier and **Continental Airlines** implement a second phase of their 1994 agreement. During these weeks AWA performs ground handling and customer service functions for Continental at the airports at Salt Lake City, Albuquerque, El Paso, Tucson, Seattle, and Omaha. Continental returns the favor for AWA at Baltimore, Philadelphia, Chicago (ORD), Orlando, and Tampa. As a result of the changes, 157 Continental and 130 America West employees are offered transfers to cities where the new jobs are created.

Officials announce, on February 15, the initiation of fare cuts for travel over all of its routes. The fares are immediately matched by **American Airlines** and, within two days, by **Northwest Airlines**, **United Airlines**, **USAir**, **Trans World Airlines (TWA)**, and **Continental Airlines**. Also, under its 1994 pact with **Continental Airlines**, AWA and CA increase by 30 the number of dual-designator airports the two carriers visit.

In accordance with its January 9 announcement, the company, on March 3, begins to layoff the first of some 700 employees. During the month, the company begins to operate a unique "night hub" operation at Las Vegas, with almost half of its 86 daily departures flying out between 8 p.m. and 5 a.m. These frequencies, especially the 8-plane 1 a.m. "bank," appeal to leisure passengers traveling to and from the city's casinos.

On April 20, the airline receives its fourth B-757 in a special paint scheme. Christened the *City of Phoenix/City of Tucson*, the Dash-23A wears a livery based on the colors of the state flag of Arizona. Also in the spring, a contract is signed with Mesa Air Group for new **America West Express** service. Mesa creates a **Desert Sun Airlines (2)** division, which begins flying to Des Moines and Spokane from Phoenix with a pair of Fokker 70 regional jets.

A new five-year contract is signed between the company and its ALPA-represented pilots in May. The arrangement includes an annual 6.9% pay increase, a single-pay scale based on seniority, and a 10% boost in productivity.

In mid-July, the company announces that it will add first-class to all of the planes in its fleet that do not already have it. The service is seen by the company, as it is by others, as a way to reward loyal passengers with service upgrades. The decision is also taken to outsource all major maintenance.

An aggressive program to increase growth over the next two years is revealed in September. The number of departures from Phoenix, for example, will be significantly increased over the present 173 per day. In addition, more planes will be added and pilots hired.

The fifth state-flag logo jet is received in November; the B-757-2S7 *City of Columbus* wears a colorful livery taken from the pennant flag of the Buckeye State of Ohio.

Plans are announced on December 3 for the layoff of 500 employees, including half of the carrier's mechanics; at the same time, the company signs a five-year contract with the Tramco; the airline will outsource all of its heavy maintenance to this subsidiary of the BF Goodrich Company.

A class-action lawsuit is filed against the airline on December 28; it claims that nearly 400 workers have been discharged because of union-organizing activities on behalf of the Teamsters. Also during the year's last week, an agreement is signed with TRAMCO of Everett, Washington, for heavy maintenance over the next five years. As a result, 500 AWA employees will be laid off.

Enplanements jump 7.5% to 16,848,329 and cargo moves ahead by 7% to 70.65 million FTKs. Operating income accelerates by 10.1% to \$1.55 billion and costs move up 10.6% to \$1.39 billion. Operating profit climbs to \$154.73 million, but net gain falls to \$53.78 million, due largely to a restructuring charge of \$10.5 million associated with the maintenance outsourcing decision.

Airline employment is increased a dramatic 10.8% in 1996 to 9,652 and 8 new aircraft are acquired. Holiday Inn, on January 1, joins the company's FlightFund frequent flyer program. The same day as the company begins to expand its Nevada hub, flights commence from Las Vegas to Mexico City. Roundtrips from Phoenix begin on January 19 to Reno, Seattle, Mexico City, and Los Cabos.

During the month, America West Vacations begins to offer vacation services to Tampa and Orlando from Boston, Houston, and Newark and from Cleveland to Las Vegas; the flight portion is handled by **Continental Airlines**. The airline itself handles a new "Fly & Ride" package for visitors to the Phoenix area.

To dramatize it's changed image and economic recovery, America West unveils a new paint scheme and logo early in the year, the first change in corporate image since the carrier was founded. This change is most visibly seen in the carrier's new aircraft livery. Employing the greens and reds of the Southwest in their tail design, aircraft are given billboard-sized America West titles on the forward sides of their fuselages. It will require two years to repaint the entire fleet.

The company's contract as official airline of the Anaheim Angels (formerly the California Angels) major league baseball team is reconfirmed.

Frequencies are initiated on February 15 from Phoenix to Burbank and Newark and from Las Vegas to Detroit; Las Vegas to Vancouver services begin on February 18.

When, beginning February, the 4 A320-231s that **Midway Airlines (2)** has chartered from ORIX Corporation must be returned, two of the European-built aircraft are turned over to America West and are flown under contract by Midway crews. Another is acquired under sublease from the Irish operator **Transliff Airways, Ltd.**

On April 7, A320-231 daily roundtrip service is inaugurated from Las Vegas to Newark. A third nonstop Phoenix to Atlanta service begins the same day.

Angered by the company's December outsourcing decision, mechanics vote on April 17 in favor of union representation by the Teamsters. The airline asks a federal judge to review the election, noting that federal election officials have allowed 400 mechanics to vote who had earlier been dismissed by the airline. The election results will stand.

On April 18, a new code-sharing alliance is formed with **British Airways, Ltd. (2)**, which will link AWA's network of U.S. routes with BA's new transatlantic service to Phoenix. The pact also includes reciprocal frequent flyer participation.

A third nonstop Las Vegas to New York (JFK) route is started on May 15 and the same day new nonstops commence from Phoenix to Philadelphia and Boston. The next day, a B-757-225 is unveiled in the bright orange and purple colors of the Phoenix Suns NBA team, with a huge basketball painted on its tail.

Richard R. Goodman becomes executive vice president /chief operating officer on June 1. He begins a series of employee meetings designed to reassure workers. A fifth Phoenix to Colorado Springs frequency begins on June 6. On June 15, thrice-daily roundtrips are inaugurated from Phoenix to San Antonio with one daily roundtrip

launched from Las Vegas to Anchorage via Seattle. In addition, low-fare, late-night flights are added to various destinations from Las Vegas.

The FAA office in Phoenix assigned to the airline is tasked to carry out, in the wake of the May **Valujet Airlines** disaster, a safety inspection of AWA from June 25–July 12. It is announced on July 1 that the company has hired a total of 118 new pilots during the preceding 12 months. The June–July period is plagued by numerous operational problems, including an increase in flight delays and cancellations, a pilot shortage, and difficulties in obtaining more jetliners. Staff morale is reflected in the company's eighth place finish in July on-time performance figures.

On the plus side, another B-757 theme plane, a former **Northwest Airlines** Dash-2S7, is unveiled, depicting the logo of the Arizona Diamondbacks, the new major league baseball team that has chosen AWA as its official airline. The **British Airways, Ltd. (2)** dual-designator service is inaugurated on July 1 with the U.K. major flying into Phoenix and on to San Diego with one of its DC-10-30s.

Results of the June–July safety inspection are released during the last week of August. The carrier is cited for overworking certain operations and maintenance employees, poor oversight of vendors, improperly manifested cargo, and its need to more carefully handle hazardous materials, especially oxygen canisters.

In September, the company commits an error that is translated by the media into a major public relations blunder. In order to fulfill a charter contract with the Anaheim Angels baseball team, the company forces 53 passengers off Flight 543, a Dallas to Phoenix flight, when the regularly assigned team plane breaks down. All of the passengers are booked on an **American Airlines** flight and given \$150 each for their inconvenience.

On November 15, daily flights are inaugurated from both Phoenix and Las Vegas to Miami and Ft. Myers. Daily nonstop roundtrips are started on November 22 from Phoenix to Acapulco. During the month, the company's sole B-737-112 is unveiled wearing not only the airline's new markings but colors of the Phoenix Suns basketball team as well.

Electronic ticketing is introduced during the fall. A nearly disastrous \$45.7-million third quarter loss is suffered as costs from the previous year's outsourcing decision are combined with what are termed "poor revenue management decisions." The situation is corrected by the end of the fourth quarter.

Customer bookings accelerate 7.9% to 18,178,072 and 69.02 million freight FTKs are operated, a 7.7% increase. Revenues jump 12.2% to \$1.73 billion and costs climb 19.7% to \$1.67 billion. Operating gains drop to \$68.66 million. Largely as a result of a \$65.1-million special charge related to restructuring of an earlier Airbus order, the net profit drops to \$8.5 million.

The employee population is reduced a slight 0.4% in 1997 to 9,615. The umbrella company, America West Holdings, is established on January 1; the new concern will operate the airline as a subsidiary and expand America West Vacations and charter operations into a leisure travel subsidiary. Newly elected officers include William A. Franke as chairman/CEO, Richard R. Goodman as president, and W. Douglas Parker as senior vice president/chief financial officer.

Goodman becomes CEO in February, the same month he surrenders his Australian citizenship in favor of the U.S. Work is begun on overnight maintenance bases at John Wayne–Orange County Airport in California and at Columbus, Ohio. By freeing up demand for routine maintenance upon its Phoenix facility, the airline will be able to offer an additional four flights per day.

Daily nonstop roundtrip A320-231 service from Phoenix to Cleveland begins on March 1, along with a daily nonstop A320-231 roundtrip between Cleveland and Las Vegas. On March 31, the carrier is fined \$20,000 by the DOT for two violations of government advertising rules. Half is due by September, with the other half to be forgiven if no further occurrences are reported within a year.

While on final approach to Las Vegas on April 18, the TCAS alarm sounds on Flight 66, a B-737-3G7 with five crew and 120 passengers, indicating that it is on course for a midair collision. The pilot climbs

sharply to avoid disaster, missing a private Beech 99 freighter by 200 feet; one flight attendant is injured.

Nearly 100 angry mechanics picket shareholders at the company's May annual meeting, held at the Arizona Historical Society Museum. Displeased flight attendants crowd the auditorium wearing inflammatory T-shirts. Chairman Franke acknowledges that employee morale has suffered in the process of turning the company around..

Flights from Cleveland to Washington, D.C. (IAD) commence on July 8. Simultaneously, daily A320-231 nonstop service is inaugurated between Phoenix and Washington, D.C. (IAD) and Las Vegas.

Complementing the carrier's existing afternoon nonstop from Phoenix to Boston, America West, on September 4, adds a second daily nonstop return flight over that route. It is followed on September 10 by a second daily nonstop from the Arizona base to Philadelphia.

In an effort at growth through fleet renewal, AWA, during the second week of September, places a \$2.07-billion order for 22 A319s and 24 A320s, plus 40 options. The earlier order for 24 A320s suspended at the time of the carrier's bankruptcy is included. Daily A320-231 nonstops are initiated from Phoenix to Baltimore on September 25; return service from Baltimore to Phoenix starts next day.

Airbus Industrie agrees to assist financially with the purchase of between 12 and 16 aircraft and to provide backup funding for the remainder should the need unexpectedly arise. The local ALPA chapter is simultaneously assured that only AWA pilots will be allowed to fly these owned aircraft once they are in service.

On October 26, nonstop daily B-737-3G7 roundtrips commence from Columbus and Miami and Columbus and Ft. Myers. During the first week of November, America West Holdings Corp. announces its intention to build a new \$37-million, 225,000-sq.-ft. headquarters at Tempe, Arizona.

A tentative agreement is reached on October 31 between management and the carrier's flight attendants, represented by a local Master Executive Council of the AFA. The settlement will be voted upon by the full membership.

AWA on November 1 expands its pact with **British Airways, Ltd. (2)**, adding Las Vegas and Columbus, Ohio, as connecting points on the dual-designator London service. Also during the month, a tentative agreement is reached with the AFA on a new five-year contract.

The DOT reports on November 25 that the carrier, according to its figures, has had the fewest reports of mishandled baggage of any U.S. major between January and September.

On December 10, *USA Today* reports the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; AWA demonstrates an 82.1% achievement, good for second place behind **Southwest Airlines (2)**.

The flight attendants vote on December 17 to reject the tentative agreement.

Passenger boardings for the year inch up 0.8% to 18,331,354 while cargo moves ahead by 4.7% to 72.29 million FTKs. Operating revenues rise 7.8% to \$1.87 billion, while expenses climb 2.5% to \$1.71 billion. The year's best financial performance ever is climaxed with record profits: \$161.82 million (operating) and \$74.97 million (net).

At the beginning of 1998, AWA is the 17th largest airline in the world in terms of passenger boardings and 22nd in operating profit. The fleet now includes 104 aircraft, of which 80.8% are Stage III certified, and consists of 63 B-737s, 14 B-757s, and 27 A320-231s.

The **Mesa Air Group** ownership stake is repurchased in January. At the same time, the state-theme color scheme of the B-757-2S7 *Arizona* is revised.

A second daily A320-231 nonstop return service is initiated on February 17 between Phoenix and Baltimore (BWI).

Also in February, Chairman/CEO William Franke is appointed to a new two-year term. For the second straight year, the company is named No. 1 in customer service on U.S. short-haul flights in a survey by J. D. Power & Associates/*Frequent Flyer* magazine.

As a result of a rejection of their tentative contract the previous October, the carrier's flight attendants, represented by the AFA, resume negotiations with management in March under the supervision of a federal mediator.

Disappointed with the service it has received from Mesa, **America West Airlines** determines during the first quarter to conclude its code-sharing agreement with **America West Express (Mesa Air Group)**, effective April 2. When it is learned that former Mesa executive vice president and current **Virgin Express Airlines, S.A.** CEO, Jonathan Ornstein, has become involved with Mesa on a management basis, AWA relents, agreeing to rescind the termination notice and enter into an interim dual-designator pact. A long-term code-sharing alliance will be negotiated after Ornstein takes over as Mesa's CEO on May 1.

A code-sharing agreement is signed with **EVA Airways, Ltd.** of Taiwan on April 21. When the pact takes effect during the summer, the two will link their frequent flyer programs and link EVA's daily nonstop transpacific services to Los Angeles and San Francisco with AWA's hubs in Phoenix and Las Vegas.

As a result of enhanced airport security measures, the carrier is now allowed to cut some costs and to make last-minute plane changes for passengers by halting, as of May 1, the issuance of advance boarding passes. On May 4, a second daily nonstop A320-231 roundtrip is launched from Phoenix to Baltimore (BWI).

Daily nonstop roundtrips commence on May 5 from Baltimore (BWI), Philadelphia, and Washington, D.C. (IAD). Daily nonstop A320-231 roundtrips from Las Vegas to Ft. Lauderdale simultaneously begin, as does a second daily A320-231 nonstop return service from Columbus to Los Angeles.

The same day, daily 5 p.m. nonstops are added from Phoenix to Baltimore (BWI), Philadelphia, and Washington, D.C. (IAD). In the last year, America West has increased nonstop service from Phoenix to the Northeast by 125%, from 8 to 18 daily flights, and enhanced its Phoenix schedule to 206 daily departures.

Expansion of service also occurs, beginning May 5, in the Pacific Northwest. A fifth daily roundtrip is started between Portland and Phoenix, with a second daily roundtrip between Portland and Las Vegas; a sixth daily roundtrip is started from Seattle to Phoenix, with a second daily roundtrip offered between Seattle and Las Vegas. That evening, night flight operations at the Las Vegas hub are restructured in order that the schedule ends two hours earlier.

America West and **Continental Airlines** now jointly announce that they are engaged in finding a way to make it possible to interline E-tickets, which cannot now be transferred between airlines, even among those in alliance. A solution is promised by spring 1999.

The carrier in May expands its alliance with **Northwest Airlines** to include the Minneapolis-based major's associates **Continental Airlines**, **Air China International Airlines**, and **Alaska Airlines**. All four will link their frequent flyer programs, coordinate schedules, offer joint marketing and maintenance where appropriate, share lounges, and plan for code-sharing.

On May 13, daily nonstop B-757-2S7 roundtrips are inaugurated between Phoenix and Anchorage. A third daily flight is also added between Phoenix and Vancouver.

Twice-weekly B-737-3G7 roundtrips commence on May 20 between Phoenix and Ixtapa and Zihuatanejo, Mexico.

Little-noticed by the public, David Bonderman, chairman of TPG Partners (which holds a 49% stake in America West Holdings) cashes out some of his stake in the airline, selling 1.95 million shares for \$56 million.

On July 14, the FAA cites the carrier for violating regulations when it fails to conduct required inspections of the doors of its A320s, as well as other maintenance deficiencies. A settlement agreement is signed by the carrier with the government under which AWA will pay a \$5-million fine, \$2.5 million within four days (it is paid next day) with the other \$2.5 million to be suspended if all terms of the pact are met. Although not the largest fine ever assessed against a U.S. air car-

rier (the \$9.5-million record was left unpaid by the demise of **Eastern Air Lines**), it is the largest ever paid.

Under terms of the settlement, the airline and FAA establish Strategic Action Teams (SATs) made up of company and government personnel to root out systemic maintenance and organizational problems and to devise corrective actions.

A new, six-year code-sharing agreement with **Mesa Air Group** is announced on July 23. Focusing initially on America West's hub at Phoenix, the agreement contemplates adding regional operations in Las Vegas and Columbus, Ohio. Additionally, Mesa's Beech 1900s will be withdrawn in favor of CRJs and DHC-8s, which will reach totals of 12 and 14, respectively, by the end of 1999.

During the **Northwest Airlines** pilot strike, which begins on August 29, the carrier accepts NWA tickets within 72 hours of the original scheduled departure time. On flights where seats are not available, Northwest ticketholders are accommodated on a stand-by basis.

A four-year marketing agreement is announced with the Arizona Cardinals National Football League team on September 17. To kick off the new partnership, AWA helps sponsor the home opener on September 20, giving the first 50,000 fans in attendance a "Big Red Rally Rooter," a replica of the Cardinals' logo. Plans are also announced that a B-757-225 will be painted in special livery as a tribute to the team.

A tentative five-year agreement is reached between the airline and the Teamsters on September 21. The airline agrees to stop outsourcing its maintenance contracts and to grant the mechanics a 34% pay increase over the life of the contract, following an immediate wage hike of 14.4%. The next day the deal is sent to the union local's rank-and-file for ratification. The mechanics contract is ratified on October 7.

An additional daily A320-231 roundtrip service is instituted on October 10 between Las Vegas and Philadelphia. Simultaneously, a second daily A320-231 roundtrip is begun from Las Vegas to San Diego.

The first of three A319-132s to be received by the company before the end of the year is delivered on October 7 and unveiled in ceremonies at Sky Harbour Airport on October 12. The aircraft enters service the same day between Phoenix and Columbus.

Two days later, flight attendants begin to receive strike ballots; a go or no-go on random work stoppages (Operation Chaos) will be decided when the votes are counted on November 2.

A fifth daily A320-231 roundtrip is added on October 26 between Phoenix and Chicago (ORD).

Local members of the AFA vote 1,701 to 14 on November 2 to authorize a strike should on-going negotiations with management fail over the next few days or weeks.

On November 4, the carrier announces that it will add a fifth daily nonstop A320-231 roundtrip between Phoenix and Newark (EWR) on January 7, together with a fourth daily nonstop A320-231 roundtrip from Phoenix to Boston.

To meet the travel demands of attendees at COMDEX, the world's largest high-tech event, AWA adds 32 return flights to Las Vegas on November 16-20 from Los Angeles, San Francisco, and San Jose.

Claiming that its negotiations with management since November 2 have been fruitless, the local members of AFA request that the National Mediation Board (NMB) immediately declare the existence of an impasse. Should that action occur during the week, a mandatory 30-day cooling off period will follow. Without an agreement in that period, the union would then be free to strike—at the height of the Christmas holidays.

While on descent into Sacramento on a December 1 service from Santa Ana, a B-737-3G7 with 5 crew and 70 passengers encounters severe turbulence. One flight attendant is seriously injured and taken to the hospital as soon as the plane lands.

The B-757-2G7 painted in a tribute to the Arizona Cardinals NFL team is rolled out on December 15. The brilliant red-and-white plane with a white Cardinals' helmet and logo emblazoned on its tail enters service as part of the four-year marketing agreement between the airline and the football club.

Another roundtrip A320-231 flight is started on December 17 between Las Vegas and Boston. Three days later, a mid-day A320-231 departure is launched from Las Vegas to Ontario, California. A sixth daily roundtrip frequency is simultaneously added from Phoenix to Chicago (ORD).

The dual-designator service with **EVA Air (EVA Airways, Ltd.)** is expanded on December 21 as EVA places its two-letter BR code on AWA services from Los Angeles to both Las Vegas and Phoenix and on its flights from San Francisco to both Phoenix and Las Vegas.

Two days later, the company announces that, effective January 7 it will add 6 daily flights (for a total of 15) between Phoenix and Los Angeles.

Passenger boardings for the year decline by 2.6% to 17,852,880; cargo traffic is off 11.13% to 62.91 million FTKs. Revenues rise 5% to \$1.96 billion, while costs are up 3.5% to \$1.77 billion. The operating profit is \$197.84 million, while net gain jumps to \$103.01 million.

The Phoenix to Los Angeles roundtrips announced before Christmas begin as scheduled on January 7, 1999. On January 20, the company announces that it has been contacted by a number of airlines expressing interest in a variety of business transactions ranging from strategic alliances to mergers. It confirms that **United Airlines** has made an offer to take it over in a merger; the action is similar to the pact concluded in December between **Northwest Airlines** and **Continental Airlines**. Analysts see the alliance as a move by the Chicago-based major to counter **American Airlines'** bid for western growth by its recent acquisition of **Reno Air**.

The next day it is revealed that **Delta Air Lines** has also been in conversation with America West. **Southwest Airlines (2)**, which is the second most dominant carrier at Phoenix, denies any interest in taking over the company. Texas Pacific (46.9%) and **Continental Airlines (8%)**, which between them own 54.9% of the company and have a right of first refusal on any shares which Texas Pacific may offer for sale. Continental chairman Gordon Bethune indicates that his carrier "would assert its rights" over those shares in the unlikely event that an offer for America West is cleared by federal regulators and labor unions.

When **Delta Air Lines** on January 29 raises business ticket prices by 2% and leisure ticket costs by 4%, America West is one of four majors to quickly follow suit. The move, the first ticket price boost for U.S. airlines in 18 months, is seen as the opening salvo in an opening series of across-the-board fare hikes.

Four daily return flights commence on February 1 between Phoenix and Monterey, California.

Also on February 1, while en route from Tampa to Las Vegas, Flight 5, an A320-232 with 7 crew and 129 passengers, encounters turbulence 1.5 hours into the flight. An elderly man ignores flight attendant instructions to return to his seat, falls, and fractures his hip. The crew obtains medical advice by radio and the aircraft continues to its destination.

CEO Franke, speaking before a Goldman, Sachs & Co. airline conference in Miami on February 5, lets it be known that the airline's major minority shareholder, TPG Partners L.P., will support the sale of the airline only if the buyer purchases all of its stock, Class A and Class B shares alike, valued at approximately \$1 billion. **Continental Airlines**, which seeks to block a takeover by **United Airlines**, has contended that it could take control merely by acquiring TPG's Class A stock, at an estimated cost of \$50 million. The position, seconded by TPG Chairman Bolderman later in the day, is seen by analysts as an effort by America West to maximize for shareholders the value of any purchase.

After months of discussion, the NMB on February 8 asks management and negotiating flight attendants to submit to binding arbitration. The local chapter of the AFA rejects the request on February 12, setting the countdown on a 30-day "cooling off" period after which the union may declare a strike. Union leaders indicate that, if a strike is declared, it will be a series of random job actions in which flight attendants simply fail to show up for randomly selected flights in targeted cities.

A strategic agreement with **Ansett Australia (Pty.), Ltd.** is announced on February 16. Under its terms, the two companies link their frequent flyer programs and offer common use of airport lounges and through check-in services. Code-sharing on revenue passenger flights will commence shortly.

On the same day, Flight 2811, an A320-231 with 5 crew and 26 passengers and inbound from Newark, is forced to make an emergency landing at Port Columbus International Airport when its nose gear fails to properly deploy. The pilot makes three go-arounds, during which ATC confirms that, though the nose tires are down, they are now correctly aligned. Both tires blow when the jetliner puts down; however, the remainder of the landing is completed without problems and no injuries are reported.

According to a report in the February 19 issue of *The Wall Street Journal*, **Delta Air Lines**, which has been considering entry into the bidding war for AWA, has withdrawn as of February 17. Also on that Wednesday, UAL, Inc., parent of **United Airlines**, tenders an undisclosed cash offer for the airline. The newspaper sees the prospect of a bidding war with **Continental Airlines**. As a result of the offer, stock in America West rises 13.8% to \$22.75 per share on the New York Stock Exchange; the value of **United Airlines** stock climbs 25 cents to \$59.50.

Shareholder Odette Muskin files legal papers in Delaware Chancery Court on February 19 instituting a lawsuit against the airline. Details are released on February 22 and allege that her company has been unable to act as independent evaluators of a takeover offer by UAL. Her effort will become moot before the day is over when CEO Franke announces to cheering company employees that the board of America West has voted to end its discussions with other airlines and remain an independent operator. The chairman refuses to acknowledge that **United Airlines** has made an offer, but acknowledges that conditions of a deal with a possible suitor, particularly antitrust concerns, had been viewed by decision-makers as "difficult and unlikely." The same opinion had been expressed by airline analysts since the day the potential deal was announced.

On March 2, a fourth daily, nonstop, roundtrip A320-231 service is inaugurated between Las Vegas and New York (JFK).

America West Holdings Corp., its officers, directors, and controlling shareholders, become the subject of a class action lawsuit on March 4. Filed by Milberg Weiss in the U.S. District Court for the District of Arizona, the complaint charges misrepresentations and insider trading on publicly traded Class B common stock during the period from November 19, 1997 to September 3, 1998. Hartford, Connecticut-based Schatz & Nobel will file a similar class action suit against the airline in the same court on March 19.

Stalled contract negotiations between the carrier and the AFA Council 66 resume in Washington, D.C. on March 17 under the supervision of NMB board member Ernest DuBester. They continue next day; if no compromise is reached, a strike will begin at 12:01 a.m. on March 20.

Just before midnight on March 19, after three days of mediation in Washington, D.C., a deal is struck between the airline's management and the flight attendants. Details are not immediately disclosed, pending approval of the pact by the union membership.

On March 29, the carrier announces that it will launch new daily non-stop A320-231 return service between Phoenix and Tampa beginning on August 1.

The board of directors approves a major management reorganization on April 12. Board Chairman/CEO Franke reassumes the duties of president (replacing the resigned Richard Goodmanson, who will become executive vice president of the E. I. Du Pont de Nemours & Co. on April 26), while Senior Vice President/Chief Financial Officer Parker becomes executive vice president. Former **Federal Express (FedEx)** senior official Gilbert D. Mook is named executive vice president/chief operating officer; both Parker and Mook receive board seats.

The five-year collective bargaining agreement reached between the airline and the AFA on March 19 is overwhelmingly ratified by the local membership on April 30. The pact is the first ever negotiated between America West and its flight attendants.

Stockholders vote at their annual meeting in Phoenix on May 20 to approve an extension of the stock buyback plan, initiated in 1995, which will allow the repurchase of up to five million additional shares. Since the scheme's inception, the airline has purchased 8.7 million shares and 7.4 million warrants, returning over \$217 million to shareholders.

Per a March 2 announcement, the company inaugurates nonstop B-737 roundtrips on June 6 between Reno, Nevada, and Orange County, California, four times a day.

Daily nonstop A320-231 flights commence on August 1 between Phoenix and Tampa. Simultaneously, additional frequencies are added from Phoenix to Milwaukee (from two to three); to Oakland (from four to five); to Atlanta and Omaha (from three to four); and from Columbus to Las Vegas (from two to three).

The carrier sells 5 B-737-300s and 1 B-757-200 to Boullion Aviation Service for \$125 million on August 23—and then leases them back for 5 years.

A multiyear marketing and sponsorship agreement is signed with the University of Southern California on August 25, under which AWA becomes the university's official airline.

Service is expanded on September 1 from Phoenix to Detroit and from Las Vegas to Baltimore, San Jose, and Palm Springs. It is also boosted, on October 1, from Phoenix to Minneapolis, Los Cabos, and Puerto Vallarta.

In early October, the carrier and **Continental Airlines** become the first two U.S. airlines to offer interline electronic ticketing via SABRE or Amadeus, on each other's flights. The action has been taken as part of the company's loose alliance with the Houston-based major.

On October 31, the two expand their code-share from Cleveland, Newark, and Houston (IAH) to include the international flights to Toronto, Ottawa, Montreal, Manchester, Birmingham, Glasgow, Frankfurt, and Dusseldorf.

As the year ends, the carrier joins with **Trans World Airlines (TWA)** to announce linkage of the two carriers' frequent flyer programs.

After completing its December 29 service from Los Angeles to Phoenix, the carrier's B-737-112 is retired; it was the last Dash-100 in U.S. airline service.

Overall passenger boardings climb 5.1% to 18.7 million, but cargo is off 7.5% to 59,457,000 FTKs. Operating revenues shoot upward by 9.1% to \$2,146,955,000, while costs rise 10.1% to \$1,949,054,000. At \$197,901,000, the operating profit is nearly level with last year's, but net gain jumps to \$200,974,000.

Airline employment at the beginning of **2000** stands at 11,300, an 8.1% increase over the past year. Among the world's top 25 airlines at the beginning of the new millennium, America West is 19th in terms of passengers, 16th in fleet size, 20th in operating profit, and 17th in net gain.

Seasonal (through March) A319-132 daily roundtrips are inaugurated on January 4 from Columbus to Ft. Myers.

When one of the company's flight-planning computers fails on February 17, 50 flights must be cancelled; another 36 must be scrubbed the next day.

Thrice-daily B-737-3G7 roundtrips begin on March 6 from Phoenix to Boise; the next day, twice-daily A319-132 and B-737-3G7 is started between Spokane and Phoenix and from Spokane to Las Vegas via Phoenix.

An irate woman passenger aboard Flight 2186, an A320-231 en route from New York (LGA) to Phoenix on March 22, enters the cockpit and strikes the copilot; the air rage perpetrator is subdued and the Airbus diverts to Albuquerque where she is turned over to police.

Also during the first quarter, President/CEO Richard Goodman is fired, with America West Holdings Chairman/CEO William Franke assuming his duties as a replacement is sought.

Daily A319-132 roundtrips commence on April 1 between Phoenix and Hartford, Connecticut, via Columbus.

A \$35-million, 150,000-sq.-ft. flight training and systems operation control facility is built at Phoenix during the spring.

Daily B-737-3G7 roundtrips are initiated on May 3 between Phoenix and New Orleans.

Passenger complaints against the carrier reach a crescendo in May while its on-time performance drops another 5 points, with roughly 30% of its flights delayed. Only **United Airlines** turns in a worse performance. In the midst of this public relations debacle, Chief Finan-

cial Officer W. Douglas Parker is elevated to the airline's presidency, effective July 1.

Two more A319-114 roundtrips are added on June 20 from Las Vegas to Hartford via Columbus.

The company's on-time deficiencies continue with the summer. During the long Fourth of July holiday, maintenance and staffing problems force the carrier to ground some 50 Phoenix flights.

With its operational performance continuing to be among the worst for U.S. majors, America West seeks improvement by reducing its schedule by 3.5% on July 28 and pulls four aircraft off the line to serve as backups when problems occur. More automation comes on line and additional ramp personnel are added at Phoenix and Las Vegas.

After boarding a company jetliner at Seattle for an August 12 flight to Phoenix, a passenger finds a written bomb threat; the plane is evacuated and removed to a remote part of the airport where it is swept. No explosives are found.

A management shake-up occurs on August 15, with all corporate matters consolidated under CEO Franke.

In mid-September, a three-year marketing compact is signed with the new Columbus Blue Jackets NHL team.

Twice-daily A320-231 roundtrips are inaugurated on September 26 from Phoenix to Washington, D.C. (DCA). A second roundtrip from Phoenix to DCA begins on October 14 as does a third from Chicago (ORD) to Las Vegas. On October 24 new daily B-757-2G7 return flights are launched from Las Vegas to Washington, D.C. (DCA). Daily A320-231 roundtrips begin on October 30 between Phoenix and Toronto.

AMERICA WEST EXPRESS (1): United States (1992–1994). On October 1, **1992**, **Mesa Airlines** enters into a code-sharing agreement with **America West Airlines** to create America West Express commuter service through the integration of routes from each carrier's existing Phoenix operations. America West's six de Havilland DHC-8-102s and a number of Mesa Beech 1900s are given over to the collective enterprise.

Also on this day, the major transfers its routes to Durango and Grand Junction, Colorado, and Yuma, Arizona, to the regional, which provides its own links from Farmington and Gallup, New Mexico. The America West route to Flagstaff is transferred on November 1 followed by the service to Palm Springs and Telluride on December 1. As the year ends, flights are also launched to the Arizona communities of Kingman, Prescott, Flagstaff, Fort Huachuca, Bullhead City, and Lake Havasu.

A year later, on October 8, **1993**, the code-sharing agreement is expanded and plans are made in November to initiate new commuter feed from America West's Columbus hub at Milwaukee. These Beech 1900 services begin on December 15 to Rochester, Detroit, Lansing, Flint, Toledo, Dayton, Akron/Canton, Louisville, Rockford, Indianapolis, South Bend, Des Moines, and Cedar Rapids.

In the spring of **1994**, **Mesa Airlines** is reorganized into Mesa Air Group, with five operating divisions, including the new **Mountain West Airlines (4)**. This turboprop unit is made up of Albuquerque-based **Mesa Airlines'** 8 Beech 1900s, Phoenix and Columbus-hubbed **America West Express'** 16 Beech 1900s and 3 Embraer EMB-120 Brasilias, and Los Angeles-based **WestAir Commuter Airlines'** 27 Beech 1900s, 9 Brasilias, and 6 de Havilland Canada DHC-8s. **Desert Sun Airlines (2)** is also established to provide regional jet service from Phoenix to Spokane and Des Moines with Fokker 70s. Following the completion of negotiations between Mesa Air Group and **America West Airlines**, both of these new divisions will operate as **America West Express (Mesa Air Group)**.

AMERICA WEST EXPRESS (2). See **DESERT SUN AIRLINES (2)**

AMERICA WEST EXPRESS (3). See **MOUNTAIN WEST AIRLINES (4)**

AMERICA WEST EXPRESS (MESA AIR GROUP): Mesa Air Group, 2325 East 30th St., Farmington, New Mexico 87401, United

States; Phone (505) 326-4410; Fax (505) 326-4485; <http://www.americawest.com>; <http://www.mesa-air.com>; Code HP; Year Founded 1997. During the first week of January 1997, **Mesa Air Group** is again reorganized. The operating divisions Desert Sun, Florida Gulf, Liberty Express, and Mountain West are replaced by four new units: America West Express, Independent, United Express, and USAir Express. Also merged into the new divisions are the marketing and customer service departments of **Air Midwest** and **WestAir Commuter Airlines**.

Desert Sun Airlines (2), the company tasked with flying America West Fokker 70 jet service from Phoenix, and **Mountain West Airlines (4)** are thus combined into America West Express, with former Mountain West CEO Michael Lewis in charge. While **Mesa Air Group** as a whole upgrades to FAR 121 status, the new unit takes over the 10-year **America West Airlines** contract, which requires 97% service completion reliability.

Services to Seattle, Spokane, Fresno, Des Moines, and Las Vegas continue even as plans move forward to replace the Fokkers with Canadair regional jets.

The initial CRJ200ERs arrive in late June painted in the new color scheme of **America West Airlines** with America West Express billboard-sized titles painted along their sides. They commence revenue services on July 7 from Phoenix to Des Moines, replacing the Fokker 70s. Later in the fall, one of the new CRJ200ERs unveils the unit's distinctive new color scheme.

Training backlogs result in Beech 1900D crew shortages, which begin to impact service reliability.

With CRJ200ERs unable to operate successfully out of Aspen in winter conditions, the carrier, on December 17, inaugurates thrice-daily nonstops from Phoenix to Aspen with DHC-8-200s; simultaneously, twice-daily flights begin from Aspen to Phoenix. Unfortunately, service completion reliability as a whole falls to 95%, three points below the minimum required.

Disappointed with the service it has received from Mesa, **America West Airlines** determines during the first quarter of 1998 to conclude its code-sharing agreement with **Mesa Air Group**, effective April 2. When it is learned that former Mesa executive vice president and current **Virgin Express Airlines, S.A.** CEO, Jonathan Ornstein, has become involved with Mesa on a management basis, AWA relents, agreeing to rescind the termination notice and enter into an interim dual-designator pact. A long-term code-sharing alliance will be negotiated after Ornstein takes over as Mesa's CEO in May.

A new, six-year code-sharing agreement with **America West Airlines** is announced on July 23. Focusing initially on America West's hub at Phoenix, the agreement contemplates adding regional operations in Las Vegas and Columbus, Ohio. Additionally, Mesa's Beech 1900s will be withdrawn in favor of CRJs and DHC-8s, which will reach totals of 12 and 14, respectively, by the end of 1999.

Frequencies to Des Moines and Fresno are increased during August. Twice-daily Beech 1900D nonstops commence on September 14 from Phoenix to Hermosillo and Guaymas in northern Mexico. On the same day, four-times-a-day nonstop DHC-8-202 roundtrips are started from Phoenix to Bakersfield, California. Twice-daily nonstop DHC-8-202 roundtrips begin on September 17 from Phoenix to Gunnison, Colorado.

Daily DHC-8-202 roundtrips commence on October 26 from Phoenix to Hayden and Steamboat Springs and to Eagle and Vail, Colorado.

Under terms of its new accord with **America West Airlines**, America West Express (Mesa Air Group) assigns 4 new CRJ200s necessary for the expansion to the major's Columbus, Ohio, hub as they become available. The first of the new Ohio-based CRJs are employed, beginning on October 29, to double frequencies to Baltimore and Philadelphia from two flights per day to four.

Additionally, a third daily flight is started to Boston and a fourth to New York (LGA). Frequencies to Chicago (MDW) are advanced to seven-per-day. These latter services will be operated by a mix of CRJs and larger America West jets and will be expanded again in January.

On November 16, the company announces that it will provide four daily CRJ roundtrips between Phoenix and Monterey, California, beginning on February 1.

At the end of the year, America West Express visits 32 cities in Arizona, California, Colorado, Illinois, Iowa, Maryland, Nevada, New Mexico, New York, Ohio, Pennsylvania, Washington, D.C., and northern Mexico.

As announced, frequencies to Chicago are expanded in January 1999 and four daily CRJ roundtrips between Phoenix and Monterey start on February 1.

Thrice-daily CRJ roundtrips commence on March 24 between Phoenix and Midland and Odessa, Texas. Two additional daily CRJ roundtrips are added on March 27 between Phoenix and El Paso.

Daily CRJ roundtrips are introduced on April 4 between Phoenix and San Luis Obispo and Carlsbad and Oceanside, California.

The **Mesa Airlines**, **Air Midwest**, and **CCAair** divisions of **Mesa Air Group** all complete 100% of their flights on May 2. To celebrate this achievement, President/CEO Ornstein, on May 6, hosts a company-wide pizza party, ordering pizza for all 3,800 employees in every unit spread over 100 locations.

Capacity from Bakersfield, California, is increased by 75% on June 26 with the introduction of two additional DHC-8-202 roundtrips to Phoenix, along with a new daily nonstop roundtrip to Las Vegas.

Twice-daily CRJ roundtrips commence on September 11 between Phoenix and Eugene, Oregon; a third frequency is added on October 1. Complementing the major's two daily roundtrips between Phoenix and Wichita, AWE adds a third CRJ service the same day. CRJ200ER daily roundtrips begin on October 31 from Las Vegas to Santa Barbara.

To complement the major's twice-daily return flights, twice-daily CRJ200ER roundtrips commence on June 20, 2000 from Columbus to Hartford. A new four-times-a-day CRJ return service from Las Vegas to Columbus begins on July 1.

Twice-daily nonstop DHC-8-200 roundtrips commence on September 6 between Phoenix and Oxnard, California. Three days later, new thrice-daily Beech 1900D roundtrips are started from the Arizona hub to Santa Fe. Daily CRJ200ER roundtrips from Phoenix to Guadalajara commence on September 13.

AMERICAIR: United States (1983–1984). With a base at Washington, D.C. (IAD), David Sullivan's AmericAir, marketing itself as the "Airlink to the Nation's Capital," inaugurates scheduled daily roundtrip passenger services to Atlantic City on March 15, 1983.

Employing 1 Britten-Norman BN-2 Islander, 1 Cessna 402, and 2 Cessna 210s, the company also undertakes shuttle flights to Washington, D.C. (DCA) and Baltimore (BWI) on behalf of **British Airways, Ltd. (2)**. Scheduled operations are discontinued late in the year.

Plans are made in spring 1984 to resume service from Washington, D.C. (IAD) to Richmond, Virginia, in May, but these can only be maintained for a few months.

AMERICAN AIR EXPORT & IMPORT COMPANY. *See* **AAXICO AIRLINES**

AMERICAN AIR EXPRESS: United States (1945–1947). One of several small all-cargo airlines established by returning servicemen in late 1945, this operator conducts irregular Douglas C-47 services until 1947.

AMERICAN AIRLINES: P.O. Box 619616, Dallas–Fort Worth International Airport, Dallas, Texas 75261, United States; Phone (817) 963-1234; Fax (817) 967-4318; <http://www.aa.com>; <http://www.amrcorp.com>; Code AA; Year Founded 1934. In February 1934, the U.S. government cancels all commercial mail contracts, leaving the delivery of the nation's mail in the hands of the U.S. Army Air Corps. Their efforts are unsuccessful, and on March 30 the Post Office again advertises for commercial services. Unable to bid under its previous identity,

American Airways is reorganized under Delaware law on April 12 and renamed American Airlines. This expedient, made retroactive to April 11, qualifies the company to participate in the new subsidy distribution. Company headquarters remain at Chicago.

On April 20 and 27, the Post Office announces the awards and American Airlines finds itself among the successful bidders. As a result, the airlines' routes are significantly revised. The services previously flown from Chicago to Atlanta and New Orleans, from Atlanta to New Orleans and Fort Worth, from New Orleans to Houston, from Fort Worth to Brownsville, and from Houston to Amarillo via Fort Worth are terminated as overall route mileage declines from 9,200 to 6,792 miles.

In place of the lost routes are several new ones: New York to Fort Worth via Washington, Nashville, and Memphis (AM-23) and Fort Worth to Los Angeles (AM-4). The link between the two new routes at Fort Worth allows a more cohesive line structure and a true southern (2,789-mile) transcontinental route. At the end of April, the company readies 12 Curtiss T-32A and D Condor biplane transports for introduction in both sleeper and day coach service.

One of the newly acquired stops is that at Bristol, Virginia, where former **Eastern Air Transport** employee Jane Dulaney is hired as station manager, one of the few females to hold such a position at this time. As is the case with all station managers, she is required to wear a pistol while overseeing the transfer of mail sacks to and from aircraft. She will hold her post until AA transfers to the new Tri-Cities Regional Airport in 1937.

The first route restarted is Fort Worth to Los Angeles on May 5; 6 T-32As allow sleeper comfort in both directions. Certain of the aircraft are also employed on May 8 as the carrier begins once more to transport mail over the older New York to Chicago route; flights begin the same day from New York to Boston. Later in the month, as orders are placed for newer aircraft, a significant portion of the old fleet is put up for sale; 51 aircraft go on the block, including 16 Fairchild Pilgrim 100As, 23 Stinson SM-6000s, and 8 Stearman mailplanes.

On June 9, en route in fog to Chicago from Newark, a T-32A crashes near the top of Mongaup Mountain, near DeBruce, New York (seven dead). On June 12, Congress passes a new airmail law that effectively removes manufacturers from the air transport business by December 31. To promote the two-month-old T-32A sleeper service, the company places a two-page ad in the June 25 issue of *Time* magazine extolling its healthful ease and offering mail-in coupons for further information. Also in June, the carrier inaugurates service on two additional, older runs reacquired: Chicago to Fort Worth and Chicago to Washington.

The first 8 Vultee V-1As are delivered at the end of July. Initial units are placed into service on the Chicago-Fort Worth via St. Louis route during the first week of August. Piloted by Earl Ward, a V-1A completes the 724-mile Chicago to New York service on August 25 in a record 2 hrs. 59 min.

Although now dependent on airmail, company officials realize that the future of air transport lies in passenger carriage. As a result, the carrier quickly makes itself known through the promotion in September of an Air Travel Plan, one of the industry's first sales tools and predecessor of today's credit travel. In addition, its development of an airway traffic control system later adopted by all airlines and administered by the U.S. government is greeted as a major contribution; the primitive system is able to follow all AA flights approaching Chicago. Cyrus R. "C. R." Smith, vice president of the southern division, is named president on October 26.

Also in October, it is announced that 3,500 passengers have taken the sleeper flights. A new, fast Boston to Washington service is initiated on November 12. A Lockheed Model 9 Orion is destroyed in a crash on November 15; there are no reported injuries. The carrier's first Douglas DC-2 is received during Thanksgiving week and enters New York-Chicago service on December 2. Its introduction and that of those that follow allows retirement of the last 10 Ford 5-ATs.

Just after landing at Buffalo on December 19, a T-32B Condor catches fire and is destroyed; no one is hurt. Late in the month, a new Post Of-

fice mail route is opened between Los Angeles and Fort Worth. On December 22-23, pilot Russell Riggs's Orion mailplane en route to Nashville from Cleveland crashes near the top of Big Pilot Mountain at Sunbright, Tennessee, killing Riggs instantly. The last two Model 9 Orions are now also withdrawn.

En route to Albany from Newark on December 28, a T-32 is caught in a snowstorm and makes a forced landing on an Adirondack mountain-side near Morehouseville, New York; the four survivors are rescued four days later. Meanwhile, 18 Stinson Model U Tri-Motors are placed into service and the first Stinson Model A is received on New Year's Eve. Made in close cooperation with the airline, the Fox Studio's Shirley Temple movie *Bright Eyes* is now released; it features numerous airport location scenes and showcases AA's new DC-2.

Despite the completion of 20 million passenger miles flown, the ledgers show a loss of \$2,313,678.

The Aviation Corporation (AVCO) formally transfers its stock to the trustees of AA on January 9, 1935. The Model 9 Orions are returned to service and, on January 10, one is destroyed when its pilot, John Johannpeter, is forced to bail out over Pittsburg Landing, Tennessee. Three additional Vultee V-1As are received during February and March as orders are placed for 15 additional Stinson Model As.

During the spring, frequencies on the New York to Chicago service rise to five each way daily (except Sundays and holidays). In addition to DC-2s, T-32 Condor sleepers are employed on the twice daily New York to Los Angeles route. A variety of other frequencies between such cities as Washington-Chicago, Cincinnati-Chicago, Tulsa-Fort Worth, Chicago-St. Louis, Boston-New York, Cleveland-Nashville, Buffalo-New York, and St. Louis-Fort Worth are also increased.

As of July 1, the trustees have completed distribution of all of the predecessors stock, acquired in January, on the basis of one-tenth share of stock for each \$5 share in AVCO.

Frequencies on the New York to Chicago service are increased to six per day on July 10. While landing at Murfreesboro, Tennessee during a Fort Worth to Cleveland run on July 27, a T-32B sleeper hits a telephone pole and crashes; no one is hurt and one passenger sleeps through the entire mishap, knowing nothing of it upon being awakened by a stewardess.

Meanwhile, during the summer, the company introduces the Air Travel Card system, one of commercial aviation's first discount-marketing schemes. A deposit of \$425 allows passengers to use their credit cards to charge trips at discounts of up to 15%.

Ranking high among the important developments of the mid-1930s is an airplane. American has purchased a few Douglas DC-2s; considered good airplanes and widely adopted, the aircraft still does not satisfy the need for an airliner that can make money carrying passengers exclusive of mail contracts. Company engineers decide that, if they can increase the DC-2's capacity from 14 to 21 seats, they will have created the desirable machine. C. R. Smith now convinces Donald Douglas to undertake development of the new sleeper transport by placing a July 8 order for 10 aircraft.

While making an emergency landing at Franconia, Virginia, on October 24, a Stearman 4CMI mailplane is wrecked.

The Society of Pioneers employee organization is established on October 26 and a full-page ad is placed in the October issue of *The Saturday Evening Post* that notes that many passengers, accustomed to alcoholic drinks on trains and ocean liners, were requesting them. "Shall we serve cocktails to passengers?" asks the message. The response to the question from respondents is an overwhelming "no." Seven Stinson Model As are received in November and December and are placed into service on the five-stop Chicago to Detroit frequency. After passing out service questionnaires for six months, the carrier announces on December 15, that as a result of public opinion (which is in line with *The Saturday Evening Post* ad) thus tested, liquor will not be served on company aircraft.

The changes that are required for the new Douglas sleeper transport turn out to be far more extensive than expected. American Airlines and the Douglas Company finish and test fly their product on December 17,

which is also the 32nd anniversary of the Wright Brothers first flight at Kitty Hawk. In the days of testing that follow during the remainder of the month, they discover that they actually have a whole new airplane—the DC-3. Destined to be one of the most famous commercial planes in history, it will become known as “the plane that changed the world.”

So efficient is the prototype that the AA order is increased to 8 DSTs and 12 DC-3A 21-seat day versions. The initial test aircraft, NC-14988, is christened *Flagship Texas* and is the first unit of the company's long-running Flagship Fleet. Enplanements for the year total 196,523 and revenue passenger miles flown are 73.57 million. An operating profit of \$748,370 is generated, along with net gain of \$4,600.

The *Flagship Texas* is displayed at the Los Angeles Auditorium's National Pacific Aircraft and Boat Show during the first week of January 1936 before resuming its test flight schedule.

Meeting in Chicago on January 14, President Smith joins with Eastern President Capt. Eddie Rickenbacker, United President Patterson, and TWA's Jack Frye to announce creation of a trade organization—the Air Transport Association of America—and appointment of its first president, Edgar S. Gorrell. On the same day, the DC-2 *Southerner*, en route from Newark to Fort Worth, mysteriously crashes into trees at Goodwin, Arkansas (17 dead); the cause of the accident is never determined.

En route to Fort Worth from Chicago on January 29, a Vultee V-1A ices up in a blizzard over Little Elm, Texas, and crashes (one dead). While lifting off from Albany on February 2, a Stinson Model U catches its left wing in a snowbank and crashes, injuring those aboard. Also in February, when **Bowen Air Lines** ceases operations, two Vultee V-1As it had leased from AA are returned.

On April 1, a Stinson Model A explodes in midair over Pavillion, New York (two dead). Eleven days later, a new shuttle service is opened between Lakehurst, New Jersey, and Newark to accommodate passengers of the German airship *Hindenburg*. On April 29, three weeks before being granted its Approved Type Certificate, the first Douglas Sleeper Transport (DST), *Flagship Texas*, is officially accepted at Phoenix, Arizona, where the carrier can avoid paying California sales tax. The same delivery process will also be employed later for the carrier's DC-6s and DC-7s. The ship is immediately returned to the manufacturer for 50 hours of additional government-required route proving tests.

The *Flagship Texas*, between May 2–7, completes its test flights between Glendale and Santa Monica via Fort Worth, El Paso, and Phoenix. During the month, Capt. H. D. Bowyer is seconded to **Airlines of Australia (Pty.), Ltd.** where he pilots that company's first Stinson Model A on a record-breaking 2 hr. 45 min. flight from Sydney to Brisbane. Just after a Chicago takeoff on May 25, smoke is seen in the baggage compartment of a Stinson Model A; after a safe landing and evacuation, the plane is destroyed by fire.

The first operational, but second DST, NC1600, is delivered on June 8. On June 21, it makes a record-breaking, publicity-generating Chicago–Newark–Chicago demonstration flight of 8 hrs. 7 min. To help encourage completion of the new Nashville Municipal Airport, on June 24 a company DC-2, becomes the first commercial airliner to land at the new field. Following the arrival ceremonies led by Tennessee's WPA Administrator Harry S. Berry, the gathered citizenry watches as the aircraft transports airport officials and civil leaders on several flights around the airfield.

Following elaborate christening ceremonies, *American Eagle* and *American Arrow* \$47.95-each-way service begins as a DST, *Flagship Illinois*, piloted by Capt. W. W. Braznell, departs Chicago on June 25, arriving nonstop at Newark (serving New York) 3 hrs. 55 min. later. The reciprocal service is piloted from Newark to Chicago in 4 hrs. 45 min. by Capt. Melvin D. Ator in the *Flagship New York*. The DSTs are not flown in sleeper configuration.

Financing of the new airliner and service has by now eliminated both the carrier's cash and credit. To continue, C. R. Smith is able to arrange the first-ever airline loan provided by the U.S. Reconstruction Finance Corporation. To assist in paying the \$2.06-million price tag for the 20 Douglas transports, a total of \$1,235,000 is borrowed on June 23.

A record New York to Boston service is completed on July 1; the 218-mile flight requires just 56 min. Ten days later, the original DST, delivered in Arizona back in April, is acquired, joining four others already on hand. A T-32A Condor is destroyed in a ground fire at Glendale Airport in California on August 13. The first DC-3A is delivered on August 18 and, with later arrivals, is placed on the New York to Chicago run and in early September, on the New York to Boston route.

A company employee places New York Mayor La Guardia's baggage in the wrong car leaving Newark Airport on September 13; the mayor complains—loudly. With additional DSTs now available in sleeper configuration, one, the *Flagship California*, is employed to begin transcontinental American Mercury service on September 18. Flights require 17 hrs. 45 min. westbound (via Nashville, Dallas, and Tucson) and 16 hrs. eastbound. The time saving over the 1934 schedule is a remarkable one-third. Toward the end of the year, time for the westbound flight is reduced even further, to 15 hrs. 50 min., and a second service, the *Southerner*, is added over a “Sunshine Route” via Memphis, Fort Worth, El Paso, and Phoenix, replacing an earlier frequency provided by DC-2.

In October, a feeder service is opened linking Newark with the Lakehurst naval air station, terminus for the German dirigible *Hindenburg*. Flights also commence from Newark to Boston's Logan Airport. Joined by **Eastern Air Lines** CEO Capt. Eddie Rickenbacker, President Smith participates in the November 1 dedication of the new, but unfinished Nashville Municipal Airport, which will also be known as Berry Field.

Five additional aircraft are ordered from Douglas on November 27. Ralph Damon is named vice president operations on Christmas Day and, by year's end, American has received 7 DSTs and 13 DC-3s; 16 DC-2s are also in the fleet. The year's profit is only \$4,589.

President of Curtiss Aeroplane and Motor Company for the past five years, Ralph S. Damon assumes his new post as in January 1937. When a murderous flood sweeps the Louisville area later in the month, the company, along with **Eastern Air Lines**, schedules dozens of extra flights to the Kentucky community to bring in food, clothing, and medical specialists. The city will later thank the carriers with bronze plaques.

On February 6, a new DST turns in a record Chicago to New York flight of 2 hrs. 53 min. P. V. Metzelthine is appointed company dietician on February 20, the first employed by a U.S. airline. The company's millionth passenger, T. C. Baker, is boarded on February 25; in ceremonies, he receives \$1,000. The New York terminus for Boston services is switched to Floyd Bennett Field on April 4.

An internally controversial, but ultimately successful “Afraid to Fly” public relations effort is made, beginning on April 19, to allay public fear of flying. C. R. Smith's full-page commentary in major newspapers both acknowledges the dangers of travel and praises the safety of air transport. Columnists, commentators, and competing airlines praise the move, with some of the latter reprinting the text and distributing it further.

On June 7, President Smith rents a Lake Hopatcong, New Jersey estate as an employee summer retreat. Six days later, he is back in Nashville for the official opening ceremonies for that community's new municipal airport.

The June 13 celebratory activities at Berry Field, in which 40,000 people participate, go on into the evening when row after row of airport lights are officially turned on for the first time. En route from New York to Los Angeles, one of the company's new DSTs appears out of the darkness and lands for refueling and a crew change. During its stopover, President Smith, Col. Berry, and others watch as the WPA administrator's daughter, Nancy Berry, christens the plane *Flagship Tennessee*.

The opening of new services in the Volunteer State continues in the fall. On September 1, an AA DC-2 en route to Nashville is the first commercial airliner to land at the new Tri-Cities Regional Airport, which serves Bristol, Johnson City, and Kingsport.

President Smith is back in Tennessee on October 15 when he escorts the governor and other state dignitaries to Knoxville aboard a DC-3 for the dedication of that city's McGhee–Tyson Airport. As soon as the new airport becomes operational, Stinson SM-6000 Tri-Motors visit twice daily, one headed west to Nashville and the other east to New York.

Following the dedication of Tri-Cities Regional Airport on November 5, the Tri-Motors stop twice daily at that point as well.

At the end of the year, the company's initial order of DC-3s is on hand; 8 DSTs fly the coast-to-coast routes while 12 DC-3As provide service from New York to Chicago and Boston. The Stinson Tri-Motors visit a number of smaller communities. A net loss of \$93,628 is recorded this year.

The Stearman 4CM1 mailplanes are withdrawn and sold in January 1938. In March, new Hamilton Standard Hydromatic propellers are installed on one of the New York–Chicago DC-3 Flagships. The new equipment is so successful that it is installed on previously received airliners as well as new ones.

On July 26, only days after his famous 28 hr. 13 min. New York to Dublin flight, Douglas "Wrong Way" Corrigan is signed to do promotions while serving as a nonflying copilot. Meanwhile, former **Braniff Airways** General Manager Orval M. "Red" Mosier is appointed vice president and sent to New York to negotiate the airline's place at the new airport being constructed at the behest of Mayor Fiorello H. La Guardia.

On September 21, a hurricane strikes the U.S. East Coast from the tip of Long Island north beyond Boston. For the next week, commercial aviation provides the only inland transportation. AA, the principal carrier in the Northeast, dedicates 30 DC-3As and 2 DSTs to a shuttle service between New York and Boston, increasing its daily schedule from 10 flights to more than 40.

At the request of ATA President Edgar Gorrell, **Eastern Air Lines**, **United Air Lines**, and **Transcontinental & Western Air**, under special permission from Washington, are allowed to contribute aircraft and flight crews to fly emergency relief services over the American routes from New York to Boston.

By September 28, the company has carried in both directions over 7,000 passengers (including refugees, relief and construction workers), 43 tons of air express, 8.1 tons of airmail, and 100 tons of railway mail. The three other airlines involved contribute similar figures.

At month's end, the last Stinson Model As are removed from the Cincinnati to Washington service and replaced with DC-2s. The Stinson withdrawal makes American an all-Douglas operator; indeed, 7 additional DSTs are obtained during the year.

A unique ad in the August 13 issue of *The Saturday Evening Post* encourages wives to allow their businessmen husbands to fly: "He Still Loves Me . . . He'll Be Home for Dinner on an American Flagship." A total of 141 million passenger miles are concluded during the year. A net profit of \$213,261 is reported. At year's end, the first company bonus (representing one-quarter of the company's profit) is awarded by the board of directors. Every one of the 2,000 employees receives a letter from President Smith with a check (\$15 for newcomers, \$25 for those with over a year's seniority) enclosed.

Colorful festivities on May 23, 1939, mark the delivery of the *Flagship Oklahoma City*, the 350th airliner built by Douglas; the plane is not actually turned over to the airline until June 4. Under the editorship of Frank L. Brunton, the monthly newsletter *Flagship News* is first published at Chicago during the month; it will become one of the best-known house organs in the airline industry.

Misses M. E. and Roberta Littlefield block the landing of AA planes at Tulsa on the evening of July 8–9 as a protest after having lost a damage suit against their county for the building of an airport near their home.

Company headquarters are transferred to New York's brand new airport. When Mayor La Guardia jokes that he could make money by renting out his VIP lounge, the airline responds and the first VIP Admiral's Club is opened in those quarters in response.

An additional 15 DC-3s are ordered on September 15. This is the year in which company pilot Ernest K. Gann publishes his first book, *Sky Roads*. An aviation overview title for general readers, Gann would later go on to write such best sellers as *Fate is the Hunter* and *The High and the Mighty*.

The company's ad campaigns of the last several years now begin to bring it awards from various journals and advertising clubs in New York and Chicago. Airline employment is 2,795 on December 31.

An additional 15 DC-3s are ordered on January 10, 1940. On January 26, AA joins with **Eastern Air Lines** and **United Air Lines** in ordering 61 Douglas DC-4s. The first reservations school opens in Hangar 3 at La Guardia Field in April. Company aircraft begin sight-seeing tours over the New York World's Fair on May 12.

As reported in the June issue of *Flagship News*, flight attendant Miss Margaret R. Gilroy continues her tour of the South and Midwest, speaking in small towns concerning her life as an AA stewardess. Thus far she has driven by automobile and appeared before civic organizations and school groups in Ohio, Indiana, Arkansas, Oklahoma, Pennsylvania, Michigan, Texas, Tennessee, Mississippi, Wisconsin, Missouri, Illinois, and Iowa.

During five summer weeks, executive M. P. "Rosie" Stallter and several assistants are put at the disposal of ATA President Edgar S. Gorrell, who has them revise his earlier plan for airline mobilization in time of national emergency. At this time, the motion picture *Flight Angels*, made in cooperation with the company, is released, depicting the activities of airline stewardesses.

Mexican authorities, on October 25, grant permission for flights south of the border from Texas. The fleet is now the largest in the American airline industry: more than 32% of all U.S. traffic is carried by American Airlines. Net profit exceeds \$1 million.

Airline employment in January 1941 exceeds 4,000. In February, ATA President Gorrell asks C. R. Smith to review his government-approved plan for the wartime mobilization of the airlines. Smith asks "Rosie" Stallter to further refine Gorrell's recommendations into an itemized action plan that would allow carriers to become available quickly. Also in February, AA installs the largest private phone switchboard in Queens County, New York.

On April 22, two New York-bound aircraft are delayed at Boston for a search made in response to an anonymous bomb warning; no explosive is found. Pacific Mutual Life Insurance Company President Alexander "Ned" Kemp is named to the board of directors on April 25 and, during the spring, the "Big Three" purchasers of the DC-4 voluntarily terminate their contracts so that Douglas might develop the C-54 military version. New York to Toronto via Buffalo DC-3 service begins on June 24.

Less than an hour out of Buffalo on October 30, the controls of the DC-3 *Flagship Erie* freeze up after the plane hits a flock of wild geese, forcing the plane to crash while making an emergency landing in a field near New London, Ontario (20 dead). The millionth passenger in less than a year and the four millionth cumulative is boarded on November 4; the event marks the first passing of the million mark in annual boardings by any U.S. airline.

Just before the Japanese December 7 attack on Pearl Harbor, U.S. Army Air Forces commander, General Henry H. "Hap" Arnold, and Undersecretary of War Robert P. Patterson persuade American Airlines' Vice President Ralph Damon to take on the presidency of the Republic Aviation Corporation. His specific mission is to get the P-47 Thunderbolt fighter into the air.

On December 14, Gen. Arnold and ATA President Gorrell meet with President Roosevelt who, the day before had prepared an executive order nationalizing the country's airlines. Gorrell pleads with the chief executive that implementation of "Rosie" Stallter's American Airlines' plan, which had been revised and been passed on to the War Department in 1938, would be more efficient in the long run than a government takeover. Arnold supports Gorrell and Roosevelt is persuaded to tear up his order.

The same day, AA is selected by the War Department, upon Edgar Gorrell's recommendation, for a special, top-secret, airline readiness exercise. Fifteen DC-3s in flight are ordered to land at the nearest airport, discharge their passengers, and fly to a special rendezvous at Ft. Lauderdale, Florida. Once assembled, the aircraft take 300 U.S. Army Signal

Corps specialists to Natal, Brazil. The operation, the first wartime flight mission for the company, is a success.

Meanwhile, a number of DC-3 freighters load 10 tons of rubber tires at New York and rush them across the country to Los Angeles. There they are loaded aboard the **Pan American Airways (PAA)** Boeing 314 *Capetown Clipper* and are flown to China. Offloaded and transferred to waiting aircraft of the **China National Aviation Corporation (CNAC)**, the badly needed tires arrive in Rangoon, Burma, in time to be fitted onto the Curtiss P-40s of the American Volunteer Group (AVG) or "Flying Tigers," that will defend the city on Christmas Day.

On December 31, it is announced that the Chicago schedule will be coordinated with **Transcontinental and Western Air (TWA)** and **United Air Lines**. Another \$1-million net profit is reported. Enplanements for the year are 1,202,816.

The fleet at the beginning of 1942 totals 64 DC-3s and 15 DSTs. Almost half this number (38 aircraft) will be turned over to the military to be operated under contract by AA crews. At the request of ATA President Gorrell and the War Department, American executive M.P. "Rosie" Stallter is sent in January on a week-long inspection tour of the U.S. Army Air Forces' Air Service Command bases in Pennsylvania, Ohio, Alabama, Utah, and California.

From this trip, Stallter and Gorrell devise and present the Army with a domestic, military cargo service plan to be operated by the airlines under government contract. Under the plan, five geographical segments are created, each assigned to a specific carrier: American the East Coast; **Northeast Airlines** the Northeast; **Eastern Air Lines** the Southeast; **Northwest Airlines** the Pacific Northwest; and **Braniff Airways** the Southwest.

On March 14, the first DST, *Flagship Texas*, is turned over to **Transcontinental and Western Air Lines (TWA)**. AAF Commanding General Arnold selects C. R. Smith on April 14 to assist Col. Harold Lee George in leading and organizing the Army's Ferrying (later Air Transport) Command; Alexander Kemp is named as Smith's replacement. The same day, the CAB grants the carrier route authority to Mexico City from El Paso and Dallas.

After five weeks of conversion and preparation, the ex-*Flagship Cleveland* begins a survey flight across the North Atlantic on April 24 via a "Great Circle" route. Under the overall command of AA's chief engineering pilot, Daniel Beard, the *Flagship Cleveland* confirms several proving flights made earlier by **Northeast Airlines**. Other members of the crew included million-miler pilots Capt. H. G. "Robby" Robinson and Capt. Frank Bledsoe, navigator C. H. McIntosh, American's chief meteorologist C. E. "Doc" Buell, and one of its best mechanics, Frank Ware.

As a result of its success, AA, in May, joins **Northeast Airlines** in ferrying troops to Iceland and the intermediate points north from Maine, including Labrador, South Baffin Island, and Greenland. Also in May, Melvin "Doc" Miller is placed in charge of the company's Mexican operations and is sent to Mexico City to recruit employees and set up a base.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at the ill-defended Dutch Harbor. The mobilization foreseen and promised by ATA President Gorrell at the beginning of the year is now realized. The U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities and report to Edmonton, Alberta, to participate in a massive airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from AA and 10 other carriers execute daily round-trips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions. During the early Aleutians campaign, 11 DC-3s are hastily assembled by American, removed from domestic service, and execute 200 contract flights north via Edmonton.

Beginning in mid-July, the company contributes aircraft to a 50-transport group from 6 contract carriers (**Northeast Airlines**, **Braniff**

Airways, **Chicago & Southern Air Lines**, **Pennsylvania Central Air Lines**, **Transcontinental and Western Air Lines**, and **United Air Lines**) which are rushed to Presque Isle. From here, the planes, joined by 110 Air Transport Command C-47s, will transport the supplies and men required to set up and man the bases at Newfoundland, Labrador, Greenland, and Iceland that will facilitate "Operation Bolero," a mass bomber ferry from the U.S. to England.

Dallas and El Paso to Mexico City DC-3 flights commence on September 3. Through service from Mexico City to Toronto is initiated on September 6. Having been turned over to the AAF earlier in the year, the C-47 formerly known as *Flagship Texas* (NC-14988, the first DC-3 to fly) loses an engine while approaching Chicago on October 15 and crashes (9 dead). An AAF bomber crashes into a DC-3 over Palm Springs, California, on October 25 (12 dead). The pilot and copilot of the bomber, 2nd Lt. W. N. Wilson and Staff Sgt. R. P. Leicht, are arrested for manslaughter and court-martialed on November 26; both are cleared of the criminal charge.

North Atlantic flights commence in October, followed by South Atlantic trips in December. The aircraft initially employed are C-87s, freighter-versions of the Consolidated B-24 Liberator bomber; these will be followed by Douglas C-54s (military DC-4s). During the year, the subsidiary catering business, Sky Chefs, is formed.

While on a westbound flight over the North Atlantic on February 4, 1943, an AAF C-87, piloted by AA Captain Owen "Chuck" O'Connor with four crewmen and seven wounded soldiers aboard, crash-lands on a frozen lake in northern Quebec. Following a blizzard, an aerial search locates the marooned party on February 10. A C-47, piloted by Capt. Ernest K. Gann, drops supplies to the men and radios their position. Another Douglas transport, piloted by **Northeast Airlines** Capt. Fredrick Lord, makes a landing to pick up the C-87s crew—and gets stuck.

Lord and his men join O'Connor's party. A ski-equipped C-47 is able to land on a makeshift runway on February 26 and take out the wounded. It will be March 6 before the last man can be extracted. Several weeks later, Capt. "Breezy" Wynn is able to get the C-87 back to base. The episode will form the basis for the Gann's later novel *Island in the Sky* and the John Wayne motion picture of the same name.

A survey flight is made to Marrakesh, Morocco, via a northern Newfoundland route, in April and, on May 10, the company's monopoly on transcontinental connecting service to Washington, D.C. is broken when the CAB also grants **Transcontinental and Western Air (TWA)** rights to the terminus. A special flight to Australia is laid on in June.

On July 18, Project 7-A is authorized. Ten C-87s and 150 men assigned to south Atlantic ferry flights are transferred to Tezpur, India; they depart taking with them sufficient supplies to last three months. On July 30, a DC-3 explodes over Trammel, Kentucky (20 dead).

The first C-87, piloted by Capt. Toby Hunt, arrives in India on August 1. During August–October, the 10 original C-87 crews, plus 3 more which follow, put in over 1,000 Liberator flights across the Himalayan "Hump" from India to the Chinese city of Yunnanyi, transporting in excess of 2.5-million tons of vital cargo.

Two planes (including that of Capt. Hunt) and 10 men are lost. Upon their return to New York (LGA), the surviving crewmen purchase a plaque commemorating their colleagues; it will eventually be hung on a wall at the airline's Dallas training facility.

On December 15, the carrier begins accepting express shipments from the U.S. to 40 cities in 21 Mexican states.

En route to New York from Los Angeles, a DC-3 crashes into the Mississippi River near Memphis on February 12, 1944 (24 dead). The CAB ends AA's transcontinental monopoly connection on June 12 when it allows competing **Eastern Air Lines** and **Northeast Airlines** rights to fly into the city. Some of the 38 DC-3s given over to the AAF in 1942 begin to return during the summer. The first rate schedule for regularly scheduled, transcontinental, all-cargo service is filed with the CAB on August 1 and 25 DC-6s are ordered on September 12.

All-freight DC-3 flights commence on October 15. A shipment of high priority materiel and women's apparel is sent west while, simultaneously, a load of airplane parts, clothing, spinach, and fresh flowers takes off for the east. Ralph Damon returns as executive vice president after completing his wartime presidency of Republic Aviation Corporation while former **Transcontinental and Western Air (TWA)** General Manager Terrell C. Drinkwater becomes a vice president. During the year, the southern transcontinental route is shortened by a cut-off from Nashville down to El Paso via Tulsa and Oklahoma City and the company begins publication of the teaching aid *Air-Age Education News*. The year's net profit is \$4.4 million.

A DC-3 crashes near Burbank, California, on January 11, 1945 (24 dead). Services are resumed to five cities on February 7 and another daily, roundtrip Washington–New York frequency is added. A DC-3 crashes near Cedar Springs, Virginia, on February 24 (17 dead). To further participate in the growing aviation education movement, the carrier establishes a nonprofit subsidiary, Air-Age Education Research, Inc. to develop and distribute such teaching aids as maps, charts, globes, films and filmstrips, pamphlets and the popular magazine *Air Globe*. The effort is directed by Columbia University's Dr. Nicholas Engelhardt Jr.

The first full cargo load is sent from New York to Mexico City on April 1 as daily freight flights between the two cities commence. Service is initiated from New York to Los Angeles via Tulsa and Oklahoma City on April 22. Just prior to V-E Day in May, AA Vice President Damon appears before a Senate Commerce Committee subcommittee hearing on the **Pan American Airways (PAA)** call for a "chosen instrument" flag carrier for overseas operations; Damon opposes the concept and calls for regulated competition on foreign service.

On June 1, it is announced that the carrier has purchased, largely through Damon's efforts, 51.4% majority shareholding in **American Export Airlines (Amex)** for \$3 million; it will form the company's new Trans-Atlantic Division. On June 13, the board elects C. R. Smith chairman; Ralph Damon succeeds the retiring Alexander Kemp as president with Larry Fritz becoming vice president operations. Carlene Roberts-Lawrence is also named a vice president, becoming the airline industry's first female corporate officer.

CAB approval for the Amex takeover is granted on July 5. Also in July, it is reported that the company has accomplished over 7,000 transatlantic flights since 1942. On July 12, the Consolidated Model 39 Liberator-Liner *City of Salinas*, leased from its manufacturer, is placed into all-cargo service on a three-month experiment. With a load of 55 gas ovens, the inaugural flight is made from Chicago to Los Angeles. The giant single-finned transport will now concentrate on transporting fresh fruit and vegetables from California to New York and Boston.

On August 1, 20 additional DC-6s are ordered. On VJ-Day, it is reported that 57 employees on military leave have been killed in combat, in addition to 18 killed during ATC operations and seven MIAs. Although the company has earned \$16.5 million during the war years, not one cent of that comes from military contracts.

The next day, the company's PR department announces that passengers may use their cameras to shoot photos through DC-3 windows. The first air express delivery of poultry is completed on September 8. Airline employment by October stands at 11,450 and the *City of Salinas* is withdrawn at month's end.

The Trans-Atlantic Division is renamed **American Overseas Airlines (AOA)** on November 10; the merger is formally completed on December 5 with C. R. Smith as president and former **Pan American-Grace Airways (Panagra)** General Manager Harold Harris as vice president and general manager. Vice President Terrell C. Drinkwater is also appointed a director. Meanwhile, on November 22, a DC-3F carries furniture from High Point, North Carolina, to Hartford, Connecticut, at local railroad rates.

In December, it is announced that, pending CAB approval, the company will take over Kansas City-based **Mid-Continent Air Lines**; the move is not allowed. During the year, application is made to the CAB

for 5,482 miles of routes to three dozen domestic communities not presently served. Net profit climbs to \$51,408,000.

The final transatlantic flight for the Allied Air Forces (trip no. 9,442) is completed on January 5, 1946. In cooperation with the Railway Express Agency, the airline begins two-way service on January 16 from 23,000 U.S. air and rail express points to all American Airlines foreign and overseas routes. Ordered by the carrier as a stretch of the DC-4, the first 48–52 passenger DC-6 makes its maiden flight on February 15.

Fifty war-surplus C-54s, purchased for \$90,000 each, reconfigured to civil DC-4 standard for an additional \$175,000 per copy, and christened Four-Engine Flagships, begin to enter service, with the first flying the twice-daily roundtrip New York to Chicago route on February 17.

A DC-3 with 3 crew and 24 passengers is lost at Thing Mountain, California, on March 3; there are no survivors.

Transcontinental DC-4 flights are inaugurated from Burbank to New York via Dallas on March 7. Two different transcontinental frequencies will be offered. First is The Mercury (Los Angeles–Dallas–Washington–New York–Boston), followed by The Eagle (Los Angeles–Tulsa–Chicago–New York). Westbound en route time is cut from the DC-3's 17 hrs. 40 min. to 14 hr. 30 min.; eastbound time falls from 16 hrs. to 13 hrs. 15 min. Initially, the faster, 80 mph Lockheed L-049 Constellations of competing **Transcontinental and Western Air Lines (TWA)** place AA at a competitive disadvantage.

During early April, a contract cargo division is established; 6 all-cargo DC-4 freighters are assigned to it, 3 on each coast, and freight rates are cut on April 18. Service to Albany is resumed on April 25. As the result of favorable market conditions, the company is able to sell \$40-million worth of cumulative preferred stock.

In June, a pilot training center is opened at Ardmore, Oklahoma; it will last 29 months until costs force its closure. Simultaneously, a Maintenance and Engineering Center is set up at Tulsa to serve the overhaul and repair needs of company aircraft from around the country.

The first DC-6, as opposed to the military C-112, makes its maiden flight in California on June 29 and the last of the 50 DC-4 Flagships enters service the next day.

New York to Toronto freight service begins on August 23. Failed negotiations for a new U.S. and Mexico bilateral air agreement cause flights south of the border to be suspended. In early fall, the Los Angeles Rams become the first professional football team transported by the carrier; a DC-4 is chartered to transport 46 persons from Los Angeles to Milwaukee and from Chicago to Los Angeles.

During the fall, Dr. Engelhardt's Air-Age Education Research, Inc. sponsors an eight-day international conference in New York City. Called to discuss teaching reforms in the light of the "air age," the meeting is attended by 350 delegates from 22 nations.

The first three DC-6s are delivered between November 24 and 30 and are christened *Flagship California*, *Flagship District of Columbia*, and *Flagship Oklahoma*. Deliveries are also made to rival **United Air Lines**; however, as the type is not yet certified by the government, both carriers must initially employ their aircraft for route proving and crew training.

An \$18-million order is placed on December 26 for 100, later 75, Consolidated-Vultee (later Convair) CV-240s; the request is the largest single airliner order in the history of commercial aviation to date. The new aircraft will replace the carrier's DC-3s on short-haul routes in the U.S., Mexico, and Canada. The flight attendants association, the Kiwis, is formed during the year at New York City. A DC-3, with 3 crew and 18 passengers, is lost near Michigan City, Indiana, on December 28 (2 dead). The contract cargo division loses \$252,000 on the year.

Airline employment totals 14,000 in January 1947. Lost, out of gas, and unable to land in bad weather, a DC-3 makes a miraculous landing on Long Island's Jones Beach on January 5. During the month, Vice President Drinkwater departs to become the fourth president of **Western Air Lines**. Orders for the controversial Republic Rainbow transport are cancelled on February 20. The first downtown air freight terminal is opened in New York City on March 2. During the first quarter, only two more DC-6s are delivered: *Flagship Arizona* and *Flagship New Jersey*.

Meanwhile, American has now overcome the speed advantage of the Constellations of **Transcontinental and Western Air Lines (TWA)** by scheduling more cross-country DC-4 flights (12 daily versus 3 by Howard Hughes's carrier). On the month, the Douglas transports fly 3,500 transcontinental passengers, while the Lockheeds haul 3,300.

On April 2, New York to Milwaukee flights begin. Twelve days later, DC-4s replace DC-3s on many passenger routes. Following an unsatisfactory attempt to modify the DC-4 freighters into combis, Chairman Smith, unimpressed during a spring review, orders the still-unprofitable contract cargo division ended. Beginning on April 20, tests of forthcoming DC-6 service are made by the *Flagship New York* on the company's Chicago to New York route. The same plane launches roundtrip revenue flights between New York and Chicago on April 27.

Transcontinental DC-6 flights begin on May 20. These cross-country services are christened: The Gotham (San Francisco–Tulsa–Washington–New York), The Advance Mercury (New York–Chicago–Los Angeles), and The Golden State (New York–Washington–Tulsa–San Francisco).

Meanwhile, in a patriotic gesture, the carrier turns over a DC-6 delivery slot to the USAF. When delivered to the military on July 1, the plane will become the one and only VC-118, but will be better known as the presidential aircraft *Independence*, named for President Harry S. Truman's hometown in Missouri.

Following the plane's christening, a new DC-6 begins New York–Mexico City flights on June 16; the first Mexico City to New York flight is completed two days later. A total of 15 DC-6s are delivered during the second quarter: *Flagship Illinois*, *Flagship New York*, *Flagship Massachusetts*, *Flagship Virginia*, *Flagship Mexico D.F.*, *Flagship Pennsylvania*, *Flagship Texas*, *Flagship Tennessee*, *Flagship Aztec*, *Flagship Ohio*, *Flagship Michigan*, *Flagship Maryland*, *Flagship Ontario*, *Flagship Connecticut*, *Flagship West Virginia*, *Flagship Indiana*, *Flagship Arkansas*, *Flagship Kentucky*, and *Flagship Kansas*.

Daily Chicago–Mexico City flights begin on July 2 and, also in July, New York to San Francisco via Phoenix DC-6 flights commence. Requested to transport an engine to Buffalo from New York, the experimental *Flagship Alpha*, with two crew and three passengers, crashes into Flushing Bay upon takeoff from La Guardia Airport on August 9 (three dead).

Flight 331, a DC-4 en route from Dallas to Phoenix with 54 aboard on August 10, lands safely at El Paso after a sudden loop from which recovery is made at just 400 feet above ground. An inquiry into the incident finds that Capt. C. R. Sisto, a pilot gaining type experience, has accidentally engaged his gust lock while in flight without telling others in the flight crew. Capt. Sisto and the carrier's chief check pilot both resign over this exercise in faulty procedures.

The last DC-3 is retired from transcontinental service on September 21. The DC-6s and DC-4s have, by month's end, provided 47% of the company's transcontinental traffic. During the third quarter, American receives 13 more DC-6s: *Flagship Rhode Island*, *Flagship New Hampshire*, *Flagship North Carolina*, *Flagship South Carolina*, *Flagship Nuavo Leon*, *Flagship Delaware*, *Flagship North Dakota*, *Flagship South Dakota*, *Flagship New Mexico*, *Flagship Vermont*, *Flagship Iowa*, *Flagship Missouri*, and *Flagship Nebraska*.

On October 9, the *Flagship Colorado* joins the DC-6 fleet, followed next day by the *Flagship Georgia*. Four days later, regularly scheduled New York–Toronto passenger service is initiated. The *Flagship Wisconsin* is delivered on October 18 and the last DC-6 delivery of the month is the *Flagship Louisiana*, which arrives on October 27.

The DC-6 *Flagship Mississippi* is delivered on November 3. Following an emergency landing November 11 at Gallup, New Mexico, by the *Flagship Wisconsin*, which had taken fire (one of several failures of the new aircraft caused by fuel transfer problems), all DC-6s industry-wide are grounded on November 12. Still, five more are delivered in November: *Flagship Wyoming*, *Flagship Nevada*, *Flagship Alabama*, *Flagship Montana*, and *Flagship Oregon*. DC-4s are substituted for the parked aircraft.

Multistop New York to Charleston, West Virginia DC-3 service begins on December 2. As anticipated, traffic growth has not materialized for a

variety of reasons. In addition to the DC-6 failure, AA is now forced to reduce its workforce by 15% to just over 12,000. Meanwhile, Dr. Nickolas Engelhardt Jr., director of Air-Age Education Research, Inc. resigns to begin work on a system of suburban school consolidations.

The first CV-240 is accepted on February 28, 1948, along with the DC-6 *Flagship Utah*. The ban on DC-6 flights is lifted on March 14 and transcontinental services resume on March 21. DC-6s are placed on the New York to Detroit and Chicago runs on March 26. To encourage passenger traffic, the carrier introduces the Family Fare Plan.

The last two DC-6s are delivered in May, *Flagship Maine* and *Flagship Florida*. The first CV-240, *Flagship San Diego*, enters service on June 1. Later in the month, a DC-6 crashes near Mt. Carmel, Pennsylvania (57 dead). Also during the second quarter, the nonprofit Air-Age Education Research, Inc. subsidiary is closed down and its publication, *Air Globe*, ceases publication.

A record 3,778,818 ton miles of freight are flown in October and, on October 28, the DC-4 *Flagship Tulsa* is sold to **KLM (Royal Dutch Airlines)**. As of November 2, the carrier employs only DC-6s on its New York to Los Angeles run; the same day, New York to San Francisco via Dallas flights, christened The Southerner, are initiated. CV-240s are introduced on the New York to Boston route on December 1. Five days later, the *Flagship Indianapolis* is also passed to **KLM (Royal Dutch Airlines, N.V.)**. A Convairliner is chartered by the Washington Redskins professional football team on December 8 for its first trip by air; 38 persons are transported to and from Los Angeles.

Tentative agreement is reached with **Pan American Airways (PAA)** on December 13 for the sale of the **American Overseas Airlines** division. The secret negotiations conducted between C. R. Smith and Juan Trippe leads to the resignation of President Ralph Damon when he is appraised. Smith now resumes the company's presidency, declaring the chairmanship vacant.

The last DC-4 is retired from coast-to-coast flying and a new transcontinental service, The Sun Country Special, is introduced that flies New York–Detroit–Chicago–Tucson–Phoenix–Los Angeles–San Francisco.

Losses caused by the training prior to introduction of the DC-6 and CV-240 plus the grounding of the DC-6s cause the fiscal downturn over the two-year period to reach \$6 million.

The last DC-3 passenger flight is completed from El Paso to Fort Worth on April 1, 1949. All remaining DC-3s are now withdrawn, including one honored in a special ceremony at New York (LGA), where it is noted that, since 1936, a total of 10.5 million passengers have been flown for the airline aboard this single aircraft type. At this point, American Airlines is the only U.S. airline with a complete fleet of postwar pressurized airliners.

En route to New York on June 22, a CV-240 takes fire and crash-lands at Memphis; although 37 are hurt, the pilot is lauded for his skill in preventing a fatal situation. A DC-4 is sold to **Air France** on August 30; since July, 7 former Skymasters, including the *Flagship Dallas*, *Flagship Buffalo*, *Flagship Cleveland*, *Flagship San Antonio*, and *Flagship New Orleans*, have been passed to the French state carrier. During the year, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, **Eastern Air Lines**, and **Qantas Empire Airways (Pty.), Ltd.** will also receive DC-4s.

A CV-240, en route to Boston from New York on September 5 with 30 aboard, loses its hydraulics, but is able to land safely at Boston; no injuries are reported. On September 22, an interchange agreement is initiated with **Delta Air Lines** on a route from Detroit to Atlanta via Cincinnati. A CV-240 flies from Chicago to Detroit on October 22 in a record 40 min. 27 sec.

En route from New York to Mexico City on November 29, the DC-6 *Flagship South Carolina* with 5 crew and 41 passengers crashes into three buildings at Love Field in Dallas and burns. Among the 28 victims is Swiss violinist Julio Cochard. In early December, orders are placed for a number of DC-6Bs at \$900,000 per copy, and coast-to-coast \$110 coach-class DC-4 flights begin on December 27. A \$5.7-million profit is earned on the year.

The equipment employed for the transcontinental coach-class service, now offered as Blue Ribbon Air Coach Service, is upgraded during 1950 from DC-4s to DC-6s. During the first quarter, the DC-4s *Flagship Tucson* and *Flagship Detroit* are sold to **Avianca Colombia Airlines** (**Aerovías Nacionales de Colombia, S.A.**). Between March 1 and 11, 4,000 ground crew strike. The DC-4 *Flagship El Paso* is purchased by **Eastern Air Lines** on April 20, followed by the *Flagship Texas* and one unnamed unit on June 23.

Beginning on July 29, the carrier offers sight-seeing trips over New York City during which amateur photographers can take photographs of the metropolis. An engine flies off and rips open the fuselage of a DC-6 over the Colorado Rockies near Eagle on August 22; although the plane is able to land safely at Denver, a man dies of a heart attack.

On September 25, President Truman approves the takeover of **American Overseas Airlines** by the newly renamed **Pan American World Airways (1)**. William J. Hogan, formerly of H.J. Heinz Co., is named vice president and treasurer as American joins with Gelston Judah Travel Advisors on November 11 to offer an all-expense, roundtrip flight to Pasadena from New York on January 1 for the Rose Bowl football game.

Cleveland to Mexico City through service begins on January 7, 1951 and a man carrying a stick of nitroglycerine is removed from a DC-6 at Dallas 12 days later. Among the graduates in the February 14 stewardess class is Patti Patterson, daughter of **United Air Lines** President Pat Patterson.

The last 25 passenger DC-6s, officially classified as DC-6Bs but not so identified in marketing, begin delivery with the *Flagship New York* on April 13. Also received in April are the *Flagship District of Columbia* and *Flagship California*. In competition with **United Air Lines**, DC-6B transcontinental flights are inaugurated on April 29, New York to Los Angeles via Chicago. The move prompts the carrier to drop its East to West Coast sleeper service, to increase its capacity by 10%, and to add 60 more flights per day. The transcontinental DC-6B services are christened Mercury, Advance Mercury, and Pacific Mercury.

Two days later, a new interline pairing with **Delta Air Lines** is initiated between Miami and Los Angeles via Tampa, New Orleans, and Dallas. Also in May, the carrier sets an industry record with 214,914,916 passenger-miles. Carlene Roberts is named vice president in charge of the company's Washington, D.C. office; she is the first woman employed by a major airline to achieve such a high position.

Transcontinental coach flights begin on June 17, followed by hourly DC-6 service from New York to Chicago on June 25. The second quarter is completed with the delivery of six more DC-6Bs: *Flagship Illinois*, *Flagship Texas*, *Flagship New Jersey*, *Flagship Oklahoma*, *Flagship Massachusetts*, and *Flagship Arizona*.

The DC-6B *Flagship Michigan* arrives on July 1, followed by the *Flagship Virginia* on July 7. On July 26, an interline arrangement is implemented with **Continental Air Lines** on a route from Houston to Los Angeles via San Antonio and El Paso. A crippled CV-240 with 23 aboard lands safely at New York (LGA) on September 8; no injuries are reported.

Released during the year, the motion picture *Three Guys Named Mike* depicts the life of an AA stewardess, played by Jane Wyman (supported by Van Johnson and Howard Keel), and is a publicity bonanza for the airline. Advertising for the film includes a pamphlet in which the actress testifies about the background work she did on the responsibilities of the company's stewardesses.

In October, American becomes the first trunk line to order the DC-6A, requesting six. Six more DC-6Bs are delivered between October and November: *Flagship Pennsylvania*, *Flagship Tennessee*, *Flagship Ohio*, *Flagship Maryland*, *Flagship Connecticut*, and *Flagship Indiana*. The third consecutive profitable year in a row is completed; since 1949, the company's profits have totaled \$27.4 million.

To end a coach-class fare war begun late the previous year, American, on January 9, 1952, agrees with **United Air Lines** and **Trans World Airlines (TWA)** to offer a \$99 coast-to-coast rate.

While on ILS approach to Newark on January 22, a CV-240, with 3 crew and 20 passengers arriving from Buffalo, suddenly crashes into a housing block in Elizabeth, New Jersey, 3.5 mi. short and 900-ft. to the right of the runway. All aboard the aircraft and 7 people on the ground are killed in the first fatal accident to a Convairliner. Among the victims is former War Secretary Robert Porter Patterson; the cause of the disaster is never officially determined.

Also during the month, C. R. Smith orders 25 DC-7s at \$1.6 million per aircraft. The \$40 million will pay for most of the aircraft's development costs and convinces a reluctant Donald Douglas to proceed.

On February 27, a DC-6B with 31 aboard circles Chicago for 2½ hours with engine problems, dumping fuel; it is able to land safely at the end of that time.

As a result of discrimination complaints to the New York State Human Relations Commission, an African-American reservations clerk is hired in Buffalo.

On June 28, a DC-6B with 55 aboard collides with a lightplane over Love Field in Dallas. The Douglas lands safely, but the two aboard the private aircraft are killed when it crashes.

The Magnetron Reservoir is introduced on July 1 to keep track of seats available on flights; the innovation will replace for all airlines the large display boards in use since the 1930s. Breaking its own and the industry's records, American, on September 3, flies 10 million revenue passenger miles in a single day; it also claims the record for the month of August with 275.66 million. The year's profit is \$12.5 million.

The company's only unnamed DC-6 is purchased from **Philippine Air Lines** on January 8, 1953. The DC-6B *Flagship Minnesota* arrives on February 14 and, on February 22, a DC-6B flies from Dallas to New York in a record 3 hrs. 41 min. The *Flagship West Virginia*, a DC-6, is placed into service on February 28, along with the *Flagship Arkansas*. The last five DC-6Bs are delivered—two in April and three in May: *Flagship Kentucky*, *Flagship Rhode Island*, *Flagship Delaware*, *Flagship Missouri*, and *Flagship Wisconsin*. One of these is present for the grand opening of the Greater Fort Worth International Airport—Amon Carter Field on April 25. The first pure DC-6 cargo plane (DC-6A), the *Airfreighter Los Angeles*, enters service on May 16, followed by the *Airfreighter New York* on June 22, and *Airfreighter Chicago* on June 26. Meanwhile, on May 18, the first DC-7 makes its maiden flight.

American and **United Air Lines** Convairliners, with a total of 57 aboard, brush in the skies over Michigan City, Indiana, on August 26; although the craft are damaged, both land safely with no one hurt. While circling the field at Albany, New York, in fog and haze while preparing to land, a CV-240 with 3 crew and 25 passengers, strikes a pair of radio transmission towers on September 16, crashes, and burns; there are no survivors.

The first DC-7 is delivered on October 10 and is christened *Flagship Illinois*. As yet uncertified, it is employed for crew training. During the remainder of the fourth quarter, seven more DC-7s will arrive: *Flagship California*, *Flagship New York*, *Flagship Oklahoma*, *Flagship Massachusetts*, *Flagship Arizona*, *Flagship Michigan*, and *Flagship Virginia*. They, too, will conduct route proving and crew familiarization flights.

DC-7 certification occurs on November 12 and on November 20 a new DC-7 flies from Los Angeles to New York nonstop in a record 6 hrs. 38 min. (ground speed averages 390 mph). Three days later, seven minutes is shaved off this record by another American DC-7. Following these publicity activities, daily nonstop DC-7 nonstop Mercury service is begun on the New York to Los Angeles route by the *Flagship California* on November 29. The new service is undertaken in direct competition with **Trans World Airlines (TWA)** and is the first nonstop transcontinental service to be offered in both directions.

While on a return flight from Los Angeles to New York, C. R. Smith and R. Blair Smith, a senior IBM sales official, discuss the possibilities of automated reservations. The discussion will lead to the development of SABRE.

The other transcontinental DC-7 frequencies are christened *The Statesman* (Washington, D.C.–Los Angeles), *The Southerner* (New

York–Dallas–San Francisco), and The Golden Gate (New York–Tulsa–San Francisco). A decade of AA-sponsored “Music ‘til Dawn” radio programs are first broadcast. On December 20, due to the increased speeds of its new aircraft, the carrier announces the end of its sleeper flights. The next day, a DC-7, taxiing to takeoff from New York (IDL), skids to a stop with its engines on fire; 65 safely escape down an emergency canvas chute. At year’s end, AA officially becomes the world’s largest transportation concern in terms of sales, surpassing the Pennsylvania Railroad.

A DC-7 flies a record one-stop San Francisco to New York service on January 17, **1954** in 8 hrs. 29 min. On initial climb from Buffalo on January 20, a CV-240 with 3 crew and 21 passengers suffers engine failure and makes a wheels-up landing in a small clearing; although the aircraft must be written off, there are no fatalities. Seven days later, a CV-240 with 34 aboard lands safely after colliding with a U.S. Navy aircraft over Columbus, Ohio; the military aircraft crashes (2 dead).

During the year’s first two months, a total of 10 DC-7s are delivered: *Flagship Pennsylvania*, *Flagship Tennessee*, *Flagship Ohio*, *Flagship Maryland*, *Flagship Connecticut*, *Flagship Indiana*, *Flagship West Virginia*, *Flagship District of Columbia*, *Flagship Kentucky*, and *Flagship Rhode Island*. As the DC-7s enter service, the state names of DC-6s and DC-6Bs are replaced by city names.

A DC-7 flies from Los Angeles to Chicago on March 12 in a record 4 hrs. 40 min. On March 29, the DC-7 *Flagship Illinois* makes the Los Angeles to New York flight in a record 6 hrs. 10 min. as verified by the National Aeronautics Association (NAA). A second DC-7 makes the same flight on March 30 in 5 hrs. 51 min. Although this is the first time a commercial airliner makes the transcontinental run in less than six hours, the record is not recognized because it is not witnessed by an official NAA observer.

During the second quarter, 6 more DC-7s join the fleet: *Flagship Delaware*, *Flagship Wisconsin*, *Flagship Arkansas*, *Flagship Colorado*, *Flagship Wisconsin*, and *Flagship Canada*. Seven are hurt when a CV-240 with 24 aboard makes a belly landing after a faulty takeoff from Buffalo on June 22.

Nonstop Los Angeles to Washington, D.C. DC-7 service begins on July 2 and four days later, a tragedy occurs in Cleveland. Having arrived at Hopkins Municipal Airport while en route from New York to Mexico City, a DC-6 is subjected to an attempted hijacking by an armed 15-year-old boy. After storming aboard and making a show of force, the youth is shot dead by the aircraft’s captain.

The last DC-7 of the year, *Flagship Mexico*, arrives on July 10. Two days later, an unnamed DC-6A Airfreighter enters service. Because westbound DC-7 nonstop transcontinental flights must remain aloft for at least eight hours and AA’s refuses to land en route for crew rotation, the company’s Air Line Pilots Association (ALPA) members institute a job action on July 31 claiming violation of their contract’s eight-hour rule. The strike halts all services.

The National Mediation Board (NMB) offers a plan for arbitration that both sides accept and a temporary accord is reached, allowing services to resume 25 days later on August 24. NMB arbitrator D. L. Cole is appointed neutral referee. Nonstop New York to Los Angeles DC-7 frequencies begin on September 20. After hearings and deliberation, Cole finds for AA; there are no changes in duty-time, but it is recommended that the company grant comp time off for extra work over 8 hours.

The first national convention of the flight attendants’ Kiwi organization is held in Chicago in the fall; there are delegates from 17 chapters and a total of 150 attendees. Also during this period, C. R. Smith accepts an invitation to address the Newcomen Society of North America in New York City on the history of his carrier. The Society, as is its custom, publishes the remarks in a pamphlet, *A.A.: American Airlines since 1926*.

A Convairliner with 16 aboard lands safely at Washington National Airport on November 5 after circling the field for over two hours with a disabled nosewheel. Four days later, a second CV-240 with 43 aboard circles Chicago while its crew tries to free a jammed landing gear; the aircraft is able to safely land at Glenview Naval Air Station. By year’s

end, thrice-daily roundtrip nonstop transcontinental services are offered between New York and Los Angeles.

En route from Newark to Tulsa on March 20, **1955**, a Convairliner with 3 crew and 32 passengers crashes near Newburg, Missouri, while attempting to land at Springfield in dense fog (13 dead). The same day, 66 are shaken when a DC-7 makes an emergency landing at Chicago (MDW).

On June 8, a letter of intent is signed for 35 Lockheed L-188 Electras. A new world record is achieved for the month of June when American flies a total of 416 million revenue passenger miles.

While on a scheduled August 4 service from Tulsa to Newark, a CV-240 with 3 crew and 27 passengers suffers a fire in its No. 2 engine just after takeoff from an intermediate stop at Springfield, Missouri. The captain is given permission to make an emergency landing at Fort Leonard Wood, but while on approach, the right wing breaks off, causing the Convair to crash into a wooded area; there are no survivors.

During October, all-weather radar retrofitting commences on the company’s DC-7s. Orders are placed on November 9 for 30 Boeing 707-123s, at a cost of \$5.5 million each. To pay for the aircraft, a \$75-million loan is negotiated with the Metropolitan Life Insurance Company.

As the result of a gin rummy game between C. R. Smith and Raymond Buck, AA wins the option to purchase a 40-acre wooded tract of undeveloped land between Dallas and Fort Worth. The land is subsequently purchased for \$1 million (from the Metropolitan loan) and construction is begun on a stewardess school.

As a result of the CAB finding in the Denver Service Case of November 14, AA is given a direct Chicago to San Francisco route. A formal contract for the turboprop Electras is signed on December 15.

During the year, senior pilot Byron Moore publishes his memoirs, *The First Five Million Miles* (New York: Harper, 1955).

Operations continue apace in **1956** and 3 more DC-6s join the fleet in January: *Airfreighter Detroit*, *Airfreighter Boston*, and *Airfreighter San Francisco*. Two unnamed DC-4s are sold to Air France on March 5 and April 5, respectively, while the DC-6A *Airfreighter Dallas*, arrives on March 24. With the first DC-7s delivered, American launches nonstop Royal Coachman transcontinental flights on May 20, provided by unnamed aircraft. Between May 24 and November 17, 9 DC-7s enter service: *Flagship Arkansas*, *Flagship Colorado*, *Flagship Wisconsin*, *Flagship Florida*, *Flagship Louisiana*, *Flagship Maine*, *Flagship Minnesota*, *Flagship Oregon*, and *Flagship Vermont*.

With the first officer at the controls and below minimums, a CV-240 with three crew and seven passengers collides with the ground while on approach to Owasso, Oklahoma, in bad weather on January 6, **1957** (one dead).

On January 14, a DC-7 flies from Chicago to Boston in a record average speed of 425 mph. Between March and May, 5 DC-7BFs are delivered for all-cargo operations. Between May 24 and August 18, 4 more DC-6As enter service: *Airfreighter Arkansas*, *Airfreighter Colorado*, *Airfreighter Wisconsin*, and *Airfreighter Florida*. Meanwhile, during the same period from June 8 to August 7, the first DC-7B passenger liners are delivered and christened *Flagship Idaho*, *Flagship Utah*, and *Flagship Nevada*. They are accompanied by 3 unnamed DC-7BFs.

The carrier begins to replace its Convairliners on the Boston to New York service on August 25 with DC-6Bs and to place DC-7Bs on all of its transcontinental flights. The *Airfreighter Louisiana* arrives on September 13, followed by the *Airfreighter Maine* on October 22. Another DC-7B, the *Flagship Georgia*, arrives on October 25. The final 3 DC-6As, *Airfreighter Minnesota*, *Airfreighter Oregon*, and *Airfreighter Vermont*, enter service between November 2 and November 17. On November 9 and 16, 2 more DC-7Bs, *Flagship Nebraska* and *Flagship New Hampshire*, are delivered.

Later renamed the Flight Service College and then the Learning Center, the American Airlines Stewardess College is dedicated and opened on November 21 on the 40-acre wooded tract between Dallas and Fort Worth, purchase option for which was won in the famous 1954 gin rummy game. Mildred Alford is named the first director and, on the

same day, the final DC-7B *Flagship North Carolina* enters revenue operations. Orders are placed for 10 Boeing 720s, which the carrier labels B-707-023s. Chicago to Mexico City flights, suspended in 1946, begin on December 31.

The fleet at the beginning of 1958 comprises 201 aircraft: 58 CV-240s, 58 DC-7s, and 85 DC-6/-6Bs. Orders are placed for 25 CV-600s (later renamed CV-990s) in August. Contracts are now signed with the aircraft broker Galeo for the sale of 25 DC-7s and 20 CV-240s. An application to the CAB for a 15% rate increase is reduced to 4%, largely because of the airline's earlier reduction of its 50% family fare to 33%. A request is made of the CAB for nonstop New York–San Francisco authority.

The landing gear of a CV-240, with three crew and five passengers, is retracted before the aircraft has lifted off the runway at New Haven on March 1, causing the aircraft to slide on its belly for some distance; although the plane is wrecked, there are no fatalities.

In the largest single aviation fuel order to date, the company contracts for the delivery of four billion gallons of aviation kerosene for its new jetliners. With a provisional certificate title posted next to its forward passenger door, the company's first B-707-123, N7509A, makes a predelivery flight from Washington State to New York (IDL) on October 28. The jetliner is also flown to Tulsa, where it is reviewed at the Maintenance and Engineering Center, which now becomes the first commercial-jet maintenance base in the U.S. The jetliner will be returned to Boeing toward year's end to be prepared for its official redelivery to AA during the following March.

The first L-188 Electra is delivered on November 27 and is christened *Flagship New York*. ALPA pilots go out on strike on December 19 over a union demand that flight engineers aboard turbine aircraft (jetliners) be pilot qualified.

The ALPA pilots' strike is settled by compromise on January 9, 1959; the carrier agrees to have three pilots and a flight engineer on its jetliners. L-188A Jet-Powered Electra *Flagship* services are inaugurated New York to Chicago on January 23. Electra flights are begun to San Francisco on January 25, the same day the carrier becomes the first to inaugurate regularly scheduled U.S. domestic turbojet trunk line service, which will initially overshadow the introduction of the new turboprops.

Luxuriously outfitted with 58 first-class seats, Flight 2, the Boeing 707-123 *Flagship California* piloted by Capt. Charles Macatee makes the premier Los Angeles to New York Stratoliner run in a record 4 hours, 3 min., shrinking the country, in terms of time in flight, by half. Capt. Hamilton Smith flies a simultaneous B-707-123 westbound inaugural (Flight 7) in a record 6 hrs. 33 min. His aircraft becomes the first jetliner to arrive at LAX. Among the 112 passengers are President C. R. Smith, actress Susan Hayward, and poet Robert Frost.

The day's achievements make AA the second carrier to provide Stratoliner service in the U.S., the first to offer it with its own rather than leased aircraft, and the first to operate transcontinental jet service.

On February 2, the carrier announces that it will spend \$4.25 million to convert 10 DC-7s to cargo craft, giving it the world's fastest cargo service and doubling its freight capacity. The next day, on approach to New York (LGA) from Chicago with 72 aboard Flight 320, the L-188A *Flagship New York*, with 5 crew and 68 passengers under the control of its automatic pilot, crashes into the East River (65 dead).

The first Electra crash is also the quickest fatal accident for a new airliner type, occurring as it does just 11 days after the plane's delivery. A second New York to Los Angeles roundtrip is inaugurated on February 15. This service is carefully depicted in Martin Caidin's *Boeing 707* (Ballantine Books, 1959).

New York to Detroit Electra flights are initiated on February 21. Five days later, a B-707-123 flies from New York to Los Angeles in a record 5 hrs. 7 min. The seventh B-707-123 *Flagship Maryland* is delivered on February 27.

Having accidentally descended below minimum altitude while on a second ILS approach to Chicago on March 15, a CV-240 freighter with two crew strikes a steel tower, crashes into a rail yard, and skids across

the tracks before coming to rest. Although the plane must be written off, neither pilot is killed.

The *Flagship Maryland* is followed into company hands by the *Flagship Texas* (N7509A, which had made the predelivery flights the previous October) and *Flagship Virginia* on March 16. New York to San Francisco via Chicago Stratoliner service begins on March 22.

Another B-707-123 cuts the transcontinental time from New York to Los Angeles to 4 hrs. 46 min. on April 15. B-707-123 flights commence from Chicago to Los Angeles on April 26. Also in April, the L-188 *Flagship Tulsa* makes a predelivery appearance at the convention of the World Congress of Flight at Las Vegas.

On June 1, Boston to Los Angeles B-707-123 frequencies are initiated. A Baltimore–Los Angeles record of 4 hrs., 35 min. is established by a B-707-123 on June 7, the day flights commence to LAX from Friendship Airport.

George Marion Sadler joins William J. Hogan, George Spater, and Orval "Red" Mosier as executive vice presidents. Manly Fleischmann, Francis H. Burr, Jim Aston, and former **Trans World Airlines (TWA)** President Carter Burgess join the board of directors. George Spater is named executive vice president and general counsel.

Stratoliner service is begun on July 12 from Dallas (Love Field) to New York. En route from Los Angeles to New York with 120 aboard on July 18, a B-707-123 warns Idlewild Airport that it has lost hydraulic power. The airport is sealed off and the media warns people to stay away. In something of an anticlimax, the plane lands safely without a single injury.

A B-707-123, with 98 aboard, skids 7,000 feet after losing its nose-wheels during an August 11 Chicago landing. Three days later, Stratoliner flights are inaugurated from Dallas (Love Field) to Los Angeles. While on a training flight from Calverton–Peconic River Airport in New York State on August 15, a B-707-123 with five crew develops excessive yaw that causes an unintentional roll at too low an altitude for recovery; there are no survivors. B-707-123s begin two new routes on August 21. The first is from Dallas (DAL) to Chicago, while the second runs from San Francisco to Boston via Chicago.

Transcontinental, nonstop DC-7F Airfreighter service begins on October 1 and, a month later, on November 1, nonstop B-707-123 New York to San Francisco flights start. On November 5, AA and IBM announce joint development of a Semi-Automated Business Reservations Environment reservations system—SABRE. Fort Worth becomes a Stratoliner departure point on December 20, with a new service to Los Angeles.

During the year, American is the first airline to offer transcontinental freight service in the cargo compartments of passenger jetliners.

With Vice President Richard M. Nixon aboard, a B-707-123 flies from Los Angeles to Baltimore on January 3, 1960 in a record 3 hrs. 39 min.

A company DC-6 nearly collides with a United DC-7 over Ohio on February 5, but on February 25, an L-188A with 27 aboard crashes at Chicago on takeoff, injuring all aboard. The new AA terminal at Idlewild Airport is opened in February. It features a block-long stained glass facade across the front of the building; designed by Robert Sowers, it is believed to be the largest expanse of stained glass in the world.

A propeller on an L-188A malfunctions during a Chicago landing on March 9 causing the aircraft to crash. The next day another Electra is damaged when it turns into an unseen snowbank while taxiing at New York. The landing gear of a DC-6 collapses during a Baltimore landing on March 16 while a DC-6B is substantially damaged while landing at Syracuse eight days later. By the end of the month, all 35 Electras have been received.

With the **Capital Air Lines–United Air Lines** merger of June 1, AA is no longer the nation's largest airline. Executive Vice President Sadler is now also appointed general manager.

Nonstop Philadelphia to Los Angeles Stratoliner service is inaugurated on June 8. A B-707-123 makes a bad landing at Dallas on June 19 that results in substantial damage to the jetliner. Developed for AA, the first B-720-23B makes its maiden flight on June 22. On July 24, the

company acquires a pair of B-720-023s (B-720As), which it continues to title as "707 (Model 720) Jet Flagships." The first is christened *Flagship Mississippi*.

The Model 720-023s launch service on July 31 from Cleveland to Los Angeles via Memphis and St. Louis. The stop at Memphis marks the introduction of jetliner service to that city. Simultaneously, Chicago to Los Angeles via Denver B-707 service is also begun. The initial SABRE computer center is established at Briarcliff Manor, New York, and the American Airlines terminal at New York (IDL) is opened.

New York to San Diego via Chicago and Phoenix service begins on August 27. During landing at Washington National on September 11, the copilot of a CV-240 inadvertently actuates the gear lever to the up position after touchdown, resulting in substantial damage to the aircraft.

Flight 361, the Lockheed L-188A *Flagship Phoenix* with 6 crew and 76 passengers arriving from Boston, crashes and burns on a shortened runway at New York (LGA) on September 14; fortunately, both crew and passengers escape without injuries.

Wearing American colors, the first B-720-023B makes its maiden flight on October 6. The nosewheel of a DC-6 collapses upon its landing at Newark on October 7.

The carrier sends a letter to its passengers on October 18 stressing, in the wake of a drop in passenger volume, the safety of the Electra. The nosewheel of a B-707-123 collapses during the plane's landing at Fort Worth on October 25. A month later, on November 16, it is found necessary to begin an active public relations campaign to rebuild public confidence in the Lockheed turboprop.

While on a training flight from Idlewild Airport on January 28, 1961, Flight 1502, a B-707-123 with 6 crew, crashes 8 km. W off Montauk Point, Long Island; there are no survivors.

Even before receiving government certification a month later, the company's first B-707-023B (B-720B) is delivered on February 3. American is one of seven carriers struck by the Flight Engineers International Association (FEIA) on February 8. The job action ends six days later when President John F. Kennedy appoints a special commission to resolve the strike's issues.

The first of 10 turbojet-powered B-707-23Bs (B-720Bs) to be received and nicknamed "707 Jet Flagships" by the airline, enters service on March 12; 15 more will be received with turbofan power plants, while the earlier B-720-023s will soon all be refitted. The inaugural flight, between New York, Chicago, and Mexico City, is the world's first B-720B service.

The company's earlier B-707-123s now also commence conversion to fan-jets, beginning with *Flagship California* (the first Boeing jetliner received by the company); the type, like the B-720B, will be marketed as "Astrojets."

The last DC-6A, *Airfreighter Boston*, is sold to **World Airways** on April 7; since February of the previous year, six of the all-cargo aircraft have passed to that supplemental. The CAB's finding in the southern transcontinental route case is announced on June 11, making AA's interline arrangements with **National Airlines**, **Delta Air Lines**, and **Continental Airlines** unnecessary.

On June 25, new all-first-class service is introduced between New York and Los Angeles. A B-707-123 with 52 aboard makes a hard, bouncing landing at Los Angeles on July 29, injuring all aboard to some degree. A contract for 25 B-727s is signed on August 10.

A B-720B with 71 aboard overshoots the runway at Logan International Airport on September 24 and skids into Boston Bay; all of the crew and passengers are saved, although one rescuer dies of a heart attack.

The former DC-7 *Flagship New York* is sold to the FAA on October 1; a week later, it is passed to the U.K.'s Royal Aircraft Establishment for blind landing experiments. A B-707-123B, with 99 aboard, crashes at Chicago on October 20 while another B-707-123B flies from San Francisco to New York on October 25 in a record 4 hrs. 29 min. On December 7, a B-720B flies from Los Angeles to Baltimore in a record 3 hrs. 32 min.

The first CV-990 Coronado is finally delivered on January 12, 1962. The Convair jetliners will be the first since the DC-3 not to be labeled Flagships and named after cities or regions. Instead, they will be marketed as Astrojets.

While taxiing in icy conditions at Chicago on January 20, a CV-240 with 35 aboard collides with a **United Air Lines** DC-7; no injuries are reported. Six days later, a DC-7 freighter's nose gear collapses at Detroit. Also in January, AA and **Eastern Air Lines** file a joint merger petition with the CAB; all other carriers oppose the union. The second CV-990A arrives on February 9 and operations are begun at Chicago (ORD).

Flight 1, a B-707-123 with 8 crew and 87 passengers suffers a rudder control system malfunction during its initial climb away from New York (IDL) on a March 1 flight to Los Angeles. Unable to recover from the resulting roll, the jetliner crashes into Jamaica Bay and there are no survivors. The company's first fatal scheduled service jetliner crash is labeled the fifth worst disaster in commercial aviation history and the one with the highest single-plane loss of life in U.S. aviation history to date.

Six days later, the right main landing gear of a DC-6 with 56 aboard fails as the plane is landing at Buffalo.

Following modification, CV-990A service is begun on the New York to Chicago route on March 18. The westbound flight requires 2 hrs. 10 min. while the eastward route is flown in 1 hr. 48 min.

Between March 20 and June 29, 10 additional CV-990As are delivered. During the same period, curbside baggage check-in by skycaps is introduced at Los Angeles, Chicago, San Francisco, and New York. By year's end, it is implemented systemwide. Also, as the result of overcapacity the company begins to reduce its Electra fleet.

Executive Vice President Orval "Red" Mosier retires on July 1.

The Distance Measuring Equipment (DME) navigation device is installed aboard all aircraft and orders are placed for 4 B-707-320C freighters. The final 4 CV-990As to be delivered on the year arrive between July 1 and 21.

All 5 crew and 67 passengers are safe after Flight 414, an L-188A, makes a bad landing in a rainstorm in Knoxville on August 6 and skids off the right side of the runway.

A B-720B, piloted by Capt. Gene Kruse, establishes a new east to west transcontinental record on August 15 for both speed and time between two U.S. cities made by a commercial airliner on a regularly scheduled commercial route. His Boeing travels the 2,474 miles from New York to Los Angeles in 4 hrs. 19 min. 15 sec., and that record still stands at the time of publication of this volume.

As part of planning for an extensive PR campaign, the airline purchases the Ford Tri-Motor 5-AT-39 in September.

Restored to flying condition, the 5-AT-39 participates in dedication ceremonies for Washington, D.C. (IAD) on November 17. When the airport opens for commercial traffic two days later, the trimotor is the first aircraft to depart. Also in November, company-wide installation of the first SABRE system is initiated with a cutover at Hartford.

During the year, the Gray Eagles association of retired pilots is formed and Electra/DC-6 Captain's Deluxe shuttle service is started, New York-Boston, in competition with **Eastern Air Lines**.

Recently retired stewardess Sherry Waterman publishes her recollections of service with the company in 1949-1956, *From Another Island: Adventures and Misadventures of an Airline Stewardess* (Philadelphia: Chilton, 1962).

Three additional CV-990As join the fleet between January 18 and February 8, 1963. The DC-7B *Flagship Nebraska* is damaged at Oakland on March 16 when its nose wheel collapses after landing; it will be written off. The last Coronado is received on March 21 and an Electra, with 57 aboard is forced to dive sharply to avoid a USAF jet fighter near Syracuse on April 9.

A B-707-123, piloted by Capt. Wylie H. Drummond, establishes a new west to east transcontinental record on April 10 for both speed and time between two U.S. cities made by a commercial airliner on a regularly scheduled commercial route. His Boeing travels the 2,474 miles

from Los Angeles to New York in 3 hrs., 38 min. At the time of publication of this volume, the record still stands.

The CAB rejects the AA-EAL merger petition in April and, on May 30, a CV-990A is destroyed in a hangar fire at Newark Airport.

An Electra, with 56 aboard, encounters severe turbulence near Chicago on June 8, which results in serious injury to a flight attendant. Turbulence is also met by a B-720B with 139 aboard near Litchfield, Michigan, on June 28 and another stewardess is hurt.

The turbulence associated with a thunderstorm causes one flight attendant aboard an L-188A, passing over Bradford, Pennsylvania, with 76 aboard on July 2, to be slightly hurt. The company's \$65-million fuel bill is now equal to all revenues received in 1946.

During the year, the famous orange aircraft rudder and aileron paint, first introduced nearly 30 years earlier, is removed from all flight equipment. Also, company headquarters are transferred from Park Avenue to 633 Third Avenue, New York City.

American's pilots defect from ALPA to form an independent company union, the Allied Pilots Association. On July 17, orders are placed for 15, later 30, British Aircraft Corporation (BAC) 1-11-401 Astrojets. The restored Ford 5-AT-39 begins two years of promotional tours in connection with the introduction of the new Boeing 727-123s, the first of which is delivered in September. The old Tri-Motor will visit 32 states and Canada and be viewed by an estimated three million people. During the remainder of the year, the Ford visits 73 cities and makes 156 courtesy flights during which 1,000 people are transported.

A B-707-123 with 95 aboard must make a drastic dive northeast of Phoenix on September 23 to avoid a midair collision; one flight attendant is seriously hurt. The first of what will become a large number of Flagship Inn hotels is purchased and, on October 27, an eastbound-only CV-990A service begins from San Francisco to New York; at 2,587 miles it is the airline's longest scheduled segment. An L-188A flies from Chicago to Washington, D.C. on December 20 in a record 1 hr. 14 min. 15 sec.

In something of a footnote to the year, American female flight attendants are provided with the first washable double-knit uniform separates; the red, white, or blue clothing does away with the previous need to dry clean stewardess uniforms.

Enplanements during the 12 months total 8,448,000 and net profits are \$23.3 million.

George Marion Sadler is named president in January 1964. Airline employment at the beginning of the year totals 23,678. During the year, the company will introduce a new livery that will be known, unofficially, as either the "lightning bolt" or "naked nose" scheme.

The last passenger service by a DC-7, *Flagship Wyoming*, arrives at St. Louis on February 14; there, in ceremonies, it is donated to the National Museum of Transport. Also in February, 10 of the 15 BAC 1-11-401s on option are converted to full orders. The DC-6B *Flagship Oklahoma City* is sold to **Hawaiian Airlines** on April 9.

New York to Chicago Boeing 727-123 service begins on April 12. Beginning the same day, the promotional tour of the restored Ford 5-AT-39 is resumed, each city visit timed to coincide with the arrival of the new "three-holer" jetliner. During the year, the old Tri-Motor will visit 117 communities in both the U.S. and Canada and fly 3,400 passengers on 430 courtesy flights. Cleveland to New York flights begin in May, providing two-carrier competition in a major market.

The last CV-240 flight is made on June 30, Syracuse to Memphis via Rochester, Buffalo, Cleveland, Columbus, Dayton, Cincinnati, Louisville, and Nashville. The aircraft is retired during July 1 ceremonies. The same day, a B-720B with 12 aboard crashes after landing at New York's international airport; injuries are slight. Representative James Roosevelt, his wife and two sons fly from Washington, D.C. to the Democratic National Convention at Atlantic City in August aboard the 5-AT-39; the trip recreates the electrifying arrival of Franklin Roosevelt in Chicago in 1932.

Company-wide installation of the first SABRE computerized reservations system, the largest electronic data processing system then in business use, is completed with a cutover at Cleveland on September 15. The

telecommunications network of the SABRE system now extends from coast to coast and from Canada to Mexico; it is the world's largest real-time data processing system, second in size only to the U.S. government's SAGE system.

During the fall presidential campaign, a new B-727-123 is leased to the Republican National Committee for Senator Barry Goldwater. At the same time, an L-188A, wearing the titles "H.H.H. The Happy Warrior," is leased to Vice President Hubert H. Humphrey as his campaign plane.

During the year, 16 new jetliners, including all 12 B-727-123s, are added and B-707Fs begin to replace piston-engine aircraft on the cargo side. On November 12, a B-707-123 with 66 aboard crashes at Nashville when its landing gear collapses after landing; injuries are slight.

Passenger boardings accelerate 12% to 9.6 million and freight traffic is up by 14.7%. Revenues advance to \$544 million and the net profit skyrockets 70% to \$33.4 million.

The workforce is 25,546 in 1965 and the fleet now includes 171 aircraft: 27 Boeing 707-123s, 22 B-720s, 29 B-727-123s, 7 B-707-323Cs, 1 BAC 1-11-401, 18 Convair CV-990s, 7 DC-7s, 24 L-188As, and 36 miscellaneous piston types. Orders remain outstanding for 29 BAC 1-11-401s, 31 B-707-323Bs, 13 B-727-123s, 22 B-727-223s, and 8 B-707-323Cs.

A second Ford Tri-Motor, 5-AT-74, is purchased in February and employed as a static display at the New York World's Fair. Interestingly, this example of past glory is parked next to a symbol of the future, the New York City Port Authority Heliport.

A B-707-123 with 95 aboard is caught in a hailstorm at 26,000 ft. over Dyess AFB, Texas, on May 9 and is severely damaged before it can make a safe emergency landing. Three days later, another B-707-123 with 126 aboard fails its takeoff when its left landing gear collapses; again there are no injuries.

Hail again strikes a B-707-123B, this time at 31,000 ft. over Texarkana, Arkansas, on July 7. AA now moves to keep two helicopter airlines, providing feed, alive. The first is **San Francisco & Oakland Helicopter Airlines**. Funds are provided on July 14 and SFO transfers its Sikorsky S-61N operation to the major's concourse at San Francisco. An application is made with the CAB for Hawaii and Japan authority.

In an early effort at a coordinated commuter network, the company provides gate facilities at New York's three airports for five small regionals from the local region that are providing feed under the confederated name of Metro Air Service: **Air Taxi Company, Chatham Aviation, Princeton Aviation Corporation, Mac-Aire Aviation Corporation, and Mid-Hudson Airlines**.

On October 10 and 19, two CV-990As are sold to **Lebanese International Airways, S.A.L.** Also in October, the 5-AT-74 is withdrawn from the New York World's Fair grounds and returned to the AA base at Tulsa for storage.

At Hurn, England, on November 4, the company's first BAC 1-11-401 makes its maiden flight.

Coming in for a landing at Greater Cincinnati Airport on November 8 after a flight from New York (LGA), Flight 383, a B-727-23 with 6 crew and 56 passengers, strikes a hill on the bank of the Ohio River 3 km. N of its intended runway, skids 300 m. through brush into a line of trees, and bursts into flame (58 dead). This is the first fatal crash of the new trimotor.

The new BAC 1-11-401 is flown to the U.S. on November 17 to begin a 17-day demonstration tour, during which it will be flown 68 times before executives from 7 airlines and 22 companies. A B-707-323B flies from Los Angeles to Washington, D.C. on November 24 in a record 3 hrs. 22 min. 21 sec.

The BAC 1-11-401 completes the first portion of its North American tour on December 4 and is turned over to AA the next day for use in pilot familiarization during the remainder of the month.

The first two owned BACs depart England for the U.S. on December 22-23, arriving on Christmas Eve.

Also in December, the airline joins with **United Air Lines** to assume, with CAB blessing, control of **Los Angeles Airways** through the

assumption of the helicopter carrier's outstanding \$3.2 million loan. Twelve additional jetliners are ordered.

Enplanements this year are 11,029,573. Revenues climb 12.6% to \$612,435,000 and profits climb 18.5% to \$39.6 million.

On February 16, 1966, a B-707-323B with 111 aboard dives 2,000 feet near Newark Airport to avoid a small private plane; one stewardess is injured.

A year behind schedule, BAC 1-11-401 Astrojets finally enter service on March 6 over routes from New York to Toronto, Syracuse, Boston, Rochester, and Washington, D.C.

A \$260-million order is placed for 10 Boeing 747-123s; a total of 52 new jetliners will be delivered during the year.

With the other majors struck by their unions, AA is the only available transcontinental carrier for part of the year. While **Eastern Air Lines**, **National Airlines**, **Northwest Airlines**, **Trans World Airlines (TWA)**, and **United Air Lines** are grounded between July 8 and August 22 by the IAM strike, American pays them \$16.8 million as part of its responsibility under the airline mutual aid pact.

During the summer, the company circulates to manufacturers a request for a new wide-bodied aircraft that can compete with the Boeing Jumbojet.

En route from Chicago to San Diego on November 12, a B-727-223 with 78 passengers suffers an explosion in its rear luggage compartment. Only slightly damaged and with no injuries reported, the trijet is able to land at its destination. Police and FBI agents looking into the incident will discover that the blast has been caused by a bomb placed in the suitcase of a female passenger. Her husband, E. T. Cook, wishing her dead, had set the explosive while simultaneously purchasing a large life insurance policy. Cook will be taken into custody a week later, indicted, and tried for the attempted murder of his wife. Convicted, he will be sentenced to a long prison term.

The last of 30 BAC 1-11-401s is received on December 16. On December 17, a DC-6 undertakes the carrier's last piston-engine service, a ceremonial flight over Kitty Hawk, North Carolina. AA is now the first of the "Big Four" with an all-turbine fleet.

Revenues grow to \$727,712,000 and the net profit jumps 31.5% to \$52.1 million.

The employee population in 1967 is 32,854. The fleet now comprises 206 aircraft: 49 B-707-123s, 24 B-707-323CF, 22 B-720s, 52 B-727-123s, 30 BAC 1-11-401s, 9 CV-990As, and 20 L-188s. Orders remain outstanding for 4 B-707-123s, 23 B-707-323CFs, 5 B-727-123s, 41 B-727-223s and 10 B-747-123s.

Early in January, the first issue of American's in-flight magazine, *The American Way* (now *American Way*) is published. A CV-990A is sold to **Modern Air Transport** on January 4 while another is chartered to **Northeast Airlines** on January 20 for a year and a third passes to **Modern Air Transport** on February 3. In response to aggressive **Eastern Air Lines** shuttle competition, AA introduces BAC 1-11-401 Jet Express service on February 12 over its New York to Boston run. Astrojets depart New York (LGA) for Logan International Airport every hour on the half-hour, 16 times per day. A Coronado is sold to **Modern Air Transport** on March 13.

The B-720B delivered to the company on June 5 is the one thousandth jet airliner built by Boeing. New York-Washington Jet Express flights commence on July 1.

During the summer, President Sadler undergoes surgery; meanwhile, George A. Spater is named company vice chairman. Executive Vice President and Chief Financial Officer William J. Hogan retires shortly thereafter.

An expansion program is initiated at the Fort Worth Stewardess College; new buildings are added as is a Flight Academy for pilots.

The number of daily New York to Chicago roundtrip flights is increased from two dozen to 28 on November 15.

Customer bookings increase by 13.3% on the year to \$16,901,000 and freight traffic advances 41.8%. Revenues climb 15.6% to \$841,531,000, but net profits decline to \$48 million.

In January 1968 C. R. Smith is named U.S. Secretary of Commerce by President Lyndon B. Johnson and President Sadler resigns; the latter is succeeded by George A. Spater, a noted Virginia Woolf bibliophile. George Warde is named executive vice president and general manager.

A third Coronado is sold to **Modern Air Transport** on February 2 and on February 19 American becomes the first to order the Douglas DC-10-10, with a firm launch request for 25 "LuxuryLiners" (plus an equal number of options).

On March 27, the carrier introduces two new cargo containers shaped to fit the narrow rear section of the B-707-320CF, where only one container could be fit before. Forty more jetliners are delivered on the year and all remaining CV-990s are retired, including one more sold to **Modern Air Transport** and the remainder that pass to the Spanish cargo charter operator **Spantax, S.A. (Transportes Aereos)**.

The current color scheme is unveiled and new terminals are opened at Love Field (Dallas) and National Airport (Washington, D.C.) and others begin construction.

On September 13, American reaches tentative agreement with the backers and creditors of **Lebanese International Airways, S.A.L.** to put that line back into operation. The scheme comes to naught when Israeli commandos wreck the two Coronados previously sold to it and other aircraft at Beirut in late December.

The employee population is now 34,664. Customer bookings advance 15% to 18,355,000 and a total of 526.82 million freight ton-miles are flown. Revenues advance 13.7% to \$957,198,000.

At the beginning of 1969, the employee population numbers 36,994 and the fleet totals 247 aircraft: 57 B-727-123s, 41 B-727-223s, 22 B-720s, 48 B-707-323CFs, and 54 B-707-123/-323Bs.

CEO Spater is now elevated to the board chairmanship with Vice President Warde appointed president. During the first quarter, the company joins with McDonnell Douglas in a demonstration and evaluation of the French-made Breguet 941S, which the manufacturer proposes to sell as the STOL transport MD-188. For two months, the aircraft is tested on the company's northeast routes out of New York City and meets with no success.

Spater now contacts **Western Airlines** Chairman Terry Drinkwater in March to discuss a possible merger. Under terms of the White House and CAB findings of April 24, in the transpacific route case, AA is given authority to serve New Zealand, Fiji, American Samoa, and Australia. In August, the company, together with United Air Lines and Trans World Airlines (TWA) files a joint plan with the CAB, for a reduction in excess capacity.

AA becomes the first airline to mix computers with freight when it introduces FREIGHT SABRE, an air cargo version of the computerized reservations system. Former President Sadler is invited by his successor to become vice chairman of the board of directors and, in November following the U.S. national election, the former president turned commerce secretary, C. R. Smith, becomes a partner in the firm of Lazard Freres & Company. Late in the year, the company joins with Continental Corporation to acquire Reservations World for \$2.75 million.

En route from New York (LGA) to Dallas on December 28 via Chicago, Tulsa, and Oklahoma City, Flight 691, a B-727-223 piloted by Capt. Robert S. Ames, suffers the loss of two engines in-flight between Illinois and Oklahoma. After some minutes, both are restarted and the flight is completed.

Enplanements for the 12 months total 18,953,800. Revenues for the year top \$1 billion for the first time (\$1,032,830,000). Profits are \$62.83 million (operating) and \$38.46 million (net).

In January 1970, an application is filed with the CAB for permission to takeover O. Roy Chalk's **Trans-Caribbean Airways (TCA)**. In exchange for \$18 million in stock, a \$7 million loan, infusion of \$5 million to meet payroll during transition, and a long-term consultancy for Chalk, the major receives 8 less-than-desirable aircraft and access to the Caribbean. Only TCA's air transportation activities are included in the merger proposal; all nonairline operations will revert to TCA stockholders.

Beginning February 8, the carrier offers a special postal cachet commemorating the inaugural flight of its B-747-121 from New York to California and on February 11 the *Clipper Ocean Pearl*, which will perform that feat, arrives under charter from **Pan American World Airways (1)**. The first Jumbojet transcontinental service occurs on March 2 and beginning on March 29 is expanded through the introduction of a second leased **Pan American World Airways (1)** B-747-121, the *Clipper Black Sea*.

Despite the removal of Drinkwater as **Western Airlines's** chairman on April 23, AA Chairman/CEO Spater continues merger discussions, primarily with board member and financier Kirk Kerkorian.

En route from Chicago on May 25, an Astrojet, Flight 206, lands at New York (JFK), transfers its 66 passengers to a waiting bus, refuels, and flies to Havana on orders of a hijacker, who remains in the rear galley with a stewardess hostage, relaying orders by intercom. The man, who never shows a weapon, had taken over the plane an hour out of Chicago and the passengers remained completely unaware of the hijacking until deplaned in New York.

The *Clipper Ocean Pearl* is returned to **Pan American World Airways (1)** at month's end.

Company executives in June meet with those from **United Air Lines** and **Trans World Airlines (TWA)** and iron-out a reduction in the total number of transcontinental flights operated by the three. The CAB grants them a one-year exemption for this "capacity control" agreement that, otherwise, would have been illegal under antitrust laws. In addition, the "Big Four" plan a jointly owned computerized reservations system for the travel industry, but the ATARS concept is quickly dropped when the U.S. Department of Justice (DOJ) threatens to file suit against the carriers under the Sherman Antitrust Act. The company's first owned Jumbojet, a B-747-123 Astroliner, arrives on June 18; it is followed by two more on July 16 and 30, respectively.

Transpacific flights to Hawaii, American Samoa, Fiji, New Zealand, and Australia are inaugurated in August while one of the Jumbojets leased from Pan Am is involved in an accident at San Francisco on September 18. A new flight academy is opened at Fort Worth and two new hotels are added to the Sky Chef system during the fall. The *Clipper Black Sea* is returned to **Pan American World Airways (1)** during October and, on November 2, the carrier announces a plan to merge with **Western Airlines**.

On December 30, presidential approval is received for the takeover of **Trans-Caribbean Airways (TCA)**, 7 B-727-1A7Cs, several DC-8s, and its route structure. The company and Continental Corporation liquidate the business of Reservations World in December, a year after its joint acquisition.

During the year's second half, 7 additional B-747-123s join the fleet and, on December 31, a B-720B is sold to **Middle East Airlines (2)**, **S.A.L.** Despite all of this activity, the workforce is cut 4.8% to 35,300.

Passenger boardings climb a modest 2.3% to 19.4 million and cargo traffic accelerates 9.3%. Although \$1.12 billion in income is received, it cannot be balanced against \$1.14 billion in expenses. Consequently, operating (\$15 million) and net (\$26.39 million) losses are taken.

A B-707-323B arriving from San Francisco on January 10, 1971 collides over Edison, New Jersey, with a **Linden Flight Service** Cessna 150 while on landing approach to Newark Airport. Although the jetliner suffers a damaged hydraulic system and lands safely, both occupants of the small plane are killed. The carrier's board approves a merger agreement with **Western Airlines** on January 30.

The L-188A *Flagship Cincinnati* is sold out of service on February 1, the last of 35 Lockheed turboprops to be retired. The 11th B-747-123 arrives on February 26.

On March 1, AA begins flying from New York to the Caribbean destinations of Haiti, Curaçao, Aruba, the U.S. Virgin Islands, and San Juan over the old **Trans-Caribbean Airways (TCA)** route. Officials announce later in the day that in an effort to attract more passengers, it will remove 40 seats from its Jumbojets to provide a cocktail lounge with a stand-up bar for economy-class passengers.

On March 2, the company introduces Coach Lounge service and, on March 8, effective back to March 1, the merger with **Trans-Caribbean Airways (TCA)** is officially consummated. On March 19, shareholders of AA and **Western Airlines** agree to join forces; as in the earlier proposed merger with **Eastern Air Lines**, opposition from the rest of the industry is nearly unanimous.

Between April 16 and June 25, 5 more B-747-123s join the fleet, completing the 16-plane order.

Los Angeles Airways, for which AA has assumed part of a \$3.2-million loan agreement, is sold to **Golden West Airlines** in July. On July 29 in Long Beach ceremonies, the first DC-10-10 is received; the FAA certifies the plane the same day.

Employing the launch aircraft received just a week earlier, American inaugurates the world's first DC-10-10 service on August 5 over the Los Angeles-Chicago run. In the process, the carrier becomes the first to fly cargo in the Douglas wide-body. The inaugural preempts premier transcontinental introduction of the type by **United Air Lines** by 11 days.

With Frank Sinatra Jr. providing the entertainment, the first B-747-123 stand-up piano bar is inaugurated on the August 25 Los Angeles to New York flight.

Sky marshals and Wayne County, Michigan, police arrest B. Pliskow at Detroit Metropolitan Airport on September 24 for allegedly attempting to hijack Flight 124, a B-727-223 with 76 passengers preparing for departure to New York. The woman wielding a pistol and dynamite to force the release of two imprisoned Black Panthers will eventually receive probation.

A one-year excess capacity reduction agreement becomes effective with **Eastern Air Lines** and **Trans World Airlines (TWA)** six days later.

En route from New York to Puerto Rico with 236 persons aboard, including 3 sky marshals and an FBI agent, Flight 98, a B-747-123 is hijacked to Cuba on October 25 by one A. L. Casaus, who holds a gun to the head of a stewardess. Cuba detains the Jumbojet and those aboard for three days. When Casaus returns to the U.S. in 1978, he will be taken in hand by police, tried, and sentenced to three years in jail.

Flight 47, a B-707-323B with 85 passengers and en route from Chicago to San Francisco on December 26, is captured by a lone assailant employing a knife, a gun (toy), and a bomb (fake). The man demands a ransom of \$200,000 and a flight out of the country, but is overwhelmed by the crew and turned over to police after the Strato-liner reaches its destination. He will be tried and sentenced to prison for three years.

Former supervisory mechanic Paul Kent establishes the American Airlines Museum in a room on the lower level of the Tulsa's airport terminal building at the end of the year. Enplanements this year are 11,338,800 and a \$3-million net profit is reported.

The DOJ objects to the planned AA-**Western Airlines** merger in January 1972 while retired NBC newsman Chet Huntley is named the carrier's television ad spokesman on March 5. Two stewardesses and the plane's captain are injured in the June 10 explosion of an oxygen flask aboard a B-727-223 at New York (LGA).

On June 12 over Windsor, Ontario, just after takeoff from Detroit, an explosion rips a gaping hole in the fuselage of a DC-10-10 piloted by Capt. Bryce McCormick. Believed at first to be caused by a bomb but later traced to decompression, the Douglas with 67 aboard on continuation of its Los Angeles-New York flight loses its rear cargo door (to a design flaw), but is landed safely by its crew using the engine throttles alone.

Interestingly, this aircraft is one of six that had originally been ordered by Mitsui for lease to **All Nippon Airways Company, Ltd. (ANA)**. When that lessor cancels and turns to the Lockheed L-1011 (in a case that will result in a famous bribery scandal), the DC-10s are placed elsewhere, including another that will go to **THY (Turk Hava Yollari, A.O.)** and crash on March 3, 1974.

The last CV-990A is sold to **Spantax Airlines, S.A.** on May 18.

On June 24, armed with a submachine gun, M. J. McNally, a 28-year-old unemployed veteran, hijacks Flight 119, a B-727-223 en route from St. Louis to Tulsa with 94 aboard, and orders it to return to Lambert Field, where he allows 80 passengers to disembark. St. Louis businessman D. J. Hanley, in an attempt to thwart the hijacking, drives his automobile head-on into the landing gear. Meanwhile, McNally receives \$502,000 in ransom and five parachutes. The plane, still operable, takes off for an undisclosed location. Over Peru, Indiana, the hijacker bails out; law enforcement officials begin a search after a 75-foot trail of blood, the submachine gun, and the ransom money are found on a local farm. On June 27, federal officials issue a warrant for businessman Hanley, who is in a St. Louis hospital, charging him with "interference with an aircraft." The next day, the farmer who found the ransom turns down a \$20,000 reward from AA as "insufficient." FBI agents capture McNally at Wyandotte, Michigan, on June 29. He will be tried and sentenced to prison for life.

FBI agents arrest 23-year-old Charles Smith on July 5 at Greater Buffalo Airport after he allegedly holds his 18-month-old daughter hostage at knifepoint aboard a B-707-323B and threatens to kill her unless he is flown to a foreign country. After two hours of discussion, Smith surrenders. He will receive a five-year probationary term.

M. M. Fisher hijacks Flight 633, a B-727-223 with 57 passengers en route from Oklahoma City to Dallas on July 12, demanding parachutes and a \$550,000 ransom. The pirate surrenders to FBI agents at Oklahoma City, after receiving a \$100,000 ransom and parachutes, but loses his nerve to bail out on the return flight to Oklahoma. Like skyjacker McNally, he, too, will be tried and receive a life prison sentence.

The CAB rejects the **Western Airlines** merger application on July 28.

En route from Baltimore to New York, with 20 aboard on August 19, a B-727-123 is able to land safely at Kennedy Airport after the failure of its landing gear.

The joint AA-**Eastern Air Lines-Trans World Airlines (TWA)** excess capacity reduction program expires on September 16.

On September 22 the company sends a telegram to the Democratic National Committee notifying it that its air travel credit has been terminated because of the Committee's failure to pay its overdue flight bills; CAB regulations prevent other airlines from offering the Democrats credit until American is paid.

A front landing gear malfunction causes a B-707-323B with 86 aboard to skid off the runway at Buffalo on September 29.

The SABRE computerized reservations system is expanded during the fall.

Following its final flying appearance at a transportation exposition at Dulles International Airport, the company's promotional Ford 5-AT-39 is given, in an October ceremony, to the Smithsonian Institution for eventual display in the National Air and Space Museum, then under construction. At the same time, the 5-AT-74 is sold to a private collector and the last BAC 1-11-401 is retired.

Losing \$12 million per year, the Flagship Inn hotel chain is renamed Americana. Thrice-daily nonstop flights between Newark and Detroit begin on November 19 and, in late December, a combination of bad weather and slowdowns by unhappy ALPA pilots conspire to cause the cancellation of hundreds of flights.

D. L. Coleman unsuccessfully attempts to hijack a B-707-323B en route from San Francisco to Chicago, to Havana on December 26.

Now the world's largest operator of wide-bodied aircraft, with 16 Jumbojets and 25 DC-10-10s, American completes the year still working out the difficulties that come with such a large fleet modernization. The fifth DC-10-10, delivered on December 8, is actually the prototype reregistered.

The workforce is now 35,197. Passenger boardings swell 4.5% to 20,616,000 and freight ton-miles flown rise 7.5% to 561 million. On revenues of \$1.35 billion and expenses of \$1.30 billion, a \$41.18-million operating profit is realized. The net profit climbs to \$5.63 million.

The employee population in 1973 numbers 37,631.

In late winter, the major trades its authority to fly from Tucson and Phoenix to San Diego to **Frontier Airlines (1)** for that local service carrier's Dallas (DFW) to Albuquerque route.

On February 1, American elects not to exercise its option for the purchase of the Anglo-French Concorde. This follows the cancellation of the U.S. Supersonic Transport project, the cost overruns in the European project, and the cancellation of Concorde orders by **Pan American World Airways (1)** and **Trans World Airlines (TWA)** the day before.

En route to Oklahoma City for repairs, a B-707-323C, with a three-man crew, crashes during takeoff from Denver on March 5; no injuries occur.

Robert Crandall, Bloomingdale's senior vice president/treasurer and former **Trans World Airlines (TWA)** assistant treasurer becomes senior vice president of finance in April. The same month the pilots' slowdown ends and it is calculated that the job action has cost the airline not only between \$10 and \$20 million, but much of its competitive edge.

U.S. prosecutors drop charges against D. J. Hanley on June 4. The St. Louis businessman who attempted to halt R. J. McNally's hijacking (McNally received two life terms on May 14) of a company airliner the previous year, is now permanently disabled.

In July, Chairman Spater informs the board that AA has illegally provided \$75,000 to Richard Nixon's 1972 campaign. Believing that the gift would bring favorable CAB consideration in the future, the AA chief becomes one of the first casualties of the Watergate affair.

Following the resignation of Board Chairman/CEO Spater on September 18, C. R. Smith, now a limited partner in the New York investment firm of Lazard Freres & Co., returns on an interim basis while a replacement search is undertaken. President Warde also resigns; meanwhile, the CAB examines a proposed route swap with **Pan American World Airways (1)** and authorizes American to suspend its South Pacific services.

On October 18, reacting to the government's mandatory jet fuel allocation plan, the carrier joins with **Trans World Airlines (TWA)** and **United Air Lines** in announcing that effective November 1, the three will eliminate 44 daily flights in an effort to save 6.6 million gallons of fuel per month.

On November 28, a company communiqué notes that, due to the fuel crisis, 96 daily flights have been cancelled and that as of January 1, 214 of its 3,700 pilots will be laid off. A new Bill Blass-designed wardrobe for flight attendants is unveiled in December.

During the year a B-747-123 is leased by Universal Pictures. Painted in the colors of the fictional Columbia Airlines, it will be employed in the filming of the motion picture *Airport 1975*, starring Charlton Heston, George Kennedy, and Karen Black.

Customer bookings grow 4.5% on the year to 21,534,000, but cargo traffic drops 2.1%. On revenues of \$1.47 billion and expenses of \$1.61 billion, the carrier has an operating loss of \$36.17 million. A \$48.2-million net loss is taken as employee morale sinks.

Continuing cutbacks in the supply of avgas requires the company, beginning on January 2, 1974, to cancel approximately 16 of its 1,000 daily departures and to suspend flights between New York, Detroit, and Knoxville; orders for 25 DC-10-10s are also cancelled. In a further effort to conserve fuel, 10 B-747-123s are grounded on January 7.

On February 15, the CAB orders the carrier to eliminate its arbitrary criteria for membership in its Admirals Club and to replace them with specific rules that must be attached to all tickets. Former Times Mirror Company president Albert V. Casey is elected president/CEO on February 20, at which point C. R. Smith returns to Lazard Freres & Co. Also in February, most of the B-747-123s, now known as Luxury Liners, are sold out of service, with the majority passing to **The Flying Tiger Line**.

In March, service to Fiji, American Samoa, New Zealand, and Australia is suspended because severe government-imposed route restrictions and fuel shortages make the cost of operation prohibitive. Service over the former **Trans-Caribbean Airways (TCA)** routes, now also unprofitable, is also suspended in March.

President Casey becomes board chairman in April and Director Carter Burgess resigns; Vice President Crandall now also assumes responsibility for the airline's marketing program.

In July, a B-747-123 is sold to the National Aeronautics and Space Administration (NASA); it will be converted to serve as a transport for the Space Shuttle.

The first B-747-123SF (one of the Luxury Liners converted during the past several months) to be employed on domestic service begins operations on November 5 to and from New York, Los Angeles, San Francisco, Chicago, and Dallas (DFW) and will be joined by another before year's end.

Significant cost-cutting measures are undertaken. Three more of the company's 16 passenger Jumbojets are withdrawn from passenger service, the Americana hotel chain is sold, and one-step automated check-in is introduced at several U.S. airports. A total of 1,605 employees are laid off or not replaced.

Arbitration results in AA paying \$9 million to Aer Lingus-Irish International Airlines, Ltd. to settle an old claim against **Trans-Caribbean Airways (TCA)**.

Enplanements this year slip 2.9% to 20,913,000 and freight traffic is off by 9%. Income is \$1.71 billion and cost cutting has paid off, lowering expenses to \$1.67 billion. The operating profit is \$40.9 million and the net profit is \$20.44 million.

The workforce in 1975 is 35,014. A route exchange agreement is sought with **Pan American World Airways (1)** and is granted in June. Under its terms, American trades its Pacific routes (except Boston and St. Louis to Honolulu) for **Pan American World Airways (1)**'s authorizations from New York to Bermuda, Santo Domingo, and Barbados.

Throughout the spring and summer a new "Doing What We Do Best" advertising campaign is run while the carrier joins with other majors in CAB-approved discussions with the American Society of Travel Agents on a joint, industry-wide computerized reservations system. In July, **United Airlines**, then with the dominant Apollo system, quits the discussions.

A DC-10-10 taking off for San Francisco on August 25 with 216 passengers and 13 crew, aborts its takeoff from New York (JFK), blowing its tires and halting about 100 yards short of the blast fence; only 1 passenger is injured.

In late summer, Mr. Crandall and his vice president in charge of data processing Max Hopper attend an Atlanta meeting of the Woodside Group, then comprised of most of the country's largest commercial travel agencies, to hear presentations on computerized reservations systems from the three largest airlines. When **United Airlines** boycotts the gathering and **Trans World Airlines (TWA)** makes an ineffective presentation, the two AA officials win the day and the contracts of the large travel industry concerns represented. The SABRE system is further expanded as carrier officials begin marketing it to additional travel agencies in the U.S. and work begins to consolidate the company's 11 mainland reservations centers into 4.

The former **Pan American World Airways (1)** routes are now inaugurated.

In November, the Flight Safety Foundation awards AA a "Distinguished Performance Award" in recognition of its 6 million hours of safe flying over a 10-year period, the greatest total of fatality-free flying hours ever amassed by an airline. The record is nearly shattered on November 27 when a DC-10-10, with 190 aboard, must effect a 2,000-ft. dive over Carleton, Michigan, near Detroit, to avoid a collision with a **Trans World Airlines (TWA)** L-1011 TriStar 1.

Passenger boardings grow only a slight 0.6% this year, to 20,681,000. Cargo is also down, by 5.1%. Afflicted by recession and the energy crisis, the carrier, after paying out fuel bills alone of \$180 million, suffers a net loss of \$20.47.

Employment is increased 3.1% in 1976 to 36,080. The year's marketing emphasis is placed upon Revolutionary Fare discounts and Bicentennial tours. Planning is begun on the fare structure required to compete with nonscheduled charter carriers who are given the freedom to oper-

ate their pricing structures largely without government restriction. In addition, the company celebrates its own fiftieth anniversary in four months of celebrations.

On April 4, a door falls from a B-727-223 over Modesto, California, during its landing approach to San Francisco and narrowly misses a 4-year-old child.

Arriving from New York (JFK) on April 27, Flight 625, a B-727-95 piloted by veteran Capt. Arthur Bujnowski with 6 other crew and 81 passengers, fails a go-around maneuver with insufficient runway remaining after a long touchdown. The Boeing runs off the runway, strikes a localizer antenna, hits an embankment that sends it airborne 83 ft. over and beyond a perimeter road, where it comes to rest and catches fire (37 dead).

General of the Army Omar N. Bradley is awarded a \$200,000 out-of-court settlement on May 27 to settle a personal-injury suit. Also in May, the first travel agency SABRE reservations unit is turned on; sales of the improved reservations system, centered in Tulsa, skyrocket.

In June, two B-747-123s are sold to **Trans-Mediterranean Airways, S.A.L.** for use as freighters. Flights begin to Omaha and Des Moines during the summer, while a third B-747-123SF enters service and unsuccessful merger discussions are held with the insurance corporations Trans-America and American General.

On November 20, arrangements with promoter John Hoffman to lease a B-747-123 for use as a flying nightclub are cancelled.

Customer boardings grow 10% to 23,296,000 and cargo is up an equal 10.3% to 764 million FTKs. Income is \$2.09 billion and expenses are \$2.02 billion. This positive difference brings an operating profit of \$70.93 million and net income of \$56.31 million. Profits climb to \$76.3 million.

One of the **Trans-Mediterranean Airways, S.A.L.** B-747-123SFs is purchased back on January 8, 1977 and, on January 31, the carrier's most popular fare is proposed—the Super Saver. In January, the company receives the 1976 "Technology Management Award" from *Air Transport World* magazine.

Offering 35–45% savings on the transcontinental route, Super Saver fare goes into effect on April 24 and when copied by other companies will largely neutralize the free-wheeling charter operators. Meanwhile, services are launched from Chicago to Montreal and additional Caribbean destinations are now visited, including Montego Bay and Kingston, Pointe-à-Pitre, and Fort de France.

During the spring, Senior Marketing Vice President Crandall joins other airline leaders (except those from **United Airlines**) in opposing deregulation of the airline industry during congressional testimony.

As a result of the previous April's B-727 crash and notification from the Allied Pilots Association union, AA, on May 24, stops flying jetliners into St. Thomas, U.S. Virgin Islands. While the Harry S. Truman Airport is upgraded, the company will form and operate a subsidiary, **American Inter-Island Airlines**, to ferry passengers from St. Thomas to St. Croix.

The B-707-123 *Flagship Maryland* is sold to Atlantic Richfield, also in May.

Several operational mishaps occur during the summer. Following an explosion and fire in an engine, a DC-10-10, with 326 aboard, aborts its takeoff for Los Angeles from Boston on July 28; no injuries are reported. A B-707-323C returns safely to San Francisco on August 6 after one of its four engines explodes minutes after takeoff. En route from Los Angeles to New York on September 30, another DC-10-10 makes an emergency landing in Oklahoma City when it, too, develops engine troubles.

With the ribbon-cutting ceremony, the fourth and last consolidated reservations centers is now opened; these regional operations are located at Hartford, Los Angeles, Dallas (DFW), and Cincinnati.

Two oil and gas subsidiaries, AA Development Corporation and AA Energy Corporation, are formed. A third B-747-123SF joins the fleet in late December.

The year's enplanements are 24,242,000. The net profit for the year reaches \$81 million on operating income of \$2.37 billion.

Airline employment is increased by 3.1% in **1978** to 38,115. Adamant nonsmoker John McAward is arrested by police on March 17 on charges of interfering with a flight when he delays the takeoff of a jetliner from Boston for 45 minutes by protesting the company's inability to provide him with a seat in the aircraft's nonsmoking section.

Also in March, Super Saver fares are expanded to all U.S. mainland routes, following with discounts on flights to Mexico and Canada. The same month, CAB permission is received to suspend nonstop Boston and St. Louis to Honolulu service. Flights begin to nine new communities; expansion and schedule changes bring a 76.1% increase in route mileage to 85,967 unduplicated miles.

A corporate airliner owned by Coyne International Corporation nearly collides with a B-727-223 over New York (LGA) on May 23.

On June 30, 11-year-old Derek Stillwell successfully stows away aboard a New York to Los Angeles flight; attempting to book a hotel room, the boy is taken in hand by police. Audley Gibson, a 20-year-old Jamaican, apparently suffocates after stowing away in a suitcase aboard a company jetliner; his body is found when the Boeing is unloaded at New York (JFK) on July 4.

The planned new subsidiary, **American Inter-Island Airlines**, is formed in the summer to offer a Convair shuttle between St. Croix and St. Thomas in the U.S. Virgin Islands; revenue flights commence on November 1.

The transfer of corporate headquarters to Dallas (DFW) is announced on November 15 and, also in November, a multimillion-dollar order is placed for 30 B-767-223s.

During the year, former company pilot and famed author Ernest K. Gann publishes his memoirs, *A Hostage to Fortune* (New York: Knopf, 1978).

Passenger boardings rise 14% during the year to 18.18 million while freight climbs 5.1% to 920.62 million FTKs. Operating income advances 15% to \$2.73 billion and expenses are \$2.63 billion, a 14.5% boost. This happy imbalance results in operating income of \$97.2 million and record net gain of \$134.4 million.

The workforce is increased by 7.6% in **1979** to 41,000. The greatest single route expansion in company history occurs on January 20, when the airline inaugurates service on 19 new routes and at 8 new destinations: Albuquerque, Las Vegas, Miami, Minneapolis (MSP), New Orleans, Reno, Tampa/St. Petersburg, and St. Martin. Nassau in the Bahamas is added in February. Later in the year, flights begin to Guadalajara and Puerto Vallarta in Mexico. An **Empire Airlines** Metro II and a B-727-223 nearly collide over Kennedy Airport, New York, on April 8.

The worst and most spectacular airline disaster in U.S. history to date occurs on May 25. Los Angeles-bound DC-10-10 Flight 191, with 13 crew and 250 passengers, loses its No. 1 engine and the left wing pylon just after takeoff from Chicago (ORD) and crashes, killing all aboard, plus two people on the ground.

The tragedy is captured in spectacular photographs that appear in newspapers and magazines around the world and on countless television broadcasts. The NTSB will find the following factors as probable cause of the disaster: uncommanded retraction of the left wing and outboard leading-edge slats; loss of stall warning and slat disagreement indication systems resulting from maintenance-induced damage; separation of the No. 1 engine and pylon assembly; and failure of the pylon structure. The combination of these events led to the asymmetrical stall and ensuing roll of the aircraft.

The FAA orders all DC-10s grounded on May 27, in accordance with a court order, for inspection and pylon repairs where necessary. The agency will also fine AA \$500,000 for improper DC-10 maintenance procedures as it believes the company's general practice of removing engines and pylons from wings as a unit for maintenance purposes helps to cause cracks in pylon upper flanges. On June 6, the wide-body's certificate of airworthiness is withdrawn.

Flight 293, Serbian nationalist Nikola Kavaja, who claims to have a bomb, hijacks a B-727-223 en route from New York to Chicago with

141 aboard, over Flint, Michigan, on June 20. He allows all of the passengers and 8 stewardesses, to deplane in Chicago. Kavaja now forces the aircraft to return to New York, where a larger aircraft is made available for a flight to Ireland. At Shannon, the pirate, who had picked up his lawyer Deyan Ranko at New York, surrenders to authorities next day and is extradited back to the U.S. He will be tried and convicted in federal court and given a 40-year prison sentence.

On July 13 the FAA determines that the Chicago DC-10-10 crash was caused by faulty maintenance rather than aircraft design. The agency lifts its ban on the type's flying and restores its Certificate of Airworthiness.

The relocation of corporate headquarters from New York to Dallas (DFW) is completed during the summer; while a new company building is under construction, executives report to the former Vought Aerospace Corporation at Grand Prairie. Douglas wide-bodies are returned to scheduled service, with the titles "DC-10 LuxuryLiner" painted on the nose of each ship changed to "American Airlines LuxuryLiner."

On August 3, 13 persons suffer minor injuries exiting a DC-10-10 (chute fatigue) at Kennedy Airport; the incident is triggered by a bomb threat.

The American Airlines Training Corporation is formed to execute various commercial and military contracts awarded to AA for pilot and mechanic training. The subsidiary's headquarters are located near The Flight Academy, the major's pilot training hub at Dallas (DFW).

Having detected smoke coming from the baggage department, the pilot of a B-727-223 arriving from Chicago with 78 persons aboard, makes a safe emergency landing at Washington, D.C. (DCA) on November 15; the fumes are later determined to have been caused by the eruption of badly-constructed bomb.

Eighteen-year-old Gerald James Hill is subdued at El Paso Airport on November 24 by FBI agents who board Flight 295, a B-727-223 with 74 passengers, which he has attempted to commandeer to Iran with a knife. Hill will be tried and given a 10-year prison term.

Passenger boardings jump 10.9% to 31,262,000, but freight is off by 3.6% to 887 million FTKs. The Chicago crash, rising fuel prices, and fare wars with new entrants start to become ruinous. Although revenues are up by 18.87% to \$3.25 billion, costs climb by 23.06% to \$3.24 billion and cause the operating profit to decline 94.94% to a scant \$4.91 million. Net profit drops 34.93% to \$87.4 million.

The employee population is cut by 10.6% in **1980** to 37,200 and, by year's end, the carrier will have completed, save one unit, its three-year sell-off of hotel properties. Despite an ATC warning, a B-707-323C with 44 aboard nearly collides with a U.S. Army helicopter over San Diego on January 10.

On April 9, an unidentified man who has climbed over a fence at the airport of Ontario, California, hijacks a B-727-223A with only seven crew aboard, which is being prepared to depart for Chicago as Flight 348. After refueling in Dallas, the aircraft proceeds to Havana. The pirate will return to the Southern California area at the end of 1981 where he is captured and tried; he will receive a 50-year prison sentence.

New routes are now begun from Chicago to Seattle and from Dallas (DFW) to Seattle via Sacramento.

Robert L. Crandall is elected president/CEO on July 16, with Albert Casey becoming board chairman and Thomas G. Plaskett succeeding Crandall as vice president-marketing. A Profit Improvement Program of cost-cutting measures is initiated in September, including withdrawal from unprofitable northeastern routes. The Fort Worth training facility is renamed the C. R. Smith Learning Center. The AAdvantage frequent flyer plan is unveiled and a name-infringement protest is filed with the CAB regarding **American Eagle Airlines** (1), which has just inaugurated scheduled services to the Caribbean.

On December 17, the carrier resumes flights to Hawaii, operating a new nonstop service between Los Angeles and Honolulu with daily continuing service to and from Chicago, Dallas (DFW), and New York. New markets are also entered at Nassau, Guadalajara, and Puerto Vallarta. With fuel costs soaring, the decision is made to accelerate retirement of the Boeing 707 fleet and to order 15 B-757-223s.

Customer bookings fall a dramatic 16.7% to 25,729,000 and cargo is off by another 14.8%. Although revenues advance by 13% to \$3.67 billion, costs climb faster, by 16.64%, to \$3.78 billion. The operating loss is a notable \$112.67 million, but the net loss declines slightly by \$12 million, to \$75.79 million.

The workforce grows by 4.6% in 1981 to 41,300. Twenty-six B-707s are retired in January and, in the same month, orders are placed for 15 B-757-223s. Many of the withdrawn B-707-123s will be sold to the Boeing Military Airplane Company for use in the USAF KC-135E aerial tanker program. Also in January, the company receives the 1980 "Cargo Development Award" from *Air Transport World* magazine.

The first of three B-747-123SFs to be purchased from **The Flying Tiger Line** over the next three months arrives at Dallas (DFW) on March 31 and George Marion Sadler, the former president and current board vice chairman, resigns on April 15. **American Eagle Airlines** (1) goes bankrupt in April.

In May as part of an effort to cater to frequent business travelers, the carrier, employing its computer record keeping capability, introduces its AAdvantage frequent flyer program, the first of its type. At the same time, AAirpass is unveiled as a plan to sell blocks of travel at preset prices for use over extended periods. This program, and others like it from other airlines, would be a staple of the air transport scene for over a decade until the costs of redemption force their reexamination.

On June 11, a further expansion takes place when AA adds 11 new cities in Texas, Mississippi, Alabama, Oregon, and Florida and 7 new routes to its system as part of a process to strengthen its hub and spoke networks feeding into Chicago and Dallas (DFW). Dallas-Fort Worth International Airport officially becomes the first hub the same day, almost in celebration of a failed attempt by **Delta Air Lines** to create the same sort of center there. Nonstop Dallas (DFW) to Honolulu B-747-123 passenger frequencies also begin in June. Late in the month, Dallas (DFW) to Minneapolis (MSP) service is inaugurated.

Another 36 B-707s, including 9 B-707Fs, are withdrawn in August; cargo operations are maintained by 6 B-747-123SFs, including 3 more newly purchased from **The Flying Tiger Line**. The final B-707-323C passenger trip is made from Newark to Chicago on August 31, where the aircraft is withdrawn in ceremony. During the fall, the Dallas (DFW) hub is further expanded with service to Denver, Kansas City, and Mexico's Yucatan Peninsula.

The airline's automated passenger processing system is now in use at all mainland airports—Honolulu, Toronto, Montreal, Mexico, and throughout the Caribbean and Atlantic. Meanwhile, the SABRE reservations system is apparently taken into action against deregulation's new entrants. Bookings on the New York to Detroit route started by **New York Air** in September begin to dry up in October as the service is re-assigned to an unusual listing location appearing on travel agency computer screens. Meanwhile, along with **United Airlines** and its Apollo system, AA begins charging other airlines booking fees for use of SABRE. The amounts requested vary at the whim of the provider and, for example, while most airlines are charged less than \$1 per reservation, new entrant **Muse Air** at Dallas (DFW) must pay \$2.

The subsidiary American Airlines Training, Ltd. is formed at London (LGW) to honor European and Mideast contracts.

Claiming that he is fleeing for his life from hostile fellow General Workers Union of Puerto Rico members, Alberto Gonzalez attempts and fails on October 23 to hijack Flight 676, a DC-10-10 with 109 passengers en route from San Juan to New York, and divert it to Quebec. Gonzalez surrenders when the wide-body reaches its destination and air piracy charges, initially placed against him, will later be dismissed.

Passenger enplanements drop 4.6% to 24,795,000, but cargo is up 3.2% to 798.3 million FTKs. Revenues jump 6.4% to \$3.91 billion and expenses rise only 2.1% to \$3.87 billion, leaving an operating profit of \$43.35 million and net gain of \$47.44 million.

The number of employees is reduced in 1982 to 35,400. In January, the carrier receives the 1981 "Airline of the Year" award from *Air Transport World* magazine.

Braniff International Airways' president Howard Putnam secretly records a conversation with President Crandall on February 1 in which the AA chief reportedly suggests that the two jointly raise fares by 20%, i.e., price fixing. The tape is turned over to the Department of Justice (DOJ) and although it cannot take action on the basis of a suggestion alone, spends the remainder of the year preparing to sue Crandall and AA for illegal monopoly practices under the Sherman Antitrust Act.

In March, the CAB announces that it is investigating **Braniff International Airways'** charges that American has illegally sabotaged its recovery efforts, particularly at Dallas (DFW); the accusation becomes the subject of a DOJ probe and a **Braniff International Airways** civil lawsuit. Failure to earlier gain labor support for a 5% pay cut causes plans to acquire B-757-223s to be cancelled in early spring. In April, an aircraft and passenger interchange service is introduced with **Alaska Airlines** that links Anchorage and Fairbanks with Houston and Dallas (DFW) via Seattle using American's B-727-223As.

Braniff International Airways declares Chapter XI bankruptcy on May 13 while the 500 millionth (cumulative) AA passenger is boarded on May 18. The next day, stockholders approve a plan of reorganization under which a new holding company, AMR Corporation, is formed and becomes the parent to American Airlines, Inc. Documents of incorporation are filed under Delaware law. For the first time since selling **American Overseas Airlines** to **Pan American World Airways** (1) in 1950, American now returns to the European market as replacement for the bankrupt **Braniff International Airways**.

Five-times-per-week nonstop Boeing 747-123 service is inaugurated from Dallas (DFW) to London (LGW) on May 19; the frequency becomes daily on June 1, with continuing service from Los Angeles added later. After acquiring all of the **Braniff International Airways** gates at Dallas (DFW), AA controls half of the gates at that location, which is now officially designated the airline's principal hub. During the second week of the month, fares out of Dallas (DFW) are increased by an average 25–40%.

Following the completion of runway improvements at Harry S. Truman Airport on St. Thomas, AA's B-727-223As are able to fly direct from Florida to the U.S. Virgin Islands beginning June 10. Consequently, it is now possible to sell **American Inter-Island** to **Air Resorts Airlines**.

The carrier is one of six now operating under an International Civil Aviation Organization (ICAO) grant to train personnel for **Biman Bangladesh Airlines**. As of August 12, the company has honored nearly 37,000 tickets of bankrupt **Braniff International Airways**.

En route from Dallas (DFW) to Washington, D.C. on August 21, a B-727-223A makes an emergency stop in Memphis when a bomb threat is found on a restroom mirror; no bomb is found.

Wallace Conkin is seized at Los Angeles on September 25 after attempting to extort \$400,000 from the carrier in return for information about the location of a bomb he planted in an LAX terminal.

The first of 30 B-767-223s are delivered in September and begin service in November. Meanwhile, the AMR Corporation comes into being on October 1.

Also in October, as the result of a unique financial arrangement with McDonnell Douglas, 20 DC-9-80s are acquired on lease for 2 years followed by 13 more. Flights are launched to Rio de Janeiro and São Paulo in Brazil in December.

Passenger boardings accelerate 11.6% to 27,680,000, but freight drops 10% to 718.66 million FTKs. Revenues advance a slight 1.7% to \$3.97 billion as expenses jump 3.31% to \$3.99 billion. Consequently, the operating loss is \$18.24 million and a net loss of \$14.47 million is suffered.

The payroll is enlarged a scant 1.1% in 1983 to 35,800 as a controversial two-tier wage program is introduced for pilots, flight attendants, and mechanics. Among the year's new hires is financial analyst Mary Jordan, who, just over a decade later, will move from her post as vice president-human resources to the presidency of commuter affiliate **Wings West Airlines**. Employees move into the new headquarters

building at Dallas (DFW) on January 15. In February, the DOJ files a civil antitrust suit against AA and President Crandall over the previous year's taped telephone conversation; the suit will be dropped after Crandall agrees to keep a two-year written record of his conversations with other airline leaders. The first of 33 leased McDonnell Douglas DC-9-80s (MD-80s) are introduced in May.

The crew of a Jumbojet reports on July 1 that it missed a small private plane by a vertical distance of 200–250 feet as the giant airliner was coming in for a landing at New York (LGA). Also in July, the **Braniff International Airways** civil suit is settled out of court when lawyers for the former airline agree to drop its charges in exchange for a \$20-million payment for certain **Braniff International Airways** lease fees at Dallas (DFW).

On September 22, claiming to have a bomb, a man hijacks Flight 625 to Cuba. The B-727-223A with 112 passengers is en route from Dallas (DFW) to the Virgin Islands via New York; the passengers are later taken to San Juan.

George Marion Sadler, former president and board vice chairman, dies in September.

Traffic on the Brazilian service proves so light that the frequencies are temporarily suspended in October. Service from John Wayne Airport in Orange County, California, is increased to six flights per day on November 14. Also in November, agreement is reached with **Pan American World Airways (1)** for a flight equipment exchange that will begin in December; AA trades the pacific pioneer its 8 B-747-123s for 15 DC-10-30s, beginning with the *Clipper Celestial Empire*.

MD-80 service is begun twice daily from Long Beach to Dallas (DFW) on December 2; simultaneously, MD-80 flights commence twice daily from John Wayne Airport to Phoenix. The subsidiary AMR Services is formed on December 12 to provide aviation services and support. At year's end, unions approve Chairman Casey and President Crandall's proposed two-tier pay scale, emphasizing lower incomes for new hires.

Enplanements swell 13.8% to 31,400,000, while freight rises a smaller 3.6% to 756.28 million FTKs. Financially, the major enjoys a stunning turnaround. Revenues climb 13.94% to \$4.53 billion, while expenses are held in check at \$4.28 billion. As a result, the operating profit is \$249.51 million and net gain is a stunning \$212.87 million. This year, AA is the nation's most profitable air transport concern, with **United Airlines** \$82 million behind.

The workforce is increased by 10.4% in 1984 to 46,900. The hiring includes 1,694 flight attendants and 550 pilots, who come in under the two-tier compensation system announced as part of Chairman Crandall's new *Growth Plan*, a document calling for corporate advancement through internal change rather than a strategy of mergers. When the CAB now orders the major computerized reservations system operators to stop charging discriminatory fees for the use of their systems and to list the flights of all carriers in an unbiased fashion, SABRE fees are simply quadrupled for all. Eleven smaller carriers file a \$1-billion antitrust suit against American Airlines and **United Airlines** while **Continental Airlines** files a similar suit on its own; both will drag on for years and eventually be dismissed.

Nonstop Dallas (DFW) to Savannah and Ft. Myers service begins on February 1. Jean Phillippe Windsor, a corporal in the Haitian army and an airport security guard, hijacks Flight 658, a B-727-223 with 152 passengers, from Haiti to New York on February 11, but surrenders mid-flight, asking for political asylum. Windsor will be tried, convicted of air piracy, and sentenced to prison for 10 years.

A B-767-223, carrying 98 passengers on a February 17 flight from Phoenix to Chicago develops engine trouble and makes an emergency landing at Santa Ana, California, after raining small pieces of debris on the city's streets during approach; no injuries are reported.

The largest commercial airplane buy to date is announced on February 29: 67 MD-82s, with options for 100 more, worth a contract price of \$1.35 billion. If the options are also secured, the purchase will eventually total some \$3 billion. The American Eagle commuter network is established. The first partners, **Metro Airlines** and **Chaparral Airlines**, provide feed to the major's Dallas (DFW) hub.

New transcontinental schedules and services are introduced. The Chicago (ORD) hub is upgraded as the Dallas–Fort Worth center is expanded. The SABRE computer reservations system now links over 8,000 travel agencies. Former Chairman/CEO George A. Spater dies on June 14 and the last of the B-707s retired in 1981 is finally sold in July. A several-year study determines that the carrier's cargo focus should be on small shipments carried aboard passenger aircraft; combined with a tempting offer from **UPS (United Parcel Service)**, a decision is taken to retire the 6 B-747-123SFs in the freighter fleet.

The first cargo plane is turned over to **UPS (United Parcel Service)** during the summer. Daily Bakersfield, California, to Dallas (DFW) service begins on November 1 and the last B-747-123SF flight is made on December 16. Also in December, nonstop Dallas (DFW) to Maui flights commence and end a year of expansion that sees service upgraded at 24 domestic markets and launched to 12 others.

Employing a hidden pistol provided by an accomplice, convicted mass-murderer Ismael LaBeet, being transported to New York from the Virgin Islands on December 31 along with 198 other people, overpower several guards aboard Flight 626, a DC-10-10, and diverts the wide-body to Cuba. At Havana, LaBeet is arrested and the Douglas is released to resume its flight to New York.

It is also reported at year's end that AA has paid the publisher William Morrow \$150,000 to recall 25,000 copies of a new book by former Braniff pilot John Nance. *Splash of Colors: The Self-Destruction of Braniff International* details the notorious price-fixing claim. Equally as interesting, though nowhere near as controversial, are the publication of the memoirs of Bonnie Tiburzi, *Takeoff: The Story of America's First Woman Pilot for a Major Airline* (New York: Crown, 1984).

Enplanements advance 8.5% to 34,102,000, while freight falls 9.1% to 680.39 million FTKs. Operating revenue jumps 12.3% to \$5.08 billion while costs rise only 10.9% to \$4.74 billion. The result is operating gain of \$339.06 million and a record \$233.9-million profit is earned.

The payroll grows by 10.6% in 1985 to 43,800. Nearly 450 passengers are stranded at Dallas (DFW) and Chicago on January 1 when crew shortages force cancellation of at least 275 flights. On January 18, Ultimate Super Saver fares, with savings to 70%, are introduced, along with Senior SAvers Club discounts for senior citizens. There are many restrictions: 25% cancellation fee, 30-day advance purchase, Hawaii–Alaska blackout, and roundtrip only use. Still, these match or undercut fares charged by deep discount competitors **Midway Airlines** and **PEOPLExpress**. When matched by **United Airlines**, **Delta Air Lines**, and others using versions of American's "yield management" computer marketing and reservations techniques, such fares directly contribute to the eventual failure of most of the post-deregulation new entrants, most spectacularly **PEOPLExpress**. Also in January, the company receives the 1984 "Labor Relations Award" from *Air Transport World* magazine.

Upon the retirement of Board Chairman Albert V. Casey on March 1, Robert L. Crandall is named board chairman/CEO. His SABRE system is now a "cash cow" for the airline and this year alone will turn out \$143 million in profits on \$335 million in sales.

On April 11, service is started to seven new markets in the Carolinas from Dallas (DFW): Charlotte, Raleigh–Durham, Greensboro, High Point, Winston-Salem, Fayetteville, Charleston, Colombia, Greenville, and Spartanburg. A nonstop Chicago to Atlanta schedule is simultaneously introduced.

Five days later, on April 16, a B-727-223A en route to San Diego with 89 aboard literally loses an engine over Deming, New Mexico. The pilot, not realizing the loss, does not report engine problems until the jetliner is over Gila Bend, Arizona, about 100 miles east of the California border. A safe emergency landing is completed and it is later learned that a chunk of ice dislodged from a lavatory valve had been ingested into the power plant.

Chicago to Honolulu nonstop service begins in May. Nonstop service is started in May from Dallas (DFW) to Paris and Frankfurt and from Chicago to Frankfurt and Honolulu. The international services employ

the first 2 B-767-223ERs delivered; 5 other ERs are also on order, together with 10 shorter-range versions.

Three flight attendants and a passenger are injured on June 23 when Flight 803, a B-727-223A with 70 aboard, is forced to dive to avoid an oncoming Cessna 421C over Lake Michigan near Grand Rapids; the private plane passes within 50 feet of the jetliner.

While on its takeoff roll from San Juan on June 27, a DC-10-10 with 270 passengers suffers the failure of its No. 7 tire, causing the aircraft to vibrate and the pilot to reject liftoff; the aircraft runs off the runway and stops with its nose in a lagoon. A total of 32 people are injured, three seriously.

A DC-10-10 carrying 190 en route from El Paso to Dallas (DFW) on September 3 makes an emergency landing at Dyess AFB when a warning light shows an engine to be on fire; 32 passengers suffer minor injuries while evacuating the plane and an investigation finds no fire.

The SABRE computer reservation system now has 9,000 subscriber locations worldwide.

Chicago (ORD)-based **Simmons Airlines** joins the American Eagle commuter network on October 1. At the same time, **Air Midwest**, seeking numerous interline affiliations, agrees to provide American Eagle feeder into Nashville. Construction is started on new hub facilities at Raleigh-Durham, Nashville, and San Juan. Also in October, the company agrees to pay \$1.5 million in fines after the FAA discovers maintenance-related violations of regulations during a special safety audit.

A bomb explodes aboard a company jetliner at Dallas (DFW) on October 30, but no one is injured. On December 8, the FBI arrests Albert Lee Thielman and charges him with trying to blow up the craft in order to collect the insurance money on his wife and three children, all passengers.

The fleet now exceeds 300 aircraft as, during the year, the 65th MD-80, 1 of the 25 MD-82s received from the previous year's order, is placed into service; orders remain outstanding for 55 more. Late in the year, 2 B-747SP-31s are purchased from **Trans World Airlines (TWA)**.

Enplanements rise 20.7% to 41,165,000 (a figure largely inflated as a result of the United Airline strike), but freight traffic declines by 37.3% to 431.49 million FTKs due entirely to the sale of the freighter fleet. Overall revenues zoom upward by 14.8% to \$5.85 billion, expenses are up 12.7% to \$5.32 billion, and the operating profit is \$506.48 million. Net gain for the airline is \$208.6 million, while AMR Corporation earns a net of \$345.8 million.

The employee population is increased by 18% in 1986 to 51,661. Not only is the first time that the company workforce has exceeded 50,000, but places the carrier in first place among U.S. majors in terms of employment.

In January, the carrier begins construction of a new \$60-million terminal at its new north-south hub of Raleigh-Durham Airport. Also during the year's first month, the carrier receives the 1985 "Financial Management Award" from *Air Transport World* magazine. Former Chairman/President Albert V. Casey serves as U.S. Postmaster General from January to August.

The new Nashville hub is opened on April 15 and the next day, Tennessee-based **Nashville Eagle** joins the American Eagle commuter system. On June 1, the Los Angeles-based third-level carrier **Wings West** joins the American Eagle commuter network.

The former **Trans World Airlines (TWA)** B-747SP-31 owned by Jet Associates is purchased on July 16.

AA and **Mexicana Airlines, S.A. de C.V.** jetliners, carrying a total of 266 people, accidentally try to land on the same Dallas (DFW) runway at the same time on July 18 and nearly collide.

Also in July, the subsidiaries Flagship International (Sky Chefs), American Airlines Training Corporation, and AMR Energy Corporation are sold—the first two for a \$60.3 million profit and the latter at a loss.

Thrice-daily nonstop B-727-223A service is introduced from Chicago to Akron, Canton and Louisville in August.

During the summer, an alliance is sealed with **Qantas Airways (Pty.), Ltd.** that provides for frequent flyer program coordination as well as

code-sharing on Qantas flights from Los Angeles to Auckland, Melbourne, and Sydney and on American jetliners from Los Angeles to Chicago, Washington, D.C., New York, Dallas, Miami, and Boston. San Juan-based **Executive Airlines (3)** joins the American Eagle commuter system on September 15. Also in September, roundtrip, nonstop B-727-223A frequencies are opened from Nashville to Orlando, Minneapolis (MSP), and Baltimore (BWI).

On October 16, Trans World Airlines (TWA) deliver the second of two B-747SP-31s to be received this year. The new San Juan hub is occupied on November 1.

As the result of talks initially aimed only at establishing a marketing agreement to bolster the major's West Coast presence, American is given the opportunity to purchase ACI Holdings, parent of the national carrier **AirCal** for \$225 million, subject to DOT approval. On November 17, the acquisition is completed; granting American strategic markets north and south along the West Coast, it is seen as a one-time only exception to the carrier's growth-from-within master plan.

Meanwhile, an agreement is reached with **Pan American World Airways (1)**. When the international pioneer becomes a partner in American's SABRE reservations system, Crandell's company is given the right of first refusal to purchase any **Pan American World Airways (1)** asset put up for sale. Also in November, daily nonstop DC-10-10 flights are launched from Boston to Montego Bay, Jamaica, and AMR Investment Services is formed. On December 2, Douglas wide-bodies replace B-727-223As on the New York to Puerto Plata run. Later in the month, the ACI Holdings purchase is concluded. During the year, 25 additional MD-82s enter service.

Passenger boardings rise 11.7% on the year to 45,983,000 as cargo climbs an almost equal amount, 11.5%, to 7.64 billion FTKs, the most freight carried by any U.S. airline, including the dedicated all-cargo concerns **The Flying Tiger Line** or **Federal Express**. Revenues dip a miniscule 0.4% to \$5.85 billion and expenses swell 2.09% to \$5.46 billion. The cost increase lowers profits to \$392.06 million (operating) and \$249.25 million (net). The operating profit is still the highest earned by any airline in the world this year. The four-year profit of parent AMR Corporation reaches \$1.09 billion.

Airline employment falls 16.8% in 1987 to 55,800. For the second time, AA, in January, wins the "Technology Management Award" from *Air Transport World* magazine, this one for its work in 1986.

In early spring, leasing orders are placed for 25 Airbus Industrie A300B4-605Rs and 15 B-767-323ERs. The European aircraft will be placed on Caribbean routes replacing DC-10-10s while the Boeings will serve the transatlantic market, allowing the DC-10-30s and B-767-223ERs to be placed on U.S. domestic routes. During the year, 17 additional MD-82s will join the fleet. A second daily DC-10-30 nonstop flight is added from San Francisco to Honolulu in February and the DOT approves the **AirCal** takeover in March.

During the spring, Chairman Crandall campaigns for Washington assistance in expanding the industry's infrastructure. Nonstop six-times-per-week Dallas (DFW) to Tokyo flights begin on May 21, with the two B-747SP-31s earlier purchased from **Trans World Airlines (TWA)**. Also inaugurated are services to Zurich and Geneva from Chicago and from New York to Paris and Frankfurt.

When UAL, Inc., parent of **United Airlines**, ousts its chairman, Richard Ferris, on June 9, some of its board members reportedly put out succession feelers to Robert Crandall, who is not interested. Meanwhile, the new hub at Raleigh-Durham is opened on June 15 and expansion of facilities at San Juan is undertaken. Acquisition of the West Coast national **AirCal** for \$225 million is completed in July, but the integration process will prove even more expensive. At the time of its takeover, AirCal owns but four aircraft, with all others leased. To oversee its feed, AMR Eagle, Inc. is formed during the month.

In August ceremonies, McDonnell Douglas hands over the carrier's 100th MD-80, literally gift-wrapped with a large red ribbon. A \$34-million underground facility is now opened at Tulsa to house the SABRE computer equipment and software; housing for the world's

largest private real-time computer network and travel information data base is secure against fire, earthquakes, and other disasters. At this point, travel agents can begin to access SABRE via personal computers.

In September, **Pan American World Airways (1)** terminates its agreement to use SABRE, while American gives up its right to a first refusal on the sale of any **Pan American World Airways (1)** assets; the merged frequent flyer programs are also unlinked.

A B-727-223A with 64 passengers averts a midair collision with a private plane 50 miles east of Los Angeles on October 10 by making an abrupt climbing turn to the right; the two planes come within 50 feet of one another.

A week later, the first A300-600R enters service. A B-727-223A quickly takes off after landing at Savannah, Georgia, on October 23 to avoid hitting a small aircraft that pulls into its path on the runway.

The carrier inaugurates daily nonstop B-727-223A frequencies from San Juan to Caracas in October. Also in October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

Direct B-727-223A service from San Juan to Toronto and Montreal starts on November 2. Pilot Don L. Ely suffers a fatal heart attack while landing his DC-10-10 at Newark on November 22, but copilot Thomas Meeker is able to bring the big plane in safely.

A daily nonstop schedule is begun from Raleigh-Durham to San Juan on December 2 and a third daily nonstop is introduced from that Carolina hub to Chicago on December 17. Very bad weather at key destinations causes traffic losses late in the fourth quarter. On December 31, **Flagship Airlines**, the **Air Midwest** American Eagle affiliate at the new Nashville hub, becomes an AMR subsidiary.

Customer bookings these 12 months accelerate 17.5% to 54,034,000 while cargo advances by 17.2% to 572.94 million FTKs. Revenues climb 15.74% to \$7.12 billion, and expenses rise 15.55% to \$6.65 billion, allowing the operating profit to reach \$473.18 million. This operating income figure represents a new industry-topping record. Assorted costs, however, force the net gain to drop to \$213.82 million.

The workforce is increased by 9.9% in 1988 to 66,700. Daily B-727-223A Chicago to Rochester flights begin in January. When one time American employee Stephen M. Wolf takes over **United Airlines**, he now recruits AA Vice President-Finance John "Jack" Pope as his new president. The new chairman also acquires, by marriage, American's vice president for personnel resources, Delores Wallace.

On February 3, AMR bails out its bankrupt large regional American Eagle code-sharing affiliate **AVAir**, which has been feeding the Raleigh-Durham hub, but which abruptly shut down on January 15; in late winter, **Nashville Eagle** obtains \$3-million worth of the former **Air Virginia's** assets.

Hourly Los Angeles to San Jose flights start in February, employing the AirCal B-737-293s. A \$16.8 million expansion of the engine overhaul facility at Tulsa is initiated in March. During the spring, the major begins to return **AirCal's** 28 B-737s as their leases come due; the BAe 146s are also put up for sale.

Also during the spring, discussions are held with **KLM (Royal Dutch Airlines, N.V.)** on the subject of a marketing and code-sharing arrangement; talks will continue for several months, but ultimately fail over questions of frequent flyer participation. Direct B-767-223ER services are started from Dallas (DFW) to Madrid on April 1 and, on April 21, the first A300B4-605R is delivered. In mid-month, chairman Crandall is named the first "Aerospace Laureate" in the field of commercial air transport by *Aviation Week and Space Technology*.

The new Airbus makes its first revenue flight on May 10 from New York to San Juan; unhappily, a fuel pump failure causes a diversion to Bermuda.

Flight 70, a DC-10-10 with 14 crew and 240 passengers, is severely damaged when it aborts its takeoff from Dallas-Fort Worth for Frankfurt on May 21; there are no fatalities.

B-767-223ER frequencies begin from New York to Zurich on May 26. Nonstop flights are inaugurated, also on May 26, between Raleigh-Durham and Paris. In honor of the first international service from the North Carolina facility, the airport is renamed Raleigh-Durham International Airport. The European service now features over 100 flights per week to nine cities from four U.S. gateways.

In June, A300B4-605Rs replace DC-10-10s on the New York to Santo Domingo route and four new destinations are added from the San Juan hub: Port of Spain, Tampa, Orlando, and Washington, D.C. (IAD. Members of the AAdvantage frequent flyer program renting a car from Hertz Corporation in conjunction with an AA flight are now entitled to bonus mileage points.

Hub operations from Dallas (DFW) are increased during June and July to 365 flights per day to 95 nonstop destinations. Unhappily during the same period, a glitch in the new yield management software costs the company an estimated \$50 million before the flaw is located and corrected.

Because of market changes and perceived benefits derived from the earlier takeover of **Nashville Eagle** and **AVAir**, ownership of several other American Eagle carriers is acquired and the new corporate subsidiary, AMR Eagle, Inc., begins work as their parent. **Simmons Airlines** becomes a subsidiary on August 8, followed by **Wings West Airlines** the next day. The Chicago (ORD) slots of the Texas Air Corporation subsidiary **Britt Airways**, doing business as Eastern Express, are also purchased.

Daily nonstop B-727-223A frequencies are introduced from Raleigh-Durham to Providence, Rhode Island, on August 12, while, at the same time, a fourth daily nonstop is added from the North Carolina hub to Chicago and Dallas (DFW).

The next phase in the expansion of the Nashville hub is undertaken during a two-month period beginning on August 31. Employment at the airport of the Tennessee capital is increased by 400 positions, to 1,250 people, and 16 B-727-223As are assigned. New services introduced include a nonstop to Toronto and the addition of four Florida cities: Miami, Ft. Lauderdale, West Palm Beach, and Ft. Myers. The first of an order for 75 B-757-223s powered by Rolls-Royce RB211-535E4 engines is delivered to Dallas (DFW) from Seattle. **Command Airways** is purchased by AMR, Inc. on September 30.

Three armed security guards at the international airport at Port-au-Prince, Haiti, force their way aboard Flight 658, a DC-10-10 with 233 passengers and bound for New York on October 1, but are arrested upon their arrival at New York (JFK). The three request political asylum.

On October 10 a pilot jettisons up to 50,000 pounds of fuel, some of it showering residents of Far Rockaway, Queens, New York, before landing his DC-10-10, with a disabled engine, at JFK.

Amalgamation of **AirCal's** routes is completed, also in October, while daily roundtrip flights are initiated from Palm Springs to Dallas (DFW) and Chicago; from Raleigh-Durham, daily nonstop frequencies are initiated to Albany, Greenville, and Spartanburg in South Carolina, and Cancún and Cozumel in Mexico.

Airbus Industrie A300B4-605Rs are introduced in November to serve San Juan and Caribbean markets from Chicago, Newark, and Raleigh-Durham. Simultaneously, plans to establish a separate computerized reservations system algorithm for international services are denied by the DOT, which refuses to grant it an exemption. Statisticians report the following month that, since June 1984, the company has interviewed 22,287 prospective pilots and of those appointed, 4,426 are still employed.

One day at the end of November, Chairman Crandall announces over the headquarters public address system that revenue passenger-kilometers flown during the year have ascended 14% to 104.21 billion, putting AA, after 28 years of competition with **United Airlines**, into first place among U.S. carriers. In December, a new hub is established at San Jose and daily roundtrip B-727-223A visits begin from Miami to Santo Domingo.

Passenger boardings jump 12.9% on the year to 64,310,000 and freight traffic swells 24.6% to 719.4 million FTKs. Airline revenues advance by 20.02% to \$8.55 billion, expenses rise 16.51% to \$7.74 billion, and the

operating profit doubles to \$800.99 million. Net income totals \$449.44 million. Parent AMR Corporation posts revenues of \$8.8 billion and reports profits of \$806.5 million (operating) and \$476.8 million (net).

The employee population swells again in 1989, by 13% to 75,470, to lead all U.S. scheduled carriers.

In early January, the megacARRIER receives the 1988 "Airline of the Year" award from *Air Transport World* magazine. It also wins approval from the DOT for the settlement it has worked out with **British Airways, Ltd. (2)** for the settlement of a long-standing dispute over computerized reservations system applications. American agrees to remove display bias against interline flights from its SABRE system and, as a result, is allowed by BA to write tickets for BA flights through SABRE in the U.K. In addition, much to the dismay of competitors, the two begin to share passenger booking information generated via their reservations systems.

On January 25, a B-767-223 recreates the first east-west transcontinental Stratoliner flight made 30 years earlier. Among the guests of honor is Robert Bisbee, who was one of two flight engineers on the original frequency; remarkably, flight time is only improved by 20 minutes over 1959.

To celebrate the previous year's economic gain, the company in late winter awards its employees \$121 million, the largest profit-sharing distribution in industry history. A large-scale buying spree begins in February as \$4.5 billion is committed for 8 McDonnell Douglas MD-11s, plus 42 options, as well as \$2.5 billion for 100 more MD-80s. Thrice-daily nonstop roundtrip service begins on February 15 from Dallas (DFW) to Monterrey, Mexico.

In March, 25 additional B-757-223s are requested at \$1.2 billion, along with \$1.5 billion for 75 Fokker 100s, \$1.5 billion for an additional 75 Fokker 100 options, plus \$750 million for 10 B-767-323s. Later in the month, it is announced that members of the AAdvantage frequent flyer program can earn mileage credits when they use the long distance telephone service of MCI Communications Corporation. At the same time, due largely to the absence of **Eastern Air Lines** in the Caribbean, the carrier's cargo operation reaches an all-time high; systemwide freight ton-miles jump 29.8% to 52.2 million.

In April, daily nonstop B-727-223A service is initiated from Atlanta to San Juan and, on May 1, daily flights are inaugurated from Chicago to Stockholm and from New York to Lyon. The same day, frequencies from the San Jose hub increase to 74 per day to 16 cities, including 7 new flights on existing routes to Los Angeles, Ontario, Portland, Seattle, and Reno. Ten days later, on May 11, daily Chicago and New York nonstops commence to Brussels; the Chicago flight continues on to Dusseldorf and the New York frequency to Hamburg.

SABRE, the nation's largest reservations system, shuts down for almost 12 hours on May 12, disrupting the operations of about 14,000 travel agencies nationwide and much of the airline's operations are left without information about who is booked on flights and whether seats are available. During the downtime, the airline is forced to revert to writing tickets by hand to service tens of thousands of travelers. For the May 25 to September 30 summer season, a second daily nonstop flight is introduced between Chicago and Manchester, England.

On May 27, Cuban exile and escaped mental patient Pedro Rene Comas-Banos boards Flight 1098, a B-767-223 at Los Angeles, wearing green military fatigues and carrying a starter's pistol and two knives, and orders the plane to Havana; the pilot lands at Miami where the pirate is captured and arrested.

During the spring, the company reaches or negotiates SABRE agreements with SAS (Scandinavian Airlines System), KLM (Royal Dutch Airlines, N.V.), Swissair, A.G., Sabena Belgian World Airlines, S.A., Austrian Airlines, A.G., and Deutsche Lufthansa, A.G.

A major expansion of services from Miami begins on June 1 as a total of 31 flights are offered daily to 13 cities and 600 more employees are hired for this hub. New cities added from the south Florida metropolis include New York, Los Angeles, Boston, Montego Bay, Kingston, Port-au-Prince, and Puerto Plata.

On June 1, the FAA fines those carriers failing its latest round of airport screening tests; AA, with 12 security breaches, is assessed \$75,000.

While helping to push back Flight 699, an A300B4-605R with 244 passengers, on July 12 for a scheduled international flight, a ramp guide slips and falls behind the Airbus' nosegear; the nosegear tires roll over his upper body, killing him.

A DC-10-10, with 248 aboard, runs into unexpected turbulence on July 23 that throws passengers against the cabin ceiling, sending 45 to the hospital.

In August, the company agrees to serve as general sales agent at New York (JFK) for **THY Turkish Airlines (Turk Hava Yollari, A. O.)**. At this point, the company has 165 MD-80s in service, the largest fleet of any single aircraft type outside of the Soviet Union.

While on final approach to Chicago (ORD) on a September 12 service from Rochester, an MD-82 with 7 crew and 102 passengers loses all hydraulic pressure. During the landing, excess reverse thrust is applied that affects the steering of the rudder; as a result, the aircraft veers off the runway and the nosegear falls into an open manhole. Although the aircraft is damaged, no injuries are reported.

The company's seventh hub, at Miami, is officially opened on September 13. Also in September, daily nonstop B-727-223A flights commence from Miami to Washington, D.C. (DCA) and DOT grants authority for service to Sydney, Australia, from Honolulu. Simultaneously, AA enters into a joint marketing agreement with **Qantas Airways (Pty.), Ltd.** for service to Washington, D.C. (IAD) and Boston. Also at this time, a Senior TrAAvler Coupon Book is unveiled for senior citizen travelers and construction begins on a second 750,000-sq.-ft. major maintenance base at Alliance Airport in Fort Worth, as well as on an expansion of the Tulsa facility.

Real estate tycoon Donald Trump makes an unsolicited \$7.5 billion (\$120 per share) bid for the company on October 5, just two months after winning control of the Eastern Shuttle; the buyout proposal is withdrawn within two weeks of its tender. Barcoding of freight is tested and the B-757-223 is also introduced during October and daily nonstop A300B4-605R Los Angeles to San Juan service is inaugurated on November 1.

In mid-December, President/CEO Crandall and Texas Air Corporation (TAC) Chairman Frank Lorenzo agree on the latter's sale of **Eastern Air Lines'** South American network to American for \$349 million. Also agreed upon are the sale of other assets worth \$121 million more, and an arrangement for **Continental Airlines**, the TAC flagship, to drop a suit claiming bias against its flights by the SABRE reservations system.

Also sold to American, pending DOT approval, is **Eastern Air Lines'** Miami-Madrid, Miami-Toronto, and Tampa-Toronto authorities and **Continental Airlines'** (lately **Eastern Air Lines'**) rights from Miami to London. Other assets acquired include slots held by both airlines at New York (JFK and LGA), Washington, D.C. (DCA), and Chicago (ORD); **Eastern Air Lines'** interest in four South American ground handling companies and property in Puerto Rico; and leasehold interests at JFK. American, for its part, agrees to handle **Continental Airlines** flights at Washington National, to purchase certain computer services from System One, and to a gate exchange at Dallas (DFW). The entire route and asset deal is worth \$471 million to TAC.

Arrangements are completed with **Trans World Airlines (TWA)**, also in December, for sale of the Chicago-London (LHR) route, together with various Chicago (ORD) facilities, for \$195 million. An arrangement is also worked out with **Continental Airlines** for the purchase of its Seattle-Tokyo run. **Executive Airlines (3)** becomes an AMR Eagle subsidiary on December 31.

Enplanements for the year swell 12.5% to 72,074,159, just shy of four million more bookings than second place **Delta Air Lines**. Cargo also does well, climbing 29.9% to 928.91 million FTKs. Revenues advance by 16.49% to \$9.96 billion, costs march up 19.11% to \$9.23 billion, and the operating profit is down slightly to \$730.79 million. Net profit also falls a little, to \$423.1 million. Still, AMR Corporation's \$2.26 billion

gain since 1980 has made it the most profitable U.S. airline company of the decade; in comparison, **Delta Air Lines** in the number two position has 10-year earnings of \$1.69 billion.

Airline employment is increased by 8.3% in 1990 to 82,655, tops in the American airline industry (2,655 ahead of second place **Federal Express**) and second in the world behind **Aeroflot Soviet Airlines**. On January 1, pilots begin working without a current contract, there being no conclusion to ongoing negotiations. The same day, American Airlines Decision Technologies, formerly the Operations Research Group, is reformed as a subsidiary.

With 552 jetliners, American owns more aircraft than any other airline in the world except the Russians, whose fleet is two-thirds larger. Stockholders note that shares purchased a decade earlier at \$1,000 per share are, on January 2, worth \$5,782. To emphasize its continuing commitment to cargo now carried aboard passenger jetliners, the old Cargo Division is restructured and reborn.

On February 2, the company begins flying inaugurated thrice-weekly to Sydney and Auckland via Honolulu, its second destination in the Pacific after Tokyo. To assist in the operation, the code-sharing agreement with **Qantas Airways (Pty.), Ltd.** is expanded. Groundbreaking ceremonies are held for an expansion of the pilot-training facilities at the Flight Academy and a \$26-million reservations center at Tucson. Late in the month, daily nonstop B-727-223A roundtrips are inaugurated from Miami to Guatemala City.

Flight 40, a B-767-223 en route from Los Angeles to New York on March 4, loses cabin pressure and the pilots put it into a steep dive, dropping 25,000 feet in several minutes; no injuries are reported. Also in March, permission is received for the inauguration of services from Chicago to Milan and a proposal is made to **Trans World Airlines (TWA)** for purchase, pending DOT approval, of its Chicago to London authority.

At the same time, a two-year, \$276-million expansion plan is unveiled for the addition of 10 new gates at the 2E terminal at Dallas (DFW). Also included in the plan is a new customs facility for international passengers, a 1,100-vehicle parking garage, a new maintenance hangar, a people mover to link terminals 2E and 3E, and new parking for American Eagle aircraft. In addition, \$25 million is pledged to the construction of a state-of-the-art System Operations Control (SOC) center in a 115,000-sq.-ft. almost windowless hall.

The airline now joins with **Cathay Pacific Airways (Pty.), Ltd.** to announce an expansion of their code-sharing agreement to more than 100 Canadian and U.S. cities served by the U.S. major.

The company establishes strict weight limits for its flight attendants under a new April 1 "grooming policy" that is challenged, on the basis of age and sex discrimination, in a lawsuit by the Association of Flight Attendants (AFA).

On April 3, members of the AAdvantage frequent flyer program are offered cash incentives toward merchandise; items that may be chosen in lieu of free seats are listed in a catalog and range from new automobiles to boats, certificates of deposit, mink coats, computers, and solariums.

Longtime CEO Cyrus R. "C. R." Smith dies at the age of 90 on April 4. Eleven days later, thrice-daily roundtrips are inaugurated from Raleigh-Durham and Chicago to Stewart Airport in New York. During the same month, service to Port-au-Prince is suspended and orders are placed for the installation of Avicom International personal video systems in the first-class sections of its overseas-oriented jetliners.

After a year, the line discontinues its daily nonstop flights from New York (JFK) to Lyon, France, on May 26. Also in May, the company engages in a computerized reservations system dispute with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Transatlantic services are increased by 30% as second daily flights are introduced from Chicago to Manchester and to Paris and new nonstops begin from Chicago to Warsaw and to Helsinki, from Miami to Madrid, and from Dallas (DFW) to Barcelona.

Through routes acquired from **Eastern Air Lines** in April, American acquires rights to fly to 20 cities in 15 Central and South American

countries from the Miami hub. Daily roundtrip São Paulo–Rio de Janeiro–Miami flights now begin. Services are also inaugurated from Chicago to Glasgow and from Miami to Guatemala City. Under a code-sharing agreement with **MALEV Hungarian Airlines**, Zurich to Budapest frequencies are started. International Flagship Service, a premier international service, is also introduced.

In June, the DOT's public counsel recommends that a new nonstop Chicago to Tokyo route should be awarded to AA, but it will be awarded to **United Airlines** instead. During the same month, a code-sharing agreement is signed with **Cathay Pacific Airways (Pty.), Ltd.** for transpacific cargo. Under the arrangement that takes effect on July 1, American offers four-times-per-week Jumbojet service from Los Angeles and San Francisco to Hong Kong and takes responsibility for marketing cargo space on the westbound flights. **Cathay Pacific Airways (Pty.), Ltd.** does the same for the flights out of Hong Kong, as well as from Southeast Asia. On July 15, an agreement is reached with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** resolving a four-month dispute over booking systems.

Miami–Orlando flights begin on August 1, while Port-au-Prince service is resumed with one daily roundtrip B-727-223A flight from Miami and one from New York. Iraq invades Kuwait on August 6 setting off a dramatic escalation in fuel costs; a cost-cutting plan is put into effect as a hoped-for countermeasure. Among its first points is cancellation of the remaining leases for BAe 146s and B-737-293s acquired with the merger of **AirCal** three years earlier. However, before the bills come in, a Miami–Tampa route begins on August 15 while daily nonstop roundtrip flights begin from Nashville to Las Vegas and San Diego.

A new \$10.5-million reservations center is opened at San Juan. All phases of the company's four-phase expansion into South America are completed at month's end with the creation of a new Latin American cargo division, headquartered at Miami under Vice President Robert J. Fogarty Jr.

As the result of an agreement signed with the Wall Street investment firm of McLaughlin, Piven, Vogel, Inc., yet another AAdvantage frequent flyer award possibility is unveiled in September—investment in stocks, bonds, and CDs. At mid-month, a code-sharing agreement is signed with **Air Bremen, GmbH.**; it provides for the linking of the major's flights from Chicago and New York to Bremen with **Air Bremen, GmbH's** service to Brussels and is the first entered into with a European airline.

Another historic first is recorded during the month with the delivery of the carrier's 200th MD-80. McDonnell Douglas announces that the acceptance of six of this type (bringing American's MD-80 fleet to 201) marks the first time a single non-**Aeroflot Soviet Airlines** air transport firm has operated 200 of a single aircraft type.

Thrice-daily roundtrips are added in September from Nashville to Columbus while thrice-daily Nashville to Miami service is inaugurated in October, along with the same number of frequencies from Raleigh-Durham to Ft. Myers. Cargo service from Louisville is expanded, also in October, by a B-727-223F flying from Nashville. Direct daily flights begin during the month from Honolulu to San Jose and from San Jose to New York. Meanwhile, 14 slots at Washington National Airport and New York (LGA) are purchased from **Midway Airlines (1)**, which leases them back for an interim period.

On November 1, B-727-223A frequencies are resumed from Raleigh-Durham to St. Croix and St. Thomas. Later in the month, a Boston and New York to Raleigh-Durham B-757-223 schedule is opened, along with daily B-727-223A Raleigh-Durham to Orlando and St. Martin flights. In addition, daily roundtrips are added from Nashville to Indianapolis and Louisville and a daily roundtrip begins to Los Angeles.

Daily nonstop flights commence on December from New York (JFK) and Raleigh-Durham to Nassau; on December 15, service is started between the North Carolina hub and St. Martin and Antigua. Even though the previous December's deal has yet to receive DOT approval, American now agrees to purchase all the **Trans World Airlines (TWA)** routes to London, including those from New York (JFK), Boston, Newark,

Washington, D.C. (IAD), St. Louis, Philadelphia, Los Angeles, Philadelphia, and Baltimore (BWI) for \$445 million. The Washington and St. Louis routes are to Gatwick Airport and with the remainder to Heathrow. In addition, \$70 million will be paid to Carl Icahn's airline for 40 slots and 3 gates at Chicago (ORD), as well as gates at Orlando and Nashville and ticket counter space at Ft. Lauderdale.

Pilot job actions during the fourth quarter bring numerous schedule changes and flight cancellations. Over the holidays, American must cancel several hundred flights as flight crew members call in sick; the flyers deny participation in a deliberate job action. At the end of the year, cargo operations are restructured into a separate American Airlines Cargo Division, with former Vice President-Cargo William R. Boesch appointed president.

During the year, pilot F. Lloyd Staats, who has flown for the airline for 35 years, publishes his memoirs, *This Is Your Captain Speaking: 50 Years of Keeping the Blue Side Up* (New York: Vantage Press, 1990).

Passenger boardings inch upward by 1.6% to 73,251,070 and freight jumps 19.9% to 1.11 billion FTKs. The enplanements figure tops the entire U.S. industry and is second in the world behind the Russians; cargo, on the other hand and despite the new emphasis, is still in fourth place on the U.S. scene, behind **Federal Express**, **Northwest Airlines**, and **United Airlines**. Its world position is 17th. Revenues ascend 10.52% to \$11 billion, the most for any air transport concern in the world.

Expenses, led by fuel costs, rise 18.53% to \$10.94 billion and cut the operating profit to \$67.97 million, good for second place among scheduled U.S. airlines behind **Southwest Airlines**, but only 11th on the world stage. More importantly, for the first time in years, a major net loss is taken: \$76.77 million. Parent corporation AMR does worse. Although revenues are up by 11.8% to \$11.7 billion, costs are up substantially and cut operating income to \$124 million. Following a horrendous \$215.1-million fourth quarter net loss, AMR closes out the year with a \$39.6-million net loss.

The payroll is increased by 6.5% in 1991 to 88,000 and Chairman Crandall is selected "CEO of the Year" and "Silver Award" winner by *Financial World* magazine. The fleet now includes 620 aircraft. As a cost-cutting move, options for 80 MD-11s are allowed to elapse. Since the beginning of the December holiday season, flight schedules have been reduced by an overall 11%, with the regression in the Charlotte, Nashville, and Los Angeles-San Francisco shuttle areas blamed on the pilots' union, with which the company is in contract negotiation.

AA places ads in the national print media in January not only blaming the pilots for causing, via sick-outs, a huge downturn in profits during the previous quarter, but naming the wrong union (ALPA) as responsible. The full-page "AApology" ads significantly sour negotiations, and will permanently damage relations between company pilots and CEO Crandall.

The Allied Pilots Association (APA) responds in kind in a *The Wall Street Journal* piece that blames over-expansion for the losses. Also in January, the DOT question's the carrier's large route purchases of the previous year and citizens of St. Louis attempt to find a buyer for **Trans World Airlines (TWA)**. At the same time, the company agrees to purchase a large package of **Eastern Air Lines** assets. Included on the \$10-million list is route authority from New York and Newark to Montreal and Ottawa, two Montreal gates, gate facilities at Nashville, Hartford, and Orlando, and 10 slots at New York (LGA).

The first McDonnell Douglas MD-11 joins the fleet on February 1 for use on long-haul routes from Dallas (DFW) to Tokyo. As a result of difficulties during proving flights, Chairman Crandall reports his disappointment with the new aircraft.

On February 19, the AAdvantage program, the industry's first frequent flyer fare, celebrates its 10th anniversary. At month's end, the company reaches an agreement with its pilots, represented by the Allied Pilots Association, with the flyers winning 8% in new wages and lump sum individual payments for the previous year. The January schedule cutbacks are now rescinded. Late in the month, the carrier begins to offer 5,000 bonus frequent flyer miles for passengers who book on its forthcoming San Jose to Tokyo service.

In early March, the company delays accepting its second MD-11 and keeps its first out of service as technical problems with the glass in the aircraft's cockpit are resolved with their manufacturer. The dispute between AA and McDonnell Douglas over 146 different items is widely covered in the aviation press. This dispute, coupled with range problems and communication difficulties, causes the manufacturer the loss of much credibility.

With no **Trans World Airline (TWA)** ownership seen, Transportation Secretary Samuel Skinner approves the AA route acquisitions in April at the original \$445-million price, minus the services from Philadelphia and Baltimore (BWI), which are excluded. The second MD-11 is delivered on April 22. At the end of the month, the company's 7.5% interest in **Air New Zealand, Ltd.** is sold to **Qantas Airways (Pty.), Ltd.** for \$23.3 million. Also in April, thrice-daily B-727-223A service is resumed from Louisville to Nashville.

The first MD-11 is operated on domestic routes, beginning on May 1. On May 23, nonstop B-767-223ER flights begin from Chicago to Milan. Also in May, nonstop Miami to Cancun, Houston, and Islip frequencies are undertaken and the new Western reservations center is opened at Tucson. From San Jose, hourly service is introduced to Los Angeles and the West Coast to Hong Kong pooled freight route with **Cathay Pacific Airways (Pty.), Ltd.** becomes a daily service.

Following a month of U.S. test service, the initial MD-11 commences scheduled passenger service from San Jose to Tokyo on June 1. The same day, daily service is inaugurated from Chicago to London (LGW); a second daily frequency between the two points is added on June 12. Meanwhile, plans are made to place the B-747SP-31s in service from New York (JFK) to London (LHR) run.

The carrier's largest route structure expansion is unveiled on July 1; as the result of a \$445-million purchase of route authority from **Trans World Airlines (TWA)**, American is able to introduce service to London (LHR). Thrice-daily service is opened from New York (JFK) and daily flights begin from Boston and Newark. At the same time, Chicago and Miami flights are switched from London (LGW). Simultaneously, flights are initiated from New York (JFK) to London (LGW) and to Manchester and from San Jose to Tokyo. Cargo is also expanded as a million pounds of daily freight capacity to and from Europe is added via B-767-223F Chicago to Milan and Miami to Madrid daily flights.

Daily Los Angeles to Heathrow and JFK to Gatwick service begins on July 20 while the first of 73 Fokker 100s on order is delivered on August 1. Later in the summer, Seattle and San Jose to Tokyo flights commence, as service to Australia is suspended. On August 7, the Federal District Court in Atlanta, converts an antitrust lawsuit against nine airlines into a class-action suit that could benefit many consumers and cost the carriers millions of dollars. The charges indict American and the others for conspiring to keep ticket prices high at 23 hub airports.

In a complicated three-party scheme between American, **United Airlines**, and **Trans World Airlines (TWA)** engineered by the latter's Carl Icahn later in the month, the three airline partners bid \$1.3 billion for bankrupt **Pan American World Airways (1)**; they lose out to a substantially higher offer from **Delta Air Lines**.
