SOUTHWEST AIR FAST EXPRESS (SAFEWAY): United States (1929–1931). With assistance from Maddux Air Lines commodore Lawrence G. Fritz, Earle P. Halliburton establishes SAFEWAY at Tulsa, Oklahoma, in early 1929 to offer scheduled, multistop passenger flights out of the oil fields to a variety of destinations. Beginning on February 14, a number of Ford Tri-Motors will be delivered for this service, including 5-AT-13 (February 14) and 5-AT-28 and 5-AT-29 (March 19).

These three aircraft are employed on April 2 to inaugurate scheduled revenue flights over routes from Tulsa to Fort Worth, Dallas, Wichita Falls, and Sweetwater via Oklahoma City and Tulsa to Springfield, St. Louis, Coffeerville, and Kansas City. Three more Fords arrive before the end of spring: 5-AT-39 on April 13, 5-AT-43 on May 8, 5-AT-44 on May 14.

During the summer, Halliburton participates with Jack Frye's Standard Airlines in the operation of an air-rail service. Passengers arriving at St. Louis from New York via the New York Central Railroad transfer to the Ford Tri-Motors, which fly on to Sweetwater, Texas. There the overnight trip continues, courtesy of the Texas & Pacific Railway, to El Paso, where Frye's company completes the third transcontinental service begun during the year.

On November 21, Halliburton applies to the U.S. Post Office for a new airmail contract. SAFEWAY is not one of those companies within the airway system desired by Postmaster General Walter F. Brown—Halliburton is thought a nuisance and his requests are put off.

The Ford 5-AT-64 is purchased on May 16, 1930, from Parks Air College in St. Louis, where it has been the only trimotored aircraft in America employed exclusively for student instruction. The final Tri-Motor, 5-AT-67, is received from Ford Motor Company on May 23.

Although Gen. Brown's contract award process will later be investigated, the Post Office is spared further difficulty from Oklahoma at this point when American Airways buys SAFEWAY out (for \$1.4 million) in September. The carrier is renamed Southern Air Fast Express on October 11 and Halliburton's planes and personnel are transferred to it.

SOUTHWEST AIR LINES COMPANY, LTD. (SWAL): Japan (1967–1993). Southwest Air Lines Company, Ltd. (Nansei Koku K.K.) is formed by **Japan Air Lines Company, Ltd.** at Naha, Okinawa on June 22, 1967. It is to replace the scheduled and charter services previously flown in the Nansei (Southwest) Islands by the U.S. CIA proprietary airline **Air America**, which is now too heavily engaged in the Vietnam War to continue their provision. JAL holds 51% ownership; the remaining stockholders (49%) are Naha Air Terminal, Orion Beer, Ryubyuan Oil, and the Bank of Okinawa. Employing Douglas DC-3s, the new entrant begins revenue flight operations, under contract to the U.S. Civil Administration of Okinawa, on July 1.

During the next decade, services are established and maintained linking Naha with Miyakojima, Ishigakijima, Kumejima, Yunagunijima, Minamidaitojima, and Taramajima. When the Ryukyu Islands are returned to Japan by the U.S. in May 1973, Southwest is designated Japan's fourth scheduled air carrier.

In 1978, President K. Oshiro's 350-employee carrier owns 8 YS-11A-500s and 2 de Havilland Canada DHC-6 Twin Otters. Orders are outstanding for a pair of Boeing 737-2Q3As. These, together with three others, are received over the next four years and by the middle 1980s, the company has also purchased two more Twin Otters, which replaced three YS-11A-500s. Orders are placed for three more Boeing 737-2Q3As.

New routes are opened during 1979–1981 to Agunijima, Hateruma, Kitadaitojima, and Okinoerabushima. Airline employment grows to 489 and traffic grows as the Boeings arrive.

A B-737-2Q3A, with 5 crew and 133 passengers, overruns the runway after landing at Ishigaki Jima on August 26, 1982, and catches fire; all aboard are safely evacuated before the aircraft is consumed by the flames.

Enplanements for the year total 1,308,651 and rise to 1,320,073 by 1983. The operating profit in 1983 is \$3.4 million and a net gain of \$2 million is generated.

The workforce is increased by 6.4% in 1984 to 500. Passenger boardings swell 4.6% to 1,378,000, while cargo jumps 18.3% to 3.21 million FTKs. Expenses do not overwhelm operating income and, as a result, the operating profit is \$1.9 million and the net profit is \$400,000, both figures being down from the previous 12 months.

K. Oshiro becomes chairman and service is now maintained by new President M. Ihara's airline throughout the Ryukyu Islands. Representing continued growth, the fleet in 1988 comprises 6 B-737-2Q3As, 4 Twin Otters, and 6 Nihons.

Orders are placed for four B-737-4Q3s in 1989. Enplanements total 1,356,974. One YS-11-500A is withdrawn in 1990 as another B-737-2Q3A is added. Passenger boardings leap ahead by 8.5% to 1,463,031 and freight climbs 22% to 4.31 million FTKs.

In 1991, the fleet includes 7 leased B-737-2Q3As, 1 chartered B-737-205A, 4 DHC-6-300s, and 5 YS-11A-200s. Airline employment in 1992 is 500. Regional services continue to be offered from Naha City to Yoron, Kume, Miyako, Ishigaki, Shimoji, Aguni, Kitadairo, Minamidaito, and Tarama. They also link Miyako with Ishigaki, Yoron with Okinorerabu, Tarama with Miyako, Ishigaki with Tarama, Ishigaki with Yonaguni, and Hateruma with Isigaki. In 1993, the carrier is renamed **Japan TransOcean Air, Ltd.**

SOUTH WEST AIR TRANSPORT, LTD. See **NAMIB AIR, LTD.**

SOUTH WEST AVIATION, LTD. See **SKYWAYS CARGO AIRLINE, LTD.**

SOUTHWEST AIRLINES (1): United States (1964–1967). Southwest is organized at San Antonio, Texas, in December 1964 to offer scheduled Beech 18 flights linking its base with Del Rio, Eagle Pass, and Kerrville. With Herbert R. Kelleher as a director and initially known as **Wild Goose Flying Service**, the commuter inaugurates daily roundtrips on January 7, 1965. Revenue services are maintained through 1966 and until the company shuts its doors in 1967.

SOUTHWEST AIRLINES (2): 2702 Love Field Drive, P.O. Box 36611, Dallas, Texas 75235, United States; Phone (214) 904-4000; Fax (214) 904-4011; <http://www.southwest.com>; Code WN; Year Founded 1967. Unloved by many of its competitors, but admired by many students of business and airline affairs, this scrappy, low-fare, short-segment carrier founded by LeMar Muse, Rollin W. King, and Herbert D. "Herb" Kelleher, becomes an example of efficient operation—and profit-making—for all American industries, as well as the U.S. Congress. It will grow into one of the nation's premier air transport concerns, imitated both at home and abroad.

Following the development of intrastate airlines (a category never recognized by the CAB) in California during the early 1960s, the next and most competitive launching site for units of this category is Texas. In 1966, as he will recall in 2001, San Antonio lawyer Kelleher meets with client Rollin W. King at a bar (the St. Anthony's Club) to discuss the idea of setting up a low-fare intrastate airline modeled after **Pacific Southwest Airlines (PSA)**. A triangle-shaped route plan is sketched on a cocktail napkin showing a system linking San Antonio, Dallas, and Houston. Later, on March 15, 1967, Air Southwest is officially formed in Dallas. Kelleher will fight long and hard in court for years to get various approvals required by his clients and will invest \$10,000 in the enterprise—a stake that will appreciate in value to \$200 million. On November 27, he files papers with the Texas Aeronautical Commission (TAC) seeking authority to provide discount flights over the route network first revealed at the St. Anthony's Club.

Although the application is unanimously approved on February 20, 1968, **Braniff International Airways**, **Trans-Texas Airlines**, and **Continental Airlines** begin a long legal battle aimed at prohibiting the TAC from delivering its certificate. On December 7, 1970, the United States Supreme Court rules against the complainants, and the new company is allowed to "get off the ground."

Having meanwhile acquired financing, Air Southwest changes its name to Southwest Airlines (2) on March 29, 1971. On June 8, a total of 650,000 shares are offered to the public at \$11 each. After one last legal skirmish on June 17, it inaugurates 12-times-per-day roundtrip Love Bird service to Houston. The next day, it launches 6-times-per-day roundtrip service to San Antonio with three Boeing 737-2H4As. Along with its hostesses' uniforms of red hot pants and white cheerleader boots, Southwest's fares are revolutionary, well illustrating the first marketing slogan: "How Do We Love You?"

On inauguration day, one-way tariffs are \$20. Southwest's decision to fly into Houston (HOU), instead of Houston (IAH) upsets others who have earlier agreed, under terms of the 1968 Regional Airport Concurrent Bond Ordinance, to service only the major fields then being built. The fourth Boeing is received on September 29 allowing every hour Dallas–Houston service to begin the next day.

On November 14, flights are started from Houston to San Antonio and a week later, the company introduces a \$10 night fare between Houston and Dallas.

Enplanements for the partial year total 108,554; Southwest has well and truly fired the opening salvo in a conflict that becomes known as the "Great Texas Airline Fare War."

A Boeing 737-2H4 is sold to **Frontier Airlines (1)** on May 13, 1972 at a net profit of \$500,000. On June 6, the Regional Airport Board and the cities of Dallas and Fort Worth jointly sue Southwest to force it to move from Love Field to Dallas–Fort Worth International Airport, 20 miles outside of town and scheduled to open in 1974. The outcome could prove important to eight other airlines that have promised to underwrite any losses the new airport might suffer; they enjoy full support from civic and financial communities from Texas to the Potomac.

Executive Class service is introduced on July 19. The TAC intervenes in the Love Field case on September 14, the same day an antitrust grand jury is impaneled in San Antonio. On October 30, Southwest introduces night half-fare flights, \$13 one way after 7:59 p.m. and all day Saturday and Sunday.

Having determined that many customers are driving 45 minutes for a 40-minute flight, all Houston service is transferred from Houston Intercontinental Airport to Hobby Airport.

A profit-sharing plan is started with an initial airline contribution of \$175,000.

A total of 308,999 passengers are carried on the year. Start-up losses are cut by more than half since January, but still total a net downturn of \$1.6 million for the year.

On January 22, 1973, half-fare tickets are issued on all San Antonio flights, \$13 one way. For a time, Southwest's competitors attempt to match its fares, but by the middle of the decade, even the staunchest have surrendered. On February 1, **Braniff International Airways** makes its most determined effort to overwhelm the newcomer by offering \$13 one-way daytime flights between Dallas and Houston. This move offers Muse's operation a shoot-out it can neither afford to fight—or lose.

The company accepts combat by placing its most famous ad in the newspapers of both cities: "Nobody's Going to Shoot Southwest Airlines Out of the Sky for a Lousy \$13!" Southwest goes on in the copy body to announce that it will not only match **Braniff International Airways** fares, but offer the passenger an alternative to it: he can, if he chooses, pay the regular \$26 fare and receive "a choice of valuable gifts." As many of the carrier's passengers are commuting businessmen, the promotion turns out to be a stroke of genius as the "valuable gifts" are fifths of expensive liquor. Passengers can put the fares on their expense accounts and take the Chivas Regal scotch, Crown Royal Canadian whiskey, or Smirnoff vodka home—free.

Braniff International Airways' tactic backfires and an appeal to the Texas Alcoholic Beverage Commission by several organizations identifying themselves as "Baptists" is dismissed. Only after the two-month contest ends do Southwest officials learn that their airline has become the largest distributor of Chivas, Crown Royal, and Smirnoff in the entire state of Texas.

A consolidated reservations center is opened at Dallas on March 21 and the Love Field case is settled in a federal court on April 28, when Judge William M. Taylor Jr., rules that Southwest Airlines can operate from Dallas (DAL) as long as it remains open as a commercial airport. The opposition is aghast and appeals the ruling all the way to the U.S. Supreme Court. The \$13 fare becomes permanent between Dallas and San Antonio on May 1, the same day the carrier begins accepting Universal Air Travel Plan cards.

On July 9, the company applies to the TAC for authority to mount its low-fare assault into the Rio Grande Valley via the Harlingen airport. RUSH Cargo service, which provides same-day airport cargo delivery, is now introduced.

On December 1, fares are increased by \$2 as company officials report that 82.1% of all flights operated arrive within 15 minutes of schedule.

A total of 543,407 travelers are transported on the year, a whopping 76% increase. The first profit in the company's short history is reported: \$174,756.

Unveiling a new advertising slogan, "Love Is Still Our Field," the carrier moves to Gates 2 and 3 of **American Airlines** at Dallas (DAL) on January 13, 1974. Ten days later, the one millionth (cumulative) passenger is carried. Service to four cities continues amidst the hustle and bustle of two dozen lawsuits. TAC hearings begin in Austin on February 26 regarding the Rio Grande Valley route application. The antitrust grand jury is dismissed on March 4 with no action and another antitrust grand jury is impaneled on April 11.

On May 31, the Fifth Circuit of the U.S. Court of Appeals in New Orleans upholds Judge Taylor's 1973 ruling. New hostess uniforms are introduced on September 24. Remodeled facilities, including two new boarding gates and departure lounges (built at a cost of \$400,000), at Houston (HOU) are occupied on December 8. Two days later, **Texas International Airlines** files suit in Austin's 200th District Court seeking to "relitigate" the Love Field case, but on December 16 the U.S. Supreme Court lets stand the Fifth Circuit Court decision of May 31.

With load factors of 61%, customer bookings for the year jump 61% to 759,721.

On January 27, 1975, the U.S. Supreme Court denies a petition for a rehearing of the Love Field Case. In five years, Southwest, in something of a record, has appeared twice (more or less as defendant) before the nation's highest tribunal and has emerged victorious on both occasions. Still, the company has one more battle to fight and one more foe to vanquish.

Finally granted on February 6, the TAC certificate for Rio Grande Valley service allows the carrier to commence four weekday roundtrip flights via Harlingen Airport on February 11. Eight days later, the new competition is appealed by **Texas International Airlines**, the local service carrier formerly known as **Trans-Texas Airlines**, which is now grounded by labor action.

The litigation drags on; meanwhile, Southwest flies the Valley, forcing its competitor into significant further difficulty that is not softened by a U.S. government indictment against TI and **Braniff International Airways** under the Sherman Antitrust Act for conspiring to put Southwest out of business.

On June 15, Judge Taylor issues a preliminary injunction prohibiting carriers governed by the CAB from "relitigating" the Love Field case. The fifth B-737-2H4A joins the fleet on July 2 and common stock is listed on the American Stock Exchange as of October 24 under the ticker symbol "LUV."

Enplanements for the year are 1,136,318.

An application is filed with the TAC on March 24, 1976, seeking authority to service five additional cities. On June 15, a \$32-million order is placed for four more Boeing short-haulers. The fifth anniversary is celebrated with parties on June 18.

The first shareholder dividend is declared by the board of directors on August 10: \$6.25 per share of common stock. The sixth B-737-2H4A enters service on September 13. From the original 2 million shares authorized, a public issue of 461,242 shares of common stock is sold on September 30.

On October 28, Southwest Airlines, whose employees number 198—the same number as the defenders of the Alamo—and which enjoys great public sympathy as an underdog, learns that the 20th District Court has sustained the TAC authority for it to service the Valley. On December 1, authority is granted to serve Austin, Corpus Christi, El Paso, Lubbock, and Midland/Odessa; the TAC permit is appealed by **Braniff International Airways** on December 14, but turned down.

The year's passenger boardings are 1,539,113. Revenues total \$30,966,000 and a net income of \$4,939,000 is earned.

Four-times-per-business-day flights are started to Corpus Christi from Dallas, Houston, and San Antonio on March 1, 1977. The five millionth passenger is flown between Houston and Dallas on May 3. Lubbock and Midland/Odessa service is inaugurated on May 20 with El Paso joining the route network on June 20. The company now covers the state (except for Amarillo and three other communities) and a new slogan is born: "We're Spreading Love."

Common stock begins trading on the New York Stock Exchange on June 27, still with the "LUV" ticket symbol. Frequencies are initiated to Austin on September 15.

Passenger boardings for the year jump 52% to 2,339,524. Revenues accelerate 59% to \$49,113,000 and the net income rises 53% to \$7,545,000.

Airline employment stands at 1,119 in 1978. With the delivery of two new Boeing 737-2H4s, service is started from Austin to Houston and the Rio Grande Valley on February 13. Lamar Muse resigns as chairman/president/CEO on March 28; Herbert D. "Herb" Kelleher is named to the post on an interim basis.

According to a 2001 recollection by the company chairman, Lamar Muse and Rollin King, who have been unable to work harmoniously together for some time, engage in a showdown with their board at the end of March. At this time counsel Kelleher, who has been a go-between, informs the board that he is resigning the Southwest account and is going to Houston to take on a case for his own firm. On March 26, Chairman/

President/CEO Muse informs the board that, unless King is terminated, he is resigning. At an emergency board meeting on March 28, the Muse resignation is accepted. Kelleher, who had flown back to Dallas for the meeting at board request, is named chairman on an interim basis after gaining approval for the appointment of an experienced airline man as president/CEO. Two days later, a new maintenance center is occupied at Dallas (DAL).

Route authority is sought from the CAB on May 23 for nonstop service from Dallas to New Orleans. Former **United Airlines** Vice President Howard D. Putnam is elected president/CEO on July 25 (effective August 21), with Interim Chairman Kelleher being awarded that post on a permanent basis. At this point, the new leader's legal secretary from his San Antonio law firm, Colleen Barrett, joins SWA. Twenty years later, as executive vice president-customer services, she will be the highest-ranking woman employed by a major U.S. airline. She will add to that distinction when, on June 19, 2001, she becomes Southwest's president/chief operating officer.

TAC route authority is received on October 19 for service to Amarillo and Beaumont, Port Arthur, and Orange. Two more B-737-2H4As arrive in late October.

Fighting its many battles against heavy odds and with recurrent success, Southwest Airlines develops a following as far away as the hearing rooms of the U.S. Senate. In the seemingly interminable series of inquiries conducted by that legislative body concerning the air transport industry in 1975-1978, Southwest is repeatedly used as an example of the blessings to be realized from airline deregulation.

Deregulation's champions argue that here is a company that is: (1) not regulated by the federal government, yet (2) increases its passenger loads by 50% per year, and (3) makes a higher return on equity than any domestic carrier in airline history, while (4) charging fares substantially lower than those of the CAB-regulated carriers. The Congress looks at these facts, debates, and passes the Airline Deregulation Act, which will prove a boon to many airlines, including Southwest, and the death knell for others. President Jimmy Carter signs this Public Law 95-504 on October 24.

With the exchange of its oldest B-737 for a new one on December 8, the intrastate completes its fleet upgrade to a total of 14 B-737-2H4As, plus 1 leased from **Braniff International Airways**. Orders remain outstanding for five more Dash-200s. Under the dormant route provision of the new Airline Deregulation Act, the CAB grants Southwest its New Orleans permit on December 11. The company adds Amarillo to its growing network on December 12. Passenger boardings rise 51% on the year to 3,528,105. Operating income climbs 65.3% to \$81 million and net gain skyrockets 121% to \$17 million. It is now time to move outside of Texas.

The workforce is increased by 45.7% in 1979 to 1,630. Daily Dallas and Houston to New Orleans service is launched on January 25. The 14th Boeing arrives on February 8 and on February 12 frequencies on the New Orleans route become 7 per day on weekdays, 6 on weekends. Service is started from Jefferson County Airport serving Beaumont, Port Arthur, and Orange to Dallas on March 5. The 15th B-737-2H4A is delivered on April 25 and placed into service on May 1.

On May 25, the best day to date is recorded: 17,928 passenger boardings. Cubic-Western Data self-ticketing machines are introduced at 10 airports. The 16th B-737-2H4A is delivered on October 23 and begins service the next day. Frequencies are increased on most routes as of November 7.

The company records a traffic increase of 49.8% or 5,000,086 million enplanements; 704,000 FTKs are also operated. Revenues jump 58.6% to \$129 million, but acquisition costs force the net profit to dip to \$15.83 million.

The employee population is reduced by 26% in 1980 to 3,283. When the CAB refigures its airline classification scheme, Southwest is rated as a "national" carrier. Local members of the IAM strike Southwest on January 13, but pilots and flight attendants cross their picket line, enabling the carrier to continue its flights; the job action ends five days later with a mediated agreement and normal operations are resumed on February 1.

Among the year's promotions are Ticknet, a prepurchase travel agency net discount and sponsorship of Capt. Slim Cummings' "Fear of Flying" course. New routes are started each day April 1-3 to, respectively, Oklahoma City, Tulsa, and Albuquerque. On June 18, Southwest celebrates its ninth birthday by deferring fare increases scheduled for July.

Orders are placed for three more B-737-2H4As on June 24. Service is terminated at Beaumont, Port Arthur, and Orange as of September 5; however, overall frequencies are again increased on October 2. Three high school students, none of whom are pilots, steal a twin-engine light-plane at Dallas on November 15 and fly it over Love Field for nearly an hour, barely avoiding a midair collision with a Southwest B-737-2H4A; the three are arrested when they land. Three more B-737-2H4As are received during the year, including the last on December 3, which is named after company founder *Rollin W. King*. It is the first aircraft to be completely owned by SWA.

During the year, the leadership of the company's flight attendants petition Chairman Kelleher to end the requirement that they wear hot pants and go-go boots. Conversely, customer service agents ask that the sexy uniforms be retained. A compromise is worked out: a wraparound skirt is designed and flight attendants are given permission to tie it over their hot pants if desired.

Passenger boardings, meanwhile, accelerate 19.5% to 5,976,621. Despite a yearlong freeze on fare increases, revenues increase by 56.5% to \$213 million. A \$28.4 million-net profit is experienced—a 70.8% jump over 1979 and a company record.

The number of employees is increased by 15.8% in 1981 to 2,129 and the 21st owned B-737-2H4A is received on January 23. A common stock offering of 750,000 shares at \$53 per share is announced on April 15 and easily returns \$38 million to Southwest's coffers. The summer schedule is increased by 18% on May 15 and the tenth anniversary is celebrated on June 18.

Five days later, orders are placed for 10 B-737-3H4s plus 30 options. The second decade of service is officially launched on August 25 with a new advertising theme: "Loving You Is What We Do." The company sees its President Howard Putnam transfer on September 22 to the same post at forgiven-rival **Braniff International Airways**; he is replaced by Board Chairman "Herb" Kelleher.

During the year, a 13.7% traffic increase is logged (6,792,927 passengers carried) and the Dallas-based carrier becomes the top-ranking U.S. national in terms of boarding totals. Cargo also gains, climbing 22.9% to 1.31 million FTKs. Revenues accelerate 26.9% to \$270.3 million and after expenses of \$221.9 are deducted, the operating profit is pegged at \$48.5 million. The \$34.16-million net gain is a company record.

The payroll increases 36.8% in 1982 to 2,913 and this is an important growth year for Southwest Airlines as its 737s fly into many new non-Texas markets. Service from Kansas City to 7 cities is inaugurated on January 18 and on January 21, flights begin to 11 cities from Las Vegas, to 12 cities from Phoenix, and to 11 cities from San Diego. Mr. Kelleher becomes permanent chairman, president, and CEO on February 23.

In celebration of its 11 years of service, the last flight on Friday nights, as of June 24 until December 31, in the Dallas, Houston, Midland/Odessa, and Tulsa markets will be \$11. A "Love That Spirit" advertising campaign is launched on July 6 and orders are placed for three more B-737-2H4As on July 27. Service from Los Angeles to 10 cities is begun on September 18 while flights to and from San Francisco commence on October 31. Largely unnoticed during the year is the appointment of Cathy Jones to the right seat of a B-737-2H4; she is the company's first female pilot.

Boardings surge by 18.1% to 9,079,000, allowing the company to retain its first place ranking in that category. To handle the load increase, 12 more B-737-2H4As have been placed on the line, a 35% increase in capacity. Cargo also grows, up 14.8% to 1.5 million FTKs. On the financial side, operating income rises 22.5% to \$331.18 million and expenses are \$291.96 million. The operating profit is \$39.22 million and a record \$34-million net profit is chalked up.

The workforce jumps upward again in **1983**, by 18.9% to 3,462. In January, the company receives the 1982 "Financial Management Award" from *Air Transport World* magazine.

On February 23, just 12 days after **American Airlines** introduces the concept of the two-tier wage, Southwest signs the industry's first two-tier contract. The first general fare increase in two years is instituted during the first quarter. Orders are placed for three additional B-737-2H4As on May 9.

Denver joins the route system on May 26. The 28th consecutive quarterly dividend is declared by the board on August 27.

Ten more B-737-2H4As join the fleet, passenger boardings for the year accelerate 19.4% to 9.51 million, and freight swells 16.8% to 1.75 million FTKs. Revenues balloon 35.3% to a record \$448 million and costs rise 30.04% to \$379.68 million. The operating gain is \$68.55 million and an after-expense net profit of \$40.9 million is realized—another record.

Employment grows another 13.6% in **1984** to 3,934 as the Texas company hits additional high spots. In what will prove a successful effort to keep financially troubled **Muse Air** out of the market, flights begin to Little Rock on February 27 after only five days preparation. Orders are placed on July 12 for 21 additional B-737-3H4s. With the new advertising campaign "You Choose Who Sits Next to You," open seating is now offered.

The first of Southwest's B-737-3H4s is received on November 30; following an elaborate banquet on December 16, the aircraft is christened *The Spirit of Kittyhawk* the next day and is placed into service. It is followed by two more on December 20.

A healthy traffic rise of 12.5% translates into passage of the 10 million mark in annual passenger boardings (10,697,544) for the first time. Cargo, still almost an afterthought, also climbs, up by 26.4% to 2.22 million FTKs.

The carrier records a 19.6% jump in revenues to \$535.94 million and costs are contained at \$467.45 million. The operating profit declines \$1,000. Yet another record net profit, \$49.7 million, is reported to stockholders and the government.

As **1985** opens, Southwest's expansion moves forward again, beginning with a 1.6% boost in the workforce to 4,228. On March 11, it is announced that the company will acquire financially troubled **Muse Airlines** for \$72 million. Five days later, the 22 city, primarily southwestern route system, is greatly strengthened by entrance into the big markets of St. Louis and Chicago (MDW), to which an introductory fare of \$17 is offered for 17 days. A "Just Say When" advertising campaign is unveiled on March 25 and on April 1, flights begin from St. Louis to New Orleans, Houston, and Kansas City.

On May 15, service is opened to Ontario, California, with a \$9 for nine days promotion. The **Muse Airlines** acquisition is consummated on June 25; Southwest pays \$40 million in cash and \$20 million in stock for its rival. The takeover is the first approved by the U.S. DOT following the demise of the CAB. Nonstop Albuquerque to Los Angeles flights begin on July 14 and to attract additional business travelers, a new campaign entitled "The Company Plane" is started.

At Houston on December 10, a Boeing 737-3H4 is christened *The Texas Sesquicentennial*. Houston to Jackson Hole, Wyoming, ski season flights begin on December 21. Southwest names the Ronald McDonald House as its primary charity. Due to fare wars, the fourth quarter is a fiscal disappointment.

Still, enplanements for the year increase 8.4% to 11,595,602 and revenues ascend 13.1% to \$606.07 million. Costs rise 14.6% to \$535.87 million and the operating profit grows to \$70.2 million. Net gain, however, drops 4.9% to \$47.2 million.

Airline employment rises 24.7% in **1986** to 5,271. A cone bolt and restraining cable supporting a rear engine mount shears off due to metal fatigue, causing a B-737-2H4A to land at Dallas on January 3 with one engine dangling; no injuries are reported.

A number of new fares are marketed in January and in February the **Muse Airlines** subsidiary is renamed **TranStar**. When, during the same

month, **PEOPLExpress** is integrated into **Continental Airlines**, Southwest is left as the largest U.S. national carrier. The 38th consecutive quarterly dividend is announced on March 3 and service is inaugurated to Nashville on March 18.

Flight attendants now sign a new five-year, two-tier wage pact. On April 14, a \$25 Senior Citizens Saturday-only fare is announced and \$19 one-way "Fun Fare" tickets are introduced in all markets on May 29. On June 13, same- or next-day door-to-door Rush Plus air express service is introduced, followed by the "One More Important Meeting—Home" advertising campaign aimed at business travelers.

A multimillion dollar Training Center is occupied on August 28 and in early fall, a five-year contract for the use of the **American Airlines** SABRE reservations system is begun. Unwilling to spend the funds required to become a major player in Denver, the company now departs that city. Meanwhile, the City of Dallas agrees to purchase all of the carrier's Love Field facilities at fair market value if operating restrictions are ever placed on that field; consequently, Southwest makes a long-term commitment to remain there.

Incidentally, when that airport closes its vehicle parking lots in order to replace them with parking garages, the airline turns around and builds the world's first drive through ticket counter outside the grounds.

Passenger boardings grow 1.6% to 12,995,000, but with **TranStar** figures included, climb to 13.6 million. Revenues increase 13.1% to \$679.8 million while the net profit jumps 5.8% to \$50 million.

The workforce is increased by 25.1% in **1987** to 5,765. In early March, Southwest takes delivery of 3 more B-737-3H4s, increasing the fleet to 20, in addition to the 46 owned B-737-2H4As. Difficulties are encountered during the first quarter in getting the new SABRE-based reservations system on line.

Service to Birmingham, Alabama, is inaugurated on March 10; also in March, the company's third reservation center (after San Antonio and Dallas) is opened in Phoenix. A new crew base domicile is opened at Phoenix on April 1 and Fun Fare prices are reduced on April 21. Later in the month, Southwest constructs a new pilot and flight attendant training center at Dallas (DAL) that houses the first convertible B-737-200/300 simulator in the industry. Additionally, work is begun on the building of a new \$7.5-million headquarters building.

The company expands into full-service air cargo on May 11, adding a Rush air freight product, and on May 21, orders are placed for 20 B-737-500s. Also in May, nonstop service is increased from San Francisco to San Diego and initiated to New Orleans, Houston (HOU), and Nashville. Detroit joins the route network on June 4; later in the month, daily nonstop flights begin from the "Motor City" to Phoenix, Chicago (MDW), St. Louis, and Kansas City.

The Company Club is introduced on June 18 as a frequent-flyer program for the short-haul business traveler, while a full-scale Rapid Rewards loyalty program is offered to other travelers. The **TranStar** subsidiary, formerly **Muse Airlines**, ceases operations on August 9 and is liquidated.

Half a million shares of common stock are repurchased on October 27. Also in October, the carrier ends its long stand as an industry outsider by becoming the 21st full member of ATA.

Also in October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

Customer bookings advance 8.6% to 12,313,000 and cargo climbs 14.5% to 1.79 million FTKs. Revenues accelerate 12.5% to \$698,663,000 and expenses increase by 22.1% to \$657.48 million, leaving an operating profit of \$23.77 million and net gain of \$20.15 million.

There is initially no change, plus or minus, in the size of the workforce in **1988**, although Elizabeth Pedrick Sartain, a future vice president, is first hired as director of compensation and benefits. Smoking is prohibited on California intrastate flights as of January 11 and on February 8 the number of trips required to win a free flight from The Company Club frequent

flyer program is reduced. Construction of a new \$5.7-million maintenance facility is started on March 9 at Houston (HOU). Two nonstops are added from Dallas to New Orleans on April 3, along with one from Phoenix; additionally, a daily nonstop is laid on in each of seven other markets served from Phoenix. Fares to several markets are lowered on April 12 and on April 22, the carrier, in compliance with federal law, bans smoking on all its flights, but hands out free lollipops to all passengers to help them become accustomed to the new rules.

The 47th consecutive quarterly dividend is announced on May 18 and also in May, services are expanded in the New Orleans and Phoenix markets. During the month, the company becomes the first to win the coveted Triple Crown award for a month—Best On-time Record, Best Baggage Handling, and Fewest Customer Complaints. In the years that follow (through 1997), SWA will win it 31 more times, as well as five annual Triple Crowns in 1992, 1993, 1994, 1995, and 1996.

On May 23, as part of its joint program with Sea World of Texas, which opens on May 28, to promote Texas tourism, Chairman Kelleher christens a B-737-3H4, painted like a killer whale, *Shamu One*. In six days, the aircraft visits every Southwest market, ending up in California where the carrier becomes the official airline of that state's Sea World attraction. On May 2, 1994, *People Weekly* will reveal that *Shamu One* is the basis for yet another impish tale in the Kelleher legend.

Seeing the killer whale livery, so the story goes, Chairman Robert L. Crandall of **American Airlines** calls up Kelleher to kid him about the aircraft. "It looks all right," he concludes, "but what are you going to do with all the whale s—t?" A few days later, Crandall receives a large bucket of chocolate mousse with a Shamu-shaped spoon sticking in it.

In June, the company adds daily nonstop frequencies from Phoenix to Detroit (DET)—the first commercial service there in 40 years— and Dallas, together with four-times-per-day flights from Phoenix to Albuquerque and Austin. Also, in a television commercial aired about this time, Chairman Kelleher offers any passengers too embarrassed to fly a discount carrier a paper bag to put over his or her head.

Frequencies are also launched from Detroit (DET) to Chicago (Midway), Kansas City, and Houston and as of July 6, the airline offers 900 flights systemwide, visiting 27 cities in 13 states. Simultaneously, service is relaunched from downtown Detroit (DET). Fares are also reduced in major markets during the day. Ground is broken on November 15 for a new corporate headquarters at Dallas (DAL). During the year, 13 B-737-3H4s arrive from and 3 B-727-2H4As are returned to their lessors.

Customer bookings jump 10.2% to 14,876,582 and cargo reaches upward 11.9% to 3.13 million FTKs. Revenues increase 23% to \$860.4 million, operating expenses rise 18% to \$774.5 million, and a net profit of \$58 million is announced.

Airline employment is increased by 35.3% in **1989** to 7,800. On January 30, a new reservations center is opened at Grand Prairie, Texas. New \$29 one-way Night Flight fares are introduced on February 8 between the Texas markets and four new B-737-3H4s join the fleet in March. The additional capacity allows the point-to-point pioneer to undertake another major service expansion, beginning on April 3 with six daily roundtrips from Indianapolis to Detroit (DET), four from the Indiana capital to Houston (HOU), and five to St. Louis.

During the month, many other frequencies are added. From Houston (HOU) these include a second daily nonstop roundtrip to Albuquerque, two additional flights to New Orleans flights, and two nonstops to St. Louis. Three daily nonstops from Chicago (Midway) to Detroit Metro Airport (for a total of 11) are added. From Albuquerque, a sixth daily nonstop to Los Angeles and a third daily nonstop to San Francisco are added, as well as a second daily nonstop from Phoenix to Detroit (DTT) and a fifth daily nonstop to San Francisco.

Flights begin from Oakland, California on May 15 and, as of May 23, *Shamu One* has flown 1.1 million miles between Southwest's destination cities. Night Flight service is introduced systemwide on June 1.

On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. SWA, with nine security breaches, is faced with \$45,000 in punishment.

Ordered earlier, the first B-737-500 makes its maiden flight on June 30. The 53rd consecutive quarterly dividend is declared on November 15. A cooperative holiday promotion is kicked off with Kentucky Fried Chicken on November 27 and at the end of December, fare reductions are announced in select markets.

Profits drop sharply during the fourth quarter due primarily to a 37% increase in fuel costs. Passenger boardings accelerate another 20.7% to 17,958,263 and freight is up 29.9% to 4.06 million FTKs, least among U.S. majors. Revenues bounce upward 18% to \$1.015 billion. Operating profits swell 13.5% to \$97,626,000 while net profit jumps 23.5% to \$71,558,000.

The payroll grows again in **1990** by 10.5%, to 8,620 and the fleet now includes 46 B-737-2H4As, 48 B-737-3H4s, and **TranStar's** 5 Douglas DC-9-51s. The fleet figure is 19th largest among world airlines.

Additional select market fare reductions are instituted on January 4 while Chairman Kelleher, at a January 31 press conference, announces Southwest's achievement of major carrier status based on its billion dollar 1989 earnings.

Quietly, an emergency cost control program is put into place, focused almost entirely on stringent fuel-conservation measures. The first B-737-5H4, for which the company is launch customer, is delivered on February 28 and enters service on March 5. Colleen Barrett is now appointed executive vice president-customers and corporate secretary, the third executive vice president appointed since 1985 and the first woman.

On April 16, service is inaugurated from Burbank to Oakland and from Oakland to Las Vegas; promotional fares herald the new frequencies. The new \$15-million corporate offices are occupied on April 25, replacing the ramshackle facilities across the field in the Love Field terminal that have been employed since the company's start.

On May 31, a B-737-5H4, the company's 100th delivered airliner, is christened *Shamu II*; painted to resemble a killer whale, it joins *Shamu I* in promotional flights. On August 2, Iraq invades Kuwait, sending fuel prices higher and on August 30, a broad, sports-theme promotional program is announced, tied to an umbrella sponsorship of the member universities of the Southwest Conference.

Special Senior Fares, starting as low as \$20, are offered as of November 1 in conjunction with the twentieth anniversary. Painted to commemorate the company's twentieth birthday and resembling a red, white and blue Texas flag, the B-737-3H4 *Lone Star I* enters service on November 12. Service to and from Reno begins on November 15, the same day the board of directors declares a 57th consecutive quarterly dividend. On December 31, Southwest is the only major carrier to see its stock price close higher on the final day of trading than on the final day of 1989 trading.

Customers accommodated rises 10.4% to 19,830,941, making Southwest the world's 14th largest carrier. Cargo skyrockets 246% to 14.07 million FTKs. Revenues increase 16.9% to \$1.187 billion, but operating expenses climb 20.4% to \$1.104 billion, leaving a net profit of \$47.1 million, atop an \$82 million operating profit, 9th highest among all world airlines.

Airline employment is increased by 13.4% in **1991** to 9,778 and the fleet now includes 124 aircraft, mostly B-737s but still including 5 former **TranStar** DC-9-51s. A new promotional package is announced in cooperation with Chili's restaurant chain on January 14.

On February 11, following the landing of Flight 335 at San Diego, FBI agents arrest C. L. Compton. During the B-737 service from Oakland to San Diego, Compton had argued with the crew for not allowing him to smoke and then gave them a note saying he was carrying explosives and demanding \$13 million and a flight to Cuba. Compton will be tried and convicted in early 1992 and given a 30-year prison sentence.

In less than a year, the Burbank–Oakland route soars from 179th largest U.S. market to 25th largest.

Oakland to Los Angeles and San Diego flights begin on April 15 and on May 6, a Kids Fly Free summer promotion is announced. As the first step in a major expansion of California operations, six-times-per-day service is inaugurated to Sacramento from Burbank on June 17; the next

day, simultaneous 20th birthday parties are hosted in each of the 32 cities served.

Six-times-per-day B-737-3H4 Sacramento to San Diego roundtrip service begins on July 25, followed by the introduction of nonstop St. Louis to Kansas City flights on August 15. In honor of its twentieth birthday, the carrier offers its customers, beginning on September 18, free admission to the Texas State Fair.

A B-737-2H4A comes within 50 ft. of colliding with a small plane while preparing for a landing at Chicago (MDW) on September 27, while on October 4, another small Boeing comes within 1,000 feet of impacting a **Midway Airlines** DC-9-31 over the same airport. On November 1, Las Vegas to Los Angeles and Phoenix frequencies commence. A job fair is held on November 15 for the employees of failed **Midway Airlines (1)**; 3,000 interviews are conducted to fill 34 initial jobs along with future positions.

Customer bookings jump 14.3% to 22,669,942 and cargo moves upward 34.4% to 18.93 million FTKs. Revenues increase by 10.69% to \$1.31 billion, expenses rise 13.25% to \$1.25 billion, and the operating profit is \$62.04 million. This year's net profit totals \$26.91 million.

Company employment grows 16.6% in **1992** to 11,307. At the beginning of the year, the company receives the 1991 "Airline of the Year" award from *Air Transport World* magazine. Also Edward O. Welles profiles Chairman Kelleher as "Captain Marvel," for *Inc* XIV (January 1992): 44-47.

On January 8, service is initiated between Chicago (MDW) and Indianapolis while flights commence between Cleveland and Chicago (MDW) and St. Louis on February 13. On March 2, nonstop frequencies are introduced between Las Vegas and Sacramento or Kansas City.

It is announced on March 6 that, where no other airline has reached the goal even once, Southwest has swept the DOT's performance categories for the sixth consecutive time. In 1991, it has the best on-time performance, the fewest number of lost baggage complaints, and the lowest number of overall customer complaints.

When it is discovered by aircraft service company **Stevens Aviation** that its advertising and that of Southwest is nearly identical, Stevens Chairman Kurt Herwald challenges "Herb" Kelleher to an arm wrestling contest with ad removal the forfeit. A jocular war of words ensues between the two companies. The best two-out-of-three contest is duly held at the Dallas Sportatorium on March 20 and despite Kelleher's loss, the two contestants, who have become good friends over the matter, agree to continue using and sharing their ads.

During the second week of April, Chairman Kelleher is named the fifth "Aerospace Laureate" in the field of commercial air transport by *Aviation Week and Space Technology*. Also during the spring, the 5 remaining **TranStar** DC-9-51s are traded to **Northwest Airlines** for the 18 Chicago gates the latter had purchased from **Midway Airlines** the year before.

On June 4, nonstop flights begin between Indianapolis and New Orleans and from Port Columbus, Ohio, to Chicago (MDW) and St. Louis. The number of Chicago (Midway) gates is now 24 and departures total 61, later increased to 100; however, Phoenix is now the largest hub in terms of departures.

A variety of promotional fares are introduced or reintroduced during the summer season. Frequencies are increased to the carrier's Missouri, Nevada, New Mexico, Arizona, Illinois, and California markets on July 13. Acknowledging the recession, an advertisement is run stating that "All Airlines Operate Within a Budget." To combat the Value Added pricing of rival **American Airlines**, Southwest notes "We'd Like to Match Their New Fares," suggesting that its traditional rates are just as low. At the same time, the famous "Liar, Liar!" ads are run demonstrating that it, in fact, has the fewest number of customer complaints per 100,000 passengers.

The company's largest maintenance facility, a \$10-million project at Phoenix Sky Harbor International Airport, is opened on October 8. Later in the fall, a sixth reservation center, at Albuquerque, is occupied. To celebrate its capture of the Triple Crown as first in customer satisfaction,

baggage handling, and on-time performance, a one-of-a-kind trophy is commissioned.

Passenger boardings zoom up by 22.8% to 27,839,284 and cargo moves ahead by 42.6% to 26.99 million FTKs. Revenues jump 28.3% to \$1.68 billion, expenses ascend 20.1% to \$1.5 billion, and operating income triples to \$182.63 million. Net profit nearly quadruples to \$91.02 million. Southwest is the only U.S. airline to make money during the year.

The payroll is increased by 16.1% in **1993** to 13,232 and the 157 all-B-737 fleet is the world's 12th largest. In January, Southwest receives a "20 Years of Excellence Award in Short-Haul Services" award from *Air Transport World* magazine.

Flights begin from Chicago to Louisville in May and daily service is started in June from San Jose with 11 daily nonstop roundtrips, six to Burbank and five to Las Vegas. Within a month, traffic between Chicago and Louisville triples.

Simultaneously, a Friends Fly Free promotion is unveiled while Chairman Kelleher serves as a member of the President's Airline Commission for three months during the summer. Executive Vice President/Chief Operating Officer Gary Barron adds only the fifth station director since 1989.

Eighteen flights are added from San Jose on August 13 to bring the total number of daily departures from that California city to 29; added nonstop flights include service to Los Angeles (LAX), Ontario, Reno, and Burbank.

A full-scale fare war breaks out with **USAir** on August 17 as additional pressure is placed on the rival when, in a move long expected, the low-fare leader begins flying into Baltimore (BWI). Both slash fares to rock bottom prices to compete on routes from the new East Coast market to Chicago (MDW) via Cleveland.

The company consolidates all of its Detroit flight operations at Detroit Metropolitan Airport on September 15, including those previously offered from downtown Detroit (DET). On the same day, five-times-per-day flights are offered from Baltimore (BWI) to Cleveland and Chicago (MDW). At the same time, 10 new daily departures are offered from the Michigan city, including six-times-per-day roundtrips to St. Louis, from whence connecting flights are offered to other destinations. Simultaneously, the six daily roundtrips to Chicago (MDW) introduced in August are increased to 10.

The carrier becomes launch customer for the B-737-700 on November 17, announcing that it will request 65 of the yet-to-be-flown short-haulers; options are taken on 63 more. Salt Lake City-based **Morris Air** is acquired through an exchange of stock on December 31; integration will take place in stages through March 1995. **Morris Air** cofounder David Neeleman, 33, who has reportedly earned \$20 million on the deal, signs on with Southwest; he will depart within five months, having found his new employer too regimented. Before his departure, Chairman Kelleher requires that he sign a five-year noncompetitive agreement. Neeleman will later help found two more deep-discount operators, **Westjet Airlines, Ltd.** in Canada and history's best-financed new entrant, **JetBlue Airlines**.

Meanwhile, during the year, a DOT study reports that the industry's changing configurations are caused by "The Southwest Effect." During the same 12 months, Chairman Kelleher, reinforces the "effect" when he appears in episodes of the television comedy series *Wings* and *Seinfeld*. He is also interviewed on the U.S. and French versions of *60 Minutes*, David Brinkley's ABC-TV Sunday morning interview program *This Week with David Brinkley*, and stars in an American Express commercial.

"Herb the Love Bug: An Interview" appears in *Incentive* CLXVII (November 1993): 52+ and the chairman regularly appears in company television ads just as onetime **Eastern Air Lines** Chairman Frank Borman had a decade earlier.

Customer bookings ascend 20.4% to 33,508,686, the world's 8th highest boarding total. Cargo rises 23.1% to 33.21 million FTKs. Profitability continues as revenues jump 22.7% to \$2.06 billion, the world's

24th best overall income. Expenses rise 18.8% to \$1.78 billion and the operating profit moves ahead to \$291.97 million, 8th best in the world. Net profit almost doubles, hitting \$169.54 million, and is the world's 5th best such figure. The company is one of only two U.S. passenger air carriers to make money during the year.

Airline employment is boosted 10.8% in 1994 to 16,816; no employee has been laid off since the airline's 1971 founding. The company completes a \$2.5-billion contract with Boeing on January 19 for the delivery of the B-737-7H4s, beginning in October 1997. In April, the union of Southwest and **Morris Air** is celebrated with a mock marriage in the Graceland Wedding Chapel at Las Vegas by a man wearing a stuffed Southwest Spirit model and a lady wearing a similar **Morris Air** mascot. The event is presided over by an Elvis impersonator, a role, incidentally, played on occasion by Mr. Kelleher. Five **Morris Air** B-737-3T5s and a B-737-3T0 are now taken over by the new parent, while the subsidiary's remaining 16 chartered units are returned to their lessor.

On March 2, four-times-per-day nonstop roundtrips commence between Phoenix and San Jose and one new nonstop roundtrip begins from Phoenix to Little Rock. Five-times-per-day roundtrips are inaugurated on April 15 between San Jose and San Diego. Apollo, an industry reservations system, informs the company on April 23 that it has until May 1 to pay for services or have its schedule dumped from the huge computer reservations system.

Other industry reservations systems, including Galileo, Worldspan, and System One, also join in the demand. Southwest begins its own reservations system by offering personal computer systems to travel agents that sell at least 15 Southwest tickets daily.

On May 26, from the old **Morris Air** market at Orange County Airport, the carrier begins flying seven daily roundtrips to Oakland and eight to San Jose. Also in May, a B-737-3H4 arrives at Phoenix painted in colors patterned after the Arizona state flag; christened *Arizona One*, the aircraft joins *Lone Star One* as one of the carrier's two state-theme aircraft.

Another **Morris Air** market is tapped, beginning on June 6; from Seattle, four daily roundtrips commence to Spokane and four to Oakland. The same day, the company begins service from Portland with thrice-daily flights to Spokane and four per day to Oakland. From Spokane, four daily roundtrips to Seattle, three to Portland, and one to Oakland are now offered.

Also this day, three daily nonstop roundtrips are added from Baltimore (BWI) to Chicago (MDW), bringing the number of daily services on that route to seven. By adding one more roundtrip, the number of dailies between Los Angeles (LAX) and Oakland is increased to 19.

For the *Gong Show* contest at this year's Dallas Chili Cook-Off staged at about this time, Chairman Kelleher dresses up as Elvis to perform *Blue Suede Shoes*. Afterwards, company pilots present him with a Harley-Davidson motorcycle.

On July 8, Southwest adds two new daily roundtrips between Birmingham and Baltimore (BWI), one from Birmingham to Houston, three new dailies between Louisville and the airport at Baltimore (BWI), and one more between St. Louis and the same Baltimore (BWI) facility. One more flight between Dallas (DFW) and New Orleans is offered, as well as one additional service between Houston and New Orleans. An additional roundtrip between Houston and Harlingen/Rio Grande Valley, three more nonstops from Houston to New Orleans, and one more roundtrip between St. Louis and Chicago (MDW) are added. Also new are one more roundtrip between Ontario and Sacramento, two more between St. Louis and Louisville, one more between St. Louis and Houston, and one more between Louisville and Birmingham.

On August 3, the carrier announces that it is planning a reservations system of its own that uses no tickets; it begins testing the new system on August 22 over routes from Dallas to Little Rock and Corpus Christi to Houston. In September, a total of 236 Head-Up Guidance Systems are ordered for the carrier's B-737 fleet. Later in the month, Chairman Kelleher announces a new \$25 one-way Monday Night Football fare good only after 7 p.m.; aboard the Boeings those evenings, cabin staff begin to wear football jerseys. Also during September, the company

holds Elvis lookalike contests. However, on October 1, the FAA requires the company's flight attendants to stop singing safety advice to passengers at the start of flights.

The same day, low-fare competition begins in the California market with the Shuttle by United division of **United Airlines**. Company ads note that "Every Seat, Every Mile, Everywhere" are discounted. Also on October 1, a flight attendant base for 494 persons is opened at Oakland. Beginning later in the month, the company offers eight daily flights from Tucson, including four to Los Angeles, two to Las Vegas, and two to San Diego. Beginning October 4, passengers are allowed to employ the new ticketless system for travel between any of the four test cities.

William G. Lee now has "A Conversation with Herb Kelleher," for *Organizational Dynamics* XXIII (Fall 1994): 64+.

A total of 15 B-737-3H4 flights are added in California on November 15, bringing the number of daily departures in the Golden State market to 519. Expansion flights include 6 times Los Angeles (LAX) to Oakland for a total of 25; 3 from Oakland to Burbank for a total of 16; 2 between Ontario and Oakland for a total of 15; 1 between Los Angeles (LAX) and Las Vegas for a total of 14; and 3 between Oakland and Seattle for a total of 7. A tentative 10-year pact is reached with company pilots on November 17; the deal raises the flyers' pay in three of the last five years, but gives them more opportunity to share in company profits.

In December, it is announced, and DOT statistics confirm, that since records were first kept in 1987, Southwest has been number one in on-time performance. These figures, when added to firsts in baggage handling and fewest customer complaints, allow SWA to wing the DOT's Triple Crown award for the third time in three years. On December 15, a leased B-737-3H4 is employed to add five daily roundtrips between Los Angeles (LAX) and Las Vegas; daily departures from the former station reach 109 and from the latter, 110.

At year's end, a new list of fun facts is released. Among the 1994 highlights, SWA has answered 66,693,786 reservation calls, received 126,389 job applications, burned 50 million gallons of jet fuel per month, has employed 543 married couples, served 62 million bags of peanuts, and has operating costs of \$.07 per mile, which no competitor can match.

Passenger boardings surge 15.7% to 42,742,602 while freight climbs 19.5% to 39.69 million FTKs. Revenues jump 12.9% to \$2.59 billion as expenses grow 13.5% to \$2.75 billion. The pretax profit is \$316.7 million and net gain hits \$179.33 million.

Airline employment in 1995 stands at 19,933, an 18.5% increase.

Chairman Kelleher is interviewed on "Unorthodoxy at Work" in *Management Review*, LXXXIV (January 1995): 9+. Fred E. Whittlesey also has a profile in his "CEO Herb Kelleher Discusses Southwest Airline's People Culture," *Aca Journal* IV (Winter 1995): 8+.

As passengers deplane a B-737-2H4 at Dallas (DAL) on January 27, a four-year-old boy exits through the galley servicing door and falls through a nine-inch gap between the aircraft and catering truck; the lad is seriously hurt and rushed to the hospital.

The company issues its last paper ticket on January 31, becoming the first totally "ticketless" operator thereafter. Only one new market is entered this year: Omaha. On the other hand, as a result of the **Morris Air** takeover, 12 new nonstop city pairs and 7 markets are more fully developed.

Wendy Zellner profiles Southwest's "Rita Bailey, Manager, Corporate Employment" for *Business Week* (February 13, 1995): 68-69.

In late June and early July, 18 nonstop daily frequencies are inaugurated from 3 Nashville gates to Baltimore/Washington, Kansas City, and New Orleans. At the same time, additional assets are moved from the East Coast to California to continue the battle with United Airlines' Shuttle by United division.

On July 29 rival **Valujet Airlines** reveals that upwards of 300 Mary Kay Cosmetics sales representatives who thought they had booked flights with them or SWA have been duped in a credit card scam.

After five months, it is reported in late July that 30% of the company's passengers are flying ticketless. Meanwhile, to meet FAA re-

quirements to match checked baggage with passengers, SWA in July begins testing a hand-held, touch-screen 486 computer for curbside check-in at Oakland, Dallas, and Houston.

On August 1, *California One*, a B-737-3H4 with a giant golden bear honoring the Golden State, is unveiled as the latest in the company's line of colorful state planes. By the end of the month, the company has added 11 additional departures from Nashville.

During takeoff at Lubbock, Texas, on August 18, the No. 3 wheel assembly separates from the axle of a B-737-3H4; the air crew continue the flight and land uneventfully at Albuquerque.

Wendy Zellner examines the question "Can a Company Hold a 401(k) Hostage?" in *Business Week* (September 18, 1995): 92+, which reveals the dark story of the termination of Gloria J. Cruz and the airline's refusal to disburse her 401(K) money until she agrees not to fight for reinstatement.

By the end of summer, departures from Portland and Seattle are increased by 50% while frequencies out of Boise and Spokane are doubled.

To kick off its new nonstop service between Cleveland and Nashville on October 29, the carrier also announces an introductory one-way tariff of \$29 or \$49 to San Antonio or Austin. Additionally, six more daily departures are added from Nashville.

Having determined that, for flights lasting more than an hour and a half, say from Nashville to Las Vegas, customers require more substantial snacks than peanuts or pretzels. To that end, the company in November begins to distribute "Real Fast Food" on its longer segments, sealed foil pouches containing wheat crackers, a little tub of cheese spread, and a fruit snack bar.

M. A. Verespei profiles the chairman in his "Flying His Own Course," *IW: The Management Magazine* CCXLIV (November 20, 1995): 22-24.

At year's end, Southwest is the world's largest operator of Boeing aircraft, flying 224 B-737s of different models.

Enplanements accelerate 4.8% to 44,785,573 and cargo grows by 22.6% to 48.67 million FTKs. Revenues jump 10.8% to \$2.87 billion while costs climb 12.5% to \$2.55 billion. Operating income actually falls to \$313.53 million although a \$182.62-million net profit is posted.

The total number workers employed grows by 15.1% in 1996 to 22,944; 10 new B-737s will be received during the year and all will be assigned to Florida. Despite the fact that the U.S. Congress has failed to renew the decades-old 10% excise tax on airline tickets, Southwest, together with **United Airlines**, raises fares by 10% on January 1, effectively cancelling out the savings for its passengers.

A major winter storm severely impacts East Coast airline operations between January 7 and 9. The company is forced to cancel all of its daily departures into and out of Baltimore (BWI) on January 7 and cannot dispatch any from that hub before two B-737s depart on January 9. Final preparations are made to undertake the long-delayed initiation of services in Florida.

The company enters the Tampa and Fort Lauderdale markets on January 22; its appearance will cause difficulties for other airlines providing Florida service, most especially **USAir**. At this time, Southwest, which has transferred pilots and ground crews from Chicago and Houston, launches six daily roundtrip flights from Tampa to Fort Lauderdale and twice-daily frequencies to New Orleans and Baltimore (BWI). Passengers flying from Fort Lauderdale to New Orleans and Baltimore (BWI) connect via Tampa while daily frequencies are also initiated from Fort Lauderdale to Birmingham and Houston. In addition, daily roundtrips begin from Tampa to Nashville and St. Louis.

Also during the month, a new five-year contract is signed with local chapter representatives of the Ramp, Operations, and Provisioning Association. The Tampa and Fort Lauderdale services are expanded on February 27. During the first quarter, company executives meet with officials in Rhode Island, New Hampshire, Connecticut, Massachusetts, and New York concerning possible expansion of services into the Northeast U.S.

On March 31, a commitment is given to offer simplified business-class fares, based on flight distance, to employees of the Business Travel Contractors Corporation, a consortium of 25 companies. The carrier cel-

brates its twenty-fifth anniversary with a series of special events throughout the summer.

The company begins flying to and from Orlando on April 7. That day, the company initiates five daily roundtrips from Orlando (OIA) to Fort Lauderdale, twice-daily flights to Baltimore (BWI), and daily nonstops to Indianapolis, New Orleans, and Nashville.

Also in April, 10 acres are leased from the City of Dallas for construction of a new pilot training facility; the complex is expected to be occupied at the end of 1997.

While approaching Ontario, California, on April 20, the pilot of a B-737-3H4 with 132 passengers reports an unresolved left main-landing-gear problem. The aircraft circles the area performing normal emergency gear-extension procedures without success. Finally, the aircraft is diverted to another airport, where an emergency landing is made with minor damage and no injuries.

Frequencies from Orlando are enhanced on May 10 with new daily nonstop roundtrips added to Birmingham and Louisville and frequencies to New Orleans and Nashville increased to thrice daily.

As the carrier celebrates its twenty-fifth, silver, anniversary, it introduces a special livery on June 1 on a B-737-3H4, which has been christened *Silver One*. The color scheme features the normal tail design atop an all silver fuselage.

New daily nonstop roundtrips commence from Tampa to Columbus, Louisville, and Indianapolis on June 18; the same day, an additional roundtrip is laid on between Tampa and Fort Lauderdale. The inter-Florida route is tied to a promotion with Alamo Rent-a-Car. During the month, one flight per day is withdrawn from the Oakland-Seattle and Oakland-Portland routes.

It is announced on July 1 that the company has employed a total of 300 new pilots during the preceding 12 months. Flight 436, a B-737-2H4A with 127 passengers, aborts its takeoff from Nashville on July 8 after a bird flies into one of its engines. The aircraft skids 700 ft. past the end of Runway 20C and comes to rest with flattened tires, but only one passenger is injured in the subsequent emergency evacuation.

To continue the commemoration of its silver anniversary as a low-cost carrier, the company inaugurates special \$25 fares on August 19; the promotion, for which tickets were first sold on July 23, will run through the end of October.

It appears by early fall that at least two of the concern's competitors are making inroads in their competition with Southwest. **Delta Air Lines** launches its "Delta Express" low-cost unit on October 1. The Texas-based airline begins its long-planned expansion into the Northeast on October 14 with the sale of everyday, one-way \$39 fares.

With SWA attention on its Northeast incursion, **United Airlines** is able to report on October 24 that its Shuttle by United service has been able to battle Kelleher & Co. to a virtual standoff in the West Coast air travel market, capturing 41% of market share to Southwest's 43%.

Pursuant to an announcement made back on July 30, SWA inaugurates service from T. F. Green Airport at Warwick, Rhode Island (8 miles S. of Providence) on October 27 with 14 daily B-737 nonstop frequencies to Chicago (MDW), Baltimore (BWI), Nashville, Orlando, and Tampa. A \$29 fare sale is launched after the Thanksgiving holiday; it will last through Christmas.

A joint-marketing agreement is signed in early December with **Flugfölag Islands (2)/Icelandair, H.F.** When the pact takes effect at the beginning of the new year, the Reykjavik-based flag carrier will handle all ticketing and reservations for the service that will ensure its passengers smooth connection from its arriving jetliners at Baltimore (BWI) onto Southwest Boeings departing for Cleveland.

Late in the month, work begins on a \$30-million, 300,000-sq.-ft., 5-story expansion of the Dallas headquarters facility. The company wins its fifth consecutive Triple Crown this year. As reported in the DOT's *Air Travel Consumer Report*, Southwest has the best on-time performance, best-baggage handling, and fewest customer complaints.

During the year, a widely circulated volume by Kevin and Jackie Freiberg describing the carrier's unique corporate culture is released,

NUTS! Southwest Airlines' Crazy Recipe for Business and Personal Success (Austin, Tex.: Bard Press).

Customer bookings accelerate 10.8% to 49,621,504 and 53.6 million FTKs are operated, a 10.1% increase. Revenues jump 18.6% to \$3.4 billion while expenses are up 19.4% to \$3.05 billion. Operating gain swells to \$350.63 million and a record \$207.33-million profit is posted.

The employee population is increased by 4.5% in 1997 to 23,974. Southwest and **Flugfelag Islands (2)/Icelandair, H.F.** begin their test single-route program on January 22. Passengers from Cleveland are able to connect at Baltimore (BWI) to Icelandair flights bound for Reykjavik.

On January 15, new daily roundtrip service is inaugurated between Houston (HOU) and Kansas City and between Baltimore (BWI) and Fort Lauderdale-Hollywood International Airport. A third daily nonstop is simultaneously introduced between Baltimore (BWI) and Orlando.

Slated for delivery in October as a Dash-7H4 unit, the first B-737-700 prototype is test flown from Renton Field, Washington, on February 6, by the manufacturer's test pilots Capt. Mike Hewitt and Ken Higgins.

Southwest is listed among America's most admired corporations in the annual survey published by *Fortune* magazine on March 3. Southwest was similarly recognized by the magazine in its 1996 survey.

Thrice-daily service from Nashville to Detroit is inaugurated on April 6. On May 24, the company is again ranked first in consumer satisfaction in a survey of domestic air transport. On June 1, limited long-haul flights commence from Nashville to Los Angeles and Oakland.

Ten days later, daily roundtrips begin from Nashville to Columbus. A B-737-3H4 is unveiled upon delivery at Seattle on June 9 as the theme aircraft *Triple Crown One*. The bright blue livery with a medal and ribbon denotes the company's performance championships in 1992-1996 and the names of 24,000 employees appear on the inside overhead storage bin doors. A group of 84 company employees chosen to represent all workers participate the ceremony; they then board the plane and fly back to Dallas, where they are met and given a pep talk by Chairman Kelleher, who formally dedicates the aircraft.

To celebrate the tenth anniversary of its frequent flyer program, SWA, on June 18, automatically enrolls all travelers this day into its Rapid Rewards program. By month's end, the number of daily departures from Nashville has risen to 53 from 11 gates.

The 50-cycle test of a prototype of the company's B-737-7H4, painted in Southwest colors, is completed on July 19. Ground personnel, cockpit and cabin crews are all involved in the exercises, which cover a large portion of the airline's route network. The popular Friends Fly Free promotion is resumed on July 20 and will be continued through December 16.

Also during July, the U.S. Congress changes the manner in which taxes on airlines are assessed, reducing the traditional 10% ticket tax while adding a flat tax per flight. The new method of income enhancement, which will take effect in October, will result in higher taxes for short-haul flights and lower ones for longer segments. Southwest, which joins other low-cost carriers in protesting the measure, continues to selectively expand into longer routes as a way to alleviate some of the anticipated new tax burden.

Twice-daily, nonstop service is inaugurated from Jackson, Mississippi, on August 9 to Baltimore (BWI) and Chicago (MDW), thrice-daily to Houston (HOU), and daily to Orlando.

Southwest and **Flugfelag Islands (2)/Icelandair, H.F.** expand their marketing agreement on August 14 to include Chicago (MDW) and Providence. Southwest passengers from those cities, as well as Cleveland, are able to connect at Baltimore (BWI) with Icelandair flights to Reykjavik. Icelandair will continue to handle all reservations and ticketing. Jacksonville also joins the route network during the second half of the month.

MedLink, a new in-flight telephone service that enables flight attendants to seek physicians' advice to provide additional aid for passengers suffering medical emergencies, is unveiled on September 1.

On September 4, **Northwest Airlines** raises its domestic fares by 5% and over the weekend, most other U.S. majors, except Southwest, join in. Daily nonstop flights from Jackson to Fort Lauderdale and Orlando

start on September 7. Simultaneously, daily nonstop roundtrips commence between Tampa and Albuquerque and between Orlando and Albuquerque.

Also on September 7, a number of other services are expanded from "Music City USA." Daily roundtrips are added between Nashville and Providence, bringing the total number of daily roundtrips between both cities to two. Flights between Nashville and Orlando are increased to four, between Nashville and Kansas City to three, and between Nashville and Austin to two. Twice-daily roundtrips are started from Nashville and Baltimore/Washington flights are increased to seven.

On September 8, **American Airlines, Delta Air Lines, and Trans World Airlines (TWA)** abandon the fare boost, but when **United Airlines** does not go along, these big three reinstate the higher tariffs the next day. Higher fares will now exist in those markets not served by SWA.

The same day, with the breaking of a ceremonial bottle of orange juice over the nose of *Shamu One*, SWA inaugurates daily nonstop roundtrips from Albuquerque to Orlando and Tampa Bay.

During the month, 48 additional frequencies are started east of the Mississippi and 26 to the west; these include 95 weekly Florida services, 101 at Chicago, 50 at Baltimore (BWI), and 59 at Nashville.

As the result of an ATC error on September 25, a private Learjet on final approach passes within 0.08 nm. of Flight 858, a B-737 inbound to Dallas (DAL) from Midland, Texas, with 108 passengers and a crew of five. The SWA pilot climbs and is required to go around, but no injuries are reported.

Although the majors disagree over routing and other issues, they band together behind **United Airlines** on October 1 when the Chicago-based giant cuts commissions paid to travel agencies for writing tickets. Although commissions on roundtrip domestic flights remain at \$50 and there is no cap on international flights, rates are reduced from 10% to 8% for domestic and international ticketing.

On October 2, the company announces that it will offer a \$99 one-way Fun Fare (based on roundtrip purchase) on all published routes to and from Chicago (MDW), St. Louis, Cleveland, Detroit, and Columbus. A \$39 one-way Fun Fare (based on roundtrip purchase) is also offered for published flights between any two California cities. From California to any of the five noted Midwest cities, the \$99 one-way Fun Fare is applicable. The promotion will run through December 18.

The travel agent payment initiative is matched on October 6 by **American Airlines, Continental Airlines, Delta Air Lines, USAirways, and Northwest Airlines.** Southwest Airlines and **Kiwi International Air Lines** announce that they will maintain the 10% scale. The travel agency industry, which, despite ticketless travel still writes 80% of all tickets sold, protests.

The same day, the alliance with **Flugfelag Islands (2)/Icelandair, H.F.** is expanded. SWA customers from Louisville to Baltimore (BWI) are able to seamlessly connect with Icelandair flights via Reykjavik to Luxembourg.

On November 3, the National Football League signs the airline to a four-year sponsorship deal valued in excess of \$5 million. The arrangement differs from other NFL arrangements; because each team has its own "official airline," Southwest cannot use the NFL logo. The airline begins an NFL-theme ad campaign on November 9.

The company's expanded headquarters facility at Dallas is occupied, also during November.

USA Today reports, on December 10, the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; Southwest demonstrates an 84.5% achievement, good for 1st place.

Delayed by certification problems, the first B-737-7H4 is finally received from Boeing on December 17—two months late. It will not enter commercial service for a month.

Passenger boardings this year climb 1.6% to 50,399,960, while freight jumps 31.1% to 70.24 million FTKs. Operating revenues grow

12.1% to \$3.81 billion, while expenses are up 7.8% to \$3.29 billion. The operating profit reaches \$524.32 million, while a net \$317.72-million gain is recorded.

At the beginning of 1998, Southwest is the 6th largest airline in the world in terms of passenger boardings, 9th in fleet size and operating profit, 12th in net profit, 13th in employee number (23,974), and 22nd in operating income. The fleet, 82% of which is Stage III certified, comprises 261 B-737s.

Coinciding with the retirement of a B-737-2H4, the first B-737-7H4 completes its premier revenue service on January 18; the inaugural Flight 11 is operated from Dallas to Harlingen, Texas, via Houston (HOU). Also during the month, an agreement is concluded to add 10 additional gates at Baltimore (BWI).

The company is named "The Best Company to Work for in America" by *Fortune* magazine in January.

All passengers are limited, as of February 1, to one carry-on bag on heavily booked flights and the airline requires that all carry-ons fit into a sizing box. It will be left to gate agents to determine if a flight is "heavily booked."

On February 26, an agreement in principle is reached to purchase two B-737-300s and lease a third; all had previously been operated by recently bankrupt **Western Pacific Airlines (Westpac)**. Two more B-737-7H4s arrive during the first quarter. However, all three are maintained on short-haul services from Dallas or Houston during this quarter of shakedown. A new ticket counter, baggage claim area, and parking garage are opened on March 31 at St. Louis. The opening of this first phase of the carrier's \$97.5-million east terminal upgrade is marked by public ceremony.

A new crew base with accommodations for 200 pilots is opened at Baltimore (BWI) on April 1; five others are also in operation. A new governmental affairs office is also opened, at Washington, D.C., bringing the number of company employees in the Washington/Baltimore area to 425.

The new summer schedule allows SWA to employ its B-737-7H4s on new long-haul routes. First up is an April 5 nonstop roundtrip from BWI to New Orleans and another to Houston from BWI. Daily nonstops are also inaugurated between Orlando and Kansas City and between Kansas City and Portland, Oregon. Passengers are now able to enjoy daily coast-to-coast one-stop service, the first provided by SWA.

Saturday-only nonstops are inaugurated on April 11 between Las Vegas and Spokane, Tulsa, and New Orleans and from St. Louis to Fort Lauderdale.

The first B-737-700 simulator in the Western Hemisphere comes on line at Dallas (DAL) on April 18. It is housed in the company's new \$10-million, 110,000-sq.ft. flight operations training center that had been opened a week earlier.

The same day, one new nonstop is started between Chicago (MDW) and Columbus, bringing the number of daily roundtrips between the two cities to six. One nonstop between Columbus and Tampa is added, thereby doubling that route and an additional roundtrip between Fort Lauderdale and Tampa brings that daily total to 11. One additional roundtrip between Orlando and New Orleans gives a total of five, one roundtrip between Phoenix and New Orleans doubles that route, and one roundtrip between Tampa and New Orleans brings the total number of daily roundtrips between those two cities to five.

Production delays at Boeing slow delivery of Next Generation "Baby Boeings." Scheduled to have received 13 B-737-7H4s by the end of April, the carrier has received just 6. Despite the payment of penalties to Southwest, Boeing indicates that the problem will continue. Plans to initiate service to two new destinations during the year are cut in half.

Nine more gates are formally opened at the new 240,000-sq.-ft. East Terminal at St. Louis on May 5; 3 more are slated to become available in December. The gates are designed to accommodate the B-737-7H4. Chairman/CEO Kelleher serves as an honorary Operations Agent while boarding customers for an inaugural flight from one of the new gates.

On May 11, fellow major **American Airlines** becomes engaged in a legal battle to prevent interstate service from Dallas (DAL) and now an-

nounces that it will, itself, engage in direct competition with Southwest from the historic battleground airport, where Chairman Kelleher's company is currently the only major operator. The first service will be operated 14 times a day to Austin employing MD-80s. **Continental Airlines**, which holds to gates at the airport, does not choose to fly out of state from it at this point.

On May 11, B-737-7H4 nonstop roundtrip flights are initiated from Portland to Kansas City and from Orlando to Kansas City, together with a one-stop from Portland to Orlando via Kansas City.

Also during the month, Executive Vice President/Chief Operating Officer Barron indicates that he will relinquish his chief operating officer title in January, but remain as executive vice president through December 2000. Vice President-Ground Operations James C. Wimberly will succeed him as chief operating officer.

The company prepares for the launch of the new **USAirways** low-cost division MetroJet at Baltimore (BWI) on June 1.

On June 7, countering MetroJet, SWA inaugurates nonstop 8-times-daily return service from BWI to Manchester, New Hampshire (its only new city this year) and 12 daily nonstop departures are launched from Manchester to Baltimore (BWI), Orlando, Chicago (MDW), and Nashville. The one-way walk-up fare between Manchester and Baltimore is \$66, \$1 more than that charged by MetroJet.

Fun and fanfare mark the Manchester kickoff, as it has at the opening of every new Southwest city for years. The morning festivities begin with an inaugural parade through the Manchester Airport, led by company and airport representatives, Manchester Mayor Raymond Wieczorek, VIPs from surrounding communities, 2 Boston Celtics NBA basketball players, the Central High School Band, and 40 school children from Highland Goffs Falls Elementary School. After speeches, the elementary school students are among those making the inaugural flight to Baltimore (BWI), from whence they are taken to enjoy a day of Washington, D.C. sight-seeing.

Another daily roundtrip is added between Orlando and St. Louis, also on June 7, thereby doubling that route. The fleet at midyear includes 266 B-737s, with an average age of 8.4 years.

Daily nonstop roundtrips commence on June 8 between Boise and San Francisco. The number of daily nonstop roundtrips between Houston (HOU) and Jackson is increased from three to four on June 25.

Beginning on July 6, SWA adds a new nonstop B-737-7H4 roundtrip between Nashville and San Diego and another between Kansas City and Providence. One new B-737-7H4 nonstop service is also started from Nashville to Houston (HOU) for a total of 7. There are now 8 flights from Baltimore (BWI) to Nashville, 4 from Nashville to Kansas City and from Kansas City to Los Angeles, 3 from Nashville to New Orleans, and 2 from Baltimore (BWI) to Kansas City as well as from Kansas City to Oakland.

While on final approach to Birmingham, Alabama, on a July 7 service from Tampa, Flight 1565, a B-737-7H4 with 5 crew and 91 passengers suffers the failure of its No. 2 engine. The aircraft makes an uneventful landing and once ground personnel determine there is no danger, the Next Generation Boeing is towed to the gate where passengers are deplaned via the jetway.

On July 23, the company enters into a 5-year, \$64-million agreement with SABRE Group for the provision of passenger reservations and inventory control systems.

Three new B-737-7H4 frequencies are added on August 5 from Baltimore (BWI) to Jacksonville, from Houston-Hobby and Las Vegas, Baltimore (BWI) and Tampa, Baltimore (BWI) and Birmingham, and Nashville and Los Angeles. (3); Ten are added from Baltimore (BWI) to Providence, six from Las Vegas and Sacramento, four from Nashville and Tampa, and two from Birmingham and Houston-Hobby.

Company pilots on September 18 agree to freeze pay scales and continue with their existing 10-year contract in exchange for additional stock options. As a result of Hurricane Georges, services to Fort Lauderdale are canceled on September 25.

Dispatch workers sign a new 12-year contract on October 5; it provides for the distribution of stock options over the life of the pact.

Twice-daily B-737-7H4 nonstops commence on October 25 between Oakland and Albuquerque. As of this date, SWA flies 51 daily nonstop departures from Albuquerque and 109 from Oakland.

On November 11, Southwest announces that it will launch nonstop Saturday roundtrips on January 16 from Reno to Austin, Houston (HOU), and San Antonio. The special flights will operate through April 2.

Additional schedule changes are announced on November 17. Beginning on January 14, the company will offer Saturday-only nonstop service from Las Vegas to Baltimore (BWI), Orlando, St. Louis, Cleveland, and Tampa. Daily nonstop B-737-7H4 roundtrips will commence on February 5 from Austin to Los Angeles and Tampa and from Kansas City to Seattle and Orlando.

On November 18, a spokesman indicates that Southwest will receive 29 more B-737-7H4s during the next year. On February 5, it will inaugurate daily roundtrips from Austin to both Tampa and Los Angeles.

Two B-737-7H4s are tasked on Thanksgiving Day to fly the carrier's first experimental one-day, coast-to-coast nonstop service. One will fly the 2,446-mi. from Baltimore (BWI) to Oakland in 6 hrs., while the other will, due to winds, complete a service from Oakland to Baltimore (BWI) in 5 hrs. 15 min. Fuel consumption, trash consumption, passenger and crew responses will be among the issues studied.

A host of new services are added on December 7. These include the introduction of three additional daily nonstop B-737-7H4 roundtrips for a total of seven between Phoenix and Baltimore (BWI). Also, one nonstop return service is added from BWI to Providence for a total of 11, from BWI to Tampa for a total of 4, and from BWI to Fort Lauderdale.

On December 9, Southwest announces that it will move into the New York area during the first quarter of the new year, flying from MacArthur Airport at Islip, Long Island.

Enplanements for the year reach 52.58 million, a 4.3% boost, while cargo climbs 40.9% to 98.99 million FTKs. Revenues climb 9.1% to \$4.16 billion, while expenses are up 5.7% to \$3.48 billion. The operating profit ascends to \$683.61 million, while net profits of \$433.4 million are earned. Based on the latter figure, the carrier will pump \$120,696,957 into the employee's profit-sharing plan.

In a major public relations event, Southwest, on January 7, 1999, christens one of its new B-737-7H4s *The Nolan Ryan Express* in honor of the Texas pitcher recently elected to the Baseball Hall of Fame. Ryan participates in the event and is the first person to board the plane, which transports him from Manhattan, where the induction announcement is made, to Dallas (DFW). There, in christening ceremonies, he autographs both sides of the aircraft's nose on two specially designed decals, each featuring a baseball with airplane wings and a Southwest colored tail. The honoree rides the aircraft to Austin, where the ceremony is repeated, this time with a confetti-filled prop champagne bottle broken across the plane's nose. The jetliner, it is noted, will fly the hurler to the actual Hall of Fame induction ceremonies in July.

En route from San Diego to San Jose on January 12, Flight 923, a B-737-3H4 with 5 crew and 74 passengers, must be diverted to Burbank to remove a passenger. The man, taken in hand by police, had threatened to kill members of the flight crew and other customers and had demanded to be taken to Hollywood. At a court appearance the next day he is charged with hijacking.

While taking off from Austin on January 20, the captain of Flight 553, a B-737-5H4 with 125 passengers aboard, spies a Cessna 210 flying at him from a crossing runway. The Boeing is put into a steep climb and passes over the Cessna, missing it by just 100 ft. The FAA opens an investigation.

Also on January 20, **America West Airlines** announces that it has been contacted by a number of airlines expressing interest in a variety of business transactions ranging from strategic alliances to mergers. It confirms that **United Airlines** has made an offer to take it over in a merger; the action is similar to the pact concluded in December between **Northwest Airlines** and **Continental Airlines**. Analysts see the alliance as a

move by the Chicago-based major to counter the recent acquisition for western growth of **Reno Air** by **American Airlines**.

The next day, it is revealed that **Delta Air Lines** has also been in conversation with America West. Southwest, which is the second most dominant carrier at Phoenix, denies any interest in taking over the company.

It is announced on January 22 that the carrier will initiate Saturday-only B-737-7H4 roundtrip flights on June 1 between Orlando and Phoenix. Addition of the new service will also create same-plane, one-stop service from Orlando to Burbank, California.

After running away from home, 13-year-old Raymond Allen makes his way to Baltimore (BWI). There he happens into the SWA departure area, where he requests and receives (with no questions asked) a boarding pass and is allowed on a B-737-7H4, which departs for San Diego. The stow-away is taken into police custody after the aircraft lands, but it will be two weeks before the lad's identity is learned. The miscue will result in a lawsuit filed by the boy's mother, who feared he had been kidnapped.

On January 25, SWA receives the 1998 "Labor Relations Award" from *Air Transport World* magazine. The fifth largest domestic carrier in the U.S. in terms of passenger boardings, Southwest currently mounts 2,350 daily departures with a fleet of 280 B-737s.

On January 28, four days before the Super Bowl game, Southwest stages a "Haul of Fame" contest, a "Pro Tow," at Fort Lauderdale-Hollywood International Airport in Florida. Two 16-man teams of present and former National Football League (NFL) players compete to pull an 83,262-lb. B-737-7H4 a distance of 50 ft. in the shortest time. The winning team is given \$2,500 and 25 SWA tickets to donate to a local children's agency.

At the end of the month, Southwest becomes the "official airline" of the reborn Cleveland Browns NFL professional football team.

Southwest inaugurates additional new service on February 5. Daily nonstop roundtrips are undertaken on this date from Austin to Los Angeles, Tampa, Kansas City, and Seattle and from Kansas City to Orlando. Simultaneously, Tampa to Los Angeles and Orlando to Seattle same-plane one-stops are also launched.

On February 9, it is announced that the carrier will double its gates at Detroit (DTT) in July to four and instead of renting them from **Northwest Airlines** with which it will now enhance competition, it will own them in the smaller terminal not now employed by NWA.

On March 15, Southwest begins to provide 12 daily nonstop return departures from MacArthur Airport at Islip, Long Island, to Baltimore (BWI), Chicago (MDW), Nashville, and Tampa. From those points, direct or connecting service will be available to 29 other cities. Prior to the first departure, Chief Financial Officer Gary Kelly presides over a ceremony with a St. Patrick's Day theme, complete with a bagpipe band that leads a procession to the gate area for speeches.

Also on March 15, **Northwest Airlines**, which has been recalcitrant in the past, joins Southwest, **American Airlines**, **Delta Air Lines**, **United Airlines**, and **USAirways** in raising business fares by 1% and imposing another 3% hike on leisure tickets. United had begun this second round of ticket price increases on March 12.

On March 25, Southwest announces 50 new flights will be added to its schedule in June, July, and August, including 24 new nonstop flights between cities that previously have had no nonstop service.

Daily nonstop B-737-7H4 service is introduced on April 4 between Nashville and Fort Lauderdale and Nashville and Seattle. The roundtrips are arranged so that customers might fly from Fort Lauderdale to Seattle or back with only one stop and no change of planes.

On April 20, SWA converts options for six more Next Generation B-737-7H4s into firm orders for delivery in the year 2000.

Although San Jose has a curfew from 11:30 p.m. to 6:30 a.m. Pacific Time, airlines are allowed to fly in during those hours if they are delayed due to mechanical, weather, or ATC problems. The *San Jose Mercury News* reports on April 27 that the city attorney's office has sent letters to six carriers threatening to sue or ban them from the airport and citing numerous violations of the curfew. The company's committing these "blatant violations" include, in addition to Southwest, **American Airlines**,

Mexicana Airlines, S.A. de C.V., Northwest Airlines, Reno Air, and United Airlines.

Daily roundtrip B-737-5H4 roundtrips commence on May 5 from Chicago (MDW) to Houston (HOU) and from Chicago (MDW) to Phoenix.

Shareholder Michael Schaefer sends his fellow stake owners a recommendation to be voted on at the annual board meeting that would have Chairman/CEO/President Kelleher choose between running the board or the day-to-day operations. Schaefer is concerned about the longevity of the leader, 67, who is a chain smoker, a frequent flyer, and is famous for his consumption of Wild Turkey liquor. Schaefer is unable to reach the May 20 board meeting because another airline cancels his flight; consequently, his proposal is not brought up for a vote.

Chairman Kelleher is interviewed in the June 1 issue of *Money* and explains "How Herb Keeps Southwest Hopping."

B-737 service begins from Raleigh-Durham International Airport on June 6 with 12 daily return flights to 5 cities. Four daily nonstop roundtrips are offered to Baltimore (BWI), two to Chicago (MDW), four to Nashville, and one each to Tampa Bay and Orlando.

New daily nonstop roundtrips are started between Albuquerque and Tucson and from Kansas City to Tampa Bay. In addition, nonstop return service from Albuquerque to Kansas City is increased from two to three, Las Vegas to Seattle from one to two, Las Vegas to Tucson from two to three, San Diego to Tucson from two to three, and St. Louis to Tampa Bay from one to two.

En route from Kansas City to Oakland on June 14, Flight 99 must make an emergency landing at Las Vegas to turn Californian John Schleimer over to local police after he had become belligerent, punched a flight attendant, and been restrained by the attendant and several passengers.

Timed to coincide with the Paris Air Show, six more Next Generation B-737-7HRs are ordered on June 17, for delivery in 2000 and 2001. The world's largest "Baby Boeing" operator, Southwest has requested 366 of the type since the airline was launched.

The official airline of the Chicago Cubs, a chartered company B-737-4H4 transports the team to Cleveland on June 30 for a weekend series with the Indians; upon its completion, the aircraft takes the team to Phoenix, Arizona, to battle the Diamondbacks. In this manner, the airline supports its Chicago team, just as it supports the others it has under sports contract.

Daily Albuquerque to Seattle nonstop roundtrips are launched on July 6, as is daily nonstop return service from Las Vegas to Chicago (MDW). In addition, nonstop return service from Albuquerque to Houston is increased from one to two, Austin and Las Vegas from one to two, Nashville to Cleveland from three to four, and Nashville and Las Vegas from two to three.

Also in early July, the company's 6th flight attendant crew base is opened at Baltimore (BWI), where 300 attendants are now stationed. Flight attendant crew bases are also maintained at Dallas (DFW), Houston (HOU), Phoenix, Chicago (MDW), and Oakland.

The October beginning of service from Bradley International Airport in Connecticut is announced on July 13.

New daily nonstop roundtrips commence on August 5 from Baltimore (BWI) to Las Vegas, Los Angeles to New Orleans, Fort Lauderdale to New Orleans, Houston (HOU) to Providence, and from Kansas City to Indianapolis, Manchester, and San Diego. In addition, nonstop return service from Las Vegas to Reno is increased from eight to nine, Chicago (MDW) to Providence from two to three, Los Angeles to Kansas City from four to five, and Los Angeles to Sacramento from seven to eight.

The arrival of several new Next Generation B-737-7H4s during early fall allows the initiation of new services. Employing the new planes, SWA on October 31 begins new nonstop daily roundtrips from Orlando to Chicago (MDW) and from Portland to Phoenix. Simultaneously, a second daily nonstop is initiated between Chicago (MDW) and Phoenix and from Phoenix to Seattle. On November 6, return flights are launched from Orlando to Phoenix and from Hartford to Las Vegas; the next day, new roundtrips begin from Phoenix to both Birmingham and Providence.

Daily Next Generation B-737-7H4 roundtrips are inaugurated on December 7 from Tampa to San Antonio and Chicago (MDW). Nonstop frequencies are increased in other markets: Tampa to Providence and Raleigh/Durham and Chicago (MDW) to Orlando from one to two, Chicago (MDW) to Raleigh/Durham from two to three, Phoenix to Sacramento from three to four, Nashville to Raleigh/Durham and Fort Lauderdale to Jacksonville from five to six.

Passenger boardings climb 9.3% to 57.5 million, while cargo is up 1.7% to 100.65 million FTKs.

Revenues jump 13.7% to \$4.73 billion, while expenses rise an almost equal 13.6% to \$3.94 billion. The operating profit ascends to \$781.57 million, while net profit reaches \$474.37 million.

Airline employment at the beginning of 2000 stands at 27,653, a 7% increase over the previous 12 months. Among the world's top 25 airlines, SWA is 4th in passengers, 14th in employees, 8th in fleet size, 18th in operating revenue, 6th in operating profit, and 6th in net profit. It is also the 4th largest U.S. carrier.

The arrival of a new Next Generation B-737-7H4s over the Christmas period allows introduction of a new nonstop roundtrip on February 6 from Islip to Orlando, while simultaneously doubling from one to two the number of return flights between Islip and Tampa.

A measure of the company's continued growth is demonstrated on March 3 when it is reported that 46 daily point-to-point nonstop flights have been added to the company's schedule since October 31.

Inbound from Las Vegas on March 5, Flight 668, a B-737-3H4 with 5 crew and 135 passengers overshoots its landing at Burbank Airport and skids off the east-west runway, rams through a fence onto Hollywood Way, where it hits a car and stops just short of a Chevron gas station. A mother and her daughter in the auto and 15 aboard are subsequently hospitalized with minor injuries. Chairman Kelleher parries safety concern questions on that Sunday morning's television interview programs.

Investigators will later report that the plane had come into Burbank at such a steep angle that its cockpit warning system had sounded; additionally, the plane had landed at 208 mph. instead of the normal 160. Injured with scalp cuts, the pilot will be discharged by the carrier on August 1, along with the copilot.

In an effort to reduce turnaround time, Southwest, also during the first week of March, begins a six-month evaluation of the FMT Sweden, A.B. dual-boarding bridge that is undergoing tests at Dallas (DAL) and Austin. The bridge allows passengers to simultaneously enter and exit through both the forward and rear exits of a B-737.

Delivery of additional new Next Generation B-737-7H4s permits the carrier, beginning on March 12, to enhance the number of nonstop return flights offered from Nashville to Islip and Hartford from 1 to 2, and to Phoenix from 2 to 3, from Chicago (MDW) to Tampa from 1 to 2 and Kansas City from 17 to 18, and from Ontario to Sacramento from 10 to 11. Additionally, new nonstop roundtrips are introduced from Ontario to Nashville and from Kansas City to Sacramento.

New daily return service is inaugurated on April 2 from Las Vegas to Columbus, Indianapolis, and New Orleans as well as from Austin to Raleigh/Durham and San Diego. Simultaneously, one more frequency is added from Houston (HOU) and Chicago (MDW) and from Las Vegas to Omaha.

Albany becomes a new hub on May 7 as the carrier initiates 10 new daily services from the New York State capital's airport to Baltimore (7 departures), Orlando (2) and Las Vegas (1).

In an incident that will be turned into a legal test case, the carrier, also in May, demands that 300-lb.+ Cynthia Luther purchase two tickets before boarding a flight from Reno to Burbank. A friend purchases the second fare and the lady rides in one seat with the armrest down and with another person seated next to her. Off the plane, Ms. Luther files suit claiming illegal discrimination and harassment.

An hour into a ramp hold at Nashville on May 19, caused by a weather-induced airport power outage, Flight 1857, a B-737-5H4, suffers another unusual incident. A passenger leaves his seat and approaches a flight attendant at one of the aft entry doors, informing her

that he needs air. Three times she directs him to return to his seat, but on the third occasion, he grabs her hair, opens the door that is slightly ajar, and jumps to the tarmac below. The flight attendant is able to free herself from the man's grip and remain aboard, but the passenger fractures his wrist. Airport security police are quickly on the scene and transport the man to a local clinic. The jetliner departs later without further incident.

Despite the bad month, incident-wise, when DOT airline performance figures for May are released, Southwest will be shown to have the fewest number of complaints of any major U.S. airline, just 0.41 per 100,000 passengers; the industry average is 2.49.

About 150 mi. E of Kansas City on his June 27 service from Los Angeles (LAX) via Kansas City, the pilot of a Next Generation B-737-7H4 receives a message from the Kansas City station that three passengers had been left behind at the previous stop. The 3, children aged 8, 9, and 12, had gotten off to buy snacks and had not been missed when they failed to reboard. The Boeing turns around and retrieves the three sisters.

Boeing confirms on June 29 that SWA, which now operates 323 B-737s, has placed an order for up to 290 Next Generation B-737s over the next 12 years. The request includes 94 firm NG B-737-700s (in addition to 74 currently on order), as well as 25 options and up to 171 purchase rights for an additional 196 NG aircraft, with deliveries beginning in 2002. The largest order ever placed for Next Generation Boeings, the firm order, valued at \$4.5 billion, is for more airplanes than SWA ordered during its entire first 16 years of existence. As they are delivered, older aircraft, beginning with the Dash-200s, will be retired.

Also in June, the carrier's cargo division extends Next Flight Guaranteed service to Albany, Las Vegas, Orlando, Baltimore, and Raleigh/Durham.

One each daily return passenger frequency is added on July 5 from Baltimore to Austin and Houston and from Indianapolis to Phoenix while two more roundtrips are started from Baltimore to Indianapolis.

Southwest is named 11th best-managed company among nonstate-owned national-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

New daily roundtrips are inaugurated on August 6 from Islip to Fort Lauderdale and Jacksonville, from Los Angeles to Indianapolis, and from New Orleans to San Diego; four-times-a-day return service begins from Islip to Providence, Rhode Island. Also on August 6, daily return frequencies are increased between a number of cities, including Baltimore to Nashville from eight to nine, Las Vegas from one to two, Phoenix from three to four, and New Orleans to Orlando from five to six. Indianapolis, Tampa to Jacksonville, and Nashville to Islip are all increased from two to three.

While en route from Las Vegas to Salt Lake City on August 11, tragedy strikes Flight 1763, a B-737-3H4 with 5 crew and 121 passengers aboard. Witnesses will later report that teenager Jonathan Burton begins pacing the aisles as the clock nears midnight, shoves a flight attendant, and runs forward where he kicks a hole in the cockpit door, and then takes a seat in an exit row. Passengers, who fear he may try to open an emergency exit and cause the plane to crash, pull him into the aisle, where he dies. Initial press reports will suggest that the lad died of a heart attack after the plane has landed and he has been turned over to police.

The FBI and local authorities investigate and will later confirm that Burton has been the first passenger killed by fellow passengers aboard a U.S. commercial aircraft. When given the chance to prosecute at the end of September, a U.S. Attorney decides not to press charges. Timothy Roche and Peta Owens-Liston profile this case, one of the most bizarre episodes of in-flight violence in U.S. commercial aviation history, in their article "Homicide in the Sky," which appears in the October 2, 2000, issue of *Time* magazine.

Coverage of the incident does not end there or with the newspapers. Late in the fall, the CBS television series *CSI: Crime Scene Investigation* (ironically, set in Las Vegas) runs a drama depicting a similar scenario. In both the real-life event and the thinly veiled teleplay, investigators suspect murder and even identify the probable perpetrators, but

file no charges. As Blake Morrison will report in his lengthy December 18 front-page story in *USA Today* newspaper, "a fatal mystery shrouds Flight 1763."

Southwest accepts its 10th theme aircraft on August 30, a new B-737-7H4 wearing the symbol of the Zia Pueblo Indians in a salute to the state of New Mexico.

In a four-year deal signed on September 5, the carrier becomes the official airline of the National Hockey League. Advertisements for the fall for the NHL and NFL will be heavily sports-oriented.

Daily Next Generation B-737-7H4 one-stop roundtrips are inaugurated on September 13 between Raleigh/Durham and San Jose via Kansas City. On September 18, the company reports that its Web site has generated over \$1 billion in revenues during the first eight months of the year. This 111% revenue increase reflects the fact that some 30% of all SWA passenger revenues are now generated via the Internet.

A new Buffalo hub is launched on October 8 with 10 daily roundtrips to 4 destinations: Baltimore (7), Las Vegas (1), Orlando (1), and Phoenix (1). On October 20, it is announced that beginning on January 21, the carrier will inaugurate service from West Palm Beach to Baltimore, Nashville, Orlando, and Tampa.

Services are substantially increased on October 29, beginning with an increase of two daily return flights (for a total of six) from Las Vegas to Kansas City and the introduction of daily roundtrips from the Nevada city to both Louisville and Tulsa. The number of daily return flights is also boosted from Las Vegas to Reno to 10 and to Ontario, California, to 9; from Houston (HOU) to Birmingham to 3 and to Las Vegas to 4; from Baltimore to Orlando to 4 and to Louisville to 5; and from Fort Lauderdale to Jacksonville to 7 and to Orlando to 8.

It is reported on November 24 that the carrier's on-time performance in September had slipped to fifth out of the ten major airlines reporting figures to the government. Pundits speculate that the special *Triple Crown* paint scheme on one of Southwest's B-737-300s will now have to be removed.

The schedule is expanded again on December 10 with new daily roundtrips launched from Baltimore to Salt Lake City and to Albuquerque and from Las Vegas to Birmingham. In addition, daily return frequencies are also boosted by from 3 to 4 from Albuquerque to San Diego, from 1 to 2 from Nashville to Manchester, New Hampshire, and San Diego, from 4 to 5 from Baltimore to Raleigh/Durham, from 12 to 13 from Ontario to Oakland, and from 8 to 9 from Las Vegas to Oakland.

On December 14, Los Angeles Superior Court Judge Marilyn Hoffman rules that in legal terms the airline's two-ticket obesity policy exercised on Cynthia Luther in May is not discriminatory.

The 1995 commitment to the American Society of Travel Agents to pay 10% commissions on all tickets expires on December 31. Per a December 13 announcement, SWA will begin 2001 on by cutting commissions to traditional travel agencies to 8% on all ticketless transactions and 5% on all paper ticket transactions.

At this point, Southwest is the fourth largest domestic U.S. carrier in terms of customers boarded and serves 58 cities (59 airports) in 29 states with over 2,700 flights every day.

As the 12 months conclude, it is noted that Southwest will end its loss-making San Francisco service on March 5, moving 8 daily flights to Oakland and another 2 to Sacramento. This will be the first city dropped from the company's network in over two decades. On January 16, to celebrate its thirtieth anniversary, Southwest will debut a new "Canyon Blue" color scheme aboard two new B-737-7H4s, *Spirit One* and *Spirit Two*.

For the year as a whole, customer bookings jump 11.03% to 72,710,000, while cargo traffic rises 30% to 100.95 million FTKs. Revenues accelerate 19.3% to \$4.73 billion, while expenses climb 17.1%, granting an operating profit up by 30.7% to \$1.02 billion. Net gain soars 31.8% to \$625 million. With its new aircraft purchases and orderly expansion, Southwest is on track to become one of, if not the, largest U.S. airlines by 2010.

On March 19, 2001, it will be revealed that the "Kelleher Era" will end on June 19 when the legendary airline chief hands over two of his three titles to longtime company associates. Vice President-General Counsel James F. Parker will become CEO, while Vice President-Customers Colleen Barrett will become president/chief operating officer—the first woman president of a U.S. major airline. With help from author Katrina Brooker, Kelleher will pen a Southwest memoir, "The Chairman of the Board Looks Back." *Fortune* (May 28, 2001): 62–76.

SOUTHWEST AIRWAYS (1): United States (1933). The first of many air transport firms to bear this regional name, Southwest (1) is formed at Tulsa, Oklahoma, in January 1933. Employing a Travel Air 6000, the company inaugurates multistop, scheduled passenger flights to Salina in February. Operations suddenly stop in March.

SOUTHWEST AIRWAYS (2): United States (1941–1958). Although organized in 1941, this local service line does not receive its CAB certificate until May 22, 1946. During the prior two years, the company's cargo division successfully tests various feeder-line tactics. Southwest launches Douglas DC-3 passenger service in the California corridor, Los Angeles to San Francisco, on December 2, 1947, employing the revolutionary tactics developed earlier. In an effort to attract customers and revenues, the company pioneers quick-stop, fast-turnaround passenger-handling methods at its smaller stations, even employing traveling agents to issue tickets in-flight. By the end of 1948, the fleet comprises nine Douglas transports, each displaying the company's thunderbird logo.

Operations continue apace during the remainder of the decade and into the 1950s. Unhappily, there is one fatal crash. On April 7, 1951, a DC-3 with 22 aboard and en route from Santa Maria to Santa Barbara, crashes into a hill near the latter point; there are no survivors.

As new northern California routes are acquired from **United Air Lines** in the spring of 1953, Southwest upgrades its equipment. It also introduces the first two of four Martin 4-0-4s to be delivered on the year and purchased from **Transocean Air Lines** on April 26 over the route from San Francisco to Los Angeles via San Jose, Santa Clara, Carmel, Monterey, San Luis Obispo, and Santa Barbara.

Martinliner service is extended during 1954 to Medford, Oregon. The Robert Ryan and Shirley Booth motion picture *About Mrs. Leslie*, released during the year, employs a company aircraft for its travel scenes.

At the beginning of 1955, Medford and the following California destinations are served, south to north: Los Angeles, Burbank, Palmdale/Lancaster, Inyokern, Ventura/Oxnard, Lompoc/Santa Barbara, Bakersfield, Santa Maria, San Luis Obispo, Monterey/Carmel, Santa Cruz/Watsonville, Santa Clara/San Jose, San Francisco, Stockton, Sacramento, Santa Rosa, Yuba City, Ukiah, Marysville, Fort Bragg/Mendocino, Chico, Red Bluff, Arcata/Eureka, Redding, Yreka, and Crescent City.

In late September, the airline becomes the first of the original local service feeders to obtain permanent CAB certification. A Martin 2-0-2 is damaged beyond repair in a hangar fire at San Francisco on December 30.

By 1956–1957, the fleet includes seven Martin 2-0-2s. In advance of additional CAB route awards to Oregon and Washington, the company is reorganized and changes its name to **Pacific Air Lines** on March 6, 1958.

SOUTHWEST AIRWAYS, LTD.: Canada (1990–1994). George Reid sets up Southwest at Windsor, Ontario, in 1990 to undertake scheduled third-level passenger flights to Pelee Island. Revenue services commence with three Fairchild-Swearingen Merlin IVs, two Piper PA-31-310 Navajos, and a Piper PA-34 Seneca. The Seneca is withdrawn in 1991. A third Navajo is acquired in 1992 as services continue until 1994.

SOUTHWEST JET AVIATION, LTD.: 14988 N. 78th Way, Scottsdale, Arizona 85260, United States; Phone (602) 991-7076; Fax (602) 991-8511; Year Founded 1989. John Castrogiovanni sets up SJA at Scottsdale Airport in 1989 to provide executive and small group passenger charters throughout the U.S. and to Canada, Mexico, and the Caribbean. A decade

later, the owner employs 4 pilots, who fly 1 each British Aerospace BAe (HS) 125-800 Hawker and Learjet 35A Century III.

SOUTHWESTERN AIRLINES, LTD. (SOUTH-WESTERN AVIATION CORPORATION): China (1934–1938). With capitalization of two million yuan from the Kwantung, Unnan, and Kwangsi civil governments and their military departments, plus Cantonese merchants, Southwestern Airlines is established at Canton in the early winter of 1934. The Chinese cabinet on January 25, 1935 grants the company an operating certificate.

Equipped with seven Stinson SR Reliants and three Loeing Air Yachts flown by Chinese pilots, the new company inaugurates services on May 1 linking its base with Lungchow via Wuchow and Nanning. During the summer, a service is initiated from Canton to the Hainan Island community of Hoihow (Kingchow) via Maoming. The new route is abandoned by year's end.

In 1936, the company undertakes services from Canton to Pakhoi and in March it receives authority from the government to operate a route from Canton to Hanoi. This service is started on July 10 and is the first international route ever operated by a Chinese airline. The Indochina route is doubled, via the company's coastal route, on April 4, 1937. Operations continue apace until October 21, 1938 when the Japanese occupy Canton.

SOVEREIGN AIRLINES (PTY.), LTD.: Australia (1976–1982). Organized at Melbourne's Tullamarine Airport in early fall 1976, Sovereign acquires a fleet comprising 1 Cessna 401, 1 Piper PA-31-310 Navajo, 1 Piper PA-31-350 Navajo Chieftain, 1 Cessna 182, and 1 Beech 55 Baron. Scheduled flights are inaugurated on October 4 to Bendigo, Swan Hill, and Mildura.

Rising fuel prices and traffic failures caused by the world recession force the small commuter carrier into receivership in 1982.

SOWIND AIR, INC.: St. Andrews Airport, St. Andrews, Manitoba, R1A 3P4, Canada; Phone 204 338 5429; Fax 204 338 5431; http://www.sae.ca/abt/sowind; Code SOW; Year Founded 1991. Sowind is established at St. Andrews at the end of 1991 to provide scheduled third-level service to six small provincial destinations. Under the direction of President Oliver Owen, the 100%-aboriginally owned carrier launches revenue flights on January 6, 1992.

Service is maintained without incident over the next 9 years employing a fleet that comes to comprise 3 Piper PA-31-350 Navajo Chieftains and 2 Cessna 208B Grand Caravans.

SOYUZ (SOYUZ MPO): Russia (1994–1998). Soyuz is established at Moscow in 1994 to provide international and domestic passenger and freight charters. V. B. Ivanov is appointed general director and he begins revenue services with 3 Ilyushin Il-76s and 1 Yakovlev Yak-40.

Flight continue into the summer of 1998. At this point, the Russian currency crisis has a devastating impact on the carrier's operations and forces it to shut down.

SP AVIATION (SUPERIOR PERFORMANCE AVIATION): c/o Business Jet Solutions, 26220 Industrial Blvd., Hayward, California 94545, United States; Phone (510) 783-3584; Fax (510) 783-3587; http://www.shewey.com/spav8r; Year Founded 1992. The fleet management and corporate charter concern SP Aviation is established at Hayward Air Terminal in 1992. Eight years later in 2000, Jeff Perdue is in charge of charter sales and the work of nine pilots who operate a pair of Learjet 35A Century IIIs on worldwide executive flights.

SPACEGRAND AVIATION, LTD.: United Kingdom (1978–1986). A division of C. Walker & Sons, Ltd. (now Walkersteel Group), Spacegrand Aviation is organized in 1978 to offer Piper PA-23 Aztec air taxi and commuter services from Blackpool Airport to Belfast in Northern Ireland and the Isle of Man. Over the next few years, the fleet is upgraded to include

a de Havilland DHC-6 Twin Otter and a Piper PA-31-350 Navajo Chief-tain. Additional destinations added include Dublin and Teesside.

In **1984**, the carrier becomes a subsidiary of Walker's 1983 acquisition **Jersey European Airways, Ltd.** P. Glennister continues as managing director and Spacegrand inaugurates scheduled services from Belfast to Exeter.

Two Shorts 330Ds are ordered and one is obtained in **1985**. The fleet in **1986** comprises three Twin Otters and the Shorts. In the spring, the two airlines are amalgamated within the parent group, Walker Aviation. Late in the year, the carrier is merged into JEA, which name survives.

SPAIR AIR TRANSPORT: 69, Vishnevaya Str, Ekaterinburg, 620031, Russia; Phone 7 (3432) 443 072; Fax 7 (3432) 441 201; Code S4; Year Founded 1993. Spair Air Transport is founded at Ekaterinburg in August **1990** to provide worldwide all-cargo ad hoc charters. Shareholding is divided between V. V. Spurnov, who is named chairman/president, along with Engineering Director Beketov, Chief Pilot Capt. Starikov, Commercial Manager Klushin, and investor Sergeyev.

Preparations for the inauguration of service take a year. During this time, bases are established at Perm and Rostov and a fleet is assembled comprising 3 Ilyushin Il-76T/TD freighters. As Spair Airlines, the new entrant begins revenue flights in September **1991**.

Service continues apace in **1992–1993**. During the latter year, the decision is taken to reform the enterprise and to begin the provision of passenger charters and scheduled services.

Airline employment in **1994** totals 200 and the company is renamed Spair Air Transport. To accommodate its new mission, the fleet is increased by the addition of two leased Tupolev Tu-154Bs, an Il-18, two Antonov An-26s, and two An-12s. Passenger and cargo charters are undertaken from Ekaterinburg, Perm, and Rostov to Sharjah, U.A.E.

Flights continue in **1995–1997**, during which years two Tu-134As are leased and flights begin to Antalya, Damascus, Delhi Fujairah, and Istanbul.

The Russian currency crisis of **1998–1999** has a significant impact on the carrier. Passenger service is abandoned and the fleet is reduced to include just 1 An-12 and 1 leased Ilyushin Il-76TD. Worldwide cargo flights now originate exclusively from the Ekaterinburg base and are understood to continue on an ad hoc basis.

SPAIR AIRLINES. See SPAIR AIR TRANSPORT

SPAN EAST AIRLINES: United States (1969–1976). Span East is officially established at Spring Valley, New York, late in **1969**, but places its operating base at Ypsilanti, Michigan. There it acquires the 10 Curtiss C-46 Commandos and several DC-6s that **Universal Airlines** has taken over from **Zantop International Airlines**.

The New York-registered freighting concern employs its aircraft to take over the former Zantop automobile industry contract and support flights. In August **1971**, Span East sells its C-46s to Ortner Air Services and transfers its DC-6s to a new Base at Miami (MIA). There it begins flying nonscheduled services to the Caribbean and South America. Flights end in **1976**.

SPANAIR, S.A.: Palma de Mallorca Airport, Edificio Spanair, Spd de Correos 50086, Palma de Mallorca, Spain; Phone 34 (71) 745 020; Fax 34 (71) 492 553; <http://www.spanair.com>; Code JK; Year Founded 1987. A new Spanish charter carrier, Spanair, S.A., is formed at Palma de Mallorca in October **1987** by the travel and operators Scandinavia & Viajes Marsono, S.A. of Spain) and Vingresor, A.B. of Sweden. Gonzalo Pascual is named chairman with Carlos Bravo as director general/CEO. A workforce of some 600 is recruited and a fleet is assembled comprising 4 leased McDonnell Douglas MD-82s and MD-83s.

Revenue services commence on April 1, **1988** with a flight from Palma to Bilbao. Charters are now launched to and from the Canary Islands and Palma from destinations in Europe, primarily Norway, Sweden, Denmark, Germany, Austria, and Switzerland.

Enplanements for the remainder of the year total 454,600, but the net loss is \$1.6 million.

Airline employment is increased 37.6% during **1989** to 366 and the fleet now includes 7 leased MD-83s. Orders are placed for two Boeing 767-3Y0ERs.

Passenger boardings skyrocket 190.3% to 1,319,699 and revenues balloon 101.5% to \$99.6 million. Operating gain is \$1.7 million and a \$369,000 net profit is earned.

Company employment is increased by 21% in **1990** to 444 and the fleet includes 7 MD-83s and 1 MD-82—all leased.

Customer bookings jump another 48.9% to 1,141,186 and revenues rise a more modest 30.9% to \$146.4 million. Expenses climb 32% to \$145.32 million and cause the operating profit to slide to \$1.02 million. Net gain surges to \$1.05 million.

The workforce grows by 29.3% in **1991** to 574 and the 2 ER Boeings arrive (also by lease), beginning in April. Services are inaugurated to new North American destinations, including Cancún, New York, Orlando, and Puerto Plata and Punta Cana in the Dominican Republic.

Passenger boardings swell 49.3% to 1,704,263 and revenues jump 47.2% to \$222.8 million. The operating profit is \$3 million while net surplus reaches \$3.8 million.

Airline employment is increased by 12.4% in **1992** to 645 and the leased fleet now includes 8 MD-83s, 1 MD-82, and 2 B-767-3Y0ERs. In September, twice-weekly flights are initiated from Madrid to Rio de Janeiro and Montevideo, Uruguay, on behalf of **PLUNA (Primeras Lineas Uruguayas de Navegacion Aerea, S.A.)**, the latter nation's flag carrier.

Customer bookings bounce upward by 13.7% to 1,937,041 while revenues advance by 11.7% to \$229.4 million. Expenses are, however, up by 13.5% to \$229.7 million and bring a \$300 operating loss. There is a net profit of \$9,000.

In **1993**, Chairman Pascual and Managing Director Bravo oversee a workforce of 680. In addition to the **PLUNA (Primeras Lineas Uruguayas de Navegacion Aerea, S.A.)** service, destinations now visited include Cancún, New York, Orlando, Puerto Plata, and Punta Cana.

Passenger boardings increase another 8.7% to 2,105,746.

Twenty new employees are hired in **1994** and the fleet is expanded by the addition of 2 more leased MD-83s. In March, scheduled service is inaugurated from Palma de Mallorca to Madrid, Barcelona, and the Balearic and Canary Islands.

The carrier becomes an **SAS (Scandinavian Airlines System)** associate company on June 1.

Customer bookings this year jump 6% to 2,232,098.

The workforce is increased a huge 85.7% in **1995** to 1,300.

The carrier's 16 aircraft transport a total of 3,150,167 passengers, a welcome 12.3% increase. Freight traffic figures show a dramatic 48.8% jump to 4.71 million FTKs. There are profits: \$6.43 million (operating) and \$241,000 (net).

Airline employment grows another 25.6% in **1996** to 1,630 and the leased fleet includes 12 MD-83s, 1 MD-82, and 2 B-767-3Y0ERs. Frequent flyer agreements are signed with **SAS (Scandinavian Airlines System)** and **Deutsche Lufthansa, A.G.**

Customer bookings jump 13.4% to 3,572,804 and 6.12 million FTKs are operated, a 31.3% increase. Revenues climb 4.5% to \$367.72 million while costs ascend 5% to \$362.66 million. Although operating gain falls to \$5.05 million, the net profit moves up to \$970,000.

The airline population grows to 2,168 in **1997**. As the year begins, approximately 45.1% of the carrier's flights are scheduled, with the remainder operated as charters. The fleet now includes 18 MD-83s, 2 MD-87s, and 2 B-767-3Y0ERs.

Share capital is 3,200 million pts. and is distributed between Viajes Marsans, S.A. (51%) and **SAS (Scandinavian Airlines System)** (49%). The carrier's cooperation with **Deutsche Lufthansa, A.G.** begins early in the year, primarily in the areas of reservations and frequent flyer programs.

New scheduled flights are inaugurated to London (LGW) and Copenhagen during January and February. Also during the first quarter, a

group of Spanish regional airlines, including **Canarias Regional Air, S.A.** doing business as Air Europa Express, Spanair, and **Futura, S.A.**, complain to the EC that part of the government funds injected into **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** during the fall of 1995 have been employed to finance a fare war against them. In addition, Canarias claims that Iberia has engaged in predatory pricing, arranging some of its schedules to directly affect private carriers such as itself. The Commission investigates.

Spanair increases its ticket prices by 15% on April 10, leading **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** to increase its tariffs by 3.5% on April 25, the same day **Air Europa, S.A.** boosts its fares by 20%, the largest increase yet.

Following complaints from a consumers' group and local authorities in the Balearic and Canary Islands, the Spanish government, on April 28, begins a price-fixing investigation of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and two of its rivals. Antitrust authorities in the Ministry of Finance begin to review an arrangement between the flag carrier and Spanair and **Air Europa, S.A.**, which has seen them end a yearlong price war while increasing fares an almost equal average of 10% on all Spanish domestic routes and dropping promotional fares.

New scheduled services to Varadero and Havana, Cuba, commence in May.

On October 1, **Deutsche Lufthansa, A.G.** and Spanair reach conclusion on a code-sharing agreement, but contrary to media reports, the German major takes no equity share.

The Spanish pilots union, SEPLA, concerned that modernization and cost-cutting plans afoot at Spain's airlines might badly impact its members, stages a one-hour strike at the end of October as a symbolic protest again them.

Employing B-767-3Y0ERs, the company launches four-times-per-week roundtrips on November 20 between Madrid and Washington, D.C. (IAD). As part of its promotion for this new service, it promises to give free tickets to the first 266 passengers showing up at Washington, D.C. (IAD) in native Spanish costume (e.g., matadors or flamenco dancers).

Passenger boardings increase 32.9% to 4,427,582 while freight skyrockets 86.9% to 11.41 million FTKs. Operating revenues total \$411 million, while costs are just \$401.8 million. Consequently, the company enjoys a \$9.2-million operating profit and a net gain of \$1.3 million.

Airline employment stands at 2,000 in 1998. The fleet now includes 2 B-767-3Y0ERs, 2 MD-87s, 3 MD-82s, and 17 MD-83s.

Twice-daily dual-designator MD-83 roundtrips with **SAS (Scandinavian Airlines System)** begin at the end of March between Madrid and Copenhagen.

While en route from Aberdeen to Ibiza on June 27, an MD-83 with 170 passengers develops engine problems and must divert to Paris (ORY). On the ground at the French capital, the customers are bussed over to Paris (CDG), where they are able to catch another flight and complete their flight.

During the fall, the company begins to evaluate new aircraft from the Boeing Next Generation 737 group as well as the Airbus A320 family. Plans are made to have a choice in hand in time for the carrier's annual board meeting in mid-March.

The opening of a third runway at Madrid's international airport in November will allow the company to expand its hub operations there during the first quarter of the new year.

On December 18, a new direct service is introduced from Madrid to Buenos Aires, replacing the previous twice-weekly one-stop via Rio de Janeiro.

Passenger boardings surge 13.6% to 5.13 million, while cargo traffic skyrockets 178.8% to 31.9 million FTKs. On record income of \$496.75 million, a \$5.55-million net profit is generated.

In an interview with *Airline Financial News* on February 1, 1999, Managing Director Bravo indicates that the company will go public during the first or second quarter of the year 2000. In addition, eight MD-82s will be delivered this year, including five leased units formerly operated by **China Eastern Airlines Company, Ltd.**

Spanair inaugurates thrice-daily MD-83 roundtrips on February 21 from Madrid to Alicante, Vigo, and Oveido.

On March 22, Chairman Pascual signs orders with Airbus Industrie for 45 A310, A320, and A321 aircraft (21 firm orders, 12 to be confirmed, and 12 options) valued at \$2.2 billion.

Thrice-daily return flights are started from Madrid to Seville on March 28. Twice-daily roundtrips are also begun to Lisbon, with Oporto served by bus from Vigo. Simultaneously, new code-sharing flights with **SAS (Scandinavian Airlines System)** are inaugurated between Copenhagen and Barcelona and from Stockholm to Madrid.

On April 22, the company reduces flights from Madrid's Barajas Airport to 500 each week from nearly 700 to help reduce congestion. The move follows a similar reduction by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Four days later, it is noted that the move will be temporary and will not impact upon the carrier's expansion plans.

Flights to Valencia will begin later in the year.

Only days after the strict curfew rule at Aberdeen, Scotland, is extended, a delayed flight from Ibiza on May 8 fails to meet its loosened requirement. En route to Aberdeen, an MD-83 with 170 passengers must be diverted to Edinburgh, not because it will be late in arrival, but because it will be unable to lift off back to Majorca before the airport is closed. The angry passengers are placed on a 3-hr. bus ride to Aberdeen, while 170 others are likewise brought down to Edinburgh, from whence they depart for Spain just before 1 a.m.

Daily B-767-3Y0ER roundtrips commence on August 31 from Lisbon to Washington, D.C. (IAD) via Madrid.

The code-sharing pact with **Deutsche Lufthansa, A.G.** is deepened during October to include all flights by the two airlines between Spain and Germany and all Spanair flights to and between 10 Spanish regional airports. Simultaneously, Lufthansa agrees to maintain up to 45 new Airbus aircraft the Spanish line will purchase and train the pilots to fly them.

Pursuant to an agreement signed on September 23, a new accord between Spanair and **United Airlines**, one that the Spanish line has been seeking since it first began flying to the U.S. in 1997, takes effect on October 31. Under its terms, United places its code on Spanair flights from Washington, D.C. (IAD) to Madrid and from Madrid to Barcelona, Palma de Mallorca, and Malaga. Additionally, passengers on both lines are able to accrue and use rewards from the United frequent flyer program and participate in convenient one-stop check-in service.

Spanair, together with **Air Europa, S.A.** and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** are fined a total of \$865,000, also in December, by the Tribunal de Defensa de la Competencia. Spain's fair-competition agency has found the three guilty of collusion in the termination of a 1997 price war.

Late in the fourth quarter, the company debuts a modified color scheme with large block "Spanair" titles.

Passenger boardings surge 14.3% to 5,757,000 while freight traffic increases 23.1% to 38.92 million FTKs. Revenues jump 27.6% to \$637.46 million, while expenses are up 27.9% to \$628.71 million. Although the operating profit increases to \$8.74 million, net gain slides to \$3.8 million.

Airline employment at the beginning of 2000 stands at 3,909, a gigantic 85.7% increase over the previous 12 months. The MD-80 fleet now includes 10 MD-82s, 21 MD-83s, and 3 MD-87s.

A B-757-2Y0ER is leased on April 26 from **Air 2000, Ltd.** for eight months.

New nonstop roundtrips begin on March 26 from Madrid to Paris (CDG). Simultaneously, the five-times-a-week B-767-3Y0ER return service from Madrid to Washington, D.C. (IAD) becomes daily. On new services between Madrid and Rio de Janeiro, Spanair code-shares with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandeuse, S.A.)**.

AeBal (Aerolineas de Baleares, S.A.) is established at Palma de Mallorca in April to provide regional services on behalf of its parent, Spanair, which orders Boeing 717s for the operation. Originally, several names are considered for the enterprise, including Spanair Link and Air

Balaer. The first two AeBal B-717-2CMs are received on June 22 and 29. Christened *Formentor* and *Espalmador*, they are employed, using the Spanair code, to launch revenue services on July 4.

Meanwhile, on July 3, a new dual-designator pact begins with **SAS (Scandinavian Airlines System)**. Under its terms, Spanair is able to place its code on SAS flights from Madrid to Copenhagen, Helsinki, Goteborg, and Oslo, while SAS shares flights with Spanair from Copenhagen to Alicante via Paris (CDG).

Previously operated by **Korean Air (Korean Airlines-KAL)**, an MD-82 is leased from GECAS for four years as of July 15.

The company's first A321-231 arrives at Palma de Mallorca from Seattle on September 29. In a special October 4 ceremony, the new jetliner is christened *Camilo Jose Cela* in honor of the Spanish Nobel Prize-winning author; it enters revenue service two days later on a scheduled flight to Madrid. The same day, Director General Carlos Bravo departs his position to spend more time with his family; his replacement is not immediately named.

The practice of naming the new A320s for famous living Spaniards continues on October 26 when the second delivered A321-231 is christened *Placido Domingo*, after the famous opera tenor.

In November, **Lufthansa Cargo Airlines, A.G.** takes over the management of all Spanair cargo activities, including its three international freight flights. Two more A320-231s are delivered, one each on November 17 and December 6.

The **Air 2000, Ltd.** B-757-2Y0ER is returned on December 26. Siemens, S.A. director Carlos Banon Blasco will be named director general early in the new year.

Customer bookings during these 12 months accelerate 19.6% to 7.15 million, but cargo traffic falls 9.2% to 34.18 million FTKs.

SPANISH AIR TAXIS. See SPANTAX S.A. TRANSPORTES AEREOS

SPANTAX S.A. TRANSPORTES AEREOS: Spain (1959–1988). **Spanish Air Taxis** is formed at Madrid on October 6, 1959. Founders **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** pilot Roldolfo ("Captain Rudi") Bay (80% owner) and flight attendant Marta Estades (20%) become chairman/managing director and vice president, respectively. Charter and air taxi flights are provided with a fleet of British-made piston-engine aircraft, including 1 AVRO Anson, 2 Airspeed Consuls, 2 Austers, and 1 Oxford.

In April 1960, SAT is granted permission to offer passenger charters on behalf of the oil industry, employing larger aircraft. Two Douglas DC-3s are acquired and charter services begin on December 20 from Las Palmas in support of fuel resource development activities in the Spanish Sahara.

Between 1961–1962, the trade name SPANTAX is chosen and, during the latter year, the company is granted authority to operate long-haul inclusive tour services, beginning with flights to Mauritania. A trio of four-engine DC-4s is brought in and vacationers are transported from various European cities, especially those in the U.K., to the resorts in Spain's Canary and Balearic Islands.

DC-6s and DC-7Cs join the fleet in 1963–1964 and additional African and South American destinations are added. During these years, the company also provides technical assistance for the establishment of **Air Mauritanie (1) (Societe Nationale Air Mauritanie, S.A.)**. There are losses, however.

A chartered DC-3 with 4 crew and 28 passengers crashes near Tenerife on December 7, 1965; there are no survivors.

A DC-3 with 27 aboard ditches in the Atlantic on a Palma–Canary Island flight on September 16, 1966; all aboard are saved except one passenger, who refuses to leave his possessions on the sinking Douglas.

The first jetliner, a Convair CV-990A, is acquired from **American Airlines** on February 19, 1967. It enters service on April 1 between Madrid and Palma de Majorca. The addition of jet equipment forces Managing Director Bey to depart **Iberia Spanish Airlines (2) (Lineas**

Aereas de Espana, S.A.) permanently in order to concentrate full-time on the fortunes of his growing concern.

In 1968–1971, the fleet grows to include 5 of these Coronados (4 from AA and 1 from **Modern Air Transport**), 5 DC-7Cs, 2 DC-6s, 7 DC-3s, and 4 Fokker F.27s. During the former year, a swing-tail DC-6B is acquired from **Sabena Belgian World Airlines, S.A.** SPANTAX is now the first charter company to offer nonstop service from Scandinavia to the Canary Islands.

One CV-990A is chartered to **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** during 1969–1970. Passenger enplanements reach the one-million mark by the latter year, but not without additional tragedy.

On December 3, 1968, a CV-990A with 155 aboard explodes and bursts into flames shortly after takeoff for Munich from Los Rodeos Airport at Santa Cruz de Tenerife in the Canary Islands; there are no survivors in Spain's worst civil aviation disaster to date.

A CV-990A with three crew and seven passengers fails its takeoff from Stockholm's Arlanda Airport on January 5, 1970, for a ferry flight to Zurich, strikes trees, and crashes 1,800 m. from its point of lift-off (five dead).

Transatlantic DC-7C charters are inaugurated in 1972. Unhappily, losses also continue. A DC-3 with six crew crashes at Madrid's Barajas Airport while on a September 30 training flight (one dead).

In poor visibility, a CV-990A with 7 crew and 148 passengers fails its initial climb away from Tenerife on a December 3 flight to Munich and crashes; there are no survivors.

With the placement into service of eight additional former **Swissair, A.G.** and **American Airlines** CV-990As in 1973–1977, SPANTAX becomes the largest operator of this Convair type in the world. During a strike of French air traffic controllers on March 5 of the former year, an **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** DC-9-32 and a SPANTAX CV-990 collide in midair near Nantes. The Coronado makes an emergency landing at a military airfield near Cognac, but the DC-9-32 explodes and crashes, killing all 68 aboard.

The piston-engine fleet is retired during these years, except for a single DC-6. It joins one each newly purchased de Havilland Canada DHC-6 Twin Otter and DHC-7 in operating local service flights in the Balearic and Canary Islands. The older propeller aircraft are replaced by a DC-8-61, two DC-8-61CFs and a DC-9-14. Transatlantic charters are turned over to the DC-8-61s, which also introduce long-haul inclusive-tour flights to Japan and Thailand. Orders are simultaneously placed for Douglas DC-10-30s.

The first wide-body DC-10-30 is placed in service over the North Atlantic on October 24, 1978. In 1979–1982, extensive charter and inclusive-tour services continue, however, an accident on September 13 of the latter year costs the carrier the Douglas wide-body, and with more competitive European operators moving in, much of its reputation as a reliable airline as well.

As the result of a late, aborted takeoff from Malaga for a service to New York, the DC-10-30CF with 13 crew and 381 passengers overruns the runway, crosses a highway, and slams into a railroad embankment, causing a fire to erupt. The aircraft is consumed by the flames and 50 people die.

The 834-employee company operates a fleet in 1983 comprising 3 DC-8-61s, 11 CV-990s, 3 DC-9-14s, and 2 DC-9-32s, 1 of which, under charter from GPA, serves for just 3 months.

On the year, a total of 1,194,413 passengers are flown and revenues of \$87.1 million are earned.

Orderly retirement of the DC-9-14s and Coronados begins in 1984 as the fleet begins rationalization with a DC-10-10 and two B-737-200s. The latter arrive wearing a new color scheme, the first livery change in company history.

All of the DC-9s and all but one CV-990 are replaced in 1985 as a DC-10-10, a third B-737-200, and a fourth DC-8-61 join the fleet. Enplanements total 1,086,175.

The employee population in 1986 stands at 748 and the fleet includes 1 DC-10-10, 4 DC-8-61s, 3 B-737-200s, and 1 CV-990. SPANTAX,

meanwhile, continues on after a series of financial reversals and a political scandal involving the assignment by Managing Director Bey of plumb positions to his relatives and friends. Following a failed effort to attract new capital, Bey loses control of his airline to the government and retires. He will die on October 1, 2000, at the age of 89.

Passenger boardings jump 28.3% to 1,514,888 and freight increases 62.4% to 6.37 million FTKs.

Airline employment is increased by 9% in 1987 to 815. The final CV-990A service is operated in March, after which the Coronado, which had long formed the backbone of the fleet, is retired. The CV-990As, which gave former Managing Director Bey his title "King of the Coronados," had become, in light of rising fuel bills and the company's red-inked ledgers, too expensive to operate.

During the spring, the Luxembourg-based Aviation Finance Group provides new equity and management and begins to offer McDonnell Douglas MD-83s with which to replace the older equipment. The Spanish government agrees to defer payment of nine billion pesetas. Still, SPANTAX encounters significant additional financial difficulty during the year's second half.

Through August, the last reporting date, customer bookings are off by 11.3% to 942,181 and cargo plunges downward 75% to 1.38 million FTKs.

In early 1988, a Kuwaiti investment concern expresses interest in providing cash aid; however, the move is blocked by the Spanish government. Unable to continue, Spantax shuts down and files for bankruptcy at the end of March, citing debts in excess of \$80 million, and leaving travel agents to accommodate over 20,000 travelers already booked.

SPARTAN AIR LINES, LTD.: United Kingdom (1933–1935). With J. de C. Ballardie, H. H. Balfour, W. D. L. Roberts, and L. A. Strange as board members, Spartan Air Lines, Ltd., owned by the investment firm Whitehall Securities, Ltd., is registered on February 2, 1933 and is equipped with a fleet of 3 Spartan Cruisers. Chief Pilot P. Lynch-Blosse begins flying summer weekend proving flights on April 12 from London (Heston) to the Isle of Wight. A month later, on May 12, after additional pilots have been hired, the operation becomes twice daily, ending on October 2.

In association with the new **Railway Air Services, Ltd. (RAA)**, London (Croydon)–Isle of Wight services are resumed on May 1, 1934 with a new Spartan Cruiser II christened *Faithful City*. Cooperation with the railway enterprise is designed to counter operations in the same area by **Portsmouth, Southsea and Isle of Wight Aviation, Ltd.** Another competitive move is equalization of fares with PS&IOW on June 26. The Isle of Wight–London service is rerouted on October 1.

A total of 6,800 passengers are carried on the year.

The London airport terminus is switched on April 14, 1935 from Croydon to Heston. Thrice-daily London (Heston)–Sandown summer services are initiated on June 1. On September 30, the airline is one of three Whitehall Securities-controlled carriers merged to form Allied British Airways, which will become **British Airways, Ltd. (1)** on October 29.

SPECIAL CARGO AIR LINES (SPETSIALNIE GRUZOVIE AVIALINII): Proizvodstvennaya Str 6, Moscow, 119619, Russia; Phone 7 (095) 435-5983; Fax 7 (095) 435-8037; Code C7; Year Founded 1993. SCAS is established at Moscow in 1993 to fly ad hoc all-cargo charters to destinations in the CIS, Africa, and Europe. Igor M. Lebedev is general director and he begins revenue services with 1 Antonov An-26 and 2 Mil Mi-8 helicopters.

Operations continue in 1994–1997, during which years the fleet is increased by 1 An-26, 5 An-12s, 4 An-2s, 3 Mi-8/17s, and 3 Kamov Ka-26s.

The Russian currency crisis of 1998–1999 has a severe impact upon the company's cargo business, forcing a fixed-wing fleet reduction to just 1 each An-12, An-26, and An-26B. Emphasis is now placed on helicopter support services.

SPECIALIZED TRANSPORT INTERNATIONAL: 1383 General Aviation Drive, Melbourne, Florida 32933, United States; Phone (407) 235-0209; Fax (407) 235-0039; Year Founded 1992. Marc Otramare establishes STI at Melbourne, Florida, in 1992 to operate FAR Part 135 all-cargo services to destinations in South Florida and the Caribbean. Revenue flights commence with three CASA C-212 Aviocars and by 2000, the workforce includes seven full-time and two part-time staff.

SPECTRUM AIRLINES: United States (1988–1990). Spectrum Airlines is established at New Bedford, Massachusetts, in 1988 to offer scheduled passenger and cargo services to Hyannis, Nantucket, and Martha's Vineyard. Daily Piper PA-31-310 Navajo roundtrips are inaugurated and are maintained until recession forces the company into bankruptcy in 1990.

SPERNAK AIRWAYS: 1707 Merrill Field Dr., Anchorage, Alaska 99510, United States; Phone 907 272-9475; Fax 907 272-0993; Year Founded 1955. One of the longest-surviving nonscheduled operators in the Alaska, Spernak is established at Anchorage in 1955 to offer charter and flight-seeing flights to local and bush destinations. In 2000, owner Mike Spernak employs 6 full-time and 2 part-time pilots to operate his fleet of 4 Cessna 207A Skywagons and 1 each C-172 Skyhawk and C-182 Skylane.

SPETSIALZIROV AIR: 55 Soviet Army Street, Magnitogorsk, 455037, Russia; Year Founded 1996. SA is set up in 1995 to offer domestic and regional passenger charters. Revenue flights begin, and continue, with 2 Antonov An-24, 3 An-2s, 1 An-26, and 1 Ilyushin Il-18.

SPIRIT AIR (PTY.), LTD.: Australia (1989–1990). A subsidiary of Charter Cruise (Pty.), Ltd., Spirit Air is started in 1989 to offer third-level flights in Queensland during the domestic airline pilots' strike. Operations are undertaken with a Fokker F.27 leased from **East-West Airlines (Pty.), Ltd.** Recession and a return to normalcy by the larger carriers forces this operator out of business in late 1990.

SPIRIT AIRLINES: 2800 Executive Way, Miramar, Florida 33025, United States; Phone (954) 447-7965; Fax (954) 447-7979; http://www.spiritair.com; Code NK; Year Founded 1992. Following the collapse of **Midway Airlines (1)**, Charter One, which is unable to find reliable jet carriers for its charters to Atlantic City, is reformed in May 1992 and is transferred to Detroit Metropolitan Airport (DTT) where it is renamed Spirit Airlines. Founder and principal owner Edward "Ned" Homfeld remains chairman/president/CEO. He oversees the launch of domestic, nonscheduled, FAR Part 121 flights on June 1 with 120 employees and 1 owned Douglas DC-9-31, plus 3 leased DC-9-32s. The purchased aircraft, which has been acquired "for a song" at a time when the second-hand aircraft market is depressed, allows for the retirement of the Convairs.

A total of 149,000 passengers are flown to Philadelphia, Atlantic City, and Boston and revenues of \$6.3 million are generated. Although start-up expenses cause an operating loss of \$2.2 million, a net profit of \$846,202 is earned.

Airline employment totals 170 in 1993. In August, DC-9-30 service begins from Detroit (DTT) and Atlantic City to four Florida cities: Fort Lauderdale, Fort Myers, Orlando, and Tampa.

Passenger boardings skyrocket 91.3% to 285,000. Start-up costs continue to hurt and losses are taken: \$3.48 million (operating) and \$50,000 (net).

The workforce is increased by 72.7% in 1994 to 323. Two chartered DC-9-31s join the fleet in January, allowing the company to initiate a major expansion of service on February 4. On this day, new flights commence to Fort Myers, Orlando, Tampa, West Palm Beach, and Fort Lauderdale and the first international routes are opened from Detroit to Nassau and Freeport in the Bahamas.

A third leased DC-9-31 arrives at Christmastime.

Customer bookings increase 54.4% to 440,000 and revenues jump 122.7% to \$35.1 million. Expenses leap up only 73.1% to \$33.3 million, allowing an operating gain of \$1.8 million and a net profit of \$1.76 million.

Airline employment grows by 36.8% in 1995 to 439. During late spring, flights are also started from Detroit (DET). At the same time, a large hangar at Detroit Metropolitan Airport is purchased from **Delta Air Lines**. The low-cost charter company begins negotiations aimed at a buyout by Cincinnati-based **Comair**, a "Delta Connection" airline.

The Michigan-based charter company enplanes a total of 626,314 passengers and achieves operating income of \$56.1 million. Costs are \$51.73 million and profits are recorded: \$4.36 million (operating) and \$2.71 million (net). The latter figures are later rewritten to read \$4.46 million and \$2.68 million, respectively.

The workforce is increased another 2.5% in 1996 to 450. The owned fleet includes 2 DC-9-32s and 1 DC-9-21; in addition, 3 DC-9-32s and 4 DC-9-31s are operated under charter.

On April 1, a \$20-million arrangement is concluded with **Comair**; under terms of the arrangement, the Cincinnati-based airline will operate its nonunionized prize as its seventh subsidiary. The acquisition must be approved by the Justice and Transportation Departments before it can take effect. Four chartered DC-9-40s scheduled for delivery in June will be taken by Comair and subleased back to Spirit.

Company growth slows following the May 11 crash of the **Valujet Airlines** DC-9 in Florida. Passengers, scared of discount carriers, shy away. Chairman Homfeld and his publicity staff send customers several hundred thousand postcards explaining what the airline does to ensure the safety of its aircraft.

The talks with **Comair** are terminated in June before the DC-9s are delivered. It is later suggested that the Cincinnati-based regional was concerned that it not be saddled with a fiscally dead company.

Spirit continues flying during the remainder of the crisis year, making roundtrip flights from Detroit, Boston, and Cleveland to Atlantic City, Tampa, Orlando, Fort Lauderdale, Fort Myers, and Tampa. It also takes advantage of an opportunity geared to the golf market by introducing service to Myrtle Beach from Detroit (DTT).

During the fourth quarter, the airline undertakes its first advertising campaign. The \$2-million push, handled by Birmingham, Michigan-based Victor Associates, will explain Spirit's low-fare, leisure-travel for a year on television and radio, in magazines, and handouts.

Passenger boardings accelerate 10.6% to 750,000 and operating income shoots up 17% to \$62.74 million. Costs are up 34.7% to \$66.16 million, leaving a \$3.42-million operating loss. A net \$4.81 million loss is suffered.

The leased fleet in 1997 includes 3 DC-9-31s and 4 DC-9-32s. Service is inaugurated at the end of May from Detroit to Bermuda via Atlantic City.

Some \$5 million in debt, **Sun Jet International Airlines**, the Largo, Florida-based discount air carrier, grounds its planes on June 18, lays off most of its 145 employees, and prepares to file for Chapter XI protection the following Monday. Its passengers are switched to flights by Spirit, including those operated as Myrtle Beach Jet Express.

On June 19, Spirit begins flying Sun Jet routes from Newark to Fort Lauderdale, St. Petersburg, and Orlando and to Myrtle Beach from Detroit, Cleveland, and Chicago. Sun Jet will emerge from Chapter XI early the following year.

On October 2, nonstop daily service is inaugurated between New York (JFK) and Myrtle Beach. Toward the end of the year, one DC-9-32 is dedicated to Atlantic City charters while another is leased to the U.S. Marshal Service, which employs it to return illegal aliens from Oklahoma City to Mexico.

Customer bookings increase 45.7% to 1,093,000. Operating revenues jump 29% to \$80.96 million, while expenses rise 19.5% to \$79.14 million. The previous year's operating loss becomes a \$1.81-million gain, while an \$895,000 net profit is celebrated.

Flights are added on February 12, 1998, from Newark to Chicago (MDW), Cleveland, and Myrtle Beach; two days later, Newark to Orlando nonstops commence, five times a week.

While taxiing to the gate after landing at Tampa on July 19 following a service from Detroit, a DC-9-32 with 6 crew and 164 passengers brakes suddenly; one flight attendant is seriously injured.

To assist it in its growth pattern into the South, the company in mid-August adds a McDonnell Douglas MD-82 to its DC-9 fleet.

Opportunity for additional income presents itself late in the month as negotiations between **Northwest Airlines** and its pilots lurch toward a strike. Consequently, the two DC-9-31s leased out at the end of the previous year are recalled. The *Detroit Free Press* reports on August 26 that calls to the airline's reservation desk have skyrocketed to 14,000 to 15,000 daily as travelers seek an alternative to Northwest, the Detroit hub's major carrier.

Beginning on August 29, the day of the Northwest strike, Spirit, employing the two DC-9-31s and the MD-82 flown by management crews, adds additional frequencies from Newark to Fort Lauderdale, Fort Myers, and Tampa. It also expands its Orlando service to daily.

These services are maintained following the end of the job action and help the company to achieve the best performance in the airline's history.

During the fall, Spirit begins to offer tickets directly through the various major reservations systems.

Enplanements for the year balloon 79.1% to 1,420,976 and the overall load factor of 76.4% is the highest in the U.S. airline industry. Revenues for the 450-employee concern surge 61% to \$130.56 million, while expenses are up 55% to \$122.86 million. Operating gain climbs to \$7.69 million, while the net profit increases to \$6.63 million.

Spirit begins daily nonstop roundtrips on February 5, 1999, from New York (LGA) and Islip, Long Island, to Fort Lauderdale.

Low-cost golf packages are introduced for the winter season on February 8. One is operated from New York (LGA) to Myrtle Beach while the second is operated to Orlando, Tampa/Sarasota, West Palm Beach, Fort Lauderdale, or Fort Myers/Naples from either Atlantic City or Detroit.

It is reported on February 9, that Spirit will purchase two gates at Detroit (DTT) in July; the gates will initially comprise temporary facilities at the smaller terminal not employed by **Northwest Airlines**.

A second daily roundtrip service is introduced on February 26 from New York (LGA) to Myrtle Beach.

Daily roundtrips commence on March 4 between Newark and Orlando as the carrier introduces an MD-87 first flown by **Midway Airlines** (1). Also during the first quarter, **Sun Jet International Airlines** resumes operations under its new name, **Southeast Airlines** (6).

Under an arrangement with officials in Florida, the company, in April, begins to move its administrative and computerized reservations functions to Miramar, near Fort Lauderdale. The existing reservations center and maintenance facility will, however, be maintained for two years as new facilities are constructed.

Also in April, arrangements are completed with GE Capital Aviation Services for the purchase of four MD-82s that the lessor has recently acquired from **China Eastern Airlines Company, Ltd.** Plans are made to retire four DC-9-32s.

On June 1, daily late-night roundtrip flights are inaugurated between Detroit and Los Angeles (LAX). The service is designed primarily to increase aircraft utilization of paid-up planes.

The move into the company's new 56,000-sq.-ft., state-of-the-art Miramar headquarters building is completed in November.

Customer bookings increase 67% to 2,372,000, while 212,000 FTKs are also operated. Revenues surge 73.9% to \$227.09 million, while expenses skyrocket 88.9% to \$232.14 million. The previous year's profits are turned into losses: \$5.04 million (operating) and \$9.97 million (net).

Airline employment at the beginning of 2000 stands at 1,884, a giant 57.5% increase over the previous 12 months. To celebrate the 10th anniversary of what is now the largest privately owned airline in the U.S., an MD-83 is painted in a bright yellow-red-lavender-green carnival-style color scheme.

Screaming that they are practicing "black magic," 20-year-old Californian Tareq Kakish assaults the flight crew of Flight 714, an MD-80 en route from Los Angeles to Detroit (DTT) on February 25. The aircraft diverts to Denver where the subdued young man is turned over to police and charged with unlawful interference.

Spirit files a suit in federal court at Detroit on March 29 charging that **Northwest Airlines** forced it to abandon its new flights from Detroit (DTT) to Philadelphia and Boston shortly after their initiation by matching the routes fares and adding more flights. It also alleges that the Minneapolis-based major prevented it from acquiring gates at Detroit (DTT).

Daily roundtrip MD-80 service is inaugurated from Newark to Tampa on May 9. Twice-weekly MD-80 return charters are inaugurated on May 29 from Austin to Las Vegas.

A third daily return service is offered from Orlando to Atlantic City on June 15, the same day a new MD-80 roundtrip is launched from Orlando to Newark.

On June 29, it is announced that the carrier will boost frequencies out of New York (LGA) on September 5, adding two new daily roundtrips to Fort Lauderdale and Orlando and one daily return service to Detroit (DTT), Fort Myers, Myrtle Beach, Tampa, and West Palm Beach.

On July 12, a deal is struck to charter a pair of former **Sun Air (Pty.), Ltd.** MD-81s from **Safair (Pty.), Ltd.** for delivery before Christmas. Two days later, two MD-83s chartered from **Aero Lloyd Flugreisen, GmbH. & Co.** are returned.

Following a rousing Democratic National Convention, a DC-9-31 is rolled out on August 29 wearing "Gore/Leiberman 2000" titles. The aircraft will be employed by Vice President Al Gore and Sen. Joseph Lieberman for the fall presidential campaign. The Republican Party is employing a **Miami Air International** aircraft.

Frequencies from New York (LGA) to Florida are doubled on September 5 with the addition of new daily roundtrips to Fort Myers, Tampa, and West Palm Beach and twice-daily return flights to Orlando. The official 10th birthday is celebrated company-wide the next day.

New daily roundtrips commence on October 5 from Chicago (ORD) to Fort Myers, Fort Lauderdale, and Orlando. Twice-daily DC-9 return service is inaugurated on October 26 from Washington, D.C. (DCA) to Fort Lauderdale and Melbourne.

On November 4, the company's flight attendants vote to be represented by the Association of Flight Attendants.

Flight 600, an MD-80 en route from Fort Lauderdale to New York (LGA) on November 18, is forced to return to its point of origin just after takeoff due to a bomb threat called in to the airport. Just after takeoff from Washington, D.C. (DCA) for Fort Lauderdale on November 24, Flight 139, a fully loaded DC-9-31, suffers severe nosegear vibration. The plane returns to its point of origin and makes a safe landing, with no injuries reported. Unhappily, the brakes of the Douglas freeze up on the runway; it will require maintenance personnel in excess of three hours to physically remove the brakes before the plane can be towed away.

On November 28, the airline announces that it will launch daily non-stop MD-87 roundtrips on February 8 between Newark and Melbourne.

As the result of a spring law allowing an increase in traffic, New York (LGA) has, by early December, added more than 200 new daily flights and requests have been made that will increase the daily total by almost 600. In an effort to handle an increase certain to exacerbate existing delays and congestion, the FAA and the Port Authority of New York and New Jersey begin coordinating planning while imposing a September moratorium on new La Guardia flights. On December 4, the FAA holds an action to distribute the available takeoff and landing slots. Each carrier serving the airport draws a certain number, with each then choosing lots for first choice of times for those slots. Spirit receives 12 of the new positions.

A second daily roundtrip is added to the schedule between Fort Myers and Chicago (ORD) on December 17. On December 22, a third daily return flight is started between Detroit and Fort Myers.

Citing weather delays and pilot scheduling, Spirit, on December 30, dramatically cuts its scheduled flights from Detroit (DTT). Several hundred travelers are stranded and it will be several days into 2001 before it can accommodate ticket holders on other flights. At the same time, 10 arrivals and departures must be cancelled from New York (LGA) and 5 each from Newark. Some passengers are stranded for up to three days.

Overall passenger boardings during these 12 months increase 29.5% to 3,221,000 while cargo traffic skyrockets by 115.86% to 457,000 FTKs.

SPIRIT AVIATION: 16233 Van Owen St., Hangar 1, Van Nuys, California 91406, United States; Phone (818) 989-9642; Fax (818) 785-9585; Year Founded 1983. A fleet management concern, Spirit is established at Van Nuys in 1983 to oversee business fleets and to provide executive and small group passenger charters throughout the U.S., Canada, and Mexico. The company prospers and over the next 14 years, also establishes a base at Santa Ana, California.

In 2000, Roxanne Sunken manages charter flight sales and observes the work of 10 pilots as they operate a large fleet of bizjets. At Van Nuys, these include 2 each IAI-1124 Westwind Is, Learjet 60s, Learjet 25Bs, 4 Beech Super King Air 200s, and 1 each King Air 90, Cessna 425 Conquest, and C-441 Conquest II. Simultaneously, a Learjet 35A Century III and Super King Air 200 are operated from John Wayne-Orange County Airport.

SPIRIT HELICOPTERS: United States (1982-1984). Spirit is established in the summer of 1982 to attempt to make scheduled helicopter services in the San Francisco Bay area a success. Employing 3 Bell 206B JetRangers, the company inaugurates high-frequency revenue flights in September linking Oakland, the China Basin Heliport in downtown San Francisco, and San Francisco.

Operating costs in a recession conspire to finish yet another scheduled rotary-wing airline, as the company goes out of business in 1984.

SPIRIT LAKES AIRWAYS, LTD. See **GREAT LAKES AIRLINES, LTD.**

SPIRIT OF AMERICA AIRLINES: United States (1985-1990). Spirit of America is established in the spring of 1985 to provide coast-to-coast, prime time, all-cargo airlift on behalf of Indianapolis-based **CF Air Freight**. Operations commence in June with 2 Douglas DC-8-73s wearing red titles on snow-white fuselages that fly from Los Angeles and San Francisco to New York (JFK) with a side day trip to San Juan, Puerto Rico.

The assets of defunct **Cam Air International** are acquired in early 1986, including CAI's entire freighter fleet of 7 Lockheed L-188AFs.

Two years later in 1987, the company is upgraded to offer both passenger and cargo charter services with a fleet of 17 Boeing 727-100Fs, 7 Lockheed L-188AFs, and 1 B-737-300. While the freighters continue to fly under contract to **CF Air Freight**, the latter aircraft is employed as transport for the Reno, Nevada, tour operator Casino Express.

In November, a B-727-100F begins five-times-weekly roundtrip flights between Columbus, Ohio, and San Juan on behalf of Profit Freight System. Another Electra freighter is acquired during the fourth quarter, an L-188PF purchased from **Markair**.

A total of 9,450 Casino Express passengers are flown by Christmas.

In 1988, the 700-employee carrier increases its fleet to 52 aircraft: 8 L-188AFs, 19 B-727-100Fs, 1 Falcon 20, and 24 Piper PA-31-310 Navajos. The Casino Express contract ends.

Passenger boardings climb to 36,000 and revenues total \$1.19 million. The operating profit is \$363,725.

The fleet is reduced in 1989 and now includes 10 B-727-100s (6 Dash-21Fs and 4 Dash-22Cs) leased from and operated for **Emery Worldwide**, plus 1 each leased B-727-25F and B-727-44F. The Falcon 20 and 2 L-188AFs are withdrawn. Unable to weather recession and difficulties in the air freight business, Spirit of America ceases operations in 1990.

SPOKANE AIRWAYS: **Spokane International Airport, Spokane, Washington 99219, United States; Phone (509) 747-2017; Fax (509) 838-2387; Year Founded 1970.** Established at Spokane in 1970 as an FBO and charter operation, Spokane Airways provides executive and small group passenger charters, air taxi, light cargo, medevac, and other services without interruption over the next 30 years.

In 2000, Operations Director Rick Lewis oversees the work of 5 full-time pilots, who fly 3 Cessna 172 Skyhawks, 2 Cessna 206 Stationaires, 1 Cessna 210T Centurian, 1 Cessna 340, 1 Beech 55 Baron, and 1 Piper PA-34-200T Seneca II.

SPORT HAWK INTERNATIONAL AIRLINES, LTD. *See SKY-SERVICE, LTD.*

SPORTS AIR TRAVEL: United States (1995–1998). Daniel McFee sets up Sports Air Travel at Troutdale, Oregon, in 1995 to operate FAR Part 135 all-cargo charters throughout the Northwest. Revenue flights commence with a fleet of 19 Cessna 402Cs and 2 C-310s.

Flights continue in 1996 and in July 1997 the concern is purchased by Burbank, California-based **Ameriflight**. Amalgamation is completed by the beginning of 1998.

SPORTSFLIGHT AIRWAYS: 156 Depot Rd., Huntingdon Station, New York 11746, New York; Phone 516 549-4965; Fax 516 271 1149; Year Founded 1994. SportsFlight is established at Tucson in 1994 to offer charter and inclusive-tour flights. Danny S. Wright is named president and revenue operations commence in April with a single leased Boeing 727-2J7A. The first professional sports franchise to sign up with the carrier is the New York Yankees baseball team.

Enplanements for the year total 20,000 and revenues are \$202,000. Expenses, however, are \$357,000 and cause losses: \$155,000 (operating) and \$154,000 (net).

Two more chartered jetliners are placed into service in 1995, a B-727-2M7A and B-727-224A. During the spring, the latter is leased by the presidential campaign of U.S. Senator Robert Dole. Passenger boardings skyrocket to 241,000. In early April 1996, the company is renamed **Pacific International Airlines**. Customer bookings for the first four months are up 83.1% to 119,000.

Unable to maintain the economic viability of his expanded **Pacific International Airline**, Danny S. Wright, in November 1997, elects to close that operation and to resume operations as the smaller Sportsflight Airways. Employing the PIA Boeing 737-233A based at Newark International Airport, the reborn airline flies winter one-plane charters to Mexico, Colorado, and the Caribbean. Sports team charters are operated in the summer.

These niche services continue in 1998–1999, during which years a hush-kitted DC-9-15 is acquired. Airline employment at the beginning of 2000 totals 16, including 6 flight crew and 4 cabin attendants.

SPRINGDALE AIR SERVICE: P.O. Box 811, Springdale, Arkansas 72764, United States; Phone (501) 751-4462; Fax (501) 751-2646; Year Founded 1986. SAS is set up by Randy Shirley at Springdale, Arkansas, during the early summer of 1986 to provide daily passenger and cargo services over the routes abandoned by **Skyways** and **Air Midwest** following their 1985 merger.

Employing Cessna 402s and Beech 18s, the carrier inaugurates these roundtrip flights in July.

A decade later, SAS is largely providing freight flights on behalf of larger carriers. Its fleet now includes 3 Beech 18s, 2 Cessna 402s, and 1 C-310.

Flights continue in 1997–1998. During the latter year, enplanements of 2,560 are recorded. Passenger boardings fall by 25.3% in 1999 to 2,000.

SRI LANKA AIRWAYS, LTD.: Sri Lanka (1978–1979). Formed to replace the domestic division of **Air Ceylon, Ltd.**, Sri Lanka Airways, Ltd. is established at Ratmalana Airport in January 1978. Ownership is

divided between the government (51%) and private interests. Two Hawker Siddeley HS 748s comprise the initial fleet and scheduled operations are begun on April 1 linking Colombo, Jaffna, and Trincomalee with Tirucharappalli, Madras, and Male, Maldives Islands.

On January 10, 1979, this new entrant is merged with **Sri Lanka International Airways, Ltd.** to form **Air Lanka, Ltd.**

SRI LANKA INTERNATIONAL AIRWAYS, LTD.: Sri Lanka (1978–1979). Formed to replace the international division of **Air Ceylon, Ltd.**, Sri Lanka International Airways, Ltd. is established at Colombo in January 1978. Ownership is divided between the government (51%) and private interests. A single Hawker Siddeley Trident 1E makes up the initial fleet. Revenue operations over previous routes to Cairo, Rome, Zurich, Paris, and London are resumed on April 1.

On January 10, 1979, this new entrant is merged with **Sri Lanka Airways, Ltd.** to form **Air Lanka, Ltd.**

SRI LANKAN AIRLINES, LTD.: 37 York Street, Colombo 1, Sri Lanka; Phone 94 (1) 735 555; Fax 94 (1) 735 122; <http://www.airlanka.com>; Code UL; Year Founded 1999. Following its 1998 sale of a 40% stake to **Emirates Airlines, Ltd.**, **Air Lanka, Ltd.** is renamed on July 13, 1999. Simultaneously, the first of two leased Airbus Industrie A340-312s is received, wearing the company's new flying peacock logo. CEO Peter Hill, in marking the day, indicates that nine A330-243s remain on order for delivery between October and late 2000.

Plans are also announced for the inauguration of new services to Beirut in October and to Sydney and Stockholm in November.

In an effort to cut its 4,000-man workforce, the company, on August 16, offers a voluntary retirement program with generous severance to those willing to accept it.

At the end of October, **Emirates Airlines, Ltd.** adds its first service to Scandinavia when it code-shares on the Dubai to Stockholm segment of a new thrice-weekly service from Colombo to Stockholm offered by Sri Lankan Airlines.

Thrice-weekly A340-311 roundtrips are introduced on November 12 from London (LHR) to Sydney via Colombo. The flight, one of the fastest to and from Australia, requires 21 hrs. flight time, plus 90 min. on the ground. The third A330-243 delivered since October 26 is accepted on December 10.

Overall enplanements total 1,422,000, while 179.18 million FTKs are operated. The workforce totals 4,688 at the beginning of 2000. The first of three A330-243s to arrive this year is delivered on January 12.

On February 22, permission is received for the initiation of five additional return frequencies to India.

It is announced on April 10 that the company will inaugurate twice-weekly service to Dhaka in July and thrice-weekly flights to Berlin in November. During the spring and summer, the company's three A340-311s and single A340-312 are all upgraded to the same standard as the new A330-243s, the last of which is delivered on June 15.

On July 1, two weekly roundtrips are added on the route from Colombo to London via Dubai and Milan. An A330-243 is placed on the twice-weekly return service from Colombo to New Delhi, while A320-231 flights from Colombo to Bombay are increased from two to three every week. Frequencies are also boosted to Tiruchirappalli.

It is reported in early July that **Emirates Airlines, Ltd.** will increase its stake in Sri Lankan from 26% to 40% by the end of the year.

It is revealed at the end of August that two L-1011-500s have been sold to **Air Transat, Ltd.** One has been delivered and the other arrives in Canada during September. The work of the company's "Delay Committee," which has been meeting for six months to find ways to improve punctuality, begins to pay off in September as the company boosts its on-time figure to 78%, up 10 points from the same period a year earlier. Including its existence under several names, the carrier's twenty-first birthday is celebrated on September 21.

A code-sharing agreement is signed with **Swissair, A.G.** on October 24. On October 29, weekly A340-312 return service is initiated from

Colombo to Berlin (Schoenfeld Airport) via Dubai. Punctuality rises to 81% during October, up from 70% in October 1999. At the same time, weekly roundtrip frequencies from Colombo to Sydney grow to 5 and to the U.K. to 14.

Under terms of their new alliance, **Swissair, A.G.** starts selling tickets on the Sri Lankan line's twice-weekly A340-312 roundtrips between Colombo and Zurich beginning on December 1. "New Look" business class A340-312 return service is introduced between Colombo and Sydney on December 17.

On December 18, twice-weekly A340-312 return flights are started from Colombo to Jakarta via Singapore.

STA (SOCIEDAD DE TRANSPORTES AEREOS, S.A.): Argentina (1934–1937). Dr. Miguel Figueroa Roman forms STA at the northern Argentine city of Tucuman in the summer of 1934 to restart a service formerly flown sporadically—at the end in 1931 with government assistance—by the Aero Club of Tucuman. The Aero Club had flown between Tafi del Valle–Valles del Oeste–Valles Calchaquies in 1925–1928.

Using the club's Fairchild 71, Roman begins a three-year service on September 5 from Tucuman to Tafi del Valle and Santa Maria. In 1936, the government loans the operation a Ryan Brougham. Unable to continue for lack of traffic, the commitment is ended in 1937.

STAB (SOCIETE DE TRANSPORTS AERIENS DU BURUNDI, S.A.): Burundi (1970–1975). Organized at Bujumbura in October 1970, STAB initiates scheduled passenger and cargo services to Kalemie, Zaire, and Kigoma, Tanzania with a pair of Douglas DC-3s, beginning in April 1971. These flights are maintained until June 1975 when the carrier is reorganized and renamed **Air Burundi, S.A.**

STABO AIR CHARTERS, LTD.: Astonia House, P.O. Box 32152, Kabelenge Road, Lusaka, Zambia; Phone 260 (1) 235976; Fax 260 (1) 233481; <http://www.africa-insites.com/zambia/stabo.htm>; Year Founded 1997. Stabo is established at Lusaka in 1997 to offer executive and small group passenger charters throughout the country and region. Much of the service will operate on behalf of the country's main lodges and safari companies in the transport of Western tourists.

Revenue flights begin and continue with a mixed fleet that includes 1 each Cessna 206, C-210, C-401, Beech 58 Baron, Beech King Air 90, Beech 1900, Piper PA-31-350 Navajo Chieftain, Let 410UVP, and Canadair CL-600 Challenger bizjet.

STAF CARGO AIRLINES (SERVICIOS DE TRANSPORTES AEREOS FUENGINOS, S.A.): Carlos Pelegrini 1063-1B, Buenos Aires, 1699, Argentina; Phone 54 11 4328-2598; Fax 54 11 4327-2164; <http://www.staf-airlines.com>; Code FS; Year Founded 1985. Privately owned STAF is established at Rio de Janeiro on September 11, 1985 to offer international and regional all-cargo charters and contract service flights, primarily to southern Argentina. Operations commence with 1 each Douglas DC-8-53F, DC-8-54F, and Lockheed L-188CF Electra.

The carrier is unable to maintain viability and by 1990 its fleet has been reduced to just the Electra, which is leased to **Air Bridge Carriers, Ltd.** in the U.K. A second L-188CF is briefly owned in 1991, but it, too, is chartered to the British operator.

The original Electra is retained by **Air Bridge Carriers, Ltd.** in 1992, even as that freighter changes its name to **Hunting Air Cargo, Ltd.** With nothing to fly and no business since the beginning of the decade, STAF suspends operations in early 1993.

The company is subsequently revitalized and its main base is situated at Miami (MIA). By 1996, the company is wet-leasing sufficient Douglas DC-10F and Boeing 747F capacity to provide seven weekly roundtrip flights from Florida to Buenos Aires via Santiago de Chile. Although 75% of the cargo shipments made are general in nature, the company also specializes in the transport north of polo horses from Argentina and perishable goods from Chile. A total of 17 million tons of freight are transported.

Ad hoc passenger charters from the U.S. to South America and back commence in 1997; however, the principal service between Miami and South America remains cargo.

It is reported on January 4, 1998, that the Canadian carrier **Royal Airlines, Ltd.** has joined with a local Chilean investor to establish the new charter operator **Chileinter, S.A.** The new company leases one of Royal's L-1011-100s, with a second scheduled to join the new entrant at Santiago within three months.

During April, **Chileinter, S.A.** begins to operate TriStar passenger charters to Caribbean destinations on behalf of STAF.

On April 29, effective in mid-May, STAF wet-leases a McDonnell Douglas MD-11CF from **World Airways** for a three-year period. Painted in STAF colors, the jet freighter will be placed on the Argentine line's services to the U.S.

When **Chileinter, S.A.** stands down during late summer, arrangements are made in November to lease its Lockheed L-1011 TriStar 1. The wide-body is employed to operate passenger charters from Buenos Aires to Varadero, Cuba, St. Martin, Punta Cana, and Porlamar, Venezuela.

Chileinter, S.A. is purchased outright by STAF Airlines on September 20.

Flights continue during the remainder of the year and in 1999.

STAIR. See **SOCIETE DE TRANSPORTS AERIENS INTERNATIONAUX ET REGIONAUX, S.A.**

STANDARD AIR CARGO. See **STANDARD AIRWAYS (1)**

STANDARD AIR LINES (1): United States (1926–1934). On February 3, 1926, Jack Frye, president and new owner of the Los Angeles-based flying school Aero Corporation of California and the first man to land an aircraft on Catalina Island, establishes his company's air transport division under the name Standard Airlines. At age 23, the new CEO is the nation's youngest airline head. Frye, who will later win fame with **Transcontinental and Western Air Lines (TWA)**, next acquires two Fokker Model 8 Universals and a nondescript single-engine Fokker F-VIIa christened *The Texan*.

Employing *The Texan*, Frye and his associates, Walter Hamilton and Paul Richter Jr., the latter fresh from aerial work on the motion picture *Hell's Angels* produced and directed by a young Howard Hughes, inaugurate scheduled service from Los Angeles to Tucson via Phoenix, on November 28, 1927. On those flights where ladies are passengers, a stop is made at Desert Center, California, where a gas station offers women's restroom facilities. Standard is incorporated under the laws of Nevada on May 1, 1928, at which point its fleet comprises upwards of 5 Fokker F-10As and 4 Model 8 Super Universals.

On February 4, 1929, President Frye announces the inauguration of the nation's first transcontinental air-rail service. It will take six months to carry out the claim. That day, the company's Fokkers extend the Tucson route to El Paso via Douglas. There, passengers can deplane and board the Texas & Pacific Railroad for Sweetwater. The old F-VIIa *The Texan* is lost in a crash at Beaumont, California, on March 29 (four dead). Three new Fokker F-10As are received in July and one is christened *The Texan* in honor of the earlier aircraft.

On August 4, Standard aircraft begin picking up T & P passengers at Sweetwater and flying them on to Oklahoma City, where they transfer to Ford 5-ATs of **Southwest Air Fast Express (SAFE)** for completion of their journey to St. Louis. There they again deplane and connect with the air-rail service of **Transcontinental Air Transport (TAT)** and the New York Central Railroad. Begun as the first transcontinental air-rail service, Frye's effort, when finished, is actually the third behind **Transcontinental Air Transport (TAT)** and **Universal Aviation Corporation**. When weather and other conditions are right, intrepid passengers can make the California to New York trip in 43 hrs. 40 min.

A year of operating the Los Angeles–El Paso route is celebrated on February 4, 1930; 97% of all flights scheduled have been completed

over what company public relations refers to as "The Fair Weather Route." The enterprising Standard becomes a tempting takeover target in the expansion plans of larger rivals and on May 1 it is purchased by Harris "Pop" Hanshew's **Western Air Express (W.A.E.)**.

Although Hanshew allows Frye and Richter to continue operations as a separate division, circumstances prevent W.A.E. from moving further east at this point and in October the subsidiary's route is sold to **American Airways**. Standard exists on paper until July 27, 1934, when it is formally dissolved.

STANDARD AIR LINES (2): United States (1945–1949). Stan Weiss and Charles Sherman found **Fireball Air Express** at Long Beach, California, in November 1945. Employing Douglas C-47s, the company inaugurates revenue services in early 1946, flying to New York via Kansas City and Chicago. In 1947, the name is changed to Standard Air Lines and a CAB certificate (as a Large Irregular Carrier) is sought and obtained.

Governor Thomas E. Dewey's August 2, 1948 flight from La Guardia Airport to Idlewild Airport spurs a dispute between the nonscheduled Standard and those scheduled carriers serving New York. Four days later, the company's transcontinental flights are ordered suspended by the CAB after the company admits in hearings to its near-regular operations and violations of rate rules. SAL continues operations apace.

In the first such move, the CAB, on June 21, 1949, upholds the Justice Department action against SAL for allegedly continuing to run unauthorized near-regular transcontinental operations. Countering, the airline cites confusion over the government's use of the term of "contract carrier" to describe its operations.

En route from Los Angeles to New York on July 13, a C-46E with 4 crew and 44 passengers crashes into Mount Chatsworth 30 mi. W of Los Angeles, reportedly as the result of a fight between two passengers; there are no survivors. The CAB will later determine that the scuffle was of no significance in the disaster; the pilot had been flying too low.

When the airline is ordered out of business on July 20, it complies and disbands.

STANDARD AIRWAYS (1): United States (1946–1969). Standard Airways is formed in Seattle in 1946 and for the next 18 years offers charter passenger and all-cargo services throughout the Northwest. The fleet is upgraded from its original Douglas DC-3s to DC-7s and, later, to DC-9-15s. In 1961, a **Trans-Canada Airlines, Ltd.** L-1049E is purchased. A second former Canadian L-1049 is purchased on August 3, 1962 while a former **Trans World Airlines (TWA)** L-1049A is leased from California Airmotive later in the year.

As the result of an in-flight propeller failure, a Lockheed L-1049E Super Constellation with 70 aboard crashes while attempting an emergency landing at Manhattan, Kansas, on May 28, 1963; fortunately, only one passenger is seriously injured. Due to heavy losses, operations cease on January 31, 1964.

The carrier's assets are purchased by Frank B. Lynott in early 1966. In April, Standard is one of 10 supplementals to win permanent certification. Two ex-**Qantas Empire Airways (Pty.), Ltd.** Boeing 707-138Bs are acquired and join a DC-7 and two DC-9-15s when Standard resumes operations on July 17. The CAB grants route authority for Canada and Mexico on December 15.

Revenues are \$1,836,294. Start-up costs cause losses: \$254,662 (operating) and \$319,371 (net).

Following the delivery of the two ex-Australian aircraft on April 1, the fleet remains unchanged in 1967 and by year's end, the employee population numbers 175. One of the new Boeings is wet leased to **Canadian Pacific Air Lines, Ltd. (CPAL)** on October 15.

A total of 173,108 passengers are carried during the first full year. Despite revenues of \$10,844,733, the operating loss is also higher at \$1,709,440. The net loss is \$1,767,035.

A third B-707-138B is obtained from the Australian flag line in 1968, allowing replacement of the Boeing wet-leased to the Canadians, which,

as the *Empress of Sydney*, had been lost in a Vancouver landing accident on February 7.

Revenues accelerate by 9.7% to \$11,894,909, but losses also grow, both operating (\$2,275,316) and net (\$4,135,559).

Early in 1969, two Convair CV-440s are delivered, succeeding the withdrawn DC-7. Domestic and international flights continue until the carrier suspends operations for fiscal reasons on July 31. Unable to restart, Standard shuts its doors permanently on September 24.

STANDARD AIRWAYS (2): United States (1966–1967). The second Standard Airways is set up at Pontiac, Michigan, in the early summer of 1966 to provide scheduled passenger and cargo services to destinations in Michigan and Ohio. Employing 1 each Beech 18 and Piper PA-31-310 Navajo, Standard inaugurates daily roundtrips on July 25 linking Detroit with Cleveland's Lakefront Airport via Pontiac and Port Huron. The service can only be maintained for a year.

STAR (SOCIETE DE TRANSPORT AERIEN DU RWANDA, S.A.): Rwanda (1964–1994). Organized by A. Milligan at Kigali in 1964, STAR undertakes local and regional passenger and cargo charter and contract service flights.

Services are maintained over the next two decades with a fleet that comprises 1 Piper PA-31-310 Navajo, 2 Britten-Norman BN-2 Islanders, and several Aero Commander 500s. A Boeing 707-328C is placed into service in the mid-to-late 1980s.

Operations are suspended during the 1992–1994 civil war.

STAR AIR, A.S.: Copenhagen Airport South, Dragoer, DK-2791, Denmark; Phone 45 3231 4343; Fax 45 3231 4390; <http://www.maersk-air.com/html/com/html>; Code SRR; Year Founded 1987. Star is organized at Copenhagen Airport South in 1987 as a wholly owned subsidiary of the AP Moller Group, owners of **Maersk Air, A.S.** Scheduled and charter operations are undertaken for both passengers and cargo on a regional basis. Additionally, several routes are started on behalf of various air courier companies. President Povi Arnold Jurgensen's initial fleet comprises 3 Fokker F.27-600s.

Operations continue apace in 1988–1990 and a fourth F.27-600 is acquired in 1991. Late in 1992, President Jurgensen negotiates a new long-term contract with **UPS (United Parcel Service)** to operate intra-European all-cargo flights. Based at the UPS European distribution center at Cologne, the carrier leases one each Boeing 727-22QC (RE) and B-727-31QC(RE) from UPS and places them on the Danish aircraft register. Flying under Danish regulations but in UPS colors, Star initiates primarily night frequencies to several European locations.

Airline employment stands at 65 in 1993 and 2 F.27-600s are withdrawn.

The workforce is cut to 50 in 1994 as an F-27-500 is leased from **Jersey European Airways, Ltd.** Services are increased in 1995, employment grows to 80, and Bjame Hansen is named president.

In 1996, the fleet contains 3 each B-727-22Cs and B-727-31Cs plus 1 B-727-180C; all are flown on behalf of **UPS (United Parcel Service)**.

Flights are maintained in 1997–2000, during which years the carrier regularly visits Athens, East Midlands, Edinburgh, Lyon, Nuremberg, Oporto, Turin, Toulouse, and Treviso.

STAR AIR LINES. See **ALASKA AIRLINES**

STAR AIR SERVICE. See **ALASKA AIRLINES**

STAR AIRLINES, S.A.: Immeuble Horizon, 10 Allée Bienvenue, Noisy-le-Grand, 93885, France; Phone 33 (1) 48 15 90 00; Fax 33 (1) 48 15 90 10; Code ZR; Year Founded 1997. Majority shareholding in **Star Europe (Societe de Transports Aerien Regional, S.A.)** is purchased toward the end of 1996 by the Canadian-based Look Voyages travel concern, part of the Transat Group and **Air Transat, Ltd.** Travelers booked on the carrier's two leased Boeing 737-497s continue their

winter holiday vacations without interruption. Orders are placed for five Airbus Industrie A320-214s, the first of which is delivered on December 19.

In early 1997, majority shareholding is purchased by the French Look Voyages division. At this point, the airline is renamed. The second A320-214 is delivered on February 27. Wearing the company's colorful white, black, and green livery, the carrier's third A320-214 is delivered on November 28. It enters service from Paris (CDG) in early December. A fourth A320-214 is handed over on December 10.

Flights continue in 1998. Once **Air Charter International, S.A.** is finally submerged within **Air France**, a capacity gap develops in the French leisure market. As a result, the company, in late spring, seeks to acquire an L-1011 to operate into the market during the forthcoming winter season.

In mid-December, an L-1011-500 is chartered from the Canadian associate **Air Transat, Ltd.**

When the TriStar enters service in January 1999, Star becomes only the second French airline to operate the long-range Lockheed. The last of five A320-214s is delivered on April 1.

Early in 2000, consideration is given to the acquisition of an A321.

STAR AIRWAYS: United States (1977–1980). Lee Hollingsworth, founder and owner of the Denver-based Star Aviation, establishes an airline division of his FBO in 1977 to undertake replacement and Essential Air Service (EAS) flights to Gillette and Rawlins. Scheduled Beech Baron, Swearingen Merlin IV, and Piper PA-31-310 Navajo passenger and cargo flights are maintained until 1980.

STAR AIRWAYS (STAR HAVA YOLLARI, A.O.): Germiyan Sokak, No. 6, Daire 4, Halkiye Hatun Villasi, Florya, Istanbul, Turkey; Phone 90 (212) 663-9120; Fax 90 (212) 663-9123; Code Z3; Year Founded 1995. Chairman Ismet Kotak establishes Star Airways at Istanbul in July 1995 to offer international, regional, and domestic all-cargo services, both scheduled and charter. Bahman Daneshmand is appointed general manager and he recruits a workforce of 28 and acquires 1 Boeing 727-225F. Meanwhile, commercial arrangements are entered into with **UPS (United Parcel Service)**, **Federal Express**, **Air 2000, Ltd.**, **Continental Airlines**, and **Virgin Atlantic Airways, Ltd.** Revenue flights commence in December.

In November, Star purchases the financially distressed, one-plane British start-up passenger carrier **World Airlines, Ltd.** from music entrepreneur Nick Stolberg. A spokesman for World suggests that the grounded airline will soon return to service. Apparently executives at both airlines are unaware that an airline owned by a non-European company cannot be based in the U.K.

Cargo flights continue in 1997–2000, during which years the company's single aircraft regularly visits points in Europe, the Mideast, the CIS, the Far East, and South Africa.

STAR ALLIANCE. See **AIR CANADA, LTD.**; **AIR NEW ZEALAND, LTD.**; **ALL NIPPON AIRWAYS COMPANY, LTD.** (ANA); **ANSETT AUSTRALIA (PTY.), LTD.**; **AUSTRALIAN AIR GROUP, LTD.**; **AUSTRIAN AIRLINES, A.G.**; **BRITISH MIDLAND AIRWAYS, LTD.**; **CANADIAN AIRLINES, LTD.**; **DEUTSCHE LUFTHANSA, A.G.**; **LAUDA AIR, GmbH**; **MEXICANA AIRLINES, S.A. de C.V.**; **SAS (SCANDINAVIAN AIRLINES SYSTEM)**; **THAI AIRWAYS INTERNATIONAL, LTD.**; **TYROLEAN AIRWAYS (TYROLEAN AIRWAYS LUTFAHRGSELSCHAFT, GmbH)**; **UNITED AIRLINES**; **VARIG BRAZILIAN AIRLINES (VIACAO AEREA RIO-GRANDENSE, S.A.)**

STAR ASIA AIRWAYS: Philippines (1994–1996). Star Asia is established at Subic Bay in the spring of 1994 to offer interisland scheduled services. Revenue flights commence in May with a single de Havilland Canada DHC-7-102. Plans are made later in the year to offer frequencies to destinations in Southeast Asia and orders are placed for a pair of

Boeing 737-200s. One is received under charter from GPA (Guinness Peat Aviation, Ltd.).

Star's plans to begin jetliner service collapse during the first quarter of 1995 and the company returns it Boeing to its Irish lessor at the end of March. A second DHC-7-102 is taken in its place and domestic flights are operated until the carrier shuts its doors in the summer of 1996.

STAR EUROPE (SOCIETE DE TRANSPORTS AERIEN REGIONAL, S.A.): France (1995–1997). Star Europe is established at Paris (ORY) on August 3, 1995 to offer European charter services. Cedric Pastour is chairman/CEO and he recruits a workforce of 152. A single Boeing 737-33A is leased and nonscheduled flights to Lille, Lyons, and Nantes commence on December 22.

The inaugural aircraft is returned during the second quarter of 1996 as two chartered, former **Aloha Airlines** B-737-497s become available. Orders are placed for two Airbus Industrie A320-214s. The carrier is purchased at the end of the year by the Canadian-based Look Voyages travel concern, part of the Transat Group and **Air Transat, Ltd.**

In early 1997, Look Voyages requires that the company be renamed **Star Airlines, S.A.**

STARLINE, B.V.: Hoeksteen 115, Hoofddorp, 2132MX, The Netherlands; Phone 31 (20) 653 0003; Fax 31 (20) 653 0335; Code AHD1; Year Founded 1993. With ownership divided between **Air Holland Charter, N.V.** (52%) and **El Al Israel Airlines, Ltd.** (48%), Starline is set up on August 13, 1993, to provide international passenger charters. R. Franken is managing director and he begins revenue flights with aircraft leased from the majority owner.

STARLITE EXPRESS: United States (1988–1991). After **Metro Express II** is merged into **Metro Airlines** in August 1987, this new subsidiary is created as its successor in January 1988. Outfitted with six Shorts 330 freighters, the all-cargo operator inaugurates scheduled freight services for **Federal Express Airlines**.

Initial routes flown are from Rochester, New York, to Newark and from Charleston, South Carolina, to Louisville. Additional northeastern routes are later added, some on behalf of **UPS (United Parcel Service)**. The subsidiary releases neither traffic nor financial data.

Operations continue apace in 1989–1990. Although the cargo operation is not included when parent Metro files for Chapter XI bankruptcy in the spring of 1991, its assets are sold in an effort to raise funds.

STARRETT AIRWAYS, LTD. See **CANADIAN PACIFIC AIR LINES (CPAL)**

STARSPPEED, LTD.: 11 Little Bookham St., Bookham, Surrey, England, KT23 3AA, United Kingdom; Phone 1372-457904; Fax 1372-459068; Year Founded 1984. Starspeed is established at Bookham in 1984 to provide passenger charters.

By 2000, CEO John Dickin oversees a 4-person workforce and the operations of 1 each **Aerospatiale** AS-350B, AS-355, **Bell** 206B Jet-Ranger, and **Bell** 222.

STARWAYS, LTD.: United Kingdom (1948–1964). This charter operation is formed in early December 1948 as a means of rapid transport for show business personnel and is registered as an airline company on December 7. Initially capitalized at £2,000, the first base is at Blackpool Airport.

A Percival Q.6 is purchased in January 1949 and employed to initiate revenue flights. On May 6, the aircraft is lost in crash at Broomhall, Pwllheli, and the company is transferred to Liverpool (Speke) Airport where an Avro Anson is acquired and christened *Stardust*.

In March 1950, two additional Ansons, *Starlight* and *Starflight*, are purchased and are employed to offer pleasure flights from Liverpool as well as a summer charter service to London (Northolt). A freight service to Belfast is launched in October and on October 17, a DC-3 becomes

available. The Douglas transport is employed to make long range flights to Pakistan and Holland.

Produce and passenger charters are flown by the DC-3 in **1951**; destinations visited include Belfast, Amsterdam, Tarbes, Palermo, Marseilles, and Brussels. In February, the Avro 19 *Starlight* is sold. The Ansons provide nonscheduled services from Liverpool to Jersey via London (LGW). In May, a de Havilland DH 89 Dragon Rapide is acquired. F. W. Wilson, owner of Cathedral Touring Agency, becomes chairman and now schedules a series of inclusive-tours.

DC-3 charters to Greece, Istanbul, and La Baule, France, are flown in early **1952**. In January, the Avro 19 *Starflight* is sold and in February, the Anson *Stardust* is removed. During March and May, six ex-RAF Dakotas are purchased and converted to DC-3 civil standard. During the summer, inclusive-tours are undertaken to Jersey and Tarbes. A total of 4,800 passengers are enplaned on the year.

An initial scheduled route is offered in **1953**, Liverpool–Isle of Man. Inclusive-tour destinations include Bilbao and Tarbes. Two ex-RAF DC-3s are sold along with the Dragon Rapide, while another DC-3 is delivered. Passenger bookings reach 6,030.

Cathedral Touring Agency purchases the carrier in **1954** and the new inclusive-tour destinations of Nice and Glasgow are added. An Avro Anson and a DC-3 are sold. In March **1955**, a DC-3 scheduled service is initiated from Liverpool–London (Northolt). Meanwhile, San Sebastian via Biarritz is added to the inclusive-tour network and a DC-3 is sold.

A DC-3 with three crew is lost at Largos on March 28, **1956**, while on a ferry flight (one dead).

Glasgow–Jersey inclusive-tour flights commence in May while the destinations of previous years are flown during the summer. A DC-3 is added in October and it then participates in the airlift of Hungarian refugees Austria–U.K. in November, transporting some 300 in 9 roundtrips.

Inclusive-tours continue unchanged in **1957** and a DC-4 is delivered in September.

Refurbished and in new livery, the DC-4 enters service in January **1958**, its first flight being delivery of football fans Liverpool–Southend. In February, a DC-3 is sold and another DC-4 is placed in operation. New scheduled routes are flown Liverpool (Speke)–London (LHR) and from Glasgow (Renfrew)–Jersey. New inclusive-tour destinations include Barcelona, Basel, Bergen, and Santander; earlier destinations are also flown.

Liverpool–St. Mawgan via Exeter DC-4 scheduled service is inaugurated on June 13, **1959**. New inclusive-tour destinations include Luxembourg, Perpignan, and Pisa. On behalf of **Trans-Arabian Airlines, Ltd.**, a DC-4 flies pilgrims to Mecca on October 16.

Another DC-4 joins the fleet in March **1960**. Scheduled DC-3 flights are, beginning on June 12, initiated from Birmingham, Glasgow, Manchester, and Newcastle to Exeter and St. Mawgan and from Liverpool–Ostend. Scheduled Liverpool–Glasgow flights commence on October 12. Weekly Manchester–Prestwick all-cargo flights start on November 20.

In February **1961**, a Vickers Viscount 708 is acquired from **Air France**. Another DC-4 is purchased in March and one is leased for six months from Trans World Leasing. New inclusive-tour destinations added to those already served include Munich, Oporto, Malaga, Rome, Dinard, and Bordeaux. When the Viscount enters service in May, two DC-4s are leased to **Sabena Belgian World Airlines, S.A.** On September 17, one of the DC-4s leased to the Belgians is destroyed on the ground at Kamina Airport in the Congo by Katangan fighter aircraft. Two days later, a company Skymaster with 4 crew and 69 passengers and first flown by **Pacific Southwest Airlines** in California, is destroyed as the result of a hard landing at Collinstown Airport, Dublin; there are no fatalities.

Daily Liverpool (Speke)–London (LHR) via Hawarden scheduled service begins on April 2, **1962**. Blackpool is added as a stop on the Liverpool–Glasgow route on May 19. Liverpool–Cork thrice-weekly scheduled flights are initiated on June 1 and direct Edinburgh–Exeter

service starts the next day. In November, an ex-**Tradair, Ltd.** Viscount 707 is purchased.

A DC-4 is delivered in January **1963** and inclusive tours are flown as before with the addition of Nantes as a new destination. On November 19, the carrier is sold to **British Eagle International Airlines, Ltd.** and ceases operations on December 31. Enplanements for the final year total 153,209.

STARWELT AIRWAYS (PTY.), LTD.: 3 Willow St., Kempton Pak 1620, P.O. Box 783465, Johannesburg, 2146, South Africa; Phone 27 (11) 975-6452; Fax 27 (11) 975 1863; <http://www.azfreight.com/starwelt>; Code 2N; Year Founded 1989. Originally established in Burundi in **1989** by Capt. Joseph R. B. Krama, Starwelt inaugurates services with a single Boeing 707-320C, flying cargo around the world, particularly in Africa.

In the early **1990s**, company headquarters are transferred to Johannesburg. As the years progress, the fleet is expanded to include not only the original Stratofreighter, but 1 each Airbus Industrie A300B4-203F, Canadair CL-44, Ilyushin Il-76, and Douglas DC-3.

In **1999–2000**, the company continues to operate contracts, taking all manner of freight to remote areas, such as mining sites and construction zones. Emergency relief flights are also made on behalf of government agencies or international organizations.

STATE AIRLINES: United States (1978–1984). Established at Fort Lauderdale in **1978**, State Airlines undertakes scheduled commuter services linking its base with Key West, Miami, and Sarasota plus the Bahamian destinations of Bimini, Chub Cay, Great Harbour Cay, Marsh Harbour, and Treasure Cay. The fleet employed includes de Havilland DH 114 Herons, Cessna 402s, and Piper PA-34 Senecas.

Early in the **1980s**, a number of services are undertaken in conjunction with **Southeast Airlines** under the joint marketing title **State Southeast Airlines**. In **1984**, State, like **Southeast Airlines**, ceases operations.

STATE SOUTHEAST AIRLINES. See **SOUTHEAST AIRLINES (3); STATE AIRLINES**

STATELINE COMMUTER SERVICE: United States (1974–1975). SCS is set up at Leewood, Kansas, in **1974** to provide daily scheduled passenger and cargo flights to destinations within the Kansas City metropolitan area. Piper PA-32 Cherokee Six and Aero Commander 500B roundtrips duly commence, but cannot be maintained beyond **1975**.

STATESWEST AIRLINES: United States (1985–1993). StatesWest is founded by Paul Jones at Phoenix in the summer of **1985** to offer scheduled passenger flights from various communities to the gambling and resort community of Bullhead City, Arizona. The airline is incorporated in Delaware on September 26.

Revenue flights commence on October 1, **1986** with three Shorts 360s. In November, the Newport Beach, California-based small regional **Golden State Airlines** is acquired in exchange for 10,000 shares of Stateswest common stock.

A total of 9,876 passengers are flown during the fourth quarter and a \$1.4-million net loss is suffered.

In **1987**, President Jones and his officers float a \$6.6-million public stock offering. The money is employed to order a pair of British Aerospace BAe Jetstream 31s, which arrive in July and August. The carrier now serves Laughlin, Los Angeles, San Diego, and Bakersfield.

In November, daily nonstop frequencies are introduced from Los Angeles (LAX) to Laughlin, Nevada, and, at year's end, Keith Houk becomes president.

Passenger boardings explode to 73,751 and revenues reach \$3.86 million. Unfortunately, expenses exceed this income and losses are again taken: \$6.06 million (operating) and \$5.97 million (net).

The workforce is reduced by 14.1% in **1988** to 110. Early in the year, the small regional becomes a code-sharing affiliate of **Braniff, Inc.** and

its repainted turboprops inaugurate services to Prescott and Fort Huachuca. Orders are placed for six Beech 1900s and in October, twice-weekday roundtrips commence from Tucson to Scottsdale.

Customer bookings increase by 44.7% to 106,685. Revenues climb by 19.7% to \$5.8 million, expenses decline by 18.9%, but still total \$8.83 million, and the operating loss is cut to \$3.04 million. The net loss also improves to \$3.51 million.

One each Shorts 360 and Jetstream 31 are acquired in 1989. Operations continue to 16 California, Colorado, and Arizona destinations, with special attention paid to the gambling town of Bullhead City in the latter state. In June, 20,000 shares of common stock (7.25% interest) is taken in the rival regional **Mesa Airlines**. During the summer, company officials attempt to propel this shareholding into a total takeover of Mesa, but the acquisition bid is successfully spurned.

On August 1, nonstop roundtrips are inaugurated between Scottsdale and Tucson, bringing the number of daily departures from the former point to seven. Plans are now made, with San Francisco-based Pacific Gate Corporation, to begin a joint-venture regional airline in Thailand.

Passenger boardings decline by 2.5% to 104,057 and revenues fall by 5.1% to \$5.6 million. Expenses, however, shoot up 24.3% to \$7.5 million and leave the company with a \$1.91-million operating loss. The net loss is also cut, to \$2.71 million.

Airline employment is increased by 104% in 1990 to 255 as it is announced on April 5 that the carrier will become the ninth "USAir Express" partner of **USAir** and the first based on the U.S. West Coast; James Lane is named president. Unable to commit the time or resources required, the airline, in May, drops its plan to create a joint venture regional airline in Thailand. In June, daily flights begin from Los Angeles to Bakersfield and Santa Barbara, along with thrice-daily flights from San Diego to Santa Barbara.

On June 15, a 1-for-6 split of outstanding common stock is offered and the company's non-Beech fleet is withdrawn as \$130 million in orders are placed for 10 additional Beech 1900s, 4 de Havilland Canada DHC-8-100s, as well as an ATC flight simulator.

Two of the Beeches arrive at the first of July and join the six already in hand to inaugurate "USAir Express" services on July 15 over the carrier's old routes. Two additional Beech 1900s arrive at year's end.

Customer bookings accelerate 47.3% to 161,847 and revenues balloon 51.4% to \$8.47 million. Costs, led by acquisition of FAR 121 certification and the USAir contract, jump 48.5% to \$11.13 million. The operating loss worsens to \$2.65 million and the net loss deepens to \$3.95 million.

Company employment is cut 49.8% in 1991 to 128 as Rudy Miller becomes chairman/president. He upgrades his flight equipment by adding four additional Beech 1900s, four Beech 1300s, and the four de Havilland Canada DHC-8-100s. A fourth daily "USAir Express" service is introduced in October from Los Angeles (LAX) to Ontario, California. Passenger boardings skyrocket 97.5% to 348,689 and revenues balloon 137.7% to \$20.15 million. Expenses rise 127.8% to \$25.37 million and guarantee an operating loss of \$5.22 million. Net loss is cut slightly, down to \$3.45 million.

The Dash 8s are retired in 1992 along with two Beech 1300s. Significant bad luck is encountered in the form of problems with the Pratt and Whitney Canada PT6A-65B engines of its Beech 1900Cs, losses in the California market, and a strike by USAir maintenance workers that directly costs the commuter \$300,000 in lost revenues.

Customer bookings climb 7% to 339,888 and revenues ascend 16.3% to \$23.4 million. Still, expenses are higher and lead to an operating loss of \$1.7 million and net loss of \$3.7 million.

Never having earned a profit since start-up, the carrier is forced to enter Chapter XI bankruptcy in December. The filing shows the airline with assets of \$42.8 million, \$270,000 in available cash, and \$45.7 million in liabilities. **USAir**, at \$688,000 the regional's largest creditor, informs the company that it will terminate its "USAir Express" affiliation within 180 days.

In 1993, Chairman/President Rudy R. Miller oversees a workforce of 350 and operates a fleet of 11 Beech 1900s and 2 Beech 1300s. As the

bankrupt Arizona-based airline struggles to hold its "USAir Express" affiliation, it receives word that it has been awarded a 1-year, \$1.8-million U.S. General Services Administration contract covering air and rail passenger service to 8 California cities. In March, the bankruptcy court approves a restructuring of the aircraft-financing arrangement the company holds with Beech Acceptance Corp.

Destinations visited from the Phoenix base now include Bakersfield, Burbank, Fresno, Lake Havasu, Laughlin/Bullhead City, Los Angeles, Monterey, Orange County, Sacramento, San Diego, San Francisco, Santa Barbara, Stockton, and Tucson.

During the summer, negotiations are held, unsuccessfully, with **Northwest Airlines** and **Continental Airlines** as StatesWest seeks a new code-sharing partnership to replace the **USAir** affiliation that will end on January 15 next. The company is unable to attract one of these two majors, or to hang on financially; it ceases operations at midnight on October 8.

Prior to its failure, a total of 149,962 passengers are boarded, a 55.8% decline on the year.

STATEWIDE AIRLINES. *See* TRANS EAST AIRLINES

STELA (STELA AO): 217/6 Ulitsa Balkalskaya, Irkutsk, 664075, Russia; Phone 7 (3952) 295 393; Fax 7 (3952) 336 530; Code NND; Year Founded 1994. Stela is set up at Irkutsk in 1994 to provide ad hoc air transport for hunting holidays scheduled in the Lake Baikal region by an associated tour company. Co-general directors A. A. Stephanov and Boris Berkovsky initiate revenue flights with 2 Antonov An-26s and 6 An-32Bs.

Flights continue during the remainder of the decade, during which time Mr. Berkovsky is named chairman and Mr. Stephanov, president. The Russian currency crisis of 1998-1999 has a significant impact on company operations. As a result, the fleet is gradually reduced to 5, then 3, the just 1 An-32Bs.

In 2000, the Antonov operates internal charters, many of these being hunting holiday flights made on behalf of an associated travel concern that arranges hunting expeditions in the Lake Baikal region.

STELLAIR TRANSPORTS AERIENS, S.A.: France (1982-1995). Stellair is established at Aeroport de Nantes Chateau-Bougon in April 1982 to operate passenger and freight charter flights. Revenue services commence with a single Douglas DC-3 plus single-engine lightplanes. Over the remainder of the decade, flights are undertaken to a variety of European destinations as well as stops in North Africa. Many of these are made as replacement services for **Air France** and **Air Inter**. A total of 72,000 passengers are flown in 1989.

In 1990, General Manager Christian Beugin's fleet comprises 1 de Havilland Canada DHC-6-200 Twin Otter, 2 Embraer EMB-110P1 Bandeirantes, and 2 Fairchild Hiller FH-227Js. At this point, the carrier begins to withhold its traffic statistics. Under its own banner, a scheduled route is opened to Strasbourg in August.

In 1991, a Fokker F.28-1000 is leased from **TAT (Transport Aeriens Transregional, S.A.)**. Revenues total \$6.2 million. Operations continue apace in 1992 and in 1993, airline employment stands at 26. The jetliner is replaced in 1994 and only one FH-227J is flown.

Flights cease in 1995.

STELLAR AIR FREIGHTER, A.S.: Norway (1970-1980). Einar von Zernichow forms Stellar at Oslo in May 1970 to operate passenger and cargo charter flights from Fornebu Airport to various destinations in Europe, North Africa, and the Mideast. Revenue services are started during the summer with a single Fairchild Hiller FH-227B and are maintained until the company stops flying in 1980.

STEPHENS AVIATION (PTY.), LTD.: Australia (1937-1941). Formed earlier as E. J. Stephens, this New Guinea bush operation is granted a contract in July 1937 for subsidized mail and passenger service

over two routes from Madang—to Upper Ramu and to Chimbu. Employing 2 de Havilland DH 50As, and 1 each DH 61, DH 66, and WACO 10T, flights commence on August 1.

The beginning of the war in the Pacific in December 1941 brings an end to the company.

STERKHA AIR COMPANY (STERKH AVIAKOMPANIYA): 3 Ulitsa Tikhonova, Yakutia, Mira, Republic of Sakha, 678180, Russia; Phone 7 (41136) 25662; Fax 7 (41136) 24445; Code STH; Year Founded 1993. Sterkha is a new independent founded at Mira in 1993 to provide all-cargo, ad hoc all-cargo charters to Europe. Leonid N. Filipovitch is director general and he inaugurates revenue flights with three Antonov An-32s.

Flights continue apace in 1994–2000, during which years an Ilyushin Il-76T is acquired. **Rich International Airlines** in the U.S. is, before its government shutdown, contracted to provide maintenance services.

STERLING AIR SERVICE: United States (1976–1980). SAS is set up at Sterling, Colorado, in 1976 to provide scheduled Cessna 206 passenger and cargo services to Denver. The FBO-owned airline division continues operations until the summer of 1980.

STERLING AIRWAYS, A.S.: Denmark (1962–1993). Danish clergyman Eilif Krogager, who had formed the travel agency Tjaereborg Rejser A.S. during the 1950s, founds this carrier in April 1962 to operate charter and inclusive-tour flights to the Mediterranean. Douglas DC-6B flights begin on July 7 from Copenhagen to Las Palmas.

A DC-6B with three crew on a ferry flight crashes on final approach to Copenhagen, Denmark, on April 13, 1963; there are no fatalities.

Two DC-6Bs are purchased from the American carrier **Northwest Airlines** on May 22 and June 20, followed by three more that arrive between February 14 and May 20, 1964.

The first jetliner, a Sud SE-210 Caravelle I, is placed in service in 1965.

Coming in to Goteborg in poor visibility on a December 23, 1967 service from Stockholm, Flight 821, a DC-6B with 6 crew and 49 passengers is destroyed as the result of a bad landing; there are no fatalities.

Additional French-made trijets now follow the 1965 unit into service, including 7 specially ordered Caravelle XIs, until 1970 when an order is placed for three Boeing 727-2J4s. On June 23 of that year, Caravelle XB3s launch inclusive-tour charters to North America, flying from Copenhagen to Omaha via Keflavik and Gander. Sterling is the first carrier to operate a twin-jet across the Atlantic with revenue passengers.

When **Falconair Charter, A.B.** goes into receivership on September 1, its Lockheed L-188C is sold to Sterling.

At the conclusion of the first decade in 1971, the fleet comprises 29 Caravelles, 2 Fokker F.27-500s, 1 Lockheed L-188C Electra, 7 DC-6Bs, 1 Cessna 402, and 1 Piper PA-28 Cherokee. A large network of vacation destinations are now visited in Europe, North Africa, and North America.

A subsidiary, **Sterling Sweden, A.B.** is established at Stockholm and begins holiday operations with the Lockheed Electra.

Enplanements reach the two million mark, standing at 2,047,522.

While on descent for Dubai Airport on March 14, 1972, Flight 296, an SE-210 Caravelle XBIII with 6 crew and 106 passengers crashes into a mountain near Al Fujayrah, 50 nm. from the runway; there are no survivors. The carrier's tenth anniversary celebration in April is consequently low key.

Passenger traffic rises 14.4% to 2,392,000 and airline employment reaches 1,241. The fleet now includes 29 Caravelles, 2 Fokker F.27-500s, 1 L-188C, 6 DC-6Bs, 1 DC-6BF, 1 Cessna 402B, and 1 Piper PA-28.

Orders remain outstanding for three B-727-200s with wide-body interiors.

An SE-210 Caravelle VIR is damaged beyond repair as the result of a bad landing at Stockholm on July 14, 1973; there are no fatalities. Also at Stockholm, the Sterling Sweden, A.B. subsidiary is closed down and the Electra is sold.

The three B-727-2J4s are delivered, beginning in November. In the wake of the world's first great oil crisis, enplanements for the year drop to 1,935,875.

The employee population is cut back to 920 in 1974 and 13 of the Caravelles have been disposed of since 1972. Another tragedy is recorded on March 15.

Asked to expedite taxiing to clear Tehran's Runway 29L because of traffic on final approach, an SE-210 Caravelle XB3 with 4 crew and 92 passengers backtracks and while initiating a left turn at the end of the runway, suffers the collapse of right main landing gear. In the process, the right wing tank ruptures, igniting escaping jet fuel that explodes (15 dead).

Passenger boardings this year increase 8.9% to 2,125,000 and cargo traffic rebounds by 69.1%.

The workforce in 1975 is 1,200. A Philippine charter subsidiary, **Sterling Philippine Airways, Inc.**, is established and given an SE-210 Caravelle XII with which to start Pacific operations.

The parent's passenger traffic dips 10% to 1,892,225. Conversely, cargo is up by 20%.

An Italian subsidiary, **Sterling, S.p.A.**, is formed in 1976 to fly Caravelle charter services in Italy and to the offshore Mediterranean islands.

In 1977–1978, additional tour packages are developed and the fleet is rationalized, with the Fokkers and Douglasses retired. During the latter year, Chairman Krogager and President Anders Helgstrand oversee a workforce of 1,354 and a fleet comprising 4 Boeing 727-2J4s, 7 Caravelle XIs, 6 Caravelle XBs. Traffic declines continue; in 1979, 1,234,500 travelers are carried.

The company employs 1,091 workers in 1980 and operates a fleet that includes 5 B-727-2J4As, 9 Caravelles, and 1 Beech King Air.

Passenger boardings skyrocket 17.7% to 1,536,000 while freight increases by 7.2% to 1.04 million FTKs.

Another B-727-2J4A is added to the fleet in 1981 as another SE-210 is retired. Passenger traffic remains level at 1,534,746.

The workforce is cut by 15.4% in 1982 to 1,100. Enplanements rise 1.4% to 1,555,746, but cargo falls off by 35.1% to 873,000 FTKs.

As the world financial situation worsens in 1983, enplanements drop to 1,348,160; 2 more Caravelles and 3 B-727-2J4s are sold.

The payroll is cut 2.3% in 1984 to 1,152 workers. Three Douglas DC-8-63s are acquired and join a fleet that also contains 3 B-727-2J4As and 6 SE-210s Caravelle XBs.

Passenger boardings leap 12% to 1,532,000. Freight does slightly better, growing 16.1% to 1.01 million FTKs. Revenues total \$117 million.

The workforce is increased 17.2% to 1,350 in 1985 and 1 DC-8-63 is deleted. Peter Vange is named president.

Bookings climb 4.3% to 1,598,000 and cargo jumps 150.1% to 1.4 million FTKs.

Only one new employee arrives in 1986, new Chairman Niels Herring.

A scheduled route is opened between Copenhagen and Luxembourg. On August 28, the company purchases four B-727-264As from **USAir**.

Passenger boardings surge upward by 10.2% to 4,759,765 while freight increases another 67% to 2.35 million FTKs. Revenues happily exceed costs and produce profits of \$21 million (operating) and \$7 million (net).

The payroll grows again in 1987, up by 5.9% to 1,354. New uniforms are provided to personnel and a new paint scheme is provided to the fleet's 10 B-727-2J4A/264As, 6 Caravelle XBs, and 2 Corvettes.

Customer bookings accelerate 14% to 2,005,926, but freight plunges 80% down to 460,000 FTKs. Revenues also dip, falling 1.1% to \$263 million. Expenses drop 6.5% to \$229 million and allow an operating income of \$19 million. Net profit climbs to \$28.5 million.

The employee population rises a further 2.1% in 1988 to 1,384. The independent is sold in April for \$118.4 million; shareholders include Reso Travel of Sweden (49%), Danish investors (49%), and Sterling employees (2%).

Passenger boardings fall 1.3% to 1,980,687 and freight dips 13.9% to 396,000 FTKs. On the other hand, revenues increase by 8.9% to \$243.4

million and operating income reaches \$21.6 million. Net gain declines, however, to \$6.8 million.

Company employment inches up 0.8% in **1989** to 1,381. Early in the year, orders are placed for two B-757-27Bs, with options for three more; the first one arrives in time to help the company open the summer season at the end of March. Simultaneously, the carrier's first scheduled route is started between Copenhagen and Luxembourg.

During the year, the company joins in creation of the Portuguese airline **Air Columbus, S.A.**, taking a 34% equity stake.

Customer bookings slide 3% to 1,921,341, but cargo mounts a 57.7% upward rally to 624.73 million FTKs.

The payroll is reduced by 6.6% in **1990** to 1,290 and the fleet comprises 10 Boeing 727-2J4A/264As, 2 B-757-27Bs leased from **Air Holland, N.V.**, and 5 Caravelle XBs, 1 of which is leased to **Air Toulouse International, S.A.**

Passenger boardings decline another 13% to 1,677,700.

Two Aerospatiale SN-601 Corvettes are added in **1991** and all but one Caravelle is retired. In January, the carrier enters into a contract with **Transavia Airlines, N.V.** under which the two charter operators pledge to cooperate on operational, commercial, and technical matters. The first of two B-757-2J4As to be delivered on the year arrives in early June wearing the company's new color scheme.

Arrangements are also made with **Transwede Airways, A.B.** and **Norway Airlines, A.S.** as enplanements plunge down to 882,990.

Airline employment totals 890 in **1992** as the last Caravelle is withdrawn from service following its final rotation on January 15 and with two others, is placed up for sale. The fleet now includes 2 owned and 2 leased B-727-2J4As, 2 each B-727-2B7As, B-727-2J4REs, and 2 B-757-2J4s, as well as 1 each B-727-2K3A and B-727-270A.

Passenger boardings rise 21.7% to 1,127,700.

Despite reductions in the number of aircraft and staff, the company is in deep financial difficulty in **1993**, due entirely to the world recession. Unable to weather the financial storm, the carrier ceases operations on September 22, declares bankruptcy, and is liquidated.

STERLING CARGO, A.S.: Denmark (1999-2000). Sterling Cargo is established as a subsidiary of **Sterling European Airlines, A.S.** at Copenhagen in the summer of **1999** to offer high-yield, low-cost all-cargo service to New York (JFK) from Scandinavia. Employing a Boeing 747-200F under an ACMI contract from **Atlas Air**, the carrier begins thrice-weekly operations in October transporting goods for Volvo, Erickson, and Nokia.

Unhappily, stiff competition for U.S. exports drives down eastbound rates and despite high traffic, Sterling is unable to recover the rising costs of its operation. A subsequent tariff increase drives away its customers. The company's North Atlantic venture is shut down on July 14, **2000**, less than 10 months after its start. Sterling is left with its original business of flying passenger charters and wet-lease B-727Fs freighter services, the latter largely on behalf of newly renamed **TNT Airways, B.V.**

STERLING EUROPEARLINES, A.S.: Copenhagen Airport South, Dragoer, DK-2791, Denmark; Phone 45 32 45 45 45; Fax 45 32 45 14 12; Code NB; Year Founded 1993. SEA is established by Lars Svenheim, Per Volstrup Petersen, Jan Lyneborg, and Keld Ditlev Pedersen at Copenhagen Airport South on December 14, **1993**. It is based on the remaining assets of failed **Sterling Airways, A.S.**, including 1 each Boeing 727-2B7A and B-727-270A. Keld Pedersen is appointed chairman, with Lars Svenheim as president and Per Petersen as chief operating officer.

In the early spring of **1994**, 24 employees are recruited and 1 each B-727-2K3A and B-727-2J4(RE)A are leased. Revenue flights to holiday destinations in the Mediterranean and ad hoc charters worldwide are begun by the four trimotors on May 1.

Airline employment stands at 250 in **1995**. The company begins to fly a B-727F for **TNT Worldwide Express** and enplanements of 3,022,000 are reported.

There is no change in the workforce or fleet at the beginning of **1996**. In January, 90% ownership is acquired by the two Norwegian companies, Ganger Rolf, A.S. and Bonheur, A.S., both of which are managed by Fred Olsen & Co. and are sold on the Oslo Stock Exchange. This is a very bad traffic year as customer bookings plunge 77.8% to just 670,000.

During the summer of **1997**, a B-727-2J4A is wet-leased to the Swedish tour carrier **Blue Scandinavia, A.B.** After Blue Scandinavia is purchased by **Britannica Airways, Ltd.** of the U.K., it will be returned early the following year. At the end of July, President Svenheim announces that three Next Generation B-737-8Q8s will be delivered under charter in mid-1998 from ILFC.

Passenger boardings drop 12.3% to 587,600.

Following the bankruptcy of the U.S. carrier **Western Pacific Airlines (Westpac)** in early **1998**, Sterling agrees to acquire one of that carrier's B-737-3Y0s. At the same time, the company adopts a new "beach ball" livery, with the ball to be painted on the tails of four brightly-colored aircraft reminiscent of the "jelly bean" color scheme introduced by **Braniff International Airways** in 1965. The first ILFC B-737-8Q8 arrives on March 19 wearing a bright yellow "beach ball" livery. It immediately begins flying to Palma de Mallorca. Late in the month, two more B-737-8Q8s are delivered wearing red and green color schemes. One more, in yellow, will follow.

When the former Westpac Baby Boeing arrives in late April, it wears a purple fuselage with white Sterling titles and a colorful beach ball painted on its tail.

Flights continue during the remainder of the year. Customer bookings surge 18.3% to 695,000.

By the beginning of **1999**, airline employment has been increased by a huge 80.3% to 476.

One of the "beach ball" Next Generation B-737-8Q8s is subleased to **Britannica Airways, A.B.** during the first quarter. Repainted in the colors of the British-owned Swedish carrier, the plane enters service with the beginning of the summer season in late March.

Having continued to operate cargo services on behalf of **TNT Worldwide Express** over the past several years, Sterling European, during the summer, begins a long-haul subsidiary, **Sterling Cargo, A.S.** Flights to New York (JFK) from Scandinavia are begun with a wet-leased B-747-200F provided by Atlas Air.

At the beginning of **2000**, the B-727 fleet includes 2 each Dash-287AFs and Dash-281Fs and 1 each Dash-232AF, Dash-251F, Dash-227AF, Dash and 224AF. Three B-737-382s and 6 Next Generation B-737-8Q8s are also operated.

Freighter service is suspended from Copenhagen to Dubai on April 1. On August 11, a Next Generation B-737-8Q8 is leased from ILFC, with delivery anticipated in February. It is reported in July that the carrier will retire two B-737-382s in February.

Having failed with its effort to establish a North Atlantic subsidiary, the company shuts down **Sterling Cargo, A.S.** on July 14, less than 10 months after its start. It will continue to operate freight charters on behalf of newly renamed **TNT Airways, B.V.**

Scheduled service is inaugurated on November 1 with the introduction of flights from Copenhagen and Stockholm to the Spanish cities of Alicante and Malaga.

On December 13, it is announced that the multicolored beach ball tail logo is being dropped.

STERLING FLIGHT SERVICES: Craig Airport, Jacksonville, Florida 32225, United States; Phone (904) 642-9683; Fax (904) 642-0994; <http://www.southeast.net/~sterling>; Year Founded 1995. Blake Deal establishes this nonscheduled carrier at Craig Municipal Airport in **1995** to provide executive and small group passenger charters throughout the U.S., Canada, Mexico, and the Caribbean.

Within five years, the owner employs 3 pilots and operates a fleet that includes 1 each North American Sabreliner, Swearingen Merlin, Piper PA-34 Seneca, PA-28 Arrow, and 2 Cessna 414A Chancellors.

STERLING ONE: United States (1995–1996). Sterling One is established in the fall of 1995 to offer deep-discount scheduled and non-scheduled services between Long Beach, California, and Chicago (MDW). Lita-Nadine Quetnick is named president and she pledges to make her airline different by offering services not found on other cut-rate airlines: hot meals served on fine china and wine served in glass wineglasses.

Employing a Boeing B-727-225A leased from **AvAtlantic**, Sterling One launches daily nonstop roundtrips in December.

Unable to achieve viability, the company is temporarily shutdown on January 25, 1996. President Quetnick informs the Long Beach *Press-Telegram* that the suspension is due to “less than stellar performance from third-party vendors.” A resumption of service in March is promised, but, in the meantime, customers holding tickets are able to transfer their flights to **America West Airlines**.

The airline does not restart.

STERLING PHILIPPINE AIRWAYS, INC. See **STERLING AIRWAYS, A.S.**

STERLING SWEDEN, A.B. See **STERLING AIRWAYS, A.S.**

STERLITAMAK AVIAKOMPANIYA: Sterlitamak Airport, Sterlibashevski Trakt, Sterlitamak, Bashkortostan, 453113, Russia; Phone 3471-14-3062; Fax 3471-14-3062; Year Founded 1991. SA is set up at Sterlibashevski Trakt Airport in the Bashkortostan Republic of the Russian Federation in 1991 as a charter subsidiary of **Bashkirskie Airlines**. R. M. Baembitov is named general director and he begins revenue services with 1 Antonov An-24 and 2 An-2 biplanes.

By 2000, Flight Director Rashid M. Khalimulin oversees a 126-person workforce and the operations of 1 each Antonov An-12 and An-24.

STEVENS AVIATION: Greenville-Spartanburg Airport, Greenville, South Carolina 29612, United States; Phone (864) 879-6000; Fax (864) 879-6195; Year Founded 1950. Stevens Aviation is established as the FBO/charter operation at Greenville–Spartanburg Airport in South Carolina in 1950. Although concentrating primarily on its “gas station” activities, the expanding company also offers a variety of smallplane charters to various southeastern destinations. During the next 40 years, a facility is also established at Nashville, Tennessee, and offices are opened at Knoxville, Atlanta, Denver, and Dayton, Ohio.

The most colorful event in company history occurs on March 20, 1992. After it has been discovered that its advertising and that of major **Southwest Airlines (2)** is nearly identical, Stevens Chairman Kurt Herwald challenges Southwest Chairman Herbert D. “Herb” Kelleher to an arm wrestling contest with ad removal the forfeit. The best two-out-of-three contest is duly held before a large crowd at the Dallas Sportatorium. Despite Kelleher’s loss, the two contestants agree to continue using their ads without change.

By 1999, Charter Director Julie Wrenn oversees the activities of three full-time and three part-time pilots. They fly 1 Beech 2000 Starship and 1 Beech 90 King Air from Spartanburg and 1 Super King Air 200, 1 B-58 Baron, and 2 British Aerospace BAe Jetstream 31s from the Greenville base. A King Air 90 and a Starship, the only one in Tennessee, is flown from Nashville, while a King Air 90 is stationed up north at Dayton, Ohio.

STEWART ISLAND AIR SERVICES, LTD.: New Zealand (1976–1978). SIASL is formed at Invercargill at the tip of New Zealand’s South Island on May 1, 1976 to provide an amphibious air service to its offshore island namesake following the cessation of Grumman G-44A Widgeon services by **Mount Cook Airlines, Ltd.** at the end of April.

Employing a Widgeon leased from Mount Cook, as well as one from **Sea Bee Air, Ltd.**, revenue charter services begin on October 1 and continue for 18 months until an airfield is built on Stewart Island. On Janu-

ary 21, 1978, the carrier is renamed **Southern Air, Ltd.** and reequipped, undertakes a land-based service.

STEWART ISLAND FLIGHTS, LTD.: P.O. Box 860, Invercargill, New Zealand; Phone 64 (3) 218-9129; Fax 64 (3) 214-4681; <http://www.southernair.co.nz>; Code RKU; Year Founded 2000. Stewart Island Flights is established at Invercargill in March 2000 by a group of Southerners formerly associated with **Southern Air, Ltd.**, which has been purchased by the charter operator Southeast Air, Ltd.

Two former Southern Air Britten-Norman BN-2 Islanders are obtained and are employed to offer thrice-daily roundtrips to Stewart Island.

During the summer, the demand for service is so high that many additional frequencies are laid on to meet the demand. The record of 33 return flights in one day is quickly established.

In addition to scheduled service, flight-seeing is also available. Importantly, air ambulance service is provided and medical transfers can be made as needed to Dunedin and Christchurch.

STIGL GROZNI UNITED AIR DETACHMENT: 364026 Chechen Republic, Grozny Airport, Chechnya, Russia; Year Founded 1995. This tiny air concern is established at Grozny Airport in the spring of 1995 even as fighting continues on the ground nearby between Chechen rebels and Russian troops. Ivan Babichev is CEO and is able to inaugurate domestic and regional passenger services, both scheduled and charter, with a pair of Tupolev Tu-134As.

Flights continue during the remainder of the year, but are offered only sporadically in 1996–2000.

STILLWELL AIRLINES (PTY.), LTD. See **SKYWEST AIRLINES (PTY.), LTD.**

STOL AIR: United States (1972–1979). Formed at Burlingame, California, in 1972 under the name **STOL Air**, this commuter is given a fleet of Britten-Norman BN-2 Islanders and BN-2A Trislanders with which to launch scheduled passenger and cargo flights to San Francisco, San Rafael, Concord, Napa, Eureka, Sacramento, Chico, and Fresno.

The company is transferred to Chico in 1975 and the fleet is expanded by the addition of Cessna 402s. New destinations visited in that year and 1976–1977 include Santa Rosa, Ukiah, Clear Lake, and Oakland.

STOL Air is acquired in 1978 by the investment group Westair, which appoints Timothy Flynn its general manager. On April 1, 1979, the new ownership merges its acquisition with another small carrier, Santa Rosa-based **Golden Eagle Airlines**, to form Western Airlines doing business as **Westair Commuter Airlines**.

STOUT AIR SERVICES: United States (1926–1930). Determined to see his aircraft inaugurate passenger service, William Bushnell “Bill” Stout, a leading proponent and, with William B. Mayo, one of the fathers of the Ford Tri-Motor, forms his own airline in the early summer of 1926. Employing the single 2-AT-10, piloted by the Ford Motor Company Chief Pilot and SAS Operations Manager J. Parker Van Sandt (who has also flown the Trimotor predecessor, the Stout 1-AS Air Sedan), the new demonstration line opens scheduled service between Detroit and Grand Rapids on August 2.

A second Ford, 2-AT-11, is acquired in December, along with 2-AT-8 repossessed from the failed **Florida Airways**.

At year’s end, records show that a total of 657 passengers and 3,155 pounds of air-express parcels have been carried.

The inventor also obtains U.S. Post Office Contract Air Mail Route No. 14 (CAM-14) in the spring of 1927, but elects not to fly it and returns it to the post office for closure on July 30. Meanwhile, the Ford Tri-Motor 4-AT-5 is delivered on June 23, becoming the number three aircraft on the Detroit–Cleveland service.

Beginning in July, the latest aircraft, bearing writing in the middle of its fuselage aft the wing that reads “Aerial Tours over the City,” undertakes sight-seeing flights over Cleveland, Detroit, and Toledo. On Octo-

ber 6, Stout obtains Ford 4-AT-9 Tri-Motor and while **Ford Air Freight Lines**, flying from the same field, elects to emphasize cargo services, he is given an opportunity to develop exclusive passenger operations. On November 1, regularly scheduled flights allow customers a view of Lake Erie while traveling to Cleveland via Toledo.

Service continues apace in 1928, with the Ford 4-AT-8, previously flown by the Royal Typewriter Company, entering service on February 18, followed by the 4-AT-18 on May 10, the 4-AT-28 on August 17, and 4-AT-34 on September 14. On October 13, Ralph Reed's 4-AT-8 crashes into a tree while landing at Detroit in the dark; he and two passengers are injured. Detroit to Chicago passenger service is initiated on November 1.

A total of 5,640 passengers are carried over the 2 routes during the year, with another 40,000 taken on 15-minute sight-seeing flights. Overall mileage flown during the year is 161,755.

As the result of a mail compartment fire, the Ford 4-AT-9 crashes near Toledo on January 16, 1929; the aircraft is destroyed and the two-man crew hurt. Another Tri-Motor with engine trouble, 4-AT-5, makes a forced landing in a field near West 65th St. and Denison Ave. in Cleveland on February 24; none of the 13 people aboard is seriously hurt. The next day, the first of the larger Ford Tri-Motors to be received by the company, the \$65,475 5-AT-15, is delivered at Detroit, followed by the \$55,000 5-AT-26 on April 24.

The Ford 5-AT-52 is acquired on June 29, 1930; however, Stout Air Services is purchased by United Aircraft and Transport Corporation on June 30. Still, yet another Ford, 5-AT-53, arrives on July 8 followed by the 5-AT-70 on August 26. The company is merged into **National Air Transport**, another United acquisition, on August 31. Stout's framework, while disappearing as an independent entity, allows United's main line, **Boeing Air Transport**, to reach from coast to coast.

Founder Stout recalls the story of his airline and of the Tri-Motor in his memoir *So Away I Went!* (Indianapolis: Bobbs-Merrill, 1951).

STRAHLE LUFTVERKEHR, GmbH.: Germany (1920–1922). This small, independent carrier is formed at Stuttgart in late fall 1920 to provide services to Constanze; flights begin in December and continue until August 1921. Reconstituted, the company resumes operations from Stuttgart to Nuremberg during the spring of 1922. Short of capital and failing to attract affiliation invitations from either Junkers or Lloyd interests, the company ceases operation.

STRAITS AIR FERRY EXPRESS, LTD. See **SAFE AIR, LTD.**

STRATOFREIGHT: United States (1947–1949). This irregular carrier is set up at Miami in late fall 1947 to operate passenger charter and inclusive tour flights. Revenue flights commence in December with a single Curtiss C-46 Commando.

Significantly overweight, the aircraft suffers engine trouble and ditches into the sea just after takeoff from San Juan, Puerto Rico, on June 7, 1949; there are no survivors. The tragedy leads to revocation of the company's operating permit.

STREAMLINE AVIATION, LTD.: Office 12, Exeter Airport, Exeter, Devonshire, England, EX5 2BD, United Kingdom; Phone 44 (1392) 361 795; Fax 44 (1392) 360 424; Code SSW; Year Founded 1991. Streamline is established in 1991 to offer passenger and cargo charters to domestic and some regional destinations. Revenue flights commence with 3 owned Embraer EMB-110P1 Bandeirantes and 1 leased EMB-110P2 Bandeirante.

One each chartered Shorts 330 and Shorts 360 are added in 1992, but in light of the recessionary impact upon the charter business, are removed in 1993. Operations continue in 1994 as the Shorts 330 is returned to service.

Flights continue in 1995–1999, during which years Chairman/CEO Bernard Haddigan adds two more Shorts 330s and a Pilatus-Britten-Norman PBN-2A Trislander.

While on departure from Paris (CDG) to Madrid on May 25, 2000, an **Air Liberte, S.A.** MD-83, returning 154 Spanish football fans home from the European Cup Final, is involved in a runway incursion accident with a taxiing Streamline Aviation Shorts 360 freighter. Although no injuries are reported aboard the jetliner, its wing smashes into the cockpit of the turboprop, killing its copilot. The French aircraft is able to safely abort its takeoff.

In December, a Shorts 360F is acquired in a basic red and gray livery.

STREZHEVOYE AIRLINE (STREZHEVSKOE GOSUDARTSVENNOE A/P): Strezhevoi Aeroport, Tomsk Region, West Siberian Zone ATD, 636762, Russia; Phone 7 (38259) 32059; Year Founded 1996. Strezhevoye Airline is established in 1996 to offer passenger and cargo services, both scheduled and charter, plus rotary-wing aerial contract work throughout Western Siberia. Vladimir Mikhailov is CEO and he begins flights with 2 Yak 42Ds, 5 Antonov An-2s, and 30 Mil Mi-8 and Mi-17 helicopters.

SUBURBAN AIR FREIGHT: P.O. Box 19090, Omaha, Nebraska, 68119-0090, United States; Phone (402) 344-4100; Fax (402) 344-0415; http://www.subair.com; Year Founded 1994. SAF is set up by James V. Armstrong at Omaha's Eppley Field in 1984 to provide scheduled all-cargo and contract service flights throughout the Midwest. The company is paired with a sister organization, Suburban Air Services, which gains a reputation for its expert in the maintenance and repair of piston-powered Aero Commander 680FL aircraft. SAS also performs retail maintenance, inspection, and modifications of other makes of small cargo aircraft.

During the remainder of the decade and through the 1990s, SAF offers a variety of cargo opportunities for shippers and is able to accommodate special requirements such as forklifts or belt loaders. Both day and overnight express services are offered and any number of special requests are filled, including overnight transfer of MIS and data systems, the handling of such time-sensitive materials as computer tapes and other specialized contracts.

The fleet in 2000 includes 9 Rockwell Aero Commander 680FLs and 1 500FL, 7 Cessna 402Cs, 3 Beech 99s, and 1 Beech 1900C.

SUBURBAN AIR TAXI. See **SUBURBAN AIRLINES**

SUBURBAN AIRLINES: United States (1968–1989). In May 1968, Alfred Bertolet's **Reading Airlines** of Reading, Pennsylvania, merges with **Suburban Air Taxi (SAT)** of Red Bank, New Jersey, adopts the first third of the latter's name, and begins service over a 2,000-mile route system. Employed are Reading's 3 de Havilland DH 104 Doves and 2 de Havilland Canada DHC-6-100 Twin Otters; SAT also contributes 2 Twin Otters and continues to operate as a subsidiary division. Later in the year, a DHC-6-100 previously ordered by Reading is placed into service and a sixth Canadian turboprop is purchased from **Air Wisconsin**.

Among the northeastern destinations now visited are Reading, Newark, Philadelphia, Allentown, Buffalo, and Wilkes-Barre, Princeton, and New York (JFK). In September, an arrangement is signed with **Eastern Air Lines** under which the major transfers a route to Washington, D.C. (DCA) via Lancaster, agreeing to pay the commuter \$245,000 over three years to operate it. Simultaneously, services to New York (JFK) from Allentown are ended.

Operations continue apace in 1969. All airline operations, maintenance, and training are shifted to Allentown, where a new 22,500-sq.-ft. hangar and office facility is opened.

Former **Reading Airlines** Vice President Arthur M. Horst is named president on March 1, 1970. By now completely coordinated, the SAT division is shut down. Although there is little change over the next two years, this condition changes in 1973. The small regional becomes a member of the "Allegheny Commuter" network on March 1 and begins to fly contract services linking Reading with Newark, Philadelphia,

Lancaster, and Washington, D.C. and Lancaster with Philadelphia and Washington.

A separate maintenance base is maintained at Allentown and several Twin Otters, not repainted in Allegheny livery, are employed to maintain an independent service from that community to Buffalo and Philadelphia. In 1974, the first full year of partnership, the commuter becomes a code-sharing member in **Allegheny Airline (1)**'s computerized reservations system. Consequently, enplanements reach 129,673.

Airline employment in 1975 stands at 60. The fleet now comprises 3 Twin Otters and 1 Beech 99, although a DHC-6-300 received on December 1 brings the total of Canadian-made turboprops to 4. Passenger boardings dip 1.5% to 127,756.

The workforce is reduced by 16.7% in 1976 to 50. Customer bookings rebound and grow by 10.8% to 141,689. In 1977, enplanements total 157,980 and revenues are \$3.4 million.

Following President Carter's signing of the Airline Deregulation Act in October 1978, Suburban enters a period of expansion. It becomes the first small regional to qualify for operations under the FAA's revised FAR 135 regulations. In addition, an order is placed for four Shorts 330-100s.

Passenger boardings grow by 1% to 159,892 and operating income increases by 21.7% to \$4.14 million.

The workforce grows by 8.3% in 1979 to 65. Suburban acquires its first Shorts 330-100 on January 15. By year's end, the fleet will include 2 of the Ulster-built turboprops, plus 1 each DHC-6-200, DHC-6-300, and Beech 99.

Customer bookings accelerate 18.1% to 188,857, but cargo is down 5% to 396,000 FTKs. Operating income advances upward by 34.4% to \$5.39 million.

The employee population rises 37.1% in 1980 to 85 and the fleet includes 5 Shorts 330-100s. Orders are placed for 4 Shorts 360-100s and 3 DHC-8s. Allentown-Philadelphia frequencies are increased and a new computer system is installed at the Reading base.

A Shorts 330-100 is blown over by a tornado at Allentown on June 3.

The Shorts transport a total of 217,094 passengers, a 15% boost; freight, on the other hand, declines by 26.1% to 18,000 pounds. Revenues are \$8.1 million, sufficient for entry into the category defined by the CAB as "large regional." Expenses are \$7.39 million, allowing a profit of \$691,096.

Airline employment in 1981 stands at 169 and orders are outstanding for 3 DHC-8s and 4 Shorts 360-100s. On May 1, the outstanding portion of the Suburban service is submerged under the Allegheny label. President Horst and his board are excited as the airline now goes public, offering 300,000 shares of common stock that brings in \$1,782,000 in new capitalization.

Over 100 daily flights are offered in Pennsylvania, New Jersey, and New York; among the destinations served are Lancaster, Allentown, New York (JFK), Newark, Philadelphia, Reading, Binghamton, and Buffalo.

Traffic increases 18.8% as a total of 257,782 passengers are transported; cargo accelerates 23.4% to 22,000 pounds. Revenues of \$11 million are earned (up 36.2%), expenses are up 36.3% to \$10 million, and a net profit of \$931,238 million is enjoyed.

The payroll grows 7.1% in 1982 to 181. Routes are stretched on July 1 into Groton and New London, Connecticut, and Binghamton, Buffalo, and Islip, New York.

On December 1, the Reading-based carrier becomes world and North American launch customer for the new Shorts 360-100 commuter liner, placing four into service. The inaugural service is a 30-min. flight from Allentown to Philadelphia with 17 passengers.

Passenger boardings rise 4.9% to 270,437. Revenues advance 1.9% to \$16.39 million and costs swell 2.4% to \$15.48 million. The operating profit is \$906,898.

Two employees retire in 1983 and the fleet includes the Shorts 360-100s, 4 Shorts 330-100s, and 1 Twin Otter. The route network is now changed as a new route is opened to Washington, D.C.; significant competition from **PEOPLExpress**, meanwhile, causes Suburban to end its flights to the new entrant's Newark base.

Passenger traffic inclines upward 7.5% as 290,807 passengers are transported. Freight grows 25.3% to 519,000 pounds. Revenues jump 7.9% to \$17.69 million and costs are up 9.4% to \$16.94 million. Operating profit falls to \$749,918 and net gain totals \$749,918.

Airline employment grows 6.2% in 1984 to 190. A \$6-million Fokker F.27-500 Friendship is added to the company's fleet in April and on May 1, is employed to inaugurate services to Pittsburgh.

The year's passenger load jumps 19.1% to 346,226 passengers flown. Cargo rises again, up 21.8% to 631,821 pounds. Revenues also increase, by 16.2% to \$20.7 million, as do expenses, by 16.5% to \$16.5 million. The operating profit is \$4.2 million and a record \$1,526,054 net profit is posted.

The payroll grows another 21.1% in 1985 to 230 and the fleet includes the F.27-500, two Shorts 360-100s, four Shorts 330-100s, and a DHC-6. In the spring, Suburban begins flying into Washington, D.C. (DCA). In December, Suburban becomes the second "Allegheny Commuter" partner directly purchased—in this case for \$9.6 million—by **USAir** and will be operated as a subsidiary.

Passenger boardings accelerate 13% to 391,183, but cargo declines 11.5% to 559,000 pounds. Revenues jump 16.4% to \$24 million, but costs climb more quickly, by 21.8%, to \$20.12 million. As a result, the operating profit falls to \$797,195.

Airline employment rises 8.7% in 1986 to 250 and the fleet includes 1 F.27-500, 2 Shorts 360-100s, and 4 Shorts 330-100s. Service to Norfolk and Boston is inaugurated as a second Fokker Friendship joins the fleet. In April, the carrier purchases all eight Washington, D.C. (DCA) slots of financially troubled **Christman Air System**.

Later, **USAir** purchases 100% shareholding from President Horst in May for \$9,742,800; however, the company is allowed to continue its "Allegheny Commuter" operations as before.

Customer bookings rise 3.9% to 406,333, but freight falls again, down 5.3% to 530,000 pounds.

In 1987, the fleet includes 2 F.27s (one newly delivered), 4 Shorts 330-100s, and 2 Shorts 360-100s. In April, five-times-per-day service is opened from Richmond to Philadelphia.

Passenger boardings climb 26.5% to 514,169 while cargo advances by 34.2% to 712,000 pounds.

A third Fokker is acquired in 1988 and with 70 daily departures from its Philadelphia hub alone, the regional posts a 5% increase in customer bookings to 539,781. Cargo, on the other hand, declines by 9.9% to 641,000 pounds.

Richmond joins the route network in early 1989 and a third Shorts 360 is purchased. When the **USAir** parent moves to revamp its "Allegheny Commuter" network into "USAir Express," Suburban changes its name to **Allegheny Commuter** in order, as the press release states, to preserve an honored name among regional carriers.

SUCKLING AIRWAYS, LTD.: United Kingdom (1984-1999). Following receipt of the license first applied for in April 1984, this commuter officially launched on November 14 as Suckling Aviation (International), Ltd., receives a £450,000 route development grant from **British Airways, Ltd. (2)** and the nation's first Dornier 228-201. With 12 employees and owned entirely by its husband and wife team of Merlyn (sales and marketing) and Roy (managing director and chief pilot), Suckling begins scheduled service over a route from Ipswich to Manchester and Amsterdam on April 26, 1986. All of the passengers on the inaugural flight are members of the Ipswich Ladies Hockey Team who are en route to a tournament in Amsterdam.

Roundtrip flights are offered four times per day in 1987. Enplanements for this first full year of operations total 20,000.

Operations continue apace in 1988-1989 as the company transfers its base to Cambridge Airport.

In early 1990, the Cambridge-based carrier, now in financial difficulty, must appeal the CAA's decision to revoke its license because of those fiscal problems. The government proposal is overturned and the Dornier 228-201 continues to operate to Amsterdam and Manchester. Enplanements total 10,299.

Single-plane operations continue apace in **1991** as passenger boardings increase to 15,735. The employee population stands at 15 in **1992** as recession causes difficulty. Customer bookings fall 5.2% to 14,958.

During the second week of April **1993**, twice-daily roundtrips are inaugurated from Manchester to Amsterdam. These prove so successful that, by September, the fleet of Dornier 228-201s has been doubled to two.

Through October, the Dornier operation records a 60.3% increase in passenger boardings to 20,250.

Two Dornier 228-202s are leased in **1994**. Another is acquired during the first part of **1995**. In October, a Dornier 328-110 is acquired and enters service on a route from London (CTN) to Paris (CDG).

Destinations visited in **1996** include Amsterdam, Cambridge, London (STN), Manchester, Paris, Rotterdam, and Waterford.

During the spring of **1997**, Suckling enters into a code-sharing agreement with **Air U.K., Ltd.** on a route to Southampton from Amsterdam. Employing a Dornier 328-110 painted in its partner's colors, Suckling launches feeder services. A route is also opened from London (STN) to Zurich. At the same time, 55% outstanding shareholding in **Air U.K., Ltd.** is purchased by **KLM (Royal Dutch Airlines, N.V.)**. Enplanements reach 90,000.

In January **1998**, **Air U.K., Ltd.** becomes **KLM U.K., Ltd.** When it suddenly withdraws from the Southampton to Amsterdam route, Suckling moves to replace the terminated service of the Dutch line's British subsidiary. Suckling's loss-generating London (STN) to Zurich route is dropped and replaced with a thrice-daily Southampton to Amsterdam service flown in its own name and colors.

During early March, arrangements are completed with **KLM U.K., Ltd.** for new replacement services. The Dornier 328-110 to be employed is repainted with a Scottish flag on its nose and a red and black tartan tail design. Tartan seats are in the cabin and cabin crew are outfitted with tartan ties.

On March 29, Suckling's tartan plane takes over the larger line's service from London (CTY) to Glasgow, four times a day.

Following a significant cash injection from two Scottish investors, Brian Souter and his sister Ann Gloag, founders of Perth, Scotland-based Stagecoach, plc, the carrier is renamed **Scot Airways, Ltd.** on October 13, **1999**. Stagecoach had become involved with the company back in April. Ownership is now divided between the Sucklings (60%) and Stagecoach, plc (40%).

SUDAN AIRWAYS COMPANY, LTD.: SDC Bldg., Street 15, New Extension, P.O. Box 253, Khartoum, Sudan; Phone 249 (11) 47 953; Fax 249 (11) 47 978; <http://www.sudanair.com>; Code SD; Year Founded 1946. A subsidiary of the Sudan Railway System, this state-owned air carrier is formed in February **1946**. A contract is let for technical and flying assistance from the British firm **Airwork, Ltd.**, which assembles flight personnel and a fleet of 4 de Havilland DH 104 Dove Is.

Dove proving flights begin in April **1947**. In July, domestic DH 104 flights commence over four routes: west from Khartoum to El Obeid, El Fasher, and El Geneina; south from Khartoum to Juba via Malakal; and east from Khartoum to Asmara via Kasala and from Khartoum to Port Sudan via Atbara.

When the first schedule is printed in September, it shows a connecting service at Khartoum with an **Airwork, Ltd.** Vickers Viking flown in from Blackbushe Airport in England.

A fifth Dove 1 is requested in January **1948** and flights commence to Wadi Halfa during the spring. With tensions running high between Railway officials and those from **Airwork, Ltd.**, the railroad administration is cut out in **1949**, leaving the British firm to negotiate directly with the Sudanese government.

Flights continue apace in **1950–1951**. Passenger traffic is heavy; despite the arrival of the fifth Dove 1 on February 13, **1952**, larger aircraft are required. Orders are placed for four Douglas DC-3s and service to Kassala and Asmara is suspended.

All four DC-3s enter service during **1953** and allow the airline to experience significant growth. In May, the company begins to participate

Hadj charters for Muslim pilgrimages to Mecca. Also in the spring, flights are started to Wadi Medani as well as to Abeche in Chad.

Scheduled DC-3 international service begins in June **1954** over a route from Khartoum to Jeddah. Flights north to Cairo commence in November.

In November **1954**, Douglas DC-3 international service begins over a Khartoum–Cairo route. During **1955–1956**, routes, frequencies, and capacity are increased and improved; for example, service to Athens is initiated and the two more DC-3s are added. Passenger traffic continues to grow, reaching 31,476 enplanements in **1957**.

An eighth DC-3 is acquired in **1958**. At this point, the new Supreme Council of the Armed Forces, which has taken over the government, elects to expand the airline's international route network and asks **Airwork, Ltd.** to provide an appropriate aircraft.

With an **Airwork, Ltd.** crew at the controls, a Vickers Viscount 831 is delivered to Khartoum on June 5, **1959**. It is employed to inaugurate Blue Nile Khartoum to London weekly return service via Cairo, Athens, and Rome, on June 8. Viscount service to Beirut via Cairo is launched in November.

Airwork, Ltd. is transformed into **British United Airways, Ltd.** on May 19, **1960**. The predecessor concern's contract with the Sudanese government is honored by BUA. In October **1960**, orders are placed for three Fokker F.27-200s and in December, Asmara service is reopened with the Viscount. Enplanements hit 50,567 for the year.

Blue Nile Viscount service is doubled to twice weekly in early **1961**. Two Comet 4C jetliners are ordered for the Blue Nile operation late in the year as passenger bookings advance to 56,987.

The premier Fokker F.27-200 is delivered on January 25, **1962** and is placed in domestic service; SA is the first African airline to fly the Dutch-made turboprop, which will prove so agreeable that a fourth will be ordered. The first Comet 4C arrives on November 13 and takes over one of the Blue Nile frequencies in early December. The second Comet 4C arrives on December 24, at which point the Viscount is returned to **British United Airways, Ltd.**

Passenger boardings are 64,123.

The Comet 4C launches thrice-weekly Blue Nile London service in January **1963**. Two additional F.27-200s are received and the orderly retirement of the DH-104s and DC-3s begins.

Comet 4Cs flying to London add Frankfurt as a stop on May 1. Over the next several months, the F.27-200s are assigned to Hadj charters, transporting 5,247 pilgrims in 107 dedicated flights.

Passenger traffic swells to 93,952.

The fourth F.27-200 enters service in **1964**. Regional service is now offered to Adis Ababa, Aden, Asmara, Cairo, Entebbe, Fort Lamy, Jeddah, Luxor, and Nairobi.

Enplanements reach 104,824 in **1964**.

During **1965–1966**, routes are maintained or extended to 14 African and Middle Eastern destinations and 16 domestic points.

Airline employment stands at 1,310 at General Manager M. el Amir's airline in **1967**. Orders are placed for three de Havilland Canada DHC-6 Twin Otters. While on a training flight from Khartoum on February 21, a DC-3 with two crew crashes near its point of origin (one dead).

The three Twin Otters arrive in November **1968** and begin to replace the last three DC-3s (two of which are up for sale) on services to Atbara, Dinder National Park, Er Roseires, Gedaref, Kosti, Merowe, and Wadi Medani. Orders are placed for two Boeing 737-200s and two B-707-3J8C Stratoliners. Flights continue apace in **1969–1970**.

Converted to civil F.27-400 standard, three Fokker Friendships are transferred to Sudan Airways from the Sudanese Air Force in May **1971**. On December 6, an F.27-200 with 5 crew and 37 passengers crashes at Kapota, near Juba, in Equatorial Province (10 dead).

The fleet in **1972** comprises 2 Comet 4Cs, 3 F.27-200s, 3 F.27-400s, 3 de Havilland Canada DHC-6s, and 2 DC-3s. While on a training flight from Khartoum on May 10, an F.27-400 with three crew and a passenger makes a bad landing at El Obeid; there are no fatalities, but the aircraft is damaged beyond repair.

Two Boeing 707-321s, on a two-year lease from **British Midland Airways, Ltd.**, replace the Comet 4Cs and begin flying the Blue Nile service on November 11. All of the crews are also BMA personnel, except for two Sudanese stewardesses on board to make Arabic announcements.

Enplanements are 135,496.

The two B-737-2J8Cs are delivered in late 1973. Although the passenger count is unknown, 229 million passenger-kilometers are reported flown.

The **British Midland Airways, Ltd.** Stratoliner charter ends late in 1974 with the introduction of the carrier's own Boeings, two Dash-3J8Cs. Upon their arrival, the two American-made jetliners have been named *White Nile* and *Blue Nile*. The fleet now includes 2 B-707-320B/Cs, 2 B-737-2J8Cs, 5 Fokker F.27s, and 3 Twin Otters.

A total of 310 million passenger kilometers are flown, an increase of 35.4%, while 7 million FTKs of cargo are operated, a jump of 66%.

While on an airfield inspection flight, a DHC-6-100 with two crew and four passengers crashes into Dinder National Park, Singa, on March 18, 1975 (five dead).

During 1976-1984, routes and frequencies are further improved. The fleet is altered and grows to include 2 B-707-3J8Cs, 2 B-737-2J8Cs, 1 B-737-3J8, 1 B-707-330B acquired from **Deutsche Lufthansa, A.G.**, 4 F.27s, and 2 DHC-6s, with the latter 2 types serving only domestic frequencies. The employee population rises to just over 2,100. There are three nonfatal hull losses.

An F.27-400M with 4 crew and 35 passengers suffers the collapse of its nosegear during takeoff from Fasher on June 6, 1977; although the aircraft is damaged beyond repair, there are no fatalities.

While on approach to Khartoum on a flight from Jeddah on September 10, 1982, a B-707-348C with 11 crew lands 3 mi. short of the runway in the Nile River; there are no fatalities, but the Stratoliner must be written off.

An F.27-200 with 3 crew and 17 passengers is destroyed as the result of a bad landing at Merowe on October 5; there are no fatalities.

Traffic figures during these years are spotty; enplanements in 1977 are 379,000; these rise in 1980 to 519,000 and in 1982 to 395,000. Pooled service to the U.K. begins in 1980 with **Tradewinds, Ltd.**

In May 1985, the company under goes the beginnings of privatization and reorganization on the basis of recommendations put forward by a team of consultants from **Alia (Royal Jordanian Airlines)**.

An F.27-200 with 5 crew and 26 passengers is destroyed as the result of a bad landing at El Debba on July 2; there are no fatalities.

The privatization process is well advanced when, following a government change in November, it is halted and General Manager A. M. Kheir is instructed to continue running his airline as a national enterprise.

On August 15, 1986, rebel units of the Sudan People's Liberation Army threaten to shoot down all planes flying over the areas they control in the southern provinces of the nation. The next day, a Soviet-made SAM-7 surface-to-air missile destroys an F.27-400M with 3 crew and 57 passengers passing overhead en route from Malakal to Khartoum. There are no survivors.

All Sudan Airways flights are suspended on August 23 as employees go on strike to press their demands for security guarantees; flights resume a month later.

In May 1987, a partnership agreement is signed with **Royal Jordanian Airlines** under which the Middle Eastern carrier makes available a Lockheed L-1011-500. The same month, Sid El Khatmin Magoub Ali succeeds the retired Sid Ahmed M. Kheir as general manager. In August, Fokker provides two additional F.27s under charter as the airline awaits the delivery, two years hence, of its Fokker 50s. One is an F.27-600 formerly operated by the Guatemalan Air Force.

Operations continue apace in 1988. No longer able to make payments, the carrier is forced to cancel its cooperative agreement with the Jordanian flag carrier in February. However, in March, the company is given exceptionally favorable treatment by the Netherlands government, which provides the funds needed to order four Fokker 50s.

The fleet in 1989 includes 2 Twin Otters, 2 F.27-600s, 1 new Fokker 50, and 1 each Boeing 707-330C and B-737-2J8C. Flights link Khar-

toum with Dangola, Juba, Geneina, and Port Sudan. A management contract is signed with **Ethiopian Airlines, S.C.** in May; when the agreement comes into effect, former Ethiopian Deputy General Manager Assefa Ambaye leads the management team to Khartoum.

In August, joint weekly service is initiated to London (LHR). The financial condition, already bad, continues to worsen and credit is withheld by fuel companies, airport authorities, and flight kitchens. Late in the year, an F.27-600 is returned to Fokker, which turns around and sells it to **Air Jet, S.A.** By November, crews are required to carry cash with them on flights to certain foreign destinations.

Mukhtar Osman becomes general manager in 1990 as a second Fokker 50 is acquired. In July, the company contracts with **ZAS Airline of Egypt** to fly a number of its scheduled frequencies between Khartoum, Cairo, and Europe. Late in 1991, the company wet-leases the newly delivered Lockheed L-1011 TriStar 1 of **Atlanta Icelandic Airlines, H.F.**

The last F.27 is withdrawn in 1992 as an order is placed for two Airbus Industrie A310-304s that arrive in 1993. New General Manager Dr. Yasin Abdin now oversees a workforce of 2,062. His fleet now also includes 1 Beech King Air 90, 1 B-707-330B, 2 B-707-3J8Cs, 1

B-707-330C, 1 B-707-368C, 1 B-707-369C, 2 B-737-2J8Cs, 2 Fokker 50s, and 1 DHC-6-300.

International centers regularly scheduled for visits include Abu Dhabi, Addis Ababa, Cairo, Damascus, Doha, Dubai, Frankfurt, Jeddah, Kano, London, Muscat, Nairobi, N'Djamena, Riyadh, Rome, Sana'a, Sharjah, and Tripoli. An A320-211 is delivered in late August and is placed into service in September.

Airline employment in 1994 stands at 2,362 and the fleet is increased by the addition of an A310-304. Orders are placed for 2 Fokker 50s. During the summer, a Special Flights Services Unit is established. Outfitted with one each Beech King Air 90, Super King Air 200, and the Fokker F.27-600 withdrawn in 1992, it specializes in charter flights and air ambulance service.

After years of financial difficulty, the carrier shuts down in August 1995. The remainder of the year is spent in reorganization.

During the interim, an **Air Operations of Europe, Ltd.** Lockheed L-1011-50 TriStar, the *Olivia*, is wet-leased to maintain the company's weekly service from London (LGW) to Johannesburg via Khartoum. As is the Air Operations practice, the TriStar wears the colors of its previous owner (**Hawaiian Airlines**), plus Sudan Airways markings.

As the result of a failed assassination attempt against the president of Egypt during his visit to Addis Ababa in September, the Ethiopian government determines that Sudan is behind the plot. Consequently, all services to and from that nation by **Ethiopian Airlines, S.C.** are suspended, while Sudan Airways is banned from Ethiopia.

The workforce is boosted to 2,745 in 1996 and the fleet is increased by the addition of one each A310-304, A300B4-621, and A320-212. On March 24, the A320-212 is hijacked to Eritrea. One of the A310-304s is sold to the Turkish carrier **Kibris Hava Yollari, A.O.** in June.

On August 25, 7 Iraqis, led by Adnan Hoshan, claiming to have grenades and protesting their fear of death at the hands of Saddam Hussein, hijack Flight 150, an A310-304 en route from Khartoum to Amman, Jordan with 196 people aboard. They force it to fly to London via Larnaca, Cyprus, arriving there the next day. The pirates engage authorities in 5 hours of negotiations before allowing 160 passengers to deplane. Several hours later, they release the remainder of their hostages and surrender to British police.

Enplanements total 490,755.

Destinations visited in 1997-1998 include Abu Dhabi, Addis Ababa, Cairo, Damascus, Dhahran, Doha, Dubai, Frankfurt, Jeddah, Johannesburg, Kano, London, Muscat, Nairobi, N'Djamena, Riyadh, Rome, Sana'a, Sharjah, Tripoli, and domestic points.

On November 5 of the latter year, hijacker Hoshan and his followers are found guilty and given terms in British prisons ranging from five to nine years. According to the British Broadcasting Corporation report of the proceedings, the jury, feeling great compassion for the defendants,

nevertheless convicts them and Mr. Justice Wright passes sentence "to deter others."

At the beginning of April 1999, the UN air embargo against Libya is lifted when that country makes available two suspects in the 1998 Lockerbie bombing case. Consequently, Sudan Airways is able to restart services to Tripoli on April 12.

Sudan Airways is permitted to once more offer a weekly roundtrip service to Addis Ababa, beginning on August 14. A homepage is opened on the World Wide Web at the end of the year.

B-737-2J8CA return service from Khartoum to Lagos begins on July 8, 2000. Only a few weeks later, on October 17, the flight enters the history books. An unidentified expectant mother from Niger, en route with her husband via the Sudanese capital to Jeddah, experiences labor pains 15 minutes before the Boeing is due to land at Khartoum. With the assistance of two female flight attendants, the woman delivers a baby girl just as the aircraft touches down on the runway.

SUDAVIA FLUGGESELLSCHAFT, GmbH.: Germany (1980–1990). This south German charter operation is established at Munich in 1980 as the air taxi BN Rent-a-Plane, GmbH. A lone Beech King Air 90 operates on-demand flights to local destinations, including Saarbrücken, as well as to points in Austria. The concern is renamed Sudavia on June 19, 1984 and in August turns its weekday taxi route to Saarbrücken into a scheduled service.

Scheduled King Air flights from Munich to Verona, Italy, commence in 1985. During the year, a scheduled air operator's permit is sought from the German government, which duly provides it on July 25, 1986. Employing a newly purchased Beech Super King Air 200, regular flights to Pisa are inaugurated.

Sudavia now contracts with Dornier for one of its unpressurized 228-200s. The aircraft is delivered during the first quarter of 1987 and enters service at the end of March on the company's new route to Strasbourg. Unhappily, the aircraft cannot fly high enough to make it over the mountains to Italy and thus must be returned. In November, a Beech 1900 Airliner is leased as a replacement for the Dornier.

A second Beech 1900 arrives in February 1988 and with the beginning of the year's summer season at the end of March, Sudavia begins to coordinate its schedules with **Deutsche Luftverkehrsgesellschaft, GmbH. (DLT)**. This arrangement allows more efficient aircraft utilization and cuts down on needless competition between the two airlines.

Early in 1989, Sudavia leases several Embraer EMB-120 Brasília's from DLT. Plans for a merger between the two cooperating carriers falls through during the first quarter. At midyear, a group of investors, who also hold shareholding in **Air Exel Belgium, S.A.**, purchase a strong 43.9% equity stake. The leased Brasília's are returned to DLT and are replaced with a pair of SAAB-Fairchild SF340s.

Largely unnoticed by the public, Sudavia has built up a large debt during the last two years. On April 2, 1990, the federal transport ministry revokes Sudavia's license and the grounded airline is forced to liquidate.

SUDPACIFICO, S.A. de C.V.: Manuel Perez, Coronado 94, Uruapan, Michoacan, 60080, Mexico; Phone 52 (452) 37937; Fax 52 (452) 44773; Code SDP; Year Founded 1995. Sudpacifico is set up at Michoacan in 1995 to offer scheduled third-level domestic services. CEO Capt. Manuel Mejia inaugurates scheduled frequencies with 2 Swearingen SA-226 Metro IIs and 1 Embraer EMB-120 Brasília.

The fleet is increased in 1996 by the addition of a third Metro II, plus two Pilatus-Britten-Norman PBN-2 Islanders and a Piper PA-34 Seneca.

A Fokker F.27 is placed into service during 1997. Flights continue during the remainder of the decade.

SUDWESTDEUTSCHE LUFTVERKEHRS, A.G. (SWL) (FLUGHAFEN FRANKFURT/MAIN, A.G.): Flughafen Frankfurt/Main, Frankfurt, D-60547, Germany; Phone (49) 69-690; Fax (49) 69-690-70081; Year Founded 1924. SWL is established at Frankfurt on July 2, 1924 by a group of local industrialists and Junkers Flugzeugwerke, A.G.

The new company is charged with developing an airport, then located at Rebstock, while also serving as an air transport component of Junkers' Trans Europa Union.

Revenue flights commence with a pair of F.13 cabin monoplanes from the airport to Munich via Nuremberg. Two more F.13s and a G.24 enter service in 1925.

When **Deutsche Luft Hansa, A.G.** is formed in 1926, SWL transfers its airline operating division to the new state carrier. In turn, it becomes a shareholder in DLH, while also retaining management of the Frankfurt airport.

SWL continues to operate the main airport at Frankfurt throughout World War II and survives into the postwar era, during which new period the company name is changed to Flughafen Frankfurt, A.G. As such, the former SWL is the only airport to be listed by full address in this encyclopedia.

SUEDAVIA, GmbH.: Germany (1986–1991). Suedavia is formed at Munich Airport in 1986 with Helmut Neufeld as general manager. The initial fleet comprises 1 Beech King Air 90 and 1 Super King Air 200. These are employed to inaugurate scheduled services to Saarbrücken, Verona, Pisa, and Strasbourg. A second King Air 90 is added in 1988.

Operations continue apace in 1989, with a number of replacement flights undertaken on behalf of **Deutsche Lufthansa, A.G.** In February 1990, **Air Exel Germany/Alphalines, GmbH.** acquires 43.9% shareholding and names Hans Schneider as general manager. The fleet is upgraded by the addition of two Beech 1900s and a SAAB 340B leased from its new partner.

The year's enplanements total 17,574 and revenues are \$2.7 million. Loss of \$1.7 million (operating) and \$1.97 million (net) are suffered.

Air Excel Germany/Alphalines, GmbH. withdraws its support during the first quarter of 1991, forcing the regional to cease operations in March and go into liquidation.

SUEDFLUG (SUDDEUTSCHE FLUGSELLCHAFT, GmbH.): Germany (1989–1994). Formed on February 1, 1989 as an affiliate of **Condor Flugdienst, GmbH.**, Suedflug operates newer equipment previously ordered to replace Condor's Boeing 727s. Rudolf von Oertzen and Reinhard Kipke are appointed joint managing directors. As Boeing 737, 757, and 767 equipment becomes available from **Condor Flugdienst, GmbH.**, a significant number of nonscheduled and inclusive-tour flights are undertaken to tourist resorts in the Canary Islands and Mediterranean area.

Operations continue apace in 1990–1992 and in 1993, airline employment stands at 775. Flights cease in 1994.

SUIDWES LUGDIENS (PTY.), LTD.: Southwest Africa (1959–1978). Originally formed in South West Africa as the nonscheduled **South West Air Transport, Ltd.** in 1946, this carrier begins scheduled operations two years later in 1948. Following a merger with **Oryx Aviation (Pty.), Ltd.** in March 1959, the company is renamed Suidwes Lugdiens.

Employing the aircraft of the merger partners, including 7 Ryan Navions and 1 de Havilland DH 89A Dragon Rapide, Suidwes Lugdiens continues over the next 3 years to provide scheduled flights linking Windhoek's Eros Airport with Grootfontein, Otjiwarongo, Outjo, Swakopmund, Tsumeb, and Walvis Bay. Regular charters are also provided to Luderitz.

Two Cessna 205s are acquired in December 1962, while in February 1963, the last Navion is sold. During the next decade, the fleet grows further, adding 4 PA-23 Aztecs, 1 PA-23 Apache, 1 PA-28 Cherokee Six, 3 PA-30 Twin Comanches, 1 PA-31-310 Navajo, 1 Cessna 182, 3 Cessna 402s, 6 Cessna 310s, 1 de Havilland Canada DHC-2 Beaver, and, most importantly, 3 Douglas DC-3s and 2 DC-4s.

One of the Aztecs operates a feeder service for **South African Airways (Pty.), Ltd.** from Windhoek to Keetmanshoop. Late in the 1960s, a joint service is offered with **Air Cape (Pty.), Ltd.** between Walvis Bay

and Alexander Bay via Luderitz. Other destinations visited include Kaitima, Mulilo, Ondangwa, and Rundu.

Namib Air (Pty.), Ltd. becomes a subsidiary during 1966.

In November 1974, Namib Air-Suidwes Lugdiens becomes a wholly owned subsidiary of **Safmarine, Ltd.** A. Lombard is appointed chairman with A. J. Koorts as managing director. Airline employment stands at 72 and the fleet is comprised of 1 Fairchild Hiller FH-227B, 2 Douglas DC-4s, 2 DC-3s, 1 Piper PA-31-310 Navajo, 3 Cessna 402s, and 6 Cessna 310s.

An order is placed with Fokker Aircraft in 1977 for an F28 Fellowship; however, the government of the Netherlands refuses an export license. On December 1, 1978, the corporation is reorganized and renamed **Namib Air (Pty.), Ltd.**

SULTAN AIR (SULTAN HAVA YOLLARI, A.O.): Turkey (1989–1994). With shareholding divided between Turkish interests and **Transwede Airways, A.B.**, SHY is set up at Istanbul on July 17, 1989 to offer international charter services. Yavuz Cizmerci is appointed president and he recruits a workforce of some 400. Two Aerospatiale (Sud-Est SE-210) Caravelle XBs are leased from **Transwede Airways, A.B.** and are employed on August 1 to inaugurate nonscheduled services to destinations in Germany, Austria, Greece, Israel, and Italy. The French-made jetliners appear in the colors of their Swedish owner, with Sultan titles.

The Caravelles are returned to **Transwede Airways, A.B.** in July 1990 and replaced by one each chartered Boeing 737-205 and 737-248; a lease is also taken on a B-737-2Q8. The Iraqi invasion of Kuwait in August has a disastrous impact on travel to the Turkish holiday destinations, although many Turkish workers employ the airline to return home from Europe. With Allied forces gathering for a counterattack, Sultan stands down for financial reasons.

Following the conclusion of Operation Desert Storm in late February 1991, Sultan resumes flights in late March, though with little success due to the continuing uncertainties of the Mideast area. Another light Boeing is added for a new service known as VIP Air. The livery of the new plane features a peacock displaying full plumage forward of the wing and aft the cockpit windows and small titles aft the wing and over the windowline that read "Operated by Sultan Air." VIP Air is not successful and is reintegrated into Sultan by the time the winter season begins at the end of October.

With **Transwede Airways, A.B.** out of the picture, Turkish interests hold complete shareholding in the airline in 1992. The two Boeing aircraft are reinforced with a pair of chartered Airbus Industrie A300B4-203s.

Destinations now visited include Amsterdam, Barcelona, Basel, Berlin, Bergamo, Bologna, Bordeaux, Brest, Brussels, Cagliari, Catania, Dusseldorf, Eindhoven, Ercan, Frankfurt, Graz, Hamburg, Hanover, Klagenfurt, Le Havre, Leipzig, Leningrad, Lille, Linz, Lyon, Madrid, Marseilles, Maastricht, Metz, Milan, Munich, Nantes, Nuremberg, Paderborn, Paris, Pisa, Rome, Saarbrücken, Seville, Strasbourg, Tel Aviv, Turin, Venice, Verona, Vienna, and Zurich. The Airbus are returned at the end of the year and are replaced with a pair of leased B-727-200As.

Airline employment in 1993 stands at 450. A new B-737-3G7 is acquired during the summer and is christened *Sabiha Gokcen*, in honor of the first female commercial pilot in Turkey. Concerns over the carrier's maintenance operations and safety causes the airline to cease its flights and liquidate its assets in 1994.

SUMMIT AIR CHARTERS, LTD.: P.O. Box 134, Atlin, British Columbia V0W 1A0, Canada; Phone (604) 651-7600; Fax (604) 651-7537; <http://www.summitair.yk.ca>; Year Founded 1987. SAC is set up at Atlin in June 1987 to provide charter services to communities in northern British Columbia and the Yukon. Revenue flights commence with a fleet that includes 3 Shorts SC-7 Skyvans, 1 Beech 18, 1 Piper PA-31-310 Navajo, 1 PA-34 Seneca, 1 Mitsubishi Mu-2, 1 de Havilland Canada DHC-2 Beaver, 1 Cessna 206, and 1 Cessna 185. Services continue without change into the 1990s.

In mid-decade, the company begins to offer thrice-weekly scheduled roundtrip frequencies between Atlin and Juneau. The fleet, by 2000, has been altered to include two Skyvans and one each Cessna 207A and 172.

While en route from Kugluktuk on the continuation of an October 8 service to Echo Bay from Yellowknife, an SC-7 with two crew and a passenger disappears. Wreckage is found the next day on a mountain 4 mi. NNE of Echo Bay near Great Bear Lake; there are no survivors.

SUMMIT AIRLINES: United States (1966–1986). **Delaware Air Freight**, which will fly under the marketing name **Del-Air Cargo**, is formed as an all-freight carrier at Philadelphia in 1966. Initial service is inaugurated with a Cessna 172 over a route from Philadelphia to Millville, New Jersey. Flights to regional locations continue during the remainder of the decade with Cessna 206s and Beech 18s. In 1971, the fleet is increased by the addition of 7 Shorts SC-7 Skyvans. Two Douglas DC-3s are acquired in 1972–1973.

The company is reorganized in June 1974 and renamed. Airline employment in 1975 stands at 65. Meanwhile, a new dispatch and flight following system is installed.

The company's two Douglas transports and 8 Skyvans transport a total of 2.9 million FTKs of freight. A profit of \$3 million is reported.

The number of employees is increased by 6% in 1976 to 87. Route expansion takes place gradually as a systemwide customer service department is established for greater emphasis on that important aspect of the business. Officials approach the CAB for a large aircraft exemption. Cargo balloons 69% to 5.4 million FTKs.

With CAB approval, Summit in 1977 purchases three Convair CV-580s and another DC-3. One Skyvan is withdrawn. Following deregulation of the air freight industry later in the year, service is extended in 1978 to such markets as Atlanta, Boston, Buffalo, Chicago, Charlotte, Detroit, Dayton, Hartford, Norfolk, Baltimore, and Raleigh.

Success is enjoyed in a freight field previously found untenable by all but the largest carriers, e.g., **The Flying Tiger Line**. The carrier's fleet in 1978 comprises 5 CV-580s, which fly 21,898 pounds of cargo during the year; that figure increases by 53% in 1979 to 46,591 pounds.

The employee population falls by 12.4% in 1980 to 268. A total of 43,212 pounds of freight are flown, a 5.8% boost. A Lockheed L-188 is acquired. In 1981, President Joseph W. Wear's fleet of 5 CV-580s and 1 Lockheed L-188 Electra transport 63.4 million pounds of cargo, a 32% increase.

The privately held company boosts its payroll by 5.2% in 1982 to 442. Over the company's eastern routes, an 11.6% traffic increase, to 20.23 million FTKs, is generated, while revenues advance 4.6% to \$26.3 million.

Sixteen new employees are hired in 1983 and the route network is expanded from its northeastern base to markets in St. Louis, Kansas City, and Minneapolis/St. Paul. To handle the increased load, two more CV-580s are acquired.

Traffic soars by 21.4% to 24.6 million FTKs and revenues, keeping pace, jump 21.5% to \$31.9 million.

The payroll is expanded by 12.1% in 1984 to 650 as 2 CV-580s and an Electra are added to the fleet. Summit's freight traffic grows 3.4% to 23.51 million FTKs.

In the spring of 1985, the company's main operation base is moved to New York (JFK), from which overnight cargo service opened to Houston and Dallas (DFW).

Although no traffic figures are released, the carrier reports that its 9 CV-580s have provided a profitable year, forcing revenues up 17.7% to \$41.5 million.

In early 1986, the company is purchased by Barry S. Lutin, owner of Hartford-based **Corporate Air**, and starts flying as a subsidiary. The workforce is reduced to 100 and the fleet of Convairs is reduced by 2. Traffic figures are not made available.

SUMMIT AIRWAYS. See CHALLENGER AIRLINES

SUMMIT JET CHARTER: c/o Summit Aviation Corporation, 7144 Republic Airport, Farmingdale, New York 11735, United States; Phone (516) 756-2545; Fax (516) 756-0809; <http://www.summitjet.com>; Year Founded 1980. Specializing in corporate and executive travel worldwide, the aircraft of Summit Jet are based at Republic Airport in 1980. Summit Aviation Corporation headquarters, however, are in Ridgefield, Connecticut.

From initial fixed-wing flights to U.S. destinations, the concern branches out over the next 18 years to operate to points around the world. It also acquires helicopters with which to provide flight-seeing and airport transfers.

Mike Brazill is charter manager in 2000 and he schedules Summits 6 pilots, who fly 2 Learjet 55 Longhorns and 1 each Canadair 600 Challenger and British Aerospace BAe (HS) 125-700A Hawker. Two Aerospatiale AS-350B Ecureuils are also flown.

SUN AIR (1): United States (1969–1978). Sun Air is set up at St. Petersburg, Florida, in 1969 to provide scheduled air taxi service to intrastate destinations. Employing the first of several Cessna 402s, the company duly inaugurates daily revenue frequencies linking its Lakeland base with West Palm Beach, Miami, Gainesville, and Jacksonville. This route network is supported for a decade.

SUN AIR (2): United States (1981). The second Sun Air is set up by A. Wayne Lackey at Fort Lauderdale during February 1981 on the purchased assets of a failed charter operation. Plans are made to establish a scheduled route network connecting the company's base with eight Florida cities. Employing one of several available Embraer EMB-110P1 Bandeirantes, Lackey's new entrant inaugurates daily roundtrips to Miami on March 17.

Only one revenue flight is completed as Lackey, saddled with a \$1 million in acquired debt, is forced to file for Chapter XI bankruptcy protection on March 24. Liquidation occurs later in the year.

SUN AIR (PTY.), LTD.: South Africa (1994–1999). In April 1994, **Bop Air (Pty.), Ltd.**, the carrier of the former South African homeland of Bophuthatswana, is renamed Sun Air. Dirk E. Ackerman is chairman, with Johan L. Borstlap is managing director. They oversee a workforce of 132 and a fleet that includes 1 British Aerospace BAe (HS) 748-B2, 1 Cessna Citation II, and 2 each Embraer EMB-120 Brasilias and EMB-110P-1 Bandeirantes, plus 2 Douglas DC-9-32 jetliners. From bases at Mmabatho and Sun City, scheduled passenger and cargo services are operated to Johannesburg, Cape Town, and Thaba'Nehu.

Operating between the "golden triangle" cities of Johannesburg, Durban, and Cape Town in 1995, Managing Director Borstlap's fleet is increased by the addition of two DC-9-31s and a Boeing 727-230A, the latter leased from **Safair (Pty.), Ltd.** The Bandeirantes are sold.

The B-727-230A is sold to **Inter Air (Pty.), Ltd.** in February 1996. In September, Sun Air enters into a marketing agreement with **Virgin Atlantic Airways, Ltd.** On October 2, the two carriers link their frequent flyer programs and share codes on Sun Air flights between Durban, Cape Town, and Johannesburg. The schedules of these flights are arranged to connect with the new VAA thrice-weekly roundtrips between London and Johannesburg. A third "Baby Boeing" is delivered in November.

Plans are made to privatize the company early in the new year and Virgin Chairman Richard Branson enters into discussions with the South African government concerning the possibility of his acquiring a majority stake. Several groups bid on the carrier and begin to study its five-year business plan; these include consortia led by Virgin, **Malaysia Airlines Bhd.**, **Air France**, and **Comair (Pty.), Ltd.** Sun Air is valued in the prospectus at between R60 million and R90 million (\$13.4 to \$20.1 million).

In a public poll, the company at year's end is voted the best domestic airline in South Africa for 1996. An R2.6-million profit is reported for the year.

In February 1997, an arrangement similar to that with VAA is joined with **KLM (Royal Dutch Airlines, N.V.)**; dual-designators of the Netherlands flag carrier are also carried on Sun Air flights from Johannesburg to Cape Town and Durban. In April, the carrier leases five McDonnell Douglas MD-81s aircraft from **Safair (Pty.), Ltd.** to replace its aging Boeing and Douglas fleet. In May, Investec, which owns the 4 DC-9s via an installment agreement with Sun Air Trust, gives Safair a 12-month window to sell the 4 planes should Sun Air default on its lease payments. When the first of the Safair planes arrives in July, one DC-9-31 is passed to the new **Zimbabwe Express Airlines, Ltd.**

In October, state-owned Sun Air is sold to a consortium that includes **Comair (Pty.), Ltd.** (25%), the Black empowerment consortium Rethabile and Coordinated Network Investments (55%), National Empowerment Fund (15%), and company employees (5%). The purchase price is R 50 million (\$10.6 million), with the new owners agreeing to take over \$46 million in debt. Managing Director Borstlap remains CEO.

Given their alliances with rivals **British Airways, Ltd. (2)** and **Virgin Atlantic Airways, Ltd.**, Comair and Sun Air will continue to compete with one another over established trunk routes. There will be no changes in branding or management. The two will, however, seek to jointly purchase equipment, coordinate schedules, and refrain, at least immediately, from launching routes in opposition to one another.

Flights continue in 1998. When **SA Express Airways (Pty.), Ltd.** sparks a price war with **Comair (Pty.), Ltd.** on October 5 in which both lower their domestic fares by 15%, Sun Air refuses to join in. At the same time, Managing Director Borstlap indicates that planning is underway for a listing of the company on the Johannesburg Stock Exchange sometime in the year 2000.

Sun Air joins with **Nationwide Air Charter (Pty.), Ltd.** and **Comair (Pty.), Ltd.** during January 1999 in lodging a complaint with the South African Competition Board. The three allege that **South African Airways (Pty.), Ltd.** has so reduced prices and increased capacity on a number of domestic routes as to be engaged in predatory pricing violations. Some SAA fares on the routes between Johannesburg and Durban are less expensive than motor buses. The board indicates that it will undertake an investigation over the next few months. When made aware of the Competition Board complaint, officials from SAA indicate that they will contest the claims.

South African Airways (Pty.), Ltd (SAA) and its affiliates continue their fare war with **Comair (Pty.), Ltd.**, backed by **British Airways, Ltd. (2)**, **Nationwide Air Charter (Pty.), Ltd.**, supported by **Sabena Belgian World Airlines, S.A.**, and Sun Air. By midsummer, the independents have still not heard from the SACB.

On August 1, **SA Airlink (Pty.), Ltd.** CEO Rodger Foster, who is also serving as chairman of the Airlines Association of South Africa, warns that the market is hopelessly overtraded and suggests that one or more of the smaller players will soon fail. Within days, SAA completes a deal with the Sun Air board of directors, led by Executive Director Sheiks Makhado; it is offered financial assistance in exchange for the carrier's grounding. It is anticipated that the government will write off it's the final R20 million (\$3.3 million) that is owed to it by the airline. The arrangement, it will later be revealed, is good until mid-September, after which SAA is free to walk away without paying a thing.

Having received neither government or shareholder permission for the deal, loss-making Sun Air is sold to SAA on August 13 and shut down 72 hours later. Its staff is dismissed and on the specific order of SAA, all aircraft are returned to **Safair (Pty.), Ltd.** at Johannesburg International Airport. In announcing the closure, SAA CEO Coleman Andrews indicates that it should not take the independents more than two weeks to absorb Sun Air's 10% market share and that its removal from the playing field should help the survivors become more viable and compete more robustly with each other.

With support from **British Airways, Ltd. (2), Comair (Pty.), Ltd.**, which grants its approval and writes off its 25% stake, immediately steps in to arrange accommodation for stranded Sun passengers.

Shortly thereafter, South Africa's Public Enterprise Minister Jeffrey Radebe informs the National Assembly that the government had not approved SAA's takeover of the defunct Sun Air and that a special investigation into the circumstances of the Sun Air demise would be conducted. In explaining his decision, Radebe confirms government disapproval of the sale of Sun Air by its current shareholders, believing that it would not receive its final R20 million (\$3.3 million) privatization payment in 2000 due from the shareholders.

With the government unwilling to write off its outstanding payment, the consortium that had purchased Sun Air now has no airline, no buyer, and responsibility for Sun Air's debts. Meanwhile, to make matters worse, **Safair (Pty.), Ltd.** proposes to file a R800-million lawsuit against Sun Air for breaking its aircraft leasing and maintenance contract. The move forces the government to place Sun Air into provisional liquidation and suspend its license, which will not be revoked until a final liquidation order is made. Lawyers for the black empowerment consortium Rethabile are instructed to seek enforcement of the SAA agreement.

Meanwhile, one option remains. A proposal is made by the Sun Air Staff Action Committee, a consortium of foreign and local companies, (including marketing partner **Virgin Atlantic Airways, Ltd.**) led by Glenn Watson, with backing from organized labor and former Sun Air employees, to purchase the Sun Air assets and restart the airline. SAA CEO Andrews scoffs and is quoted in an October *Airline Business* report as indicating that "only a total fool would invest the R300 million that would be required to restart Sun Air."

When the government does not step forward to offer assistance in the form of greater protection for a reborn entity, **Virgin Atlantic Airways, Ltd.**, which has just received authority for direct London (LHR) to Cape Town flights, withdraws on October 4 from any further discussions on revitalizing Sun Air. Its local spokesman informs the Africa News Service on October 6 that the home office also has not, in its due diligence, been able to get a handle on potential liabilities facing Sun Air. That being the case, no profit could be expected.

The results of an investigation into Sun Air's grounding conducted by official liquidator Kenneth Moses are released on December 27 and create headlines in every major newspaper in the country. Details are based on court papers and reveal a secret compact between **South African Airways (Pty.), Ltd.** and **Safair (Pty.), Ltd.** made without the knowledge of anyone at Sun Air or Investec, the bank that had financed part of its fleet. The pact made it impossible for the airline to restart or to sell its leased aircraft.

Under the alleged arrangement, SAA agrees to pay Safair R50 million for the Sun Air leases once it has purchased the airline. Meanwhile, the former Sun Air aircraft may only be sold or chartered by Safair to airlines operating outside southern Africa, a move that will clearly frustrate any group attempting to revive the carrier. It is now understood that the secret arrangement had been one of the "liabilities" that caused **Virgin Atlantic Airways, Ltd.** to halt its talks with Sun Air's former employees concerning a possible revival.

Also on December 27, it is reported that Sun Air Trust, which had owned Sun Air's two DC-9-32s and DC-9-31s, was, itself, liquidated by the Johannesburg High Court on December 20. That closure frees the creditors of SAT to sell the four DC-9s, valued at R60 million, which had been unavailable for sale under the SAA-Safair deal. The trust continues to owe Investec R70 million, while SAA itself stands to forfeit the R50 million it had paid to Safair as part of the May 1997 arrangement.

On December 29, South African Public Enterprises Minister Radebe informs reporters that no one in the South African government knew about the secret SAA-Safair arrangement. An official government inquiry will commence, he promises, once the liquidators have finished their work.

The Sun Air court liquidation hearings get underway in mid-January 2000. **Comair (Pty.), Ltd.** Managing Director Pieter van Hoven testifies

on January 20 that the government itself had persuaded him to buy a stake in the failed carrier when it was privatized in 1997 because there were no other serious bidders. More importantly, he reveals that **South African Airways (Pty.), Ltd.** had come up with a plan in 1999, never implemented, for "horizontal capacity collusion" as a way to end the 1998 domestic price war. Under this proposal, the local airline market would simply be carved up between all the active players. The idea went nowhere when Comair refused to drop its complaint, then pending before the South African Competition Board. Thereafter, the next move was to be the elimination of one of the independents.

During the first week of February, the Sun Air liquidators file suit against **South African Airways (Pty.), Ltd.** seeking R7.2 million to cover the salaries SAA had promised to pay the smaller carrier's employees, as well as ticket liabilities. SAA had claimed R6 million from the Sun Air estate for wages. Various inquiries into the Sun Air closure drag on during the remainder of 2000, with principals in the case blaming or defending as the matter continues. Eventually, most of the arguments escape news coverage. In the end, Sun Air is completely liquidated and is not reborn. Safair leases the last two repossessed Sun Air-operated MD-81s to **Spirit Airlines** on August 16.

SUN AIR LINES: United States (1967–1969). Equipped with Beech 18s, Sun is organized by George Caleshu at St. Louis in early 1967. It begins intrastate service in Missouri on April 3 and by the end of 1968, has stretched routes from Kansas City to Miami with intermediate stops at St. Louis, Memphis, Nashville, Birmingham, New Orleans, and Jacksonville.

During the year, the fleet is enhanced by the addition of several de Havilland DH-114 Herons and de Havilland Canada DHC-6-100 Twin Otters. The use of a Learjet allows the carrier to claim that it is the first commuter to employ a jetliner.

Sun Air Lines in 1969 is the largest regional airline in America, but is so significantly overextended, that it cannot fiscally support its business and so must close its doors in July.

SUN AIR OF SCANDINAVIA, A.S.: Lufthavnsvej 33, P.O. Box 40, Billund, DK-7190, Denmark; Phone 45 76 50 01 00; Fax 45 75 33 86 18; <http://www.sunair.dk>; Code EZ; Year Founded 1977. Entrepreneur, pilot, and former school building salesman Niels Christian Sundberg, an employee of Business Jet Flight Centre at Billund, purchases the flight portion of that company when it goes bankrupt in 1977. Early in 1978, Sundberg registers his prize at Billund as Sun Air of Scandinavia as an aircraft sales, maintenance, and charter company. Over the next decade, Sun-Air undertakes nonscheduled domestic services plus air taxi, air ambulance, and contract flights with Piper and Cessna lightplanes.

By the middle 1980s, the fleet of Sundberg's carrier provides many single-plane examples, including 1 each Beech Bonanza, Cessna 172, Cessna 237, Cessna 207, Gulfstream Commander 690B, Piper PA-31-310 Navajo, Piper PA-34 Seneca, and Piper PA-23 Aztec.

When the European Commission relaxes certain air transport requirements in 1987–1989, Sundberg, who is increasingly unable to make ends meet in the charter business, elects to launch a scheduled operation. He applies for a number of scheduled routes and but several years will elapse before these are awarded. An interline agreement is signed with **Deutsche Lufthansa, A.G.** and an Embraer EMB-110P1 is purchased with which to initiate flights from Billund to Cologne and Bonn during the spring of the latter year.

In 1990, the fleet comprises 2 Cessna Citation Is, 1 Cessna 402, 1 Cessna 441, 1 EMB-110P1, 1 SAAB 340A, and 1 Shorts SC-7 Skyvan. During the summer, the German major shuts down its Cologne hub and the contract with Sun Air ends. As a result of financial and political difficulties, bookings fall to 2,000.

A British Aerospace Jetstream 31 and two Mitsubishi Mu-2Bs are acquired in 1991. When **Maersk Air, A.S.** withdraws from its Billund to U.K. (Southend Airport) service in favor of a new route to London (LGW), Sun Air steps in to take over the previous service. Unhappily,

load factors dictate that it be suspended within three months of its start. During the spring, the Danish government decrees that Aarhus Airport, 40 miles outside Copenhagen, will be the nation's second airport.

When **SAS (Scandinavian Airlines System)** is unable to make a profit flying larger aircraft into the airport, owner Sundberg approaches them with a strategic agreement. Sun Air will take over the low-density service to Norway and SAS will provide airside handling, ticketing, check-in, and other airport services for the regional.

The new Jetstream begins scheduled flights from Aarhus to Oslo in August. Enplanements by year's end total 8,000.

Five more Jetstream 31s arrive in **1992**, as orders are placed for three Jetstream 41s and the Bandeirante is withdrawn. Enplanements surge to 50,000. In **1993**, President Sundberg oversees a workforce of 70. The first Jetstream 41 is placed into service as a new service is inaugurated from Karup to Aarhus and Stockholm's Bromma Airport.

Airline employment is increased to 85 in **1994** and the fleet now includes three Cessna 500 Citation Is, seven Jetstream 31s, two Jetstream 41s, two Mitsubishi Mu-2s, and a Partenavia PN.68 Observer. Brussels, Copenhagen, Goteborg, Odense, and Thisted join the route network.

Recognizing the need to find a commercial partner in **1995**, Chairman Sundberg approaches **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, **Air France**, **Alitalia, S.p.A.**, and **KLM (Royal Dutch Airlines, N.V.)**. An appropriate fit cannot be found with any of them. The fleet is, meanwhile, increased by the addition of 5 Jetstream 41s and enplanements total 120,000.

During the spring of **1996**, partnership negotiations are undertaken with **British Airways, Ltd. (2)**. On August 1, the carrier becomes a franchise partner of BA, the first recruited from outside of the U.K.; the British major does not take equity, preferring to leave the Danish carrier an independent airline. It does, however, provide computerized reservations and other airport services, and allows its passengers to participate in its frequent flyer program.

The fleet now includes 9 J-31s and 7 J-41s painted in "British Airways Express" livery. The two share designators on Sun-Air's Continental routes.

In January **1997**, "British Airways Express" service is inaugurated from Billund to Manchester. Four Jetstream 31s will be removed. In July, the carrier purchases two BAe ATPs and another Jetstream 41 from BAe Asset Management Turboprop.

Two aircraft are delivered in early December. The ATP replaces a Jetstream 41 on the Billund to Manchester route while the J-41 succeeds a J-31 on the run from Billund to Oslo.

Following its arrival in January **1998**, the second ATP is dedicated to ad hoc and charter work, including the transport of ski enthusiasts to Norway.

The last BAe ATP to be manufactured, serial no. 2062, is acquired in early December.

It is announced on February 25, **2000**, that the company will soon inaugurate a new twice-daily Jetstream 41 return service from Billund to Berlin's Tegel Airport. The flights, employing both J-41s and ATPs, commence on March 27 and complement the airline's extensive network of flights from Billund to Manchester, Stavanger, Haugesund, Torp, Oslo, and Goteborg.

SUN AIRE: United States (1981-1985). Stephen Mildren forms Sunaire at St. Croix, U.S. Virgin Islands, as a division of the privately owned, Hamilton-based FBO Aviation Associates on April 1, **1981**. After a year of revenue charter work, capitalization is raised to purchase a de Havilland Canada DHC-6-300 Twin Otter that is employed to inaugurate scheduled seven-times-per-day roundtrip services to St. Thomas on July 5, **1982**. During the remainder of the year, a total of 17,621 passengers are flown.

A second Twin Otter arrives in **1983**, along with a Piper PA-34 Seneca and a PA-31-350 Navajo Chieftain. Enplanements climb 51% to 50,980.

Airline employment in **1984** is 35. Significant competition arrives in April when **Virgin Island Seaplanes Shuttle** launches 14-times-per-day services between the 3 U.S. Virgin Islands.

Bookings total 58,190, a 14% boost, while cargo accelerates 53.5% to 36,000 pounds.

The St. Croix-based carrier is purchased by **Metro Airlines** in October **1985** and merged, becoming an Eastern Metro Express division on November 15, dedicated to providing feed to **Eastern Air Lines'** San Juan hub. Prior to the takeover, the year's passenger boardings are 69,135. Afterwards, traffic and other details are reported with those of the Metro Airlines parent, as are those of its Aviation Associates division.

SUN AIRE EXPRESS: United States (1991-1994). San Juan, Puerto Rico-based **Aviation Associates**, an Eastern Metro Express commuter partner of **Eastern Air Lines** prior to that major's January 18, **1991** shutdown, is purchased by **Metro Airlines** Chairman Edmond Henderson and President Jay Seaborn in February and renamed. With a "United Express" code-sharing alliance in hand, the 216-employee company's 9 de Havilland Canada DHC-6-300 Twin Otters and 3 DHC-6-200s continue operations from a base at St. Croix as before and transport a total of 348,336 passengers, down 18.9% from the previous year.

Enplanements decline a further 5.1% in **1992** to 330,592 as the carrier's parent is reformed and renamed Aeroflight Holdings.

An effort is made throughout **1993** to sell the airline but no buyers are found. As a result, the airline, in financial trouble, is forced into Chapter XI bankruptcy in December.

Prior to its bankruptcy, the airline's customer bookings rise 5.7% to 349,451. Revenues for the year total \$14 million.

In May **1994**, Sun Aire is purchased by the Texas-based megaregional **Mesa Airlines**. Under terms of the agreement, Mesa pledges to invest between \$600,000 and \$750,000 in its new acquisition as part of the required Chapter XI reorganization, which is designed to allow Sun Aire, in the future, to pay back its \$2.3-million debt. In addition, the Virgin Island-based company will receive a cash infusion of \$750,000, bringing Mesa's total investment in cash and debt to \$3.1 million.

The takeover does not occur, new financing is not obtained, and the company is forced to shut its doors at year's end, after flying 69,072 passengers.

SUN AIRE LINES: United States (1968-1984). Founded by H. L. Van Sickle, Sun Aire Lines, the marketing name of Borrego Springs Airline, a subsidiary of the Di Giorgio Corporation, is certified in November **1968**. George J. Kuhrts III, president of the corporation's Rams Hill resort and residential community development unit, is placed in charge; however, he leaves operations to founder Van Sickle, vice president-operations.

The new entrant inaugurates scheduled passenger and cargo flights to San Diego on December 22. The company's single Cessna 402 links the Borrego Springs base with San Diego, 90 mi. away, in **1969**, the first full year of flights, transporting a total of 709 passengers.

Operations continue against stiff competition in the tough California commuter market for the remainder of the decade and through the **1970s**. The corporate base is transferred to Palm Springs and additional points visited include Los Angeles, Yuma, and Santa Maria. The only unfortunate incident of these years is a fatal accident in **1976**. En route from San Diego to Palm Springs on April 15 of that year, a Beech 18 with six aboard crashes in the Santa Rosa Mountains during a storm; there are no survivors.

Michael Di Giorgio, a son of the corporate owners, becomes vice president in **1979**.

In **1980**, President Kuhrts's airline flies to and from its Palm Springs base to Borrego Springs, San Diego, Los Angeles, El Centro, Yuma, and Phoenix. In **1981**, the fleet includes 5 Swearingen Metro IIs and a total of 163,000 passengers are transported.

The number of bookings increases to 227,000 in **1982**. New destinations served include Bakersfield, Burbank, Ontario, Santa Barbara, and Santa Maria.

Airline employment jumps 57.9% in **1983** to 300 and the fleet includes 12 Metroliners. A total of 327,000 customers are flown by the large regional and revenues of \$16.4 million are earned, a 40.2% boost.

In March 1984, the regional offers 195 daily departures from Bakersfield, Borrego Springs, Burbank, Imperial County, Los Angeles, Ontario, Palm Springs, Phoenix, San Diego, Santa Barbara, Santa Maria, and Yuma. During the month, a 13th Swearingen Metro joins the fleet, followed by a 14th in May.

The parent company, continuing its principal engagement in building materials and consumer products, elects to depart the air transport industry, selling Sun Aire to **Sky West Airlines** on September 28. The Utah-based regional will initially operate its new acquisition as a subsidiary until it can be integrated.

SUN BASIN AIRLINES: United States (1975–1978). Sun Basin is set up at Moses Lake, Washington, in the spring of 1975 to offer scheduled passenger and cargo flights to Seattle and Spokane. Employing a pair of Cessna 402s, the commuter opens service on April 7, maintaining it until it goes out of business on July 13, 1978.

SUN COAST AIRLINES: United States (1987–1989). Originally set up at St. Petersburg, Florida, in 1983, to offer low-cost charters to Pennsylvania, Illinois, and North Carolina, Sun Coast is purchased by former **Arrow Air** President Bryan Ellison in the summer of 1986 and relocated to Fort Lauderdale. From there, the company's lone Boeing 727 continues to offer charters and replacement flights into the spring 1987. A workforce of 100 is assembled along with a fleet of 3 Boeing 727-100s. When scheduled authority is received in the spring, it is employed to inaugurate that type of passenger services on June 1 from Orlando to San Juan. Orlando and Fort Lauderdale to Montego Bay scheduled flights are introduced in the fall.

By Christmas, a total of 79,000 passengers have been transported.

Thrice-weekly flights commence on January 5, 1988 from New York (JFK) to Georgetown, Guayana. Scheduled service is opened in April from Boston and New York to Borinquen Airport at Aguadilla, Puerto Rico.

During the spring, the company becomes embroiled in a controversy with ILFC, from whom it plans to lease a B-737-2Q8. As a result, it suspends scheduled flights and declares Chapter XI bankruptcy. Charter flights, however, continue until it is realized that plans to reorganize and resume scheduled flights cannot be implemented. The company's operating certificate is revoked by the DOT in February 1989.

SUN COUNTRY AIR LINES: 2520 Pilot Knob Road, Suite 250, Mendota Heights, Minnesota 55120, United States; Phone (612) 681-3900; Fax (612) 681-3970; <http://www.suncountry.com>; Code SY; Year Founded 1982. Affiliated with Minnesota-based MLT Tours, Sun Country is formed by former **Braniff International Airways** employees at Minneapolis (MSP) in July 1982. Robert Daniels becomes president/CEO and recruits a workforce of 33.

Plans are made to inaugurate MLT tour group flights to Las Vegas, Florida, California, Mexico, the U.S. Virgin Islands, and other Caribbean holiday locations. Charter authority is received from the CAB at the end of the year.

Employing a leased Boeing 727-227A formerly operated by **Air Florida**, the company initiates revenue service on January 20, 1983, flying from Sioux Falls to Las Vegas.

Enplanements for the year total 149,000.

Bookings climb to 177,264 in 1984 and in June 1985 a B-727-264 is leased from Guinness Peat for 10 months. Enplanements climb to 376,000, a 48.6% boost.

In 1986, the carrier obtains the lease of four additional B-727-200s, including two Dash-212As from **Dan-Air/Dan-Air Services, Ltd.** of the U.K. In addition, a DC-10-40 is leased from **Northwest Airlines** in late spring, entering revenue service in June.

Also during the year, Sun Country moves into a new hangar and headquarters complex at Minneapolis (MSP).

The new aircraft help the 179-employee charter operator to have a very successful year, with enplanements climbing 25% to 518,912.

Airline employment is reduced by 1.7% in 1987 to 176. In the spring, the **Dan-Air/Dan-Air Services, Ltd.** aircraft are returned and are replaced by two leased **Northwest Airlines** B-727-251As. The first of these joins the fleet in September as flights on behalf of tour operators are inaugurated from Chicago and Detroit.

Customer bookings zoom upward by 18.9% to 616,937 and revenues total \$44.1 million. With costs low, profits are generated: \$3.19 million (operating) and \$2.08 million (net).

Airline employment grows by 16.5% in 1988 to 205. The second B-727-251A leased from **Northwest Airlines** arrives in February and charter flights to Europe are begun during the summer from Minneapolis to Oslo and Rome. A major change in ownership occurs on December 1 as the Minnesota Corporation takes over.

Passenger boardings increase by 26.8% to 782,502 and revenues rise 25.7% to \$55.5 million. Expenses are held in check, allowing an operating profit of \$2.1 million and a net profit of \$1.7 million to be generated.

The workforce grows a substantial 70.7% in 1989 to 350 as a chartered B-727-276A arrives under charter from **Dan-Air/Dan-Air Services, Ltd.**

The Minneapolis-based charter operator enplanes a total of 907,822 passengers for a 23.3% increase. Revenues ascend by 37.7% to \$76.4 million, costs jump 34.9% to \$71.98 million, and the operating profit moves up to \$3.49 million. Net profit doubles, to \$2.54 million.

The payroll is enlarged by 19.5% in 1990 to 313 as **Air Portugal, S.A.** charters a B-727-282 to the carrier.

Customer bookings surge 20% to 1.2 million and revenues jump 26.5% to \$87.7 million. Expenses are boosted 21.7% to \$80.15 million and allow operating income to more than double to \$8.02 million. Net gain climbs to \$5.44 million.

Company employment is cut 4.2% in 1991 to 300 as 2 DC-10-10s are leased from **Scanair, A.B.** of Sweden, allowing a further expansion of long-haul flights.

Passenger boardings ascend 9.1% to 1,288,000 and revenues shoot up 26.2% to \$117.11 million. Expenses jump 29.1% to \$109.43 million and guarantee an operating profit of \$7.68 million. The net profit is up to \$7.03 million.

The payroll is increased by 16.7% in 1992 to 350 and the fleet comprises 2 each leased B-727-225As, B-251As, and 2 B-727-2J4As, 1 each B-727-227A and B-727-282A, plus 2 DC-10-10s leased from **Scanair, A.B.** and DC-10-14 chartered from **Northwest Airlines**.

Customer bookings move ahead by 37.3% to 1,928,000 and revenues reach \$151 million. Operating income slides to \$793,072 and net gain drops to \$1.4 million.

In 1993, President/CEO John Barry oversees a workforce of 571, a 63.1% boost. A ninth B-727, a Dash-2A1A, is acquired as the DOT upgrades the carrier to national airline status.

Passenger boardings remain level at 1.9 million, but revenues ascend 4.7% to \$144.8 million. Expenses jump up only 0.4% to \$138.5 million and allow operating income to increase sixfold to \$8.45 million. Net profit surges to \$7.01 million.

Airline employment is increased by a huge 53.8% in 1994 to 889 and the leased fleet comprises 2 each B-727-2A1As, B-727-2J4REs, and B-727-225As, 1 B-727-227A, 1 B-727-282A, and 3 DC-10-10s. During the spring, 1 B-727-251A and 1 DC-10-40 are chartered from **Northwest Airlines**.

When a B-727-260A, formerly flown by **Ethiopian Airlines, S.C.** arrives at Minneapolis on September 1, it introduces the company's striking new color scheme. Under contract to MLT Vacations, a subsidiary of **Northwest Airlines**, the company inaugurates nonstop charters from Wichita to Las Vegas on September 29.

Customer bookings surge 18.1% to 2,255,107 and revenues move ahead by 19.8% to \$173.46 million. Expenses climb 18.2% to \$161.14 million and grant a pretax profit of \$12.32 million. The net gain rises to \$9.57 million.

The workforce is reduced by 10.4% in 1995 to 813.

Having equipped 70% of its B-727s with the Trimble TNL8 100 Global Positioning System (GPS), the company chooses one of them to make a roundtrip validation flight on July 25–26 from Boston to Santa Maria, Portugal, via Gender, Newfoundland. On September 1, Sun Country becomes the first commercial carrier to receive FAA operational approval for use of the GPS as its primary navigation system in remote or oceanic airspace.

Gemini Air Cargo is established at Washington, D.C. (IAD) in October to operate charter air cargo services. Unable to immediately acquire its government certification in time for a November launch of services, the carrier leases three newly acquired Douglas DC-10-30Fs to Sun Country, which initiates services on behalf of the new operator on December 1. Sun Country benefits in that it is allowed to continue operating passenger aircraft that exceed FAA noise standards.

On behalf of Funjet Vacations, the company, on December 14, launches winter charters from Atlanta to Cancún and Cozumel; the segment from Cancún to Cozumel is flown via **Mexicana Airlines, S.A. de C.V.**

Enplanements surge ahead by 12.9% to 2,546,838 and 1.26 million FTKs are also operated. Although operating income is up by 16.6% to \$202.19 million, costs are up 22.2% to \$200.73 million. Consequently, the operating profit falls to \$1.46 million. A \$2.08-million net profit is posted.

The employee population climbs 30.4% in 1996 to 1,060. In January, **Gemini Air Cargo** complains that Sun Country has employed the wrong flight number on a service from New York to Seoul, thereby causing a delay in cargo aboard the wide-body. The action results in the cancellation of three later contracted flights and a loss of \$400,000 to the company.

Gemini Air Cargo receives its own FAA Part 121 certificate in June and a fourth Douglas freighter is acquired from Sun Country.

On August 12, the company unveils its fall fare sale good on flights through December 15. Travelers will be able to fly for \$49 to \$99 one way from Minneapolis (MSP) to 18 major U.S. destinations, including Chicago, Boston, San Francisco, Seattle, and New York. Added to the sale are Los Angeles, Washington, D.C., Phoenix, and Laughlin, Nevada.

On August 28, the carrier, which has reduced its relationship with the Indianapolis-based tour operator MLT Vacations, contracts to provide charter service during the winter season with the Bloomington, Minnesota, concern Trans Global Tours.

Reporting that both **UPS (United Parcel Service)** and **Swissair, A.G.**, having found service provided so poor in results that they refuse to ship cargo on planes operated by Sun Country, **Gemini Air Cargo** in the fall attempts to cancel the DC-10 contract.

In October, flights on behalf of Trans Global Tours begin to eight destinations, including Orlando and Las Vegas.

Passenger boardings decline 7.9% to 2,346,856. Although revenues are up 2.9% to \$207.98 million, expenses accelerate 5.9% to \$212.61 million. The previous year's profits are, unhappily, turned into losses: \$4.62 million (operating) and \$2.25 million (net).

John Barry is chairman in 1997, with Gregory Smith as vice chairman and John Skiba as president/CEO. With 9 DC-10s (9) and 10 B-727s, the fleet is now almost evenly divided.

Sun Country files suit in Hennepin County District Court and in U.S. District Court in Minneapolis in January seeking an injunction against **Gemini Air Cargo's** DC-10 repossession. The passenger charter operator, refuting Gemini's concerns, contends that, if the planes are reclaimed, it would suffer "catastrophic" financial injury at the height of the winter tourist season. The companies settle their claims on February 7 in an agreement that allows Sun Country to continue operating on behalf of Gemini for the immediate future.

The agreement with **Gemini Air Cargo** is officially terminated during the second week of April. Gemini is now flying its six DC-10-30s with its own pilots; a seventh aircraft is down for maintenance. That airline currently flies one scheduled service from New York to Seoul six times a week.

William La Macchia Jr., owner of Mark Travel Corporation and its Funjet Vacations subsidiary, purchases Sun Country on April 17 for an

estimated \$25 million and assumes its presidency. Sun Country, which flies from 23 U.S. cities, is known for its charter flights to Las Vegas and other warm-weather destinations and has been a longtime business associate of Funjet. No plans are made to bring Funjet to Minneapolis.

While on a repositioning flight from Minneapolis to Los Angeles on June 17, the cockpit crew of a DC-10-10, transporting 9 flight attendants, 12 deadheading crew members, aircraft parts, and 1,795 lbs. of mail, smells smokes and diverts the flight to Denver, where a safe emergency landing is made. No damage occurs and no injuries are reported.

Passenger boardings rise 8.6% to 2,548,000, but freight plunges 89.5% to 30.64 million FTKs. Operating revenues advance 10% to \$228.83 million, while expenses jump 16.9% to \$239.54 million. The previous year's operating loss deepens to \$10.71 million, while the net loss worsens to \$11.68 million.

After 30-months of negotiations, culminating in around-the-clock bargaining at NMB headquarters in Washington, D.C., the company and ALPA are able to jointly announce a tentative agreement on February 20, 1998. It is anticipated that the 220 rank-and-file pilots will ratify the pact.

Charter destinations now visited include Boston, Chicago, Dallas (DFW), Detroit, Fort Lauderdale, Fort Myers, Harlingen, Texas, Houston, Laughlin, Los Angeles, Miami, Milwaukee, New York (JFK), Phoenix, Salt Lake City, San Antonio, San Diego, San Francisco, Sarasota, Seattle, St. Louis, Washington, D.C. and in the West Indies, St. Thomas, St. Croix, St. Martin, Costa Rica, and Aruba.

As a result of the **Northwest Airlines** pilots' strike in September, Sun Country institutes an elevated flight schedule to meet public demand for an alternative airline in Minneapolis (MSP). During the job action, which shuts down the major, Sun Country adds over 28,000 seats to its regular schedule. It provides regular daily scheduled service to Boston, Chicago, Cleveland, Dallas (DFW), Detroit, Houston, Los Angeles, New York, Phoenix, San Antonio, San Diego, San Francisco, Seattle, and Washington, D.C. Services to Detroit and New York depart Minneapolis (MSP) twice-daily, with flights to Boston and San Francisco made four times a week.

Although Sun Country reverts to charter status after the Northwest strike is concluded, the introduction of scheduled flights during that time leaves a lasting impact. During the fall and into the winter, planning is undertaken, in response to requests from leisure and business customers, to prepare the company for a new departure. An entirely new marketing and operating strategy will soon be revealed.

During the 12 months, customer bookings rise 2.4% to 2.61 million, while freight traffic plunges 83.69% to 4.99 million FTKs. Revenues are up 3.8% to \$237.58 million, while costs dip 2.4% to \$233.88 million. The previous year's operating loss becomes a \$3.69-million gain, while the net loss becomes a \$12.43-million profit.

The Sun Country fleet at the beginning of 1999 includes 4 DC-10-15s and 11 B-727-200As. Airline employment has, by this time, been increased by 20.1% to 1,259.

On January 15, President/CEO La Macchia announces that, effective June 1, Sun Country will become a scheduled airline. Between the date of his news conference and June, the company will develop a frequent flyer program and, beginning in April, undertake an advertising campaign. Daily routes will be undertaken from Minneapolis (MSP) to such major U.S. destinations as Boston, Detroit, Las Vegas, New York (JFK), Orlando, Phoenix, San Francisco, Seattle, and Washington, D.C. (IAD).

Following the announcement by **American Trans Air** that it will stop servicing Milwaukee on April 30, Funjet Vacations, based in that city and also owned by Sun Country President La Macchia, announces on January 22 that it will switch over to Sun Country as its principal carrier on May 1.

Sun Country, on February 3, signs a tentative agreement with its flight attendants union, the Teamsters. The pact is passed to the 400 members for ratification, which is accomplished on March 2.

In an effort to create the same sort of edge in scheduled services enjoyed by **Pro Air** in Detroit, Sun Country, on May 5, begins to run a number of sassy ads in Minneapolis area newspapers touting the advantages

it has to offer. A "Pez head" of President La Macchia appears in the ads along with a coupon that can be mailed back to the airline for a chance to win a year of free travel.

Within days, billboards also begin to appear sporting the slogan "Jesse Did It—Why Can't We?" Others use teaser words like "Smile" and others note the carrier's cheap fares. The \$15-million marketing blitz continues throughout the spring.

Flight 744, a B-727-200A with 7 crew and 83 passengers is substantially damaged when its left wing strikes a catering truck during push-back at Washington, D.C. (IAD) on May 28; no injuries are reported.

The first scheduled service is inaugurated on June 1, a daily nonstop roundtrip from Seattle to Minneapolis (MSP).

Orders are placed with ILFC on June 16 for the charter of six Next Generation B-737-8Q8s, to be delivered during the year beginning on January 31, 2001. In September, competitor **Northwest Airlines** unilaterally terminates an agreement to share or sell jetliner parts to Sun Country; the move deepens already hard feelings between the two Minneapolis-based carriers.

The situation with Northwest worsens on October 13. Although Sun Country has already paid a \$500,000-a-year fee for the federally mandated training, NWA now refuses to train the more than 600 Sun Country workers needing to learn the latest emergency evacuation procedures.

During Christmas week, new seasonal service is introduced from Minneapolis to Montego Bay, Puerto Vallarta, St. Thomas, and St. Martin.

Passenger boardings drop 3.3% to 2,519,000, while freight traffic plunges 64.2% to 1.78 million FTKs.

Although revenues are up 6% to \$251.87 million, expenses surge 14.9% to \$268.62 million. The previous year's profits are turned into losses: \$16.74 million (operating) and \$16.87 million (net).

Airline employment at the beginning of 2000 stands at 1,359, a 12.2% increase over the previous 12 months. The company's B-727 fleet now includes 5 Dash-2J4As, 1 each Dash-227A, Dash-282A, Dash-259A, Dash-2K3A, Dash-224A, and Dash-2M7A, plus 2 Dash-225As. Also operated are 3 DC-10-15s.

For one of several historic baseball matches between players from the U.S. and Cuba, Sun Country is contracted on January 10 to transport the University of St. Thomas team to Havana on January 22. Also aboard are several dignitaries, including university and political officials and members of the news media. At the end of the series on January 29, the carrier will bring the team home.

Seasonal service is introduced on January 24 from Minneapolis to San Juan. The company's seasonal services introduced in December and January will all cease at the end of April. On February 10, Milwaukee customers are able to utilize new connecting service through Minneapolis (MSP) and fly daily to Los Angeles and six times a week to Seattle. From Detroit (DTT), beginning on February 18, passengers can choose one-stop connecting service via Minneapolis to San Francisco and Seattle weekdays.

On March 3, the carrier receives DOT authorization for the inauguration of scheduled services from Detroit (DTT) and bases in Texas to points in Mexico.

On May 15, the company reveals details of their new corporate color scheme to the local Minneapolis affiliate of ABC Television; the livery will be officially unveiled on the first B-737-8Q8 when it arrives in January.

The new scheduled services to Mexico begin on May 22. The return routes flown include Saturday flights from Detroit to Cancún, Houston to Cozumel and San Antonio to Cancun four times a week, and Houston to Cancún six times a week. Twice-weekly flights include Dallas (DFW) to Cabo San Lucas, Cancún, and Puerto Vallarta, Austin to Cancún and Cozumel, San Antonio to Cozumel, and Houston to Puerto Vallarta. Dallas to Ixtapa flights are offered weekly.

It is announced on May 26 that Sun Country has become the first commercial airline to install MedAire's Emergency Service Kits, first-aid kits designed specifically for the needs of the traveling public, aboard all of its aircraft. Sun Country is also contracting with MedAire for the services of MedLink, its emergency telemedicine service.

Also in May, contract talks begin between the airline and its ALPA-represented pilots. A B-737-225A leased from **Sabre Airways, Ltd.** earlier in the year is returned during the month.

Nonstop frequencies between Minneapolis (MSP) and San Diego are increased on September 6, the same-day, one-stop flights are initiated to the Southern California community from Boston, Detroit, and Milwaukee.

While taxiing to the runway for a September 10 departure from Minneapolis to San Francisco, Flight 791, a B-727-224 with 7 crew and 94 passengers, is badly damaged when the No. 3 wheel and tire assembly fail and pieces of the assembly impact the airframe. No injuries are reported. A chartered B-727-225A replacement is received on September 15.

It is announced on October 6 that the carrier's three DC-10-15s will be retired by April; one DC-10-15 has already been turned over to The Memphis Group for reduction into scrap. The B-727-225A acquired in mid-September is employed, beginning on October 9, to offer twice-daily roundtrips between Minneapolis (MSP) and Chicago (ORD); one frequency omits Saturdays from the schedule and the other, Sundays.

A B-727-225A is leased from **Sabre Airways, Ltd.** late in the month for use on the charter line's winter schedule. On October 28, a new "customer friendly" carry-on policy is implemented; passenger baggage is physically measured to ensure that it meets a new linear size requirement of 48 inches, rather than adhering to the standard "in-the-box" system of measurement.

On November 20, ALPA requests that federal mediators enter into the contract negotiations it is holding with the company's management.

Scheduled roundtrip service to Mexico, approved by the Mexican government two weeks earlier, begins on December 18. Routes and weekly return frequencies include four from Minneapolis (MSP) to Cancún, one to Cozumel, and five to Mazatlan; four from Milwaukee to Cancún, five to Puerto Vallarta (5); and four from St. Louis to Cancún, and five to Puerto Vallarta.

As a way to report to the public on the lack of progress in contract negotiations, a number of the carrier's ALPA-represented pilots participate in informational picketing at Minneapolis (MSP) on December 18.

During these 12 months, the decline in passenger boardings is reversed, growing by 5.05% to 2,664,000. Cargo traffic, on the other hand, falls another 80.24% to just 353,000 FTKs.

SUN D'OR INTERNATIONAL AIRLINES, LTD.: P.O. Box 161, Ben Gurion International Airport, 70100, Israel; Phone 972 (3) 971-6470; Fax 972 (3) 971-1389; Code ERO; Year Founded 1977. To compete with foreign nonscheduled flights entering the Israeli market, El Al Charter Services is incorporated as a wholly owned subsidiary of the state airline on October 2, 1977. It had, prior to incorporation, offered BAC 1-11 charters to Rome and Dublin.

During the remainder of the decade, tour routes are developed for destinations in Germany, France, Spain, Finland, Mediterranean points, and the Canary Islands. The carrier also serves to prove routes and stops later regularly flown by **El Al Israel Airlines, Ltd.**; examples of these future scheduled stops include Chicago, Madrid, Boston, and Manchester.

In 1981, the decision is taken not to fly to any city regularly served by El Al and in order for the carrier to have a separate identity, the present name is chosen. On May 1, 1985, a joint operating agreement is signed with **Arkia Israel Airlines, Ltd.** covering operations to Europe and the Mediterranean in an effort to avoid duplicated service. Aircraft employed are leased from El Al and operate in that carrier's standard colors with titles altered.

Operations continue apace during 1986–1991. In 1992, the carrier employs a total of nine permanent workers, including Chairman M. Berger, President S. Mattatiah, and Commercial Manager Y. Schachar. All other personnel support is provided by the parent. A total of 123,500 passengers is flown on the year.

Regular, ad hoc, and seasonal passenger charter flights from Israel to Europe continue in 1993–1994. Enplanements of 308,500 are reported in 1995.

The permanent workforce grows to 12 in 1996. Operating with Israeli jetliners as before, the charter carrier enjoys a good year; customer bookings soar 16.8% to 361,100.

Flights continue without incident during the remainder of the decade.

SUN EXPRESS AIR, A.O.: Fener Mahallesi Sinanoglu Cad, Oktay Airport, P.O. Box 28, TR-07100, Antalya, 07100, Turkey; Phone 90 (242) 323-4047; Fax 90 (242) 323-4057; <http://www.sunexpress.de>; Code XQ; Year Founded 1989. Sun Express is formed at Antalya on September 11, 1989 as a joint venture between **THY Turkish Airlines (Turk Hava Yollari, A.O.)** and **Deutsche Lufthansa, A.G.** Each national carrier holds 40% interest, with private Turkish shareholders owning the remaining 20%; Atilla Celebi is chairman. Gerhard Dinter is appointed managing director and a Boeing 737-3Y0 is leased from the German carrier with which to begin passenger charter revenue flights to Austria, Germany, Italy, Spain, and Cyprus. The first revenue flight is initiated from Nuremberg to Antalya on April 4, 1990.

Two more Dash-3Y0s are chartered from the same source after the Kuwait crisis in 1991. Operations continue apace in 1992-1993, and the first profit is posted at the close of the latter year, during which nearly 400,000 passengers have been flown.

The workforce in 1994 stands at 202 and the fleet is altered with the addition of one each B-737-4Y0 and B-737-430, both chartered from **Deutsche Lufthansa, A.G.** Destinations visited include Cyprus, Austria, Germany, Italy, Spain, Finland, Sweden, Israel, Switzerland, and the Czech Republic.

Flight International, in its November 9 issue, reports that THY has plans to sell its 40% stake as it prepares for alliance negotiations and possible privatization. The report is not confirmed.

Operations continue without change in 1995-1996.

The fleet in 1997 remains the same as it was in 1994: three leased B-737-3Y0s and one each chartered B-737-4Y0 and B-737-430.

On September 18, co-parent **Deutsche Lufthansa, A.G.** announces that, at the beginning of the new year, its charter subsidiary **Condor Flugdienst, GmbH** will be spun off and joined with Germany's second largest tour operator, **Neckermann Reisen, GmbH**. The fifty-fifty joint venture company is to be known as **C&N Condor Neckermann Touristik, A.G.** and will also contain the DLH interest in Sun Express and five German tour operations.

The joint enterprise **C&N Condor Neckermann Touristik, A.G.** is born on schedule, January 1, 1998. Sun Express is not physically submersed and retains its own identity. Flights continue during the remainder of the year and into the next.

Two Next Generation B-737-73Ss, previously operated by **Israir, Ltd.**, are chartered from Pembroke Capital in January 1999 and are delivered on February 23 and April 29, respectively. Enplanements for the carrier's B-737-3Y0s total 120,000.

A total of 282 workers are employed at the beginning of 2000. The first of four Next Generation B-737-86Ns leased from GE Capital Corporation is delivered on January 19; the others follow on February 4, February 22, and May 12. In early November, it is announced that regularly scheduled service will be inaugurated in March to London and Frankfurt.

The new Boeings arrive at the end of December. They will be employed to operate the charters to Germany previously flown by **Air Alfa Hava Yollari Ve Tic, A.S.**, which has been banned from that country due to nonpayment of its ATC fees.

SUN INTERNATIONAL AIRLINES: United States (1989-1990). Based at New Iberia, Louisiana, **Gulf Air** changes its name to SIA in the spring of 1989. Airline employment is increased by 19.1% to 417 and the fleet includes 3 B-727-100s and 4 B-727-200s. In May, the carrier acquires four Douglas DC-8-63s that are placed into transatlantic tour service beginning on Memorial Day.

In early June, two B-727-200s are again leased to **Air Malta, Ltd.** for its summer activities. During the summer, a new operations facility is

occupied approximately one mile from the old one. Operations do not last a year.

SUN INTERNATIONAL AIRWAYS: United States (1979-1982). An associate of Reading, Pennsylvania-based **Perkiomen Airways, SIA** is set up at Isla Verde, San Juan, Puerto Rico, in 1979 to offer scheduled passenger services to St. Thomas, Aguadilla, Vieques, and Culebra. Daily Beech B-55 Baron roundtrip flights are duly inaugurated and are sustained through 1982.

SUN JET INTERNATIONAL AIRLINES: United States (1993-1999). SJI is established by former **Key Airlines** President P. Thomas Kolfenbach at Largo, Florida, in the spring of 1993 to offer charter passenger and inclusive-tour flights to destinations throughout North America with a fleet of two leased McDonnell Douglas MD-81s.

A DC-9-31, once operated by **Eastern Air Lines**, is put into service during October over an initial route from Newark to Tampa/St. Petersburg and Fort Lauderdale. Only \$17,000 in income is realized before year's end, along with \$19,000 in expenses. Losses are \$2,000, on both the operating and net lines.

In June 1994, Dallas (DFW) is added to the route system, with connecting service to Los Angeles via Long Beach.

The leased fleet is considerably increased in 1995; added are two DC-9-51s and another DC-9-31. Flights between Los Angeles/Long Beach and Las Vegas and Seattle commence on October 1. On November 15, new service is inaugurated between Long Angeles/Long Beach and Newark and Houston (IAH).

Enplanements for the first full year total 486,000. Revenues well exceed costs and there are good profits: \$8.79 million (operating) and \$6.56 million (net).

Michigan housing developer John Mansour purchases the company at the beginning of 1996. After announcing plans to transfer the airline to his hometown of Flint, the new owner relents. Former **American Airlines** executive David Banmiller is hired to succeed Mr. Kolfenbach as president and he, too, announces growth plans. Unfortunately, Sun Jet, like a number of smaller carriers, will be badly affected by the May crash of **Valujet Airlines** Flight 592 into the Everglades.

Sun Jet now falls behind in its payments to vendors and to former owner Kolfenbach. Meanwhile, larger airlines offer deep discount fares in an effort to attract riders to their supposedly safer operations.

The two DC-9-31s are withdrawn as passenger boardings slide 2.4% to 622,000. Operating income falls 7% to \$59.28 million while expenses are up 9% to \$59.87 million. The previous year's profits are turned into an operating loss of \$599,000 and a net loss of \$532,000.

The leased fleet in 1997 includes two DC-9-51s and two MD-81s. During the first quarter, Sun Jet, which has been unable to raise additional capital, abandons the scheduled charter market and returns to a more traditional, on-demand, nonscheduled service.

During its takeoff from Dallas (DFW) on June 16, a DC-9-51's main landing gear tire explodes; pieces of rubber are ingested into an engine causing major damage and cancellation of the departure.

In deep trouble, Chairman Mansour indicates on June 17 that he is seeking a merger partner. Recent engine problems have taken two of Sun Jet's four planes out of service and the company reports itself \$5 million in debt.

On June 18, the Largo-based discount air carrier grounds its planes, lays off most of its 145 employees and prepares to file for Chapter IX protection the following Monday. Passengers are switched to flights by Detroit-based **Spirit Air**. That company operates Sun Jet's flights to Orlando, St. Petersburg, Fort Lauderdale, and Newark.

The carrier keeps its operating certificate active with the government and seeks a rescue package that will allow it to resume operations.

Prior to its shutdown, the company flies a total of 248,000 passengers. Revenues have dropped 73.8% to \$15.54 million and expenses have fallen 67.3% to \$19.59 million. The operating loss is \$4.5 million, while a net \$4.09-million loss is also suffered.

Aviation Industries Corporation steps before the U.S. Bankruptcy Court on February 12, 1998 and wins permission to provide debtor-in-possession financing. Although Chairman Mansour and his management team are temporarily left in place, AIC retains AIBC Investment Services Corp. to advise it as it prepares to recall workers, expedite revalidation of the carrier's fitness certificate with the DOT, and resume passenger charters.

A reorganization plan is filed with the court by March 20. When it becomes a reality, the airline will fly under a new marketing name.

The DOT finds Sun Jet fit to resume service during the first quarter of 1999. Flights resume from a base at St. Petersburg with a single DC-9-32 and under the name **Southeast Airlines (6)**.

SUN JET INTERNATIONAL SALES: United States (1993–1999).

Sun Jet International Sales, not to be confused with **Sun Jet International Airlines**, is founded by tour operator World Technology Systems in the late summer of 1993 to promote low-cost charter service (provided by other carriers) between the New York area and Florida. The company is a charter travel company and not an operating airline; therefore, the FAA does not monitor its activities. The government will, however, monitor the carriers contracting with Sun Jet and via this regulatory responsibility will ultimately have some impact on the WTS subsidiary's fate. Charter flights are launched in October from Newark to Tampa/St. Petersburg and Fort Lauderdale. **Great American Airways** is the principle carrier to fly WTS passengers this year and in 1994.

During the summer of 1995, World Technology Systems contracts with the city of Myrtle Beach, South Carolina, and **Great American Airways**, to provide charter service that supplements regular flight schedules. The operation will be known as "Myrtle Beach Jet Express." Like SJIS, MBJE is also not an actual airline.

Beginning in September 1996 and continuing through the following February, tour operator World Technology Systems sponsors a promotion in which every "Myrtle Beach Jet Express" passenger purchasing a ticket will receive two free rounds of championship golf at a selected course.

Citing numerous falsifications of records and documents, the FAA pulls the operating certificate of **Great American Airways** in April 1997. The Reno-based airline files for Chapter XI bankruptcy protection and appeals the government action. The company's certification problems are eventually resolved, but, in the meantime, WTS moves its "Myrtle Beach Jet Express" charters, including its popular golf-for-ticket promotion, to the new **Sun Pacific International Airlines** and **TransMeridian Airlines**.

Early in January 1998, World Travel System enters into a one-year commercial agreement with **Trans World Airlines (TWA)**. Beginning on February 20, the major undertakes daily, nonstop, \$99, one-way through-fares in partnership with "Myrtle Beach Jet Express" between Myrtle Beach and many other destinations via connections at St. Louis and New York. Also during the month, capacity is expanded when SJIS contracts for lift with the start-up carrier **Winair**.

By mid-April, President/CEO Kent Elsbree's company offers daily flights from Orlando and Tampa/St. Petersburg to Newark and twice-daily roundtrips to Newark from Fort Lauderdale. These flights are operated by **Sun Pacific International**, **TransMeridian Airlines**, and the start-up **Winair**.

On June 20, twice-daily (except Tuesday) roundtrips begin from Fort Lauderdale to New York (JFK), along with daily return flights between Fort Lauderdale and Long Island MacArthur Airport at Islip, New York. Daily (except Tuesdays) roundtrips simultaneously commence from Islip to Orlando. The service is also subcontracted to **Sun Pacific International**, **TransMeridian Airlines**, and **Winair**.

For the third consecutive year, the popular New York–Myrtle Beach air service gives away free golf play for every ticket purchased. Each passenger receives two rounds of championship golf at a choice of five courses from September 9 through February 28. Courses participating in this year's promotion are Angels Trace, Deer Track, Raccoon Run, Toski Links, and Wicked Stick.

On January 21, 1999, Casino Airlink, a division of Integrated Marketing Professionals, contracts with Sunjet to offer 42 monthly DC-9-51 inclusive tour charter flights from Fort Lauderdale and St. Petersburg to the new gambling center at Tunica, Mississippi.

By the first quarter, SJIS has flown over 1,000,000 passengers on its "Myrtle Beach Jet Express." A second daily roundtrip "Myrtle Beach Jet Express" service is inaugurated on March 4.

A new nonstop service is inaugurated, also on March 4, from West Palm Beach and Orlando to Newark. The flight brings the total number of daily flights from Florida to New York to seven, including six daily (except Tuesday) roundtrips simultaneously reinstated from Fort Lauderdale to New York (JFK) and Islip. Once more, the actual service is provided by aircraft operated by **Sun Pacific International**, **TransMeridian Airlines**, or **Winair**.

The company's contracted capacity is reduced on April 16 when the FAA issues an emergency order suspending the operating certificate of **Sun Pacific International** due to continuing maintenance problems. **Winair** also encounters regulatory problems; it, too, will fail, on July 6. The lack of capacity forces a suspension of flights to Florida from New York (JFK).

Preparing for an April 16 departure from Newark to Florida, a Sun Jet International Sales flight, operated by **TransMeridian Airlines**, must be evacuated after a bomb threat is received. No explosive device is found and the service eventually departs.

The loss of two of its three contracting carriers and problems at the third force the airline to incur significant additional operating expenses for replacement aircraft and revamped scheduling, travel protection for passengers, and hotel and meal costs. Unable to continue, Sun Jet shuts down at 3 p.m. on June 25, leaving some 2,500 ticket-holders for its flights and those of "Myrtle Beach Jet Express" stranded in Newark, Myrtle Beach, Tampa/St. Petersburg, Fort Lauderdale, and West Palm Beach. With passenger funds protected in escrow by the DOT regulation, refunds are promised within a week. Meanwhile, **Continental Airlines** offers low fares to those SJIS travelers without lift who waive certain restrictions that would normally be imposed.

SUN LAND AIRLINES: United States (1980–1981). The nonscheduled charter operator SLA is established in the summer of 1980 to offer passenger charters to destinations in the U.S. and the Caribbean. Flights between Cleveland, Las Vegas, and Reno commence on October 1 with a pair of Douglas DC-8-31s leased from **Overseas National Airlines**.

During the winter and into the spring of 1981, the company adds Atlantic City and the Bahamas to its holiday tour destinations, while also adding contract service flights between Las Vegas and Reno, Portland, and Seattle. A **Frontier Airlines (1)** B-737-291 is leased and employed to turn the Las Vegas to Reno segment into a scheduled route on May 29. Nonscheduled service is simultaneously initiated from Seattle to Spokane.

Traffic does not bring in sufficient revenue to maintain viability and the company ceases operation in August.

SUN PACIFIC AIRLINES: United States (1987–1988). Miguel Avila organizes this air taxi service at Long Beach, California, in the summer of 1987. Employing an Embraer EMB-110P1 Bandeirante, the carrier opens scheduled flights to Capexico and Brownfield. Operations cease a year later in 1988.

SUN PACIFIC INTERNATIONAL: 2502 East Benson Highway, Tucson, Arizona 85706, United States; Phone (520) 295-0455; Fax (520) 295-1125; Code SNP; Year Founded 1995. SPI is established at Tucson, Arizona, in late 1995 by former **Viscount Air Service** CEO Robert Fleming to offer domestic and international charter services, including flights for professional athletic teams, as well as subservices for scheduled carriers. Two Boeing 727s, a Dash-221A and a Dash-227A, are leased and the company is granted its FAA Part 121 certification on March 1, 1996. The first service is a replacement flight for **Cayman Airways, Ltd.**

A chartered B-727-89 and B-727-243A are purchased by Star Air Tours during the spring from the assets of bankrupt **Viscount Air Services**. Both are expressly dedicated to the transport of pro sports teams, though neither wears team identification, and are contracted to Sun Pacific for operation.

Star, meanwhile, arranges for the Boeings to be operated on behalf of the New York Yankees and Baltimore Orioles professional baseball teams as well as the Sabres, Whalers, and Flyers of the National Hockey League.

On August 15, Sun Pacific agrees to pay a fine of up to \$4,000 to the DOT for flying two international charters without authority to Mexico earlier in the year; \$2,000 must be paid immediately and the remainder will be forgiven in a year if no other violations are committed. On November 28, the company is authorized by DOT to increase its trijet fleet strength to five.

A contract is signed with **Valujet Airlines** on December 26 under which Sun Pacific will operate charter flights from Atlanta to Dallas and to Fort Myers and West Palm Beach, Florida, through January 6. The flights will carry passengers who booked with Valujet when it advertised the service before it received FAA approval.

Enplanements by December 31 total 181,000. Start-up and associated costs exceed the \$11 million in generated in revenues and leave losses: \$971,000 (operating) and \$826,000 (net).

The company enjoys a beneficial 1997. When **Great American Airways** encounters regulatory problems, Sun Pacific contracts with the city of Myrtle Beach, South Carolina, and tour operator World Technology Systems, to provide charter service that supplements regular flight schedules. The WTS charter operation is known as **Sun Jet International Sales** and the South Carolina service as "Myrtle Beach Jet Express."

Beginning in September and continuing through the following February, tour operator World Technology Systems sponsors a promotion in which every passenger purchasing a "Myrtle Beach Jet Express" ticket will receive two free rounds of championship golf at a selected course.

Passenger boardings accelerate 35.4% to 245,000. Operating revenues skyrocket 98.8% to \$25.88 million, while expenses are up 81.9% to \$24.78 million. The previous year's losses become profits: \$1.09 million (operating) and \$871,000 (net).

Early in January 1998, the company enters into a one-year commercial agreement with **Trans World Airlines (TWA)**. Beginning on February 20, the major undertakes daily, nonstop, \$99, one-way through-fares in partnership with "Myrtle Beach Jet Express" between Myrtle Beach and many other destinations via connections at St. Louis and New York.

In March, bankrupt **Sun Jet International Airlines** files a reorganization plan. By mid-April, President/CEO Kent Elsbree's **Sun Jet International Sales** offers daily flights from Orlando and Tampa/St. Petersburg to Newark and twice-daily roundtrips to Newark from Fort Lauderdale. These flights are operated by Sun Pacific, **TransMeridian Airlines**, and the start-up **Winair**.

On June 20, twice-daily (except Tuesday) roundtrips begin from Fort Lauderdale to New York (JFK), along with daily return flights between Fort Lauderdale and Long Island MacArthur Airport at Islip, New York. Daily (except Tuesdays) roundtrips simultaneously commence from Islip to Orlando. The service is also subcontracted to Sun Pacific, **TransMeridian Airlines**, and **Winair**.

When Hurricane Bonnie threatens Myrtle Beach on August 25, the company employs one of the trijets committed to "Myrtle Beach Jet Express" service to evacuate passengers to Newark. Two first-come-first-serve flights are operated in the early evening.

For the third consecutive year, the popular New York-Myrtle Beach air service gives away free golf play for every ticket purchased. Each passenger receives two rounds of championship golf at a choice of five courses from September 9 through February 28. Courses participating in this year's promotion are Angels Trace, Deer Track, Raccoon Run, Toski Links, and Wicked Stick.

During the 12 months, customer bookings jump 46.9% to 360,000. Revenues drop 8.5% to \$22.53 million, while expenses dip 5.1% to

\$23.54 million. The operating loss increases to \$1 million, while the net loss "improves" to \$485,000.

On takeoff from Montego Bay on January 2, 1999, an **Air Jamaica, Ltd. (2)** A310-324 blows a tire and thus becomes unavailable for service. The scheduled flight to Atlanta is cancelled. In Georgia the next day, a B-727-227A is leased from Sun Pacific International to operate the return flight to Jamaica.

While en route from Atlanta as Flight 56, the trijet, with 110 passengers, is forced to divert to Jacksonville when passengers report smelling smoke. No problems are found and the flight to Jamaica is completed.

By the first quarter, **Sun Jet International Sales** has flown over 1,000,000 passengers on its "Myrtle Beach Jet Express." A second daily roundtrip "Myrtle Beach Jet Express" service is inaugurated on March 4.

A new nonstop service is inaugurated by **Sun Jet International Sales**, also on March 4, from West Palm Beach and Orlando to Newark. The flight brings the total number of daily flights from Florida to New York to seven, including six daily (except Tuesday) roundtrips simultaneously reinstated from Fort Lauderdale to New York (JFK) and Islip. Once more, the actual service is provided by aircraft operated by Sun Pacific, **TransMeridian Airlines**, or **Winair**.

On April 16, due to continuing maintenance and record-keeping problems, the FAA issues an emergency order suspending the carrier's operating certificate. Indicating that the airline had been made aware of these difficulties and had failed to correct them, the government regulators conclude that the airline is suffering from "systemic failures." It is given 10 days to appeal the order to the NTSB, during which time the order remains in effect.

Although the certificate is maintained, the company remains grounded into the summer.

Customer bookings plunge 85.2% this year to 83,000. Revenues total \$6.6 million, but expenses are \$11.86 million. The operating loss is \$5.6 million, while the net loss is \$5.7 million.

Service is maintained in 2000 with a pair of B-727-227As.

SUN VALLEY AIRLINES: United States (1966-1975). On January 27, 1966, **Janes Airways (1)** is renamed Sun Valley Airlines. The company's Beech 18s and Piper lightplanes continue to provide service linking Salt Lake City with Sun Valley, Boise, Burley, and Hailey. There are no untoward incidents until 1972. On February 20 of that year, a Beech 80 Queen Air crashes at Fairfield, Idaho, killing all five people aboard.

Service continues unabated until August 1975, when the company is merged with Ogden (Utah)-based **Key Airlines (1)**, which is owned by Johns-Manville Company, to form **Sun Valley Key Airlines**. In November, the name reverts to **Key Airlines (1)**.

SUN VALLEY KEY AIRLINES. See **KEY AIRLINES (1)**

SUN WEST AIRLINES: United States (1979-1985). Scottsdale, Arizona-based **Scottsdale Charter** establishes a scheduled airline division in early summer 1979. Employing 2 Piper PA-31-350 Piper Navajo Chieftains and 3 PA-34 Senecas, passenger and cargo revenue flights are inaugurated in July to Phoenix as well as Durango, Colorado.

Routes are stretched to the New Mexico cities of Farmington and Albuquerque in 1980.

Customer bookings for the first full year of service reach 4,487; 30,603 pounds of cargo are also flown.

The company fleet is increased to eight aircraft in 1981, including 2 Senecas, 5 Chieftains, and 1 Cheyenne II. Flight 104, a PA-31-350 with four aboard crashes at Colorado's Durango-LaPlata County Airport on December 31; there are no survivors.

Enplanements for President John R. Walters' carrier jump an unbelievable 480.8% to reach 26,050; freight is also up strongly, 149.4% to 75,000 pounds.

Company headquarters are transferred to Phoenix in 1982 as passenger boardings accelerate to 34,970. Cargo bounces upward 46.8% to 112,054 pounds.

Customer bookings rise 22% in **1983** to 42,658 while freight gains by 73.3% to 194,169 pounds.

Bookings climb to 41,650 in **1983** and in **1984**, the fleet comprises 4 Beech 99s and 1 Navajo Chieftain. New destinations visited since start-up now include Flagstaff, Gallup, Winslow, and Yuma. In October, five-times-per-day service is inaugurated between Phoenix and Prescott; three-times-per-day from Phoenix to Bullhead City/Laughlin; and twice daily from Phoenix to Las Vegas.

Passenger boardings advance 64% to 62,874 and cargo jumps 28.6% to 221,000 pounds. Overexpanded and under capitalized, the carrier, having failed to find new financing, is forced to file for Chapter XI bankruptcy in March **1985**. It is unable to reorganize.

SUN WEST INTERNATIONAL AIRLINES: 3550 Laughlin View Drive, Bullhead City, Arizona, 86429, United States; Phone (520) 754-1119; Year Founded 2000. Sun West International is established at Bullhead City in the summer of **2000** to provide lift for gamblers visiting the Harrah's casinos at New Orleans and at the new gambling mecca at Laughlin, Nevada, just across the Colorado River. Employing a pair of Boeing 737-236As wet-leased from **Pace Airlines**, the company begins revenue operations in July. Charters for professional sports teams, particularly those from the National Hockey League, are also arranged.

The *Des Moines Register* will report on March 10, **2001**, that Sun West has offered to purchase certain assets of **AccessAir**, which had gone out of business on February 27, for \$750,000. Aircraft spare parts, office equipment, and assorted other materials would be included if such an arrangement were completed.

SUN WORLD AIRLINES: United States (1971–1972). Sun World Airlines is set up at Burbank, California, in **1971** to provide scheduled passenger and cargo commuter flights with a fleet of Cessna 402s. Revenue flights linking the company's base with Phoenix, Prescott, and Kingman in Arizona are inaugurated, but are maintained for less than a year.

SUNAIR EXPRESS: Redding Municipal Airport, 3770 Flight Avenue, Redding, California 96002, United States; Phone (530) 226-0717; Fax (530) 226-8462; <http://www.iflysunair.com>; Year Founded 2000. Andrew Krochmalny establishes SunAir Express at Redding in early summer **2000** to provide scheduled commuter service to Sacramento. Employing a pair of Cessna 208 Caravans, thrice-daily roundtrips commence in August. Two flights continue onto Oakland and back.

Early in **2001**, Sacramento County will demand that the start-up provide \$150 million in liability insurance to use the commuter terminal at Sacramento International Airport. President Krochmalny will inform the *Sacramento Bee* on March 8 that the added \$25,000 premium cost may put him out of business.

SUNBELT AIRLINES (1): United States (1979–1980). Sunbelt (1) is set up at Rome, Georgia, in **1979** to provide scheduled daily roundtrip shuttles to Atlanta. Although Cessna lightplane revenue frequencies are duly inaugurated, they cannot be maintained far into **1980**.

SUNBELT AIRLINES (2): United States (1982–1984). In March **1982**, Camden (Arkansas)-based **Jamaire** is renamed Sunbelt Airlines. Scheduled third-level passenger services continue to be offered linking the company's base with the Arkansas communities of El Dorado, Fayetteville, and Fort Smith as well as Memphis, Dallas (DFW), New Orleans, Muscle Shoals, Alabama, and the cities of Jackson, Laurel/Hattiesburg, Meridian, and Tupelo, Mississippi.

The workforce is increased 36.4% during the year to 75 and the fleet now comprises 2 Embraer EMB-110 Bandeirantes and 3 Cessna 402s.

Enplanements for the year total 29,065, a 47.6% boost, and cargo grows 17.1% to 96,000 pounds.

Airline employment in **1983** is 130, a 62.5% boost, and 2 Shorts 360s are added.

Passenger boardings accelerate 23.3% to 35,823.

The carrier is unable to weather the personal bankruptcy of its former president, owner of more than half of Sunbelt's stock, and shuts down on October 9, **1984**.

SUNBIRD AIR: United States (1978–1986). Established by M. W. "Dudley" Bourne at Murray–Calloway County Airport in Murray, Kentucky, in **1978**, Sunbird initially undertakes nonscheduled air taxi flights linking its base with Nashville, Tennessee, employing two PA-28 Cherokees. Enplanements continue during the remainder of the decade.

The decision is taken just after New Year's Day **1980** to set up a scheduled airline division. Daily roundtrip frequencies are inaugurated in March to Memphis via Paris and Nashville.

Low traffic and high expenses in the years of recession following the **1981** PATCO air traffic controllers' strike, causes the small regional to contract services until it is left with only routes from Murray to Memphis and Paris, Tennessee.

Unable to continue, the carrier shuts its doors on March 28, **1986**.

SUNBIRD AIRLINES (1): United States (1980). Sunbird Airlines (1) is set up at Nashville, Tennessee, in the early fall of **1980** to provide daily roundtrip air taxi flights up to Murray, Kentucky. Piper PA-32 Cherokee Six revenue shuttles are inaugurated on October 1, but are maintained for only one quarter.

SUNBIRD AIRLINES (2): United States (1979–1985). Organized by Ralph Quinlan at Denver/Charlotte, North Carolina, in early **1979**, Sunbird inaugurates scheduled Cessna 402 daily service on November 15 over a route from Hickory to Rocky Mount via Charlotte and Raleigh. The fleet comprises 1 Cessna 404 Titan and 5 Cessna 402Cs are acquired; orders remain outstanding for 2 more 402Cs and fresh orders are placed for 10 Beech 99s. The operations and maintenance centers are established at Little Mountain Airport at Maiden.

Enplanements by the 32-employee company reach 6,000.

During **1980**, flights, many replacement services for **Piedmont Airlines**, are launched to Atlanta, Tri-Cities, Fayetteville, Wilmington, Kingston, Greenville, and Norfolk.

Passenger boardings climb to 41,170.

Traffic increases steadily; 77,250 passengers are enplaned in **1981**. President Quinlan's fleet comprises 8 Cessna 402s, 2 Cessna 404 Titans, and 2 Beech 99s.

The payroll is cut 22.3% in **1982** to 101 employees and the fleet includes 8 99s, 6 Cessna 402s, and 1 Cessna 404 Titan. These 15 aircraft fly over a route system that now includes markets not only in North Carolina, but in South Carolina, Georgia, and Tennessee as well.

Late in the year, an interline agreement is signed with **Piedmont Airlines**, whereby the small regional will provide feed from Winston-Salem to the nation's Charlotte hub.

Customer bookings swing upward by 3.6% to 88,453.

Atlantic Southeast Airlines official Roy Hagerty becomes president in June **1983**, merging the company with his Air Transportation Holding Company. On June 22, the carrier merges **Atlanta Express Airline Corporation**.

Passenger traffic is off by 7.5% with bookings down to 81,189.

On July 11, **1984**, the company is reacquired by new owners and renamed Sunbird Airlines 1984, Inc. The new owners are mostly private investors, including Roy and Harry Hagerty, along with minority interest from Air Transportation Holding Company (Air T), which now also controls **Mountain Air Cargo**. Company headquarters are moved from Hickory, North Carolina, to new offices near Charlotte–Douglas International Airport.

Passenger boardings dip again, down 17.4% to 67,062.

When both **American Airlines** and **Eastern Air Lines** move to acquire commuter affiliates at Charlotte, **Piedmont Airlines** works out an arrangement with Sunbird, which becomes Sunbird, the "Piedmont Commuter" on May 1, **1985**.

En route from Hickory Municipal Airport to Charlotte on an August 28 training flight, a Beech C99 with three crew strikes a row of trees and utility pole, which cause it to crash 11 km. E of Hickory; there are no survivors.

To avoid continuing confusion with Murray, Kentucky-based Sunbird, the carrier changes its name to **CCAair** on January 1, 1986.

SUNBIRD AIRLINES (PTY.), LTD.: Australia (1982–1991). A division of **Helitrans Australia (Pty.), Ltd.**, Sunbird is formed at Cairns in 1982 to provide scheduled fixed-wing commuter flights into northern Queensland. A fleet is assembled comprising 2 Piper PA-31-350 Navajo Chieftains and 1 Piper PA-23 Aztec plus Bell 206B JetRanger helicopters leased as required from the parent. Scheduled services are inaugurated to Aurukun Mission, Croydon, Delta Downs, Dorunda Station, Georgetown, Koolatah, Kowanyama, Normanton, and Robinhood.

Within four years, Managing Director Bruce L. Evans's carrier has added Mareeba and the Torres Straits Islands to its route network. The fleet is also increased and while the Aztec is gone, it is replaced by 3 Pilatus-Britten-Norman PBN-2 Islanders, 3 Cessna 310s, 2 Cessna 404s, 5 Cessna 421s, 1 PA-31-310 Navajo, and 1 Partenavia P-66B.

In 1990, the carrier is purchased into the Norfolk Airlines Group and new Managing Director Andrew Hoar's fleet is significantly reduced. It now includes only 2 Islanders, 5 Cessna 310s, 3 Cessna 404s, and 3 Cessna 421s. Unable to maintain economic viability in an increasingly competitive market, the carrier does not see its tenth anniversary, being declared insolvent and forced to close in the spring of 1991.

SUNBIRD AIRWAYS: 5456 Hoffner Avenue, Orlando, Florida 32812, United States; Phone (813) 530-1515; Fax (813) 530-4082; Year Founded 1993. Sunbird is established at Orlando in 1993 to provide regional passenger charter and inclusive-tour services. Revenue flights commence with two each Douglas DC-9-31s and McDonnell Douglas MD-81s.

The fleet is altered in 1994 to include 2 B-727-225As and 1 each B-727-222 and B-727-230A. New York, Detroit, Minneapolis, and Dallas (DFW) continue as the company's principal destinations.

Operations continue apace in 1995–1999.

SUNBIRD AVIATION, LTD.: Kenya (1979–1985). Chairman M. Hemstead and Managing Director R. D. Knight are appointed by the Cassman Brown Group to organize Sunbird at Nairobi in July 1979 following the merger of the corporation's **Caspair Air Charter, Ltd.** with **Sunbird Charters, Ltd.**

The initial fleet comprises 2 Douglas DC-3s, 2 Cessna 404 Titans, 2 Beech King Air 200s, 2 Britten-Norman BN-2 Islanders, 2 Piper PA-31-310 Navajos, 2 Cessna 402s, 1 Cessna 310, 3 Partenavia P-68Bs, and 2 Beech B-58 Barons.

Scheduled passenger and cargo services are initiated from the capital's Wilson Airport to Kisumu, Keekorok, Mara Serena, Musiara, and Kichwa Tembo. Charter flights are also undertaken to destinations in the Sudan, Somalia, Uganda, and Tanzania.

During the early 1980s, attention is given to the tourist-safari trade and twice-daily scheduled services are launched to lodges and wildlife reserves.

A DC-3 with 2 crew and 36 passengers is destroyed as the result of a bad landing at Kilaguni on August 15, 1987; there are no fatalities.

In November, the carrier is merged with **Wilkenair, Ltd.** to form **Air Kenya Aviation, Ltd.**

SUNDANCE HELICOPTERS: McCarran International Airport, 5596 Haven Street, Las Vegas, Nevada, 89119, United States; Phone (702) 736-0606; Fax (702) 736-4107; http://www.helicoptour.com; Year Founded 1984. This concern is established at Las Vegas in 1984 under the name **Helicopter Services of Nevada** to provide FAA Part 135 charter flights, as well as aerial tours of the local region, including Las Vegas at night, Zion Canyon, Bryce Canyon, and the Grand Canyon.

The company takes its present name in 1993. At this point, the company also begins to engage in external load and contract service work, as well as flights on behalf of television stations, film crews, and government agencies. By the end of the decade, Sundance is operating over 5,600 flights annually, which transport in excess of 28,000 customers.

Jim Granquist is president in 2000 and oversees a 28-person workforce. The fleet comprises 2 Eurocopter AS-350B A-Stars, 3 Bell 206B JetRangers, 3 Bell 206L LongRangers, and 2 Beta R-22s.

SUNDORPH AERONAUTICAL CORPORATION (SAC): United States (1969–1984). Eiler Sundorph, owner of the established FBO at Cleveland's Lakefront Airport, creates an airline division during the first quarter of 1969 to provide scheduled passenger and cargo flights to Akron and Columbus. Employing a Lockheed Model 18 Lodestar, Sundorph inaugurates daily roundtrips on March 17. Traffic does not materialize and the scheduled offering is suspended in 1970. Charters are, however, offered over the next 12 years.

During the late spring of 1983, the decision is taken to resume scheduled services to the destinations visited in 1969 plus Detroit. Daily revenue frequencies commence on June 1 and are maintained with a fleet of 4 Piper PA-31-350 Navajo Chieftains.

In April 1984, the FAA grounds the carrier for maintenance violations and its certification is revoked.

SUNDTAIR, A.S.: P.O. Box 31, Gardemon 2061, Norway; Phone 47 63929660; Fax 47 63929670; Year Founded 1996. Sundtair is established at Gardemon in 1996 to provide executive and small group air taxi services to destinations in Norway and throughout Europe. By 2000, the company employs 14 full-time pilots and operates 1 Beech Super King Air 200 and 3 Cessna Citation III bizjets.

SUNEXPRESS AIRLINES MALDIVES, LTD.: 2nd Floor, 35 Boduthakurufaanu Magu, P.O. Box 20104, Male, 20-02, Maldives; Phone 960 320 001; Fax 960 320 007; http://www.sunexpressair.com; Year Founded 1997. The team that operates **Hummingbird Airways, Ltd.** establishes this new start-up at Male in October 1997. Shareholding is divided between UB Group (60%), Air Beach Resorts (30%), and Kit Chambers (10%). HA Chief Pilot Capt. Garth Duncan is named flight operations manager.

The new company has a long 17-month gestation period, during which time Hummingbird is submerged into the new carrier and the Chambers shareholding is taken over by the surviving partners. Employing 1 each leased Yakovlev Yak-40, Mil Mi-8 helicopter, and 2 float-equipped de Havilland Canada DHC-6-300s, revenue flights finally commence on May 27, 1999.

Service is maintained during the remainder of the year; however, the Yak-40 is quickly replaced with a DHC-6-100; this Twin Otter is also float-equipped. The carrier now begins to emphasize seaplane service between Male Airport and the outer islands.

A total of 41 workers are employed at the beginning of 2000.

SUNFLOWER AIRLINES, LTD.: P.O. Box 9452, Sunflower Hangar, Nadi Airport, Fiji; Phone 679 723 555; Fax 679 720 085; http://www.fiji.to; Code PI; Year Founded 1980. Mike Brook and Don Collingwood form this commuter at Nadi in May 1980, with the latter becoming managing director. Having obtained a Britten-Norman BN-2 Islander, a twice-weekly service is opened in July to the resort Castaway Taveuni. A route is also opened from Nadi to Nausori Airport at Suva, on the island of Viti Levu.

Frequencies on the resort route are increased in 1981 to four per week. During the first full year, a total of 7,000 passengers are carried. Replacement flights are begun in 1982 on several interisland routes abandoned by **Fiji Air, Ltd.** Charter flights are undertaken to a variety of local destinations and boardings soar to 13,000.

Two additional BN-2s are acquired from **Malaysian Airlines System, Ltd. (MAS)** in late fall 1983 and enter service during Christmas week.

Enplanements grow to 26,000. As additional northern routes are flown in **1984**, a Lycoming-engine de Havilland DH 114 (Riley) Heron 2 is purchased from Tarawa's **Air Tungaru**; christened *Belo Vula* (White Heron), it is placed in service at year's end.

A typhoon strikes the carrier's Nadi facilities in January **1985**, damaging or destroying all aircraft except the BN-2 *Bui Nigone* (Old Fashioned Lady), under repair in New Zealand. Also damaged are a terminal air bridge and the company's hangar, which receives severe damage.

With the Heron repaired and a replacement Islander located and christened *Adi Mamanuca* (Plantation Girl), flight operations resume on a reduced basis in March. The remainder of the year is spent in upgrading the fleet and route network.

The fleet in **1986** comprises 2 BN-2s, 2 Riley Herons, and 1 Piper Aztec. Scheduled boardings reach the 5,000-per-month level by summer and charter flights are accelerated.

While on final approach to Nadi after a flight from Savu Savu on December 27, the right flap of a DH 114 Riley Heron 2B with 2 crew and 12 passengers jams, forcing the aircraft to roll over and smash into the ground short of the runway (11 dead).

Two years later in **1988**, Managing Director Collingwood's fleet has been upgraded by the addition of two more Islanders, the *Lewa Sewa* (Little Lady) and *Adi Yasawe* (Yasawa Lady), and a Piper PA-31 Navajo Chieftain; one Riley Heron is retired. The last Riley Heron is retired in **1989** and is replaced by a Beech B80 Queen Air.

A traffic boom in **1990** results in reinstatement of the Riley Heron *Belo Vula* and the acquisition of one more Islander, the *Adi Makutu* (Determined Lady) and two de Havilland Canada DHC-6-210 Twin Otters, which are christened *Spirit of the North* and *Spirit of the West*, respectively.

By **1991**, Donald I. Collingwood, now chairman, oversees a company that employs 60 workers. Enplanements total 122,000, including 18,000 taken on charters.

The fleet in **1992** includes 2 Twin Otters, 1 Riley Heron returned to duty, 5 Islanders, and 1 Avions de Transport Regional ATR42-300 leased from **Air Pacific, Ltd.** Also available is a Cessna 152, the *Ratu Ropate* (Sir Robert) and a Cessna 172N, the *Ratu Ian* (Sir Ian).

Customer bookings rise to 140,000, including 20,000 charters.

Operations continue in **1993-1994**. Enplanements in **1995** total 148,274.

Airline employment is increased by 22.7% in **1996** to 135 and the fleet now includes 3 de Havilland Canada DHC-6-300 Twin Otters, 6 Islanders, 1 Shorts 330, and 1 Beech 80 Queen Air.

Passenger boardings soar 16.7% to 178,000.

Flights continue in **1997-1998**. During the latter year, enplanements total 190,000 and revenues of F\$7.7 million are generated.

Scheduled destinations visited in **1999-2000** include Castaway, Kandavu, Labasa, Laucata Island, Malolotilai, Mana Island, Rotuma Island, Savusavu, Suva, and Taveuni. During these years, the employee total reaches 175, a second Shorts 330-200 is acquired, and Sunflower carries 60% of all visitors to Fiji and 40% of local traffic.

SUNJET AVIATION: 1604 Hangar Road, No. 333, Orlando Sanford Airport, Sanford, Florida 32773, United States; Phone (407) 328-8440; Fax (407) 328-8442; <http://www.gentech.net/sunjet>; Code JX; Year Founded 1990. Sunjet Aviation is established at Orlando Sanford Airport in **1990** to offer worldwide executive passenger charters. Revenue flights duly commence and continue under the marketing name "Sunjet International Airlines."

By **2000**, General Manager Jimmy Watkins employs 3 full-time and 6 part-time pilots to operate the company's Learjet 35A and Cessna 501 Citation I/SP.

SUNJET INTERNATIONAL AIRLINES. See **SUNJET AVIATION**

SUNQUEST EXECUTIVE AIR CHARTER: 7155 Valjean Ave., Van Nuys, California 91406, United States; Phone (818) 778-6520; Fax (818) 778-6526; Year Founded 1992. Sunquest is founded at Van Nuys in **1992** to provide executive and small group passenger charters

throughout the U.S. and Canada. Within 8 years, the concern employs 8 pilots and flies 3 Piper PA-31-350 Navajo Chieftains, 2 Beech Super King Air 200s, and 1 Cessna 310Q.

SUNRISE AIRLINES: 3150 East Airport Loop, Suite C, Show Low, Arizona, 85901, United States; Phone (520) 532-8888; Fax (520) 645-9318; <http://www.sunriseair.net>; Year Founded 1998. At the beginning of **1998**, Moab, Utah-based Redtail Aviation is awarded an Essential Air Service (EAS) contract by the Department of Transportation for the operation of daily scheduled roundtrip passenger service between Moab and Salt Lake City. On September 24, Redtail is sold to Phoenix-based Express Air. The FBO and cargo operation continues under the Redtail banner, while all future scheduled flights, including the \$1,087,340 annual EAS services later expanded, are to be offered as **Sunrise Airlines**. The takeover, according to September 24 *Tribune Business News* feature, is to be completed by November 1.

Revenue services begin with a fleet of 6 leased British Aerospace BAe Jetstream 31s, linking the company's base with Phoenix and Show Low, Arizona, Las Vegas, Ely, and Elko, Nevada, and Salt Lake City, Vernal, and Moab, Utah. A tour and leisure division, Sunrise Vacations, focuses on the combination of travel on the airline with vacation and tour packages. SV destinations include Grand Canyon National Park, Bryce Canyon National Park, Canyonlands National Park, and Monument Valley.

Flights continue without headline or incident in **1999-2000**, with annual boardings approaching 60,000; over 50% of all customers come from outside the U.S.

On November 3 of the latter year, Sunrise suddenly files for bankruptcy and shuts down all of its scheduled routes except the one from Show Low to Phoenix. A news release from the office of Nevada U.S. Senator Harry Reid indicates that the grounding has been caused by the airline's inability to get an extension on its aircraft lease payments.

In bankruptcy court, it is revealed that the small regional has assets and debts of between \$1 million and \$10 million each. A long list of creditors await payment; for example, the city of Page (\$223,334) and the Phoenix Aviation Department (\$5,493). Arrangements are made to keep the airline flying its Show Low-to-Phoenix route and its Web page remains viable well into the new year.

SUNSHINE AIRLINES: 7155 Valjean Avenue, Van Nuys, California 91406, United States; Phone (818) 997-4597; Fax (818) 997-8372; <http://www.sunshineair.com>; Code SO; Year Founded 1995. Three years after the establishment of the nonscheduled **Sunquest Executive Air Charter**, Laurence Balter sets up Sunshine at Van Nuys, California, in **1995**, to provide third-level scheduled services in the Southern California area. Chief Pilot Jim Rinaldi begins and continues frequencies with 6 Cessna 402s.

SUNSHINE AVIATION, LTD.: Lugano Airport, Lugano, CH-6982, Switzerland; Phone 41 (91) 594 141; Fax 41 (91) 595 932; Year Founded 1985. Capitalized at SFr 100,000, Sunshine is established by a group of Ticino businessmen at Locarno in **1985** to serve as an air taxi for Italian-speaking Switzerland. Twin bases are set up at the airports of Locarno/Magadino and Lugano/Agno and operations commence with a fleet comprising 1 Cessna 340, 1 Piper PA-31-310 Navajo, and 1 PA-31T Cheyenne.

A Dornier 228-100 is ordered in **1986** and "quasi-scheduled" weekend flights are inaugurated on December 13 linking Locarno/Lugano with the Samedan airfield, which serves the Swiss sports center at St. Moritz. The last of these services, undertaken primarily for ski holiday passengers, is completed on April 26, **1987**. Beginning on May 1, Sunshine operates replacement flights for Alisarda between the Ticino airports and Oibia.

Capitalization is now increased to SFr 2.5 million and the German-made turboprop enters service. During the summer, "quasi-scheduled" charter flights are inaugurated on fixed days on behalf of ATAV, the Ti-

cino Travel Agents Association, to Oibia/Sardinia, Elba Island, and Sicily, to Corfu/Greece, Ajacolo/Corsica, Mahon/Menorca, Malta, and Sfax/Tunisia.

In late 1988, the decision is taken to offer scheduled regional services. Giacomo Babbucci is appointed managing director in early 1989 and he assembles a fleet comprising 1 Cessna 600 Citation II, 1 Dornier 228-201, and 1 Fokker F.27-200. Orders are placed for 1 Dornier 328-100. The available aircraft are employed to inaugurate scheduled flights to Elba, Olbia, and Cagliari. Charter work is also undertaken.

The Cessna Citation II is deleted in 1991 and Giorgio Giani becomes managing director in 1992, the same year in which the Dornier 228-201 is leased to the Swiss regional Air Engiadina, A.G. In 1993, airline employment is 12 and the fleet includes 1 Dornier and 2 F.27-200s. The flight equipment is changed again in 1994, with operations now being conducted with the new and larger Dornier and a Cessna 600 Citation II.

Flights continue in 1995-1999.

SUNSHINE COAST AIR CHARTER (PTY.), LTD.: Pathfinder Drive, Caloundra Airport, Caloundra, Queensland, 4551, Australia; Phone 61 754 911 988; Fax 61 754 918 346; Year Founded 1979. Sunshine Coast is established at Caloundra in 1979 to provide airport service as well as to conduct executive, small group, and bush charters into the surrounding countryside. By 2000, Chief Pilot Lester Niedeck employs 3 other full-time pilots and oversees the flights of 2 Cessna 172 Skyhawks, 1 Cessna 310, and 1 Piper PA-34-200 Seneca I.

SUNSHINE EXPRESS AIRLINES (PTY.), LTD.: Friendship Dr., Sunshine Coast Airport, Queensland, 4564, Australia; Phone 61 (7) 544 88700; Fax 61 (7) 544 87070; Code CQ; Year Founded 1998. Aeromi Australia (Pty.), Ltd. establishes Sunshine during the summer of 1998 to offer scheduled flights from the Sunshine coast to Brisbane in association with Ansett Australia (Pty.), Ltd. Steve J. Padgett is named CEO and is provided with a single Embraer EMB-110P1 Bandeirante.

Revenue flights, code-shared with the major, are inaugurated on October 25 linking Maroochydore with Brisbane.

A second Bandeirante is acquired in the spring of 1999. Enplanements for the first full year of service total 25,000.

Seven workers are employed at the beginning of 2000. Beginning on October 12, passengers are able to employ the Ansett Australia (Pty.), Ltd. e-check-in machines that were installed at the domestic terminals at Melbourne, Sydney, and Brisbane in August.

SUNSHINE HELICOPTERS: Kahului Heliport #107, Kahului, Hawaii 96732, United States; Phone 808 871-5600; Fax 808 871-0682; <http://www.sunshinehelicopters.com>; Year Founded 1985. Following an 11-year stint as manager for an aviation concern in Anchorage, Alaska, former Vietnam War helicopter pilot Ross Scott and his wife, Anna, relocate to Maui, Hawaii, to operate Alihilani Yacht Charters. In 1985, pilot Scott, yearning to fly again, leases a pair of helicopters and establishes Sunshine Helicopters at Kahului.

During the next 25 years, Sunshine grows into a noteworthy flight-seeing operation. From the air customers view the dense jungles, towering waterfalls, and other sights of Maui, as well as the fiery lava of Kilauea Volcano on the Big Island of Hawaii. By the end of the 1990s, President Scott oversees the flights of 6 Eurocopter AS-350BAA Stars, all painted in a "Black Beauty" black livery. These annually accomplish over 8,500 flights, transporting in excess of 51,000 passengers.

SUNSTATE AIRLINES (PTY.), LTD.: P.O. Box 256, Hamilton Central, Brisbane, Queensland, 4007, Australia; Phone 61 (7) 860-4577; Fax 61 (7) 860-4578; <http://www.qantas.com.au/flying/regional/index.html#sun>; Code OF; Year Founded 1980. Noosa Airlines (Pty.), Ltd. CEO and former truck dealer Bevan Whitaker forms this commuter at Brisbane in the fall of 1980 to operate commuter services feeding Trans-Australian Airlines (Pty.), Ltd. (TAA). Initial services begin in December over a route from Brisbane to Maryborough, Bund-

aberg, Gladstone, and Toowoomba. The company grows in size and by 1983 the employee population totals 64 and 93,381 passengers are boarded. This growth results in Whitaker's decision to integrate his other airline activity, Noosa Airlines (Pty.), Ltd. into Sunstate and this process is completed on January 1, 1984.

During the next several years, flights are undertaken to the following destinations on various schedules: Brisbane, Bundaberg, Gladstone, Great Keppel Island, Hervey Bay, Maroochydore, Maryborough, Noosa, Rockhampton, and Toowoomba. The fleet in 1985 comprises 1 Shorts 360, 2 Embraer EMB-110P1 Bandeirantes, 3 de Havilland Canada DHC-6-200s, 1 GAF Nomad N-24A, and 1 Britten-Norman BN-2 Islander. Operations continue apace through 1988.

The workforce is increased by 11.1% in 1989 to 120 and the fleet now includes 3 Shorts 360s, 2 de Havilland Canada DHC-6-300 Twin Otters, and 1 Embraer EMB-110P Bandeirante. An Embraer EMB-110 is ordered as an interest in the third-level operation is taken by Australian Airlines (Pty.), Ltd. in June.

Enplanements for the year total 164,432.

Four new employees are hired in 1990. Controlling interest in the company is taken over by Australian Airlines in October and the Brisbane-based airline repaints its fleet, which now includes 3 Shorts 360s, 2 Shorts 330s, 2 Twin Otters, 1 Bandeirante, and 1 Cessna 404 Titan.

Enplanements climb 5.1% over the previous year to 172,800. Revenues total A\$19.4 million and expenses are less. As a result, an A\$3.9-million operating profit is generated. Costs of the changeover, together with world economic conditions, lead to a net loss of A\$170,950.

In 1991, the fleet of General Manager Greg Bee's expanding operation includes the 2 Bandeirantes, 3 Shorts 360s, and 2 DHC-6s. The Shorts 330s are placed up for sale. Hubbing on Brisbane, the carrier becomes a member of the new Australian Airlink commuter network in August, following its 100% takeover by Australian Airlines (Pty.), Ltd.

A total of 175,195 passengers are carried on the year.

The two EMB-110s are withdrawn in 1992 in favor of two de Havilland Canada DHC-8-101s and a DHC-8-102. The company's parent is taken over by Qantas Airways (Pty.), Ltd. in September and Sunstate, in the process, has a new owner.

Customer bookings decline 5% to 165,946.

In 1993, new General Manager Ashley Kilroy oversees a workforce of 171, up 31.5% over the previous year. When Australian Regional Airlines (Pty.), Ltd. is eliminated, its routes and assets are passed to Sunstate. Thus the commuter's fleet now includes 3 Dash-8s, 4 Shorts 360s, and 1 Shorts 330 and are put to work feeding Qantas Airways (Pty.), Ltd. at Brisbane.

Passenger boardings swell 34.2% to 268,142 and the net gain is A\$122,000.

The fleet in 1994 includes 3 Dash-8s, 4 Shorts 360s, 1 Shorts 330, and 5 DHC-6s.

Passenger boardings recover, increasing by 32.5% to 308,000, and an A\$1.5-million profit is earned.

The workforce is increased by 21.1% in 1995 to 230 and the fleet is increased by the addition of 1 DHC-8 and 2 Shorts 360s.

The added capacity helps customer bookings to leap up 39.7% to 408,775.

Ten workers retired or are laid off in 1996, a 4.3% decrease in the employee population. Two more Shorts 360s arrive and help enplanements to jump 6.8% to 436,180.

Destinations visited in 1997 include Barnaga, Blackwater, Brampton Island, Bundaberg, Cairns, Dunk Island, Emerald, Gladstone, Great Keppel Island, Hervey Bay, Lizard Island, Lord Howe Island, Mackay, Maroochydore, Maryborough, Rockhampton, Thursday Island, and Townsville.

Passenger boardings inch up 1.8% to 444,055.

In May 1998, a DHC-8Q-200 is ordered from Bombardier, the aircraft's Canadian manufacturer. New daily roundtrips are introduced on June 1 between Brisbane and Rockhampton.

Customer bookings during the 12 months advance by 7.4% to 477,000.

By the start of **1999**, airline employment has grown by 9.1% to 240. Customer bookings for the year accelerate 4.2% to 403,000.

Airline employment at the beginning of **2000** stands at 245, an 8.4% increase over the previous 12 months.

On April 5, the company receives the first Dash 8-Q300 to be delivered in Australia. The super-quiet turboprop is placed into service on the weekday route from Cairns to Townsville and on Saturdays between Cairns and Hamilton Island.

SUNSTATE AIRLINES (MILDURA) (PTY.), LTD.: Australia (1986–1991). Following the collapse of **Murray Valley Airlines (Pty.), Ltd.** on October 31, **1986**, this commuter is quickly established under the leadership of local accountant Lloyd Thompson as its Mildura Airport-based successor. Ownership is divided between Mildura businessmen and **Australian Airlines (Pty.), Ltd.** (66%) and Bevan Whitaker, owner of **Sunstate Airlines (Pty.), Ltd.** (33%).

Employing 1 Shorts 360 and 1 Cessna 404 Titan obtained from Murray Valley's assets, Managing Director Tony Matthews and Chief Pilot Damian Cresp launch scheduled services over the predecessor's routes on November 9. With the entire Murray Valley staff retained, travelers notice little change. Enplanements total 34,000.

Operations continue apace through the remainder of the decade and into the next and in **1991** the carrier becomes an **Australian Airlines (Pty.), Ltd.** affiliate and at year's end is renamed **Southern Australia Airlines (Pty.), Ltd.**

SUNWAYS AIRLINES, A.B.: Sweden (1994–1997). Sunways Airlines is set up at Stockholm's Arlanda Airport on October 30, **1994**, to provide domestic and regional charters, both passenger and cargo. Shareholding is divided between Izzet Edige, Haluk Semiz, and Ilmari Haapajoki. Richard W. Hjelt is appointed chairman, with Engin Gulmez as managing director. A workforce of 330 is recruited over the next 6 months. Three Boeing 757-236s and a B-757-23A are leased and are employed to inaugurate revenue flights on May 22, **1995**. Two of the B-757-236s are soon leased to **Sunways Intersun Havacilik, A.O.** and replaced with McDonnell Douglas MD-83s.

Services continue during the remainder of the year and in **1996–1997**. During these years, destinations visited include Agadir, Bergen, Billund, Cardiff, Copenhagen, Dubai, Fuerteventura, Goa, Goteborg, Gran Canaria, Helsinki, Hurghada, Jonkoping, Kalmar, Kristiansand, Kuopio, London (LGW and CTN), Lulea, Manchester, Mombasa, Newcastle, Orebro, Ostersund, Oulu, Phuket, Stavanger, Tampere, Trondheim, Ulmea, and Vasteras.

One of the company's B-757-236s is grounded in Denmark during the summer, where it is repossessed by its lessor. The company goes bankrupt and shuts its doors in September.

SUNWAYS INTERSUN HAVACILIK, A.O.: Turkey (1994–1997). SIH is founded by the Tursem Group of Tour Operators at Antalya on November 1, **1994** to provide international passenger and cargo charters. Shareholding is specifically divided between Tursem Turistik Hizmetler Mumessillik ve Ticaret, A.S., Intersem Mumessillik ve Dis Ticaret A.S., Haluk Semiz, Mujde Semiz, and Nedim Gurbuz, the latter being named chairman.

Adi Cavas is appointed managing director and over the next six months he assembles a workforce of 320 and orders 3, later 4, McDonnell Douglas MD-83s. During the production period for the jetliners, he also arranges to lease a pair of Boeing 757-236s from **Sunway Airlines, A.B.** Revenue flights commence on April 8, **1995**.

Services continue during the remainder of the year and in **1996**. During these years, destinations visited include Aalborg, Aarhus, Bergen, Berlin (Schoenefeld and Tegel Airports), Billund, Birmingham, Bodo, Bristol, Cardiff, Cologne, Copenhagen, Dalaman, Dusseldorf, East Midlands Airport, Edinburgh, Esbjerg, Frankfurt, Glasgow, Goteborg, Hamburg, Helsinki, Humberside, Isle of Man, Istanbul, Izmir, Joensuu, Jonkoping, Jyvaskyla, Kajaani, Kalmar, Kokkola, Kristiansand, Kuopio,

Lappeenranta, Leipzig, Liverpool, London (CTN, LGW, and STN), Lulea, Malmo, Manchester, Munich, Newcastle, Nuremberg, Orebro, Bofors, Ostersund, Oulu, Pori, Rovaniemi, Savonlinna, Stockholm (Arlanda Airport), Stuttgart, Tampere, Turku, and Teesside.

At the end of September, a company MD-83 causes significant concern. Upon its departure from Turkey, from intermediate points in Germany, as well as its landing at its ultimate destination of Kajaani, Finland (near the Arctic Circle), loud bangs from repeated compressor stalls of the left engine are heard. As the aircraft attempts to depart for Turkey with 137 vacationers aboard, the left compressor stalls again on the taxiway, forcing it to return to the block. An inspection shows numerous fan blade cracks in the left engine, leading Finnish authorities to ground the plane and seize its flight data recorders.

Just after landing at Joensuu, Finland, an intermediate stop on an April 10, **1997** service from Jyvaskyla to Antalya, Turkey, an MD-83, with 166 passengers overruns the runway and comes to a stop just before hitting an airport perimeter fence. No injuries are reported.

Over the next two quarters, numerous safety violations by this airline's MD-83s are recorded, particularly in Scandinavia. In Sweden, one of the jets lines up to land on a country road instead of the runway at Ostersund, only changing at the last moment. Similar near misses occur at the airports of Kajaani, Kuopio, and Oulu in Finland and at Kristiansand, Norway.

Following the bankruptcy of **Sunways Airlines, A.B.** in Sweden in September, this company is shut down in October by the national banks that are acting in the bankruptcy proceedings.

SUNWEST AVIATION: Santa Ynez Valley Airport, P.O. Box 960, Santa Ynez, California, 93460, United States; Phone (800) 293-2437; <http://www.silcom.com/~sunwest>; Year Founded 1987. Alan and Janet Jones, lifelong residents of the Santa Ynez Valley, establish this concern in **1987** as a family operation to provide flight management services for local aircraft owners. Over the next 14 years, the company employs workers at bases in both Santa Barbara and San Luis counties and develop into the largest charter operator on the central California coast, incorporating additional aircraft, a flight school, car rentals, and a maintenance shop into its growing family.

By **2000**, the light aircraft operator provides daily return Sun West Shuttle flights to and between San Luis Obispo, Santa Maria, Santa Ynez, San Jose, Oakland, and Sacramento. Also offered are Cessna 172 scenic flights and banner-towing for the entire central coast. On-demand charters remain a company speciality and are fully promoted on the company's Internet homepage.

SUNWEST HOME AVIATION, LTD.: 230 Aviation Place, N.E., Calgary, Alberta T2E 7G1, Canada; Phone (403) 275-8121; Fax (403) 275-4637; <http://www.aso.com/seller/9297>; Year Founded 1999. During the spring of **1998**, merger discussions are begun between Gordon Laing, who together with his wife and several partners own Calgary-based **Sunwest International Aviation Services, Ltd.**, and his chief pilot, Mark Eberl, and Richard Hotchkiss who, with three partners, own cross-field competitors Home Aviation, Ltd.

Sunwest had been founded in 1986 when the Laings purchased and renamed Skocdopole Brothers Aviation, Ltd. Over the next 12 years, the firm builds up a significant maintenance business and operates charters with a fleet that has come to include 7 Piper PA-31-310 Navajos, 4 Fairchild Metroliners, and 1 each Beech King Air 100, Learjet 55, and Cessna Citation II.

Home, which is also flying executive and small group passenger charters with 1 each Beech Super King Air 200, Learjet 35, and Cessna Citation II, had been created in the early 1990s as the charter division of Home Oil Company, Ltd., and had had its own corporate flight unit for some years. In 1996, Home Oil is sold to Anderson Exploration, Ltd., which in turn sells **Home Aviation, Ltd.**, together with its Beech Super King Air 200 and Learjet 55, to Richard Hotchkiss and three partners. By 1997, Home, which is operating from a leased Esso Aviat hangar, is

flying passenger and cargo charters with 8 aircraft and has added 1 Cessna Citation II.

Although discussions between the two concerns continue into the summer, they end abruptly in August after Gordon and Kathy Laing are killed in an accident.

Southwest and Home resume amalgamation discussions in January 1999. On June 24, a merger is completed and the two concerns become Sunwest Home Aviation, Ltd., with Eberl and Hotchkiss as joint managing directors.

The fleets are combined and Home Aviation's leased hangar is turned back to Esso Aviat. Work, completed a few months later, immediately begins on a 14,000-sq.-ft. addition to Southwest's southwestern-most hangar and office complex. In addition to an increased charter schedule permitted under an international license granted by the Canadian Transportation Agency on July 9, the new company expands its aeromedical services. It participates in the Human Organ Procurement and Exchange (HOPE) Program and also provides flights on behalf of the Alberta Shock Trauma Air Rescue Society (STARS).

During the summer, employing two newly acquired Fairchild Metro 23s, the company introduces replacement services for **Canadian Airlines, Ltd.** from Calgary to Medicine Hat and Cranbrook. The business fleet is enhanced by the addition of another Learjet 35 as well as a British Aerospace (HS) Hawker 800. The company also manages the Eurocopter AS-350B operated by Herman Lorenz of Hi Wood Helicopters, Ltd.

In addition, the company flies and maintains several historic aircraft, including a company-owned Beech 3NM Expeditor and local architect William Boucock's Boeing 75 Stearman.

SUNWEST INTERNATIONAL AVIATION SERVICES, LTD.: Canada (1986–1999). Privately owned SIAS is created at Calgary, Alberta, in 1986 when Gordon and Kathy Laing and their partners purchase and rename Skocdopole Brothers Aviation, Ltd. Over the next 12 years, the revitalized concern builds up a business offering passenger and cargo services to various exploration and energy firms. It also operates air-ambulance flights.

By late 1997, the company occupies 2 self-contained hangars totaling 32,000-sq.-ft. at Calgary Airport, near the Aero-Space Museum of Calgary. Here, aircraft maintenance and avionics work is performed under contract. Commuter facilities are also provided to a regional airline.

The workforce totals 55 at the beginning of 1998 and the fleet numbers 7 Piper PA-31-310 Navajos, 4 Fairchild Metroliners, and 1 each Beech King Air 100, Learjet 35, and Cessna Citation II.

During the spring, merger discussions are begun between Gordon Laing and his chief pilot, Mark Eberl, and Richard Hotchkiss, who, with three partners, owns cross-field competitors **Home Aviation, Ltd.** Home is also flying executive and small-group passenger charters and cargo flights with a fleet of 8 aircraft, including 1 each Beech Super King Air 200, Learjet 55, and Cessna Citation II. In August, Gordon and Kathy Laing are killed in an accident and all merger discussions are postponed.

Southwest resumes amalgamation discussions with Home in January 1999. On June 24, a merger is completed and the two concerns become Sunwest Home Aviation, Ltd., with Eberl and Hotchkiss as joint managing directors.

SUNWORLD INTERNATIONAL AIRLINES: 207 Grandview Drive, Fort Mitchell, Kentucky, United States; Phone (606) 331-0091; Fax (606) 578-1178; <http://www.sunworld-air.com>; Code SM; Year Founded 1996. This charter operator is established at Cincinnati in early 1996 by William Yung, owner of the Columbia Sussex Corporation, which holds hotel properties in the U.S. and Caribbean. On April 29, the company announces plans to inaugurate daily \$99 roundtrips from Akron–Canton Regional Airport to Newark (EWR) with a single Boeing 727-251 first flown by **Northwest Airlines**.

Delays in obtaining DOT and FAA certification cause the carrier to postpone its service launch three times until the end of May. Nonsched-

uled flights to additional domestic points and international services from "The Queen City" to Grand Cayman start in July.

Although traffic figures are not released, the carrier admits to losses of \$582,000 (operating) and \$2 million (net) on operating income of \$2 million.

Service continues in 1997. Enplanements total 47,000 and operating revenues reach \$6.34 million, but expenses climb to \$8.72 million. Consequently, the operating loss grows to \$2.37 million, while the net loss hits \$2.6 million.

Sunworld barely hangs on during 1998. Customer bookings drop 10.3% to 28,000. Revenues, on the other hand, increase by 27.1% to \$8 million, while expenses are held to \$7.82 million. There is a \$246,000 operating profit and a small \$60,000 net gain.

By the beginning of 1999, the workforce has been increased by 57.5% to 63.

Passenger boardings skyrocket 163.6% to 116,000. A total of 67 workers are employed at the beginning of 2000, a 6.3% increase over the previous 12 months.

Just after takeoff from Greensboro, South Carolina, on September 8, one of the carrier's two B-727-251As, on a charter with the North Carolina A & T football team aboard, develops engine trouble and is forced to return to its point of origin. A safe emergency landing is made.

Overall customer bookings during these 12 months jump 35.8% to 167,000.

SUNWORLD INTERNATIONAL AIRWAYS: United States (1981–1989). Jetwest International Airways is organized and incorporated at Las Vegas, Nevada, on June 4, 1981; however, after a long, financially required gestation period, company officials of the privately held carrier change the corporate identity to Sunworld International in early 1983.

With significant investment from George Sage's Providence, Rhode Island-based Bonanza Bus Lines, the management team is led by President/CEO Larry Decker, Executive Vice President Myron Reynolds, Vice President-Operations Les Ferguson, Vice President-Maintenance Jack O'Dell, and Vice President-Finance Robert Sherer, all of whom began their airline careers with **Bonanza Air Lines**.

Employing a pair of former **Continental Airlines** Douglas DC-9-14s, one of which is leased, twice-daily roundtrip flights are inaugurated over a Las Vegas to San Jose via Ontario route on May 27. By year's end, the network has grown to seven cities, including Oklahoma City and Phoenix.

Two more airliners are acquired and 105,432 passengers are transported.

Sunworld withdraws from Tulsa in March 1984 because of a fare war in that market and returns its leased DC-9-14 on May 13. Other than Tulsa, traffic for the large regional is good elsewhere.

During the company's first full year, a total of 362,506 customers are flown. Unfortunately, finances are not as kind and losses of \$560,000 (operating) and \$533,000 (net) are posted.

Airline employment in 1985 increases 78.4% to 339 and as the year dawns, the four DC-9-14s are providing scheduled service to seven cities in four states—California, Nevada, Oklahoma, and Arizona. The fleet is improved by the addition of two leased Boeing 737-300s. Spokane, Portland, and Omaha join the route network.

Passenger boardings leap upward by 71.7% to 555,670 and revenues jump 72.5% to \$41.3 million. With costs held low, the operating profit swells to \$2.52 million and net gain reaches \$2.46 million.

The payroll is increased again in 1986, up 20.7% to 403. On April 1, flights begin to Los Angeles (LAX) and to Milwaukee. In late May, two more B-737-300s arrive under charter, along with a pair of DC-9-31s leased from **Trans Australia Airlines (Pty), Ltd.**

The year's enplanements increase again, rising 42.1% to 790,149. Although figures are not provided, financial losses are suffered.

The workforce grows another 14.9% in 1987 to 463 and the carrier is restructured during the first quarter. In August and September, the carrier begins service from Seattle to Las Vegas, Reno, Oklahoma City, Tucson, San Diego, and Ontario, California.

Having lost a head-to-head competition with **America West Airlines**, headquarters for President Thomas Voiz's charter operations are transferred from Las Vegas to Reno and the leases on the four B-737-300s and two DC-9-31s are terminated. A British Aerospace BAe 146-300 is leased from **Royal West Airlines** during the month for initiation of a service from Reno to San Diego via Las Vegas and Ontario.

Employing the four original DC-9-14s and the BAe, Sunworld is able to increase its traffic by 21.8%, as 962,343 passengers are flown. It is not able to reverse its economic downturn.

On January 14, **1988**, the financially strapped airline halts all scheduled services except a single route between Las Vegas and Oklahoma City. A few charters are offered. The company files for Chapter XI bankruptcy reorganization in April. During the first 9 months of the year, a total of 52,713 passengers are transported.

Unable to reorganize and gain new capitalization through a merger with the U.K. carrier **Paramount Airways, Ltd.**, the carrier is finally shut down for good on November 7. Some \$16 million in debt, the carrier's assets are liquidated in **1989** to partially satisfy creditors.

SUPERIOR AIR: United States (1972–1973). Superior Air is set up at Fairmont, West Virginia, in **1972** to provide scheduled air taxi services to regional destinations. Employing a Britten-Norman BN-2 Islander, the company links its small base, north of Clarksburg, with Pittsburgh and Wheeling via Morgantown. Daily roundtrips cease in **1973**.

SUPERIOR AIRWAYS, LTD. See **AUSTIN AIRWAYS, LTD.**

SUPERIOR AVIATION: 250 Riverhills Road, Kingsford, Michigan 49802, United States; Phone (906) 774-0400; Fax (906) 774-1645; http://www.superioraviation.com; Code AB; Year Founded 1994. Superior is set up by Steven C. Van Beck at Kingsford, Michigan, in **1994** to offer all-cargo and contract services around the Midwest, many on behalf of larger freight airlines and air freight forwarders. FAR Part 135 revenue flights commence with a fleet that includes 1 Cessna 208 Caravan I, 5 C-208Bs, 1 C-441 Conquest II, and 3 leased Swearingen SA-226 Metro IIs.

The fleet is increased in **1995** by the addition of one more C-208B and three more Metro IIs. Two more C-208Bs join the fleet in **1996**, along with six more Metro IIs.

Operations continue apace in **1997**. Just after landing at Des Moines on August 19, a Metro II, having lost directional control, runs off the end of the runway and impacts the localizer antenna. Although the aircraft is substantially damaged, the pilot is not hurt.

Flights continue without incident in **1998**. On March 5, **1999**, two company Metros collide while taxiing at Denver. Although both aircraft are damaged, neither pilot is severely injured.

Just after takeoff from Smith Field, Fort Wayne, in bad weather on a November 9 freight service to Milwaukee, a Metro II hits trees and crashes into the ground just 400 m. from the runway, catching fire. The pilot is killed and the cargo is destroyed.

The company suffers further loss on April 15, **2000**. Just after takeoff from Capital City Airport at Lansing, Michigan, on a cargo service to Caro, a Cessna 404 loses power and is required to make a forced landing. The pilot is not hurt. It will later be determined that the aircraft had been serviced with the wrong fuel, receiving 25 gallons of jet fuel in each wing tank before takeoff.

Late in the year, twice-weekly scheduled Cessna 404 and Cessna 441 is inaugurated between Iron Mountain, Escanaba, and Lansing.

SUSQUEHANNA AIRLINES: United States (1978–1985). Bernard Ford establishes **Ford-Aire** at Sidney, New York, in May **1978**. Employing a Piper PA-23 Aztec, Ford inaugurates scheduled air taxi flights to Syracuse in June. In October **1979**, the company is renamed Susquehanna Airlines.

Ford increases his fleet in **1980** by the addition of two Piper PA-31-310 Navajos. Daily roundtrip revenue services are started to New York (LGA) via Monticello and from the Big Apple to Sidney via Binghamton.

In **1981–1984**, Susquehanna makes Binghamton its primary hub and opens additional markets at Newark, New York (John F. Kennedy Airport), Wilkes-Barre, Boston, and Chicago (ORD). The fleet is increased to comprise 1 Grumman Gulfstream G-1, 1 Beech 99, 2 Navajos, and 3 de Havilland DH 114 Herons.

While on approach to Bainbridge, New York, following a service from Binghamton on December 17 of the latter year, a Navajo, with a pilot and three passengers, crashes into trees and hits a wooded hill 85 mi. N of the runway; there are no survivors.

Due to alleged safety violations, the FAA orders the carrier grounded on January 16, **1985** and its certificate is suspended until its record-keeping violations can be cleared up. Permission to resume is obtained within two months and having restarted, President Ford's airline is shut down a second time on April 28 for five alleged safety deficiencies and the falsification of records.

This time, the government revokes the operating certificate and despite company appeals, it is not restored.

Unable to fly, the carrier, on May 30, sells a Beech 99 and a route between Binghamton and New York to **Ransome Airlines**. The remainder of the operation is liquidated.

SVENSK FLYGTJANST, A.B. See **SWEDAIR, A.B.**

SVERDLOVSK 2ND AIR ENTERPRISE (SVERDLOVSK AVI-APREDPRIAT): Sputnikov Str 6, Uktus Airport, Ekaterinburg, Urals Zone ATD, 620025, Russia; Phone 7 (3432) 242 367; Fax 7 (3432) 246 107; Code UKU; Year Founded 1992. The former **Aeroflot Soviet Airlines** 2nd division at Koltsovo Airport at Ekaterinburg is reformed in **1992**; however, its mission of providing long-haul trunk and charter passenger services is continued. Sergey N. Shuratov is named director general and he launches services with 6 Tupolev Tu-154Ms and 3 Antonov An-12s.

Flights continue in **1993–1999**, during which years Nikloli Mekhnev becomes general manager. The Russian currency crisis has a dramatic impact upon the carrier, which now changes its mission to one of domestic feeder service and rotary-wing contract aerial work. The fleet is altered by removing the Tupolevs and An-12s in favor of 2 An-28s and 19 An-2s, plus 19 Mil Mi 8/17s and 14 Mi-2 helicopters.

Airline employment stands at 400 at the beginning of **2000**. The fixed-wing fleet is once again revised as two Yakovlev Yak-40s are added.

SVG AIR, LTD.: St. Vincent and the Grenadines (1991–1999). Former **Mustique Airways, Ltd.** pilot Martin Barnard establishes SVG (St. Vincent and the Grenadines) Air at Bequia, in the northern Caribbean Island chain of the Grenadines, in **1991**. His daughters, Joanne and Leslie, take charge of the reservations and administrative offices, while one son-in-law, Capt. Paul Gravel, is named head of operations and the other, Capt. Dominic Gonsalves, becomes the no. 2 pilot. Revenue flights to nearby islands commence with a single Pilatus-Britten-Norman PBN-2 Islander and a Beech B-58 Baron.

During the next three years, the Barnard family provides charters to St. Vincent and up to Barbados. Their company enters into an agreement with **Air Martinique, S.A.** to complement the French airline's Dornier 228-200 services to its St. Vincent hub. The fleet is increased by the addition of two Cessna 402Cs and a Piper PA-34 Seneca.

In late **1994**, groundbreaking ceremonies are held for a new hangar maintenance center at Bequia. The new facility is constructed during the summer of **1995**. Service continues apace in **1996–1998**. During these

years, a variety of holiday opportunities are offered, including special package tours for events on Mustique, Bequia, and Jamaica and as far as Venezuela or Guyana. The fleet includes several Aero Commander 500Ss, Cessna 402Bs, and Islanders.

On November 14, 1999, **Airlines of Carriacou, Ltd.** is merged with SVG Air, Ltd., with the latter owning 75% shareholding. Under the direction of SVG's founder, Barnard, the new **Vincent and Granada Air, Ltd.** resumes services from Granada almost immediately.

SWAZI AIR, LTD. (2): Swaziland (1965–1978). The second Swazi Air is set up at Matsapa in 1965 as a subsidiary of **National Airways Corporation (Pty.), Ltd.** M. J. F. E. "Dem" Tanguy-Desmarais is appointed general manager and he is provided with a tiny fleet comprising 1 each Mooney Super 21, Navion Rangemaster, and Piper PA-23 Apache.

Revenue flights commence on September 27 with twice-weekly return flights from Matsapa to Johannesburg and to Durban.

On March 25, 1966, the company joins with **DETA (Divisao de Exploracao dos Transportes Aereos, S.A.)** to open a joint Friday and Monday return service from Manzini to Lourenco Marques in Mozambique. Swazi operates the route with an Aero Commander 500B.

Flights continue during the remainder of the decade and the fleet is upgraded with the addition of a pair of Douglas DC-3s.

National Airways Corporation is taken over by **Protea Airways (Pty.), Ltd.** in 1970, which keeps its new subsidiary only briefly before selling it to the government of Swaziland. When A. Wilhelmi becomes the new general manager in 1972, his fleet comprises 2 DC-3s, 2 Beech Bonanzas, 1 Aero Commander 500B, and 1 Piper PA-24 Comanche.

Service continues as before in 1973–1975. During the latter year, a pooled service is operated with **South African Airways (Pty.), Ltd.** over the route from Manzini to Johannesburg. By 1976, the company is employing a Hawker Siddeley HS 748 over the new route thrice weekly. The two airlines also fly from Manzini to Durban twice weekly.

Late in 1977, the company stops operations and is replaced on January 1, 1978 by **Royal Swazi National Airways Corporation (Pty.), Ltd.** as new national carrier.

SWAZILAND AIRLINK, LTD.: SA Airlink (Pty.), Ltd., P.O. Box 7529, Bonaero Park, Johannesburg, Gauteng, 1622, South Africa; Phone 27 (11) 395 3333; http://www.saaairlink.co.za/airlink_swa; Code ZC; Year Founded 1999. **SA Airlink (Pty.), Ltd.** purchases 40% of the available equity in **Royal Swazi Airways Corporation, Ltd.** on January 25, 1999. Majority ownership (60%) remains with the Swaziland government. Under the leadership of General Manager Capt. President Dhlamini, the concern is renamed on April 12.

Outfitted with a single Fokker F.28-3000, the reborn concern launches daily roundtrip revenue services on July 1, linking Manzini (Matsapa) with Dar es Salaam and Johannesburg. During the fall, flights to Dar es Salaam cease and frequencies between Manzini and Johannesburg are increased to three per weekday and once on Saturdays.

Airline employment stands at 37 at the beginning of 2000. Early in January, the F.28-3000 is grounded for repairs after it develops cracks in its windshield frame. Another aircraft is leased for the interim. The repaired Fokker returns to service in May just in time to offer a special flight, transporting King Mswati III to Mauritius. After developing a mechanical fault over the Indian Ocean, the aircraft is forced to abort the service and return to Mbabane. It is parked there at Matsapha International Airport while government and airline officials decide what to do with it.

After the incident with the king, it is decided not to bring the jetliner back into airline service; instead, it is replaced with a British Aerospace BAe Jetstream 41, chartered from **SA Airlink (Pty.), Ltd.** When the J-41 enters service on June 18, it wears Swaziland Airlink livery.

Services are enhanced during the summer and fall, with the number of weekly roundtrips from Johannesburg to Matsapha boosted to 26 (4 on weekdays and 2 on Saturdays). An average of 4,000 passengers are flown every month.

In October, Swazi transport ministry officials announce that the carrier will either sell or lease out the displaced F.28-3000, which remains grounded at Mbabane.

SWEDAIR, A.B.: Sweden (1975–1993): This regional is formed in 1975 by the merger of **Crownair, A.B.** and **Svensk Flygtjänst, A.B.**, founded in 1935 and one of the nation's oldest carriers. The Swedish government holds 50% interest with the other half divided between **Linjeflyg, A.B.** and **ABA Swedish Airlines, A.B.**, the **SAS (Scandinavian Airlines System)** consortium partner. A fleet is assembled and personnel hired during the remainder of the year.

In 1976, de Havilland Canada DHC-6-100 services are launched over a Karlstad–Göteborg route. In 1977, the carrier's shareholding is revised; **ABA Swedish Airlines, A.B.** takes 25% and **Linjeflyg, A.B.** the remainder. The airline now inaugurates regional services on behalf of **Linjeflyg, A.B.** and **SAS (Scandinavian Airlines System)**, but is also given one international route, Örebro–Copenhagen, for itself. The charter subsidiary **Basair, A.B.** is formed in 1979.

Ministry of Finance official Karl-Erik Strand becomes president/CEO in 1981. Airline employment stands at 450 and the fleet comprises 1 Douglas DC-3, 1 DHC-6-100, 9 Cessna 404 Titans, 1 Cessna 402, 1 Cessna 441, 1 Cessna 425, 1 Cessna 337, 9 Mitsubishi Mu-2s, 1 Gates Learjet 36, 2 Learjet 35As, and 2 Learjet 24s.

In 1982, orders are placed for 10 SAAB-Fairchild SF340As and 6 DHC-6-200s. The first of the Swedish-manufactured turboprops is delivered in 1983, during which year a total of 466,720 travelers are carried. Two additional SF340As arrive in 1984 as the network reaches 20 destinations in Sweden and Denmark. Passenger boardings pass the half-million mark.

Three more SF340As arrive in 1985 and join a fleet comprising 3 SF340As, 5 Fairchild Hiller FH-227s, 6 DHC-6-200s, and 1 British Aerospace BAe Jetstream 31. The year's profit reaches \$2 million. The last 4 SF340As are delivered to the 600-employee regional in the late summer of 1986, at which time sale of the Twin Otters begins.

Regional services are continued in 1987 and President Strand's fleet has been altered to comprise 2 Jetstream 31s, 2 Cessna 441s, 4 Cessna 404s, 2 DHC-6-300s, 2 FH-227s, 3 Learjet 35As, and 8 340As.

Operations continue apace in 1988 and in 1989 this commuter receives a de Havilland Canada DHC-6-300 Twin Otter on lease from **Loganair, Ltd.** and a Piper PA-31-350 Navajo Chieftain. Managing Director Eric Lindström's carrier inaugurates scheduled services to Vilhelmina and Umeå.

Rolf Blom steps into the managing director slot in 1990 as flights begin to Vasa. The financially weak carrier enters into merger discussions with **Salair, A.B.**, but the uncertainty caused by the world political situation following Iraq's August invasion of Kuwait causes them to drag. Plans are also made for the sale of **Linjeflyg, A.B.**'s 75% interest in the regional if a merger between it and **Salair, A.B.** is concluded. Enplanements total 444,400.

The fleet in 1991 includes the DHC-6-300 leased from **Loganair, Ltd.**, plus five owned and eight chartered SAAB 340As. Orders are outstanding for three SAAB 2000s. Following the decision of Swedair, A.B. to not merge with the commuter **Salair** in April, plans for **Linjeflyg, A.B.** to sell its 75% shareholding in the regional are shelved. A new route is initiated from Stockholm (Arlanda) to Trondheim in September. Passenger boardings decline 11.1% to 400,000.

Flights begin from Stockholm (Arlanda) to Trollhättan in 1992. Majority 75% shareholding is reaffirmed by **Linjeflyg, A.B.** at the end of the year, but the carrier is left to operate as an independent subsidiary.

In January 1993, acting Managing Director Lars Svanström oversees a workforce of 500 and a fleet of 13 SAAB 340As. In significant financial difficulty as a result of the nation's airline recession, the company is ordered closed by **SAS (Scandinavian Airlines System)** officials as they merge **Linjeflyg, A.B.** into the major at year's end.

The **Linjeflyg, A.B.** merger decree is withdrawn in 1994 and Swedair, A.B. is allowed to continue its operations with 9 SAAB 340As, 4 of which

are leased to the New Zealand regional **Air Nelson, Ltd.** Benny Lakrisson is now chairman/president, with Christer Bruce as managing director.

SWEDEWAYS, A.B.: Skogsta 41, Hudiksvall, 82492, Sweden; Phone 46 (650) 24280; Fax 46 (650) 24224; <http://www.swedeways.se>; Code HJ; Year Founded 1995. In July 1995, the decision is taken to provide the **Holmstrom Air (Holstrom Flyg, A.B.)** subsidiary **Holmstroem Air Hudiksvall, A.B.** with a new corporate identity at the same time as the parent is renamed **Highland Air, A.B.** On September 1, Chairman Erik Lindstroem and President Carl-Jonas Stahle's 3 Shorts 360-100s resume scheduled passenger services from Hudiksvall as Holstroem Air Sweden, A.B., better known as Swedeways, A.B. Hubs are established at Stockholm (Bromma Airport) and Ostersund.

Scheduled destinations visited in 1996 include Borlaenge, Gallivare, Goteborg, Huitsfred, Oskarshamn, Mora, Stockholm (Arlanda Airport), Sundsvall, Umea, and Vasteras.

In order to provide itself with assured feed, the Swedish regional **Skyways, A.B.** purchases 91% majority ownership in **Highland Air, A.B.** in March 1997. The parent company name remains the same. Nightly postal flights now become this carrier's principal business, although a Shorts 360-200 is acquired to operate passenger services. Scheduled destinations visited in 1998 include Gavie, Lulea, Ostersund, Stockholm, and Sundsvall. Enplanements during the 12 months total 33,325 while 257,400 FTKs are operated.

Customer bookings rise 4.5% in 1999 to 35,000 while freight rises 1% to 260,000 FTKs. Revenues increase 9.3% to \$8.2 million and net gain climbs to \$205,000.

A total of 41 workers are employed at the beginning of 2000, a 6.8% decline over the previous 12 months. A homepage is now opened on the World Wide Web and a Douglas DC-9-41 is added for postal flights and ad hoc charters.

SWEDISH INTERNATIONAL AIRLINES, A.B. (SILA). See SAS (SCANDINAVIAN AIRLINES SYSTEM)

SWIFT AIR: United States (1982–1984). Swift Air is set up at South Bend, Indiana, in late fall 1982 to offer scheduled passenger and cargo services to Sturgis and to Chicago's Meigs Field. Employing a Piper PA-31-310 Navajo, daily roundtrips are duly inaugurated and are maintained into 1984.

SWIFT AIR SERVICE: United States (1962–1967). Swift is established at San Diego in 1962 to provide revenue air taxi flights to Catalina Island and Las Vegas employing a single Grumman G-73 Mallard.

Operations continue apace until the amphibian is lost in a 1967 accident.

SWIFTAIR, S.A.: Ingeniero Torres Quevedo 14PL, Fin de Semana, Madrid, Spain; Phone 34 (91) 329 4693; Fax 34 (91) 329 5720; <http://www.swiftair.com>; Code SWT; Year Founded 1986. SEUR Service Urgent establishes this carrier at Madrid in 1986 to operate scheduled domestic cargo services on its behalf, together with air ambulance and air taxi flights. Revenue operations commence with a fleet of 5 Convair CV-580s, 4 Fairchild Dornier Metro IIs and 4 Metro IIIs. Over the next decade, the fleet is increased through the acquisition of 5 additional CV-580s, 1 each Metro II and Metro III, and 2 Embraer EMB-120 Brasilias.

In the years after 1996, the company mission is expanded into international cargo charter. The fleet is upgraded by the addition of four Boeing 727-200Fs (two each Dash-224AFs and Dash-277AFs), which are employed to offer freight flights on behalf of **DHL Worldwide Express** to the U.K., Belgium, and Germany. A fifth B-727, a Dash-223AF, is delivered on May 1, 2000. It is followed by a sixth and seventh, both Dash-264AFs. In November, a new, modified DHL color scheme is unveiled on two trijets.

SWIFTAIR CARGO, LTD.: Canada (1980–1983). Abbotsford, British Columbia-based **Conair Aviation, Ltd.**, an aerial spraying and fire

bomber operation, applies to the government in the summer of 1979 for permission to operate an all-cargo service. Swiftair Cargo, Ltd., jointly owned with **Frontier Helicopters, Ltd.**, is established by Conair owner Les Kerr the following summer of 1980. Employing 2 Douglas DC-8-33Fs, reverse course night cargo services are inaugurated on September 15–16 from Abbotsford to Montreal via Calgary, Winnipeg, and Toronto.

Significant competition is encountered from **Air Canada, Ltd.**, **Northwest Territorial Airways, Ltd.**, and **Purolator Courier**. Financial difficulties in the sluggish economy ensue and a proposed bailout by **Pacific Western Airlines, Ltd.** in March 1982 does not occur.

Operations cease on May 11 when the Canadian Imperial Bank of Commerce takes the carrier into receivership. One DC-8 is sold immediately and the second in May 1983.

SWIFTE AIRE LINES: United States (1969–1981). Swifte Aire Service is organized by Charlie Wiswell at San Luis Obispo, California, during the first quarter of 1969. The new operator inaugurates Piper PA-23 Aztec flights to Catalina Island on March 20 and to Las Vegas on October 1. Operations continue apace in 1970–1971.

Following a slight name change in early 1972, the carrier begins scheduled de Havilland DH 114 Heron intrastate California passenger services to such destinations as Los Angeles, Bakersfield, San Jose, and Fresno. Operations by the six British-built aircraft continue apace in 1973 and in 1974, enplanements total 92,244.

Airline employment in 1975 stands at 110. Passenger boardings accelerate 6.6% to 98,762.

The number of employees is increased by 20% in 1976 to 145. Four more Herons join the fleet as the company completes the paperwork necessary to become an FAR 121 operator. Orders are placed for four Nord 262 turboprops, two of which are delivered by year's end.

Customer bookings jump 30% to 128,686 while freight traffic rises 46% to 18,360 FTKs.

Enplanements in 1977 total 172,020, with capacity allowed by the arrival of two more Nords. On revenues of \$4.74 million, a \$311,000 net loss is suffered.

In 1978, the year the Airline Deregulation Act becomes federal law, the company boards 209,270 passengers, a 17.8% boost. Revenues advance 29.5% to \$6.14 million and expenses are held to \$5.93 million, leaving an operating profit of \$203,000. The net loss is cut to \$145,000.

Airline employment is boosted by 20.7% in 1979 to 274 and the fleet now includes 3 F.27s, 4 Nord 262As, and 3 DH-114 Herons.

Shortly after takeoff from Los Angeles (LAX) on March 10, Flight 1235, a Nord 262A with three crew and four passengers, loses engine power and ditches into Santa Monica Bay, off Del Rey, California (three dead).

Customer bookings jump 12.4% to 235,000. Operating income grows by 39.3% to \$8.42 million while expenses are held to \$7.9 million. As a result, a \$517,000 operating profit is realized and a \$249,000 net gain is achieved.

The employee population rises 3.4% in 1980 to 275. Unfortunately for Swift Aire, recession and competition in the tough California commuter market, along with rising fuel costs, begin to cause significant financial difficulty. The balance sheet is not helped by the costs involved in taking over **Golden Gate Airlines**, which is allowed to function as a subsidiary.

With the delivery of three F.27-600s, Swifte Aire becomes the first U.S. airline to operate a factory-delivered, Fokker-built F.27. The units also have the distinction of being the first new aircraft of their type to be sold in North America.

Passenger boardings rise 16.2% to 273,116 and cargo grows by 30.8% to 170,000 pounds, revenues advance only 47.1% to \$12.2 million, while expenses skyrocket 66.8% to \$13.2 million. The year's \$2.7-million loss portends disaster unless immediate success is had in what has become a big-stakes game.

The cards do not fall correctly in 1981. When the PATCO air traffic controllers' strike during the summer forces **Golden Gate Airlines** out

of business, Swift Aire, the financially weak parent, is forced to quit as well. Even though Swift Aire has thus far transported 165,045 customers (down 40%) and 26,000 pounds of cargo (down 45.5%) on the year, at the time of its demise on September 18, its cash flow situation is so desperate that no other option exists.

SWISS WORLD AIR NETWORK, LTD. (SWAN). See **SWISS WORLD AIRWAYS, LTD.**

SWISS WORLD AIRWAYS, LTD.: Switzerland (1996–1998). In early 1996, **Swissair, A.G.** announces that it will drop most of its long-haul flights from Geneva, which is located in the French-speaking western part of the nation, and transfer them to its headquarters base at Zurich.

This announcement has far-reaching impact and sets off a storm of political and citizen protest in Geneva, where the move is viewed as an affront by those seeking to curry favor with the major commercial banks and insurance companies located in the German-speaking center east of the country. The financial resources available in the Zurich area are known to be greater than those in Geneva, which is home to most private banks, many international organizations, as well as the European headquarters of the United Nations.

When it is determined that reversal of the Swissair edict is impossible, SWA is established at Geneva, with financial support from the city council and private investors. The founders make it clear that they wish only to assure appropriate long-haul service into Geneva and are not interested in establishing a competitor to **Swissair, A.G.**

Their new enterprise is initially known as SWAN: Swiss World Air Network, Ltd. Former ICAO Secretary General Philippe Rochat is appointed chairman, with Swissair pilot Pierre A. Porta as president. Plans are announced for the inauguration of scheduled passenger services at the beginning of 1998.

1997–1998 is taken up with achieving certification from the Swiss Office of Civil Aviation at Berne and in establishing the infrastructure, personnel base, and aircraft necessary to start up. SWAN, which now changes its name, proves that it has achieved the financial basis necessary to maintain operations for a year. At the same time, an aircraft serving agreement is signed with **British Airways, Ltd. (2)**, which meets a requirement for the demonstration of a high-level of aircraft maintenance.

In March 1997, former **Air Canada, Ltd.** executive Peter Leishman, who has also been involved in the launch of the U.K. discount airlines **easyJet, Ltd.** and **Debonair Airways, Ltd.**, is named president/administrator/director general, with former President A. Porta as his chief deputy.

With a lengthy French-language review of the reasons for formation, as well as other information deemed to be of value, SWA opens a home-page on the World Wide Web in March 1998.

During the spring, arrangements are completed with Ansett for the lease of a Boeing 767-219ER surplus from its partner, **Air New Zealand, Ltd.** The new entrant hires New York-based Tool Box to handle its advertising, even though that firm has no prior experience with airlines. It also designs a revolutionary frequent flyer program that will employ a scratch-off ticket that instantly rewards passengers.

Painted in a simple white livery with black trim, the long-range New Zealand wide-body is delivered on July 17. On August 19, the company signs a contract to lease four B-737-700ERs, which will begin delivery next February.

Certification is received from the Office of Civil Aviation on September 8. Two days later, six-times-a-week roundtrips are inaugurated from Geneva to Newark (EWR) in the U.S., which serves the New York area.

Jubilant officials now announce plans to launch service in 1999 from Geneva to Washington, D.C. (IAD) and Montreal (YUL) and possibly to Miami, as well as from Berne to Newark.

Citing competition from **Swissair, A.G.** and launch problems, the new entrant, on November 4, postpones the inauguration of flights between Basel and Newark (EWR).

Negotiations, revealed on November 19, are undertaken with a London bank concerning an initial public offering to be made during the first half of 1999; it will be designed to raise SFr 35 million (\$25.2 million). The income would help finance new routes, starting with Geneva to Washington, D.C. (IAD).

Having achieved only a 50% seat occupancy on its New York services, during the last week of November the company makes an urgent bid to raise \$2 million to keep itself afloat. When the money is not found, the company's board orders the carrier into receivership on December 2. Flights are suspended and Director General Leishman resigns from all of his posts.

The company's vice presidents and a council of administration, headed by the Geneva official appointed to oversee it upon the receivership filing, now act as an interim board to guide what is left of SWA. In a note to shareholders, it is announced that an administrator will be sought to oversee the end of western Switzerland's airline dream.

On December 24, a group of anonymous shareholders petition the interim board for permission to present a recovery plan. A meeting is set up for January 21, with the understanding that, if it is to maintain its Swiss government operating certificate, the carrier must be back in the air by May. Simultaneously, the Geneva newspaper *Le Temps* reports that the shareholders seeking to restart the airline are headed by Saudi Arabian businessman Hani Yamani.

SWISSAIR (SCHWEIZERISCHE LUFTVERKEHR, A.G./SWISS AIR TRANSPORT COMPANY, LTD.): Zurich-Flughafen, Zurich, CH-8058, Switzerland; Phone 41 (4) 812-1212; Fax 41 (4) 810-8046; <http://www.swissair.com>; Code SR; Year Founded 1931. On March 26, 1931, **Ad Astra Aero, A.G.** and **Basler Luftverkehrs, A.G. (Basle Air Transport-Balair)** merge to create **Schweizerische Luftverkehr/Swiss Air Transport, Ltd.**, recognized thereafter as **Swissair, A.G.** Balz Zimmerman and Walter Mittelholzer, formerly of Balair and Ad Astra, respectively, are appointed as joint managing directors, with initial capitalization of SFr 800,000.

A fleet is assembled comprising 8 Fokker F-VIIb/3ms, 2 Dornier Merkurs, 1 F-VIIa, 1 Messerschmitt M-18d, and 1 Comte AC-4, having a combined total capacity of 86 seats. Ten pilots, seven radio operators, and eight flight engineers are employed. Revenue flight operations begin on March 31 and are restricted to the summer season and only made in good weather. By the end of the year's service in October, the route network stands at 2,800 miles and the workforce totals 64.

Service is resumed in March 1932. The carrier becomes the first European airline to operate American-made equipment when it receives two Lockheed Model 9 Orions; the fastest commercial aircraft now available in Europe, these are placed on the Zurich–Vienna via Munich express route on May 2. March–October summer-only operations also continue in 1933. During the year, the carrier also links Switzerland with the European night airmail network with service between Basel and Frankfurt.

In the spring of 1934, a Curtiss AT-32C Condor II is placed in service on the Zurich–Berlin route. The first of 16 company air hostesses and, indeed, the first European stewardesses, led by the “Airborne Angel” Nelly Diener, are sent aloft to assist passengers on this biplane American transport. In March, the first production model Clark G.A. 43 is delivered; this American aircraft is placed in passenger service on a route Zurich–Basel–Geneva and on night mail runs Zurich–Frankfurt.

The Condor II experiment ends on July 27 following its crash near Tuttlingen, in Germany, which claims the life of, among others, Nelly Diener. Orders are now placed, via the Dutch aircraft manufacturer and sales agent Fokker, for Douglas DC-2s. The first of the new transports arrives on December 4.

Two more DC-2s are delivered in January 1935, followed by a third on February 15. In March, the fourth and final Clark G.A. 43 is ordered. Following the lead of **KLM (Royal Dutch Airlines, N.V.)**, Swissair now introduces the Douglas DC-2 on its European service. In cooperation with **Imperial Airways, Ltd.**, the American transports on April 1 begin a Zurich–London link via Basel—the first Swiss over-water operation.

On July 21, an F-VIIb/3m crashes into a forested mountainside near Berne (13 dead). Two days later, the DC-2 fleet is completed with the delivery of the sixth aircraft. Success leads to the decision to begin DC-2 winter operations on December 16, again over the Zurich–London route. This is the company's first all-year service. At year's end, the Clark G.A. 43 is delivered. Placed in service, it is lost in April 1936 when it crashes into Mount Rigi in the Swiss Alps (two dead).

Mittelholzer and Zimmerman, the joint managing directors, both die in 1937, the former in a climbing accident in Austria on May 9 and the latter by heart attack on October 13. Before Zimmerman's death in October, a Junkers Ju-86Z is acquired, the first Clark G.A. 43 is sold to Spanish Republican sympathizers in France, and an order is placed for five DC-3s that are placed into service during 1938.

In 1939, the fleet comprises 5 DC-3s, 6 DC-2s, 1 de Havilland DH 89A Dragon Rapide, the original Fokker F-VIIs and Comte AC-4. Following the loss of a DC-2 in a crash at Senlis, near Paris, on January 7, a Ju-86 piloted by noted pilot-author Walter Ackermann, crashes at Constance in Germany on July 20. Swiss civil aviation is banned on August 29, just before the eruption of World War II. Unable to workout routes with the Germans, French, British, or French, the company is forced to lay off 85 workers on December 31.

In early 1940, the company is able to gain permission to operate over a limited number of routes, mostly from Ticino. These include Locarno to Barcelona, Zurich to Munich, and Zurich to Berlin via Stuttgart. With a view to postwar expansion, the company's share capital is raised in 1943 to SFr 1 million. A company DC-2 is destroyed at Stuttgart Airport on August 9, 1944 during an American bombing raid. Twelve days later, the carrier ceases operations to Stuttgart and Berlin, its last foreign destinations.

In 1945, the fleet is enlarged through the addition of three more DC-3s and after a five-year hiatus, the Lisbon route is reopened on May 12.

Services resume on July 30 between Geneva and Paris and Zurich and Paris. Zurich–Amsterdam flights resume on September 19. London is served from Zurich beginning on September 29 and Geneva on November 5. Special flights are also undertaken to Barcelona, Tunis, and Malmo. The fleet now comprises 4 DC-3s and 2 DC-2s.

Orders are placed in 1946 for the carrier's first four-engine airliner, the unpressurized DC-4. The last production DC-3, a DC-3A, is delivered in May. During the summer, special frequencies are initiated to Prague, Warsaw, and Barcelona. Capitalization is increased on August 26 to SFr 20 million and after a 16-hour flight, the initial DC-4, christened *Geneva*, arrives at Zurich on November 24.

In February 1947, the operations of the independent airline **Alpar Bern, A.G.** are taken over and Swissair is officially recognized as the national airline of the Confederation. Public institutions acquire 30% of the share capital, while the remaining 70% remains in private hands—an arrangement that will remain unchanged. On March 8, a special DC-4 service is undertaken to Johannesburg.

The first DC-4 transatlantic proving flight is made on May 2, Geneva–Washington, D.C. via London, Shannon, and Gander. The return flight to Switzerland is made four days later. Four more of these irregular flights across the North Atlantic are made before October; 1,000 passengers travel the route this first year it is available. On October 10, a proving flight is made to Rio de Janeiro and Buenos Aires.

Two additional transatlantic proving flights are completed during the first quarter of 1948 before regularly scheduled service is inaugurated on March 25. Some 2,000 transatlantic passengers are carried this year as 17 flights are made from Geneva to New York and 4 from Zurich. Additionally, 20 special DC-4 frequencies are run from Geneva to Johannesburg. The company's special services also include several flights to Middle East destinations.

On the whole, these give Swissair the opportunity to gain the commercial and technical experience necessary to inaugurate regularly scheduled long-haul services and for flight crews to be trained. Meanwhile, operations are moved from Dubendorf to Kloten Airport, their current location.

The first Convair CV-240s join the fleet in January 1949, the delivery flight for the first being organized by young engineer and future chairman Armin Baltensweiler. Regularly scheduled Zurich–New York via Geneva, Shannon, and Gander DC-4 flights commence on April 29. Service to Glasgow is simultaneously started. Devaluation of the pound sterling on September 18 produces a severe revenue crisis.

Dr. Walter Berchtold, a mountain climber and former railway manager, becomes president on May 2, 1950. The continuing financial crisis results in increased short-term government assistance, principally in the purchasing and leasing to Swissair of two pressurized DC-6Bs and the advancement to the carrier of SFr 15 million.

In return for the loan, the government requires Swissair to reduce its share capital to SFr 14 million, a move agreed to at an Extraordinary Shareholders' Assembly held on November 10. A spare-parts pool is entered into with **Sabena Belgian World Airlines, S.A.** and **SAS (Scandinavian Airlines System)**.

En route from Geneva to New York via Shannon and Gander on December 1, a DC-4 with 11 crew and 20 passengers is forced by poor weather to divert to Sydney. While landing, the plane hits light poles and lands heavily, losing a wing. Although there are no injuries and everyone is safely evacuated, the aircraft catches fire and is destroyed.

North Atlantic passenger boardings this year rise to 4,000.

On January 9, 1951, a DC-4 flies New York to Zurich in a record 16 hrs. 44 min. A third DC-6B is ordered in January, while the first two arrive in June and July. These join in the transatlantic service on August 18 and help to bring the year's bookings on that route to more than 6,000. In October, three more DC-6Bs are requested from America. Weekly flights are initiated from New York to Tel Aviv on December 2.

A DC-4 with 4 crew and 16 passengers must be written off after a hard landing at Schiphol Airport, Amsterdam, on December 14; there are no fatalities.

A total of 7.5 million revenue passenger miles are flown on the year and a net profit exceeding SFr 1 million is posted.

A DC-6B makes the New York to Geneva flight on February 1, 1952 in a record 10 hrs. 27 min. Meanwhile, a DC-4 is acquired from **Pan American World Airways (1)**. On April 4, a new route is opened to New York from Zurich via Frankfurt and Shannon. The world's longest operator of the Douglas DC-2 loses its final machine in a crash at Kosti, Sudan, on August 29. At the end of summer, the carrier's administration is reorganized and the famous Swiss arrow logo is introduced. The third DC-6B is delivered in November. North Atlantic traffic is up to 10,000. Three additional DC-6Bs arrive in October and November 1953 as North Atlantic bookings increase to 15,000.

New DC-6B routes are extended on May 27, 1954 from Zurich to Rio de Janeiro and São Paulo via Geneva, Lisbon, Dakar, and Recife.

For whatever reason, a CV-240 with four crew and five passengers has not been refueled before departing Geneva for a flight to London on the evening of June 19. Suffering fuel exhaustion, both engines of the Convair stop, forcing the aircraft to ditch in the dark in the English Channel near Folkstone (three dead).

At year's end, four DC-7Cs are ordered, the first of their type to be requested by a European operator. Transatlantic enplanements are 20,000.

Service is started to Damascus on April 17, 1955. To modernize the short-haul fleet, 8 (later 11) Convair CV-440s are ordered in September. In December, two DC-6s financed by the government in 1949–1950 are purchased from it and the SFr 15 million advanced are paid back in full. North Atlantic bookings accelerate to 22,000.

On January 30, 1956, two Douglas DC-8s are ordered, with one more requested in September. The first CV-440 is delivered on June 10 and enters European service shortly thereafter.

On July 15, on a delivery flight from San Diego to Zurich via New York, Gander, and Shannon, a brand new CV-440 with four crew makes an abnormally steep turn into its final approach into Shannon, drops, and crashes; there are no survivors.

In the wake of the Hungarian Revolution, Swissair flies relief sorties to Budapest. The carrier also transports the first UN peacekeeping troops

on 37 flights from Naples to the Suez Canal zone. The first two DC-7Cs arrive at Zurich on November 12 and December 8 and enter transatlantic operations in December; on the North Atlantic, boardings rise to 24,000.

A DC-7C flies from New York to Rome on January 26, 1957 in a record 9 hrs. 58 min. Services to the Far East commence on April 1, 1957; a DC-6B makes an inaugural flight from Zurich to Tokyo via Geneva, Beirut, Karachi, Bombay, Bangkok, and Manila. The Brazil route is extended to Buenos Aires via Montevideo on April 7. Regularly scheduled weekly flights over the Zurich-Tokyo route are begun on April 23. Nonstop New York to Lisbon flights begin on May 5.

While on a training flight from Zurich, a DC-3 with nine crew is lost in Lake Constance on June 18; there are no survivors.

Weekly Geneva-Tokyo multistage flights start on July 5 via Zurich, Athens, Cairo, Karachi, Calcutta, Bangkok, and Hong Kong. The last of the CV-440s is delivered on July 1 and two more DC-7Cs arrive, one each on June 22 and August 10. On October 30, a fifth DC-7C is ordered and a seventh DC-6B is leased. A DC-6A freighter is ordered on July 8; later in the year, 36% interest is taken in **Balair Air Charter, A.G.** North Atlantic bookings for the year are 33,000.

Board Chairman Rudolf Heberlein dies on January 6, 1958 and is succeeded by Ernst Schmidheiny. On April 11, the company is one of four European airlines charged by **Pan American World Airways (1)** with violating IATA rules by serving full meals disguised as sandwiches, on economy flights; the industry association promises to investigate this "sandwich" incident.

Three new aircraft are now delivered: a DC-6B on June 18, a DC-6A on October 2, and a DC-7C on November 6. Orderly retirement of the DC-4s begins with the first-received *Geneva*, which is renamed *Uri* and transferred to **Balair Air Charter, A.G.** On October 6, Swissair, and **SAS (Scandinavian Airlines System)** initial a maintenance cooperation agreement. The same day, orders are placed for five Convair CV-880Ms. Bahrain joins the route network on November 1. North Atlantic passenger traffic rises to 42,000.

Services are added to Kuwait and Ankara in April 1959, with Tehran joining the route network in May. The company, under contract to the government, opens the Swiss Civil Aviation School (SLS) on June 26. On September 30, the previous year's Convair order is upgraded to seven Convair CV-990A Coronados, although the carrier agrees to acquire a pair of CV-880Ms on lease as a stop-gap until the 990s can be delivered. The year's transatlantic enplanements reach 45,000.

New York to Geneva and Zurich service begins on February 28, 1960. Service is inaugurated to Warsaw in April. The first DC-8-33 is delivered to Zurich on April 24. Two undelivered CV-990As are leased to **SAS (Scandinavian Airlines System)** which, in turn, charts four Sud SE-210 Caravelle IIIs to the Swiss flag line, beginning on May 2. The French-made trijets are introduced on the Zurich-London service on May 21. A third weekly Far East service (terminating at Hong Kong) is begun two days later.

The first DC-8-33 is placed in scheduled transatlantic service on May 30, flying from Zurich to New York's Idlewild Airport via Geneva. The second DC-8-33 arrives on June 20, followed by the second Caravelle on June 25. Two more SE-210s arrive on July 8 and August 13, respectively, followed by the third DC-8-33 on August 31. On December 21, four new Caravelle IIIs are ordered from France. North Atlantic bookings jump to 56,000.

The first of two leased CV-880Ms is received from Convair on August 11, 1961. During the August 21-22 delivery flight from New York (IDL) to Zurich, the second CV-880M establishes a distance and speed record of 3,855 mi. in 6 hr. 57 min.

A third weekly Far Eastern frequency is begun as the Hong Kong route is stretched to Tokyo on September 10 with one of the CV-880Ms. Orderly retirement of the DC-6A/Bs and DC-7Cs begins.

Systemwide, enplanements total 1.46 million (73,000 on the North Atlantic).

The first four CV-990As are delivered between January 12 and February 3, 1962. They are christened *Luzern*, *St. Gallen*, *Canton de Vaud*,

and *Basel-Land*. The CV-880Ms are returned to Convair. The Coronado's begin a frequency to Rio on February 25.

The first CV-990A Far Eastern service is undertaken on March 9 from Zurich to Tokyo via Cairo, Karachi, Calcutta, Bangkok, and Hong Kong.

The first three of the 1960 Caravelle order are delivered between March 17 and March 19. Service is started to Accra and Lagos and Montreal and Chicago on May 2 and 17, respectively.

The fourth Coronado arrives at Zurich on August 3. The Buenos Aires route is extended to Santiago de Chile on August 26. The two loaned CV-880s are now returned to Convair. The final Caravelle is delivered on October 19. Also in October, four DC-8-62s are requested. North Atlantic enplanements jump to 83,000.

A route is opened to Algiers on April 1, 1963. On September 4, Flight 306, a SE-210 Caravelle III with 6 crew and 74 passengers en route to Geneva, crashes and burns in the village of Humlikon, near Durrenäsch (Canton Aargau), following takeoff from Zurich. There are no survivors and 43 people are killed on the ground, 20% of the community's population.

Piloted by Capt. Siegfried Hale, the fourth DC-8-33 begins its delivery flight on October 26. The 7,460-mi. mission from Long Beach to the pickup point at Beirut, Lebanon—the longest nonstop flight by a commercial airliner to date—is completed in 13 hrs. 58 min. The Douglas reaches Switzerland on October 30. By year's end, all DC-6/7s have been sold, leaving only 3 DC-3s and 11 CV-440s as propeller types within the fleet.

Systemwide, passenger enplanements total 1,801,599.

The workforce in 1964 is 8,682 strong. A sixth CV-990A arrives on February 28. Scheduled DC-3 operations cease on March 31 and the last three machines are retired. An order is placed for 12 DC-9-15s on May 13, making Swissair the first European carrier to purchase a new twin-jet. Geneva-Tunis and Zurich-Tripoli services begin on July 6. Later, in the fall, a DC-3 is sold to the South African carrier **Commercial Air Services (Pty.), Ltd.**

Overall passenger bookings climb to 1,978,000 and a net profit of \$3.5 million is recorded on total revenues of \$108.41 million.

Airline employment stands at 8,922 in 1965. The Vatican, on January 18, dispenses the company's passengers from Friday abstinence. On March 22, as the result of an agreement with

El Al Israel Airlines, Ltd. that allows the Swiss to open a new route through Lydda to the Far East, the airline loses its landing and overflight rights over several Mideast countries through an Arab League boycott. The Caravelles leased from **SAS (Scandinavian Airlines System)** are purchased outright in April.

New routes are opened during the year to Frankfurt, Casablanca, Budapest, Abidjan, and Monrovia. Cargo space at New York (JFK) is doubled and new cargo handling equipment is installed. A new flight numbering system is adopted late in the year and two DC-8-33s are sold. Fritz Gugelmann is elected board chairman at year's end, succeeding Ernst Schmidheiny, who remains on the board.

Passenger boardings rise 14% to 2.3 million.

On February 1, 1966, two CV-990As are acquired from the Scandinavian consortium. During February and March, **SAS (Scandinavian Airlines System)** returns the two CV-990As, *Adils Viking* and *Ring Viking*, leased in 1960. Re-liveried, the former is named *Winterthur* while the latter becomes the *St. Gotthard*, later *Nidwalden*.

In April, a fourth Far Eastern frequency is initiated. The first three DC-9-15s arrive in July, August, and December, respectively, and Zagreb is added to the route network during the summer.

Passenger traffic rises to 2,410,096 and total revenues for the year are \$160 million.

On January 1, 1967, the Federal Transport Department grants the carrier's 15-year renewable concession confirming it as the national airline. On February 10, a CV-440 crashes near Zurich while on a training flight (four dead). Two additional DC-9-15s arrive at Zurich on March 11 and June 27, respectively. Meanwhile, a BAC 1-11-207 is leased, with crew, for a year from **British Eagle International Airways, Ltd.** on April 1, and is placed into service from Zurich to Dusseldorf, Prague, and Nice.

The Budapest service is extended to Bucharest on April 5 and the Stockholm to Helsinki service begins on April 11. On April 28, the board of directors authorizes a December order placed for two Boeing 747-100s. A new Balsberg head office is occupied on May 10. The DC-9-15 order is upgraded to DC-9-32s on July 6 and the Warsaw terminus is stretched to Moscow on July 27. Seven DC-9-32s join the fleet during the remainder of the summer, but five are immediately leased to capacity-poor **SAS (Scandinavian Airlines System)**.

On November 5, Malaga becomes the fourth Spanish destination. The first DC-8-62 is delivered on November 24 and a DC-8-33 is withdrawn and sold back to Douglas. On the economic side, bearer shares are issued for the first time.

Enplanements drop back to 2,337,582 while total revenues are \$178.4 million.

Airline employment in 1968 is 11,185. Two DC-8-62s and a DC-8-62CF are delivered, as well as eight DC-9-32s; five DC-9-32s out on lease to **SAS (Scandinavian Airlines System)** are returned from Stockholm, allowing five DC-9-15s to be resold to Douglas.

The BAC 1-11-207 originally constructed for **Central African Airways Corporation** is turned over to **Zambia Airways Corporation**, its successor, on March 27. It is briefly replaced by a BAC 1-11-205 chartered from **British Eagle International Airways, Ltd.**

A CV-990A is transferred to **Balair Air Charter, A.G.** on March 28 and a long-haul DC-8-62 Zurich-Johannesburg route via Geneva, Nairobi, and Dar es Salaam is begun on April 1.

The final CV-440 service is flown on October 31 and the last Metropolitan is disposed of on November 1, making Swissair Europe's third all-jet operator after **British Overseas Airways Corporation, Ltd. (BOAC)** and **TAP-Air Portugal, S.A.** The same day, a Hong Kong service is extended to Tokyo.

Cargo traffic for the year swells by 49% and passenger boardings jump 13.3% to 2,696,172. Revenues are now \$161.8 million.

The 1969 workforce is 11,952. Two DC-9-32s, a DC-9-33F, a DC-8-62, and a DC-8-62CF are delivered as SE-210 retirements continue. Orders are placed for six DC-10-10s.

Multistage Zurich-Singapore service via Geneva, Athens, Karachi, Bombay, and Colombo, is initiated in April and a route is reopened to Damascus, while operations to Innsbruck are withdrawn. The CV-990A *St. Gallen* flies Pope Paul VI to and from Geneva.

On December 22, seven submarine guns are taken from the baggage hold of a DC-9-32 when it lands at Geneva on a flight from Zurich to Beirut; two Lebanese passengers are arrested.

Enplanements for the year soar to 3,888,720.

Airline employment is increased to 13,280 in 1970. The last DC-8-62 is delivered on February 9 and the DC-10 order is upgraded on February 19 to one for DC-10-30s.

Some 9 min. after takeoff from Zurich on a February 21 service to Tel Aviv, Flight 330, the CV-990A *Basle-Land* with 9 crew and 38 passengers, is rocked over Wurenlingen by a bomb explosion in the aft part of the aircraft. The aircraft attempts to return to the airport, but crashes en route and there are no survivors.

Later in the day, another bomb goes off aboard a Caravelle that has departed Frankfurt for Vienna, but that plane is able to land safely. No person or group will claim responsibility and no one is ever indicted for either explosion.

Also in February, the KSSU Group for technical and operational cooperation is formed with **SAS (Scandinavian Airlines System)**, **KLM (Royal Dutch Airlines, N.V.)**, and **UTA French Airlines, S.A.**; the 4-airline pact is signed for a 10-year period.

On April 1, DC-8-62 service to Kinshasa and Johannesburg, to Douala and Oslo via Copenhagen is inaugurated. On April 24, a BAC 1-11-500 (with crew) is leased from **British United Airways, Ltd.** for a six-month period as replacement for the CV-990A lost on February 21.

Four more DC-9-32s arrive in early fall. On September 6, Flight 100, a DC-8-62 with 12 crew and 143 passengers en route from Zurich to New York, is one of three Western airliners hijacked to Zerqa, a military air

base 20 mi. N of Amman, Jordan, by Popular Front for the Liberation of Palestine guerrillas. The hostages are released and together with a BOAC VC10 and a TWA B-707-331B, the plane is blown up on September 13.

Passenger boardings this year climb a slight 1% to 3.92 million and freight is up 6%. In terms of passengers carried, Swissair is now the 23rd largest airline in the world; it ranks 21st in freight tonnage and 18th in employment.

Orders are placed for four DC-10-30s on February 18, 1971. The carrier's first B-747-257B arrives at Zurich on February 27, where it is christened *Geneve*. It enters service on the Zurich-New York via Geneva route on April 1. The second Jumbojet, the *Zurich*, is delivered on April 16 and starts flying to America on April 29.

New flights are added to Nicosia on April 21, Boston on May 8, Libreville on May 13 and in cooperation with **Alitalia, S.p.A.**, Genoa on June 1. Walter Berchtold retires as president on December 31.

Enplanements during the 12 months increase to 4,506,620.

On January 1, 1972, Armin Baltensweiler becomes president and the workforce is now 13,707. The twenty-fifth anniversary of North Atlantic service is celebrated in April, during which month the first anniversary of wide-body service is also noted. The Swiss government issues a new postage stamp in honor of the carrier.

Declaring himself to be the "reincarnation of Jesus Christ Superstar," 30-year-old New York City resident M. V. Maimone hijacks a DC-9-32 en route from Geneva to Rome on April 17 by brandishing what turns out to be a box of cigars. Told the craft is low on fuel and cannot take him to Argentina as requested, Maimone permits the Douglas to fly on to Rome. On the ground at Rome, he demands an audience with the Pope, but is arrested by police instead. He will be tried and sentenced to a prison term of six years. Allowed to post bail in order to go home and put his affairs in order, Maimone simply disappears.

A ban on night movements of aircraft at Zurich, Geneva, and Basel Airports comes into effect on November 1. The first of eight DC-10-30s is delivered on December 9; christened *St. Gallen*, it is placed in transatlantic service to Chicago on December 15. Swissair is the first carrier to introduce the Douglas wide-body on the transatlantic run.

Passenger boardings rise 3% to 4,646,000 and cargo accelerates 9%.

Another DC-10-30 arrives in 1973 and is placed in service to African destinations; three more will be delivered by year's end. Ten DC-9-51s are also ordered. The fuel crisis forces curtailment of transatlantic operations during the third quarter.

D. Buholzer, an 18-year-old Swiss teenager, is overpowered at Zurich Airport on December 1 after seizing a DC-9-32 with 5 crew and 140 passengers shortly after it lands on a flight from Vienna. Buholzer, demanding aid to the starving peoples of Africa, had requested newsmen to come aboard and conduct an interview. When they show up, they turn out to be undercover policemen.

Enplanements are still up, however, by 12% to 5,211,810, and cargo traffic rises by 19%. The workforce is now 14,131.

The employee population climbs to 14,603 in 1974. In an organizational change on January 1, the number of divisions is raised to 11. In February, another DC-10-30 is delivered and placed on the African service; the CV-990s now begin phase out. A route is opened to Marseilles on April 1.

En route from Bombay to Karachi on December 2, a DC-8-62 with 150 passengers is hijacked by a youth armed with a toy pistol, who demands to be flown to the Mideast. After the Douglas lands at Karachi for refueling, the pirate is captured by the airliner's crew. He will be tried and receive a three-year prison sentence.

For the year, an all-time high in passenger bookings to date is reported: 5,373,000, a gain of 3% over 1973; cargo accelerates 15%.

The last CV-990A service, from Tripoli to Zurich, is flown by the *Canton de Vaud* on January 6, 1975, after which this final Coronado is retired. The last of the original eight-plane order of DC-10-30s arrives in February. Flights are started to Beijing and Shanghai on April 1, as well as to Abu Dhabi, Dhahran, and Salzburg. A CV-990A is sold to **Spantax, S.A.** on April 5 and service to Toronto begins on April 23.

Beginning on May 11, the company offers a two-week vacation tour to Yugoslavia for nudists and in June, two more Coronados are passed to **Spantax, S.A.** The former *St. Gallen*, is presented to the Swiss Transport Museum at Lucerne early in the month. Three of 10 ordered DC-9-51s are delivered in July. Company passengers are now able to enjoy the new Terminal C opens a Zurich Airport.

Enplanements for the year climb 5.2% to 5,649,824, freight grows 5.3%, and the workforce is reduced to 14,360.

New service is inaugurated to Oran, Kuwait, and Dubai in April 1976. Employment drops to 14,342 and the fleet now totals 48 aircraft. A DC-9-32 is sold in November, following the earlier sale of a DC-8-62 to **Balair Air Charter, A.G.** and one to the Swiss charter carrier **Societe Auxiliare de Transport Aerien, S.A. (SATA)**. Passenger boardings climb 8.4% to pass the 6 million mark for the first time (6,126,000) and cargo soars 11.7%.

In January 1977, the carrier receives the 1976 "Financial Management Award" from *Air Transport World* magazine.

During the year, routes are extended to Sofia, Linz, and Ankara. A ninth DC-10-30 is delivered and on October 19, 15 DC-9-81s and 2 DC-9-51s are ordered. One more DC-9-32 is withdrawn and orders are placed for 2 DC-9-51s and 15 DC-9-81s (later McDonnell Douglas MD-81s) on October 19.

In 16 days during November and December, a DC-10-30 with 243 passengers aboard makes the carrier's first around-the-world flight Zurich to Zurich. The mission is completed in 11 stages: Geneva, Karachi, Bangkok, Hong Kong, Shanghai, Tokyo, Honolulu, San Francisco, and Geneva.

Enplanements are 6,540,624 during these 12 months.

The workforce totals 14,777 in 1978 and new flights originate to Oporto (April 1) and to the Algerian city of Annaba on June 29. On July 6, a letter of intent is signed for six Airbus Industrie A310-221s and firm orders placed for two more DC-10-30s. Service to Jeddah begins on November 2 and on December 18 it is announced that a new corporate emblem will replace the 25-year-old logo and arrow.

Passenger boardings are up 4.6% to 6,856,437 and cargo jumps 14.5%. On total revenues of \$1.4 billion, expenses reach \$1.36 billion, leaving a profit of just under \$27.9 million.

The company receives the 1978 "Airline of the Year" award from *Air Transport World* magazine in January 1979. On March 14, an order worth SFr 697 million is placed for 10 A310-221s.

Service is inaugurated to Dublin on April 1 and withdrawn to Beirut on July 8 because of the Israeli-Lebanese conflict.

After landing at Athens from Geneva on October 8, the DC-8-62 *Uri*, with 12 crew and 142 passengers, overruns the runway and stops in a public road 80 m. beyond. A fire breaks out and spreads quickly (14 dead).

The public prosecutor files preliminary charges of multiple manslaughter against pilot Fritz Schmutz the next day. They will not be dismissed as expected.

During the Iran hostage crisis, CIA disguise-specialist Tony Mendez is able to smuggle six Americans out of Tehran aboard a Swissair flight; the story is not revealed until October 12, 1979.

A third B-747-257B is requested in December.

Despite soaring fuel prices and the temporary grounding of all DC-10s in the wake of the Chicago **American Airlines** crash, passenger traffic rises 1.8% to 6,977,611 and freight traffic accelerates 1.2%. On total revenues of \$1.47 billion, expenses are \$1.43 billion, producing a \$30.5-million profit.

Two additional DC-10-30s are delivered in January and February 1980 and Jakarta flights are begun on March 31. The top management structure is realigned on June 1. In July, four (later five) B-747-357s and two DC-10-30ERs are ordered; the former, for which the carrier is launch customer, will be passenger and cargo convertible combis. The first three MD-81s are delivered in August and September and are placed into service over the company's Zurich to London route on October 5. Service is launched to Amman on December 10. Also during the

year, the 100-millionth passenger enplanes at Zurich Airport and a new city rail link is opened at that facility.

Cargo traffic is up 3%, but passenger boardings decline 1% to 6.95 million. With the help of income from subsidiaries, a net \$23.1-million profit is posted.

The number of employees in 1981 totals 15,494 and in January the carrier acquires the Hotel Drake in New York City for \$73.5 million. The company's fiftieth birthday is celebrated in Basel ceremonies on March 26.

In April, the holding company Swissair Associated Companies, Ltd. is created to manage the airline's growing number of associated companies. Deputy Swissair President Hans Schneider is placed in charge as the new concern's chairman. He is succeeded at deputy president by Executive Vice President-Technical and Operations Robert Staubli.

During the summer, a decision is taken in favor of a two-crew cockpit for the A310. In October, President Baltensweiler is elected IATA president for 1981-1982.

Passenger bookings rise 5% to pass the seven million mark in annual boardings for the first time (7,300,000) and freight grows 7.5%. Revenues rise to \$1.67 billion and expenses are \$1.65 billion, leaving a \$27.7-million profit.

The employee population in 1982 is 15,746, a 1.6% boost. On February 12 after protracted negotiations, a five-year replacement agreement is signed with **Crossair, Ltd.** and on February 23, the 100 millionth passenger is boarded. Flights begin to Thessaloniki on March 28 and the next day, to Hanover and Nuremberg. On April 30, Chairman Fritz Gugelmann retires and is succeeded by President Baltensweiler; Deputy President Robert Staubli becomes the new president. The new deputy president is Bertranc Jaquiere, while Rolf Krahenbuhl becomes executive vice president-technical and operations and Paul Frei becomes vice president-operations.

A new route is opened to Harare (Zimbabwe) on June 8. Additional highlights of the year include the addition of two more DC-10-30s and the boarding by the airline of its 100-millionth passenger.

Passenger traffic falls 1.8% to 7,168,567 bookings, but freight gains by an equal percentage, climbing to 461.7 million FTKs. Revenues are \$1.72 billion, up 0.3%, and expenses are \$1.70 billion, up 3.3%; a \$27-million net profit is realized, atop an operating gain of \$14.3 million.

The workforce is increased a scant 0.9% in 1983 to 16,147. In January, the carrier receives the 1982 "Airline of the Year" award from *Air Transport World* magazine. Also in January, the marketing and foreign affairs units are merged into a single organization under Deputy President Jaquiere.

The first Jumbojet combi, the B-747-357C, is acquired on March 5 and is christened *Basle*, followed by the *Bern*, which arrives on March 19. Service is started to Toulouse on March 27 and Riyadh on December 7. The latter point is the carrier's 100th destination. Service is also withdrawn from Beirut and Ankara. Meanwhile, during the first six months of the year, two new B-747SP-57s enter service and one sets a new record for the Atlantic crossing of 5 hrs. 47 min.

The first of four A310-221s to be delivered during the year arrives at the end of March and as the first of its type to enter service, begins revenue flights between Zurich and London on April 21. Flights to Moscow are suspended for two weeks in protest of the shooting down of **Korean Air/Korean Airlines KAL 007**.

In late summer, the readers of *Business Traveler Magazine* vote the company the world's No. 1 airline; the carrier will hold that position with subscribers until 1988. The board of directors now approves the introduction of business-class services while Swissair Associated Companies, Ltd. Chairman Schneider announces his retirement, effective at the end of the year. He will be succeeded by Martin Junger.

In September, the company's first DC-10-30, the *St. Gallen*, is sold to **Ecuadoriana (Empresa Ecuatoriana de Aviacion, S.A.)**. The third B-747-357C *Zurich* arrives on November 30, followed by the *Geneve*,

which is delivered on December 4. The board directs the introduction of business-class service on December 15 and in one of the stranger aviation incidents of the year, pilot Fritz Schmutz is convicted by a Greek court for the 1979 fatal Athens crash and fined.

Passenger boardings advance only 0.1% to 7,177,407 while freight does much better, advancing 17.1% to 540.42 million FTKs. On revenues of \$1.7 billion, the profits are \$38.3 million (operating) and \$27 million (net).

The workforce is increased 3.4% to 16,652 in 1984 and the original B-747-257Bs are sold out of service during January. One is leased to the California charter operator **Air National**, which will employ it to launch summer-scheduled European passenger flights.

Business-class service is introduced systemwide on March 25, the same day flights to Harare and to the Algerian city of Annaba are closed. A frequency is initiated to Larnaca on March 27 and the last DC-8-62 is withdrawn from service in mid-April.

As launch customer, Swissair places an order for eight Fokker 100s on July 5; simultaneously, four more MD-81s are also requested. After a string of problems involving overbooked flights, stranded passengers, and fiscal downturn, **Air National's** problems become terminal in early July when the Swissair Jumbojet is attached by a Missouri court for non-payment of rental fees. The plane is returned in August and the company files for Chapter XI bankruptcy in September.

Boardings decline 1% to 7,074,000, but cargo swells another 17% to 634.09 million FTKs. Capitalization is increased to SFr 568,324,400 and revenues advance 8.6% to \$1.7 billion. A gross profit of \$152 million is generated and the year's net profit is \$25.8 million, a 7.9% boost.

The employee population advances 4.8% to 17,500 in 1985. The fleet, meanwhile, comprises 4 B-747-357Bs, 11 DC-10-30s, 5 DC-9-32s, 6 DC-9-51s, 17 DC-9-81s, and 3 A310-221s.

The carrier receives the 1984 "Technology Management Award" from *Air Transport World* in January. In March, Swissair MD-81 first officer Gabriela Luthi becomes the first woman to begin pilot training at the Swiss Civil Aviation School. The Boston Lafayette opens as Swissotel No. 5 and Caracas joins the route network on June 8.

New uniforms are introduced for female flight attendants the company and receives its first extended-range A310-322 in November; the first of its type in the world to enter service, it is placed on the Zurich to London route on December 20.

Cargo is level and enplanements rise 4% to 7.3 million. Revenues are \$2.3 billion and expenses are \$2.1 billion; profits are \$202.4 million (operating) and \$36.3 million (net).

As the year closes, the carrier ranks 20th among world airlines in terms of air freight transported, 21st in total number of employees, 11th in revenues generated, and 4th in operating profit. The year's profit is, in fact, the 35th consecutive one reported since 1950.

The payroll grows 2.3% in 1986 to 17,657. In January, two A310-322s and three MD-81s are added and three DC-9-51s are sold. On March 30, twice-weekly B-747-357B flights begin to Seoul and new markets are initiated at Birmingham on April 1, Malta and Anchorage on April 3, Tirana on May 5, Bahrain on May 29, Ankara on October 26, and Brazzaville on October 28.

Meanwhile, on May 23, a man runs onto Flight 125, a DC-10-30, as passengers are boarding at Chicago (ORD) and holds a knife to a woman's throat for 30 minutes. The man is subdued and removed from the wide-body slightly injured; the lady suffers only minor cuts.

A new accord is signed with **Crossair, Ltd.** on September 16 as six more Swissotels are added. "Genuss-scheine," a form of dividend-right certificate, is issued for the first time.

Share capital is increased to SFr 615,371,400 and the *Genuss-scheine*, a form of dividend-right certificate is issued for the first time. Three people who have played major roles in shaping Swissair's post-war history pass away: Walter Berchtold on January 23, Fritz Gugelmann on June 23, and Heinz Haas on July 21.

Passenger boardings rise 2.2% to 6,454,497 and freight advances 5.9% to 674.17 million FTKs. Revenues drop 7.4% to \$2.18 billion, due

largely to exchange rate fluctuations. Expenses fall 7.1% to \$1.98 billion, leaving an operating profit of \$200 million. The 36th consecutive net profit is down 5.8% to \$35 million.

The employee population climbs 1.4% in 1987 to 17,908. Orders are placed for six MD-11s and another MD-81 on March 18. Flights to Oran are closed on March 22 and the Santiago de Chile route opened in 1962 is closed the next day. Service to Dhahran is closed on March 26, to Dublin on March 27, and to Colombo on March 28. Flights begin to Atlanta on March 29 and Turin (by **Crossair, Ltd.** SAAB 340s) on May 4. Gabriela Luthi begins her career as the first Swissair female pilot.

On July 10, Swissair joins other European carriers in launching the continent-wide computerized reservations system known as Galileo. Crews begin converting to the Fokker 100 in September using a simulator in Montreal. Launch customer for the new Fokker jetliner, the carrier, scheduled to receive its first unit in November, must wait longer because of manufacturing delay. The final B-747-357C, named *Ticino*, arrives on December 4, while options taken earlier on six additional MD-11s are converted to firm orders on December 16. Later in the month, the carrier features foods from the Grisons region on its intra-European and North African services. It also opens new lounges for business-class passengers at Geneva and Zurich.

Customer bookings for the year advance 7.6% to 6,945,399 and cargo moves ahead by 8.8% to 733.75 million FTKs. Revenues inch up to \$2.6 billion, but despite the first profit for the European operation since 1979, exchange rate erosion pushes costs to a point where the carrier's operating income drops to \$69.8 million. Net profit, however, swells to \$48.1 million.

The number of workers grows a further 3.8% in 1988 to 18,584. Early in February, a fifth Jumbojet, a combi, is placed into service. Following hand-over ceremonies in Amsterdam at the end of the month, the company's lead Fokker 100, christened *Chur*, is employed for crew training at Malta during March. Flights to Khartoum end on March 20; however, a week later, flights are started to Graz. On March 28, service begins to Bordeaux, followed two days later by the start-up of the Catania market.

The world's first Fokker 100 service is flown on April 5 when the *Chur* carries passengers from Zurich to Copenhagen. A new cargo terminal is opened on May 30 at Geneva's Cointrin Airport; it is capable of handling 100,000 tons of freight per year.

Swissair acquires 38.4% equity stake and 41% voting rights shareholding in **Crossair, Ltd.** on June 13 in exchange for an investment of SFr 111 million. The Swiss Civil Aviation School celebrates its thirtieth anniversary on June 26.

Deputy President Otto Loepfe succeeds Robert Staubli as president on July 31 upon the latter's retirement. Swiss national councillor Verena Spoerry becomes the first woman elected to the company's board of directors.

The next day, a new corporate organization is introduced. The new corporate management includes Loepfe, the heads of 1 corporate divisions, and 2 delegates to the president. Vice Presidents Heinz Buchi, Andre Clemmer, Alfons Bernhardsgrutter, and Heinz Galli all retire and Paul Reutlinger and Stephan Frohlic join the management team.

Eight Fokker 100s and three MD-81s join the fleet while the last DC-9-32 revenue flight is made, bringing to a close the company's Dash-32 and Dash-51 era.

Passenger boardings ascend 4.2% to 7,236,126 and freight swells 10.9% to 813.91 million FTKs. Revenues increase 5.5% to \$2.8 billion, costs rise 6.8%, and operating income declines to \$40.5 million. Net gain manages to increase again, to \$52.5 million.

Company employment grows 3.8% in 1989 to 20,300 and the fleet now includes 55 jetliners. A cooperative agreement is signed between **Delta Air Lines** Chairman Ronald Allen and Swissair Chairman Baltensweiler on March 14; the two promise to assist one another in marketing and operational areas.

Under terms of the agreement, the Swiss and American airlines will coordinate and share frequent flyer programs, ground handling, schedules, and codes over the North Atlantic from Zurich to New York (JFK),

Atlanta, and six other U.S. gateways plus a route from Geneva to JFK. Swissair will code-share with Delta on the latter's intra-American routes while Delta will operate dual-designator flights via Zurich to nine European communities, plus Abu Dhabi and Dubai.

Service is inaugurated to Lyon on March 27 and to Izmir and Ljubljana on March 28. The service to Lyon and Ljubljana is operated five times per week on behalf of the carrier by Crossair, while the Izmir route is flown twice weekly by Swissair Fokker 100s. The airline joins the frequent flyer program of **USAir** on May 1.

Nonstop flights to Japan via Siberia commence on June 28. Service to Glasgow is suspended on July 27, but started to Santiago de Chile on July 31. Also in July, Swissair acquires 2.5 million shares of **Delta Air Lines** stock (5% equity) for \$193.4 million; the Atlanta-based megacorporation purchases 100,000 shares of Swissair stock, a figure also representing 5% equity. A new management structure is completed on August 1 as Swissair, **Deutsche Lufthansa, A.G.**, and Guinness Peat Aviation, Ltd. undertake to jointly construct and operate an aircraft maintenance facility at Shannon, Ireland.

During the fall, onboard telephones are introduced for the use of passengers on flights delayed on the ground at Swiss airports for more than half an hour. In September, the carrier teams with **Delta Air Lines** and **Singapore Airlines, Ltd.** to form "Global Excellence," an alliance offering a worldwide network of quality air services. The agreements between the European, American, and Asian carriers calls for code-sharing, frequent flyer program cooperation, and reciprocal ground handling.

An extraordinary general assembly of shareholders votes on September 12 to increase share capital to SFr 709,171,740 and votes approval of the 5% equity stake taken in **Delta Air Lines**. About this time, Swissair, **Deutsche Lufthansa, A.G.**, and Guinness Peat Aviation (GPA) undertake to jointly construct and operate an aircraft maintenance facility at Shannon, Ireland.

Goteborg joins the route network on October 29 and Los Angeles on November 1. Later in the month, it is announced that the carrier has finished returning its Fokker 100s to Amsterdam for structural strengthening and will take from the manufacturer all of the jetliners previously assigned to **KLM (Royal Dutch Airlines, N.V.)**. During November, in-flight video news is offered with combined programming from Cable News Network (CNN) and the European Business Channel (EBC).

A cooperative 0.6% equity agreement is inked with **Singapore Airlines, Ltd.** in December, similar to that signed with **Delta Air Lines** in March, and emphasis upon the "Global Excellence" program is intensified. In reciprocity, Singapore takes 2.7% shareholding in the Swiss flag line. During the year, the company begins to wet-lease on the Santiago to Buenos Aires route of **Ladeco (Linea Aerea del Cobra, S.A.)**.

Customer bookings swell 6% to 8,620,319, but cargo only inches upward, by 0.1%, to 887.9 million FTKs. Revenues advance by 3.2% to \$2.9 billion, expenses crawl up only 0.9% to \$2.8 billion, and the operating profit is \$104.6 million. Net profit reaches \$58.8 million.

The payroll is increased 1.7% in 1990 to 20,655, a figure representing the 22nd largest airline workforce in the world. In April, a joint traffic system agreement is signed with **SAS (Scandinavian Airlines System)**. Flights to Monrovia are suspended on June 5 and to Kuwait on August 2; however, the Boston terminus is stretched to Philadelphia on August 6. During the remainder of the month, flights are halted to Jidda, Tel Aviv, Abu Dhabi, and Dubai as the result of Iraq's invasion of Kuwait.

A huge order is placed on September 28 for 7 A320-214s and 16 A321-111s for 1995 delivery. Catania departs the route network on October 24; service is initiated to Berlin (Tegel Airport) on October 28, followed by Valencia the next day and Bilbao on October 30. Also in the month, the airline becomes the first international carrier to offer telephone rental service to its incoming passengers.

In Europe during October, the "European Quality Alliance" of Swissair, **SAS (Scandinavian Airlines System)**, **Finnair, O/Y**, and **Austrian Airlines, A.G.** is formed. During the year, new staff uniforms are introduced, created by the fashion designer, Luigi Colani.

In December, the Swiss national carrier takes a 10% interest in **Austrian Airlines, A.G.** and six-times-per-week services are inaugurated between Zurich and Berlin.

Passenger boardings climb a slight 1% to 8,700,325 and freight is up by 4% to 927.37 million FTKs. Revenues ascend 4.4% to \$3.58 billion, 13th best in the world. Expenses grow 7.7% to \$3.34 billion and cause the operating gain to fall to \$244 million, which is still the world's 7th best operating profit. Net gain plunges to \$3 million.

Airline employment is increased by 21.5% in 1991 to 19,302 and the first 2 of 11 MD-11s join the fleet in March. Early in that month, it is reported that the joint traffic system agreement signed with **SAS (Scandinavian Airlines System)** a year earlier has actually shown a "slightly negative response." At the same time, service is resumed to Jidda, Tel Aviv, Abu Dhabi, and Dubai.

Code-sharing flights, in cooperation with **Air Afrique, S.A.**, commence on a block-space basis from Zurich to Abidjan via Geneva and Dakar. The equity stake in **Crossair, Ltd.** is increased to 48.5% and the voting rights shareholding increases to a majority of 51.9% on March 13. Swissair flights to Bordeaux are taken over by **Crossair, Ltd.** on March 31.

The sixtieth anniversary is celebrated and on May 9, MD-11 service is inaugurated from Zurich to Atlanta. Service is suspended to Jakarta on June 21 and to Anchorage two days later. Service is started to Delhi on June 24, the same day flights to China are inaugurated via Siberia and Mongolia.

Daily MD-11 flights begin in June and July from Zurich to Montreal and Toronto and also in July, Swissair and **Austrian Airlines, A.G.** begin thrice-weekly joint service to Kiev and St. Petersburg, employing Austrian equipment and flying from Zurich via Vienna. The secession crisis disrupts Yugoslavia services in late June and July; although flights to Ljubljana are cancelled and those to Zagreb are suspended, those to Belgrade are maintained.

In an effort to save \$5.5 million per year, the company announces in August that it will move its revenue accounting operations from Zurich to Bombay, India. To compensate for the inequity of the joint traffic system, **SAS (Scandinavian Airlines System)** in September turns over its profitable daily Copenhagen-Geneva service to its partner as compensation.

Crossair, Ltd. begins replacing the carrier's flights to Hanover and Nuremberg on October 27 as direct DC-10-30 Switzerland-Johannesburg via Nairobi flights begin. Three days later, direct Switzerland to Hong Kong MD-11 service is inaugurated. Also in October, and again with **Austrian Airlines, A.G.**, MD-81 flights are started to Kiev and Vienna. Thrice-weekly nonstop MD-11 frequencies are introduced from Zurich to Johannesburg in November; the previous route via Nairobi is also maintained.

In Europe, a second flight, six times per week, is offered from Zurich to Helsinki and the Zurich to Nuremberg route, flown by **Crossair, Ltd.** on behalf of the major, is fully transferred to the regional. MD-11 nonstop flights are also introduced to Los Angeles and Rio de Janeiro and CFM International is selected in December to provide the engines for the carrier's new aircraft. Despite economic difficulties, the carrier is the 21st largest enterprise in Switzerland in turnover terms. Also during the year, Peter Nydegger is appointed chairman of the board of Swissair Associated Companies, Ltd., with Philippe Bruggisser succeeding Rolf Krahenbuhl as president. Rolf Winiger succeeds Paul Frei as head of the flight services division.

Overall customer bookings slide 8.2% to 7,985,740, but cargo inches up 1.9% to 944.64 million FTKs. Cost-cutting and other revenue enhancement programs allow revenues to ascend 1.4% to \$3.69 billion and exceed expenses. As a result, there are substantial profits: \$273.24 million (operating) and \$31.46 million (net). Swissair Group, the parent holding company, enjoys a \$74.6-million net gain.

Airline employment in 1992 stands at 19,300. Hannes Goetz succeeds Armin Baltensweiler as board chairman; the latter is named honorary chairman. A "Move" plan is implemented aimed at cost-cutting. Service is launched to Vilnius on January 19 and flights to Caracas are

suspended on January 26. On February 1, in response to a progressive policy of animal conservation support, the company deletes goose and duck liver, turtle soup, and frogs' legs from its in-flight menus.

The last DC-10-30s are withdrawn and on March 30, in cooperation with **Austrian Airlines, A.G.** and **SAS (Scandinavian Airlines System)**, the company opens four-times-per-week A310-322 service from Vienna to Chicago via Copenhagen; Swissair flies the entire route, suspended by the Stockholm-based major. The "Qualiflyer" frequent flyer program is kicked off on April 1 and a streamlined management structure is unveiled on May 1.

The fleet in July comprises 60 aircraft: 5 B-747s, 12 MD-11s, 4 A310-322s, 5 A310-222, 24 MD-11s, and 10 Fokker 100s. Cooperation with **Austrian Airlines, A.G.** increases on September 1 as passenger and cargo handling at Swiss and Austrian airports pass to the home airline. Service is started to Washington, D.C. on September 14. Four new markets are opened in October: Kiev on the 25th, Minsk on the 27th, St. Petersburg on the 28th, and Yaounde on the 31st.

A marketing agreement is signed with **Air Canada, Ltd.** in October. The arrangement provides for frequent flyer program linkage, exchange of flight attendants, and code-sharing on flights from Zurich and Geneva to Montreal and also Zurich-only to Toronto, Calgary, and Vancouver during the summer.

On November 1, the company tightens its working relationship with **Austrian Airlines, A.G.** with the introduction of a "governorship" concept to look after each others interests in their respective home markets. For example, the two partners represent each other with respect to booking offices, check-in, and passenger lounges at their home airports and merge their sales agencies in Switzerland and Austria. Banjul joins the network on November 6. Also during the year, the new Swissair Terminal at Zurich Airport is opened. Plans are announced for the reorganization of top management into a seven-member executive management group under President Loepfe.

Passenger boardings inch up 1.9% to 7,475,090 while freight does better, growing 13% to 1.06 billion FTKs. Revenues increase 2.7% to \$3.6 billion and expenses ascend 3% to \$3.32 billion. The happy difference allows an operating surplus, slightly down, of \$271.78 million and net gain, cut in half, of \$13.72 million. Parent Swissair Group experiences a 4.7% jump in operating income to \$4.2 billion and an operating profit of \$147.66 million. The net profit, including \$147.4 million from aircraft sales, is \$74.6 million.

In 1993, President Loepfe oversees a workforce of 19,100, still frozen after two years. In January, Swissair receives a "20 Years of Excellence Award in Passenger Service" from *Air Transport World* magazine. Management is now reorganized and the number of board members is reduced from 30 to 22.

A new marketing structure is introduced on January 1 and in February the 1989 "Global Excellence" code-sharing agreement signed with **Delta Air Lines** is expanded. Beginning in June, the American carrier begins daily nonstop Cincinnati to Zurich flights, with the Swiss line reserving blocks of seats in all three classes. Later in the month, Swissair inaugurates flights from Zurich to Atlanta and New York and from Geneva to New York, with **Delta Air Lines** purchasing a similar number of seats. The companies also begin to share terminal facilities in their jointly served cities.

During the year, new scheduled markets are opened at Harare on June 29, Cape Town on July 2, and Muscat on November 6; discontinued flights include to Bonn on March 27 and Vilnius on July 4. Buarulhos Airport becomes a stop on the São Paulo route. The lead European customer for the MD-11 experiences two turbine-blade failures on Pratt & Whitney PW4460 engines of its new airliners during the summer; the two grounded airliners are replaced by aircraft leased from **Deutsche Lufthansa, A.G.**

In October, the carrier joins with **Cathay Pacific Airlines (Pty.), Ltd.** in the Passages frequent flyer cross-participation program. A decision is taken to reject membership in the Alcazar alliance of European airlines. In December, the carrier opens discussions with the Belgian government

over ways to reduce the labor costs and raise the capital of **Sabena Belgian World Airlines, S.A.**

Customer bookings for the year climb 4% to 8,288,755 while cargo rises 17% to 1.24 million FTKs. Revenues for Swissair Group swell 4% to \$4.42 billion and expenses are \$4.27 billion. The operating surplus is \$120 million while net profit slides to \$48.4 million.

Operations continue apace in 1994 as \$1.8 billion, its largest ever investment, is committed to the replacement of MD-81s and A310-221s with 5 A319-112s, 16 A320-214s, and 8 A321-111s. In March, the company becomes the first to place a firm order for the A319.

In May, a 5% stake in Swissair, worth \$70 million, is purchased by a British bank for "mystery investors." At the same time, the company adopts a new aircraft livery that dispenses with the two-tone brown cheatline in favor of a two-color gray and white fuselage.

Plans are made to phase out the **Balair/CTA** charter subsidiary and to pass to the **Crossair, Ltd.** subsidiary the operation of all aircraft of 100 seats or less. Later in the year, negotiations are undertaken for purchase of a stake in **Sabena Belgian World Airlines, S.A.** In the fall, the Very Reverend Colin Semper, Canon of Westminster Abbey in the U.K., is hired to do voice-overs on radio commercials.

Passenger boardings leap ahead by 7% to 8,877,083 while freight is nearly double that, climbing 13% to 1.4 billion FTKs. Revenues are impacted by currency exchange movements; operating income is consequently down 6.1% to \$4 billion, while expenses fall 4.2% to \$3.99 billion. The pretax gain is down to \$5.7 million, while net profit is just \$2.5 million. Swissair Group has \$5.5 billion in revenues and net income of \$18.9 million.

Airline employment is increased a slight 0.4% in 1995 to 17,206. The first A321-111 is delivered to the company at the end of January and enters service on February 17; additional deliveries are scheduled at the rate of one per month through May 1997.

Having entered into a first-quarter block-seat, code-sharing agreement with **LOT Polish Airlines, S.A.**, Swissair now turns to **Crossair, Ltd.** to implement it by flying a SAAB 2000 over a route from Zurich to Krakow.

The route between Vienna and Chicago is closed on March 26 and passengers previously booked on that route are shifted to Swissair. Also during the last week of the month, 12 Avro RJ100s are ordered for **Crossair, Ltd.** at a price of \$300 million.

On March 31, three-way block-space, code-sharing service is launched with **Delta Air Lines** and Swissair by **Austrian Airlines, A.G.** A310-324s flying from Vienna to Washington, D.C. via Geneva. Flight attendants from all three carriers provide in-flight services.

As flag carriers are not welcome by the latter to serve both Taiwan and the Peoples Republic of China, the company, on April 7, establishes the subsidiary **Swissair Asia** to visit Taipei. The new entity receives a single MD-11 from its parent, which is employed to inaugurate new service to Formosa via Bangkok five times per week.

Also during the first week of April, joint flights with **Austrian Airlines, A.G.** commence between Zurich and Almaty via Vienna; the route complements an existing service from Zurich to Minsk via Vienna. At the same time, the current cooperative Vienna-Zurich route is converted into an every-2-hour shuttle. On April 16, the company leases a Douglas DC-4 from the South African Airways Museum Society; it will arrive from Lanseria and be repainted to represent the aircraft employed 50 years earlier to launch transatlantic service.

Discussions between the Belgian government and Swissair concerning the financial plight of **Sabena Belgian World Airlines, S.A.**, which have been on-going since December 1993, appear to bear fruit in early spring. Brussels officials and the Swissair let it be known that the Swissair may purchase up to 49.5% shareholding in the Belgian airline. On April 20, the European Commission enters the picture with a statement that it will only approve this plan when it receives guarantees that any agreement will not distort competition within the European Union or create a duopoly on routes from Brussels to Zurich and Geneva.

The Belgian government on April 28 announces that it has decided to approve the terms under which it will sell a 49.5% stake in Sabena to the Swiss major and expects finalization of a compact within the next two weeks. Sabena executives announce the acquisition on May 2 and two days later, Swissair officials announce the financial arrangements. In exchange for almost a half-interest in the Belgian airline, the Swiss carrier will invest \$228.1 million in Sabena. The arrangement represents acquisition by Swissair of a \$210.6-million voting-rights equity-holding and a \$17.5-million investment in nonvoting Belgian law participation certificates.

In addition, Swissair agrees to lend the publicly held Societe Federale d'Investissement, S.A. (SFI) \$140.4 million with which to pay back **Air France** for its 37.5% minority stake. The Belgian government, via SFI, will inject \$52.6 million while a consortium of Belgian investors will provide an extra \$70.2-million capitalization. State ownership of Sabena will drop from 61.8% to 50.5%; options also exist that would allow Swissair to increase its stake or for the Belgian government to buy back the Swiss stocks if national security requires nationalization.

Although both carriers continue for legal purposes to exist as independent entities, the deal will create the fourth-largest airline group in Europe. Swissair is permitted to appoint 5 members to the Sabena 12-person board of directors, with a 6th coming from the Belgian shareholders; the 12th person on the board, its chairman, must be a Belgian or European Union national with approval of both the Belgian shareholders and Swissair.

Under terms of the alliance signed between **Deutsche Lufthansa, A.G.** and **SAS (Scandinavian Airlines System)** on May 11, the latter will end its strategic relationship with the Swiss company. The next day, company executives announce that the airline will launch a new joint return service, in cooperation with **Delta Air Lines**, from Atlanta to Tel Aviv via Zurich. Two months later, the two will also launch dual-designator return services from Zurich and Geneva to Brussels.

During the third week of July, the European Commission formally, but with provisions to preserve competition, approves Swissair's \$228.1-million, 49.5% stake in **Sabena Belgian World Airlines, S.A.** To satisfy EC antimonopoly concerns, the two carriers pledge that, over the next five years, they will: (1) make slots available at Brussels, Zurich, and Geneva for any new entrants unable to obtain their own; (2) not increase frequencies on the four principal routes between Belgium and Switzerland more than 25% without EC permission; and (3) will conclude interline agreements with any new entrants wishing to fly the routes and permit them entrance into the frequent flyer programs of the two majors. In essence, the approval represents the application of EC air transport rules upon Switzerland, a non-European Union nation; the Swiss, looking for a way into the EU air market, offer no objections.

Also during the month, **Austrian Airlines, A.G.** accounting services are transferred, as a cost-cutting measure, to the Bombay facility where Swissair is already processing financial information. When the main runway at Stuttgart Airport is closed between July 31 and October 4, an Avro RJ85 is leased from **Crossair, Ltd.** and employed to maintain frequencies to the cross-runway at the German airport.

As the result of the tense military situation in Croatia, both **Austrian Airlines, A.G.** and Swissair suspend flights to Zagreb on August 2. Flights will resume a week later.

Company officials are on hand at Hamburg in August when the first Airbus Industrie A319-112 is rolled out and when, on August 25, it makes its first flight; the carrier is to receive its first "Baby Bus" a year hence. On August 29, a block-seat, code-sharing agreement is signed with **Malaysia Airlines, Ltd. (MAS)**.

On September 1, the company enters into an interline agreement with **NEPC Airlines, Ltd.** Under terms of the arrangement, the Swiss flag carrier will maintain the NEPC fleet and train its personnel, while the Indian company becomes Swissair agent in India.

On September 18, strategic alliances are entered into with **TAP-Air Portugal, S.A.** and **AOM French Airlines, S.A.** When implemented, the pacts will place emphasis on joint marketing (including frequent

flyer program links) and upon coordination of aircraft maintenance, ground handling, cargo, catering, and in-flight sales. Ten Fokker 100s are transferred to **Crossair, Ltd.** in September and these begin operating the major's short- and medium-haul routes. The Fokkers will begin withdrawal as the Avros arrive in quantity.

Other new markets are opened at Krakow, Shanghai, and Taipei during the year and the carrier wet-leases with **Emery Worldwide** on cargo flights between Basel and Chicago and operates joint flights with **Korean Airlines/Korean Air (KAL)** between Basel and Seoul. The block-seat, dual-designator service with **Malaysia Airlines, Ltd. (MAS)** begins thrice-weekly operations on November 1 between Zurich and Kuala Lumpur employing MAS B-777-2H6s. Flights take 12 hours.

Also during November, a cost-cutting plan, WIN, prepared by McK-insey Consulting, is sent to arbitration by the company and the pilots' union Aeropers. If implemented, the concept will see an unspecified number of Swissair pilots transferred to **Crossair, Ltd.** In addition, 1,600 **Balair/CTA** positions would be cut over the next several years and 300 ground workers will be laid off. Although executives from Swissair and **Crossair, Ltd.** all refuse to consider a group agreement covering cockpit crews from both companies, the mediator promises a solution by April.

A host of corporate activities, largely unnoticed by the public, occur during the year. A new group corporate structure, group executive management, is adopted and includes President/CEO (Otto Loepfe), Flight Operations (Rolf Winiger), Marketing and Ground Services (Paul Reutlinger), Logistics and Cargo and Human Resources and Organization (Jurg Marx), Swissair Associated Companies, Ltd. (Phillipe Bruggisser), and Finance and Corporate Development (Peter Nydegger). Executive Vice President-External Relations Paul Maximilian Muller retires, while Alain D. Bandle, who has headed the Swissair/Sabena joint project, departs. The board appoints Georges P. Schorderet as its future chief financial officer.

Enplanements move ahead by 3.5% to 8,703,270 while cargo grows by 7.1% to 1.5 billion FTKs. Operating revenue is off 13.2% to \$3.597 billion, but expenses are also down, by 11.5%, to \$3.592 billion. The closeness of these two figures allows an operating gain of just \$5.01 million; net profit falls to \$2.35 million. When SAirGroup is formed the following year, the overall figures will be rewritten; operating gain is adjusted upward to \$172 million, but there is a net loss of \$102.9 million.

Airline employment is cut 1.9% in 1996 to 16,883. In February, Paul Reutlinger, longtime Swissair vice president and management board member, is sent to Brussels to succeed embattled Pierre Godfroid as CEO of **Sabena Belgian World Airlines, S.A.** Block-space flights commence with **CSA Czech Airlines** between Zurich and Prague.

A block-seat agreement begins with **Oman Air** in March on flights between Zurich and Muscat. Code-sharing begins with **Air Canada, Ltd.** at the end of March on flights between Zurich and Toronto.

The type's launch customer, Swissair receives the first two A319-112s on April 25.

In response to the carrier's decision to transfer most of its long-haul flights from Geneva to Zurich, the Swiss government on May 8 elects to grant foreign airlines greater access to the nation's domestic air market and to end Swissair's monopoly status. Within weeks, foreign airlines will be granted unlimited access to Switzerland, including fifth freedom rights. The politics of the day almost overshadow introduction into service of its new A319-112.

On May 15, Swissair announces that it will stop offering champagne in business class before takeoff because of a lack of demand. During the month's last week, a three-year agreement, complete with a 5% salary increase, is negotiated with the company's flight crew union Aeropers; the pilots involved also agree on the carrier's plan to operate code-sharing routes with **Crossair, Ltd.**

Transatlantic summer services commence on June 1. The carrier inaugurates new weekday frequencies between Zurich and Newark. The number of flights to Cincinnati and Los Angeles is expanded by two. In addition, the code-sharing services operated with **Austrian Airlines**,

A.G. and **Delta Air Lines** are enhanced. The arrangement takes the form of block-seat purchases: Delta and Swissair purchase seats six times per week on the Austrian service while Austrian sells seats from Vienna to Washington, D.C. and Geneva. In addition, Delta sells its partners seats for flights from Washington to Vienna and Geneva and Swissair sells seats from Geneva to Vienna and Washington, D.C.

Pooled flights with **Gulf Air** commence in June between Bahrain and Damascus, Syria. During the month, a code-sharing agreement is entered into with **THY (Turkish Airlines, A.O.)** covering flights from Zurich to Istanbul and Izmir and from Geneva to Istanbul.

Plans for in-flight gambling announced earlier in the year begin to come to fruition on July 23 when Interactive Flight Technologies completes a contract for the installation of its in-flight entertainment network, which includes casino-style gambling, on 21 of the carrier's long-haul jetliners. The manufacturer will also receive a share of the gambling revenues generated by its \$80-million system.

Seven days later, company executive Phillippe Bruggiser advises workers that lower fares, high costs, and unsatisfactory business trends are forcing Swissair to cut salaries and other compensation. In cooperation with **Delta Air Lines**, a new market is opened at Newark, New Jersey.

In November, the existing dual-designator pact with **Delta Air Lines** is expanded. Ten new U.S. cities will be added: Fort Lauderdale, New Orleans, Cincinnati, Washington, D.C. (IAD), Dallas (DFW), Houston, Denver, Salt Lake City, Los Angeles, and San Francisco. Toward month's end, the company, acting in an independent role, agrees to allow **Sabena Belgian World Airlines, S.A.** market and sell cargo space on behalf of the Swiss line.

On December 18, the board of directors approves the restructuring of the carrier into the holding company SAirGroup with four major divisions: SAirLines, the airline operating unit; SAirRelations, the catering subsidiary; SAirSer, parent for ground handling and engineering; and SAirLogistics, the cargo and logistics center. A block-seat agreement also begins with **Olympic Airways, S.A.** on flights between Zurich and Thessaloniki.

Customer bookings rise 4% to 9,543,028 and 1.63 billion FTKs are operated, an 8% increase. Operating income for SAirGroup inches up 2.1% to \$5.74 billion, but expenses total \$5.49 billion. Operating profit jumps to \$235.6 million, but largely as a result of writing off its **Sabena Belgian World Airlines, S.A.** stake, the net loss deepens to \$342.8 million.

The employee population is increased by 13.1% in 1997 to 19,100. On January 1, Chief Operating Officer Philippe Bruggiser succeeds Otto Loepfe as CEO; Loepfe remains on the board of directors. The December cargo agreement with **Sabena Belgian World Airlines, S.A.** takes effect on the same day. Officials announce on January 8 that the airline, together with its European partners **Austrian Airlines, A.G.** and **Sabena Belgian World Airlines, S.A.**, will be deepening their relationships with **Delta Air Lines** on February 1 with the intention of increasing the share for all in the North Atlantic air travel market. The new alliance will be known as "Atlantic Excellence."

Six days later, Swissair begins a yearlong commemoration of the fiftieth anniversary of its first transatlantic service by noting that aviation buffs will be able to fly over the original 1947 route in a vintage DC-4 that it will charter from **South African Airways (Pty.), Ltd.**

Astoria, Queens, New York-resident Thomas F. Casella is arrested by the FBI on January 24 and charged with making 185 threatening telephone calls to the New York offices of Swissair and **Delta Air Lines** since March 1995, 107 of which include claims about bombs.

As the result of an ATC failure on January 25, a company MD-11 comes within 1,000 feet of colliding with a **Singapore Airlines, Ltd.** A310-324 over Tochigi, Japan, near Tokyo. Disaster is avoided when the TCAS system aboard the Swiss airliner sounds, allowing it to take evasive action. The in-flight gambling system developed by Interactive Flight Technologies is tested on January 28.

Also during the month, **Sabena Belgian World Airlines, S.A.** and Swissair cargo operations in the U.S. are merged. Additionally, a memorandum of understanding is signed with Airbus Industrie for nine

A330-223s. Transatlantic code-shared revenue dual-designator flights commence on February from all U.S. gateways to Brussels, Zurich, and Vienna.

In March, block space flights commence with **Malev Hungarian Airlines** between Zurich and Budapest. **American Airlines** veteran Jeffrey G. Katz is named chief operating officer on April 1; he will become CEO on January 1, 1998. The carrier also recruits two Britons for vice presidential slots: Lee Shave as vice president-sales and customer relations and Ray Lyons as vice president-network management.

Also during the month, a code-share agreement is signed with the Italian regional **Azzur Air, S.p.A.**

On April 25, raw diamonds worth \$11 million lay unnoticed for two hours in a freight container thought to be empty in a Swissair freight room at the Zurich airport. An honest cargo handler discovers the London-bound shipment from Zaire when he opens the metal container, intending to use it for luggage headed for Atlanta. A Swissair spokesman notes the sacks have gone unnoticed because a telex message alerting the Zurich airport about the incoming shipment from Kinshasa, capital of Zaire, never arrived, probably due to the local political upheaval. Normally a message is sent and valuable cargo is escorted to a special freight room. The worker who found and turned over the diamonds is given a reward by his boss—\$34 from the boss's own pocket.

Celebrating a half-century of transatlantic service, Swissair flies the leased South African DC-4, in vintage livery, from Zurich to Washington, D.C. (DCA) via Shannon and Gander on May 6. With former hostess Emily Schneider-Salta, who had flown the original service, the Douglas must divert from New York (LGA) because of fog. The next day, the aircraft flies to New York (JFK). From there, on May 8, invited guests fly aboard the turbine-powered giant to New York (LGA) and Newark (EWR); two days later, the DC-4 returns to Switzerland.

Company shareholders, who also have a chance to see the historic aircraft, approve creation of SAirGroup at the annual meeting on May 22; restructuring is on target for June completion. Also during the month, **Finnair O/Y** is brought into the trilateral frequent flyer program of Swissair, **Austrian Airlines, A.G.**, and **Sabena Belgian World Airlines, S.A.** and begins dual-designator flights with the Swiss flag carrier over a route from Zurich to Helsinki.

Also in May, new joint Atlantic service begins when European colleague **Sabena Belgian World Airlines, S.A.** begins five-times-per-week Brussels-Cincinnati return service with Belgian A340s. The U.S. DOT now approves the carrier's plans to expand its block-space, code-share agreements with Sabena, **Delta Air Lines**, and **Austrian Airlines, A.G.** to 30 U.S. cities beyond Atlanta, New York, and Cincinnati. In return, Delta will purchase seats on the alliance partners' flights to eight cities beyond Brussels, Zurich, and Vienna.

In late spring, a block space, code-sharing agreement begins with **Ukraine International Airlines** between Zurich and Kiev. At the same time, a similar accord begins with **THY (Turkish Airlines, A.O.)** from Zurich to Istanbul and Izmir. The South African DC-4 makes another transatlantic historic flight in early June. Later, it will take passengers on charters from Zurich and Geneva to Prague, Salzburg, and Cairo.

As of August 1 "Atlantic Excellence" partner **Delta Air Lines** is able to place its code on Swissair's four weekly nonstop roundtrips from Zurich to St. Petersburg and twice-daily flights to Moscow.

On August 4, a code-sharing agreement is signed with **Maersk Air, A.S.** A marketing agreement is signed with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** on August 6. Under the arrangement, beginning in 10 days the majors will share codes on a new daily Swissair roundtrip service from Zurich to Mexico City via New York (JFK).

Also in August and September, strategic alliances are entered into with **TAP-Air Portugal, S.A.** and **AOM French Airlines, S.A.** Both agreements involve the usual amenities such as code-sharing, joint marketing, schedule coordinating, and linked frequent flyer programs that will be implemented with the pacts early in the new year.

In October, the carrier begins to code-share with **Regional Airlines, S.A.** on the route from Zurich to Toulouse. At the same time, Atlanta is

added to the westbound leg of the dual-designator service to Mexico City. When **Lufthansa Cargo, A.G.** determines during the month that it no longer requires its 25.4% stake in **Cargolux International Airlines, S.A.**, that shareholding is purchased for Swisscargo by SAirGroup's SAirLogistics subsidiary.

The **Maersk Air, A.S.** arrangement takes effect on October 26 when a Maersk B-737-5L9 inaugurates daily roundtrips from Copenhagen to Geneva. The route is an extension of another new joint-service that the two provide between Zurich and Billund via Frankfurt.

The 33-month upgrade of the European fleet has been completed by the time the winter schedule begins, also on October 26; at this point, all of the A310-322s/325s and most of the MD-81s have been replaced by 8 A319-112s, 18 A320-214s, and 8 A321-111s.

At Zurich this day, "Atlantic Excellence" partner **Delta Air Lines** is able to place its code on the carrier's daily return services to Hanover. The next day, dual-designator service is also begun on Swissair's daily flights from Zurich to Bangkok.

Also during October, the company enters into a strategic alliance with **AOM French Airlines, S.A.** effective November 1. On this date, code-sharing begins on routes from Zurich and Geneva to Paris (CDG), Zurich to Nice, Lyon, and Marseilles, and Geneva to Nice. The final MD-81 is retired, also on November 1.

The company outbids **Gemini Air Cargo** and is able to purchase four MD-11s from **LTU International Airways, GmbH.** on November 24.

On November 28, Swissair is left without an Asian partner when **Singapore Airlines, Ltd. (SIA)** withdraws from the "Global Excellence Alliance" to sign a bilateral strategic marketing pact with **Deutsche Lufthansa, A.G.** The 5% equity the two companies have in one another does not immediately change. The search for a new relationship begins in Japan and China while plans move forward to launch a fourth weekly service to China in 1998 in collaboration with **Air China International Corporation.**

The relationship with the Atlantic Excellence alliance will also be deepened beginning on December 1 when **Delta Air Lines** starts to code-share on Swissair's daily flights from Zurich to Cairo. Ten days later, it is announced that effective January 8, Delta will also begin to share codes on Swissair's daily flights between Zurich and Singapore.

On December 23, it is announced that the partnership with **TAP-Air Portugal, S.A.** will be deepened. Under this more extensive arrangement, TAP will use Swissair's reservations and handling system while its frequent flyer program will join the Qualiflyer program of Swissair. The agreement also allows SAirGroup to take a minority stake in the Portuguese airline when its planned privatization is initiated by the Portuguese government.

The year-old cooperative agreement with **Air One, S.p.A.** is intensified on December 29 under a new memorandum of understanding. Although the two airlines already cooperate in a number of areas, including frequent flyer benefits, the new relationship will provide Swissair with greater access to North Italian markets and give SAirGroup the opportunity to acquire a substantial minority equity stake in its southern colleague.

Passenger boardings surge 21% to 11,541,754 while freight climbs 12% to 1.83 billion FTKs. SAirGroup sees its operating revenues advance 29% to \$7.3 billion. Expenses are \$6.84 billion. The group operating profit is \$297.9 million while a net gain of \$278.9 million is posted. The core Swissair business enjoys an operating profit of \$137 million, its first since 1991.

At the beginning of 1998, Swissair/SAirGroup is the 11th largest airline in the world in terms of operating income and operating profit, 17th in net profit, 18th in freight carried, and 20th in employee number (19,100). The fleet, all of which is Stage III certified, includes 61 airplanes: 5 B-747s, 6 A310-322s, 8 each A321-111s and A319-112s, 18 A320-214s, 15 MD-11s, and 1 MD-80.

Chief Operating Officer Katz, a California native, becomes CEO on January 1. The code-share with **Delta Air Lines** begins as scheduled on January 8. The corporate checkbook is taken out and employed in Janu-

ary as it is announced that, under the December pacts, Swissair will purchase up to 10% equity in **TAP-Air Portugal, S.A.** as well as a significant minority stake in the Italian carrier **Air One, S.p.A.**

It is announced on January 10 that Swissair will replace its A310-322s, 5 B-747-357Cs, and 20 MD-11s, including the four just acquired from **LTU International Airways, GmbH.** with Airbus A330/340 equipment between the end of the year and 2008. The MD-11s are to be sold to an unnamed "major American airline."

During the month, the company joins several others as a launch customer for the A340-600, placing orders for nine Dash-642s, powered by Rolls-Royce Trent 500 engines, for delivery between 2002 and 2006; it also requests six more A330-223s with Pratt & Whitney PW4168 engines.

In order to gain German antitrust office approval for the merger of **Hapag-Lloyd Fluggesellschaft, mbH.** and Touriste Union International (TUI), Dusseldorf-based Westdeutsches Landesbank (WestLB), at the beginning of the year, is required to divest itself of its 34.2% interest in **LTU International Airways, GmbH.** Discussions on the matter begin with the U.K. leisure group Thomson and with SAirGroup.

On January 24, the existing relationship with **THY (Turkish Airlines, A.O.)** is deepened under a new memorandum of understanding signed in Ankara. Although the new pact does not call for SAirGroup to acquire a stake in the Turkish carrier, it does provide for full-freighter flights between Basel and Istanbul with THY as well as for planning on which new markets the two might enter on a joint basis.

An A320-131 arrives under charter from ILFC in early March. On March 13, **Delta Air Lines** begins to place its code on the daily Swissair flights between Zurich and Oslo.

On March 29, the carrier joins with **Sabena Belgian World Airlines, S.A., Austrian Airlines, A.G., TAP-Air Portugal, S.A., THY Turkish Airlines, A.O.,** and **AOM French Airlines, S.A.** to form the "Qualiflyer" group. Although members will retain their own identities, they will engage in a long list of joint activities, including ground handling, lounges and ticket offices, and frequent flyer benefits. Collaborative activities that will be added as soon as details can be worked out include maintenance and overhaul, cargo, in-flight catering, information technology, and duty-free concessions.

Also on March 29, **Delta Air Lines** places its code on the Swissair A310-322 service between Zurich and Muscat. The same day, the Singapore route is extended, thrice weekly, to Jakarta. New European frequencies are added to Malta, Tunis, Bucharest, and Kiev, while Lisbon receives another daily flight, Stockholm receives a new afternoon service, and the number of daily flights to Frankfurt is increased to four.

Former CEO and current board member Loepfe dies on March 31 at age 62. Lack of demand leads to a suspension of flights to Seoul at month's end. Capacity on the route will be shifted to a new Zurich to San Francisco route.

Swissair joins with **Delta Air Lines** on April 2 to form a global cargo alliance. When the arrangement takes effect during the summer, both companies will see their cargo networks marketed as a single network, using the cargo sales forces of both carriers in common cities to offer joint pricing.

Following the threat of **Virgin Express Airlines, S.A.** to move to the U.K. to skirt Belgium's high taxes and costly personnel benefits, President/CEO Paul Reutlinger of **Sabena Belgian World Airlines, S.A.** seeks government approval in April to shift the contracts of his pilots to Switzerland and to hire Swiss flight attendants. Reutlinger also points out that, as soon as Switzerland is able to join the European Union, Swissair will increase its Sabena stake from 49.5% to 67%, thereby reducing the Belgian government's stake to 33% minority holding.

On April 23, the parent group's Flightlease, Ltd. subsidiary completes arrangements to sell all of the airline's MD-11s to **Federal Express (FedEx).** After undergoing conversion from passenger to cargo aircraft, the planes will be delivered, beginning in August 2002 and continuing through December 2006.

The Swisscargo subsidiary, on April 29, wet-leases a third DC-10-30F that will offer new regularly scheduled links to Bombay and Hong Kong.

Employing an MD-83 leased from Swissair, **Crossair, Ltd.** launches service on May 1 between two and four times a week from Zurich on behalf of its parent to five East European destinations, including Baku, Riga, Samara, Yerevan, and Tbilisi. A Crossair MD-83 is also employed to offer Swissair replacement service from Zurich to both Nice and Berlin (Tegel Airport).

The first of two A321-231s acquired from ILFC on the year arrives in mid-May; the second will be delivered in November.

With MD-11 capacity freed up by the cancellation of services to Seoul, the company, together with **Delta Air Lines**, launches nonstop roundtrips from Zurich to San Francisco on May 28, five times a week. At the same time, service to the New York area, including Newark, is boosted from 21 to 27 weekly flights, while additional frequencies are added on the Manila, Delhi, Bombay, Beijing, Karachi, Dubai, and Muscat routes.

Also in May, an agreement is signed with **Delta Air Lines** that will see the inauguration of dual-designator flights on July 4 from Zurich to Karachi. Another document commits the partners to market their cargo operations as a single network.

All passenger flights become nonsmoking on June 1. The next day, weekly MD-11 roundtrips commence between Zurich and Malabo, Equatorial Guinea. Four weekly return services are initiated on June 7 between Zurich and the Macedonian city of Skopje. The 154th and 155th destinations on the company route network are added on June 22 as flights begin to Bologna and Venice, Italy. The daily services are operated in association with **Air One, S.p.A.** and are provided by a SAAB 2000 wet-leased from **Crossair, Ltd.**

A memorandum of understanding is signed with **Cathay Pacific Airways (Pty.), Ltd.** on June 29; under its terms, the two companies introduce code-sharing on their five weekly nonstops between the Zurich and the new Chek Lap Kok Airport, when it opens on July 6.

After months of operating freighter hubs at both Geneva and Basel, the company, also on July 6, concentrates all of its freighter services at the latter point. Relatively few of the company's staff are required to transfer from one airport to the other.

A major marketing agreement is signed with **Japan Air Lines Company, Ltd. (2)** on July 7. The two airlines will launch dual-designator service between Switzerland and Japan in October. Additionally, the pair will also cooperate in such areas as information technology, technical services, catering, and cargo.

The dual-designator agreement with **Malaysia Airlines, Ltd.** is intensified on July 17 as Swissair places its code on Malaysia's thrice-weekly B-777-2H6 IGW roundtrips from Kuala Lumpur to Zurich.

Code-sharing between Zurich and Ankara begins on August 1 as the Swiss airline places its code on the **THY Turkish Airlines, A.O.** B-737-4Q8 daily roundtrip.

During mid-month, the company joins several other concerns in placing a bid for a large minority stake in the French carrier **AOM French Airlines, S.A.** Also at this time, heavy fighting forces the company to suspend its weekly flights to Kinshasa, Democratic Republic of the Congo.

The U.S. DOT fines the carrier \$50,000 on August 11 for flying over Afghanistan. Department rules prohibit foreign airlines using the codes of their U.S. alliance partners (in this case **Delta Air Lines**) from entering Afghan airspace because of safety and security concerns caused by the civil conflict there. Half of the fine will be forgiven if Swissair does not violate the rule during the next year.

Tragedy strikes on September 2. Late at night while en route from New York (JFK) to Geneva, Flight 111, an MD-11 with 14 crew and 215 passengers, crashes into the sea off the coast of Nova Scotia after the pilot had reported smoke in the cockpit and attempted an emergency landing at Halifax. All aboard, including two infants, are killed and rescue parties reaching the scene in civil and military boats find only an oil slick, small amounts of debris and remains, and life preservers. Along with the lives of those aboard, Swissair will report the loss of a container holding 1 kg. of diamonds, 2 kg. of watches, 4.8 kg. of jewels, and an

unknown amount of currency. Additionally, a painting by Pablo Picasso, valued at \$1.5 million, is also gone.

At 1:30 a.m., **Delta Air Lines**, the carrier's U.S. code-sharing partner, makes an announcement concerning the disaster, together with contact instructions for relatives and the media. Family and friends of crash victims wait at New York (JFK) for word and are assisted by Delta personnel. Meanwhile, the Geneva airport sets up a crisis center for crash relatives in Europe. Canadian transport authorities begin an investigation.

As salvage activities intensify, numerous family members and friends of victims head to the U.S. and Canada, with some continuing on to Nova Scotia. While en route from Chicago (ORD) to Zurich on September 5, Flight 125, an MD-11 transporting home numerous family members of victims of Flight 111 who had come to the U.S. earlier, must be diverted to Toronto when a passenger signals he is in medical distress. Emergency in-flight medical aid is provided by flight crew and two doctor-passengers. After deplaning with other family members, the man, brother of a Flight 111 passenger, is rushed to a Toronto hospital, where he dies. The MD-11, meanwhile, continues to Switzerland.

A strategic alliance is signed with **Qantas Airways (Pty.), Ltd.** on September 18. Dual-designator services and the linkage of frequent flyer programs are the main ingredients.

Also late in the third week of September, SAirGroup purchases a 44% state in the French regional carrier **Air Littoral, S.A.**, which will now become a member of the "Qualiflyer" group. In order to comply with EU regulations, the commuter's controlling shareholder, the MSC holding company, retains the majority interest.

Newly received, the company's first A330-223 makes its maiden revenue flight on September 25, operating as Flight 700 from Zurich to Paris (CDG). Before the new ship is deployed on intercontinental routes on October 25, it will fly European services, ensuring a smooth introduction.

On October 5, it is reported that wreckage from Flight 111 will be brought to the surface via the use of a barge equipped with shovels that can scoop 30-tons each time they are lowered.

In light of the September 5 disaster, the company, on October 7, withdraws its advertising campaign, which had featured the slogan "The Refreshing Airline." Planning begins on a new promotion, with television advertisements, for 1999.

After months of negotiation, WestLB completes arrangements during October for the sale of its **LTU International Airlines, GmbH** stake to SAirGroup, parent of Swissair. At the same time, the SAirGroup board nominates five-year member Eric Honegger to succeed Chairman Hannes Goetz when the latter retires in the year 2000.

The code-share between **Air Littoral, S.A.** and **Deutsche Lufthansa, A.G.** between Nice and six German destinations is threatened in late October. Swissair requests that Air Littoral, which maintains management control, abandon its DLH link, but the regional does not, at least initially, comply.

Under the code-sharing pact signed in July, the company, on October 25, begins code-shared services with **Japan Air Lines Company, Ltd. (2)** over return routes from Zurich to Tokyo (NRT) seven times a week and from Zurich to Osaka (KIA) six times a week.

With the start of the winter schedule during the day, the company also initiates thrice-weekly roundtrips from Zurich to Santiago de Chile via São Paulo. A fourth weekly roundtrip is begun to Buenos Aires, while weekly frequencies to Rio de Janeiro are doubled to two.

The company's five weekly frequencies from Zurich to Hong Kong are augmented by four additional weekly flights operated by **Cathay Pacific Airways (Pty.), Ltd.** under the new dual-designator pact.

The new A330-223 enters long-haul service when it initiates a new Sunday roundtrip service from Zurich to New Delhi, the company's fourth weekly frequency to the Indian destination. As additional A330-223s are received during the fall, they will fly to Dubai and Karachi.

Also on the first day of the winter schedule, Johannesburg receives a sixth weekly service, extended to Cape Town. Douala, meanwhile, receives a second weekly flight, operated via Yaounde.

The code-sharing pact with **Qantas Airways (Pty.), Ltd.** takes effect on October 26, as the two begin to offer thrice-weekly connections from Zurich to Sydney via Singapore. The Zurich–Singapore leg is operated nonstop by Swissair, while the Singapore–Sydney portion is a Qantas operation.

Also on October 26, a strategic code-sharing agreement is signed with **South African Airways (Pty.), Ltd.** Under its terms, SAA will distribute all Swissair traffic from Johannesburg throughout Southern Africa while Swissair will distribute all SAA traffic from Zurich to numerous destinations in Europe. A joint daily service to and between Zurich and Johannesburg will be introduced within months.

The carrier's direct connection with Philadelphia ceases at the end of the month. Travelers needing a connection to Philadelphia are referred to **Delta Air Lines**.

After some negotiation, SAirGroup, parent of Swissair, takes the maximum permitted stake in **Air Europe, S.p.A.** on November 1 through the purchase of 49.9% of the Dutch-based holding company Tegel. Simultaneously discussions continue between SAirGroup and **Air One, S.p.A.** concerning its acquisition of the remainder of the Italian airline.

Under a contract signed with **Debonair, Ltd.** on December 1, the British discount operator undertakes "Swissair Express" BAe 146-200 replacement service for the major from Zurich to Bologna and Venice beginning on November 5. The flights, code-shared with **Air One, S.p.A.**, had previously been operated by Swissair employing a SAAB 2000 wet-leased from **Crossair, Ltd.**

As is the case with the continuing search into the reason(s) for the crash of TWA-800, the investigation into the disaster of Flight 111 has not yet revealed any firm leads as to its cause. On November 11, the parents of a Swiss teenager killed in the crash file a negligent homicide suit against the airline, hoping to discover the cause. The couple, who are reportedly not seeking damages, have chosen to employ this legal procedure as a way to intensify the crash investigation.

En route from Singapore to Zurich on November 26, Flight 189, a fully loaded MD-11, is forced to return to its point of origin when acrid odors are smelled in the cockpit. It will later be determined that the cause was forest fires burning on Sumatra.

On December 6, a similar cockpit odor forces Flight 183, an MD-11 with 14 crew and 222 passengers en route from Bangkok to Zurich, to make an unscheduled landing at New Delhi. After an examination, the aircraft continues to Switzerland without further incident.

By December 8, the remains of 223 victims from Flight 111 have been identified; however, the diamond container and the Picasso painting are still missing. The latter is believed destroyed and no one knows if any of the precious stones will ever be recovered.

Delta Air Lines on December 17 begins to code-share on Swissair A310-325 roundtrip flights from Newark to Basel, six times a week. Simultaneously, the Swiss partner is able to place its code on Delta services to 10 new U.S. destinations: Albuquerque, Austin, Greensboro, Greenville/Spartanburg, Kansas City, West Palm Beach, Raleigh/Durham, San Antonio, Sarasota, and Tulsa.

Despite the Flight 111 tragedy, customer bookings accelerate 12% to 12.69 million. Cargo traffic jumps 7% to 1.96 billion FTKs. Profits are reported for the year: SFr 700 million (operating) and SFr3 61 million or \$247.8 million (net) on \$7.8 billion in revenues.

By the beginning of 1999, airline employment has been increased by 9.3% to 43,696.

The sale of **AOM French Airlines, S.A.** is completed by Consortium de Realisations on February 3. Marine Wendel/Groupe Alpha purchases 51% majority control, with SAirGroup, the parent of Swissair, winning the remaining 49% stake. With Switzerland having elected not to join the European Union, Swissair has actively sought to bypass the problems of non-membership by acquiring strong minority stakes in a number of carriers from EU states.

Plans are now announced by SAirGroup for the creation of a large European Leisure Group, which will include not only **LTU International**

Airways, GmbH., but also the Swissair subsidiary **Balair/CTA, Sabena Belgian World Airlines, Ltd.**'s subsidiary **Sobelair, S.A., Crossair, Ltd., Air Europe, S.p.A.,** and **Volare, S.p.A.** The new arrangement, under the direction of Project Leader Stefan Helsing, is designed to be part of an integrated network built around the already existing "Atlantic Excellence" and "Qualiflyer" alliances.

It is reported on March 8 that the Canadian government has so far spent US \$41.4 million on the Flight 111 disaster; international protocol prevents Canada from seeking recompense from Switzerland.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo, Swissair, on March 23, halts all scheduled service into Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further the next day. On March 24, service is also cancelled to Sarajevo, Mostar, Banja Luka, Tirana, and Skopje; that evening, Operation Allied Force, the NATO bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade remains halted on March 25 and for the duration of the NATO bombing campaign. Flights to south-central and south-eastern Europe experience delays of 30–60 min. due to airspace closure.

Weekly service to Kinshasa, Democratic Republic of the Congo, is resumed on March 28. **Flightline, Ltd.** becomes the second British "Swissair Express" carrier during the day. Painted in "Swissair Express" colors and operated with a Flightline cockpit and cabin crews, the new partner's BAe 146-200 operates twice-daily return flights from Zurich to London (STN).

The "Swissair Express" agreement with **Debonair, Ltd.** is simultaneously expanded. A second Debonair BAe 146-200 operates four daily roundtrips from Zurich to Turin.

On April 1, **Delta Air Lines** places its code aboard Swissair services from Zurich to Bucharest.

The Wall Street Journal reports on April 2 that SAirGroup, parent of Swissair, will soon acquire a 20% stake in **TAP-Air Portugal, S.A.**, with an option to acquire another 10% interest over the next 4 years. The pact will need EC permission before it can be implemented.

The company indicates that it is interested in restarting service to Tripoli now that the UN has lifted its seven-year ban on air travel to Libya.

The NATO Stabilization Force reopens the Bosnian airports at Sarajevo, Mostar, and Banja Luka for daylight flights on April 14.

At a meeting of the Swiss-American Chamber of Commerce on April 21, the CEO of Swissair indicates that moves by **Delta Air Lines** to form a code-sharing alliance with **Air France** have placed the status of its current dual-designator pact with Swissair in grave doubt. Swissair resumes flights to Sarajevo on April 21.

Beginning on May 1, partner **Delta Air Lines** places its code on Swissair's daily roundtrips between Zurich and Bucharest. Simultaneously, the number of weekly flights to Beirut is boosted to seven.

Cologne returns to the company route network on May 10 with thrice-daily return service from Zurich.

Flight International reveals on May 12 that SAirGroup is having second thoughts about its plans to take a 20% stake in **TAP-Air Portugal, S.A.** This doubt follows the decision of a tribunal court that has recommended that pilots of the Portuguese national airline be awarded a 95% pay increase.

It is reported on May 21 that the company's parent is holding discussions with **South African Airways (Pty.), Ltd.** concerning the possibility that it may enter the "Qualiflyer" group, sponsored by the Swiss line. Officials from SAA and SAirGroup both stress that no agreement has been concluded. The Italian carrier **Air Europe, S.p.A.** does, however, sign on.

The next day, in an effort to reduce its dependence on the traditional, but volatile, airline catering business, SAirGroup purchases the U.S.-based caterer Dobbs.

On May 24, Swissair increases the number of frequencies to various European cities. This includes six daily frequencies to Brussels and Munich,

five to Berlin, Dusseldorf, and Copenhagen, four to Hamburg, Hanover, Barcelona, and Stockholm, and two to Bucharest and Oslo. Frequencies are also added to Paris (CDG), Amsterdam, Skopje, and Sarajevo.

Swissair and **Delta Air Lines** launch a code-sharing service on May 28 between Atlanta and Lima, Peru. At the same time, Swissair, reestablishes scheduled service to Kinshasa but suspends flights to Bamako, Banjul, and Dakar.

Victor Gerden, the Canadian chief investigator for the September 2, 1998 Flight 111 crash, reports during the last week of May that, by weight, approximately 81% of the wreckage has been recovered from the waters off Halifax, Nova Scotia. The accident review is far from finished.

The company enters into a European marketing alliance with **Sabena Belgian World Airlines, S.A.** and **American Airlines** on June 22. As soon as government clearances are received, AA and Sabena will code-share on each other's flights between Chicago and Brussels and on Sabena services between Boston and Brussels. AA and Swissair will code-share on flights between Chicago and Zurich and on Swissair flights between Zurich and both Miami and Boston.

A B-747-357 is retired on June 24. It arrives at Arizona two days later from Switzerland, having flown in via Boston.

South African President Thabo Mbeki informs his parliament, as part of his State of the Nation address on June 25, that SAirGroup has won the bid and will acquire a 20% equity stake in **South African Airways (Pty.), Ltd.** for R 1.4 billion (\$232 million). The Swissair parent has an option to purchase another 10% within six months. **Deutsche Lufthansa, A.G.** and **Singapore Airlines, Ltd.** had withdrawn from the bidding with **American Airlines**, Texas Pacific Group (**Continental Airlines** shareholders), and **Ryanair, Ltd.** losing out. The SAirGroup link is expected to help SAA cut interest rates, negotiate less expensive aircraft deals, and to enter major alliance relationships.

Occupation of the new Geneva headquarters for **TEA-Basel, A.G.**, doing business as easyJet Switzerland, A.G., a franchise partner of easyJet Airlines, Ltd., is completed on May 21. Plans are announced for the inauguration of new services on July 28 from Geneva to Amsterdam, Barcelona, and Nice.

By the end of the first full week in July, easyJet Switzerland, A.G. has sold thousands of seats for the inauguration of service on its new route from Geneva to Barcelona. On July 12, a spokesman for Swissair holds a news conference to remind the discount operator that a national law enacted the previous November grants the SAirGroup subsidiary a monopoly over the Barcelona route and any others that it has not abandoned. The combative easyJet Chairman Stelios Haji-Ioannou promises a court battle if necessary.

The Swissair position is confirmed by Transport Minister Moritz Leuenberger on July 19. The authority of easyJet Switzerland, A.G. to operate to Amsterdam and Nice is, however, confirmed as Swissair had dropped those routes from its regular schedules before the November law had taken effect.

Beginning on July 29, 3,500 passengers with confirmed Barcelona tickets have their fares refunded in cash, are offered free roundtrips from Geneva to Barcelona, and are encouraged to contribute to a company fund set up "for the protection of consumer interests against Swissair."

The latest airline to be subjected to the scrappy tactics of the British discount carrier, Swissair and its executives must now stand by as easyJet Switzerland, A.G. begins to bypass the November law by offering daily "charter" flights from Geneva to Barcelona using the **TEA-Basel, A.G.** tour operator license, which is still valid.

In something of a surprise move, the airline and Boeing agree, on August 9, to take responsibility for the crash of Flight 111. On August 27, Swissair announces that it will not, in fact, make any attempt to join one of the big global airline alliances. It will, instead, continue to foster the Qualiflyer group.

Boeing and SAirGroup conclude a "sharing agreement" on August 5 under which the two concerns jointly assume financial responsibility for proven damages arising from the Flight 111 disaster.

By mutual consent, the carrier, on September 22, agrees with **Singapore Airlines, Ltd.** to end their pact to own a percentage of each other's share for a minimum 10-year period; the accord was otherwise slated to end in August 2001.

With the October 1 collapse of the British low-fare airline **Debonair Airways, Ltd.**, **Volare Airlines, S.p.A.**, in which Swissair holds a stake, is persuaded to dedicate two A320-211s to the operation of replacement flights on the routes from Turin and Venice to Zurich.

To provide lift for its charter program in the fall, Volare wet-leases a pair of A321-131s from the Turkish carrier **Onur Air, A.S.** on October 7. The participants announce on October 13 that the "Atlantic Excellence" alliance is being dissolved in order that its members might join other world airline groupings. Swissair, **Delta Air Lines**, **Austrian Airlines, A.G.**, and **Sabena Belgian World Airlines, S.A.** will honor existing travel agency and corporate sales agreements through December 31 and end their code-sharing arrangements on or before August 5, 2000.

When the winter schedule begins at the end of October, service is withdrawn to Jakarta, Riga, and London (STN), while new frequencies are started on the Zurich to Washington, D.C. (IAD) route.

It is announced on November 19 that SAirGroup, parent of Swissair, has outbid both **British Airways, Ltd. (2)** and **Deutsche Lufthansa, A.G.** to purchase, by year's end, a 10% stake in **LOT Polish Airlines, S.A.** In making the award, Polish Treasury Minister Emil Wasacz indicates that the stake will be increased to 37.6% through a recapitalization of the airline.

A strategic, equity agreement and code-sharing arrangement is concluded with **South African Airways (Pty.), Ltd.** on November 20. Under its terms, SAirGroup will purchase a 20% stake in its new partner.

Counting partner **Sabena Belgian World Airline, S.A.**'s three flights to and from Chennai, the two carriers share 14 weekly Indian frequencies after Swissair increases its weekly flights from Zurich to Bombay and New Delhi from 9 to 11 on December 7.

The last of 11 A330-223s to be accepted this year is delivered on December 14 while the last of 12 A321-111s received since January 1995 is delivered on December 21. Also, by the end of the year, the management, marking, and sales functions of the carrier and Swissair, A.G. in the U.K and Ireland have been combined into a single umbrella organization known as the Airline Management Company, Ltd. Swissair's General Manager UK & Ireland Kirk Albrow is AMC general manager, with his Sabena counterpart, Marc Nellis, as deputy.

Largely unnoticed during the year, Gaby Musy-Luthi becomes the first woman captain in Swissair history. After performing its final flight from Newark to Zurich via Basel, the last A310-325 is withdrawn. The departure brings down the curtain on 16 years of Swissair A310 service without accident or major incident.

Passenger boardings during the 12 months jump 12% to 14,501,000 while freight traffic dips 1% to 1.94 billion FTKs. SAirGroup revenues increase 17.2% to \$8,135,351,000 while costs climb 16.4% to \$7,713,630,000. The operating profit slides to \$421.72 million, while the net gain drops to \$170.81 million. One more frequency is added on January 1 to both Bombay and New Delhi.

Airline employment at the beginning of 2000 stands at 18,157. Among the world's top 25 airlines, Swissair is 25th in passengers and 20th in FTKs, while SAirGroup is 13th in operating revenue and operating profit, and 20th in net gain.

A one-year lease is signed with **Nova Airlines, A.B. (Novair)** on January 23 for the lease of a Swissair A330-200 that will replace Novair's Lockheed TriStar.

Just 100 m. airborne on its January 27 takeoff from Los Angeles for Zurich, Flight 107, an MD-11, suffers the failure of an engine. The wide-body circles over the Pacific for 45 min. dropping 50 tons of fuel before making a successful emergency landing back at its point of origin.

In late January, representatives of the expanding SAirGroup arrive at Almaty to open negotiations concerning their possible acquisition of a stake in **Air Kazakhstan Group**. A stumbling block will be that group's huge debt, estimated at \$110 million.

A code-sharing agreement is signed with **El Al Israel Airlines, Ltd.** on February 4 covering frequencies by the two airlines between Switzerland and Israel.

The Portuguese government, in early February, confirms that SAirGroup has completed arrangements for the acquisition of a 34% stake in **TAP-Air Portugal, S.A.** for 31.2 billion escudos (\$154 million). The government will retain 51% and sell 10% to employees. SAirGroup has an option to purchase another 5% if desired.

Plans are announced on February 22 for resumption of five-times-a-week return service from Zurich to Belgrade on February 26; this scheme will be delayed until March 10.

Early in the year, new improvements are started on a fifth expansion of facilities at Zurich, including a new terminal train station.

A tripartite signing ceremony is held in New Delhi in March for a pair of new cargo agreements. In one, **Emery Worldwide Express** acquires 80% of the daily cargo capacity of **Indian Airlines, Ltd.** between Madras and Singapore. The other, between **Swisscargo** and **Emery**, permits Emery to book belly space aboard **Sabena Belgian World Airlines, S.A.** passenger flights and Swissair's dedicated thrice-weekly DC-10-30F freighter service to Africa and beyond from Basel.

With a load factor below 60% on the route, the carrier discontinues its Basel to Newark service on March 26; the Zurich-to-Newark flights remain. The same day as the summer schedule begins, a third daily roundtrip is introduced between Zurich and New York (JFK), replacing the one previously flown in code-share with **Delta Air Lines**. The Delta dual-designator arrangement had been concluded the previous day.

The code-sharing agreement with El Al also begins on March 26 and is implemented on the thrice-weekly Swissair roundtrips between Geneva and Tel Aviv and the 14 return flights made by the carrier from Zurich and Tel Aviv, as well as the six-times-a-week El Al roundtrips between Tel Aviv and Zurich and the thrice-weekly return flights from Tel Aviv to Geneva.

Other international highlights of the new Swissair summer schedule include increases in services to San Francisco and Miami from 5 to 7 weekly flights, Boston from 7 to 14, New York (JFK) from 14 to 21, as well as to Bombay, Delhi, Osaka, and the Persian Gulf states. In Europe, frequencies are boosted to Vienna, Paris, and Hamburg.

At Geneva, frequencies to Athens, Madrid, Rome, and Lisbon are turned over to **Crossair, Ltd.** Thrice-daily roundtrips from Geneva to Vienna are handed to **Air Littoral, S.A.** Swissair will continue to operate flights from Geneva to New York (JFK), London (LHR), Moscow, Zurich from Geneva.

Under terms of a memorandum of understanding signed on March 7, Swissair and **Thai Airways International, Ltd. (THAI)** on March 26 begin to code-share on each other's seven weekly roundtrips between Zurich and Bangkok (seven flights each).

Unable to fill the bellies of its passenger planes flying to Miami and various charter points, Swissair terminates its exclusive block-space contract with **City Bird, S.A.** also in March.

Dual-designator services with **Japan Air Lines Company, Ltd. (2)** between Osaka (KIX) and Zurich are increased on April 1 when Swissair increases its MD-11 return flights between the two cities from six per week to daily.

It is confirmed on April 19 that negotiations are underway between **Deutsche Lufthansa, A.G.** and SAirGroup concerning a possible purchase by the former of the latter's 10% stake in **Austrian Airlines, A.G.**

Arrangements are completed on April 26 for SAirGroup to become the new majority owners of **Sabena Belgian World Airlines, S.A.** by taking over the Belgian government's stake and increasing its own equity holding from 49% to 85%. The deal is subject to ratification by a referendum of Swiss voters on May 21 of a new air transport agreement and other accords between Switzerland and the EU, as well as acquisition of the approval of the Belgian Parliament.

On May 5, **British Airways, Ltd. (2)** sells its 86% stake in **Air Liberte, S.A.** for FFr 457 million (£47 million) to Taitbout Antibes, B.V., a Swissair affiliate owned by the French investment houses of Alpha

Group and Marine Wendel. Taitbout is already joined with SAirGroup in the total ownership of **AOM French Airlines, S.A.**, with the two also holding 66% of **Air Littoral, Ltd.** Plans are announced for a merger of the three into a single carrier that can offer domestic French competition for **Air France**.

On May 21, Swiss voters ratify bilateral agreements providing Switzerland closer executive, nonpolitical relations with the EU. Also during May, seven-year board member Eric Honegger becomes SAirGroup chairman, succeeding Hanes Goetz. The U.S. DOT, meanwhile, approves the 10-year pact between Swissair, Sabena, and **American Airlines**.

On June 1, Swissair and **Japan Air Lines Company, Ltd. (2)** link their frequent flyer programs.

The carrier begins to code-share with **Thai Airways International, Ltd. (THAI)** on June 15 on the return route from Zurich to Bangkok. One flight is operated by a Swissair MD-11 and the other by a THAI MD-11.

A second daily roundtrip is initiated between Zurich and Boston on June 18; one flight is operated with an MD-11 and the other with an A330-223. The last of 15 A330-223s to be delivered since September 1998 is accepted on June 23.

It is announced on June 28 that the installation of new first-class seating has been completed on 15 MD-11s and 9 A330s.

Also in June, the carrier joins **Sabena Belgian World Airlines, S.A.** and **American Airlines** in placing a new dual-designator arrangement before the U.S. DOT for approval. Under its terms, the three would code-share on flights from Zurich to Bombay and New Delhi and from Brussels to Chennai, India. The idea will be rejected by the regulators in early August.

A fourth weekly A330-200 service between Zurich and Karachi is added on July 20.

At the end of July, SAirGroup President/CEO Philippe Bruggisser announces creation of a "Conseil de Surveillance," a revised management structure for the about-to-be-merged French airlines. Chaired by Mr. Couvelaire, the body's executive management will be headed by Paul Reutlinger, current **Sabena (Belgian World Airlines, S.A.)** CEO, who will move to Paris to guide the fusion of the three into one, but will also become vice chair of the Belgian airline's board of directors. Meanwhile, Swissair President/CEO Jeffrey Katz, while retaining his board seat, returns to the U.S. to take over the industry-owned Orbitz Internet travel site. Group CEO Bruggisser takes Katz's hat as well.

The last code-shared flights by Swissair, **Delta Air Lines**, and **Austrian Airlines, A.G.**, acting as partners under the now-disbanded "Atlantic Excellence" alliance occur on August 5. The next day, the 10-year arrangement with **Delta Air Lines** definitely ends as Swissair launches a new dual-designator pact with **American Airlines** covering all 14 daily flights operated across the Atlantic by the new partners.

The tire bursts aboard a company MD-11 as it takes off from Johannesburg on August 12 on a service to Zurich. Fragments enter the left engine, causing complete loss of power. After circling for an hour dumping fuel, the giant aircraft make a safe emergency landing back at its point of origin.

The European Commission reports on August 18 that SAirGroup and a group of Portuguese investors have withdrawn their plans to takeover **PGA-Portugalia Airlines, S.A.** In cooperation with the Swissair cargo division **Swisscargo**, **MASKargo**, the cargo unit of **Malaysia Airlines, Ltd. (MAS)** inaugurates twice-weekly B-747-200F return freight flights between Kuala Lumpur and Basel/Mulhouse on August 30.

A code-sharing agreement is signed with **Sri Lankan Airlines, Ltd.** on October 24. Under its terms, the Swiss carrier will sell tickets on the Sri Lankan line's twice-weekly A340-312 roundtrips between Colombo and Zurich beginning on December 1. Swissair will thus return to the former Ceylon for the first time since March 1987.

The Swissair services between Paris (ORY) and Geneva are taken over by **AOM French Airlines, S.A.** on October 29. A press release issued on November 1 indicates that the carrier is training staff and preparing to introduce handcuffs in January for use in restraining violent

passengers. The measure is made necessary by an increase of unruly passenger incidents from 285 in 1996 to 502 in 1999.

A program to repaint the winglets of its MD-11s and A330-223s with the Swiss flag must be halted on November 6 due to legal problems. The airline learns of the requirement limiting the national symbol to the flag and registration area after two MD-11s and two A330-223s have already been colored.

All services between Switzerland, Belgium, Boston, Chicago (ORD), Miami, and Washington, D.C. (IAD) are operated as code-shares by November 21.

It is rumored in the German press during November that Swissair, because of its reportedly weakened financial situation, has become a takeover target for **Deutsche Lufthansa, A.G.** In an interview with the magazine *Wirtschafts Woche* published on November 23, DLH Chairman Jurgen Weber categorically rules out buying the Swiss flag carrier. On November 24, SAirGroup Chairman Bruggisser indicates that Swissair has no current plans to join the "OneWorld" alliance of its code-sharing partner **American Airlines**.

The company grounds its 11 A330-223s propelled by Pratt & Whitney engines on December 8 after French aviation authorities issue a warning concerning a component in the assembly that mounts the power plants to the wing.

In view of the mounting losses being suffered at its French subsidiaries and at **Sabena Belgian World Airlines, S.A.**, negotiations, which have been ongoing with **Alitalia, S.p.A.** for some weeks, are abandoned on December 16. This development opens the door for the Italian line to finally find a partner in **Air France**. Reuters, Ltd. reports that SAirGroup, hit by high fuel bills like other majors, is facing the need to bolster the even more worse off Belgian and French members of its "Qualiflyer" alliance and does not currently have the resources needed for expansion.

On December 18, a global cooperative agreement is signed with Switzerland Tourism aimed at increasing tourism to the carrier's home country. Simultaneously, plans are announced for a second phase of its plans to upgrade operations at Zurich Airport. Passenger handling will be improved at the airport by next summer through the addition of another 70 ground handling staff.

The SAirGroup board meets before Christmas but does not complete a strategic plan to revive its deteriorating economic condition. Arrangements are, however, completed under which SAirGroup will sell its 4.6% stake in **Delta Air Lines** for an unspecified amount to an unnamed buyer. The divestment will allow Swissair to concentrate on its growing relationship with **American Airlines**. A financial rescue plan is also approved for the ailing French airline subsidiaries.

As has become increasingly clear as the year ends, fiscally, 2000 is the worst ever for the airline and its parent. Swissair, during these 12 months, enjoys operating revenues of SFr 5.79 billion, but a loss, before interest and taxes, of SFr 1.27 billion. As a whole, SAirGroup operating revenues jump 25% to SFr 16.23 billion, but operating expenses accelerate 26.1% to SFr 15.63 billion, causing operating profit to fall to SFr 603 million. Losses incurred by airline investments, value adjustments to loans, and provisions established for restructuring costs, asset impairments and contractual obligations combine to cause a net loss of SFr 2.88 billion (\$1.66 billion).

A profit crisis in January will see SAirGroup CEO Bruggisser step down. The board will announce an end to the corporation's aggressive airline acquisition policy and name **Crossair, Ltd.** CEO Moritz Suter to manage its airline group (Crossair, Swissair, and **Sabena Belgian World Airlines, S.A.**), with Swissair Flight Operations Director Beat Schaer becoming Swissair CEO. Suter will resign after only six weeks.

In February, with union support, the company's board will approve a financial rescue package to keep **Sabena Belgian World Airlines, S.A.** from imminent collapse; SAirGroup will assume responsibility for SFr 150 million of the SFr 250-million (\$230-million) bailout agreement reached earlier with the government of Belgium.

SWISSAIR ASIA, A.G.: **Swissair, A.G. Zurich-Flughafen, Zurich, CH-8058, Switzerland; Phone 41 (1) 812 1212; Fax 41 (1) 810 8046; Code SR; Year Founded 1995.** As the People's Republic of China does not welcome flag carriers serving both Taiwan and the PRC, **Swissair, A.G.** on April 7, 1995 establishes this subsidiary to visit Taipei. The new entity receives 2 McDonnell Douglas MD-11s from the mainline fleet, which are employed to inaugurate new service to Formosa via Bangkok, five times a week. The company operates one MD-11 twice weekly over the Formosa route in 1996-1998, increasing to thrice-weekly in 1999.

SWISSAIR EXPRESS. See **AIR ONE, S.p.A.; DEBONAIR AIRWAYS, LTD.; FLIGHTLINE, LTD.**

SYD AERO BE-GE, A.B.: **Sweden (1967-1987).** Established at Oskarshamn in late 1967 under the direction of Per Erik Persson and Karl-Johan Persson, this small commuter inaugurates passenger and cargo charters as well as scheduled commuter services to Hultsfred, Norköping, Stockholm, Trollhättan, and Västervik. De Havilland Canada DHC-6 services continue throughout the remainder of the decade and the 1970s.

By 1981, the fleet comprises 3 Twin Otters and the workforce totals 31. During 1982-1984, one DHC-6-300 is withdrawn and replaced by a Shorts 330. Operations continue with little change until 1987 when the company stops flying.

SYKTYVKAR AIR ENTERPRISE: **Ulitsa Sovetskaya 86, Syktyukar, 167610, Russia; Phone 7 (82122) 20342; Fax 7 (82122) 21678; Code KMA1; Year Founded 1992.** Syktyukar is established in 1992 under the direction of Comdr. Nikolai Banban to operate scheduled passenger and cargo services to Moscow, St. Petersburg, and other Russian points. Additionally, ad hoc charters throughout Europe, Asia, and Africa will also be laid on, together with a significant schedule of rotary-wing aerial work.

Revenue flights continue in 1993-1998 with a fixed-wing fleet that grows to include 35 Tupolev Tu-134s, 1 Yak-40, 62 Antonov An-2s, 4 An-12s, 18 An-24s, 11 An-26s, and 19 An-28s. The helicopter fleet is nearly as impressive, comprising 19 Mil Mi-6s, 59 Mi-8/17s, 5 Mi-10s, 8 Mi-25As, and 52 PZL-Swidnik Mi-2s.

Although it is understood that this carrier continues to operate in the period after the beginning of the August 1998 Russian currency crisis, no definite information has been located to that effect.

SYNDICAT NATIONAL POUR L'ETUDE DES TRANSPORTS AERIENS, S.A. (SNETA): **Belgium (1919-1923).** On March 1, 1919, a group of Belgian businessmen found and capitalize a new air transport enterprise, SNETA. Commandant Georges Nelis, former head of the technical staff of the Belgian Air Corps, is named director general. Six aircraft (three Breguet 14A2s and three Rumpler C.IVs) are acquired in the spring of 1920 and inaugurate Brussels-London service on June 19. Later the fleet is upgraded with de Havilland DH 4s and DH 9Cs.

Meanwhile, in the Belgian Congo, SNETA joins with the aerial survey operator **Comite d'Etudes Pour le Navigation Aerienne au Congo, S.A. (CENAC)** under the joint title **Ligne Aerienne du Roi Albert, S.A. (LARA)** on July 1 to create an experimental east-west air service. Levy-Lepan R three-seat flying boats are employed to launch the first segment of a route between the Congolese towns of Leopoldville and Stanleyville, flying from the former destination as far as N'Gombe. This first airline to open in any colony in the world has thus also opened the first intra-African air service.

Despite the irksome necessity of reattaching the aircraft's fabric after each flight, the N'Gombe end of the Congo service is extended by the little pusher biplanes to Lisala on March 3, 1921. During the summer, the 1,078-mile Stanleyville-Leopoldville Congo River route is finished and opened.

In Europe, Farman F-60 Goliaths are placed on the London route on April 6 and on May 2, in cooperation with **KLM (Royal Dutch Air-**

lines) and **Compagnie des Messageries Aeriennes, S.A.**, a pooled through-service is launched Amsterdam–Paris via Rotterdam and Brussels. By the second anniversary of European service in July, less than 100 passengers have been carried. Two Farmans are among seven aircraft lost in a hanger fire at Brussels Airport on September 28, causing the London service to be halted.

In 1922, the fleet comprises only 14 transports: Farman Goliaths, de Havilland DH 9s, Bleriot-Spad 33s, Ansaldo A300Cs, and the 6 Levy Lepans in the Congo. The combined LARA service is completed on June 7. In 2 years of operations, 95 passengers and 2 tons of freight are transported between the 4 towns on the Kinshasa–Stanleyville route.

To combine and upgrade both the Congolese and European operations, the Belgian government takes over SNETA's assets on May 23, 1923 and forms them into the new state airline, **Societe Anonyme Belge d'Exploitation de la Navigation Aerienne—Sabena**.

SYNDICATO CONDOR, S.A. (SERVICO AEREO NA AMERICA DO SUL E PARA A EUROPA): Brazil (1927–1942). After six months of quasi-operations and negotiations following the official end of the **Condor Syndikat** on July 1, 1927, a new Brazilian company, **Syndicato Condor, S.A.** is registered as an airline on December 1. Fritz W. Hammer returns as director general, the board of directors remains the same, funding is provided by **Deutsche Luft Hansa, A.G. (DLH)**, and initial equipment comprises the Dornier Wals *Santos Dumont* and *Bartholomew de Gusmao*, plus the Junkers G-24 *Ypiranga*.

The Brazilian government on January 20, 1928 provisionally transfers to the new entrant the concession of the old **Syndikat**. A permanent concession is provided a week later for the development of routes and services throughout the country. The *Bartholomew de Gusmao* is destroyed in a fire on February 11.

The established Rio de Janeiro–Porto Alegre frequency is now increased by the *Ypiranga* to twice weekly. During the first half of June, the newly delivered G-24 *Potyuar*, formerly the **Deutsche Luft Hansa, A.G. (DLH)** *Persephone*, undertakes an expedition to the north of Brazil, visiting all of the cities that will later be included in the company's flight plan. In the fall, the carrier begins to distribute semiofficial airmail stamps produced in Germany.

The *Santos Dumont* is destroyed in an accident at Guanabara Bay on December 3. Late in the year the former **Deutsche Luft Hansa, A.G. (DLH)** *Wal Lubeck* is sold to Condor and renamed *Guanabara*. Two more Junkers G-24s, the *Polyguar* and *Riachueio*, along with two F-13s, the *Bandeirante* and *Bluemau*, are received from Germany at year's end.

An ex-**Deutsche Luft Hansa, A.G. (DLH)** Junkers F-13, the *Iguassu*, is received in January 1929. On July 15, the latter initiate weekly flights from Salvador to Belmonte via Ilheus; Valenca and Santarem are added as stops on this new route, beginning on September 2. The former Dornier *Wal Hamburg*, formerly owned by the German flag carrier, is acquired late in the year and christened *Olinda*.

A complete coastal route from Rio de Janeiro up to Natal is inaugurated by the *Olinda* on February 3, 1930 via Vitoria, Caravelas, Belmonte, Ilheus, Salvador, Marcio, Recife, and Cabedelo. On March 22, the new Dornier *Wal Jangadeiro* flies mail to the passenger ship *Cap Arcona* off the island of Fernando Noronha, and in so doing is forced to land on high seas (but mail flights are thus shown to take only 10 instead of the usual 21 days).

On May 18, the carrier begins a close transatlantic relationships with **Deutsche Luft Hansa, A.G. (DLH)** and the German steamship company HAPAG. When the dirigible *Graf Zeppelin* arrives at Rio's Campo dos Alonsos airfield on May 25, a **Syndicato Condor** aircraft picks up its mail sacks and flies them on to other communities in southern Brazil. In June, the German airline inaugurates transatlantic air-steamship airmail service; a Condor *Wal* awaits the arrival of the steamer at Fernando Noronha and takes the mail sacks on to Rio de Janeiro, cutting the Berlin–Rio delivery time to 10 days.

Meanwhile, the F-13 *Piraja* reaches Corumba, having been transferred there on an emergency basis via Buenos Aires and Asuncion in

the midst of the Paraguay–Bolivia Chaco War. On September 18, Capt. Rudolf Cramer von Clausbruch, flying the *Piraja*, initiates Brazil's first interior airline service, a weekly inland route from Corumba to Cuiaba, state capital of Mato Grosso, via Porto Joffre. Later in the month, Fritz Hammer is succeeded as director general by Paul Moosmeyer.

During 1931, seven connecting mail flights are made by **Deutsche Luft Hansa, A.G. (DLH)** from Europe to steamers sailing to South America. **Syndicato Condor, S.A.** Wals provide a pickup service from Fernando Noronha. In August, September, and October, the *Graf Zeppelin* makes three roundtrips between Friedrichshafen and Recife, where the Brazilian airline provides the connection for both mail and passengers. The *Wal Olinda* is written off during the year.

Beginning on March 20, 1932, the dirigible makes nine roundtrips to Brazil; by midyear, the *Graf Zeppelin* is calling directly at Rio's new Santa Cruz airship terminal and the year's last three flights are made without assistance from the **Syndicato Condor**. Meanwhile, the carrier, beginning on June 1, extends its Corumba segment eastward to Campo Grande. Although Condor is no longer needed to help execute HAPAG's nine annual airship trips to Brazil, the transoceanic partnership with **Deutsche Luft Hansa, A.G. (DLH)** continues.

On April 20, 1933, Argentina gives permission for flights to Buenos Aires, thereby providing that city with a link to the Zeppelin service. Paraguay follows suit. On September 8, the trans-Mato Grosso route is completed as Campo Grande is linked to São Paulo via Tres Lagoas, Aracatuba, Penopolis, Lins, and Bauru. A special bus service is required to link São Paulo with the carrier's terminal at Santos. During the year the first of what would eventually comprise a fleet of 16 Junkers Ju-52/3ms are delivered.

February 3, 1934 is an important date in aviation history, marking the inauguration of the first all-air, heavier-than-air, regularly scheduled, transatlantic airmail service. In a four-day odyssey, including 14 hr. 10 min. over-ocean flight, written communications are sent from Berlin to Natal via a mid-ocean depot ship refueling stop. At Natal, the incoming mailplane is met by the **Syndicato Condor**'s Junkers W-34 *Tiete*, which takes over the mail sacks and flies them down to Buenos Aires in 26 hrs. 51 min.

During the spring, improvements in this soon-to-be regular service are made. Meanwhile, on April 14, Argentina gives Condor the concession to carry airmail for the country. Uruguay does the same for flights to Montevideo, beginning in May. Begun as an every-two-weeks service, frequencies on these extensions are upgraded to weekly in July.

On October 7, Chile grants permission for a trans-Andes route from Argentina. During the year, five additional W-34s, the *Tibagy*, *Taquary*, *Tapajoz*, *Tacutu*, and *Tarauaca*, along with two Junkers Ju-46s, the *Tocantins* (formerly the catapult *Bremen*) and *Tingua* (formerly the *Jupiter*) are received from the German state airline.

With the introduction of night services on the transatlantic service as of March 30, 1935, the **Deutsche Luft Hansa, A.G. (DLH)**–Condor flying time between Germany and Buenos Aires is reduced to three-and-a-half days. The Ju-52/3m *Aconcagua* is delivered in July and is employed to inaugurate the first flight of the **Syndicato Condor** on the Buenos Aires–Vila Mercedes–Mendoza–Santiago de Chile route over the Andes on September 28; flying time is four days. Services are maintained and support is now given to other German controlled or assisted airlines in South America. The coastal route is extended northward of Natal to Fortaleza in December.

Two-day service is opened with float-equipped Ju-52/3ms between Rio de Janeiro and Belem on April 11, 1936. Later in the month, a connection is made with **LAB (Lloyd Aero Boliviano, S.A.)**. Passengers seeking to fly into Bolivia from the Atlantic coast are able to board a Condor plane at São Paulo, fly across the Mato Grosso to Corumba, and ferry the Paraguay River to the LAB terminus at Puerto Suarez. F-13s launch eight-stop operations from the Atlantic coastal town of Parnaíba inland to the river community of Florianópolis.

On July 24, 1937, former Condor Director General Hammer founds **SEDTA (Sociedad Ecuatoriana de Transportes Aereos, S.A.)** in

Ecuador. Late in the month, **Deutsche Lufthansa, A.G. (DLH)** establishes a South American regional directorate in Rio de Janeiro. On August 31, the trimotored *Aconcagua* is repurchased by DLH, repainted, up-engined, reregistered, and placed back into service in the Andes Cordillera. In December, service is launched from Florianópolis west to Carolina via Urucui and Balsas.

In 1938, flights begin from Rio Branco to Porto Velho via Boca do Acre and Labrea. The *Aconcagua* is leased to **LANChile Airlines, S.A.** between January 8 and March 14 while that carrier awaits delivery of its Ju-86Z-1s.

Early in 1939, Ju-52/3m flights are started from Belém to Carolina via Cameta, Alcobaco, Marabá, and Imperatriz. The ubiquitous *Aconcagua* is sent back to Chile in January to aid in disaster relief following an earthquake in the southern part of that nation. A new Focke Wulf Fw-200 Condor, christened *Abaitara*, is delivered to the Brazilian carrier on June 27; the first flight by a German landplane over the South Atlantic requires 9 hrs. 47 min. and is a new transatlantic record.

It is followed by a second Condor, the *Arumani*, in July. Following the outbreak of war, all aircraft are painted in **Deutsche Lufthansa, A.G. (DLH)** livery and reregistered with the local subsidiary. On October 23, F-13s begin serving 15 destinations in the state of Maranhão. By the end of the year, Sindicato Condor is serving more than 50 destinations in Brazil. In 1940, the company receives its final two aircraft from Germany, the Focke-Wulf Fw-58 Weihe's *Aquin* and *Cacun*.

A repaired W-34 is received from the Ecuadorian carrier **SEDTA (Sociedad Ecuatoriana de Transportes Aéreos, S.A.)** on January 14, 1941 and on April 24, the trimotor *Aconcagua* is leased to the Ecuadorian line. Final route development occurs on May 3 as a route is pushed inland of Fortaleza through the Ceará State towns of São Benedito, Sobral, Saboeiro, Campos Sales, and Jaicos to Picos.

Brazil, firmly favoring the Allied side in the European war that had begun in September 1939, forces the carrier to change its name to **Servicos Aéreos Condor, S.A.** on August 19. Following the German declaration of war on the U.S. on December 8, fuel supplies are cut off and the company ceases trading.

On January 6, 1942, a group of Brazilian businessmen pay off the \$2.7-million debt owed **Deutsche Lufthansa, A.G. (DLH)** and taking the airline over, rename it **Cruzeiro do Sul, S.A.**

SYRIAN AIRWAYS: Syria (1946–1961). Private Syrian interests form this company on December 21, 1946. With technical assistance, including Douglas DC-3s and crews, from **Pan American Airways (PAA)**, it begins service from Damascus to other Arab capitals in June 1947. Financial reversals and the war with Israel force suspension of services in May 1948, at which time Pan Am withdraws its interest.

With assistance from the Ministry of Finance, Syrian Airways resumes limited Douglas DC-3 operations in the summer of 1951. Services continue without incident until December 21, 1952, when a Douglas transport, with nine aboard, crashes near Damascus; there are no survivors. Following the crash, the government cancels the carrier's operating permit and orders the Syrian Air Force to provide airline services.

A new government-owned firm of the same name is established in 1954 and starts flying with DC-3s and DC-4s.

Operations continue apace during 1955–1957. On February 24, 1956, a DC-3 with 3 crew and 16 passengers is struck by lightning near Aleppo, Syria, and crashes; there are no survivors. Following the union of Syria and Egypt, the company is merged into **United Arab Airlines** on December 23, 1958; the amalgamation lasts until September 1961 when, following the breakup of the two-nation union, Syrian Airways reemerges as the government-owned state carrier **Syrianair (Syrian Arab Airways)**.

SYRIANAIR (SYRIAN ARAB AIRWAYS): P.O. Box 417, Youssef-Azmeh Square, Social Insurance Bldg., Damascus, Syria; Phone 963 (11) 231838; Fax 963 (11) 232154; <http://www.syriaonline.com/syriair>

Code RB; Year Founded 1961. Following the disestablishment of **United Arab Airlines** in September 1961, the Syrian component, **Syrian Airways**, is reformed, reemerging as the government-owned state carrier Syrianair. An extensive domestic network is started with a fleet of 2 Douglas DC-4s and 3 DC-3s inherited from the UAA consortium. Long-haul flights commence to regional Mideast destinations in October with 3 DC-6Bs, also obtained from UAA.

Operations continue apace in 1962–1963. A DC-6B fails its takeoff from Hama on April 7 of the latter year (one dead).

International operations commence in 1964 to London and Paris and through the Gulf states to Karachi and New Delhi.

A DC-4 is destroyed as the result of a bad landing at Damascus on October 2; no crew or passengers are killed.

The flight time on this network is vastly improved when the first of several new Sud-Est SE-210 XR Caravelles arrives on October 27, 1965. Eighteen months later, on February 6, 1967, a DC-3 crashes while landing at Aleppo (1 dead).

Operations continue apace for the remainder of the decade and into the early 1970s, except for a brief interruption during the period of the Six Day War.

Following the disruption of the lead-up to and combats of the Yom Kippur War in 1973, traffic increases steadily in the mid-1970s. During 1974, two **British Airtours, Ltd.** Boeing B-707-436s fly scheduled services on behalf of the company, supplementing Syrianair's own four Sud-Est SE-210 Caravelle XRs.

Enplanements total 279,866 while freight rises a significant 166% to 496,000 FTKs. Revenues are S£107.81.

Orders valued in excess of \$100 million are placed in early 1975 for three B-727-294As and two B-747SP-94s. All will be painted in the carrier's blue and white livery, with a white bird on a blue tail.

A Yak-40 is destroyed as the result of a bad landing at Beirut on March 19, 1976; there are no fatalities.

The first B-747SP-94 arrives on May 21; christened November 16, it enters service on a route from Damascus to London. The second SP-94, delivered on July 16, is named *Arab Solidarity* and extends the company's reach to Pakistan and India. Once the American aircraft begin to enter service, the contract with **British Airtours, Ltd.** ends. During the year, a total of 480,000 enplanements are recorded.

A joint service to New York is started in cooperation with **Alia (Royal Jordanian Airlines)** in April 1978. In 1979–1980, Chairman/Managing Director M. Jeroudi's fleet comprises 2 Boeing 747SP-94s, 3 B-727-294As, 4 Caravelle XRs, and 2 DC-6Bs.

Passenger boardings total 510,000 in 1981, falling due to the Lebanese crisis to 465,000 in 1982.

Just before departure for Damascus on August 19, 1983, a B-727-294A is rocked by a bomb explosion while on the ground at Rome. All of those aboard (the number is uncertain) are safely evacuated; however, the aircraft is severely damaged.

Customer bookings for the year climb back to 487,000.

Airline employment stands at 3,150 in 1984 and the fleet comprises 2 B-747SP-94s, 3 B-727-294As (1 under repair), 4 Tupolev Tu-134s, 2 Caravelle XRs, 5 Yakovlev Yak-40s, 4 Ilyushin Il-76M freighters, 3 Antonov An-26s, and 2 Dassault Falcon 20Fs. All but the Boeings and Tupolevs are operated out of commercial airline service and on behalf of the government. Two Tu-154Ms are delivered in 1985 as Air Force Maj. Adnan Al-Jabi becomes chairman and president.

Operations continue apace in 1986 as a third Tu-154M arrives. In 1987, the Tu-134s are reconfigured to all-economy-class seating and operate primarily over domestic routes.

By 1988, enplanements are 363,355.

Company employment is reduced by 1.5% in 1989 to 3,526 and the fleet now includes 2 B-747SP-94s, 3 B-727-294As, 2 Caravelle XRs, 3 Tu-154Ms, and 4 Tu-134s.

Passenger boardings explode by 28% to 504,659 and freight moves ahead by 5.4% to 9.9 million FTKs. Revenues are \$131.5 million. Costs allow profits of \$1.56 million (operating) and \$55,987 (net).

The workforce is increased by 2.5% in 1990 to 3,615. Despite the Gulf crisis, which erupts following Iraq's August invasion of Kuwait, the Syrian flag carrier enjoys a good year.

Customer bookings swell another 29.9% to 655,644 and cargo skyrockets 78.5% to 17.8 million FTKs. Revenues shoot up 8% to \$88.1 million and permit operating income to ascend to \$1.69. Net gain reaches \$60,466.

The payroll grows another 4.7% in 1991 to 3,784 and the fleet now includes a mixed fleet of 5 Antonov An-26s, 1 An-24, 3 B-737-294As, 2 B-747SP-94s, 2 Dassault Falcon 20Fs, 4 Ilyushin Il-76Ms, 2 Caravelle XRs, 6 Tu-134Bs, 3 Tu-154Ms, and 6 Yak-40s. Syria supports Kuwait during the Gulf Crisis.

Passenger boardings increase 6.9% to 700,819 while freight climbs 19.1% to 14.41 million FTKs. Revenues reach \$199 million.

In 1992, the workforce of Chairman/Managing Director Gen. Adnan Al-Jabi stands at 3,500. Domestic destinations visited from Damascus include Aleppo, Latakia, and Deirzezzor. International markets are concentrated on regional and European cities. In January, the company is able to resume service from Damascus to London, offering three B-737-294A flights per week.

Chairman/CEO Adnan Al-Jabi is succeeded during April 1993 by Air Force Gen. Omar Ali Rida. When the U.S. drops its embargo in December, Kuwait pledges to deliver to Syria its three surplus Boeing 727-269As, as payback for Syrian support two years earlier.

The Boeing jetliners arrive at Damascus during the first quarter of 1994. Operations continue apace in 1995. A commercial agreement begins with **Cyprus Airways, Ltd.** over the Cyprus route from Larnaca to Madrid. The last Caravelle is retired at the end of the year.

A profit of \$71.5 million is reported for the year, a \$48-million increase over the previous 12 months. Company officials suggest that this good fortune is due to training and maintenance contracts with other Arab airlines, improved cooperation with those carriers, and improved ground services and meals for its own services.

Airline employment stands at 4,327 in 1996 and in March, the company begins dual-designator services with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** between Damascus and Madrid.

In June, pooled service begins with **Gulf Air Company, G.S.C.** on a route from Damascus to Bahrain. An order is placed on December 7 for six Airbus Industrie A320-200s.

The company's 31 aircraft transport a total of 598,502 passengers and the carrier earns a \$44.13-million operating profit.

The employee population is slashed 46.1% in 1997 to 2,331. In addition to destinations in the Mideast and North Africa, Syrianair now also visits Berlin (Schoenefeld Airport), Copenhagen, Moscow, Paris, Prague, and Rome. At home, it flies from Damascus to Aleppo, Latakia, and Kameschi.

Passenger boardings accelerate 11% to 672,780, but freight slides 3.9% to 15.65 million FTKs. Operating revenues advance 6.3% to \$209.68 million while expenses rise 5% to \$160.86 million. The operating profit climbs to \$48.82 million.

Flights continue in 1998 under the direction of Gen. Ali Rida, who continues to serve as both chairman and managing director.

In November, the first A320-232 is delivered and christened *Ugarit*. The plane wears the company's new livery, which consists of an all-white fuselage with a dark blue tail and engine nacelles. The previous cheatline has been removed and the titles have been modified to read just "Syrian" in big black letters forward of the wing and below the windowline.

The following month, Syrianair unveils a homepage on the Internet's World Wide Web.

On April 5, 1999, the UN lifts its sanctions against Libya following the handover of two suspects in the 1988 Lockerbie airliner bombing. Twice-weekly flights to Tripoli resume on April 15 and weekly service to Benghazi is restored on April 17.

With the arrival of the second A320-222, the company begins to rethink the role of its aging B-747 fleet.

Twice-weekly roundtrips are inaugurated on December 1 between Aleppo and Beirut. The last of six new A320-232s to be delivered since the previous October is accepted on December 15.

Service is maintained in 2000. The B-727 fleet continues to include 3 each Dash-269As and Dash-294As. Two B-747SP-94s are also operated.

Airport authorities at Damascus receive a bomb threat against Flight 202, an Airbus A320-232, just prior to its May 21 departure. Passengers are deplaned and a search is conducted, but no explosive is found.

A320-232 roundtrips commence on September 15 between Damascus and Vienna.

When an A320-232 lands at Baghdad on October 8, it marks the first flight into the Iraqi capital by a Syrian civil jetliner in 18 years.

An even older suspended-service record—21 years—is broken on November 22 when a company A320-232 resumes twice-weekly roundtrips between Damascus and Amman, Jordan.

TAAG ANGOLAN AIRLINES (TAAG LINHAS AEREAS DE ANGOLA, S.A.): Rua da Missao 123, P.O. Box 79, Luanda, CP 3010, Angola; Phone 244 (2) 332 485; Fax 244 (2) 393 548; Code DT; Year Founded 1973. The **Divisao de Exploracao dos Transportes Aereos de Angola**, also known as **DTA Angolan Airlines**, is reorganized on October 1, 1973. Ownership is divided between the new government of Angola (51%), **TAP-Air Portugal, S.A.** (29%), and ex-DTA employees (20%). Plans are made for the introduction of a new livery that will feature the *palanca negra*, a rare native antelope.

Orders are placed in 1974 for two Boeing 737-2M2Cs as an upgrade for a fleet built around three Fokker F.27 Friendships. Two associated companies are also formed: **TAAG (Aviacao Ligeira)** (General Aviation) and **TAAG-Air Charter, S.A.**

Flight operations are suspended until the nation's 1975 independence from Portugal, at which time the airline becomes the national carrier. A bloody civil war that will last 19 years begins between the government and rebel UNITA forces. Commercial services resume in October and on November 19 the first of two B-737-2M2As to be obtained before year's end is delivered. It introduces a red and orange livery and a tail-fin logo designed by Albano Neves e Sousa that features the *palanca negra* antelope.

Domestic B-737-2M2A operations are inaugurated in early 1976. International destinations now served include São Tome, Brazzaville, Lagos, Maputo, Paris, Rome, Lisbon, and Moscow. The two "Baby Boeings" spend most of the year on proving flights and crew training.

The airline is fully nationalized in 1977. The B-737-2M2As begin domestic services. The Soviet Union delivers four new Yakovlev Yak-40s and enplanements total 233,000.

A light aircraft division is established for the 1,650-employee in 1978 to perform air taxi flights; it is equipped with a fleet of 3 Piper PA-23 Aztecs, 1 Piper PA-28 Cherokee, 1 Piper PA-30 Twin Comanche, 2 Cessna 172s, and 1 Britten-Norman BN-2 Islander. A B-707-373C is leased; christened *City of Ostend*, it undertakes all-cargo services from the Belgian city of that name.

A Lockheed Hercules freighter is destroyed as the result of a bad landing at São Tome on May 15, 1979. There are no fatalities. A total of 503,000 passengers are carried this year as additional jetliners are added.

Airline employment stands at 4,000 in 1980 as the airline is again rebuilt. Jose Antonio Fernandez is appointed director general as a government decree brings corporate reorganization. The fleet now includes in its heavy division 6 B-707-3M2B/Cs, 4 B-737-2M2As, 3 Yak 40s, 2 Lockheed L-100s, 4 Antonov An-26s, 2 F.27-600s, 1 F.27-500, and 1 F.27-400.

Seventeen minutes after takeoff from Jamba to Lubango on June 8, a Yak-40FG with 4 crew and 15 passengers is mistaken for an unauthorized foreign aircraft and is shot down by anti-aircraft fire near Matala, Huila; there are no survivors.

A B-707-347C is purchased from **Western Airlines** of the U.S. in August, together with a B-737-2M2C.

Newly arrived from **Western Airlines**, the B-737-2M2C with 6 crew and 128 passengers is destroyed as the result of landing short at Benguela, Angola, on November 4; although the plane catches fire, all aboard are safely evacuated.

During **1981–1982**, the fleet is increased by the addition of a replacement B-737-2M2AC as the 4 Antonovs are withdrawn. Routes are initiated or frequencies modified to Havana, Moscow, Lisbon, Paris, Rome, Brazzaville, Kinshasa, Lusaka, Maputo, and Sal, plus 22 domestic stops.

On May 16 of the former year, an L-100-20 Hercules with four crew coming in to land at Menongue is hit in its No. 4 engine by a heat-seeking surface-to-air missile; there are no survivors from the crash that follows.

A chartered An-26 with six crew and nine passengers flies into 2,250-m. Monte Bibala on November 29 of the latter year; again, there are no survivors.

Passenger boardings in 1981–1982 are, respectively: 810,000 and 890,000.

A third F.27-600 is delivered in April **1983**.

While on initial climb away from Lubango on a November 8 service to Luanda, a B-737-2M2AC with 4 crew and 126 passengers reaches an altitude of only 200 ft. before it stalls and crashes, bursting into flames; there are no survivors. The government will maintain that the accident is due to a "technical fault" experienced during bad weather, while pro-Western insurgents will assert they have shot it down.

Enplanements reach 952,000 for the year.

In **1984**, the company visits 27 destinations, including the international communities of Brazzaville, Havana, Kinshasa, Lisbon, Lusaka, Maputo, Moscow, Paris, Rome, and Sal.

On February 9, as the result of a bomb explosion in its forward cargo hold, a B-737-2M2AC with 6 crew and 136 passengers is forced to make an emergency landing back at Huambo, its point of origin; although no injuries are reported, the little Boeing is damaged beyond repair.

Financial difficulties are suffered and traffic figures are not released this year.

The employee population in **1985** is 5,000. In November, the Douglas DC-10-30 of **LAM Mozambique Airlines** is chartered to start a weekly service from Luanda to Lisbon. One L-100 is withdrawn as bookings fall to 829,000.

Operations continue apace during **1986**. An L-100-20 with five crew veers off the left side of the runway while landing at Dundo on June 8; a wing is ripped off and a fire started that guts the aircraft. There are no fatalities.

Return services from Luanda to Havana are now operated by a pair of Ilyushin Il-62Ms recently obtained from the Soviet Union.

TAAG-Air Charter, S.A. is renamed Angola Air Charter, S.A. in **1987**. The subsidiary continues flights with a Boeing 707 and two Lockheed L-100 Hercules. Flights are operated to Johannesburg, Lisbon, Luanda, and Ostend, along with charters to Namibia and the Spanish city of Vitoria.

During **1988**, damaged or lost flight equipment proves costly. A Yak 40FG is destroyed in a Luanda landing accident on January 8; there is no information concerning any possible casualties.

A B-707-349C with nine crew strikes a radio antenna atop a building while on final approach to Luanda on February 8; the accident costs the aircraft its hydraulic and control lines and consequently, the Stratofreighter overruns its landing and loses its nose gear. Although the plane must be written off, there are no fatalities.

While on initial approach to Lagos on a July 21 service from Ostend, an Angola Air Charter, S.A. B-707-328C with six crew crashes while positioning; there are no survivors.

While on the ground at Luanda on October 10, an electrical fire breaks out in the forward cargo hold of the former **Western Airlines** B-707-347C; although the three-man crew is able to escape, the Stratoliner is burned out.

After an uneventful **1989**, is uneventful, Director General Mario Rogerto von Haff's fleet in **1990** includes 1 B-707-349C, 5 B-707-3M2Cs, 4 B-737-2M2As, 2 Il-62Ms, 1 B-737-2M2AC, 1 F.27-400M, 1 F.27-500, 3 F.27-600s, 1 F.27-100, 1 Hercules, and 2 Yak-40s.

On January 5, the Hercules, with four crew and three passengers and operated by Angola Air Charter, S.A., is hit in its No. 4 engine by a heat-seeking surface-to-air missile just after takeoff from Menongue on a service to Luanda. Although the No. 3 engine is also damaged, the tur-

boprop is able to make a safe return to its point of origin. Upon landing, however, it veers off the runway and its landing gear collapses, damaging the aircraft beyond repair. No injuries are reported.

A Pilatus-Britten-Norman PBN-2 Islander is acquired in **1991**. Domestic services are flown out of Luanda to 18 internal locations. International destinations include Berlin (Schoenefeld Airport), Havana, Brazzaville, Kinshasa, Lisbon, Lusaka, Maputo, Moscow, Paris, Rome, Sal, São Tome, and Rio de Janeiro. A new board is installed in September with Antonio Henriques da Silva as chairman/CEO. The five B-707-3M2Cs are traded in during October for two hush-kitted B-707-382Cs that are turned over to Angola Air Charter, S.A. for operation.

In addition to the fleet units available 2 years earlier, da Silva's company in **1992** continues to operate 2 Il-62Ms, 2 more L-382G Hercules freighters leased from **Safair Freighters (Pty.), Ltd.**, and 1 L-1011-500 TriStar chartered from **Air Portugal, S.A.** An order is placed for five Fokker 50s.

The nose gear of the B-707-349C with four crew collapses as the Stratofreighter is landing at Luanda on February 20; although the aircraft is badly damaged, there are no fatalities.

In March, the airline contracts with **TAP-Air Portugal, S.A.** for the creation of a joint catering and handling operation based at Luanda.

Endiama, the state-owned diamond company, purchases 49% minority shareholding in Angola Air Charter, S.A. in April.

Da Silva is followed into office by Jose A. Fernandez in **1993**. The bloody civil war in the country continues to rage; early in the year, UNITA rebels capture the central Angolan city of Huambo, forcing TAAG to withdraw its services. A new color scheme is introduced during the year for both the main line and Angola Air Charter, S.A.

The workforce totals 1,948 in **1994**. While taxiing to a parking spot after landing at Malange on April 7, an Angola Air Charter, S.A. L-100-30 with four crew and overheated brakes, catches fire; the blaze spreads, destroying the aircraft, though not before all aboard are able to escape.

Huambo is recaptured in early November just before a cease-fire is signed between the government and UNITA on November 20; a formal UN-sponsored truce begins two days later. TAAG is able to resume four-times-per-week F.27-600 flights to Huambo from Luanda on December 6.

The fleet in **1995** comes to include the TriStar leased from **TAP-Air Portugal, S.A.** as well as 2 owned Il-62Ms, 3 B-737-2M2As, 3 Fokker F.27-600s, 1 of which is out of service, and 1 each F.27-500, F.27-400M, F.27-200, B-737-2M2CA, and B-707-382C.

Just after landing at Huambo, Angola, in the rain on January 31, a newly acquired B-727-21F with three crew hydroplanes off the runway into the mud, ripping off its landing gear in the process; although the aircraft is damaged beyond repair, there are no fatalities.

In November, the company begins code-sharing flights with **TAP-Air Portugal, S.A.** between Luanda and Lisbon. Again, no traffic figures are reported.

Airline employment stands at 4,297 in **1996** and an arrangement is made with **Singapore Airlines, Ltd.** to lease a Boeing 747-312C the following year. Enplanements reach 398,513 and a total of 8,600 tons of goods are also flown.

An F.27-600 with three crew and four passengers fails its takeoff from Brazzaville on April 14, **1997** and falls back to land on a rough spot near the runway where it breaks in two and bursts into flame (three dead).

New in-flight services are introduced and staff training is upgraded. Destinations visited during this year and into **1998** include Benguela, Brazzaville, Cabinde, Dundo, Harare, Havana, Huambo, Johannesburg, Kinshasa, Kuito, Lisbon, Lubango, Lusaka, Malange, Menongue, Moscow, Pointe Noire, Rio de Janeiro, Sal, São Tome, Soyo, and Windhoek.

Fighting between the government and UNITA forces resumes in late fall.

Because South Africa has removed certain authorizations for service into the airspace of war-torn Angola, TAAG Angola begins flying a B-707-382C in full **Aero Zambia, S.A.** colors and logo on thrice-weekly all-cargo roundtrips from Luanda to Johannesburg. When this subterfuge is found out on February 9, **1999**, Aero Zambia requests that the pirated livery be removed.

Having been closed for five months due to threats from UNITA rebels, Malange Airport is reopened on May 12.

On July 10, 2000, the company begins to negotiate with **British Airways, Ltd. (2)** concerning the authority now provided the British major to operate twice-weekly roundtrips to Luanda from London (LHR).

In mid-September, the leased B-737-2M2A employed to operate from Luanda to Lisbon is stranded in the Portuguese capital with technical problems. A heavily used B-737-2M2AC is also stuck, undergoing required maintenance. This leaves the leased fleet with just 2 operational B-737-2M2As and 1 each B-747-312 and B-747-357. By the end of the month, the airline is forced to suspend its flights to Rio de Janeiro and Johannesburg because it does not have sufficient aircraft to make the flights.

TAASA (TAXIS AEREOS ARGENTINAS, S.A.): Argentina (1946–1959). TAASA is formed as an ad hoc air taxi by government decree no. 179/47 in Buenos Aires in 1946. Following two years of charter work during 1947–1948, the operator begins flying scheduled services in January 1949. With a fleet comprising 6 de Havilland DH 89As and 1 Fairchild F-24W, TAASA provides third-level flights for citizens in 7 towns in Entre Rios Province.

Service continues for a decade. Unable to compete against the large number of commuter carriers established in 1958, the company ceases operations in 1959.

TAB (TRANSPORTES AERIENS DU BENIN, S.A.): Benin (1982–1989). In April 1982, the Benin government merges **Air Benin (Societe Nationale des Transports Aeriens du Benin, S.A.)** and **ENB (Escadrille Nationale du Benin, S.A.)** to form a new state carrier **TAB (Transportes Aeriens du Benin, S.A.)**. Equipped with 1 Fokker F.28, 1 de Havilland Canada DHC-6-300 Twin Otter, 3 Douglas DC-3s, 1 Dassault Falcon 20, and 1 Antonov An-26, the company undertakes services over the routes of the merger partners.

Destinations now visited include, within Benin: Cotonou, Kandi, Djougou, Parakou, Natitingou, and Save. Weekly flights are made to the regional destinations of Lagos (Nigeria) and Niamey (Niger). The Twin Otter is lost under unknown circumstances at Choke on February 24, 1983.

Company operations are maintained without further incident by Managing Director Manasse Ayayi's concern until the carrier ceases operations in 1989.

TABA (TRANSPORTES AEREOS BACIA AMAZONICA, S.A.)
See TABA (TRANSPORTES AEREOS BANDEIRANTES, S.A.)

TABA (TRANSPORTES AEREOS BANDEIRANTES, S.A.): Brazil (1946–1951). Hoping to create an air cargo operation into the rubber country around Manaus, ex-**VASD (Viacao Aerea Santos Dumont, S.A.)** pilot Capt. Alberto Martins Torres founds **TABA (Transportes Aereos Bacia Amazonica, S.A.)** in early 1946.

Unsatisfied with the carrier's choice of name, denoting as it did a specific locale, the government requires Torres to reorganize and rename his company in 1947 before an operating permit will be provided. Choosing to honor men of legend while retaining the company initials, TABA is accordingly reformed and its headquarters are moved to Rio de Janeiro.

Employing two Consolidated PBY-5 Catalinas originally acquired for use in the Amazon area surrounding Manaus, Torres now begins flying to Laguna, Santa Catarina, in April 1948. These services do not prove fiscally viable even after the route is stretched to Porto Alegre and by the fall of 1949, the flying boats are maintaining the route only on an intermittent basis.

Although his routes are suspended by the fall of 1950, Capt. Torres hopes to restart and to save money in the face of mounting costs, he joins in a technical consortium with **LAP (Linha Aerea Paulista, S.A.)** and **Loide Aereo Nacional, S.A.**

En route from Rio de Janeiro, a C-46A with three crew is lost in Guanabara Bay on September 8; there are no fatalities.

The situation does not improve and on August 24, 1951, TABA becomes part of an operating consortium with his partners under the Loide banner.

TABA (TRANSPORTES AEREOS BUENOS AIRES, S.A.): Argentina (1959–1969). One of many commuter airlines established in 1959, TABA provides scheduled flights to various destinations within Buenos Aires Province. The company's fleet comprises 1 Cessna 170 and 5 C-45s.

In 1963, the carrier receives a government subsidy to defray its costs of operation after picking up the route network of **TACA (Transporte Aereo Costa Atlantica, S.A.)**, which had stopped flying the previous year.

Overextended financially, the operation is closed down in 1969.

TABA (TRANSPORTES AEREOS REGIONAIS DA BACIA AMAZONICA, S.A.): Av. Dr. Freitas S/No, Hangar TABA, Belem, Para 68030, Brazil; Phone 55 (91) 233-6653; Fax 55 (91) 233-3553; Code T2; Year Founded 1975. TABA is formed at Julio Cesar Airport at Belem in early 1975 by Col. Marcellio Gibson Jacques and is consolidated with his already existing **NTA (Norte Taxi Aerea, S.A.)**. Beech 18 operations commence in July. On November 12, the government establishes the Sistema Integrado de Transportes Aereos Regional, calling for the formation of five regional airlines to provide third-level feeder service to outlying areas. A promise of subsidy is made, based on a 3% surcharge on tickets sold on trunk routes. The first carrier signed up is Col. Jacques's Amazon Basin TABA.

Jacques's operation is officially registered as a domestic regional airline on January 1, 1976 as scheduled service is inaugurated from Belem to Altamira, Santarem, and Itaituba. In addition to Beech 18s painted in the company's white, brown, and blue livery, TABA's fleet is now significantly strengthened by the addition of the Fairchild Hiller FH-227 *Rio Amazonas*, leased from the Ministry of Aeronautics in June. Several new Embraer EMB-110C Bandeirantes are also acquired.

Between 1977 and 1981, service is developed and maintained to some 40 destinations as the network is stretched west and south into the State of Amazonas and to such cities as Macapa, Amapa, Oiapoque, Altamira, Nonte Alegre, Obidos, Santarem, Itaituba, Parintins, Maues, and Manaus. Other states visited, primarily by Bandeirante, include Amazonas, Para, Amapa, Acre, Rondonia, and Mato Grosso and additional cities are Cucui, Porto Vellio, and Cuiaba.

The fleet is increased to comprise 3 FH-227s, 10 EMB-110P1s, and 8 Beech 18s.

An EMB-110P with 2 crew and 14 passengers crashes on takeoff from Eirunepe Airport in Brazil on January 31, 1978 (two dead).

During the latter year, the livery is changed to blue and white and enplanements total 189,974.

While on final approach to the airport at Tabatinga, Brazil, in poor visibility on June 12, 1982, an FH-227B with 4 crew and 44 passengers, collides with a pole and then crashes into a parking lot; there are no survivors.

Enplanements reach 228,891 for the year.

In 1983, three Fairchild Hillers are withdrawn. Passenger bookings climb to 244,820.

Delivered the previous December, two BAe 146-100 jetliners are placed in service during January 1984. As recession reaches the Amazon area, customer boardings fall to 230,825.

Difficulties surround the BAe 146-100s in 1985; both are grounded and then returned. Plans for expansion to Rio de Janeiro are shelved in the face of adverse financial conditions.

While on final approach to Juara, Brazil, on June 23, an EMB-110P1 with 2 crew and 15 passengers suffers the loss of its No. 1 engine and crashes 1 km. short of the runway; there are no survivors.

Although three more FH-227s are brought into service, enplanements plunge 28% to 165,079. Financially, however, the year is a success; on revenues of \$25 million, a \$4-million profit is generated.

The BAe 146s are returned to their British manufacturer early in 1986. The fleet of the 600-employee company now includes 9 Bandeirantes and 6 FH-227s. The company services 36 destinations across 3 time zones; the

company's east-west route network equals in distance the space between London and Moscow. At year's end, Bruno Gibson Jacques succeeds his father as president/CEO. Enplanements total 310,953.

Airline employment grows 2.3% in 1987 to 619 and the route network is increased includes 39 destinations in 6 states in northwest Brazil. The company also provides maintenance services, air taxi operations, and a full crew for each airport it operates.

Passenger boardings drop 7.5% to 289,259.

The workforce is increased another 16.3% in 1988 to 720 as the fleet receives another Bandeirante and FH-227.

Still, customer bookings decline, falling 17.5% to 169,521. Cargo, on the other hand, increases by 50.1% to 1.23 million FTKs.

In 1989, the 630-employee airline owns a fleet comprising 10 Bandeirantes and 7 FH-227s. In association with **TNT Express Worldwide**, new charter freight service is introduced in the fall between São Paulo and Manus. For the first nine months covered by the statistics that are provided, the company suffers another major traffic downturn.

Passenger boardings are off by 14.6% to 115,180 and freight is down 25.4% to 841,000 FTKs.

Two EMB-110Ps are withdrawn in 1990. While on final approach to Altamira after a service from Belem on June 6, an FH-227B with 3 crew and 29 passengers strikes a line of trees and crashes 1 km. from the runway (22 dead).

Still, customer bookings recover during the first half to grow by 33.4% to 96,612.

In 1991, five more Bandeirantes are added, along with three de Havilland Canada DHC-8-300s as two more FH-227Bs are retired.

Through September, passenger boardings are down 32.2% to 103,590; freight through the same period is up 34.5% to 441,000 FTKs.

One more Bandeirante is acquired in 1992 in addition to three leased Canadian-made turboprops; options are taken on two Fokker 100s. The first international route is opened during the summer, to Georgetown via Boa Vista.

The workers at the third-level operator are doubtless pleased as customer bookings recover for the year as a whole, growing by 28.2% to 132,841. Cargo hauled totals 250,000 FTKs.

The two Fokker 100s are placed into service in 1993.

An FH-227B freighter with three crew en route from Belem, crashes out of control into the jungles near Altamira on the night of January 25; there are no survivors.

During 1994, the fleet includes 15 Dash 8s, 9 Bandeirantes, 4 FH-227s, and the 2 Fokker 100s. Enplanements during the first quarter of 1994 are 90,806.

En route from Itaituba to Belem on the evening of October 22, a DC-8-300 with 33 passengers is taken over by 5 gunmen among them, who require that the aircraft return to its point of origin. There, armed with advance knowledge, the pirates are able to remove a \$1.15-million shipment of gold bars weighing a total of 213 pounds from the cargo hold and disappear with it on vehicles that appear from the nearby woods. The gold is owned by Germany's Degussa A.G., which had begun operating the Amazon's first gold exchange in Itaituba on September 13.

With nine passengers en route from Caryari to Teti on December 15, an EMB-110 is hijacked by a lone assailant. When the aircraft lands at its scheduled destination, the pirate is captured by police.

Airline employment has been cut to 300 by 1995. Again, traffic figures are only reported through March. These show passenger boardings up 36.1% to 142,105.

While on final approach to Santarem on a November 28 all-cargo service from Belem, an FH-227B with two crew and two passengers crashes near the runway (three dead).

Full-year revenues are \$53.19 million.

Eight employees leave the company in 1996. Figures are again incomplete and show enplanements down to 33,898. The financial picture worsens in 1997 and over 30 workers are laid off.

Flights continue in 1998–2000. During these years, the fleet of 10 Bandeirantes is cut to 8; however, the 3 FH-227Bs soldier on.

TABSA (TRANSPORTES AEREOS BENIANOS, S.A.): Bolivia (1963–1977). The proprietors of the Crillon Hotel at La Paz, led by Capt. Samuel Sanguenza, creates TABSA in July 1963. Initially equipped with several Curtiss C-46 Commandos and employing the marketing name Bolivian Airways, the carrier begins services from La Paz to destinations in the Departments of Benj, Santa Cruz, and Pando. An application is made to the U.S. government for a foreign air carrier permit; disposition of the request will take years.

Finally, in early 1968, the carrier is granted traffic rights by the CAB to fly to Miami. Two Lockheed L-1049G Super Constellations are purchased and scheduled charter services undertaken to Miami beginning in April via Lima, Guayaquil, and Panama. On August 23, a C-46 crashes near Nieve (four dead).

During the remainder of the decade and through 1971, the number of C-46s is reduced from a high of nine to just two.

One of these, a chartered Curtiss CW-20T with two crew and two passengers is destroyed in a crash while landing at San Pedro Richard Airport on May 28, 1972; there are no fatalities.

Thereafter, the survivor and the Lockheeds are retired and replaced by one each Convair CV-440 and Douglas DC-7CF. Ultimately unprofitable, the carrier ceases flying in late 1977.

TABSO. See **BALKAN BULGARIAN AIRLINES**

TAC (EMPRESA DE TRANSPORTES AEREOS CATARINENSE, S.A.): Brazil (1947–1966). This little-known charter operation is formed at Rio de Janeiro in May 1948 under the name TAL (Transportes Aereos, S.A.). Two Curtiss C-46A Commandos are acquired and operations are launched over a single route to Curitiba. Just over two years later, in August 1950, the company is reorganized and renamed TAC. Its headquarters are now transferred to Florianopolis.

Due to heavy competition with other carriers working the State of Santa Catarina, the carrier is unprofitable and within a year or so it becomes a subsidiary of **Cruzeiro do Sul, S.A.**, which employs TAC under its own name to service local destinations, particularly with regard to cargo and express, while providing what would later be called interline services, e.g., reservations, maintenance, advertising, etc.

In 1952–1965, TAC gradually loses its identity and by January 1, 1966 is completely integrated into **Cruzeiro do Sul, S.A.**

TACA (TRANSPORTE AEREO COSTA ATLANTICA, S.A.) (1): Argentina (1946–1967). The first Argentine Costa Atlantica is established at Buenos Aires in November 1946 to operate domestic passenger and cargo charters. Revenue flights commence with a single Curtiss C-46 Commando.

During the 1950s, the carrier leases a Douglas DC-6 and two Lockheed L-1049 Super Constellations. These undertake scheduled passenger flights to Antofagasta from Salto. A DC-4 is also acquired, along with a Fairchild C-82 Packet; they join the Commando in offering scheduled freighter flights from Buenos Aires to Asuncion.

TACA joins with the new Chilean all-cargo carrier **ALFA (Aerlineas Flecha Austral, Ltda.)** in 1965 to provide freight services from Men-

doza, Argentina, to Santiago. These pooled flights end in 1967 when TACA goes out of business.

TACA (TRANSPORTE AEREO COSTA ATLANTICA, S.A.) (2): Argentina (1957–1962). TACA is formed at Buenos Aires in 1957 to offer scheduled third-level flights to destinations within the Province of Buenos Aires. The fleet comprises a Cessna 170 and a Noorduyt Norseman.

Unable to maintain viability even while supplementing and feeding the **Aerolineas Argentinas, S.A.** trunk routes, the company is forced into bankruptcy in 1962.

TACA (TRANSPORTES AEREOS CENTRO AMERICANOS, S.A.): El Salvador (1931–1951). Having become sole owner of a Stinson Junior biplane, American-educated New Zealander Lowell Yerex, who had formerly flown for the Mexican carrier **CAT (Corporacion de Aeronautica de Transportes, S.A.)**, forms **TACA (Transportes Aereos Centro Americanos, S.A.)** at Tegucigalpa, Honduras, in December 1931.

On February 14, 1932, Yerex receives a Honduran government mail contract and now begins to provide mail-cargo service Tegucigalpa to Juticalpa, Trujillo, Catacamas, La Ceiba, and other points with a fleet of 5 Stinson Juniors and 1 Stinson Model U. Late in the year, Yerex loses an eye while flying government-requested reconnaissance missions over the rebel strongholds in the mountains.

Returning from New Orleans in January 1933 with a glass eye, Yerex is greeted as a hero by Honduran President Tiburcio Carias-Andino; offered a cash reward, the pilot-entrepreneur opts, instead, for a guarantee (confirmed on February 1) of additional mail contracts that are, in fact, subsidies. A program of airfield construction is undertaken. The fleet is increased through the addition of a Stearman, two Ford 4-ATs, and a Bellanca CH-300; services are inaugurated Tegucigalpa–San Salvador at year's end.

The Stinson Model U crashes just after takeoff from Tegucigalpa on March 6, 1934; four aboard are killed and seven hurt. A period of rapid expansion now begins, starting with the purchase of Honduras' only other significant airline, **Empresa Dean, S.A.**, on April 24.

The fleet grows to include 15 aircraft: 7 Stinsons, 1 Stearman, 2 Fokker Model 4 Universals, 1 WACO C, 2 Bellancas (CH-300/CH-400), the 2 Ford 4-ATs, and the 5-AT-71, purchased at Chicago from **American Airlines** on October 15 and flown via intermediate stops to Honduras by TACA pilots. A landing strip is built at the 3,500-foot high Agua Fria mine and in September, a Ford 4-AT arrives from San Lorenzo on the first of many flights to be made over the next 10 months ferrying in mining equipment and supplies. During the year, flights begin to Guatemala City.

The small **CNA (Compania Nacional de Aviacion, S.A.)** is purchased early in 1935, becoming the subsidiary **Compania Nacional TACA de Guatemala, S.A.** Previously operated by **American Airlines**, the Ford 5-AT-75 is purchased on February 19. Service is started to Managua and majority control is taken in the local carrier **LANEP (Lineas Aereas de Nicaragua, Empresa Palacios, S.A.)** on October 16; for now, LANEP is allowed to continue operations under its own name.

The fleet is further strengthened through the acquisition of two Kreutzer K-5s, a Hodkinson trimotor, a Fleet biplane, a Ryan B-1 Brougham, and three Curtiss Kingbirds. En route to La Ceiba, a Ford crash-lands near Jutiapa, Honduras, on November 10; seven are hurt. Orders are now placed for a number of ex-U.S. airline Ford 5-ATs, to be obtained at the rock bottom of price of \$3,000–\$4,000 apiece.

TACA de Guatemala, S.A. receives the Ford Tri-Motors 5-AT-26, 5-AT-52, 5-AT-53, and 5-AT-73, purchased from **Pennsylvania Airlines** on January 21, 1936, the 5-AT-90 obtained from the Guatemalan airline **CNA (Compania Nacional Aviacion, S.A.)**, the 5-AT-36 acquired from a Chicago broker on April 18. The 5-AT-13 and 5-AT-28 are purchased on June 6 and service is inaugurated to Belize City. A company aircraft with four aboard goes down near Puerto Cabezas, Nicaragua, on October 3; pilot Robert Ewalt, who is also Nicaraguan division chief for Yerex, is killed.

TACA thrives in 1937 as its freight business grows; valuable and perishable goods are ferried out of the jungles and mountains, including tobacco, fruit, coffee beans, timber, and the chicle sap used to manufacture chewing gum. Again, the fleet is enlarged as Yerex acquires a Bellanca 300W Pacemaker, five Flamingo G-2s, two Bellancas (31/50), and the Fords 5-AT-7, 5-AT-14, and 5-AT-18, which latter are purchased on December 11 from Nevada-based **Grand Canyon-Boulder Dam Tours**. The wreckage of a company trimotor is found in the jungles near Puerto Cabezas, Nicaragua, on October 3; there are no survivors.

LANEP's Nicaraguan contract is rescinded in 1938, but the carrier's freight operation continues to boom. During the year, the fleet is enlarged as a Lockheed Model 5 Vega and six Lockheed L-14Hs are acquired.

Passenger enplanements reach 20,000, and 4,000 tons of cargo are hauled.

LANEP (Lineas Aereas de Nicaragua, Empresa Palacios, S.A.) is purchased outright by TACA becoming, on March 16, 1939, the **Compania Nacional TACA de Nicaragua, S.A.** Regular services suspended by the now wholly owned subsidiary in 1938 are now resumed. The Ford Tri-Motor 5-AT-16 is purchased for the new entity from **SACO (Servicio Aereo Colombiano, S.A.)** at month's end, while the 5-AT-31 is acquired from the Nicaraguan government and assigned to **TACA de Costa Rica, S.A.** The same month, the 5-AT-4 is destroyed in a fire at Tegucigalpa. Also, in late spring, Ford Tri-Motors begin a six-year period of freight service to the La Luz gold mine, near Siuna, Nicaragua.

Capitalized at \$400,000, TACA, S.A. is established at Panama City on August 25 as a nonoperating holding company for Yerex's growing airline empire and an operating base is set up at San Salvador. The same day, the Honduran operation is incorporated as **Compania Nacional TACA de Honduras, S.A.** Simultaneously, the established subsidiary **Compania Nacional TACA El Salvador, S.A.** now launches direct services between the capital cities of Honduras, El Salvador, Guatemala, Costa Rica, and Nicaragua, with the TACA subsidiaries in those nations providing local feeder/connection services.

During the year, the entire 1,000-ton chicle crop is transported from the Flores region of Guatemala to the port city of Puerto Barrios by air. On October 20, the airlines **Transportes Aereos Costarricenses, S.A.** and **Aerovias Nacionales de Costa Rica, S.A.** are purchased and merged into **TACA de Costa Rica, S.A.**, which, incidentally, receives the Fords 5-AT-71 and 5-AT-90 from **TACA de Honduras, S.A.** in December. The fleet, meanwhile, grows by only four airplanes during the year, all Lockheed Model 10A Electras.

The Costa Rican carrier **ENTA (Empresa Nacional des Transportes Aereos, S.A.)** is purchased, along with Ford Tri-Motor 5-AT-70, on January 16, 1940. On February 20, 5-AT-107 en route to the mines on Nicaragua's east coast, crash-lands near Prinzapolka; there are no fatalities.

On March 1, all of the newly purchased Costa Rican carriers are merged into the single **Compania Nacional TACA de Costa Rica, S.A.** The company now has 29 radio stations in operation for the 46+ aircraft fleet, which is enlarged this year through the acquisition of 1 Stinson SR-8, 1 Hamilton Metalplane, 3 Fairchild Pilgrim 100As, 1 Stinson Model A, 7 Travel Air 6000s, and 16 Lockheed L-18 Lodestars.

In June, takeover negotiations begin with **American Export Airlines**. An aircraft of unknown type piloted by Enrique Malek is lost in a storm over Colon, near San Jose, Costa Rica, on October 7 (six dead). On November 1, American Export purchases controlling interest in the airline for a reported \$2 million; threatened in its sphere of influence, the giant **Pan American Airways (PAA)** reacts 10 days later by establishing a competing subsidiary, **Aerovias de Guatemala, S.A.** Meanwhile, Yerex moves further afield, founding **British West Indies Airlines (1) (BWIA)** at Trinidad on November 27.

Seeking compensation, the heirs of the six victims of the October 7 crash are able to obtain a judicial embargo against the company on December 13. TACA operations in Costa Rica are partially paralyzed for a week.

Enplanements during the 12 months are 65,000, and cargo tonnage reaches 12,500.

On January 28, 1941, the Guatemalan government cancels by purchase the franchise of **Compania Nacional TACA de Guatemala, S.A.** With a pen, 20% of TACA's business is wiped out. Leases on the four airfields Yerex had constructed are cancelled and he is allowed three flights to get all of his men and equipment out of the Peten region where the chicle is grown.

Although much is removed, \$12,000 worth of buildings must be abandoned; **Aerovias de Guatemala, S.A.** will later send a \$5,000 check for them. A Ford freighter, en route to Alamicambra, Nicaragua, from Puerto Cabezas with cargo for the mines, disappears on April 4; the wreckage is found in the east coast mountains 16 days later and neither of the two crewmen have survived.

American Export Airlines and **Pan American Airways (PAA)** now become involved in a court battle in the U.S. over the former's TACA holding (based on Section 408b of the Civil Aeronautics Act of 1938). Yerex testifies from April 29 through May 2. During the year, the TACA fleet is not increased by even a single plane; however, fleet rationalization begins and a number of aircraft, including the earlier Fords, are retired.

On September 4, the CAB denies **American Export Airlines** the right to purchase TACA, citing that provision of the law preventing steamship companies authority to purchase airlines.

Meanwhile, and despite the "ouster" from Guatemala, bookings climb to 90,000, and cargo tonnage accelerates to 14,000.

On August 26, 1942, **Empresa de Transportes Aerovias Brasil, S.A.**, better known as **Aerovias Brasil, S.A.**, is formed at Rio de Janeiro; Yerex and another TACA official hold 60% interest and two Rio brothers, Oscar and Roberto Taves, the remainder. In support of the Allied war effort, two L-14s begin providing freight service Rio-Miami some months before operations are authorized by Brazilian presidential decree on December 29.

Meanwhile in Nicaragua, the Ford 5-AT-4 is purchased from the Texas Petroleum Company by **TACA de Nicaragua, S.A.**, which also accepts the transfer of 5-AT-18 and 5-AT-52 from **TACA de Guatemala, S.A.**, 5-AT-31 from **TACA de Costa Rica, S.A.**, and 5-AT-89 from the government of Colombia. Stationed at Alamacamba, the 5-AT-18 is converted into a diesel oil tanker plane by the insertion of tanks in the cabin; a permanent ladder is attached to the fuselage that allows the pilot to enter his cockpit via the overhead escape hatch. The Ford 5-AT-73, also acquired on loan from **TACA de Guatemala, S.A.**, is returned on October 15, as is the 5-AT-90 back to **TACA de Costa Rica, S.A.**

At year's end, **American Export Airlines** withdraws from TACA, selling its shares back to TACA, S.A. The fleet grows through the purchase of three Curtiss Condor T-32Cs and four Beech 18s.

On January 27, 1943, TACA, S.A. changes its name to Inter-American Airways, S.A.; simultaneously, the Inter-American Airways Agency is incorporated in New York City, allowing the opening of marketing and ticketing offices there and in Miami. On May 13, **British West Indies Airways (1) (BWIA)** is also incorporated. TACA now serves 235 points in Central America, some with the Lockheed L-12, Vultee V-1A and Burnelli UB-14B acquired during the year.

On October 5, Yerex sells 46.2% of Inter-American Airways, S.A. (worth \$2.25 million) to various U.S. corporations: The Adams Express, the Pennsylvania Railroad, Maryland Casualty Co., Time, Inc., and **Transcontinental and Western Air Lines (TWA)**. The same day, all but 40% of the Yerex interest in **British West Indies Airways (1) (BWIA)** is also sold. On November 26, the name TACA, S.A. is reinstated for Inter-American Airways, S.A. and capitalization is increased to \$10 million.

Infused with new capital and **Transcontinental and Western Air Lines (TWA)** technical backing, the carrier in 1944 once again begins to expand, although only two new aircraft are added, a Grumman G-21A Goose and a Douglas C-39 (military DC-2). The Ford 5-AT-52 is transferred back to **TACA de Guatemala, S.A.** in January after two year's service with **TACA de Nicaragua, S.A.** An unidentified Ford Tri-Motor is lost on an unspecified date just after takeoff from the airport at Tegucigalpa, Honduras (14 dead). The Ford 5-AT-75 is transferred on June 1

from **TACA de Honduras, S.A.** to **TACA de Nicaragua, S.A.** Another aircraft of unspecified type crashes into a mountain near Matagalpa, Nicaragua, in a storm on July 3 (one dead).

The nonoperating subsidiary **Compania Nacional de TACA de Mexico, S.A.** is formed, thereby allowing the international division (**TACA El Salvador, S.A.**) to operate north of Guatemala. **Lineas Aereas TACA de Venezuela, S.A.** (55% local control and **Lineas Aereas TACA de Colombia, S.A.** (77.5% local shareholding) are established on August 18.

L-10As of **TACA de Colombia, S.A.** and **TACA de Venezuela, S.A.** launch joint nonstop service Caracas-Bogota on January 2, 1945. **TACA de El Salvador, S.A.** begins Mexico City-Bogota via Medellin and Mexico City-Bogota via Central America service; meanwhile, **Aerovias Brasil, S.A.** launches flights via Trinidad and Dutch Guiana from Ciudad Trujillo-Rio de Janeiro.

During the year, the airlift to the La Luz mine at Siuna, begun in 1939, is completed; during the 6-year period, more than 30,000 tons of supplies and equipment have been flown (mostly by Ford Tri-Motors) to the Nicaraguan dig. This achievement and continuing success in the freight carriage area of the operation allows TACA to lay claim to the honor of being the largest cargo airline in the world. This year the fleet is significantly increased as 6 L-14s and the first in a group of 39 Douglas DC-3s are placed in service.

Displeased by new inroads into Central America made by **Pan American Airways (PAA)** and the perceived lack of support from his American backers, Yerex attempts to obtain British backing for a scheme to buy out his North American partners. The scheme fails and in December the U.S. shareholders buy out the founder's contract as president and elect as his successor Pennsylvania Railroad official Benjamin Pepper. Lowell Yerex, who had started the carrier with a single Stinson in 1931, is now out of his airline's future.

In 1946, **Aerovias Paraguayas, S.A.** is formed as a wholly owned subsidiary, along with **Aerovias Argentinas, S.A.**, but neither will be operated. The Ford 5-AT-31 is sold by **TACA de Nicaragua, S.A.** to **SAN (Servicios Aereos Nacionales, S.A.)** in Mexico in January and a Lockheed Model 10A Electra is damaged beyond repair at Rio Cuarto on March 7. Plans are laid to open services Caracas-Lima and Bogota-Lima via Cali, Quito, and Guayaquil during the summer, but these fail to materialize as increasing financial loss is suffered in the contest with **Pan American Airways (PAA)**. The Ford 5-AT-18 is sold to **NAMSA (Negociacion Aerea Mexicana, S.A. de C.V.)** on June 6 and a DC-3 disappears on December 15. The fleet is, however, further augmented by the addition of three DC-3s, four DC-4s, and two Curtiss C-46As.

On January 6, 1947, the American CAB grants rights for **TACA de El Salvador, S.A.** to fly Belize City-Miami via Havana. Yerex sells his interest in **Aerovias Brasil, S.A.** on January 11, after it reports a \$900,000 loss for 1946. Two days later, the Waterman Steamship Co. purchases a significant block of TACA shares and, as general agent, merges the now-low U.S. office in Miami into its own U.S. sales outlets at home and abroad.

The fleet shrinks to 6 L-18s and 9 DC-3s plus 2 leased DC-4s and 3 DC-3s; late in the year, 1 war-surplus Junkers Ju-52/3m and 3 Avro Anson Vs are placed in service. A DC-3 crashes near Medellin on March 18 (eight dead); two days later, another goes down near Bogota (five dead). Bogota to Balboa daily service begins on April 23; also in April, Ford Tri-Motor 5-AT-75 is sold to **Lagosa (Lineas Aereas Guerrero Oaxaca, S.A.)** in Mexico. Another DC-3 crashes near Nicoya, Costa Rica, on May 4 (11 dead).

Following the DC-3 accidents and the reported loss of \$4 million, **TACA de Colombia, S.A.** ceases operations in mid-May, but a new (never-to-operate) subsidiary, **Aerovias Latine-Americanos, S.A.**, is purchased in El Salvador. On September 15, **Transcontinental and Western Air Lines (TWA)** Executive Vice President Paul Richter becomes TACA chairman and 15 days later, Lowell Yerex sells his interest in **British West Indies Airways (1) (BWIA)**. The wreckage of the DC-3 missing since the previous December is found near Tilaran on November 30; there are no survivors.

The once-thriving TACA empire crumbles almost completely before Easter 1948. On February 28, Miami service is suspended and on the same day, **TACA de Honduras, S.A.** is sold for \$94,000, along with **TACA de Nicaragua, S.A.** On March 3, **Pan American Airways (PAA)** asks the CAB to bar an extension of the TACA permit to serve Miami and New Orleans, charging the Watership Steamship Corporation with owning the airline and operating it to invade the air transport field and evade income taxes.

The outbreak of revolution in Costa Rica on March 12 forces suspension of domestic services in that nation and on the San Jose–Panama route; the Costa Rican government seizes the subsidiary's three DC-3s. Colombia's first woman pilot is hired on March 31 and on May 19, **TACA de Costa Rica, S.A.** is sold to the brothers Kruse for a mere \$175,000. For only the second time in its history, the carrier adds no new aircraft during the year; in fact, it loses or sells several. On December 31, only **TACA El Salvador, S.A.** and **TACA de Venezuela, S.A.** remain from the onetime airline empire.

In February 1949, the Waterman Steamship Co. officially purchases 35% of TACA's **Transcontinental and Western Air Lines (TWA)** interest and thereby gains control. The shipping outfit pours in \$600,000 in operating funds, while plans are made to keep the pioneer alive. Meanwhile, the airline is granted its first regular, three-year, foreign air carrier permit by the U.S. CAB for the San Salvador–New Orleans route via Guatemala City and Belize City on March 30. Flights commence on May 13.

TACA de Venezuela, S.A., the last of the subsidiaries held from the Yerex era, is sold in 1950 and all interests elsewhere in Central America (except El Salvador) and Mexico are liquidated.

On May 24, 1951, the TACA Corporation is organized at New Orleans as a U.S. company, incorporated under Delaware law. All liabilities and assets of the Panamanian-registered TACA, S.A. are transferred to the Louisiana corporation, which now also reforms **TACA El Salvador, S.A.** into the subsidiary **TACA International Airlines, S.A.**; **TACA El Salvador, S.A.** now ceases to exist.

TACA GROUP. See **AEROPERLAS (AEROLINEAS PACIFICO ATLANTICO, S.A.)**; **AVIATECA (EMPRESA GUATEMALTECA, S.A.)**; **COPA (COMPANIA PANAMENA DE AVIACION, S.A.)**; **ISLENA AIRLINES (ISLENA DE INVERSIONES, S.A.)**; **LACSA (LINEAS AEREAS COSTARRICENSES, S.A.)**; **NICA (NICARAGUENSE DE AVIACION, S.A.)**; **SAHSA (SERVICIO AEREO DE HONDURAS, S.A.)**; **TACA INTERNATIONAL AIRLINES, S.A.**; **TACA PERU, S.A.**

TACA INTERNATIONAL AIRLINES, S.A.: Altos Edificio Caribe 2 Piso, Segunda Planta, Colonia Escalon, San Salvador, El Salvador; Phone (503) 339-9155; Fax (503) 223-3757; <http://www.taca.com>; Code TA; Year Founded 1951. On May 24, 1951, the TACA Corporation is organized at New Orleans as a U.S. company, incorporated under Delaware law. All liabilities and assets of the Panama City-based TACA, S.A., are transferred to the Louisiana corporation, which now also reforms **Compania Nacional TACA de El Salvador, S.A.** into the subsidiary TACA International Airlines. **TACA El Salvador, S.A.** ceases to exist and initial capitalization for the new entrant is \$200,000.

Same-day U.S. to Central America service begins on August 20. Services operate without incident through the remainder of the year and into 1952.

A DC-3 with three crew and nine passengers smashes into Cerro Grande mountain, 30 km. E of San Felipe, Venezuela, on March 29; there are no survivors.

To avoid the sort of litigation that ensued following the original buy-in to TACA S.A. back in 1949 (as well as that fought by **American Export Airlines** earlier), the Waterman Steamship Co. interest is sold throughout the year and into 1953. Primary buyers are the steamship line's major shareholders and employees, who hold it as **Waterman Airlines** stock.

A DC-3 freighter with three crew is lost near San Andres, Honduras, on September 8; there are no survivors.

The CAB permit of 1949 is renewed on June 16, 1954.

The Waterman Airlines shares are acquired by McLean Industries in May 1955; in January 1956, these shares are sold to Southern Industries Corporation. The three-year CAB route award is renewed in June 1957. To upgrade the fleet, provision is made for the addition of six Vickers Viscount 700s by lease and purchase. The first, a Viscount 784D, is chartered from **Philippine Air Lines** and is placed in service on the New Orleans run on December 2.

Three more Viscounts, a 798D formerly owned by **Hawaiian Airlines**, a new 786D christened *El Centroamericano*, and a 763D built for Howard Hughes, join the fleet in 1958. The former Hughes machine, with 4 crew and 15 passengers, crashes on takeoff from Managua, Nicaragua, on March 5, 1959 (15 dead).

In exchange for two million shares of common stock, the TACA Corporation, on March 29, 1960 transfers all of the company's properties, assets, and liabilities to its San Salvador-based subsidiary, TACA International Airlines, S.A., and is then liquidated. Simultaneously, the El Salvador government takes action to facilitate the transfer and establishment of the carrier as a local operation. The CAB permit is renewed in May.

One more Viscount 784D enters service in 1961. An ex-LANICA (**Lineas Aereas de Nicaragua, S.A.**) Viscount 786D is obtained in 1962. Enplanements in 1963 are 76,304. Revenues are \$4.426 million and the net profit is \$73,569.16.

Airline employment in 1964 stands at 365. In April, Riccardo H. Kriete purchases controlling interest, giving the airline a decidedly Salvadorian flavor. Simultaneously, the CAB route permit to New Orleans is renewed, with San Pedro Sula (Honduras) as an added stop. A third Viscount 784D enters service in late November, allowing the company to provide all-Viscount service on several major route segments.

The DC-4s are largely restricted to cargo service and the transport of passengers over a few frequencies from Guatemala City to New Orleans.

Passenger boardings jump 11% to 85,735. Revenues accelerate 12% to \$5 million and the net profit skyrockets 86% to \$525,494 on total revenues of \$5 million.

The workforce loses 35 employees in 1965. The fleet now includes 2 DC-4s and 5 Viscount 700Ds. In November, orders are placed for a pair of BAC 1-11-407s, plus two options.

Freight traffic is up and passenger bookings increase to 104,661. Revenues climb 16% to \$5.824 million and net earnings are \$623,667.

On December 14, 1966, the first BAC 1-11-407 arrives from Great Britain; christened *El Centroamericano*, it is joined by *El Salvador* on February 21, 1967. The two jetliners unite with two additional Viscount 784Ds in opening additional routes to Belize, Mexico City, San Jose, Managua, Panama City, and Tegucigalpa.

When owner Kriete dies in early 1968, he is succeeded as company chairman by his son. The employee population now totals 490. Passenger and mail flights begin to Miami in the spring. The colorful Lowell Yerex, founder of the original TACA, dies of cancer in December; his nephew, David Yerex, will publish his biography in New Zealand almost two decades later, *Yerex of TACA: A Kiwi Conquistador* (Carterton: Ampersand Publishing, 1985).

Cargo is up again, and a total of 144,085 passengers are carried on the year. Revenues grow to \$8.06 million, the freight portion of which is the second highest in the airline's history.

A Viscount 745D is purchased from **United Air Lines** in February 1969 for use on short-haul, high-traffic routes in Central America. Due to a diplomatic flap between Honduras and El Salvador in July over a soccer match, the carrier loses its rights into Tegucigalpa.

A BAC 1-11-409 is purchased from **LACSA (Lineas Aereas Costarricenses, S.A.)** in September and is christened *El Izalco*.

During 1970, the Viscounts and DC-4s are retired in favor of four (one leased) DC-6As. On June 1, 1971, service is inaugurated to Jamaica via Belize City.

Enplanements for 1973 are 136,112. Inflation in Europe brings a shift in U.S. holiday traffic to Central America; as a result, passenger boardings soar 23.8% in 1974 to 181,000, while cargo climbs 32.4%. In that year, an ex-RCAF Canadair CL-44D freighter is added.

The workforce is 546 in 1975. In October, the carrier loses its operating authority into Guatemala. The DC-6As are replaced on freight runs by the Canadair CL-44D.

Passenger boardings dip 1.3% to 179,000, and cargo drops 13.4% to 17.3 million FTKs.

The employee population is increased 3.8% in 1976 to 567.

A DC-6BF with three crew undershoots the runway while landing at Altavapaz, Guatemala, on May 2; although the aircraft must be written off, no serious injuries are reported.

The cargo operation is now significantly increased through the addition of a DC-6A, which replaces the DC-6BF. Also acquired in May are two former **Trans Australia Airlines (Pty.), Ltd.** Lockheed L-188AFs that had begun service as the passenger Electras *Charles Sturt*, now renamed *Pangeran Diponegoro*, and the *John Gilbert*. Passenger flights are inaugurated to Merida, Mexico, in the fall.

Passenger boardings increase 5% to 188,121, and freight is up 24.6%. An order is placed in 1977 for a Boeing 737-200.

Enplanements soar to 209,250. Profits of \$39.6 million (operating) and \$715,000 (net) are recorded.

Airline employment in 1978 is 617. The DC-6A is retired in August as the new B-737-244 is delivered, initiating new livery for itself and the fleet's two remaining BAC 1-11-407s and two L-188AFs. Service is restored to Guatemala.

Passenger bookings are up 7% to 225,267 and cargo advances 12.2%. Revenues rise 13.6% to \$25.1 million and expenses are up 10.8% to \$21 million, producing profits of \$3.1 million (operating) and \$1.5 million (net).

Flights continue without incident in 1979. The wing of the L-188AF formerly known as the *John Gilbert* catches fire on the ground at San Salvador on February 2, 1980, destroying the aircraft. No one is injured.

Increased fuel prices and the economic recession of the early 1980s badly hurt TACA, which still, however, maintains services.

While en route over the Gulf of Mexico on September 6, 1983, a BAC 1-11-407 with 71 passengers encounters turbulence while flying in the vicinity of thunderstorms; three people are injured, one seriously.

The carrier begins to fiscally recover in 1984, at which time two additional B-737-222s are placed in service, withdrawing the ex-TAA L-188AF *Charles Sturt* for sale in September of the following year to **Galaxy Airlines**. Operations continue with little fanfare in 1985-1986 and enplanements, by 1987, reach 444,001.

The 1,000-employee flag carrier owns a fleet in 1988 that includes 4 B-737-222s, 1 each B-737-210C and B-737-244, and 1 new B-767-2S1, the only wide-body aircraft to enter service with any Central American airline. Battered by rain and hail and nearly out of fuel, a B-737-222, incoming from Belize with 44 passengers, has both engines suddenly quit at a height of 16,000 ft. The pilots are able to establish emergency power and make a successful emergency landing on a canal bank near New Orleans on May 24.

While on approach for a landing at Golden Meadow, Louisiana, on July 20, a C-118A (military DC-6A) with three crew suddenly loses power to its No. 1, 2, and 3 engines. The pilot attempts an emergency landing at his destination, during which the landing gear strikes a levee, a wing hits the ground, and the aircraft crashes into a drainage ditch. All aboard are killed and the freighter is damaged beyond repair.

On September 28, a B-737-222 runs off the runway at Tegucigalpa, Honduras, damaging its undercarriage and flaps. Although passenger boardings rise only 1% to 448,486, cargo traffic balloons a tremendous 113.3% to 6.45 million FTKs.

The fleet in 1989 is altered slightly as a B-737-3S1 is acquired to replace the B-737-222 lost the previous May. The company initiates a plan, under development for two years, to become "The Airline of the Americas" by purchasing equity in the carriers of neighboring countries.

The process begins with a 30% purchase into Guatemala's **AVIATECA (Empresa Guatemalteca, S.A.)**. The plan also calls for the beginning of fleet rationalization, joint purchasing, and cooperation and coordination in ground handling, catering, and maintenance. Enplanements for the year plunge to 262,945.

Daily nonstop service is initiated in July 1990 from Washington, D.C. (IAD) to Guatemala City and San Salvador. In August, daily nonstop flights commence from Dulles International to San Salvador.

Customer bookings jump upwards to 512,966 and revenues are \$119.78 million.

Airline employment still stands at 1,000 in 1991 and the chartered fleet now includes 1 each B-737-222, B-737-244, B-737-242A, B-737-210C/A, B-737-3S3, B-767-2S1, and 2 B-737-3S1s. A strong 41% share is acquired in the Honduran carrier **SAHSA (Servicio Aereo de Honduras, S.A.)**.

Enplanements total 548,004 and 1.7 million FTKs are operated; together, the traffic produces revenues of \$143.91 million.

A noninvestment marketing alliance is concluded with Panama's **COPA (Compania Panamena de Aviacion, S.A.)** in 1992. In addition, equity is acquired in **NICA (Nicaraguense de Aviation, S.A.)** (49%) and **LACSA (Lineas Aereas Costarricenses, S.A.)** (41%).

All are joined together with **AVIATECA (Empresa Guatemalteca, S.A.)** to form the "Airline of the Americas" or, officially, America Central Corp., S.A., which is often better known as the TACA Group. All participate in joint purchasing, fleet rationalization, and cooperate in ground handling, catering, scheduling, and maintenance.

Passenger boardings are initially announced only for the first five months and total 274,253; it will be revealed later that boardings for the full 12 months have increased to 713,653. Revenues for the year are \$170.92 million.

In 1993, Chairman Enrique Borgo Bustamante and President/CEO Federico Bloch oversee a workforce of 1,500 and the addition of one each B-767-216ER and B-767-33AER to the fleet, the latter delivered in June under lease from Ansett Worldwide Aviation Services. Indeed, El Salvador becomes the first Central American nation to operate an extended range B-767.

A total of 12 cities in nine countries are served from El Salvador, including: New York, Washington, D.C., Los Angeles, San Francisco, Houston, Miami, New Orleans, Belize, Mexico City, Guatemala City, San Pedro Sula, Tegucigalpa, San Jose, and Panama City.

Just after landing at Guatemala City on April 6, Flight 510, a B-767-2S1ER with 9 crew and 227 passengers veers off the runway at 90 kn., 300 m. short of the end of the runway. The wide-body strikes the perimeter fence, runs down a hill, crashes into and through a cinder block house, and hits another home. Although the aircraft is damaged beyond repair, there are no fatalities; three people on the ground are, however, injured.

In July, a comprehensive marketing agreement is signed with the Italian flag carrier **Alitalia, S.p.A.** covering the entire TACA Group; featured is schedule coordination for connections through Los Angeles, New York, Miami, and Chicago.

Customer bookings are swell to 777,158. Cargo is up a whopping 62.8% to 7.78 million FTKs and revenues reach \$192.38 million.

When **SAHSA (Servicio Aereo de Honduras, S.A.)** grounds its entire fleet on January 15, 1994, it begins to employ a leased TACA B-737-2H6A. Hubs for TACA Group are developed. San Salvador handles flights to North America while San Jose, Costa Rica, becomes the gateway for flights to South America. A secondary hub is also set up at Guatemala City.

The entirely leased fleet in 1995 includes 2 each B-737-3S1s and B-737-3Q8s and 1 each B-737-244, B-737-25A, B-737-296A, B-737-210CA, B-737-3S3, B-767-216ER, and B-767-3S1ER. An order is outstanding for an Airbus A320-233. The U.S. reservations centers of the TACA Group members are consolidated in a single El Salvador facility. During the summer, the four B-737-200s are all leased to **LACSA (Lineas Aereas Costarricenses, S.A.)**. Three are repainted in LACSA colors, while one retains its TACA livery with LACSA markings.

The chartered fleet is increased in 1996 by the addition of two A320-233s, which are subleased to **LACSA (Lineas Aereas Costaricenses, S.A.)**, two B-737-2K5As, two B-737-205As, a B-737-2T5A, which is chartered to **NICA (Nicaraguense de Aviacion, S.A.)** and another B-737-3S1, which is chartered to **Air New Zealand, Ltd.** The B-737-3S3 on hand is leased to **Western Pacific Airlines (Westpac)**.

During the third week of January 1997, a code-sharing pact is signed between the TACA Group and **Continental Airlines**. Under its terms, Continental codes will be added to the flights of the TACA partners to Santo Domingo, Cali, Guayaquil and Quito, and Panama City while the TACA designator will also grace Continental frequencies from Houston to Los Angeles and from Houston, Miami, and Dallas (DFW) to Newark.

During the spring, three Cessna 208 Caravan Is received at the start of the year are transferred to **SAHSA (Servicio Aereo de Honduras, S.A.)** and **LACSA (Lineas Aereas Costaricenses, S.A.)**. The latter company becomes the first to offer services from Cuba to North America when it inaugurates flights from San Jose to Toronto via Havana.

A veteran airline executive with service at **Continental Airlines**, **UPS (United Parcel Service)**, **Northwest Airlines**, and **American Airlines**, 36-year-old B. Benjamin Baldanza is named group managing director and chief operating officer in May.

Three Cessna Grand Caravans are delivered in June. By the end of July, TACA Group is operating a combined fleet of 37 jetliners and 8 Grand Caravans. The route network includes stops at 12 points in South American, 14 in Central America, 3 in Mexico, and 8 in the U.S.

Also in July, officials of TACA Group and **American Airlines** sign a memorandum of understanding for establishment of a strategic code-sharing partnership. Due to intense opposition from other Latin American carriers, as well as **Continental Airlines** and **United Airlines**, the pact will remain enmeshed in bureaucratic regulatory wrangling during the next year.

During the summer and fall, joint planning is undertaken between TACA Group, **LANChile, S.A.**, and the Brazilian carrier **TAM (Transportes Aereos Mercosur, S.A.)** for the joint acquisition of up to 200 new narrow-body jetliners. At the same time, the TACA partners begin planning for the elimination of their individual frequent flyer programs in favor of one new loyalty offering.

TACA Group's presence in Cuba is enhanced in August when **AVI-ATECA (Empresa Guatemalteca, S.A.)** launches thrice-weekly roundtrips to Havana from Guatemala City.

During the fall, a number of company aircraft, including a B-767-3SA1, are repainted in a new TACA Group livery that features a white fuselage and a blue tail with a red vertical slash over which appears a logo consisting of five golden macaws, which represent the group members. It is anticipated that the entire group will be repainted by the end of the century.

In November, TACA Group begins service to Santo Domingo. Thrice-daily service to Dallas (DFW) from San Salvador, San Jose, and Guatemala City begins in December.

The company, in January 1998, takes the lead in creation of a new TACA Group frequent flyer program, Distancia. The new loyalty program, affiliated with LatinPass, also allows passengers on any of the five member airlines to collect points when they fly with **KLM (Royal Dutch Airlines, N.V.)** and **USAirways**.

Citizens of El Salvador, Honduras, and Nicaragua are, beginning on February 18, able to employ the new C-4 Central American Immigration card while traveling between the three nations.

On behalf of the TACA Group, **LACSA (Lineas Aereas Costaricenses, S.A.)**, on April 1, inaugurates thrice-weekly B-737 roundtrips between Santo Domingo, Dominican Republic, and Havana, Cuba.

On April 6, in cooperation with ENSA, a company that is owned by the Institute of Civil Aeronautics of Cuba, TACA Group unveils a new "Inter Cuba" division. Although under the operational management of **SANSA (Servicios Aereos Nacionales, S.A.)**, the Costa Rican domestic airline, the new unit's employees, including its general manager, are all Cubans. Under this arrangement, Cessna 208Bs with Costa Rican pi-

lots provide internal frequencies between Havana, Varadero, Cayo Coco, Trinidad, Cayo Largo, and Gerona, all growing tourist areas.

Airbus Industrie achieves a historic victory over its Boeing competitors in April when it signs a gigantic South American consortium purchase agreement. Under its terms, TACA Group, including TACA International, **SAHSA (Servicio Aereo de Honduras, S.A.)**, **NICA (Nicaraguense de Aviacion, S.A.)**, **LACSA (Lineas Aereas Costaricenses, S.A.)**, and **AVIATECA (Aerolineas de Guatemala, S.A.)** promises to take 32 firm A320 family planes, plus 32 options. Other participants are **TAM (Transportes Aereos Regionais, S.A.)** on behalf of itself and its subsidiaries, which agree to acquire 38 firm A320 family aircraft, with 37 options and **LANChile Airlines, S.A.**, which will take 20 A320 family aircraft, with 20 options.

A320-233 daily nonstop return service is inaugurated on April 20 between San Salvador and Washington, D.C. (IAD), between San Salvador and New York (JFK), and between San Salvador and Guatemala City.

As Guatemala has no scheduled, permanent, and efficient domestic air transport for passengers, cargo, or documents, TACA Group decides at the end of the month to remedy that situation. The subsidiary **Transportes Aereos Inter, S.A.** is established at Guatemala City to provide frequencies. Equipped with a fleet of Cessna 208B Grand Caravans operated by Costa Rican pilots of **SANSA (Servicios Aereos Nacionales, S.A.)** under contract, the new entity begins regular flights to Puerto Barrios, Coatepeque, Retalhuleu, Quetzaltenango, Huehuetenango, and El Quiche.

In May, a 49% stake in the parent holding company of TACA Group associate **COPA (Compania Panama de Aviacion, S.A.)** is acquired by **Continental Airlines**. Subject to "certain conditions," the two will enter into a comprehensive marketing and code-sharing alliance. Also during the month, Managing Director/Chief Operating Officer Baldanza is named to the board of directors of **Frontier Airlines (2)**.

The DOT approves the TACA/**American Airlines** alliance in June, with some restrictions, including a prohibition on code-sharing beyond Mexico City. Under terms of the agreement, TACA will place its codes on 126 weekly AA services from 8 points in 7 Central American countries to U.S. gateways and beyond. **American Airlines** will place its designation upon 149 weekly TACA flights from 9 U.S. communities to 10 Central American destinations.

The new arrangement begins in July when the U.S. major places its "AA" code aboard TACA Group services from Dallas (DFW) to Guatemala City and to San Jose via Guatemala City; from Los Angeles to Guatemala City and from Los Angeles (LAX) to San Salvador. The code-share is expanded on August 26 on four new routes: San Francisco to San Salvador, Houston (IAH) to San Salvador, as well as to Roatan, Honduras, on Saturdays, and from Washington, D.C. (IAD) to San Salvador.

During the fall, four new A320-233s are received. All of the group's jetliners are reconfigured for the introduction of Clase Ejecutive (Business Class) service. The initial business services are available over the groups routes from Guatemala City and San Jose to Dallas (DFW).

A \$2-million wet-lease contract is signed with **World Airways** on October 31. Under its terms, the U.S. carrier, beginning on November 1, operates a DC-10-30CF for the group four to six times a week from Miami (MIA) to San Jose, Costa Rica, San Salvador, El Salvador, and San Pedro Sula, Honduras. Flights will continue through the end of the year.

During the first week of November, company aircraft are enlisted to transport 430,000 pounds of relief supplies to Soto Cano AB in Honduras, from where it will be distributed to victims and survivors of Hurricane Mitch. The Honduras-American Emergency Fund in Louisiana had collected the goods.

In addition to relief supply flights, the company establishes an aerial bridge with special flights between the main cities of Honduras so as to overcome the lack of passable roads. It also begins to implement a major program to help rebuild tourism and the economies of the Central American countries affected by the storm.

On November 25, a host of new scheduled changes to be introduced in early December are announced. Demonstrating the growing unity of the group, the individual carriers providing the various services are not

identified. Clase Ejecutive seating will be available on every jet flight by the end of the year.

The decision is taken on December 2 to expand all-cargo services in the new year through the addition of five A300 freighters.

The new schedule is duly implemented on December 7. North American gateway improvements include new daytime nonstop service from Los Angeles (LAX) to both El Salvador and Guatemala City, in addition to the evening service, plus nonstop service to Mexico City and through-service to San Jose. Five daily nonstops are offered between Los Angeles (LAX) and Central America, more than any other airline.

Daily nonstop flights are now operated from New York (JFK) to El Salvador and Guatemala City, plus a new nonstop route to San Jose. From those three stops, connections are available to almost every city in Central America, plus Lima, Caracas, Bogota, Santiago, Quito, and Guayaquil. A daily nonstop is also available from Washington, D.C. (IAD) to El Salvador.

Two daily re-timed flights become available from Houston (IAH) to El Salvador, along with a daily nonstop to Belize and a weekly nonstop to the resort island of Roatan. A new daily nonstop is launched from Dallas (DFW) to El Salvador, doubling service on that route, which complements flights from that Texas city to Guatemala City and through plane service to San Jose.

Daily flights continue to be offered linking Miami with El Salvador, while thrice-daily roundtrips are operated from Miami to San Jose. Nonstop service is also flown daily from Miami to Guatemala City, Managua, and San Pedro Sula, with same-plane service to Tegucigalpa. Daily nonstops are also provided from New Orleans to San Pedro Sula and El Salvador.

Flights from San Francisco to El Salvador are flown every day, while thrice-weekly roundtrips are operated from Toronto to Havana. From the San Jose and El Salvador hubs, the company also offers five daily roundtrips to Guatemala City, San Pedro Sula, Tegucigalpa, Managua, Panama City, Liberia, and Belize. These regional operations will be provided with a mix of jets and newly received Avions de Transport Aerien ATR42-320s.

COPA, on January 19, 1999, places orders for eight Next Generation B-737-700s. Simultaneously, four units are requested from two lessors, Tombo Aviation Services and GE Capital Aviation Services, with the first aircraft scheduled for delivery in April.

In April, TACA President/CEO Bloch is named the 1998 recipient of the Tony Jannus Award for his outstanding contribution to the airline industry. The honor will be presented at a dinner in Tampa, Florida, on October 15.

Chartered from Tombo, the premier Next Generation B-737-71Q is delivered to COPA in ceremonies at Seattle on May 24. The aircraft wears the company's new image, which emphasizes the new alliance with **Continental Airlines**.

Following its arrival at Panama City, additional ceremonies are held, with a ribbon cut by Panamanian first lady Dora Perez Balladares and comments from TACA's Bloch and COPA Chairman Motta. Simultaneously, the code-share with Continental is implemented through a linkage of the two carriers' frequent flyer programs. Plans are announced for the opening of a new Presidents Club at the Panama Airport later in the year. COPA continues to plan for the opening of services to Buenos Aires and São Paulo.

It is announced on May 25 that the number of daily roundtrip flights between Newark and Dallas (DFW) will be increased on September 9 from six to nine.

COPA and **Continental Airlines** begin code-sharing on June 10. The Panamanian line places its "CM" code on approximately 35 Continental flights serving 22 destinations (including Houston, Newark, and Los Angeles), while the American major puts its "CO" code on COPA's flights to Latin America, as well as Miami.

"New Look" daily return service is launched on June 19 between Miami and both Belize City, Belize, and Flores, Guatemala.

About this time, TACA Group takes a minority stake in the Peruvian carrier TransAm, S.A., which is immediately renamed **TACA Peru**,

S.A. It leases to it the B-737-2Q3As required for its October 1 start-up, as well as two new Airbus A319-132s. A third A319-132 is delivered on December 29.

The last of four new A319-132s to be delivered, including the two with TACA Peru, is accepted on March 13, 2000. The "classic" B-737 fleet continues to include 2 each Dash-2K5As and Dash-205A, and 1 each Dash-296A, Dash-242A, Dash-25AA, and Dash-2L9A, plus a Dash-3S1.

A marketing and code-sharing agreement is signed with **Air France** on March 22. With the beginning of the AF arrangement on April 9, TACA Group and the French major exchange designators on their flights between Paris (CDG) and Guatemala, with the consortium carrier able to connect with Air France's worldwide flights via Miami. Weekly Saturday charters, operated on behalf of Cuba Travel Services, from Los Angeles to Havana are launched on April 15.

All-cargo roundtrips begin on June 10 between Guatemala and El Salvador to cities in Mexico.

Due to safety concerns and its inability to measure up to ICAO standards, the FAA downgrades El Salvador to Category 2 status during June. TACA Group core airline TACA International now faces a freeze on its U.S. operations, including its alliance with **American Airlines**, forcing the Group to shift much of its international operations emphasis to its partners **COPA (Compania Panamena de Aviacion, S.A.)** and **LACSA (Lineas Aereas Costarricenses, S.A.)**

In early July, TACA Group Vice President-Maintenance Alfredo Schildknecht is named the group's chief operating officer.

In the wake of Hurricane Keith's devastation in Belize, TACA Group organizes a support plan on October 2 under which the multinational carrier undertakes the immediate delivery of 60 95-pound boxes filled with foods and first-necessity articles. Flights to Belize, cut off by the storm, are resumed on October 4.

Thrice-weekly A320-233 return service is inaugurated on October 31 from San Jose to Montreal via San Salvador and Havana. The last of four A320-233s to be delivered during the year is accepted on December 7. Six more will arrive in 2001, bringing their representation in the fleet to 24 units (including one Dash-232).

Daily roundtrip A319-132 service begins on December 8 from Lima to La Paz and Santa Cruz. A320-233 daily roundtrips commence on December 15 between Lima and Miami.

The eruption of the Popocatepetl Volcano 40 mi. NW of Mexico City on December 20 forces the carrier to cancel all of its flights into and out of the Mexican capital.

Also during December, a B-727 is donated to the Tin Marin children's museum at San Salvador. Company engineers assemble it as a static display.

TACA PERU, S.A.: Avenida Comandante Espinar 331, Miraflores, Lima, Peru; Phone 51 (1) 444-7835; Fax 51 (1) 445 1787; Code ES; Year Founded 1999. With **AeroPeru (Empresa Transportes de Aereos de Peru, S.A.)** bankrupt and on its way to eventual liquidation, Daniel Ratti, former CEO of **Carnival Air Lines**, and Ernesto Mahle establish a new carrier, Trans American Peru, S.A. at Lima during January 1999. When additional capital and support is provided by TACA Group, the company, which retains Ratti as chairman and Mahle as president, is renamed TACA Peru, S.A.

A Peruvian air operator's certificate is obtained on July 13. The TACA Group strategy for the carrier involves its use as a spearhead for the group's deeper penetration into South America.

Outfitted with a pair of Boeing 737-2Q3As leased from TACA Group, the new entrant launches daily roundtrip domestic services from Lima to Iquitos on October 1 and from Lima to Cuzco on October 7. On November 1, scheduled international service is inaugurated from Lima to Miami via Buenos Aires and Sao Paulo employing two Airbus Industrie A319-132s.

TACA Peru officially becomes a member of TACA Group on July 18, 2000. The hub at Lima is expanded with two banks of flights, morning

and early evening, beginning on July 19. Domestic flights are operated with one each B-737-2L9A and B-737-230A, while two more Airbus Industrie A319-132s are brought in to inaugurate new daily return frequencies to Buenos Aires, Caracas, Guayaquil, Mexico City, Panama City, Quito, San Jose, Santiago de Chile, and São Paulo.

International services from Lima are boosted on October 1, with roundtrips started to Bogota and Miami. Daily A319 return service starts on December 8 from Lima to La Paz and Santa Cruz. A320s replace B-737s on the daily Lima to Miami nonstop route beginning on December 15. By year's end, the domestic network from Lima has been increased with stops at Trujillo, Chiclayo, and Piura.

TACH (TRANSPORTES AEREOS DE CHIAPAS, S.A. de C.V.): Mexico (1933–1939). Noted Mexican aviator Francisco "Pancho" Sarabia and his brother Jesus form a cargo charter operation in early 1933, Sarabia Hermanos, and operate it as partners, flying chicle and coffee from the southeastern states of Chiapas and Tabasco. Later, in the spring, the name is changed to TACH (Transportes Aereos de Chiapas, S.A.) and on May 25 the government grants the brothers the route concession formerly flown by Charles Wren's *Pickwick Airways*.

Employing single engine Travel Airs 4000s, Bellanca CH-300 Pace-makers, and Stinsons, TACH maintains its routes, adding passenger service and during late 1934 serves as a feeder for Walter Varney's **LAO (Lineas Aereas Occidentales, S.A.)**, which suspends operations in January 1935.

Thereafter, the company concentrates on building up its local chicle and coffee freight service; two Pilgrim 100s and a rare EMSCO Model B-3-A are acquired in 1937. The small competitor **Aerovias de Quintana Roo** is purchased and merged in late 1938, its route concessions being received in early 1939. On June 7 of the latter year, Francisco Sarabia is killed in the crash of his record breaking Gee Bee *Conquistador del Cielo*.

The company is now split in two. Jesus Sarabia begins flying a coastal service under the name **Lineas Aereas Jesus Sarabia, S.A. de C.V.**; however, he is killed in a crash at Quintana Roo on September 2. Francisco's widow Agripina Diaz and his former chauffeur Effego Cabrera change LAO's name to **Compania Aeronautica Francisco Sarabia, S.A. de C.V.**

TACSA (TAXI AEREO CENTROAMERICANO, S.A.): Tobias Bolanos Airport, Hangar #9, Pavas, San Jose, Costa Rica; Phone 232-1317; Fax 232-1469; <http://www.crdirect.com/tacsa>; Year Founded 1996. TACSA is established at San Jose in 1996 to offer both scheduled and nonscheduled domestic passenger and cargo services. Flights are operated with a sizeable fleet of small aircraft which, by decade's end, includes several Cessna 182s, 5 C-206s, 7 Piper Aztecs, and 4 Piper PA-31-310 Navajos. On occasion, Let L-410UVP-E are leased for charter flights.

The company is not well regarded for its safety. On September 18, 1998, a PA-31-310 crashes into two local houses just after takeoff from Tobias Bolanos Airport (2 dead).

A more dramatic tragedy occurs on January 15, 2000. Having departed Tobias Bolanos on a charter to Tortuguero National Park, a leased L-410UVP-E with 3 crew and 17 passengers is unable to maintain its height and crashes into a home in the upscale Rohrmoser neighborhood of San Jose. Former Central Intelligence Agency (CIA) Director Adm. Stansfield Turner is among the injured in the disaster, which kills his wife, Eli Karen, a San Francisco couple, and a Spaniard. A housekeeper in the demolished home is also hurt.

The actions and lapses of the badly injured crew are later enumerated and include overloading of the aircraft, failure to calculate the plane's weight and balance, no provision of a safety briefing for passengers, non-connection of an installed FDR, and improper flap selection.

TACSA (TRANSPORTES AEREOS DE CARGA, S.A. de C.V.): Mexico (1960–1984). An all-cargo airline formed at Ensenada in 1960,

TACSA flies from that city to Tijuana and to Punta Abreojos via Isla Cedros with Douglas DC-3s. A DC-6F is acquired from **Mexicana Airlines, S.A. de C.V.** in January 1972.

Upon the failure of **Aerocarga, S.A. de C.V.** in 1977, that company's routes and assets are acquired, including a Lockheed L-188AF and a U.S. government contract to return deported Mexican citizens.

Following the world economic recession and the dramatic increase in fuel costs in the early 1980s, the carrier is no longer able to turn a profit and stops flying by 1984.

TACV CABO VERDE AIRLINES (TRANSPORTES AEREOS DE CABO VERDE, S.A.): P.O. Box 1, Rua Guerra Mendes 11/13, Praia, Santiago, Cape Verde; Phone 238 613 215; Fax 238 613 585; <http://www.57.250.224.29>; Code VR; Year Founded 1958. When the local aero club, which has been providing air transport since 1955 with a de Havilland DH 89A Dragon Rapide, goes bankrupt at Praia's Espargo Airport in 1958, the Portuguese government steps in on December 27 and forms TACV to take over its services in on a formal, scheduled basis.

Flight operations commence in January 1959 over a Praia–Sal–São Vicente–Praia route. Two de Havilland DH 104 Doves supplement the Dragon Rapide, until the company is closed down at the end of 1966 for reformation.

Following a period of suspended operations, the carrier is reorganized in 1967 by native-born Anastacia Filinto Correia e Silva, who is sent from Lisbon by **TAP-Air Portugal, S.A.** to become CEO. A third Dove is supplied and service is resumed over the original route, as well as to São Vicente, São Nicolau, and Boa Vista.

Operations continue apace during the remainder of the decade and into the next as the principal islands of the 275,000-citizen republic are all linked. In addition, on-demand charters are often flown.

The first of two Hawker Siddeley HS 748s to be delivered arrives in 1973 and enplanements total 38,048. The employee population in 1974 numbers 172 and the fleet includes 2 HS 748s, 3 de Havilland DH 104 Doves, and 3 Britten-Norman BN-2 Islanders. On December 30, Portuguese transfers power to a transitional government headed by the Portuguese High Commissioner.

Passenger boardings jump 35% to 57,787 and cargo traffic accelerates by 104% to 619,912 FTKs flown.

Following the July 5, 1975 independence of the islands, TACV becomes the national airline. CEO Correia e Silva is retained by the new national leadership, becoming general manager and president of the board of management. He now establishes a route to Dakar, in Senegal, which will be the company's lone international service for many years.

Enplanements for the full year total 62,666.

Airline employment grows 6% in 1976 to 220. Passenger boardings jump 10% to 69,629 and freight traffic is up by 9% to 1.1 million FTKs.

During 1977–1982, the fleet grows to include 2 BAe (HS) 748-2As and 2 de Havilland Canada DHC-6-300s. Airline employment reaches 300. Passenger enplanements in 1981 and 1982 total 103,000 and 113,000, respectively.

The carrier becomes a public company in 1983 and Valdemar Fortse de Sousa Lobo becomes CEO. In 1984, enplanements total 126,433, with revenues exceeding \$2 million. The employee population in 1985 stands at 475. A Douglas DC-10-30, chartered from **LAM-Mozambique Airlines, S.A.** begins weekly weekend charter flights to Lisbon for six months, beginning in April.

Operations continue apace in 1986 and in the summer of 1987, twice-weekly service is initiated between Sal and Boston employing the DC-10-30 leased from **LAM Mozambique Airlines, S.A.** During 1988, a direct route to Lisbon is started by the company in cooperation with **TAP-Air Portugal, S.A.**, which conducts the flight with its A310-304 under a TACV flight number.

Late in 1989, the fleet is increased by the delivery of an Embraer EMB-120 Brasilia. The fleet in 1990–1991 includes 2 each CASA C-212-300 Aviocars, DHC-6-300s, and BAe (HS) 748-2As, plus the Brasilia.

In **1992–1993**, new President/General Manager Alfredo Carvalho oversees a workforce of 580. European destinations visited, with the co-operation of **TAP-Air Portugal, S.A.**, include Lisbon, Amsterdam, and Frankfurt. Enplanements in the latter year total 169,903.

Fleet renewal plans are announced during the spring of **1994**. Both CASAs and the Brasília will be replaced before the end of the year with two new Avions de Transport Aerien ATR42-320s. A B-767-281ER is leased from **LAM Mozambique Airlines, S.A.** and used to start flying from Sal to Amsterdam and Frankfurt.

Passenger boardings accelerate 18.3% to 207,959 while 19.2 million FTKs are operated.

Operations continue apace in **1995** and business improves. During January **1996**, a Boeing 757-2Q8 is chartered from International Lease Finance Corporation. It enters service in March on the company's long-haul routes from Sal to Lisbon, Amsterdam, Frankfurt, and Paris, replacing the B-767, which is returned to Mozambique.

The company now joins with **Air Bissau (Transportes Aereos da Guine-Bissau, S.A.)** to provide joint services. Under this arrangement, the two fly weekly roundtrips from Bissau to Lisbon, employing TACV's Boeing 757-2Q8. Similarly, weekly roundtrips are offered from Bissau to Dakar employing one of TACV's ATR42-320.

Airline employment stands at 580 in **1997** and domestic destinations visited include Boa Vista, Brava, Maio, Mosteiros, Sal, Santo Antao, Sao Nicolau, and Sao Vicente. Flights to Munich begin on October 30.

While landing at Praia on Santiago Island on September 28, **1998**, after a charter service from Sao Nicolau Island, a DHC-6-300 with 3 crew and 19 passengers including Prime Minister Carlos Veiga, crashes in stormy weather. One of the prime minister's bodyguards is killed and four other persons are injured.

New roundtrip service is inaugurated on October 25 from Sal to Bologna and Vienna.

Flights continue in **1999**. While on a go-around on August 7, a Dornier 228-212 acquired the previous year and with 18 passengers, crashes. There are no survivors. A total of 762 workers are employed at the beginning **2000**. A second B-757-2Q8ER arrives under charter from ILFC in April.

TADAIR, S.A.: Mallorca, no. 319, Barcelona, 08037, Spain; Phone 93 712 36 08; Fax 93 712 29 49; <http://www.tadair.es>; Year Founded 1998. Tadair is established at Barcelona in **1998** to offer on-demand executive and small group passenger charters on a 24-hour-a-day, seven-day-a-week basis. Revenue flights begin, and continue, with a single Fairchild Metro III.

TADZHIK AIR. See **TAJIK AIR**

TAE (TRABAJOS AEROS Y ENLACES, S.A.) See **TRABAJOS AEROS Y ENLACES, S.A.**

TAE GREEK NATIONAL AIRLINES TECHNICAL AND AERONAUTICAL EXPLOITATIONS COMPANY, S.A. (TAE): Greece (1940–1957). When **Helliniki Eteris Enaerion Synghinonion (HEES)** ceases operations in **1940**, its equipment and routes are assumed by this new entrant. When the Germans invade in **1941**, all company assets are purposely destroyed.

In early **1946**, the prewar company is reformed and on April 6 a contract is signed with **Trans World Airlines (TWA)** for technical assistance. Pilots of the American carrier, which holds 35% shareholding, inaugurate domestic Douglas DC-3 services, mainly to larger cities, on July 8; later, routes are begun to Alexandria and Istanbul. Frequencies are maintained but services are not financially successful.

Operations continue apace largely without change through the remainder of the decade. The most significant events of this period are tragic.

En route from Athens to Salonika on September 12, **1948**, a DC-3, with 23 passengers is hijacked by 8 passengers, some of whom beat members of the crew severely and force the aircraft to divert to Tetovo, Yugoslavia.

On June 6, **1949**, a DC-3 with 22 passengers including Maj. Gen. George Kotsalos, the military governor of Kavella, crashes 17 mi. from Athens; there are no survivors.

In July **1951**, the local service airline becomes one of three small carriers which, under government supervision, are amalgamated into a new joint stock company that is placed under the TAE banner. Shareholding is divided between TAE (30%), **Trans World Airlines (TWA)** (15.5%), **Aeroporike Metaphore Ellados (AME)** (5%), the Greek Civil Service pension fund (24%), the National Bank of Greece (16%), and the Greek government (10%). Scottish Aviation, which had held interest in one of the merger partners, withdraws.

Financial reversals continue and by August **1954** the government, which is making good the losses, is forced to announce that the carrier faces complete privatization. On June 1, **1955**, the airline is taken over by the Greek Transport Ministry, which sells it to shipping magnate Aristotle Onassis on January 2, **1957**; Onassis reforms the airline and re-names it **Olympic Airways, S.A.** on April 6.

TAESA (TRANSPORTES AEREOS EJECUTIVOS, S.A. de C.V.): Mexico (1988–2000). Financed with private money, including 51% shareholding from businessman Carlos Hank Rhon, TAESA is established by Alberto Angel Abed Shekaiban as an FBO/air taxi at Mexico City in April **1988**. Rhon is chairman, Abed Shekaiban is managing director, and executive passenger charters commence with a pair of Learjet 25Bs. A total of 8,000 passengers are flown on the year.

A cargo division is set up by Managing Director Abed Shekaiban very late in **1989** when two ex-Mexican army Boeing 727-100Fs become available.

The first of these, a B-727-64F, is employed to inaugurate cargo charters in January **1990**. Two more B-727-100s are obtained as a passenger airline operating division of the FBO/air taxi concern is created. Passenger charters are operated to a number of Latin American locations as plans are made to operate scheduled domestic services and international passenger (mainly business executives) and cargo charters.

The next month, a B-727-104 is acquired and used to open scheduled passenger service over a single route. In addition, an executive transport fleet is built comprising 1 Grumman G-159 Gulfstream I, 12 Learjets, and 1 Rockwell Saberliner 40. As is the custom with many privately owned U.S. carriers, traffic and financial figures are not released.

Airline employment stands at 700 in **1991** and the fleet is increased. In addition to the two aircraft employed the previous year, the following units are leased or purchased: a B-727-22, B-727-27, B-727-35, B-727-51, B-727-24C, and B-727-114. Leased are one each B-737-3Y0, B-757-2Y0, and B-757-236. A second B-757-2Y0 remains on order.

The first international run is inaugurated roundtrip between Mexico City and Laredo, Texas; it is followed by roundtrips from Mexico City to Vail, Colorado, and Las Vegas, as well as from Mexico City to Vienna, Cologne, Paris, Barcelona, and Madrid. The airline becomes the first Mexican B-757 operator in October when it receives the B-757-2Y0.

In a three-day period in December, the company obtains most of the fleet noted above in response to its quick signature of contracts with Canadian tour operators left in the lurch by the grounding of **LaTur (Lineas Aereas Latur, S.A. de C.V.)**. Passenger charters are consequently initiated to Brussels and the number of domestic scheduled routes is increased to 12. A contract is signed with **DHL Worldwide Express** and the B-727-24C is dedicated to its fulfillment.

Passenger traffic figures are released and show enplanements for the year totaling 371,700.

Operations of Mexico's third largest domestic airline and largest charter operator continue apace in **1992** as the B-757-236 is delivered, along with a chartered B-767-3Y0ER, four B-737-5Y0s, one B-737-4Y0, and two B-737-3Y0s. Scheduled services are launched to 18 Mexican communities and the former **Mexicana Airlines, S.A. de C.V.** commuter partner **Noroeste (Aviacion Noroeste, S.A. de C.V.)** switches over its feeder affiliation.

Acting under U.S. DOT authorization, TAESA on July 22 launches thrice-weekly same-plane flights from Chicago (ORD) to Mexico City via Zacatecas and Morelia. Mexico City to Milan charters begin on August 11 and, in mid-October the airline is awarded new routes from Chicago to Guadalajara and Leon, from Laredo to Leon, and from Los Angeles to Zacatecas via Ontario.

Employing the original Learjet 25Bs reconfigured, the company inaugurates small package services on behalf of **Airborne Express**. In December, the airline is criticized for a variety of safety-oriented deficiencies in a U.S. General Accounting report, which also notes that Canada has suspended all TAESA flights to its territory because of safety shortcomings.

The workforce is increased to 2,000 and bookings jump 433% to reach 898,000, of which 800,000 are carried over the company's extensive charter system throughout the U.S. and Europe. Revenues total \$300 million and a net \$12-million profit is recorded.

Airline employment, all nonunion, stands at 2,200 in **1993**. On February 22, Chairman Rhon joins in a public worry over the new alliance between **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and **Mexicana Airlines, S.A. de C.V.** Managing Director Abed Shekaiban is interviewed by *The Wall Street Journal* on March 1 and again expresses concern over the linkage between the majors. Later in the month, he meets with officials from the Mexican Transportation Secretariat and Civil Aviation Authority to discuss the airline's safety record.

Alberto and his brother Miguel obtain complete ownership in April, with the former president now occupying the post of chairman/CEO. The company inaugurates scheduled international services to Laredo, Oakland, Chicago, New York, and Detroit. Charter destinations now include Barcelona, Madrid, Paris, Cologne, Munich, Frankfurt, Berlin, Rome, Milan, Brussels, Vienna, Reykjavik, Cordoba, Buenos Aires, and São Paulo.

On his third journey to Mexico, Pope John Paul II is flown from Kingston, Jamaica, to Merida aboard a company B-757-2Y0 fittingly and briefly reregistered XA-KWK, the initials of the Pontiff's name, Karl Wojtyla Kaczorowska. Among the air taxi division's other famous passengers this year are Paul McCartney and Michael Jackson.

Passenger bookings through November total 1,585,627 (scheduled)—a 141.9% increase—and 339,281 (charter). Estimated revenues are \$340 million.

Regularly scheduled passenger service is provided to 26 domestic locations by January **1994**. In addition, charters are undertaken from numerous Mexican markets to 6 destinations in Canada, 12 in Europe, 3 in South America, 9 in the Caribbean, 24 in the U.S. A two-year marketing and code-sharing alliance is signed with **United Airlines** in February while charters to Tokyo begin on March 30. That service, the first ever between Japan and Mexico, is undertaken as a charter joint venture with the large Rising Sun tour operator Nichimen Aviation, Ltd.

At the end of April, several Mexican regionals join with TAESA in a merger of support services designed to make the carriers more competitive with **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and **Mexicana Airlines, S.A. de C.V.** Under the arrangement, the carriers share reservations systems, maintenance facilities, ticketing, airport facilities, hangars, and work crews.

During the spring, the airline leases a B-737-5Y0 to **Dominicana (Compania Dominicana de Aviacion, S.A.)** until that carrier can obtain a leased aircraft of its own.

The company is the official carrier of the Mexican national soccer team when it comes to the U.S. to play in the summer's World Cup matches. The subsidiary company **Pueblas Aerolineas, S.A. de C.V.** is established to provide scheduled feed from Puebla with a pair of B-737-3Y0s transferred over from the parent's fleet. Meanwhile, **Noroeste (Aviacion Noroeste, S.A. de C.V.)** is purchased and merged. Enplanements are 2,803,264.

Airline employment stands at 3,000 in **1995**. The airline's 52 aircraft transport a total of 2,070,358, a large 35.4% decline. Freight traffic is also off, falling an even greater 65.5% to 15.92 million FTKs.

Two hundred workers are hired in **1996**. The fleet now includes 2 B-727-23s, 1 each B-727-14, B-727-31, B-727-51, B-727-64F, B-727-24C, 2 each B-737-2T4As and B-737-33As, 1 each B-737-3K2 and B-737-3M8, 1 B-757-23A, 2 DC-9-14s, 3 DC-9-15s, and 3 DC-10-30s. The majority of these aircraft are leased.

Although customer bookings decline 30.9% to 1,429,704, cargo surges, growing 121.7% to 35.3 million FTKs.

The employee population is reduced by 12.5% in **1997** to 2800. A B-737-4Q8 is chartered from ILFC.

Still, passenger boardings accelerate 11.7% to 1,596,235 while freight skyrockets an almost unbelievable 905.5% to 354.99 million FTKs.

Destinations visited by the nation's third largest airline in **1998** include Acapulco, Cancun, Chicago (ORD), Ciudad Juarez, Culiacan, Guadalajara, Hermosillo, Laredo, Leon/Guanajuato, Merida, Monterrey, Puerto Vallarta, Tapachula, Uruapan, Vail, and Zacatecas.

A DC-9-31F, previously employed by the U.S. National Aeronautics and Space Administration (NASA), enters service in June.

On October 22, the U.S. FAA fines TAESA \$160,000 for operating a DC-10-30F in a cargo-carrying operation to the U.S. in excess of its maximum allowable gross weight and failure to maintain it properly.

In November, another DC-10-30F undertakes cargo flights on behalf of the Chilean start-up NSW-New Southways, a cargo sales agent. The aircraft wears dual titles for both concerns.

In the midst of a nationwide scandal involving charges of government and business corruption, Mexican President Ernesto Zedillo vows to crack down on white-collar crime and asks Congress to enact stiffer laws against tax evasion. The Finance Ministry and Office of the Attorney General are directed to enhance their efforts to assure that taxpayers comply promptly and correctly with their payments.

In line with this new government push, Chairman Abed Shekaiban is arrested on December 10 and charged with tax fraud in the amount of 28.78 million pesos (\$2.9 million). It is alleged that this figure has been withheld from workers' paychecks but not turned in to the country's coffers.

Customer bookings jump 18.6% to 1.89 million, while cargo traffic falls 29.5% to 354.99 million FTKs.

A strategic partnership is entered into with the U.S. firm Network Cargo System World Wide on January 21, **1999**. Under its terms, the airline will provide its fleet and the forwarder will invest \$25 million. Between them, nonstop cargo services will be offered from the U.S. to various communities in Mexico and Central America.

During the first quarter, a new color scheme is introduced in which the yellow on aircraft tails extends to the tops of fuselages. The livery is introduced on the B-737-4Q8, which will be returned to ILFC later in the spring.

It is reported on March 5 that the carrier has begun to renegotiate its huge \$350-million debt. On March 14, it liquidates \$80 million of its debt to foreign banks. Although it still owes \$270 million, a restructuring program has been started and recovery is expected.

Unhappily, the turnaround will not occur.

Daily B-737-33A roundtrips are inaugurated on October 28 from Oaxaca to Tijuana via Puebla and Hermosillo. A B-737-4Y0 is now subleased to **Ryan International Airlines** for the winter charter season.

Flight 725, the former NASA DC-9-31F is en route from Tijuana to Mexico City via Guadalajara and Uruapan on November 9 when disaster strikes. Just after takeoff from Uruapan, where 85 passengers have deplaned, the jetliner, with 5 crew and 18 passengers, crashes into an avocado grove 3.3 mi. S of the airport. There are no survivors.

As a direct result of the tragedy, TAESA's operations are suspended by the Mexican government on November 23. A promised fast investigation of the airline continues for a month. On December 23, the government releases its findings, which include 43 conditions TAESA must meet before regaining its certification.

Prior to its shutdown, enplanements for the year have risen to 2,027,000 and 53.76 million FTKs are also operated.

Airline employment at the beginning of **2000** stands at 3,820, a 36.4% increase over the previous 12 months. January is spent attempting

to meet the government's conditions and to cobble together a restructuring plan.

It is reported on January 21 that the grounded company has found partners willing to inject the \$130 million required to get the carrier back into the air once civil aviation authorities have finished their review of its aircraft and procedures. It is anticipated that these details will be completed in a matter of course and that TAESA will soon be offering scheduled services.

On January 31, representatives of the Mexican tourism industry petition Secretary of Communications and Transportation Carlos Ruiz Sacristan and Tourism Secretary Oscar Espinosa asking them to intervene in the TAESA situation and allow the company to resume operations as a way of ending the growing air transport monopoly of the CINTRA carriers **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)** and **Mexicana Airlines, S.A. de C.V.**

The company is unable to make its January payroll. This gigantic downturn causes hundreds of employees to protest in downtown Mexico City on February 3, demanding that the government allow the carrier to resume operations. For his part, Mexican Secretary of Communications and Transportation Sacristan answers that by noting that the airline is, technically, bankrupt, under national law it cannot continue flying.

On February 17, most of the company's 3,500 unhappy workers demand the confiscation of two aircraft, which should be sold to raise the 12.3 million pesos owed them for unpaid wages. A strike is threatened if the funds are not forthcoming. The airline, meanwhile, indicates that it is virtually bankrupt and cannot pay any of its debts.

With an estimated \$60 million in assets and \$380 million in debt, the company is officially declared bankrupt by Mexico City Bankruptcy Court Judge Justino Montes de Oca on February 21. On March 9, Banobras is appointed the defunct carrier's official executor. Executives from the public works development bank now begin a review of the company's books to determine its exact financial situation, how it may be able to work with creditors, and whether or not it can fly again. Simultaneously, Angel Celorio, who heads the TAESA workers' union, indicates that at least two potential buyers will soon step forward.

A potential takeover remains shrouded in mystery. On April 3, Marco Delgado, representing an unnamed "American consortium," asks to begin negotiations by requesting use of 22 TAESA routes—and seven more besides. On May 12, Judge Montes de Oca denies four requests for stays of execution on his earlier bankruptcy order. Banobras completes its audit of TAESA on June 9 and its findings are not encouraging. Instead of an estimated \$60 million in assets, it actually has only \$20 million-worth, including vehicles, equipment, and a pair of B-727s. Unhappily, the original \$380-million deficit figure remains correct.

Grupo Hispano Americano de Aviacion, a mixed Mexican-U.S. investment group, steps forward on June 15 to express interest in purchasing the company and restarting it on July 1. If successful, the reborn TAESA would employ most of the previous operation's fleet and operate over 15 domestic and international routes. Transport Secretary Sacristan reports on June 19 that Grupo Hispano Americano de Aviacion has not yet applied for a concession to operate their announced carrier and there is no longer time enough to obtain the necessary clearances before the announced July 1 start-up date. Sacristan notes that, should the group make application and comply with all legal requirements, a concession would be forthcoming.

The remaining TAESA assets are sold to a new entity, **Lineas Aereas Azteca, S.A. de C.V.** on October 13. The new entrant, owned by gas transportation company owner Leonardo Sanchez Davalos (75%) and U.S. interests (25%), acquires the TAESA operating permit, five aircraft, and a hangar at Toluca. Preparations now begin to get the reborn airline off the ground in early 2001.

A special commission appointed to determine a cause of the November 1999 DC-9 disaster reports on November 1 that, although several procedural mistakes have been determined, it is not possible to establish the exact reason for the crash.

During the summer and into winter, efforts have continue to revive the carrier. Eventually, it is determine that the carrier should be reborn

as a new entity, **Lineas Aereas Azteca, S.A. de C.V.** The carrier's 2,700 unionized members patiently await further developments. In its November issue, *AVNews: Latin America and the Caribbean* reports that Azteca has acquired the assets of TAESA from Banobras, including four aircraft, hangars, and airport facilities around Mexico. Gas transport magnate Davalos is known to own 75% of the new entity, with the remaining 25% allegedly held by a U.S. carrier, possibly **America West Airlines** or **Southwest Airlines (2)**.

As the result of an arrangement between Banobras and TAESA workers' union leader Angel Celorio Guevara, the labor force is finally dismissed on November 16. Under terms of the mass termination, each worker receives a severance package equivalent to eight months pay, with additional payments for seniority. Critics complain that the settlement is 50% less than one offered earlier. Still, distribution is completed by the end of the month.

On December 19, it is reported that Azteca will launch service on March 1 with a fleet of 17 B-737-300s.

TAF (LINHAS AEREAS, S.A.): Hangar: Airport Pinto Martins, Fortaleza, Brazil; Phone (085) 272-7333; Fax (085) 272-5144; <http://www.secrel.com.br/taf>; Year Founded 1957. The small air taxi carrier TAF is established on the aero club grounds at Fortaleza, capital of Ceara State, Brazil, by Capt. Ariston Pessoa de Aradjo in 1957. From ad hoc passenger and cargo flights, the company, over the next 42 years develops a full program of services that include scheduled and non-scheduled passenger and cargo flights. By 1999, the fleet includes 5 Cessna 208 Caravans, 4 Embraer EMB-110 Bandeirantes, 1 Cessna Citation I bizjet, and 1 Esquilo AS.305 charter helicopter. Scheduled frequencies are maintained from Fortaleza to Igauatu, Terezina, Fernando de Noronha, Sobral, Parnaiba, Joao Pessoa, and Juazeiro do Norte.

A Boeing 737-200 is acquired in late May 2000.

TAG (SOCIETE DES TRANSPORTS AERIENS GUYANAIS, S.A.): French Guiana (1919-1922). Headquartered in Paris but with its operating base at Saint Laurent du Maroni, TAG is founded on June 7, 1919. Employing a war surplus Levy-Lepen R flying boat, the company undertakes its first flight from Laurent to the capital of Cayenne on October 12. Additional flights are made to other coastal stops and up the Maroni River.

Flying boat mishaps cause a temporary suspension of operations in April 1920. After four new aircraft are delivered, regularly scheduled twice-weekly Saint Laurent du Maroni to Inini services commence on October 7 followed by a frequency to Cayenne started three days later.

Company records for March 1921 show that 40 scheduled flights have been made, carrying 64 passengers and assorted cargo and mail over 13,754 kilometers. Additional accidents to the thin-skinned Levy-Lepens results in the introduction of four Breguet 14Tbis Limousines later in the year. When TAG ceases operations on October 30, 1922, it enters the record books as the first regularly scheduled airline in the Americas to operate nonseasonal sustained services.

TAG AIRLINES: United States (1955-1978). **Taxi Air Group** is organized by William Knight at Lakefront Airport, Cleveland, Ohio, in 1955 and for the next two years offers on-demand floatplane air taxi flights to Toledo, Akron, and other local destinations with one de Havilland Canada DHC-3 Otter and two DHC-2 Beavers. Financial losses are incurred as services cannot be offered during the winter, when Lake Erie freezes.

E. Ross Miller, owner of the Toledo-based Miller Oil Company, and W. C. Brookmeyer, of Cleveland, approach Knight seeking to purchase a Beaver. When negotiations are over, the two have bought out Knight in July 1957 for \$200,000.

Two de Havilland DH 104 Doves are acquired and are employed by the new Miller Oil Company subsidiary to inaugurate four-times-a-day roundtrips between Cleveland's Lakefront Airport and Detroit City Airport. Taxi Air Group takes over and merges Rockford, Illinois-based **Illini Airlines** in December.

Early in **1958**, a third Dove is acquired and TAG begins to operate year-round passenger and cargo flights from Rockford to Detroit City Airport via Chicago (Meigs Field). Chicago is dropped on April 1 in order that the Rockford–Detroit route may be flown direct. Service is inaugurated between Cleveland and Akron on April 28 and from Akron to Detroit on May 5.

Miller's company is transferred to Detroit in July and in the fall the organization is reformed into a scheduled carrier and renamed TAG Airlines. Employing its DH-104 Doves, the new airline begins daily roundtrip revenue services from Burke Lakefront Airport to Detroit City Airport on October 1.

Flights from Rockford to Detroit and from Detroit and Cleveland to Akron cease in **1959** in order that TAG might turn its single route service into a shuttle, "every hour, on the hour."

Enplanements for the year total 20,767.

TAG applies to the CAB on February 1, **1960** for certification as a scheduled airline; initially rejected, the company goes through the application process again on February 8, **1961**.

Throughout **1962**, Miller and his colleagues await action by the regulatory body, but in the end, have no success.

Chairman Miller and his attorney, Merrill Armour, establish the Association of Commuter Airlines in **1963**. Passenger boardings for the year total 44,324.

A third filing is made with the CAB on August 7, **1964**. **North Central Airlines** opposes TAG's request and no action is taken. The company files for the fourth time on September 24 and again NCA stands in opposition. Dove flights link Cleveland with Cincinnati via Columbus beginning on March 15, **1965**.

On May 3, the first of 15 newly received Piper PA-23 Aztecs inaugurate daily frequencies from the 2 new Buckeye destinations to Detroit. During the year, the Cleveland terminus is transferred to Hopkins Airport while that at Detroit is moved to Metropolitan Airport.

Enplanements for the year are 83,873.

Service to Pittsburgh's Allegheny County Airport begins in **1966**, the same year in which unionized company pilots strike the commuter. Significant competition begins on May 18, **1967** when former TAG official Gerald E. Wheeler's **Wright Airlines** begins Cleveland–Detroit frequencies.

Miller seeks permission to begin employment of 40-seat Fokker F.27s as replacements for his aging Doves. Instead, the regulators require the company to suspend services on all of its routes except the "grandfathered" Cleveland–Detroit run. Much of **1968** is occupied in an unsuccessful attempt to become a member of the "Allegheny Commuter" network.

On March 8, **1969**, the CAB grants TAG permission to begin operating F.27s over its Cleveland–Detroit route. The move immediately brings a protest from Wright; as a result of the CAB hearing that follows, the government approval is withdrawn.

On June 28, TAG is incorporated as a freestanding airline and an entity separate from its former Miller Oil Company parent. After a decade of petitions, TAG finally receives a temporary CAB Certificate of Public Convenience and Necessity the next day.

Customer bookings reach 58,222.

A crack in a wing fitting causes a DH-104 en route from Cleveland to Detroit to crash into frozen Lake Erie, 15 mi. offshore from Cleveland, on January 28, **1970** (9 dead). The attendant legal and public relations difficulties surrounding the crash and salvage operations drive passengers away. In May, only 881 commuters are flown and only 2 Doves are required to fly the company's schedule of 10 daily roundtrips, down two-thirds in just one year.

Miller and Wright officials agree to a merger in June, but the plan is vetoed by the CAB in July. Out of options and with its bookings for the year to date being only 9,489, TAG goes out of business on August 7.

TAGP (TRANSPORTES AEREOS DA GUINE PORTUGUSA, S.A.): Portuguese Guinea (1960–1974). TAGP is set up at Bissau in **1960** to offer scheduled services to Dakar, Praia, and Ilha do Sal. Rev-

enue flights commence with a single de Havilland DH 114 Heron 1B. The Heron is supplemented in **1961–1964** by a pair of DH 89A Dragon Rapides.

The fleet is revamped in **1964–1968**. The Dragon Rapides are retired and replaced with another Heron 1B, three Dornier Do-28s, and one each Cessna 206 and C-172H.

At this point, some of the longer route segments are taken over by **TAP-Air Portugal, S.A.**, including the service to Bissau from Ilha do Sal. This arrangement continues until **1974** when Portugal agrees to the colony's independence, unilaterally declared the previous September 24. TAGP is now renamed **LIA (Linha Aerea da Guine-Bissau, S.A.)**.

TAGUA COLOMBIA (TAXI AEREO DEL GUAVIARE, S.A.): Calle 40, No. 29-103, Villavicencio, Meta, Colombia; Phone 57 (86) 644106; Fax 57 (86) 623475; Year Founded 1990. With a base at Villavicencio, TAGUA is formed in **1990** to offer scheduled, third-level passenger and cargo flights throughout the local region. In **1993–2000**, General Manager Hernando Villamizar's fleet comprises 3 Cessna 206s and 1 Pilatus Britten-Norman BN-2 Islander.

TAH (TRANSPORTES AEREOS HONDURENOS, S.A.): Honduras (1931–1932). Dr. T. C. Pounds, who had started the first air transport service in Central America in 1923 and who had been involved with the unsuccessful **Central American Air Lines** of 1927–1928, returns to the Honduran air scene in **1931**.

After receiving government permission, he brings a Stinson Detrioter into the country from the U.S. on August 26 and in September, joining with other partners, forms TAH. A mail contract is briefly flown; however, a dispute between the partners leads to a company shutdown on December 30.

Pounds' mail contract is renewed in early **1932** and he makes a few, sporadic flights before giving up his enterprise on February 20.

TAHITI CONQUEST AIRLINES, S.A.: BP 6109, Faa'a, Tahiti, French Polynesia; Phone 689 85 55 54; Fax 689 85 55 56; Code TQ8; Year Founded 1990. Tahiti Conquest is formed in **1990** at Aeroport de Tahiti, Papeete, to provide interisland commuter flights. President Michel Thion's initial fleet comprises 1 Beech B-58 Baron, 2 Cessna 441s, and 1 new Dornier 228-212. A Cessna 55 is acquired in **1991** and in **1992** the Baron and one 441 are withdrawn.

Operations continued during the remainder of the decade, during which years one 228-212 is replaced with a Fairchild Dornier 328-110.

TAHOE AIR: United States (1996–2000). Tahoe Air Corporation is founded by Bruce Wetzel and Mark Sando during September **1996** with the goal of providing scheduled direct jet service from Lake Tahoe. During the next 24 months, preparations proceed slowly for the initiation of the new flights. An application is filed with the DOT for certification and a management contract is signed with Elko, Nevada-based TEM, Inc., whose CEO, George Warde, now becomes Tahoe Air's chairman. In addition to Wetzel as president/CEO and major investor Sando as executive vice president, other appointments, all from the Lake Tahoe area, include Vice Presidents Gale Davis, Jack Keady, and Gail Sutton.

Late in this gestation period, controlling interest is sold to Pacific Sports Holidays (PSH) of Westlake Village, California. Roseville-based Capitol Bay Securities, an investment banking concern, raises the initial \$5 million start-up funding. The decision is now taken to withdraw the DOT application (and file again in 2000) and to complete a block-seat arrangement with Elko-based **Casino Express**.

Concrete planning is acted upon for the initiation of direct frequencies to both Los Angeles and San Jose. Travel agents are briefed and community relations are undertaken. Efforts are made to coordinate airline activities with those of leading local attractions.

Arrangements are completed to obtain 85% of the seats abroad a hush-kitted Boeing 737-214A in Tahoe Air colors from **Casino Express**, via TEM, which also handles acquisition of flight and cabin crews.

Presided over by *The Newlywed Game* host Bob Eubanks, as well as PSH Chairman Lawrence Donizetti, the inaugural press and VIP flight is made to Los Angeles on June 25, 1999. Thrice-daily nonstop roundtrips to Los Angeles (LAX) are thereafter offered, with twice-daily nonstop roundtrips to San Jose beginning on July 1. At this time, it is announced that twice-daily nonstop B-737 return service will be inaugurated on December 18 from Lake Tahoe to San Diego.

The summer's activities are very rocky. The relationship with **Casino Express** is terminated in a contract dispute at the end of October and Tahoe Air must largely stand down. Casino has been unwilling to let Tahoe sell cargo capacity in the belly of the Boeing and has kept all revenues earned from the in-flight sale of drinks.

A few charters are now operated on Tahoe Air's behalf by Tucson-based **Lorair, Ltd.** The Arizona airline also helps Tahoe resume its pursuit of a Part 121 operating permit from the DOT and entertains CEO Wetsel's proposals for a larger role in his company's operations.

Meanwhile, negotiations with the larger Lake Tahoe casinos for commitments to purchase seats largely fall through. Only one gambling center is willing to go along with the idea, but only if the others also come in—and they do not.

As the result of investor frustration and a refusal by Capitol Bay Securities to pump in the \$2.5 million required to keep the airline going, the decision is taken on November 19 to indefinitely suspend operations (although the message played on the public reservations recorder refers only to the upcoming holidays) and to reorganize. All of the carrier's 65 employees, except for its CEO and three managers, are laid off. Co-founder/Executive Vice President Sando, who has not been consulted on the decision, is one of those released.

CEO Wetsel is, however, quick to inform the media that "we're not dissolving the company . . . we're not filing for bankruptcy." Still, the value of shares has dropped from \$5 each during the summer to \$1 in early November to 25¢.

Over the next week, negotiations with the Lake Tahoe casinos and an unnamed airline are intensified as a way is sought to return to the air. Capitol Bay Securities CEO Stephen Kircher estimates that Tahoe Pacific Corporation will also need to find an additional \$10 million in capital. These developments, reported by the *Tribune Business News*, lead to an increased in the company's stock value on the Over the Counter Bulletin Board, to 37.5¢ a share on November 30.

On Christmas Eve, it is reported that a letter of intent had been signed the previous week for a merger between Tahoe Pacific Corporation and Dallas-based Ameri-First Financial, which would leave the Texas firm in control of the merged company. The deal had been spearheaded by Steve Kircher. Ameri-First Financial owner/CEO Jeffrey Bruteyn will be chairman/CEO with Kircher the chief financial officer. In reviewing the arrangement for the media, Bruteyn indicates that Tahoe Air will be revived employing 50-seat turboprops instead of 737s.

The good news of Christmas sours in January 2000. Former Tahoe Air Vice President-Marketing Keady files an involuntary Chapter VII bankruptcy petition claiming that the airline owes him \$35,350 in back wages. With only slim cash reserves of its own, the carrier quickly files for Chapter XI bankruptcy protection so that it can reorganize its finances and pay off Keady and other creditors. It does not recover.

TAI. See **COMPAGNIE DE TRANSPORTS AERIENS INTER-CONTINENTAUX, S.A. (TAI)**

TAIFUN (ADJAL AVIA) (SUKHUMI UNITED AIR DETACHMENT): Babushara Airport, Sukhumi, 384962, Russia; Phone 995 (88122) 22021; Fax 995 (88122) 24103; Code GIG; Year Founded 1995. Taifun is set up at Sukhumi in 1995 to offer domestic scheduled and charter services. Zaur K. Khaindrava is CEO and he begins revenue flights with 7 Tupolev Tu-134As.

Although it is understood that this carrier continues to operate in the period after the beginning of the August 1998 Russian currency crisis, no definite information has been located to that effect.

TAIMYRTUR TOO (TAIMIRTUR TOO): Russia (1994–1996). TT is established at Norilsk in 1994 to provide rotary-wing charter passenger and cargo flights in support of energy, communications, and agriculture. A. V. Golnikov is named general director and he begins revenue flights with 3 Mil Mi-2 helicopters. Flights cease in 1996.

TAINO AIR, LTD.: P.O. Box F4006, Freeport International Airport, Freeport, Bahamas; Phone (809) 352-8885; Fax (809) 352-5175; Year Founded 1991. Based at Freeport, the longtime air taxi TAINO is upgraded during 1991 to offer scheduled, third-level passenger and cargo flights to various island destinations, including Puerto Plata, Punta Cana, and Santo Domingo. John P. Doherty is named chairman/president and by 1993 his fleet comprises 2 Piper PA-31-310 Navajos, 4 Aero Commander 690s, and 3 Embraer EMB-110P Bandeirantes. Airline employment stands at 22.

Financial difficulties force Doherty to remove all but one Bandeirante in 1994, while adding a Shorts 360-300. Services continue in 1995–1999. During the latter year, the fleet is once again changed; the turboprops are replaced by one each Rockwell Aero Commander 500 and Cessna 402.

A Convair CV-440 is added to the fleet in early September 2000.

TAIP (TRANSPORTES AEREOS DA INDIA PORTUGUESA). See **TRANSPORTES AEREOS DA INDIA PORTUGUESA (TAIP)**

TAISA (TRANSPORTES AEREOS DE INTEGRACION, S.A.): Costa Rica (1971–1974). TAISA is established at San Juan in 1971 to operate all-cargo charters throughout Central and South America. Revenue operations commence with 2 Douglas DC-6As and 1 Curtiss C-46 Commando and continue until the company declares bankruptcy in 1974.

TAIWAN AIRLINES, LTD.: Taiwan (1966–1998). Privately owned **Taiwan Aviation Corporation** is formed by Tu Fuan Lan at Taipei on April 1, 1966. After assembling a fleet of light aircraft (mostly Cessna 206s) and single Douglas DC-3, the carrier begins unscheduled revenue flights on June 26, 1967. Only a month later, the DC-3 with 18 aboard crashes near Luang Prabang, Laos; there are no survivors. C-206 flights are inaugurated from Taitung to Orchid Island on June 26, 1970.

Several Britten-Norman PBN-2A Trislanders are acquired and are employed to initiate additional services from Taitung and Kao-hsiung to Green Island and the Pescadores.

After nearly a decade of charter services, primarily within the republic, company officials elect to commence scheduled services in 1976 and change their concern's name to reflect that decision. Within the next five years, regular and ad hoc flights are started or maintained to nearly every community of size on the outlying islands from Taitung and Koa-hsiung.

In December 1981, Chairman Jackson T. S. Ho and General Manager Allan K. S. Chan's fleet comprises 4 Britten-Norman BN-2 Islanders, 1 BN-2A Trislander, and 1 Cessna 206. The workforce totals 78 and the year's enplanements are 95,526.

Traffic also grows in 1982 as boardings reach 114,127, but dips in 1983 to 113,502.

During the middle years of the decade, additional scheduled destinations are added, including Chimei, Lanyu on Orchid Island, Green Island, and Makung. A Piper PA-34 Seneca and another Trislander replace one Islander. Operations continue apace in 1984–1987.

A Trislander with 11 aboard crashes into a mountain on Orchard Island on January 20, 1988 (10 dead). Enplanements for the year reach 99,356, but losses of \$1.82 million (operating) and \$1.42 million (net) are suffered.

Airline employment skyrockets 94.4% in 1989 to 175; however, the fleet is reduced to 2 Islanders and 2 Trislanders, plus the Seneca and Cessna 206.

Still, passenger boardings jump 27.1% to 136,290 and 2.77 million FTKs are operated. Orders are now placed for six Fokker 100s. Revenues ascend 19.3% to \$4.6 million, but costs escalate and cause the op-

erating loss to worsen to \$1.82 million. The net loss deepens to \$1.88 million.

Liao Min Ling becomes chairman and Harold C. "Chuck" Liu is named president in 1990 and two more Islanders are added. Two Fokker 100 jetliners are ordered. The number of passenger enplanements is reported for the first half of 1991 and show bookings down 11.8% over the same period a year earlier to 62,000.

The first two Fokker 100s are delivered in January 1992, with two more arriving in the fall. In 1993, Chairman Liu oversees a workforce of 173 and adds a third Islander for commuter flights. Plans are made to initiate flights to Kao-hsiung and Taitung from Taipei and the service is inaugurated in 1994.

Flights continue in 1995–1996. Destinations visited include Taitung, Kao-hsiung, Chimei, Green Island, Matsu, Orchid Island, and Wonan. Airline employment grows to 173.

During 1997, this regional becomes a subsidiary of **EVA Air, Ltd.** The fleet's Fokkers are withdrawn and replaced with a pair of Dornier Do 228-212s and four Pilatus Britten-Norman PBN-2A Trislanders. A total of 38 daily flights are offered over 11 routes to the offshore islands. It is reported that an economic loss is suffered on the year.

The crash of a **China Airlines, Ltd. (CAL)** A300B4-622R on February 16, 1998 (202 dead) and a **Formosa Airlines, Ltd.** SAAB 340A on March 18 (13 dead), triggers a national debate over air safety. In mid-April 1998, **EVA Air, Ltd.** employs this debate to make a dramatic move that will also improve its balance sheet.

Effective July 1, the major no longer offers any domestic services. Its regional subsidiaries Taiwan, **Great China Airlines, Ltd.**, and **Uni Air, Ltd.** are now to be merged into an enlarged **Uni Air, Ltd.**, which provides only domestic services.

TAJ (TRANSPORTES AEREOS DE JALISCO, S.A. de C.V.): Mexico (1936–1954). On August 10, 1936, the Mexican government grants General Roberto Fierro and his brother Raul an experimental route from Guadalajara to Puerto Vallarta on the Pacific coast. Service is started in the fall and maintained to small destinations in Jalisco State, with minor variations, until 1943, when a major expansion is undertaken from Guadalajara to Tepic. The company briefly stops flying in mid-1945, but resumes operations with a converted Douglas B-18 and two DC-3s in November.

The Ford 5-AT-103 is purchased from **TACA Nicaragua, S.A.** on January 17, 1946; christened *Estrella Fugaz*, it is placed into service over a route from Guadalajara to Mascota via Talpa. The 5-AT-39 is acquired from the same source in March. The 5-AT-103 is sent to Los Angeles in September 1948 for extensive engine overhaul. The ship, which had originally begun service with **National Air Transport** in the U.S. in 1931, returns to Mexico, but is badly damaged in a landing crash at Pinotepa Nacional on October 27, 1949.

The *Estrella Fugaz* is sold to **Lineas Aereas Guerro-Oaxaca, S.A. de C.V.** in January 1950 and in February the carrier joins in a confederation with expanding **ATSA (Lineas Transcontinentales de Aero-Transportes, S.A. de C.V.)**, known as **Aero-Transportes**. At this point, it begins flying a difficult DC-3 route christened *La Ruta de los Porta-Aviones* (Route of the Aircraft Carriers), from Guadalajara to San Martin de Bolanos.

The ATSA merger proving impossible to integrate, TAJ reverts to its independent status in September 1952. The Ford 5-AT-39 is sold to a Montana native in November 1953 and on January 7, 1954 the airline is purchased by and merged into **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**.

TAJIK AIR. See **TAJIKISTAN AIRLINES**

TAJIKISTAN AIRLINES: Titov Street 31/2, Dushanbe Airport, Dushanbe, 734006, Tajikistan; Phone 7 (3772) 212 195; Fax 7 (3772) 510 091; <http://www.tajikistanairlines.com>; Code 7J; Year Founded 1990. Tajik Air is formed in 1990 as the Tadzhiik directorate of **Aeroflot**

Soviet Airlines based at Dushanbe Airport. On behalf of the monolithic state carrier, Tadzhiik operates services to the north of its base. When the Soviet Union and Aeroflot are reformed in 1992, the old organization becomes the independent state air company and flag carrier of the new south Asian republic. The new board of directors numbers as its members V. S. Avidzba, K. G. Lolaev, R. Kh. Roustamov, T. Kh. Khamidov, V. S. Sharipov, and Mirzo A. Mustangolov. The latter is named director general and his workforce totals 2,743. A fleet of Russian built aircraft, including Tupolev Tu-154B/Ms, Tu-134As, Yakovlev Yak-40, and Antonov An-26s and An-24s is taken over from the Soviet directorate.

The company, without its previous chain of supply and support from Aeroflot, now enters what the company's Web page will call "the period of the second birth of aviation" in the country. En route from Batumi to Chimkent via Baku on June 17, 1993, an An-26 with 5 crew and 35 passengers crashes 100 km. from Tbilisi, Georgia; there are no survivors.

One of commercial aviation's most disastrous cases of airplane overloading occurs on August 28. Heavily armed ethnic rebels force 81 passengers to board a Yakovlev Yak-40 (designed to accommodate 28 passengers and a crew of 5) at Khorog Airport, Dushanbe, and force the plane and its crew of 5 to take off at high speed under threat of massacre.

The aircraft fails to rise and overruns the runway; its left main landing gear strikes a low embankment, 150 m. beyond the runway, while the right main landing gear hits a concrete machine gun nest 60 m. further on. The plane now plunges into the River Pyanj and only four passengers survive.

A Boeing 747SP-21 is leased from the American major **United Airlines** on November 28; christened *Snow Leopard*, it is employed to inaugurate scheduled flights to Almaty, London (STN), and Sharjah.

In addition to the Jumbojet, the fleet in 1994 includes 1 Tupolev Tu-134, 3 Tu-154B-2s, and a number of smaller aircraft. The SP Boeing is returned to **United Airlines** on February 14.

Plans are made to inaugurate services to Bangkok, Los Angeles, Shanghai, and Tokyo.

A number of new routes are inaugurated in 1995, including Karachi in March, New Delhi in April, and Kabul and Frankfurt in May. With assistance from foreign firms, reconstruction of the runway at Dushanbe Airport is begun. On December 30, the first flight of a Tu-154B is made into Koulyab Airport.

In 1996, a Tupolev Tu-134A is wet-leased long-term to **Sasco Air Lines, Ltd.** Service is started to Beijing, Ankara, and Jeddah. On December 18, the reconstruction of the airport runway at Dushanbe is completed. Fiscal returns diminish, despite introduction of the new routes and a name change to Tajikistan Airlines.

A number of company employees receive training during 1997 at institutions of higher education in Western Europe. Others are sent to study at the Kazakhstan Academy of Civil Aviation (KACA) Also, modern aeronautical navigation equipment is installed at the airports at Dushanbe and Khujand and the airport at Koulyab is given international status.

On December 15, Flight 3183, a Tu-154B-2 with 8 crew and 77 passengers, crashes while on approach to Sharjah, UAE, after a flight from Khudzhand; there are no survivors. Reconstruction of the Dushanbe Airport air terminal begins in 1998. The company begins to equip its aircraft with modern navigational systems and equipment according to ICAO standards. The first ATC controller graduates from the KACA return to Dushanbe to assume positions with the local airports. A group of student pilots and navigators is sent to study at the KACA.

In order to continue and expand services to Western Europe, the carrier is faced with the necessity of making its Tu-154s Stage 3 noise compliant. Six Tu-154B/Ms are modified, at a cost of \$1 million each.

The Russian currency crisis, which begins in August, has an impact. Flights to Beijing, Ankara, Jeddah, Frankfurt, and London (STN) are all eliminated.

The company is subjected to a hijacking hoax on April 21, 1999. While en route from Dushanbe to Moscow, a Tu-154B-2 with 136 passengers is

diverted to Samara after a flight attendant finds a note in a toilet indicating that there is a "terrorist" aboard demanding to be flown to Tehran. On the ground at the central Russian city, a safe evacuation is made as armed troops surround the airliner. Soldiers find no hijackers and no explosives. After refueling, the plane continues its service.

Elsewhere, the 1,100th anniversary of the founding of the Samanids State is celebrated, along with the 75th anniversary of civil aviation in Tajikistan. The eastern gates at the new Dushanbe Airport terminal are completed and the second class of ATC controllers is graduated from the KACA. Scheduled, twice-weekly Tu-154M return service from Dushanbe and Tekirdag to Munich begins on August 24.

At the beginning of August 2000, the air connection between Tajikistan and Uzbekistan is restored. As part of an effort by Russian and Iranian officials to enhance security along the border between northern Tajikistan's Sodhdi region and northeastern Iran, arrangements are completed at the beginning of December for a weekly roundtrip flight between the two areas.

A new schedule is released with the beginning of the winter season on October 29. International Tu-154 return flights are made weekly from Dushanbe to Karachi, New Delhi and Sharjah and twice-weekly from Dushanbe to Munich and Karachi. Weekly roundtrips are also flown from Tekirdag to Munich.

Service is also maintained to points in the Commonwealth of Independent States. Tu-134As from Dushanbe fly weekly to and from Ekaterinburg, Novosibirsk, and Almaty, while Tu-154s operate twice-weekly roundtrips to Moscow. Yak-40s are operated weekly from Dushanbe to Bishkek and twice-weekly to Almaty.

Twice-weekly Yak 40 return flights between Khujand and the Iranian city of Mashhad commence at Christmastime. It is hoped that the \$260 return service will prove a boon for religious pilgrims wishing to visit Islamic sites.

TAJIKISTAN INTERNATIONAL AIRLINES: Tajikistan (1995–1996). TIA is set up at Dushanbe in early 1995 to operate long-haul services to London (LHR). Revenue flights begin in February with a pair of Lockheed L-1011 TriStar 1s formerly flown by **TAP-Air Portugal, S.A.** and obtained via Fortis Aviation, but only last a year.

TAKE AIR, LTD.: P.O. Box 393, Entebbe, Uganda; Phone 39 0333 2251578; Fax 39 06 30891796; <http://www.takeair.com>; Year Founded 1994. Take Air is established at Entebbe in 1994 to provide passenger and cargo charters throughout Central Africa. Revenue operations begin and continue with a pair of Cessna 206 Stationaires.

TAL AIR. See **TRADEWINDS AIRWAYS, LTD.**

TAL THURINGIA AIRLINES, GmbH: Germany (1995–1998). The air taxi TAL is established by Uwe Bohme in 1980. The company grows only slightly over the next sixteen years, also offering lightplane public and small group passenger charters.

Scheduled services from Berlin's Tempelhof Airport are inaugurated in 1996 with 1 each Beech 1900D and Dornier 328-110. Two Fairchild Metro IIIs are added the following year.

Scheduled destinations visited by the 25-worker airline at the beginning of 1998 include Erfurt, Friedrichshafen, Munich, and Westerland/Sylt. On November 1, the carrier is renamed **Tempelhof Express Airlines, GmbH.**

TALAIR (TOURIST AIRLINES OF NIUGINI (PTY.), LTD.): Papua New Guinea (1975–1993). In April 1975, Lae-based **Territory Airlines (Pty.), Ltd.** purchases **Macair (Melanese Air Charters, Ltd.)** and its **Solair (Solomon Islands Airways, Ltd.)** subsidiary. Solair and Macair continue in subsidiary commuter roles, reporting their finances and traffic as part of the figures for the enlarged company, which changes its name to the present title. Most of the previous aircraft and routes are maintained, along with the workforce of 240.

Enplanements for the inaugural year reach 150,191.

Panga Airways (Pty.), Ltd. is purchased and merged in October 1977 completing Talair's immediate expansion. Within four years, Managing Director R. Dennis Buchanan's 594-employee carrier is serving 146 domestic airports with a fleet comprising 5 Embraer EMB-110 Bandeirantes, 8 de Havilland Canada DHC-6-200 Twin Otters, 10 Cessna 402s, 19 Britten-Norman BN-2 Islanders, 1 Pilatus Turbo-Porter, 3 Cessna 207s, 7 Cessna 208s, and 1 Cessna 185. Orders are outstanding for 4 DHC-8-100s.

A DHC-6-200 freighter crashes while on final approach to Garaina, Papua New Guinea, on February 28, 1978, killing its pilot.

Upon its independence, the sovereign new nation of the Solomon Islands acquires 49% interest in the **Solair (Solomon Islands Airways, Ltd.)** subsidiary and the right to purchase, within five years, the remainder for a set price plus a goodwill figure.

An EMB-110P2 freighter is lost at Port Moresby on November 4, 1982; the pilot escapes injury.

In 1984, the government duly serves notice of its desire to takeover **Solair (Solomon Islands Airways, Ltd.)**; however, financial negotiations will require another three years.

Meanwhile, during the middle years of the 1980s, five more domestic points are added along with an EMB-110, three Beech Barons, and a Cessna Citation 550. Severe financial reversals force the closure of the **Macair (Melanese Air Charters, Ltd.)** subsidiary in November 1986. The former parent, meanwhile, takes delivery of its first DHC-8-100 in December.

Capt. H. O. Tschuchnigg is named general manager of the 827-employee carrier in 1987. In January, the company receives permission to operate scheduled services on nine domestic routes in competition with the state airline **Air Niugini (Pty.), Ltd.**

An EMB-110P2, with 2 crew and 15 passengers is forced by bad weather to ditch off the Papua New Guinea coast on February 6 while on a service from Rabaul (14 dead).

In October, orders are placed for two EMB-120 Brasilias. Over 136 regional destinations are now served with upwards of 300 flights scheduled per day. At year's end, the **Solair (Solomon Islands Airways, Ltd.)** subsidiary is finally sold to the government of the Solomon Islands for \$51.4 million.

Overall enplanements for the 12 months rise 20.8% to 294,082 and cargo is up 3.8% to 1.52 million FTKs.

In 1988, Managing Director Buchanan's fleet is increased and now includes 23 Islanders, 4 Beech Barons, 10 Cessna 402s, 11 Twin Otters, 8 Bandeirantes, and 1 DHC-8-100. A new EMB-120 Brasilia is also delivered.

The workforce is increased by 18.1% to 867 and passenger boardings leap upward by 12.9% to 330,650. Freight is also up, by 22.4%, to 1.8 million FTKs.

The number of employees is increased by 36.4% in 1989 to 1,200 as a second Dash 8 arrives.

While in its post-takeoff climb, a DHC-6-300 with 2 crew and 19 passengers veers left and crashes into trees near Porgera on July 21 (3 dead).

Enplanements are reported through September and are up by 17.4% to 220,288. Freight also moves along smartly, growing 10% to 914,000 FTKs.

The fleet in 1990 includes 52 aircraft. However, the world economic situation, particularly after Iraq's August invasion of Kuwait, has a dramatic impact.

Passenger boardings decline to 185,815 and freight is down to 757,000 FTKs. Expenses exceed income and there are equal operating and net losses: \$5.3 million.

Company employment declines by 11.2% in 1991 to 592 and the fleet now includes 7 DHC-6-200s, 9 DHC-6-300s, including 2 leased to **Metro Manila Airlines**, 4 EMB-120P1s, and 3 EMB-110P2s. The Dash 8s must be removed from major Papua New Guinea domestic routes as traffic continues to fall. Still, in the year's highlight, Managing Director Buchanan is knighted by the Queen.

Customer bookings plunge 19.6% to 249,300 and cargo drops 20.7% to 6.15 million FTKs. Revenues slide 8.6% to \$38.56 million, but profitability returns with profits of \$2.68 million (operating) and \$3.6 million (net).

The payroll is boosted 16.9% in 1992 to 498. One Islander is withdrawn and replaced by a Dash 8. The fleet now also includes 7 DHC-6-200s, 8 DHC-6-300s, 5 EMB-110P1s, and 3 EMB-110P2s. Scheduled services are maintained by the 510-employee company to over 700 airstrips and 130 destinations throughout the nation.

An EMB-110P1 with 3 crew and 13 passengers and en route from Mount Ragen to Lae crashes into the mountains at Goroka on April 14 (11 dead).

The landing gear of a DHC-6-300 collapses during touchdown at Esa Ala on October 29; although no one aboard is injured, the plane will have to be written off.

Passenger boardings for the year drop another 5.8% to 234,855 and freight slides 17.3% to 953,000 FTKs. Revenues decline 8.4% to \$35.3 million and expenses fall 3.6% to \$34.58 million. Small profits are posted: \$720,000 (operating) and \$340,000 (net).

The Sir Dennis Buchanan's colorful airline, known on occasion to transport headhunters, goes into a nosedive during the late winter and spring of 1993. Losing \$1 million per month from January on, New Guinea's largest domestic airline is forced to cease operations on June 30.

TALARIK CREEK AIR SERVICE: United States (1983–1986). TCAS is established at Iliamna, Alaska, in the fall of 1983 to provide scheduled passenger and cargo flights to local and regional destinations. Employing Piper Navajos and Saratogas, the company inaugurates revenue flights in November linking its base with Nondalton, Anchorage, Kakhonak, Pedro Bay, and Port Aisworth.

Frequencies continue apace until the company goes out of business in August 1986.

TALIA AIRWAYS, A.O.: Turkey (1987–1989). Talia Airways is established at Ankara in early 1987 to offer passenger and inclusive-tour charter flights to destinations around the Mediterranean and southern Europe. The company is equipped with a Boeing 727-2H9, first flown by **JAT (Yugoslav Airlines)**, which inaugurates services in April. Operations continue apace during the remainder of the year.

While on a positioning flight from Istanbul to Ercan on February 27, 1988, a B-727-2H9 with six crew and nine passengers crashes into a mountain near Girne Arap, Cyprus; there are no survivors.

Unable to recover from the loss, the company closes its doors in 1989.

TALKEETNA AIR TAXI: P.O. Box 73, Talkeetna, Alaska 99676, United States; Phone (907) 733-4444; <http://www.gorp.com/flytat/flt.htm>; Year Founded 1948. This small Part 135 charter operation is formed at Talkeetna, 80 mi. N of Anchorage in Alaska, in August 1948 by famed bush pilot Don Sheldon and Stub Morrison. Operations to various bush destinations commence with a single war-surplus Taylorcraft L2M Cub.

Following the loss of Morrison in an air crash, Sheldon flies alone, operating passenger and cargo charters throughout the territory's interior. Regular customers include miners, trappers, homesteaders, mountain climbers, the Alaska Road Commission, and the U.S. Geological Survey. Exploring parties visit destinations from Ketchikan and Yakutat in the south to Kuskokwim in the west and to Umiat and Barrow in the north.

In the fall of 1950, Sheldon crashes in a lake west of Talkeetna; after securing his injured passenger, the pilot hikes for 14 hours until help can be secured. In a famous 1955 exploit, the pilot lands his float-equipped Aeronca on the Susitna River and rescues seven members of a U.S. Army search and rescue section stranded after an unsuccessful attempt to shoot the rapids at Devil's Canyon. On December 25, 1958, Sheldon finds the wreckage of a USAF C-54 missing on Mount Iliamna, 180 miles south of his base.

During the 1950s and 1960s, mountain climbers, as many as 100 each year, are taken to Mount McKinley, often in the owner's favorite aircraft, a Yellow Piper Super Cub. The fleet grows to as many as 4 Cessna 180s and Sheldon, like his friend Robert "Bob" Reeve, becomes proficient at landing on glaciers.

In June 1960, Sheldon participates in the rescue of several parties in difficulty at the same time on Mount McKinley, ferrying in relief parties and their gear to a base camp 10,200 feet up the mountain's flank and flying out rescued climbers.

In 1964, Sheldon marries Reeve's daughter Roberta, who takes over the company's ground operations. Operations continue for another decade, during which time Sheldon crashes his last aircraft (six since 1948) and completes the flying of a million miles without a passenger fatality.

In 1972, he participates in the award ceremony when his father-in-law is named Alaskan of the Year; three years later in 1975, at age 53, Sheldon is dead of cancer.

Business is maintained over the next quarter century. During these years, David J. Lee becomes president and operations are continued from a hexagonal log building at the Talkeetna State Airport.

During the 1990s, the company continues to specialize in flight-seeing trips over Mount McKinley, using ski-equipped Cessna 185s. Fishing and backcountry hiking and camping adventures are also heavily promoted. The occasional accidents common to Alaskan bush operations occur.

While approaching Anderson Pass on June 30, 1995, a Cessna 185 with a pilot and four passengers encounters turbulence and impacts a glacier. Although the aircraft is badly damaged, no one aboard is hurt and all are rescued within a short time.

While landing on a rough and uneven frozen lake at Skwentna on March 4, 1996, the left main landing gear of a Cessna 185 with three passengers collapses; although no one aboard is hurt, the aircraft is badly damaged.

A Cessna 185 with a pilot and five passengers stalls while taking off from a glacier near Talkeetna on July 28; the airplane settles back onto snow-covered terrain and then collides with the edge of a crevasse. Two aboard receive minor injuries.

While en route on an August 4 scheduled service, a Cessna 185 with a pilot and five passengers is hit from below near Healy by a private McDonnell Douglas MD-369 helicopter with a pilot and two passengers, which is seeking landing sites for a geographical survey. The helicopter is able to spiral down to a safe emergency landing in busy terrain while the Cessna, which has lost its tailwheel and suffered damage to its lower fuselage, is able to continue on to its destination.

On August 9, 1997, a Cessna 185 with a pilot and two passengers sustains substantial damage when it contacts terrain during its landing roll on a Chickaloon River off airport landing site, 30 mi. N of Chickaloon. No injuries are reported.

Flights continue without incident in 1998–1999.

TAM (JATOS EXECUTIVOS, S.A.). See TAM (TRANSPORTES AEREOS REGIONALS, S.A.)

TAM (TRANSPORTES AEREO MILITAR): Paraguay (1954–1988). In May 1954, with the government-owned LATN (**Línea Aerea de Transporte Nacional**) in difficulty and doubt concerning the future of national airline operations, the air force establishes a special air transport wing. On September 27, the government decrees the funding necessary to

purchase a fleet of Douglas C-47s, which are to be employed both in support of the military's logistical needs and in support of civil requirements.

In May 1955, TAM's air force pilots begin flying a number of routes parallel to those of LATN and by 1956 have assumed the latter's scheduled routes to its 12 largest destinations.

A total of 25,500 passenger are carried by the air force wing during the year.

During the next six years, as LATN's role is diminished to one of air supply to outlying army posts, TAM becomes the nation's primary domestic airline.

A C-47 with two crew and four passengers crashes at Tipuani, Bolivia, on August 1, 1960; there are no survivors.

In 1962, TAM officials participate in the founding of the nation's international carrier, LAP (Lineas Aeras Paraguayas, S.A.).

During the next 13 years, TAM continues to undertake internal passenger and cargo operations. Flights serve such points as Asuncion, Concepcion, Filadelfia, and Pilar. Regional services are provided with Douglas DC-4s and Convair CV-340s. There are losses.

A chartered DC-3 with four crew and a passenger crashes while landing at Laja, Bolivia, on February 12, 1970; there are no fatalities.

Just 13 min. after takeoff from La Paz on February 17, 1971, on a flight to San Borja, a C-46A with four crew and eight passengers crashes into Cunatincuta Mountain; there are no survivors.

While climbing away from La Paz on an all-cargo service to El Jovi on May 4, a C-47 with two crew crashes at Rio Secco; the aircraft must be withdrawn, but there are no fatalities.

While on final approach to Talara, Peru, on December 21, 1973, a CV-440 with six passengers strikes a treeline and crashes; there are no survivors.

A DC-4 with 3 crew and 21 passengers disappears on January 10, 1974 while on a charter service from Santa Rose to La Paz; the wreckage is never found and there are no survivors.

A DC-3 crashes near Sorato Mountain, Bolivia, on November 11; there is no information concerning possible casualties.

A CV-440 with 67 passengers fails its takeoff from Cerro Colorado on October 27, 1975 and crashes; there are no survivors.

Flights continue without incident in 1976-1977, but a CV-440 runs off the runway while landing at San Ramon, Bolivia, on January 24, 1978 and ends up in a ditch; one person on the ground is killed.

Service is maintained without incident during the remainder of the decade and into the early 1980s. The last CV-440 freighter is damaged beyond repair while making an emergency landing near La Paz on October 22, 1984; there are no fatalities.

The fleet in 1985 comprises 7 DC-3s and 4 CASA C-212-200 Aviocars received the previous year. Gradually, by the end of the decade, TAM is absorbed into LAP (Lineas Aeras Paraguayas, S.A.).

TAM (TRANSPORTES AEREOS REGIONAIS, S.A.): Avenida Pedro Buano No. 1-400, Rua Monsenhor Antonio, Pepe 9, Jardim Aeroporto, Sao Paulo 04342-001, Brazil; Phone 55 (011) 5582 8811; Fax 55 (011) 5581 9167; <http://www.tam-airlines.com.br>; Code KK; Year Founded 1976. On November 12, 1975, the federal government of Brazil establishes the Sistema Integrado de Transportes Aereos Regional, a system calling for the formation of five regional airlines to provide third-level feeder service to outlying areas. A promise of subsidy is made, based on a 3% surcharge on tickets sold on trunk routes.

Taxi Aereo Marilia, S.A. (TAM), which had been established at São Paulo's Congonhas Airport as an FBO/air taxi charter operation by Capt. Rolim Adolfo Amaro in 1961, is now chosen for expansion into a major commuter operation. It is offered the west central portion of Brazil, which contains the three major cities of São Paulo, Rio de Janeiro, and Belo Horizonte and accounts for 45% of GNP.

In spring of 1976, the small operator is approached by VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.) with a proposal for the creation of one of the five regional airlines permitted under the November government decree, one which would provide scheduled oper-

ations to southeastern states. On May 27, the two carriers form the joint stock company TAM (Transportes Aereos Regionais, S.A.) with VASP holding 66.7% controlling interest and Taxi Aereo Marilia, S.A. the remaining 33.3%.

The latter will also provide executive charter operations and business aircraft sales as TAM Jatos Executivos, S.A., becoming the largest Cessna corporate jet distributor and maintenance center in South America. With a single Fokker F.27-200 and Taxi's Piper PA-31-310 Navajo, President Amaro's TAM (Transportes Aereos Regionais, S.A.) begins flight activities on July 12 over a route from São Paulo to Ourinhos and Maringa. Nine Embraer EMB-110P Bandeirantes arrive later in the year.

During the remainder of the decade, passenger boardings average some 335,000 per year. The regional develops and maintains a significant domestic route network of some 24 destinations as scheduled services are flown from São Paulo to Maringa, Presidente, Prodent, Ribeirao Preto, São Jose de Rio Preto, Bauru, and Aracatuba. Other important routes include Rio de Janeiro to Marilia, Bauru, and Campinas and to Ribeirao Preto, São Jose de Rio Preto. Ribeiro and Franca are served from the federal capital, Brasília.

Aerotaxi Paulista, S.A. is purchased in 1978. While on initial climb away from Bauru, Brazil, on February 8, 1979, an EMB-110C with 2 crew and 16 passengers strikes trees and crashes in flames; there are no survivors.

By 1980, the company has purchased three F.27-600s and joined the reservations and flight control systems of VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.).

Expenses, led by fuel prices, continue to mount and this year a net loss of \$323,935 is suffered.

By 1981, the employee population is 307 and the fleet comprises 3 F.27-600s, 9 Embraer EMB-110Ps, 3 Cessna 402s, and the original Navajo. Oswaldo Pampiona Pinto is named executive vice president.

Enplanements total 331,115, a 6.8% increase over the previous year, while cargo is up by 17% to 8.03 million FTKs. Revenues skyrocket 130% to \$19.2 million and expenses are \$20.2 million, a 107% boost. Although a \$960,941 operating loss is suffered, a net profit of \$724,289 is reported.

The workforce is decreased in 1982 to 279 and the fleet includes 20 airliners. Another air taxi operator, ORA (Oeste Redes Aereas, S.A.), is purchased and merged.

Passenger boardings accelerate 2.7% to 338,750, while freight rises 14.7% to 9.21 million FTKs.

The number of employees grows 26.2% in 1983 to 520. During this and the succeeding two years, frequencies are increased and the route network comes to include some 24 destinations in the States of Rio de Janeiro, Parana, Minas Gerais, Mato Grosso, Matto Grosso do Sul, and São Paulo, plus Brasília. International nonstop flights are also made several times weekly between Ponta Pora and Asuncion.

While on final approach to Aracatuba on October 7, an EMB-110C with 2 crew and 13 passengers lands short of the runway and crashes (7 dead).

Passenger boardings continue to ascend, reaching 346,890, a 4.1% boost, as freight rises 8% to 9.95 million FTKs. This year's profits are \$562,925 (operating) and \$218,710 (net).

The fleet of the 530-employee company in 1984 comprises 3 F.27-600s, 3 F.27-500s, 1 F.27-200, and 9 EMB-110P/Cs.

While descending toward São Pedro in rain and clouds on June 28, a chartered EMB-110C with 2 crew and 16 passengers crashes into a hill; there are no survivors.

Bookings this year dip 4.3% to 338,000 and cargo is down 0.3% to 9.52 million FTKs.

In 1985, enplanements plunge 14.6% to 222,000; however, freight rises 23.7% to 1.8 million FTKs. Revenues total \$20.3 million and allow a net profit of \$2.3 million.

On the brink of financial collapse, VOTEC (Servicios Aereos Regionals, S.A.) is acquired for \$15 million in 1986 and reformed into the wholly owned subsidiary Brazil Central (Linhas Aereas Regional, S.A.). As a result of this single merger, TAM instantly becomes Brazil's largest regional airline in terms of fleet size and passengers flown.

Bookings for the 893-employee regional jump 38.5% to 428,000 while freight ascends 18.6% to 2.9 million FTKs.

During 1987–1988, Capt. Amaro's Taxi Aereo Marilia, S.A. gradually acquires majority ownership in the company, obtaining 76.93% shareholding versus VASP's 23.07%. In conjunction with the Ponte Aerea Air Bridge shuttle service in which **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** is a partner, TAM is subcontracted to provide turnaround flights from and between the downtown airports of Santos Dumont in Rio de Janeiro and Congonhas in São Paulo.

During the latter year, enplanements total 321,445 and 436,000 FTKs are operated.

The fleet in 1989 comprises 8 F.27s and 8 Bandeirantes. During the first 3 quarters for which it reports statistics, the Brazilian airline sees an 11.5% rise in passenger boardings to 272,117. Freight, meanwhile, increases 41% to 437,000 FTKs.

During late summer the airline is authorized to fly F.27 flights between the downtown airports of Santos Dumont in Rio de Janeiro and Congonhas in São Paulo. These begin, six times per day, in October. These flights are in direct competition with the Air Bridge shuttle services offered by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**, **Cruzeiro do Sul, S.A.**, and **Transbrasil, S.A. (Linhas Aereas)**. However, instead of the austere in-flight services offered by the majors, TAM provides a higher class of food and beverage service. Officials estimate it will require 16 years to recoup the \$2 million invested in the new enterprise. In December, the regional **Rio-Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** also enters the Air Bridge shuttle business, flying Embraer EMB-120 Brasílias.

Airline employment stands at 736 in 1990.

While attempting to abort a bad landing at Bauru on February 12 after a service from São Paulo, an F.27-200 with 3 crew and 38 passengers strikes a row of houses and a car 600 m. outside the airport perimeter; the driver and passenger in the automobile are killed.

Through June, passenger boardings, due almost entirely to the new shuttle service, are up 44.5% to 235,000. Cargo skyrockets 473.3% to 1.52 million FTKs. The first of four ordered Fokker 100s arrive under charter in September.

In 1991, TAM operates 5 owned EMB-110Cs, 3 F.27-500s, 1 F.27-500F, and 3 F.27-600s. Additionally, 4 Fokker 100s are now operated under lease.

Statistics are reported through September: customer bookings rise 29.3% to 499,353 while cargo increases 53.6% to 599,000 FTKs. Expenses exceed income leaving an operating loss of \$2.84 million. There is a net income of just \$157,156.

The workforce grows a slight 1.1% in 1992 to 1,061 as two more chartered Fokker 100s are delivered.

Passenger boardings for the year as a whole are down by 9.6% to 629,407 and freight falls 4.4% to 25.59 million FTKs. Revenues increase by 26.3% to \$77.36 million and expenses climb only 15.8% to \$74.26 million. As a result, there is an operating surplus of \$3.09 million and net profit of \$3.89 million.

In 1993, Chairman Capt. Amaro oversees a workforce of 1,245, up 17% over the previous year.

Shuttle service is inaugurated from Rio de Janeiro (Santos Dumont Airport) to São Paulo (Congonhas Airport). Other markets served include Aracatuba, Bauru, Belo Horizonte (Pamphula Airport), Brasília, Campo Grande, Campinas, Corumba, Cuiaba, Dourados, Franca, Goiania, Londrina, Marilia, Presidente Prudente, Ponta Pora, Ribeirao Preto, São Jose do Rio Preto, Uberaba, Uberlandia, and Varginha.

Two more Fokker 100s are delivered, one each in September and October, bringing the total of Dutch-made jetliners in the company fleet to 12, with orders are outstanding for 3 more.

Customer bookings increase 68.5% to 1,038,471 while cargo balloons 183.4% to 2.63 million FTKs. Revenues swell 41.7% to \$121.76 million and expenses are up only 38% to \$117.38 million. Consequently, the operating profit grows to \$6.44 million and net gain reaches \$5.7 million.

Airline employment is increased by 9.5% in 1994 to 1,378 and the fleet now includes 12 leased Fokker 100s plus 3 each owned F.27-500s and F.27-600s, and an F.27-500F freighter. Orders are placed for 5 new Fokker 50s and a 13th Fokker 100 is delivered in January.

During the year, the president of Paraguay, anxious for airline deregulation, invites TAM to take over the domestic air services previously operated by the military. As a result, Commandante Amaro directs the creation of **ARPA (Aerolineas Paraguayas, S.A.)**, which will be outfitted with two Cessna 550 Citation IIs from **TAM (Jatos Executivos, S.A.)** and three Cessna Caravan Is from **Brasil Central (Linhas Aereos Regional, S.A.)**.

Four additional Fokker 100s are requested during the summer; GPA will dispatch three former **Crossair, Ltd.** units, the first in October, followed by two more in November. Meanwhile, the carrier continues to carry out most of its own maintenance at night at Congonhas Airport in São Paulo.

In December, a promotion offers free tickets to passengers making useable suggestions; upwards of 25,000 will be received. The first of these ideas to be acted upon results in the painting of an Fokker 100 for Christmas; a Santa Claus hat appears over the Dutch jetliner's cockpit (the fourth former **Crossair, Ltd.** unit) when it is delivered early in the month.

Passenger boardings balloon this year by 41.9% to 1,473,234 while freight skyrockets 107.7% to 5.46 million FTKs. Revenues advance another 46.7% to \$291.66 million and expenses are up 35.3% to \$260.25. Pretax gain increases to \$31.41 million while net profit surges to \$17.28 million.

The workforce stands at 633 in 1995. During the fall, TAM becomes the first airline to introduce ticketless travel in Brazil. The electronic tariffs are restricted to frequent flyer program members and are only available for the São Paulo to Rio de Janeiro route.

Enplanements skyrocket 90.8% to 1,171,000 while cargo dips to 4.06 million FTKs. Operating revenues increase 73.1% to \$450 million.

Airline employment increases to 2000 in 1996. The carriers fleet of 24 Fokker 100s is the third largest in the world behind those of **American Airlines** and **USAir**. In January, the company receives the 1995 "Regional Airline of the Year" award from *Air Transport World* magazine.

During the summer, the carrier is restructured; the holding company TAM Group is established to operate the airline as a subsidiary.

To supplement its domestic feeder routes, the rapidly expanding TAM purchases **Helisul Taxi Aereo, Ltda.** in August for 2 million reais (\$2 million). The company, which is allowed to retain its independent identity, is assigned to TAM's **Brasil Central (Linha Aerea Regional, S.A.)** subsidiary, but continues to operate from its Foz do Iguaco base in Parana State.

A major stake and management control is acquired in the former **LAPSA (Air Paraguay, S.A.)** during August and by September 1 the entire company is sold to the new Brazilian airline holding company TAM Group for \$27 million. The same day, service between Asuncion and Miami is suspended. The carrier is now renamed **TAM-Mercosur (Transportes Aereos Mercosur, S.A.)** in honor of the free trade zone established by Argentina, Brazil, Paraguay, Uruguay, and Chile. TAM President Rolim Adolfo Amaro appoints former **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** President Rubel Thomas as his deputy director in charge of TAM-Mercosur. Plans are made to lease a fleet of 10 Fokker 100s to **TAM-Mercosur (Transportes Aereos Mercosur, S.A.)**.

When the Brazilian government grants **Brasil Central (Linha Aerea Regional, S.A.)** the rights of a trunk carrier, TAM Group renames its subsidiary **TAM-Meridionais (Transportes Aereos Meridionais, S.A.)** in October.

While on its initial climb away from São Paulo on October 31, Flight 402, a Fokker 100 with 6 crew and 90 passengers, suffers an uncommanded deployment of the No. 2 engine thrust-reverser. Control problems cause the aircraft to enter a right turn and strike a tall building before crashing into a residential area approximately one mi. from the end of the runway. All aboard the jetliner die, along with three people on the ground.

The new long-haul subsidiary, **TAM-Meridionais, S.A.**, begins service in November. Also during the month, orders are placed for five Cessna Citation Ultras.

In November, the airline registers a 9% drop in passenger boardings as a result of the Fokker disaster; figures are back to normal by December.

Customer bookings for TAM Group ascend to 3,126,238 on 73,320 scheduled departures and revenues reach \$600 million. A \$65-million net profit is reported.

During a training flight on January 9, 1997, an F.27-500 with four crew makes a belly landing at Uberaba. Temporary repairs are carried out over the next eight days and on January 17 the turboprop departs on a ferry flight back to its São Paulo base. Just after takeoff, cabin pressurization fails and the plane makes a safe emergency landing back at its point of origin. Considered damaged beyond repair, the decision is taken to write off the Fokker.

The five Cessna Citation Ultras are delivered in February and March. One becomes the personal transport of Chairman Amaro while the other four are handed over to the airline to operate as replacements for overbooked Fokker flights. When not supporting the airline, the executive jets will perform air taxi service.

TAM and **American Airlines** sign a major code-sharing agreement in May; the document covers dual-designator services that will begin later between 41 Brazilian cities and 25 communities in the U.S. and Canada.

Another Fokker 100 explodes after crashing at São Paulo on July 9 (one dead).

In October, a new holding company, CIT, is established to control the three Brazilian based TAM carriers. A previously announced order for five A330-200s for TAM-Meridionais is confirmed during the month.

Plans to lease aircraft and begin daily roundtrip services from São Paulo to Miami in November are postponed for a year. In the meantime, **American Airlines** will operate the route as part of its dual-designator arrangement with TAM.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Passenger boardings jump 6.8% to 3,337,729 on 74,613 scheduled departures while freight accelerates 10.1% to 14.83 million FTKs.

In January 1998, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** is the first off the liberalization mark, introducing its deep discount night product Voa Brazil at Christmas.

Airbus Industrie achieves a historic victory over its Boeing competitors in April when it signs a gigantic South American consortium purchase agreement. Under its terms, TAM, on behalf of itself and its subsidiaries, agrees to acquire 38 firm A320 family aircraft, with 37 options. Other participants are the TACA Group, including **TACA International Airlines, S.A.**, **SAHSA (Servicio Aereo de Honduras, S.A.)**, **NICA (Nicaraguenses de Aviacion, S.A.)**, **LACSA (Lineas Aereas Costarricenses, S.A.)**, and **AVIATECA (Aerolineas de Guatemala, S.A.)**, promising to take 32 firm A320 family planes, plus 32 options and **LanChile Airlines, S.A.**, which will take 20 A320 family aircraft, with 20 options.

With Voa Brasil having proven an outstanding success, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** unveils a new discount product in May that provides for promotional fares on all of its 280 daytime domestic flights. TAM immediately moves to counter VARIG's low prices, offering 60% off fares on 45% of its own services. This challenge ignites a fare war over Brazil's domestic routes, the first in the nation's history.

Under the code-sharing agreement with **American Airlines**, the U.S. major on July 16 begins placing its code on TAM flights from São Paulo to Porto Alegre. Dual-designator services with **American Airlines** are initiated on August 12 from São Paulo to Brasília, Curitiba, and Rio de Janeiro.

On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to

abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Customer bookings surge 17.9% to 3.93 million, while cargo traffic falls 26.6% to 10.88 million FTKs. A net \$6.65-million profit is also generated.

A third A330-222 is delivered to **TAM-Meridionais, S.A.**, the long-haul subsidiary, in January 1999. During the month, it is announced that discussions are underway by that division with **Air France** aimed at the formulation of a strategic alliance.

On February 3, **American Airlines** places its code on the two daily return flights from Miami to São Paulo made by the A330-222 of **TAM-Meridionais, S.A.**

TAM-Meridionais successfully completes its strategic discussions with **Air France** on February 15, at which point a major marketing agreement is announced. Under its terms, the two international airlines will link their frequent flyer programs, coordinate scheduling and marketing, and code-share on routes between São Paulo and Paris (CDG) four times a week, beginning on June 10.

The April 26 issue of *Gazeta Mercantil* reports that Brazil's airlines will have laid off 3,000 employees by the beginning of June due to the restructuring programs they have started since the first of the year. TAM, having reduced its domestic flights somewhat, lays off 191 workers.

The dual-designator pact between the company, its long-haul subsidiary **TAM-Meridionais, S.A.**, and **American Airlines** is further expanded on May 6. AA begins to place its code on TAM flights from São Paulo to Florianopolis, Fortaleza, and Recife. TAM, is allowed to place its "JJ" code on AA domestic services.

It is reported on September 6 that TAM has taken over **ITA (Itapemirim Transportes Aereos, S.A.)** and will shortly be renamed Interexpress Transportes Aereos Regionais, S.A.

In September, the government proposes that the nation's four major carriers find a way to merge some or all of their activities under a joint operating agreement or some other form of umbrella.

Weekday roundtrips commence on October 4 between São Paulo and Florianopolis. At this point, the Brazilian National Development Bank (BNDES) adds to the discussion of airline mergers when its president, Andrea Calabi, announces that BNDES will broker and finance an amalgamation of VASP, VARIG, Transbrasil, and TAM, which may be accomplished in "the medium term." Stating that such a move without additional capital would be pointless, the initiative is publicly opposed by TAM, **Transbrasil, S.A. Linhas Aereas**, and **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. VARIG, which also does not want to give up any of its market regions in order to participate, begins negotiations with BNDES about a debt roll-over loan and an extension of its debt payments.

The 38th and 39th Fokker 100s are added to the fleet on November 11. Under pressure from BNDES CEO Calabi, TAM and Transbrasil undertake and maintain negotiations during November and into December. It is suggested that an accommodation will allow for consolidated capacity, which can produce higher rates for the partners. The last of six new A319-132s to be delivered since July is accepted on December 16. By December 31, the carrier has claimed 24.3% of all Brazilian market share. Enplanements for the year reach 7.87 million. After seven consecutively profitable years, the carrier suffers a R 129.3-million (\$113.7-million) loss on the year. The downturn is largely blamed on the impact of the devaluation of the real back in January.

The carrier accepts delivery of the first 2 of 32 ordered A320-232s in ceremonies at Toulouse, France, on February 18, 2000. The 48th Fokker 100 to be received arrives on February 28 and is the first company aircraft painted in the carrier's bright new color scheme that replaces the blue tail with a red one, along with the provision of billboard-sized red "TAM" titles on a white fuselage with red engine nacelles. The aircraft, which has also dropped its calm blue tail motif, wears billboard titles and, to celebrate the 500th anniversary on April 22 of Portuguese explorer Pedro Alvares Cabral's discovery of Brazil, a special commemorative inscription by the nose.

The spring is marked by continuing financial loss. To help reverse fortunes, company executives, facing the necessary return of seven jetliners to GE Capital Aviation Services on June 1, continue to talk with their colleagues from **Transbrasil, S.A. Linhas Aereas** on measures that may be implemented for joint profitability. On April 19, officials reveal that the company is discontinuing loss-making services to 16 northern and southern Brazilian cities. Additionally, 35 Cessna Caravans will be sold or returned to lessors, while a decision on going all-jet by removing the Fokker 50s remains under active consideration.

It is announced on April 20 that the company is creating a new 49% minority-owned subsidiary, **TAM-Mercosur de Bolivia, S.A.** that will begin operations in July. Two Fokker 100s are assigned to the new entrant and over the next five years the parent will invest \$120 million into the new Bolivian domestic operation.

Two Fokker F27-600s are sold to **Jet Sul Cargo, Ltda.** at the end of the month. Officials from TAM and Transbrasil announce a joint operational agreement on May 3 designed to save upwards of \$6 million per month for the two carriers. The initial phase of the pact, which includes code-sharing, is to run for six months and if successful, may well lead to a merger of the two concerns.

The aircraft returned to GECAS include one each B-737-300 and B-767-300ER, plus four B-737-400s. In addition, the plan to add three former **TAP-Air Portugal, S.A.** B-737-382s is shelved.

A 24-hour strike and pilots protest at Bogota on May 24 causes the nation's government, on June 1, to suspend the operating permit it had given to TAM-Mercosur de Bolivia, S.A. for domestic services. As the month continues, representatives from the TAM start-up subsidiary enter into merger discussions with **Aerosur Boliviano (Compania Boliviana de Aero Privado, S.A.)**, the nation's largest domestic operator. Although a first-half loss of R 74.3 million (\$35 million) is reported, that figure marks a 43% improvement on the loss suffered during the same time period in 1999. The second pair of A320-232s is delivered on August 21, again in a double ceremony. Continuing a livery trend first seen in Europe earlier in the year, a company Fokker 100 appears on August 27 wearing www.tam.com Internet titles.

The two newly arrived, chartered A320-232s enter service on August 31. Two more Fokker 100s are delivered during the week of October 16; with 50 of the type, TAM has more Model 100s than any other airline in the world except **American Airlines**.

The cost-cutting and code-sharing operational agreement with **Transbrasil, S.A. Linhas Aereas** is not renewed on November 3. *Airline Business*, in its December issue, will quote the speculation of analysts who believe that a merger was aborted because TAM does not offer Transbrasil sufficient cash. In an event, all talk of merger ends. As the airline moves to resume its previous operations, it completes an arrangement with **South African Airways (Pty.), Ltd.** to take over the charter, via GATX, of two of its A320-231s. It also announces plans to charter four B-737-300s for the upcoming summer season.

On November 24, TAM is designated by the Brazilian authority International Air Navigation Studies Committee (CERNAI) to receive 43 of the 63 international route allocations it had requested, including some that will replace services previously operated by its fiscally challenged local rival **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. The first of these, which will be flown by the TAM parent itself, covers the São Paulo to Buenos Aires air bridge route. TAM will offer five-times-a-day roundtrips in that market beginning on March 1. At the same time, CEO Amaro announces that TAM has received CERNAI certification for the initiation of twice-daily roundtrips, also on March 1, over the former VASP routes from Rio de Janeiro and São Paulo to Montevideo. All of these routes will be operated with A320s.

A code-sharing agreement is signed with **Air France** and on November 29 it is revealed that **TAM-Meridionais (Transportes Aereos Meridionais, S.A.)** will bring its total of U.S. roundtrips to 28 on May 1 when it adds 14 weekly roundtrips from Brasilia to Miami (7 flown via Manus), in competition with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**. The long-haul subsidiary will also add seven

weekly return flights on June 1 to both Frankfurt and Madrid and one to Paris (CDG). These flights will be operated by A330s and will be flown in code-share with **Deutsche Lufthansa, A.G., Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, and **Air France**, respectively.

For the year as a whole, a R 562,000 profit is generated.

TAM (TRANSPORT ET TRAVAUX AERIENS DE MADAGASCAR, S.A.): 31 Avenue de L'Independence, Antananarivo, Madagascar; Phone 261 270360; Fax 261 30540; <http://www.madagascar-contracts.com/tam>; Code OF; Year Founded 1951. The small charter operator TAM is established at Antananarivo in 1954. Shareholding is divided between **Air Madagascar (Societe National Malagache de Transports Aeriens, S.A.)** (34%) and private concerns (66%). Revenue flights commence with three PA-18 Super Cubs.

Very little is heard of the enterprise for almost 20 years as it quietly provides airport services and flies nonscheduled services around the island with a fleet which, between December 1965 and August 1970, is increased by the addition of 10 PA-25 Pawnees.

Flights continue apace in 1971-1989. During these years, the company also undertakes agricultural services, including spraying activities.

In 1990, the fleet is again increased with the addition of three PA-23 Aztecs and a PA-31-350 Navajo Chieftain. Employment in 1991-1992 grows to 140.

Owner/President Jean-Louis Rajaonarivelo and General Manager Solonaivo Rakotomalala take the decision in early 1993 to inaugurate scheduled domestic and regional commuter services. Orders are placed for two Avions de Transport Aerien ATR42-500s.

In October 1994, the company signs an agreement with the manufacturer to lease an ATR42-320 until the newer ATRs can be delivered. The aircraft arrives from France in late November and enters service in December.

Employing the Navajo Chieftain and ATR, as well as the Aztecs, TAM in 1995 provides regular frequencies linking its base with Diego, Fort Dauphin, Majunga, Mezunga, Nosy Be, Saint Denis la Reunion, Sainte Marie, Tamatave, and Tulear. The first ATR42-500 is delivered in October and in November the ATR42-320 is returned.

Airline employment at General Manager Rakotomalala's concern in 1996 stands at 138. Plans are made for receipt of the second ATR42-500 in early 1997. Flights continue in 1998-2000.

TAM-EXPRESS, S.A.: Ave. Pedro Buano No. 1-400, Rua Monsenhor Antonio, Pape 9, Jardim Aeroporto, Sao Paulo 04342-001, Brazil; Phone 55 (011) 5582 8811; Fax 55 (011) 5581 9167; Code H9; Year Founded 1998. When **TAM-Meridionais (Transportes Aereos Meridionais, S.A.)** enters the long haul arena in 1998, that carrier's parent organization, TAM Group, elects to transfer its internal TAM Express services to a new feeder carrier. Consequently, TAM-Express is established to operate scheduled domestic passenger services that will link up with the main line routes of TAM's larger airlines.

Revenue flights commence with a fleet comprising 6 Cessna 208 Caravan Is, 30 C-208B Grand Caravans, and 1 Embraer EMB-110P1 Bandeirante. Scheduled destinations visited include Chapeco, Concordia, Erechim, Rorlanopolis, and Porto Alegre.

TAM-MERCOSUR (TRANSPORTES AEREOS MERCOSUR, S.A.): Peru, 456, Paraguay; Phone 595 (21) 491040; Fax 595 (21) 509151; Code PZ; Year Founded 1996. The consortium led by **SAETA Air Ecuador, S.A.** that had purchased the former national airline of Paraguay in September 1994, contracts management control of **LAPSA Air Paraguay, S.A.** to newly formed TAM Group, parent of **TAM (Transportes Aereos Regionais, S.A.)**, in August 1996. That Brazilian holding company also takes a financial stake that is increased to the \$27-million purchase of full control on September 1.

The same day, service between Asuncion and Miami is suspended.

The new Brazilian owners rename the company in honor of the free trade zone of Argentina, Brazil, Paraguay, Uruguay, and Chile. TAM

President Rolim Adolfo Amaro appoints former **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** President Rubel Thomas as his deputy director in charge of TAM-Mercosur and operations are continued with a pair of Fokker 100s. The marketing name TAM Paraguay is often hereafter employed.

A code-sharing agreement is signed with **American Airlines** in October. Under its terms, TAM purchases blocked seats on AA's daily roundtrips from Miami to Asuncion. Plans are made to lease a fleet of 10 Fokker 100s from TAM to TAM-Mercosur.

Late in the year, the company enters into a code-sharing agreement with **Aerolineas Argentinas, S.A.** on Asuncion to Buenos Aires daily flights; under terms of the agreement, 50% of the seats on every flight will be blocked off for Aerolineas passengers.

Enplanements this year total 258,641. Expenses are such that there are losses: \$2.98 million (operating) and \$25.86 (net).

Airline employment is reduced by 31.5% in 1997 to 185. In January, it is announced that the company will enter a new code-sharing agreement with **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)**. The two will offer dual-designator flights between Lima and Asuncion. During the summer and fall, joint planning is undertaken with TACA Group and **LANChile Airlines, S.A.** for the joint acquisition of up to 200 new narrow-body jetliners.

Passenger boardings decline 3.3% to 194,467. Operating revenues also fall, by 31%, to \$26.93 million. Expenses increase 44.9% to \$18.84 million. Although there is an \$8.08-million operating profit, the net figure is still a loss, albeit down to \$3.95 million.

Plans are made in the spring of 1998 to participate in the code-sharing arrangement between **TAM (Transportes Aereos Regionais, S.A.)** and **American Airlines**.

Customer bookings during the 12 months jump 16% to 222,000. Revenues rise 6.7% to \$25.99 million, while costs fall 4.4% to \$24.31 million. Although a \$1.18-million operating profit is generated, a \$1.18-million net loss is suffered.

By the beginning of 1999, airline employment has been increased 15.1% to 213. Passenger boardings drop 12.2% during the year to 195,000. A net loss of \$113.7 million is suffered. A total of 170 workers are employed at the beginning of 2000.

TAM-MERCOSUR DE BOLIVIA, S.A. See **TAM (TRANSPORTES AEREOS REGIONAIS, S.A.)**

TAM-MERIDIONAIS (TRANSPORTES AEREOS MERIDIONAIS, S.A.): Rue General Pantaleao Teles 210, São Paulo, SP, CEP 04355-040, Brazil; Phone 55 (11) 582-8737; Fax 55 (11) 533-2469; Code JJ; Year Founded 1996. When the Brazilian government grants **Brazil Central (Linha Aerea Regional, S.A.)** the rights of a trunk carrier, the newly formed Brazilian airline holding company TAM Group, parent of **TAM (Transportes Aereos Regionais, S.A.)** renames its subsidiary during December 1996. TAM founder Rolim A. Amaro is chairman, with Armando L. Filho as managing director. Scheduled Fokker 100 passenger revenue flights commence in December, linking São Paulo with four other destinations under the marketing name TAM Express.

Passenger boardings during the 12 months inch up 1.9% to 409,995, while cargo moves ahead by 7.7% to 1.6 million FTKs.

The company expands its route network in early 1997 by four additional domestic locations. TAM Group and **American Airlines** sign a major code-sharing agreement in May; the document covers dual-designator services, which will begin later between 41 Brazilian cities and 25 communities in the U.S. and Canada, as well as the linkage of frequent flyer programs.

A previously announced order for five A330-223s for TAM-Meridionais is confirmed by its parent during October.

Plans to lease aircraft and begin daily roundtrip services from São Paulo to Miami in November are postponed for a year. In the meantime, **American Airlines** will operate the route as part of its dual-designator arrangement with TAM.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Enplanements for the year reach 674,226, while 2.6 million FTKs are also operated. Revenues of 530 million reais are generated, with a net gain of 31.9 million reais (\$38 million).

Flights continue apace in 1998. Beginning in February, TAM places its code on **American Airlines** services from São Paulo and Rio de Janeiro to Miami, New York (JFK), and Dallas (DFW). Plans are announced for the initiation of nonstop dual-designator TAM services to those U.S. gateways, beginning in November.

American Airlines places its "AA" code on TAM-Meridionais services on July 16 from São Paulo and Porto Alegre. The code-sharing service is expanded by the two companies on August 12 as the American major begins code-sharing on the carrier's flights from São Paulo to Brasília, Curitiba, and Rio de Janeiro.

TAM-Meridionais becomes the first airline in Latin America to take delivery of a long-range Next Generation Airbus when it receives its first two A330-223s in a November 23 twin delivery. After it has conducted workup flights, it enters service in early December over a direct return route from São Paulo to Miami. The flights are the first for the company outside of South America.

The third A330-323 arrives on December 22. On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Passenger boardings skyrocket 274.6% to 2.52 million, while cargo traffic accelerates 136.4% to 6.21 million FTKs.

During January 1999, it is announced that discussions are underway with **Air France** aimed at the formulation of a strategic alliance.

On February 3, **American Airlines** places its code on the two daily return flights from Miami to São Paulo made by the A330-223 of TAM-Meridionais, the long haul subsidiary of **TAM (Transportes Aereos Regionais, S.A.)**.

TAM-Meridionais successfully completes its strategic discussions with **Air France** on February 15, at which point a major marketing agreement is announced. Under its terms, the two international airlines will link their frequent flyer programs, coordinate scheduling and marketing, and code-share on routes between Brazil and France.

The dual-designator pact between **TAM (Transportes Aereos Regionais, S.A.)**, its long-haul subsidiary Tam-Meridionais, and **American Airlines** is further expanded on May 6. AA begins to place its code on TAM flights from São Paulo to Florianopolis, Fortaleza, and Recife. TAM is allowed to place its "JJ" code on AA domestic services.

Dual-designator flights with **Air France** commence on June 10 between São Paulo and Paris (CDG) four times a week; the French line places its code on the services, which are operated by TAM-Meridionais' A330-223s. TAM is able to place its designator aboard the French major's existing B-777-228 roundtrips.

It is announced on April 27 that TAM-Meridionais is interested in taking over the long-haul international routes of **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** to Europe and North America. The pioneer will be forced to suspend them on May 15 when its last four MD-11s are returned to their lessors.

During June, special "Voo Presidencial" inscriptions are placed on the engine nacelles of an A330-223, along with yellow and green logos, to designate the VIP nature of the aircraft that transports Brazil's president on a state visit to Paris.

The carrier's fifth A330-223 enters service on November 13. On November 24, TAM is designated by the Brazilian authority International Air Navigation Studies Committee (CERNAI) to receive 43 of the 63 international route allocations it had requested, including some that will replace services previously operated by its fiscally challenged local rival. The first of these, which will be flown by the TAM parent itself, covers

the São Paulo to Buenos Aires air bridge route. TAM will offer five-times-a-day roundtrips in that market beginning on March 1. At the same time, CEO Rolim Adolfo Amaro announces that TAM has received CER-NAI certification for the initiation of twice-daily roundtrips, also on March 1, over the former VASP routes from Rio de Janeiro and São Paulo to Montevideo. All of these routes will be operated with A320s.

In addition to these local and regional opportunities, TAM is also designated to replace the long-haul international flights previously operated by **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. A code-sharing agreement is signed with **Air France** and, on November 29, it is revealed that **TAM-Meridionais (Transportes Aereos Meridionais, S.A.)** will bring its total of U.S. roundtrips to 28 on May 1 when it adds 14 weekly roundtrips from Brasilia to Miami (7 flown via Manus), in competition with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**. It is hoped that these flights will attract new U.S. tourist traffic to the Amazon region.

The TAM long-haul subsidiary will also add seven weekly return flights on June 1 to both Frankfurt and Madrid and one to Paris (CDG). These flights will be operated by A330-223s in code-share with **Deutsche Lufthansa, A.G., Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, and **Air France**, respectively.

TAMAIR (PTY.), LTD.: Australia (1992–1998). Tamair is established at Tamworth Airport, New South Wales, in 1992 as a division of **New England Airways (Pty.), Ltd.** Paul Brederick is named managing director and scheduled passenger and cargo third-level flights are inaugurated to Sydney with 6 Cessna 310s and 3 Piper PA-31-350 Navajo Chieftains.

The Chieftains are replaced in 1993–1994 by 3 Fairchild Metro IIIs and these help enplanements to grow to 36,000 during the latter year. Orders remain outstanding for a fourth Metroliner.

Customer bookings accelerate 16.6% in 1995 to 42,000.

Airline employment stands at nine in 1996 as the Metro 23 enters service. In November, a Metro III is painted as a flying billboard to promote Tamworth's January 19–28 country music festival. The color scheme has been designed by three local art students.

Enplanements in these 12 months drop 5% to 40,000.

Destinations visited in 1997 include Glen Innes, Inverell, Sale, Sydney, and Tamworth. Customer bookings increase 24% to 52,916.

Despite this positive traffic picture, Tamair ceases trading in July 1998. Its assets are sought by **Impulse Airlines (Pty.), Ltd.**

TAME (TRANSPORTES AEREOS MILITARES ECUATORIANOS): Ecuador (1962–1970). With presidential backing and under the leadership of Maj. Jose Maria Montesinos, a special air transport division is established within the Ecuadorian Air Force (Fuerza Aerea Ecuatoriana) on December 17, 1962. Its purpose is to supplement existing civil airlines and to make certain that, in light of a deteriorating financial and managerial situation within **CEA (Compania Ecuatoriana de Aviacion, S.A.)**, better known as **Ecuatoriana Airlines, S.A.**, domestic civil operations continue. With two military C-47s that have not been reconfigured, TAME begins flying the Guayaquil–Quito trunk route as well as services to smaller cities.

Monthly flights to Baltra in the Galapagos Islands begin in 1963 at which point the route network also includes stops at Tukan, Iberia, Quito, Latacunga, Ambato Riobamba, and Guayaquil. On January 9, 1964, a new management team is installed, which quickly negotiates TAME's transformation from a military squadron into a civil airline. As the year continues, additional local destinations are added: Esmeraldas, Bahia, Manta, Portoviejo, Cuenca, Machala, Macara, and Loja.

Additional Douglas transports are provided to handle the increased workload and in early 1967, a DC-6B is purchased to fly the Galapagos run, which monthly service it begins in April. In 1968, and in cooperation with Metropolitan Touring of Quito, the Galapagos frequency becomes daily.

The use of military airfields as airline bases is discontinued in the fall of 1969 when operations are transferred to Quito and Guayaquil.

On September 6, 2 DC-3s with a combined 50 customers aboard en route from Quito to Esmeraldas, are hijacked by upwards of a 12 antigovernment rebels. Both aircraft land for refueling at Tumaco, Colombia, where one DC-3 copilot is killed and another wounded. A number of hostages are released, but the remainder, together with the terrorists, band together on one Douglas, which proceeds to Havana.

On January 19, 1970, TAME is reorganized into a mixed-stock company and although remaining under Air Force administration, it is allowed to retain its acronym, the name is legally changed to **Transportes Aereos Nacionales Ecuatorianos, S.A.**

TAME (TRANSPORTES AEREOS NACIONALES ECUATORIANOS, S.A.): Avenue Amazonas 13-54, P.O. Box 8736, Sucursal Almagro, Quito, Ecuador; Phone 593 (2) 509 375; Fax 593 (2) 509 594; <http://www.tame.com.ec>; Code EQ; Year Founded 1970. The military-sponsored **TAME (Transportes Aereos Militares Ecuatorianos)** is reorganized at Quito into a mixed-stock company on January 19, 1970. Although remaining under Air Force administration, it is allowed to retain its acronym and is renamed. Later in the year, orders are placed for two Hawker Siddeley HS 748s with which to supplement the fleet, which still consists of Douglas DC-3s and a DC-6B.

A DC-3 crashes at Cerro de Hojas, Ecuador, on September 12, 1971; there is no information on casualties.

The HS 748s enter service over the domestic routes in September 1972, with the DC-6B employed as backup. All of the DC-3s are withdrawn to lesser routes and cargo flights. When **CEA (Compania Ecuatoriana de Aviacion, S.A.)**, better known as **Ecuatoriana Airlines, S.A.**, suspends operations on April 16, 1974; it is nationalized on July 31. Shareholding is assigned to TAME on behalf of the government and the military carrier's CEO General Carlos Banderas becomes president.

Although the reconstituted airline is allowed to operate under its previous identity as the nation's long-haul carrier, its fleet of four Lockheed L-188 Electras is passed to TAME for domestic flights. One is placed in service with the HS 748s on the domestic network on August 10 and another is assigned to the Galapagos run on October 25.

Destinations visited in 1975 include Tulcan, Manta, Portoviejo, Quito, Cuenca, Machala, Guayaquil, and Macara.

An HS 748-2A with 6 crew and 36 passengers crashes into a mountain near Loja on January 20, 1976 (34 dead).

A de Havilland DHC-6-300 Twin Otter joins the fleet and, by 1978 the company's employee population has reached 250. A second Twin Otter is added in 1979, during which year the BAC 1-11-409 *El Izalco* is sold back to British Aerospace.

In 1980, a new Boeing 727-2T3A is delivered; the carrier's first jetliner is christened *Cotopaxi* and is placed on the Guayaquil–Quito trunk route.

The DHC-6-300 is lost in Ecuador on September 2; there is no other information on the accident.

A B-727-134 and a B-727-17 join the fleet in 1981, by which year the airline boasts stops at a 12 domestic destinations.

While flying in formation with a Beech Super King Air 200 on May 22, a DHC-6-300 with 3 crew and 15 passengers, joins it in crashing into a mountain near Zumba, Ecuador; there are no survivors from either aircraft. Enplanements total 519,574.

Bookings grow to 668,763 in 1982 as airline employees total 400 and a B-737-2V2 is purchased.

While on final approach to Cuenca on a service begun at Quito on July 11, 1983, the B-737-2V2 with 8 crew and 110 passengers crashes into a hill 1.5 km. from the runway in rough terrain; there are no survivors.

During the 1980s, TAME becomes the nation's primary domestic operator; President Gen. Maco Chavez Duque's airline provides regularly scheduled services to 17 locations.

En route from Loja on November 20, 1984, a DHC-6-300 with 2 crew and 12 passengers crashes into a hill; there are no survivors.

A new Fokker F.28-4000 Fellowship is received in 1985. In an unusual exchange with **VARIG Brazilian Airlines (Viacao Aerea**

Rio-Grandense, S.A.) in 1986, TAME turns over a pair of Electras; VARIG, in turn, overhauls and repaints the two remaining in TAME service.

New destinations added during 1987–1988 include Lago Agrio, Tarapoa, Macas, and Coca. There are losses.

As the result of an electrical failure, an HS 748-2A with 38 passengers overruns the runway at Lago Agrio, Ecuador, on June 23, 1987, after a service from Quito; although the aircraft is damaged beyond repair, there are no fatalities.

Just after takeoff from Lago Agrio on a ferry flight to Quito with an inoperative No. 2 engine on July 1, 1988, an L-188A with six crew and a passenger loses No. 1 engine; with two engines out on the same wing, the plane veers left and crashes. There are no survivors.

In 1989, the fleet includes 2 British Aerospace BAe (HS) 748-2As, 1 B-727-17, 2 B-727-134s, 1 B-727-2T3A, 1 Fokker F-28-4000 Fellowship, and 1 Lockheed L-188C.

The left main landing gear of an L-188C with 7 crew and 92 passengers remains down after the aircraft takes off from Quito on September 4 on a service to Mariscal Sucre. An emergency landing is completed at Taura AFB and although the aircraft is damaged beyond repair, there are no fatalities.

Airline employment in 1990 stands at 650 as the Lockheed is withdrawn. In 1991, a B-727-230 is acquired under lease from **Air France**, followed by a B-727-230A in 1992. The company now begins to feed the French flag carrier's flights in Caracas, by connecting to them from Quito via Bogota. Also during the year, a Frontier Integration Agreement allows flights to be operated from both Tulcan and Esmeraldas to Cali, Colombia, four times a week. Also during the year, TAME flies within the Frontier Integration Agreement, with four frequencies weekly to Cali, Colombia, from Tulcan and Esmeraldas.

In 1993, President Gen. Duque and Managing Director Armando Nuney remove the Twin Otters. Destinations visited from Quito now include Ambato, Bahia, Esmeraldas, Galapagos Islands, Guayaquil, Loja, Macara, Machala, Manta, Oriente, Portoviejo Cuenca, Salinas, and Tulcan. Operations continue apace in 1994.

The fleet in 1995 includes 1 each B-727-12, B-727-134, B-727-230, B-727-2T3A, and Fokker F-28-4000 Fellowship, 2 B-727-230As, and 2 British Aerospace BAe (HS) 748-2As.

One more B-727-134 is acquired in 1996 and regular service is launched on April 30 to Santiago de Chile, Panama City, and Havana. A code-sharing agreement is entered into with **EVA Air, Ltd.** in 1997 covering connecting flights from Los Angeles to the Orient.

Flight 422, the B-727-230 leased from **Air France**, with 10 crew and 43 passengers, crashes into 3,100-m. high Cerro el Cable Mountain just after takeoff from Bogota to Quito on April 20, 1998; there are no survivors.

During the first quarter of 1999, a new homepage is opened on the Internet's World Wide Web. Later in the year, Brig. Gen. William Birkett is president.

The government of Ecuador announces on July 21, 2000, that it will privatize its national carrier in 2001. The search for a strategic partner now begins, while a new Civil Aviation Act works its way through Congress. The fleet now includes 8 B-727s, 1 each Dash-17 and Dash-2T3A, 2 Dash-134s, and 4 Dash-230As, one of which has been hush-kitted.

TAMGASS AVIATION. See ALASKA SOUTHCOAST AIRWAYS

TAMPA (TRANSPORTES AEREOS MERCANTILES PANAMERICANOS TAMPA S.A. CARGO): Carrera 76, No. 34A-61, Alaya Herrera Airport, Medellin, Colombia; Phone 57 (4) 250-2939; Fax 54 (4) 250-5639; Code QT; Year Founded 1974. Oscar Posada and American expatriate and pioneer Latin American aviation figure Luis H. Coulson form TAMPA at Medellin in 1974. After obtaining two Douglas DC-6A freighters, domestic all-cargo services are inaugurated. In 1975, the new all-cargo carrier contracts with **SAM (Sociedad Aeronautica de Medellin, S.A.)** to operate freight flights from Medellin and Bogota to Miami. A third DC-6A is acquired and the cargo to Florida consists

exclusively of cut flowers. TAMPA, meanwhile, becomes the first airline in Colombia dedicated solely to air freight.

Late in the decade, services are also started to Miami from Bogota as the freight operator begins its climb to prominence as the seventh largest all-cargo carrier in the world.

In 1980, the Douglas transports are replaced by a pair of chartered Boeing 707-373Cs; services remain the same, though frequencies are increased to an almost-daily basis. The first Boeing is returned to its lessor in 1981. The second, with three crew, fails its initial climb away from Medellin on December 14, 1983, and crashes into power lines and buildings; all aboard the freighter are killed, along with 22 persons on the ground.

In 1984–1988, four B-707-320Cs are acquired and routes are opened to Miami from Barranquilla, Cali, and Pereira. The company reports that, during the first 3 quarters of the latter year, a total of 105.97 million FTKs are operated.

Airline employment is increased by a spectacular 185.4% in 1989 to 371 and the fleet now includes 4 B-707-320Cs.

Traffic figures are only made available for the year's first half, but show a valuable boost in cargo carried, up 36.4%, to 63.71 million FTKs.

On September 11, the first European service is inaugurated, Bogota–Miami–Ostend, employing a pair of leased Douglas DC-8-63Fs; the routes, which will be suspended in the face of recession, are the first operated across the Atlantic by any Latin American cargo airline. Cut flowers are still flown to Miami, but now account for only 87% of the company's tonnage.

Statistics made available in 1990 show that, through September, freight traffic rises 4.9% to 153.86 million FTKs. A fifth Stratofreighter, a B-707-324C, is delivered at year's end under charter from Comtran International.

In 1991, the fleet comprises 2 B-707-321Cs, 3 leased B-707-324Cs, and 1 leased Douglas DC-8-71F. Employment at President Jorge Coulson Rodriguez's carrier stands at 371. When U.S. Customs agents at Miami find 3,900 pounds of cocaine in an inbound shipment of clothing aboard a TAMPA Stratofreighter, the company is hit with a \$1,000 per ounce (\$64 million) fine. An agreement is reached with the U.S. government under which most of the fine is mitigated as the airline spends almost \$2 million to boost its security.

Numbers are again offered only through September, but this time show cargo down 1.6% to 151.36 million FTKs.

Airline employment stands at 371 in 1992 as the fleet is altered slightly. Gone is one B-707-324C, replaced by a B-707-338C first operated by **Qantas Airways (Pty.), Ltd.** A new route is operated to Panama and Caracas from New York.

Figures are publicized through May and note freight traffic as being up 16.9% to 101.34 million FTKs. Revenues total \$68.8 million and with expenses down, an operating profit of \$1.3 million is generated.

At the end of the month, a temporary contract is signed with the new Miami-based U.S. cargo concern **Fine Air**; it will undertake TAMPA's weekly roundtrip service from south Florida to Ostend, Belgium, via London (STN) employing a Douglas DC-8-55FB.

In 1993, the workforce is increased to 600 and the fleet is altered to comprise the original 2 owned B-707-321Cs, plus 2 leased B-707-324Cs, 1 leased B-707-338C, and 2 leased DC-8-71Fs. Scheduled cargo flights are undertaken from Miami to Barranquilla, Bogota, Cali, Medellin, Ostend, and Pereira, from Bogota to Miami and Ostend, and from New York to Caracas and Panama City.

Through August, cargo is up 5.6% to 162.7 million FTKs. Unhappily, revenues are only \$57.1 million. In the early fall, the last Stratofreighter service is operated to Europe. Although the B-707Fs are withdrawn, the all-cargo route to Ostend and London (STN) is maintained with a DC-10-30CF leased from **World Airways**.

Airline employment is increased by 8.3% in 1994 to 650. Cut flowers are still flown to Miami; however, their tonnage accounts for only 65% of the business conducted by the largest Latin American all-cargo airline operating out of the south Florida airport.

Early in the year, the Douglas wide-body is returned to **World Airways** and services to Europe end. During the year's first 9 months, freight traffic is up by 15.4% to 187.51 million FTKs.

Just after takeoff from São Paulo on an October 9 all-cargo service to Santa Cruz, the No. 3 engine of a B-707-324C with five crew must be shut down. The landing gear fails as the aircraft attempts an emergency landing back at its point of origin and the Stratofreighter slides to a stop. Although the Boeing is damaged beyond repair, there are no fatalities.

There is no change in the workforce during **1995**. Cargo dips 4.5% through August to 176.87 FTKs.

A 40% stake is acquired by **Martinair Holland, N.V.** in November **1996**. President/CEO Frederik Jacobsen's fleet transports a total of 112.6 million tons of goods and earns revenues of \$69.5 million.

The leased fleet in **1997** includes 2 DC-8-71Fs and 1 each B-707-321C, B-707-324B, and B-707-338C. The former was first operated as the *Clipper Courser* by **Pan American World Airways (1)**.

The company moves into a 75,000-sq.-ft. leased warehouse at Miami (MIA) in December. Approximately one-third of the facility is refrigerated for the protection of fresh flowers and other perishable cargo.

Cargo traffic accelerates 14.6% to 226.94 million FTKs, which translates into 117.87 million tons of freight hauled. Income accelerates to \$77.51 million.

Flights continue in **1998**, with approximately 30 all-cargo flights made each week from Miami to Bogota and other cities in Colombia. One more DC-8-71F joins the fleet and a fourth is ordered.

When **Martinair Holland, N.V.** begins to implement a new cargo strategy in Latin America during the third quarter, TAMPA's activities become an integral part. Acquiring a DC-10-30CF on lease, the Colombian airline initiates five-times-a-week all-cargo flights in late November linking Miami (MIA) with Bogota, Medellin, and Caracas.

Freight traffic slides to 204.53 million FTKs.

By the beginning of **1999**, airline employment is reduced by 26.5% to 551.

It is noted on February 18 that this year's volume of fresh flowers into Miami, ahead of Valentine's Day, is level with the previous year's. At the peak of the just-ended season, volume is approximately 17,000 boxes per day. For purposes of measurement, a DC-8-71F can transport 2,300 whole boxes on a flight, each box containing 300 roses. Hoping for better sales, the airline has even undertaken the expense of renting 6 refrigerated 40-ft. trucks to supplement its Miami warehouse capacity. They are not used.

On December 6, company officials indicate that they are planning to soon add a Venezuela stop on the carrier's Colombia-Miami all-cargo run.

Freight traffic for the year totals 234.75 million FTKs. Revenues grow to \$80.9 million.

The workforce at the beginning of **2000** totals 551 and 3 DC-8-71Fs continue to be operated by President/CEO Frederick Jacobsen's concern. It is announced on April 27 that the company will soon be adding new routes into Mexico and Brazil, as well as short-term service to Bolivia and Panama.

TAMSA (TRANSPORTES AEREOS MEXICANOS, S.A. de C.V.): Mexico (1943-1960). *Compania Aeronautica Francisco Sarabia, S.A. de C.V.*, which had ceased trading in 1942, is purchased for 2.2 million pesos from Sarabia's widow, Agripina Diaz, and her partner, Efegeo Cabrera, by a group of Mexican investors in **1943**; the carrier is renamed TAMSA and registered on August 16, **1944**. On August 22, the Ford Tri-Motor 4-AT-6 is purchased from a New York source.

The haulage of chicle, a principal interest of the previous operation, is now halted in favor of the inauguration in **1945** of freight flights to Matamoros and other Yucatan towns. The fleet in **1946** includes Curtiss Robins, Avro Ansons, a Ford Tri-Motor, and a Boeing 40B; orders are placed for three Douglas DC-3s.

The 4-AT-6 is sold to **NAMSA (Negociacion Aerea Mexicana, S.A. de C.V.)** on February 10, **1947**. Three stops, Chetumal-Cozumel-Merida, forming a triangle, plus a frequency to Belize City in British Hon-

duras, comprise the company's passenger service by March, although a mostly cargo route is also flown from the Merida base to Mexico City.

Following the delivery of the Douglas transports later in the year and in **1948**, the fleet is standardized on the three modern aircraft.

Flights continue without incident in **1949-1952**. While landing at Chablekal, Mexico, on September 14, **1953**, a DC-3 freighter with two crew strikes a steel tower in fog, tearing off the wing and forcing the plane to crash in nearby woods (one dead).

Service is maintained without significant changes into the middle **1950s**, at which point a converted Consolidated B-24 Liberator transport is acquired. The ex-military aircraft, employed in a combi role, crashes at Merida on April 14, **1957**, killing all aboard, including popular singer Pedro Infante. Just as the public uproar over the Infante tragedy is dying down, TAMSA becomes involved in a long and bitter strike by its pilots.

The labor dispute, coming on top of the adverse publicity occasioned by Infante's death, effectively kills the airline, which is unable to recover financially from a resulting loss of traffic. What remains of the carrier's assets (primarily its route permits) are purchased by **Mexicana Airlines, S.A. de C.V.** in the summer of **1960**.

TAMU (TRANSPORTE AEREO MILITAR URUGUAYANO): Colonia 959, Montevideo, Uruguay; Phone 598 (2) 901 938; Fax 598 (2) 920 945; Year Founded 1974. The state airline **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)** is reorganized in **1974**. Responsibilities for domestic services are now transferred to the air transport arm of the Uruguayan air force, which is designated TAMU and also flies special charters for the government and military.

By **1985**, daily or near-daily nonstop service is linking Montevideo with the cities of Artigas, Melo, Paysandu, Rivera, and Salto. The fleet includes 2 Fokker F-27-100s, 2 Fairchild Hiller FH-227Ds, 5 Embraer EMB-110B/Cs, 2 CASA C-212 Aviocars, 1 Douglas DC-3, and 1 Beech B80 Queen Air.

Although the "mission" does not change for the air force officers maintaining the TAMU service, the fleet is altered slightly by **1993-1994** as one Bandeirante is withdrawn in favor of another Aviocar.

Flights continue in **1995-1999** without change.

TAN (TRANSPORTES AEREOS DE NIASSA). See COMAG

TAN (TRANSPORTES AEREOS NACIONAL, S.A.) (1): Brazil (1946-1956). Two pilots, Manuel J. Antunes and Hilton Machado, form Nacional at Belo Horizonte in December **1946**. Claudio Hoelck is named traffic manager, but he will come to play a more important role. Brazilian government operating permits are received on February 26, **1947** and the remainder of the year is spent in organization and fleet assemblage. With two Douglas DC-3s, the carrier inaugurates flights to Rio de Janeiro, Salvador, and Cuiaba in January **1948**. Another DC-3 is acquired in **1949** and São Paulo becomes a scheduled destination.

Early in **1950**, service is started to various inland destinations in the state of Bahia, including the northern city of Petrolina. Additionally, a frequency is launched via Januaria to Salvador. Antunes, Machado, and Hoelck now determine that the company should expand, not on its own, but through the creation of a consortium of airlines assembled with similar new entrants.

The first to join with TAN in late spring is **VIABRAS (Viacao Aerea Brasil, S.A.)**. It is followed in August by the large Belo Horizonte-based air taxi operator **OMTA (Organizacao Mineira de Transportes Aereos, S.A.)**. Providing services throughout Mato Grosso, **Central Aerea, S.A.** joins the consortium in October.

Following a year of integration in **1951**, Nacional purchases **VASD (Viacao Aerea Santos Dumont, S.A.)** in April **1952**, gaining the latter's coastal route to Recife.

A DC-3 with 4 crew and 20 passengers is the victim of an in-flight explosion over Palmeira de Goias, Brazil, on August 12; there are no survivors.

The consortium is officially incorporated as the limited company **Consorcio Nacional de Transportes Aereos, S.A.** on November 20, 1953.

Meanwhile, the DC-3 fleet continues to grow, reaching a total of 20 early in 1954.

A navigational error takes a DC-3 with 3 crew and 16 passengers directly into Cipo Mountain, Brazil, on May 31; there are no survivors.

By the end of the year, 8 more Douglas transports have been acquired and the route network stretches for 20,000 unduplicated miles between 74 Brazilian destinations.

The all-cargo airline **Itau (Companhia Itau de Transportes Aereos, S.A.)** is purchased and merged in October 1955, along with its surviving fleet of 5 Curtiss C-46 Commandos. Early in 1956, the Bahia State third-level carrier **TAS (Transportes Aereos Salvador, S.A.)** is acquired. Although its equipment prevents Nacional from entertaining the possibilities of international service, its growth has attracted considerable attention in the national airline community.

As a result, Linneu Gomes, CEO of **REAL, S.A.**, finds Nacional a worthy acquisition, purchasing 85% controlling interest on August 2. Nacional is allowed to continue operations as an autonomous carrier during a two-year integration period, during which time its places into service six new Convair CV-440s.

TAN (TRANSPORTES AEREOS NACIONALES, S.A.) (2): Honduras (1947–1991). Americans Cornell N. ("C. N.") Shelton and R. C. Forsblade join local rancher Miguel Brooks in setting up TAN at Tegucigalpa in August 1947; initial capitalization from the latter is \$159,000. After acquiring a converted Douglas B-18 bomber and two Curtiss C-46s, the carrier begins twice-weekly charters to Miami and Cuba on behalf of the Inter-American Affairs Institute.

A three-year foreign air carrier permit is received from the U.S. CAB on June 12, 1950, allowing the ad hoc service to be scheduled regularly for both freight and passengers. Two more C-46s enter service.

During 1951–1953, San Pedro Sula joins Tegucigalpa as an in-country terminus and direct flights are begun to Managua, Belize City, and Guatemala City. Using a loophole in Ecuadorian law to circumvent the normal understanding of Fifth Freedom rights, TAN, in June 1954, begins simply flying over Honduras to Managua before flying on to Lima via Guayaquil.

By March 1956, the carrier's Miami–South America traffic has increased 10-fold since 1953.

As part of the conditions for renewing TAN's Miami concession in 1957, the CAB requires the carrier to terminate at least one leg of its service in Honduras. There is also much discussion concerning the actual ownership of the airline, with considerable suspicion that Miguel Brooks is simply serving as a front for Shelton.

As a result of the U.S. government ruling, C. N. Shelton now not only avoids stopping in Honduras by forming partnerships with the new Peruvian carrier **APSA (Aerolineas Peruanas, S.A.)** and the fresh Ecuadorian entrant **CEA (Compania Ecuatoriana de Aviacion, S.A.)**, but convinces them to join him as a consortium in discount competition against American companies.

By June 17 when APSA starts flying to Santiago, Chile, Shelton's group is effectively able to offer through-service from the tip of South America all the way up to Florida. Services and frequencies are expanded in 1958–1959.

TAN-APSA interchange service ceases on September 1, 1960 when APSA begins flying to Miami under authority of its own CAB permit. Still, TAN prospers, introducing DC-6As in 1961. The company's interest in **CEA (Compania Ecuatoriana de Aviacion, S.A.)** is sold in 1963.

When Shelton dies in March 1965, the carrier passes to his daughter, Mrs. Patricia S. Spohrer of Miami, who holds a dual U.S./Honduran citizenship. The cofounder's story will be told about 15 years later by Philip Schleit in his *Shelton's Barefoot Airlines* (Annapolis, Md.: Fishergate Publishing, 1982).

Operations continue apace in 1966 and on February 20, 1967, a DC-6B with 48 aboard crashes on the Tegucigalpa Airport runway (4 dead). The great north-south consortium fades during the late 1960s.

On January 21, 1970, TAN purchases the last 38% shareholding of **Pan American World Airways (1)** in **SAHSA (Servicio Aereo de Honduras, S.A.)**. The shareholding leads to a close relationship between the nation's two major airlines.

At the beginning of 1971, two Lockheed L-188A Electras, converted to L-188AF freighter status, are purchased, one had originally been operated by **Braniff International Airways** and the other by **Eastern Air Lines**. Services continue in 1972.

A DC-6A with three crew on approach to the airport at Tegucigalpa on January 27, 1973, crashes 10 mi. N of the runway and bursts into flames; there are no survivors.

The first jetliner, a Boeing 737-2A3 purchased from **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)**, is delivered in May 1974. The Honduran city of La Ceiba now adds a third point to the domestic route network as frequencies are maintained in 1975–1977.

During 1978, President General O. Lopez Arellano's 400-employee company owns a fleet comprising 1 B-737-2A3, 2 L-188AFs, and 1 DC-6B. In April 1980, a legitimate Fifth Freedom CAB concession is awarded for an all-cargo route to and through Belize City. This is flown by a Lockheed L-188, leased from **SAHSA (Servicio Aereo de Honduras, S.A.)**. There are no significant changes in 1981–1984.

By 1985, daily flights are offered between Tegucigalpa and San Pedro Sula and Miami by both the company's B-737-2A3 and the **SAHSA (Servicio Aereo de Honduras, S.A.)** B-727-81 under contract. In 1988, the company reports that during the first 6 months it has transported a total of 74,409 passengers and 599,000 FTKs.

In 1989, control is purchased by TAN; however, the two airlines integrate under the single title **TAN-SAHSA Airlines, S.A.** Leonel Lopez is named general manager and the B-727-81 is sold.

A B-727-224 is acquired, but while preparing to land at Tegucigalpa, Honduras, in high winds and low clouds on October 21, the trijet, with 8 crew and 138 passengers flies into a mountain 15 km. S of its destination and explodes (127 dead).

While on initial approach to Tegucigalpa on a March 21, 1990, all-cargo service from San Pedro Sula, an L-188CF with three crew in poor visibility, crashes into the southern slope of Cerro Hula at 2,500 ft.; there are no survivors.

Two B-737-4Y0s, leased from GPA Group, are delivered during the summer.

A drop in traffic forces the airline, in May 1991, to return the two B-737-4Y0s to GPA Group and put a hold on a third requested for delivery later in the year. At this point, an L-188AF is chartered from SAHSA. On November 1, the carriers are integrated under the **SAHSA (Servicio Aereo de Honduras, S.A.)** name. The L-188AF that TAN had leased the previous year is withdrawn from service in mid-1992.

TAN (TRANSPORTES AEREOS NEUQUEN, S.A.): Diagonal 25 de Mayo 180, Neuquen, 8300, Argentina; Phone 54 (99) 488 927; Fax 54 (99) 466 418; <http://www.tan.com.ar>; Code TB; Year Founded 1972. In order to replace the tax-supported provincial government air ambulance, mail, cargo, and passenger services provided in the region since 1960, TAN is created at Neuquen in the southwestern part of Argentina on May 26, 1972. Equipped with 3 Piper PA-31-310 Navajos, the third-level commuter undertakes scheduled flights linking Neuquen with Chapelco, Caviahue, and Chos Malal. The Pipers are replaced by 3 Rockwell Aero Commander 690s and services are maintained during the remainder of the decade and into the 1980s.

By 1983, the carrier has added additional destinations, including Zapala, and increased its fleet through the acquisition of two Swearingen Metro IIs. Able to survive the ups and downs of the turbulent economy of the late 1980s, President Cesar Jose Gazzera's fleet in 1989 consists of 2 Rockwell Commander 690Bs, 1 SAAB 340A, and 2 Metro IIIs.

There is a significant enhancement in service during the early 1990s as the company begins to replace the frequencies suspended by LADE (**Lineas Aereas del Estado**). In 1992, a third Metro III is acquired and the route network stretches up from Bariloche and Esquel via Mendoza to Cordoba and to the coastal cities of Bahia Blanca and Comodoro Rivadavia.

Cesar Jose Gazzera remains president in 1993 and through the first 6 months, enplanements total 44,221. Passenger boardings decline in 1994, falling by 12.6% through July to 39,273.

The workforce stands at 115 in 1995. Destinations visited include Buenos Aires, Bahia Blanca, Chos Malal, Comodoro Rivadavia, Cordoba, Cutral Co, Malarque, Mar del Plato, Medellin, Puerto Deseado, Puerto Monti, Rincon de los Sauces, Rio Gallegos, Rio Grande, San Carlos de Bariloche, San Martin de Los Andes, Temuco, and Trelew.

Traffic figures are only reported through the first quarter and show enplanements of 23,452 for the period.

The fleet in 1996-1999 includes 2 owned Rockwell Commander 690Bs and 3 Swearingen SA-227 Metro IIIs, plus 2 leased SAAB 340As. Destinations visited include Bahia Blanca, Balmaceda, Chapelco, Chos Malal, Comodoro Rivadavia, Concepcion, Cordoba, Mendoza, Puerto Montt, Rincon de los Sauces, Temuco, and Trelew.

During these years, majority control is acquired by **VASP Brazilian Airlines (Viaceo Aerea Sao Paulo, S.A.)**.

Having fallen on hard times financially, VASP is forced to sell its TAN shares in October 2000.

TAN-SAHSA AIRLINES, S.A. See SAHSA (**SERVICIO AEREO DE HONDURAS, S.A.**); **TAN (TRANSPORTES AEREOS NACIONALES, S.A.)**

TANA (TRANSPORTES AEREOS NACIONALES, S.A.): Colombia (1971-1979). TANA is formed at Bogota as **Taxi Aereo Nacional, S.A.** by Inversiones Alfredo Sesana y Cia in September 1971 to offer charter services to destinations in Panama, Peru, Brazil, Venezuela, Ecuador, and Colombia. Following receipt of several Douglas DC03s and DC-4s, all-cargo services begin in early 1972.

The company is reorganized in 1974, adopts a new name and livery, and begins scheduled passenger services linking Cali with Condoto, Ipiales, Guapi, and Tumaco.

Airline employment in 1978 totals 150 and the fleet comprises 4 DC-4s, 4 DC-3s, and 1 Beech 99. In 1979, the carrier is purchased by a competitor, **TAVINA (Trans-Colombiana de Aviacion, S.A.)**.

TANANA AIR SERVICE: P.O. Box 60713, Fairbanks, Alaska 99706, United States; Phone (907) 474-0301; Fax (907) 474-9311; Code 4E; Year Founded 1972. Tanana Air Taxi of Fairbanks is certified by the State of Alaska in August 1972 to offer intrastate passenger and cargo charter services. President James P. Hagglund assembles a fleet comprising 1 Piper PA-31-350 Navajo Chieftain and 2 Piper PA-32 Cherokee Sixes and inaugurates flights to Minto Manley, Tanana, Ruby, and Galena. The company is reformed in 1974 and renamed **Alaska Central Airways**.

Operations are taken over by Harold Esmaika's Arkansas-based **Harold's Air Service** in 1976. Scheduled commuter services are now inaugurated linking the company's base with Lake Minchumina, Minto, Manley, and Tanana. Late in the decade, the company acquires an Australian-built GAF Nomad N.24A.

In 1983, the carrier is acquired by new owners and renamed Tanana Air Service; Dale Erickson becomes president.

Operations continue apace over the next 15 years. Enplanements in 1996 reach 3,914, and \$1.5 million in operating revenues are generated.

Passenger boardings decline 6.8% in 1997 to 3,649. Business dramatically improves in 1998 as customer bookings rebound and climb 29.2% to 5,000.

Passenger boardings skyrocket 357.8% in 1999 to 22,000.

A total of 10 full-time pilots are employed at the beginning of 2000 to fly the company's fleet, which now includes 1 PA-31-310 Navajo and 5

PA-32R-300 Lances. In 2000, for the first time, the salmon runs along the entire Yukon watershed collapse. By fall, subsistence salmon fishing must be shut down and Governor Tony Knowles declares an emergency. In addition to the economic loss, thousands of dogs in rural bush areas, used to haul sleds and dependent upon salmon as their food source, face starvation or liquidation. Something must be done to avert this disaster and a number of small airlines, coming off a bad year caused by rising fuel and insurance costs, are able to assist, while also enjoying renewed profits.

The key to the situation, in the eyes of many, is the transport of donated dog food and fish obtained by local governments and tribes as the result of press reports of the failed salmon returns. In late August and September, a massive food shipment is organized by Warbelow's at Fairbanks, with support from the U.S. Postal Service and other small airlines.

Because Warbelow's has made special arrangements with its competitors, the USPS, which will not be directly involved in distribution, agrees to allow the donated food to be classified as bypass mail, for which rock-bottom postage is charged. The entire \$25,000 bill will be paid by the Tanana Chiefs Conference, which also rents refrigeration to hold frozen food awaiting delivery.

Under the direction of Chief Pilot Michael Morgan, Warbelow's, which has the only bypass mail shipping permit in Fairbanks, runs the packages through its meter and with USPS assistance, farms out this mail for delivery. The airlines involved, including **Warbelow's Air Ventures, Frontier Flying Service, Arctic Circle Air Service, Belair, Larry's Flying Service, Servant Air, Tanana, Tatonduk Air Service, and Wright's Air Service**, are paid a rate per pound (between 40¢ and \$1 depending on distance), to haul the approximately 100 tons of food to villages along the Yukon, Tanana, and Koyukuk Rivers.

TANEJA AEROSPACE AND AVIATION, LTD.: 1010 Prestige Meridian-1, 29, M.G. Road, Bangalore, Karnataka, 560001, India; Phone 91 (080) 555-0944; Fax 91 (080) 555-0955; http://www.tanejaaerospace.com; Year Founded 1997. In collaboration with Partenavia, S.p.A. of Italy, Taneja is established at Bangalore in 1997 as the first private-sector aircraft manufacturing company in India. The aircraft chosen for development and sale is the six-seater P-68C. The new concern is also the authorized sales and service center in India for Cessna Aircraft Company's business aircraft, including the Citation bizjets and the Caravan.

In addition to building and sales, Taneja also engages in executive and small-group charter operations and provides medevac flights.

In 2000, the company employs 12 full-time pilots. Parenavia P-68Cs are stationed not only at Bangalore, but also at Bombay, Delhi, Madras, and Madurai.

TANS (TRANSPORTES AEREOS NACIONALES DE LA SELVA, S.A.): Ave. Arequipa 5200, Miraflores, Peru; Phone 241-8510; http://www.tans.com.pe; Year Founded 1963. TANS is established by the Peruvian Air Force on December 5, 1963 and given the mission of operating missionary routes into the remote areas of the Amazon region. These flights are operated without headline or incident over the next 35 years, employing a fleet of de Havilland Canada DHC-6 Twin Otters, Chinese-built Harbin Y-12s, Bell 212 helicopters, and large Russian Mil Mi-17s.

At the urging of Peruvian President Fujimori, TANS is encouraged to expand and on December 15, 1998, the DGAC (Peru's civilian aviation agency) grants the AF unit permission to begin scheduled services into Cuzco, as well as to Iquitos, Tarapoto, Pucallpa, and Arequipa. The nation's private carrier's complain that they are being unfairly forced to compete with a government carrier, but the president brushes their concerns aside, pointing out that the nation's airline situation demands reliable service. By March 26, 1999, a fleet of four Boeing 737-200s is on hand and flights commence to Lima. Between April and December, service is also added to Chiclayo, Piura, Juliaca, Tujillo, and Tumbes. In the wake of the collapse of **Aero Peru (Empresa de Transportes**

Aereos de Peru, S.A.), TANS is one of several domestic Peruvian airlines given new routes and responsibilities. In November, the carrier applies for permission to switch from a military to a civilian operating license and former Aero Peru Director Hector Arce becomes managing director. At the same time, alliance discussions begin with **Continental Airlines**.

TANS is recertified as a civilian airline on February 18, 2000. On April 18, it begins operating new services to Tacna, Ayacucho, and Puerto Maldonado. International flights are authorized on May 10. At this point, Cesar Follegati Noriega becomes director general and plans are made to inaugurate roundtrip service from Cuzco to New York.

The relationship with **Continental Airlines** is strengthened during the year as the two make their booking and billing systems fully compatible. On February 1, 2001, the South American Business Information service will report that the two companies will sign a full code-sharing agreement with the next couple of months.

TANSÁ (TRANSPORTES AEREOS DE NAYARIT, S.A. de C.V.): A.P. 221, Tepic, 63190, Mexico; Phone 52 (321) 33 111; Fax 52 (321) 33 117; Year Founded 1958. Alberto Velazco Garcia, who has been in the crop dusting business since 1954, elects to officially establish an air taxi and cargo charter operation in 1958. Revenue operations, which had previously been operated with single engine aircraft, are enhanced by the addition of a Douglas DC-3.

Garcia and his son, Alberto Velazco Navarro, operate flights throughout the mountainous region of the western Sierra Madre in the central part of Mexico. Passengers, supplies, building supplies, and other essential items are transported between small communities and the established towns of Puerto Vallarta, Talpa de Affende, Mascota, San Sebastian, Tepic, Santiago Ixcuintla, La Mesa, Mesa del Nayar, San Juan Peyaton North, and Santa Teresa.

A second DC-3 is acquired in 1974. One is based at Puerto Vallarta and the other at Santiago Ixcuintla. When the founder dies in 1991, the company passes to his son.

Flights continue apace through 1999. During the summer, Greg R. Wormser visits the carrier, subsequently penning its only printed profile, "Romancing the Skies," for the December issue of *Airways*.

TANZANAIR (TANZANIAN AIR SERVICES, LTD.): P.O. Box 364, Dar es Salaam, Tanzania; Phone 51-113151; Fax 51-112946; Year Founded 1969. This privately owned carrier is formed at Dar-es-Salaam in February 1969 and begins domestic and international charter flights on July 7. **Tim Air Charters, Ltd.** is acquired in 1976. During 1977-1984, the fleet grows to include 1 Cessna 414, 1 Piper PA-32 Cherokee Six, 3 Cessna 310s, and 2 Cessna 402Bs. Airline employment reaches 100 and yearly enplanements average 10,000 to 20,000.

Flights continue apace during the remainder of the decade and into the 1990s. D. J. Samaras becomes managing director and the fleet comes to comprise 1 Beech 55 Baron, 1 Beech Bonanza, 2 C-310Rs, 1 C-402B, and 2 C-406 Caravan IIs.

While on approach for a landing at Morogoro on April 24, 1996, one of the Caravan IIs crashes into a mountain; the aircraft is destroyed and the pilot is killed.

The company replaces the lost aircraft in 1997 and goes on to generate \$2 million in sales. Flights continue during the remainder of the decade. During these years, the C-402B and Beech Baron are withdrawn.

TAO (TAXI AEREO DE OAXACA, S.A. de C.V.): Mexico (1930-1943). Capt. Luis Melgosa organizes TAO at Oaxaca in 1938 and begins flying a circular route from that town to Tehuacan-Mixteca with a Stinson Detrolter; route direction is changed on alternate days.

In 1940, the company is renamed Taxi Aereo de Oaxaca and a cargo route is started to the mining areas near Juchatengo. At this point, an old Boeing Model 40 and a Buhl Air Sedan are purchased. Backed by **Pan American Airways (PAA)**, **Aeronaves de Mexico, S.A. de C.V.** takes over Melgosa's operation in 1943.

TAO (TAXI AEREO OPITA, S.A.): Colombia (1961-1974). Investors at Neiva, the provincial capital of Huila, reform TAO from a crop-spraying concern originally formed in 1957 into an air taxi during 1961 to provide small plane passenger and package charter flights within the region. A Douglas DC-3 is acquired in 1963 and a regularly scheduled route called *La Ruta Cordial del Sur* is opened from Neiva to Bogota. Two Curtiss C-46 Commandos are placed on the route during 1965.

Four years later, in 1969, the local service operator purchases a pair of previously owned Vickers Viscount 745s and begins flying to additional destinations. As the British-made turboprops enter service, the Curtiss aircraft are withdrawn.

Operations continue apace in 1970-1971. En route from San Andres to Barranquilla on July 19, 1972, a Viscount 745 is able to land safely at Cartagena after the pilot is shot by B. Suarez, a passenger and the carrier's chief stockholder. The improved route network is maintained with difficulty in 1973 against stiff competition, increasing fuel costs, and the after effects of the Viscount incident.

Already in great difficulty, the company suffers a fatal tragedy on June 8, 1974. One of the two Viscount 745s with 44 aboard crashes near Cueuta and there are no survivors. TAO now stops flying.

TAP (TRANSPORTES AEREOS DEL PACIFICO, S.A. de C.V.): Mexico (1935-1941). Mario Rivas Mercado and Joaquin Cortina Goribar found TAP at Acapulco on May 31, 1935. With 2 Travel Airs and 3 pilots, including the American "Pistol Pete" Baughan, multistop service is initiated to Oaxaca.

During the late 1930s, pilot Julio Zinzer obtains the carrier and upgrades its Stinson fleet by adding a Sikorsky S-38. In 1941, TAP is sold to **Aeronaves de Mexico, S.A. de C.V.**, at that time backed by **Pan American Airways (PAA)**.

TAP-AIR PORTUGAL (TRANSPORTES AEREOS PORTUGUESES, S.A.): Aeroporto de Lisboa, Apartado 50194, Lisbon Codex, 1704, Portugal; Phone 351 (1) 841-5000; Fax 351 (1) 841-5095; http://www.tap-airportugal.pt; Code TP; Year Founded 1944. By a September 1944 decree, the Portuguese government establishes a Secretariate for Civil Aviation, the purpose of which is to plan and launch regular commercial air operations, primarily to strengthen connections with the nation's colonies. On March 14, 1945, the new Secretariate creates a special division, Transportes Aereos Portugueses (TAP), to physically fulfill the government mission.

Simultaneously, the independent carrier **Companhia de Transportes Aereos, S.A. (CTA)** inaugurates scheduled service on a route Lisbon-Oporto. Eight twin-engine Douglas DC-3s and four four-engine DC-4s are ordered and, during the summer and fall, proving flights are undertaken in Europe and to the Azores and Africa. Meanwhile, pilots and maintenance personnel are recruited from the Portuguese Army and Navy and 11 pilots are sent to Britain for training by **British Overseas Airways Corporation (BOAC)**.

All is placed in readiness and five DC-3s are available; on September 19, 1946, TAP becomes a regularly scheduled public carrier as it inaugurates twice-weekly flights Lisbon-Madrid in cooperation with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. On December 31, the so-called "Imperial Line" is opened as the Douglas transports begin 11-stage Lisbon-Lourenco Marquis service, linking the parent country with its African colonies, Angola and Mozambique. This is the longest then-current Dakota route, covering 24,540 km.

Companhia de Transportes Aereos, S.A. (CTA) is disbanded on July 15, 1947 and its assets are acquired by TAP. A Lisbon-Oporto regular service is launched and three DC-4s are delivered, allowing the start-up of operations to Johannesburg. Total enplanements for the year are 8,742.

New European services are started in 1948, initially linking Lisbon to Paris as of August 10. Bookings climb to 14,850.

Airline employment reaches 400 in 1949 and the fleet is upgraded to include 6 DC-3s, 3 DC-4s, and 2 Beech 18s.

Piloted by Capt. Silva Soares, a DC-3 on March 6 inaugurates the company's roundtrip service between Lisbon and Sao Tome and Principe. The flight will be recreated on TAP's fiftieth anniversary.

DC-4 Lisbon-London flights also commence and new charter and freight services are initiated.

Economic difficulties are encountered in 1950 and the government begins planning to privatize the carrier. Privatization efforts continue in 1951-1952; enplanements in the former year are 20,765.

In April 1953, **Aero Portuguesa, S.A.**, controlled by **Air France**, is acquired, together with its equipment, personnel, aircraft, and routes to Tangier and Casablanca. TAP is sold on June 1 to a combine of banking, mercantile, and shipping firms that reorganize it into TAP S.A.R.L., a joint stock company with limited liability and a 20-year government concession for world routes as a developmental incentive. Three Lockheed L-1049G Super Constellations are ordered for the airline in December.

The workforce reaches 593 in 1954. DC-4s are introduced on several African routes as bookings accelerate to 27,310. The Super Constellations are delivered in July and September 1955; after workup, they are placed in service, replacing DC-4s on the routes from Lisbon to Luanda and Lourenco Marques via Kano and Leopoldville. Also, they fly roundtrip from Lisbon to Madrid, Paris, and London.

Cargo traffic increases during 1956-1958 and the last of the DC-3s is retired. During the 12 latter months, L-1049Gs fly the Lisbon to Oporto trunk route. Bookings increase each year: 42,341 (1956), 47,087 (1957), 64,553 (1958). In 1959, plans are undertaken for the launch of jetliner service. A pooling arrangement is entered into with **British European Airways Corporation (BEA)** for the lease of Viscounts and Comet 4Bs. At this point, the L-1049E and L-1049H leased from **Seaboard & Western Airlines** the year before are returned.

Employing the chartered British airliners in 1960, new service is inaugurated to Porto Santo and Madeira; in cooperation with **Panair do Brazil, S.A.**, the Friendship Flight is started to Rio de Janeiro. The African destinations Bissau and Beira are added to the route network in 1961 and four Sud SE-210 Caravelle VIRs are ordered from France. Meanwhile, two L-1049Gs are purchased from **Aerovias Guest, S.A. de C.V.** of Mexico.

On November 11, six government opponents hijack an L-1049G during a Casablanca to Lisbon flight and force it to circle the capital city as leaflets are dropped urging revolt; the plane goes on to land at Tangier, Morocco. The Moroccans deport the pirates to Senegal and they eventually receive political asylum in Brazil.

The first Caravelle VIR is delivered on July 13, 1962 and together with the leased Comet 4Bs, is placed into service on new flights to Santa Maria in the Azores and Las Palmas. Chartered Viscounts begin new Lisbon to Frankfurt and Geneva frequencies. Comet 4Bs launch Lisbon-Luanda service in 1963. Orders are placed for Boeing 707s and 727s. As two additional SE-210s become available during the summer, the pooling arrangement with **British European Airways Corporation (BEA)** is terminated late in the year.

Airline employment is 2,152 in 1964. Direct L-1049G flights are started to Funchal in the Madeira Islands, with connections to Santa Maria, Porto Santo, and Las Palmas. The African Caravelle route is extended from Luanda to Beira.

Systemwide, enplanements during the 12 months are 248,006.

The first B-707-382Bs are delivered via the Portuguese government in early 1965 and are employed to inaugurate new frequencies to Johannesburg. Se-210 service to Brussels, London, and Faro is also started.

Boardings this year climb 26% to 337,883.

Boeing jet service is launched to Rio de Janeiro and New York in June 1966. Caravelle flights Faro-London also commence. The last L-1049G is retired.

With the arrival of 3 B-727-82s, the carrier in 1967 becomes the first European airline to operate an all-jet fleet, now also including 3 Caravelle VIRs and 2 B-707-382Bs. New services are initiated to Zurich via Geneva, to Copenhagen, Salisbury, Rhodesia, Bissau, Recife, and Buenos Aires via Rio de Janeiro. Pope Paul VI flies a TAP SE-210

Rome-Monte Real on his visit to Fatima. The first administrative computer is installed and the workforce is increased to 3,106.

A total of 536,041 passengers are carried during the year.

Airline employment in 1968 stands at 3,125. Two additional B-707-138Bs and two B-727-82s are delivered and new routes are opened Lisbon-Amsterdam and São Paulo and Faro-Frankfurt. Eduardo Mendes Barbosa is named president in October.

Cargo skyrockets 95% and passenger boardings soar 23.7% to 663,000.

On April 1, 1969, Lisbon to Boston flights begin. Also in April, one more B-707-382B is delivered. Faro and Lisbon-Dusseldorf service is started and Santa Maria is added as a stop on the New York run.

Beginning in February 1970, two additional B-707-382Bs are added, allowing extension of the Mozambique route to Lourenco Marques. Lisbon-Santa Maria, Boston, and New York service is launched. A B-747-282B is ordered and activities in 1971 center around its delivery on December 20. Enplanements approach a million.

The fleet in 1972 comprises the new wide-body, plus 7 B-707-382Bs, 5 B-727-82s, and 3 SE-210s. A pipe bomb explodes in the company's New York office on January 24, causing slight damages but no injuries. The premier B-747-282B, christened *Portugal*, inaugurates Lisbon to New York flights in March. Following delivery of the *Brasil* on May 16, Jumbojet services are extended during the summer to Rio de Janeiro, Luanda, Mozambique, and Johannesburg. Passenger boardings jump 20.3% to pass the million mark for the first time (1,454,000) and cargo traffic is up by 15%.

Airline employment reaches 8,140 in 1973. Three more aircraft (a sixth B-727-82 and two B-707-3F5Cs) are added and an Oporto-Paris frequency is begun. TAP is now the first airline to fly a Boeing trijet to Funchal.

Passenger boardings accelerate 14% to 1,517,560 and freight rises a spectacular 69%. The employee population numbers 8,568.

Additional European routes and frequencies are added in 1974 as three more B-727s (one each Dash-82C, Dash-172C, and Dash-155C) and a B-707-3F5C are placed in service.

The computerized reservations system TAPMATIC is introduced. The April 25 revolution brings a reassessment of the carrier, its routes and policies. Some 200 employees demonstrate against their management at Lisbon on May 2; the next day, the six-man board of directors resigns. The first step taken to revitalize the carrier is appointment of a new board.

The third B-747-282B arrives on June 7 and is christened *Luis de Camoes*. On August 29, the government imposes martial law on ground personnel, ending a strike by workers that had paralyzed the national airline. A major shift in route concentration away from Africa to other parts of the world is now undertaken, with the Portuguese flag line becoming one of the few airlines to expand North Atlantic service. Despite the fuel crisis, frequencies to the U.S. and Canada are increased to 17 per week and another B-747-282B is added.

Passenger bookings dip 3.8% to 1.5 million, but freight traffic accelerates by 15.9%.

Lisbon-Caracas service is inaugurated 1975. On April 15, the carrier is nationalized, becoming a public company; the current corporate identity, logo, and livery are introduced and three Caravelle VIRs are sold to the Equatorial airline **SAN (Servicios Aereos Nacionales, S.A.)**. The fourth and final B-747-282B, the *Bartolomeu de Gusmao*, is delivered on October 17. Also in October, as civil war breaks out in Angola, a single B-707-3F5C evacuates 342 passengers and 9.5 tons of cargo to Lisbon in one nonstop flight.

Cargo traffic falls 38.4% and passenger boardings are down 14.6% to 1,307,000.

The employee population is 8,946 in 1976. In protest of the imprisonment of Portuguese citizens by the government, TAP briefly suspends flights, as of January 14, to Mozambique. Cuban Army Pvt. Carlos Manuel Molina Alvaral defects from his country's forces in Angola and forces the captain of a TAP airliner to fly him from Luanda to Lisbon on April 4, where he seeks political asylum. Lisbon-Milan service begins, also in April.

Two B-747-282Bs, the *Bartolomeu de Gusmao* and *Luis de Camoes*, are leased later in the month and later sold to **Pakistan International Airlines Corporation (PIA)** and, in October, 2 additional B-707-3F5Cs are delivered, bringing the fleet total to 12 707s, 4 B-727-100s, 7 B-727-82s/82Cs, and 2 B-747-282Bs.

Passenger traffic jumps 11% to 1,453,893 and freight grows by 12%.

Three new routes are opened in **1977**: Amsterdam and Funchal via Lisbon, Geneva and Funchal via Lisbon, and Oporto and Caracas via Lisbon. Most of the members of the Union of Civil Aviation Pilots strikes TAP between September 11 and December 30.

Poor visibility causes a B-727-82 with 8 crew and 156 passengers to land too far down the runway at Santa Cruz Airport, Madeira, on November 19 after a flight from Brussels via Lisbon. The Boeing overruns the end of the runway and goes over a steep bank, bursting into flames (131 dead).

Enplanements for the year total 1,578,520.

President Eng Frederico Monteiro da Silva's workforce is 9,224 in **1978**. Cabin crews end a strike on January 7, while later, flights to five new European destinations are inaugurated, plus a route Oporto-Salvador, with an extension to Rio de Janeiro. Three B-727-82s are sold as charter operations decline.

En route from Lisbon to Madeira on October 22, a B-727-82 is taken over by a lone assailant claiming to have two pistols and demanding that the aircraft fly to Morocco. After careful observation, the captain determines that the pirate's weapons are fakes and overpowers him. The ship lands at its destination and the perpetrator is turned over to police.

Cargo jumps 23.8% and passenger boardings accelerate a slight 2.4% to pass the two million mark (2,077,000). On total revenues of \$267.9 million, a net loss of \$20.6 million is suffered.

The company receives the 1978 "Technology Management Award" from *Air Transport World* magazine in January **1979**. In March, Transportes Aereos Portugueses, S.A. receives a new name, TAP-Air Portugal. A new corporate identity designed to emphasize the airline's role as the flag carrier is adopted. A new monogram, a bold red, green, and white airplane livery, new wide-body interiors, and new uniforms are unveiled.

One more B-707-3F5C, three B-727-282s, and a de Havilland Canada DHC-6 Twin Otter are acquired and services to Copenhagen and Brazzaville are inaugurated. An order not finalized for five Lockheed L-1011 TriStar 500s is announced in September.

Passenger bookings rise 2.1% to 2,159,673 and cargo grows 10.5% to 116.5 million FTKs. Still, a \$48-million loss is reported.

The workforce is increased by 2.1% in **1980** to 10,003. Three Lockheed L-1011-500s are ordered, another B-727-282 is received, and service is launched to Rome and Barcelona, with a Lagos and New York route is added.

On May 6, 16-year-old Rui Manuel da Costa Rodrigues hijacks Flight 131, a B-707-382B with 90 passengers en route from Lisbon to Faro, demanding to be given a ransom and flown to Switzerland. The aircraft diverts to Madrid for refueling, where the pirate frees all of the passengers, but holds seven crew members as hostages. He is talked into surrendering the next morning.

Later in the year, a major marketing program is launched, aimed at current Brazilian offerings. In October, the TriStar purchase is finalized.

The worldwide recession, however, strikes hard: boardings fall 12.7% to 1,717,000, freight dips 5.5% to 110 million FTKs, and expenses soar 20.3% to \$510 million. On total revenues of \$434 million, a \$76-million loss is taken.

Lisbon-Manchester service begins in May **1981** and a route is restarted to Harare (formerly Salisbury, Rhodesia). A fifth B-727-282 joins the fleet.

Cargo declines 11.3% to 108 million FTKs, as passenger boardings rise 9.4% to 2,055,000. Revenues total \$449 million, expenses climb to \$504.8 million, and a record \$82.8-million loss is incurred.

Airline employment is 9,940 in **1982**, a 0.3% decline. Pope John Paul II flies Oporto-Rome aboard the B-707-320B *Fernao de Maga*; meanwhile, direct Oporto-Manchester service starts and the first B-737-282 is delivered.

Passenger bookings are up 5.8% to 2,175,071, but freight falls again, off 5.5% to 102.24 million FTKs. Despite a cost-control program, expenses rise 4.1% to \$473.6 million. On total revenues of \$442.5 million, another severe financial loss is incurred, the net being \$58.4 million in the red.

The workforce is increased 0.3% to 9,974 in **1983**. The first L-1011-500, christened *St. Antonio Lisboa*, is delivered on January 12. Sometime later, B-727-282 service is kicked-off Oporto-Brussels and Lisbon-Copenhagen. Executive Class is introduced on European flights.

Cargo declines another 3.7% to 461.38 million FTKs and passenger boardings are down an equal percentage, to 1,926,567. On revenues of \$455.7 million, the loss produced this year is \$54.2 million.

The employee population swells 1.3% to 10,105 in **1984**. Monthly Lisbon-S. Tome (Lagos) flights are inaugurated and the two B-747-282Bs *Portugal* and *Brasil* are sold to **Trans World Airlines (TWA)**. The fleet now includes 5 L-1011-500s, 8 B-707-382B/3F5Cs, 7 B-737-282s, and 2 DHC-6s.

Passenger boardings climb 4.8% to 2,125,000 and freight soars 21% to 116.42 million FTKs. Financial data is not released.

The workforce is cut to 9,963 in **1985** and 3 B-707-382Bs are sold. In June, the wholly owned subsidiary **Air Atlantias, S.A.** is formed to operate Lisbon-U.K. charters with two B-707-382Bs and two B-737-282s transferred under lease from the parent's fleet; revenue operations commence in the fall.

Passenger boardings climb a slight 0.05% to 2,126,000 and freight jumps 14.6% to 133.39 million FTKs. The year proves healthy financially in that expenses are less than revenues, \$529.5 million versus \$555.6 million. Still, a \$3.3-million net loss is suffered.

The payroll is cut again in **1986**, down by 0.7% to 9,896. In November, the carrier sells a B-707-3F5C to the Republic of Zaire and enters into negotiations to sell two others to an unnamed U.S. airline. At year's end, orders are placed for three Airbus Industrie A310-300s.

Customer bookings jump 5.5% to 2,131,449. Costs far exceed revenues and an operating loss of \$32.6 million is suffered.

The number of employees is down 11% in **1987** to 9,787 despite the company's good year. The Airbus order is increased by one, and requests are made for three B-737-382s. New routes are stretched to Athens, Vienna, Munich, and across the Atlantic to Toronto.

As a result, passenger boardings accelerate 14% to 2,439,140 and freight rises 1.4% to 124.6 million FTKs. Revenues advance 12% to \$471.8 million, expenses rise 5.9% to \$480.8 million, and the operating loss is down to \$9 million.

The workforce falls a very slight 0.7% in **1988** to 9,612. The fleet now includes 9 B-737-282As, 6 L-1011-500s, 4 B-727-282s, 3 B-727-82Cs, and 2 B-707-382Bs. Orders are outstanding for 4 A310-304s, 3 B-737-482s, and 1 L-1011-500.

Beginning in April, a company L-1011-500 becomes the first commercial aircraft to use satellite data communications on a transatlantic flight; the achievement is part of a joint IMMARSAT/ESA/SITA experimental development program. The route network is increased when markets are entered at Curaçao, Casablanca, Nice, Stuttgart, Hamburg, and Stockholm.

On June 2, twice-weekly roundtrips are inaugurated between Lisbon and Manchester and Dublin. The first A310-304 arrives in December and is placed into service at month's end over routes to Africa.

Customer bookings swell 8% to 2,635,185 and cargo increases 12.8% to 141.05 million FTKs. 1.05 million FTKs.

The fleet is enhanced in **1989** by the addition of one more L-1011-500, three A310-304s, three B-737-382s, and one B-737-282C. Gone are the three B-727-82Cs and two B-707-382Bs.

Long-haul A310-304 service is initiated twice-weekly from Lisbon to Los Angeles in April via Terceira in the Azores. In July, with financing provided by the European Development Bank and the African Development Bank, the company begins construction of a large maintenance and overhaul base at Sai Airport, Cape Verde Islands.

Passenger boardings are elevated 5.7% to 2,954,832 and freight shoots up 13.4% to 159.36 million FTKs.

Company employment is increased by 8.1% in 1990 to 10,688. Orders are placed for two A340s, with options placed on two others. Much of the fleet is sold and leased back on long-term leases.

During the spring, the carrier blocks attempts by the new regional carrier **Portugalia Airlines, S.A.** to inaugurate international routes.

Customer bookings increase 10.2% to 3,257,041 and cargo climbs 4.2% to 166.57 million FTKs.

The payroll grows a slight 0.1% in 1991 to 10,700 and the fleet now includes 1 owned and 5 leased A310-304s, 2 chartered A320-211s, 2 leased B-737-230As, 6 chartered B-737-282As, 1 leased B-737-282C, 5 leased B-737-382s, and 7 leased L-1011-500s, 1 of which is subleased to **TAAG Angola Airlines, S.A.**

In January, flights are begun linking Lisbon with the Spanish communities of Bilbao, Malaga, Seville, Vigo, and Santiago de Compostela. Later in the year, the carrier becomes a "Sociedade Anonima" or public limited company in which the state holds most of the shares.

Unlike most European airlines, the Portuguese flag carrier actually increases its passenger traffic, albeit only 1.9%, to 3,317,386 passengers flown. Freight slides 2.3% to 162.74 million FTKs.

Although there is no change in employment in 1992, two additional A320-211s are leased from **Bavarian Fluggesellschaft, GmbH.**, along with two B-737-382s. In March, the company joins with **TAAG Angola Airlines** in the creation of a catering and handling operation based at Luanda Airport. An L-1011-500 TriStar is also leased to the African company.

Customer bookings jump 8.8% to 3,607,995 and cargo moves ahead by 2.3% to 166.54 million FTKs.

In 1993, President Eng Fernando Santos Martins oversees a workforce of 10,700. The owned A310-304 is replaced by four more leased A320-211s, two coming over from **Bavaria Fluggesellschaft, GmbH.** New international markets are opened at Basel, Bordeaux, Marseilles, and Toulouse. During July, it is announced that the carrier requires a government capital investment of \$500-\$626 million to keep it, like **Sabena Belgian World Airlines, S.A.**, from collapsing under the weight of recession.

The government agrees to the investment and announces that plans are being formed to privatize 49% of the airline before year's end, if the airline's unions agree to a cut of 2,600 positions over the next 2 years and if a restructuring plan can be created. Protesting the plan at a fall rally of 3,000 employees, several hundred dissidents stage a wildcat strike, blocking a Lisbon airport runway and halting flight departures.

The strike ends when Portuguese Transport Minister Joaquim Martins-Ferreira do Amaral agrees to discuss the restructuring plan with union leaders. Weekly nonstop roundtrips commence November 1 between Lisbon and Tel Aviv.

Customer bookings inch up 0.2% to 3,616,885 and cargo does better, climbing 2.4% to 170.53 million FTKs.

Airline employment is increased by 11.2% in 1994 to 9,500. Early in the year, direct flights are added between Oporto and Basel. Still, the carrier continues to suffer from significant fiscal difficulties and becomes one of several flag carriers seeking European Union permission for government bailouts.

In February, Lisbon officials approve a restructuring plan designed to return the airline to profitability in two years. Under its provisions, the company will reduce the workforce from 9,500 to 7,110, cancel 15 European routes, and cut out all North American service except New York. In return, the government will inject Esc 180 billion (\$1 billion).

The EU Commission approves Portugal's bailout of TAP in July, but with restrictions. These include abolishment of government tax exemptions in favor of the airline, a ban on TAP's increasing its European market share, and a ban on TAP's acquiring interest in other European airlines. Having absorbed exceptionally heavy losses, the charter subsidiary **Air Atlantis, S.A.** is now absorbed into its parent.

In August, the company co-brands its image with Visa credit cards, via the Banco Comercial de Macau. A code-sharing, blocked-seat agreement is signed with **Delta Air Lines** on November 1. Under its terms,

the Portuguese carrier purchases blocks of seats on Delta's A310-324 flights from New York and Newark to Lisbon, beginning on November 16. The first of four A340-312s on order is delivered on December 22; another will arrive a week later.

Passenger boardings decline 2.7% to 3,521,013 while freight grows 5.7% to 180.24 million FTKs. Revenues total \$976.82 million, but expenses are a monstrous \$1.16 billion. The operating loss is \$184.14 million and the net downturn is \$179.06 million.

There is no change in the workforce during 1995. The first A340-312 is employed on crew-training flights to London (LHR) during January in place of the A320-211 normally flown on the route from Lisbon. Arrangements are completed, via Fortis Aviation, to place a pair of Lockheed L-1011 TriStar 1s with **Tajikistan International Airlines** in time for that start-up to begin operations in February.

British Midland Airways, Ltd. becomes a code-sharing partner in February. TAP passengers arriving at London (LHR) from Lisbon, Faro, Oporto, or Madeira are able to make seamless connections aboard BMA flights to Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

In April, code-sharing flights commence with **Air Afrique, S.A.** over a route from Lisbon to Abidjan. An L-1011-500 TriStar is leased to **British West Indies Airways, Ltd. (2) (BWIA)** on a short-term basis in July. At the same time, two L-1011-500s are leased to the Belgian operator **Caribjet, Ltd.**, which operates them under contract to **Air India, Ltd.**

Two more African airlines become dual-designator associates in November as code-sharing flights commence with **TAAG Angola Airlines, S.A.** from Lisbon to Luanda and with **LAM (Linhae Aereas de Mocambique, S.A.)** from Lisbon to Maputo.

Enplanements rise 5% to 3,696,376 and freight is up 6.9% to 192.76 million FTKs.

Airline employment is reduced 7.1% in 1996 to 8,827 and the owned fleet includes just the 4 A340-312s. Leased equipment includes 6 B-737-382s, 2 B-737-33As chartered from **Norway Airlines, A.S.**, 2 B-737-3K9s leased from **Bavaria Fluggesellschaft, GmbH.**, 1 B-737-282CA, 4 B-737-282As, 2 B-737-230As, 5 A310-304s, 5 Lockheed L-1011-500 TriStars, including the 1 leased to **TAAG Angola Airlines** and 1 out with **British West Indies Airways, Ltd. (2) (BWIA)** and 2 with **Caribjet, S.A.**, plus 6 A320-211s, including the 2 chartered from **Bavaria Fluggesellschaft, GmbH.**

In January, a block-space, code-sharing agreement begins with **Portugalia Airlines, S.A.** Manuel Ferreira Lima becomes chairman in February and in March the EU Commission approves a further Portuguese government injection of \$26 million.

During the first quarter, the two TriStars with **Caribjet, S.A.** go out of service. They are, however, replaced by a third Portuguese L-1011-500 on March 8. After it has been repainted, it begins flying on behalf of **Air Mauritius, Ltd.** on March 15.

A \$720-million order is placed with Airbus Industrie on November 1 for 18 A319s. Following the practice of **Western Pacific Airlines (Westpac)**, the company at the end of the year commits two B-737-382s to a "logojet" program under which sponsors will pay to have advertisements on the aircraft.

Customer bookings accelerate 3.7% to 3,832,386 and 200.67 million FTKs are operated, an 8.8% increase. Although there is a \$57.63-million operating profit, there is also a \$69.51-million net loss.

The employee population grows by 7% in 1997 to 7,968. A previously announced commitment for 18 A319s is formalized in January, with the possibility that 5 orders may later be changed for A320s. In February, the two B-737-382s in the flying billboard program are unveiled. One wears a red and white livery promoting a specific vacation region and titles "Fly Algarve," while the other boosts Lisbon's "Expo 98" world's fair with a base blue and white scheme.

The process of liberalization within the European civil aviation industry is completed on April 1. In early April, the European Commission approves the final Esc 40-billion tranche of state aid to the carrier.

It is now required that pilots perform to the EU legal limits for flight and duty time. Believing this to be unsafe, company flight crews declare a 48-hr. strike on April 24–25.

When the carrier withdraws its service from Lisbon to Manchester, England in May, the route is taken over by its code-sharing partner, the newly renamed **PGA-Portugalia Airlines, S.A.**

On September 18, a strategic partnership agreement is signed with **Swissair, A.G.** When implemented the next summer, the alliance will result in code-sharing on flights, collaboration on aircraft maintenance, ground handling, cargo, catering, and in joint marketing and linkage of frequent flyer programs.

On November 4, the company joins the Skymiles frequent flyer program of **Delta Air Lines**. The first new A319-111 is delivered on December 4.

A strategic alliance is entered into with **Sabena Belgian World Airlines, S.A.** in early December.

On December 23, it is announced that the partnership with **Swissair, A.G.** will be deepened. Under this more extensive arrangement, TAP will use Swissair's reservations and handling system while its frequent flyer program will join the Qualiflyer program of Swissair. The agreement also allows SAirGroup to take a minority stake in the Portuguese airline when the Portuguese government initiates its planned privatization.

Passenger boardings accelerate 7.6% to 4,355,605 while cargo jumps 11.2% to 251.32 million FTKs. Operating revenues dip 1.6% to \$1.15 billion, while costs slide 0.7% to \$1.1 billion. Although the operating profit drops to \$46.91 million, there is an \$8.52-million net profit, the first net gain in a quarter of a century. It is later adjusted downward to \$7.95 million.

Airline employment in 1998 stands at 7,448 while the fleet, 84.4% of which is Stage III certified, includes 32 airplanes at the beginning of the year: 15 B-737s, 5 A310s, 2 A319s, 6 A320s, and 4 A340s.

In January, officials of the carrier and **Swissair, A.G.** agree that the latter will acquire a 10% stake in the line as part of the Lisbon-based major's privatization process. On January 28, a memorandum of understanding is signed with **Austrian Airlines, A.G.** for a broad commercial agreement that includes **Lauda Air Luftfahrtgesellschaft, A.G.**; plans are made to begin code-sharing on routes from Portugal to Austria during the summer.

The company signs a strategic alliance and code-sharing pact with **AOM French Airlines, S.A.** in February, effective at the end of March.

The strategic pact with **Sabena Belgian World Airlines, S.A.** comes into effect on March 1. Dual-designator services are inaugurated from Lisbon to Brussels.

The first quarter compacts are deepened on March 29 when the carrier joins with **Swissair, A.G.**, **Austrian Airlines, A.G.**, **Sabena Belgian World Airlines, S.A.**, **THY Turkish Airlines, A.O.**, and **AOM French Airlines, S.A.** to form the "Qualiflyer" group. Although members will retain their own identities, they will engage in a long list of joint activities, including ground handling, lounges and ticket offices, and frequent flyer benefits. Collaborative activities that will be added as soon as details can be worked out include maintenance and overhaul, cargo, in-flight catering, information technology, and duty-free concessions.

Under a recently signed code-sharing pact with **Transbrasil Airlines, S.A. (Linhas Aereas)**, TAP is able to offer daily dual-designator service to Lisbon. The service, which begins on June 29, is flown four times a week by the European carrier, while Transbrasil offers flights thrice weekly. Each of the Brazilian line's flights stop at a different northeastern city, Fortaleza, Recife, or Salvador.

When the company announces plans to wet-lease aircraft in order to gain additional required capacity to support traffic to the Lisbon "Expo 98" world's fair, the carrier's pilots vote to conduct 48-hr. strikes each week through August to protest.

With the beginning of the winter schedule on October 25, additional flights are added between Lisbon and London (LHR).

High overhead costs force the company, on October 26, to suspend its unprofitable twice-weekly A340-312 roundtrips from Lisbon to Macau.

Toward the end of the year, the government establishes an arbitration panel to end the long-running dispute between the company and pilots over working hours, holidays, rest periods, and wages.

Customer bookings during the 12 months accelerate 8.7% to 4.53 million even as cargo traffic slides 2.1% to 229.97 million FTKs. Revenues are \$1.14 billion, while expenses are \$1.1 billion and leave an operating profit of \$43.45 million. The net gain is \$9.01 million.

By the beginning of 1999, airline employment has been increased by 2.1% to 8,300. Weekly A310-304 return service is inaugurated on March 29 between Lisbon and Natal, in northeastern Brazil. Natal is the sixth Brazilian destination served by TAP, with the others including Rio de Janeiro, São Paulo, Recife, Salvador da Bahia, and Fortaleza.

The Wall Street Journal reports on April 2 that SAirGroup, parent of **Swissair, A.G.**, will soon acquire a 20% stake in TAP, with an option to acquire another 10% interest over the next 4 years. The deal is valued at Esc 15 billion (approximately \$100 million), but will need EC permission before it can be implemented.

The arbitration panel established at the end of 1998 makes a ruling in mid-April on working conditions that very much favors the position of the carrier's pilots. A huge 95% pay increase is also recommended.

On April 21, Portugal's Public Works Minister, Joao Cravinho indicates that the panel's work should be revisited. Unless the arrangement is renegotiated, he fears, TAP risks bankruptcy. Responding for the pilots' union, SPAC, Capt. Joaquim Filipe indicates that the flyers will not abandon the tribunal's ruling and rejects the minister's call to reopen the issue of working conditions. The pilots are, he states, prepared to discuss cost cutting, but only after the airline accepts the principles enshrined in the arbitrators' decision.

Swissair, A.G. offers no comment on the management-labor tussle and waits on the sidelines. Both parties know that the stake sale is effectively on hold until the labor problems are resolved.

At the beginning of May, a new management board is elected. It is tasked with attempting to prepare the airline for privatization and settling the labor dispute with SPAC.

Flight International reveals on May 12 that SAirGroup is having second thoughts about its plans to take a 20% stake in TAP. Doubt has followed the decision of a tribunal court that has recommended that pilots of the Portuguese national airline be awarded a huge salary increase.

It is announced on August 2 that the labor dispute has been settled. Under terms of an agreement between the company and its flyers, the pilots will receive between 10% and 21% of the airline's equity and a seat on the board of directors when TAP is privatized.

A new recovery plan is unveiled on August 6. Although it will divide the company into three operating units and seek various cost-savings, no date for its implementation is announced.

The reorganization and conclusion of the labor difficulties is, however, sufficient proof of stabilization for SAirGroup to finalize its equity investment. TAP-Air Portugal now becomes a member of the "Qualiflyer" group. The last of six A319-111s to be delivered on the year is accepted on November 24.

Passenger boardings jump 6.7% to 4,841,000 while freight traffic falls by 11.5% to 203.59 million FTKs.

Airline employment at the beginning of 2000 stands at 8,870, a 6.9% increase over the previous 12 months.

A comprehensive cooperative agreement is signed with **LAM (Linhas Aereas de Mocambique, S.A.)** on January 24. Under terms of the pact, the Portuguese flag carrier will purchase blocks of seats and place its code on LAM's return services from Maputo to Lisbon. The last of a 16-ship order for A319-111s is delivered on January 25. The Portuguese government, in early February, confirms that SAirGroup has completed arrangements for the acquisition of a 34% stake in TAP for 31.2 billion escudos (\$154 million). The government will retain 51% and sell 10% to employees. SAirGroup has an option to purchase another 5% if desired.

The block-seat dual-designator pact begins with **LAM (Linhas Aereas de Mocambique, S.A.)** on April 1. Three of the four weekly roundtrips from Maputo to Lisbon are operated with LAM's B-767-2B1ER, with the

third flown by TAP's A310-304. The Tuesday and Wednesday LAM flights stop at Beira, while the other two frequencies are direct.

The last of six A320-214s delivered since the previous February is accepted on May 31.

During a parliamentary hearing in June, Public Works Minister Jorge Coelho reports that TAP has avoided the prospect of bankruptcy by having reduced its loss during the first 4 months of the year by 15% to E 42 million (\$39 million). The upswing is due entirely to the company's new relationship with SAirGroup, parent of **Swissair, A.G.**, and the sale of E 20 million of its shares in Equant. Early next year, company employees will be invited to purchase a 10% stake in the airline.

TAP takes delivery of its first A321, a Dash-211, on August 31.

Under a code-sharing agreement signed with **American Airlines** on June 13, American, on October 29, places its designator on TAP flights from Lisbon to Boston, Newark, and New York (JFK). TAP is able to place its code on AA domestic flights beyond those three gateways.

When, on October 29, TAP discontinues its Lisbon to Boston service, it instead begins to code-share on the route with **SATA Internacional, S.A.** Flights from Lisbon to Abidjan cease the same day.

Displeased with the company's salary offer, members of the Civil Aviation Cabin Crew Union stage a strike on November 25. The job action causes the airline to cancel 47 of its 125 departures. The strike continues the next day, forcing TAP to cancel 46 of 125 flights. For the weekend, only 11,914 passengers are transported, as against typical bookings of 25,000. After another 35 flights are scrubbed on November 27, the job action ends and negotiations on a final settlement resume.

During the following week, the airline offers its workers 1.4% of the 2.7% increase demanded, refusing to give in further in anticipation of a huge loss on the year. Talks collapse on the evening of November 30 and the strike action resumes on December 1.

Only one B-737-3K9 remains in service as the year ends. At New Year's, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** CEO Fernando Pinto becomes president/CEO of TAP-Air Portugal.

Customer bookings during these 12 months accelerate 9.1% to 5.28 million, while freight traffic rises 9.9% to 223.66 million FTKs.

Due to finances and a management shakeup at **Swissair, A.G.** parent SAirGroup in late January, the Swiss will withdraw from the TAP privatization process.

TAPIS ROUGE AERO SERVICES, LTD. See **QUEBEC AVIATION, LTD.**

TAPSA (TRANSPORTES AEREOS PERUANOS, S.A.): Peru (1946–1965). One of the longest surviving of Peru's small independent airlines, TAPSA is formed at Lima in June 1946. With an initial fleet of 4 Avro Ansons and 4 Noorduyn Norsemen, revenue services are initiated in the summer over a route from the capital city to Iquitos via Trujillo and Tarapoto. Feeder services to and from Andean destinations are also undertaken.

Three Curtiss C-46As are acquired in mid-1958, and begin flying from Lima to Iquitos. With the coming of additional aviation services to the nation during the late 1950s, the carrier becomes unprofitable.

The entire original Curtiss fleet is lost during the first five months of 1959.

A C-46A with two crew is wrecked in a hard landing at Moyabamba, Peru, on January 4; there are no fatalities.

The second C-46A with two crew and three passengers fails its take-off from Cuzco, Peru, on May 8 and makes a forced landing; although the aircraft must be written off, there are no fatalities.

The last operational C-46A with 2 crew and 10 passengers goes down 30 km. S of Tournavista, Peru, on May 13; there are no survivors.

By June, the carrier is operating only a single Curtiss Commando, acquired as a replacement at the end of the previous month.

TAPSA is forced to shut its doors in July 1961, but is able to resume operations later in the year with a Douglas DC-6 on a route from Lima to Santiago and Buenos Aires. Services end by 1965.

TAPSA (TRANSPORTES AEREOS PROFESIONALES, S.A.): Guatemala (1989–1996). TAPSA is established at Guatemala City in 1989 to provide air taxi and executive charter passenger flights to local and regional destinations. Revenue operations commence with a single Embraer EMB-110P1 Bandeirante. A second Bandeirante is acquired in 1991 and operations continue apace.

While en route from Guatemala City on November 1, 1996, an EMB-110P1 with 2 crew and 12 passengers collides with a 900-ft. mountain near Santa Elena in bad weather; there are no survivors.

The airline, itself, is shut down shortly thereafter.

TAPSA AVIACION (TRANSPORTES AEREOS PETROLEROS, S.A.): Sarmiento 593, 7 Piso, Buenos Aires 1041, Argentina; Phone 54 (1) 480 0572; Fax 54 (1) 480 0552; Code TPS; Year Founded 1991. TAPSA is established at Buenos Aires in 1991 to fly support services on behalf of the nation's energy industry. Revenue flights begin with a fleet that includes 1 Israeli Aircraft Industries AIA Arava 102, 1 SAAB 340A, and 7 de Havilland Canada DHC-6 Twin Otters.

TAQUAN AIR SERVICES: 1007 Water Street, Ketchikan, Alaska, 99901, United States; Phone (907) 225-1010; Fax (907) 225-0522; http://www.AlaskaOne.com/taquanair; Code K3; Year Founded 1977. Jerry A. Scudero, a 23-year-old Tsimshian native, establishes TAS at Metlakatla, Alaska, in the fall of 1977 to provide third-level passenger and cargo flights to regional and bush destinations, as well as flight-seeing and air tours. Operations commence in October with a single Cessna 185, linking the company's base with Ketchikan, Smith Cove, Kasaan, Hollis, Polk Inlet. The 4 Cessna 185s and 2 de Havilland Canada DHC-2 Beavers in the fleet fly a total of 3,865 passengers on the year.

Operations continue apace in 1978–1990. Business improves steadily and company headquarters are moved to Ketchikan. A full-service maintenance facility is opened.

A major expansion occurs in October 1991. Cross-town rival **Temsco Airlines** abandons its Part 135 fixed-wing operation in October and becomes a helicopter operator. Consequently, Taquan is able to purchase seven of Temsco's de Havillands, along with seven routes and a significant quantity of equipment.

Customer bookings skyrocket to 15,423. In addition, a total of 1,063,405 pounds of mail are carried.

The workforce stands at 21 in 1992. Passenger boardings zoom upward another 169% to 41,527.

The payroll grows by 14.1% in 1993 to 28 and the fleet includes 5 Beavers, 3 185s, and 2 DHC-3 Otters.

Customer bookings surge 52.9% to 107,000.

Enplanements climb another 13% in 1994 to 42,467.

Just after landing on the water at Craig on January 2, 1995, a float-equipped Cessna 208 with a pilot and seven passengers strikes a log with its right pontoon; the aircraft veers to the right and the left float strut collapses, causing the left wing to hit the water. All aboard are safely evacuated.

Climbing away from Ketchikan on July 13, a DHC-3 with a pilot and seven passengers begins to vibrate severely; a safe emergency landing is made and an inspection finds large cracks in the trailing edge of the plane's elevator.

Enplanements for the year remain level at 42,418.

The employee population stands at 21 in 1996 and the fleet is altered to include 6 Beavers, 5 Otters, 3 Cessna 185s and 1 Cessna Grand Caravan.

By the spring, 18-year-old Sitka-based **Bellair** has become economically unviable. As a result, its facilities, routes, and 4 aircraft (1 Beaver, 2 Cherokee Sixes, and 1 Cessna 172) are sold to Taquan in June; the latter now adds 12 new points to its expanding route network. Also in June, a new homepage is opened on the World Wide Web.

While climbing away over water from Ketchikan on December 12, a float-equipped DHC-2 with a pilot and a passenger loses engine power,

rolls over and crashes into the water. The customer is able to exit the fuselage through the windshield; the body of the pilot is found with the aircraft when the wreck is partially salvaged several days later.

Passenger boardings this year accelerate 21.4% to 51,478.

In the spring of **1997**, the carrier begins to expand again. This growth is made possible when a 50% interest in the carrier is sold to the Kootznوو Corporation, a group that represents the Alaska natives around Juneau. The funding provided allows Taquan to take over its longtime rival **Ketchikan Air** and change to its IATA code. Harold Esmailka becomes president and the fleet is upgraded by the addition of four Piper Lances and three Cherokee Sixes, as well as additional routes, an aviation fuel business, eight additional scheduled destinations, and two travel agencies.

The carrier begins to heavily promote unique "adventures," including an air tour to explore famous El Capitan Cave, part of a vast recently discovered caste system, and a Prince of Wales Island coastal cruise to see humpback whales, sea otters, and puffins.

Customer bookings soar 46.8% to 75,548.

Flights continue in **1998**. Additional growth continues in June when a Part 121 sister carrier, **Air One (2)**, is able to launch daily scheduled services employing a pair of leased British Aerospace BAe Jetstream 32EPs.

While on a flight-seeing tour over Misty Fjords National Monument on August 5, a float-equipped Cessna 185F with one pilot and two passengers crashes 24 mi. NE of Ketchikan; one passenger is killed, the other two survivors are both seriously injured.

Passenger boardings increase 67.5% to 127,000.

Having proven unviable, the **Air One (2)** subsidiary is shut down in March **1999**.

Just after takeoff from Fairbanks on April 5 on a scheduled all-cargo service to Fort Yukon, a Piper PA-32 blows a cylinder and makes an emergency landing on a nearby road. Just after putting down, the landing gear collapses, severely damaging the aircraft. The pilot is unhurt.

Passenger boardings plunge 60.9% to 49,000.

TAR AIRLINES (TRANSPORTES AEREO RIOPLATENSE, S.A.): Argentina (1969–1989). Carlos F. Martinez Guerrero and his associates register this all-cargo operation at Buenos Aires in December **1969**. Equipping the carrier with two Canadair CL-44Ds, they inaugurate charter freight flights to South American destinations in July **1970**. With permissions received, the operators begin flying to Miami and Houston early March **1971**. The Houston flights involve the transport of cattle.

Three more Canadairs are acquired in **1972**, as the company's worldwide nonscheduled freight flights are profitable, although one is lost in a July accident. Scheduled freight operations begin to Basel, Switzerland, in **1976** and in **1977** a CL-44D is sold to **AER (Aerotransportes Entre Rios, S.A.)**.

In **1978**, President Guerrero's company employs 130 workers. The carrier now orders a pair of Boeing 707-320Cs from **Dan Air/Dan-Air Services, Ltd.** with which to replace its propeller equipment. The first jetliner arrives in **1980**.

The second Dan Air Boeing arrives in early **1981**. Meanwhile, at the turn of the decade, TAR has become involved with the transport of arms to Tehran. One of the two remaining CL-44Ds involved in this trade is lost under mysterious circumstances in July.

Nonscheduled operations continue into mid-decade as two Douglas DC-8-73CFs are briefly acquired and new destinations, such as Santa Cruz, Bolivia, Santiago de Chile, and New York are added.

Unable to maintain viability in the recession of the late **1980s**, the company is forced to cease flying in **1989**. One Boeing and a CL-44D are parked at Ezeiza while the second Boeing is left at Miami.

TAR HEEL AVIATION: 278 Albert Ellis Airport Road, Richlands, North Carolina 28574, United States; Phone (910) 324-2500; Fax (910) 324-3323; Year Founded 1994. Jere W. Fountain sets up Tar Heel

at Richlands, North Carolina, in **1994** to provide FAR Part 135 all-cargo services throughout the local region. Operations begin and continue with a fleet that includes 1 owned and 3 leased Cessna 208/208B Caravan Is, 2 each Beech 58 Barons and Piper PA-31-310 Navajos, and 1 Piper Cherokee Six.

TAROM ROMANIAN AIR TRANSPORT (TRANSPORTURILE AERIENE ROMANE, S.A.): Otopeni Airport, Bucharest, Romania; Phone 40 (1) 212-2494; Fax 40 (1) 314-0524; http://tarom.digiro.net; Code RO; Year Founded 1946. To restart the domestic network of the prewar carrier **Linile Aeriene Romane Exploatate cu Statui (LARES)**, the Romanian and Soviet governments establish the fifty-fifty partnership airline Transporturile Aeriene Romana Sovietica (TARS) in **1946**. Li-2s (Soviet-made Douglas DC-3s) and former Luftwaffe Junkers Ju-52/3ms comprise the initial equipment and only local routes are flown in **1947–1953**.

During these years, TARS is subjected to one crash and a number of hijackings. An Li-2 is lost while landing at Bucharest on August 13, 1947 (three dead).

The first skyjacking occurs on June 17, 1948, when a Junkers with 23 passengers is diverted to Salzburg, Austria. On April 29, 1949, another Ju-52/3m, with 16 passengers en route from Timisora to Bucharest, is seized by a gun-wielding youth, who orders the plane to fly to a military airfield at Salonika, Greece.

En route from Sibiu to Bucharest on December 9, an Li-2 with 24 passengers is captured by 4 passengers, who shoot a security guard dead and order the plane to fly to Belgrade, Yugoslavia.

In **1954**, Romania buys out the Soviet half interest in TARS and assuming full control renames the carrier TAROM (Transporturile Aeriene Romane). Between **1955–1957**, purchased Ilyushin Il-12s introduce service to other Warsaw Pact capitals, as well as Moscow. Il-14Ps are delivered and one of these, with four aboard and flown on behalf of the Party Central Committee, crashes while landing at Moscow's Vnukovo Airport on November 4 of the latter year.

Initial routes are extended into Western Europe during **1958–1962**; in the latter year enplanements are 217,000.

In **1963**, the first Il-18 turboprops are placed in service on the European regional services. On June 16, a chartered Il-14P with 4 crew and 27 passengers crashes near the villages of Tokomlos and Bekessamson in southeast Hungary; there are no survivors.

Passenger boardings for the year advance to 329,000.

An Li-2 is lost at Paragina Hill on June 13, **1964** under unknown circumstances.

There are two fatal crashes in two days in October. On October 9, an Il-14P with 32 aboard crashes near Sibiu; the next day, an Il-18 goes down in the same place (43 dead).

Available traffic figures now show bookings of 371,000 in **1965**.

While en route from Clui to Bucharest on August 11, **1966**, an Li-2 with four crew and 20 passengers crashes into Romania's Lotiora Valley near Sibiu; there are no survivors. Passenger boardings surge to 478,000 this year.

Traffic continues to advance: 571,000 passengers are flown in **1967**.

Technoimport, on behalf of the carrier, orders six British Aircraft Corporation BAC 1-11-424s on February 26, **1968**. The first is received on June 14 and is placed into service (scheduled and charter), linking Bucharest with Vienna, Zurich, Rome, Frankfurt, Brussels, and London. The second BAC is received on December 17 and the year's enplanements reach 668,000.

In **1969**, flights are started to the European destinations of Madrid, Paris, Amsterdam, Sofia, Budapest, Prague, Berlin, and Copenhagen as the fleet grows to comprise 6 BAC 1-11-424s, 11 Il-18s, 3 An-24s, and several Il-12/14s. Routes are also pushed east to Athens, Istanbul, Nicosia, Beirut, Tel Aviv, and Cairo, as well as nonstop from Bucharest to Moscow and from Bucharest to Algiers via Zurich. Passenger boardings reach 680,000.

The following year is especially tragic.

While on initial approach to Oradea after a service from Bucharest, an An-24 with 4 crew and 18 passengers crashes in the Aprisini Mountains on February 4, **1970**; there are no survivors.

En route from Bucharest to Prague on September 14, a BAC 1-11-424 with 89 aboard is hijacked by 4 armed Hungarians accompanied by 2 children and diverted to Munich. All will be tried for air piracy; three will be sentenced to 2 1/2 years in German prisons while the fourth is acquitted.

Inbound from Tel Aviv on December 7, a BAC 1-11-424 with 7 crew and 20 passengers crashes while landing at Constanta (18 dead). Enplanements this year total 849,000.

En route from Oradea to Bucharest on May 27, **1971**, an Il-14P with 24 passengers is taken over by 6 hijackers, who divert the aircraft to Vienna. Put on trial, the pirates will receive prison terms ranging in length from 24 to 30 months.

A total of 958,000 passengers are carried this year.

A BAC 1-11-401 Astrojet is purchased from **American Airlines** on June 20, **1972** while a new BAC 1-11-402, just back from an eight-month lease to **Bavaria Fluggesellschaft, MbH. & Co.**, is acquired in August.

A total of 1,001,000 boardings are recorded for the year.

The first Il-62s are received in **1973**, allowing extension of services to Africa and the Far East. Among the lightplanes operated as part of the 30-unit fleet are 23 Cessnas, 4 Beech 55s, and 3 de Havilland Canada DHC-6 Twin Otters.

Bookings climb to 1,118,000 and airline employment is 1,580.

In February **1974**, a Boeing 707-3K1C is received, allowing Bucharest-New York via Vienna services to commence. A total of 14 An-26s enter all-cargo service. Il-62 service from Bucharest to Beijing via Tehran is inaugurated on December 21.

An An-24V with 5 crew and 28 passengers crashes into the Lotru Mountains while on approach to Sibiu, Romania, on December 29; there are no survivors.

Passenger traffic this year rises to 1,414,000 passengers flown.

On January 4, **1975**, an Il-14P with 33 aboard crashes into the Lotru Mountains; there are no survivors. During the spring, an order is placed with British Aircraft Corporation for five BAC 1-11-525s.

The charter subsidiary **Linie Aerienne Romane** is formed to operate inclusive-tours with three BAC 1-11-424s transferred from the parent company. Charters are started in December to the Black Sea holiday resorts.

Boardings this year dip to 1,397,000.

Tu-154s replace the BAC 1-11s on the European routes in **1976** while traffic remains level.

In **1977** and beyond, General Manager S. Craciunescu's fleet comprises 4 Boeing 707-3K1Cs, 3 Ilyushin Il-62s, 10 Il-18s, 5 Tupolev Tu-154Bs, 4 BAC 1-11-424s, and 28 Antonov An-24s. Destinations now served include destinations in Europe, as well as Tripoli, Algiers, Casablanca, Amman, Baghdad, Beirut, Cairo, Damascus, Istanbul, Kuwait, Nicosia, Tehran, Tel Aviv, Karachi, Peking, and New York City.

The first of five BAC 1-11-525s is delivered on March 21. An Il-18V is involved in an accident at Bucharest on April 21; there are no other details concerning the incident.

On May 25, a tentative agreement is signed between British Aircraft Corporation and Grupui Aeronautic Bucuresti for the latter's license-production of BAC 1-11s. The fifth BAC 1-11-525 arrives on August 25.

Enplanements for the year are 1,437,000.

The Romanian One-Eleven production contract is officially concluded at Filton, England, on June 15, **1978**. The British will manage the ROMBAC project, which will be undertaken by Interprinderea de Avioane Bucuresti, which operates a manufacturing complex at Baneasa, near Bucharest.

Bookings this year are 1,613,000 and 1,908,000 passengers are flown in **1979**.

As part of the ROMBAC project, an Aeromaritime, S.A. Super Guppy is chartered in January **1980** to transport the first of three complete British-built BAC One-Eleven fuselages to Bucharest.

Coming in from Bucharest on August 7, the pilot of a Tu-154B-1 with 16 crew and 152 passengers is unable to see the runway and lands his Tupolev in the sea 300 m. short of the concrete at Nouadhibou, Mauritania (one dead).

Overall bookings for the year slide to 1,871,000.

A BAC 1-11-525 arrives from Hurn, England, on January 16, **1981**. Configured for passengers, it will serve as a finished pattern for the ROMBAC project. En route from Bucharest to Tel Aviv on June 17, a B-707-3K1C is forced to make an emergency landing at a Turkish air base because of a bomb scare. A BAC 1-11-487GK is delivered on July 28; configured as a freighter, it will serve ROMBAC as a pattern for cargo jets.

An An-24RV with seven crew on a training flight crashes while on final approach to Constanta on January 25, **1982**; there are no survivors.

Romanian aviation begins production of the British Aerospace BAe (BAC) 1-11 in the first quarter; a second pattern BAC 1-11-525 is delivered on March 12. The first ROMBAC 1-11-560 is rolled out on August 27 and is test flown on September 18; certified on December 18, it is delivered to TAROM on December 24.

In **1983-1987**, when little operational information is available, An-26s join the TAROM fleet, which also receives modernized Soviet jetliners. Services are begun or frequencies are increased to a total of 50 cities around the world; in April 1983, joint flights commence, in cooperation with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, between Bucharest and Madrid. On March 28, 1984, a BAC 1-11-525 is chartered to **Dan Air, Ltd./Dan Air Services** for 18 months.

Passenger traffic figures are rarely provided and by available year the figures read 1,304,000 (1982), 1,239,014 (1986), and 1,281,296 (1987), the latter figure a 3.3% increase.

The Romanian flag carrier in **1988** has a fleet of 83 aircraft: 5 B-707-3K1Cs, 8 each Romanian-manufactured Rombac BAC 1-11-487s and BAC 1-11-560s, 3 Il-62s, 2 Il-62Ms, 11 Tu-154Bs, 11 Il-18s, 2 An-26s, and 33 An-24s.

Customer bookings accelerate 3.2% to 1,322,535 and cargo rises 10.5% to 12.8 million FTKs.

There is confusion and tragedy in **1989**. While on a training flight from Otopeni Airport at Bucharest on February 9, a Tu-154B-2 with five crew suffers engine failure and crashes; there are no survivors.

An An-24RV freighter with seven crew crashes 50 km. W of Bucharest on December 28 while on a positioning flight; again, there are no survivors.

Traveler traffic for the state carrier fails as the result of the government's downfall. Passenger boardings decline 3.8% to 1,271,726. Freight, however, moves ahead by 13.2% to 14.48 million FTKs.

The longtime Romanian flag line is reorganized into a private company in **1990**, TAROM, S.A., with George Racaru as director general. Orders are placed for three Airbus Industrie A310-325s. Other Western aircraft in the fleet include 4 Boeing B-707-3K1Cs and 2 B-707-321Cs, plus 1 each BAC 1-11-401AK and 111-402AP, 2 111-424EUs that are leased to **LAR (Ligacoe Aereae Regionals, S.A.)** in Portugal, 1 BAC 1-11-487GK leased to **Anglo Airlines, Ltd.**, and 7 BAC 1-11-525FTs, 2 of which are leased to the Irish independent **Ryanair, Ltd.** All of these are painted in a new livery.

Code-sharing flights commence with **Royal Jordanian Airlines** in April over a route from Bucharest to Amman. During the summer and fall, five An-26s are transferred to **Romavia, S.A.**

Customer bookings recover and rise 3.9% to 1,321,498. In a reversal of the previous year, cargo plunges 11.9% to 12.77 million FTKs.

Customer bookings inch up to 1,343,562 in **1991** and freight traffic climbs to 17.42 million FTKs.

The first A310-325 is placed into service in the fall of **1992** and orders are placed for seven B-737-38Js. Joint operations commence with **Austrian Airlines, A.G.** on routes from Timisoara and Bucharest to Vienna.

Enplanements rise a very slight 0.2% to 1,340,881, but cargo rockets skyward an almost unbelievable 482.1% to 72.68 million FTKs.

In 1993, Director General Racaru adds another Airbus A310-325 and a pair of B-737-38Js. When the first "Baby Boeing" is received, it is christened *Alba Lulia*. In addition to domestic passenger and cargo services, the company offers international scheduled flights from Bucharest's Otopeni Airport to Algiers, Tripoli, Amman, Casablanca, Beirut, Baghdad, Istanbul, Cairo, Damascus, Abu Dhabi, Kuwait, Tel Aviv, Larnaca, Karachi, Bangkok, Singapore, Beijing, and New York.

Late in the year, the previous arrangement with **Austrian Airlines, A.G.** is rewritten into a code-sharing agreement for the flights from Timisoara to Vienna; the flights are made with Austrian aircraft.

Although customer bookings slide 1.5% to 1,642,236, cargo climbs 5.5% to 100.89 million FTKs. The year's operating and net losses are an identical \$11.47 million.

Airline employment stands at 3,300 in 1994 and a third A310-325, flown earlier by **Pan American World Airways (1)** and **Delta Air Lines**, is acquired under dry-lease in April. Also in April, a block-space agreement begins with **LOT Polish Airlines, S.A.** over a route from Bucharest to Warsaw.

On September 24 while on approach to Paris (ORY) from Bucharest with 182 passengers aboard, the new Airbus suddenly pulls into a steep nose-high altitude and rolls into a dive; pilots regain control and pull the plane up just 800 feet above the ground. No one aboard is seriously injured. Panic-stricken passengers are so relieved that, as soon as the plane is safely on the ground, many run forward to embrace the pilot.

Passenger boardings for the year plunge another 22.5% to 1,273,315 and freight all but collapses, declining 79.9% to 20.27 million FTKs. Revenues jump 14.1% to \$181.97 million, while expenses accelerate 20.8% to \$206.4 million. As a result, there is an operating loss of \$24.43 million and a net loss of \$44.78 million.

There is no change in the workforce during 1995. The Airbus involved in the September Paris event experiences another mysterious incident on March 1. While en route from Chicago to Amsterdam, the A310-325, while over Riviere-du-Loup, Quebec, suddenly climbs above its ATC-assigned cruise altitude, decelerates, and then plunges 7,000 feet before it is recovered. Again, no injuries are reported. From mid-March on, officials at the airline and at the two Bucharest airports receive multiple bomb threats.

Just after takeoff from Bucharest's Otopeni Airport for Brussels on March 31, Flight 371, an A310-325 with 10 crew and 50 passengers and piloted by Capt. Ilie Batanoui, suddenly goes into a steep dive and crashes in a sleet storm into a snow-covered field outside of the Romanian capital. There are no survivors and witnesses report seeing one or two explosions before the jetliner went down. The disaster is blamed on thrust asymmetry and crew failure.

The two remaining Airbuses are grounded until experts from their manufacturer can complete systems integrity verification during the first week of April.

It is reported on April 3 that post-crash tests on the victims of the March 31 disaster have confirmed an in-flight explosion, possibly caused by a bomb, as the cause of the disaster. On April 4, a bomb threat forces a company aircraft en route from Bucharest to Paris to make an emergency landing at Timisoara; no explosive is found. The next day, a TAROM BAe (BAC) 1-11-525FR flying from Bucharest to Stockholm is also the subject of a bomb threat and lands prematurely at Warsaw; again, no bomb is located.

On April 11, an official finding blames technical failure and not a bomb for the March 31 crash. Also during the month, joint flights commence with **CSA Czech Airlines** over a route from Bucharest to Prague.

During the summer, two B-707-3K1Cs are leased to **Air Afrique, S.A. (2)**. Later, on December 13, another jetliner with 49 aboard crashes near Verona, Italy; there are no survivors.

Enplanements swell 8.7% to 978,723 and cargo moves ahead by 3.5% to 17.49 million FTKs.

Airline employment is increased by 1.4% in 1996 to 3,345. In January, the flag carrier takes a 15% asset stake in George C. Paunescu's Bucharest-based **DAC Air, S.A.** The carrier turns over a number of do-

mestic routes to the new entrant, which launches services in May to 12 locations. **DAC Air, S.A.** receives operational support from TAROM in the way of reservations and ticketing, ground handling, and passenger facilities.

Director General Racaru infuriates the carrier's unions by announcing plans to dismiss 400 employees and ground all but 15 aircraft as a way of addressing TAROM's \$400-million debt. In May, this bold plan is blocked by the government, which is facing elections.

Service to Tashkent ends on July 24.

In December, two second-hand Aero International (Regional) ATR42-320s are received.

If the previous year was good for traffic, this one is bad. Customer bookings plunge 24.5% to 738,614 and 14.53 million FTKs are operated, a 16.9% decline. There is a \$24-million net loss.

The employee population is slashed 13% in 1997 to 2,900. The newly received ATRs begin domestic flights from Bucharest in January, during which month Marian Serbanescu is appointed acting director general.

The debt-ridden airline once more attempts to implement a restructuring program. In addition to mass layoffs, the carrier pledges to rid itself of all its old Soviet-built flight equipment.

Destinations visited now include Abu Dhabi, Amsterdam, Athens, Beijing, Berlin, Cairo, Casablanca, Chicago, Copenhagen, Dusseldorf, Frankfurt, Karachi, Lisbon, London, Madrid, Moscow, New York, Paris, Prague, Rome, Tel Aviv, Vienna, Warsaw, and Zurich.

The code-sharing services with **CSA Czech Airlines** cease in June. Discussions commence with **Iberia Spanish Airlines (2)** (**Lineas Aereas de Espana, S.A.**) concerning extension of their 1983 pact to include dual-designator flights from Bucharest to Barcelona.

Employees opposed to the carrier's restructuring plan go on strike during the week of November 10. Just after takeoff from Bucharest for Hanoi, an A310-325 with Romanian President Emil Constantinescu and his party on board and headed for a Francophone summit, is forced to return to the airport after the plane's center of gravity shifts toward the tail. The aircraft stays on the ground for two hours unloading five tons of fuel before proceeding on without incident.

On November 17, President Constantinescu orders Transport Minister Traian Basescu to sign a decree reappointing George Racaru as director general. The Reuters dispatch announcing the changeover quotes an unnamed transport ministry official as saying, "I have no idea if the minister appointed him because of what happened last week." The former CEO, Serbanescu, is demoted to technical manager.

Passenger boardings fall 6.1% to 693,733 while cargo drops 15.8% to 12.23 million FTKs. There is a net gain of \$15.22 million, despite an operating loss of \$12.03 million.

In the spring of 1998, the Romanian government requires a restructuring program be intensified. Layoffs, route rationalization, and replacement of the Soviet-era fleet continue to headline an effort to put the company into a position for privatization.

With the beginning of the winter season at the end of October, thrice-weekly roundtrips are introduced from Bucharest to Arad and Treviso, Italy.

Customer bookings accelerate 7.6% this year to 745,000, while freight traffic falls another 3.7% to 11.78 million FTKs. Revenues jump 9.8% to \$160.45 million, while costs ascend 6.9% to \$1.69.23 million. There is an operating loss of \$8.77 million and a net loss of \$7.06 million.

Flights continue in 1999. At the end of March, TAROM becomes the first Avions de Transport Regional customer to receive four aircraft in one day when it accepts delivery of four ATR42-520s.

In his article "Flying High" in the May 8 issue of the *Bucharest Business Week*, reporter Sean Hillen provides an extensive and flattering profile of General Manager Racaru. It is the most complete for any of the post-Communist era East European airline leaders.

On June 17, orders are placed with Boeing for four each Next Generation B-737-700s and B-737-800s; deliveries are scheduled to commence at the end of the year. Two each ATR42-520s and ATR72-520s

are added during these 12 months. The *Bucharest Business Week* reports on October 11 that ABN-AMRO Bank (Romania), S.A. and Credit Commercial de France, S.A. are both bidding to become advisors to the Romanian Transport Ministry and the State Ownership Fund on the privatization of TAROM. If successful, the CCF team would be led by former **Air France** CEO Christian Blanc. The AMRO Bank is named consultant on October 22.

Customer bookings accelerate 12.9% to 843,000, even as cargo traffic slides 5.4% to 11.13 million FTKs.

Airline employment at the beginning of **2000** stands at 2,921, a 1.2% increase over the previous 12 months. The "classic" B-737 fleet continues to include 5 Dash-38Js, and 1 each Dash-36M, Dash-36Q, Dash-33A, Dash-548, and Dash-5L9. Most are leased.

Due to a political dispute, services by **Estonian Air Corporation, A.S.** from Moscow to Tallinn are suspended on April 6. Following the route cutback, the B-757-5Q8 employed on the route is subleased by EAC to TAROM. It arrives at Bucharest wearing the basic Estonian color scheme with TAROM titles.

On June 20, a code-sharing agreement is signed with **Alitalia, S.p.A.** The Italian line will place its designator on the Romanian's twice-weekly ATR42-520 roundtrips from Bucharest to Parma via Cluj Napoca.

The Romanian Transport Ministry, on September 8, places 54.2% of the national carrier up for sale. Delivery of tenders is expected during the period between September 12 and November 3 and it is anticipated that as much as 51% of the stock will be held by Romanian nationals and/or juristic persons, thereby allowing TAROM to remain the national airline.

Due to lack of interest and acting on advice from its AMRO Bank consultants, the government, on November 24, puts off the sale of TAROM and announces that the privatization process will be relaunched on September 31, 2001. Analysts suggest that investors had probably been put off by the country's poor economic situation, high fuel prices, the airline's less-than-spectacular fiscal performance, and uncertainty surrounding the Romanian national elections scheduled for November 26.

Hosted by **JAT Yugoslav Airlines** CEO Mihajlo Vujinovic, a "meeting of the scheduled airlines of Southeast Europe" is held at Belgrade in mid-December to consider possible joint cooperation. Attending are representatives of **Malev Hungarian Airlines, Rt., Croatia Airlines, Air Bosna, S.A., Air Srpska, S.A., Monenegro Airlines, Macedonian Airlines, and Adria Airways (Adria Aviopromet) (2)**. Due to an unplanned management change, TAROM is unable to participate, but expresses interest in joint activities.

Of the eight participating airlines, six express interest in joint commercial operations, four in joint technical and maintenance activities, and five in joint training exercises. To study and discuss matters further, three working committees are established: commercial, chaired by a representative from **Adria Airways (Adria Aviopromet) (2)**, technical, chaired by a **Malev Hungarian Airlines, Rt.** Representative, and training, chaired by a representative from **JAT Yugoslav Airlines**.

Passenger boardings during these 12 months surge 20.4% to 1.23 million, while freight traffic is up 4.1% to 11.78 million FTKs.

TARS. See TAROM ROMANIAN AIR TRANSPORT, S.A.

TARSA (TRANSPORTES AEREOS RANQUELES, S.A.): Argentina (1939-1940). Roberto Ripamonti forms TARSA at Rio Cuarto on April 22, **1939**. After acquiring a Beech 17 Staggerwing and operating a number of proving and charter flights, Ripamonti begins thrice-weekly scheduled services on January 3, **1940**. The route flown extends from Cordoba to Huinca Renanco via Rio Cuarto and Vicuna Mackenna. Flights end on December 30.

TARTARSTAN AIRLINES (TARTARSTAN HAVA YOLLARI TL): Kazan Airport, Kazan, Tartarstan, 420017, Russia; Phone 7 (8432)

379 379; Fax 7 (8432) 372 665; <http://www.rz.uni-frankfurt.de/~puersuen/twakaz.htm>; Code KAZ; Year Founded 1992. When **Aeroflot Soviet Airlines** is reformed in **1992**, Tartarstan is broken off from the former Aerovolg directorate and established as an autonomous affiliate of the new **Aeroflot Russian International Airlines (ARIA)**. The company also acts as the country's Civil Aviation Department and assumes the old Aeroflot responsibility for general aviation, airports, and air traffic control.

Vasilii M. Nesterov is director general and he employs a leftover Aeroflot fleet of 10 Ilyushin Il-76s, 15 Tupolev Tu-154B-2s, 10 Yakovlev Yak-42Ds, and 10 Antonov An-26s to begin revenue services from Kazan. In addition to trunk and regional flights, the company also flies charters to Europe, the Mideast, South America, and Asia.

Enplanements total 1,241,650.

The declining Russian economy causes a significant downturn in traffic during **1993**. The fleet is altered to include 10 Yak-40s, 8 Yak-42Ds, 2 Tu-154B-2s, and 1 An-24B.

Passenger boardings plunge 25.9% to 986,220 while freight falls 33.3% to 104.5 million FTKs flown.

The amount of flight equipment available is slashed in **1994** and only 1 each An-24, Il-76, Tu-154B-2, and Yak-42D remain in service. Customer bookings decline another 30.9% to 680,500 while cargo drops 13.4% to 90.5 million FTKs.

The fleet is increased in **1995** by the addition of the company's first Western aircraft, a Boeing 727-193, brought in at the urging of the new director general, Mikhail Rosenstein.

Enplanements total 487,981. Passenger boardings decline by 33.3% in **1996** to 343,572.

The employee population stands at 696 in **1997**. Customer bookings accelerate a welcome 3.3% to 355,300.

The airline experiences serious problems caused by the Russian economic crisis that begins in August. Late in the year, the airline stops flying and its aviators disperse. Director General Rosenstein resigns and immigrates to Israel.

Tatarstan Airlines is "reborn" in May **1999** under the leadership of the new director general, Magomed Zakhorzhayev. In an effort to revitalize air transport in the nation, the Tatar government agrees to a direct loan of 30 million rubles for the overhaul of the remaining Yak-42Ds, the postponement of debt repayments, and compensation for losses suffered when flights are operated at fixed rates. The airline announces plans for the creation of a new maintenance base, the establishment of a meteorological service, and installation of a computerized reservations system. The government allocates 400 million rubles for the construction of a new runway and other improvements at Kazan International Airport. It also pledges to purchase two of the new Tupolev Tu-214-100s being built in the country.

Destinations visited at the beginning of **2000** include Adler/Sochi, Baku, Donetsk, Ekaterinburg, Fergana, Frankfurt, Istanbul, Kiev, Krasnodar, Krasnojarsk, Kiev, Makhachkala, Mineral Vody, Moscow, Nadym, Nefteyugansk, Norilsk, Novy Urengoj, Polyarniy, St. Petersburg, Samara, Samarkand, Surgut, Tashkent, and Urfa. The company employs 8 An-24s, 1 An-26, 5 Tu-154B-2s, and 22 Yak-40s on routes to these communities. The B-727-193 is still flown.

On January 21, the company places an official order for the two Tu-214-100s to be built this year at the local plant of the Kazan Gorbunov Air Industrial Association.

In May, the new runway is opened at Kazan International Airport. Other improvements unveiled include a French-built ATC system.

Flights continue in **1998**.

TAS (TRANSPORTES AEREOS SALVADOR, S.A.): Brazil (1949-1956). This FBO-turned charter carrier is formed at the coastal town of Salvador in **1949** by Capt. Parreiras Horta. In **1953**, the Brazilian state of Bahia offers Horta operating authority for scheduled services within that jurisdiction. With his fleet of two de Havilland DH 114 Herons and 10 Beech V-tail Bonanzas, Horta opens a successful third-level passenger and cargo service in **1954**.

A year later in **1955**, the carrier rejects a merger proposal from the much larger **Panair do Brazil, S.A.** The following year, however, negotiations are successfully concluded and the carrier is taken into the growing airline empire of **TAN (Transportes Aereos Nacional, S.A.)**.

TAS (TRANSPORTES AEREOS SQUELLA, S.A.). See **TAS (TRANSPORTES AEREOS SURAVIA, S.A.)**

TAS (TRANSPORTES AEREOS SURAVIA, S.A.): Chile (1964–1978). TAS (Transportes Aereos Squella, S.A.) is organized at Santiago de Chile by **Transa Chile, S.A.** pilot Oscar Squella Espina in **1964** to provide a scheduled all-cargo service between the capital city and Punto Arenas, along with general and beef-haulage charters to destinations in Chile and across the Andes to Argentina. The company also acquires Transa's Miami authority and revenue flights commence with a Curtiss C-46 Commando.

Two years later, in August **1966**, a former **Capital Airlines** Lockheed L-049 Constellation is purchased. Business thrives during the remainder of the decade, but as the **1970s** begin, the Constellation is replaced with two more Commandos. Service to Miami is suspended.

On January 1, **1973**, the carrier is reorganized and renamed **Transportes Aereos Suravia, S.A.** Director General Espina remains in charge of operations; however, his fleet comprises only one Commando.

On December 17, the left elevator of the Curtiss C-46A, with three crew, separates in flight causing the aircraft to lose control and crash near Aysen; there are no survivors.

A replacement Curtiss is acquired in **1974**. Unable to retain profitability in an increasingly thin market, TAS closes down in late **1978**.

TAS AIRWAYS, S.p.A. (TRANSPORTI AEREI SPECIALI): Italy (1990–1994). TAS is established at Milan's Linate Airport in **1990** to offer charter flights as well as scheduled services on a route from Parma to Rome. President Enzo Guerrieri and Managing Director Paolo Rizzi acquire a fleet of 4 Grumman G-159 Gulfstream Is and flights are inaugurated to Naples, Parma, and Rome.

Three more Gulfstream Is join the fleet in **1991**. Seasonal four-times-per-week Gulfstream I flights are undertaken from Parma to Olbia in June–September while year-round five-times-per-week Parma to Rome roundtrips are also operated.

The first jetliner, a British Aerospace BAe 146-300, is purchased from **Sagittair, S.p.A.** during the first quarter of **1992** and begins charter flights in mid-April. A second BAe arrives in June. Enplanements for the year total 56,140, only 9,315 of which are on the scheduled frequencies. Another BAe 146-300 is added in early **1993**, at which time airline employment stands at 46.

Operations continue only briefly in **1994** after Lorenzo Casgrande becomes president.

TASAIR (PTY.), LTD.: P.O. Box 451E, Hobart, 7000, Australia; Phone (03) 6248-5577; Fax (03) 6248-5507; http://www.tasair.co.au; Year Founded 1963. Tasair is established at Hobart in **1963** to offer scheduled passenger and cargo services to the North West Coast of Tasmania and to King Island. Flight training is also offered.

Scheduled flights are inaugurated between Devonport and Burnie in March **1998** and continued, along with regional charter flights. Airline employment by this time stands at 10.

Billing itself as "Tasmania's Regional Airline," Tasair operates 1 each Piper PA-31-350 Navajo Chieftain and Aero Commander 680 at the beginning of **1999**. Unable to maintain its economic viability, the company is forced to briefly shut down in July. Flights resume and by **2000**, Tasair is back, flying aircraft charters, scenic flights, King Island package holidays, flight training, and its regular airline services.

TASAWI AIR SERVICES, S.A.: Ul, Przestrzenna 10, Szczecin, PL-70800, Poland; Phone 48 (91) 434 2033; Fax 48 (91) 434 2503; Code 9X; Year Founded 1989. Tasawi is established as an air taxi by Wo-

jiczuk Andrezej in **1989**, but does not actually begin services until **1995**. Scheduled services are launched with a pair of British Aerospace BAe Jetstream 31s in July **1996**.

Service is maintained in **1997–1999**. Scheduled destinations visited include Katowice and Warsaw, with some flights operated on behalf of **EuroLot, S.A.**

Only one Jetstream 31 is operated in the first quarter of **2000**.

TASMAN EMPIRE AIRWAYS, LTD. (TEAL): New Zealand (1940–1965). In December 1937, the **Imperial Airways, Ltd.** Shorts S23 *Centaurus* makes a survey visit from Sydney, Australia, to Auckland, during which 50,000 citizens offer greetings. Following discussions held in the wake of the visit, representatives of New Zealand, Australia, and the U.K. sign the papers on April 3, **1940** establishing this jointly owned airline.

Capital shareholding is divided between the government of New Zealand (50%), Australia (30%) and the U.K. (20%) and it is agreed that the new entrant should receive five S23 flying boats. Only two will be delivered before World War II cuts off deliveries.

Later in the month, the first S23 arrives; christened *Aotearoa*, it is employed to inaugurate weekly return service across the Tasman Sea from Auckland to Sydney, on April 30. A second S23, the *Awarua*, is placed in service on the Sydney route in early August and frequency is increased to thrice weekly.

The Sydney frequency is increased to four per week after the December 7, **1941** Pearl Harbor attack, as the flying boats become the only commercial passenger service between New Zealand and Australia.

During **1942–1945**, the two S23s not only maintain their Tasman Sea operation (the 1,000th crossing is made in June 1944), but conduct military-oriented charter flights as far afield as Noumea, Tonga, Fiji, Samoa, and even Hawaii.

The first S25 Sandringham is delivered on July 17, **1946**; christened *Tasman*, it is placed on the Sydney route in August.

Enplanements for the year reach 11,600.

By the fall of **1947**, three additional S25s (*Australia*, *New Zealand*, and *Auckland*) have been delivered and placed in service. The *Aotearoa* completes its 442nd Sydney–Auckland flight on October 29 and along with the *Awarua*, is retired.

Bookings climb to 18,700.

Trouble with the Pratt & Whitney engines requires the withdrawal of the four S25s from service between February 23 and June 17, **1948**; the gap is filled by Douglas DC-4s leased from **Trans-Australian Airlines (Pty.), Ltd.**

Enplanements accelerate to 24,500.

The carrier's first Shorts S45 Solent is christened *Aotearoa II* by Princess Elizabeth at Belfast ceremonies on February 26, **1949**; the first Solent to be delivered, however, is the *Ararangi*, which arrives at Auckland on September 29. S45 Auckland–Sydney service begins on November 14. As three additional Solents join the fleet (the *Aotearoa II*, *Awatere*, *Aranui*), the last S25 Tasman Sea flight is made by the *New Zealand* on December 19; thereafter, the four Sandringhams are retired.

Traffic dips to 22,600 passengers carried.

The Auckland–Fiji service of **New Zealand National Airways Corporation, Ltd.** is taken over on June 6, **1950**. Twice-weekly Wellington–Sydney flights are started by the *Ararangi* on October 3. Quarterly S45 operations are begun on December 15 over a route Auckland and Wellington–Chatham Islands.

The year's bookings grow to 32,434.

On March 26, **1951**, a Solent arrives at Quintero, Chile, ending an 8,500-mile pioneering flight over a future transpacific route. Employing DC-4s leased from **Qantas Empire Airways (Pty.), Ltd.**, the carrier initiates weekly Christchurch–Melbourne service on June 28. A second S45 arrives at the same destination on April 19, having traced the same route. The Fiji–Lambasa return service launched in 1950 is withdrawn on December 11. On December 27, new monthly Solent service is extended from Auckland to Fiji, Cook Islands, and Tahiti—the Coral Route.

Boardings soar to 42,593.

The Coral Route frequency is advanced to every two weeks on May 26, 1952; Samoa is added as a stop on that network on October 14.

Enplanements drop to 37,141.

On August 1, 1953, the Solent route to Fiji is extended to Tonga. In October, the British government drops out of the TEAL consortium, leaving the Australian government to increase its shareholding by 20%.

Simultaneously, **British Commonwealth Pacific Air Lines, Ltd. (BCPAL)** is liquidated; in exchange for its 30% share, TEAL is given by **Qantas Empire Airways (Pty.), Ltd.** the defunct carrier's three Douglas DC-6s.

The year's bookings dip to 35,910.

The three ex-BCPAL DC-6s are delivered in March 1954 and are christened *Arahia*, *Arawhata*, and *Aotearoa III*. On April 7, the S45 *Ararangi* flies the final Wellington–Chatham Islands service. Auckland–Sydney DC-6 flights are inaugurated by the *Aotearoa III* on May 14; the next day, the same plane launches Auckland–Fiji “Hibiscus” service. The *Aotearoa II* flies the last Wellington–Sydney flying boat service on June 25 and the final Sydney–Auckland service two days later; with the exception of the *Aranui*, which is retained on the Fiji–Tahiti route, the surviving Solents are now all retired. Twice-weekly Christchurch–Sydney operations are begun by the *Aotearoa III* on June 29.

A total of 43,575 passengers are carried on the year.

The DC-6 *Arahia* completes the carrier's 10,000th Tasman Sea crossing on October 28, 1955. In November, the NZNAC responsibility for Auckland–Norfolk Island service is acquired; the route is flown every two weeks with a DC-4 leased from **Qantas Empire Airways (Pty.), Ltd.**

Bookings skyrocket to 50,864.

Boardings balloon again in 1956, up to 62,159. Auckland–Melbourne DC-6 service is launched in October 1957. The year's boardings remain level at 62,127.

On May 23, 1958, under Australian influence, orders are placed for three Lockheed L-188C turboprops from the U.S. The request is controversial and brings about the slogan “T.E.A.L.—Take Electras And Like It.”

Enplanements for the year rise to 67,438.

The first of three Electras to be delivered during the year arrives at Auckland on October 15, 1959 and is christened *Aotearoa IV*; the other two will be named *Atarau* and *Akaroa* following their arrival on December 22 and 29, respectively. The premier L-188C launches service from Auckland to Sydney on December 1 and to Melbourne on December 7. Orders are now placed for Fokker F.27-100s.

Traffic for the 12 months reaches 76,405 passengers carried.

Together with **British Overseas Airways Corporation, Ltd.** and **Qantas Empire Airways (Pty.), Ltd.**, TEAL becomes a co-owner of **Fiji Airways, Ltd.** on January 1, 1960. New Electra routes are now opened: Auckland–Fiji on January 5, Fiji–Auckland on January 6, Christchurch–Melbourne and Sydney–Christchurch on January 23, Melbourne–Christchurch and Christchurch–Sydney on January 24, and Wellington–Sydney on July 26.

When a new Tahiti airport is opened allowing landplane service, the *Aranui* completes the carrier's last flying boat service; arriving at Auckland on September 15, the Solent is retired. Late in the month, DC-6 flights commence to Bora Bora and on October 22, to Faa'a Airport, Tahiti.

As 1961 begins, the fleet consists of 3 L-188s and 3 DC-6s. The retired S45 *Aranui* is donated to Auckland's Museum of Transport and Technology. The final Tasman Sea DC-6 service is flown in May as the heavily used Douglas transports are retired. On July 25, in exchange for a grant of competition on the Tasman Sea route, Australia sells its 50% interest to TEAL to the New Zealand government, which now gains control of what will become its state carrier.

The entire fleet of New Zealand's now wholly owned flag carrier in 1962 consists of three Lockheed L-188Cs. Enplanements reach 148,000

in 1963. In 1964, orders are placed for Douglas DC-8-52s for service on the carrier's main routes. Traffic climbs 21% as plans are made to adopt a new name and livery identifying the airline as 100% New Zealand controlled.

The L-188C *Akaroa*, with four crew and two passengers, is destroyed as the result of a bad landing at Whenuapai Airport during a training flight on March 27, 1965; there are no fatalities.

As Auckland's new international airport is prepared for the arrival of the DC-8-52s, 25-year-old TEAL changes its name to **Air New Zealand, Ltd.**, on April 1.

TASMAN PACIFIC AIRLINES OF NEW ZEALAND, LTD. See **QANTAS NEW ZEALAND, LTD.**

TASMAN PACIFIC CONNECTION. See **QANTAS NEW ZEALAND, LTD.; REX AVIATION, LTD.**

TASMANIAN AERIAL SERVICES (PTY.), LTD.: Australia (1932–1934). Ivan and Victory Holyman of **Holyman Brothers (Pty.), Ltd.**, who have been flying a thrice-weekly service from Launceston, Tasmania, to Flinders Island (about 120 miles offshore), join forces with Lawrence McK. Johnson, who has been operating the same route, in October 1932 to form **Tasmanian Aerial Services (Pty.), Ltd.**

The merged carrier now extends its route west to King Island via Smithton. A de Havilland DH 84 Dragon is acquired during the summer of 1933 and in September, Launceston–Melbourne via Flinders Island flights commence. Having obtained the financial backing of two major steamship companies, the Holyman's are able to take administrative control of the airline on October 1, 1934, changing its name to **Holyman's Airways (Pty.), Ltd.**

TASS. See **TRANSPORTES AEREOS SAMUEL SELUM, LTDA.**

TASSILI AIRLINES, S.A.: Blvd. Mustapha ben Boulaid, 301 Hassi Messaoud, Algeria; Phone 213 (9) 73 84 25; Fax 213 (9) 73 84 251 Year Founded 1999. Tassili is established on paper at Hassi Messaoud in 1997 to provide transport for oil workers between that city and Algiers. Shareholding is divided between Sonatrach (51%) and **Air Algeria, S.A.** (49%).

Following a long gestation period, the company receives operating authority during the first quarter of 1999. Outfitted with a fleet comprising 1 each de Havilland Canada DHC-7-102 and DHC-6-300, revenue flights are launched on April 8. Plans are announced later in the year for the acquisition of Next Generation Boeing 737s, probably under lease from the major airline partner.

TAT (TOURAINÉ AIR TRANSPORT, S.A.): France (1968–1987). **Touraine Air Transport, S.A.** is set up by Michel Marchais in 1968, originally as a Beech King Air 90-equipped air taxi, but later, to provide scheduled passenger and cargo service on routes in France and to Corsica. Revenue flight operations begin between Tours and Lyon in March 1970.

In 1971, additional flights are added on behalf of **Air Inter (Lignes Aeriennes Interieures, S.A.)** as the carrier comes to act in a feeder capacity for the French domestic flag line. The company becomes a subsidiary of Societe Auxiliare de Services et de Materiel Aeronautiques (SAS-MAT) in January 1973 and receives its first Fokker F.27 on February 16. Also during the year, the small regional **Rousseau Aviation, S.A.**, together with its fleet of 8 Nord 262s, is taken over and merged.

In 1974 TAT diversifies into maintenance and professional pilot training. The training enterprise is known as CIPRA (Centre d'Instruction Professionnelle et de Recyclage Aeronautique).

In 1975–1977, a number of smaller airlines are absorbed during this period, including **Air Alps, S.A.**, **Air Paris, S.A.**, **Air Languedoc, S.A.**, **Rousseau Aviation, S.A.**, and **Taxi Avia France, S.A.** Operations grow to cover a 55-point network of domestic and international services from

four major cities: Paris (Orly), Lyons (Satolas), Lille, and St. Briec. Several other incidents occur during these years.

The No. 2 engine aboard a Beech 99, with two crew and six passengers catches fire just after takeoff from Nantes on July 2, 1975; the plane attempts an emergency landing, but crashes instead and there are no survivors.

The first express air cargo is flown in 1976 by the company's **TAT Worldwide Express** subsidiary, **TAT Express, S.A.**

Chairman/President Marchais's workforce totals 446 in 1978 and he oversees a fleet comprising 2 Fokker F.28-1000s, 2 VFW-Fokker 614s, 9 Fairchild Hiller FH-227Bs, 2 Nord 262s, 3 Aerospatiale Corvettes, 5 Beech 99s, and 1 Cessna 402.

An FH-227B with 18 passengers is involved in a ground accident at Paris (ORY) on July 5, 1979; there are no fatalities.

Operations continue apace in 1980-1982. During these years, two additional F.28-1000s join the fleet.

The Fokkers are not quite large enough to satisfy TAT requirements, but are excellent short field aircraft suitable to the majority of airports visited. A search for an F.28 replacement continues. In late summer 1983, arrangements are made to lease for a year's trial a pair of Douglas DC-9-21s from **SAS (Scandinavian Airlines System)**. SAS owns 14 of the type and is interested in selling them.

The two Douglas transports are delivered to Paris (ORY) in September and October via Denmark, then the only Scandinavian EEC country (thus making the planes non-import taxable). Revenue flights are undertaken from Paris (ORY) to Chambéry, Beziers, and Carcassonne. Although TAT wishes to proceed with the sale, SAS, upon reconsideration, elects to retrieve the DC-9-21s for additional service.

A subsidiary, TAT Export, is now created to undertake international charters. One each DC-9-14 and DC-9-41 are leased from **Finnair O/Y** for a year at the beginning of 1984. The former will suffer from significant summer payload restrictions during the summer while the other is simply too large.

A daily nonstop service from Saarbrücken and West Berlin's Tempelhof Airport is taken over by **Dan-Air/Dan-Air Services, Ltd.** LAB (Laboratoires et Ateliers de Bretagne, S.A.) is established during the year as a wholly owned maintenance subsidiary. Most importantly, the regional Air Alsace, S.A. is acquired, together with its three F.28-4000s.

The fleet in 1985 comprises 18 FH-227s, 7 F.28-1000s and 1 F.28-4000 employed on **Air France** contract work, 2 other F.28-4000s, 5 de Havilland Canada DHC-6s, and 6 Beech 99s.

The two **Finnair O/Y** DC-9s are returned when their charters expire.

The fleet in 1986 acquires an FH-227B cargo aircraft, two FH-227Js, and two Beech King Air 90s. In 1987, TAT is reformed and renamed **TAT (Transport Aerien Transregional, S.A.)**, also known as **TAT French Regional Airlines**.

TAT (TRANSPORT AERIEN TRANSREGIONAL, S.A.)/TAT (FRENCH REGIONAL AIRLINES): France (1987-1992). **TAT (Touraine Air Transport, S.A.)** is reformed in 1987 and renamed. Founder Michel Marchais remains as president/CEO, with Rodolphe Marchais as general manager. Their fleet comprises 6 Beech 99s, 1 Cessna King Air 90, 4 de Havilland Canada DHC-6 Twin Otters, 14 Fairchild Hiller FH-227Bs, 2 FH-227Js, 7 Fokker F.28-1000s, and 3 F.28-4000s. The F.28s constitute the world's third-largest in-service fleet of that type and regional services continue to be flown from Paris, Lyons, and Lille.

The workforce is increased by 11.7% in 1988 to 2,161. Another FH-227B is acquired, along with a Fairchild-Swearingen Metro II and a second King Air 90; one Beech 99 is retired.

En route from Nancy to Paris (ORY) on March 4, Flight 230, an FH-227B with 3 crew and 20 passengers, loses electrical power and crashes near Fontainebleau; there are no survivors.

Wet-lease operations commence in the spring on behalf of **Air Inter, S.A.**

In November, orders are placed for 30 Avions de Transport Regional ATR72-200s and 8 ATR42-300s.

Customer bookings for the year increase 15% to 2,240,000.

Company employment is cut by 30.6% in 1989 to 1,500 and orders are placed in March for eight Fokker 100s and four Boeing 737-200s. These will be employed both on company routes and as leasing vehicles. Meanwhile, two more Metroliners are received during the year's first half, together with two ATR42-300s. A 6.25% stake is taken in the new Ajaccio, Corsica-based **Compagnie Corse Mediterranee, S.A.**

Emphasis is now placed on increasing the company's freight business as feed contracts are signed with **Air France** and the French Post Office, and a revised **TAT Express, S.A.** overnight delivery service is created. The flag carrier takes 35% shareholding in July.

Passenger boardings jump 20% to 2.7 million. The year's profits total \$21.8 million (operating) and \$11.1 million (net).

The new aircraft begin to arrive in 1990; delivered are the four Boeings, two Fokker 100s, and three ATR42-300s. Following the **Air France** absorption of **UTA French Airlines, S.A.**, the European Commission directs **Air France** to divest itself of its TAT holdings in a three-stage pull-out. In addition, the regional receives six new routes from Paris (CDG) to London, Milan, Stockholm, Munich, Copenhagen, and Frankfurt. The newly received aircraft duly inaugurate the new service opportunities.

Later, the company will also receive permission to fly from Paris (CDG) to Helsinki and Vienna. The Fokker 100 order is increased in December by two options. Two Metroliners are withdrawn and two F.28-1000s are leased out, including one to **Air Reunion, S.A.**

Customer bookings ascend 11% to 3 million and revenues climb 22% to \$465 million. With expenses held in check, the operating profit grows to \$31.3 million, 18th best among all airlines in the world. Net gain is \$12.1 million.

Four ATR42-300s arrive in 1991, along with eight leased Fokker 100s and two ATR72s. The number of FH-227Bs is reduced to five, one of which is chartered to **Iona Airways, Ltd.**

As the result of the conditions placed upon **Air France** for its takeover of **Air Inter, S.A.** and **UTA French Airlines, S.A.**, the flag carrier is required to relinquish a number of regional routes to the smaller independent airlines. In January, the company receives a license to fly from Paris (CDG) to Frankfurt, Copenhagen, London (LGW), Milan, Munich, and Stockholm plus Nice to Berlin, Geneva, and Athens. Services are also newly provided from Lyons to Satolas and from Toulouse to Blagnac and London (LGW).

On April 1, the company revises the mission of its 14 Fokker 100s. Ten remain dedicated to the provision of **Air France** replacement services while four are now leased out to other airlines. Although not obligated to do so for another year, **Air France** transfers 25% shareholding in July to a subsidiary of the Credit National. It also sells a 10% stake to SASMAT, a financial group chaired by TAT Chairman Marchais.

At the same time, Chairman Marchais is able to acquire additional financial assistance to help with the acquisition of new aircraft. These include Banque Indosuez, Aerospatiale Finance, and Credit Agricole and Societe Generale, which commit a total of FFr 240 million. A FFr 1.2-billion loan is also acquired from the European Investment Bank.

By August, the carrier is operating 280 flights daily to 51 national points, plus 28 charter and 9 holiday destinations. Sales offices are opened in Frankfurt, Munich, Copenhagen, Stockholm, London, and Milan while flights from Paris to the latter destination commence in November.

Although traffic figures are not released, it is reported that a \$7.5-million profit is earned on revenues of \$450 million.

Four more ATR72s are received in 1992 as both King Airs and three FH-227Bs are withdrawn from service. Two Fokker 100s are leased to **Corse Mediterranee, S.A.**, the two F.28-1000Cs are chartered to **Air Austral** and **Iran Asseman Airlines**. The latter carrier also leases an F.28-1000 as a second Dash-1000 is loaned to **Stellair**. A new international hub is established at Paris (ORY) and the domestic hub is strengthened there and a new one established at CDG. At this point in February, the carrier announces plans for a major expansion of services and is renamed **TAT European Airlines, S.A.**

TAT (TRANSPORTES AEREOS DE TAMPICO, S.A. de C.V.): Mexico (1940–1950). Felipe Gutierrez de Lara sets up TAT at Tampico in 1940, obtaining an experimental Mexican government permit to begin offering Spartan biplane service between Tampico and Huejutla on May 22. A 30-year certificate is granted at the end of the year and full service begins over the *Ruta de las Huastecas* on January 2, 1941. Tampico–Ciudad Victoria–Monterrey experimental flights commence on October 15, 1942; however, the route is abandoned in 1943.

Tampico–Mexico City service is inaugurated on September 2, 1946 and proves so successful that the company purchases and introduces large Douglas DC-3s in 1947. In 1948, Avro Ansons are employed to begin a frequency from Tampico to Poza Rica.

In 1950, de Lara orchestrates a merger between his TAT, **Aeronaves Oaxaca, S.A. de C.V.**, and **SAN (Servicios Aereos Nacionales, S.A. de C.V.)** resulting in the amalgamated **LAUSA (Lineas Aereas Unidas, S.A. de C.V.)**.

TAT (TRANSPORTES AEREOS DE TETE). See COMAG

TAT (TRANSPORTES AEREOS TERRESTRES, S.A. de C.V.): Mexico (1943–1990). When **United Air Lines** takes over **LAMSA (Lineas Aereas Mexicana, S.A. de C.V.)** in 1943, it casts aside Gordon Barry's old Mazatlan–Tayoltita route, which had been maintained under a permanent route certificate on behalf of the San Luis Mining Company. To replace the service, TAT is organized at Tayoltita and begins service with a Stinson.

In late 1948, the mining concern purchases the 20-year old Ford 5-AT-11 in Florida for \$5,000 and spends \$60,000 to refurbish it. The machine is then flown down to Tayoltita and placed on the company's runs to Mazatlan and Durango, where it will serve until March 1966, when it is sold to an Arizona concern.

Following departure of the Ford, the carrier replaces its antique with a de Havilland DH-6-100 Twin Otter, the first of its type to fly commercially in Mexico. The company continues to offer charter and contract passenger and cargo flights; although its fleet is enhanced by the addition of a Britten-Norman BN-2 Islander and other single-engine types during the 1980s, its fleet at decade's end includes just one DHC-6-300.

Operations cease in 1990.

TAT EUROPEAN AIRLINES, S.A.: France (1992–1998). Based at Paris (ORY), **TAT (Transport Aerien Transregional, S.A.)**, France's largest independent carrier, is renamed TAT European Airlines, S.A. in February 1992 and embarks upon a major expansion of routes and services. The original founder of the French concern, Michel Marchais, becomes chairman; his son, Rodolphe, becomes president/general manager with Alain Corbel as deputy president and John Hanlon as deputy general manager.

The fleet now comprises 5 Avions de Transport Regional ATR42-300s, 4 ATR72-202s, 1 Beech Super King Air 200, 5 Boeing 737-200s, 3 de Havilland Canada DHC-6 Twin Otters, 11 Fairchild Hiller FH-227Bs, 9 Fokker 100s, 5 Fokker F.28-4000s, 4 F.28-2000s, and 12 F.28-1000s. Simultaneously, a contract is signed with Nordam for the development of a hush-kit system for the F.28s.

New Fokker 100 and F.28 services are inaugurated to Milan and Bergamo on March 9, three-times-daily to London's Gatwick Airport on March 30, to London (Gatwick) from Lyon on April 27, to Copenhagen on May 11, and to Munich on May 18. Domestic flights from Paris (ORY) continue to provide services to over 30 destinations while new services from De Gaulle are launched to Marseilles and Toulouse. During the summer tourist season, flights are laid on from Poitiers and Tours to London (LGW and STN) from Brive and the Corsican cities of Figari and Calvi.

On September 28 (effective January 1), a £17.25-million, 49.9% interest is acquired by **British Airways, Ltd. (2)** with an option to obtain the remainder before April 1997. Most former routes are maintained by

company planes, painted as they are in a mixed BA/TAT livery. Also in September, new business-class services are introduced from London (LGW) by Fokker 100s to Paris and F.28s to Lyon.

Enplanements at Chairman Marchais's carrier, under both monikers, increases 14.8% for the whole year to 910,905. Large, undisclosed, losses are suffered.

Airline employment stands at 3,000 in 1993. The process of applying a BA/TAT livery to the fleet continues into the new year.

By the end of the first quarter, the company, employing the British Airways brand name, is offering the major's Club Europe and Euro Traveler products and employing BA flight designers.

In March, the partners establish a new regional network based on both Paris and London (LGW, North Terminal). Following the loss of one of its two Fokker 100s in a spring takeoff accident, **Palair Macedonia** leases one each F.28-1000 and F.28-4000.

Daily flights are initiated to Munich, Stockholm, and Copenhagen from those locations, with twice-daily services also provided Lyon–Satalas and Marseilles–Provence. Flights from Paris are operated by Fokker 100s and those from London by F.28s. Orders are placed for seven Airbus Industrie A320s with which to replace the Fokker 28s.

TAT closes its U.K. office at month's end and suspends its flights from London (LGW) to Paris (CDG) in favor of BA, which gained slots on the route the previous fall when it acquired **Dan-Air/Dan-Air Services, Ltd.** At the same time, the London (LGW)–Lyon F.28 service becomes twice daily and a new twice-daily route is opened from Britain to Marseilles. A complaint is now filed with the EU Commission protesting **Air Inter's** monopoly on domestic French routes from Paris (ORY).

Four more Fokker 100s are delivered, two of which are leased to **Corse Mediterranean, S.A.**, along with four ATR72-202s. A significant number of replacement services are offered on behalf of **Air France** and five B-737s (two Dash-204Cs and one each Dash-210C, Dash 242C, and Dash-248C) are operated in support of **L'Aeropostale (2)**. In December, a five-year fiscal recovery plan is published, calling for 15% savings and the layoff of 350 workers.

Passenger boardings for the year only increase to 995,909 and revenues total \$328.8 million. Heavy fiscal losses are again taken.

In an effort to stem its fiscal hemorrhage, TAT begins to restructure in the spring of 1994. The fleet is cut to 6 Fokker 100s, 11 F.28s, 3 ATR72-202s, and 6 ATR42-300s. In January, an ATR72-202 is leased to **Kam-puchea Airlines**. Plans are made to launch service in June between London (LHR) and Paris (ORY) following resolution of a dispute concerning the access of "foreign" carriers to the historic French airport.

That dispute is officially terminated in May by order of the EU Commission, which requires **Air Inter** to end its historic monopoly. The commission requires that TAT be permitted to commence roundtrip flights from Paris (ORY) to London beginning on June 13, with Marseilles available by fall.

France and **British Airways, Ltd. (2)** agree that June 30 will be soon enough for the launch of the London–Paris (ORY) service. However, the British are upset by French restrictions that limit both the flag carrier and its French partner to four daily flights shared between them under their common flight designator.

During the 12 months, scheduled departures total 42,567 while enplanements ascend to 1,196,211.

Services to Paris (ORY) are enhanced in early 1995. On January 1, TAT is authorized to begin roundtrip services between Paris (ORY) and Toulouse; flights commence in March. Five Fokker 100s are leased to Munich-based **Deutsche BA Luftfahrtgesellschaft, GmbH**.

On May 29, six-times-per-day roundtrips commence from Paris (ORY) to Marseilles. Also in May, a new commercial organization is established at Tours. Provided with a new telephone sales and direct-selling base, it is charged with marketing all domestic services within France.

The Toulouse flights start in September. With the European network losing money, company executives determine to concentrate on building up domestic services.

As the year ends, 20 senior pilots take early retirement and although costs have otherwise been cut somewhat, the airline's deficit now stands at FFr 600 million (\$119 million).

Interested in increasing income, the carrier refuses to enter into deep-discount competition with **Air France Europe, S.A.** when the government completely deregulates domestic air transport on January 1, 1996. Liberalized competition is left to the other independents **Air Liberte, S.A.** and **AOM French Airlines, S.A.**

In order to provide additional space for **Air France Europe, S.A.**, TAT and **AOM French Airlines, S.A.** are ordered in February to vacate the West Terminal at Paris Orly Airport and move to the South Terminal. Both protest vigorously, with AOM Chairman Marc Rochet referring the matter to both Aeroports de Paris and the European Commission. **Air France** Chairman Christian Blanc proves powerful enough to push the two independents out by April.

Continuing to suffer financially, the carrier now concentrates solely on domestic operations, seeking to increase its market share on the routes from Paris (ORY) to Marseilles and to Toulouse from 12% to 20%, while also focusing on the Toulouse hub and its network of secondary routes. On April 1, the number of daily nonstop roundtrip frequencies from Paris (ORY) to both Marseilles and Toulouse is increased from six to nine.

B-737-336s, leased from **British Airways, Ltd. (2)**, now replace the Fokker 100s on the nonstop roundtrip services from Paris (ORY) to London (LHR) and from Marseilles to London (LGW), however, the Fokkers remain in operation from Lyon to London (LGW). Also during the spring, two ATR72-202s are dry-leased to **Vietnam Airlines**.

British Airways, Ltd. (2) takes 100% complete control of TAT in August.

Financially troubled competitor **Air Liberte, S.A.** is placed into receivership on September 26 and its chartered Douglas DC-10 widebodies are returned to Finland. Given six months by the bankruptcy court to develop a workable reorganization plan, its chairman promises to write a recovery program by the end of October, at which time \$120 million in fiscal year losses must be reported.

Following further exploration into the company's finances during the first week of October, the bankruptcy court determines that **Air Liberte, S.A.**'s fiscal situation is worse than was originally reported. Even though a number of unprofitable routes are now cut, the court announces that it must have outside acquisition bids by October 14 in order to avoid ordering the company liquidated.

Suitors for the stricken airline begin to emerge late in the week. With pressure to keep it in French hands and its unions seeking acquisition, **Air France** expresses interest. Under EC restrictions against acquisition of other carriers during the time of its \$4-billion state bailout, it appears unlikely that the independent will join the major's stable.

Other companies expressing an interest include **AOM French Airlines, S.A.**, which has been seeking a merger, along with **British Airways, Ltd. (2)**, **Virgin Express, Ltd.**, **TAT European Airlines, S.A.**, and **Corsair, S.A.**, the in-house airline of France's largest tour operator, Nouvelles Frontieres. Seeking to protect the interest of its TAT subsidiary, **British Airways, Ltd. (2)** CEO Robert Ayling complains to the European Commission at AOM should not be allowed to seek ownership as it, too, is up for sale as the result of restructuring plans announced in the wake of a 1995 state aid package to its parent, Credit Lyonnais.

With **AOM French Airlines, S.A.** and **Air France** out of the picture, two airlines, Nouvelles Frontiers, and a group of private investors, submit offerings for **Air Liberte, S.A.** to the Creteil Court on October 14.

The weakest offering is made by an unnamed French pilot acting on behalf of a group of private investors; no details are provided. **Virgin Atlantic Express, Ltd.**'s offering, for which details are also not provided, is not, as company officials put it, "fully compliant with the court's requirements."

Nouvelles Frontiers notes that it has partners in the Rivaud Bank and **Royal Air Maroc** who would be willing to take over **Air Liberte, S.A.**

(including its \$300-million debt) and make it profitable within 18 months. It would also make an offer to acquire **AOM French Airlines, S.A.** The two independents would be merged with its own in-house carrier, **Corsair, S.A.**, to create a major independent airline that could then compete with **Air France**.

In addition to an initial payment of \$5 million for AL's assets, the BA/TAT plan would essentially retain the present **Air Liberte, S.A.** fleet and routes, concluding a code-sharing agreement for routes now flown in competition and pledging not to begin new routes that overlap. French management would be maintained, 1,250 employees would be hired, and the British would make a major capital investment. The company would be reformed into the new French carrier Societe Nouvelle Air Liberte, S.A.

During the last week of October, the Rivaud bank and Nouvelles Frontiers abandon their efforts to take over **Air Liberte, S.A.**; Rivaud throws its support behind BA, with the two pledging to invest \$124 million in the ailing French independent. BA would hold 70% interest with the remaining 30% stake held by Rivaud. Meanwhile, **Virgin Atlantic Express, Ltd.** is joined by a number of unnamed investors in presenting an alternative to the French bankruptcy court handling the case; the court extends the deadline for its decision from October 30 to November 5.

Virgin Atlantic Express, Ltd. does not submit a bid and on November 5 the Creteil Court accepts the BA/Rivaud joint offering to acquire Air Liberte. Under terms of the agreement, which will become final on December 15, TAT Chairman/CEO Marc Rochet will assume the same post at Air Liberte; he will be joined by other TAT officials, as well as by Warren Tucker, head of BA's Investment and Joint Ventures Department. No immediate plans to merge the carriers are announced; however, schedules will be coordinated and flight operations will be streamlined.

In November, **Deutsche BA Luftfahrtgesellschaft, GmbH.** completes the sale of its turboprop international and domestic operations originating from Bremen, Stuttgart, and Friedrichshafen to the **Regional Airlines, S.A.** The five Fokker 100s are returned to TAT as the French carrier begins to operate its prize under the separate marketing name Deutsche Regional Airlines, S.A.

Although the acquisition of **Air Liberte, S.A.** is scheduled for completion on December 15, paperwork complexities will force a delay into the new year.

Combined enplanements on the year for both TAT and **Air Liberte, S.A.** total 4.5 million.

On January 4, 1997, the Creteil tribunal officially approves the **British Airways, Ltd. (2)** purchase of a 67% stake in **Air Liberte, S.A.** with the remainder held by Banque Rivaud. TAT Chairman Rochet is also confirmed as chairman of Air Liberte's board of directors. French government permission is simultaneously acquired by the British major to take over complete control and to integrate AL's operations into those of TAT.

TAT and **Air Liberte, S.A.**, under a substantial code-sharing agreement signed at the end of March, begin to more deeply integrate their services as of April 1, the day on which the process of liberalization within the European civil aviation industry is completed.

At this point, Chairman Rochet demands that the working conditions of TAT pilots be cut to the level of their Air Liberte opposite numbers. It is also required that pilots from both lines perform to the EU legal limits for flight and duty time. Believing this to be unsafe, flight crews from TAT and Air Liberte, with support from the European Cockpit Association, walk out on indefinite strike on April 9.

Flight crews at other airlines facing similar difficulties offer support; on April 24-25, pilots at **TAP Air Portugal, S.A.** declare a 48-hr. strike.

The process of amalgamation continues throughout the spring, summer, and into the fall. During these months, a number of routes are dropped, including Paris (ORY) to Chambéry and Castres. Most are quickly snapped up by other companies, including **Proteux Air System, S.A.**

Although legalization of the merger is not complete, the company trade name is no longer employed after November 1, the unified carrier being known as **Air Liberte, S.A.** Complete absorption is completed on March 15, **1998**.

TATA AIR LINES: India (1929–1946). Neville Vintcent and Johangir R. S. Tata in July **1929** establish the private carrier **Tata Sons** at Karachi as a division of the latter's huge family trading enterprise Tata Sons, Ltd. and submit a plan to the government for a Karachi to Bombay air service. A license is successfully sought to open a connecting service to link the **Imperial Airways, Ltd.** Karachi base with cities further south. The 10-year contract, if successfully executed by Tata and Vintcent, will eventually bring revenues for mail on a sliding scale pounds-per-mile basis.

Beginning Indian commercial air transport, Tata and Vintcent inaugurate an unsubsidized weekly de Havilland DH 80A Puss Moth mail service on October 15, **1932** over a route Karachi–Ahmedabad–Bombay and Bombay–Bellary–Madras. The initial flight, completed by Vintcent from Bombay after Tata had arrived at that city from Karachi, reaches Madras on October 16.

Vintcent begins the first leg of the Madras–Karachi return flight next day with Tata arriving at that destination on October 18.

In **1933**, the first full year of service, a total of 155 passengers and 10.71 tons of mail are transported over 160,000 miles. Operations continue apace in **1934**.

In order to gain an annual Rs 20,000 subsidy from the Nizam of Hyderabad, the Bellary stop is replaced on January 4, **1935** by one at the new airfield at Hyderabad. On February 23, Vintcent flies a proving mail route Bombay–Calcutta via Nagpur and Jamshedpur, with the carrier's newly arrived second Puss Moth. During the summer, a Miles Merlin is received and on November 26, it begins an experimental weekly mail service Bombay–Trivandrum via Goa and Cannanore.

American-made WACO YQC-6s join the fleet in **1936** and the Kathiawar Peninsula town of Bhuj becomes a stop on the Karachi–Ahmedabad segment. Tata carries the first Colombo–Karachi airmail, starting on Christmas Day.

The carrier's name is changed to **Tata Air Lines (Pty.), Ltd.** in **1937**. Two de Havilland DH 89As are placed in service during late summer. WACO mail service begins over a Bombay–Delhi route via Indora, Bhopal, and Gwalior, on November 6. The Karachi–Madras mail route is extended to Colombo with WACOS on January 22, **1938**; DH-89A passenger service to the same point is inaugurated on January 29. On February 28, the Indian government grants the carrier a 10-year mail subsidy for its Karachi–Colombo service as a part of The Empire Air Mail Scheme. The Bombay–Trivandrum route is extended to Trichinopoly on March 2; this move links the two principal southbound routes from Bombay. The first of four DH-86s purchased from **Qantas Empire Airways (Pty.), Ltd.** arrives in September and is placed in service on October 9.

During **1939–1940**, additional DH-86s are placed on the passenger routes. In **1941**, five Stinson Model A Tri-Motors are acquired from the U.S. carrier **Marquette Airways** and are placed in service. On November 1, with Douglas DC-2s loaned by the government, nonscheduled multistop Karachi–Baghdad flights are begun. Internal Indian routes are maintained in **1942** with three DC-2s turned over by the RAF in July, August, and October of the former year.

The route to Trichinopoly is suspended in January **1943** and two of the Douglas transports are withdrawn, one each in July and November. On March 1, **1944**, DC-3s are placed on the weekly Bombay–Colombo and twice-weekly Bombay–Karachi routes. These replace the Stinsons, which are now withdrawn, and the last DC-2, retired on July 6. Meanwhile, the network is strengthened in April by the inauguration of Jodhpur services.

In **1945**, DC-3 routes are opened from Bombay to Nagpur and Calcutta on April 16, Bombay to Bangalore and Coimbatore on April 25, Bombay to Bangalore and Madras on June 24, the former being suspended on July 3. The carrier is allocated four DC-3s on August 25 and

leases/purchases eight others from the U.S. Foreign Liquidation Commission. On July 29, 1946, **Tata Air Lines, Ltd.** becomes a public corporation and is renamed **Air India, Ltd.**

TATNEFTAERO: Vishnevski Str., No. 26, Kazan, 420043, Russia; Phone (8432) 380988; Fax (8432) 380969; Code TNF; Year Founded 1997. This privately owned charter carrier is formed on March 17, **1997** and registered on May 6. A refurbished Tupolev Tu-154M is acquired in August **1998** and the Russian air transport ministry (FSVT) grants the new concern an operator's certificate on September 15.

The Russian currency crisis forces the company to put an 18-month hold on its start-up. Employing the Tu-154M, revenue operations commence at the end of March **2000**. Over the next several weeks and into the summer, Tatneftaero operates flights of several days' duration to Delhi, Islamabad, Abadan, Yakutsk, Anadir, Pevsk, Norilsk, Igarka, Noyabsk, Nizhnevartovsk, Nadim, Ufa, Rostov, Anapa, Krasnodar, Stavropol, Mineralnie Vodi, Sochi, and Astrakhan.

On August 15, the company's fleet is increased by the addition of a Tu-134A. The Tu-154M operates a charter from Moscow to Zurich on September 1 transporting the Russian football union's combined national team for World Cup elimination matches. The aircraft returns to the Russian capital on September 3.

With an official delegation from the Tartarstan Republic embarked, including State Council Chairman F. Khan. Mukhametshin, the Tupolev on September 4 flies from Kazan to Hanover for a weeklong visit to the Expo 2000 World's Fair.

A second Tu-154M joins the fleet on September 11. It is joined by the Tu-134A which, on October 19–21, operates a charter flight for Tatneft representatives over a route Kazan–Simferopol–Kalingrad–Moscow and back to Kazan.

Under contract to the tour operator Ver-Tur, a Tu-154M operates a charter from Kazan to Sharm al-Sheikh in Egypt between October 28 and November 6. The second Tupolev, flying on behalf of Inturtsenter, transports tourists from Kazan to Sharja, UAE, via Orenburg between October 30 and November 9. Between November 1 and 3, company representatives are flown on the Tu-134A on a route-proving and public relations service from Kazan to Prague and back. Upon its return from Egypt, the premier Tupolev is turned around and flown with tourists to Greece between November 8 and 11. Known as a "fur tour," this trip and others like it has the express purpose of letting sight-seers return with as many Western-made goods as possible.

Flights continue in December, during which month a homepage is opened on the World Wide Web.

A total of 16,974 passengers are transported between March and December 31.

TATONDUK AIR SERVICE: P.O. Box 61680, 6348 Old Airport Road, Fairbanks, Alaska 99706, United States; Phone (907) 474-4697; Fax (907) 474-4687; <http://www.tatondukflying.com>; Code 3K; Year Founded 1977. Tatonduk is established by **Everts Air Fuel** founder/owner Clifford R. Everts in early 1977 to operate passenger and cargo taxi flights linking Fairbanks with its base at Eagle, on the Yukon River, 5 mi. inside the U.S. border with Canada. The service, a division of the owner's Tatonduk Outfitters Limited, supports those engaged in the gold mining and trapping industries, as well as hunters and fishermen. In **1984**, Robert W. Everts graduates from Embry Riddle Aeronautical University and goes to work for his father.

Regularly scheduled commuter flights are inaugurated by the company's Piper PA-31-310 Navajo in March **1985**. A Piper PA-32R-300 Cherokee Lance is acquired in **1989** as the commuter becomes a code-sharing partner of **Frontier Flying Service**.

Tatonduk's two aircraft fly a total of 1,114 passengers in **1990**. Enplanements grow by a total of 10 customers in **1991**. In addition, 197,144 pounds of mail are transported. Passenger operations are scaled back in **1992–1994** and the Navajo is sold. Meanwhile, in **1993**, Robert W. Everts becomes the company's owner/operator.

Following the collapse of **MarkAir** in April 1995, Everts is granted authority to establish another division of Tatonduk Outfitters Limited, an all-cargo concern under the marketing name Air Cargo Express (2).

A Douglas DC-6 is leased and roundtrip freight service is inaugurated on July 19 from Fairbanks to Barrow, four times a week. On the other days, charters are operated to gold-mining sites in the state's interior.

Operating income exceeds costs and there are profits: \$240,000 (operating) and \$223,000 (net).

The Tatonduk Air Service fleet in 1996 includes 2 Cessna Lances and 1 Cessna 206. Two more DC-6 freighters enter service with Air Cargo Express (2).

A total of 1.07 million FTKs are operated, a huge 204.5% increase. Revenues of \$7.3 million are generated and expenses are \$6.16 million. Operating gain swells to \$1.14 million while a net \$1.05-million profit is posted.

The total fleet of President/General Manager Everts in 1997 includes 3 Piper Lances, 1 Cessna 206, and 3 DC-6s. Although traffic figures are not available at this writing, revenue figures demonstrate a good year.

Operating revenues skyrocket 74.1% to \$12.7 million, while expenses increase 72.6% to \$10.63 million. The operating gain shoots up to \$2.08 million and a \$1.79-million net profit is banked.

Airline employment in 1998 stands at 28. Flights continue without incident or gain. Cargo traffic falls 94.7% to 10,000 FTKs. Still, revenues are up 20% to \$15.26 million and costs are \$14.03 million. The operating profit falls to \$1.2 million, while the net gain slides to \$929,000.

The cargo division's fleet is altered in 1999 as five DC-3s join the fleet, replacing the earlier DC-6s. The new additions provide scheduled services to 13 major markets in Alaska, including Aniak, Barrow, Bethel, Dillingham, Emmonak, Galena, Iliamna, McGrath, King Salmon, Kotzebue, Nome, St. Mary's, and Unalakleet. On-demand charters are also flown. Freight traffic during these 12 months plunges again, dropping to 3,968,000 FTKs.

A total of 23 full-time and 2 part-time pilots are employed at the beginning of 2000 to fly the company's 2-division fleet, which now includes 2 each C-206s and C-208Bs, 1 PA-32R-300 Lance, 3 PA-32-300 Cherokee Sixes, and 5 DC-3s. Air Cargo Express (2) now opens a homepage on the Internet's World Wide Web.

This year, for the first time, the salmon runs along the entire Yukon watershed collapse. By fall, subsistence salmon fishing must be shut down and Governor Tony Knowles declares an emergency. In addition to the economic loss, thousands of dogs in rural bush areas, used to haul sleds and are dependent upon salmon for food, face starvation or liquidation. Something must be done to avert this disaster and a number of small airlines, coming off a bad year caused by rising fuel and insurance costs, are able to assist, while also enjoying renewed profits.

The key to the situation, in the eyes of many, is the transport of donated dog food and fish obtained by local governments and tribes as the result of press reports of the failed salmon returns. In late August and September, a massive food shipment is organized by Warbelow's at Fairbanks, with support from the U.S. Postal Service and other small airlines.

Because Warbelow's has made special arrangements with its competitors, the USPS, which will not be directly involved in distribution, agrees to allow the donated food to be classified as bypass mail, for which rock-bottom postage is charged. The entire \$25,000 bill will be paid by the Tanana Chiefs Conference, which also rents refrigeration to hold frozen food awaiting delivery.

Under the direction of Chief Pilot Michael Morgan, Warbelow's, which has the only bypass mail shipping permit in Fairbanks, runs the packages through its meter and, with USPS assistance, farms out this mail for delivery. The airlines involved, including **Warbelow's Air Ventures**, **Frontier Flying Service**, **Arctic Circle Air Service**, **Belair**, **Larry's Flying Service**, **Servant Air**, **Tanana Air Service**, **Tatonduk**, and **Wright's Air Service**, are paid a rate per pound (between 40¢ and \$1 depending on distance), to haul the approximately 100 tons of food to villages along the Yukon, Tanana, and Koyukuk Rivers.

TATRA AIR, A.G.: M. R. Stefanik Airport, Bratislava, 82314, Slovak Republic; Phone 421 (7) 292 318; Fax 421 (7) 292 459; Code QS; Year Founded 1990. Tatra is established at Bratislava-Ivanka Airport in July 1990 to operate as the new nation's flag carrier on international, regional, and domestic routes. Slovair, with two-thirds of the holdings, and the Swiss regional Crossair, Ltd. holding the other third, jointly own the enterprise. Milos Vrablica becomes director general and Slovair provides both staff and infrastructure. Close cooperation is maintained with **CSA (Czechoslovak Airlines)** while **Crossair, Ltd.** trains flight and ground crews at its Basel base.

A SAAB 340A turboprop is leased from **Crossair, Ltd.** and is employed to inaugurate scheduled services on April 2, 1991. Initial internal flights are undertaken linking the carrier's base with Tatry, Popra, and Kosice, and Sliac with Prague. In August, former Swissair official Jana Jorasek is named director general.

In September, negotiations are held with **CSA (Czechoslovak Airlines)** aimed at allowing Tatra to fly replacement services for the flag carrier. Later in the year, markets are initiated at Zurich and Munich, with twice-daily frequencies to the former and daily to the latter.

During the spring of 1992, Jorasek's carrier, due to severe start-up losses, loses its **Crossair, Ltd.** support and aircraft. The Swiss carrier, having lost over a million Swiss francs and having received no lease payments for its turboprop, withdraws the SAAB 340A at the end of March. Tatra is able to charter a Yak 40 from the state of Slovakia with which to maintain its services to Zurich and Munich.

New Austrian owners, the freight forwarding concern Cargo Rachbauer of Salzburg, replace the Swiss in April and the company acquires three Let L-401s and two chartered SAAB 340BQCs, the latter formerly operated by **Air Exel Belgium**. International destinations now visited from Bratislava include Berlin (Schoenfeld), Geneva, Stuttgart, Zurich, Munich, and Frankfurt. A frequency is also inaugurated to Berlin (Schoenfeld) from Tatry and Popra. Protected by the Czech government, Tatra in July demands that **Deutsche BA Luftfahrtgesellschaft, GmbH**, split its Stuttgart-Prague service with it.

Enplanements total 8,174 and revenues of \$2.4 million are generated.

Airline employment stands at 90 in 1993. The company shuts down for a month in June in protest of the delay in granting it national carrier status; flights are resumed in July and the move does not impact the year's traffic figures. Meanwhile, the company, having spent many months seeking investment from other airlines, finally finds a partner. Unable to make lease payments on its own SAABs, Lausanne, Switzerland-based **AlphaLines** purchases Tatra in August.

Passenger boardings are up a spectacular 56.6% to 18,832 while freight skyrockets 118.7% to 25,000 FTKs flown. Revenues slide 20% to \$2 million.

The workforce is decreased 12.2% in 1994 to 55 and the fleet now includes 1 L-410UVP and 2 SAAB 340BQCs, 1 of which is leased. New routes are opened to Prague and Kiev.

Customer bookings accelerate another 31.9% to 24,833 while cargo jumps 38.4% to 33.9 million FTKs. Revenues increase by 14.9% to \$2.3 million.

Five employees are rehired in 1995 to help the carrier initiate new services to Warsaw.

Enplanements jump 26.4% to 31,395 and operating revenues climb 18.9% to \$3.85 million.

The workforce is increased by 13.3% in 1996 to 68 and the leased fleet now includes 2 SAAB 340QCs and 5 Boeing 737-300s.

Customer bookings increase 38.2% to 43,401 and 61,500 FTKs are operated, a 23% increase.

During the first quarter of 1997, Tatra becomes the first European Customer for the SAAB 2000, ordering two of the jetprops. The first of the Swedish-made aircraft is delivered in October and on November 1 enters service over a route from Bratislava to London (LGW). Plans are made at the end of the year for receipt of the second SAAB 2000 in March.

Passenger boardings accelerate 26% to 54,738, while cargo jumps 32% to 81,000 FTKs.

Service is maintained in 1998.

Customer bookings jump 23% to 70,000, while freight traffic rises 21% to 98,000 FTKs.

Airline employment in 1999 stands at 68.

TAUNUS AIR, GmbH. & CO., K.G.: Frankfurt Airport, GEB 515, Frankfurt, D-60549, Germany; Phone 49 (611) 840 096; Fax 49 (611) 840 066; Code TAQ; Year Founded 1990. Taunus is set up at Frankfurt by Georg Patzold in 1990 to provide executive and small group passenger charters and air ambulance flights to destinations throughout the world. Another base is established at Wiesbaden. By 2000, President Patzold oversees a 14-person workforce and a fleet of 3 Learjet 35A Century IIIs.

TAVAJ (TRANSPORTES AEREOS REGULARES, S.A.): CP484, Rio Branco (Acre), 69901-320, Brazil; Phone 55 (68) 223-2866; Fax 55 (68) 224-3654; <http://www.tavaj.com.br>; Code TVJ; Year Founded 1994. TAVAJ is established at Rio Branco (Acre) in January 1994 to provide scheduled air taxi flights to local destinations. Idaiberto Luis Cunha is managing director and he begins revenue services with three Embraer EMB-110P2 Bandeirantes.

Airline employment stands at 105 in 1995 and Managing Director Cunha is able to report to ICAO that for the first quarter, his enplanements have skyrocketed to 5,440, a 212.1% increase over the same period a year earlier.

Forty-five new workers are hired in 1996, a 42.9% increase. The company's 9 Bandeirantes, 1 Fokker F.27-600, and 3 lightplanes fly a total of 28,708 passengers through July, a huge 115.6% increase. During the fall, a 12-year, \$48-million lease is signed with Bombardier Regional Aircraft for 4 DHC-8Q-200Bs.

The first two of the combi DHCs enter service in February 1997, while the third arrives in June and the fourth in July. The new turboprops allow the company to significantly increase its passenger and cargo services to small communities in the central and western regions of Brazil.

Flights continue during the remainder of the decade.

Destinations visited at the beginning of 2000 include Altamira, Belem, Boa Vista, Boca do Acre, Brasilia, Carauari, Costa Marques, Cruzeiro do Sul, Cuiaba, Eirunepe, Feijo, Guajara-Mirimi, Itaituba, Labrea, Manaus, Parintins, Porto Velho, Rio branco, Sao Gabriel, Santarem, Tabatinga, Tarauaca, and Tefe. In August, a Fokker F.27-600 is leased from the new freight operator **Jet Sul Cargo, Ltda.**

TAVINA (TRANS-COLOMBIANA DE AVIACION, S.A.): Colombia (1973–1986). Gabriel Echavarria Obregon forms TAVINA at Cartagena in 1973 to undertake Douglas DC-3 charter services for oil and mining companies. The base is transferred to Barranquilla in 1974.

In 1979, TANA (Transportes Aereos Nacionales, S.A.) is purchased and absorbed, together with its aircraft and route network. The major shareholder in the private airline remains Aeroejecutivos (49%). The combined route system now extends throughout western Colombia to the Ecuadorean frontier.

In 1980, this system is consolidated, with scheduled services being concentrated at a Barranquilla hub in the north. In 1981, 4 Embraer EMB-110P-1s, 2 de Havilland DHC-6 Twin Otters, 2 Britten-Norman BN-2A Trislanders, 1 Swearingen Merlin, and 1 Swearingen Metro II are brought into supplement the Douglas transports.

Enplanements reach 140,000 for the year.

As is the case for other carriers, rising fuel prices and the world economic recession conspire with stiff competition to cause traffic downturns and financial difficulties.

Passenger boardings show steady decline, plunging to 104,000 in 1982.

An EMB-110P-1 with two crew and five passengers fails its takeoff from Barranquilla on May 29, 1983, and crashes; there are no fatalities.

The year's bookings total only 96,000.

Major fleet rationalization occurs in the early 1984 as the Embraers and Swearingens are replaced by six de Havilland DHC-6 Twin Otters

and two Britten-Norman BN-2A Trislanders. At this point, the route network for the 100-employee airline includes stops at Cartagena, El Banco, Guamal, Maicao, Mompos, Monteria, Providencia, Riohache, San Andres Island, and Valledupar.

The disappointing traffic figures do not improve with the general return to prosperity in mid-decade and TAVINA fails in 1986.

TAXADER (LINEAS AEREAS TAXADER, S.A.): Colombia (1963–1965). The onetime air taxi **Taxader (Taxi Aereo de Santander, S.A.)** is reorganized in 1963 and renamed in order to promote its status as a scheduled second-level airline. Two Douglas DC-4s ordered in 1962 are delivered and permission is received from the U.S. CAB to inaugurate scheduled passenger flights from LAT's base at Bucaramanga to Bogota, Barranquilla, and Miami. The four-engine airliners undertake those international frequencies, while five DC-3s and four Curtiss C-46 Comandos continue to operate at home.

While on a March 8, 1964 domestic flight, a DC-3 crashes near Bogota (33 dead). The Douglas transports begin *El Cafetero* (The Coffee Tree) Florida service in October. Unable to achieve sufficient financial return on its domestic or international routes to pay for its new airliners, Taxader ceases operations in 1965.

TAXADER (TAXI AEREO DE SANTANDER, S.A.): Colombia (1947–1963). Dr. Herman Gomez-Gomez founds Taxader at Bucaramanga in 1947 to operate nonscheduled Cessna lightplane air taxi flights to Barranquilla and various unimproved destinations in Colombia's northeast.

Following the failure of **LANSA (Lineas Aereas Nacionales, S.A.)** in 1954, Taxader begins to expand. Capitalization is raised to 3 million pesos (\$250,000) and a fleet of 5 Douglas DC-3s is purchased. Over the next five to six years, a multistop route network is established linking Bogota with Bucaramanga and Barranquilla.

Three Curtiss C-46s configured for passenger service as "Super C-46Ts" are acquired in 1960. These aircraft allow the carrier to expand its route network over the next year from north to south, adding such destinations as Cali, Pereira, Cartagena, and San Andres Island.

Two DC-4s are purchased in 1962 and service is initiated to the Ecuadorian frontier towns of Pasto and Popoyan. Orders are placed for DC-6Bs. While on an August 23 domestic flight, a DC-3 with 31 aboard crashes at Barrancabermeja (18 dead). A second Douglas transport, with 24 aboard, also goes down near Barrancabermeja on December 6; again, there are no survivors.

The company is reorganized in 1963 and renamed **Taxader (Lineas Aereas Taxader, S.A.)**, the better to market its status as a scheduled second-level carrier.

TAXI AEREO DE MEXICO, S.A. de C.V.: Toluca International Airport, Toluca, Mexico; Phone 52 83 28 62 80; Fax 52 83 28 62 40; Year Founded 1981. TADM is set up at Toluca in 1981 to provide executive and small group passenger services worldwide. By 2000, General Manager Julio Ituarte employs 4 full-time and 2 part-time pilots to fly his Canadair CL-601 Challenger and Learjet 35A Century III.

TAXI AERO NACIONALES, C.A.: Venezuela (1964–1969). Established at Ciudad Bolivar in 1964, this nonscheduled carrier undertakes domestic flights with an antique fleet that comprises 1 Lockheed L-10

Electra, 1 L-12, 1 de Havilland DH-104 Dove, and 7 Cessna lightplanes. A Curtiss C-46 Commando is also leased and employed on all-cargo services. The concern fails in **1969**.

TAXI AEREO OPITA, S.A. *See* **TAO (TAXI AEREO OPITA, S.A.)**

TAXI AEREO PANAMENO, S.A.: Panama (1961–1965). Never able to gain economic viability, TAP operates a pair of Curtiss C-46 Commandos on scheduled domestic all-cargo services between **1961** and **1965**.

TAXPA (LINEA AEREA TAXPA, S.A.): Chile (1967–1992). Having established guest facilities on Juan Fernandez Island, which is better known as Robinson Crusoe Island, famous as the location where Alexander Selkirk was shipwrecked, TAXPA is formed at Santiago de Chile in January **1967** to provide an air link from the capital city's Los Cerrillos Airport. Initial equipment is a Douglas DC-6B.

By the middle **1980s**, the fleet of the one-route airline is changed to comprise 2 Piper PA-31-310 Navajos, 1 Piper PA-23 Aztec, 1 Cessna 310, and 1 Aero Commander 690. Late in the decade, President Carlos Griffin acquires an updated Douglas DC-3.

The recession of the early **1990s** forces the little service to shut its doors in **1992**.

T-BIRD AIR TRAVEL: United States (1981–1984). T-Bird is established at Houston (HOU) in **1981** as successor to Ray Kroc's one-year-old San Diego Padres Air Travel holiday service. Affiliated with Thunderbird Airways, the charter operator undertakes passenger group charter and contract service flights with a Boeing 727-100. Customer bookings accelerate 33.3% to 4,000.

The lone "three-hole" jetliner is able to generate customer bookings of 35,000 in **1982**. On revenues of \$2 million, a \$25,000 operating profit is achieved. In **1983**, the carrier enplanes 72,000 passengers, a remarkable 105.7% boost.

Operations cease during the summer of **1984**; however, in the fall, Reno-based Silver Wings International steps forward and purchases T-Bird's assets.

TCA (TRANSPORTES CARGA AEREA, S.A.): Brazil (1947–1949). Rui Vacani, with fellow owners Roberto Taves and Marcilio Gibson Jacques, set up TCA as a cargo carrier at Anapolis, in Goias State, on December 22, **1947**. A fleet of three ex-military Douglas C-47s is assembled and operations are undertaken in the northeast shoulder area of the country.

The carrier, which has lost two of its three freighters in crashes, is reorganized on August 24, **1949**, emerging with increased capitalization and a new name, **Loide Aereo Nacional, S.A.**

TCA (TURKS AND CAICOS AIRWAYS, LTD.). *See* **TURKS AND CAICOS AIRWAYS, LTD.**

TCI SKY KING CHARTERS, LTD.: P.O. Box 398, Provo International Airport, Providenciales, Turks and Caicos Islands; Code RU; Year Founded 1996. TCI is established in **1996** to offer scheduled and

charter services around the Caribbean from Providenciales. Employing a fleet of 1 each Piper PA-23 Aztec, Cessna 402, Cessna 404, and Shorts 360-300, the carrier will, over the next 4 years, come to visit numerous destinations. Among these are Anguilla, Antigua, Aruba, Barbados, Cap Haitian, Cayman, Dominica, Exuma-Georgetown, Freeport, Havana, Santiago, Inagua, Kingston, Martinique, Miami, Fort Lauderdale, Nassau, Port au Prince, Puerto Plata, San Salvador, Santo Domingo, St. Croix, St. Kitts, St. Lucia, St. Martin, St. Thomas, Tortola, and Cat Island.

T. D. AVIATION: Republic Airport, Route 109, Farmingdale, New York 11735, United States; Phone (516) 753-5757; Fax (516) 753-0279; Year Founded 1994. This rotary-wing operator is established at Republic Airport in **1994** to provide aerial work (spraying, etc.), airport transfers, charters to New York destinations, courier flights, flight-seeing, and aerial photography. Within 6 years, Operations Manager Mike McCormack oversees the operations of 1 each Eurocopter AS-355F Twinstar, Bell 206B JetRanger, and Bell 206L LongRanger.

TEA. *See* **TRANS EUROPEAN AIRWAYS, LTD.; TRANS EUROPEAN AIRWAYS, S.A.**

TEA-BASEL, A.G.: Switzerland (1992–1998). Originally formed in May **1988** as the Swiss component of the multinational charter operator **Trans European Airways, S.A., Trans European Airways-Basel, A.G.** receives its initial Boeing 737-3M8s in early **1989**, placing it into service on March 29. In November, the carrier initiates a practice of leasing certain of its aircraft and the second little Boeing is chartered to an Australian operator.

Enplanements for the first year total 20,000 with charter fees covering expenses and allowing a small profit.

During the national pilots strike of **1989–1990**, a B-737-3M8 is based at Sydney to operate replacement services for **Australian Airlines (Pty.), Ltd.**

Operations continue apace in **1990–1991** and the carrier is purchased by its Swiss management and reformed in early **1992** following the demise of the Belgian parent. The airline is capitalized at SFr 29.2 billion (\$22 million), 60% of which is held by Chairman Markus Kunzli and his colleagues. Managing Director Markus Seiler oversee a workforce of 105 and operates a fleet of 3 owned Boeing 737-3M8s and 1 leased B-737-3Y0 to holiday destinations in Europe, Africa, and the Far East.

Enplanements for the year total 248,000.

The workforce is increased by 5% in **1993** to 105 while the chartered B-737-3Y0, christened *City of Hanoi*, is based at Hanoi to operate on behalf of **Vietnam Airlines**. It is briefly joined by a second aircraft, one of the B-737-3M8s; both are painted in white with Vietnam livery. Although retaining its official TEA-Basel name, the company now begins trading under the name TEA Switzerland.

The year's passenger boardings swell 12.2% to 278,300. Revenues total SFr 81 million and allow a SFr 2-million profit.

Airline employment in **1994** stands at 160 and a new catering facility is established at Zurich. During the summer and in cooperation with a travel firm affiliated with the Migros supermarket group, the airline applies to the government for permission to undertake deep discount domestic flights in competition with **Crossair, Ltd.**; after significant public debate that brings credit to the company, the application is rejected.

A B-737-3Q8 is leased in November and during the winter tour season, the new aircraft is employed to begin operating charter flights from Bergamo, Italy, to Malindi, Kenya, on behalf of an Italian tour operator. Customer bookings accelerate 37% to 370,000 through October 31.

The workforce is increased to 205 in **1995**. The *City of Hanoi*, while retaining its name, is returned to Switzerland.

For the year as a whole, enplanements total 533,200.

The workforce grows 12.2% in **1996** to 230 and the company's 5 aircraft transport a total of 544,300 passengers, a 2.1% increase.

In addition to its ad hoc charters, the company, in **1997**, flies from Zurich and Basel to 24 Mediterranean destinations, as well as Goa, Re-

cife, and Mombasa. The B-737-3Q8 is subleased to **Air Afrique, S.A.** (2) for two years.

Passenger boardings drop 4.7% to 518,600.

On March 26, **1998**, Stelio Haji-Ioannou's low cost carrier, **easyJet Airlines, Ltd.** purchases 40% shareholding in TEA-Basel, A.G. The U.K. airline has the option to increase its stake in the Basel-based line to 90% and to refocus the company as a discount company and franchise partner, **easyJet Switzerland, A.G.** The equity boost is dependent upon Switzerland's joining the European Union "open skies" arrangement. The company remains Swiss-registered, with the same Swiss staff and management.

The franchise arrangement with **easyJet Airlines, Ltd.** physically begins on May 1 as one of the TEA aircraft begins flying on the Geneva-London (CTN) route that easyJet already serves.

TEA-FRANCE, S.A.: France (1991-1992). Having originally launched operations in October 1989 as the French component of the multinational charter operator **Trans-European Airways**, **Trans-European Airways-France** is reformed in September **1991** following the demise of the Belgian parent. The company is licensed by the French government to undertake inclusive-tour flights to Mediterranean destinations from the French cities of Lourdes and Lille. Revenue flights begin and continue with a single Boeing 737-3M8. When **Trans-European Airways** fails in **1992**, it drags TEA-France out of business with it.

TEA-ITALY, S.p.A. (1). See **TRANS EUROPEAN AIRWAYS-ITALY, S.p.A.**

TEA-ITALY, S.p.A. (2): Italy (1993-1995). The second TEA-Italy is established at Rome in early **1993** to provide scheduled passenger services to regional destinations. The fleet of 3 Boeing 737-3M8s transports a total of 500,000 passengers by year's end. A fourth B-737-3M8 arrives in **1994**.

Unable to maintain economic viability, the company shuts down in **1995**.

TEDDY AIR, A.S.: Voldsveien 200, Skeien, N-3729, Norway; Phone 47 (35) 546 600; Fax 47 (35) 546 740; http://www.teddyair.no; Code ZJ; Year Founded 1989. Loevenokiold/Herman establishes Teddy Air at Skeien, Norway, in January 29, **1989**, to offer domestic passenger and cargo taxi services. Viggo Vestiby is chairman, with Tollef Dale as president. Over the next 7 months, a workforce of 18 is assembled and 2 Britten-Norman BN-2 Islanders are ordered. Receipt of these allow revenue flights to commence in July.

A year later, on July 1, **1990**, two newly purchased Piper PA-31-350 Navajo Chieftains begin scheduled commuter flights between Skien and Oslo. These continue without headline or incident during the next three years. On April 1, **1993**, replacement flights are undertaken on behalf of **Wideroe's Flyveselskap, A.S. (Wideroe's Flying Company)** between Skien and Stavanger. Frequencies between Skien and Bergen follow thereafter. Orders are now placed for four Embraer EMB-110 Bandeirantes.

The first Bandeirante is delivered on July 14, **1994**. Christened *Tasselass*, she enters service on the Skien to Stavanger route. The second EMB-110, the *Bamse*, begins flying between Skien and Bergen in **1995**. The *Pekka* and *Lisa* are delivered on August 1, **1996** and enter service shortly thereafter.

Business continues in **1997-1998**, during which years the company begins to cooperate closely with **Golden Air Flyg, A.B.** During the latter year, enplanements total 14,000.

Three of the Bandeirantes are withdrawn during **1999-2000** and replaced with two SAAB 340As leased from Golden Air.

TEEN AIR: 2 Komsomolskaya Volzhski, Volgograd, 404000, Russia; Phone 7 (84453) 36308; Year Founded 1993. Teen is established at Volgograd in **1993** to offer ad hoc passenger charters throughout the nation. Revenue operations commence and continue with a single Yakovlev Yak-42.

Although it is understood that this carrier continues to operate in the period after the beginning of the August **1998** Russian currency crisis, no definite information has been located to that effect.

TEJAS AIRLINES: United States (1976-1980). Tejas is set up at San Antonio, Texas, in **1976** to provide scheduled passenger and cargo services to a number of intrastate destinations. Employing 1 each Fairchild-Swearingen Metro II and Piper PA-31-350 Navajo Chieftain, Tejas inaugurates daily roundtrips linking its base with Austin, Laredo, Corpus Christi, Brownsville, McAllen, Waco, Houston, and Fort Worth. Service continues without incident in **1977**.

Following its landing at Austin's Robert Muller Municipal Airport on August 13, **1978**, the Swearingen Metro II with 2 crew and 16 passengers, swerves off the runway and crashes; there are no serious injuries reported, but the aircraft is damaged beyond repair.

Operations continue with the Navajo Chieftain until **1980**.

TELAIR MANCHESTER, LTD.: United Kingdom (1980-1985). This air taxi operator is based, not as its name implies, at Manchester, but at Speke Airport at Liverpool. Employing a pair of Britten Norman BN-2A Islanders, the little carrier provides on-demand passenger flights around England until it suspends services in **1985**.

TELFORD AVIATION: 100 Airport Road, Waterville, Maine 04901, United States; Phone (207) 872-5555; Fax (207) 872-6794; http://www.telfordaviation.com; Year Founded 1982. With backing from family and friends, Telford Allen Jr. establishes this all-cargo concern at La Fleur Airport in Waterville, Maine, in **1982** to offer charter flights to destinations in the Northeast U.S. and Atlantic Canada. Revenue operations commence with 1 owned Cessna Rockwell Saberliner 40 and 1 Saberliner 60 plus a leased fleet of 2 Cessna 208 Caravan Is, 1 C-208B, and 1 Saberliner 60. In **1989**, a second facility is opened at the Bangor International Airport.

The Saberliner 40s are removed in **1992** and replaced in **1993** with a Swearingen SA-226 Merlin IV. A major fleet change occurs in **1994** as the Saberliners are removed and a Beech 99, CASA C-212-200 Aviocar, and another C-208B are chartered. Emphasis now is largely on the transport of freight.

The Cessna 208 is subleased to **Prince Edward Air, Ltd.** for a year in **1995** as another C-208B arrives along with a British Aerospace BAe (HS) 125-700A Hawker. The Merlin IV and Aviocar are withdrawn in **1996** and replaced with 1 each Beech 99 and Hawker. Telford Allen III becomes president in **1997** and the fleet now includes 2 Hawkers, 7 Caravans, and 2 Beech 99s.

Flights continue in **1998-1999**. Increased emphasis is placed on aircraft maintenance activities and an Airliner Production Facility is opened to undertake approved repair work.

During **2000**, a new \$50-million joint venture is undertaken with the Ages Group, a division of Volvo Aerospace, A.B. In addition, two Cessna 208Bs are stationed at Savanna, Georgia, and begin operating two newly awarded feeder contracts from **UPS (United Parcel Service)**.

TELLAIR, LTD.: Girella 2, Lugano, CH-6814, Switzerland; Phone 41 (91) 960 2170; Fax 41 (91) 960 2179; http://www.tellair.com; Code F4; Year Founded 1997. Tellair is established on January 4, **1997**

to offer regional scheduled services. There is a long gestation period before flight operations can begin, during which 2 Fokker 50s and 1 Boeing 727-100 are acquired.

Revenue flights commence on February 8, 1999, linking the company's base with Ancona, Milan, Pescara, and Turin.

Chairman Renzo Bianchini oversees a workforce of 29 at the beginning of 2000.

TEMPELHOFF AIRWAYS, USA: United States (1980-1990). Having won FAA approval to launch charter flights out of West Berlin in 1981, this U.S.-registered carrier, founded two years earlier in Florida, is reformed at West Berlin's Tempelhof Airport by Knut Kramer and associates in January 1982. Flight activities commence in April employing a Cessna 441 Conquest and a Piper PA-31-350 Navajo Chieftain.

Between 1983-1985, charter operations are undertaken to some 30 destinations in West Germany, including the larger cities of Dusseldorf, Bremen, Munich, and Frankfurt. Most of these services are undertaken under contract to a large computer company.

Following the collapse of the West Berlin-based commuter Directair, Tempelhoff Airways in January 1986 acquires the necessary permissions and an ex-Cimber Air Nord 262 turboprop, allowing it to launch twice-daily scheduled services to Paderborn. A second Nord 262 becomes available at the end of February as company employment reaches nine. Scheduled flights are now laid on to Dortmund, Luxembourg, Augsburg, and Braunschweig. Enplanements are now averaging 1,500 per month.

In late December, 51% controlling interest is taken by **Pan American World Airways (1)**, which plans to use the commuter to feed its Internal German Service beginning in the spring of 1987. No sooner has this arrangement been completed than Pan Am elects not to consummate it. Rather, it elects to begin a new subsidiary of its Philadelphia-based **Pan Am Express** and operate it under the certificate once held by **Ransome Airlines**. Meanwhile, Tempelhoff initiates scheduled services to Dortmund and a third Nord is acquired. Orders are placed for three SAAB 340As.

The first SAAB 340A is received in early 1988, at approximately the same time in which the airline becomes the first European code-sharing partner for **Trans World Airlines (TWA)**. "TWExpress" service is inaugurated twice daily between West Berlin and Brussels. The newly received Nord is now employed to fly packages from West Berlin to Hanover on behalf of **UPS Air**.

Enplanements for the year total 50,000. They grow to 51,000 in 1989.

Major expansion occurs in early 1990 as the fleet is enlarged by the addition of three SAAB 340As, which are employed to inaugurate flights to Brussels and Hamburg. Following German reunification in October, Tempelhof ceases flight operations, but continues to offer ground handling services at the Berlin airport.

The company applies for a certificate to operate as a German airline and CEO Knut Kramer pledges to sell his one-third stake, but such an arrangement cannot be concluded.

TEMPELHOF EXPRESS AIRLINES, GmbH. & CO., KG: Flughafen Berlin-Tempelhof, Gebaeudeteil A1, Rm. 2651, Berlin, 99092, Germany; Phone 49 (60) 7877342; Fax 49 (60) 788284; http://www.tempelhof-express.com; Code FC; Year Founded 1998. **TAL Thuringia Airlines, GmbH.** is renamed on November 1, 1998. The corporate identity change, made under the leadership of President Uwe Bohme, has no impact on operations, which are continued as before with 1 each Beech 1900D and Dornier 328-110.

Frequencies from Berlin to Erfurt, Friedrichshafen, Munich, and Westerland/Sylt are maintained in 1999-2000.

TEMPUS AIR, LTD.: Canada (1988-1989). Formed at Hamilton, Ontario, early in 1988, Tempus inaugurates scheduled commuter services to Ottawa and Montreal with Swearingen Metros. By fall, company officials know that they will be unable to achieve profitability in such regular service and thus suspend it.

The Metros are replaced with a Convair CV-580 that is used briefly in 1989 to operate a courier service between the three cities.

TEMSCO AIRLINES: 5411 North Tongass, P.O. Box 5057, Ketchikan, Alaska 99901, United States; Phone (907) 225-5141; Fax (907) 225-2340; Year Founded 1985. Temsco is established by Kenneth Eichner at Ketchikan, Alaska, in early 1985 to provide passenger charter and contract services. Revenue flights commence on January 2. To provide a scheduled air transport division, the assets of the failed local fixed-wing regional **Tyee Airlines** are purchased in May 1986, merged, and reformed to operate under the name Temsco Airlines.

The company employs a float-equipped, fixed-wing fleet that includes 1 Cessna 206, 7 de Havilland Canada DHC-6 Twin Otters, 1 Pilatus Britten-Norman PBN-2 Islander, and 10 Bell 206B JetRangers.

Temsco undertakes flights to over 120 destinations throughout the state. **Westflight Aviation** is purchased and merged on October 1 and in December, the carrier becomes an **Alaska Airlines** commuter partner.

By 1987, Temsco has also established a reputation as the "originator" of the Juneau ice field flight-seeing and glacier tours. From Juneau, Petersburg, and Skagway, the company's helicopters perform glacier tours that actually allow passengers to get out and walk on the ice.

Operations continue apace in 1988-1989, but not without loss.

While preparing to land on a lake near Liscombe Bay on July 30 of the former year, a float-equipped Cessna 185 with one pilot and two passengers, crashes into the water; there are no survivors.

Just two miles beyond the airport at Ketchikan on an outward-bound flight made on January 15 of the latter year, a DHC-2 with a pilot and a passenger flies into a snowstorm and crashes into water. Search and rescue efforts are suspended after four days and there are no survivors.

The fleet of the 40-employee carrier totals 52 aircraft in 1990: 4 Bell 206B JetRangers, 2 Cessna 185s, 5 Aerospatiale AS-350B-1 A-Stars (known in Aerope as the Ecureuil or Squirrel), 8 DHC-2 Beavers, 1 Islander, 9 DHC-3 Otters, 2 Bell 212s, and 1 Bell UH-1.

During the second week of August, a DHC-2 with a pilot and a passenger crashes 13 miles W of Wrangell; the flyer is killed.

When the company is unable to immediately locate up-to-date maintenance records for an FAA investigation team, Temsco, on August 29, idles 14 helicopters until the matter can be resolved. Theodore Beckloff, head of the FAA office in Anchorage, does not find the matter to be a major enforcement action and refrains from closing down the airline.

The next run-in between the agency and the airline is not as gentle. On December 10, the FAA pulls the license of President Charles W. Gale, charging that he has falsified flight records, particularly flight checks that were not conducted for a number of pilots, including former president and owner Eichner.

Enplanements for the year total 28,497.

Passenger boardings drop to 23,188 in 1991. In addition, 1,044,626 pounds of mail are transported. In October, the Part 135 fixed-wing portion of the company is shut down. The assets are largely passed to **Taquan Air Services**.

Operations continue apace in 1992-1994 as President Gale adds three AS-350B-2 A-Stars to employ in a growing contest for sight-seeing business waged with **ERA Aviation**.

Flights continue during the remainder of the decade. During these year's, the rotary-wing fleet is revised to include 16 Eurocopter A-Star 350s, 2 Bell 212s, and 12 McDonnell Douglas MD-500Ds. The company also begins operating medevac flights under contract to various hospitals employing leased equipment.

While returning to Juneau International Airport after a September 10, 1999, ice field sight-seeing tour flight, an A-Star 350 with a pilot and four passengers encounters a snowstorm that forces the helicopter down into a snow-covered ice field. One person is seriously injured.

On March 10, 2000, while en route to the Northwest Texas Healthcare System Hospital at Amarillo from a hospital in Boise City, Oklahoma, a chartered Eurocopter BO105-CBS-5 with a pilot, two medical technicians, and a patient, encounters fog and crashes into a field 25 mi. N of Dalhart, Texas. There are no survivors.

TENNESSEE AIRMOTIVE: United States (1966–1968). Tennessee Airmotive is established at Chattanooga during the summer of 1966 to provide daily roundtrips to and from Nashville. Employing one each Piper PA-23 Aztec and PA-31-310 Navajo, scheduled frequencies are inaugurated on September 1 and are maintained until 1968.

TENNESSEE AIRWAYS: United States (1978–1987). Founded at Knoxville by Stuart Adcock to provide intrastate service between that city and Nashville, this company's two Cessna 402Bs begin flight operations on June 1, 1978; 4,100 passengers are transported during the next six months in direct competition against the state's other indigenous third-level carrier, **Aerie Airlines**.

A third Cessna 402B joins the fleet in 1979 as the 16-employee carrier begins providing 20 daily flights to the state capital, plus Tri-Cities, Chattanooga, Charlotte, and Augusta. Already weakened, competing **Aerie Airlines** shuts its doors early in the year, leaving Adcock to operate all-commuter flights emanating from and within Tennessee.

Orders are now placed for four Embraer EMB-110 Bandeirantes.

Enplanements skyrocket 384.9% to 19,000.

The employee population rises by 50% in 1980 to 30 and the fleet is upgraded by the addition of the first 2 Bandeirantes. Tullahoma joins the state network, while interstate frequencies are initiated to Lexington, Kentucky.

Passenger boardings leap 42.1% to 27,000.

By 1981, Adcock's airline is serving 6 major cities (Tri-Cities, Knoxville, Chattanooga, Nashville, Lexington, and Charlotte) with a fleet of 3 Bandeirantes and 2 Cessna 402s.

During the year, the **American Airlines** SABRE reservations system is installed at TA's McGhee-Tyson Airport base at Alcoa (outside Knoxville) and the workforce is increased by 25% to 50.

Bookings skyrocket 77.8% to 48,238.

The payroll is advanced 16.7% in 1982 to 70. A fourth EMB-110 is added and orders are placed for 3 EMB-120 Brasiliats and 3 SAAB-Fairchild SF340s.

A modest passenger growth rate of 4.1% (50,000) is experienced by the privately held carrier.

The employee population grows 14.3% in 1983 to 80 as another Bandeirante is acquired and service is launched to Cincinnati. Bookings climb 8% to 54,000.

Early in 1984, the small regional adds two Piper T-1020s to its fleet and brings London and Corbin, Kentucky, and Memphis into its route system. In September, when **United Airlines** abandons its Knoxville-Washington, D.C. service, Tennessee Airways is ready to replace it. Knoxville Metro Airport to Washington, D.C. (IAD) EMB-110 flights commence on October 29. Traffic remains level, but in anticipation of further growth CEO Adcock now places an order for four SAAB-Fairchild SF340s.

While claiming that computer bias is at work against it, Tennessee takes a sharp traffic downturn in 1985, by 26.9% to 38,010 passengers flown.

The plunge continues in 1986, even though employment is increased by 33.3% to 80.

Passenger boardings drop 45.5% to 20,751.

Unable to absorb further losses and successfully compete against the increasingly powerful "American Eagle" commuter network of **American Airlines**, Tennessee Airways shuts its doors on June 30, 1987, after having transported a total of 6,949 passengers during the year's first half. Services are, at least officially, temporarily suspended in 1988–1989, but are never resumed.

TEPAVIA TRANS, S.A.: Office 64, Dacia 60/5, Kishinev, MD-2026, Moldova; Phone/Fax (3732) 526646; <http://www.riscom.net/~air-lines.tepavi>; Code TET; Year Founded 1999. Tepavia Trans is established at Kishinev on May 18, 1999 as Moldova's first air taxi company. A fleet of 7 Antonov An-28s is assembled and revenue flights to destinations within a radius of 1,200 km. are begun. Although initially oper-

ated in the liveries of the airlines from which they were purchased, the company's aircraft are all repainted by late autumn in a new "busy bee" livery designed by artist Fedor Fesilov. Passenger, cargo, and "combi" flights continue during the remainder of the year and into 2000. Destinations visited are located in the Commonwealth of Independent States, Europe, and the Mideast.

TERRE HAUTE AIR COMMUTER: United States (1980–1981). THAC is established at Terre Haute, Indiana, in the spring of 1980, initially operating as **H & D Aviation**. Piper lightplanes are employed to initiate daily scheduled roundtrips to Lawrenceville on June 1 and are maintained until April 1, 1981, when the company is renamed. The new corporate identity is not sufficient to keep the airline from going out of business on August 1.

TERRITORIAL AIRLINES: United States (1990). Territorial is founded at Albuquerque in early 1990 to offer scheduled third-level passenger services to Las Vegas with a Piper PA-31-310 Navajo. The jump in fuel prices caused by Iraq's August invasion of Kuwait conspires with the nation's deepening recession to force the new venture out of business at year's end.

TERRITORY AIRLINES (PTY.), LTD. (TAL): Papua New Guinea (1952–1975). Formed as a charter operation at Lae, TAL obtains two de Havilland DH 84 Dragons and a license that allows it to commence revenue flights on May 5, 1952. Nonscheduled flights to Madang and a variety of other local destinations are undertaken over the next 15 years. The company's main work becomes the resupply of remote stations.

Airline employment stands at 98 in 1967. During the year, the company operates a fleet of 3 Beech B-55 Barons, 3 Cessna 402s, 3 Cessna 336s, 6 Cessna 206s, and 5 Cessna 185s. Enplanements are 27,000 and a total of 6,500 tons of cargo is lifted.

In 1968 a scheduled license good for the New Guinea Highlands is acquired from the government. Three additional Cessna 402s are acquired with which to begin the new commuter operation.

Rapid route and system expansion occurs over the next 7 years, bolstered by several acquisitions; by 1971, enplanements are 56,141.

Airline employment in 1972 stands at 300 and the fleet includes 1 de Havilland Canada DHC-6-100 Twin Otter, 3 Beech B-55 Barons, and 24 Cessnas. **Sepik Air Charters, Ltd.** is acquired in July.

Air services in New Guinea are reorganized late in 1973. As a result, Territory opens new terminals in Wewak, Madang, and Port Moresby and acquires three more Twin Otters. Two hotels are also purchased. On December 20, Bryan Grey is appointed general manager. Additional terminals are opened at Awar and Karkar Island in 1974. Three more hotels are acquired and another is built. More Twin Otters join the fleet as the carrier begins to phase out its single-engine planes. Plans are made to reform the company late in the year; it will be renamed and given a new corporate image.

Enplanements for the final year are 78,442.

In April 1975, **Macair (Melanesian Airlines Charter Company, Ltd.)**, together with its **Solair (Solomon Islands Airways, Ltd.)** subsidiary, is acquired. Although Solair continues as a flying subsidiary, Macair is merged into Territory Airlines, which now changes its name to **Talair (Tourist Airlines of Niugini (Pty.), Ltd.)**.

TESIS AIR ENTERPRISE (TESIS AVIA PREDPRIYATIE): 117858 Moscow Profsoyuz Street, Moscow, 934406, Russia; Phone 7 (095) 336-4733; Fax 7 (095) 335-5111; <http://www.thesis.ru>; Code UZ; Year Founded 1992. TAE is set up at Ekaterinburg in 1992 to offer long-haul domestic passenger services. Aleksei V. Kiumov is appointed general director and launches revenue flights with 3 Tupolev Tu-154Ms.

Service is maintained in 1995–2000, although the company during these years is reformed into a Moscow-based all-cargo operator. George Lipaev becomes director general, with Boris Panukov as president, and the fleet is revised to include 1 owned Tu-154M and 2 Ilyushin Il-76TDs,

plus 7 leased Il-76TDs. Scheduled destinations visited from Moscow's Sheremetyevo and Vnukovo Airports include Irkutsk and Chkalovski.

At the end of the latter year, Tesis joins with **Abakan Avia**, **Atlant-Soyuz**, **Ilavia**, and **Kras Air (Krasnoyarsk Avialinii-Krasair)** in seeking government support in their search for credits to upgrade their aging freighter fleets and to provide customs and tax breaks on the imported equipment necessary to accomplish the task.

TESLINOGRAD UNITED AIR DETACHMENT: Kazakhstan (1992–1996). When **Aeroflot Soviet Airlines** is reformed by the CIS in 1992, TUAD is formed at Akmola Airport in the Akmolinsk Region of Kazakhstan. Mikhail R. Peshkov is general director and oversees a workforce of 1,276. Domestic and regional services are begun and continued with an all-Antonov fleet that includes an unspecified number of An-2s and An-24s. Flights continue until 1996.

TEXAS AIR TRANSPORT: United States (1927–1930). Fort Worth motor coach operator Temple Bowen forms Texas Air Transport on November 12, 1927 to bid upon two short U.S. Post Office Contract Air Mail Routes, Nos. 21 and 22. After the routes are awarded in January 1928, a Curtiss Swallow and four Pitcairn PA-5 Mailwings are purchased and four pilots plus three mechanics are hired. Revenue services commence in February, from Dallas to Galveston (CAM-21) and from Dallas to San Antonio (CAM-22).

Although **Pitcairn Aviation**, the airline division of builder Harold Pitcairn's operation, had received the first airmail contract for its purpose-built aircraft, delays allow TAT the honor of first employing the Mailwing.

Owner Bowen sells out to Tennessee financier A. P. Barrett in November; Barrett immediately reforms his company into a three-division operation for flight training, service, and airline operations. In perhaps his greatest service to commercial aviation, Barrett appoints young Texas bookkeeper Cyrus R. ("C. R.") Smith to his first airline position, vice president/treasurer.

The airline operating division is subdivided. Mail operations continue under the company's previous TAT name while passenger services are relabeled. The latter opens scheduled flights to Brownsville from San Antonio on March 9, 1929. On March 30, flights begin from Dallas and Fort Worth to San Antonio and Houston. On March 31, owner Barrett forms **Southern Air Transport**, incorporating it in Delaware, into which he merges Texas Flying Service and several other aerial activities and companies. TAT will retain its name and fly mail until the following July.

In May, the subsidiary takes delivery of a brand new Lockheed Model 5 Air Express, which is placed into service over the CAM routes from Dallas. Flown by Robert H. Grey, the plane crashes while landing at Big Springs, Texas, on September 12 when its landing gear collapses. Southern has the plane rebuilt by the following February.

TEXAS AIRLINES: United States (1984–1988). Texas Airlines is established at Galveston during the fall of 1984 to provide scheduled passenger and cargo intrastate service with a fleet of Piper lightplanes. Daily and limited weekend revenue flights are inaugurated linking the company's base with Austin, Beaumont, Lake Jackson, and Houston.

Frequencies are maintained with little fanfare until the fall of 1988.

TEXAS FLYING SERVICE. See **TEXAS AIR TRANSPORT; SOUTHERN AIR TRANSPORT SYSTEM**

TEXAS INTERNATIONAL AIRLINES (TXI): United States (1969–1982). On April 1, 1969, the corporate identity of **Trans Texas Airways** is changed by its new owners, Minnesota Enterprises. At this point, W. Lloyd Lane succeeds Robert Sherer as president. To avoid confusion with **Trans International Airlines**, the abbreviation TXI is chosen. The fleet, however, remains the same: 7 DC-9-10 Pamper Jets and 25 CV-600 Silver Clouds.

Flight 600, a CV-600 en route from Alexandria, Louisiana, to New Orleans on May 30, is subjected to an unsuccessful attempt by a man, claiming to be armed with a grenade, to divert it to Havana. Criminal charges are dropped as the man, deemed insane, is committed to a psychiatric hospital for two years.

As if in honor of the name change, a TXI Douglas DC-9-10 becomes the first revenue airliner to land at newly opened Houston (IAH) on June 8; full meal service begins aboard the jetliners the same day. In December, several DC-9-30s joins the fleet.

Enplanements this year are 2,080,080. Revenues are \$51.36 million; however, expenses are \$55.11 million. As a result, losses are suffered: \$3.57 million (operating) and \$5.09 million (net).

The employee population in 1970 is 2,230 (a 6.4% increase) and R. L. Sicard becomes executive vice president at the beginning of the year. A DC-9-10 is involved in an accident at Harlingen, Texas, on January 11, while the new DC-9-30s are employed to inaugurate nonstop operations from Albuquerque to Los Angeles on January 15.

In addition, five Beech 99s are acquired to service, beginning in March, the small communities of east and west Texas, including Bryan, Waco, Temple, Victoria, Galveston, Longview, and Lufkin. Also in March, direct Houston to Salt Lake City flights begin. Direct Houston to Monterrey, Mexico, service is also instituted.

Passenger boardings increase 3.7% to 2,235,000 and freight traffic accelerates a healthy 49.5%. Despite this flurry of activity, the finances of the carrier, never strong, continue to erode. Although income advances 20.6% to 62.12 million, costs (led by increased fuel prices) soar 19.1% to \$65.6 million. As a result, the operating loss, down slightly to \$3.45 million, is further overshadowed by the new loss, now \$7.42 million.

In 1971, an uplift of the corporate image is undertaken, including new advertisements from a new West Coast agency, new uniforms, gate area designs, ticket counters, and so forth. A number of groups make offers for TXI, including William Wyant Jr. and Associates in May, **Hughes Airwest** in November, and Jet Capital Corporation the same month.

Led by Frank A. Lorenzo and Robert J. Carney, the latter joins TXI in announcing on December 9 that Jet Capital will invest \$1.5 million and take control. Harlingen to Vera Cruz via Tampico flights are suspended.

Enplanements for the year are 2,371,908 and the carrier's aggregate losses since its takeover by Minnesota Enterprises in 1968 now stand at \$20.1 million, including a \$6.1-million downturn this year.

The workforce in 1972 is 2,004. President Lane resigns on May 24. Also in May, President Nixon approves and the CAB authorizes service from Houston to Mexico City. Beech 99 feeder flights cease on July 1. Despite objections from Hughes, the CAB approves the Jet Capital acquisition on August 10. Frank A. Lorenzo is appointed president and a \$35-million refinancing program is completed.

Twice-daily DC-9-30 Houston to Mexico City frequencies commence in December.

Passenger traffic declines by 2.68% during the year as 2,310,000 passengers are carried. Cargo, on the other hand, improves by 13.9%. Revenues are \$72.92 million and expenses are \$71.09 million. A \$1.83-million operating profit is chalked up and the net loss declines to \$1.29 million.

A total of 176 new employees are hired in 1973 and two additional DC-9-30s join the fleet in March. Plans are made to introduce upwards of five new DC-9s per year and to begin retiring the Convair fleet. An extensive refurbishment program is undertaken for the carrier's jetliners. Interiors are revamped and new red, white, and blue liveries are painted on exteriors, complete with the white Texas lone star on airliner tails. A new logo is introduced and all appropriate personnel are outfitted with new uniforms.

During the year, the carrier enters into a tough, three-year battle against intrastate rival **Southwest Airlines (2)** in the Rio Grande Valley.

After taking off in heavy thunderstorms and lightning on the El Dorado–Texarkana leg of a September 27 service from Memphis to Dallas, Flight 655, a CV-600 with three crew and eight passengers wanders off course and crashes into a mountain near Mena, only 75 mi. from

Texarkana, and burns. The wreckage is found on September 30 and there are no survivors.

Enplanements decline another 5.9% during the 12 months to 2,175,000 and cargo is down a significant 44.1%. Still, costs are kept in hand, with expenses reaching \$74.4 million on total revenues of \$77.7 million. The operating profit is \$3.32 million and the net profit—the first since 1966—is \$1.18 million.

The carrier begins flying from Dallas (DFW) in January 1974. Late in April, the company adopts the marketing subtitle of “The Texas Airline.” Service is withdrawn to Jonesboro, Lufkin, Pine Bluff, Temple, Brownwood, Big Spring, and Santa Fe; however, a nonstop route is opened from Houston to Denver. What will prove a difficult strike by clerical and office workers and fleet and passenger service personnel begins on December 5 and closes the carrier down.

Prior to the shutdown, the year’s passenger boardings have risen 4.3% to 2,269,000; FTKs drop 3.6% to 6.42 million.

The workforce in 1975 is 2,234 and the fleet is increased by the addition of a former **Hughes Airwest** Douglas DC-9-14 that is christened *City of Laredo*. After 123 days of strike-caused idleness, Texas International resumes operations on April 4.

Customer bookings for the year begin a strike-induced downward spiral to 1,515,196, a decline of 27.5%. At 4.63 million FTKs, freight traffic is off an equal 27.9%. The loss of business results in costs of \$82.98 million, which exceed total income by \$2.98 million. The operating loss is \$2.97 million and a net loss of \$4.37 million must be endured.

The number of employees is increased by 5.4% in 1976 to 2,355. The battle to oust **Southwest Airlines (2)** from the Rio Grande Valley is lost and, as a result, service to a number of smaller communities in the area is progressively abandoned. Permission is sought to open a new route from Albuquerque to Las Vegas from Dallas (DFW) to Kansas City and Las Vegas and from Houston to Yucatan. Orders are placed for six additional DC-9-30s, four of which are delivered by year’s end.

Flight 987, a DC-9-14 with 5 crew and 81 passengers must reject its takeoff from Denver on November 16. The aircraft overruns the runway, traverses drainage ditches, and strikes light stanchions before stopping. Although the aircraft is badly damaged, no fatalities occur.

Passenger enplanements are boosted 58.2% to 2,397,256 while 7.8 million FTKs are operated. Operating income grows to \$121.54 million while expenses are held in check at \$116.37 million. This happy imbalance results in an operating profit of \$5.16 million and record net gain of \$3.21 million.

Early in 1977, Lorenzo’s carrier battles back by starting the first of the (now common) deep-discount fares, the famous “Peanut Fares,” and goes on to launch service to Kansas City and Las Vegas. Two additional DC-9-30s are used on the new frequencies. Meanwhile, CV-600 service is phased out.

Enplanements for the year total 3,167,000. Net gain of \$9.31 million is earned on total income of \$147.6 million.

Airline employment is increased by 12.9% in 1978 to 2,950. CEO Lorenzo competes against **Pan American World Airways (1)**, **Eastern Air Lines**, and **Air Florida** in an attempt to take over **National Airlines**. Copilot Jill E. Brown, on April 20, becomes the first African-American woman to qualify as pilot for a large U.S. airline. Following passage of the Airline Deregulation Act in the fall, plans are made to enter a host of new markets and those actually inaugurated during the fourth quarter include Kansas City, Las Vegas, Guadalajara, Cancún, and Merida.

Braniff International Airways declines to contest charges of violating federal antitrust laws and is fined \$100,000 on December 28 for using unfair tactics in squeezing TIA out of the commuter business.

Passenger boardings for the year rise 23% to 4,113,000 while freight also ascends, by 12.6% to 9.49 million FTKs. Revenues jump 23.08% to \$181.66 million and expenses are \$165.87 million. As a result, profits are realized: \$15.78 million (operating) and \$12.85 million (net), the latter a 37.95% boost.

The employee population grows by 14.4% in 1979 to 3,376.

Eight additional DC-9-30s join the fleet and orders are placed for 20 used DC-9-30s. Flights to Baltimore, Cozumel, Washington, D.C., Mobile, Oklahoma City, St. Louis, and Tulsa are inaugurated and city-pair frequencies on other routes are upgraded. Low-cost fares are expanded. Simultaneously, service is withdrawn, or sometimes just suspended, at Brownsville, Wichita Falls, and several other southwestern cities. Beginning on April 1, the company offers 99 cents and 69 cents flights to Los Angeles and Dallas to commemorate the inauguration of those new routes.

The bidding for **National Airlines** is won by **Pan American World Airlines (1)**, but through a sale of its acquired stock to the winner, Texas International realizes a \$34.6-million gain.

Customer bookings climb 10.4% to 4,542,000; however, freight is down 0.2% to 9.48 million FTKs. Fuel costs are up dramatically, causing a 33% increase in expenses on revenues of \$235 million. Nevertheless, TXI earns a record net profit of \$40.5 million, including \$34.6 million from the sale of its National stock.

As the result of the CAB’s restructured airline classification scheme, Texas International is rated as a “national” in size during 1980. In January, the carrier receives the 1979 “Market Development Award” from *Air Transport World* magazine.

The DC-9-14 *City of Laredo* with 4 crew and 50 passengers is destroyed as the result of a bad landing at Baton Rouge on March 17; there are no fatalities.

The company’s stockholders in June approve formation of the holding company Texas Air Corporation (TAC), which then acquires the airline as its subsidiary. When Frank Lorenzo moves up to chair the parent, Robert J. Carney becomes TXI chairman and Henry T. Chandis arrives from **USAir** to become president. On August 8, 20 DC-9-30s are purchased from **Swissair, A.G.** and **Austrian Airlines, A.G.** for \$135 million and begin to arrive following refurbishment and repainting.

A new TAC subsidiary, **New York Air**, is formed. Frequencies are extended to new markets at El Paso, Omaha and Hartford/Springfield. A campaign is undertaken to acquire **Continental Airlines**, then in deep financial difficulty, as the year ends.

Passenger bookings dip 2.5% to 3,970,000. Revenues rise to \$291 million and a net profit of \$3.62 million is realized atop an operating gain of \$7.8 million.

Airline employment in 1981 stands at 3,350 and the fleet includes 47 aircraft. On January 31, Houston and Dallas to Yucatan flights commence, as does service from the Texas cities to Minneapolis/St. Paul. The takeover bid aimed at **Continental Airlines** continues. Service to Milwaukee is launched on April 1. On May 21, the company begins flying from Houston to Puerto Vallarta, Manzanillo, and Ixtapa/Zihuatanejo.

Still, TXI suffers. Passenger enplanements drop 13.2% to 3,861,000 and cargo falls 23.6% to 6.78 million FTKs. Even though revenues are up 6% to \$310.9 million, expenses accelerate 12.1% to \$319.9 million. As a result, the airline records an operating loss of \$8.9 million and a net decline of \$34.9 million.

On July 13, 1982, **Continental Airlines** and TAC stockholders approve a merger of the two companies and on June 1, they begin a joint schedule. TAC completes its acquisition on October 31 and thereafter combines the operations of the two previous independents under the **Continental Airlines** banner.

TEXAS NATIONAL AIRLINES: United States (1983–1994). Established by CEO Charles Burnight at San Antonio as **Border Airlines** in 1983, this small intrastate carrier undertakes scheduled Piper PA-31-310 Navajo air taxi flights linking its base with Corpus Christi, Del Rio, and Laredo. Late in 1984, the company is purchased by Fairchild Industries, reformed and renamed.

In 1985, the small regional is outfitted with a pair of Metro IIIs, but serves largely as a corporate carrier. Additional destinations visited now include McAllen, Dallas, Brownwood, and Temple. By mid-August, 12 flights per day are offered from San Antonio, generating some \$105,000 in income per month.

Fairchild support operations continue apace in 1986 until October. The carrier now becomes the first U.S. commuter airline to inaugurate scheduled passenger services south of the border by offering public flights to Chihuahua. A total of 426 fare-paying passengers are hauled during the fourth quarter.

Outfitted with 3 Metro IIIs, the 26-employee small regional enjoys a good 1987, its first full year, carrying a total of 9,483 passengers and 6,000 pounds of freight.

Operations continue apace until July 30, 1988 when Fairchild decides to halt scheduled operations and recast its carrier as an air taxi and charter concern. During the year's first half, customer bookings triple to 16,187.

Nonscheduled flights continue for the remainder of the decade and into the 1990s. In 1993, John H. Karamanian is CEO and his company shuts its doors the following year.

TEXAS STAR AIRLINES: United States (1981–1983). TSA is set up at Fort Worth in 1981 to provide daily scheduled shuttle flights to Austin. Employing Cessna lightplanes, the air taxi initiates revenue passenger flights, maintaining them into the fall of 1983.

TGA AVIATION: 16644 Roscoe Blvd., Van Nuys, California 91406, United States; Phone (818) 787-0797; Fax (818) 787-0799; Year Founded 1992. This small nonscheduled carrier is set up at Van Nuys in 1992 to provide executive and small group passenger charters to destinations throughout the world. Within eight years, Operations Director Rit Higgins oversees the work of four pilots, who have been hired to alternately fly a single Grumman G-1159 Gulfstream II.

THAI AIRWAYS COMPANY, LTD. (TAC): Thailand (1951–1988). This state-owned domestic carrier is formed on November 1, 1951 through the merger of **Siamese Airways Co., Ltd. (SAC)** and **Pacific Overseas Airlines (Siam), Ltd. (POAS)**. With a fleet consisting mainly of SAC's Douglas DC-3s and POAC's two DC-4s, inherited and previously flown regional and domestic routes are maintained during the remainder of the year and into 1952.

Among the company's local service routes are Phitsanulok, Lampang, Chiang Mai, Khon Kaen, Phuket, Surat Thani, Nat Yai. International regional flights continue to Penang, Phnom Penh, Saigon, Singapore, Hong Kong, Rangoon, and Calcutta.

During 1953, two Lockheed L-1049G Super Constellations are ordered and DC-4 service is expanded from Hong Kong to Taipei and Tokyo. Financial problems cause TAC to sell its Lockheeds, even before delivery, to **KLM (Royal Dutch Airlines, N.V.)** and they are turned over to the Dutch carrier in June and July 1955.

The decision is taken in 1956 to form an international division and to again seek Super Constellations. The carrier is given a \$2-million U.S. International Cooperation Administration development grant to purchase three more L-1049Gs. A management and technical contract, approved by the U.S. CAB, is signed with **Pan American World Airways (1)**, but is cancelled two years later upon objection of the Thai government.

Later in 1958, the company seeks a second management contract, this one with **Northwest Airlines**. Following dissatisfactions expressed by the CAB, completion of arrangements with the American major fail. Meanwhile, the Super Constellations, received in July, are allowed to sit idle at Bangkok Airport.

Following a period of negotiations conducted under the leadership of Hans Erik Hansen, an agreement is reached with **SAS (Scandinavian Airlines System)** on August 24, 1959. The Europeans will operate the carrier's hoped-for long-haul international routes, while TAC continues to operate domestic and regional services. The arrangement is concluded on December 14 with the joint formation of **Thai Airways International, Ltd. (THAI)**, in which the Scandinavians take a minority equity stake (30%). The new division's activities are examined below.

On May 1, 1960, TAC turns over to THAI all of its previously operated significant regional routes, but continues to fly within the borders

of Thailand and to a few cities nearby. The three redundant L-1049Gs are sold to **Aerovias Guest, S.A. de C.V.** in Mexico, in which **SAS (Scandinavian Airlines System)** also holds substantial shareholding. Domestic services with DC-3s and other light aircraft continue in 1961–1962.

In April 1963, the government approves TAC's plan to purchase three, subsequently nine, Avro (later Hawker Siddeley later British Aerospace) 748s to supplement the DC-3s. Although THAI's parent comes to maintain a lower profile than its internationally known subsidiary, its domestic and regional work continues in 1964. The three HS 748s are placed into service on high-density routes, beginning on April 1, leaving the Douglas transports to be operated on other services.

The workforce stands at 293 in 1965 and enplanements are 91,836.

Operations continue apace for the next decade, during which time regional routes are opened to Kuala Lumpur and Vientiane. Only one plane is lost during these years.

Flight 002, a DC-3 with 3 crew and 28 passengers, crashes while landing at Chiang Mai at the end of a service from Bangkok in May 1967 (four dead). The last DC-3 is retired in 1975.

During the heated contest between THAI and the independent **Air Siam, Ltd.** in 1976, company workers support THAI employees in August demonstrations in Bangkok. Officials of the government of Thailand discuss a possible three-way merger; however, **Air Siam, Ltd.** collapses in September before any such plan can be put on paper. At the same time, the decision is taken to acquire the **SAS (Scandinavian Airlines System)** stake, which had been reduced to 15% in 1974. SAS's local station chief, Niels Lumholdt, prepares to ease the transition.

Air Siam, Ltd. stops flying on January 12, 1977. On February 2, THAI is designated as the nation's sole flag carrier and the next day, Air Siam's license is revoked. On March 31, the SAS shareholding in THAI is terminated, with the European ownership turned over to TAC and the government Ministries of Finance and Communications.

A new lotus logo is introduced in September, replacing the original three-headed elephant symbol. The first Boeing 737-2P5A is delivered on October 21, entering regional service the following month from Chiangmai to Vientiane and Penang. The first HS 748 survey flight to Hanoi occurs on May 17, 1978, while on October 21, regularly-scheduled HS 748 service to the Vietnamese capital begins.

Airline employment at Chairman Air Chief Marshal Penieng Kantarat's carrier stands at 599 in 1979. A code-sharing agreement is signed with **Lao Aviation Company** and during the first quarter, twice-weekly flights are inaugurated from Bangkok to Hanoi via Vientiane. The last DC-3 is retired in 1980.

While on initial approach to Bangkok from Khon Kaen on April 27, Flight 231, an HS 748-2A with 4 crew and 49 passengers, is caught in a thunderstorm, where it encounters a downdraft that forces it to hit the ground, slide 510 ft., and break up (44 dead).

Another HS 748-2A with 3 crew and 18 passengers fails its takeoff from Chiang Rai, Thailand, on June 21, 1981, overruns the runway, and stops against the banks of a stream; although the aircraft is severely damaged, there are no fatalities.

On May 14, 1982, the first of four Shorts 330s are introduced as HS 748 replacements on feeder routes from Chiangmai, Khon-Kaen, and Hat-Yai.

The fleet in 1983 comprises 5 B-737-2P5As, 2 HS 748s, and 2 Shorts 330s. The company now adopts a policy of regional and domestic long-haul route sharing with its offspring.

En route from Phitsanulok to Chiang Mai on January 18, a Shorts 330 is captured by three armed men, who demand a ransom and parachutes. Their request is denied and deciding not to engage in violence, the trio escapes from the turboprop after it lands at its destination. Two of the men will be captured and imprisoned.

An interline service is begun with **Thai Airways International, Ltd. (THAI)** on December 1 from Bangkok to Phuket.

A Hat Yai–Singapore B-737-2P5A route is opened under charter to THAI on February 4, 1984. New pink uniforms are introduced by the

carrier's hostesses and the last pair of Shorts 330s are delivered. The first long-haul interline service with THAI is initiated to Cairo via Karachi and Muscat on June 6.

During the year, passenger enplanements total one million.

The employee population in 1985 stands at 559 and orders are placed for 2 Airbus Industrie A310-204s and 1 A300B4-601. Bandar Seri Bagawan in Malaysia becomes a shared destination with THAI on April 5.

While on initial approach to Phuket on April 15, a B-737-2P5A with seven crew and four passengers crashes into a mountain; there are no survivors.

On September 30, Air Marshal Narong Dithipeng succeeds Air Marshal Kiat Fuangvudhiran as managing director. Two Shorts 360s, delivered on October 22, begin feeder services in the domestic network on November 28.

Passenger boardings this year climb 7.5% to 1,268,000 and 1.97 million FTKs are operated.

The workforce is increased a huge 103% in 1986 to 1,135. Powered by two GE CF6-80C2s, the first A310-204 joins the fleet in May with the second arriving in December; the two aircraft are the airline's first wide-bodies of any type and are placed in service to operate routes from Bangkok to Chiang Mai and Phuket. Meanwhile, the A300B4-601 is delivered on October 9.

Customer bookings jump 10.1% to 1,396,000 and cargo is ahead by 22.7% at 2.42 million FTKs.

Employment continues to increase in 1987, up 32.2% to 1,500.

Carrying 3 other crew and 39 passengers, the copilot is given the honor of landing an HS 748-2A at Chiang Rai, Thailand, on April 28. Unfortunately, he forgets to lower the landing gear and the turboprop makes a gears-up landing alongside the runway, skidding for 1,075 m. to a stop. Although the aircraft is damaged beyond repairs, there are no fatalities.

Flight 365, a B-737-2P5 with 9 crew and 74 passengers, stalls while on final approach to Phuket Island on an August 31 service from Hat Yai and plunges into the Andaman Sea, disintegrating upon impact; there are no survivors.

Orders are placed with leasing companies in November for a pair of Boeing 737s. Auckland and Madrid become joint markets with THAI on December 5.

Passenger boardings ascend 23.1% to 1,719,000 and freight rises 43.8% to 3.49 million FTKs. The year's net profit is \$7.6 million.

On April 1, 1988, the company is merged into its **Thai Airways International, Ltd. (THAI)** offspring.

THAI AIRWAYS INTERNATIONAL, LTD. (THAI): 89 Vibhavadij Rarigsit Road, Bangkok 9, 10900, Thailand; Phone 66 (2) 513-0121; Fax 66 (2) 513-0183; <http://www.metrotel.co.uk/travelog/thaiair.html>; <http://www.thaiair.com>; Code TG; Year Founded 1959. Following a year in which management contracts with two U.S. majors are voided, a master agreement covering the next 15 years is signed between **Thai Airways, Co., Ltd.** and **SAS (Scandinavian Airlines System)** on August 24, 1959, founding a new international operation as a subsidiary of the former. The multinational Scandinavian flag line, whose representative Hans Erik Hansen had led the negotiations, acquires a 30% share in the new airline and pledges to supply modern propeller equipment retired from its fleet as the switch is made to jetliners.

The TAC-SAS pact is formally launched on December 14 with the creation of Thai Airways International, Ltd. (THAI), the new officials of which immediately sign a service agreement with **Thai Airways Co., Ltd.** and technical, managerial, and equipment contracts with **SAS (Scandinavian Airlines System)**.

Three Scandinavian DC-6Bs are transferred under lease to THAI during late winter and a number of Scandinavian personnel are seconded over as well. Revenue flights commence on May 1, 1960 and within a week, all of the former TAC regional routes are being flown, including frequencies to Hong Kong, Taipei, Tokyo, Rangoon, Calcutta, Kuala Lumpur, Singapore, Saigon, and Phnom Penh. Service is extended to Manila on August 11 and to Jakarta on November 6.

As the result of heavy competition on THAI's Tokyo route, **SAS (Scandinavian Airlines System)** officials approach Convair, seeking the lease of two of their new Coronados for the THAI operation. The manufacturer readily complies and a THAI DC-6B is accordingly retired.

The Convair CV-990A Coronado *Ring Viking*, THAI's first jetliner, is leased from **SAS (Scandinavian Airlines System)** and placed on the Japan service on May 18, 1962. The chartered aircraft is given the name *Srisuriyothai* for purposes of the lease. A second SAS Coronado, the *Adils Viking*, is also chartered.

By this time, another DC-6B is out of service and the carrier faces a crisis. To handle problems, Henry Jensen is named CEO. He immediately arranges that capitalization be increased from B 2 million to B 40 million. At the same time, cost-cutting measures are put in place.

In 1963, THAI has the honor of flying Thailand's King and Queen on royal visits aboard company aircraft—the first of many such flights; countries visited by their majesties include Pakistan, Japan, Taiwan, the Philippines, and Malaysia. In November, a pooling agreement is reached with **Cathay Pacific Airways (Pty.), Ltd.** and **Malayan Airways, Ltd.** covering the Hong Kong, Bangkok, Calcutta, and Singapore routes. The original leased CV-990s, meanwhile, are returned to **SAS (Scandinavian Airlines System)** for refurbishment and eventual sale to **Swissair, A.G.**

The carrier in 1964 converts to an all-jet fleet as its last DC-6B and the two Convairs are gradually replaced by two ex-Scandinavian Sud-Est SE-210 Caravelle IIIs, the first of which enters service on January 1. In September, THAI launches the first jet service to Osaka by any airline; a route is opened to Dacca in November. Enplanements for the year total 100,000.

A third SE-210 is added in 1965 and the carrier's first profit is earned. A large flight kitchen is opened at Don Muang Airport in Bangkok to prepare some 40,000 meals each month for 13 scheduled and a number of charter airlines. HRH Capt. the Prince "Nicky" Varanand forms **Air Siam, Ltd.** (initially, Varanair Siam) at Bangkok on September 15. A fourth Caravelle III is added in 1966 and in October a frequency is initiated to Penang.

The employee population in 1967 totals 1,235 and a fifth SE-210 is acquired.

While landing at Hong Kong in bad weather after a June 30 service from Seoul via Tokyo, Flight 601, an SE-210 Caravelle III with 7 crew and 73 passengers, is caught in a downdraft and crashes into Kowloon Bay (24 dead).

In August, the one-millionth passenger is boarded. The first jet service by any airline to the Indonesian island of Bali is inaugurated on December 24. The workforce is now 1,235.

A Caravelle III with no passengers aboard collides with a Thai army craft on January 21, 1968; the company's aircraft lands safely, but all six aboard the military aircraft are killed. Service is launched to Seoul, New Delhi, and Kathmandu on March 17, July 2, and December 4, respectively; the latter represents the first regular jet service to Nepal by any airline. Orders are placed for Douglas DC-9-41s and DC-8-33s.

In February 1969, two DC-9-41s leased from **SAS (Scandinavian Airlines System)** are placed in service, followed by two chartered DC-8-33s in May. An advanced IBM computer is installed in October. A net \$1.08-million profit is realized.

An SE-210 Caravelle III, with 7 crew and 68 passengers is destroyed as the result of a bad landing in heavy weather at Bangkok on July 9; there are no fatalities.

A new cargo terminal is opened at Bangkok in March 1970, the same month Royal Orchid Holiday inclusive-tours are first offered. Bob Keesee, an American with a prison record in Arizona, takes over a company airliner and orders it to fly to North Vietnam; en route to Hanoi, the airliner is hit by antiaircraft fire over Laos. THAI is now the third largest airline in the Far East.

On April 1, 1971, THAI's first intercontinental service, to Sydney, Australia, is inaugurated via Singapore or Bali. During the year, Chatrachai

Bunya-Ananta, a future president, joins the company; he will oversee the airline's coming years of ascent.

Enplanements reach 702,450.

The workforce in 1972 is 2,800. DC-8-62s are leased from SAS and allow Royal Orchid Service to be started between Bangkok and Copenhagen via Moscow (technical stop) on June 3. In August, a flight crew training center is opened at Bangkok and the last SE-210 is retired in the fall. Royal Orchid Service to Europe also becomes known at year's end as the Trans-Asian Express.

Bookings for the year decline to 520,027, but freight traffic grows 41%.

A DC-8-33 with 10 crew and 100 passengers fails to stop after landing at Kathmandu on May 10, 1973, crashes off the runway and crosses a concrete drain, killing one person on the ground. No injuries are reported by anyone aboard the aircraft.

By June, the staff numbers an even 3,000 and the DC-9-41s are now withdrawn. The carrier serves 24 cities in 20 countries and on November 2 begins weekly flights to London via Tashkent (technical stop). On November 6, Frankfurt replaces Copenhagen, although the Moscow technical stop continues.

A record \$5.5-million net profit is posted and enplanements advance to 545,940.

Airline employment in 1974 is 3,534. The fleet now comprises 6 DC-8-33s and 1 DC-8-62. A new computerized reservations system is implemented; new airplane interior decor and hostess ensembles are introduced. Between March 27 and October 1, three DC-8-63s are delivered and placed into service on the routes to Europe, Hong Kong, Tokyo, and Australia. Although the first is chartered from SAS (Scandinavian Airlines System), the second and third mark a new departure in that they are lease-purchases arranged with the First National City Bank. These aircraft are fully owned as of October 26.

Meanwhile, in April, flights are inaugurated to Rome and London frequencies are increased. The five-year pact with SAS (Scandinavian Airlines System) is renewed on July 16; however, the European carrier's stake is cut in half, to 15%.

Although passenger traffic this year climbs 19% to 674,000, Air Siam, Ltd. is offering a quality and variety of service against which THAI finds it increasingly difficult to compete. A new approach must be taken.

THAI intensifies its battle with Air Siam, Ltd. in March 1975 when, on the last day of the month, it leases its first wide-bodied jetliner, a DC-10-30 from UTA French Airlines, S.A. The carrier in April changes its corporate identity, introducing the "New Look" designed by Landor Associates.

The French DC-10-30 is placed in service on April 3 over a route to Amsterdam; it is the first airplane to appear in the new livery. The Douglas is returned in June when two purchased DC-10-30s, led by the *Hariphunchai*, arrive. Flights begin to Athens and Paris on November 3 and 4, respectively.

As a result of complaints from Cathay Pacific Airways (Pty.), Ltd., the government of Hong Kong in January 1976 suspends traffic rights for both THAI and Air Siam, Ltd. that had forced the British action through a policy of extremely low fares. On April 1, THAI begins DC-8-63 flights to Karachi followed by service to Baghdad on May 1.

Air Siam, Ltd. almost collapses in September following nearly three quarters of airline discontent, a near-employee strike by THAI and TAC workers, government discussions of forced mergers, and extremely poor finances for the independent. THAI's seventeenth anniversary is celebrated in December while SAS (Scandinavian Airlines System), having been served notice, prepares, under the direction of Station Chief Niels Lumholdt, to turn over its shareholding and speed transfer of control to TAC.

Air Siam, Ltd. ceases operations on January 12, 1977. On February 3, THAI is recognized as the sole international operator for Thailand and the next day Air Siam's license is revoked. THAI's first owned (rather than leased) DC-10-30 arrives on March 3 and on March 31 SAS (Scandinavian Airlines System) relinquishes the last of its interest to the Thai

government's Ministries of Finance and Communications, which share ownership with TAC. Capt. Lumholdt is asked to remain as a senior executive and accepts.

Also in March, THAI orders two Airbus Industrie A300B4-103s. The first Airbus enters service on November 1 and flights to Seoul, suspended several years earlier, are resumed the next day. Service to Kuwait is inaugurated on November 3.

Enplanements for the year total 869,196.

In 1978, Chairman Air Chief Marshal Panieng Kantarat, who also leads Thai Airways, Ltd., has a workforce of 5,616. All six DC-8-33s are retired as two more A300B4-103s join the fleet. Service is launched to Dhahran on April 4 and in August, orders are placed for three Boeing 747-2D7Bs. The last remaining Air Siam, Ltd. assets are liquidated in September.

Passenger boardings climb 32.3% to 1,281,983 as the carrier passes the million mark annual figure for the first time; freight accelerates 28.7%. On revenues of \$213.1 million, expenses are \$195.4 million and the profit is \$23.5 million.

In January 1979, THAI moves into a new Bangkok headquarters. The fleet during the year is increased by four A300B4-103s and two B-747-2D7Bs, plus a DC-8-62F, the latter beginning all-cargo flights to Europe in April. That month also sees the introduction of service from Bangkok to Hong Kong via Chiangmai (the first international connection from that north Thailand city). Flights are also started to Melbourne and Saudi Arabia in the fall.

In September, Broma Thalang is appointed president. The Jumbojets arrive on November 2 and December 15, respectively, and are painted in a purple, mauve, and gold livery; they are christened *Visuthakasatriya* and *Sirisobhakya* and commence Royal Orchid service from Bangkok to Amsterdam via Frankfurt, Paris, and Amsterdam.

Passenger boardings soar 21.2% to 1,553,922 and cargo jumps 26.2%. A net \$15.9-million profit is recorded on total revenues of \$345.5 million.

The workforce is increased 4.1% in 1980 to 7,000. A third B-747-2D7B is acquired on February 23 and named *Dararasmi*, allowing introduction of operations to Los Angeles and Seattle via Tokyo on March 30.

Flights to Melbourne commence on April 4. Also in the spring, a 1,486-mile Bangkok-Colombo, Sri Lanka, roundtrip A300B4 service is initiated.

A300/B747 simulators are added to the training base during the summer and a new maintenance hangar is completed.

The fourth B-747-2D7B arrives on September 24; christened *Phimara*, it begins working a route to London on November 1. The next day, A300B4-103 service is initiated to Noumea, New Caledonia, via Manila.

Passenger boardings jump 21.8% to 1.86 million and freight soars 35.6% to 237.57 million FTKs. A net \$5.2-million profit is reported.

The employee population grows by 6.7% in 1981 to 7,468 and the carrier enters a new decade with a fleet that comprises 5 B-747-2D7Bs, 2 DC-10-30s, 3 DC-8-63Fs, and 10 A300B4-103s.

Bangkok to Guangzhou service is inaugurated on April 2; the market is the first THAI serves in the People's Republic of China.

Passenger boardings inch upward 1% to 2.2 million while cargo grows 10.6% to 242 million FTKs. Revenues total \$603 million and the net profit is \$1.86 million.

The employee population in 1982 swells 9.3% to 8,452. Royal Executive economy-class service is introduced and the fifth B-747-2D7B, *Sriwanna*, is delivered on March 16. Jumbojet flights to the Australian cities of Perth and Brisbane commence on March 31 and April 2, respectively. In December, joint services are inaugurated with Malaysian Airlines System, Ltd. (MAS) from Kuala Lumpur to Bangkok, Phuket, and Hat Yai and from Penang to Bangkok and Phuket.

Bookings are up 9.9% to 2,402,884 while freight accelerates 27.9% to 320.47 million FTKs. On revenues of \$569 million, expenses are up 17.2% to \$486.1 million; still, an 18th consecutive profitable year is enjoyed as gains are, respectively, \$83.3 million (operating) and \$1.15 million (net).

The workforce grows 5.6% in 1983 to 8,928. A direct route to Beijing replaces the Guangzhou service on March 29. Nikorn Meneelert is named executive vice president in October. During the fourth quarter, the decision is jointly taken with TAC to offer interline services on certain long-haul domestic and regional routes. The first shared flights commence on December 1 from Bangkok to the southern community of Phuket.

Cargo this year rises 4.9% to 317.3 million FTKs and passenger traffic advances 4.3% to 2,506,000 passengers boarded. Revenues and expenses are, respectively, \$618.4 million and \$586.6 million; the operating profit is \$31.8 million and the net is \$28.4 million.

The payroll climbs 5.7% in 1984 to 9,166 and the fleet includes 5 B-747-27Bs, 10 A300B4-103s, 2 DC-10-30ERs, and 1 DC-8-62. A sixth B-747-2D7B, the *Chainarai*, is delivered on January 1 as orders are placed for two A300B4-605Rs. Dual-designator flights commence with TAC to Hat Yai, in southern Thailand, on February 4. The first long-haul interline service with TAC is initiated to Cairo via Karachi and Muscat on June 6.

Weekly U.S. frequencies are increased to four with the addition of flights to Seattle and Dallas (DFW). In October, Air Chief Marshal Janya Sukontasp becomes chairman and president, while Vice President-Management Chatrachai Bunya-Ananta succeeds the late Executive Vice President Nikorn Meneelert.

Enplanements are 2,661,120 as freight soars 43.1% to 323.54 million FTKs. The operating profit is \$115.85 million and the net income is \$80.25 million, the highest in company history and the 20th in a row.

The workforce is up 8.1% in 1985 to 10,700. Twice-weekly B-747-27B service is initiated from Bangkok to Cairo via Karachi on April 1. Four days later, TAC and THAI link up on a frequency to the eastern Malaysian city of Bandar Seri Bagawan. Later in the month, in cooperation with **Royal Brunei Airlines**, twice-weekly (later thrice-weekly) service is started to Brunei employing RBA's B-737-2M6C.

On May 1, a domestic terminal and a wide-body maintenance center are opened at Bangkok. Also in May, an agreement is reached with **Garuda Indonesian Airlines** for joint operations to the holiday island of Bali. The carrier celebrates its twentieth anniversary in June by opening a new cargo terminal at Bangkok. Later in the month, a fourth weekly flight, operated jointly with **British Airways, Ltd. (2)**, is opened to London and a second is inaugurated to Zurich.

In September and October, delivery is taken on the two GE-powered A300B4-600Rs; during the second month, a DC-10-30 is placed on the Perth run. A route is inaugurated to Kiyadh in November and the joint twice-weekly service with Garuda to Bali is opened, employing an Indonesian Airbus.

Passenger boardings climb 10.4% to 2,970,000 and freight rises 5.5% to 421 million FTKs. An operating profit of \$38 million (22nd best among all world airlines) and a net profit of \$21 million are produced on total revenues of \$763 million.

Employment grows 3.6% in 1986 to 11,145. In January, leased DC-8-63F freight service is started Bangkok-Brussels; in February, a new Air-freight Business Development Division is created. Two B-747-3D7s are ordered for 1987 delivery, plus four more A300B4-601s, the first of which arrives in time to begin service over Asian routes by late October. Also in October, Air Chief Marshal Prayad Didyasarin succeeds Air Chief Marshal Janya Sukontasp as chairman.

On October 26, a Japanese Yakuza member smuggles an American-made hand grenade aboard Flight 620, a B-747-2D7B with 247 aboard, prior to its departure for a flight from Bangkok to Osaka, Japan, via Manila. En route at 33,000-ft. over Shikoku Island, the bomb explodes in a rear lavatory, causing a sudden loss of cabin air pressure. After 20 minutes of wild bucking and the long plunge earthward that follows, the pilot is able to recover the aircraft at 6,600 ft. An emergency landing is completed at Osaka 38 min. after the incident; 62 injured passengers are taken to hospital. One of those wounded is the perpetrator, who is arrested.

On November 1, weekly DC-10-30 service is inaugurated Bangkok-Dusseldorf and Stockholm. On December 8, the carrier postpones a pub-

lic stock offering after it is determined that profits will be sufficient to fund the next decade's plans.

Customer bookings accelerate 7% to 3,200,000 as cargo climbs 9% to 463 million FTKs. Revenues advance by 17% to \$895 million as expenses rise 15.6% to \$838 million. Both the operating profit (\$57 million) and net profit (\$32 million) are improvements on the previous year.

The payroll is increased by 3.7% in 1987 to 11,558. In honor of the sixtieth birthday of the king, a yearlong "Visit Thailand Year" promotion is undertaken. In July, the carrier's two DC-10-30s are sold to **SAS (Scandinavian Airlines System)** and two DC-10-30s are purchased new to operate nonstop services from Thailand to Europe. Also in midyear, a new international terminal is opened at Bangkok International Airport. Air Chief Marshal Sukontasp retires in September and is succeeded as chairman/president by Air Chief Marshal Prapan Dhupatemiya.

In November, an agreement is signed with **SAS (Scandinavian Airlines System)** for the creation of a hub-and-spoke operation through Bangkok, with the European airline feeding traffic into Bangkok and THAI carrying it onward; the agreement begins with the winter schedules. On December 5, THAI becomes the first Asian airline to fly to Spain when it launches twice-weekly service from Bangkok to Madrid. Also, on December 3 and 16, respectively, two B-747-3D7Bs are delivered and are christened *Chutamat* and *Suchada*.

New weekly roundtrip service is started with TAC to Auckland on December 5, the same day Madrid becomes a European market for both Thai carriers. Two B-737-3D7s are also acquired in December.

Passenger boardings ascend 15.3% to 3,690,000 and freight rises 5.8% to 490,000 pounds. Revenues jump 21.6% to \$1.09 billion, expenses are up 19.7% to \$1 billion, and a record \$53-million net profit is announced.

In January 1988, THAI joins **Delta Air Lines** and ProTrav, Inc. to offer new \$1,295 vacation packages to the Orient; Delta flies travelers to Tokyo where they continue their Asian visits aboard THAI jetliners. THAI and its **Thai Airways Company, Ltd.** parent are merged on April 1; the combined airline has a route network that includes 47 international destinations and 17 domestic points. Also transferred with the parent are two A310-204s, an A300B4-601, three B-737-2P5As, two Shorts 360s, and four Shorts 330s. In late spring, flights commence to Hanoi, Vienna, and Cairns and a third DC-10-30ER is commissioned in June.

On July 17, thrice-weekly B-747-2D7 service is inaugurated from Bangkok to Toronto via Taipei and Seattle. Also in July, service is inaugurated to Nagoya and Toronto. The seventh A300-601R, a DASH-605R, is delivered in August and in the fall, Ho Chi Minh City becomes a destination. Domestic frequencies are also increased throughout the year as the number of local destinations is increased from 17 to 26. Frequencies to the two major tourist points, Phuket in the south and Chiang Mai in the north, are increased to 40 and 51 weekly flights, respectively.

In October, 18 packaged-tour programs are initiated to leading national tourist attractions and resorts and joint operations commence with **Japan Air Lines Co., Ltd. (2)** on routes from Bangkok to Nagoya and Fukuoka.

Chairman Air Chief Marshal Prayad Didyasarin retires, being succeeded by Air Marshal Werra Kitchathorn. Although Chatrachai Bunya-Ananta remains executive vice president, he and five other key officials are now removed from the airline's long-term planning committee. Simultaneously, a second executive vice president slot of equal status is created and filled by Vice President-Ground Operations Capt. Udom Krisnampok. The fleet is strengthened by the addition of six B-747-2D7Bs, three DC-10-30ERs, and one more owned Airbus A300B4-601, plus two leased A300B4-622Rs.

Customer bookings increase 36.8% to 4,851,818 while cargo advances 19.3% to 584.19 million FTKs. Revenues jump 27.5% to \$1.43 billion, expenses are up 26% to \$1.14 billion, and the operating profit is \$286.8 million. A record net gain of \$258.8 million is reported for the 24th consecutive annual profit.

Early in 1989, the leadership of Prime Minister Chatichai Choonhavan's new Thai government disapproves the airline's membership and \$40 million investment in the ABACUS reservations system because the group has failed to locate its core in Bangkok. At the end of January, Air Chief Marshal Voranat Aphichan becomes chairman/president, the third in a year.

During the first quarter, known in Bangkok airline circles as "The Black Winter," service is inaugurated to Christchurch, New Zealand, while the A310-204s are removed from domestic routes and assigned to regional services, leaving local service to the A300B4s and regional aircraft. Simultaneously, two British Aerospace BAe 146s are leased to provide temporary capacity until an order for seven B-737-400s can be filled beginning the following year. Serious delays and flight cancellations reach such a level that the airline's image begins to be tarnished. Punctuality on occasion slips below 50% and many tourists are stranded with huge bills that tour operators cannot cover. Morale among the airline's professionals collapses when Capt. Chusak Bhachaiyud, vice president-technical affairs, is accused of corruption and demoted, along with Capt. Prija Thawompradit, vice president-operations.

In October, the carrier increases its flights to Hanoi and Ho Chi Minh City from three times weekly to daily. During the month, Air Chief Marshal Kaset Rojananil becomes chairman and he reverses the personnel decisions of President Weera Kitchathorn. Demoted former senior personnel are reinstated in their old jobs; however, a power struggle continues. Work is begun on two additional maintenance hangars at Bangkok.

A B-747-2D7 en route from Seattle to Tokyo on December 14, mistakenly reverses course over the northern Pacific and wanders 600 miles off its flight path before it is alerted by air traffic controllers, who assist it to make a safe landing at Anchorage. The incident marks the largest deviation from a Pacific flight path ever made by a jetliner. The merger with **Thai Airways Company, Ltd.**, meanwhile, produces a traffic bonanza.

Bookings at the 13,552-employee airline jump 28.2% to 7,394,199 while cargo is ahead by 11.1% to 649.26 million FTKs. Revenues total \$1.8 billion and a profit of \$290 million is generated.

The 13,552-employee carrier remains profitable in 1990, despite the deepening world economic crisis. Plans are announced in February for the government to expend \$118 million over the next 6 years to develop terminals and technical facilities at 24 provincial airports. Late in the month, the first B-747-4D7 arrives, following a delivery flight from Seattle to Bangkok. In preparation for possible service several years hence, an office is opened in São Paulo, Brazil, in March and a tourism campaign is launched aimed at attracting Latin American travelers to Thailand. Additionally, twice-weekly nonstop roundtrips commence between Bangkok and Helsinki, with a single weekly roundtrip flight from the Thai capital to Munich via Copenhagen.

A mutual-cooperation agreement is signed with **SAS (Scandinavian Airlines System)** in July, under which a joint supervisory board is formed, with two representatives from each airline, to implement, coordinate, and administer strategies and activities. The first of seven ordered B-737-400s arrives in August.

Two Burmese students, carrying a fake bomb, hijack Flight 305, an A300B4-622R, to Calcutta on November 10 to dramatize their demands for an end to military rule in Myanmar (formerly Burma). All 219 passengers and crew are released over a six-hour period before the pirates surrender.

In October and November, North American service is increased from four flights weekly to daily between Bangkok and Seattle and six times per week to Toronto via Seattle. Skyrocketing fuel prices during November cause the airline to cut back on its European sectors and eliminate service to Dusseldorf entirely.

Passenger boardings for the year ascend 15.5% to 8,537,355 and freight climbs 33.6% to 867.31 million FTKs. The cargo figure is 24th best among all of the world's airlines. Revenues advance 11.9% to \$1.93 billion, 22nd highest, and expenses allow operating income to total \$268 million, 5th best in the world. This is the 26th consecutive operating profit.

Company employment is cut a slight 0.3% in 1991 to 13,500 and the fleet now includes 2 Aerospatiale-Aeritalia ATR42-300s, 2 ATR72-212s, 9 owned and 4 leased A300B4s, 1 A300C4, 7 owned A300B4-601s, 2 chartered A300B4-622Rs, 3 owned A310-204s, 5 leased British Aerospace BAe 146-300s, 3 B-737-2P5As, 3 B-737-4D7s, 5 owned and 1 leased B-747-2D7Bs, 2 B-747-3D7s, 4 B-747-4D7s, 3 DC-10-30ERs, and 2 MD-11s. Orders are outstanding for 5 A300B4-622Rs, 4 A330-302s, 6 A330-321s, 2 BAe 146-300s, 4 B-747-4D7s, 6 B-777-2D7s, and 5 MD-11s.

Due to spiraling fuel and other costs, an austerity program is initiated at the beginning of the year. Chairman/CEO Air Chief Marshal Rojananil is one of the leaders of the successful February 23 military coup against the government and is able to make management changes beginning in March. At that time, Executive Vice President Chatrachai Bunya-Ananta becomes executive vice president-commercial and Capt. Udom Krisnampok becomes executive vice president-technical as the new leadership structure converts from two levels of senior management to three and decision making is decentralized.

It is announced in April that partial privatization will still leave the government holding 75% majority shareholding. The first of five BAe 146-300s is added at the end of May.

During the summer, services are suspended to Helsinki, Auckland, and Cairns. Services are inaugurated from Bangkok to Perth via Phuket and from Bangkok to Los Angeles via Seoul. In September, B-747-4D7s inaugurate a third weekly frequency from Bangkok to Rome and Madrid. The planned partial privatization announced for October 1 is postponed, even as Air Chief Marshal Rojananil becomes leader of the Thai armed forces. Twice-weekly MD-11 service is started from Bangkok to Brussels and Zurich on October 27; the same day, A300-622Rs launch thrice-weekly flights from Chiang Mai to Hong Kong and Taipei.

The Gulf crisis impacts traffic as customer bookings slide 6.1% to 8,016,303 while cargo slips slightly to 867.15 million FTKs. Revenues total \$2 billion and the 27th operating profit in a row is generated: \$197.3 million.

During the first quarter of 1992, plans are finalized for the airline's May partial privatization. A total of 7.3% shareholding (100 million shares) will be made available at a price of \$2.35 each. In May, Thailand is rocked by political turmoil and in June, Transport and Communications Minister Nukui Prachuabmoh orders an investigation into allegations of corruption at the airline headed by the nation's supreme military commander, Air Chief Marshal Rojananil.

While on descent to Kathmandu on a July 31 service from Bangkok, Flight 311, a chartered A310-304 with 14 crew and 99 passengers, crashes 25 mi. N of the runway in the Himalayan mountains. Monsoon rains hamper rescue teams' efforts to find the wreckage, but troops reach the accident site on the side of a snowy mountain on August 3, finding no survivors.

Partial privatization occurs in August as 7.14% of the governments shares are listed by the Securities Exchange of Thailand. The company is now officially known as Thai Airways International pcl; however, we will continue to refer to it here as Thai Airways International, Ltd. (THAI) for consistency in the conclusion and cross-referencing of this profile.

The nation's new Air Force chief, Gen. Gun Pimarnthip, becomes the airline's new chairman, also in August. In September, Gun becomes vice chairman as Finance Ministry Permanent Secretary Pandit Bunyapana becomes the airline's first-ever nonmilitary leader. Simultaneously, veteran Executive Vice President Chatrachai Bunya-Ananta succeeds Air Chief Marshal Weera Kitchathorn as president and begins a corporate reorganization.

In October, services are inaugurated from Bangkok to Bali, Phnom Penh, and Fukuoka. Before the international media, the carrier's first ever corporate planning is held at Bangkok on November 12; with an on-time record of only 78%, the theme chosen for the meeting is "On Time Performance."

Passenger boardings ascend 11.7% to 8,951,689 and freight traffic swells 6.8% to 926.34 million FTKs. Revenues inch up to \$2.1 billion and although a \$114.34-million operating loss is suffered, a \$132.89 million-net gain is chalked up.

The employee population grows 2.3% in 1993 to 19,458. The fleet is altered as two A300B4-601s are withdrawn and are succeeded by five A300B4-622Rs, four B-737-4D7s, three B-747-4D7s, two MD-11s, and a Canadair CL-601 Challenger. In April, it is announced that orders for seven A330-321s and a B-747-400 have been deferred while options on seven A330s and six B-777s are given up.

En route from London to Bangkok aboard a company Jumbojet on July 8, Chairman Bunyapana dies in his sleep of a heart attack. The new acting chairman is Vice Chairman Gun Pimarnthip, who remains commander in chief of the Thai Air Force. The carrier bans the use of laptop computers and CD-players during takeoffs and landings, beginning on August 1.

In addition to its domestic network, the state carrier of the expanding Asian "Mini Dragon" flies to 51 destinations in 31 nations Amsterdam, Athens, Auckland, Bandar Seri Begawan, Beijing, Brisbane, Brussels, Calcutta, Chiang Mai, Copenhagen, Dhaka, Delhi, Frankfurt, Hanoi, Hai Yai, Ho Chi Minh City, Hong Kong, Jakarta, Kao-hsiung, Karachi, Kathmandu, Kota Kinabulu, Kuala Lumpur, Langkawi, London, Los Angeles, Madrid, Manila, Melbourne, Munich, Muscat, Nagoya, Osaka, Paris, Penang, Perth, Phuket, Rome, Seattle, Seoul, Singapore, Stockholm, Sydney, Taipei, Tokyo, Toronto, Vienna, Vientiane, Yangon, and Zurich.

Senior Vice President-Finance Thamnoon Wanglee is chosen by the board in September to succeed the retiring Chatrachai Bunya-Ananta as president for a two-year trial period, beginning on October 1.

Customer bookings increase 18.8% to 10,637,751 while cargo jumps 14.6% to 1.06 billion FTKs. Although revenues are up 7.6% to \$2.05 billion, expenses are \$2.13 billion. The operating loss is cut to \$107.94 million and a \$40.36-million net gain is realized.

The workforce is increased another 5.6% in 1994 to 20,356 and the company's shareholders appoint a new 15-member board of directors in January. Former TAF commander in chief and airline Chairman Gun Pimarnthip is removed from the board and is succeeded by Kasem Suwanakul, the former education minister. On October 10, the company signs an agreement with **Deutsche Lufthansa, A.G.** to expand the Thai carrier's German passenger and cargo operations; under terms of the pact, THAI will increase its flights from Bangkok to Germany from five to seven per week and both airlines will operate as code-sharing partners.

A certification dispute with Airbus Industrie in September further delays the delivery of several A330-321s. The manufacturer will eventually pay compensation for loss of revenues higher than allowed for in the purchase contract; the dispute will be resolved in December and three A330-322s are delivered.

Meanwhile, on October 22, an MD-11 is badly damaged when, during engine runs at the Bangkok base, it jumps its chocks and smashes into a parked A300B4-203. It will take months for repairs to be completed to the U.S.-built wide-body, while the Airbus must be withdrawn from service.

Passenger boardings for the year jump 12.6% to 11,501,787 while freight ascends 17.4% to 1.197 billion ton kilometers. Revenues increase by 8.6% to \$2,178,191 while expenses move up 3.2% to \$2,182,382. As a result, there is an operating loss of \$4,191,000. Electing to recognize discounts on aircraft purchases as income, this figure is adjusted to show an operating profit of \$74.4 million. The company also realizes a net gain of \$168.5 million.

Airline employment in 1995 stands at 21,906, a 7.6% increase. Early in the year, dual-designator flights commence with **Japan Air Lines Co., Ltd.** (2) between Bangkok and Osaka (KIX).

The company's premier B-777-2D7 is delivered during the first week of April; it will be the first to employ the Rolls-Royce Trent engine in revenue services.

On June 5 a new code-sharing and strategic arrangement is signed with **SAS (Scandinavian Airlines System)**, which has recently entered

into a comprehensive alliance with the German major **Deutsche Lufthansa, A.G.** Under terms of the agreement with the Scandinavians, THAI will share passenger lounges, ground handling, advanced-seat reservations, frequent flyer mileage, and other amenities, as well as codes on all of its flights to or from Norway, Sweden, or Denmark.

With the arrival of the second B-777-2D7, flights are inaugurated in June from Bangkok to Hong Kong, Seoul, Taipei, Singapore, and Delhi.

When the U.S.-Thailand bilateral air agreement is suspended by Thailand in early July because of Washington's requirement for greater access to Bangkok, THAI makes it known that, although it also supports Japan in that country's discussions with the U.S. over beyond-flights for **Federal Express**, discussions for a proposed around-the-world pact with **Deutsche Lufthansa, A.G.** and **United Airlines** will not be disrupted.

After a new coalition government takes office in July, Air Chief Marshal Siripong Thongyai is named acting chairman.

Also during the summer, routes are opened to Athens and Istanbul. The pact with SAS becomes trilateral in October when a similar agreement is entered into with **Deutsche Lufthansa, A.G.** The new pact will create 430 code-sharing weekly passenger connections as well as a joint freighter service between Bangkok and Frankfurt. Also during the month, a trilateral around-the-world service is initiated with **United Airlines** and **Lauda Air Luftfahrtgesellschaft, A.G.**, the latter replacing **Deutsche Lufthansa, A.G.** The new thrice-weekly flights allow dual-designator code-sharing via Bangkok with THAI, Los Angeles or San Francisco with **United Airlines**, and Vienna via **Lauda Air, A.G.** The big winner in this arrangement is **Deutsche Lufthansa, A.G.** in that its pact with **Lauda Air, A.G.** provides the German major with an alternative service from Frankfurt to Sydney, Australia.

Deutsche Lufthansa, A.G. joins THAI on October 31 in inaugurating new joint weekly return flights from Frankfurt to Chiang Mai, Phuket, Phnom Penh, Yangon, and Auckland; additionally, the two will offer two weekly roundtrip frequencies between Munich and Bangkok and seven per week from Frankfurt to Bangkok.

Joint services with **Japan Air Lines Co., Ltd. (2)** are increased seven-fold in November; services from Bangkok to Fukuoka, Osaka, and Nagoya are increased to nine per week. Additionally, JAL begins to code-share on THAI frequencies from Bangkok to New Delhi.

At the annual stockholders meeting in December, Acting Chairman Air Chief Marshal Thongyai, the Royal Thai Air Force commander who had also acted as the airline's CEO for the past six months, is confirmed in the latter post.

Customer bookings climb 11.9% to 13,251,299 and cargo moves ahead by 5.8% to 1.3 billion FTKs. Operating revenues swell 11.3% to \$4.7 billion, while costs are up only 7.4% to \$2.29 billion. Operating gain jumps to \$149.3 million and net profit reaches \$182.4 million. The operating line is later adjusted upward to \$193.9 million.

The workforce is increased by 3.7% in 1996 to 22,723.

A contract is entered into with Langdon Asset Management Co. on May 1 under which LAMC, acting as agent, acquires six B-747-2D7Bs from THAI for resale to **Atlas Air**. All will be delivered over the next 18 months and converted by Boeing at Wichita, with the first entering service with the American freighter during the fourth quarter. The trilateral pact with **SAS (Scandinavian Airlines System)** and **Deutsche Lufthansa, A.G.** takes effect on June 1. On June 18 the company enters into a three-year contract with the American freight operator **Atlas Air** for the wet-lease of B-747-200Fs.

The \$256-million agreement with **Atlas Air** commences during the fourth quarter as the first of the newly converted ex-THAI Jumbojets reaches Atlas. It is employed to start new cargo routes opened to Los Angeles via Osaka and Anchorage and to Frankfurt via Sharjah.

Just 24 hrs. before the start of a shareholders meeting on December 24, Transport Ministry official Mahidol Chantyrangkum is told that he has been nominated for the post of airline chairman. He is duly elected to the post, replacing Air Chief Marshal Siripong Thongyai. The board, also newly installed, authorizes the new CEO to place 21 new Boeing and Airbus aircraft worth \$2.6 billion.

Enplanements shoot up another 11.5% to 14,308,270 and 1.32 billion FTKs are operated, a 4.3% increase. Operating income advances 6.6% to \$2.59 billion while costs climb 9.1% to \$2.48 billion. The operating profit reaches \$231.21 million, while after-tax income totals \$193.9 million.

Airline employment is cut almost in half in 1997, dropping 49.7% to 11,300, with most layoffs occurring after the summer currency crisis begins.

Sydney Organizing Committee CEO Mal Hemerling and **Ansett Australia (Pty.), Ltd.** Chairman Rod Eddington announce on January 28, that THAI has been chosen one of seven carriers to receive the designation of official carrier for the Sydney 2000 Olympic Games. In an effort to deal with the nation's growing economic crisis, Thailand's Prime Minister Chavalit Yongchaiyudh makes a series of budget cuts during the month. He requests that THAI delay its aircraft purchase and lease only those aircraft necessary to maintain services.

As the result of a study undertaken by a management consulting company, the carrier, in March, reorganizes its top management functions according to a plan approved by the Ministry of Finance. The new structure is designed to streamline the company's hierarchy.

The government, in April, once more gives THAI the green light to purchase \$2.6 billion in new aircraft from Airbus and Boeing. The delayed plan will see 31 aircraft retired as the new planes arrive through the year 2000. Among the withdrawals will be five BAe 146-300, which will exit at the end of the year and be turned over to the new U.K. discount airline **Debonair Airways, Ltd.**

With considerable fanfare on May 14, THAI joins with its marketing partners **Deutsche Lufthansa, A.G.**, **Air Canada, Ltd.**, **SAS (Scandinavian Airlines System)**, and **United Airlines** in an enhanced joint venture marketing venture to be called "Star Alliance." The new alliance, seen in some quarters as a counter to the proposed **British Airways, Ltd. (2)-American Airlines** arrangement, will stitch together the operational and marketing efforts of all five airlines.

Employees of the five will be able to share ticket offices and airport services and jointly purchase supplies. They will also contribute to joint promotional and advertising campaigns to be handled by the New York firm of Young & Rubicam Advertising, which is given a \$25-million budget to publicize unified efforts. Travelers on any of the carriers will be able to accumulate and cash in frequent flyer mileage from any of the five. **VARIG Brazilian Airlines (Viacao Aereo Rei-Grandense, S.A.)** will join the group in October and negotiations are underway to bring in such other airlines as **South African Airways (Pty.), Ltd.** and **British Midland Airways, Ltd.**

The long-delayed aircraft order is finally placed during June. Requested for 1998 delivery are 4 A330-321s and 5 A300B4-622Rs; additionally, 19 Pratt & Whitney POW4000 engines, valued at \$210 million, are also ordered.

Despite the chaos following Hun Sen's coup in Cambodia and the fighting at and near Phnom Penh's Pochentong Airport, the company continues flying into the beleaguered capital from Bangkok during the second week of July. It is the only foreign airline to do so.

A severe foreign-exchange problem strikes Thailand in July and continues. Over the next six months, the baht will fall 36% against the U.S. dollar. Meanwhile, the Finance Ministry resists a Transport and Communications Ministry proposal to further privatize the company and lower its government's 93% stake. Local media cite government sources that claim that opposition to the sale has arisen because it is realized that the International Monetary Fund might have a claim on any revenues.

In a report picked up and distributed by the Agence France Presse English wire service on October 2, the Bangkok daily newspaper *Nation* is quoted as reporting that THAI is under pressure to withdrawn from the "Star Alliance." With THAI officials complaining that the airline has been unable to show adequate progress on an action plan for global co-operation because it is still under control of the Finance and Transportation Ministries, it is noted that "sources close to" **Deutsche Lufthansa, A.G.** have the German major suggesting that the more-efficient **Singapore Airlines, Ltd.** would make a preferable partner. German airline officials deny the contention.

Singapore Airlines, Ltd. would make a preferable partner. German airline officials deny the contention.

In late November, the government, in a petition to the International Monetary Fund, pledges to reduce its stake in the national airline from 98% to below 50% within the next six months.

On December 22, the company's governing board agrees to a privatizing plan that will see the government stake cut from 93% to 70% through a series of public offerings. A delay in Boeing's delivery schedule means that the BAe 146-300s cannot be withdrawn at year's end.

Passenger boardings rise 2.3% to 14,981,897 while cargo moves ahead by 20.3% to 1.6 billion FTKs. Operating revenues (reported at the end of September) climb 8.5% to \$2.07 billion, while costs are \$1.85 billion. Although a \$221-million operating profit is reported, a gigantic \$732.91-million net loss is suffered.

At the beginning of 1998, THAI is the 19th largest airline in the world in terms of operating profit and 21st in passenger boardings and freight carried. Airline employment stands at 11,309 and the fleet, all of which is Stage III certified, includes 76 airplanes: 9 B-737s, 15 B-747s, 7 B-777s, 23 A300s, 2 A310s, 8 A330s, 5 BAe 146s, 3 DC-10s, and 4 MD-11s.

The five BAe 146-300s are retired in February; they will be returned to British Aerospace for refurbishment and painting and will be forwarded to **Debonair Airways, Ltd.** during the second and third quarters.

On March 17, three DC-10-30ERs are sold to Alliance AirInvest; the financing company will lease the planes to another carrier.

Flight 664, an MD-11 arriving from Bangkok on April 12, skids off the runway after landing in heavy rain at Shanghai. Although no injuries are reported, the airport is briefly closed, affecting more than 100 flights.

Discussions concerning privatization are held and in June the government authorizes the sale of 235 million shares, thereby reducing its stake to 72%. **Qantas Airways (Pty.), Ltd.** expresses interest in acquisition. To raise capital, THAI is also granted permission to issue 100 million new shares of common stock.

A working group is established by the board of directors on August 3 to organize a long-term strategic plan for the airline's growth. The Association of Asia-Pacific Airlines (AAPA) announces on September 2 that, in its survey of on-time service for 1997, THAI ranks first.

The carrier's new B-777-3D7 makes a predelivery appearance at the Farnborough Air Show at London on September 9. Between September 9 and 11, THAI hosts a meeting of the "Star Alliance" Purchasing Steering Committee at the company's head office, while simultaneously holding a "Star Alliance" Trade Fair.

The Cambodia Daily newspaper reports on September 23 that, because of a failure in control tower meteorological equipment at Phnom Penh, a THAI aircraft had experienced minor problems in making its landing on September 20. As a result, the airline had suspended flights into the Cambodian capital for two days until repairs can be completed.

Flight 775, an MD-11 with 400 passengers en route to Bangkok is forced to return to Osaka (KIX) on September 22 with engine problems. An uneventful landing is made and no injuries are reported.

On October 25, code-sharing begins with **Emirates Airlines, Ltd.** on all passenger and cargo flights. Together, the two airlines will offer seven weekly roundtrips between Bangkok and Dubai.

The new winter schedule begins on October 26. The current seven weekly roundtrips from Bangkok to Los Angeles via Osaka (KIX) will be maintained, while the number of roundtrips operating to Europe will grow from 29 to 47 each week.

Daytime flights now operate on the thrice-weekly routes from Bangkok to London, while the number of weekly roundtrips between Bangkok and Paris grows from four to seven. The company introduces thrice-weekly direct services from Bangkok to Stockholm, cutting out the Paris stop.

Due to the current dismal economic situation, the weekly roundtrip passenger service to Amsterdam is suspended; all-cargo services are, however, continued. The five weekly flight operations previously undertaken between Bangkok and Amsterdam via Zurich are replaced with daily roundtrips between Bangkok and Zurich.

Although daily services are maintained from Bangkok to Perth, Brisbane, Melbourne, and Auckland, THAI ends its four weekly roundtrips from Bangkok to Sydney via Jakarta.

New twice-weekly flights are initiated between Phuket and Seoul via Taipei. Also in the region, the airline increases the frequency of its weekly Bangkok to Kunming flights from 5 to 7, to Guangzhou from 3 to 4, to Yangon from 12 to 14, and to Phnom Penh from 10 to 14. Within Thailand, weekly frequencies operating from Bangkok to Chiang Mai increase to 58, Chiang Rai and Pitsanulok to 21, and Phuket to 64. The number of roundtrips between Bangkok and Mae Hong jumps from 21 to 28 weekly flights.

At a November 30 ribbon-cutting ceremony attended by the minister of transport, THAI and Rolls-Royce officials open the largest engine test cell in Asia. The facility is located at the airline's Bangkok technical base.

The two ATR72-212s operating daily between Bangkok and Nakhon Srithammarat are replaced on December 1 with a B-737-4D7.

THAI is the official airline and caterer of the 13th Asian Games, which are held for a week at Bangkok beginning on December 6.

As the result of passenger complaints and in cooperation with the Australian Quarantine and Inspection Service, THAI, on December 8, becomes the first foreign airline permitted to stop the use of aircraft disinfectant spray inside the cabin prior to landing.

Having arrived at Surat Thani after a December 11 service from Bangkok, Flight 261, the A310-204 *Phitsanoluk* with 14 crew and 132 passengers encounters limited visibility and heavy rainfall. While on its third landing attempt, the Airbus crashes 3 km. S of the airport in a swamp on a rubber plantation.

Forty-five of those aboard survive, including 12 of the 25 foreigners aboard. On December 13, Chairman Wanglee tells a news conference that THAI will pay all medical expenses for the survivors and provide each of them with \$5,600 in compensation. The airline will also pay \$100,000 in compensation to the relatives of all of the dead.

Despite the UN's armed dispute with Iraq, THAI, on December 17, maintains its scheduled services from Bangkok to both Dubai and Muscat.

The carrier's technical department receives maintenance certification from the European Joint Aviation Authorities on December 18.

The company's first B-777-3D7 is delivered in ceremonies at Everett, Washington, on December 23. The aircraft is christened *Sriwanna* in honor of a now-retired THAI B-747. To accommodate holiday traffic, as many as five extra B-747-4D7 roundtrips are now offered from Bangkok to Hong Kong. These flights will continue to January 2. Extra Airbus frequencies are added on domestic routes.

During the 12 months, passenger boardings climb 4.2% to 15.61 million, while cargo traffic falls 6.1% to 1.52 billion FTKs.

On January 1, 1999, the carrier's float "The Kingdom of Thailand" receives the "Craftsman Award" at the 110th Rose Parade at Pasadena, California.

The Thai Minister of Transport and the airline's chairman are both on hand on January 20 as young Apichart Petchart, a survivor of the Flight 261 disaster, departs for medical treatment in Germany.

The annual board meeting is held at Bangkok on January 21 and results in the appointment of several new members and the establishment of special committees to review safety, the technical department, and conduct audits.

A second B-777-3D7, the *Chainarai*, arrives in January.

Thai Transport and Communications Minister Suthep Thaugsuban announces on February 18 that his government may not be able to allow **Singapore Airlines, Ltd.** to hold a stake in THAI because state enterprise laws do not permit it to accept strategic partners that are also business competitors. Singapore and Star Alliance partner **Deutsche Lufthansa, A.G.** will lobby the other members of the airline pact to make a joint equity purchase into the airline using the alliance as the agent.

THAI is unsuccessful in its attempt to cancel its aircraft orders. However, in March, Airbus Industrie agrees to allow the carrier to delay delivery of an A330-323X until July 2000, while Boeing agrees to a one-

month moratorium on progress payments for a pair of B-777-300s due to arrive early in the new year.

All flights become nonsmoking on March 28. In April, the company announces that it will at some point privatize its THAI-Aircraft Engineering Services Company by selling a 50% stake to another, probably foreign, concern.

Worker opposition to the engineering sale continues to manifest itself in speeches and broadsides throughout the remainder of the month and into May. On May 5, 900 engineers and mechanics stage a protest rally at Bangkok's Don Muang Airport, listening as their leader, Charnchit Sukreungrong, denounces the projected foreign interest and threatens to lead a strike that will ground the company's flights the next day. Sukreungrong's rally follows a similar outburst against foreign ownership staged by workers of the state-run Electricity Generating Authority of Thailand the week before.

THAI Chairman Wanglee sends word to the disgruntled workers early the next morning that he will meet with them to discuss the pending divisonal sale. The conciliatory action averts the threatened strike.

Passenger boardings accelerate 6.3% to 16,593,000, while cargo jumps 9.7% to 1,672,801,000 FTKs. Operating revenues rise 2.1% to \$2.83 billion, while costs dip 2% to \$2.38 billion. Operating gain rises to \$452 million, while the net profit falls to \$140 million.

Airline employment at the beginning of 2000 stands at 24,121, a 0.2% increase over the previous 12 months. Among the world's top 25 airlines, THAI is 21st in passengers, 22nd in FTKs, 17th in employees, 25th in operating revenue, 11th in operating profit, and 23rd in net gain.

It is announced on February 7 that the U.S. Export-Import Bank will guarantee a \$537-million, 12-year loan that will enable THAI to purchase 4 B-777-300s and another B-747-4D7 to go with the 16 already operated.

Stung by a 1.7-billion baht (\$45-million) loss on domestic operations in 1999, the THAI board, on February 24, boosts domestic ticket prices an average of 13% beginning in March.

Between February 24 and February 29, THAI flights bring back to Bangkok all national senate election ballots cast by citizens residing overseas. The votes will be counted with the national tabulation on March 4.

Coming on the heels of the new March 1 bilateral air agreement between Thailand and Myanmar, THAI increases its weekly seat capacity between Bangkok and Rangoon on March 8 from 2,500 to 3,150. Airbus equipment will replace B-737-4D7s to make the increase happen.

Also during the month, another step is taken down the trail toward privatization. Deputy Prime Minister Supachai Panitchpakdi reveals that, with the approval of the Thai Cabinet, the government stake in the flag carrier will be cut from 92.2% to 70% by the sale of 100 million existing and 300 million newly created shares.

Under terms of a memorandum of understanding signed on March 7, THAI and **Swissair, A.G.**, on March 26, begin to code-share on each other's 7 weekly roundtrips between Bangkok and Zurich (7 flights each).

To accommodate visitors to the Songkran Festival 2000, THAI adds seven special flights between April 13-16 from Bangkok to Chiang Mai, Phuket, and Surat Thani. Thrice-weekly return service begins on April 14 from Bangkok to Lampang.

Thrice-weekly ATR roundtrips from Bangkok to the new airport at Petchaboon commence on May 3. Petchaboon is THAI's 23rd domestic destination.

THAI staff welcome visitors to the Thailand Pavilion at EXPO 2000 in Hanover, Germany, beginning on June 1; the World's Fair is scheduled to continue until October 31. B-737-4D7s replace ATRs on the Bangkok-Petchaboon route the next day.

In order to allow the installation of new runway lights at Khon Kaen Airport, the B-737-4D7 flights to that city from Bangkok are cancelled or severely reduced between June 5 and July 1.

The carrier begins to code-share with **Swissair, A.G.** on June 15 on the return route from Bangkok to Zurich. One flight is operated by a THAI MD-11 and the other by a Swissair MD-11. Concerned with the decimation of the world's shark population, shark soup is removed from

THAI's menus. Also on June 15, the company denies plans, rumored for some weeks, that it will join the new "SkyTeam" alliance beings set up by **Air France** and **Delta Air Lines**.

It is announced on June 29 that **Air France** and **Delta Air Lines** will team up to make a bid for a 10% stake that is becoming available in THAI. Officials of the Bangkok-based major announce on July 7 that they will begin accepting bids in September. The accounting firm KPMG and lawyers from the firm of Baker & McKenzie are now employed to assist with the process. Unhappily, a sharp decline in the Thai stock market quickly nullifies this pronouncement and a decision is taken to step away, temporarily, from the partial 23% floatation of the airline—10% to a strategic (airline) partner and 13% to the public—originally scheduled for year's end.

Beginning on July 1, the number of weekly return flights to Europe is increased from 51 to 53. The two weekly Bangkok–Athens–Rome services are separated into twice-weekly direct flights from the Thai capital, one each to Italy and Greece. The delayed A330-323X is delivered on July 19.

A THAI B-747-4D7 arriving at Los Angeles on August 23 carries 120 automobile tires on pallets in its belly. This is the first delivery of a 25-flight transpacific tire airlift that will be made on behalf of Bridgestone/Firestone over the next week. The tire manufacturer has recalled certain types of tires in the wake of their alleged operational failures that have caused a number of motorist fatalities.

On September 26, a block-seat code-sharing agreement begins aboard **El Al Israel Airlines, Ltd.** for four-times-a-week B-747-458 roundtrips between Bangkok and Tel Aviv.

Executive Vice President-Customer Services Bhisit Kuslasayanond succeeds Thamnoon Wanglee as president on October 1. On October 4, the new CEO joins with Mae Fah Luang Foundation Chairman Apilas Osatananda to open "THAI's Exhibition to Commemorate the Centenary Celebration of the Birth of Her Royal Highness the Princess Mother."

On October 19, the board of directors appoints consultants Roland Berger & Partner, GmbH, assist with continuing plans for privatization. It also approves lease financing for the fifth and sixth B-777-3D7s.

An extraordinary shareholders meeting is held on October 25. Chaired by Vice Chairman Supachai Phisitvanich, the meeting approves a reduction of the company's registered capital.

The winter schedule begins on October 29. The number of domestic weekly return flights between Bangkok and Chiang Rai is increased from 33 to 35, as are those from Bangkok to Nakhon Si Thammarat from 7 to 9 and Trang-Krabi from 14 to 20. All of these flights are operated with B-737-4D7s.

International routes are also adjusted. Four additional A330-323X roundtrips are inaugurated between Bangkok and Osaka, three additional B-777-2D7 return flights are offered from Bangkok to Seoul, seven more frequencies are completed to Singapore, bringing the total to 14, while one each additional roundtrip is operated to Fukuoka (4 to 5), Lahore (3 to 4) and Colombo (3 to 4).

There is an increase in the number of weekly roundtrips to Europe from 53 to 56, with one additional weekly flight added on the routes from Bangkok to Copenhagen, to Stockholm, and to Munich. Weekly roundtrips to Australia are boosted from 19 to 24, with the A330-321 service from Bangkok to Perth increased by one service. President Kuslasayanon welcomes back to Bangkok the Sydney Paralympic Games medalists and officials and presents financial rewards to the winners. A gala celebration is held at the Shangri La Hotel in Jakarta on the evening of November 6, marking the fortieth anniversary of service to the Indonesian capital. Chairman Mahidol Chantarakorn resigns on November 16 so that he may begin his retirement. He is replaced by Transport and Communication Ministry Permanent Secretary Srisook Chandragasu. Also in November, the government once more defers the airline's privatization. Rising fuel prices have caused a slump in the value of shares, by some accounts, of up to 50% over the past year.

Believing that they have paid too much for five new jetliners in a deal recently concluded with Boeing, THAI, on December 8, appoints a spe-

cial board to look into the situation. Boeing, meanwhile, agrees to lower its price by \$5 million and to buy back four MD-11s.

On December 1, the number of weekly B-737-3D7 roundtrips from Bangkok to Sydney, Melbourne, and Auckland is increased from 15 to 19. The last of 14 B-777-2D7s to be delivered since 1996 is accepted on December 9.

Deutsche Lufthansa, A.G. Chairman Jurgen Weber admits on December 13 that his airline will participate in bidding for a stake in THAI. Following elections in Thailand on January 6, the national finance ministry is expected to reduce its stake in the flag carrier from 93% to 70% sometime later in the first quarter.

On December 22, THAI and **All Nippon Airways Company, Ltd. (ANA)** begin code-sharing on approximately half of the 21 weekly roundtrips (14 THAI, 7 ANA) operated by them between Bangkok and Tokyo (NRT).

THAI FLYING SERVICE, LTD.: Thailand (1981–1986). This small operation is formed at Bangkok in February 1981 to offer domestic on-demand and commuter services. Flight operations begin in April and the fleet grows to include 1 Piper PA-34 Seneca III and 1 Rockwell Turbo Commander 680T. Operations cease in 1986.

THAMES AIR, LTD.: Nigeria (1993–1995). TAL is established at Lagos in 1993 to provide nonscheduled cargo services to European destinations, particularly London. Revenue operations commence with a single Boeing 707-321C freighter and continue until the company shuts down in 1995.

THERON AIRWAYS (PTY.), LTD.: South Africa (1976–1991). Organized as **Theron's Lugdiens**, the airline division of Pierre A. Theron's Theron's Cartage, Ltd., in 1976, this Krugersdorp-based charter operation commences lightplane revenue flights to domestic destinations late in the year. After five years of nonscheduled operations, Theron begins scheduled services in 1981 from Lanseria Airport, north of Johannesburg, to Wonderboom and Ellisras with a Cessna 421 and a Beech B-55 Baron.

During the middle of the decade, the fleet is increased by the addition of a Cessna 404 Titan and a Beech B-60 Duke. Additional destinations acquired include Alldays, Louis Trichardt, Messina, Pretoria, and Tahipise. Most passengers are businessmen.

Managing Director Theron withdraws the Duke in 1988 while employing the Titan to maintain scheduled services in the northern Transvaal. Three other Cessnas are purchased in 1990: a 402, a 310, and a 210. Recession forces the little carrier into bankruptcy in 1991.

THTIS AIR, LTD. See **PACIFIC SPIRIT AIR, LTD.**

THK (TURK HAVA KURUMU, A.O.): Turkey (1989–1990). THK is established at Ankara on February 28, 1989 to offer scheduled services to regional destinations. Prof. Dr. Inanc Ayas is appointed director general and a two-plane fleet is purchased comprising one Fairchild Metro III and a Dornier 228-200.

The carrier becomes an affiliate of **THY Turkish Airlines (Turk Hava Yollari, A.O.)** in September 1990, at which time its name is changed to **THT (Turkish Air Transport, A.O.)**.

T. THOMAS AIR TRANSPORT SYSTEM, LTD. (THATS): Australia (1978–1985). THATS is formed at Neutral Bay, New South Wales, in October 1978 to operate charter and package air tour services throughout the nation. The initial fleet consists of 1 each Piper PA-31-310 Navajo and PA-31-350 Navajo Chieftain and revenue flights commence on January 26, 1979.

Larger aircraft are acquired later and destinations visited by air tourists come to include Murray River, Tasmania, Alice Springs, the Northern Territory, Ayers Rock, the Great Barrier Reef, and stops in rural Queensland.

The company ceases operations in or before 1985.

THOMAS LAMB AIRWAYS, LTD. See **LAMBAIR, LTD.**

THOMPSON AERONAUTICAL CORPORATION: United States (1928–1931). Thompson Aeronautical Corporation of Chicago bids on the Post Office Department's Contract Air Mail Route No. 27 (CAM-27) to Bay City, winning the award on May 5, 1928. Tex Marshall is appointed president, with Charles Rheinstrom as traffic manager. A fleet of six Stinson SM-1 Detroiters is assembled and scheduled airmail and express flights commence on April 17–18 from Bay City to Chicago via Saginaw, Lansing, Kalamazoo, Ann Arbor, Jackson, Battle Creek, and Kalamazoo.

Preparatory to the introduction of passenger service, a new station is opened at Detroit at the beginning of 1929 and on March 2, Charles Speer, who will become well known as an **American Airways** marketing guru, is appointed its manager. On April 1–2, a spur is opened from Muskegon to Chicago via Grand Rapids and Kalamazoo. Employing Loening C-2C amphibians, Thompson inaugurates scheduled, one-hour return passenger service on May 14 from Detroit to Cleveland. The one-way fare is \$20.

With Amelia Earhart aboard as copilot for the publicity, the initial flight departs the Motor City on schedule, but must land on Lake Erie to wait out a dense fog and misses its expected arrival time. The Ohio port city's newspapers quickly get out editions with headlines proclaiming the loss of the famous aviatrix. Shortly after the newspapers hit the street, the plane alights near 6th Street and the embarrassed press now blames Marshall and Rheinstrom of perpetrating a public relations hoax.

Beginning on July 17, passengers are allowed to fly the multistop Michigan mail route. On August 13, the C-2C *Miss Detroit*, piloted by the same Cy Caldwell who had inaugurated **Pan American Airways (PAA)** service in 1927 and with three others aboard, suffers engine failure. Attempting a deadstick landing, Caldwell crashes into Lake Erie west of Pelee Island; the copilot, Johnny Kasper, is killed. Caldwell is blamed for the tragedy and fired.

In January 1930, winter conditions are addressed through the equipment of passenger and mailplanes with skis. Flying from Cleveland to Bay City, Michigan, on February 18, a Pitcairn PA-6 Super Mailwing suffers engine failure in bad weather near Flint, Michigan; pilot Clifford W. March parachutes to safety.

On March 11, pilot A. H. Dewitt bails out of his PA-6, which is caught in a snowstorm at Mishawaka, Indiana. In the "Great Hangar Fire" at Chicago on June 25, a Stinson SM-1 is destroyed. Beginning on June 26, Thompson begins the use of experimental SM-1 Detroiters powered by Packard diesel engines. En route to Bay City from Cleveland on July 22, a PA-6 crashes at Huron, Ohio, in rain (one dead).

Later in the summer, mail, express, and passengers are carried on a new route from South Bend to Chicago via La Porte. On November 11, service is extended to Buffalo, New York.

On January 1, 1931, TAC is reorganized into a holding company. The airline subsidiary that emerges is named **Transamerican Airlines Corporation**, a small title change.

THORPE'S TRANSPORT (PTY.), LTD.: Australia (1976–1983). Based on Thursday Island, Queensland, Thorpe's is formed in 1976 to offer scheduled Britten-Norman BN-2 Islander services to Yam Island, Sue Island, Badu Island, Yorke Island, and Sabue Island (all located to the north of the Cape Yorke Peninsula) and to Barmaga on the mainland.

In 1983, the company is purchased by and merged into Mascot, New South Wales-based **Adved Airlines of Australia (Pty.), Ltd.**

THT TURKISH AIR TRANSPORT (TURK HAVA TASIMACILIGI, A.O.): Turkey (1989–1993). Originally established in early 1989 as the independent **THK (Turk Hava Kurumu, A.O.)**, operations are undertaken from Istanbul to domestic destinations. Osman Celikadam becomes general manager and his fleet consists of 2 Beech King Airs and 2 Antonov An-24RVs leased from **Tarom (Transporturile Aeriene Romane, S.A.)**.

The carrier becomes a 64% owned subsidiary of **THY Turkish Airlines (Turk Hava Yollari, A.O.)** in September 1990, at which time it is reformed and renamed. The previous regional services of THK are maintained and new routes are introduced, especially to eastern Anatolia; plans are made for the carrier to assume all of THY's domestic routes within six years.

In 1991, the company applies for permission to fly into western Anatolia. Celikadam is succeeded as general manager by Barbaros Yurdakul. In the summer, THY orders three British Aerospace BAe ATPs (later Jetstream 61s) with which to replace the Russian turboprops. The first arrives in September and enters service in eastern Turkey connecting 20 communities with Istanbul; the other two are in operation by year's end.

Airline employment stands at 88 in 1992 as the second pair of Jetstream 61s arrives. Statistics for passenger traffic are publicized for the first six months and show boardings of 60,013.

Airline employment in 1993 stands at 88 as Aykut Ozel becomes managing director. Late in the year, the company is absorbed by **THY Turkish Airlines (Turk Hava Yollari, A.O.)**, its parent.

THUNDER AIRLINES, LTD.: 310 Hector Dougall Way, Thunder Bay, Ontario P7E 6M6, Canada; Phone (807) 475-4211; Fax (807) 475-5841; http://www.thunderair.com; Year Founded 1990. Thunder Airlines is established at Thunder Bay, Ontario, in 1990 to provide passenger and cargo charters linking small communities and large throughout the province, with particular attention to air tour packages. Revenue operations begin with 1 each Beech King Air 100, Piper PA-31-350 Navajo Chieftain, and Cessna 208 Caravan I based at Thunder Bay and 1 each Caravan and Shorts 330 based at Pickle Lake.

By 2000, the fleet includes 1 each Beech King Air 100, Cessna 208 Caravan I, Beech King Air 100, and Pilatus PC-12. Clients now include Bell Canada, Ontario Hydro, C&N Rail, and the Ontario Ministries of Natural Resources and of Health. On behalf of the latter, air ambulance service is provided.

THUNDERBIRD AIRLINES: United States (1964–1969). Established as a division of Ogden, Utah-based Thunderbird Flying Services in the fall of 1964, this small, third-level operator begins scheduled lightplane passenger and cargo flights to Salt Lake City and Logan on September 18.

Operations continue until January 1, 1969, when the carrier is reformed and renamed **Key Airlines**.

THUNDERBIRD AIRLINES, LTD. See **NORTHERN THUNDERBIRD AIR, LTD.**

THUNDERBIRD AIRWAYS. See **T-BIRD AIR TRAVEL**

THY TURKISH AIRLINES (TURK HAVA YOLLARI, A.O.): General Administration Building, Ataturk Airport, Yesilkoy, Istanbul, 34830, Turkey; Phone 90 (212) 663-6300; Fax 90 (212) 663-4744; http://www.turkishairlines.com; Code TK; Year Founded 1933. **DHY (Devlet Hava Yollari-Turkish State Airlines)** is formed by the Ministry of Public Works on May 20, 1933. Initial Istanbul–Ankara via Eskisehir service is launched by de Havilland DH 80A Puss Moths on a summer basis only. At the end of April 1934, it is reported that, for the first year of operations, the carrier has transported a total of 463 passengers and one ton of cargo. The fleet now includes 2 Junkers F.13s, 2 DH 80s, and 2 Curtiss Model 55 Kingbirds first flown by **Eastern Air Transport** in the U.S.

In 1935, the single route is extended to Diarbekir and in May 1937 the fleet is increased through the addition of four DH-86s. By 1939, the route network runs from Istanbul–Diarbekir, with stops at Izmir, Adana, Ankara, and Kayseri. There are no significant changes during the war years.

Pan American Airways (PAA) begins to provide technical assistance in 1946 under a new Turkish-U.S. bilateral air agreement. Upwards of 33 Douglas DC-3s and C-47s ordered from Allied war surplus

the previous year are acquired and winter services are initially begun at year's end. The first international service is inaugurated in **1947** over a route from Ankara to Athens via Istanbul.

Operations continue apace and without incident in **1948–1949**. A DC-3 with 4 crew and 11 passengers catches fire after landing at Ankara on March 25, **1950**, and explodes; there are no survivors.

Another Douglas transport with four crew and a passenger, strikes a sand dune while on final approach to Cairo on November 19; there are no survivors.

Flights are safely conducted during the remainder of the year and throughout **1952**. A DC-3 with 5 crew and 16 passengers fails its climb away from Ankara on September 25, **1953**, and crashes into a dry river bed (five dead).

The first half of **1954** is marred by two fatal accidents. On January 5, a DC-3 with three crew and five passengers smashes into the ground near Lapseki, Turkey, (four dead).

On April 3, a DC-3 explodes in midair just after takeoff from Adana (25 dead).

On June 15, **1955**, an agreement is signed with **Pan American World Airways (1)**; the terms of the deal call for the Turks to be trained in modern techniques under a \$475,000 FOA grant to be administered under the direction of Capt. S. H. Miller.

The carrier is reformed into a corporation and receives its current name on March 1, **1956**, with the government maintaining controlling interest. DH-114 Heron 2s join the fleet and a Douglas DC-7B is leased from the American carrier **Eastern Air Lines**. Toward year's end, the company becomes the 78th member of IATA.

Vickers Viscounts are ordered in July **1957**, during which year passenger boardings are 329,000. While landing at Munich on January 20, **1958**, the EAL DC-7B suffers a nosewheel collapse; although no injuries are reported, the plane is so badly damaged that it must be written off. Fortuitously, the first Viscount is delivered the next day.

British Overseas Airways Corporation (BOAC) acquires a 6% minority interest in **1959**, which will be held until 1977. British technical assistance now replaces American.

En route from Ankara to London on February 17, a chartered Vickers Viscount 794D with 8 crew and 16 passengers crashes near Gatwick Airport (14 dead).

Enplanements for the year total 371,244.

Orders placed for five Fokker F.27s the previous year are license-built in the U.S. by Fairchild and join the fleet in **1960**.

On initial approach to Ankara following a September 23, **1961** flight from Adana, an F.27-100 with 4 crew and 25 passengers flies below minimum altitude and crashes near the airport (28 dead).

While on approach to Incirli on March 8, **1962**, a Fairchild F-27 with three crew and eight passengers makes a navigational error and crashes into snow-covered Taurus Mountain at the 11,000-ft. level; there are no survivors.

Passenger traffic for the year drops to 287,333, falling to 262,920 in **1963**.

A DC-3, with three crew crashes while on initial approach to Ankara on February 3, **1964**; there are no survivors. During the year, routes are opened to Western Europe as Viscount service is started to Brussels, Vienna, Rome, Frankfurt, Munich and Athens.

Enplanements total 368,664.

Airline employment is 1,249 in **1965** and the fleet now includes 19 aircraft: 2 C-47s, 5 DC-3s, 8 F-27s, and 4 Viscounts. A new route is extended to Amsterdam. Frequencies are increased on the Istanbul to Athens route, the service from Istanbul to Brussels via Vienna and Frankfurt, and the run from Istanbul to Munich via Rome.

Passenger boardings climb 10% to 409,626.

There is no change in services offered during **1966**. The carrier's first jetliner, a DC-9-14, is leased from Douglas in August **1967** and is placed in service on the European routes.

The fleet is increased by six Friendships and six Douglas DC-9-14s in **1968**.

The nosegear of a chartered DC-7B with 6 crew and 32 passengers collapses as the plane lands at Munich on January 20; there are no fatalities.

Enplanements this year total 770,232.

While on final approach to Ankara on February 2, **1969**, a Vickers Viscount 794 with 4 crew and 22 passengers strikes an electricity pylon, crashes, and catches fire; although the aircraft must be written off, there are no fatalities.

En route from Istanbul to Ankara on September 16, Flight 124, a Viscount with 63 passengers, is captured by a lone assailant protesting Turkish travel restrictions. The aircraft is diverted to Sofia, Bulgaria, where the pirate is taken into custody. Upon examination, he will be found mentally deficient and sent to a psychiatric facility.

Customer bookings this year swell to 952,816.

The workforce is 2,769 in **1970**. Two additional DC-9-14s are acquired and Istanbul–London service is inaugurated.

An F.27-100 with 3 crew and 26 passengers is destroyed as the result of a bad landing at Samsun on February 17; there are no fatalities. Top management is reorganized during the fall.

Passenger boardings increase 13% to pass the one-million mark for the first time (1,095,191) while cargo climbs by 29.4%.

Two more DC-9-14s are delivered in **1971** as bookings climb to 1,921,744 and DC-10s are ordered.

The employee population stands at 3,775 in **1972**. Service is added to Copenhagen and Milan.

En route from Damascus to Ankara on January 21, a DC-9-32 with five crew is diverted to Adana with pressurization problems; on a second approach, the Douglas crashes and catches fire (one dead).

While en route from Ankara to Istanbul with 61 aboard on May 3, a DC-9-14 is hijacked by 4 Turkish students armed with grenades, who force it to land at Sofia, Bulgaria, after threatening to blow it up unless three condemned members of the Turkish People's Liberation Army are freed. Following a two-day siege, the students abandon their effort in exchange for political asylum.

The Bulgarians will, in fact, place the four on trial and give them three-year prison terms. The condemned TPLA prisoners are, meanwhile, hung at Ankara on May 6.

Four more TPLA students attempt the same ploy on October 22, seizing a similar jetliner en route from Istanbul to Ankara and diverting it to Sofia, where they hold 60 passengers hostages while demanding the release of 13 Turkish political prisoners. Again the demands are refused and again the students surrender to Bulgarian police. These students will also be put on trial and sent to prison for up to three years. The "ring-leader" will make the mistake of returning to Turkey some years later. He will be captured, tried, and sent to prison for 20 years.

The first of three DC-10-10s to be delivered on the year arrives on December 1 and begins service later in the month. Orders are placed for five Fokker F.28s.

Passenger traffic soars 24% to 1,969,000 and freight traffic grows 8.2%.

Service is initiated to Geneva in **1973**. The first F.28-1000s are delivered and begin to replace F-27s on domestic routes. The first of eight new Boeing 727-2F2s are assigned to regional services.

An F.27-100 is destroyed as the result of a belly landing at Istanbul on May 10; there are no fatalities.

Freight skyrockets 46.9% and passenger boardings jump 28.8% to 2,536,072.

An F.28-1000 with 5 crew and 68 passengers fails its takeoff from Cumaovasi Airport at Izmir for a January 26, **1974** flight to Istanbul and crashes into a drainage ditch, skidding and catching fire (66 dead).

As the result of the incorrect engagement of the door-latching mechanism before takeoff from Paris (ORY) to London (LHR) on March 3, Flight 981, the ascending DC-10-10 *Ankara* with 11 crew and 335 passengers, suffers the in-flight ejection of the aft cargo door on the left-hand side of the fuselage. The sudden and explosive depressurization that follows leads to the disruption of the floor structure, causing six

passengers and parts of the aircraft to be ejected. The No. 2 engine is rendered inoperative, thus impairing the flight controls (tail surfaces) making it impossible for the crew to regain control of the aircraft. The wide-body crashes crash at Bois d'Ermenonville and there are no survivors; the event is the worst single-plane disaster in commercial aviation history to date.

Ironically, the *Ankara* is one of six DC-10s that had first been ordered by Mitsui for lease to **All Nippon Airways Company, Ltd. (ANA)**, but passed to other carriers when the Japanese firm suddenly does an about-face and purchases Lockheed TriStars. Among the other carriers is **American Airlines**, which suffered an explosive door-decompression with one of the ships on June 12, 1972. Moira Johnson recalls this incident later in *The Last Nine Minutes: The Story of Flight 981* (New York: William Morrow, 1976).

The resulting bad publicity from Flight 981 (much of it in the British press, as many of the *Ankara*'s passengers had been from the U.K.) and the Cyprus invasion cause bookings to drop 8.3% to 2.09 million. Cargo, however, is up to 10.19 FTKs, a slight 1.9% boost.

As an F.28-1000 with 4 crew and 38 passengers is making its second landing approach to Istanbul Airport on the night of January 31, **1975**, the airport is suddenly blacked out by a city-wide power failure; the jetliner, consequently, crashes into the Sea of Marmara and there are no survivors.

The subsidiary **Kirbis Turk Hava Yollari/Cyprus Turkish Airlines** is formed in February to connect four Turkish cities with the northern part of the island of Cyprus; initial equipment includes a DC-9-14, a Boeing 727-2F2, and a B-707-128B. The airline, on March 4, offers a \$10-million out-of-court settlement to the damage suits arising from the 1974 Paris crash.

Systemwide, passenger boardings advance 8.5% to 2,274,000, but freight drops 4%.

Airline employment is 4,647 in **1976**. Seeking to be reunited with his French girlfriend, Turkish national Zeki Ejder hijacks a DC-10-10 with 253 passengers, shortly after its takeoff from Paris (ORY) for a flight to Istanbul on May 1. He surrenders at Paris, where the plane lands after it is refused permission to exit French airspace.

En route from Istanbul to Antalya on the night of September 20, the pilots of a B-727-2F2 with 8 crew and 146 passengers, see bright lights of a city believed to be their point of destination and obtain permission to land. While on initial approach to, what turns out to be, Isparta instead of Antalya, the aircraft crashes into a mountain; there are no survivors.

Passenger bookings this year soar 25.9% to 2,862,000 and cargo swells by 47.8% to 14.52 million FTKs.

On February 13, **1977**, a 17-year-old assailant shoots the pilot and a stewardess while taking over a DC-9-14 with 62 aboard en route from Istanbul to Izmir. The aircraft is diverted to a military base near its destination, where the young man surrenders to grim-looking military police.

Lebanese police arrest two armed hijackers on March 20, who have commandeered a B-727-2F2 during a Diyarbakir to Ankara flight with 8 crew and 173 passengers and diverted it to Beirut.

The company is completely nationalized at midyear and now operates without foreign capitalization; the last **British Airways, Ltd. (2)** holding is relinquished. Two B-707-321Cs begin a dedicated all-cargo service from Istanbul to Frankfurt; goods hauled include vegetables, fish, fruit, textiles, and leather.

Enplanements for the year rise to 3,109,385. Still, a \$15.1-million loss is suffered. On revenues of \$176.8 million, the loss is cut to \$8.4 million.

International destinations visited from Ankara, Antalya, Izmir, Istanbul, and Adana in **1978** include Beirut, Tel Aviv, Tripoli, Milan, Rome, Zurich, Copenhagen, Brussels, Geneva, Frankfurt, Paris, Vienna, Munich, and London.

Chairman Nihat Kursat oversees a workforce of 5,540 and his fleet now comprises 4 Boeing 707-120Bs, 2 DC-10-10s, 4 B-727-2F2s, 9 DC-9-30s, and 3 F.27-100s. A new technical agreement is negotiated with **KLM (Royal Dutch Airlines)**.

Bookings fall 16.5% to 2,688,979 and freight is off 18.7%.

While on approach to Ankara's Esenboga Airport on December 23, **1979**, the F.28-1000 *Trabzon* with 4 crew and 41 passengers deviates from course and strikes a hill near Cucuk Koy (41 dead).

Traffic for the year falls to 2,037,000, yet the loss is down to \$4.7 million.

A three-month strike-lockout and its aftermath in **1980** will have a significant impact upon traffic.

En route from Istanbul to Ankara on October 13, Flight 890, a B-727-2F2 with 140 passengers, is diverted to Diyarbakir by four armed hijackers. On the ground, Turkish troops storm the aircraft, killing 1 passenger and wounding 12 other persons, including the skyjackers, who are all captured. The four will later be tried and executed.

Passenger boardings drop 45.5% to 1,445,000 as freight dips 37.8% to 162.72 million FTKs. Consequently, the workforce is cut 6% to 5,734. On revenues of \$174 million, the loss this year soars to \$27.6 million.

Service is inaugurated to Karachi and Abu Dhabi in **1981**. En route from Istanbul to Ankara on May 24, Flight 104, a DC-9-30 with 84 passengers, including 5 American bankers, is hijacked to Burgas, Bulgaria, by 4 leftist guerrillas, who threaten to kill the Americans unless 47 political prisoners are released from Turkish jails and a ransom paid.

The next day, two of the skyjackers are captured by police as they leave the aircraft to give a press conference. The two other sleepy pirates are overpowered by Bulgarian law enforcement officials and brave passengers; all of the hostages are safely freed. The quartet will be tried and receive three-year prison terms.

On June 12, a number of people stage a protest outside the company's Paris offices against alleged "outrages" being perpetrated against Armenians living in France.

Customer bookings skyrocket 58.3% to 2,295,000. A net profit of \$37 million is reported.

Enplanements are off 0.2% to 2,292,000 in **1982**. Airline employment in **1983** stands at 5,712 as Airbus Industrie A310s are ordered. Also, 3 de Havilland Canada DHC-7s are chartered for 3 years from **Schreiner Airways, B.V.**

While on final approach to Ankara in a blinding snowstorm on January 16, a B-727-2F2 with 7 crew and 60 passengers lands 50 m. short of the runway, breaks up and catches fire (47 dead).

On January 22, Armenian guerrillas throw grenades at the carrier's Paris office and another bomb is later discovered near the airline's counter at Orly Airport; no injuries are reported at either location.

University student Mahmoud Kalkan, a member of the Leftist DEV SOL group, takes over a DC-9-30 en route from Istanbul to Izmir and diverts it to Athens Airport on April 15. After releasing the 112 passengers, he continues to hold the flight crew at knifepoint, demanding passage to Australia. Police, instead, refuse and storm the cockpit, arresting the pirate. No one is injured during the ordeal. Kalkan will be tried and given a 13 1/2-year prison term.

When the new Turkish government takes power, it introduces legislation to end the flag carrier's monopoly.

On the year, bookings climb 4.4% to 2,392,000.

The workforce is increased 8.5% to 6,195 in **1984**. Turkey's No. 1 foreign currency earner, the airline's status is changed from that of a state-owned private company to that of a government economic enterprise, involving additional bureaucratic processes. An ultramodern technical base is opened at Yesilkoy Airport in the fall and Yilmaz Oral becomes president in November, the 21st since 1956.

Bookings jump 12.9% to 2,687,000. With a ratio of 1.5 million domestic to 1.2 million international, THY has a higher such ratio than any other European airline except **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

The payroll is increased to 6,208 in **1985**. In February, the **KLM (Royal Dutch Airlines, N.V.)** CORDA computer reservations system at Istanbul (Yesilkoy Airport) is turned off in favor of its own TOROS system.

The first of four Airbus Industrie A310-203s is delivered in May and enters service in June as first-class service is reintroduced as a revenue enhancement. The advanced jetliners fly to 24 cities on the

THY network, which now runs from London to Karachi, with 36 foreign and 17 domestic destinations. Three de Havilland Canada DHC-7-102s are leased for domestic operations.

En route from Frankfurt to Istanbul on June 28, a B-727-2F2 with 81 passengers is taken over by a lone assailant, who sprays foam over the instruments, shouting that he will cause the trijet to crash. Obviously mad, the man is quickly captured by passengers and crewmen working together.

Passenger boardings dip 2.6% to 2,508,000, but cargo accelerates 9.23%. Revenues are \$255 million and expenses \$218.4 million, producing a \$36.6-million operating profit and net gain of \$31.4 million.

The employee population continues to grow in 1986, up 4.5% to 7,568. The three leased DHC-7s are returned. Istanbul to Singapore via Bahrain weekly DC-10-30 service begins in July and in August, three A310-300s are ordered.

Customer bookings accelerate 8.2% to 2,935,813 and cargo increases 58.5% to 45.46 million FTKs. Revenues rise 40.6% to \$312 million, expenses are up 47.6% to \$280.63 million, and the operating profit is \$31.52 million.

Airline employment rises another 14.3% in 1987 and the fleet now includes 25 aircraft, although the DHC-7-102s are withdrawn and returned to Canada.

Enplanements through August are up 21.5% to 2,310,684 and freight swells 36.7% to 27.62 million FTKs.

The number of workers grows again in 1988, by 7.8%, to 6,994 and the fleet now includes 9 B-727-2F2As, 9 DC-9-32s, and 7 A310-203s. A B-727-264A, first flown by **Mexicana Airlines, S.A. de C.V.** as the *Mexicali*, joins the company under a two-year lease. Former Denison University (Ohio) professor Dr. Cem Kozlu is named chairman/CEO. In an effort to help promote tourism, direct Istanbul-New York roundtrips are inaugurated on September 15. In November, two DC-10-10s are sold to **Federal Express**.

Passenger boardings for the year increase by 8% to 4,116,883 and cargo climbs 34% to 59.62 million FTKs.

The fleet of the Turkish flag carrier in 1989 includes 13 A310-203/304s, 11 B-727-2F2As, 9 DC-9-32s, and 2 B-707-320Cs. Orders are placed for five A340-311s. All of the aircraft are painted in new livery and major emphasis is placed upon customer service and on-time performance. In August, the company contracts with **American Airlines** to serve as its general sales agent at New York (JFK). Under the arrangement, American feeds cargo to THY's three weekly flights into New York and the Turkish airline provides a connection to American's European operations at other times.

Service begins in October to the carrier's most distant point when weekly (later twice-weekly) roundtrip flights are inaugurated from Istanbul to Tokyo. The number of international destinations served now totals 52. During the last week of December, weekly Istanbul to Moscow flights commence. By year's end, 73.9% of all company flights are on time, as contracted with 66% the previous year.

Customer bookings swell 9.2% to 4,430,570 and cargo balloons 56% to 92.74 million FTKs. Revenues total \$460 million and the first net profit in two years is generated: \$5 million.

Airline employment stands at 6,488 in 1990 and orders are placed for six B-737-4Q8s and four B-737-4YOs. The ex-*Mexicali* is returned. The company joins with **Deutsche Lufthansa, A.G.** in February in acquiring shareholding in the charter operator **Sun Express, A.S.** The Istanbul-Moscow service becomes twice weekly in March. Beginning on May 9, twice-weekly Istanbul-Budapest roundtrip service is introduced for the summer. A new corporate image is introduced during July, complete with a new livery, designed free for the company by Airbus Industrie. It is not unlike that of **Swissair, A.G.** in appearance. **THK (Turk Hava Kurumu, A.O.)** becomes a subsidiary in September and is renamed **THT Turkish Air Transport (Turk Hava Tasimaciligi, A.O.)**.

Iraq's August invasion of Kuwait slows traffic growth and dims immediate growth plans. Approximately 100% of the airline's shareholding is now transferred to the Prime Ministry's Public Participation Ad-

ministration. Following the decision to privatize the airline, a public offering of 5% of the company on the Istanbul stock exchange is made in November, but only 1.3% of the shares are subscribed.

Still, overall passenger boardings climb 9.4% to 4,857,814 and cargo swells 25.3% to 116.23 million FTKs.

The workforce is increased by 31% in 1991 to 8,500; however, much of it is idled by a 38-day strike, which atop the effects of the Gulf war and recession, turns the year into a disaster for the flag carrier. The dedicated Stratoliner freighters are withdrawn in February as the company comes to rely on belly-capacity and wet-leasing for its cargo services; service is also suspended to Kuala Lumpur.

Joint flights commence with **CSA Czech Airlines** in April over a route from Istanbul to Prague. In September, nonstop A310-304 nonstop service is inaugurated from Istanbul to New York, in addition to the carrier's three weekly multistop flights.

President/CEO Cem Kozlu resigns in October; during the search for his successor, Vice President-Technical Yasuf Bolayirli assumes the position. During the year, frequencies are also begun to Abu Dhabi, Baku, Denizli, Amman, and Beirut.

At the behest of national political leaders anxious to gain influence and under a government order, THY begins service into the former Soviet republics of Central Asia and the Caucasus. Airline leaders do not believe the markets will be profitable. Meanwhile, business-class service is introduced throughout the international network and on key domestic routes.

Despite this expansion, customer bookings fall 26.6% to 3,356,337 and cargo drops 32.1% to 77.51 million FTKs. Expenses far exceed income and large losses are suffered: \$60.79 million (operating) and \$128.77 million (net).

The payroll is reduced a slight 0.6% in 1992 to 8,181 and the fleet now includes 9 DC-9-32s, 8 B-727-2F2As, 7 each B-737-4YOs, A310-203s, and A310-304s, plus 2 B-737-5YOs, and 1 each B-727-243A, B-737-4Q8, and leased from **Bavaria Fluggesellschaft, GmbH**, 1 B-737-2K9A.

Tezcan M. Yaramanci becomes president/CEO in January. New routes are initiated to Bahrain, Barcelona, Nice, Strasbourg, and Tashkent/Alma Ata and help the carrier to recover traffic lost to the Gulf crisis. In April, a marketing alliance is entered into with **CSA (Czechoslovak Airlines)** covering joint services on the route from Istanbul to Prague.

Passenger boardings increase 41.8% during the year to 4,687,554 while freight jumps 47.4% to 112.87 million FTKs. Revenues rise 29.5% to \$591.06 million and expenses are up 21.1% to \$626.44 million. The operating loss is cut in half to \$35.38 million as the net loss declines to \$70.02 million.

In 1993, Chairman Erman Yerdelen and President/CEO Yaramanci oversee a workforce of 8,689, up 6.2% over the previous year, and a fleet increased by the addition of an 8th A310-203. A \$20-million international advertising campaign is undertaken during the first and second quarters as 8 routes in Europe and the Mideast are dropped and replaced by 12 others, with Strasbourg, Nice, Barcelona, Manchester, and Tirana new destinations.

As part of a coordinated campaign of demonstrations and other acts designed to draw attention to the desire for a separate Kurdish state, a gang of four or five Kurds smashes in the front window and destroys the airline's office in central Strasbourg on June 26.

Taking over the five delivery positions of the defunct **Dan-Air/Dan-Air Services, Ltd.**, THY on July 22 becomes the first European airline to receive and operate the AVRO RJ100. Christened *Denizli*, the premier aircraft's receipt is shortly thereafter followed by the arrival of four sisters: *Erzurum* on August 12, *Samsun* on September 7, *Van* on October 21, and *Gaziantep* on November 4. The RJ100s are placed on the carrier's domestic routes from Istanbul and Ankara to Adan, Antalya, Izmir, and Van, as well as on international services to Athens, Bucharest, Cairo, Kiev, Rome, Salonika, and Tirana.

The first two A340-311s arrive at Istanbul on July 22 and August 10, respectively. First-class service, abandoned some years earlier, is rein-

troduced on the new Airbus while, at the same time, the \$50 membership fee for the airline's frequent flyer program is dropped. It and the others will allow nonstop flights to North America and the Far East, including a new service to Tokyo.

Late in the year, the regional subsidiary **THT Turkish Air Transport (Turk Hava Tasintaciligi, A.S.)** is absorbed and its fleet of ATPs is exchanged for AVRO RJ100s. At the same time, the company enters into an agreement with the Bulgarian freight operator **Air Sofia**. Under its terms, that company's entire fleet (two Antonov An-22s and five An-12Bs) will provide return all-cargo flights on THY's behalf from Istanbul to Basel, Maastricht, and London (STN).

Customer bookings swell a further 30.1% to 6,099,032 while cargo bounces skyward by 43.2% to 161.66 million FTKs. Although revenues move ahead by 9.7% to \$648.49 million, expenses are nearly double that percentage, jumping 16.1% to \$727.3 million. The operating loss increases to \$83.2 million while the net loss deepens to \$91.13 million. Capitalization is now just TL 2.5 billion.

Airline employment is cut by 2.1% in 1994 to 8,509 and 6 B-727-2F2As are phased out as the 5th leased RJ100 and 7 B-737-4Q8s enter service. In January, three more AVRO RJ100s are requested. Early in the first quarter, a contract is signed with the **British Airways, Ltd. (2)** subsidiary Speedwing, Ltd. for the provision of certain computerized reservations and fare services.

Although remaining a member of the board of directors, President/CEO Yaramanci quits in March; once again, Vice President Bolayirli fills in as a search for a successor is undertaken. The carrier is again designated as a state economic enterprise under the jurisdiction of the Privatisation Administration. Also in March, joint services are inaugurated with **Balkan Bulgarian Airlines** over a route from Istanbul to Sofia.

The three new AVRO RJ100s arrive late in the first quarter and into the second. They are placed on international routes from Istanbul to Athens, Bucharest, Rome, and Cairo. During the spring, the third A340-311 enters service and daily nonstop flights commence to New York (JFK).

THY is now the only European carrier to serve all four Central Asian republics of Azerbaijan, Kazakhstan, Turkmenistan, and Uzbekistan. Among the services offered are twice-weekly Boeing 727-2F2A flights from Istanbul to Baku and Ashkhabad (weekly from Istanbul to Baku direct) and A310-203 frequencies from Istanbul to Tashkent to Alma Ata.

Two DC-9-32s transport 300 blue-bereted Turkish troops to Split, Croatia, on June 24, where they are linked with a contingent of 237 technical and support staff and vehicles sent by sea and are then dispatched to Bosnia to serve with UN forces. A total of 1,455 additional soldiers are flown to Split by June 27. The Turkish contingent will be fully committed in central Bosnia by mid-July.

During the summer, daily A340-311 nonstop flights are inaugurated from Istanbul to Newark (EWR), as well as Tokyo and Beijing.

With the mission of attracting additional business-class passengers, afternoon flights are initiated, complementing the traditional morning flights from the Turkish capital to European destinations. A \$16-million agreement is signed with **Valujet Airlines** on October 1; under terms of the deal, the Turkish carrier will sell the American discount operator nine used DC-9-32s, plus spare parts and engines.

Simultaneously, the thrice-weekly nonstop roundtrips between Istanbul and Manchester are cancelled; bookings have been insufficient to support the service.

After 2 previous attempts to put down are aborted due to bad weather, Flight 278, a B-737-4Y0 with 7 crew and 69 passengers, collides with a 5,700-ft. hill and crashes 2 mi. from the airport of the southeastern city of Van on December 29. All aboard, mostly military personnel, are killed.

At year's end, plans are made to inaugurate new services to Osaka (KIX).

Passenger boardings balloon 19.3% to 7,273,679 while freight moves up 29.8% to 209.85 million FTKs. Revenues advance 9.7% to \$705.09 million, but expenses are \$726.34 million. The loss picture is "improved," with the pretax downturn reduced to \$27.73 million and the net loss down to \$73.84 million.

Fifty-nine new employees are hired in 1995, a 0.7% increase, while three B-737-4Q8s join the fleet. New twice-weekly routes are opened to Tirana and Osaka.

A far-left group is accused of the April 17 fire-bombing attack on the company's Vienna office on April 16.

Following the June 2 crash of one of the DC-9-32s sold to **Valujet Airlines**, the U.S. FAA issues an airworthiness directive requiring inspection of all P&W JT8D engines maintained by THY for U.S. carriers or purchased from the Turkish airline's subsidiary repair facility. A new B-737 simulator is opened at the company's main facility.

At the Paris Air Show in early June, orders are placed for two more AVRO RJ100s. These aircraft, the *Surt* and *Tokat*, are delivered on June 22 and June 28, respectively. These deliveries are followed in October by an order for four RJ70s.

Enplanements swell 18.2% to 8,599,250 and cargo rises 2.7% to 215.44 million FTKs. Operating revenues jump 22% to \$1.22 billion while expenses are up only 15.7% to \$1.09 billion. This year there are profits: \$26.27 million (operating) and \$8.01 million (net).

The workforce is increased by 1.2% in 1996 to 8,668 and a fourth A340-311 is acquired. In January, 10 pilots are sent to the British Aerospace Flying College at Prestwick, Scotland, to undertake a 20-week course of instruction on operation of the new AVROs.

Flights are started to Almaty and six other destinations, including Bangkok. By this time, THY is a dominant carrier in the former Soviet republics along its border, including the Caucasus and Central Asia. Stiff competition on those routes now begins with **Deutsche Lufthansa, A.G., Austrian Airlines, A.G., and British Airways, Ltd. (2)**.

While en route from Ercan, Cyprus, to Istanbul on March 8, a B-727-2F2A with 110 passengers is captured by a lone assailant armed with what will turn out to be a fake pistol. The plane is diverted to Munich where, after hours of negotiations, the perpetrator releases his hostages the next morning and surrenders.

During the month, a code-sharing agreement is entered into with **Swissair, A.G.** covering flights from Zurich to Istanbul and Izmir and from Geneva to Istanbul.

The first AVRO RJ70, the *Usak*, is delivered on March 29. It will be followed into service by the *Muk*, which is accepted on May 3. Weekly A310-204 roundtrips are inaugurated on May 24 from Istanbul to Bishkek and Kyrgyzstan via Almaty. The RJ70s *Kahramanmaraş* and *Erzincan* are delivered on June 24 and June 28, respectively.

On July 31, THY becomes the 10th foreign airline company to start regular service to Tbilisi, when it inaugurates RJ70 services twice weekly from Istanbul. The AVRO is replaced with a B-737-4Y0 in October.

The contract with **Air Sofia** ends with that carrier's demise at year's end. The company now charts 10 RJ100s and 4 RJ70s.

Customer bookings accelerate 7.9% to 9,280,869 while 214.2 million FTKs are operated, a 5% decline. Operating income climbs 13.6% to \$1.27 billion while costs ascend 17.5% to \$1.21 billion. Operating gain reaches \$55.83 million and a big \$53.76-million net profit is posted.

The employee population is cut by 3.6% in 1997 to 8,358. A block-seat agreement begins with **Swissair, A.G.** during the first quarter over routes from Istanbul and Izmir to Zurich. Thrice-weekly roundtrips from Istanbul to Ercan begin on March 30.

Weekly service is started between Istanbul and Johannesburg and in April from Istanbul to Odessa. A \$4-million international print and television advertising campaign to the theme "The Turquoise Bridge"—referring to Turkey's coastal resort area as well as the nation's reputation as a bridge straddling continents—is begun in Europe and the U.S.

A340-311 service from Istanbul to Chicago is started on May 7, thrice weekly on Wednesdays, Fridays, and Sunday. For the first two weeks, tickets of \$499 are offered, followed until the end of May by \$529 tariffs. The Turkish fashion design firm of Vakko creates new female flight attendant uniforms, which are introduced on company aircraft during June.

Cem Kozlu succeeds Atilla Celebi, returning as chairman on July 1. Almost immediately, he cancels a company plan to solicit bids from various manufacturers for a total of 54 aircraft. Twice-weekly, 15-hr. flying

time A340-311 roundtrips to Jakarta via Bangkok and Singapore commence on July 4.

A code-sharing agreement with the South Korean carrier **Asiana Airlines** takes effect on August 1; employing Asiana aircraft with dual designated flight numbers, the two initiate twice-weekly roundtrips between Istanbul and Seoul. A consortium comprising the Turkish government, Banque Nationale de Paris, and the Credit Agricole Indosuez pay for all of the Airbus machines.

Twice-weekly roundtrips are initiated on August 8 to Edremit and Agri, followed by introduction of the same number of frequencies to the "City of Roses," Isparta, on August 28. Meanwhile on August 19, the carrier takes delivery of an A340-313X. In September, Bangkok is dropped as a stop on the twice-weekly Istanbul via Singapore to Jakarta route.

On October 1, a \$2.5-billion contract is signed with Boeing for 26 Next Generation B-737-8F2s and options for 23 more; deliveries are to begin in the year 2002. At the same time, the decision is taken not to exercise the three-year option for the 10 RJ100s now in its fleet and that will begin a staggered return to Canadair next year. Four RJ70s will be retained.

Service to Chicago is suspended on October 26. A new marketing pact with **Japan Air Lines Company, Ltd.** (2) comes into effect on October 31; JAL purchases block-seats on THY A340-311 thrice-weekly flights to Istanbul from Osaka (KIX).

Disappointed in the European Union's inability to grant the nation membership, the government, on December 21, approves a THY plan to purchase up to \$2.5 billion worth of Next Generation B-737-8F2 from Boeing. The EU instructs the carrier not to proceed with its previous effort to secure new aircraft from Airbus Industrie, the European consortium.

Passenger boardings accelerate 12.2% to 10,405,774 while cargo shoots up 23.1% to 256.21 million FTKs. Operating revenues advance 6.2% to \$1.35 billion, while costs are up 3.6% to \$1.37 billion. Although there is an \$18.9-million operating loss, an \$18.8-million net gain is celebrated.

Airline employment stands at 8,958 in 1998 and the fleet, 95.4% of which is Stage III certified, includes 65 airplanes at the beginning of the year: 3 B-727-2F2As, 29 B-737s, 14 each A310s and AVRO Regional Jets, and 5 A340s.

In early January, the carrier firms up its Boeing commitment. After making a second approach in heavy snow and dense fog, the pilot of Flight 74, an RJ100 with 6 crew and 68 passengers arriving from Istanbul, lands midway down the runway at Samsun on the Black Sea, on January 11 and skids some 50 meters into a field. Both pilots and 20 passengers are injured and the fuselage is severely damaged. The aircraft, damaged beyond economic repair, is later written off.

On January 24, the existing relationship with **Swissair, A.G.** is deepened under a new memorandum of understanding signed in Ankara. Although the new pact does not call for SAirGroup to acquire a stake in the Turkish carrier, it does provide for full-freighter flights between Basel and Istanbul with THY and for planning on which new markets the two might enter on a joint basis.

On February 25, ex-convict and Turkish citizen Mehmet Dag hijacks a company flight with 5 crew and 62 passengers while it is en route from Adana to Ankara, and diverts it to the southeastern city of Diyarbakir before surrendering. He claims (falsely) that a teddy bear he is holding contains explosives. Taken into custody, the man is charged with air piracy for which the government will seek a 15-year prison sentence. Diyarbakir Chief of Police Gaffar Okan tells the Associated Press that Dag, who has called himself a "martyr of God," is a psychopath with self-inflicted razor cuts on his body.

Twice-weekly B-737-4Y0 return service is initiated on March 5 from Istanbul to Kazan, Tartarstan. Kazan is the first city in Turkistan to which THY was not the first foreign carrier, having been beaten into service at that point by **Deutsche Lufthansa, A.G.** on March 31, 1997.

On March 29, the carrier joins with **Swissair, A.G., Austrian Airlines, A.G., TAP-Air Portugal, S.A., Sabena Belgian World Airlines, S.A., and AOM French Airlines, S.A.** to form "Qualiflyer" group. Although members will retain their own identities, they will engage in a long list of joint activities, including ground handling, lounges and ticket offices, frequent flyer benefits. Collaborative activities that will be added as soon as details can be worked out include maintenance and overhaul, cargo, in-flight catering, information technology, and duty-free concessions.

Beginning in April, Almaty is dropped as the intermediate stop on the weekly route between Istanbul and Bishkek. At Tashkent on June 18, the deputy directors of THY and **Uzbekistan Airways** sign a protocol that looks forward to cooperation in transportation, training, and technical matters.

Passenger check-in activities at New York (JFK) are transferred on June 12 from Terminal 4W to the newly opened Terminal One. The next day, twice-weekly AVRO RJ70 roundtrips are inaugurated from Ankara to Adiyaman, in southeastern Anatolia.

The company's homepage on the World Wide Web is revised on July 1, the same day twice-weekly AVRO RJ70 roundtrips are inaugurated from Istanbul to Skopje.

While en route from Istanbul to Tokyo on July 9, an A340-311 encounters clear-air turbulence that slightly injures six passengers four hours into the flight; the service continues to Japan.

Just after takeoff from Istanbul on a July 17 service to Ankara, an A310-203, with 175 passengers aboard, suffers an engine fire caused by a fuel leak; a safe emergency landing is made back at the point of origin and no injuries are reported.

Code-sharing between Zurich and Ankara begins on August 1 as **Swissair, A.G.** places its code on the THY B-737-4Q8 daily roundtrip.

En route from Ankara to Istanbul on September 14, Flight 145, an A310-203 with 84 passengers, is taken over by Turkish student Ihsan Akyus, who storms into the cockpit and points a pistol (later found to be a toy) at the head of Capt. Anil Isil. The pirate orders the Airbus diverted to the Black Sea city of Trabzon, while simultaneously demanding that Prime Minister Mesut Yilmaz rescind a ban he had imposed earlier in the year on Islamic attire at Turkish universities. The two-hour incident ends in the release of the hostages and Akyus' surrender to police. The next day, Transport Minister Arif Ahmet Denizolgun will call for "a serious punishment" for the young man's transgression.

Departures into and out of Milan, Italy, are moved on October 25 from Linate Airport to Terminal One of Malpensa Airport.

With the release of the winter schedule on October 28, much of the carrier's route network is changed or upgraded. From the Istanbul hub, the number of daily flights to Ankara is increased from 13 to 14 while the number to Diyarbakir is increased from two to three. Simultaneously, service is offered to Elazyo twice weekly and to Malatya five times a week.

Based on four waves of flights, the new domestic schedule at Ankara is similarly increased. New twice-weekly return service is added to Denizli, while the number of daily roundtrips to Antalya and Trabzon is increased from two to three. Service to Gaziantep is doubled to twice daily, while those to Yzmir are flown five times a day. Frequencies from Ankara to Aory and to Samsun are operated three times a week; to Erzurum and to Kahramanmaraş four times a week; and to Panlyurfa and to Siirt seven times a week.

New twice-weekly service is introduced between Istanbul and Zagreb, together with a third daily roundtrip to Frankfurt. New Friday, Saturday, and Sunday flights are added to the daily roundtrips from Istanbul to Stuttgart, while the schedule is adjusted to show six weekly roundtrips to Hamburg, five to Nuremberg and Baku, and four to Basel. All code-share flights remain as before.

Just after takeoff from Adana on an October 30 service to Ankara, a B-737-4Y0 with 36 crew and 38 passengers is hijacked by armed Kurdish freedom fighter Mursel Peker, who demands that the aircraft be flown to Lausanne, Switzerland. Instead, the plane lands at Ankara, which the gunman has been tricked into thinking is Sofia, Bulgaria, a re-

fueling stop. As part of the ruse, the government has ordered all airport lights turned off and the mosques in nearby villages are told not to hold prayers.

As negotiations are conducted over the next seven hours, the hijacker, closed up in the cockpit, is unaware that security troops have come aboard and evacuated all of the passengers and cabin crew. Finally, commandos storm the cockpit and kill Peker. Police will later reveal that the dead man had been wanted for the 1994 murder of three teachers and a policeman.

In a ceremony presided over by Turkish Prime Minister Mesut Yilmaz, THY, on November 4, receives six of the Next Generation B-737-8YOs ordered the previous December. The mass delivery of the new planes is one of the largest in the history of commercial aircraft. They are christened *Rize*, *Diyarbakir*, *Hatay*, *Afyon*, *Mardin*, and *Igdir*.

Customer bookings climb 2.3% this year to 10.5 million, while freight traffic inches up 1.7% to 260.52 million FTKs. Revenues inch up 0.8% to \$1.36 billion, while costs climb 1.3% to \$1.34 billion. There is an operating loss of \$24 million and a net gain of \$21 million.

Service continues in 1999. Daily roundtrips are inaugurated on March 14 from Istanbul to the tourist and historic community of Nevsehir. At the same time, the number of weekly roundtrips from Istanbul to Bishkek, Kyrgyzstan, is doubled from one to two.

NATO countries find it necessary to unite and commence a military campaign against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo. Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins on March 24.

As the aerial operation continues, Serbian forces drive ethnic Albanians from Kosovo into Albania and Macedonia, creating a humanitarian crisis. On March 31, Greece, a member of NATO opposed to the campaign and a traditional foe of fellow-NATO member Turkey, nevertheless grants permission for Turkey to begin a humanitarian airlift to Tirana. This is the first time Greece has ever opened its airspace to Turkish cargo planes.

Three **MNG Airlines Cargo, A.O.** and THY freighters transport 36 tons of food and medicine from the Red Crescent organization to Albania. Additional aircraft fly missions daily thereafter for the duration of the conflict.

All THY flights become nonsmoking on April 1, the same day new services are introduced for business-class passengers.

Just after takeoff on April 7 from Adana on a service to Jeddah, Saudi Arabia, to return Hadj pilgrims, a B-747-4Y0 with 6 crew becomes engulfed in flames and crashes into a field outside of the town of Ceyhan, some 25 mi. from the airfield. There are no survivors. A Second A340-313X is delivered on April 22.

Weekly roundtrips to Beijing begin on May 19. Plans to start summer flights to Barcelona, Warsaw, and Prague must be shelved. Twice-weekly B-737-4Y0 roundtrips are initiated on May 26 linking Istanbul with the Crimena capital city of Simferopol.

With the end of Operation Allied Force on June 11, NATO reopens the airspace over Macedonia to commercial traffic. Consequently, THY resumes thrice-weekly service to Skopje on June 25. In addition, new thrice-weekly return flights are started from Istanbul to Algiers on June 28; weekly flights between Istanbul and Vienna are increased from 11 to 12 on June 30. Twice-weekly roundtrips to Tripoli are resumed on July 14.

Delivered on September 15, a new Next Generation B-737-8F2 arrives from Seattle with a cargo of relief supplies for distribution in the earthquake disaster area. With the beginning of the winter schedule at the end of October, THY introduces the "wave system" of aircraft arrivals and departures at Ankara, with four flights now made daily to regional cities.

At the beginning of October, the wreck of a BAe 146 that had crashed at Samsun in January 1998 is sold to a local businessman for conversion into a restaurant. The deal will later fall through and the hulk will be acquired by **CityFlyer Express, Ltd.** for use as a cabin trainer.

In December, the leases of five of the carrier's nine Avro RJ100s are extended. Passenger boardings inch up 0.4% to 10,541,000 while cargo

traffic jumps 18.2% to 288.25 million FTKs. A net loss of \$121 million is suffered.

The workforce at the beginning of 2000 totals 9,712. The "classic" B-737 fleet now includes 13 Dash-4Y0s, 3 Dash-4Q8s, and 2 Dash-5Y0s, all of which are leased. Also flown are 15 Next Generation B-737-8F2s.

While taking off from Istanbul on a January 1 service to Johannesburg, an A340-311 collides with a flock of seagulls, knocking out two of the four engines on the Airbus and damaging its radar. A safe emergency return to the point of origin is completed and no injuries are reported. A substitute aircraft is located and emergency repairs are effected on the A340.

The previous day's bird-stricken Airbus is assigned to operate the company's Istanbul to New York (JFK) service on January 3. Shortly after departure, the aircraft is forced to return due to a technical problem. Once repairs are made, the aircraft, already late, takes off for New York a second time. About an hour out, the technical fault reoccurs, forcing another return to Istanbul. The third departure is successful and the New York service is finally completed, many hours behind schedule.

On a more mundane January note, the company renews leases for five of its nine Avro RJ100s, and on January 26 takes delivery of a 16th B-737-8F2. A new international terminal is also opened at Istanbul Airport. A new domestic terminal is scheduled for completion in 2002.

A comprehensive code-sharing agreement is signed with **American Airlines** on February 28. On March 22, new daily roundtrip service is inaugurated between Istanbul and the Greek city of Thessaloniki. Two more Next Generation B-737-8F2s now arrive, one each on March 31 and April 3. The last of three A340-313Xs delivered since August 1997 is accepted on April 21.

After landing at Siirt in southeast Turkey in heavy rain after its April 22 service from Ankara, Flight 774, an Avro RJ70, skids off the runway; 5 passengers and 2 crew of the 46 passengers are injured. The aircraft is damaged beyond repair.

The last three of six Next Generation B-737-8F2s to be delivered this year are accepted on May 12, May 17, and June 1, respectively.

A340-311 return service from Istanbul to Shanghai, via Beijing, is increased to thrice weekly on June 6.

Unhappy with their working conditions, air traffic controllers begin a "go slow" policy at Turkish airports; the potential for mistakes increases dramatically.

Daily roundtrips are inaugurated from Istanbul to Chisinau on September 1. A similar service to Warsaw begins on September 15.

A code-sharing agreement is signed with **Cathay Pacific Airways (Pty), Ltd.** on September 22 covering service over the Hong Kong to Istanbul route.

Under a new October 1 code-sharing agreement with THY, **American Airlines** is able to place its designator on THY services from Istanbul to New York (JFK), Chicago (ORD), and Miami. The Turkish line is permitted to code-share on AA domestic flights from those gateways.

The "go slow" policy of the ATC almost results in midair collisions for THY B-737s three times between October 21 and October 24. In the first incident on October 21, the pilot of a "Baby Boeing" on final descent to Ankara on a service from Istanbul, visually identifies a Turkish military plane headed directly at him at 7,000 ft. Altitude is immediately gained and a crash is averted, though several of the 150 passengers are shaken. At 27,900 ft. over the Black Sea later in the day, the TCAS of another B-737, with 155 passengers, sounds; after sighting the lights of an unidentified Russian aircraft, the pilot is able to change course. Ascending to 13,200 ft. after takeoff from Izmir on October 24, the TCAS of yet another B-737, with 150 passengers, sounds a warning of imminent collision with another aircraft; the accident is averted when the 737 halts its ascent.

Also during October, Privatization Minister Yuksel Yalova reveals that the government has decided to change its previous stance and instead of keeping it, will sell off a majority 51% stake in the airline at an early date.

On December 7, Turkish Prime Minister Bulent Ecevit announces that his government will initiate a public offering for the 51% portion of THY that it had earlier agreed to put up for sale. The initial public

offering, which will begin by December 14, comes as a response by Turkey to an agreement it has signed with the International Monetary Fund. Under the pact, the IMF has agreed to provide \$10 billion in credits to help the country surmount fiscal problems while the deregulation of key economic sectors moves forward.

Within a few days, Minister Yalova informs the press that the government shareholding in THY will be 24% when the privatization process is completed.

TIANJIN AIRLINE COMPANY, LTD.: Zhangquizhuang Airport, Tianjin, Tian Jin, Hebei, 300300, China; Phone 86 (22) 439-4104; Fax 86 (22) 494-4105; Year Founded 1996. TA is set up at Tianjin in 1996 to offer scheduled and charter domestic passenger services. Jiang Gue Dong is named president and he launches revenue flights with 4 leased Boeing 737-300s.

Although it is understood that this provincial carrier continues to operate in the period after the beginning of the Asian economic crisis in 1998, no definite information has been located to that effect.

TIE AVIATION (TRANS-INTERNATIONAL EXPRESS): Building 179, P.O. Box 300994, John F. Kennedy International Airport, Jamaica, New York 11727, United States; Phone (718) 244-8909; Fax (718) 244-8912; <http://www.iflytie.com>; Code 5B; Year Founded 1993. Founded by Jacob Lamdan, TIE Aviation is incorporated at New York City in 1993 to sell cargo space to freight forwarders to designations in Central America, Puerto Rico, and Israel. In August 1996, the company receives its FAA Part 135 operator's certificate and joins IATA.

Late in the year, interline agreements are initiated with **Continental Airlines**, **Pan American World Airways (2)**, **Tower Air**, and **Carnival Air Lines**. Revenue passenger charters commence with a fleet comprising 1 each Piper PA-23 Aztec and PA-31-350 Navajo Chieftain.

Flights continue in 1997 and plans are made late in the year to inaugurate several daily roundtrips linking JFK with Albany, Burlington, Atlantic City, Hartford, and Washington, D.C. Four-times-a-week service to both Atlantic City and Hartford becomes a reality.

The company begins working with the FAA on a Part 121 certificate. The agreement with **Carnival Air Lines** ends when that company is merged into **Pan American World Airways (2)** in September.

During the spring of 1998, a whole new management team is put in place, headed by former **Northwest Airlines** executive Thomas Ronell as president, ex-**Deutsche Lufthansa, A.G.** official Michael Winkler as director of business development, and onetime director of operations and chief pilot of **Block Island Airlines** Robert Tidler to hold the same post with TIE Aviation.

These gentlemen devise a plan to provide scheduled commuter links for nonaffiliated JFK-based international airlines to destinations within an hour's flying time of the airport. To accomplish this end, the paperwork is completed to upgrade TIE's operating certificate to FAR Part 121 standard and orders are placed for three previously used Shorts 360-300s.

The premier Shorts is received during the first week of July and upon receipt of the new FAR authority, is employed in August to launch daily roundtrips to Philadelphia. Another 360-300 enters service in November.

A third Shorts 360-300 is acquired early in 1999. On June 17, company officials unveil plans to begin roundtrip services from New York (JFK) to Tel Aviv, Israel, on September 1 employing a Boeing 747-312 leased from **Singapore Airlines, Ltd.**

Although the cargo service is not started, Shorts flights continue in 2000.

TIGAS (TURKS AND CAICOS ISLANDS GOVERNMENT AIR SERVICES, LTD.). See **AIR TURKS AND CAICOS, LTD.**

TIGERES VOLADORES, S.A.: Venezuela (1962–1972). This non-scheduled all-cargo carrier is established at Caracas in 1962. A Curtiss C-46 Commando freighter is acquired, allowing domestic revenue flights to commence in August.

When **LEBCA (Lineas Expresa Bolivar, C.A.)** fails in April 1968, Tigres is able to acquire four more Commandos from the ruined line's assets. Flights cease in 1972.

TIGERFLY, LTD.: 3 Badgers Way, Marlow, Buckinghamshire, England, SL7 3QU, United Kingdom; Phone 44 (0) 1494-447575; <http://ayla.avnet.co.uk:80/tigerfly>; Year Founded 1986. Calling itself the "World's Smallest Airline," Tigerfly, Ltd. is established by Peter Wyld and five others at Wycombe Air Park (Booker) in July 1986 to provide regularly scheduled weekday flight-seeing services. Employing a restored 1940 de Havilland DH 82A Tiger Moth, roundtrip frequencies (including on-demand aerobatics) are undertaken between Marlow and Henley on the Thames River.

Operations continue apace and by the end of 1994 a total of 4,000 passengers have been transported. Flights continue during the remainder of the decade.

TIGRES VOLADORES, S.A. de C.V.: Mexico (1955–1959). Tigres Voladores (Flying Tigers) is formed at Mexico City in April 1955 specifically to fly citizens deported to the capital city from the U.S. on to the cities of Leon, Aguascalientes, Guaymas, and Durango. Over the next four years, a total of seven Curtiss C-46 Commandos will be operated, although not all simultaneously.

The C-46 contract service continues until disaster strikes. A C-46F, with 5 crew and 21 passengers, is lost at Puerto Kino, Mexico, on April 17, 1959; there are no survivors. Among the victims is the company's owner. As a result of the tragedy, the carrier is shut down almost immediately.

TIKAL JETS AIRLINE, S.A.: Avenida Hincapie, Zona 13, Hangar 8, 18 Calle Interior, Aeropuerto La Aurora, Guatemala City, 01013, Guatemala; Phone (502) 334-5568; Fax (502) 334-5631; <http://www.tikaljets.centroamerica.com>; Code TJ; Year Founded 1995. Fernando Rodriguez sets up Tikal Jets at Guatemala City in 1995 to offer scheduled and charter passenger and cargo services to domestic and regional destinations. Revenue operations commence with 1 each British Aerospace BAe (BAC) One Eleven 400 and Shorts 330. In 1996, six Let L-410 turboprops are acquired; however, in 1997, three of these are withdrawn as another hush-kitted One Eleven 400 jetliner enters service.

Flights continue in 1998–2000. In addition to domestic destinations, company jetliners also visit communities in Panama, Mexico, El Salvador, and Colombia.

TILLAIR (PTY.), LTD.: Australia (1982–1988). Formed at Katherine in the Northern Territory in 1982, Tillair undertakes scheduled commuter flights on behalf of itself as well as the Ansett subsidiary **Airlines of Northern Australia (Pty.), Ltd.** Destinations visited without support are small towns, tourist spots, and cattle stations, including Groote Eylandt, Hooker Creek, Kalkgurung, Numbulwar, Roper River, Victoria River Downs, and Wavehill Station.

ANA stops are the larger towns of Darwin, Tennant Creek, Alice Springs, and Ayers Rock. The fleet by mid-decade comprises 2 Cessna 402s, 1 Cessna 404, 2 Cessna 441s, and 1 Cessna 310. Three more 402s are acquired between 1985 and 1987.

Another Cessna 310 and a Cessna 441 are purchased in 1988. However, in the tough competitive that marks the Australian airline scene at the end of the decade, Tillair is unable to maintain its viability and is forced to cease operations late in the year.

TIM AIR CHARTERS, LTD.: Tanzania (1959–1976). Tim Air is established by Tim R. K. Bally at Dar es Salaam in 1959 and operates passenger and cargo charters from its base, as well as a secondary airfield at Arusha.

When Kenya-based **Campling Bros. & Vanderwal, Ltd.** is sold to Blackwell Enterprises of New York in June 1963 and broken up, that small portion that had operated over the border in Tanzania is purchased.

In one fell swoop, Tim Air becomes the nation's largest nonscheduled airline.

Piper and Cessna lightplane operations will continue for another 12 years. In 1976, the company is taken over by **Tanzanair (Tanzanian Air Service, Ltd.)**.

TIMBERLINE AIR, LTD.: Canada (1989–1997). Timberline Air is established at Chilliwack, British Columbia, in 1989 to provide transportation support to the logging industry. Due to an increased demand for air services, the company, at the beginning of 1990, starts to diversify into charter services.

Flights continue in 1991–1997, during which years the company opens a base at Nanaimo and an office at Bella Bella. Employing the two Beech King Air 100s and Piper PA-31-310 Navajo, Timberline also introduces daily scheduled services to and between Chilliwack, Nanaimo, Bella Bella, Vancouver, Campbell River, and Port Hardy.

TIME AIR: United States (1968–1969). Time Air is established in 1968 as the airline division of Hunter Aviation Corporation, the FBO at Fitchburg, Massachusetts. Employing a de Havilland Canada DHC-6-100 Twin Otter, the company duly inaugurates scheduled daily roundtrips linking its base with Boston. These flights continue into 1969.

TIME AIR, LTD.: Canada (1966–1993). Organized at Lethbridge, Alberta, by Walter R. "Stubb" Ross in early 1966, **Lethbridge Air Services, Ltd.** is initially equipped with a Beech 18 and a Cessna 402. These are employed, beginning in May, to link the company's base with Calgary and Medicine Hat.

Within three years, the fleet has been upgraded by the addition of a second Beech 18, another Cessna 402, and a de Havilland Canada DHC-6-100 Twin Otter.

Routes are expanded in 1969 to connect Lethbridge with Edmonton via Calgary and Red Deer and with Calgary via Medicine Hat. The carrier's name is now changed to Time Air, Ltd.

Service is continued without significant change during 1971–1973. Several efforts to provide Edmonton to Red Deer flights prove uneconomical and are given up. A Cessna 402 and Beech 18 are withdrawn and replaced by three additional DHC-6-100s, one of which is sold in 1973.

The last Beech 18 and Cessna 402 are sold in July and August 1974, respectively. They are replaced in October by Fairchild Hiller FH-227J, which is placed into competition with **Pacific Western Airlines, Ltd. (PWA)** on an Edmonton–Calgary route. Unlike the PWA service, Time Air stretches its Calgary flights on to Lethbridge. The route is a success and an FH-227A is purchased in July 1975 to provide additional capacity for it.

To upgrade its fleet, Time Air also orders three Shorts 330s, the first of which is delivered in early August 1976 and placed into service on the Edmonton–Calgary–Lethbridge run on August 24. Two additional Ulster-made turboprops are received, one each in October and November.

A Twin Otter is sold in January 1977 and a Beech 18 in February. In June, the FH-227A is passed to **Norcanair, Ltd.** One of the company's Shorts 330s becomes, on November 29, the first aircraft to arrive at Calgary's new international terminal.

Also in November, the FH-227J is sold to **Pacific Alaskan Airlines**. Edmonton–Pitcher Creek DHC-6 flights begin in May 1978 and are followed by an Edmonton–Grand Prairie service in December 1979. Meanwhile, the Pitcher Creek frequency is suspended in October of the latter year.

Early in 1980, orders are placed for three DHC-7-102s, the first of which is delivered in May and the second in September. Also in May, **Norward Aviation, Ltd.**'s Edmonton to Peace River and Rainbow Lake service is temporarily acquired as its owner plummets toward liquidation. Cold Lake is now briefly visited, but is abandoned when the frequency proves unprofitable.

With **Northward Aviation, Ltd.** now bankrupt, the assets of its **Gateway Aviation, Ltd.** subsidiary are purchased in November for

C\$1.8 million. These include the temporary Alberta routes flown since May and a Convair CV-640 dedicated to them.

Fleet rationalization begins to occur in 1981 as the decision is taken to sell both the Twin Otters and Shorts. The former two are sold in January and June, respectively. The last of three DHC-7-102s ordered in early 1980 arrives in September and one of the Shorts is withdrawn in December.

In February 1982, the carrier inaugurates its first service outside of Alberta, flying a DHC-7-102 from Lethbridge to Vancouver via Kelowna. This route had originally been awarded to PWA but is now given to Time Air by order of the federal cabinet. In June, Time Air avails itself of a new strategy that becomes common in the industry; all of its DHC-7-102s are sold to a leasing firm and then chartered back. A second Shorts 330 is sold in September.

Stubb Ross sells a 40% interest in Time Air to PWA in October 1983 for C\$4.3 million. Ross remains board chairman and Richard Barton is named president. The company's DHC-7-102s now replace the larger carrier's Boeing 737-2T2Cs on Connector services from Vancouver to Victoria and to Campbell River via Comox.

The last Shorts 330 is sold in February 1984 and a second CV-640, acquired from **Worldways Canada, Ltd.**, joins the fleet on May 21. Also in May, Walter Ross retires and Richard Barton becomes CEO. Calgary–Castlegar flights begin in June and are followed in September by two ex-PWA services out of Edmonton: to High Level via Peace River and to Fort Chipewyan via Fort McMurray.

In May 1985, **Inter City Air, Ltd.** is acquired, together with its CV-580, for C\$2 million. Two other Convairs are leased from **Air Ontario, Inc.** during the summer and a second CV-580 is purchased in September. Meanwhile, in June, Calgary-based **Southern Frontier Airlines, Ltd.** is taken over, together with its CV-440 and routes to Cold Lake, Saskatoon, and Lloydminster. Time Air takes over the routes with the two ex-Southern Frontier Beech 99s as the Convair is parked.

The new acquisition's charter division is allowed to continue and during the fall, the carrier is given approval to inaugurate a number of new services (as replacement for abandoned PWA stops) out of Edmonton and Prince George. New destinations visited include Dawson Creek, Williams Lake, Kamloops, and Penticton. Two Shorts 360s are ordered in October and delivered in November. These are placed on the flights emanating out of Vancouver.

In order to place more capacity on routes into Vancouver during Expo '86, service to Saskatoon is suspended early in 1986. Another CV-580 is acquired in February and in June the company joins **Air BC, Ltd.** in announcing a major order for DHC-8-100s and Dash-8-300s. Three new routes out of Vancouver are initiated during the summer: to Port Hardy, Kamloops, and Penticton and Castlegar.

In September, the company joins PWA commuter network, the Spirit Service. Two routes out of Prince George are halted in October: that to Dawson Creek and that to Kelowna and in December, **Pacific Western Airlines, Ltd.** purchases **Canadian Pacific Airlines, Ltd.** Enplanements for the year total 575,000. Revenues advance to C\$33 million and with costs kept down, a C\$3.89-million operating profit is generated, along with net income of C\$773,000.

Airline employment increases 60% in 1987 to 639. A fourth DHC-7-102 is acquired from **Air Atlantic, Ltd.** in February. On March 16, Time Air purchases Saskatoon-based **Norcanair, Ltd.** and its two CV-640s and two Fokker F.28-1000s. The new acquisition will be allowed to maintain its separate identity during a yearlong integration process.

Also in March, two Fokker F.27s arrive and the first of five DHC-8-102s to be received on the year is delivered. In April, CPAL and PWA are integrated into **Canadian Airlines International, Ltd.** The commuter now adopts its new parent's code and as a member of the "Canadian Partner" commuter alliance, begins to paint its aircraft in a similar livery. Two more DHC-8s arrive in April and the last two in June and July.

The new turboprops are placed on services out of Lethbridge to Kelowna and Vancouver. A CV-580 is sold to **Air Ontario, Inc.** in August. In September and October, Vancouver–Williams Lake and Quesnel

flights begin and frequencies from the capital of British Columbia to Comox and Campbell River are increased.

A second CV-580 is sold to **Air Ontario, Inc.** in December, the same month the ex-Norcanair F.28-1000s are integrated and a Dash 7 begins a six-month lease to **Wideroe's Flyveselskap, A.S.** The integration of Norcanair is completed at year's end.

Passenger boardings swell 34.5% to 770,783 and revenues ascend by 59.4% to C\$49.7 million. Expenses are kept under control, allowing the operating profit to reach C\$5.86 million and net gain to grow to C\$2.6 million.

The workforce is increased by 37.4% in **1988** to 878. **Norcanair, Ltd.** is fully absorbed on January 1. Time Air is now affiliated with **Canadian Airlines International, Ltd.**, owned by the carrier's minority shareholder, PWA. A third F.28-1000 is acquired in March. When CAI drops its services to Castlegar, Dawson Creek, Quesnel, Williams Lake, and Penticton in May, they are assumed by Time Air. The carrier's flights to Great Falls, Montana, are dropped. Two more Beech 99s are received in June, followed by former **Maersk Air, A.S.** Dash-7s, one each in October and December.

Meanwhile, a CV-640 is sold to **Canada West, Ltd.** in August and Vancouver-Seattle DHC-8-100 service is kicked off in October. An F.27 is sold in November and is replaced on its Saskatchewan routes by Dash 7s.

Customer bookings accelerate by 35.9% to 1,048,000 and revenues swell 43.2% to C\$77.8 million. Operating income rises to C\$11.7 million and net profit surges to C\$4.3 million.

Airline employment is increased by 19.2% in **1989** to 4,600. The world's first production DHC-8-301 is delivered in February. It does not enter airline service right away; rather, its manufacturer takes it on a demonstration tour. During late winter, the company's maintenance base is shifted to Calgary from its previous Lethbridge facilities.

The fleet at year's end includes 6 DHC-8-301s, plus 4 DHC-8-102s, 5 DHC-7-102s, 5 Beech King Air 90s, 3 Fokker F.28-1000s, 4 Beech 99s, 1 Cessna Citation, 2 Shorts 360s, and 2 Convair CV-580s. Orders are outstanding for a pair of DHC-8-300s and a CV-580.

Passenger boardings swell 19% to 1,250,000 and revenues jump 24.5% to C\$97 million. Costs are held in check and allow operating profit to reach C\$11.9 million. Net gain is \$6 million.

PWA, Inc.'s new Canadian Regional Airlines division acquires 46% minority ownership of this large regional in **1990**. Airline employment remains unchanged; however, the five DHC-7-102s are sold.

Enplanements for the year reach 1.5 million.

In **1991**, 1,300 employees are overseen by General Manager Glenn Pickard, who also operates a fleet that includes 6 F.28-1000s, 14 DHC-8-301s, and 6 DHC-8-102s.

In January, the remaining 54% shareholding is taken by PWA, Inc. in consideration of C\$11 per share. Under the label Skybus, new 10-times-per-day DHC-8-102 service is inaugurated on January 13 between Kelowna and Vancouver, replacing the B-737 service previously provided by **Canadian Airlines International, Ltd.**

Operations continue apace in **1992** as the carrier participates under auspices of the new Canadian Regional Airlines holding company. In March **1993**, the airline is amalgamated with **Ontario Express, Ltd.** to form an enlarged regional under the holding company title, **Canadian Regional Airlines, Ltd.**

TIME AIR SWEDEN, A.B.: Sweden (1991-1993). Thomas Johansson's air taxi Time Air Sweden, A.B. is established at Stockholm in March **1991** to provide both domestic and regional charter flights, the latter under the name **Air Sweden, A.B.** Local services are maintained with 1 Beech Super King Air 200C, 2 Israel Aircraft Industry 1124 Westwind 1s, and 1 Piper PA-31-310 Navajo. Air Sweden passenger charters are inaugurated to Caribbean and Canary Island holiday locations with a Boeing 737-205 leased from **Transwerde Airways, A.B.** The success of these flights leads the company to charter 1 each Boeing 737-205A and B-737-3Q8. In December, a Douglas DC-8-71F is leased from GPA Group, Ltd. and is employed to fly cargo around Europe on behalf of Air India, Ltd.

To improve business in **1992**, the Air Sweden, A.B. fleet is dramatically increased. Added under charter are one each Lockheed L-1011 TriStar 1, DC-8-71F, and two B-737-3G7s.

The GPA Douglas is returned in March as an owned DC-8-71F is acquired. Christened Italian Rainbow, the narrow-body immediately undertakes a weekly roundtrip all-cargo service from Stockholm to Bombay, India, via Ostend and Dubai.

The capacity-enhancement gamble of the previous year does not pay off as recession impacts holiday travel and causes significant financial distress for TAS, as well as several other Scandinavian charter operators. Despite a poor winter season, the company, in an effort to boost business, charters a Lockheed L-1011 TriStar 1 to transport passengers from Stockholm to the Canary Islands during the high summer season. This idea is equally unsuccessful. The fall schedule, which begins at the end of October, brings more disappointment.

With few prospects for passenger contracts from tour operators for the upcoming summer season, TAS owners shut the company's doors in February **1993**. The leased aircraft are returned and all other inventory is liquidated.

TIME AIRLINES: United States (1968-1969). Time Airlines is set up by Gene Cramer at Benton Harbor, Michigan, during the first week of January **1968** to offer scheduled passenger and cargo services to regional destinations. Employing 1 each Beech 18 and Beech 99, the company starts daily roundtrips on January 22 linking its base with Detroit and the 2 smaller airports at Chicago (Meigs Field and Midway). Operations continue until July **1969**.

TIME MACHINE: United States (1982-1984). The Time Machine is established at Atlanta in **1982** to provide scheduled helicopter flights linking its base with heliports at Galleria, Perimeter Center, and Beaver Rim. Service is inaugurated with a Bell 206B JetRanger and a Bell 222.

Recession and high operating costs force the company to shut down in early **1984**.

TITAN AIR CHARTER, LTD. See **TITAN CHARTER AVIATION (ASTORIA), LTD.**

TITAN AIR COMPANY: 18/1 Olimpiski Prospekt, Moscow, 129110, Russia; Phone 70952231348; Fax 70952231349; Code TIT; Year Founded 1988. TAC is set up at Moscow in **1988** to undertake outsized all-cargo charters, primarily on behalf of the domestic energy industry. Revenue flights begin with a pair of giant Antonov An-124-100 Ruslan freighters.

Airline employment at the beginning of **1999-2000** stands at 75.

TITAN AIRWAYS, LTD.: Enterprise House, Stansted Airport, Stansted, Essex, England, CM24 1QW, United Kingdom; Phone 44 (1279) 680 616; Fax 44 (1279) 680 11; http://www.titan-airways.co.uk; Code T4; Year Founded 1988. Titan is established at London (STN) in **1988** by the ARTAC charter brokers to undertake ad hoc passenger and cargo charters and contract service flights to regional destinations, largely on behalf of the British automobile industry. Founding member Gene H. Wilson is named managing director and operations are initiated with one Cessna 404 Titan, from which the enterprise draws its name.

Capacity to continue the emergency freight services offered to Ford and General Motors force Wilson to purchase another Titan early in **1989**, following it with an Embraer EMB-110P1 Bandeirante. A Shorts 330-100 is purchased in May **1990** and passenger charters are undertaken.

A second 330-100 is leased in **1991** along with three Shorts 360-300s. Differences in market philosophy now occur between ARTAC, which wishes to continue freighting on behalf of the auto industry, and the carrier's leadership.

The company is subjected to a management buyout in February **1992** as Gene Wilson (51%) and Brian Donald (19%), backed by the invest-

ment capital group 3i (30%), take control. Orders are placed for the charter of an Avions de Transport Regional ATR42-300.

Airline employment in 1993 stands at 30 as a SAAB 340B is ordered. Being ferried from Southend to Glasgow on January 13, the original Bandeirante with two crew encounters bad weather and fog and strikes a hill at Ponsenby Fell, three mi. E of Sellafield; there are no survivors.

The company, in March, plans to become the first domestic scheduled carrier to operate out of London (LCY), offering twice-weekly roundtrips to Belfast City Airport. When the government's Civil Aviation Authority (CAA) requires the company to display an increase in its working capital above £1 million (\$1.5 million), the new route's start-up must be postponed until September.

The fleet in 1994 includes 3 Shorts 360-300s, and 1 each Shorts 330-100, Cessna 406 Caravan II, and ATR42-300. Another of the latter type is leased in June, followed at year's end by a Cessna 500 Citation I.

The company handles both passenger and freight work, on a fixed or short notice basis; more and more business comes from rapid response to capacity requests from such customers as **Manx Airlines, Ltd.** and **Air U.K., Ltd.** Contracts are arranged on an ACMI (aircraft, crew, maintenance, insurance) wet-lease basis.

A third chartered ATR42-300 arrives in 1995. In the spring, the company agrees to become U.K. launch customer for the ATR42-500; however, when it is learned that the first aircraft cannot be delivered before summer, the order is cancelled. In September, a Shorts 360-300 is leased to **Base Regional Airlines, B.V.** for six months. During the summer, an ATR42-300 is wet-leased to the Italian carrier **Meridiana, S.p.A.** In December, the company agrees to lease a British Aerospace BAe 146-200QC from Asset Management Organization.

The BAe is delivered at the start of April 1996, entering service two weeks later. On September 5, the carrier receives, for the third time in three years, a Silver Award from the British Post Office in recognition of its high quality of service on the nightly Royal Mail Skynet.

Unable to land because of weather at East Midlands Airport after a January 3, 1997, service from Exeter, a Shorts 330-100 with two crew and a passenger is placed in a holding pattern. With fuel running low, it is subsequently diverted to Liverpool. While landing, the freighter touches down hard, causing the right main landing gear to collapse. Although the aircraft is damaged, no injuries are reported.

Following a 10-month lease, Titan, on February 25, purchases the BAe 146-200QC it has been chartering from Assets Management: Jets. On May 1, the carrier announces that it will lease a BAe 146-200 from **USAirways** and will be put to work on a contract with **Jersey European Airways, Ltd.** flying between the U.K. and Belfast.

In a fortunate piece of delivery exposure, the aircraft is photographed as backdrop in a scene where "Q" demonstrates a new BMW automobile to James Bond in the 18th Bond movie, *Tomorrow Never Dies*, which premieres in the U.S. on December 19.

Meanwhile, another BAe 146-200, first flown by **British World Airlines, Ltd.**, is repainted in a colorful blue-and-white color scheme and delivered in November.

Enplanements for the year total 14,000 and 568,000 FTKs are also operated.

Flights continue in 1998 without significant fanfare. During the year, airline employment is increased by 60% to 120. Business, on the other hand, falters.

Passenger boardings plunge 42.9% to 8,000 while cargo traffic is off by 56.2% to 249,000 FTKs.

During the first quarter of 1999, a BAe 146-200 is leased to **CityJet, Ltd.** for use on the Irish carrier's new "Air France Express" services. During the same time, the company introduces a new corporate image and aircraft livery. Gone from plane tails is the previous outline of a Greek soldier, replaced with a stylized globe painted on the markings-free white and light blue fuselages. Markings are left off in order to make it easier for ACMI customers to add their own with easy on/off decals available through a program Titan runs in cooperation with London-based Graphicraft, Ltd.

In early May, an arrangement is concluded with Ansett Worldwide Aviation Services for the charter of a used Boeing 737-300 which will be based at London (STN) and wet-leased out to other European carriers requiring additional capacity. The aircraft, an ex-**Air Pacific, Ltd.** B-737-33A, is received in June.

The busy summer season prevents the carrier from carrying out a plan to equip the Boeing with leather seats. This is completed during the first week of November by Frank Guy, Ltd. and the plane is returned to the airline on November 10.

Passenger boardings for the year jump 28% to 10,000.

A total of 75 workers are employed at the beginning of 2000, a 37.5% decrease over the previous 12 months. The company's second chartered BAe 146-200QC is unveiled in a new trial color scheme on January 9. Designed by the Hertfordshire design house The Foundry, the livery is applied by Aviation Cosmetics. Both companies had worked with Titan on its successful "Globe" scheme.

To cover the late delivery of its new DHC-8-Q300s, **Augsburg Airways, GmbH.** on February 1 signs a wet-lease contract with Titan under which the British operator will fly its British Aerospace BAe 146-200 over the German airline's Augsburg-Berlin route until the end of March. During this time, the aircraft will wear an experimental new color scheme designed by The Foundry group.

The Augsburg contract is extended in March for another six months; however, the route terminus is altered from Berlin to Budapest. Wearing full Titan colors, the B-737-33A is wet-leased to **Tyrolean Airways (Tyrolean Airways Luftfahrtgesellschaft, GmbH.)** for six months, beginning on June 16.

The chartered B-737-33A is employed on behalf of the Cunard Steamship Company between August 9 and October 26 to provide a link from London (STN) for passengers flying to Mediterranean points to join the RMS *Caronia*.

In mid-December, Titan wins a long-term contract with the British Royal Mail to operate a pair of British Aerospace BAe 146-200QCs nightly, one each on the route from London (STN) to Belfast and the other from Edinburgh to East Midlands. The deal is historic as it marks the initial introduction of jet equipment onto the nightly U.K. mail service.

TITAN CHARTER AVIATION (ASTORIA), LTD.: Canada (1995-1996). The deep-discount carrier, also known as **Transports Aeriens Astoria, Ltd.** or **Titan Air Charter, Ltd.**, is established at Toronto in early spring 1995. Two Boeing 737-275s are leased from ATASCO and, on May 26, inaugurate six-times-per-day roundtrips to Montreal (YUL). The carrier folds within a year.

TLA (TOTAL LINHAS AEREAS, S.A.): Transportadores Sullsta S/A, Ave. Senador Salgado Filho 5397, Bairro, Uberaba, CEP-81580-000PR, Brazil; Phone/Fax 55 (41) 376-1710; http://www.tal.com.br; Code TTL; Year Founded 1988. TLA is established as the air taxi Total Aerotaxi, Ltda. at Belo Horizonte, in the state of Minas Gerais, in 1988. Over the next 5 years, the company hauls mail for the Brazilian postal company Telegraphs. Scheduled intrastate services are added and the fleet comes to include 5 Embraer EMB-110P1 Bandeirantes and 1 Beech 99.

In April 1993, the 45-employee carrier takes delivery of the first EMB-120QC Brasilia. The new turboprop, which can carry either 30 passengers or 3,500 kg. of cargo, enters night mail service for the Brazilian Post Office.

Curitiba-based Grupo Sulista, in 1994, purchases the company with a plan for turning it into a regional air carrier. Over the next two years, investments are increased and in 1996 the company receives scheduled airline authority from the Department of Civil Aviation. At this point, the air taxi is renamed Total Linhas Aereas or Total Airlines.

Flights continue in 1997-1998 with a fleet that still includes 1 Beech 99, 7 Bandeirantes, and the lone Brasilia. Two new Avions de Transport Regional ATR42-320s join the fleet during the latter year.

During the first quarter of **1999**, a Portuguese-language homepage is opened on the Internet's World Wide Web. An English-language version will appear a year later. A third ATR42-320 arrives in midyear, allowing retirement of two Bandeirantes.

During the second week of July **2000**, twice-daily all-cargo roundtrips are inaugurated from São Paulo to Florianópolis; one flight is operated with an EMB-120 and the second with an ATR42-320.

Two Boeing 727-243AFs are leased from Pacific Coast Group in early November and are employed to inaugurate all-cargo return service from São Paulo to Florianópolis via Rio de Janeiro and Curitiba.

TMK II COMMUTER, S.A.: Zaire (1990–1994). TMK is founded at Kinshasa in **1990** to offer scheduled passenger and cargo services throughout the nation. Revenues services are started during the summer with a single de Havilland DHC-6-300 Twin Otter. A second Canadian turboprop is acquired in **1991**. Operations continue for two more years.

TNT AIRWAYS, B.V.: Neptunusstraat 41-63, 2132, JA, Hoofddorp, The Netherlands; Phone (31) 20 500 6877; <http://www.tnt.com>; Code NTR; Year Founded 1999. During the summer of **1998**, the company's owners, KPN, the Dutch PTT & Telecommunications organization, is split up, leaving **TNT Express Worldwide (TNT International Aviation Services, Ltd.)** as a subsidiary of the TNT Postal Group, N.V. As an Australian company, TNT could not own or operate its own European airline, but now the restriction no longer applies. Planning is begun for the establishment of a wholly owned, noncontract cargo airline. During the year, TNT and its affiliates move 2.91 million freight tons.

TNT Express and the cargo division of **American Airlines** sign a worldwide airline service level agreement on January 28, **1999**. The pact is the first of its kind between TNT and a U.S. carrier and will extend its reach, particularly into South and Central America. Improved service standards and block-space cargo availability in the freight holds of AA's new Boeing 777-223s are important components of the new arrangement. Freight tons carried grows to 2.97 million and TNT Express contributes \$145 million to its parent's \$860 million 1999 revenues.

At the beginning of **2000**, TNT's air network moves 1,400 tons of express cargo weekly and serves 50 airport every night throughout Europe. When capacity through its "OneWorld" alliance and **KLM (Royal Dutch Airlines, N.V.)** partners is figured in, TNT is able to offer an additional 5,300 flights operating between 726 worldwide hubs.

TNT Airways, Ltd. is officially created on April 7 as a subsidiary of TNT Holdings, B.V. to operate on a noncontract basis as TNT Postal Group's own cargo airline. Although headquartered in the Netherlands, the operational component, under Vice President Fred Beljaars, is based at the TNT European Express Centre at Liege, Belgium, from whence it can take full advantage of TNT Postal Group's extensive European road network. It now begins the process of reacquiring the fleet of 18 BAe 146QT freighters it has placed with other European operators. These are to be consolidated into the new airline as the contracts with each carrier end. It is anticipated that the company will launch flights under its own brand at the end of the year and be fully operational by the end of 2002.

As TNT Postal Group further prepares for the deregulation of European postal services over the next year, it joins with the British Post Office and the Singapore postal authority, also in April, to create an international mailing joint venture. Combined potential value of this enterprise, with its emphasis on the delivery of business mail, could be upwards of \$429 million.

In need of additional capacity in Europe, TNT, during the second quarter, reclaims the two BAe 146-200QTs it has had on lease to **Pacific East Asia Cargo**. They are shifted to London (STN), arriving on April 25 and 28, respectively.

Work toward the official beginning of service continues apace during the remainder of the year. It proves difficult to attract flight crews to Liege, due largely to the high taxes of Belgium. In October, a contract is won with ABB to handle express documents, parcels and freight for the technology concern's 1,000 offices around the world.

Employing a single BAe 146-300QT, TNT Airways inaugurates revenue all-cargo services from Liege in mid-February 2000.

The company's fleet is dramatically increased on May 3 when the contract with **Air Foyle, Ltd.** ends and the eight BAe 146QTs it had been operating on behalf of **TNT Express Worldwide** are transferred back the TNT European Express Centre. The **Pan Air Lineas Areas, S.A.** contract has one more year to run.

In mid-May, TNT purchases the original Airbus Industrie A300B4-203F of **Channel Express (Air Services), Ltd.** The last **Air Foyle, Ltd.** BAe 146QT arrives at Liege on June 5, physically bringing an end to a relationship begun in May 1987. Approximately 55 former Air Foyle pilots have been enticed over to fly the aircraft.

The **Channel Express (Air Service), Ltd.** A300B4-203F is transferred to Belgium on July 5, where it is joined by a second Airbus freighter during the second week of the month.

A new cargo facility is dedicated at New York (JFK) on August 7. The facility is linked by a daily B-757-200F freighter service to the Liege cargo hub.

Another A300B4-203F is purchased on December 15, this one from the First Security National Bank. Using **Pan Air Lineas Aereas, S.A.** A300B4-103Fs, a new cargo route is opened during Christmas week from Liege to Pescara via Bologna. Two more Airbus A300B4-203s are acquired as the year ends and will also be converted into freighters.

TNT EXPRESS WORLDWIDE (TNT INTERNATIONAL AVIATION SERVICES, LTD.): United Kingdom (1988–1999). TNT, Ltd., that part of the Australia-based TNT International Aviation Services Group dedicated to European services, establishes its main hub at Cologne in **1988** while keeping administrative headquarters at Windsor, Berkshire, England. Gerry Fallscheer is appointed managing director and à la **Federal Express (FedEx)**, established an integrated European network of more than 30 cities. These will be served nightly by contract carriers, who may use the aircraft during the day to provide daytime charters booked through the company's Windsor commercial department. Neither traffic nor financial data is released.

In **1989**, a total of 10 British Aerospace BAe 146-200QTs are flown, two each by **Air Foyle, Ltd.**, **Euralair, S.A. (2)**, and **Malmo Aviation, A.S.**, and one each by **Malev Hungarian Airlines; Mistral Air, S.p.A., Pan Air Lineas Aereas, S.A.,** and **Nurnberger Flugdienst, GmbH.** Orders are outstanding for 6 more Dash-200QTs plus 10 Dash-300QTs.

Four BAe 146-300QTs arrive in **1990** and two each are assigned to **Air Foyle, Ltd.** and **Malmo Aviation, A.S.** The former carrier also receives the 11th Dash-200QT. Although seven Dash-300QTs are on hand in **1991**, four (including two flown by **Air Foyle, Ltd.**) are placed in storage as recession, higher fuel bills, and the Gulf crisis impact the carrier's air freight business.

To market all of its cargo products under a single umbrella, TNT, Ltd. in May is reorganized into the single program TNT Express Worldwide, Ltd. Ownership is now held by a consortium of postal departments from Canada, Sweden, France, Germany, and the Netherlands.

Based at Amsterdam and with Paul Moorhouse as chief operating officer, the new organization comes into effect on July 1. At this point, the company controls 1,200 offices in Europe and the U.S. (including 50 in the latter nation) and buys up the entire BAe 146 production line for the next 2 years. An office is opened in Hong Kong in October as services commence in Asia.

The 11 BAe 146-200QTs and 8 Dash-300QTs are fully engaged in **1992** as services improve following the end of the Gulf War. Of the latter aircraft type, **Air Foyle, Ltd.** operates three, **Malmo Aviation, A.S.** flies two, and one each are flown by **Mistral Air, S.p.A.** and **Pan Air Lineas Aereas, S.A.** In May, daily return cargo flights are inaugurated between Cologne and the Finnish city of Turku.

During the year an agreement is entered into with **Federal Express**; under its provisions, TNT will provide intra-European cargo and express flights on behalf of the American major to 10 communities. In Decem-

ber, the company's Aircraft Maintenance Services division opens a new Engine Repair Centre at London (CTN).

In early 1993, a DC-8-73F is acquired and employed to fly five times per week between Cologne and New York City. New European partners joining the operation include **Eurowings NFD + RFG, GmbH**, and **City Air Scandinavia, A.S.** The airline, with the help of **Pacific East Asia Cargo** (formerly **Air Philippines**), expands into the Far East during the spring. Two BAe 146-200QTs are provided to the Asian partner which, also employing two of its own BAe 146-300QTs, inaugurates overnight flights linking its Manila base with Taiwan, Singapore, and Brunei. PEAC's Manila base becomes TNT's new Asian hub.

During the first quarter of 1994, the company's Premium Service and Mail Fast products are joined by a third express-level, "Say When" service. The new product allows U.S. shippers to designate specific delivery dates for items going to Europe. A total of 11 BAe 146-200QTs are flown, four by **Air Foyle, Ltd.**, two each by **Pacific East Asia Cargo** and **Pan Air Lineas Aereas, S.A.**, and one each by **Eurowings NFD + RFG, GmbH**, **Malmö Aviation, A.S.**, and **Mistral Air, S.p.A.**, while two each BAe 146-300QCs are operated by **Air Foyle, Ltd.**, **Malmö Aviation, A.S.**, and one each by **Mistral Air, S.p.A.** and **Pan Air Lineas Aereas, S.A.** In the fall, a seventh BAe 146-300QC is placed into service on the company's European night services.

During the third week of November 1995, a memorandum of understanding is signed with TNT's Australian parent. Under its terms, **Air New Zealand, Ltd.** will purchase from TNT a 25% stake in **Ansett Australia (Pty.), Ltd.** for A\$200 million. In addition, it has the option through February 15, 1998, to purchase another 25% for A\$225 million. If this second stock option is not taken up, TNT will have the option to buy back the initial 25% share. The deal must be reviewed by both the Australian Foreign Investment Review Board and New Zealand's Commerce Commission.

During the first week of January 1996, TNT Express Espana, S.A. is sold for A\$40 million. In a preliminary January ruling, the New Zealand Commerce Commission disapproves of **Air New Zealand, Ltd.**'s arrangement with TNT, Ltd. It advises all interested parties that they may make written comments on the proposed sale until February 29 and give oral presentations in March, but that it will make a final determination on April 3.

During the first week of March it is announced that the company will move its European hub from Frankfurt to Liege, Belgium; upwards of 34 flights per night will be affected when the transfer takes effect on January 1, 1998. Meanwhile, Belgium begins to upgrade facilities at the onetime military air base to Category III standards.

The New Zealand Commerce Commission, fearing a monopoly over New Zealand's domestic routes, rules on April 3 that **Air New Zealand, Ltd.** may not purchase the TNT, Ltd. interest in **Ansett Australia (Pty.), Ltd.**

The Commerce Commission reverses its April decision in late June after the News Corporation, which also holds 50% interest in **Ansett Australia (Pty.), Ltd.**, steps forward at mid-month and acquires 100% ownership of **Ansett New Zealand, Ltd.** The new equity arrangement ends New Zealand government's monopoly concerns; however, the TNT, Ltd. purchase still must be approved by two Australian bodies, the Foreign Investment Review Board and the Competition and Consumer's Commission. These permissions are all obtained over the summer.

The formal A\$325 million **Air New Zealand, Ltd.** buyout of the TNT, Ltd. interest in **Ansett Australia (Pty.), Ltd.** is approved by the TNT board in early September. Approval from the Ansett board and the Australian government is received in October. Late in the year, a four-year contract is signed with FLS Aerospace, Ltd., based at London (STN), for the conversion of Boeing 727-200 passenger planes into 727Fs.

In Europe during November, construction begins on a 24,000-sq.-m. warehouse at Liege. In late December, TNT is purchased by KPN, a postal and telecommunications service based in the Netherlands.

At the beginning of 1997, the company and its subsidiaries visit over 40 European destinations, as well as Brunei, Manila, New York, Singapore, and Taipei.

In January, TNT receives a \$5.9-million contract from Opel/Vauxhall for distribution of after-sales service parts to points within that company's European retail network. The first FLS-converted B-727F is delivered in mid-April. At the same time, the Liege warehouse is completed.

In late May, it is announced that the company has begun construction of an automated parcel-sorting system and a 4,600-sq.-m. aircraft maintenance hangar at Liege.

At this point, TNT has aircraft under contract stationed in Europe at Liege, Helsinki, Cologne, Budapest, Dublin, Bergamo, Rome, Oslo, Lisbon, Madrid, Goteborg, Stockholm, Belfast, Edinburgh, and London (STN). It also operates freighters from Hong Kong, Jakarta, and Singapore. In the U.S. and Canada, it contracts with other operators and provides services from hubs at Vancouver, Toronto, Miami, Los Angeles, San Francisco, and New York (JFK).

The move to Ostend is completed in March and April 1998. During May, it is announced that the company will acquire a large fleet of Airbus Industrie A300B4Fs with which to feed its new Liege hub and with which to replace the aging B-727Fs. A contract is signed with **Channel Express (Channel Express Air Service, Ltd.)** to begin employing its own A300B4-203F on TNT flights from the U.K. to Liege in September.

A new aircraft livery is unveiled in June on a B-727F converted into a freighter by Tucson-based Hamilton Aviation. The aircraft is sent to Europe to be flown by Denmark-based **Sterling European Airways, A.S.**

During the summer, the company's owners, KPN, the Dutch PTT & Telecommunications organization, is split up, leaving TNT Express as a subsidiary of the TNT Postal Group. As an Australian concern, TNT had been prohibited from owning or operating its own freight carrier in Europe, but those restrictions no longer apply. Planning is begun for the establishment of a wholly owned, noncontract cargo airline.

TNT Express and the cargo division of **American Airlines** sign a worldwide airline service level agreement on January 28, 1999. The pact is the first of its kind between TNT and a U.S. carrier and will extend its reach, particularly into South and Central America. Improved service standards and block-space cargo availability in the freight holds of the carrier's new B-777-223s are important components of the new arrangement.

In need of additional capacity in Europe, TNT, during the second quarter, reclaims the two BAe 146-200QTs it has had on lease to **Pacific East Asia Cargo**. They are shifted to London (STN), arriving on April 25 and 28, respectively.

At the beginning of 2000, the TNT air network serves 50 airports across Europe every night moving in excess of 1,400 tons of cargo nightly.

TNT Express and the cargo division of **American Airlines** sign a worldwide airline service level agreement on January 28. The pact is the first of its kind between TNT and a U.S. carrier and will extend its reach, particularly into South and Central America. Improved service standards and block-space cargo availability in the freight holds of AA's new Boeing 777-223s are important components of the new arrangement. **TNT Airways, Ltd.** is officially created in April to operate on a noncontract basis as TNT's own cargo airline. Although headquartered in the U.K., the new concern is based at the TNT European Express Centre at Liege, Belgium.

In need of additional capacity in Europe, TNT, during the second quarter, reclaims the two BAe 146-200QTs it has had on lease to **Pacific East Asia Cargo**. They are shifted to London (STN), arriving on April 25 and 28, respectively.

TNT Airways, Ltd. now begins the process of reacquiring the fleet of 18 BAe 146QT freighters it has placed with other European operators. These are to be consolidated into the new airline as the contracts with each carrier end. It is anticipated that the company will launch flights under its own name around the end of the year and be fully operational by the end of 2002.

TNT SAVA, S.A.: Brazil (1992–1993). TNT Sava is established at Rio de Janeiro in 1992 as the Brazilian partner of the multinational **TNT International Aviation Services** based in the U.K. All-cargo services commence with a single Boeing 727-27C first flown by **Braniff International Airways**.

Unable to achieve fiscal viability in a recession year, the company shuts down in 1993.

TOA AIRWAYS COMPANY, LTD.: Japan (1953–1971). The automobile manufacturer Daihatsu forms Toa Kotan, Ltd. at Hiroshima on November 26, 1953, beginning de Havilland DH 104 Dove charter flights to the Osumi and Shoto Islands early in 1954. In late 1957, permission to commence temporary scheduled services is obtained commencing March 20, 1958. The fleet is now increased by the addition of a number of DH 114 Heron 1Bs.

Three years later in late 1961, permanent certification is obtained.

A DH 114 Heron 1B with three crew crashes into Mount Ohira on February 23, 1962; there are no survivors.

In affiliation with **All-Nippon Airways Company, Ltd. (ANA)** from which several Convair CV-240s are leased, the carrier makes preparations to inaugurate new services on March 20. These new routes include Kagoshima–Kumanoto–Kokura, Kagoshima–Ryuku Islands, and Hiroshima–Matsuyama. On August 22, a marketing and route transfer agreement is signed with ANA; it will be implemented beginning the following year.

A number of thin ANA routes from Hiroshima are turned over on February 11, 1963, followed on October 16 by feeder routes emanating from Fukuoka. The most important group of ex-ANA routes is turned over on June 15, 1964 and includes several important services from Osaka, including a connecting link to Hiroshima.

Services are maintained and frequencies are increased, particularly following Toa's introduction to the commercial world of the YAMC YS-11-100 on April 1, 1965. This turboprop is the first indigenous, post-war, Japanese-built commercial airliner.

A CV-240 leased from **All-Nippon Airways Company, Ltd. (ANA)** is damaged beyond repair in a ground accident at Obihiro on May 29; there are no fatalities.

Another CV-240 with five crew crashes on takeoff from Tokyo on an August 26, 1966, training flight; there are no survivors.

Flights continue without incident through the remainder of the decade and into the next. By May 15, 1971, when the company is merged with **Japan Domestic Airlines Company, Ltd.** to form **Toa Domestic Airlines Company, Ltd.**, the fleet comprises 18 YS-11-100s, 10 YS-11A-200s, and 2 YS-11A-300s.

TOA DOMESTIC AIRLINES COMPANY, LTD.: Japan (1971–1988). This carrier is formed on May 15, 1971 through the merger of **Toa Airways Company, Ltd.** and **Japan Domestic Airlines Company, Ltd.** Shareholding is divided between the Tokyo Electric Express Railway (26%), **Toa Airways Company, Ltd.** (11%), **Japan Air Lines Company, Ltd. (2)** (9%), and miscellaneous smaller investors (54%). Goro Tominaga is named president.

The combined fleet under a new livery includes Toa's 18 YAMC YS-11-100s, 10 YS-11A-200s, 2 YS-11A-300s, JDA's 15 YS-11As, and 3 Boeing 727-146s. Former routes of the merger partners are now flown under integrated schedules.

En route from Sapporo to Hakodate on July 3, a YS-11A with 4 crew and 64 passengers is reported missing; the next day the wreckage is spotted on the southern face of Mount Eboshi near Hakodate and there are no survivors. President Tominaga accepts responsibility for the disaster and resigns.

Orders are placed in 1972 for eight Douglas DC-9-41s, the first of which arrives and enters service between Tokyo and Kushiro in December 1973. TDA is the only airline other than **SAS (Scandinavian Airlines System)** to operate the Dash-40 version of the Douglas twin-jet.

Frequencies and rates are improved during 1974 to the 35 destinations on the domestic network. The fleet is standardized around the YS-11A, which predecessor **Toa Airways Company, Ltd.** had introduced to the commercial world on April 1, 1965, and the three Boeing trijets are withdrawn.

The first of eight additional DC-8-41s begin serving the carrier's Tokyo to Sapporo and Fukuoka trunk routes in May 1975.

A total of 3,851,723 passengers are carried during the 12 months.

Isamu Tanaka is named president in 1976. Airline employment is 2,642 and the fleet now includes 14 DC-9-41s, 1 DC-9-51, and 31 YS-11As. Service is inaugurated between Osaka and Aomori.

Freight traffic accelerates 26.5% for the year while passenger boardings swell 18% to 4,697,954.

Six more DC-9-41s, two DC-9-51s, and six YS-11As are placed into service during 1977.

Enplanements soar to 5,419,954.

The workforce at President Isamu Tanaka's carrier is increased 6.7% in 1978 to 2,914. The transfer of international flights to the new Tokyo Narita Airport and the beginning of services from Nagoya, Oita, and Kagoshima results in a traffic boom.

Cargo soars 28.4% and passenger boardings jump 15.8% to 6,437,000. To help handle this surge, orders are placed for six Airbus Industrie A300B2s and five DC-9-80s (also known as McDonnell Douglas MD-80s).

The number of employees is increased another 8.3% in 1979 to 3,155. Five new domestic routes are opened and five used YS-11As are added to the fleet.

Passenger boardings grow 13.8% to 7,327,194 while freight accelerates by 15.8%.

The workforce grows again in 1980, climbing 5.4% to 3,325. The first of three A300B2K-C3s delivered on the year arrives at Tokyo on October 2 and is placed on a service from Tokyo to Kagoshima. New routes are started from Tokyo–Memembetsu and from Kagoshima–Osaka, Kikaishima, and Okayama.

Freight traffic grows 4.1% to 12.06 million FTKs and passenger bookings rise 1.1% to 7.4 million.

The employee population inches upward by 3.2% in 1981 to 3,430. The first two of eight MD-81s are delivered in March, with six more arriving throughout the remainder of the year along with two A300B2K-3Cs. The MD-81s begin flying from Tokyo to Kagoshima, Kumamoto, and Hakodate.

Four DC-9-41s are sold to **Finnair, O/Y** and the carrier's tenth anniversary is celebrated on May 15. The subsidiary **Japan Air Commuter, Ltd.** is established at Kagoshima on July 1 to feed its parent, itself once a feeder for **All-Nippon Airways Company, Ltd. (ANA)**. TDA holds 60% shareholding.

Passenger boardings jump 9.5% this year to 8,114,786 and cargo traffic balloons 42.4% to 17.18 million FTKs. On revenues of \$253 million, expenses (led by fuel and airport usage costs) climb 21.1% to \$267.9 million, leaving an operating loss of \$10.8 million.

The employee population is increased 1.4% in 1982 to 3,478. Routes are extended from Tokyo to Sapporo, Fukuoka, and Kagoshima and from Nagoya to Akita. One more A300B2K-3C is delivered as two DC-9-41s are sold to **Ozark Air Lines (1)** and one to **Finnair, O/Y** plus three YS-11As to **Mid-Pacific Airlines**.

Passenger boardings dip 2.8% to 7,890,000, but freight advances by 39.2% to 23.9 million FTKs.

A total of 11 people are hired in 1983, a 0.6% increase. During the year, Isamu Tanaka is appointed chairman in June, with Toshihiko Kubota as president. Three A300B2K-3Cs are added to the fleet and two A300B2K-3Cs previously grounded following the national fuel crisis are placed back into service between Tokyo and Osaka. The carrier now orders STOL aircraft for its commuter subsidiary **Japan Air Commuter Company, Ltd.**; the new Dornier 228-212s enter service on December 10.

Freight zooms 30.1% this year while passenger boardings are up 3.2% to 8,143,461. The year's loss is \$27 million.

The workforce is boosted 2.8% in **1984** to 3,596. One A300B2K-3C is delivered and orders are placed on February 8 for four MD-81s, at ¥ 6billion per copy (\$25.8 million) for delivery the following spring.

By December, the company's busiest route is that between Fukuoka and Kagoshima.

Passenger boardings accelerate 10.2% to 8,975,875 and cargo balloons 24.1% to 38.59 million FTKs. Revenues are \$508 million and profits are, respectively: \$19.3 million (operating) and \$19 million (net).

The payroll grows 2.3% in **1985** to 3,674. The fleet now comprises 9 A300B2K-3Cs, 8 MD-81s, 14 DC-9-41s, and 35 YS-11As, with orders outstanding for 5 MD-81s, 1 A300B4-203, and 4 MD-87s.

The first MD-11 is delivered to President Kubota at Long Beach on April 5; a second will be delivered before year's end.

Two new MD-81s arrive from the U.S. in April and May. The first enters service on routes to Mebanbetsu, Hokkaido, on July 1. Also in July, the two daily Tokyo-Hanamaki services are dropped due to the success of the competing *Tohoku Shinkansen* (Bullet Train); this route is replaced by a Hanamaki-Nagoya service, flown with two more A300B2s leased for the route.

In December, the government ends the **Japan Air Lines Company, Ltd. (2)** monopoly on international service, while allowing the flag carrier to compete domestically. Simultaneously, in an effort to save on fuel costs and reduce accumulated deficit, the number of flights on 16 domestic routes is reduced.

Due to the **Japan Air Lines Company, Ltd. (2)** Boeing 747 crash in August, passenger boardings are up only 4.2% to 9,348,000, although freight continues its upward spiral, growing by 10.3% to 42.56 million FTKs. On revenues of \$748.5 million, expenses are \$746 million; profits are, respectively: \$2.5 million (operating) and \$3.5 million (net).

Employment grows by 4% in **1986** to 3,851. In February, an application is submitted seeking the launch of Tokyo-Honolulu scheduled service at year's end. Weekend 20% discount fares are offered on the Tokyo-Osaka route, beginning in May, in an effort to battle the *Tohoku Shinkansen*.

In June, the decision is made to postpone long-haul international service for two years while efforts are made to eliminate the carrier's deficit and to gain experience by flying charters to South Korea, China, Hong Kong, and Singapore with A300B2K-3Cs and the last two of four MD-81s.

On July 21, President Kubota announces that TOA will recruit foreign pilots for its envisaged international air route service now scheduled to start in the airline's 1988 business year. The recruitment is labeled "a temporary measure" until the airline's Japanese pilots have acquired enough experience and technique on the new Tokyo-Honolulu flights.

In November, two DC-10-30s are ordered for delivery in January and February 1988 and an A300B4-203 is purchased from **Australian Airlines (Pty.), Ltd.** for March 1989 delivery.

En route to Tokyo from Oita in Kyushu on December 9, a DC-9-41 with 105 people encounters air turbulence at the 9,000-ft. level over Oshima Island; although the aircraft is safely landed at Tokyo (HAD), nine people must be rushed to the hospital for treatment of their injuries.

So far this year, the company has sold nine of its YS-11-100s; a tenth is purchased by **Mandala Airlines** of Indonesia on November 12 for ¥ 180 million.

Customer bookings increase a scant 1.4% to 9,267,928, but cargo jumps again, by 13.5% to 48.29 million FTKs.

The workforce is increased by 5% in **1987** to 4,042. On January 10, a YS-11A-109 with 4 crew and 48 passengers fails its takeoff from Miho Airport for a service to Osaka and goes off the end of the runway; there are no serious injuries reported.

In March, an A300B4-203 is acquired from **Australian Airlines (Pty.), Ltd.** The company's first long-range DC-10-30 is received on March 30 and to mark the occasion and the rise to the status of an international carrier, the company name is changed on April 1 to **Japan Air System, Ltd.**

TOIMACHEVO STATE AVIATION ENTERPRISE. See **SIBERIA AIRLINES**

TOLAIR SERVICES: P.O. Box 37670, Airport Station, San Juan, Puerto Rico, 00937, United States; Phone (809) 791-5235; Fax (809) 791-8385; <http://www.tolair.com>; Code TI; Year Founded 1983. Jore A. Toledo and Lisa L. Rossello found Tolair at San Juan in **1983** to provide regional and domestic scheduled all-cargo services. Revenue flights commence on May 16 with a single Cessna 182 between Borinquen and Beef Island. A Beech 18 is acquired and later the same year service is initiated to St. Martin, St. Eustatius, and St. Kitts. After obtaining a contract with **UPS (United Parcel Service)**, the company is able to grow with Beech 18s and Convair T-29s refurbished as civil CV-240 freighters. In **1988**, the company receives the first of three (later five) Douglas DC-3s. The first turboprop, a Fairchild-Swearingen SA-227 Metro, is acquired in **1992** and employed on new fast freight service between San Juan and the Dominican Republic.

Operations continue apace for the next 6 years. By **1999**, Chairman Toledo and Executive Vice President Rossello oversee a workforce of 63 and fly 5 each DC-3s and Cessna 402Cs, 3 each CV-240s and Beech 18s, and 1 Metro. The company is now able to transport 100,000 pounds daily to 10 destinations in the Caribbean. In addition, Tolair offers 200,000 pounds of air cargo storage facilities to satisfy the needs of its clients, sells aviation fuel, and operates an avionics repair station.

In January **2000**, a homepage is opened on the Internet's World Wide Web.

TOMSK STATE AIR ENTERPRISE: Tomsk Airport, Tomsk, 634012, Russia; Phone 7 (3822) 443 575; Fax 7 (3822) 448 127; Code TKS; Year Founded 1992. TSAE, the Tomsk division of Aeroflot Soviet Airlines, is reformed at Tomsk Airport in **1992**, retaining its previous mission of providing domestic passenger and cargo services. Under the direction of Comdr. Yuri Prokopiev, revenue flights are undertaken with 3 Tupolev Tu-154B-2s and an unspecified number of Let L-410UVPs, Antonov An-2s, An-24s, and An-26s.

Flights continue during the remainder of the decade, during which years the fleet is altered to include 9 (later 8) Lets, 17 An-2s (most of which are gradually withdrawn), 6 An-24s, 5 (later 4) An-26s, 1 Tu-154B-2, and 5 Yakovlev Yak-40s.

TONGA AIR, LTD. (TONGA AIR SERVICES, LTD.): Tonga (1978-1985). Equipped with two Britten-Norman BN-2 Islanders, Tonga Air begins operations on May 22, **1978**, taking over the role of main domestic airline for the kingdom from the late **Tonga Internal Air Service, Ltd.** Interisland services are provided linking Tongapatu, Vav'u, Ha'apia, and 'Eua.

During the early **1980s**, one Islander is withdrawn in favor of a Piper PA-31-310 Navajo and a Piper PA-23 Aztec. The carrier is renamed **Friendly Islands Airways, Ltd.** in **1985**.

TONGA INTERNAL AIR SERVICE, LTD. See **TONGA AIR, LTD.**

TOP AIR, A.O.: Yeni Hangartar Bolgesi, Ataturk Havalimani, Istanbul, TR-34630, Turkey; Phone 90 (2) 125 41 60 40; Fax 90 (2) 125 98 50 60; <http://www.topair.com.tr>; Code B6; Year Founded 1990. Top Air is established at Istanbul in **1990** to provide long-haul ad hoc passenger charters. It also engages in executive and air ambulance services, aircraft sales, maintenance, and flight training. Revenue flights commence with a fleet that comprises a Tupolev Tu-154M and a Cessna 650 Citation III bizjet. Destinations visited on a nonscheduled basis include Georgia, Albania, Israel, Germany, and the Netherlands.

Two Boeing 727-100s are acquired in the spring of **1996** and allow the company to begin twice-weekly scheduled roundtrips from Antalya and Dalaman to Tel Aviv and from Istanbul to London (STN). Scheduled and charter flights are also begun from Istanbul to Paris, Strasbourg, Lyon, Berlin, Dusseldorf, Hanover, Cologne, Frankfurt, Munich, Leipzig, Munster, and Rotterdam. Return service is also offered from Antalya and Dalaman to Billund in Denmark.

Many of the company's European charters must be cut back or eliminated during the March–July 1999 Kosovo crisis. Once that disturbance is past, the company, which now also owns a B-727-200, is able to resume its services, adding new destinations at Split and Sarajevo.

As 2000 begins, the new company Web site draws attention back to Top Air's air taxi division. Fast and reliable flights are available from Istanbul to Aksaabat, Kazan, Dubai, London, Odessa, Tehran, and Moscow, as well as to local points.

TOPAIR, LTD.: U Silnice 42, Ruzyne Airport Terminal South, Prague 6, CR-16100, Czech Republic; Phone 42 (2) 316-5554; Fax 42 (2) 316-6561; Code P9; Year Founded 1991. Topair is formed at Prague, capital of the former Czechoslovakia, in May 1991 to undertake scheduled Prague to Braunschweig corporate services under contract to **Skoda Air**. Principal owner Mikoslav Tutter is appointed director general and his initial fleet comprises a Beech Super King Air 200 and a Cessna C650 Citation III. Flights begin in September, many in support of a corporate contract with Skoda/Volkswagen for frequencies between Prague and Braunschweig.

A second Super King Air 200 and three Beech 1900Cs are leased in 1992 and the carrier begins feeder flights in March for **UPS (United Parcel Service)** between Prague and Nuremberg. Airline employment in 1993 stands at 38. One 1900C is returned in July as Topair takes delivery of the first Beech 1900D to be introduced into the Czech Republic.

The workforce is increased to 46 in 1994 and a Let L-410A is leased from **Bemoair**.

Flights continue in 1995–2000, during which years the fleet includes 2 each Beech 1900Cs, 2 Let L-200 Moravas, and 1 each Beech 1900D, L-410A, and Cessna 650 Citation III.

TOPFLIGHT AVIATION COMPANY, LTD.: United Kingdom (1976–1990). Topflight is established at Fairoaks Airport (Surrey) as **Air Oxford, Ltd.** in 1976 to undertake charter and contract service flights to local destinations in southern and eastern England.

These operations continue for the next decade with a fleet comprising 2 de Havilland DH 114 Herons, 2 Piper PA-31-350 Navajo Chieftains, 1 Hawker Siddeley HS 125, and 1 Piper PA-23 Aztec. In 1986–1987, Managing Director Howard Rose's company adds another Heron and two Partenavia P-68s. Operations cease in 1990.

TORAIR, A.B.: Sweden (1964–1966). With the two Douglas DC-3s of his Loadair, A.B. charter operation about to be repossessed and his company declared bankrupt, Gote Rosen promptly re-registers it as Torair (after Thor, the Nordic thunder god) at Stockholm. Although he cannot save one Douglas from attachment, he is able to spirit the other out of Bromma Airport to Goteborg on August 6, 1964. There he is able to convince the plane's owner to back a resumption of service under the new name.

Still able to employ Loadair's permit while awaiting the issuance of a new certificate, Rosen is able to complete his previous commitments. The new permit allows only cargo work and fortunately, two significant contracts are received. As a result, a second DC-3 is chartered.

Three nights every week in the fall, live chicks are flown from Billund in Denmark to destinations around the U.K. Twice-weekly deliveries of cut flowers from Copenhagen to Helsinki are also ordered.

The flower deliveries continue through the winter. One night in February 1965, a DC-3 strays off course and comes within 10 miles of the Soviet Union's Baltic coast. The aircraft is chased back by a Red Air Force MIG 21.

During the spring, the company's certificate is amended to allow public passenger charters. Consequently, three stewardesses, chosen by the pilots for their beauty and including the two Britt sisters Anna and Anita, are hired. Business prospers during the summer and fall. Late in the year, owner Rosen enters into a feeder arrangement with **Transair Sweden, A.B.**

As a result of the agreement with the older company, Torair begins to expand in early 1966. Three passenger-appointed Curtiss C-46 Com-

mandos are acquired and additional flight and technical personnel are hired. This rapid upgrade is a mistake. Unable to maintain financial viability, the company shuts its doors in September.

TORONTAIR, LTD.: Canada (1979–1986). The charter carrier **Toronto Airways, Ltd.** establishes this commuter subsidiary at Toronto Buttonville Airport in Markham, Ontario, in February 1979. Employing Beech 99s, the new entrant launches revenue flights on April 30 over a multistop route from Toronto to Elliot Lake.

During 1981–1982, frequencies are extended to Brockville, Kingston, Ottawa, and Trenton. The fleet is increased to comprise 3 Beech 99s, 1 de Havilland Canada DHC-6 Twin Otter, and 2 Piper PA-31-350 Navajo Chieftains. The company now receives admission to **Air Canada, Ltd.**'s Reservac II computerized reservations system at Toronto. Boardings for the two years are, respectively, 17,000 and 26,000.

Toronto to Syracuse, New York, flights begin in 1983. In October 1984, service is initiated from Toronto to Canadian Forces Base Trenton, Ottawa, and Kingston. Frequencies on these routes are increased to five per day by April 1985. Financial difficulties now ensue. The DHC-6 is sold in December and replaced by another Beech 99.

Headquarters are moved to Toronto in February 1986 in order to undertake a planned new operation with **Nordair, Ltd.** for which a Fairchild Hiller FH-227B is leased. When the Nordair prospect falls thorough in May, the carrier finds itself so far overextended that it must shut its doors in June. Following bankruptcy, the remaining assets, routes, etc. are purchased by **Austin Airways, Ltd.**

TORONTO AIRWAYS, LTD. See **TORONTAIR, LTD.**

TOROSAIR, A.O.: Turkey (1988–1990). This charter operator is established at Ankara in the summer of 1988 to offer inclusive tour and other passenger charter flights to destinations in southern Europe and the Mediterranean. The first aircraft, a leased Boeing 727-51 formerly operated by **Suncoast Airlines**, arrives in August; christened *Burcu*, it allows the company to begin revenue services in October.

Operations continue apace in 1989 and by 1990 the fleet includes not only the *Burcu*, but three more chartered tri-motors as well: a B-727-77, B-727-81, and B-727-247. Following Iraq's invasion of Kuwait on August 2, the company's routes dry up and it is forced out of business.

TORRES AIR (PTY.), LTD.: Australia (1990–1991). This small commuter is established in late 1990 to offer services linking the towns on the islands in the Torres Strait, which is located between Australia and Papua New Guinea. Revenue flights begin with 1 each Pilatus-Britten-Norman PBN-2 Islander and Cessna 402. Unable to achieve either traffic or economic viability, Torres Air closes its doors before its first birthday.

TOWER AIR: Hangar 8, Second Floor, John F. Kennedy International Airport, Jamaica, New York 11430, United States; Phone

(718) 553-4300; Fax (718) 553-4312; <http://www.towerair.com>; IATA Code FF; Year Founded 1982. A package tour operator, Tower Air is formed at John F. Kennedy International Airport in August 1982 to offer services from New York City to Israel and Belgium via the scheduled flights of **Metro International Airways**, a division of **The Flying Tiger Line**. The financial arrangement between the two concerns is based on profit-sharing, with the price per aircraft tied to the number of seats sold. The joint-enterprise is formally launched in November.

By spring 1983, Tower has become the sales arm of Metro and with load factors approaching 98%, both partners make money. In the fall, Flying Tiger officials elect to close out their passenger airline operation.

Led by Tower Chairman/CEO Morris K. Nachtom, a group of former **El Al Israel Airlines, Ltd.** partners, including Samuel Fondiler, Zev Melamid, and Mordechai Gil, purchase the Metro division, planning to continue the New York to Israel link. Melamid becomes president, with Gil as chief financial officer.

A Boeing 747-127 is chartered for five years from the wreckage of **Braniff International Airways** and is sent off to **World Airways** for a \$1.7-million refurbishment and reconfiguration, which will give it 16 business- and 469 coach-class seats. A maintenance support contract is negotiated with **Pan American World Airways (1)**.

On November 1, Tower receives authorization from the CAB to inaugurate its own services and on November 3 it steps in to replace Metro on the latter's New York-Brussels-Tel Aviv route.

Retaining their positions on the board of directors, Melamid and Gil resign their management posts during the first quarter of 1984 and are succeeded by Fondiler and new Chief Financial Officer Herbert Heyman. At the end of April, company headquarters are transferred from lower Park Avenue in New York City to **United Airlines'** Hangar 8 at New York (JFK).

Leasing a former **Continental Airlines** B-747-124 christened *Rena* on May 31, Tower Air continues its scheduled service to Belgium and Israel, transporting 251,000 passengers to those two nations during the remainder of the year. Following a \$2-million refurbishment, a B-747-259B, first flown by **AVIANCA (Aerovias Nacionales de Colombia, S.A.)**, is chartered in July.

A scheduled six-days-per-week, low-fare, coach-class New York to Los Angeles service is introduced during November in competition with **PEOPLExpress**.

Financially speaking, the year is very costly as losses of \$972,523 (operating) and \$799,985 (net) are suffered.

Airline employment grows 5.8% in 1985 to 276 as the *Rena* is purchased. Early in the spring, company officials announce plans to offer charter flights to points in Germany, Italy, Greece, Switzerland, and France during the summer. Simultaneously, the low-cost New York to Los Angeles scheduled service is discontinued when it is found that the company cannot out-attract **PEOPLExpress**, even with the addition of a third Jumbojet in December, the *Suzie*, which had formerly flown for **Deutsche Lufthansa, A.G.**

Customer bookings accelerate 23.5% to 285,078 and revenues climb 31.2% to \$77 million. With costs held down, the carrier is able to generate an operating profit of \$2 million and net gain of \$1.6 million.

The payroll is increased again in 1986, up 16.7% to 322. Due to a change in service patterns, the total number of revenue passenger miles flown declines by 8.4%; however, passenger boardings climb 5.7% to 301,439.

Once flown by **Trans World Airlines (TWA)**, a leased B-747-131 is delivered on April 21, 1987; it is followed by a chartered, onetime **Pan American World Airways (1)** B-747-121 on May 10.

A B-747-100 en route for Israel on September 1 blows two tires as it takes off from New York, but makes a successful emergency landing after circling the airport for two hours. Both of the Jumbojets borrowed in the spring are returned in October.

Customer bookings accelerate 57.2% on the year to 473,753 and revenues advance to \$138 million, pushing the airline from the ranks of the large regionals to national status. The operating profit is \$8.98 million while net gain totals \$2.6 million.

The workforce increases 51.6% in 1988 to 488. Unfortunately, the company's first year as a national is marked by a 3.1% decline in passenger boardings to 459,057. Profits are generated: \$10.83 million (operating) and \$3.44 million (net).

Twelve new employees are hired in 1989 and the fleet now includes 1 each B-747-121, B-747-124, B-747-127, and B-747-130.

Customer bookings dip another 3.8% to 454,000. Revenues ascend 6.48% to \$141.43 million, expenses rise 7.54% to \$131.2 million, and the operating profit falls slightly to \$10.23 million. Net gain also declines, to \$3.40 million.

Airline employment falls by 7.8% in 1990 to 473. During the year, new livery is applied to the company's four B-747-100s, including one that is newly acquired. The company now owns the largest share held by a U.S. carrier in the New York-Israel direct trade.

Passenger boardings inch upward by 0.1% to 453,793 and revenues jump up by 21.81% to \$172.28 million. Costs leap 22.03% to \$160.11 million and allow operating income to move ahead to \$9.1 million. Net profit almost doubles to \$5.61 million.

The payroll grows by 10.5% in 1991 to 524. The fleet is enlarged by the addition of two more B-747-100s. During the Gulf War in January and February, Tower is the only airline, other than **El Al Israel Airlines, Ltd.**, to maintain scheduled services to Tel Aviv. Following the conflict, the Israeli Minister of Transport presents Chairman/CEO Nachtom with a letter and plaque of commendation.

Indeed, with a total of 300, the carrier is in second place behind **American Trans Air** in the number of missions flown in support of the deployment of American troops to and from Saudi Arabia. In May, scheduled flights begin to Paris and Scandinavia. Hadj flights to Mecca are also resumed on behalf of other carriers.

The year's enplanements are up 4.7% to 548,573 and revenues increase 42.69% to \$245.81 million. Expenses grow only 41.3% to \$226.82 million and guarantee operating income of \$18.98 million. Net gain inches up to \$6.96 million.

Company employment increases 62.2% in 1992 to 850 and the fleet now includes 7 B-747-100s and 3 B-747-100Fs. Scheduled flights are initiated on May 1 from Miami to Cologne via Copenhagen. Scheduled services to Berlin begin in November. Regularly scheduled flights are maintained from New York to Paris, Los Angeles, San Juan, and Miami and from Miami to Berlin and Cologne.

Nonscheduled passenger frequencies are undertaken to Athens, Buenos Aires, Milan, Rome, and São Paulo, while all-cargo flights are flown to Taipei, Hong Kong, and other Pacific destinations.

Passenger boardings jump 18.7% to 661,000. Revenues total \$210.89 million and costs are held low enough to allow an operating profit of \$9.03 million and net gain of \$1.2 million.

In 1993, Chairman/CEO Nachtom oversees a workforce of 757, down 10.9% from the previous year, and operates a fleet of 7 B-747-200s, 8 B-747-100s, and 3 B-747Fs. Scheduled passenger service is inaugurated to Brazil while scheduled all-cargo flights begin to Hong Kong.

On August 2, Tower is one of seven carriers to win an Air Force contract to provide long and short range international airlift services under the Civil Reserve Air Fleet program; the pact is valued at \$19 million.

The airline becomes a public corporation in November. During the month, the company opens a new terminal at New York (JFK). Located adjacent to its maintenance hangar on the approach road to the main complex, it is the only terminal at the airport not shared with another carrier.

Customer bookings leap upward by 34.4% to 953,874 while cargo skyrockets 140% to 104.89 million FTKs. Revenues ascend 38.3% to \$341.83 million, expenses accelerate "only" 33.3% to \$317.35 million, and operating income balloons to \$24.47 million. Net profit increases ninefold to \$9.93 million.

Airline employment is increased 18.9% in 1994 to 900. During the spring, scheduled flights are initiated to New Delhi, Dublin, Shannon, and Amsterdam. Hadj business is off, but, on June 18, weekly scheduled roundtrips are started between New York and Orlando. Company

Jumbojets, as well as ticket counters in Israel are given prominent display in the Chuck Norris action film *Hellbound*.

In October and early November, unknown saboteurs—possibly former employees—cut wires on five different Jumbojets on the ground at New York (JFK), disabling their monitoring systems. The media reports in December that the FBI has been called into the case, which the airline prefers to call vandalism instead of terrorism.

Passenger boardings surge 35.4% to 1,282,000 and freight skyrockets 105.8% to \$244.82 million. Revenues increase 7.6% to \$367.98 million and expenses grow 14.4% to \$363.19 million. The rise in costs brings a decline in pretax profit to \$4.79 million and a plunge in net gain to \$568,000.

The workforce stands at 1,842 in **1995**, a 34.7% increase. On February 23, a company Jumbojet flies the last 450 Pakistani UN peacekeepers home to Karachi from Mogadishu, Somalia. Also in February, the company charts a B-747-212B from ILFC for four years; it also receives a second B-747-212B from ILFC, which has leased the Jumbojet to Tower on behalf of a Swedish financial institution.

Hadj business is also down again this year. Josefina M. Essex succeeds C. V. Meserole III as vice president-finance on December 1 while the chairman's son, Guy A. Nachtomi, becomes vice president-operations.

A major snowstorm begins in the New York area on December 20 and contributes to a near disaster at New York (JFK) involving a company B-747. Flight 41, a B-747-136 with 17 crew and 451 passengers, experiences control difficulty during its takeoff roll; after the pilot aborts, the plane skids along icy Runway 4L and off its left side, hitting an electric conduit building that shears off its No. 4 engine. The nosegear and right main landing gear collapse and the plane halts 600-ft. out. A total of 25 passengers aboard are injured (1 seriously) and as the weather deteriorates, the airport is shut down for several hours.

Enplanements surge 24.2% to 1,570,244; however, cargo plunges 64.8% to 80.8 million FTKs. Operating income advances 33.3% to \$490.47 million as costs move up 31.3% to \$476.95 million. The operating profit quadruples to \$13.51 million and a \$10.68-million net profit is posted.

Airline employment stands at 1,400 in **1996**, a 24% decline. A certain amount of embarrassment is suffered on January 29 when a dog escapes from its cage while being unloaded from a freighter at New York (JFK) and must be chased for some time before its recapture. Scheduled service to India via Amsterdam is suspended in March. Four Jumbojets are leased to **Garuda Indonesia** and three to **Air India, Ltd.** for the transport of Muslim pilgrims on Hadj from Indonesia and India to Mecca.

Former **Alaska Airlines** Chairman/CEO Raymond J. Vecchi is named executive vice president/chief operating officer on September 1. Prior to the suspension of its New York to Tel Aviv service on September 3, **World Airways** contracts with the carrier to honor those passengers holding tickets valid beyond the end-of-service date. Also during the month, a B-747-136 is leased to Hollywood; repainted to resemble the U.S. government's VC-25A, it is employed at Hollywood in the shooting of the Harrison Ford adventure *Air Force One*.

The year is not successful as the number of military charters flown declines, along with civilian passenger traffic to and from Israel. Domestic traffic falls off and maintenance problems keep one of the Jumbojet freighters out of service. Chief Operating Officer Vecchi departs the company in December to accept a similar post with **Carnival Air Lines**.

Passenger boardings drop 3.5% to 1,519,000 and cargo plunges 45.5% to 39.35 million FTKs. Revenue falls off 14.8% to \$417.8 million and expenses total \$441.3 million. The previous year's profits are, unhappily, converted into losses: \$23.5 million (operating) and \$20.9 million (net).

The employee population is increased by 32.5% in **1997** to 1,855. At the beginning of the year, the company visits Amsterdam, Athens, Berlin, Bombay, Buenos Aires, Hong Kong, Los Angeles, Milan, Miami, New York, Paris, Rome, São Paulo, San Juan, Taipei, and Tel Aviv. During the spring, flights to Brazil cease. At the same time, a total of nine Jumbojets are subleased to three carriers for Hadj flights: three to

Air India, Ltd., four to **Garuda Indonesia**, and two to **Saudi Arabian Airlines**. A leaking fuel-tank check valve that is (initially) not repaired and flown on a Jumbojet roundtrips from New York and Tel Aviv between April 14 and May 2 will become the subject of a proposed FAA fine in February 1998.

Aviation officials in Israel during the second week of June agree to allow Tower to begin new roundtrips from New York to Tel Aviv during the summer. In return, the U.S. DOT grants **El Al Israel Airlines, Ltd.** permission to operate up to eight monthly roundtrips from Tel Aviv to Baltimore (BWI).

The beginning of the takeoff roll of a company B-747-212B is depicted toward the climax of the Jim Carrey comedy movie *Liar, Liar*, released by Universal Pictures.

Having lost significant business in the wake of the **Valujet Airlines** and **Trans World Airlines (TWA)** disasters the previous year, Tower, on August 1, launches a new advertising campaign. The media effort seeks to reassure travelers about the company's safety by stressing that it is large enough to perform its own aircraft maintenance.

Countering statistics from the Israeli Airport Authorities that reflect a sharp decline in the number of Americans traveling to and from Israel during July and August, Tower Air experiences a 34.9% increase and emerges as the summer's No. 1 foreign carrier in Israel.

On September 4, B-747-238B scheduled nonstop roundtrip service begins on Thursdays and Sundays from New York (JFK) to Las Vegas. The flight is welcomed at McCarran International Airport by a group of heavily plumed showgirls. Tickets on the inaugural flight cost just \$25.

A collision between a company B-727-212B landing at JFK on September 27 and a **British Airways, Ltd. (2)** B-777-236 taking off is narrowly avoided; the two wide-bodies have 200 ft. of vertical separation and 1.3 mi. of lateral separation.

Passenger boardings jump 10.1% to 1,673,000, while freight skyrockets an almost unbelievable 282.7% to 150.59 million FTKs. Operating revenues climb 10.1% to \$461.5 million, while expenses move ahead 2.9% to \$454.04 million. The previous year's large operating loss is turned into a \$7.45-million profit, while the net loss is improved to \$3.89 million.

On January 14, **1998**, former **USAirways Shuttle** President Terry V. Hallcom is named president/chief operating officer; he also takes over as both vice president-operations, as Guy A. Nachtomi enrolls at Stanford University, and as chief financial officer as Ramesh Punwani departs and becomes a member of the board.

The number of weekly New York to Las Vegas flights is doubled to four on February 2.

On March 19, two Tower Air B-747-121Fs are wet-leased by **Fast Air Chile (Fast Air Carrier, S.A.)** for a year under a \$22.86-million contract that is extendable by mutual agreement. The contract will continue even after Fast Air is merged into **LADECO Chilean Airlines, S.A.**

During the first quarter, the company elects to train nonunion, foreign national translators, originally hired to complement the crew of 14 unionized professional flight attendants on services in Saudi Arabia, as flight attendants. On April 1, AFA expresses its displeasure at Tower's plans to replace 50 of the 180 U.S. flight attendants based at Jeddah with these new local hires.

On April 8, CEO Nachtomi announces that, under terms of the new U.S.-France bilateral agreement, Tower will operate up to four weekly flights between Paris and Tel Aviv beginning in June. Future flights from Paris to Cairo may commence in the year 2000.

Flight 37, a Jumbojet en route to New York from Paris on April 18, encounters severe turbulence over the Atlantic Ocean approximately a half hour out from its destination. One passenger is critically injured and 28 others receive cuts and bruises; upon landing, all are taken to Jamaica Hospital Medical Center.

Former Amana Tool Corporation and **Trump Shuttle** Chief Financial Officer Nathan Nelson becomes Tower's chief financial officer on May 14. The company's 250 pilots vote, in June to end their affiliation with the Tower Air Cockpit Crew Association and begin representation by ALPA.

Twice-daily B-747 services commence on June 26 between New York (JFK) and Miami. Under authority granted at the end of April, the company now initiates four weekly fifth-freedom return combi services beyond Paris to and from Tel Aviv and Cairo.

On July 7, Terry Hallcom, president/executive vice president-operations/board member, resigns to move to **Eastwind Airlines**; Chairman/CEO Nachtom takes over his duties.

Under the direction of Thomas Shinar, a new West Coast office is opened at Los Angeles (LAX) on October 9. The office is responsible for servicing 13 states west of the Rocky Mountains. A B-747-200F joins the fleet on November 2.

On December 1, a B-747-259B receives fire damage to its right wing during refueling at Miami (MIA). There are no injuries among the four-person flight crew or the refueler on the ground, but the aircraft must be taken out of service for repairs.

On December 11, a \$20-million contract is signed with **Air India, Ltd.** to provide four B-747s, under wet lease, to transport religious pilgrims during the Hajj for the years 1999–2001.

During the 12 months, customer bookings climb 21.6% to 1.59 million, while cargo traffic is unreported. Revenues improve by 4.8% to \$483.8 million and allow the operating profit to skyrocket 129.8% to \$17.1 million. The previous year's net loss is turned into a \$1.5-million net gain.

Pending the completion of a survey into its on-site operations by the DOD Commercial Airlift Review Board, Tower, on January 28, 1999, agrees to suspend its military charters, which now account for 13.6% of its income. Once the survey is finished, the DOD will decide whether to allow Tower to continue in its program.

The carrier's audit is successfully concluded on February 12 and it is granted DOT authority to offer scheduled return service between New York (JFK) and Santo Domingo, Dominican Republic beginning on March 5. The first service, undertaken on an ad hoc charter basis, actually begins two days later to assist passengers inconvenienced by the **American Airlines** job action, which is just now winding down.

Tower, which has been providing Jumbojets for Hajj flights since 1992, begins the 1999 service in the middle of February and continues through the end of April.

Meanwhile, on March 30, *Aviation Daily* reports that Tower, for the second year in a row, is the fifth busiest airline operating out of New York (JFK).

Meanwhile, on April 20, a federal arbitrator orders the airline to pay its flight attendants back pay plus 9% interest within the next 30 days. The airline had repeatedly failed to meet its flight attendant payroll over a period of two years and was called on the matter by the local chapter of AFA.

The president of the local chapter, Jason Weber, is fired by Tower Air on April 21, allegedly for refusing to report for a second flight after completing a first. Four female colleagues join Weber in his stand, including one who is pregnant. The AFA immediately seeks arbitration in his case.

While en route from New York (JFK) to Puerto Rico on April 22, Flight 51, a fully loaded B-747-200, is forced to divert to Bermuda when two drunken male passengers become involved in a fight after a passenger attempts to halt one of them from harassing a flight attendant. The Puerto Rican suspects are taken to the airport police station after the safe emergency landing.

As a result of an April pledge by the U.S. to take up to 20,000 refugees homeless in the Kosovo fighting, Tower is contracted by the International Organization for Migration to provide lift in a four-to-six week program set to start at the beginning of May. The contract is valued in excess of \$10 million. The original plan had been to move the people to Guantanamo Bay, Cuba, but the scheme is now refined to match refugees up as far as possible with Albanian-American relatives or sponsors.

In response to an urgent request from the UN High Commissioner for Refugees on May 1, the U.S. quickly puts into operation its plan to air-

lift up to 20,000 Kosovo Albanian refugees and provide them with temporary housing for three to six months. The same sorts of appeals have been made to Britain and Canada and U.S. Immigration officials are already working in Macedonia identifying potential transfers, who will join relatives and friends.

The first of 40 scheduled Kosovo refugee flights, a B-747-212B with 17 crew, departs New York (JFK) for Skopje, Macedonia, on May 4. The Jumbojet, after boarding 453 passengers, returns to McGuire AFB, New Jersey, late on May 5, where it is met by first lady Hillary Rodham Clinton and New Jersey Governor Christine Todd Whitman. After a processing period at nearby Fort Dix, the newcomers will be allowed to travel to the homes of U.S. family or friends.

Early on the morning of May 6, Tower flight attendants, joined by colleagues from other carriers, stage a rally in support of dismissed flight attendant Weber. Rallies have been held outside the company's offices almost every week since the controversial firing and dampen many good vibrations generated by the Kosovo airlift.

The second Jumbojet, piloted by Capt. Joe Rudder with 14 crew members, departs for Macedonia on May 6 and returns with 407 ethnic Albanians on May 7. A total of 102 arrive at New York on May 8. The airlift continues, with 422 displaced persons arriving at McGuire AFB on May 11. The total jumps to 1,379 on May 12 and 1,861 the next day.

Employing a B-747-130, Tower launches weekly roundtrips on May 14 from New York (JFK) to Guayana via Trinidad. On May 15–16, four Jumbojets are chartered by over 2,000 Jewish voters wishing to return to Israel to cast ballots in the May 17 general election.

By May 18, 2,904 Kosovo refugees have arrived in New Jersey; they are followed by 464 on May 20 and 483 on May 22.

To coincide with the company's annual stockholders meeting, pilots perform informational picketing around the company's New York (JFK) headquarters on May 26. The flyers have been in negotiations for a new contract since 1996.

At the same time, the shareholders are also met by very unhappy flight attendants, who are protesting the firing of Jason Weber, Tower's treatment of Israeli workers, and its introduction of mandatory overtime. AFA notes that one-sixth of all Tower flight attendants have quit in the last seven months, many because of chronically late and inaccurate paychecks and nonpayment of medical claims under the company's self-funded insurance plan.

An independent arbitrator, agreed to by both sides, upholds Tower's special circumstances scheduling right on June 16, but also rules that flight attendant Weber be reinstated with a two-month salary loss.

Another 365 Kosovo refugees come over on May 27. Less than half of the original 20,000 displaced persons will arrive before the military phase of the Kosovo campaign ends in mid-June.

Weekly nonstop roundtrip Jumbojet flights commence on June 19 between New York (JFK) and Port of Spain, Trinidad.

The frequency of the Guayana service is increased to twice weekly from July 2 to September 18. The next day, the Port of Spain service grows to twice weekly as well.

Passenger boardings increase 7.4% to 1,915,000, while cargo traffic skyrockets a remarkable 440.6% to 130.81 million FTKs. Revenues drop 55.1% to \$217.03 million, while expenses are down 53.9% to \$214.91 million. The operating profit falls to \$2.11 million, while the previous year's net profit becomes a net loss of \$4.61 million.

Airline employment at the beginning of 2000 stands at 1,265, a 20.1% decrease over the previous 12 months. The company remains famous as one of the largest remaining operators of Dash-100 Jumbojets; the B-747 fleet includes 1 each Dash-124, Dash-130, Dash-131, Dash-136, and two Dash-121s, plus two each Dash-282Bs and Dash-212Bs, and one each Dash-2F6B and Dash-283B.

In January, Tower and FotoTag successfully complete FAA-observed operational tests of FotoTag's radio frequency identified (RFID) baggage tags. The system had been installed at New York (JFK) and employed on Tower scheduled flights to Miami, San Francisco, Los Angeles, Tel Aviv, and Paris (CDG).

Tower, which has become somewhat infamous among travelers for the level of its passenger service, now faces at least two Internet forum sites specifically established to share complaints.

At the beginning of February, Tower announces that it is laying off 300 employees, 18.5% of its workforce, as part of a strategic restructuring plan. The airline will also return the now-surplus B-747-2F6B to its lessor, GECAS.

For the Hadj season that begins on February 7, **Air Asia Sdn. Bhd.** wet-leases three Boeing 747-382Bs while **Air India, Ltd.** takes three B-747-212Bs. The aircraft will transport 65,000 people to and from Mecca and earn Tower revenues of the \$28 million.

Unfortunately, the new income is insufficient to prevent the company from entering into voluntary Chapter XI bankruptcy protection on February 29, filing as it does a petition for relief with the U.S. Bankruptcy Court in Wilmington, Delaware. To facilitate the airline's continued operation while it reorganizes and seeks additional financing, Chairman Nachtoni secures an \$18-million debtor-in-possession loan from the airline's existing secured lender, GMAC Business Credit, LLC.

At the beginning of March, officials from **El Al Israel Airlines, Ltd.** meet with Tower executives to discuss ways in which the Israeli carrier, through cooperation or investment, can help the financially distressed U.S. carrier. No decisions are immediately taken, but Tower now stops providing refunds for tickets purchased before February 29 or for lost or damaged baggage or cargo. At the end of the month, the FAA issues an advisory noting that Tower has cancelled certain flights and that other airlines are not required to either honor Tower fares or accept its tickets.

Scheduled frequencies to Fort Lauderdale and San Francisco end on March 17. The B-747-238B is returned to its lessor in April.

Tower suddenly stops all scheduled service on May 1. Indeed, the final service from New York (JFK) to Tel Aviv is pulled so abruptly that 300 passengers are left stranded. Indeed, many are forced to spend the night sleeping in their airport departure terminal. Most carriers refuse to accept Tower's tickets; however, **Trans World Airlines (TWA)** removes a number of restrictions, thereby making deep discount fares available.

Military and other charter work is continued. On behalf of New Age Air Service, passenger charters begin on June 17—and will continue through March 1—from New York (JFK) to Trinidad and Tobago.

The B-737-136 is returned to its lessor on August 15. Little more is heard from this operator as the year finishes. Overall customer bookings in these 12 months plunge 86.32% to 262,000, while freight traffic is worse, down 99.08% to 1.2 million FTKs.

TOWNSVILLE AND COUNTRY AIRWAYS (PTY.), LTD. (T&CA): Australia (1948–1953). T&CA is founded at Townsville, Queensland, in early 1948. With Douglas DC-3s leased from **ANA (Australian National Airlines [Pty.], Ltd.)**, the new entrant begins service to Mount Isa on March 1. Despite significant competition from **Trans-Australian Airlines (Pty.), Ltd.**, the route is maintained in 1949–1952; however, traffic and financial returns fall off in 1953, leading to a cessation of operations on November 27.

TOZAI TEIKI KOKU-KAI (TTKK) (EAST AND WEST SCHEDULED AIR TRANSPORT SOCIETY): Japan (1923–1929). With support from the newspaper *Asahi Shimbun* and leadership from the flying schools founded by Otojiro Itoh and Einosuke Shirato, TTKK is established at Tachigawa Airport (near Tokyo) on January 11, 1923. Employing a Nakajima V, the new airline inaugurates airmail service in July from Tokyo to Osaka via Hamamatsu.

Executives of the newspaper assume the carrier's management in August 1924 and begins to offer willing passengers free accommodation on its aerial mail service. During the fourth quarter, the national government provides the airline with an operator's certificate.

Free flights on the company's eight Nakajimas are now replaced with a one-way ¥ 35 fare. It is reported in March 1925 that 384 flights have been completed since start-up. The Great Earthquake strikes Tokyo in September, interrupting operations.

When business is resumed in 1926, a new route is authorized, north from Tokyo to Sendai; it is not immediately operated. Mail and passenger flights over the original route continue, however, and in the spring of 1927 three Dornier Komets, built in Japan under license by Kawasaki, are acquired. These launch passenger-only service between Tokyo and Osaka on August 27.

Flights continue without significant additional change until late 1929 when the company is purchased by and merged into **Japan Air Lines Company, Ltd. (1).**

TPI INTERNATIONAL AIRWAYS: United States (1984–1991). TPI (Turbo Power International), the subsidiary of an overhaul facility named Turbo Power Incorporated, is established at Miami in 1984 to operate cargo charters and contract service flights with Lockheed L-188AF and L-188CF Electra freighters.

While on initial approach to Kansas City on a service from Detroit (DTT) on January 9, 1985, a L-188AF with three crew accidentally lines up on the wrong airport, Fairfax Airport. The aircraft pulls up steeply to begin to line up anew, when, at 3,100 ft. it stalls and crashes into a public water treatment plant; there are no survivors.

Services continue in 1986–1989 as the fleet is increased to 9 Electras and 1 Douglas DC-8-64F. Three additional Douglas jets remain on order. These operate Logair charters on behalf of the U.S. military, mail on behalf of the British company Airbridge, Ltd., long-haul charters to Africa and South America, and third-party maintenance.

The 200-employee company is purchased by Frederick R. Cathpole and associates and transfer it to Brunswick, Georgia, in February 1990.

While climbing away from Oranjestad, Aruba, on July 14 on a service to Panama City, an L-188CF with three crew suffers the failure of its No. 3 propeller gearbox, causing the No. 3 propeller to separate. The broken propeller strikes No. 4 propeller, which also separates. This propeller crosses under the aircraft and hits the fuselage, hydraulics, cables, and pressure vessel, damaging the No. 2 engine. The No. 2, 3, and 4 engines are all shut down and a safe emergency landing is carried out back at the point of origin.

A total of 4.1 million FTKs are operated during the year. A victim of recession, the airline folds in 1991.

TRABAJOS AEREOS Y ENLACES, S.A.: Spain (1957–1982). TAE is organized at Palma de Majorca in 1957 by shipping magnate Naveira Aznar as an aerial division of his shipping concern, *Compania de Naveira Aznar*. Although the paperwork is completed, difficulties in obtaining an air operator's certificate force the start-up of operations to be postponed until April 1967. At that point, the carrier, from a new base at Palma de Mallorca, inaugurates charter and inclusive-tour services with long-haul piston-engine aircraft to Spain and destinations in North Africa.

To assist in the expansion, the company leases a BAC 1-11-402 from its manufacturer on March 1, 1969. The long-haul enterprise proves a fiscal failure and the company is consequently shut down in early 1970. The BAC is returned to England.

Following lengthy negotiations with various financial institutions, TAE is able to obtain sufficient backing to resume operations on April 1, 1973. A technical assistance contract is entered into with **UTA French Airlines, S.A.**, which provides two chartered Douglas DC-8-32s with which to begin holiday flights to Germany. The world energy crisis has an adverse economic impact, but does not put the company out of business.

Three Sud-Est SE-210 Caravelle XBs are chartered in 1974–1977 and enhance the number of charters flown into Northwest Europe. Although arrangements are completed for the lease of a DC-8-51 from **Delta Air Lines**, the transaction is not completed.

Santiago de Andrews Solana becomes chairman and Aznar's new managing director in 1978 and he now oversees a fleet comprising 3 DC-8-30s and 3 Sud-Est SE-210 Caravelle XBs. Service is maintained during the remainder of the decade and into the next, but higher fuel

bills and a loss of traffic due to world recession cause the carrier to cease trading at the beginning of 1982.

TRADE AIR: Vladimira Nazora 6, 10410 Velika Gorica, Zagreb, Croatia; Phone 385 (1) 6265-053; Fax 385 (1) 6265-054; <http://www.trade-air.com>; Code TDR; Year Founded 1994. Trade Air is established at Zagreb by Capt. Michael Cvijin in 1994 to offer domestic and regional cargo services. Flights commence in May 1995 employing a single Let L-410UVP-E.

Flights continue during the remainder of the decade. During these years, two more Lets are acquired, along with a chartered Antonov An-72. A scheduled roundtrip cargo route is operated on behalf of **DHL Worldwide Express** five times a week between Zagreb and Bergamo.

By 2000, President Michael Cvijin oversees a workforce of 9. A Web site is opened on the Internet later in the year.

TRADE WINDS AIRWAYS. *See* **TRADE WINGS & WESTERN AIRWAYS**

TRADE WINDS & WESTERN AIRWAYS: United States (1959–1975). In 1959, **Tradewinds Airways** is established to offer irregular Beech 18 charter services from San Juan, Puerto Rico, to various other destinations on that island as well as in the U.S. Virgin Islands. Scheduled services are inaugurated over the previous charter routes in June 1964.

Four years later in 1968, another small charter operation, **Western Air Services**, is taken over and merged to form Trade Winds & Western Airways. The enlarged airline employs Beech 18s and Aero Commander 500Bs on its services.

Operations continue apace for the remainder of the decade and into the 1970s. Destinations visited include Mayaguez, St. Thomas, Ponce, Viequez, and St. Croix. Unable to withstand higher fuel costs after the 1973 OPEC embargo, the carrier ceases operations in 1975.

TRADEAIR, LTD. (1): United Kingdom (1957–1962). Eric S. Hanks and Laurence N. Monnickendam register Tradair, Ltd. as an airline company on November 22, 1957. Two Vickers Vikings are purchased in February 1958 and delivered to the company's Southend base. Inclusive-tour flights are now undertaken on behalf of various travel agencies to such destinations as Barcelona, Basel, Munich, Perpignan, Lyons, Vencie, and Santander. The "Queens Flight" of three Vikings are purchased in July.

Two more Vikings are purchased in May 1959 and during the summer a significant number of new tour destinations are added, including Stockholm, Rotterdam, Copenhagen, Malmo, Goteborg, and Hamburg.

Two Vickers Viscount 707s are acquired from **Aer Lingus Irish Airlines** in February 1960, followed by three more Vikings in May. Although inclusive-tour work is resumed for the summer season, there is not enough to fully occupy the Viscounts, so one is leased to **Kuwait Airways, Ltd.** for a year. During the third quarter, three Vikings are sold.

Both Viscounts are back in service for the 1961 summer season and new inclusive-tour destinations of Maastricht, Rotterdam, and Treviso are added. By November, the carrier owes Esso Petroleum over £87,000 and its Viscounts are grounded. Its backer, Barclays Bank, appoints a receiver to handle company business.

During the winter, an all-cargo route is opened Southend–Malmo. Inclusive-tour flights to southern Europe are also flown. During the spring of 1962, the carrier's Vikings undertake a heavy inclusive-tour schedule and between July and October, a Viscount flies German internal services on behalf of **British European Airways Corporation (BEA)**. Upon its return to the U.K. in November, the Vickers is sold to **Starways, Ltd.** Following negotiations, Tradair becomes a wholly owned subsidiary of **Channel Airways, Ltd.** on December 31.

TRADEAIR, LTD. (2): Zimbabwe (1980–1986). The Zimbabwe-based all-cargo airline Tradeair, Ltd. is established in 1980 as a sister to the British freight line **Tradewinds, Ltd.** Employing a B-707-320C

leased from its U.K. associate, the new entrant inaugurates scheduled all-freight flights to London and to regional African destinations.

When **Tradewinds, Ltd.** fails in 1986, so to does Tradeair.

TRADEWINDS (TRADEWINDS [PTY.], LTD.): Singapore (1976–1992). Formed as a wholly owned travel and tour subsidiary of **Singapore Airlines, Ltd.** on February 17, 1975, **Tradewinds (Pty.), Ltd.** does not initially begin operations. Indeed, the carrier's first charter flights—to Peking and Shanghai—are not undertaken until the summer of 1976. In October, Tradewinds begins service as both a regional scheduled carrier and a world charter operator.

Thereafter and throughout the 1980s, nonscheduled passenger flights, many inclusive tours, are undertaken to seasonal destinations in Thailand, Indonesia, Malaysia, Taiwan, China, and the Philippines. Ad hoc charters and oil-crew changes are also undertaken, again using aircraft leased from SIA.

Scheduled flights are undertaken with **Malaysia Air Charter, Ltd.** from Singapore's Seletar Airport nonstop to Malacca and Tioman (both in Malaysia) employing MAC's Dornier 228s. Manager Raymond Lim's company also flies charters with jetliners leased from the parent.

In October 1983, the latter arrangement is put in the form of a marketing agreement, which also includes joint services on routes to Singapore from Kuala Lumpur and Langkawi. Daily Dornier 228 shuttle flights from Singapore to Kuala Lumpur and Malacca commence on May 25, 1984, while Shorts SC-7 Skyvan flights to the Malaysian resort island of Tioman on June 8. These and other services continue apace in 1985.

The joint service with **Malaysia Air Charter, Ltd.** ends with its 1986 cessation. A Shorts SC-7 Skyvan is employed to continue domestic flights within Singapore and long haul charter and wholesale tour services continue to be provided with the major's jetliners. In 1988, the company is split into two divisions: Air Services and Tour and Travel. Operations are conducted from Seletar Airport until midyear. Revenues for the year total \$30 million.

In February 1989, 163-employee Tradewinds (Pty.), Ltd. returns to the scheduled arena and officially becomes the nation's second airline. It upgrades its marketing compact with **Singapore Airlines, Ltd.** and becomes a member of the Passages frequent flyer program.

Outfitted with a wet-leased McDonnell Douglas MD-87 from GPA Group painted with the company's new logo and colors designed by Landor Associates, Chairman Syn Chung Wah's new entrant begins regional all-nonsmoking flights to destinations in Brunei, Malaysia, and Thailand. The first service, performed on February 21, is flown from Singapore to Pattaya, Thailand.

A two-year operations contract with **Air Tara** provides eight flight deck staff and five technical staff to operate the jetliners. Enplanements by year's end total 84,710.

Company employment is increased by 35.6% in 1990 to 274 and 1 Boeing 737-3Y0, also chartered from GPA Group, is delivered in August. A Dornier 228-200, wet-leased from the Malaysian carrier **Pelanggi Air, Ltd.**, takes over the route from Singapore to Tioman Island.

Passenger boardings rocket upward by 66.2% to 184,696.

Airline employment grows by 26.2% in 1991 to 217. In January, a second GPA B-737-3Y0 replaces the MD-87, which is returned. The airline is now made Singapore's second scheduled carrier and service is initiated to Jakarta and Langkawi from Singapore's Changi Airport; in May, six charters are undertaken to Xiamen in the People's Republic of China. A B-737-3L9 is acquired from **Maersk Air, A.S.** in October.

Enplanements for the year increase 47.9% to 250,452 and freight skyrockets 378.2% to 1.62 million FTKs.

The workforce is increased by 31.9% in 1992 to 310. In an effort to change its image as strictly a holiday-resort airline to a scheduled carrier with a business-class emphasis, the company, in April, is renamed **SilkAir, Ltd.**

TRADEWINDS AIRLINES. *See* **TRADEWINDS INTERNATIONAL AIRLINES**

TRADEWINDS AIRWAYS, LTD.: United Kingdom (1968–1990). In November 1968, **Transglobe Airways, Ltd.** ceases operations, leaving a fleet of Canadair CL-44s lease-purchased from **Seaboard World Airlines** in limbo. Later in the month, **Bobwood, Ltd.** is formed to take over the aircraft lease.

This company's name is changed to Tradewind Airways, Ltd. in January 1969 and three ex-Transglobe Airways CL-44s are transferred over. In April, a British group is put together to take over the company, subscribing £50,000 capitalization. The major shareholders are Charles F. Hughesden (85%), now chairman, and Stewart Wrightson and Co., Ltd. C. J. Stevens, former chairman of **BKS Air Transport, Ltd.**, is named managing director.

In June, the ATLB turns down the new entrant's application for a charter license on the grounds that it is not a wholly owned U.K. company. In July, a Bell 206B JetRanger helicopter joins the fleet and later in the year, the Canadairs begin limited ad hoc freight charter flights from London (LGW) on behalf of **Trans-Mediterranean Airways, S.A.L.**

In January 1970, two Tradewinds Airways, Ltd. freighters are employed to transport military and medical supplies to Lagos, Nigeria. In April, a 40% interest in the company is taken by the Crown Agents for Overseas Governments and Administrations and the carrier simultaneously receives its charter license. Two more CL-44s are added in June and October, respectively.

A route network is developed primarily to Africa and North America in 1971–1976. During 1972, the carrier begins flying from London (LHR), often on all-cargo subcontracts for foreign airlines.

A Canadair CL-44D with five crew is destroyed as the result of a heavy landing at Lusaka, Zambia, on December 22, 1974; there are no fatalities.

A replacement aircraft is found and placed in service on February 1975. Weekly London–Maastricht–Hong Kong flights begin during the summer. Ad hoc Ministry of Defence charters begin in 1976.

In January 1977, the carrier becomes a wholly owned subsidiary of the multinational Lonrho Group. The first of three Boeing 707-320Cs is delivered and Managing Director N. F. Curtis now oversees 220 employees.

With a fleet that comes to include 3 B-707-320Cs in place of the Canadairs, the carrier in 1978–1979 maintains scheduled jet freight service from London to Lagos, Kano, and Port Harcourt, Khartoum, Mogadishu, Accra, Chicago, New York, and Toronto.

Following takeoff from Mombasa with a 50-ton cargo of cement on July 6, 1978, the crew of a CL-44D with four men aboard is unable to lock up the right main landing gear, which subsequently collapses when the plane lands at Nairobi.

During 1979, a total of 157.9 million FTKs are operated.

Pooled services are started with **Sudan Airways, Ltd.** and **Uganda Airways Corporation** in 1980. As the carrier further emphasizes blood-stock transport, a special penning system is delivered. A Zimbabwe-based sister company **Tradeair, Ltd.** is established and supplied with a leased B-707-320C. During the recessionary early 1980s, the carrier does not do well financially and releases no figures. Its scheduled services are gradually reduced until, by 1984, its only regularly posted route extends to Chicago via Toronto. The three Boeing freighters do, however, fly ad hoc charters to many other-world destinations, particularly in Africa, although one of the freighters is withdrawn in 1985.

As Britain's last remaining scheduled all-freight carrier in 1986, the airline ceases trading in late January, citing overcapacity, undercutting by competing charter services, and stringent new noise abatement rules as cause of the demise. A bid by the **Deutsche Lufthansa, A.G.** subsidiary **German Cargo Airlines, GmbH.** to purchase the assets is abandoned in April. In May, the aircraft and remaining assets are taken over by **Tal Air, Ltd.**, a business travel airline based at London (STN). At a cost of \$2.5 million, a B-707-320C is hush-kitted in California to operate a twice-weekly scheduled cargo service to Chicago.

Little is heard of the carrier until March 1988. At this point, it leases a hush-kitted B-707-320C from **ZAS Airlines of Egypt** and begins joint services with it to Sudan, Somalia, Kenya, and North Yemen.

On September 28, 1990, Tradewinds ceases operations and shuts down once more, this time for good.

TRADEWINDS AVIATION, LTD.: Canada (1982–1990). Tradewinds is established at Richmond, British Columbia, in 1982 to offer charter and contract service flights to various destinations in the province as well as throughout western Canada. A fleet is assembled that includes 2 Britten-Norman BN-2 Islanders, 1 Piper PA-31-310 Navajo, 1 de Havilland Canada DHC-2 Beaver, and assorted Cessna single-engine types. These are employed to inaugurate revenue services during the summer.

The scheduled subsidiary **Skylink Airlines, Ltd.** is formed in 1983 to offer commuter flights linking its base at Boundary Bay Airport at Delta with Victoria. Operations for both carriers continue quietly apace during the next six years.

On September 28, 1989, a Skylink aircraft is involved in a fatal accident. A government safety audit following the tragedy turns up improprieties and the Skylink operating certificate is revoked in October. Unable to withstand the costs of the crash and the onrush of recession, Tradewinds closes its doors in 1990.

TRADEWINDS INTERNATIONAL AIRLINES: 7304 West Market Street, Greensboro, North Carolina 27409, United States; Phone (910) 668-7500; Fax (910) 668-7517; Code WI; Year Founded 1991. Greensboro, North Carolina-based **Wrangler Aviation** is renamed in November 1991. Employing 6 (4 leased) Canadair CL-44Ds and a chartered Lockheed L-1011-1F—the only one of its type in the world—Chairman/president Richard Swirnow's 182-employee company maintains scheduled all-cargo services to Hartford and Miami and the Caribbean-destinations of Aguadilla and Santo Domingo. A total of 4.52 million FTKs are operated.

Two leased CL-44Ds are temporarily withdrawn in January 1992 and the following month the company files for Chapter XI bankruptcy. The move is made to allow multimillion-dollar refinancing.

During the remainder of the year, the company hauls 7.81 million FTKs, a remarkable 72.6% boost.

The fleet in 1993 includes 6 CL-44Ds and 1 L-1011-1F. A total of 532,900 FTKs are operated and the freight operator reports revenues of \$32.8 million, up 7.9%.

In February 1994 certain air operations and five CL-44Ds are sold to **Florida West Airlines**. The \$5-million transaction is completed in March. The Lockheed freighter continues its operations from Piedmont Triad International Airport; it is the largest aircraft operating from that facility and Tradewinds is the only airline to offer regularly scheduled daily international service from Greensboro.

In 1995–1996, operations continue apace with the L-1011-1F under the marketing name Tradewinds Airlines. A contract is won to haul pharmaceuticals between the U.S. and Puerto Rico. Late in 1997, the company approaches the DOT seeking licensure to operate passenger charters between Hartford, Greensboro, Miami, and San Juan. DOT grants authority on December 4.

Arrangements are made on December 13 to acquire an L-1011-1 TriStar 1 from **Delta Air Lines**.

It is announced on January 26, 1998, that Tradewinds will lease three or four former **Gulf Air Company G.S.C.** L-1011 passenger planes from Interlease Aviation Group. The first, currently being checked at Shannon, Ireland, will be delivered within the next few weeks.

On February 12, the ex-Delta L-1011-1 TriStar 1 is officially commissioned *Charlotte Rose* in ceremonies at Greensboro. The first passenger charter, initiated three days later, is offered from Boston to Montego Bay, Jamaica, on behalf of Sunburst Holidays.

The company continues to expand its passenger charter capacity during the spring and summer, adding the L-1011-200 TriStar 1s *Allison Ann* and *Susan Sabina*, the latter arriving on August 14. The *Allison Ann*, meanwhile, begins operating from New York (JFK) to Georgetown on July 19 on behalf of **Guyana Airways, Ltd.**

During the 12 months, 42,000 passengers are flown by the 182-employee airline. Although revenues of \$38.44 million are generated, expenses are \$41.51 million. There are losses: \$3.06 million (operating) and \$3.08 million (net).

A second L-1011-1 and an L-1011F enter service during the first quarter of 1999. A disagreement with the carrier's aircraft lessor, Interlease Aviation, results in the four passenger planes being parked on April 5. The matter is resolved in time for the aircraft to resume service on May 2.

With the Boston to Montego Bay flights suspended, the carrier now introduces TriStar flights from Hartford to Aguadilla, Puerto Rico.

Passenger boardings jump 16.4% on the year to 128,000 while cargo traffic rises 9% to 98,797,000 FTKs. Revenues increase to \$13.8 million.

A total of 182 workers are employed at the beginning of 2000.

Two Airbus Industrie A300B4-203Fs, chartered from P-G Aircraft Holdings for five years, enter service early in the new year. During the spring, the carrier unsuccessfully attempts to gain permission from the government of Poland for the initiation of charter services into Poland. Company officials appeal to the Department of Transportation, which exerts heavy pressure.

On May 15, an A300B4-203F begins operating from Fort Wayne to Los Angeles on behalf of **Kitty Hawk Aircargo**.

On June 1, the DOT warns the Warsaw government, as well as executives at **American Airlines** and **LOT (Polish Airlines, S.A.)**, that it will unilaterally cancel the code-sharing pact between AA and LOT unless Tradewinds is granted access under the bilateral air agreement between the two countries.

Flights continue during the remainder of the year. In December, the fleet includes 7 A300B4-203Fs and 1 L-1011F.

Overall customer bookings during these 12 months fall 18% to 105,000.

TRADO (TRANS DOMINICAN AIRWAYS, C. por A.): Aeropuerto International Las Americanas, Santo Domingo, Dominican Republic; Phone (809) 549-0591; Fax (809) 542-0169; Code TRD; Year Founded 1995. TRADO is established at Santo Domingo in 1995 to provide both passenger and cargo charters to Miami and various Caribbean destinations. Under the direction of Amin Canaan, revenue operations begin with 1 each Convair CV-440, Douglas DC-6BF, and DC-7CF.

TRAMP AIRWAYS: United States (1931–1932). Named in honor of the mass movement of homeless men across the country during the Depression, Tramp is formed at Tulsa, Oklahoma, in the summer of 1931 to offer scheduled, multistop passenger service to Little Rock, Arkansas.

Employing a Stinson Junior, the carrier begins flight activities on August 28. Without a mail contract, success for the little carrier is as elusive as it is for most hobos; operations cease in February 1932.

TRANS ADRIA: Yugoslavia (1978–1988). In order to assure continuance of the services provided by the failed **Pan Adria**, this wholly owned and government-controlled carrier is established at Zagreb in December 1978. In addition to charter and agricultural work, the carrier provides scheduled flights both within the nation and internationally. Domestic stops include Belgrade, Titograd, Skopje, Dubrovnik, Split, and Pula; international destinations are Linz, Klagenfurt, and Vienna. The fleet comprises 3 Fairchild-Swearingen SA-226 Metro IIs, 2 Merlin IVs, 3 Aero Commander 500Bs, 1 Piper PA-31T Cheyenne, 4 Piper Pawnee Braves, and 11 PA-25 Pawnees.

Two more Metro IIs are added in 1986. Operations cease two years later.

TRANS AERO-SYSTEMS: United States (1973–1974). TAS is set up at San Jose, California, in 1973 to operate passenger and cargo commuter flights on local routes from the city. Employing 1 each de Havilland DH 104 Dove and Cessna 207, the company launches scheduled revenue flights, but cannot maintain them a year.

TRANS AFRICAN AIRWAYS, S.A.: Zaire (1993–1994). Trans-African is established at Kinshasa in 1993 to provide nonscheduled passenger and cargo flights around the country. Revenue services commence with a single Grumman G-159 Gulfstream I and last a year.

TRANS AIR (1): United States (1972–1986). Initially affiliated with **Trans Island Airways, Ltd.** of the Bahamas, Trans Island Airways is originally formed by James Dent as a privately held charter operation in 1972. During the years 1973–1978, the small carrier expands its routes to 10 cities in Florida and provides service to Bahamian destinations with a fleet of 9 Cessna 402s.

The company adds an airline division and launches scheduled passenger service in 1979. As in its charter days, Trans Air remains a seasonal airline, flying most of its passengers between December and April to resort areas.

Enplanements at General Manager Lori P. Goldbold's airline reach 14,000.

Passenger boardings reach 21,000 in 1980. General Manager Goldbold becomes president in 1981, during which year the company is reformed and renamed. Daily Fort Lauderdale to West Palm Beach service is initiated as are flights from Miami and Fort Lauderdale to Melbourne. Bookings reach 24,000.

Additional Florida markets are served in 1982 and orders are placed for CASA turboprops. In 1983, 23,065 passengers are transported. Traffic skyrockets 197.3% in 1984 as 68,575 passengers are boarded.

In June and July 1985, the carrier's Cessna 402s inaugurate five-times-per-day service between Orlando and Gainesville/Daytona. Service is dramatically upgraded in August when the airline places the first of four CASA C-212 Aviocars on line, freeing up two Cessna 402s to operate a new service between Sarasota and Orlando. With the arrival of two more CASAs, six-times-per-day roundtrips are initiated on September 9 between Fort Lauderdale and Orlando and from Tampa to Jacksonville.

This growth leads to Trans Air becoming a member of the **Piedmont Airlines** "Piedmont Commuter" network in October. In an effort to take advantage of the troubles of competing **Provincetown-Boston Airlines (PBA)**, Trans Air now shifts its service from predominantly island routes to flights within Florida proper.

Passenger boardings increase again, up 124.6% to 157,692.

The Piedmont arrangement is inaugurated on January 16, 1986, but on April 1 it is cancelled by the major, which claims that the small regional is unable to fulfill flight completion and on-time requirements of the contract. Chairman/President Dent is now unable to obtain necessary financing and options on six additional Aviocars must be cancelled.

Affiliation is sought with another airline, but such a deal is not forthcoming. The company stops flying its Florida routes, but continues to operate charters for its parent, Royal American Holidays. In late August, Trans Air files for Chapter XI bankruptcy and is sold to Pennco.

TRANS AIR (2): P.O. Box 29239, Honolulu, Hawaii 96820, United States; Phone (808) 833-5557; Fax (808) 833-2636; Code P6; Year Founded 1994. Trans Air is established at Honolulu in late 1994 to offer third-level scheduled as well as charter passenger services throughout Hawaii. Founder Teimour Riahi is president, with Marjan Azimi as executive vice president; revenue flights commence with 4 Cessna 402A/Bs.

The fleet is increased in 1995 by the addition of another Cessna 402B and one Piper PA-32-300. Orders are placed for three Beech 1900Cs. Airline employment stands at 60 in 1996 and the company's 6 aircraft transport a total of 6,844 passengers.

Services continue in 1997. Passenger boardings are level, rising only to 6,865.

Flights are maintained during the remainder of the decade.

TRANS AIR BENIN, S.A.: Cotonou, Benin; Year Founded 2000. This new passenger carrier is established at Cotonou at the beginning

of November 2000. Employing a leased B-737-200A, the carrier initiates twice-weekly roundtrips on November 17 from Cotonou to Ouagadougou, Burkina Faso, via Niamey, Niger.

TRANS AIR CARGO, S.A.: Democratic Republic of the Congo (1993–1997). TAC is set up at Kinshasa in 1993 to offer regional and domestic all-cargo services. Revenue flights commence with one each Bristol Britannia 253F and a Douglas DC-8-55; a DC-8-54 is also available, but out of service. Both Douglas freighters are sold in 1995 and replaced with a Boeing 707-358C.

Flights continue in 1996, but are halted at the beginning of 1997 due to the civil war that will, within months, change Zaire into the Democratic Republic of the Congo.

TRANS AIR CARGO SERVICES. See **TRANS AIR LINK**

TRANS AIR EXPRESS: United States (1977–1979). TAE is set up at Enterprise, Alabama, in 1977 to offer daily air taxi flights to Atlanta via Montgomery. Piper PA-23 Aztec roundtrips are duly inaugurated and are maintained for two years.

TRANS AIR HAWAII, LTD.: United States (1945–1948). Established at Honolulu just after V-J Day in September 1945, this all-cargo airline opens an interisland freight service that is maintained during the hectic relocation of personnel and business following the war. When the general euphoria for all-freight services ends in 1948, this carrier is one of many that stops flying for lack of traffic.

TRANS AIR LINK: 3501 NW 82nd Street, P.O. Box 521298, Miami, Florida 33152, United States; Phone (305) 871-3301; Fax (305) 871-5785; Code TY; Year Founded 1969. Trans-Air Cargo Services is founded at Miami in 1969 to provide all-cargo services linking its base with destinations in Central and South America. Operations continue apace for the remainder of the decade and into the 1970s. By 1978, Managing Director Bob Shelton is flying 1 Lockheed L-1049H, 2 Douglas DC-6As, and 1 Lockheed L-188AF.

In 1984, the carrier is renamed and its Constellation and Electra are replaced by a third DC-6A. Worldwide freight charters are operated, together with scheduled all-cargo flights to St. Martin, St. Croix, St. Thomas, San Juan, and the Bahamian cities of Nassau and Freeport.

Flights continue in 1985–1986. Airline employment jumps 9.5% in 1987 to 92 and CEO Guy Cottingham operates 3 DC-6As and 1 DC-7CF. FTKs operated dip 4.4% to 13.12 million.

The workforce is reduced by 2.2% in 1988 even as the fleet is increased by the addition of 2 more DC-6As.

Despite the capacity boost, cargo drops again, down 19.3% to 10.34 million FTKs.

Although the number of personnel and aircraft is unchanged in 1989, traffic is up and income is down.

Freight rises 17.9% to 11.99 million FTKs and revenues reach \$5.98 million. Expenses, however, climb to \$6.29 million and leave TAL with a \$280,000 operating loss.

The workforce is cut by 44.4% in 1990 to 50. Cargo balloons by 37.8% to 16.65 million FTKs. Although revenues rise 1.7% to \$6.08 million, expenses jump 5.7% to \$6.62 million and cause the operating loss to double to \$535,449. A net profit of \$62,000 is, however, generated.

Twenty new employees are hired in 1991 and the fleet now includes 5 DC-6As and 1 DC-7CF.

Traffic plunges 52.4% to 7.92 million FTKs and revenues decline 20.5% to \$4.82 million. Expenses drop 22.9% to \$5.09 million and cause a \$248,389 operating loss. This year the net profit grows to \$406,388.

A total of 6.83 million FTKs are operated in 1992 and revenues slide to \$4.3 million. Costs are again high and operating loss is \$213,971. There is also a \$23,706 net loss.

The 1993 fleet of President Gary Balnick's all-cargo airline includes 4 DC-6As and 1 DC-7CF. Scheduled and charter flights continue to link south Florida with St. Martin, St. Thomas, St. Croix, San Juan, Nassau, and Freeport.

Cargo declines by 10.3% to 6.41 million FTKs. Revenues decline 10.2% to \$3.86 million and expenses bring another operating loss, \$320,107. This year, however, there is a net profit of \$97,135.

The workforce stands at 60 in 1994 and freight recovers, climbing 18.7% to 7.61 million FTKs. Revenues decline 12.5% to \$3.38 million, while expenses drop 4.5% to \$3.99 million. The operating loss increases to \$613,000 and there is a \$40,000 net loss.

If the previous year was good, 1995 is bad for the Miami-based airline. The carrier's 5 aircraft operate only 4.23 million FTKs, a 44% decline. Losses continue to mount to \$998,000 (operating) and \$289,000 (net).

The situation worsens for the 60-worker concern in 1996 as cargo traffic falls 13.2% to \$3.59 million FTKs. Operating income plunges 19.5% to \$2 million and expenses fall 24.2% to \$2.64 million. Although the operating loss improves to \$641,000, a \$294,000 net failure must be reported.

Flights and mixed traffic and fiscal fortune continue at the carrier in 1997.

Freight accelerates 22.4% to 4.4 million FTKs, while operating revenues ascend 7% to \$2.14 million. With expenses of \$2.69 million, however, an operating loss must still be reported, albeit a smaller \$548,000 figure. The net loss worsens to \$317,000.

The downturn continues for the 60-employee airline in 1998. Cargo traffic falls 59.1% to 1.23 million FTKs. Revenue figures are not available.

Freight traffic skyrockets 109.6% in 1999 to 3,776,000 FTKs.

A total of 60 workers are employed at the beginning of 2000. Following an ownership change, the company parks its DC-6 freighters and acquires, instead, a Convair CV-580.

TRANS AIR VALEOLOGIA: Aleksandru Cei Ban St 54, Kishinev, 277012, Moldova; Phone 373 (0422) 245 406; Fax 373 (0422) 221 013; Code VL; Year Founded 1991. TAV is set up at Chisnau in 1991 to offer domestic all-cargo charters. Valeri V. Kalinochkin is CEO and he begins revenue flights with 2 Antonov An-72s and 1 An-74.

TRANS AIRE: United States (1966–1968). Established at Detroit City Airport in fall 1966, this small operator begins regularly scheduled flights to other Michigan cities and Toledo, Ohio, beginning on October 25. The Piper services are maintained until the company stops flying in 1968.

TRANS ALASKA HELICOPTERS: 819 Orca St., Anchorage, Alaska 99501, United States; Phone 907 274-7762; Fax 907 264-6486; Year Founded 1961. A pioneer Alaskan rotary-wing operator, Trans Alaska is established at Anchorage in 1961 to operate charter and sight-seeing services to local and bush destinations. Over the next 39 years, energy support, forest fire fighting, and various other aerial work services are also undertaken.

In 2000, owner Mel Nading operates a fleet that includes 4 Bell 206B JetRangers, 2 Bell 206L LongRangers, and 1 fixed-wing Cessna 206 Stationaire.

TRANS AMAZON, S.A.: Iquitos, Peru; Year Founded 1992. Trans Amazon is established at Iquitos in 1992 to provide charter passenger and freight services in the border region with Brazil. Revenue flights are inaugurated with 1 Antonov An-24RV and 2 An-26s. Operations continue without change during the next five years.

TRANS AMERICAN AIRLINES/AIRWAYS. See **NORTH AMERICAN AIRLINES (1) (NAA)**

TRANS AMERICAN CHARTER: 5923 South Central Ave., Chicago, Illinois 60638, United States; Phone (312) 735-6906; Fax (312) 735-5622; Year Founded 1994. Trans American Charter is set up

at Chicago in December **1994** to offer domestic and regional nonscheduled and inclusive-tour passenger charters, primarily on behalf of sports teams. President Gary Balnicki's concern inaugurates flights in February **1995** employing the first of three British Aerospace (BAe) 146-200As to be delivered over the next three years. A Douglas DC-9-32 is placed into service during **1997**.

TRANS ANGUILLA, INC.: P.O. Box 1329, Wallblake Airport, Anguilla; Phone (264) 497-8690; Fax (264) 497-8689; <http://www.trans.ai>; Year Founded **1997**. Trans Anguilla is established at Wallblake Airport in **1997** to offer domestic services as successor to **Air Anguilla, S.A.** Under the direction of General Manager Lincoln Gumbs and Chief Pilot Karl Thomas, a workforce is assembled, together with a fleet consisting of 2 Britten-Norman BN-2 Islanders, 1 Beech Super King Air 200, and 1 de Havilland Canada DHC-6-300 Twin Otter, the latter for business charters.

Five-times-a-day return BN-2 scheduled service is inaugurated between Anguilla and St. Martin.

In addition, Islander charters are offered to St. Marten, St. Barths, St. Kitts, Nevis, Antigua, Dominica, Guadeloupe, Martinique, Barbados, St. Thomas, St. Crox, Virgin Gorda, Tortola, and San Juan. Super King Air charters are operated from Anguilla to St. Barths, Nevis, Virgin Gorda, and St. Kitts.

Flights continue over the next four years. During this time, a new hangar is constructed and the staff grows to a total of 11.

TRANS ARABIAN AIR TRANSPORT, LTD.: P.O. Box 1461, Africa Street, Khartoum, Sudan; Phone 249 (1) 451 801; Fax 249 (1) 451 544; Code ZQH1; Year Founded **1983**.

Organized at Khartoum by H & H, under contract to Yemen Transporting Corporation in **1983**, TAAT begins charter and contract cargo operations with 30 workers and 1 Douglas DC-8-55Fs. The aircraft launches revenue services to destinations in the Middle East, Europe, and Africa. Emphasis is placed on the transport of livestock. Neither traffic nor financial figures are released by the privately owned concern, 75% shareholding of which is in the hands of M. H. Gangari.

A second DC-8-55F is acquired in **1985**. Services are maintained by the Jet Traders until **1988**, when they are replaced in September by a single Boeing 707-349C christened *Juba*. A B-707-338C arrives in early **1989**, followed later in the year by a B-707-321C leased from **Sudan Airways, Ltd.**

The year **1990** is disastrous for the company as it loses two Stratofreighters. The leased unit crashes into a mountain near Athens during the first quarter on its very first flight for TAAT. Just after landing at Khartoum on July 14, *Juba* suffers the collapse of its landing gear, which in turn leads to the damaging of the No. 2 and No. 4 engines. There are no fatalities. The B-707-338C now operates all of the carrier's services.

The last Stratofreighter is sold to Grumman Aerospace Corporation in early **1992** for conversion into a J-STARs platform for the USAF. It is replaced with two leased Stratofreighters, plus three Antonov An-26s.

Destinations visited in **1993-1994** include Addis Ababa, Amsterdam, Athens, Cairo, Doha, Harare, Jeddah, London (LGW and STN), Malta, Nairobi, Port Sudan, and Sharjah. In February of the latter year, a B-707-351C is leased as the Antonovs are withdrawn.

Flights continue in **1995** and a new corporate livery is unveiled in **1996** when the company is renamed **United Arabian Airlines, Ltd.**

Capt. Mustafa H. Y. Kordofani remains managing director of the renamed concern and continues to oversee a 230-person workforce.

In addition to 3 Antonov An-26s and 1 An-12, the fleet includes 1 each owned Boeing 707-349C and B-707-351C, plus 1 leased B-707-321C. Destinations visited during the remainder of the year and in **1997** include Addis Ababa, Amsterdam, Athens, Cairo, Doha, Harare, Jeddah, London (LGW and STN), Malta, Nairobi, Port Sudan, and Sharjah.

The company reverts to its original name in **1998** and operations continue apace without headline or incident during the next year. Repainting of the company's aircraft proves haphazard; the An-12 simply has its

"United Arabian Airlines" titles painted over in gray and new "Trans Arabian Transport" titles applied over the top.

Following a missed approach to the airport at Mwanza, Tanzania, on a February 3, **2000** ferry flight, the captain of the carrier's B-707-321C turns to recover. During this maneuver, the aircraft hits the surface of Lake Victoria, where it remains afloat approximately 3 km. short of the runway. Later, the Stratofreighter is towed to shore and beached. Investigators will later determine that the pilot's altimeter had been incorrectly reading 400-ft. higher than actuality.

TRANS ARABIAN AIRWAYS KUWAIT, LTD. See **KUWAIT AIRWAYS, LTD.**

TRANS ARCTIC: United States (1969-1971). Formed at Grosse Point, Wisconsin, in **1969**, this contract carrier is physically based at Fairbanks. A total of 7 Curtiss C-46 Commandos are acquired and employed to operate all-cargo flights throughout Alaska. Operations continue until **1971**.

TRANS ASIA AIRWAYS COMPANY, LTD.: 139 Cheng-Chou Road, Taipei, Taiwan; Phone 886 (2) 715-2766; Fax 886 (2) 712-9801; <http://www.tna.com.tw>; Code GE; Year Founded **1991**. In order to reflect its wider ambitions, the Taiwanese scheduled carrier **Foshing Airlines, Ltd.** receives this new name in late **1991**. President Charles C. Lin's 1,300-employee company has a fleet that includes 4 Avions de Transport Regional ATR42-320s and 5 ATR72-202s. Orders are now placed for two Airbus Industrie A320-231s, four A300B4-622Rs (later cancelled), an ATR42-320 and an ATR72-202. Regular flights are maintained linking Taipei with such national cities Hualien, Kao-hsiung, Kinmen, Makung, and Tainan.

The two A320-231s and four ATR72-202s are received, beginning in August **1992**. The former allow the inauguration of international charter services to Bangkok, Phuket, Kuala Lumpur, Okinawa, Japan, Phnom Penh, Manila, and Cebu during the fall. An order is placed for four A321-100s for delivery beginning in July 1995.

Enplanements total 1,002,034 and a \$2.7-million operating profit is earned.

The employee population is increased by 6.3% in **1993** to 1,412. President Lin's domestic and charter services continue to prove successful and plans are laid to commence scheduled service within a year or so.

Passenger boardings increase 51.3% to 2,069,885. Revenues increase by 47.9% to \$117.49 million and expenses are up only 43.2% to \$109.88 million. The operating surplus is a comfortable \$7.61 million.

Flights continue into **1994**. Traffic improves as eight additional ATR72-202s enter service, the last on December 20.

While en route from Peng Hu Island to Kuei Shan Hsiang on January 30, **1995**, the new ATR72-202 delivered on December 20, with four crew, crashes into a hillside; there are no survivors.

Destinations visited during the remainder of the year and into **1997** include Cebu, Hualien, Kinmen, Makung, Manila, Surabaya, Phnom Penh, Pingtung, Surabaya, Tainan, and Taitung.

The Asian economic crisis started during the previous year comes to have a severe impact on the carrier in **1998**. In the spring, an A320-231 is sold to **Kyrgyzstan Airlines**; repainted in the colors of its new owners by Lufthansa Technik, it will be delivered in July.

In an effort to remain competitive with the nation's 14 other local carriers, Trans Asia, in August, is forced to slash the salaries of its pilots by between 20%-40%. As a result, most of the flyers resign. Faced with collapse, the company reaches a deal with the pilots, who agree to withdraw their resignations.

Faced with continuing economic downturn, the company agrees to sell three ATR72-202s to **Finnair, O/Y** during the second week of November.

On revenues during the 12 months of \$177 million, a \$67.9-million loss is suffered.

Flights continue in **1999-2000**, during which years the ATR42-320s are withdrawn and replaced with three more A320-232s, six A321-131s,

and six ATR72-520s. During the former year, even though Russia and Taiwan do not enjoy diplomatic relations, a bilateral air accord is concluded under which Trans Asia and **Vladivostok Air** are to inaugurate twice weekly roundtrips between Taipei and Vladivostok. Although the services are initially planned for May 2000, they will not in fact begin until April 30, 2001.

At the dawn of the new millennium, President Lin oversees a workforce of 1,587 and has outstanding orders for 2 ATR72-520s. Service is increased between Taipei and Kinmen Island on November 1.

TRANS ASIAN AIRLINES: Tulebaeva Str. 4, Almaty, 480016, Kazakstan; Phone 7 (3272) 301512; Fax 7 (3272) 301558; Code T7; Year Founded 1994. Trans Asian is established at Almaty in 1994 to undertake long-haul passenger flights throughout Russia and the CIS, as well as to China. Flights begin and continue with 3 Ilyushin Il-62s.

TRANS ASIATIC AIRLINES, INC. (TAALI): Philippines (1946–1950). As is the case with competing **Commercial Air Lines, Inc.**, TAALI is established at Manila in late 1946 by a group of former U.S. Army pilots. Plans are made to inaugurate nonscheduled services to Asia with a fleet of Consolidated PBY-5A Catalinas chartered from Victor Osias' **Insular Airways Company**. Although flights are duly begun, they must be suspended in the spring of 1947 when INACO is put out of business for smuggling arms to Indonesian insurgents.

Regrouping, TAALI acquires a fleet of six Douglas C-47s with which to continue its irregular operations during the remainder of the year and into 1950. The business shuts its doors during the latter year.

TRANS ASIATIC AIRLINES (SIAM), LTD.: Thailand (1948–1952). American citizen William D. Davis and officials from **Siamese Airways Company, Ltd.**, establish this independent nonscheduled airline at Bangkok on April 10, 1948, with Davis holding a major minority stake (49%). Equipped with a pair of Douglas DC-3s, the company inaugurates passenger and cargo charters to Hong Kong and Singapore, as well as regional capitals.

A DC-3 fails takeoff from Rangoon, Burma, on January 18, 1950; although the aircraft must be written off, no fatalities are reported.

Flights continue with the remaining Douglas transport until November 11, 1952.

TRANS ATLANTIC AIRLINES: United States (1960–1963). This American-registered company is established in late 1960 to operate passenger charters in Europe. Two Douglas DC-4s are acquired and employed to begin revenue flights from London (LGW) to Luxembourg in March 1961. Cargo charters also begin in October with a Curtiss C-46 Commandos.

Business continues until the concern files for bankruptcy in 1963.

TRANS AUSTRALIA AIRLINES (PTY.), LTD. (TAA): Australia (1945–1986). The Australian National Airlines Act passes the parliament on August 16, 1945 and provides for the creation of an Australian National Airlines Commission as a Commonwealth airline operating authority. Certain provisions of the act are challenged and the matter is not resolved by the High Court of Australia until December.

On February 12, 1946, the government appoints members to the ANAC and the Australian National Airlines Act of 1945 comes into effect on April 17 by proclamation. Late of **Qantas Empire Airways (Pty.), Ltd.**, Lester J. Brain is named on June 3 as general manager and becomes the first employee at the new Melbourne headquarters. In July, a National Airline School is set up at Essendon Airport. To avoid confusion with ANA (**Australian National Airlines [Pty.], Ltd.**), the trading name **Trans-Australian Airlines (Pty.), Ltd.** becomes the carrier's official title in August.

Meanwhile, 11 Douglas C-47s have been obtained from the Australian Disposals Commission and converted to civil DC-3 standard. Flown by Capt. J. Hepburn, the DC-3 *Hawdur* makes a proving flight Melbourne–Sydney on September 1 as daily scheduled service is inau-

gurated the next day; the frequency on the route is increased to twice daily on September 23. New daily flights are launched from Melbourne throughout the fall: to Brisbane on October 7, Hobart on November 4, Launceston on November 18, and Adelaide on December 2. On December 2–3, night DC-4 operations begin Melbourne–Adelaide and Perth. At year's end, five Convair CV-240s are ordered.

Enplanements for the period September–December are 28,576.

Regularly scheduled DC-3 flights begin on April 27, 1947 on the Melbourne–Sydney and Tasmania routes. DC-3 and DC-4 service is launched on July 12 (the latter weekly) from Brisbane to Cairns via Rockhampton, Mackay, and Townsville. The Adelaide–Alice Springs route of **Guinea Airways (Pty.), Ltd.** is acquired and flown by DC-3s as of November 1. During the year, 12 additional war surplus C-47s, all converted to civil DC-3 standard, join the fleet.

Boardings for the first complete 12-month period are 260,391.

On February 16, 1948, Mount Isa–Brisbane via Townsville service is launched. A second Queensland segment paralleling a **Qantas Empire Airways (Pty.), Ltd.** route is opened on April 2. The first of two years' worth of New Zealand charters on behalf of **Tasman Empire Airways, Ltd.** are flown during the summer and several DC-4 migrant-lifting flights are made to Singapore and Hong Kong. The first CV-240 is delivered to Essendon in late September; christened *John Forrest*, it is placed on the Brisbane run on October 18. On November 1, the **Guinea Airways, Ltd.** route from Adelaide to Darwin is purchased.

Nonstop CV-240 *Cannonball* flights Sydney–Adelaide commence on March 11, 1949. Freeing itself to become the Commonwealth's international carrier, **Qantas Empire Airways (Pty.), Ltd.** on April 2 turns over to TAA all 6,050 kilometers of its domestic system in West Australia and Northern Territory. Significant routes thus acquired include the nation's longest internal segment, the 2,870-kilometer Brisbane to Darwin run, plus Brisbane service to Winton, Cunnamulla, Quilpie, and Roma and that from Cloncurry to Burketown.

Additionally, the Flying Doctor Services, based at Cloncurry and Burketown, are also taken over, along with the two de Havilland DH 89As employed to fly them. On June 30, the carrier reports that its cumulative trading loss since inception now totals A£897,000. Air express parcel service begins on December 10.

Boardings for the year reach 507,000.

Nonstop CV-240 Rocket service begins Melbourne–Brisbane on October 23, 1950. Meanwhile, during the summer, the first, if small, profit is reported. Also, the Queensland Gulf and Channel areas—"The Channel Country"—is plumbed with feeder services provided by five de Havilland DH 84 Dragons. Australian-built DHA-3 Drover operations begin on December 19 over the Townsville–Cairns route and at least two of these machines are now dedicated to the Flying Doctor Services.

Bookings for the year soar to 567,000.

DHA-3s are sent into "The Channel Country" in 1951.

The pilot of a DC-3 freighter, with another crewman aboard, loses control in icing conditions on July 3, causing the Douglas to crash at Barilla Bay; neither man survives.

Enplanements for the year accelerate to 654,850.

Melbourne to Perth flights begin on January 15, 1952. On March 1, the carrier assumes responsibility for the Northern Territory Aerial Medical Service based at Alice Springs and Darwin. In July, orders are placed for seven Vickers Viscount 720s. The Civil Aviation Agreement Act of November 18 ends the airline's privileged mail contracts, interest-free loans, and, in general, establishes a "two-airline" policy for healthy and constructive rivalry with the completely independent ANA (**Australian National Airlines [Pty.], Ltd.**).

Boardings dip to 652,865 and the carrier loses A\$166,000 on the year.

Enplanements recover in 1953 and advance upward to 660,287.

Sydney–Darwin DC-3 service via Roma, Longreach, Mount Isa, and Katherine, is inaugurated on March 22, 1954, thereby eliminating an overnight stop at Brisbane. The first Viscount 720 is delivered on October 5. With eight crew aboard, it is lost during takeoff from Mangalore on October 31 for a training flight (three dead).

A second Viscount 730 is secured; christened *John Batman*, it is placed on the Melbourne–Brisbane via Sydney service on December 18. TAA thus becomes the fourth carrier in the world and the first in the Southern Hemisphere to offer turboprop flights.

Still, bookings fall during the year, down to 649,846.

On February 23, 1955, over 70 pilots are suspended for refusing to fly DC-3s with maximum weight; the pilots hold that safety margins are cut to unacceptable levels. Fitted with long-range slipper tanks, daily Viscount 720 Adelaide–Perth flights are begun on April 17 by Capt. D. Winch's *Charles Stuart*. DC-4s, released by this initiative, are reassigned to begin thrice-weekly, tourist-class, Melbourne–Sydney–Brisbane service on October 3 and weekly Melbourne–Alice Springs–Darwin flights on October 14.

Enplanements for the year skyrocket to 739,783.

Hiller H-12C helicopter operations begin on the last day of April 1956. Weekly Sydney–Darwin direct night DC-4 service begins on May 16–17, and weekly Brisbane–Mount Isa via Longreach and Cloncurry DC-4 day flights commence on June 10. Tourist-class fares are cut to three-fourths of first-class fares on August 10. The carrier's technical office recommends acquisition of the Sud SE-210 Caravelle jetliner.

Bookings during the 12 months grow to 773,144.

Early in 1957, the ANAC rejects the proposal for Caravelle purchases; however, permission is granted for the ordering of Viscount 816s and Fokker F.27s. Melbourne–Adelaide–Perth DC-4 tourist-class services are launched on December 14.

Together with the new **Ansett-ANA, Ltd.**, orders are placed at year's end for Lockheed L-188 Electras. The government requires the independent to surrender two delivery positions to TAA before it will approve the arrangement.

Enplanements for the 12 months climb to 811,977.

DC-3 airmail drops begin to isolated points in "The Channel Country" on January 3, 1958. The first Fokker F.27-100 is delivered on April 6; christened *Abel Tasman*, it begins service as Flight 567 on the Melbourne–Canberra–Sydney route on May 1.

Orders are placed on May 23 for a pair of Lockheed L-188A Electra turboprops. Weekly tourist-class Viscount 720 flights Melbourne–Adelaide–Perth are started in May. The **Guinea Airways (Pty.), Ltd.** maintenance contract is taken over from the defunct ANA (**Australian National Airlines [Pty., Ltd.]**) on June 30; it will be lost, together with the carrier itself, to Ansett during the next 12 months.

The Airline Agreement Act is passed late in the year and is applied specifically to TAA/Ansett-ANA; confirmed is the 1952 "two airline" policy and the pattern of fleet rationalization required to maintain it.

Bookings for these 12 months leap to 851,422.

A new Day-Glo livery is unveiled during the first quarter of 1959 and is employed on the company's second F.27-100, the *William Landsborough*, when it begins flying to Brisbane. Direct Melbourne–Coolangatta Viscount 816 operations start on May 16.

The first L-188A, *John Eyre*, arrives at Essendon on June 24, in company with the carrier's second Viscount 816. Given "TAA: The Nation's Jetline" titles above its windowline, the Electra launches Melbourne to Adelaide and Perth service on July 8. Its work is halved by delivery on July 14 of the second L-188A; christened *John Gilbert*, it enters revenue service on July 26.

F.27-100 Adelaide–Alice Springs via Leigh Creek and Oodnadatta operations commence on August 1. The L-188C *Pacific Enterprise* is dry-leased from **Qantas Empire Airways (Pty.), Ltd.** in December.

The year's bookings total 960,643.

The L-188A *John Eyre* makes the Melbourne to Brisbane flight on February 15, 1960 in a record 2 hrs. 9 min. On February 26, TAA signs the last contract negotiated for the Lockheed L-188A Electra. On March 2, the Electra *Pacific Enterprise* arrives under a short-term charter from **Qantas Empire Airways (Pty.), Ltd.**; rechristened *Charles Sturt*, it enters revenue service the next day. The one-millionth passenger of the year is boarded on April 29.

The first fatal accident in scheduled passenger service occurs on June 10 when the initial F.27-100, *Abel Tasman* with 4 crew and 25 passen-

gers en route from Brisbane to Sydney crashes into the sea while on final approach to the airport at Mackay; there are no survivors. Among the victims is Queensland's U.S. Consul, John F. O'Grady.

In June, TAA and **Ansett-ANA (Pty.), Ltd.** are awarded the **Qantas Empire Airways (Pty.), Ltd.** routes to New Guinea.

The state carrier begins weekly Sydney and Brisbane–Port Moresby and Lae operations on July 9 with a DC-6B leased from **Ansett-ANA (Pty.), Ltd.**, following up on July 11 with Brisbane–Port Moresby F.27-100 flights every two weeks.

A passenger aboard Flight 408, the July 19 service operated by the L-188A *John Gilbert*, attempts to divert it to Singapore by threatening to blow up a dynamite bomb under his seat; both the man and the bomb are disarmed by the plane's fast-talking pilot. The third owned L-188A is delivered on August 29. **Qantas Empire Airways (Pty.), Ltd.**'s New Guinea internal and regional services are assumed on September 1, together with the flag carrier's local fleet of 6 DC-3s and 4 de Havilland Canada DHC-3 Otters. Christened *Charles Sturt*, the third owned L-188A enters service on September 3. The leased L-188A *Charles Sturt* is returned to **Qantas Empire Airways (Pty.), Ltd.** on September 9; Qantas will rename the aircraft *Pacific Enterprise*.

Hiller H-12C helicopter services are inaugurated from Melbourne's Yarra River Heliport to Essendon on December 20.

Enplanements pass the magic million mark this season with 1,090,691 passengers flown.

TAA's fleet in 1961 comprises 3 L-188s, 2 Viscount 816s, 3 Viscount 720s, 7 Viscount 756s, 9 F.27-100s, 1 leased DC-6B, 3 DC-4s, 4 DHC-3s, 1 H-12C, and 2 H-12Es.

On July 8, the L-188A *John Eyre* sets a Melbourne to Sydney speed record of just 54 min. A floatplane DHC 3, on August 14, experiences engine failure W of Samari, near the Owen.

On August 14, a DHC-3 floatplane experiences engine failure west of Samarai, near the Owen Stanley Mountain Range, and makes a heavy water landing at sea; all aboard are saved, with the plane's steward becoming a hero for his rescue of three children.

To provide additional capacity on the New Guinea service, TAA, a Consolidated PB-Y-5A Catalina is purchased from **World Wide Air Services**; repainted and given a yellow-bellied sunbird logo for its tail, the amphibian, nicknamed *Wimpey's Water Closet*, begins Sunbird Services over the Gulf of Papua on September 6.

Between November 20–28, the aircraft is loaned to the government to assist in the unsuccessful search for Michael Rockefeller, son of governor Nelson Rockefeller of New York, and his companions, lost somewhere in the Arafura Sea–Dutch New Guinea area. In terms of passenger miles flown, the carrier now ranks as the world's 28th largest.

The H-12s are replaced in 1962 by a Bell Model 47; three DC-3s and a DC-4 are retired as another DC-6B is leased from **Ansett-ANA (Pty.), Ltd.** *Wimpey's Water Closet* is lost in a landing accident at Daru on April 26, although all 11 aboard are rescued by a TAA launch from shore. In early May, a replacement Catalina, a former OA-10A, is purchased from **Macao Air Transport Co., Ltd.** and is refurbished by Bristol Aviation at Bankstown, Sydney, Australia. The rebuilt amphibian arrives at Jacksons Field, Port Moresby, on October 1 and resumes Sunbird Services on October 5 over the routes previously operated by *Wimpey's Water Closet*.

On November 19, government permission is received to order American jetliners. Acting on behalf of TAA, on February 8, 1963, the Australian National Airlines Commission orders four Boeing B-727-76s.

The workforce totals 5,219 in 1964 and the fleet of 63 aircraft now serves 145 points in Australia and the Territories of Papua and New Guinea; the carrier is now the largest domestic airline in the British Commonwealth. TAA enters the jet age on August 25 when the first B-727-76 *James Cook* makes its maiden flight. Piloted by Capt. D. A. Winch and K. J. Fox and in company with **Ansett/ANA Airlines (Pty.), Ltd.**'s first B-727-77, the *James Cook* arrives at Melbourne's Essendon Airport from Seattle on October 16, having flown via San Francisco, Honolulu, Canton Island, and Nadi.

In a new livery and advertised as a "T-Jet" (for TAA and for its T-tail), the *James Cook* undertakes a series of proving flights over the company's route network until November 2, when it is placed in service from Melbourne to Sydney. A second B-727-76, the *John Forrest*, arrives on November 13 and enters service 16 days later.

A total of 1,549,510 passengers are carried on the year and revenues earned total A\$46.88 million.

Employment in 1965 drops to 5,015. On January 14, Capt. Bert van Drunick operates Flight 413, the L-188A *John Eyre*, on a record-shattering Sydney to Melbourne service in 1 hr. 30 min. Another B-727-76, the *Arthur Phillip*, is delivered on August 22 and enters service only two days later. The varied fleet now includes 3 Boeing jetliners, 1 Bell Model 47, 2 Beech B-80 Queen Aires, 2 Bristol 170s, 2 Cessnas, 1 Consolidated PBV, 3 DHA-3s, 20 DC-3s, 5 DC-4s, 3 L-188s, 9 F.27s, 2 FH-227s, 2 Piper Aztecs, 7 Viscounts, and 3 leased DC-6Bs.

Enplanements this year are up to 1,678,647.

The twentieth anniversary is celebrated in 1966 as the carrier's Catalina Sunbird Service comes to an end on January 10. Although the flying boat is put up for sale, it cannot be sold and is eventually transferred to a museum. The fourth B-727-76, *Gregory Blaxland*, arrives on August 10 and is placed in service on August 13; four Viscounts are sold, including both 816s.

In 1967, orders are placed for DC-9-32s and DHC-6s. The first Douglas jetliner enters service in April.

The workforce grows to 6,440 in 1968. A fleet standardization program, Operation Streamline, is initiated, designed to reduce the number of aircraft types within the fleet from 15 to 4. Two DC-9-32s, four F.27QCs, and six DHC-6s (for rural and developmental routes) are received as three DC-3s and two DHA-3s are retired. The computerized reservations system is extended to 90% of the route network and the first airline building is opened at the new Melbourne International Airport at Tullamarine.

Bookings for the 12 months rise to 2,169,562 and revenues of A\$78.86 million are earned.

The employee population in 1969 is 6,549. Four DC-9-31s and the *Matthew Flinders*, a B-727-76 that enters service on November 2, displace the remaining DC-4s, L-188s, and half the Viscounts. The leased DC-6Bs are returned.

Bookings accelerate to 2,468,742.

The payroll is increased 14.7% in 1970 to 7,514. Four more DC-9-32s and nine F.27s arrive to replace the last DHA-3, all but nine DC-3s, the Cessnas and Pipers, the Bristol 170s, the Beech 80s, and the lone PBV.

Air Siam, Ltd.'s first aircraft, a used Douglas DC-4, is acquired from TAA in February. It is employed to launch the Thai independent's inaugural service on March 1, a thrice-weekly all-cargo route to Hong Kong.

A DHC-6-100 with two crew and nine passengers crashes at Kainatu, Papua New Guinea, on April 28 (seven dead).

The final B-727-76, *William Dampier*, arrives on July 12 and begins revenue flying on July 18. An order for four advanced B-727-276As is made on December 9.

Passenger boardings jump 15.5% to 2,921,588 and freight accelerates 14.6%.

Operation Streamline is concluded in 1971 with orders for four B-727-276s. The route system now comprises some 50,000 unduplicated miles. The pioneering first L-188A *John Eyre*, and the second *Electra*, *John Gilbert*, are withdrawn from service on April 30 and placed into storage at Essendon Airport. They are joined by the third turboprop, the *Charles Sturt*, on October 31.

A total of 3,054,957 travelers are transported.

The employee population stands at 7,675 in 1972. The TAARSAN reservations system is now inaugurated. Inclusive-tour charters (ITC) are offered for the first time in a major way.

A DC-3 overruns the runway after landing at Madang, Papua New Guinea, on April 11 and continues into the ocean; there are no fatalities.

Like the *John Gilbert* on February 29 and the *John Eyre* on March 14 before it, the L-188A *Charles Sturt* is sold to the U.S. concern Concare Aircraft Leasing on June 7

With the delivery of the first B-727-276A, *Charles Sturt*, on December 11, the fleet has been standardized and includes 1 B-727-276, 6 B-727-76s, 12 DC-9-31/32s, 17 F.27s, 10 DHC-6s, and 9 DHC-3s.

Passenger boardings increase 7.9% to 3,317,000, but cargo is off 0.2%.

The employee population in 1973 numbers 8,112. The *Charles Sturt* enters service on January 7. The second B-727-276A, *Freeman Cobb*, arrives at Melbourne on November 23 and is in service by December 1. Late in the year, interest in Papua New Guinea services are turned over to **Air Niugini (Pty.), Ltd.**

Cargo, meanwhile, increases 9.9% and passenger bookings swell 18.1% to 3.6 million.

The workforce in 1974 declines to 7,868. A third B-727-276A, *McDouall Stuart*, is delivered on April 7 and enters service three days later. It is followed into service by the *Joseph Banks* on August 1 and the *John Fawcner* on November 8. In an effort aimed at diversification, the carrier purchases the Great Keppel Island Resort on the Great Barrier Reef.

Reacting to a Christmas Day typhoon that devastates Darwin, an F.27 flies one of the first relief flights out of that city and the airline brings 4,000 evacuees out during the next four days. The inbound flights carry doctors, nurses, food, and clothing.

For the year, passenger boardings jump 13.7% to 4,104,724, and freight balloons 16.2%.

A total of 117 new employees are hired in 1975. In January, a new A\$5-million passenger terminal is unveiled at Sydney Airport. As another B-727-276A, *John Eyre*, joins the fleet on April 28, all but one DC-3 is retired. A new hostess school is opened. The marketing of group and holiday travel is broadened as a new holiday package reservations and processing system, TRIPS, is put into operation. In a diversification move, shares are also taken in a tourist park at Airlie Beach in North Queensland. Training facilities are upgraded as a new hostess school is opened and flight simulator visual display systems come on line.

Freight grows a slight 1% and passenger boardings move up 3.1% to 4,169,800.

The workforce declines 2.3% in 1976 to 7,818. The first B-727-76 to leave the fleet was the first to join; the *James Cook* is sold to **Compania Interamericana, S.A. Panama** on February 14. A seventh B-727-276A, *Albert Namatjira*, is placed into service on November 26 and the last DC-3, *Shangri-La*, is retired.

Orders are placed for eight more Boeing "trimotors." The thirtieth anniversary is celebrated and flight attendants, traffic and dispatch personnel receive new uniforms. The B-727-76 *Arthur Phillip* is sold out of service on December 26.

The 50 millionth passenger (cumulative) is boarded, although enplanements for the year dip 2.6% to 4,060,010; freight is up 1%.

The turboprop portion of the fleet in 1977 includes 4 F.27-100s, 2 F.27-200s, 7 F.27-600s, and 4 DHC-6-300s. Shareholding is purchased in the Queensland tourist resort at Dunk Isle.

Bookings are up to 4,514,139.

Airline employment rises 0.9% at Chairman K. H. Vial's company in 1978 to 8,203. One more B-727-276A, the *Caroline Chisholm*, arrives on June 30, bringing the jet portion of the fleet to 8 B-727-276As, 3 B-727-76s, and 12 DC-9-32s. Several new nonstop services and a standby fare system are introduced.

Passenger boardings accelerate 4.6% to 4,535,000 and cargo jumps 10.5%. Unduplicated route mileage is down to 34,722.

Two more B-727-276s, *Arthur Philip* and *John MacArthur*, join General Manager Lyndon L. McKenzie's fleet on, respectively, January 29 and May 26, 1979 as three B-727-76s, the *William Dampier*, *Gregory Blaxland*, and *Matthew Flinders*, are sold on January 15, March 31, and June 4, respectively. Early in the year, the carrier becomes the first airline to adorn its aircraft with scenic views rather than corporate livery when a holiday paint scheme (i.e., a beach scene) is applied to the tails of four DC-9-32s.

While en route from Coolangotta to Brisbane on June 8, a DC-9-32 with 41 passengers, is taken over by a lone assailant armed with a shotgun, who allows the aircraft to proceed to its destination. On the ground, the pirate

allows all of his hostages to deplane, but before he can decide upon his next move, he is disarmed by the flight crew and handed over to police.

In December, government approval is received for the introduction of wide-bodies and an order is placed for five Airbus Industrie A300B4-203s. Cargo climbs 11% and passenger traffic moves ahead by 8.5% with 4.9 million passengers carried.

Another B-727-276A, the *Lawrence Hargrave*, arrives on January 20, 1980 and enters service on January 26; a fifth B-727-76, the *John Forrest*, is sold to **Interamericana, S.A.** on January 29, following the last passenger service by the type from Launceston to Melbourne. Longtime General Manager McKenzie retires in May and is succeeded by Frank Ball.

One more B-727-276A, the *Bert Hinkler*, joins the fleet on September 23 and enters service on September 26.

Passenger boardings increase 4.4% to 5,141,312 as the carrier becomes the first Australian airline to transport 5 million passengers in a single year; freight, however, dips 2.8% to 55.92 million FTKs. During the year, airline employment grows a scant 0.2% to 8,269.

The employee population grows by 4.7% in 1981 to 9,003. The first of three A300B4-203s to join the fleet this year is delivered on June 29; christened *John Oxley*, it will enter service on August 7. Also placed into service at this time is a 12th B-727-276, while three DC-9-32s and three F.27s are deleted.

Two more A300B4-203s now arrive; christened *James Cook* and *John Forrest*, both are in service by September 2. During the first three months of operation, the Airbus equipment achieves a dispatch reliability of 98.9%, topping the previous record for the initial quarter of service of 98.6% sent by **Deutsche Lufthansa, A.G.**

During the remainder of the year, the carrier continues converting to a new logo and colors of blue and gold. Meanwhile, the first direct link is opened Perth and Alice Springs to the North Queensland coast.

Cargo grows 4% to 58.21 million FTKs, but passenger bookings drop 6% to 4,864,000.

The employee population stands at 8,588 in 1982.

An F.27-600 with three crew on a training flight is destroyed as the result of a bad landing at RAAF Amberley on June 9; there are no fatalities.

The fourth A300B4-203, christened *William Light*, enters service on September 2.

Cargo is up again by 9% to 63.2 million FTKs, but passenger boardings dip again, down 1.6% to 4,676,000.

As the effects of the world economic situation continue to plague Australia in 1983, the workforce is cut 9.2% to 7,800. The last two A300B4-203s are placed in service, but three more F.27s are sold.

While en route from Perth to Melbourne on February 13, Flight 5, an A300B4-203 with 204 passengers, is skyjacked by a lone assailant, who claims to have a bomb and demands to be flown to Adelaide. When he allows the Airbus to land at its original destination for refueling, the pirate opens himself up to capture. Knowing this, he surrenders and turns over his explosive, which is a fake.

A dry-lease is taken on June 9 of a B-727-25F, christened *Phar Lap*, from **Bloodstock Air Services (Pty.), Ltd.** The final A300B4-203, named *John Fawkner*, is in service by September 2.

Passenger traffic drops another 8% to 4,301,000 and freight is off as well, down 15.9%.

As recovery appears in 1984, airline employment is increased 3.3% to 8,084. Following the return of the *Phar Lap* on March 30, a five-year lease is taken on April 17 of **Air Nauru's** B-727-77C *Ernest Giles*. **Ansett Airlines of Australia (Pty.), Ltd.** dry-leases the B-727-277 *Frank Hann* to TAA between May 1 and November 30.

Cargo jumps 11.7% to 59.38 million FTKs and passenger boardings advance 3.2% to 4,438,000. On revenues of A\$427.6 million, profits are A\$10.66 million (operating) and A\$2.6 million (net).

The workforce grows 4.6% in 1985 to 8,549. In March, 95% controlling interest is taken in **Air Queensland (Pty.), Ltd.**, some of whose shares are held by rival **Ansett Airlines of Australia (Pty.), Ltd.** In June, government permission is sought to purchase 12 B-737-300s to

replace the aging DC-9-32s. The permission is given and the orders are let during the fall; also ordered are three BAe Jetstream 31s. One B-727-276 is leased as a freighter.

Passenger bookings grow 8.2% to 4,802,000 and freight accelerates 5% to 62.3 million FTKs. Revenues are A\$505.5 million and expenses are A\$485.9 million; respective profits are A\$19.65 million (operating) and A\$19.98 million (net).

Employment grows by 4% in 1986 to 8,797. In January, James Strong, appointed the month before, becomes general manager, succeeding the retiring Frank Ball. A month later, orders are placed for nine A320s for 1989 delivery. In May, two DC-9-32s are leased to the U.S. charter operator **Sunworld International Airlines** for a year. Timed to coincide with the arrival and introduction of the first B-737-376 in July, the carrier's name is shortened to **Australian Airlines, Ltd.** and a new logo and livery are unveiled.

There is an unofficial Web site at <http://www.uq.net.au/~zzbdruni/taa.htm>.

TRANS BHARAT AVIATION, LTD.: Nehru Place 201/72, Laxmi Bhawan, New Delhi, 110019, India; Phone 91 (11) 641-9600; Fax 91 (11) 331-3353; Code TBA; Year Founded 1996. TBA is set up by the Kilachand Group at New Delhi in July 1990 to offer scheduled third-level passenger services to local domestic destinations. P. N. Kumar is managing director and he begins revenue services, primarily to tourist destinations, in March 1991 with a pair of Beech 99s.

Flights continue during the remainder of the decade.

TRANS CAL AIRLINES: United States (1968–1970). Also sometimes labeled Trans Cal Commuter, this small airline is set up at Long Beach, California, in the late spring of 1968 to provide scheduled passenger and cargo flights to Porterville via Los Angeles, Therman, and Bakersfield. Employing Beech B-80 Queen Aires, Trans-Cal inaugurates services on July 8, maintaining them until the company goes out of business in 1970.

TRANS CALIFORNIA AIRLINES (1): United States (1963–1964). TCA is established at Burbank Airport in 1963 to offer deep-discount service in direct competition with **Pacific Southwest Airlines (PSA)**. Three former **Eastern Air Lines** Lockheed L-749A Constellations outfitted with a record 98 seats are leased from California Airmotive and service is inaugurated to Oakland (recently dropped by PSA from its route network) in July.

Three more ex-EAL Constellations join the TCA fleet in the spring of 1964 and flights are initiated to San Diego, Los Angeles, and San Francisco. The resort center of Lake Havasu, on the Colorado River, also becomes a destination. Overextended and in deep fiscal difficulty, Trans California, which cannot compete with PSA's speedy Lockheed L-188A Electras, is forced to shut down in the fall and close its doors.

TRANS CALIFORNIA AIRLINES (2): United States (1980–1981). The second TCA is set up at El Monte, California, in late 1980 to provide scheduled passenger and cargo flights to Las Vegas and Los Angeles. Employing a single Convair CV-440, the company initiates revenue services on December 19.

Unable to generate sufficient traffic, the commuter goes bankrupt in April 1981.

TRANS CANADA AIR LINES, LTD. (TCA): Canada (1937–1964). During a 1935 Ottawa meeting of United Kingdom, Commonwealth, and dependency nations, agreement is reached on the idea of an air transport network linking all of the nations represented. The concept of a transcontinental Canadian airline and a transatlantic link to Great Britain is endorsed, with the Ottawa government assuming full responsibility for the first objective and pledging its cooperation in the latter.

A first significant step is taken on November 2, 1936, when control of Canadian civil aviation is transferred to the Air Services Branch of the Department of Transport from the Department of National Defence.

Transport Minister Clarence D. Howe proposes, early in **1937**, the investment of private and public capital in the creation of a new national carrier. Agreement cannot be reached on broad composition between potential members and **Canadian Airways, Ltd.** and the Canadian Pacific Railways withdraw from the discussions, leaving the government to proceed alone through the instrument of Canadian National Railways (CNR).

Minister Howe introduces Bill 74, the Trans-Canada Air Lines Act, into the House of Commons on March 4. Passed, the Parliament's legislation receives Royal Assent on April 10. The new airline is born as a wholly owned affiliate of the CNR, with an authorized capital of C\$5 million, consisting of 50,000 shares of common stock with a par value of C\$100 each.

Administrative headquarters are established at Montreal with the main overhaul base at Winnipeg. C. N. Hungerford, CNR president, becomes the carrier's first president with former **Boeing Air Transport/United Air Lines** President Philip G. Johnson as vice president-operations. Two other Americans, D. B. Coyle and O. T. Larsen, become technical advisors. The first Canadian employee is **Canadian Airways, Ltd.** Pacific Division boss Donald R. MacLaren, who is joined by a number of pilots, mechanics, radio technicians, and agents from the private carrier. Airline employment by year's end reaches 71.

Meanwhile, with the airline's first aircraft, a C\$5,000 Stearman 4EM two-seater biplane purchased from **Canadian Airways, Ltd.**, the initial proving flight over the transcontinental route departs Vancouver on July 7. Piloted by J. N. Tudhope and J. D. Hunter, a Transport Department Lockheed Model 12A, with Minister Howe, Deputy Minister C. P. Edwards, and TCA Director N. J. Symington as passengers, makes a non-stop Montreal-Vancouver via Gillies, Sioux Lookout, Winnipeg, Regina, and Lethbridge, proving flight in 17 hrs. 34 min. (14 1/2-hrs. flying time) on July 30. In August, two Lockheed L-10As are delivered and the first international route is acquired from **Canadian Airways, Ltd.**

Commercial operations commence on September 1 as the L-10A registered CF-AZY, piloted by Billy Wells and F. M. McGregor, with MacLaren and CNR Auditor P. W. Baldwin as passengers, launches twice-daily, 50-min., 122-mi. Vancouver-Seattle return service. As these flights become routine, the carrier's Stearman, joined by two others, continues cross-country proving flights by day and night. Three additional Lockheeds are placed in service between October and December.

Vancouver to Winnipeg L-10A cargo service begins on February 1, **1938**, with a scheduled training service hauling airmail from Winnipeg to Vancouver commencing on March 1. The first of 10 Lockheed Model 14 Super Electras to be delivered during the year is placed in service in May. The first two TCA stewardesses, Lucile Garner and Pat Eccleston, are hired on July 1.

On August 1, Lethbridge to Edmonton scheduled service is inaugurated with mail placed on the route on October 1. A cargo route is stretched from Vancouver and Winnipeg to Toronto, Ottawa, and Montreal on October 17, with mail added on December 1. Meanwhile, on November 18, the carrier suffers its first fatal accident when an L-14 crashes at Regina (two dead).

Enplanements for the first full year total 2,086.

On February 1, **1939**, the Lethbridge-Edmonton mail and cargo flights begin stopping at Calgary. Daily transcontinental mail-only service is begun on March 1, although the first two planes, crossing simultaneously east to west to east, carry VIPs. The original Stearman is sold to **Northern Airways, Ltd.** in March. The first class of 15 stewardesses is graduated in March and one of the three Stearmans is sold to **Northern Airways, Ltd.** Passengers are allowed to board the transcontinental and Lethbridge-Calgary-Edmonton flights starting on April 1.

Vice President-Operations Johnson, having accomplished his start-up task, now returns to Boeing, turning his post over to D. B. Coyle. A mail stop is added at Moncton on the Vancouver-Montreal run on November 1, as training flights continue. During the year, five L-10As are sold and replaced by six L-14s.

The year's boardings skyrocket to 21,560. A total of 19.6 million pounds of cargo and 1.8 million pounds of airmail are transported.

The Montreal-Moncton route is opened for passengers on February 15, **1940**. A second daily transcontinental frequency is initiated on April 1. On July 15, a mail and training operation is launched from Toronto to Windsor and London, Ontario, with passengers permitted as of August 1. During the fall, an agreement is signed between Ottawa and Washington permitting TCA to begin transborder flights from Toronto to New York City. Bookings accelerate to 53,180.

H. J. Symington becomes the carrier's second president in **1941**. An L-14 crashes at Armstrong, Ontario, on February 6 (10 dead). The Moncton route is extended to Halifax on April 1. The Vancouver to Seattle run is suspended and a Toronto to New York service is opened on April 10. Two L-14s are sold to **Yukon Southern Airways, Ltd.** and the first 6 of 15 ordered Lockheed Model 18 Lodestars are placed in service throughout the year.

En route from Montreal (YUL) to Prestwick, Scotland, on December 30, a civil Lancaster with eight aboard disappears over the Atlantic; among the lost passengers is Sir Alfred E. Evans, chief of the British Admiralty's technical mission in Ottawa.

Enplanements for the year advance to 85,154.

O. T. Larsen becomes vice president-operations in **1942**. On May 1, the Moncton route is stretched to St. John's, Newfoundland, via Sydney and Gander. Late in the year, six more L-18s join the fleet. By year's end, employment stands at 1,662 (464 women).

Bookings jump again, up to 104,446.

Following Minister Howe's announcement in the House of Commons on June 16, **1943**, a TCA Avro Lancastrian launches contract mail, freight and priority-passenger Canadian Government Transatlantic Air Service for Forces (CGTASF) flights from Montreal to Prestwick, Scotland, on July 23, via Reykjavik. (The Lancastrian is the first of nine Lancaster bombers converted to civil standard to be acquired over the next four years.) The first four-ton cargo arrives in Scotland in a flying time of 12 hrs. 26 min.

As summer turns to fall, the company's engineering department works up plans for a Rolls Royce Merlin-powered Douglas DC-4 variant. A Lodestar must be written off following a nonfatal crash upon take-off from Malton on November 4.

Enplanements for the year total 140,276.

Since the beginning of American involvement in the war and through the first half of **1944**, a number of new transborder routes are planned or introduced. These include services from Halifax to Boston and from Whitehorse, Yukon Territory, to Fairbanks. In June, the Vancouver service is extended to Patricia Bay and Vancouver Island. On July 1, a Blissville stop is added on a Montreal-Halifax frequency. At the same time, daily Halifax to Sydney flights are inaugurated. The final three ordered Lodestars are received during the year while an L-12A is leased for four months from the government. A Lancastrian is lost without trace during a December eastbound crossing.

Bookings this year add up to 156,884.

On February 2, **1945**, the first Canadian vice president-operations is appointed, William F. ("Bill") English. Also in February, an L-14 is destroyed in a Moncton accident. Following a nonfatal crash landing at Montreal (YUL) on July 1, a Lancastrian burns out. By year's end, the Lancastrians have made 500 transatlantic crossings and 3 ex-USAAF Douglas C-47s (converted to civil DC-3 standard) have joined the fleet. Passenger boardings rise to 183,121.

Unduplicated route mileage totals 5,299 miles on January 1, **1946**. A number of new routes to the U.S. are opened: Toronto and London to Chicago on July 1, Toronto and London to Cleveland on August 1, Lakehead (Fort William) and Port Arthur to Duluth on September 16, and Victoria to Seattle on November 1.

The CGTASF Lancastrian route is extended from Prestwick down to London on September 15. Also in September, another L-14 is written off after an accident at Moncton. Orders are placed for 20 pressurized Canadair DC-4M-2 North Stars and another 24 DC-3s are obtained, 20 from the RCAF, which has ordered 24 DC-4M-1s. In the licensing agreement, Douglas inserts a clause limiting North Star use to U.K. and Canadian air transport concerns.

The development of cabin pressurization delays delivery of the DC-4M-2s so, beginning on November 19, six unpressurized DC-4M-1s are loaned to the airline by the RCAF. These are powered by Rolls Royce Merlin 622s and are fitted with undercarriages similar to those of the DC-6, which allow an increase in gross weight from 36.5 tons to 39 tons. Since 1942, a total of 218 pilots, like the Douglas transports mostly from the RCAF, have been hired.

Bookings this year grow to 305,442.

Halifax to Boston via Yarmouth and St. John service begins on April 1, 1947. Two days later, the carrier assumes full responsibility for the CGTASF, which now becomes a commercial operation, under a subsidiary **TCA (Atlantic), Ltd.** Employing the RCAF machines, the company begins four-per-week North Star roundtrip flights on the Montreal to Prestwick to London route on April 15.

Fifteen days later, a DC-3 with 15 aboard is lost off Vancouver; there are no survivors. On May 8, another Douglas transport and 15 more passengers are lost off Gabriola Island, British Columbia.

On July 1, Medicine Hat, Swift Current, and Saskatoon enter the route network. As North Star flights climb to 10-per-week, Shannon, Ireland, is added as a transatlantic destination on October 1. The first DC-4M-2 is also delivered on the same day.

Boardings balloon to 443,782.

Nonstop Toronto–New York roundtrip service is inaugurated on January 1, 1948 and Gordon R. McGregor is appointed president in February. DC-4M-1s are introduced on the Vancouver to Calgary route on May 1, the same day twice-weekly Montreal and Toronto to Bermuda DC-4M-2 North Star operations commence.

On June 1, North Stars begin serving the length of the transcontinental route, Vancouver to Montreal, via Calgary, Winnipeg, and Toronto (DC-3s fly to intermediate points) and are placed on the Toronto to Chicago service. The same day, Prairie frequencies are extended to Brandon and Yorkton. The last of 20 DC-4M-2s arrives on June 4 and planes are made to return the borrowed RCAF North Stars.

On July 1, the carrier becomes the world's first to carry unsurcharged first-class mail (at ground rates), initiating the so-called "all-up" system now universally employed. During the summer, all-cargo Lodestar service is initiated on a multistop Toronto to Victoria route. A DC-4M-1 with 6 crew and 11 passengers is lost when its fuel tanks take fire upon landing at Sydney, Nova Scotia, on August 12. All aboard escape, but the plane is burned out.

The Lakehead–Duluth frequency is withdrawn on October 1, due to poor traffic. On December 2, twice-weekly Toronto and Montreal to Nassau, Kingston, and Port of Spain DC-4M-2 flights start.

The ex-USAAF DC-3s are sold. At year's end, the employee population is 5,084, all 20 DC-4M-2s have been received, and bookings are up to 532,555 (23,000 on the North Atlantic run).

DC-4M-2s replace DC-3s on the Edmonton–Saskatoon–Winnipeg route on May 10, 1949. As sufficient DC-4M-2s have now been received, the five surviving borrowed DC-4M-1s are returned to the RCAF over six months, beginning in late June. Barbados is added as a stop on the Bermuda and Trinidad service on December 1. Having by now sold all of its remaining Lockheed L-14s and L-18s, the carrier's fleet comprises 20 North Stars and 30 DC-3s.

Boardings boom to 685,086 (North Atlantic bookings dip 21,000).

After a long—and ultimately unsuccessful—legal action by **Colonial Airlines** to block the Canadian flag carrier's entry onto its long-held route, Colonial must withdraw its claim to exclusivity. Consequently, Montreal to New York DC-4M-2 flights are inaugurated on April 1, while Tampa is added as a stop en route to the Caribbean the next day. The Florida destination represents the airline's first long-haul route into the U.S.

Enplanements for the year zoom upward to 823,509 (however, transatlantic bookings drop again, down to 16,000).

TCA's big event of 1951 is the inauguration of DC-4M-2 service from Montreal to Paris (ORY) via Reykjavik and London on April 1. During December, three DC-4-1 Argonauts are acquired from **Canadian Pacific Airways, Ltd.**

Bookings climb to 973,337 (including 4,000 more transatlantic passengers than in 1950).

On April 27, 1952, DC-4M-2s are introduced on the Montreal-St. John's via Moncton and Sydney route. Dusseldorf is added to the list of European destinations on November 5. In December, orders are placed for 15 Vickers Viscount 724s.

TCA is the fifth carrier in the world and, significantly, the first in North America, to adopt the British-made turboprop. Lockheed is also asked to provide a number of its new L-1049C Super Constellations. On December 22, fog forces cancellation of a record 68 flights from Toronto.

Boardings this year pass the million mark for the first time, up to 1,132,518 (22,000 North Atlantic).

Seventeen aboard are hurt when a DC-4M-2 en route from Toronto to New York City on January 24, 1953, is caught in a downdraft; the plane lands safely. During early spring, the name "Air Canada" first appears as the official bilingual adaptation of TCA, replacing the previous translation of Lignes Aeriennes Trans-Canada.

Under contract to the International Red Cross, the company undertakes with DC-4M-2s the airlift of 4.5 tons of supplies to Greece during August. North Star service is initially offered to Regina and Lethbridge on April 26. Royal Assent is given on May 14 to an amendment to the 1937 enabling legislation, merging the subsidiary TCA (Atlantic), Ltd. into the parent.

Beginning on October 1, the carrier offers shuttle service from Halifax to Boston for steamship passengers diverted from a strikebound Atlantic coast.

On November 1, direct Toronto to Prestwick and London DC-4M-2 flights begin, the same day the carrier's North Stars first begin flying into Cleveland. Sixteen days later, Montego Bay (Jamaica) is added to the Caribbean network. At year's end, three Bristol 170 Mk. 31s are placed in service on an all-cargo run from Montreal and Toronto to New York.

Enplanements for the year rise to 1,307,810 (24,000 transatlantic).

The Tampa route is stretched to Mexico City on January 16, 1954. On February 1, Sault Ste. Marie–Montreal via Sudbury and North Bay service is introduced, the same day tourist-class economy fares are initiated roundtrip, twice daily on the transcontinental route. The first of five Lockheed L-1049C Super Constellations are delivered in March and April, being placed on the transatlantic route from Toronto and Montreal to London, Paris, and Dusseldorf on May 14 in three-class configuration.

Meanwhile, on April 8, a DC-4C-4C en route to Calgary from Winnipeg collides with an RCAF Harvard trainer over Moose Jaw, Saskatchewan (37 dead); a woman is also killed in this tragedy, Canada's worst commercial air disaster to date, when debris falls on her house.

Five-times-per-week Bristol 170 Mk. 31 Montreal and Toronto to Winnipeg freighter flights commence in late May. Super Constellations are placed on the transcontinental run on September 26, Montreal–Vancouver via Toronto and Winnipeg. The first Viscount 724 is delivered on December 8.

An L-1049C with 7 crew and 16 passengers must be written off following a nonfatal takeoff crash from Brampton, Ontario, on a flight from Tampa to Toronto on December 17; many aboard receive various injuries, but there are no fatalities.

The U.S. CAB approves the use of Kinross Airport, Michigan, on December 23 to serve Sault Ste Marie, Ontario.

Bookings rise to 1,438,349 (29,000 on the North Atlantic) and a net operating profit of \$C1.8 million is reported.

The first North American turboprop service begins on April 1, 1955 as the newly received Viscount 724s start flying from Montreal to Winnipeg via Toronto and Fort William. Three days later, Viscount service is launched from Toronto to New York. With three DC-4M-2s in freighter configuration, a five-times-per-week all-cargo service is launched on May 2 from Montreal to Vancouver via Winnipeg, Edmonton, and Calgary. Three L-1049Es now join the fleet.

With equipment supplied by Western Union, the carrier opens a telegraph system from its base at Montreal on June 15, which is reported to

be the largest private communications system in Canada. Montreal to New York Viscount flights begin on August 8.

A route exchange with **Canadian Pacific Air Lines, Ltd. (CPAL)** occurs on November 1. In exchange for Toronto–Mexico City rights, TCA receives routes from Quebec to Seven Islands, Val d'Or, Noranda, and Earlton and Quebec to the Maritime Provinces. The same day, Viscount 724s are introduced on the Montreal to Vancouver transcontinental run and the number of Toronto and Montreal to New York frequencies is doubled to two. The type is now serving 14 North American cities with load factors exceeding 80%.

The first nonstop Toronto to Mexico City service is flown by a DC-4M-2 on November 8. During the year, the Bristol Mk. 31s are sold to **Central Northern Airways, Ltd.** and replaced by four DC-4M-2 Freighters. The fleet now includes 14 Viscount 724s, 25 DC-3s, 7 L-1049s, and 21 North Stars.

The 10 millionth (cumulative) passenger is boarded this year as boardings advanced to 1,682,195 (34,000 transatlantic).

The number of Viscount flights to New York City is increased to 14-per-week on April 1, 1956. Viscount 724s replace DC-4M-2s on the First Class transcontinental service on April 29, Montreal–Vancouver via Ottawa, Fort William, Winnipeg, Regina, and Calgary. Ten days later, orders are placed for 4 (later 11) Rolls Royce-powered DC-8-40 jetliners, which the company will help Douglas develop. A propeller spins off one of the new Viscounts over Flat Rock, Michigan, on July 9, puncturing the plane's fuselage (one dead).

On September 12, a DC-4M-2 with 3 crew and 59 passengers crashes into the mountains near Hope, British Columbia; there are no survivors.

A Montreal-bound North Star, operating as Flight 810-9 with 62 passengers develops engine trouble over Hope, British Columbia, on December 9 and turns back toward Vancouver before disappearing into the wilderness. The RCAF suspends search operations on December 26. The wreckage will subsequently be located on Mount Slesse.

Late in the year, Bill English retires and is succeeded as vice president-operations by H. W. ("Herb") Seagrim. Two DC-3s are sold to **Quebecair, Ltd.** Passenger boardings jump to 2,072,912 (40,000 transatlantic).

Nonstop Toronto–Vancouver flights are inaugurated on January 1, 1957. Orders are placed on January 3 for 20 (later 23) Vickers Vanguard 952s. The C\$67.1-million commitment is, for that time, the largest single export dollar order placed in postwar Britain. Mechanics, on March 15, begin checking the wing flaps of all company Viscounts in the wake of the previous day's accident with a unit owned by **British European Airways Corporation (BEA)**.

The wreckage of the DC-4M-2 lost the previous December 9 is found on Mount Slesse, British Columbia, on May 13; the crash site is guarded to prevent looting. Daily nonstop Toronto–Vancouver L-1049C flights commence on June 1. A search is begun for new pilots on July 10 and the minimum age for these flyers is raised to 28.

A newly developed electronic reservations system built in cooperation with Ferranti Electric, Ltd. is first publicly demonstrated on October 26. Late in the year, the first L-1049Gs and L-1049Hs are delivered.

Enplanements soar to 2,392,713 (48,000 North Atlantic).

On January 1, 1958, domestic tourist-class fares are cut by 20%. L-1049G transatlantic flights begin on April 2 to London and Brussels; the route is stretched to Zurich on May 18. On May 28, Vancouver to London via Winnipeg and Gander L-1049G service starts. At New York on November 10, a **Seaboard and Western Airlines** L-1049H rams a Viscount 724 with two crew upon landing; both aircraft are burned out without loss of life.

DC-4M-2 Montreal–Antigua flights commence on December 15 via Bermuda. Also in December, North Stars launch a two-month airlift of 16,460 pounds of supplies to Ceylon on behalf of the International Red Cross. A total of 13 DC-3s are phased out during the year, of which 9 are sold to **Frontier Airlines (1)**.

Passenger boardings climb to 2,785,523 (61,000 transatlantic).

An L-1049E is acquired and it launches Vienna service via London on May 1, 1959. After striking a water tower while landing at Toronto in

bad weather on October 3, a Viscount 757 with 4 crew and 34 passengers alights short of the runway; no casualties result, but the turboprop must be written off. Only one DC-3 is disposed of this year.

Enplanements accelerate to 3,209,197 (64,000 on the North Atlantic).

The carrier's first DC-8-41 is delivered on February 7, 1960 and is followed by a second in March. Meanwhile, on February 28, the propeller blade from the No. 2 engine of an L-1049C en route from Toronto to London with 83 aboard, flies off, hitting the cowlings and forcing engine shutdown. Escorted by an RAF Shackleton bomber, the aircraft makes a safe landing at London (LHR) with no injuries reported.

When an earthquake destroys Agadir, Morocco, in March, the company, on behalf of the International Red Cross, employs its DC-4M-2s to fly 6,657 pounds of medical supplies to the stricken area. Both of the new Douglas jetliners are simultaneously placed in service, east to west and west to east on the Montreal and Toronto to Vancouver transcontinental route on April 1. The flights mark the first use of jetliners in Canada and the first use of a turbofan-powered airliner in the Commonwealth.

TCA's first Vanguard 952 makes its maiden flight in England on May 21. During the North Atlantic proving flights of May 28–29, the Douglas establishes two world speed records: Ottawa to London in 5 hrs. 55 min. and Montreal to London in 5 hrs. 44 min. Also in May, DC-4M-2s fly emergency medical supplies to Chile following an earthquake in that South American nation.

Transatlantic DC-8-41 DC-8 Jetliner Service begins on June 1, as the transcontinental service from Vancouver is stretched to London via Toronto and Montreal and via Toronto and Montreal and Glasgow. On August 9, one of the new jetliners flies from Toronto to Vancouver in a record 4 hrs. 4 min.

In the fall, a major capacity agreement is reached with **British Overseas Airways Corporation (BOAC)**. In exchange for landing rights at Toronto, the British flag line agrees to pool capacity and revenues on the North Atlantic route. On December 7, the first Vanguard 952 is delivered, following its certification on the second day of the month.

Bookings advance to 3,440,303 (83,000 transatlantic).

Three more Vanguard 952s are delivered in January 1961 and on February 1, daily Vanguard 952 frequencies are inaugurated from Montreal and Toronto to Vancouver via Winnipeg, Saskatoon, Regina, Calgary, and Edmonton. Nonstop Edmonton–London DC-8-43 flights begin on May 3, followed two days later by the start of Cleveland to London service. Via Lockheed, an L-1049H is sold to **Trans-International Airlines** later in the month. Montreal and Toronto to New York and Chicago frequencies are initiated on June 15. Nonstop Winnipeg–London DC-8-43 service is begun shortly thereafter.

The final DC-4M-2 all-cargo, six-stop transcontinental service is flown west to east on June 1, after which the last of 21 DC-4M-2s is retired. In 14 years, these aircraft have flown a combined total of 193 million revenue miles. The fleet now comprises 14 Viscount 724s, 35 Viscount 757s, 5 L-1049Cs, 2 L-1049Es, 4 L-1049Gs, 2 L-1049Hs, 4 DC-8-41s, 4 DC-8-42s, 2 DC-8-43s, 3 Vanguard 952s, and 4 DC-3s.

An effort to sell the North Stars to **Overseas Aviation, Ltd.** in July falls through when the U.K. operator is forced to enter receivership. Three are, however, sold to **Lineas Aereas Unidas, S.A.**, three to **International Air Freighters Cubana**, and two to **World Wide Airways, Ltd.** The remaining North Stars are sold for storage in the U.K. and will later be scrapped.

On September 17, TCA becomes the first to order the Douglas Jet Trader, a freighter version of the DC-8-50.

A C\$20-million maintenance and overhaul facility is completed at Montreal (YUL) and the last DC-8, a Dash-43, is received on December 16.

Customer boardings reach 3.7 million (104,000 on the North Atlantic). In terms of the number of passengers flown, TCA now ranks as the world's seventh largest airline.

The Super Constellations are retired in 1962 and the fleet now includes the same number of Viscounts as in 1961, the same number of DC-3s, 5 more DC-8-43s, and 20 additional Vanguard 952s. One L-1049H overshoots a landing, but will be rebuilt from an L-1049C earlier sold to the

leasing firm California Airmotive. On October 10, a Viscount 757 is involved in a ground collision at Bagotville, Quebec (two dead).

Bookings climb to 3.8 million (114,000 transatlantic).

When, early in **1963**, the last four DC-3s are retired, the carrier becomes the first in the world to operate an all-turbine fleet. A DC-8-54CF Jet Trader is delivered on January 30, the first of eight "combi" airliners to be received, including two more during January.

Two of the DC-3s and a Viscount are sold to **Transair, Ltd.** for C\$1 and concession of its prairie route from Winnipeg to Prince Albert via Brandon, Yorkton, Regina, and Saskatoon. Two more DC-8-43s are delivered and orders are placed for six DC-9s.

The first-ever revenue jet service with a mixed passenger-cargo airliner is inaugurated on March 2 by the new DC-8-54CF over a route from Montreal to London via Prestwick.

While en route from Vancouver to Edmonton on May 6, a Vanguard 952 with 71 aboard encounters severe air turbulence over Alberta and despite a violent plunge, survives (one dead).

All but one of the Vanguard fleet has been delivered by July.

While on its roll for liftoff from London on a foggy night early in November, the takeoff of Flight 861, a DC-8-43 with 7 crew and 90 passengers, is aborted when its controls freeze up. The plane runs off the runway, breaks its nose landing gear, strikes an ILS localizer with its wing, slides across an 8-ft.-wide ditch losing its main landing gear, and comes to rest in a cabbage field half a mile away. No injuries are reported.

On November 29, in the worst commercial aviation accident in Canadian aviation history to date, Flight 831, a DC-8-43 with 7 crew and 111 passengers, crashes near St. Therese de Balinville, four minutes after taking off from Montreal; there are no survivors.

Enplanements exceed 3.9 million for the year.

The employee population in **1964** stands at 11,670. The 15th and 16th DC-8-43s join the fleet and the DC-9 order is increased to eight. During the year, Bill C-2 passes Parliament. It will officially change the carrier's name to **Air Canada, Ltd.** on January 1, **1965**.

On June 13, a Viscount 757 lands short of the runway at Malton; although wrecked beyond repair, no one aboard is hurt. The last DC-8-54F Jet Trader arrives at Montreal on August 27.

Passenger boardings during the final year of operations under this title climb to 4,189,439 and freight traffic jumps by 29%. Total revenues are C\$213.9 million and a C\$1.4-million profit is reported.

An unofficial Web site for Trans Canada Air Lines is located at <http://www.schoolnet.ca/collections/aviation/m065.htm>.

TRANS CAPITAL AIRWAYS, LTD.: Hangar One, Toronto City Centre Airport, Toronto, Ontario M5V 1A1, Canada; Phone (416) 203-1144; Fax (416) 203-1120; Year Founded 1994. Victor Pappalardo establishes his new charter company, Trans Capital, at Ottawa in the spring of **1994** as successor to his defunct **City Express**. Revenue charter operations commence on regional routes in Ontario during the summer with a single de Havilland Canada DHC-7-110.

Flights continue in **1995–1999**. During these years, a second DHC-7-110 is acquired and plans are made to purchase a used Boeing 727-100.

TRANS CARIBBEAN AIRWAYS: United States (1945–1971). With designs of capturing traffic away from its competitor **Resort Airlines** in the Caribbean area, O. Roy Chalk organizes Trans Caribbean as an irregular carrier on May 18, **1945**. Revenue charter flight operations are launched in December with two war-surplus Douglas C-47s purchased for \$6,000 and modified to civil DC-3 standard. After increasing capitalization by \$250,000, DC-4s are acquired in the spring of **1946** with the first inaugurating service from Miami to Puerto Rico in August.

Unable to obtain CAB authorization for regularly scheduled services to that Commonwealth in **1949–1950**, Chalk purchases three DC-6As. These are operated with high-density seating both in Caribbean charter work and on military contract flights following the start of the Korean War in June of the latter year. Another application for scheduled service is made in the fall of **1953**; it, too, is turned down.

Under the **1955** CAB Supplemental ruling, Trans Caribbean begins biweekly, low-fare flights to Puerto Rico on June 15, **1956**. On November 15, **1957**, the company receives a scheduled certificate that will allow it to launch regular New York to San Juan flights with its three DC-6As on March 8, **1958**. Trans Caribbean's achievement is historic as the airline becomes the first ever to be reclassified upward from the ranks of the supplementals to that of the scheduled carriers.

In **1961**, Chalk acquires a minority interest in older, scheduled **Caribbean-Atlantic Airlines (Caribair)**, which operates throughout the West Indies. In **1962–1963**, Trans Caribbean leases a DC-8F from **Seaboard World Airlines**, which makes the jetliner available to Chalk for weekend passenger flights from New York to Aruba and San Juan. Enplanements in the latter year reach 197,025 and revenues exceed \$13 million.

Airline employment in **1964** stands at 550 and the fleet includes five aircraft. A second DC-8F is leased for weekend flights from New York down to the Caribbean and back. Passenger boardings jump 46.2% to 351,203 and revenues jump 43.9% to \$24.62 million.

The workforce in **1965** grows to 671. The company now operates three DC-8Fs on its New York to San Juan route, with an order for a fourth pending. A DC-8-54F is lost in a ground fire at Miami (MIA) on November 25; there are no fatalities.

A total of 380,526 passengers are originated and freight ton-miles flown climb to 11,286,375.

Enplanements in **1966** are 440,000. During the year, the carrier's two C-46s are sold.

The workforce in **1967** is 849. Emphasis continues to be placed on package tours to the Caribbean. The CAB grants permission for flights linking Washington, D.C. (IAD) and San Juan. Two offices are opened in Washington, D.C. and tourist excursion fares are inaugurated in the new Puerto Rican market in October. At year's end, the fleet includes 3 DC-8-55Fs, 1 DC-8-61F, 1 B-707, and 1 B720-048, leased from **Aer Lingus Irish Airlines, Ltd.** Passenger boardings climb to 468,620 and 7.33 million freight ton-miles are flown.

Daily flights begin in **1968** linking Newark with San Juan and Aruba. The employee population numbers 1,028 and the fleet grows by two aircraft. The CAB's decision in the Caribbean Route case results in a doubling of the carrier's unduplicated mileage. New stops are added at Port-au-Prince, St. Thomas and St. Croix, and Curaçao. Customer bookings accelerate 51% to 699,061 and cargo is up a spectacular 511%. Revenues are \$47,369,209.

The fleet in **1969** comprises 1 Boeing 727-100, 2 B-727-2A7s, 2 DC-8-30s, and 3 DC-8-62s. Despite its successes, Trans Caribbean by **1970** has fallen on hard times. In January, Chalk is able to obtain a merger with **American Airlines**. While the two await the outcome of their joint request to the CAB for approval, the major advances TCA a \$7-million loan for payroll.

En route from Newark to San Juan on August 19, Flight 401, a DC-8-62 with 154 passengers, is hijacked by 3 men armed with guns and grenades and is forced to fly to Havana; the plane is allowed to return to Miami the same day.

Flight 505, a B-727-2A7 with 7 crew and 48 passengers, bounces twice upon landing at Harry S Truman Airport, St. Thomas, from New York on December 28 and the third time comes down 2,700 ft. past the end of the runway. The Boeing crashes through a fence, across a highway, and into a hillside (two dead).

On February 21, **1971**, the company is fined \$5,000 after pleading guilty to a charge that it paid "unlawful gratuities" to obtain confidential information on its employees from New York City police files. On March 8, government permission to complete integration of the former supplemental is acquired. American has paid \$18 million in stock for Chalk's operation, receiving in return eight unwanted aircraft. More importantly, shortly thereafter it finds a way to gain a leading position in hotly contested New York to Puerto Rico service.

In an anticlimax and as the result of a 10-month federal grand jury probe, H. Davidoff, secretary-treasurer of Teamsters Local 295, is arrested

on November 2 on charges of extorting tickets worth \$9,627 from the carrier between October 1966 and November 1970. He will eventually plead guilty and go to jail.

TRANS CATALINA AIRLINES: United States (1978–1980). The newest seaplane operator established to provide scheduled commuter service from the California mainland to Catalina Island begins revenue services in February 1978 with 3 Grumman G-73 Mallards.

A total of 44,199 passengers are transported by December 31.

The fleet is altered to landplanes in 1979: 1 each Cessna 421, 402, and 340. Customer bookings fall by 20% to 35,000 and as a result, the workforce must be cut by 62.5% to 15. Operations cease in 1980.

TRANS CENTRAL AIRLINES (1): United States (1966–1970). The first Trans Central is set up at Denver during the first quarter of 1966 to provide scheduled passenger services. Cessna 402 revenue flights commence on March 22, linking the company's base with Albuquerque, New Mexico, via Pueblo and Trinidad.

Operations continue apace until 1970.

TRANS CENTRAL AIRLINES (2): United States (1980–1984). Enid, Oklahoma-based **Air Central** is reformed in January 1980; renamed, it is transferred to Oklahoma City and begins scheduled passenger services on June 1. Robert P. Lammerts's 90-man workforce operates and supports a fleet of 2 Fairchild-Swearingen Metro IIs and 2 Metro IIIs. Flights are undertaken to Little Rock, Memphis, Dallas (DFW), Topeka, and Wichita.

The company highlights for 1981 are the addition of a third Metro III and a move into new facilities at Will Rogers World Airport.

Enplanements for the first full year of operation total 17,938.

Airline employment is increased by 110% in 1982 to 110 and the fleet is enhanced by the addition of 1 Metro II. A new hangar is completed and Lubbock joins the route network.

Passenger boardings skyrocket 175.6% to 49,444. Cargo climbs 46.3% to 16,000 pounds.

Service is started to Kansas City Downtown Airport early in 1983 as the first two of seven ordered NAMC YS-11As join the fleet.

Customer bookings accelerate 31.2% to 65,600.

All other aircraft are retired as the remaining five Japanese turboprops arrive in the winter and spring of 1984. In deep financial difficulty, the carrier ceases operations on August 19.

Prior to its closure, the carrier flies a total of 48,549 passengers, a 53.8% increase.

TRANS CHARTER AIRLINES: Russia (1994–1998). Trans Charter is established at Moscow on April 5, 1994, to offer international, regional, and domestic scheduled and charter services, both passenger and cargo. A workforce of 160 is assembled and flights to Bombay and Maastricht begin a week later with 3 Antonov An-32s, 1 An-74, and 1 Yakovlev Yak 40.

Business continues until late 1998, when fiscal difficulties caused by the Russian currency crisis forces the company to shut down.

TRANS COASTA RICA, S.A.: Costa Rica (1989–1995). TCA is established at San Jose in the fall of 1989. All-cargo services are inaugurated throughout Central America with a single de Havilland Canada DHC-4 Caribou registered in Honduras. Flights continue until the middle years of the next decade.

TRANS COLOMBIANA DE AVIACION, S.A. See TAVINA (TRANS-COLOMBIANA DE AVIACION, S.A.)

TRANS COLORADO AIRLINES: United States (1980–1987). TCA is founded by a group of businessmen at Gunnison in late 1980 to provide scheduled services to ski resorts and to Denver and Montrose with a fleet of 3 Fairchild-Swearingen Metro IIs. Airline employment in 1981

at President James Huff Jr.'s fledgling stands at 36 and enplanements for the first full year are 18,846.

In 1982–1983, new markets are opened at Albuquerque, Cortez, and Durango. Another Metroliner is purchased and enplanements in the latter year reach 61,799.

In April 1984 nonstop Albuquerque to Colorado Springs flights begin, following transfer of the company to the latter point. Former **Continental Airlines** official William Mueller becomes president/CEO, the fleet is increased by two more Metro IIs, and a marketing agreement is signed with **Continental Airlines** on July 15.

Operations continue apace in 1985 as the workforce reaches a total of 175. Destinations visited from Colorado Springs and Denver include Rapid City and Pierre, South Dakota; Casper, Rock Springs, and Jackson Hole, Wyoming, via Riverton/Lander; Gunnison, Montrose, Durango, and Cortez in Colorado and Farmington, New Mexico.

Enplanements total 118,942.

The fleet by 1986 includes 10 Metro IIs. During the latter year, the company becomes a "Continental Express" feeder partner of the major at Denver and Albuquerque. A Metro II, with 17 aboard, goes out of control while landing at Stapleton on December 1 and runs off the runway into a patch of mud; no injuries are reported.

Largely as a result of its new code-sharing affiliation, passenger bookings swell to 157,326.

Flight 2286, a Metroliner with 2 crew and 15 passengers and en route from Denver to Durango, Colorado, on January 19, 1987, crashes 8 km. to the E of the destination from an initial approach that is too steep (nine dead). It is later reported that Capt. Stephen S. Silver had taken cocaine the night before the flight.

During the spring, **Continental Airlines** shifts its "Continental Express" Denver operation exclusively to **Rocky Mountain Airways**. Trans-Colorado attempts to hub on Albuquerque alone, but the market is not there. After a three-month try, the small regional ceases operations in July and leases out its Metroliners to other operators until it is liquidated.

TRANS COMMUTER AIRLINES: United States (1973–1979). Established at San Juan, Puerto Rico, in 1973, Trans-Commuter inaugurates daily roundtrip scheduled passenger services to St. Croix and St. Thomas in the U.S. Virgin Islands with Beech B-80 Queenairs.

Operations become irregular in 1977–1978 and after its 1979 failure, the company's assets are purchased by a new operator, which will resume flights on November 8 as **Oceanair**.

TRANS CONTINENTAL AIRLINES: United States (1972–2000). Established at Ypsilanti in 1972 as the flight training center International Airlines Academy, the company elects to add an air cargo division in early 1975. Employing a fleet of 7 Curtiss C-46 Commandos, IAA inaugurates freight flights from Detroit's Willow Run Airport in August, largely in support of the automobile industry.

In 1977, the company is reformed and renamed, adopting an airline marketing title. During the next 12 years, scheduled all-cargo only services retain their auto emphasis; however, destinations visited are extended throughout the nation. The Commandos are withdrawn and replaced by three Convair CV-440Fs and four Douglas DC-6As. Operations continue apace with little notice for over a decade.

By 1989, the fleet also features four leased Douglas DC-8-54Fs and a DC-8-63. During the spring, the decision is made to enter the passenger charter and inclusive-tour business; revenue flights to TCA's cargo markets commence in July.

By December 31, a total of 39,660 passengers are flown. In the freight department, cargo reaches 67.1 million FTKs. Revenues are \$32.39 million, expenses are \$33.38 million, and the operating loss is \$988,574. Net loss is \$1.56 million.

Two chartered DC-8-55Fs and a DC-8-61 arrive in 1990. Passenger charters are suspended on October 8.

Still, customer bookings for the 10 months skyrocket to 107,000 and full-year freight traffic surges to 183.59 million FTKs. Revenues slip

0.6% to \$32.19 million, expenses jump 15% to \$38.37 million, and an operating loss of \$4.71 million is suffered. The net loss deepens to \$5.19 million.

As a result of the recession, President R. Deane Melvin's fleet is cut-back in **1991** to three DC-8-54Fs, including two leased from **Zantop International Airlines**.

Partially in consequence, cargo declines by 23.7% to 33.73 million FTKs. Revenues plunge 64.3% to \$11.51 million and expenses drop 60.4% to \$14.64 million. The resulting operating loss is \$3.12 million. The net loss is cut to \$225,604. Unable to continue in a tough recessionary year, the carrier ceases operations in January **1992**.

After affiliating with Connie Kalitta's Detroit-based **American International Airways (3)**, Transcontinental, under the direction of Tom Gorklesky, is able to relaunch operations in **1994** with a single DC-8-54F. Plans are made to acquire one each DC-8-51F, DC-8-55F, and DC-8-62F.

A total of 8.74 million FTKs are operated on the year and operating revenues of \$4.61 million are earned. Expenses are only \$2.31 million, allowing a \$2.3-million operating profit. An equal \$2.3-million net profit is also reported.

The workforce stands at 80 in **1995** as the 3 additional Douglas freighters enter service.

Cargo traffic rises dramatically as 50.75 million FTKs are operated. Costs exceed revenues and there are small losses: \$88,000 (operating) and \$68,000 (net).

There is no change in the employee population during **1996**. The company enjoys an outstanding year as traffic soars 116.8% to 110 million FTKs. Operating income skyrockets 322.9% to \$19.67 million while expenses jump 267.5% to \$17.42 million. The previous year's losses become sizeable gain as an operating profit of \$2.25 million and a net profit of \$1.9 million are reported.

The owned fleet in **1997** includes 2 DC-8-62Fs, 1 DC-8-61F, and 1 DC-8-55F. A DC-8-51F and DC-8-54F are also operated under charter from **American International Airways (3)**. The contract will pass to **Kitty Hawk Air Cargo** when AIA and the rest of the Kalitta empire is purchased by the Texas-based carrier.

Freight ascends 2.3% to 112.3 million FTKs, but operating revenues, reported through June, decline 2.6% to \$8.67 million. Expenses jump 23.6% to \$9.53 million and leave an operating loss of \$861,000. The previous year's net gain is turned into a \$1.27-million net loss.

During the 12 months of **1998**, cargo traffic falls 25.4% to 83.86 million FTKs. Revenues total \$9.97 million, while expenses are \$10.58 million. The operating loss is \$562,000, while a net loss of \$1.13 million is also suffered.

Services are maintained during **1999**, but cargo traffic plunges 63.8% to 35,583,000 FTKs.

A total of 80 workers are employed at the beginning of **2000**. During the first week of January, the company is renamed **Express.Net Airlines**.

TRANS DOMINICAN AIRWAYS, S.A. (TRADO): Dominican Republic (1984–1994). TRADO is established at Santo Domingo in **1984** to operate regional all cargo charters employing a single Lockheed L-749A Constellation.

The Connie is removed in **1985** and replaced with two Douglas DC-6s that maintain its freight runs throughout the Caribbean and to Miami and Mexico City. A DC-7CF is acquired in **1986**, along with a Convair CV-440. Unlike the Douglas transports that remain painted in an all-metallic finish with few titles, the Convair is painted in full TRADO colors and is employed for both passenger and mixed-cargo services.

Flights cease in **1994**.

TRANS EAST AIRLINES: United States (1964–1971). Established as **Statewide Airlines** at Manchester, New Hampshire, in the fall of **1964**, this commuter is soon purchased by Walter S. Blandford, who changes its name. Employing a pair of de Havilland DH 104 Doves, daily roundtrips revenue frequencies are inaugurated on November 5, linking the company's base with New York (LGA) via Hartford and New Bedford.

Operations continue apace in **1965–1967** and the route network is expanded with flights to Lebanon, Albany, and Portland. The contract air-mail operator **Buker Airlines** is purchased and merged on August 29, **1968**. Services are maintained in **1969–1971** and the fleet is upgraded by the addition of a de Havilland Canada DHC-6-100 Twin Otter.

TRANS EAST INTERNATIONAL AIRLINES: United States (1982–1984). Not to be confused with the nonunion carrier established by Texas Air Corporation, **New York Air (2)** is reformed at Farmingdale in October **1982** and renamed. Employing a Cessna 402, an Embraer EMB-110P1 Bandeirante, a de Havilland Canada DHC-6-200 Twin Otter, and a Cessna 404 Titan, the carrier continues to maintain daily roundtrip scheduled passenger services to New York (LGA) and from that airfield to Nantucket and Martha's Vineyard.

Operations continue apace in **1983** and **1984**; late in the latter year, the company is renamed **Island Air (5)**.

TRANS EUROPA (COMPANIA DE AVIACION, S.A.): Spain (1965–1982). Trans Europa, S.A. is established at Palma de Mallorca in July **1965** to offer international and domestic passenger and cargo charter services. Equipped with a single, Douglas DC-7B, ad hoc flights commence in September, bringing in tourists from Spain and other Northwest Europe destinations.

In **1969**, the company acquires two Sud-Est SE-210 Caravelle 10Rs and expands its network of holiday vacation points to southern Europe and North Africa, including Morocco and Tunisia. Two more Caravelle 10Rs are acquired from **LTU International Airlines (Lufttransport Unternehmman, GmbH)** in **1976**, while two Caravelle 11R combis are brought in to operate not only passenger charters, but to fly cargo, on behalf of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**.

By **1978**, President Benito Tamayo and Managing Director Tomas Perez Ruiz oversee a workforce of 185 and a fleet comprising 4 Caravelle 10Rs and 1 Caravelle 11R. Runaway expenses caused by higher fuel bills and a lack of traffic generated by world recession force the carrier to cease operations before the beginning of the summer season at the end of March **1982**. Most of the company's inventory and many of the staff are taken on by **Aviacion y Comercio, S.A. (AVIACO)**.

TRANS EUROPEAN AIRLINES: Russia (1999–2000). TEA is formed at Moscow at the beginning of **1999** to operate long-haul passenger charters. Although a failure, the carrier will be remembered as the first operator of the new Tupolev Tu-204-100 passenger plane. Having consolidated almost every ruble they could raise, the company's owners reportedly give the Ulianovsk-based aircraft builder Aviastar \$1.2 million to complete construction of the first airframe. The airline and the manufacturer agree to share operating revenues and passenger flights with the first of 3 new Tupolevs commence on May 16.

Burdened with a heavy debt, the company, which must also battle the ongoing impact of the Russian currency crisis, cannot achieve economic viability. Unable to continue, TEA shuts its doors after the **2000** summer season. The Tu-204-100 is repossessed by Aviastar and is leased to **Kras Air (Krasnoyarsk Avialinii -KrasAir)** on November 10.

TRANS EUROPEAN AIRWAYS, S.A. (TEA): Belgium (1970–1991). TEA is formed at Brussels on December 6, **1970** to offer passenger and cargo charters and inclusive-tour flights on behalf of its owners, TIFA and G. P. Gutelman. Georges P. Gutelman himself becomes managing director. Flights to European holiday destinations are inaugurated on June 2, **1971** with an ex-Eastern Air Lines Boeing 720-025. A subsidiary maintenance organization is established, Teamco (Trans-European Airways Maintenance Company). In August **1972**, a B-720-048 is purchased from **Aer Lingus Irish Airlines, Ltd.**

Three B-707-131Bs, originally flown by **Trans World Airlines (TWA)**, are acquired in **1973**. An Airbus Industrie A300B2-103 arrives on November 27, **1974**. At the end of the decade, the fleet comprises 1 A300B2-103, 3 B-707-131Bs, 2 B-720s, and 1 B-737-2M8.

Services continue in the **1980s** to European and Mediterranean holiday destinations. During the winter seasons, the transport of Muslim pilgrims to Jeddah and Mecca becomes a specialty. Withdrawal of the B-707-131Bs begins in **1982**; however, the fleet is increased by four B-737-2M8s. In **1985**, the carrier attracts wide publicity for its delivery of Ethiopian Jews from Sudan to Israel over a secret (at the time of the operation) air bridge.

A joint venture airline, **Tur Avropa (Tur European Airlines, A.O.)**, is established with the Turkish trading group Kavala in April **1988**. In May, the subsidiary **TEA Basel, A.G.** is organized to fly charters to Africa, Europe, and the Far East.

In January **1989**, the former British charter operator **Mediterranean Express, Ltd.** is acquired and is reestablished at Birmingham as **TEA U.K., Ltd.** Later in the year, two more associates, **TEA France, S.A.** and **TEA Italy, S.p.A.**, are organized. Orders are placed for nine Airbus A310-304s.

The fleet in **1990** comprises 1 B-737-2M8 (leased to **TEA U.K., Ltd.**), 2 B-737-229s and 3 B-737-3M8s (1 of which is chartered to **Air Aruba, B.V.**). Orders are outstanding for 8 B-737-3M8s and 12 B-737-4M8s.

Airline employment stands at 200 and enplanements total 400,000.

Operations continue apace in **1991** until September when the parent organization collapses from recessionary pressures. This fiscal disaster requires TEA to stop flying and seek protection of a Belgian court from its creditors. Prior to September, passenger boardings are 390,000. The airline is liquidated in November and its failure will adversely affect all of the European partners.

TRANS EUROPEAN AIRWAYS (TEA), LTD.: United Kingdom (1959–1962). A. M. Ross, E. D. Kayton, A. C. Stauber, and L. Perez form Trans European Aviation (TEA) at Fairwood Common, Swansea, in early spring **1959**. A privately owned de Havilland DH 89A belonging to one of the members is employed to start company charter work in early May. A second Dragon Rapide is purchased at the end of the month. These are now employed to offer ad hoc and pleasure flights.

Similar work continues in **1960** and at the end of April, the company base is switched to Coventry Airport. A change in direction is undertaken in October when the former **Air Condor** Bristol 170 Mk. II Wayfarer is acquired. Refurbished, the large aircraft enters service in late November, flying nonscheduled charters between Birmingham and Dublin.

Having decided to enter the long-haul charter market, TEA purchases a Lockheed L-049 from **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** in early January **1961**. However, as it is passing through the U.S. on its delivery flight, it is impounded at Charlotte, North Carolina, to satisfy a claim of Jacob Shapiro, who claims that the Castro government has nationalized his hosiery mill, valued at \$750,000. The aircraft will never reach England.

On March 11, the Wayfarer begins a series of long-range charters from Birmingham. In July, two L-049Es, once flown by **Capital Airlines**, are purchased from **Falcon Airways, Ltd.**; refurbished, the first enters service on July 17, flying a charter from London (LGW) to West Berlin.

The marketing name Trans European Airways, Ltd. is now adopted. Inclusive-tour and charter destinations during the year include Dusseldorf, Malaga, Munich, Nice, Palma, Perpignan, Treviso, Hanover, Dublin, the Channel Islands, Le Touquet, Naples, Nicosia, and Amsterdam. A Dragon Rapide is sold in September and the second Falcon Constellation is delivered in December.

A London group purchases an interest in early **1962** and capitalization is increased to £75,000. The last DH 89A is sold in February. Charter flights to West Berlin on behalf of German tour agencies are now undertaken. Although inclusive tours are flown, financial losses become heavy and a receiver is appointed in July to handle the situation.

In August, a Constellation is impounded in Israel while the other L-049E and the Wayfarer are impounded at London (LGW), all for un-

paid debts, including landing fees. With bills amounting to £125,000, the company collapses and is liquidated.

TRANS EUROPEAN AIRWAYS-BASEL, A.G.: Switzerland (1988–1992). This subsidiary of the Belgian charter carrier **Trans European Airways, S.A. (TEA)** is established at Basel in May **1988** to operate passenger and cargo charters and inclusive-tour flights to destinations in southern Europe, North Africa, and the Far East.

Markus Seiler is named managing director and his carrier is provided with a pair of Boeing 737-3M8s with which to inaugurate services in **1989**. The first flight is undertaken between Zurich and Lisbon on March 23. The second B-737-3MB is leased in Australia and covers operational expenses.

Enplanements for the year total 200,000.

The fleet is increased to 5 B-737-3MBs during the next 5 years as the carrier outlives the failure of its Belgian parent. In **1992**, the company is renamed **TEA Basel, A.G.**

TRANS EUROPEAN AIRWAYS-FRANCE, S.A.: France (1989–1991). Another member of the TEA Group, this French charter operator is organized at Lille early in **1989**. A license is obtained from the government for the operation of inclusive-tour flights from the carrier's base and Lourdes to Mediterranean holiday destinations.

The company begins operations in October with a pair of Boeing 737-3M8s. An Airbus Industrie A310-304 is acquired during the winter, but is leased out to **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** in **1990**. Following the demise of the Belgian parent in September **1991**, the airline is renamed **TEA France, S.A.**

TRANS EUROPEAN AIRWAYS-ITALY, S.p.A.: Italy (1989–1991). This member of the TEA Group is established at Rome in early **1989** to offer inclusive-tour services to destinations in North Africa and the Mediterranean. The fleet is equipped with 3 Boeing 737-3M8s and begins operations in late fall.

The company is not strong enough to continue on its own and ceases trading shortly after the failure of its Belgian parent in September **1991**.

TRANS EUROPEAN AIRWAYS-U.K., LTD.: United Kingdom (1989–1991). The failed British charter operation **Mediterranean Express, Ltd.** is acquired by the TEA Group in January **1989** and is reformed at Birmingham as **TEA U.K., Ltd.** The company is equipped with 2 leased Boeing 737-3Y0s and 1 B-737-2M8, which is almost immediately leased to **G. B. Airways, Ltd.** of Gibraltar. Operations to European destinations commence in the fall.

The company is not strong enough to continue on its own and ceases trading shortly after the failure of its Belgian parent in September **1991**. For the second time in three years, the carrier is bought out of liquidation, this time by the investment group 3i and **Air Malta, Ltd.**, both of which take 30% shareholding, and its **TEA U.K., Ltd.** managers, who secure the remaining stake and reform the company as **Excalibur Airways, Ltd.**

TRANS EXEC AIR SERVICE: 2828 Donald Douglas Loop North, Santa Monica, California 90405, United States; Phone (310) 399-9435; Fax (310) 392-2474; Year Founded 1979. David L. Bilson founds Trans Exec at Santa Monica in **1979** to provide executive and small group passenger charters, initially in support of the motion picture industry. It will also undertake passenger transfer and aerial photography with helicopters. Over the next 20 years, the company grows to a point where it is operating not only within the U.S., but to destinations worldwide, from bases at Santa Monica and Van Nuys.

In **2000**, President Bilson employs 10 pilots, who, from Santa Monica, operate 1 each IAI 1124 Westwind I and Cessna 501 Citation I, plus 1 each August A-109 and Bell 206B JetRanger. Another Westwind I is stationed at Van Nuys, along with two Grumman G-1159 Gulfstream IIs.

One of the Gulfstream IIs overshoots the runway while landing at Van Nuys on February 18 and crashes into four small aircraft and a truck. Although all of the aircraft and the ground vehicle are seriously damaged, no injuries are reported.

TRANS FLORIDA AIRLINES: P.O. Box 10150, Daytona Beach, Florida 32120, United States; Phone (904) 252-3053; Fax (904) 252-0037; Code TF; Year Founded 1966. Originally established by Robert D. Willman at Daytona Beach, Florida, in 1964 as the FBO Daytona Aviation, this concern diversifies in 1966, after obtaining an FAA FAR 121 airline certificate. Privately funded, the new supplemental air-charter carrier inaugurates contract and charter Douglas DC-3 flights in 1967 to destinations throughout Central America, the Caribbean, the Bahamas, Puerto Rico, and the southeast U.S. A flight school is opened in 1968 and, between 1973 and 1975, Trans Florida provides life for the affiliated travel club Holiday Hunters, employing a former **Trans World Airlines (TWA)** Lockheed L-049 Constellation. The Connie is sold to a Dominican Republic firm in 1976, the FBO is shut down in 1977, and the ground school closes in 1978. All of these late 1970s actions occur as the concern's passenger charter business grows.

The first Convair CV-240 is acquired in 1979 and is employed to initiate return charter flights to the Bahamas on behalf of the gambling industry. During the next decade, the fleet grows to include 4 CV-240s and 1 Vickers Viscount 700.

The first Convair freighter is introduced in 1991, a year after the Vickers is withdrawn. In 1993, the Federal Aviation Administration mandates that all aircraft with more than nine seats in commercial passenger service be outfitted with TCAS warning gear. As the cost of the installation of such equipment aboard a TFA CV-240 would exceed the cost of the entire aircraft, President Willman exits the holiday charter business to concentrate exclusively on freight. In 1994, the bulk of the fleet is transferred to San Juan and begins the operation of feeder flights on behalf of **Federal Express (FedEx)** and Silver Express.

By 1998, President Willman oversees a workforce of 25 and a fleet of 4 CV-240s (2 are parked for cannibalization of spare parts) and 3 CV-240Fs. Just after takeoff from San Juan on September 24, a CV-240 with two crew and a passenger elects to return to its point of origin. The aircraft turns to land on Runway 28, but loses altitude and crashes. Although no fatalities occur, the plane is destroyed beyond repair.

Service is maintained in 1999–2000, during which years the active fleet is reduced to just the 3 CV-240Fs and 1 CV-240. Destinations served from San Juan include Borinquen, plus Punta Cana, Santo Domingo, and Santiago in the Dominican Republic.

During the late spring of the latter year, the company's affiliation with Silver Express ends and the company returns to Daytona Beach from San Juan to offer charters in its own livery with two CV-240Fs.

TRANS GLOBAL AIRLINES: United States (1978–1984). Founded at Newark (EWR) on May 1, 1978, this new nonscheduled carrier receives CAB permission in 1980 to inaugurate charter services. A workforce totaling 42 is assembled and a single Douglas DC-8-62 is leased from **Arrow Air**.

Delays in financing cause the airline to delay its initial revenue service, requiring that the Arrow narrow-body be returned. Flights finally commence on July 5, 1984, when a tour group is flown to Oporto in Portugal on board a DC-8-62 once owned by **Braniff International Airways**. The carrier fails before the end of October and plans for a relaunch are abandoned.

TRANS ISLAND AIR, LTD.: South Ramp, Grantley Adams International Airport, Christ Church, Barbados; Phone (246) 428-1654; Fax (246) 428-0916; Code TRD; Year Founded 1990. Trans Island is established at Barbados in 1990 to offer regional passenger charters to points in the Caribbean. Under the direction of Herbert Yearwood, revenue flights begin with 2 Cessna 402Cs and 3 Britten-Norman BN-2B Islanders.

Service is maintained and holiday and sight-seeing flights are offered without incident or headline during the remainder of the decade. In September 2000, one each Cessna and Islander are put up for sale.

TRANS INTERNATIONAL AIRLINES (1): United States (1960–1979). To avoid confusion with the rotary-wing carrier **Los Angeles Airways, Los Angeles Air Service**, owned by Kerkor "Kirk" Kerkorian, changes its name on July 18, 1960. On November 14, two Lockheed L-1049H Super Constellations are chartered from **The Flying Tiger Line**. In May 1961, an L-1049H is purchased from **Trans-Canada Air Lines, Ltd.** The carrier stops individual ticketing in October to concentrate entirely on group charters and inclusive-tour flights. Revenues for the year are \$236,604.

The company becomes the first supplemental carrier to order a Douglas Jet Trader when it makes a request on June 11, 1962, for three of the DC-8-54TJs. It is also the first to offer jetliner service following the delivery of a Douglas DC-8-51 on June 22. It is paid for with money borrowed by the carrier's owner, but helps the airline's profits to jump to \$1.1 million.

On an unhappy note, a Lockheed L-1049H freighter crash-lands at Clark AFB, Philippines, on August 10. Two of the six crewmen are hurt.

Four L-1049Hs acquired from the Hughes Tool Company are leased to **Capitol Airways** and are employed by that supplemental later in the year.

The ex-Hughes Super Constellations continue to be employed throughout 1963. The first DC-8-54TJ is received in April and enters service on the carrier's long-haul routes. The other two Jet Traders also arrive during the year.

One of the new Jet Traders, on May 22, operates a military charter from Travis AFB, California, to Saigon via several intermediate stops, transporting a record cargo of 87,000 pounds.

On March 1, 1964, one of **The Flying Tiger Line** Super Constellations is purchased. The Studebaker Corporation purchases control in October for \$2.7 million in a stock transaction. Airline employment is now 139 and the fleet consists of 6 aircraft

Enplanements total 118,882.

New military contracts are received, beginning in 1965, for flights on the transpacific Vietnam airlift. Additionally, the first of several contracts is signed with **Japan Air Lines Company, Ltd. (2)** for the training of its pilots.

The CAB grants TIA-1 permanent certification on April 1, 1966 as one of 10 airlines of its class so favored. Transatlantic authority is received on April 5, with Latin America/Pacific permissions given on September 30. The same day, the L-1049H acquired from **The Flying Tiger Line** is sold back to the huge freight operator.

When the Studebaker Corporation elects to withdraw from the air transport business, it sells the company back to Kirk Kerkorian in September for \$200,000 less than it cost to acquire in the first place.

Revenues for the year are \$22,162,781. Expenses are \$14,659,258 and a net profit of \$3,854,336 is reported.

The airline becomes a public corporation on June 28, 1967. On October 20, a third consecutive one-year contract is signed to training pilots for **Japan Air Lines Company, Ltd. (2)**. By the end of the year, the fleet comprises 3 DC-8-61Fs, 2 DC-8-35Fs, and 1 DC-8-51F leased out to **Delta Air Lines**. The latter will be sold to the Atlanta-based company. Orders are made or remain outstanding for two B-727-121QCs and three (later seven) DC-8-63CFs.

A total of 240,221 charter passengers are originated and 22,330,465 freight ton-miles are flown. Revenues rise to \$31,557,029. Profits are \$8,569,636 (operating) and \$5,391,030 (net).

Kerkorian elects to withdrawn again in 1968 and 58% majority shareholding is purchased by Transamerica Corporation on April 23. Kerkorian's personal profit is \$104 million. Two B-727-121QCs and a DC-8-63CF are delivered. The carrier is the first supplemental to order the DC-10. The company now begins to specialize in the transport of livestock, as 7,000 head of cattle are transported from California to Chile.

On the year, 491,000 charter passengers are accommodated and cargo ton miles increase a significant 113%. Revenues jump 54% to \$48,582,000. Profits are also up, both operating (\$10,415,561) and net (\$6,534,574).

The fleet is augmented in early 1969 by the delivery of another DC-8-63CF. The remainder of the stretched Jet Trader order is completed by late fall, at which time the three DC-8-61CFs and two DC-8-35Fs are used for leasing operations. The two Boeing 727-121QCs are retained for short-haul services.

Although a passenger count is not released, figures show that 1.96 billion revenue passenger miles are operated. Income accelerates to \$51,095,000 and profits continue to be made. Both operating (\$4,682,000) and net (\$4,012,000) income exceed the \$4-million mark.

Two (later three) DC-10-30CFs are ordered in 1970.

Actually filmed at Long Island's Islip-MacArthur Airport, the beginning of the motion picture *The Out of Towners* depicts the departure from an "Ohio airport" of Jack Lemmon and Sandy Dennis aboard a TIA B-727-121QC.

Eleven of the company's most senior aircrew are killed when a DC-8-63CF crashes after stalling on takeoff from New York (JFK) on October 8 on Ferry Flight 863 to Washington, D.C. (IAD) to pick up passengers for a flight to London (LGW).

Revenue passenger miles flown jump 30% to 2.54 billion. Revenues accelerate 21.5% to \$62,078,000. Led by increased fuel prices, costs climb by \$8 million to \$36,246,000. Although the operating profit is \$8,359,000, the net profit declines to \$2,388,000.

In 1971, TIA transports 702,450 charter passengers and places orders for 3 DC-10-30CFs.

The workforce in 1972 is 928. The CAB grants a temporary exemption to fly holiday service into Mexico. Sales incentive flights are increased throughout the year and on September 9 the carrier begins flying the first of seven charter groups from the U.S. West Coast to New Zealand on behalf of Unitours, Inc.

Now the nation's largest supplemental airline, the carrier's passenger boardings increase 37% to 1,115,000. Freight traffic reflects the general decline in Southeast Asian military business, being down a full 35%. Income is \$74.27 million and expenses are \$69.97 million. Consequently, profits are made: \$4.30 million (operating) and \$1.93 million (net).

Airline employment in 1973 rises by 124. Three DC-10-30CFs are placed into service on April 27 and give the company the largest wide-body capability of any U.S. charter airline. TIA becomes the first airline anywhere to operate a DC-10 all-cargo flight. The inaugural service out-bound from Oakland to Hong Kong late in the year transports fresh California produce, while the return flight brings a plane full of clothing.

The fuel crisis has an impact on business. Charter passenger bookings fall 34.5% to 730,000 and although 22.85 million freight FTKs are flown, the figure represents a decline of 44.1%. On revenues of \$73,487,000, expenses are \$70,553,000. The operating profit is \$2.93 million and the \$4.95-million net gain is the highest for any U.S. supplemental this year.

The carrier employs 952 in 1974. New DC-10-30CF configurations are adopted as TIA begins operating charter programs to Hong Kong and to destinations throughout South America.

On June 4, it is announced that Trans International has negotiated a \$35-million agreement with Travel Enterprises, Inc., under which 500 flights involving 125,000 persons will be made between the U.S. and Hawaii.

Flight attendants, members of the Teamsters, walk out on July 15; their job action ends on July 21 with a mutual agreement concerning issues.

Negotiations are undertaken to acquire Howard Korth's **Saturn Airways** and at year's end, officials of the two carriers file their agreement with the CAB seeking regulatory consent.

Boardings advance 9% to 753,000, but freight traffic is off by 7.7%. The nation's largest supplemental has income of \$104.63 million, while expenses are kept to \$100.88 million. The operating profit is \$3.74 million. A net \$1.48-million loss is suffered.

Employment in 1975 grows to 1,041 and planning continues apace for the acquisition of **Saturn Airways**.

Although passenger boardings are down by 7% to 701,000, freight skyrockets 149% to 52.41 million FTKs. Expenses of \$105.74 million are submerged into total income of \$123.34 million and as a result, the operating profit is \$17.6 million while a net income of \$4.98 million is reported.

The number of employees is increased by 46.4% in 1976 to 1,524. The CAB grants final permission in the spring for acquisition of the Oakland-based supplemental **Saturn Airways** and its fleet of Hercules freighters. Meanwhile, emphasis is placed on increasing tour packages available from the U.S. West Coast to Europe and Israel. A DC-10-30CF is reconfigured to handle 376 passengers. The official **Saturn Airways** takeover occurs on December 1.

Customer bookings for TIA (exclusive of Saturn) total 705,000 for the year while cargo skyrockets 101.7% to 105.722 million FTKs. Operating revenues are \$133.788 million while expenses are kept at \$121.39 million. This happy imbalance results in an operating profit of \$12.39 million and net gain of \$3.12 million.

In January 1977, integration of TIA and **Saturn Airways** into the world's largest charter carrier is completed.

On April 14, the company receives authority to fly into Mexico and Canada. Beginning September 10, Teamster flight attendants again strike the company.

Enplanements for the year are 675,000 while a total of 347.65 million FTKs are operated.

In 1978, President/CEO Henry P. Huff oversees a workforce of 1,715 and operates a fleet of 6 DC-8-63CFs, 2 DC-8-61s, 3 DC-8-61Fs, 3 DC-10-30CFs, 12 Lockheed L-100-30 Hercules, and 9 L-188AF Electra freighters.

The flight attendants accept a mediated agreement on January 11.

A DC-10-30CF, with 376 American tourists aboard, skids from the runway during its July 2 takeoff from Shannon Airport in Ireland; no injuries are reported.

Charter bookings increase by 22.1% to 866,000 passengers while cargo jumps 17.4% to 420.88 million FTKs.

The employee population in 1979 grows by 49.4% to 2,583. A DC-8-63CF with 250 aboard loses a tire during its takeoff from New York (JFK) on May 3, but is able to turn around and make a safe landing. Also in May, scheduled transatlantic passenger frequencies are started New York to Amsterdam via Shannon, in addition to passenger and cargo charters already flown. On October 1, the company name is changed to **Transamerica Airlines**.

TRANS INTERNATIONAL AIRLINES (2): United States (1984-1988). Employing the earlier corporate identity of its parent, TIA-2 is formed in late 1984 as a nonunion, wholly owned subsidiary of Transamerica Corporation's air transport division, **Transamerica Airlines**, to offer charter and contract flights. Initially, the carrier takes over the routes and remaining assets of dormant **Central American International**, a freight line originally founded at Louisville, but which had closed its doors in 1982.

Airline employment in 1985 stands at 1,146. Service is launched from an Orlando base in early spring with a fleet that begins with 1 Douglas DC-8-54F, but which soon thereafter adds 6 DC-8-62Fs, 9 Convair CV-640s, 11 DC-6As, and 21 Lockheed L-100-30 Hercules freighters.

A total of 8.82 million FTKs are operated by December 31. Revenues for this start-up year are \$1.9 million, but costs are \$3.45 million. Consequently, the operating loss is \$1.55 million; the net loss is \$952,000.

When **Transamerica Airlines** ceases operations on September 30, 1986, the future of its subsidiary is in doubt. This Trans International is, however, reformed into a passenger and cargo charter carrier and obtains a new fleet of one DC-8-61F, the original DC-8-54F, and one Lockheed L-188AF.

Recertified, the company begins flying in April 1987 and by year's end has transported a total of 81,000 passengers and 4.5 million FTKs.

The carrier survives only the first six months of **1988** before it shuts down and goes out of business.

During this time, it flies a total of 502.8 million revenue passenger kilometers and generates revenues of \$3.79 million. The operating loss is \$2 million and net loss is \$943,000.

TRANS INTERNATIONAL EXPRESS. *See* TIE AVIATION (TRANS INTERNATIONAL EXPRESS)

TRANS ISLAND AIRWAYS. *See* TRANS AIR

TRANS JAMAICAN AIRWAYS, LTD.: Jamaica (1975–1996). **Jamaica Air Taxi, Ltd.** is formed in early **1975** to assume the assets and routes of **Jamaica Air Services, Ltd.**, which ceases operations in late **1974**. Based at Sangster Airport, Montego Bay, the carrier's initial fleet comprises the JAS de Havilland DH 114 Herons. Scheduled services are undertaken from Montego Bay to Grand Turk, Port Antonio, Mandeville, Ocho Rios, and Kingston.

On October 11, **1976**, TJA acquires 35% shareholding in the new Air Turks and Caicos. Late in the decade, services are started to the Turks and Caicos Islands. Two Britten-Norman BN-2A Trislanders are acquired in **1980**.

The fleet in **1981** comprises 2 Britten-Norman BN-2 Islanders, 2 Trislanders, and 2 Cessna 206s. Another Islander and a Douglas DC-3 are acquired in **1982**. Passenger enplanements in **1983** are 39,000, while two Cessna 402s are delivered. During the remainder of the decade, the company's regional and international services and routes are maintained.

The **1989** fleet includes 2 Cessna 402s, 2 Cessna 206s, 2 Pilatus-Britten-Norman PBN-2A Trislanders, and 1 PBN-2 Islander.

Enplanements total 73,925. Profits of \$172,000 (operating) and \$66,000 (net) are generated.

In **1990**, one of the two Trislanders is temporarily withdrawn and replaced with another Islander.

Passenger boardings jump 11.4% to 83,436 and revenues shoot up 54.3% to \$2.9 million. Operating income rises to \$476,000 and net profit is \$377,000.

The payroll is increased by 2.6% in **1991** to 117. Customer bookings entirely reverse their previous year's gain, falling 12.4% to 73,103. Revenues decline 14.4% to \$2.48 million, but costs rise. As a result, the operating surplus is cut to \$351,000 and net gain falls to \$183,898.

A significant fleet alteration occurs at General Manager Robert E. Cranston's carrier in **1992**, as all previous equipment is replaced by three leased Dornier 228-202s. An Avions de Transport Regional ATR42-320 arrives in **1993**, and the three Dornier 228-202s are returned in **1994**, along with the Islanders, Trislanders, and two Cessna 206s. Late in **1995**, the majority interest in the company is taken by **Air Jamaica, Ltd.**, which will relaunch it in **1996** as **Air Jamaica Express, Ltd.**

TRANS LATIN AIR, S.A.: Panama (1990–1994). Trans Latin is established at Panama City in the spring of **1990** to offer charter passenger, cargo, and express flights around the nation and to other Central American republics. Revenue operations commence with a single Fairchild Metro III.

International services are introduced in **1992** by a leased Boeing 727-191 first flown by **Frontier Airlines** in the U.S. The big jet service is not successful and the trimotor is withdrawn in **1993**. Unable to continue, the company shuts its doors in **1994**.

TRANS MAGIC AIRLINES: United States (1969–1973). Trans Magic is set up at Twin Falls/Jerome, Idaho, in **1969** to provide scheduled passenger and commuter services to regional destinations. Employing a Piper PA-31-31 Navajo and a de Havilland DH 104 Dove, rev-

enue flights commence, linking the company's base with Boise, Mountain Home AFB, Sun Valley, Burley, Pocatello, Idaho Falls, Jackpot, and Salt Lake City. Operations continue until the great energy crisis of **1973** forces the company out of business.

TRANS MALDIVIAN AIRWAYS, LTD.: Pvt Ltd., P.O. Box 6, Male, Maldives; Phone 960 (32) 5706; Fax 960 (32) 3161; http://www.tma.com.mv; Year Founded 1999. On May 27, **1999**, **Hummingbird Island Airways, Ltd.** is renamed Trans Maldivian Airways, Ltd. Having begun in 1989 as a helicopter carrier, TMA, owned by the UB Group and Air Beach Resorts, now operates only fixed-wing floatplane charters.

Under the direction of Flight Operations Manager Capt. Garth Duncan, the company operates from Male, employing 1 float-equipped Cessna 208B Caravan, and 2 float-equipped de Havilland Canada DHC-6-300s. Two more Twin Otters arrive during the year.

Distracted by reprogramming his GPS unit after takeoff from Male International Airport on February 3, **2000**, the captain of the float-equipped Caravan forgets to raise his landing gear. The aircraft is landed on the water at Filithayo Seaplane Base with the gear still extended and consequently turns over and sinks. There are no fatalities.

TRANS MEDITERRANEAN AIRWAYS, S.A.L. (TMA): P.O. Box 11-3018, Beirut International Airport, Beirut, Lebanon; Phone 961 (1) 831 433; Fax 961 (1) 386 669; http://www.tma.com.lb; Code TL; Year Founded 1953. Organized in **1953** to provide support services for oil companies and for six years a nonscheduled carrier flying a pair of Avro 685 York C.1s, TMA becomes a joint-stock company controlled by its Chairman/President Munir I. Abu Haidar in October **1959**. Certified as an all-cargo airline, TMA purchases its first Douglas DC-4 and undertakes an international network of scheduled freight services linking Beirut with destinations in the Mideast (including Tehran), Europe (including Frankfurt), Africa, and Asia.

Operations continue apace in **1960–1962**, during which years the fleet grows to include seven DC-4s. There are also losses.

An Avro 685 York C.1 crashes during its May 24, 1961, takeoff from Azaiba, Oman; although the aircraft must be written off, there are no fatalities.

A DC-4 is lost at Azaiba, Oman, on January 21, 1962; no other details are available. Another DC-4 freighter with six crew fails its takeoff and plunges into the sea off Brindisi, Italy, on July 9; there are no survivors.

The first DC-6B enters service in **1963**. A DC-4 freighter with three crew crashes in the Koh-i-Safid Mountains in Afghanistan on December 12; there are no survivors.

By **1964**, the workforce totals 525 and a total of 18 million freight ton-miles are flown. Revenues are \$5.17 million.

The fleet in **1965** comprises 5 Douglas DC-4s and 4 DC-6As. New offices are opened during the year in Doha and Dusseldorf. A new cargo terminal is occupied at Beirut, along with a new engine overhaul shop. A Lockheed L-1632F is placed into service at year's end.

A number of new offices are opened in **1966** and the first jet freighter, a B-707-331C Stratoliner, leased from **World Airways**, is acquired.

While en route from Beirut to Frankfurt, a DC-6A freighter with five crew crashes into Mount Parnon, Greece, on March 10; there are no survivors.

In October, an L-1649A Starliner, once owned by **Deutsche Lufthansa, A.G.**, is leased for the winter from the U.S.-based travel club **Air Venturers**.

The last L-1649 flight is completed in January **1967** and the Starliner is replaced by a sixth DC-6A, which is placed into service on a new route to Jeddah. During the summer, new DC-6A service is inaugurated to Tokyo. New offices are opened at Hong Kong, Osaka, Tokyo, Bangkok, Taipei, and Copenhagen. In the fall, a pair of Canadair CL-44Ds is leased.

A total of 35.9 million revenue ton-miles of freight is flown during the year.

The workforce in **1968** stands at 932. The world's longest air freight route is now provided, directly linking Europe, the Middle East, India, Southeast Asia, and the Far East.

Israeli commandos hit Beirut IAP on December 28 destroying or damaging beyond repair a Douglas C-54B and a Douglas DC-6A/B.

The fleet now comprises 5 DC-6As, 1 DC-4, and 3 Boeing 707-327C freighters, the latter previously flown by **Braniff International Airways**.

Revenue freight ton-miles flown are now 52,361,000 and revenues are up to \$16.82 million.

In **1969**, flights begin to Athens, Stockholm, Zurich, Istanbul, Benghazi, Tripoli, Singapore, Paris, and Milan.

Airline employment stands at 820 and freight ton-miles flown total 51,216,464.

A total of 205 employees are hired in **1970**. Revenue freight ton-miles flown increases by 32.4% to 75,764,000.

On April 14, **1971**, the company launches the first round-the-world jet cargo route, flying from Beirut to Tokyo via Southeast Asia and on to Anchorage, New York, Europe, and back to Lebanon.

The workforce in **1972** is up to 1,529. New services are opened to Muscat and Lagos. One of the four remaining DC-6As is sold as two newly reconditioned, ex-**American Airlines** B-707-323Cs join the fleet, for a total of five.

Freight traffic jumps 41%, with real growth occurring toward year's end.

The employee population is increased during **1973** to 1,798 and two more B-707 Stratoliners are added, one each B-707-321C and B-707-331C. New routes are opened to Hong Kong and N'Djamena. Frequencies are increased on other services.

As a result of all this activity, freight traffic doubles to 349.86 million FTKs.

In **1974**, airline employment stands at 5,256. Shafik Fakhoury is named vice president of a new international affairs division created in February. Orders are placed for two B-747Fs and the carrier's seven B-707Cs receive new liveries consisting of green fuselages and yellow tails. Service is inaugurated to Kuala Lumpur and Muscat.

FTKs increase 5% to 387.37 million and construction is started on a new freight terminal at Beirut.

Two leased B-747-123Fs, formerly flown by **American Airlines** and converted into freighters, are placed into service between Beirut and New York via Amsterdam in May and June **1975**. Civil war breaks out during the summer and will bring a series of airport shutdowns over the next decade and a half. En route from Beirut to Athens on December 3, a Jumbojet freighter is badly damaged when its overruns a wet runway on landing in Greece; the fuselage, engine, and landing gear are repaired by Boeing and other engineers.

The company's new freight terminal at Beirut is occupied in **1976**. With a capacity of 800 tons per day, it doubles the airlines previous capacity. During the first major blockade, Beirut International Airport is shut down for a total of 168 days.

As if the carrier did not have enough problems at home, clerical, office, and passenger service employees, members of the Teamsters, refuse to arbitrate differences at New York (JFK). Instead, they walk out on October 25. In no position to resist, TMA grants the union's requests three days later.

As a result of the civil war in Lebanon, the leased Jumbojet freighters are withdrawn in June **1977**. At the same time, four more Stratoliners are acquired to help make up for the capacity lost with the Jumbojets.

By **1978**, airline employment stands at 2,174 and the fleet holds 11 Boeing freighters. A total of 490,198,000 FTKs are operated.

A B-707F crashes during a July 23, **1979** training flight at Beirut, killing all six of its crewmen.

Cargo traffic for the year leaps 17% to 590.6 million FTKs.

Flight operations are severely disrupted by the nation's civil strife of the early **1980s**.

The workforce is reduced by 7.1% in **1980** to 1,955. The company's 11 B-707-320Cs haul 514.06 million FTKs, a reduction of 13%.

An explosion near a B-707-327C parked on the ramp at Beirut on July 5, **1981** causes substantial damage to the freighter.

As a typhoon is passing 160 km. S of Tokyo on October 23, a B-707-331C with three crew that has departed, develops engine trouble and returns to Narita Airport. Although it lands heavily and is badly damaged, there are no fatalities.

On June 16, **1982**, Israeli commandos strike Beirut International Airport, destroying two DC-6As and a B-707-323C. The company, which has been now been reduced by war and hard usage to a fleet of 8 707-320Cs, transfers its headquarters to Sharjah in the UAE. The capital's airport is shut down for 115 days during the Israeli invasion. Freight hauled in **1983** totals 420.26 million FTKs.

Late in **1984**, the Lebanese government approves a merger of TMA with **Middle East Airlines, S.A.L. (MEA)** (2) and establishes a holding company to split ownership between the state carrier (75%) and the independent (25%). The arrangement is not consummated.

Cargo for the year climbs 13% to 483.06 million FTKs.

In response to the **Trans World Airlines (TWA)** Flight 847 hijacking ordeal of June, President Reagan orders an end to TMA landing rights in the U.S. as of July 1, **1985**.

Operations continue, with some disruptions, between **1986-1988**. In 1987, Beirut International Airport is blockaded for 107 days.

Airline employment in **1989** stands at 960 and the fleet includes 7 B-707-320Cs. Following a March to September blockade by forces of Christian militia Gen. Michel Aoun, Beirut International Airport is re-opened; a company B-707-320C cargo service is the first airline service into the facility in six months.

A total of 274 million FTKs are operated on the year. Expenses exceed income and there are losses: \$7.7 million (operating) and \$14.9 million (net).

Company employment is cut by 5.1% in **1990** to 824. Cargo declines by 42.6%, due largely to the Gulf crisis, to 182.87 million FTKs. Revenues are also off, by 24.5%, to \$43.3 million. The operating loss increases to \$12.2 million and net loss reaches \$17.7 million.

With 850 employees, Chairman Chafi Moharram's airline continues to fly its network during **1991-1993** with two each B-707-323Cs and B-707-327Cs (lately leased to **Kuwait Airways, Ltd.**) and one each B-707-321C and B-707-331C.

While taxiing out for takeoff from Amsterdam on an all-cargo service to Beirut on July 26 of the latter year, a beam in the right wing of Flight 172, a B-707-327C with three crew, fails. The aircraft is driven back to its platform where major damage is found in the wing structure. No injuries are reported, but the aircraft must be written off.

Last operated almost 15 years earlier, the B-747-123F, withdrawn in 1977, returns to the fleet at the beginning of **1994**.

In **1995**, airline employment stands at 519 and a total of 137.8 million FTKs are operated. The company suffers a very bad **1996** and is shut down for a period and the Jumbojet freighter is withdrawn.

In November, following introduction of the government's "Horizon 2000" reconstruction program, company management begins to modernize TMA. It also pledges to increase capital to \$40 million. For the year as a whole just 35.62 million FTKs are operated.

Modernization of the carrier's operations continues in **1997-1999**. Capitalization is increased to some \$40 million. The company's six Stratofreighters regularly visit Abu Dhabi, Amsterdam, Bahrain, Bangkok, Bombay, Dammam, Doha, Dubai, Frankfurt, Jeddah, Kuala Lumpur, Kuwait, London (STN), Muscat, Paris (CDG), Sharjah, Singapore, Taipei, and Tokyo (NRT).

In April **2000**, the Lebanese Pilots' Union holds a conference at the Commodore Alhambra Hotel in Beirut, during which it reviews updated reports on the airline's progress. Later in the month, the marketing name TMA Cargo is introduced, as is a new black and yellow color scheme for the carrier's Stratofreighters.

Weekly all-cargo roundtrips are inaugurated by **Jamahiriya Libyan Arab Airlines** during June, from Ostend, Belgium, to Tripoli and Beng-

hazi. The flights are reportedly handled by European Cargo Services, S.A. and operated by a wet-leased Trans Mediterranean B-707F.

A B-707F launches weekly return freight service to Bergamo, Italy, in September.

Allowed under the UN approved "oil-for-food" program, a company B-707F begins transporting goods from Beirut to Baghdad on November 8. Flights to Iraq by the airline have been suspended for 15 years.

TRANS MICHIGAN AIRLINES: United States (1969–1970). Trans Michigan is established at Traverse City in June 1969 as successor to **Peninsula Air**. Employing one each Piper PA-31-310 Navajo and de Havilland Canada DHC-6-300 Twin Otter, the new commuter inaugurates daily scheduled multistop services linking its base with Detroit, Flint, Lansing, Marquette, Kalamazoo, and other Wolverine State destinations.

Unable to maintain economic viability, the company shuts its doors in March 1970 and its assets are sold to the start-up **Great Lakes Airlines**.

TRANS MIDWEST AIRLINES: United States (1983–1985). Trans Midwest is set up by Tom Koehler at Columbus, Ohio, in the summer of 1983 to offer scheduled third-level services to destinations in Ohio and West Virginia. Employing a fleet of 3 Piper PA-31-310 Navajos, the airline undertakes frequencies, beginning on August 1, to Toledo, Lima, Dayton, Cincinnati, Parkersburg, and Charleston.

Operations cease in April 1985.

TRANS MISSOURI AIRLINES: United States (1966–1986). W. E. Asel forms this intrastate carrier at Jefferson City, Missouri, in the spring of 1966. Employing a fleet of 3 Cessna 402s, the company undertakes local charter services while applying for a certificate from the FAA, which is received on July 11.

Beginning in December, scheduled passenger and cargo flights are inaugurated to St. Louis, Lake of the Ozarks, Sedalia, and Kansas City. Two years later, in 1968, Topeka-based **Beeson Aviation** is purchased and merged. Cape Girardeau and Topeka join the route network.

Operations continue apace over the next 18 years. In 1986, however, recession takes its toll on the carrier. Only three Cessna 402s are flown and services to Kansas City are suspended; however, these cost-cutting measures are insufficient and the company closes down.

TRANS MO AIRLINES. See **TRANS MISSOURI AIRLINES**

TRANS MOUNTAIN AIR: United States (1975–1976). Also known as **Trans-Mountain Airlines**, this small regional is established at Longmont, Colorado, in 1975 to provide scheduled Aero Commander 500B flights to Denver. Expected traffic does not develop and the carrier shuts down in 1976.

TRANS NATIONAL AIRLINES (1). See **NORTH AMERICAN AIRLINES (1) (NAA)**

TRANS NATIONAL AIRLINES (2): United States (1973–1974). TNA is set up at Oakland, California, in 1973 to offer de Havilland DH 104 Dove scheduled commuter flights over local routes from the city. Service cannot be maintained a year.

TRANS NATIONAL AIRLINES OF HAWAII: United States (1979–1983). TNAH is established at Honolulu in 1979 to offer scheduled all-freight commuter services in Hawaii with a fleet of 4 Douglas DC-3s and 2 Beech 18s. In 1980, the first full year of service, a total of 4.92 million FTKs are operated. Unable to survive recession, the carrier stops flying in 1983.

TRANS NEBRASKA AIRLINES: United States (1971–1973). Alliance, Nebraska-based TNA is established in 1971, built largely upon

the assets of the former Omaha air taxi **Sky Harbor Air Services**. Employing a Cessna 402, the new company inaugurates scheduled passenger and cargo flights linking its base with Chadron, Kearney, Lincoln, and Omaha. These daily flights are maintained into 1973.

TRANS NEVADA AIR SERVICES: United States (1968–1969). TNAS is founded at Las Vegas during the summer of 1968 to provide scheduled passenger and cargo flights over local routes from the city. Beech 18 and Aero Commander 500 revenue flights commence on August 30, but cannot be maintained a year.

TRANS NEW YORK AIRLINES: United States (1981–1982). Early in 1981, TNYA is established at New York City to provide a rotary-wing shuttle service linking John F. Kennedy International Airport, Newark International Airport, and La Guardia Airport with Manhattan's Wall Street heliport. Employing 3 Agusta A109s, the carrier inaugurates scheduled flights on March 30.

Recession, high expenses, and low traffic cause the company to cease operations in 1982.

TRANS NORTH AIR, LTD.: Canada (1966–1987). Trans-North is established at Whitehorse in 1966 to provide regional helicopter passenger and cargo and passenger and freight charter services throughout the Yukon region. Services commence in 1967 and between 1968 and 1971, routes are developed to a variety of Yukon destinations, including Pine Lake, Faro, and Rose River. Fixed-wing aircraft are added in the latter year.

Great Northern Airways, Ltd. is acquired in 1972 and services are extended down into British Columbia and northern Alberta. The mixed fleet grows to include Douglas DC-3s, de Havilland Canada DHC-6-200s, Cessna and Beech lightplanes and helicopters. Scheduled services begin in 1976.

By 1980, President R. F. Connelly's fleet comprises 2 Douglas DC-3s, 2 Twin Otters, 2 Cessna 404 Titans, 1 Cessna 402, 1 Cessna 310, 2 Bell 204Bs, 11 Bell 206B JetRangers, 4 Hughes 369s, and 2 Bell Model 47Gs.

Enplanements total 30,000 in 1981 and 20,000 in 1982. A DHC-6-300 is sold to **Baker Aviation, Ltd.** in 1983. Airline employment reaches 90 in 1984 and in May, international DC-3 service is started from Whitehorse to Juneau, Alaska. By 1986 the fleet comprises 2 DC-3s, 1 DHC-6-300, 2 Embraer EMB-110s, 2 Cessna 404s, 12 Bell 206B JetRangers, and 2 Bell Model 47s, plus 3 Hughes 500s and 1 Aerospatiale Alouette III. Operations cease in 1987.

TRANS NORTH AVIATION, LTD.: P.O. Box 1445, Eagle River Airport, Eagle River, Wisconsin 54521, United States; Phone (715) 479-6777; Fax (715) 479-8178; <http://www.transnorth.com>; Code 4Q; Year Founded 1980. Ronald J Schaberg establishes this small regional at Eagle River, Wisconsin, in the early fall of 1980, initially as an FBO and charter operation. In 1981, the decision is taken to provide scheduled passenger and cargo services to the "second home" area of northern Wisconsin. Employing a Piper PA-31-350 Navajo Chieftain, the company inaugurates daily roundtrips in October linking its base with Chicago's Palwaukee Airport, Green Bay, Woodruff, and Sturgeon Bay.

Both scheduled and charter operations continue apace over the next 19 years. In 2000, President Schaberg's Eagle River fleet includes 1 each Navajo Chieftain, Beech 1900 Airliner, and Cessna 421C Golden Eagle.

A Beech Super King Air 100 and a Cessna 340A are stationed at Green Bay and a Cessna 340A is also based at Charleston, South Carolina.

TRANS OCEANIC AIRWAYS (PTY.), LTD.: Australia (1947–1953). Trans Oceanic is formed at Sydney in early 1947 to begin flights to Lord Howe Island and Hobart with the Short S.25 Sandringhams *Beachcomber* and *Australis*. Revenue flight operations commence on February 24. These routes are maintained during 1948–1952, but are

finally purchased, along with the flying boats, by **Ansett Airlines of Australia (Pty.), Ltd.** in 1953.

TRANS OCEANIC LINES, LTD.: Seychelles (1963–1968). This ambitious, but tiny, carrier is established at Victoria on the island of Mahe in 1963 to offer service to Kenya. Employing a pair of Consolidated PBY-5A Catalina flying boats, the company launches 1,200-mi, 9-hr. flights to Nairobi via Port Reitz.

Flights continue until the company shuts its doors in 1968.

TRANS PACIFIC AIRLINES (PTY.), LTD.: P.O. Box 1379, Cairns, Queensland, 4870, Australia; Year Founded 1996. This commuter is established at Cairns in the spring of 1996 to offer third-level scheduled services to local destinations. Revenue flights commence and continue with one each Embraer EMB-110 Bandeirante and Dornier 228-200.

TRANS PACIFIC AIRLINES (TPA): United States (1946–1959). TPA is formed at Honolulu by local publisher Rudy Tongg on June 9, 1946. Incorporated under the laws of the Territory of Hawaii, it begins nonscheduled services with a single war surplus Douglas C-47 (military DC-3), piloted by Al Olson and Louis Lucas, on July 26.

Four Douglas transports, nicknamed "Alohaliners," are in service by year's end and enplanements for the first six months total 24,000. In the fall of 1947, older **Hawaiian Airlines** seeks and obtains an injunction to shut the newcomer down on the basis that it is actually flying scheduled service without CAB permission.

After a year of difficulty and litigation, the CAB in 1948 authorizes the carrier to commence scheduled operations in competition with **Hawaiian Airlines** under provision of a five-year temporary certificate. Future U.S. Senator Daniel K. Inouye is an employee and future owners Dr. Hung Wo Ching and Sheridan Ing begin to invest.

President Truman approves TPA's temporary certification on February 17, 1949 and the formerly suspect irregular launches its newly authorized flights on June 6. As the result of a longshoreman's strike, interisland traffic falls off and the company cannot earn a profit during the year. Indeed, a \$300,000 loss is suffered.

There is also no profit in 1950, but in June 1951 the CAB grants a \$127,000 airmail subsidiary. During the year, the company begins to use "The Aloha Airline" as part of its corporate moniker. On August 22, 1952, the company begins hauling sight-seers over an erupting Hawaiian volcano.

Operating as the "poor man's airline," TPA chalks up significant traffic gains as the two carriers fight one another for market share throughout the 1950s. During the decade, a fleet of eight Douglas DC-3s is operated. Now called Vistaliners, they are provided with *puka* camera openings in their five-foot windows. Flight attendants dress in native costume, dance for passengers, and serve fresh pineapple juice along with sodas. As statehood approaches toward decade's end, the junior island service is renamed **Aloha Airlines** on February 11, 1959 and soon thereafter begins to fly Fokker F.27 Friendships.

TRANS PENN AIRLINES (TRANS PENNSYLVANIA AIRLINES): United States (1978–1980). Following President Carter's signing of the Airline Deregulation Act in October 1978, TPA is established to undertake regional services under an Essential Air Service (EAS) contract. Employing a fleet of Piper PA-31-310 Navajos, scheduled daily roundtrips are inaugurated linking the company's base at Reedsville with State College, Pittsburgh, Baltimore, and Atlantic City. Operations continue apace until 1981.

TRANS PROVINCIAL AIRLINES, LTD.: Canada (1964–1994). Trans Provincial is established by a group of local businessmen at Terrace, British Columbia, in 1964 to offer charter and scheduled services from Prince Rupert to the Queen Charlotte Islands as well as to Stewart, Alice Arm, Hartley Bay, Bella Bella, Ocean Falls, Price George, Smithers, and the Alaskan town of Ketchikan.

Flights are started with a pair of de Havilland Canada DHC-3 Otters, one of which is lost in an accident at Stewart on April 18, 1967. Three Grumman G-21 Goose amphibians are acquired in 1968 and a base is established at Port Hardy under management of Gene Story. A fourth G-21 arrives in 1969, the same year a replacement Otter is also acquired. The DHC-3 is followed by two more in 1970, along with a Douglas DC-3.

A second DC-3 is added in 1972 and is followed into service by a Fokker F.27 Friendship in 1973, which is employed to operate a scheduled Prince Rupert–Prince George route via Terrace and Smithers. A fifth Grumman Goose is purchased in 1974. Even after a DC-3 replaces the Fokker (which is sold to **Time Air, Ltd.**) on the scheduled service, traffic is too light to sustain it and the operation is halted in 1975. Another Goose joins the fleet in 1976. Two DC-3s and a Goose are sold in 1978.

Jim Pattison Industries purchases the carrier in 1979 as one of many acquired for the formation of **Air BC, Ltd.**; however, the carrier is allowed to retain its identity. Port Hardy is built up as a major TPA base in 1980 and the subsidiary is upgraded by the addition of a DC-3 and a Britten-Norman BN-2 Islander. An Otter is lost in a crash near Smithers on June 12, 1981. The Douglas is passed to **Air BC, Ltd.** in 1983, leaving TPA a largely amphibious operation, to which most of its parent's amphibious aircraft are now assigned.

TPA is purchased from Jim Pattison in October 1986 by a group of investors headed by Port Hardy supervisor and TPA Chief Pilot Gene Story. In 1987, the fleet is reformed as two G-21s and the Islander are sold and succeeded by two de Havilland Canada DHC-6-100 Twin Otters. Charters and scheduled flights resume on a larger scale and emphasis on cargo is demonstrated by acquisition of a Bristol 170 Mk. 31 Freighter.

A second, the last of its type operational in Canada, is purchased in 1988.

Upon landing at Bronson Creek after a June 21 freight service from Wrangell, one of the Bristol 170 Mk. 31s with three crew ground-loops and runs off the runway, at which point the undercarriage collapses; although the wreck must be written off, there are no fatalities.

Operations continue apace in 1989–1992. At the beginning of 1993, General Manager Jim Soden's fleet comprises 2 DHC-6s, 3 DHC-3s, 6 DHC-2s, 2 Bristols, and 3 Grumman G-21 Geese.

The Bristol all-cargo service is closed down in January, but the company is already in significant financial difficulty. Having overexpanded ahead of revenues, the carrier ceases operations in March.

The Bristol assets and contracts are sold by the carrier's receivers to former Trans Provincial executives Paul Hawkins, Rod Hayward, David Menzies, and Donald Vienneau; the U.K.-made transports will resume freighter operations in August 1994 as **Hawkair, Ltd.**

TRANS REGIONAL AIRLINES (PTY.), LTD.: Australia (1982–1984). Adelaide-based **PAGAS Airlines (Pty.), Ltd.** is renamed Trans Regional Airlines, Ltd. in 1982. Services are maintained with 2 Embraer EMB-110s, 1 Piper PA-31-310 Navajo, and 3 Rockwell Aero Commanders to a variety of destinations in South Australia and Queensland. These include Adelaide, Andamooka, Broken Hill, Hawker, Innamincka, Kingscote, Leigh Creek, Mount Gunson, Oodnadatta, Penneshaw, Port Augusta, and Port Pirie.

Unable to overcome the economics of poor traffic brought on by recession, the carrier is forced to shut its doors in early 1984.

TRANS SERVICE AIRLINK, S.A.: BP 14711, Kinshasa, Congo, Democratic Republic II; Phone 243 (12) 20 970; Code TSR; Year Founded 1992. Trans Service is founded at Kinshasa, Zaire, in 1992 to offer passenger charter and inclusive-tour flights to regional African destinations. Revenue operations commence with a fleet that includes 1 Boeing 727-25, 2 Nord 262s, 2 Lockheed L-188 Electras, 1 Vickers Viscount 754D, and 1 Viscount 782D.

One Nord with 21 passengers fails takeoff from Kinshasa airport on January 27, 1993 and crashes; 3 aboard are killed, along with 6 people

on the ground. A year later, on January 21, **1994**, the L-188A is lost in an accident.

Another accident, the most horrific of the three, occurs in **1995**. While operating a charter service for the Angolan political party UNITA, the last remaining Electra, an L-188C with 5 crew and 139 passengers (thus overloaded by 40 people), crashes at Kahengula just after takeoff from Jamba on December 18 (141 dead).

Despite the civil war that changes Zaire into the Democratic Republic of the Congo, Managing Director Christian von Oorschot's concern continues flying in **1996–2000**. During these years, the Boeing, a Viscount, and the remaining Nord are replaced with two British Aerospace BAe (HS) 748-2As and the Bristol Britannia 253F previously operated by **Trans Air Cargo, S.A.**

TRANS SIERRA AIRLINES (1): United States (1971–1972). Trans Sierra is set up at Burbank, California, in **1971** to provide scheduled passenger and cargo flights linking the company's base with Los Angeles, San Jose, Bishop, and Mammoth Lakes. Piper PA-31-310 Navajo revenue services continue until the company is reorganized into **Sierra Pacific Airlines** in early **1972**.

TRANS SIERRA AIRLINES (2): United States (1980). The second Trans Sierra does not last as long as the first. Established at Fresno, California, in early **1980**, it begins Piper PA-31-310 Navajo scheduled passenger flights to Bishop, California, but cannot maintain them until the end of the year.

TRANS SOUTHERN AIRWAYS: United States (1983–1985). Established at Florence, South Carolina, in **1983**, Trans Southern, in association with **Tennessee Airways**, undertakes daily roundtrip scheduled third-level passenger and cargo services to Atlanta and the North Carolina city of Charlotte.

The carrier's two Piper T-1040 turboprops continue flying these routes until the company shuts down in May **1985**.

TRANS STATES AIRLINES: 9275 Genaire Drive, St. Louis, Missouri 63134, United States; Phone (314) 895-8700; Fax (314) 895-1040; <http://www.transstates.net>; Code 9N; Year Founded 1989. To better reflect its growth and to support the long-term goals of **Trans World Airlines (TWA)**, St. Louis-based **Resort Air** is renamed as Trans States Airlines in June **1989**. President Hulas Knodia oversees a workforce of 420 and operates a fleet of 15 Fairchild Metro II/IIIs and the first 2 of 5 ordered ATR42-320s that had been received during the spring. The airline makes an unsuccessful bid to takeover **Air Midwest** during the summer. Three more ATR42-320s join the fleet by December and orders are placed for ATR72-200s. All are painted in a red and white modified version of the major's livery.

Enplanements for the year under both names total 491,580 passengers, a 47.6% boost.

In **1990**, two Metro IIs are withdrawn and a sixth ATR42-320 is acquired. Orders remain outstanding for ATR72s.

Late in the fall, the other St. Louis "TWExpress" carrier, **Air Midwest**, agrees to become a subsidiary of **Mesa Airlines**. Citing market conditions, it agrees to sell its operation there to Trans States.

Enplanements for the year total 594,395, a 20.8% boost.

The fleet totals 52 aircraft in **1991**. On February 1, **Air Midwest** President Robert Priddy sells his company's St. Louis operation to Trans States for \$12 million. Along with route authority, TSA receives 8 Embraer EMB-120 Brasilias and 15 British Aerospace BAe Jetstream 31s. Also included in the acquisition are ground station and maintenance equipment plus fuel in ground in 19 cities, options on 15 more Jetstream 31s, and \$7.4 million in long-term debt.

The first ATR72-202 is delivered in April and introduced into service on the longer route segments.

These moves assist passenger boardings to skyrocket 88.6% to pass the million mark for the first time (1,121,291). Revenues total \$93.62

million and expenses are \$89.85 million, guaranteeing an operating profit of \$3.76 million. Net gain is \$1.54 million.

In **1992**, the number of Metros is reduced to 6, while the number of Jetstreams is increased to 22. The TWA parent begins to replace Trans States service, using jetliners, from St. Louis to Chicago (MDW), Louisville, Lincoln, and Knoxville. Frequencies on the route from St. Louis to Springfield, Illinois, are increased to 10 daily roundtrips.

Customer bookings this year swell a further 44.5% to 1,322,183 and revenues reach \$106 million. Expenses are held down and allow profits: \$3.65 million (operating) and \$238,649 (net).

In **1993**, President Kanodia oversees a workforce of 933 and a fleet of 43 aircraft. In the spring, a new company, **UFS (United Feeder Service, Incorporated)**, is formed to take over **Air Wisconsin's** remaining BAe ATP turboprop operations. In June, TSA becomes an associate member of CASE (Coordinating Agency for Supplier Evaluation). It will become a sustaining member during the second quarter of 1994.

The great Midwestern floods of the summer and fall impact traffic. Still, the ATP purchase from **United Airlines** is effective on September 1. On that date, the nine repainted British propeller-liners, flying under the direction of special projects manager Gary Santos, inaugurate scheduled UFS flights from Chicago (ORD) to Akron/Canton, Youngstown, Fort Wayne, and Green Bay.

Other company destinations now visited in the East include Birmingham, Bloomington, Burlington, Cape Girardeau, Cedar Rapids, Champaign, Chicago (Meigs Field and MDW), Columbia, Decatur, Evansville, Fayetteville, Fort Smith, Fort Leonard Wood, Joplin, Knoxville, Lexington, Lincoln, Louisville, Memphis, Madison, Marion, Moline, Paducah, Peoria, Sioux City, South Bend, Springfield, Illinois, Springfield, Missouri, Quincy, and Waterloo.

In December, the "USAir Express" routes of **StatesWest Airlines**, which had failed in October, are assumed. The company's new California division provides service to 10 cities with operational control functions provided from St. Louis.

Passenger boardings ascend only 5% to 1,387,865, but revenues rise 8.7% to \$115.16 million. Expenses climb only 2.1% to \$104.43 million and allow operating profits to triple up to \$10.72 million. Net gain surges to \$8.26 million.

Airline employment is reduced by 3.6% in **1994** to 900.

The Jetstream 31s, wearing Trans States livery, are assigned to a new hub at Los Angeles, where, in early April, they take over the "USAir Express" service previously operated by defunct **StatesWest Airlines**. Destinations visited by the British-made turboprops include Sacramento, Monterey, Fresno, Santa Barbara, San Diego, and Palm Springs.

During July, **Northwest Airlines** and **Alaska Airlines** reach agreement with Trans States to offer code-sharing on the commuter flights out of Los Angeles (LAX) and San Francisco to seven California cities. This innovative arrangement is the first triple code-sharing agreement in the United States.

In November, a \$420-million order is placed for 25 Jetstream 41s, with options for 10 more. Also during the month, four daily J-31 "TWExpress" roundtrips are introduced from St. Louis to Fort Wayne, Indiana.

The year's customer bookings recover, shooting up 22.5% to 1,662,135. Revenues advance by 25.2% to \$144.22 million, while expenses rise only 18.5% to \$123.74 million. The resulting operating surplus doubles to \$20.48 million, while the net profit more than doubles to \$18.5 million.

The workforce is reduced to 750 in **1995**, but the fleet is increased by the addition of 12 Jetstream 41s, beginning with three initial deliveries, one each in January, February, and May. The new aircraft replace EMB-120s on a one-for-one basis on the 200–400 mile sectors out of St. Louis, including Birmingham, Sioux City, and Evansville. Meanwhile, the last Metro is sold in March.

When, on November 6, **Trans World Airlines (TWA)** shuts down **TWExpress**, which it had purchased as **Pan Am Express** (formerly **Ransome Airlines**) out of the assets of its onetime rival a few years earlier, its East Coast services are contracted out to Trans States.

President Kanoida's growing regional also maintains its TWA link at St. Louis and its "USAir Express" service on the West Coast. All remaining EMB-120s are withdrawn in December as the last of 12 J-41s arrive. Trans States is now the largest airline at Lambert Field save **Trans World Airlines (TWA)** itself.

Enplanements inch up 1.5% to 1,725,000. Revenues exceed costs and leave profits: \$12.58 million (operating) and \$11.66 million (net), both figures down from the previous year.

The employee population is boosted 24.5% in **1996** to 934. The fleet now includes 3 ATR72-202s, 8 ATR42-300s, 33 Jetstream 31s, and 12 Jetstream 41s, with 13 more of the latter on order and options for 35 more. The newer aircraft are painted in a striking new livery based on that introduced by **Trans World Airlines (TWA)** the previous October.

On May 1, daily roundtrips are introduced between Gary Regional Airport and Champagne, Illinois, with connecting service to St. Louis. Addition of the former "TWExpress" routes provides a traffic bonanza as passenger boardings jump 23% to 2,121,000, on 160,668 scheduled departures.

Operating income accelerates 34.5% to \$190.67 million and expenses are up only 26.6% to \$163.56 million. The operating profit more than doubles to \$27.1 million and a \$26.17 million net profit is posted.

The employee population is increased by 7.1% in **1997** to 1,000. Early in the year, the company begins to receive additional J-41s painted in the updated red, blue, and gold color scheme of the parent. Four-times-per-weekday "USAirways Express" Jetstream 31 nonstops commence on October 1 between Sacramento and Santa Barbara.

In December, a letter of intent is signed for seven Embraer ERJ-145 Amazons, with seven options.

Passenger boardings accelerate 12.5% to 2,386,000 on 174,740 scheduled departures. Operating revenues rise 9.7% to \$208.36 million. Expenses jump 12.1% to \$183.16 million and cause the operating profit to slide to \$25.2 million. Net gain drops to \$24.69 million.

The fleet at the beginning of **1998** includes 6 ATR42s, 3 ATR72s, 35 BAe Jetstream 32s, 25 Jetstream 41s, and 4 ERJ-145s.

A "Delta Connection" contract is entered into with Atlanta-based **Delta Air Lines** during January covering feed at New York (JFK). The incumbent "Delta Connection" partner, **Business Express (BEX)**, shifts its emphasis to New York (LGA) and Boston when the new TSA contract begins in April.

At the Asian Aerospace Show in early 1998, the company places orders for 9 more ERJ-145s, with options taken on 18 more. Upon their arrival, starting in June, most of the new ERJ regional jets, painted in the modified colors of **United Airlines**, are employed on "United Express" services out of Chicago (ORD).

With receipt of the sixth ERJ-145, painted its own Trans States color scheme, the regional, on November 1, initiates thrice-daily "Delta Connection" jet service from Raleigh/Durham to New York (JFK).

After five months of unsuccessful contact negotiations with management, the ALPA local chapter on November 19 requests the intervention of the NMB in the discussions.

At the end of the month, the carrier converts its option to purchase 9 more ERJ-145s, bringing its total confirmed order to 15. Options remain for 12 others.

During the 12 months, customer bookings climb 2.69% to 2.45 million. Revenues climb 5.6% to \$220.08 million, while costs are up 9.2% to \$199.89 million. Operating gain slides to \$20.18 million, while the net profit drops to \$18.94 million.

Airline employment has been cut by 6.6%, to 799, in **1999**.

The company begins to receive its first ERJ-145 ExpressJets during the early summer. On July 21, it is announced that the new aircraft will be employed, beginning on September 19, to inaugurate "Delta Connection" return flights between Boston and Philadelphia, eight times a day. The new service will be increased by four more frequencies on November 15.

The existing "TWExpress" contract with **Trans World Airlines (TWA)** is renewed on August 20.

Thrice-daily ERJ-145 roundtrips are inaugurated on December 5 from Atlanta to New York (LGA).

Passenger boardings drop 2.7% to 2,384,000. Although revenues are up 4.2% to \$229.41 million, expenses jump 14.8% to \$229.55 million. The previous year's profits become losses: \$138,000 (operating) and \$1.8 million (net).

Airline employment at the beginning of **2000** stands at 2,402, a 3.3% decline over the previous 12 months.

The number of daily ERJ-145 return flights to Colombia, South Carolina, from New York (LGA) is increased on February 10 from one to three; those to Charleston are increased from one to two. On April 5, the carrier's ERJ-145s are assigned to take over 4 of 12 **USAirways Shuttle** roundtrips between Washington, D.C. (IAD) and Boston.

On April 14, plans are announced by **USAirways** for a massive increase and expansion of regional services from New York (LGA) in the period between July and October. New flights, some of which will also be flown by **USAirways Express (Mesa Air Group)**, will start to Bedford, Binghamton, Elmira, Manassas, Richmond, Roanoke, Greensboro, and Greenville-Spartanburg. Present frequencies will be increased in number to Albany and Syracuse, Baltimore, Birmingham, Burlington, Charleston, Columbia, Charlottesville, Norfolk, Harrisburg, Hyannis, Martha's Vineyard, Nantucket, Portland, and Providence. Additionally, ERJ-145 "TWExpress" service is initiated from St. Louis to Fayetteville and Peoria.

Having been in negotiations with its pilots since November 1998, Trans States' ALPA-represented pilots commence informational picketing at St. Louis and New York (JFK) on May 15. The action comes in the last phase of a government-required 30-day "cooling off" period. The company narrowly avoids a strike on May 27 when it comes to terms with its 530 ALPA-represented flyers. The 11th hour agreement avoids a job action that could have shut down the carrier's operations from New York (JFK) and St. Louis.

In something of a surprise, the carrier's ALPA-represented pilots vote on July 10 to reject the new May 27 contract and indicate a desire to reopen negotiations. While bidding for a new contract, the pilots picket (informational only) company headquarters on July 24. With a job action only hours away on July 26, the company and its ALPA-represented pilots reach an agreement on a new contract.

It is announced on September 15 that Trans States will cease operations as a "Delta Connection" carrier by March 31. Prior to that date, the company will gradually transfer most of its "Delta Connection" routes by January 1 to **Atlantic Coast Airlines**, **Atlantic Southeast Airlines**, and **Comair**. Flights from New York (JFK) and Cleveland to Boston will be operated under the company's own name thereafter.

On December 2, twice-daily "USAirways Express" Jetstream 41 roundtrips are initiated between Baltimore and Newburgh, New York, while thrice-daily "USAirways Express" J-41 return flights begin from Newark to Richmond, Virginia.

As the result of a spring law allowing an increase in traffic, New York (LGA) has, by early December, added more than 200 new daily flights and requests have been made that will increase the daily total by almost 600. In an effort to handle an increase certain to exacerbate existing delays and congestion, the FAA and the Port Authority of New York and New Jersey begin coordinating planning while imposing a September moratorium on new La Guardia flights.

On December 4, the FAA holds an action to distribute the available takeoff and landing slots. Each carrier serving the airport draws a certain number, with each then choosing lots for first choice of times for those slots. "USAirways Express" receives 20 of the new positions. In a supplemental auction for the slots previously assigned to defunct **Legend Airlines**, "USAirways Express" receives an additional slot.

As the year ends, it is announced that the carrier will begin daily "USAirways Express" ERJ-145 flights from Baltimore (BWI) to Charleston, West Virginia, on April 1 and from Memphis to Pittsburgh on April 6.

Overall customer bookings during these 12 months fall another 26.01% to 1,764,000.

TRANS TEXAS AIRWAYS: United States (1940–1969). R. Earl McKaughan organizes the aircraft sales and service company Aviation Enterprises at Houston in 1940. After appealing to the CAB for local service authority in 1943, McKaughan incorporates on November 14, 1944. Following the Texas–Oklahoma Route Case, the government awards five routes in 1946 to be effective as of May 12, 1947. The corporate name is altered to Trans Texas Airways on June 21 of the latter year, and scheduled Douglas DC-3 services are inaugurated on October 11.

McKaughan's Douglasses fly two routes from Houston: one to San Angelo via Palestine, Dallas, Fort Worth, and Brownwood and the other to San Antonio via Victoria. At year's end, frequencies are started from San Antonio and San Angelo to El Paso. Extensions on these routes are made south and east in 1948 to Brownsville and to Beaumont and Port Arthur.

By 1949, the route system of Trans Texas boxes in an area from El Paso in the west to Dallas in the north to Galveston in the east and Brownsville in the south.

Five years later, in April 1953, services are extended northward to various large and small markets, including Shreveport, Pine Bluff, and Memphis. The carrier's 20 DC-3s, now called Super Starliners, maintain these routes for six years. In April 1959, the network is enlarged by the opening of additional markets at New Orleans and Little Rock.

A DC-3 with 20 aboard encounters severe turbulence over Dallas on May 29, 1960; the flight attendant is badly hurt. Another flight attendant is killed when the Douglas on which she is serving loses its brakes and crashes into a parked DC-7B at Houston on July 22.

As successor to its DC-3s, the carrier places the first of 25 Convair CV-240s into service on April 1, 1961. These are employed during the remainder of the year and into 1962 to maintain current operations initiate new service along routes transferred from **California Airlines**; additional destinations now include Albuquerque, Santa Fe, and Clovis.

The CAB permits nonstop Houston to Austin flights as of November 12, 1963. On November 19, service begins to Dallas from Houston.

Enplanements for the year total 310,080.

Trans Texas experiences the greatest growth in the local airline industry during 1964. Airline employment is now 1,277 and the fleet includes 48 aircraft. As a consequence of additional route awards made late in the previous year in the Southwestern Area Local Service Case, the carrier now adds 13 new markets in Texas and New Mexico. In September, the company makes its first public stock offering; it is the last local service airline to do so.

In late fall, President McKaughan announces plans to reengine his 25 Convairliners with Rolls Royce turboprops, thereby converting them into CV-600s. The \$14-million upgrade will also allow for the simultaneous installation of ground and in-flight air conditioning.

Passenger boardings skyrocket 56.5% to 712,827, a new high in customer traffic for the airline. Operating revenues jump 44.6% to \$18.7 million and expenses climb but 41.2%, leaving a profit of \$1 million.

The workforce in 1965 grows to 1,472 and the fleet is reduced to 43 aircraft. Twenty-five of these machines are Convair CV-240s that will now receive a \$15-million conversion; Rolls Royce RDa10 Dart turboprops and new interiors will vastly improve the old piston engine machines. Orders are placed for seven DC-9s, five in CF configuration. A First Rider promotion is undertaken that allows a \$25 roundtrip fare to customers who have not previously flown. A CV-240 with 10 aboard makes a ground loop while landing at College Station, Texas, on November 8; several aboard are badly hurt.

Bookings climb 29.4% to 922,367.

A key year in the history of Trans Texas Airways is 1966. By February 1, its route network has been significantly strengthened by the receipt of 13 Texas and New Mexico markets from other airlines and by **Eastern Air Lines'** withdrawal from all stops on its Houston–New Orleans run. When Trans Texas introduces its CV-600 Silver Clouds on the Houston to Dallas via Beaumont service on March 1, it virtually has control of the entire feeder route system of the U.S. Southwest.

On August 17, the company becomes an international airline through a CAB award of operating rights from south Texas cities to Monterrey, Tampico, and Vera Cruz in Mexico. The year ends on a high note when, on October 30, the carrier becomes the fifth local service carrier to introduce the Douglas DC-9; its seven new DC-9-10s will cost \$51 million and are called Pamper Jets.

Enplanements for the year are 1,184,220 and revenues are \$20,572,000.

As a result of this expansion, Trans Texas goes into a financial tailspin in 1967. The workforce now stands at 2,021 and the fleet includes 30 aircraft: 3 CV-240s, 17 CV-600s, 8 DC-3s, and 2 DC-9-10s. Orders are placed or remain outstanding for 2 DC-9-30s and 8 CV-600s. In August, a new computerized reservations system comes on-line at Houston (HOU), where a new headquarters facility is also occupied. A new hangar is opened at Midland/Odessa and another begins construction at Dallas (DAL).

In October, Chairman McKaughan retires to become chairman emeritus; his son, Richard, already president, becomes CEO, with J. L. Her-ring as vice president-operations. Sixteen DC-3s and spares are sold in November for \$783,000. Five more DC-9-10s have joined the fleet since spring and the 7 jetliners provide all-jet service to 20 of the company's 65 markets.

Passenger boardings climb 19% to 1,462,000 and revenues jump 26% to \$27.8 million.

The employee population in 1968 numbers 1,961 and the fleet includes 34 aircraft. A number of new terminal facilities are completed or are nearly so and the company's International, Inc. subsidiary purchases control of the Hotel Conquistador, Inc. holding company for control of the Las Vegas landmark, the Tropicana Hotel. The transition of the fleet to all-jet aircraft is completed in October: 11 DC-9s and 25 CV-600s.

During the fourth quarter, control of the corporation passes to Minnesota Enterprises. By merging into a wholly owned Delaware subsidiary, stockholders now vote to change the company name and corporate image the following spring.

For this year, passenger bookings accelerate 33.5% to 1,905,050 and cargo traffic jumps 50.2%. Revenues are \$41,419,019.

The new owners order the introduction of Houston to Denver service on March 1, 1969 with an extension to Salt Lake City on April 1. Non-stop San Antonio to Dallas flights begin the same day. And before sundown, a change in corporate identity occurs as Trans Texas becomes **Texas International Airlines**.

TRANS TRAVEL AIRLINES, B.V.: Arendweg 21, 8218 PE Lelystad Airport, Rotterdam, The Netherlands; Phone 31 (0) 320 28 84 00; Fax 31 (0) 320 28 84 01; <http://www.tta.nl>; Year Founded 1985. Tur-dus Airways, B.V. is established as an FBO at Rotterdam in 1985. Over the next decade, it also comes to operate general aviation, aircraft leasing, air taxi, and air ambulance services.

In May 1996, Turdus Airways establishes a scheduled airline division, TTA. L. Maars is named president, with Mrs. A. de Groot as director general. Employing 2 de Havilland Canada DHC-8-100s plus the Turdus Beech Super King Air 200, the company inaugurates revenue services in October with thrice-daily roundtrips to Hamburg. Service is maintained over this single route during the next year and a total of 12,500 passengers are flown. During the year, interline agreements are signed with **KLM (Royal Dutch Airlines, N.V.)**, **Sabena Belgian World Airlines, S.A.**, and **British Airways, Ltd.** (2).

On May 3, 1998, a new route is opened from Rotterdam to Goteborg, Sweden, operated with a Beech 1900D. In December, a homepage is launched on the Internet's World Wide Web. Enplanements for the year reach 30,000.

A third route, from Rotterdam to Copenhagen, is inaugurated on August 2, 1999. It, too, is operated with the Beech 1900D. Passenger boardings climb to 40,000.

Airline employment at the beginning of 2000 stands at 40. All 3 company routes are now operated thrice-daily.

TRANS UNION AIRLINES, S.A.: France (1967–1971). Trans Union is established in 1967 to operate passenger charters throughout Europe and Africa. Revenue operations begins and continue with a fleet of 3 Douglas DC-6Bs, previously owned by **Sabena Belgian World Airlines, S.A.** Upon its failure in September 1971, the carrier is purchased for its aircraft by **Europe Aero Service, S.A.**

TWA AIRLINES: One City Center, 515 North 6th Street, St. Louis, Missouri 63101, United States; Phone (314) 589-3000; Fax (314) 589-3129; <http://www.twa.com>; Code TW; Year Founded 1950. In keeping with its global service pattern, **Transcontinental and Western Air, Inc. (TWA)** is renamed on May 17, 1950, but is adroitly able to retain its previous company initials. New logos and liveries are introduced. The company is certified to serve 60 cities in the U.S. The company's coast-to-coast, one-way fares at this time are \$157.85 (\$110 Sky Coach), a considerable savings over the 1929 TAT price of \$351.94.

The L-049 Constellation *Star of the Mediterranean* is badly damaged in a nonfatal crash landing at Pittsburgh on May 23; the DC-4s employed earlier to offer daytime coast-to-coast service are replaced by L-049s, beginning on May 25. On June 19, 4.33 million revenue passenger miles are flown in a single day—a company record. The L-049 *Star of Greece* is damaged at St. Joseph, Missouri, on June 21 when a fire breaks out in engine nacelle No. 1 before takeoff on a training flight.

While awaiting delivery of an order for 40 Martin 4-0-4s, TWA agrees to lease 12 unpressurized 2-0-2As. The first, *Skyliner Burbank*, is delivered on July 14.

En route from Bombay to New York on August 30, a Lockheed L-749A with 7 crew and 48 passengers crashes near Wadi Natrun, in Egypt's Nile Delta near Cairo; there are no survivors.

The next day, Martin 2-0-2As are introduced on a route from New York to Kansas City, as well as other short domestic segments. When the White House overturns the CAB recommendation on September 25 allowing **Pan American World Airways (1)** to purchase **American Overseas Airlines**, it also makes certain that the regulators grant TWA permission to service London and Frankfurt. All-cargo coast-to-coast DC-4 flights begin on November 13 while, on December 5, orders are placed for 10 L-1049A Super Constellations.

During the year, all interest in **Aerovias Brazil, S.A.** and **British West Indies Airways, Ltd.** are sold. The fleet now comprises 61 Constellations, the world's largest fleet of postwar 4-engine commercial aircraft yet assembled. In addition, 12 Douglas DC-4s, 58 DC-3s, and 5 Boeing 307 Stratoliners are inventoried. Frequencies are maintained over 4 continents and transatlantic enplanements are 66,000.

The L-049 *Star of the China Sea* is damaged on January 5, 1951 when it is forced to make a belly landing at Phoenix. Impressed with the record-breaking flight of the Avro Canada, Ltd. C-102 prototype between Toronto–Chicago–New York–Toronto on January 10, Howard Hughes charts the Jetliner as his private aircraft for the next year. L-749As, outfitted in a deluxe 18-berth sleeper layout, inaugurate The London Ambassador service on April 8.

The L-049 *Star of Egypt* is leased to Lockheed on April 13 for Jet Stack tests; the Constellation is returned on May 17 as the first of her type with Jet Stacks. The five Boeing 307 Stratoliners are withdrawn in April and sold to the French independent airline **Societe Aigle Azur, S.A. (SAA)** between May and July.

Five additional L-749As, plus three taken over from a **Delta Air Lines** order, are delivered during the first two quarters. The new L-749A *Star of Colorado* is delivered to Howard Hughes in June; it will never enter TWA service. Shareholding in TAE is reduced to 15.4% at the beginning of July. During the same month, a Missouri River flood submerges the company overhaul base at Fairfax Municipal Airport, near Kansas City, under 15 feet of water. TWA employees are able to rescue three DC-3s, a DC-4, a Martin 2-0-2A, and an L-049. In the aftermath, Kansas City and TWA begin development of a new, flood-proof TWA overhaul base and a new international airport north of the city.

Marking the anniversary of a Columbus voyage, the carrier undertakes Madrid to New York L-749A flights on August 3.

The first of nearly 50 Martin 4-0-4s, christened *Skyliner Baltimore* for the city where it was built, is placed into service on October 5; the type is the first in the fleet painted in the attractive white crown skin livery. Upon the assumption of full control of **TACA (Transportes Aereos Centros Americanos, S.A.)** by the Waterman Steamship Company, TWA sells all of its remaining shares in the Honduran enterprise. Transatlantic boardings accelerate to 73,000.

Beginning on January 3, 1952, the carrier replaces its DC-3s with Martin 4-0-4s on its routes from New York, Washington, D.C., and Kansas City. To end a fare war begun late the previous year, TWA, on January 9, agrees to the introduction, with **American Airlines** and **United Air Lines**, of a \$99 transcontinental coach-class service; \$99 coast-to-coast Sky Tourist fares are introduced on January 11.

When a curious soldier tests it, the emergency door of a Martin 2-0-2A en route from Pittsburgh to Chicago on February 24, is jettisoned; the plane is able to safely return to Pittsburgh. Also in February, the CAB grants the airline permanent rights to transport passengers to Paris and Rome via Ireland.

Three are hurt when a gasoline truck, refueling an unoccupied Constellation at Idlewild Airport on April 21, catches fire. Boston to London and New York to Paris Sky Tourist flights commence on May 1; the roundtrip fare is \$486 with \$4 extra for meals; there is no liquor provided. The first TWA Ambassadors Cup is opened at Greater Pittsburgh Airport on May 2.

A permanent certificate for Bombay service is received from the CAB in June. Daylight L-1049A transcontinental service begins on September 10 and, on September 10–11 the Super Constellations introduce transcontinental Ambassador deluxe sleeper service. At this point, the practice of naming selected flights is dropped and all coast-to-coast services are flown under the Ambassador label. Also in September, the last 4-0-4 is delivered.

On October 1, it is reported that the 21,000 tourists were flown between May 1 and August 31; simultaneously, it is noted that a record 183 million revenue passenger miles are flown in September.

The New York to San Francisco Super Constellation frequency is doubled on October 22 to twice daily. Although the eastbound service is made nonstop in under 8 hours, the westbound run must still stop at Chicago.

Also during the fall, President Damon accepts an invitation from the Newcomen Society to address a dinner in New York City; as is the Society's customs, his remarks are published in a small pamphlet, *TWA: Nearly Three Decades in the Air*.

A total of 90,000 customers are transported across the Atlantic this year and TWA's interest in **Linee Aeree Italiane, S.p.A. (LIA)** is reduced to 30%.

A 10% stock dividend is paid in January 1953. On April 1, an interline agreement is signed with **Chicago & Southern Air Lines** allowing both companies to offer through-plane service from New York to Houston using, where necessary, each other's stops en route. The L-049 *Star of the China Sea* is damaged at Baltimore on May 2 when an oxygen bottle explodes, causing a fire in the cockpit and forward cabin.

A new one-day record of 10.18 million revenue passenger miles is celebrated on June 14, but company navigators go on strike between July 10–21. A three-year contract is signed with the government of Ethiopia on July 28, renewing the 1945 support agreement for the operation of **Ethiopian Airlines, S.C.**

Daily nonstop San Francisco to Las Vegas service begins on August 4, followed by twice-weekly flights from the U.S. to Ceylon beginning on August 30. L-1049C Ambassador service is opened between New York and Los Angeles and Los Angeles to New York on October 19. Eastbound flights, advertised as the first scheduled nonstop transcontinental flights, can be made nonstop in 8 hours or less while the westbound service, still fighting the wind, must refuel at Chicago.

During the summer, the Bombay terminus is stretched to Ceylon and orders are placed on September 12 for 20 L-1049Es.

North Atlantic bookings pass the 100,000 mark for the first time (107,000), while systemwide, the year's boardings exceed 3 million.

A Super Constellation flies from New York to Paris on January 12, **1954** in a record 10 hrs. 12 min; the record is lost to **Air France** the next day. Six days later, an L-1049A flies from San Francisco to Chicago in a record 5 hrs. 7 min. New York to London all-cargo service is opened on February 16.

While landing at Albuquerque on April 21, an L-1049A rams into a USAF barracks; fortunately, no injuries are reported. On May 18, U.S.-German all-cargo flights are launched. Also during the spring, an appeal is filed with the CAB seeking the substitution of Tokyo for the Shanghai terminus granted earlier; it is not granted. Through May and into June, the company takes possession of three L-749As purchased from **Chicago & Southern Air Lines**.

Two-way nonstop New York to San Francisco L-1049A flights begin on June 19, followed by a nonstop New York to Los Angeles service on September 19. Howard Hughes' L-749A *Star of Colorado* is sold to **British Overseas Airways Corporation (BOAC)** in the fall to help that carrier add capacity in the wake of the failure of its Comet I jetliners.

A total of 118,000 passengers are flown over the Atlantic.

While on a January 12, **1955**, scheduled service, a Martin 2-0-2A with 3 crew and 10 passengers suffers a midair collision at 900 feet over Covington with a Castleton, Inc. DC-3 executive aircraft, with two crew, which is operating in the area without clearance. Both aircraft crash and there are no survivors; this is the carrier's first domestic fatal accident since December 1944.

In cooperation with **Braniff International Airways**, an interchange service is inaugurated on January 14 from Dallas to Las Vegas via Amarillo using TWA L-749As.

Flight 260, Martin 404 *Skyliner Binghamton* with 3 crew and 16 passengers en route from Albuquerque to Santa Fe on the first leg of a flight to Baltimore, disappears into the mountains near the former New Mexico city on February 19. The wreckage is later found at the 11,000-ft. level of 13,000-ft. Sandia Mountain and there are no survivors. The CAB Bureau of Safety will find that the aircraft's pilot, Capt. Ivan Spong, had intentionally flown off course.

Equipped with wing-tanks, the L-1049G *Star of Chambord* is received on March 14 and enters service on April 1. Also in April, the carrier is allowed to begin flying into Zurich.

On June 1, the Greek government acquires operational control of **TAE Greek Airlines, S.A.** An L-1049A with 67 aboard makes a forced landing at Iowa City on August 7; however, no injuries are reported. A CAB ruling in September allows the carrier to substitute a stop at Detroit for one at Pittsburgh on its New York-Chicago route. Two-class service (Sky Tourist and First Class) are introduced by Super Gs on September 25, the first such same-plane split in the U.S. industry.

Super Gs are assigned to international service for the first time on October 30, flying Los Angeles to London in the first California-U.K. frequency offered by an American airline. As a result of the CAB's Denver Service Case, TWA wins access to the Colorado capital on November 14. North Atlantic bookings reach 127,000.

President Damon dies on January 4, **1956** and John Collings is appointed his acting CEO successor. Two-class transatlantic service is initiated between New York and London, Paris, Rome, and Frankfurt, on January 9 and four days later, on January 13, company Martins begin stopping at Denver.

The L-749A interchange service from Dallas to Las Vegas via Amarillo ends on March 1. On March 3, the number of flights is increased to 100 per week and service is added to Athens and Cairo. The L-049 *Star of Africa* hits an automobile with its propeller at Denver on March 11; no injuries are reported.

An order is placed for 18 Boeing 707-331s on March 19. In the first major commercial air disaster of the year, the wingtip of a Martin 4-0-4 with 3 crew and 33 passengers hits a hillside just after takeoff from Pittsburgh on April 1, causing the airliner to crash and burn (22 dead).

New York to Washington, D.C. service is opened on April 30.

Orders are placed for 30 Convair CV-880s on June 21.

The worst civil aviation disaster to date occurs on June 30. Flight 2, the company's L-1049G Super Constellation *Star of the Seine*, and Flight 718, the **United Air Lines** DC-7 *Mainliner Vancouver*, are both en route eastward 3 minutes apart from Los Angeles. With heavy thunderstorms in the area and both aircraft in similar patterns, the Lockheed seeks permission to fly 1,000-ft. above the 20,000-ft. cloud ceiling where the Douglas is cruising. Permission is granted and the airliners collide 21,000 feet over Arizona's Grand Canyon (128 dead).

The accident will receive intense media exposure and lead to calls for government changes in the nation's air traffic control situation. Donald B. Jr. and Michael B. McComb review "Final Destination: The Story of Flight 2 and Flight 718" in *Airliners* 5 (Spring 1992): 41-47.

The CAB grants routes to Manila and Bangkok in early fall and on October 1 the company joins with American Export Lines to organize the first combined air-sea European cruises. Designed to compete with the DC-7C, the first of 25 L-1649 Starliners slated for the carrier makes its maiden flight on October 11; the giant piston-engine airliner will be the first capable of flying nonstop either way across the North Atlantic.

A Martin 4-0-4 with 3 crew and 35 passengers is wrecked as the result of a bad landing at Las Vegas on November 15; there are no fatalities.

Also during the last quarter, the L-049s *Star of Ireland*, *Star of China*, *Star of Greece*, *Star of Lebanon*, and *Star of Lisbon* are chartered to **Eastern Air Lines** for a year or less. On December 17, the board elects Carter L. Burgess as president.

Transatlantic enplanements are 142,000.

When Aristotle Onassis takes control of **TAE Greek Airlines, S.A.** on January 1, **1957**, he purchases TWA's 15.4% interest. The carrier receives a contract from Ethiopia on January 26 to train its airline's pilots. Beginning under a February 16 ICA contract, officials inspect **Air India, Ltd.** operations in order to recommend improvements; longtime Hughes associate and board member Noah Dietrich is removed from his offices on March 11.

L-749 Sky Tourist service is introduced in April and also during the month, a 21-year-old DC-3 employed for training purposes is sold to **Cruzeiro do Sul, S.A.** The first of 25 ordered Lockheed L-1649A Starliners is delivered on May 26 and christened *Star of Vermont*. It is followed by the arrival of the *Star of Ebro* on May 31.

Employing the new Starliners, TWA commences nonstop Jetstream service New York to London and Paris on June 1. The next day, a leased Lockheed C-121A is delivered to **Ethiopian Airlines, S.C.** Complete with the Lion of Judah insignia in gold on its forward fuselage, the aircraft is outfitted with a removable stateroom for Emperor Haile Selassie. By June 15, 10 Starliners are in service and several are placed on the nonstop Ambassador service from New York to Los Angeles and San Francisco.

Frankfurt becomes a Jetstream destination on July 1. Two engines take fire on a July 10 scheduled flight by the Ethiopian C-121A north of Khartoum and the plane crash-lands; although no injuries are reported, the Constellation is so badly damaged that it must be written off. The twentieth L-1639A is delivered on July 26. In mid-August, L-1649As begin flying from Boston to Los Angeles and from Washington, D.C. to San Francisco.

When **Linee Aeree Italiane, S.p.A. (LIA)** is merged into **Alitalia, S.p.A.** on September 1, all TWA interest is withdrawn in the former. The final Constellation model is also used to launch flights from Los Angeles to London over a Great Circle polar route on September 29 and on October 1, flights begin to Manila and Bangkok. Los Angeles and San Francisco to Paris and Rome L-1649A flights begin over the Great Circle route on October 2. A refueling stop is made at Frobisher Bay, on Baffin Island, where Imperial Oil has just installed new fuel tanks. Simultaneously, the first nonstop New York to Rome service is inaugurated, again with L-1649As.

TWA occupies its new \$25-million maintenance and overhaul base at the new Mid-Continent International Airport at Kansas City, having

transferred these activities over from its longtime facilities at Municipal Airport, where flight operations continue. During the third quarter, the L-049s *Star of India*, *Star of London*, and *Star of Rome* are leased to **Eastern Air Lines** for a year or less.

The L-049 *Star of Switzerland* is damaged at St. Louis on December 19 when it goes into a ground loop during a turn off a wet runway and the right gear collapses. Carter Burgess resigns on December 31, the same day Howard Hughes authorizes an order for 9 L-1049H freighters, 2 of which are delivered within 24 hours.

A loss of \$1.5 million is suffered on the year. A total of 154,000 people are flown over the Atlantic.

The first edition of *Ambassador Magazine* is published in January 1958. Also at the beginning of the year, three L-1049H Super Constellations owned by **California Eastern Aviation (CEA)** and operated by the Argentine carrier **Transcontinental, S.A.** are leased for three years at \$45,000 per month per plane. Originally ordered by **Resort Airlines**, two other L-1049Hs are also received, along with four purchased from Lockheed.

On March 3, an L-1649A with 28 aboard flies nonstop from London to San Francisco in a record time of 19 hrs. 5 min. Late in the month, the DC-4 *Le Moulmein Pagoda* is withdrawn and sold to Eastern Aircraft Sales. Economy-class service is introduced on international flights on April 1 while retired chain-store official Charles S. "Two-Pants Charlie" Thomas succeeds Carter Burgess as president on July 2.

The unlucky L-049 *Star of the China Sea* is damaged in yet another ground accident, this time at San Francisco on August 13 when a jack collapses during a maintenance check. On October 6, the leased CEA L-1049Hs commences twice-weekly New York-London all-cargo services. A job action by members of the IAM ground the airline between November 21 and December 8.

The company's premier Boeing 707-131 Stratoliner makes its maiden flight at Renton, Washington, on December 3. The fleet now comprises 8 DC-4s, 71 L-049s and L-749s, 41 L-1049s, 29 L-1649As, and 48 Martins.

North Atlantic enplanements reach 161,000 and the year's loss totals only \$700,000.

The company's premier B-707-131 is delivered on January 29, 1959. Pioneer and 12-year President William John "Jack" Frye is killed in an automobile accident on February 3. The carrier's first B-707-131 is readied for service on March 17. Piloted by Capt. Gordon Granger, Flight 46, the new Stratoliner, inaugurates the company's first pure jet service from San Francisco to New York on March 20.

On April 1, B-707-131 frequencies are started from New York to Los Angeles. On April 13, service to Manila is halted; however, six days later, Stratoliner service is launched from Chicago to Los Angeles. Baltimore to Los Angeles and San Francisco jetliner frequencies start on June 1.

An L-1649A is employed on June 5 in a last-ditch attempt to snatch traffic for piston-engine airliners in the contest with the new jets; non-stop Chicago to London service begins on that day and is flown in 13 hrs. 10 min. The London-Chicago return is executed in 15 hrs. 50 min. Another B-707-131 is delivered on June 8. Although it had been the first Stratoliner built for the company, its delivery has been delayed by almost three months.

The L-1049G *Star of Edinburgh* suffers a fuselage failure during pressurization tests on June 24; the plane is written off after the accident and sold to California Airmotive, where it will be rebuilt as an L-1049H.

Flight 891, an L-1649A with 9 crew and 59 passengers explodes when lightning hits its fuel tank, causing the aircraft to crash in a thunderstorm 20 mi. NW of Milan, Italy, on June 26; there are no survivors.

Stratoliner service is inaugurated from Chicago to San Francisco on July 1 and from New York to St. Louis on July 21. Between July 30 and August 5, the carrier's new B-707-331 is flown to Moscow to pick up newsmen covering Vice President Richard M. Nixon's Russia visit; Nixon flies the airliner as far as Keflavik, holding a press conference while on board. Meanwhile, B-707-123 service is begun on August 2 from Kansas City to Los Angeles.

Four-times-per-week all-cargo services are instituted between New York and Rome during October. Later in the month, all L-1649As used for transcontinental flights complete configuration into economy- and coach-class. The first two of 12 B-707-331s are delivered on November 10.

B-707-331 transatlantic service begins, New York to London and Frankfurt, on November 23. North Atlantic bookings made prior to late November aboard piston-engine L-1649As, drop significantly, down to 146,000.

On November 24, shortly after takeoff for Los Angeles from Chicago (MDW), one of the engines of Flight 595, an L-749F with three crew, takes fire, forcing the plane to return. It crashes into small homes and apartments near the airport, killing its 3-man crew plus 13 people on the ground.

The fleet now includes 147 Constellations, including 29 L-1649As, 9 L-1049Hs, 9 L-1049As, 28 L-1049Gs, 12 L-749s, 27 L-749As, and 32 L-049s. One of the company's new B-707-331s is leased to **Northeast Airlines** on December 17. It is replaced in service by another B-707-331 delivered on December 23.

Landing gear failures cause damage to two aircraft on two succeeding days in February 1960: a Martin 4-0-4 landing at Olathe, Kansas, on the 28th and an L-1049G at Chicago the next day. New York to London and Paris B-707-331 frequencies are doubled on March 1. On March 20, an air conditioning unit door falls off a B-707-131 and lands on a Queens, New York home; no one is hurt. During the first quarter, Lockheed Aircraft Services begins the conversion of the *Star of Ebro* and five other L-1649As, previously used on The Jetstream transatlantic services, into freighters. At the same time, four Starliners are sold to the new Argentine carrier **Trans Atlantica Argentina, S.A.**

On April 2, a leased L-1049A that has been christened *Bounty* begins weekly service from Honolulu to Tahiti for **South Pacific Air Lines**. Also during the second quarter, the last L-1049As are withdrawn, with one leased to **The Flying Tiger Line**. A B-707-331 crash-lands at New York on May 9; all 109 aboard are injured to some degree. Also on May 18, the first Convair CV-880 is accepted as a trainer. B-707-331 flights are inaugurated via the Great Circle Route from San Francisco to Rome on May 21 and are stretched to Athens eight days later.

At the beginning of June, two L-1049As are purchased by **California Hawaiian Airlines** and a third is leased to **General Airways** for a year.

After a four year investigation, largely conducted and pushed by TWA Capt. Larry de Celles, the CAB issues an amended accident report on June 15 concerning the loss of Flight 260 on February 19, 1955. In its first-ever reversal of a finding document, the CAB safety bureau changes the cause of the disaster from an intentional flight path deviation by Capt. Ivan Spong to "unknown." At once, the tarnished reputation of a respected flyer is restored.

Charles Thomas resigns his presidency on July 28 over continuing operational interference by Howard Hughes. The carrier's bankers now demand Hughes transfer his control to a voting trust or lose any chance of future loans. The newly reconfigured L-1649A freighters begin to replace L-1049Hs on the transcontinental and transatlantic all-cargo runs during August.

Airline magnate Hughes resists his fate throughout the remainder of the summer and fall, but with the company's future up in the air, he finally agrees to the bankers' demands in early December.

An L-1049G with 8 crew and 63 passengers makes a hard landing at Barcelona on November 8; although the aircraft must be written off, there are no fatalities.

Failure of the No. 3 engine causes an L-1049G with 36 aboard to crash-land at Atlanta on December 5; no major injuries are reported. Daily transcontinental excursion fares on Constellations are initiated on December 12 and on December 15 the carrier begins to test the projection of motion pictures on its jetliner flights.

The worst air disaster in U.S. history to date is recorded on December 16. In fog and sleet, **United Airlines** Flight 826, a DC-8-11, with 7 crew and 77 passengers approaches New York (ILD) on December 16 after a flight from Chicago (ORD). At the same time, TWA Flight 266, an

L-1049 with 5 crew and 39 passengers approaches New York (LGA) in IFR. The jetliner, proceeding beyond its clearing point, crosses the flight path of the Super Constellation and at short range the No. 4 jet engine slices open the propeller-liner's fuselage top. The impact causes the TWA craft to break into three pieces and crash in flames on Miller Army Air Station, Staten Island, nearly missing a row of houses.

The DC-8 limps on for another 13.5 km before crashing into Sterling Point, Brooklyn, destroying a church, 10 apartment buildings, and several shops, causing a seven-alarm fire. All aboard both aircraft are killed, along with 5 people on the ground. Donald B. McComb Jr. portrays the "Collision Course: The Tragic End of *Mainliner Will Rogers* and the *Star of Sicily*" in *Airliners* 8 (January–February 1995): 20–23.

North Atlantic bookings for the year recover and accelerate to 243,000.

The second CV-880 is received, following a lengthy Hughes-inspired delay, on January 1, 1961, and is followed by five more during the remainder of the month. Following a preinaugural flight from Los Angeles on January 10, this second Convair 880 begins flights over transcontinental routes on January 12, New York (ILD) to Los Angeles via Phoenix and Las Vegas.

Later in the month, the three L-1049H Super Constellations leased from **California Eastern Aviation** are returned. Six more L-1649A freighters are created by Lockheed Air Services.

CV-880 frequencies are undertaken, beginning on January 20, between New York and San Francisco via Dayton and Chicago. Four days later, a CV-880 service from Chicago to New York is completed in a record time of 1 hr. 11 min.

An illegal work stoppage by flight engineers at TWA and six other carriers causes the layoff of employees between February 17 and 24. During the month, the B-707-331 leased to **Northeast Airlines** in 1959 is returned.

On March 18, the carrier begins to offer refrigerated container services for perishables. Charles C. Tillinghast Jr., formerly the official in charge of Bendix's international operations, is elected president on March 20.

A B-707-331 with 125 aboard lands short of the runway at St. Louis on March 26; only minor injuries result. Four days later, the landing gear of an L-049 freighter collapses when the plane alights at Las Vegas.

The last Martin 4-0-4 flight is completed on April 29, Baltimore to St. Louis via Washington, Columbus, Dayton, and Indianapolis. The L-049 *Star of Switzerland* is sold out of service in April; ironically, it will be acquired by the Pima Air Museum 20 years to the month later, restored, and exhibited in TWA livery—the only one of its class available for visitation.

In May, orders are placed for 26 additional Boeing 707-331B/Cs and for the lease of four **Northwest Airlines** B-720-51Bs (B-720Bs), which will fill the gap until they arrive. The airline files a \$115-million damage suit against Howard Hughes and the Hughes Tool Company on June 30, alleging violations of the Sherman Antitrust Act and the Clayton Antimonopoly Act.

Regularly scheduled in-flight motion pictures are introduced on the New York to San Francisco domestic route on July 19, followed up with their introduction in the first-class sections of international flights as of August 16. The modern age of in-flight entertainment is begun with a screening of the Lana Turner film *By Love Possessed*.

Meanwhile, the first B-720B is received on July 23 and B-720B service is inaugurated on August 18 from New York to Kansas City. The number of movies shown reaches 103 per week by August 31.

The fourth worst air disaster in U.S. history to date occurs on September 1. The L-049 *Star of Paris* with 5 crew and 73 passengers, which had inaugurated the company's North Atlantic service 15 years earlier, suffers elevator failure and crashes just after its takeoff from Chicago for Las Vegas; there are no survivors.

Later in the month, two L-1049Hs are sold to **Trans-International Airlines**.

The last L-1649A transatlantic flight is completed on October 28, Cairo to New York. With the cessation of piston aircraft service on overseas routes on October 29, TWA becomes the first all-jet airline in in-

ternational passenger service; however, disappointing traffic causes suspension of service to Bangkok. The engine of a B-720B explodes in-flight near Albany, New York, on Nov. 5; the plane is able to make a safe landing. Agreement is reached on December 4 with the Air Line Navigators Association on issues involved in the use of the Doppler-Loran electronic navigation system and the last L-049 is retired at year's end. Transatlantic enplanements fall to 208,000.

The last L-049 Constellation is retired on January 1, 1962. Also in January, the carrier is granted roundtrip authority between Los Angeles and San Francisco; it will not be advantaged. On March 25, the Nevada Airmotive Corporation purchases 25 L-049s for resale or lease to non-scheduled airlines. At the same time, two L-1649A freighters are leased to **Alaska Airlines**. The first B-707-131B is received on March 29.

Christened StarStream 707s, several new B-720-131Bs enter service on April 29 over routes from New York to Los Angeles, San Francisco, and Indianapolis. Also in April, a suit is filed against Howard Hughes and the Hughes Tool Company in the Chancery Court in Delaware, seeking \$35 million in damages based on a breach of fiduciary duty. At the same time, the two Super Constellations sold to **California Hawaiian Airlines** are attached for lack of payment.

The formal opening and dedication of the Trans World Flight Center is held at New York (JFK) on May 28. Designed by Eero Saarinen, the facility consists of a main terminal, with one (four planned) "Flight Wing." A second L-1049A is sold to **South Pacific Air Lines** on June 7.

Between July 1 and September 4, the pilot and flight engineer unions disagree with management over third-seat jurisdiction aboard jetliners. Fully automated Doppler radar system of navigation on scheduled transatlantic service is introduced on the October 1 New York to London flight; it is the first time a commercial or military flight has ever operated across the ocean without a professional navigator aboard. During the month, the four B-720Bs are returned to Boeing, who passes them on to **Northwest Airlines**, for whom they were originally constructed.

Following several months of negotiations, TWA and **Pan American World Airways (1)** file a merger plan with the CAB on December 20. Also during the month and after less than six years of service, the L-1649A *Star of Vermont* is withdrawn.

North Atlantic enplanements this year jump to 276,000.

The company receives its first intercontinental B-707-331B on March 11, 1963. As the initial phase of a cargo expansion program, the carrier orders three B-707-331Cs on April 8, taking options on two more. Ten days later, a B-707-131B encounters clear-air turbulence northeast of Des Moines, Iowa, which results in serious injury for one stewardess.

On April 28, the world's first international reservations system to function through high-speed computers is activated at New York.

On May 3, a default judgement is rendered against Hughes Tool Company for its failure to produce Howard Hughes for pretrial examination; Toolco counterclaims are dismissed with prejudice. In-flight movies are inaugurated in the economy-class sections of international flights on May 22.

Attempting to hold to a 1930 schedule that will generate little publicity, the company leases the Ford Tri-Motor 5-AT-74 from its Illinois owner and undertakes a transcontinental flight from Los Angeles to Newark on June 20. Flying via Albuquerque, Amarillo, Wichita, Kansas City, St. Louis, Indianapolis, Columbus, Pittsburgh, Harrisburg, and Philadelphia, the veteran airliner completes its sky voyage in flying time of 27 hrs. 48 min. After a stop at New York (ILD), the Ford flies to Washington, D.C. (DCA) to participate in the government's celebration of the anniversary of the Civil Aeronautics Act before returning to California.

The first three of six CV-880s formerly operated by **Northeast Airlines** are received on July 29, followed by three more by September 13.

A B-707-131 with 68 aboard hits turbulence southeast of Topeka, Kansas, on September 21; one stewardess is badly hurt. On September 27, Hughes purchases \$30 million worth of new convertible debentures and the next day, a B-707-131 with 102 aboard is involved in a ground accident while taxiing out for its Los Angeles takeoff. TWA informs the

government on October 14 that it is willing to purchase the first U.S.-built supersonic transport and deposits a \$600,000 check with the FAA as down payment on the first six.

The same day, a B-707-331B with 14 aboard is involved in an accident at Paris, France. TWA and **Pan American World Airways (1)** announce termination of their mutual merger plan on October 16 and a secondary offering of \$80.9-million subordinated income debentures is filed on October 17. Four Anglo-French Concorde are ordered on October 30 and on November 14 the company informs the FAA that its order for U.S. SSTs is increased to 10. Having successfully employed them for military charters, **Alaska Airlines** purchases its two leased L-1649As on December 31.

All-cargo transcontinental jet service is started on December 3 with two leased B-707-331Cs.

The year's enplanements total 5,966,012 and the net profit is \$19.8 million. As a footnote to the year, a young MBA is hired for his first job; Frank Lorenzo will later head Texas Air Corporation, the largest airline combine in the world.

Airline employment in **1964** stands at 24,500 and the fleet includes 178 aircraft. A CV-880 with 66 aboard overshoots its landing at Boston's Logan Airport on New Year's Day and crashes; no serious injuries are reported. Two days later, on January 3, jet freighter service is extended across the Atlantic and features the first and only through-plane cargo-jet service between the west coast of the U.S. and European cities. San Francisco to London time is 13 hrs. 45 min.

A contract is signed with the National Aeronautics and Space Administration (NASA) on February 10 for the provision of base support services at Merritt Island Launch Area at the Kennedy Space Center in Florida. On March 9, the nose gear of an L-749 with 14 aboard collapses upon landing at Boston after a shuttle flight from New York.

On April 1, the Concorde order is increased to six; as with the four ordered the previous October, none will ever be delivered. The CAB, on April 8, approves a route exchange between the carrier and the local service companies **Mohawk Airlines** and **Allegheny Airlines (1)** governing service between Pittsburgh and Boston. Also in April, the first of 16 B-727-31s are delivered along with the first owned B-707-331C.

A B-707-331 is involved in a landing accident at Paris, France, on May 29; no injuries are reported. B-727-31 domestic flights begin on June 1, New York to Indianapolis. Sixteen days later, the board of directors authorizes an expenditure of \$162 million for the purchase of 33 more jetliners. A CV-880 with 45 aboard encounters turbulence near Allentown, Pennsylvania, on July 1; one stewardess is seriously hurt. Service is resumed to New York (LGA) the same day and 20 DC-9-15s are ordered on July 20.

The last five retired L-1049A Super Constellations are sold to **Florida State Tours** beginning August 7. A B-707-331C is damaged after it overshoots its runway while landing at Kansas City on August 26; fortunately, none of the 138 persons aboard are injured.

The last main line piston engine service west of Wichita is concluded in October when CV-880s replace L-749As on the route from that Kansas community to Albuquerque via Amarillo.

On November 9 near Chicago, a violent maneuver must be undertaken by the pilot of a CV-880 with 50 aboard to avoid a midair collision. Two flight attendants are badly hurt. An L-749A encounters heavy turbulence while landing at Wichita two weeks later, but this time, no one is hurt. While taking off from Rome's Fiumicino Airport for Athens on November 23, Flight 800, a B-707-331 with 73 aboard, skids into a power roller near the runway and explodes (46 dead).

During the year, the airline cooperates in the publication of Capt. John Bainbridge's *Like a Homesick Angel* (Boston: Houghton, Mifflin) which depicts a day in his life as a pilot.

Passenger boardings jump 19.4% to 7.4 million. Revenues increase by 20.6% to \$574.9 million and profits skyrocket 86% to \$36.98 million.

The workforce in **1965** grows to 27,912. On February 17, a B-707-331 with 15 aboard strikes a parked aircraft while taxiing at Los Angeles. The left wing of a B-727-31 with 97 aboard strikes the runway as the plane

lands at Kansas City on St. Patrick's Day. No one is hurt in either incident. Also in March, another L-1649A is sold to **Alaska Airlines**.

On May 3, Howard Hughes liquidates his TWA shareholdings, selling 6,584,937 shares and netting over \$5 million. Severe turbulence is suffered by the 57 persons aboard a CV-880 near Chicago on May 5. Nine-channel audio and stereo programs are introduced on company flights, beginning on May 24.

On June 25, TWA joins with **Pan American World Airways (1)** in guaranteeing the operations of **New York Airways**; in exchange for a 15.6% shareholding, Hughes' airline receives direct helicopter service from Manhattan to the passenger ramps at Newark, La Guardia, and John F. Kennedy International Airports. Near Omaha on July 6, a B-707-131 with 52 aboard is badly tossed about in clear-air turbulence. A B-707-331 en route from Rome to Geneva on August 6 narrowly avoids a midair collision with three Italian jet fighters; many passengers are shaken.

A CV-880 with four aboard on a training mission crashes at Kansas City on September 13 and burns; there are no survivors.

Following his historic New York City visit, Pope Paul VI returns to Rome on October 4-5 aboard a chartered B-707-331. On October 25, a new high-speed electronic UNIVAC message switching center is activated at Zurich.

The year's Visit USA and Discover America marketing programs are a success, CAB authority is now received to serve Kenya, Uganda, and Tanzania in East Africa, and contract operations continue for the National Aeronautics and Space Administration (NASA).

En route to Boston from Newark on December 4, **Eastern Air Lines** Flight 853, a L-1049C with 5 crew and 54 passengers makes an emergency pull up to avoid a suspected collision with a TWA Boeing 707-131, with 58 aboard, near Danbury, Connecticut. The Stratoliner, meanwhile, rolls to the right and down to the left, ensuring the collision. The jetliner manages to land safely at New York (JFK), 45 miles away, with 20 feet of its left wing sheared off and its hydraulic system knocked out. Although several stewardesses are hurt, no passengers are injured. The same cannot be said for the Super Constellation, which crashes near North Salem, New Hampshire.

On December 10, the Moral Rearmament organization purchases a TWA L-1649A Starliner.

Customer bookings jump 18% to 8,771,000 and cargo traffic advances by 41%. Revenues rise to \$672.8 million and net profits of \$50.1 million are banked, leading the industry. Chairman Tillinghast is now the first airline executive to be pictured on the cover of *Time* magazine.

President Johnson approves the renewal of the carrier's transatlantic route certificate on February 11, **1966**, and three days later, TWA seeks authority to extend routes across the Pacific and provide around-the-world service. For the first time in 30 years and for only the third time in company history, a cash dividend is paid to stockholders on February 25; the \$1 per share is payable in equal quarterly installments.

DC-9-15 service is inaugurated on the New York-Kansas City route on March 17 and on May 3, FAA approval is received for operations under Category II landing minimums with the aid of Auto-Scan. In accordance with an agreement between IATA airlines, the CAB, on May 20, approves a \$2.50 charge for in-flight entertainment on international flights.

Having obtained a contract with the USAF Military Airlift Command (MAC), the carrier makes its first Pacific airlift flight to Saigon on July 2. Six days later, TWA is one of five U.S. airlines struck by mechanics and other ground service employees, members of the IAM. The combined effect of the job action is to halt 60% of U.S. passenger service and 70% of airmail operations. After several weeks of negotiations, President Lyndon B. Johnson announces a strike settlement on national television on July 29.

On August 1, the IAM membership votes 2 1/2 to 1 to reject the proposed settlement. Talks resume and on August 15, a tentative agreement is reached on a new three-year contract. The membership votes, on August 19, to ratify the contract by a 2 to 1 margin, thus ending the longest

and costliest strike in U.S. commercial aviation history to date. Meanwhile, on July 22, public bus tours of the Kennedy Space Center are initiated as part of the carrier's NASA contract. Also in July, TWA Services, Inc. is incorporated. During the summer, service is resumed to Bangkok.

The largest equipment order in company history to date is placed on September 2: \$410 million for 28 additional Boeings, including 12 747 Jumbojets. With British permission finally granted, flights to Hong Kong commence in late October. The L-1049G *Star of Chambord* is withdrawn in December and sold to California Airmotive Corporation.

Enplanements for the year total 9,743,700 and revenues are \$681,632,000. A net profit of \$34,718,000 is banked.

The workforce grows during 1967 to 35,015 and the fleet now includes 173 aircraft.

While descending toward Chicago (ORD) on March 9 after a flight from New York (LGA) via Harrisburg, Pittsburgh, and Dayton, Flight 553, a DC-9-15 with 4 crew and 21 passengers, is hit by an unseen and non-ATC controlled single-pilot Beech 55 Baron (owned by the Tann Company). Both aircraft crash near Urbana, Illinois, and there are no survivors.

Following a service from New York to Kansas City on April 6, the L-1649A *Star of Nebraska* is the last Constellation to be retired from passenger service as TWA becomes the first airline to go all-jet in U.S. domestic service. Stratoliners will be joined by DC-9-14s and DC-9-15s in carrying the load.

In cooperation with **LOT Polish Airlines**, joint New York-Warsaw one-stop service is opened.

A merger with Hilton International Company becomes effective on May 9; the international hotel chain becomes a subsidiary. The last two cargo L-1049Hs are withdrawn on May 11, the same day the final L-1649A all-cargo flight is made. During the month, a CV-880 is leased from **Northeast Airlines** for the summer.

On June 2, the FBI seizes J. V. Grimaldi of New York City, who has attempted to extort \$100,000 from the company by threatening to blow up a jetliner; he will be sentenced to prison two months later. Following the suspension of services, due to the six-day Mideast war, flights to Tel Aviv and Tripoli begin again on June 9. The UAR, on June 18, allows a resumption of services to Cairo by all airlines except TWA and **British Overseas Airways Corporation (BOAC)**, both of which are now flying into Israel.

On July 5, Capt. H. Chittenden is grounded for two weeks after he lands a B-707-131 at Ohio State University Airport, which he mistakes for Port Columbus Municipal Airport. Completing worldwide implementation, the carrier activates computerized flight planning on domestic routes on July 31. A B-707-331 with 135 aboard lands safely at New York (JFK) on August 19 after losing a wheel on takeoff from Shannon, Ireland. The L-1649A freighter *Star of Ebro* is sold to Trans-American Leasing in September.

The number of weekly all-cargo transcontinental roundtrips is increased from five to 10 on October 1 and on October 18 the order for American-made SSTs is increased to 12. None will ever be delivered. The same day, \$445 million in additional orders are let for 37 planes, including 10 additional B-747s.

On its November 6 takeoff roll, the pilot of Flight 159, a B-707-131 with 7 crew and 29 passengers, notices a **Delta Air Lines** DC-9-32 apparently stopped off the side of the runway of the Greater Cincinnati Airport. Believing that he has touched the Delta plane, the pilot attempts to abort his departure and runs 421 ft. past the end of the runway. The main landing gear shears off and the plane catches fire, killing one person; the wreck is scrapped four days later.

On November 11, negotiations are completed with the Greek company Sun Line for the addition of a Greek islands cruise as part of the company's air tour packages. Seven days later, on November 18, three are hurt exiting a B-707-131 at Indianapolis' Weir Cook Municipal Airport after a false report of fire.

While on final night approach in light snow to Cincinnati at the end of a November 21 service from Los Angeles, Flight 128, a CV-880 with 7 crew and 75 passengers, strikes trees and crash-lands at Constance, Kentucky, 6,878 ft. short of the runway (70 dead). The pilot will be

faulted for choosing to employ the north runway into the wind, despite its lack of approach lights, in an effort to avoid a tailwind landing, rather than the better-lighted south runway.

Gate facilities are provided late in the year at Los Angeles (LAX) for feed-partner **Cable Commuter Airlines**. A B-707-124 is purchased from **Continental Airlines** in December to replace the Stratoliner lost in mid-November.

Passenger boardings climb 19.7% to 12,640,000 and a total of 310.93 million freight-ton miles are flown. Revenues jump 28.4% to \$875,539,000 and net earnings jump to \$40,770,000.

The carrier changes its in-flight movie system on February 10, 1968 to assure that those making roundtrip, cross-country or transatlantic flights will see a different film in each direction. On March 29, the carrier joins with **Eastern Air Lines** and Air Holdings, Ltd. to announce a \$2.16-billion order for 144 Rolls-Royce RB-211-powered Lockheed L-1011 TriStar 1s. TWA's share in this arrangement is 44 TriStars, plus 11 options. NASA awards the company a 10-year contract on April 8 to conduct a Visitor Center program at the Kennedy Space Center.

A small USAF passenger jet, with Gen. W. T. McKee aboard, is involved in a near miss with a B-707-131 over Arizona on May 7. A major aircraft and grounds facility upgrade program is undertaken and 24 Boeing jetliners are delivered. In addition, work on doubling the size of the TWA Flight Center at New York (JFK) is undertaken; it will include Flight Wing One, the first New York terminal ready for the Boeing 747. A \$33-million Technical Services Center is opened at Kansas City.

En route from Kansas City to Las Vegas on July 4, Flight 329, a B-727-31 with 71 passengers, is captured by a lone assailant who claims to have both a gun and dynamite. Actually unarmed, the man is quickly overpowered. He will be tried and sent to prison.

Special Master Herbert Brownell rules on September 21 that TWA is entitled to recover \$137,611,435 in damages from the Hughes Tool Company. The award represents a statutory tripling of damages found.

On December 11, Flight 496, a B-727-31 with 38 aboard en route on the inaugural flight of a new route from St. Louis to Miami, is hijacked by a recently married African-American man and woman just after take-off from an intermediate stop at Nashville. They force the plane to fly to Cuba in the nation's 20th skyjacking of the year; passengers and crew return to the U.S. on another plane.

President Johnson approves a transpacific route on December 19, thereby allowing the company to offer around-the-world services.

A total of 12,866,000 passengers are originated and 358.44 million freight ton-miles are flown. Revenues, not including those from the Hilton International hotel subsidiary, reach \$948,244,000.

On January 24, 1969, President Nixon reopens the Transpacific Route Case with an announcement that he will review personally the previous decisions of the CAB and President Johnson. The company receives a new B-707-331B on April 2 and President Nixon upholds Johnson's December transpacific route award on April 11, for which the carrier is certified.

On June 17, Black Panther member W. L. Brent hijacks Flight 154, a B-707-331 with 87 aboard en route from Oakland to New York, and diverts it to Cuba. A Flight Hostess Academy is opened at Overland Park, Kansas, also in June, as is a large multiprocessing computer system at the company's new data processing center.

While practicing landing at the FAA's National Aviation Facilities Experimental Center at Atlantic City Airport, Pomona, New Jersey, on July 26, Flight 5787, a B-707-331C, crashes, killing all five crewmen aboard. Also in July, the carrier surpasses its old rival, Pan Am, as the leading carrier on the North Atlantic.

A federal prisoner, guarded by two marshals, is among 131 aboard Flight 79, a B-727-231 en route from Pittsburgh to Los Angeles on July 31. In the lavatory, he finds a used razor blade that he hides on his person until he is able to spring up and hold it to the throat of a stewardess, threatening to kill her unless the plane is diverted to Cuba. The aircraft is allowed to return the same day. Twelve years later, the pirate will return to the U.S. and be captured in Indiana, tried, and sentenced to 25 years in prison.

Transpacific and around the world flights commence on August 1. The latter depart both eastward from Los Angeles and westward from New York; transpacific stops now include Honolulu, Guam, Okinawa, Formosa, and Hong Kong. Incidentally, the initial B-707-331 flight across the Pacific from Los Angeles is first blessed in a Happiness Ceremony by three Buddhist priests. Just after the launch of transpacific service, the company announces on August 15 that 13 Congressmen and a CAB member have accepted the carrier's invitation to take an all-expenses-paid trip with their wives to the Orient.

Claiming their act is a reprisal for U.S. aid to Israel, a male and female team of Arab commandos from the Popular Front for the Liberation of Palestine hijacks Flight 840 on August 29. The B-707-331B with 113 passengers is on the Rome to Athens leg of a service from Los Angeles to Tel Aviv, when the pirates force it to land at Athens, where propaganda messages are broadcast over the Stratoliner's radio.

The Boeing takes off again and lands at Damascus, Syria, where the hijackers organize an emergency evacuation. After the last person steps off, one of the terrorists throws a package of explosives into the plane, destroying its cockpit. Almost immediately, all of the hostages are released; six Israelis will be held as pawns to win exchange of Syrian military prisoners in Israel.

The FAA reports this to be the first hijacking of a U.S. airliner to a destination outside of the Western Hemisphere. On a technical note, the aircraft's destroyed cockpit will be repaired with a "new" nose section claimed from the wreckage of a **British Overseas Airways Corporation (BOAC)** B-707-465 that had crashed at London in April 1968.

The choice of two in-flight movies is introduced on nonstop flights between Washington and San Francisco on October 2, one for "general" audiences and one for "mature." Initially, some Hollywood producers will use the carrier's passengers to "sneak preview" their films.

While beginning its approach to San Francisco from Los Angeles on October 31, Flight 85, a B-707-131B with 39 passengers, is taken over by AWOL USMC Capt. Raffaele Minichiello, who enters the cockpit with an M-1 rifle and orders the craft to fly to Italy. At a Denver refueling stop, he allows all of the passengers and two of the three stewardesses to deplane.

A stop is made at New York to take on two pilots qualified to fly the transatlantic leg. Together with the two stewardesses and the original cockpit crew led by Capt. B. N. Williams, they fly the 6,800-mi. route on to Rome in 17 hours via Bangor, Maine, and Shannon, Ireland.

After arrival in Rome, Minichiello, having already eluded U.S. police, the FBI, and Irish security agents, flees in an auto with an Italian policeman as hostage. The car is abandoned on the highway to Naples and the fugitive is captured in a chapel 10 mi. S of Rome, where he has taken refuge. TWA Chairman Tillinghast puts the cost of fuel and salaries to the company, in terms of flying time, at \$50,000 for one of the nation's most notorious skyjackings. Tried in an Italian court, he will receive an 18-month prison term in a local jail.

Flight 54, a B-707-131 with 28 passengers en route from San Francisco to Philadelphia on December 2, is diverted to Cuba by a passenger holding a knife to the throat of a stewardess. A U.S. Air National Guard F-102 fighter plane tasked to provide an escort crashes near Jacksonville, Florida, although the pilot is able to parachute to safety. News coverage of this second TWA skyjacking in just over a month is, because of its Havana destination, what can only be termed as "routine." When the pirate returns to the U.S. a decade later via Canada, he will be captured, tried, and sentenced to a prison term of 10 years.

The Breech Training Academy is opened in ceremonies the next day and on December 16 the board of directors holds an in-flight meeting aboard a leased B-747. On December 21, two Arab men and a woman are arrested at the airport in Athens as they are about to board a B-707-31 with guns and grenades. They also carry mimeographed announcements that the seizure is the work of the Popular Front for the Liberation of Palestine. Under questioning, one man reportedly confesses the plot to seize the New York-bound plane, force it to land in Tunis, and blow it up as a warning to the U.S. to halt air communications with Israel.

The Hughes Tool Company, on December 23, is ordered to pay \$137.6 million in treble damages to TWA. The carrier's first B-747-131, and only the eighth Jumbojet manufactured, is delivered at Seattle on December 31 and the fleet now also comprises 59 B-707-131s, 65 B-707-331C/Fs, 35 B-727-31Cs, 29 B-727-231s, 25 CV-880s, and 19 DC-9-15s. During the year, the company acquires Spartan Newfoods Corporation, parent of the Hardee's and Quincy Family Steak House restaurant chains.

Enplanements this year are 15,066,240. Revenues are \$1.8 billion and the profits are \$24.9 million (operating) and \$19.8 million (net).

On January 8, 1970, Flight 802, a B-707-131 en route from Paris to Rome, is hijacked to Beirut by Frenchman C. Belon. Upon landing, Belon fires 12 pistol shots into the cockpit instrument panel and then surrenders. The passengers and several crew will fly to Rome aboard an **Alitalia, S.p.A.** airliner, while the pilot and two officers remain behind to supervise aircraft repairs and, three days later, fly the plane to Rome. Pirate Belon is released on \$8 (eight U.S. dollars!) bail on January 14. He will be tried in Lebanon and given a nine-month prison sentence; when released, he will be sent to France, tried again, and given an eight-month term.

The second Jumbojet also arrives on January 8 and a third B-747-131 is delivered on February 2. The first U.S. carrier to offer domestic Jumbojet service, TWA inaugurates scheduled, nonstop B-747-131 Los Angeles to New York flights on February 25; en route, one of four movie projectors on the inaugural Flight 100 fails, but passengers all praise the new service. Flight 100, incidentally, is the first regularly scheduled Jumbojet to land at Los Angeles (LAX).

The fourth Jumbojet is delivered on March 7 and on March 18, B-747-131s are placed into service on the New York-London (LHR) run. Simultaneously, no-smoking areas are offered in Jumbojet first-class and coach-plus economy-class. Flight Wing One is dedicated and opened at New York (JFK) on March 19.

Four more B-747-131s join the fleet between April 3 and May 23. A B-707-131 is destroyed in a ground fire at Indianapolis on April 22.

The year's second hijacking, also somewhat unusual, occurs on June 4 and involves unemployed truck driver A. G. Barkley, who is also involved in lawsuits against his former employer, the Teamsters, and the IRS, which has charged him with failing to pay \$471.78 in 1964 income tax. Barkley takes over Flight 486, a B-727-231 with 51 passengers aboard, shortly after its departure from Phoenix for Washington, D.C. Brandishing a razor, a revolver, and a can of gasoline, Barkley orders the pilot, Capt. D. C. Hupe, to radio ahead and demand a \$100,000,000 ransom from the U.S. Supreme Court, which has refused to hear his tax case appeal.

At Washington, D.C. (IAD), the plane is refueled and takes on Capt. B. N. Williams, hero of the October 1969 Minichiello hijacking, with \$100,500 collected from area banks. When Barkley learns that most of the money he has demanded is not aboard, he orders the plane back to Dulles. The FBI, meanwhile, prepares a ruse, planting paper bags made to look money-filled along the runway.

When Barkely doesn't take this bait, the FBI shoots out the Boeing's tires and hoists an agent into the cockpit through the emergency windows. In the ensuing scuffle between Barkely, the agent, and Capts. Williams and Hupe, the latter is shot in the stomach.

Wounded in the thumb, Barkley is hustled off to an Alexandria, Virginia, arraignment for air piracy. These charges will later be dropped when, upon examination, it is determined that the pirate is mentally unbalanced. He will be sent to a psychiatric facility instead of prison. Incidentally, the ransom demand that was radioed ahead by Capt. Hupe physically reaches the Supreme Court on June 8.

Following an engine fire that begins during a B-747-131 New York landing on June 26, 12 of 198 passengers are slightly injured during an emergency chute evacuation of the Jumbojet.

On July 1, the company becomes the first to offer a no-smoking area aboard every aircraft it flies.

En route from Las Vegas to Philadelphia on August 24, Flight 134, a B-727-231 with 86 passengers, is hijacked to Cuba by a lone gunman.

Castro's government sends the pirate back a month later and upon examination, it is determined that he is mentally ill and is thus sent to a psychiatric hospital for three years.

Along with airliners from **British Overseas Airways Corporation (BOAC)** and **Swissair, A.G.**, Flight 741, a B-707-331B with 10 crew and 141 passengers en route from Frankfurt to New York, is hijacked by Popular Front for the Liberation of Palestine guerrillas just after its departure from Germany. It is diverted to Zerqa, a military air base 20 mi. N of Amman, Jordan, on September 6, where the TWA passengers will be held hostage for six days before the plane is flown to Syria, where all three planes are blown up on September 12.

Eight days later, on September 15, Brinks courier R. E. Denisco shoots ex-mental patient D. B. Irwin during the latter's attempt to hijack Flight 15, a B-707-131B with 56 other passengers en route from New York to Los Angeles, to North Korea. Irwin is arraigned on September 17, the same day Brinks gives Denisco a \$5,000 bonus, a raise, and an extra week's vacation. The pirate will be tried and receive a 12 1/2-year prison term.

A 29-hour strike by cabin attendants, members of the Transport Workers Union of America, begun on October 20 is ended in agreement on October 22. Later on October 22, the carrier, charging misrepresentation and breach of contract, discontinues efforts to use Burroughs computers in its automated passenger reservations and management information system and seeks \$70 million in damages; it also announces a switch to IBM equipment. A major overhaul of the domestic schedule pattern, Clean Slate, is begun on October 25. En route from Chicago to San Francisco on October 28, H. Shively, pilot of a B-727-231 with 54 aboard, dies of an apparent heart attack; his copilot is able to land the plane safely at Cedar Rapids, Iowa.

On November 1, a new business-class Ambassador service is introduced on the transcontinental service, one that features "twin seat" accommodations.

While taking off from Tel Aviv on November 30, a B-707-373C freighter with three crew strikes an unlit Israeli Air Force KC-97 Stratocruiser being towed across the runway. Although both aircraft are destroyed in the fiery crash, only the two-man Israeli towing crew is killed.

A joint proposal with **United Air Lines** and **American Airlines** is filed with the CAB on December 21 that would allow all domestic carriers to reduce excess capacity. When the Ross Hunter production of Arthur Hailey's novel *Airport* reaches the screen during the year, it is learned that TWA's noted mechanic Roy Davis is portrayed as the George Kennedy character "Joe Patroni."

Eight additional B-727-231s and five more B-747-131s are delivered, bringing the fleet total by year's end to 245 aircraft; the employee population is shaved by 4.9% to 37,762.

Passenger boardings decline 6.4% to 14,164,000. Income falls to \$1.15 billion and expenses, led by increased fuel prices, jump to \$1.24 billion. Consequently, the operating loss advances to \$84.2 million and the net failure triples to \$63.5 million.

The NASA Merritt Island Launch Area support contract expires on April 1, **1971**. Three B-747-131s are delivered between May 20–24 and beginning on May 26, Ambassador Lounges are offered in the coach-class sections of certain airliners. The last B-707-131 is withdrawn from service on June 1; the same day, the former **Continental Airlines** B-707-124 is sold to Israel Aircraft Industries.

Out on bail, passenger George White takes out a gun during a June 11 scuffle with a stewardess aboard Flight 358, a B-727-231 on the ground at Chicago (ORD) (an intermediate stop on a flight between Albuquerque and New York), and seizes her. He then orders the remainder of the passengers off the aircraft and shoots one, 65-year-old H. L. Franks, to death. A deputy U.S. Marshal, meanwhile, is covertly boarded through a cockpit window.

White demands to be flown to North Vietnam and a ransom of \$75,000, but is shot and seized by the Deputy U.S. Marshal just after the plane departs eastbound. White is turned over to police when the Boeing arrives at New York.

Franks is the first passenger to die in a U.S. aerial hijacking. Seven years later, White will hang himself in his cell at a mental institution.

The same day, a B-707-131 collides with an **American Airlines** B-707-323C near Phillipsburg, Pennsylvania; both freighters crash, killing all aboard.

Brandishing a pistol, Robert Obergfell hijacks Flight 335, a B-727-231 en route from New York to Chicago on July 23. After taking stewardess Maria Concepcion hostage, this pirate forces the flight crew to return the Boeing to New York (LGA), where he demands a larger aircraft for an escape to Milan, Italy. With his hostage, Obergfell is driven to New York (JFK), where he is shot to death on the runway by an FBI sharpshooter.

On July 29, arrangements are made for the sale of the 13 retired B-707-131s. Coach lounges are introduced aboard B-707-131Bs on September 18. Renewed merger discussions with **Pan American World Airways (1)** are discontinued—again—on September 30. The United-American-TWA excess capacity reduction agreement comes into effect on October 3. PARS is inaugurated at Paris on October 11. The last of 19 B-747-131s is delivered 8 days later.

Wanted for the murder of a New Mexico policeman, three members of the Republic of Black Africa organization, C. Hill, M. R. Finney, and R. Goodwin, brandishing automatic weapons and a knife, seize Flight 106, a B-727-231, on the ground at Albuquerque on November 27. After allowing the 49 passengers to disembark at Tampa, the three force it to fly to Havana; the plane is allowed to return to Miami the next day. One of the pirates will drown while swimming off a Cuban beach in April 1973.

Ambassador Service is extended to all overseas cities and around-the-world flights on December 1 and on December 22, the CAB is asked to extend TWA's 1947 mainland China authority (never exercised) to Hong Kong. At year's end, three B-707-131s are sold to Israel Aircraft Industries at Tel Aviv.

Enplanements for the year total 14,223,560 and a net profit of \$7 million is reported.

The workforce in **1972** totals 36,778.

On January 29, ex-mental patient Garrett Brock Trapnell pulls a gun from a fake plaster arm cast and commandeers Flight 2, a B-707-331 en route from Los Angeles to New York with 8 crew and 93 passengers, over Iowa. At New York (JFK), Trapnell allows the passengers to deplane, but demands \$300,000 in ransom, clemency for his air piracy, freedom for Angela Davis, a conversation with President Nixon, release of a friend from a Texas prison, and talks with lawyers and psychiatrists. Fearing FBI agents will seize his plane, Trapnell orders it to takeoff and circle the airport until it must land. On the ground, the Boeing is refueled and a relief crew is requested. Once aboard, one of the relief crewmen, an FBI agent in disguise, shoots Trapnell and takes him prisoner. He will be tried and given a life sentence in prison.

Meanwhile, another B-707-331, chartered to carry television and radio equipment and U.S. journalists to Communist China in preparation for President Nixon's trip, is delayed until the Trapnell hijacking is resolved. On January 31, a Cherry Hill, New Jersey, resident is fined \$500 and court costs for grabbing and kissing a stewardess during a flight the previous November.

The B-707-331, delayed at New York by the Trapnell affair, arrives at Beijing on February 1; chartered to transport technicians and equipment for television coverage of President Nixon's forthcoming trip, it is the first commercial American airliner to land in mainland China in 23 years. Buoyed by this success, the company seeks permission to begin service to China. In response to a petition from Howard Hughes and a cross-petition from TWA, the U.S. Supreme Court, on February 22, agrees to review the treble damage award.

On March 7, an extortionist telephones the carrier's New York office and demands a \$2-million ransom or he will blow up Flight 7, a B-707-331 that has just taken off for the West Coast. The plane returns to New York (JFK) where police, using trained dogs, find a live bomb in a flight bag in the cockpit minutes before it is timed to explode.

Threats are made against other TWA airliners during the day and there are many delays as searches are made for other bombs. The next day, March 8, the cockpit of Flight 57, a B-707-331, empty and on the ground at McCarran Airport, Las Vegas, is destroyed by a bomb blast believed to be part of the string of extortion demands begun the previous day. Thereafter, the company hears no more from the bomber and on March 11, the FBI arrests two men in the case, who will turn out to be innocent.

Beginning on April 9, TWA offers a European vacation program specifically designed for African-Americans. B-727 Ambassador Express service is inaugurated over domestic routes on April 15. The first of 33 Lockheed L-1011 TriStar 1s is delivered on May 10. En route from Athens to Tel Aviv on June 3, a B-747-131 is delayed more than two hours on the ground at Athens for an explosives search; nothing is found. St. Louis to Los Angeles L-1011 service is inaugurated on June 25; the aircraft is flown on autopilot from takeoff to landing.

The second Lockheed wide-body arrives on July 4 and Chicago-Los Angeles TriStar flights begin on July 8. On July 15, in the largest fine ever received by the CAB for airline misconduct, the airline pays \$87,000 for its failure to obey the regulations requiring it to inform (over 500) passengers that they are entitled to free transportation after being bumped from flights for which they held reservations.

New Getaway vacation packages are offered during the summer. Holiday charter and cargo activities are stepped up by 70%; a total of 2.09 million charter revenue passenger miles will be flown by December. Incorporated in 1966, TWA Services, Inc. is initially activated in July as a wholly owned subsidiary created to undertake special worldwide contract services. New facilities are occupied at New York (JFK), as well as the airports at Kansas City and Pittsburgh. A management assistance agreement is signed with **Nigeria Airways, Ltd.**

After a fire develops in the landing gear of a B-747-131 arriving at New York (JFK) from Rome on September 1, it is decided to evacuate the plane by chute; 30 are injured.

When a B-707-331C freighter with three crew suffers vibration during its takeoff roll from San Francisco on September 14, the liftoff is aborted; the aircraft settles back down to the runway, which it overruns into San Francisco Bay. There are no fatalities.

The TWA-United-American excess capacity agreement expires on September 16. Another B-707-331C is lost in a landing accident at New York (JFK) on December 12.

Also during the year, commercial air service for the Kansas City region is relocated from TWA's longtime home at Municipal Airport to Mid-Continent International Airport, which is renamed Kansas City International Airport.

Passenger boardings for the year jump 11.6% to 16,090,000 and cargo traffic is up by 14.7%. Overall revenues are \$1.41 billion and expenses are \$1.33 billion. Consequently, profits are made: \$74.85 million (operating) and \$43.07 million (net).

Only 71 new employees are hired in 1973. On January 4, a telephone bomb threat is received, demanding a \$237,000 ransom or a B-747-131 en route from Madrid to New York with 236 passengers aboard will explode if it flies below 3,200 ft. Government officials divert the Jumbo-jet to 3,276-ft.-high Ellsworth AFB, South Dakota.

In a 6 to 2 January 10 decision, the U.S. Supreme Court overturns a lower court ruling that had supported TWA's position in its litigation with the Hughes Tool Company. The next day, a B-727-231 with 81 aboard lands safely at an airport near Las Vegas after a large part from one of its three engines falls off over Colorado.

Four Louisville, Kentucky, youths are charged on January 20 with an attempt to extort \$25,000 from the airline by posing as a man named John Clemente, who telephoned to say he would "kill some people" if not paid. Exercising its option not to purchase, TWA, on January 31, cancels its earlier order for Anglo-French Concorde SSTs.

A plan is filed with the CAB on February 14 for "demand scheduling," an innovation that combines substantial fare reductions with advance planning and scheduling. On March 5, the Supreme Court denies TWA reconsideration of its earlier decision dismissing a damage

judgment against Hughes. The 1962 Delaware case, however, remains pending.

Dr. P. P. Yu hangs himself with a belt behind a locked toilet door of a B-707-331 during an April 5 flight from Honolulu to Taiwan. The former Passaic, New Jersey, electronics manufacturer was sought by the U.S. government the past three years for his link to a smuggling conspiracy with the Peoples' Republic of China.

An agreement in principle is reached with ITT on April 18 for acquisition of the Canteen Corporation, a leading vending machine and food services company. An order is placed on April 25 for 17 B-727-200s, with options on 17 others.

A new L-1011 TriStar is received on May 16 and the formal agreement for the proposed acquisition of the Canteen Corporation is signed on June 5.

Between July 8 and 13, four undocumented Polish nationals, including a family of three, crosses the Atlantic five times between New York and Europe in a futile search for a country that will permit them to enter. Canteen shareholders agree to the \$132-million purchase on August 1; the acquisition process is completed on August 10. Meanwhile, five major TWA Getaway tour programs are introduced along with a Europe on Your Own package designed for individuals; automated ticketing also becomes available at San Francisco, St. Louis, and Chicago.

A 44-year-old female passenger dies after suffering a broken neck as a result of severe buffeting aboard a B-707-331B flight to Los Angeles on August 28.

Hughes Tool Company and Raymond M. Holliday file a motion on September 14 for an allowance of costs in the amount of \$2,186,919.24.

The earlier plan for on-demand scheduling service is implemented on October 1. On October 12, TWA seeks permission from the CAB to service 10 additional U.S. and 17 foreign destinations. The same day, the government announces, in light of the energy crisis, a mandatory allocation plan for jet fuel that is slated to occur on November 1. The company, in turn, causes the immediate cancellation or rerouting of 40 flights, an overall 5% reduction, and lays off 100 pilots.

The carrier joins with **American Airlines** and **United Air Lines** in a joint October 18 communiqué concerning a flight reduction plan designed to save 6.6 million gallons of fuel per month following initiation of the allocation scheme on November 1.

A flight attendants strike begins on November 4 and shuts the airline's passenger services down until December 19; the 45-day job action is the longest in company history to date.

Meanwhile, in an effort to conserve fuel, the airline, as of November 26, eliminates its 11 p.m. nonstop all-cargo flight from New York to Los Angeles, which usually ferries 100,000 pieces of airmail and air parcel post daily. The move forces the Post Office to begin relying more heavily upon charter air taxis for the delivery of transcontinental mail.

On December 19, company officials confirm media reports that it continues to train **Saudia (Saudi Arabian Airlines)** pilots under a program first begun in 1946; although embarrassed that the program employs domestic jetliners burning 1,800 gallons of fuel per hour, the airline adds that the effort will continue. Continuing shortages in jet fuel force suspension of on-demand scheduling as of December 31.

The number of TWA Getaway members now exceeds a million, making the plastic card the most widely circulated in the airline industry. During the year, eight more L-1011s join the fleet and long-held options for six Anglo-French Concorde are cancelled. Since June, three CV-880s have been retired.

Customer bookings fall 8.8% to 14,673,000 and freight is off by 4.4%. Revenues are \$1.45 billion and expenses are \$1.38 billion. The operating profit is \$68.07 million and the net profit—a marked comeback—is \$46.47 million.

Airline employment in 1974 is 36,318 and the Washington District Court on January 10 allows costs to Hughes Tool Company of \$1,184,045.10. The same day, another 350 pilots are laid off, as the energy crisis continues.

The nosegear of Flight 701, a B-707-131B with 7 crew and 56 passengers, collapses upon touchdown at Los Angeles on January 16; although the aircraft catches fire and is destroyed, all aboard are safely evacuated beforehand.

Also during the month, 11 CV-880s are withdrawn.

The company files, on February 8, for a revised version of its on-demand scheduling service using regularly scheduled flights. On March 1, movies are introduced on transcontinental L-1011 flights. The same day, a B-707-331 with 80 aboard makes an emergency landing at Los Angeles (LAX) after its landing gear malfunctions on takeoff from San Francisco.

During the first quarter, daily New York (JFK) to Dublin flights begin, along with twice-weekly service from New York (JFK) to Malaga. The company requests a temporary federal subsidy for its international operations on April 3, citing "unprecedented" increases in the price of jet fuel.

A fire breaks out aboard an L-1011 Tristar 1 on the ground at Boston's Logan Airport on April 19, severely damaging the after fuselage. No injuries are reported.

Flight 449 from Chicago to Kansas City on June 15 is the last Convair 880 service; thereafter the aircraft type is retired from the company fleet. The revised demand scheduling service begins on July 8.

Just after arriving at Rome from Athens on August 26, with its passengers deplaned, airline workers discover fire in the aft baggage compartment of Flight 841, a B-707-331B. The blaze has been caused by bomb, set to destroy the plane during a later flight, which has malfunctioned and gone off early. There are no injuries and the blaze is contained.

On a September 8-9 flight from New York to Tel Aviv, via Rome and Athens, the B-707-331B (the same plane attacked on August 26) reports an engine failure. Flight 841, carrying 9 crew and 79 passengers, is seen by the crew of an **Alitalia, S.p.A.** airliner and by those aboard Pan Am Flight 110 to roll to the left into a steep descent. The plane plunges into the sea, with an engine ablaze, some 50 mi. off the Greek island of Kefallinia and 235 mi. WNW of Athens; there are no survivors. The Arab nationalist Youth for the Liberation of Palestine organization claims to have sabotaged the airliner when one of its own members detonates the explosive device, hidden in the aft cargo compartment, as the aircraft flew overhead. The NTSB confirms the boast a year later.

The CAB rejects TWA's request for temporary subsidy on September 18. As a result, the company grounds aircraft and dismisses personnel and also resumes merger discussions with **Pan American World Airways (1)** at month's end. On October 16, the two carriers sign an agreement to exchange selected route authorities (including TWA's transpacific route) for a temporary period of five years. Two days later, the carrier files with the CAB for a reconsideration of its previous international subsidy petition.

Flight 514, a B-727-231 with 7 crew and 85 passengers en route from Columbus to Washington, D.C. on December 1, crashes near a secret government installation on Mount Weather, Berryville, Virginia, during its landing approach to Washington, D.C. (IAD). There are no survivors from what is reported to be a premature descent while on an unpublished segment of a VOR-DME approach.

Two authors will later attempt to explain the disaster: F. Lee Bailey, with John Greenya, *Cleared for Approach: F. Lee Bailey in Defense of Flying* (Englewood Cliffs, N.J.: Prentice Hall, 1977) and Adam Shaw, *Sound of Impact: The Legacy of TWA Flight 514* (New York: Viking Press, 1977). Even the NTSB accident report is commercially published as *How and Why Did Flight 514 Kill 92 People: An Accident Report* (New York: Arno Press, 1976).

The route agreement with **Pan American World Airways (1)** is filed with the CAB on December 17 and incorporates several changes made since October. During the year, 11 additional L-1011s and 3 B-727-200s are delivered, while one TriStar catches fire on the ground at Boston and is destroyed.

Passenger boardings jump 10% to 16,138,000, but FTKs operated decline by 7.7% to 21.08 million. Depression on the North Atlantic and higher fuel costs have a severe impact. Although overall income is up to

\$1.75 billion, expenses (led by fuel bills for \$203.8 million) rise even more, to \$1.77 billion. As a result, stockholders learn that the operating loss is \$18.23 million and, at \$23.57 million, the net decline is even worse.

The workforce is reduced in 1975 to 34,194. In need of a cash injection, TWA concludes an agreement on January 31 to sell six Boeing 747-131s to the government of Iran for \$99 million. On February 4, a B-747-131 with 196 aboard sets a new speed record of 8 hrs. 54 min. between Los Angeles and London, 8 min. faster than the previous mark. Following February CAB approval, the two-year **Pan American World Airways (1)**-TWA route exchange agreement is implemented on March 2. TWA suspends service on its transpacific route, as well as that flown to Bangkok, Bombay, and Frankfurt.

Meanwhile, Daniel P. Reid is appointed vice president/general manager and leads a bold new marketing effort designed to attract additional customers. Newly designed ticket offices, new aircraft livery, and new services are all ordered. On May 5, the carrier files for a fuel-related domestic subsidy of \$184.1 million and a 5% fare increase.

Iran purchases three additional B-747-131s on June 13; the Jumbojets will be delivered through the remainder of the year. A new L-1011 TriStar 1 is delivered on August 27.

To celebrate the anniversary of its 1930 cross country airmail service, Ford 5-AT-8 is leased from Harrah's Automobile Collection at Reno, Nevada. Painted in the carrier's early livery, it flies from Newark to Los Angeles in October and November via Philadelphia, Harrisburg, Pittsburgh, St. Louis, Kansas City, Wichita, Amarillo, and Albuquerque.

An **American Airlines** DC-10-10 with 190 aboard must dive 2,000 feet over Detroit on November 27 to avoid a collision with a company L-1011 carrying 113 people. A lightplane nearly collides midair with a B-727-231 near Pittsburgh on December 9.

While putting down in thick fog, a B-707-331B with 8 crew and 117 passengers lands outside the runway at Milan on December 22, losing its landing gear and all four engines during a subsequent slide to a stop. No fatalities occur, but 33 passengers are injured.

During the year, service to Bombay is cancelled.

Customer bookings since January increase a slight 0.9% to 15,759,000 while freight is off by 7.8% to 712 million FTKs. Total revenues are \$1.8 billion, but expenses are much higher at \$1.88 billion. The operating loss is \$81.6 million while a net loss of \$86.27 million must be reported.

The number of employees is boosted by 2.2% in 1976 to 34,938. An agreement is signed on February 10 for the sale of two L-1011s to **Saudia (Saudi Arabian Airlines)** for \$55.5 million; the aircraft are delivered at month's end, but are flown on to Jeddah wearing TWA livery and Saudia registrations. The fuel-related domestic subsidy request of 1975 is denied on March 17. During the spring, service is inaugurated to Bahrain and Nice and on May 18 the company discloses to the Securities and Exchange Commission (SEC) that it has made \$700,000 in improper payments abroad during the previous year to air cargo agents and shippers for rebates of tariff charges. The company's longest-lasting contribution to the Bicentennial is the restoration of a Northrop Alpha for donation to the National Air and Space Museum.

Five Croatian nationalists (Zvonko Busic, Julienne Busic, Peter Matanic, Frane Pesut, and Mark Vlasic) hijack Flight 355, a B-727-231 en route from New York to Chicago on September 10 with 92 aboard, and divert the aircraft to Montreal. From the Canadian city, the pirates radio instructions that lead New York police to Grand Central terminal lockers, where active bombs and political documents are found—the latter are required to be published next day. During the bomb removal, one device explodes killing a policeman. On September 11, the trimotor flies to Gander, Newfoundland, where it is joined by a TWA B-707-331B able to navigate across the Atlantic.

After the release of 35 hostages, the pathfinder Stratoliner leads the hijacked B-727-231 to Keflavik, Iceland, where both planes are refueled and the B-707-331 is loaded with propaganda leaflets. Meanwhile, the hostages released at Gander relay the hijackers' instructions for the aerial dropping of propaganda leaflets over Chicago and New York.

From Iceland, the B-727-231 and B-707-331 fly to London, where permission to land is denied, but where the B-707 drops leaflets before flying across the Channel to drop more over Paris. Both jetliners land within minutes of one another at Orly Airport, where French police marksmen shoot the tires out of the trimotor.

Early on September 12, French officials give the hijackers an ultimatum: deportation or execution. The five pirates quickly surrender and are led aboard a French Air Force transport plane that flies them to New York and trial for air piracy and murder. The quintet will be tried on federal charges of murder and air piracy and all five found guilty; two will receive sentences of life in prison and the others will receive 30-year terms. The group is retired in a New York State court and the members receive similar local terms of imprisonment.

In an unrelated matter, one of the B-747-131s sold to Iran is now repurchased at the last minute.

A B-707-331 lands safely at Boston on November 30 after being struck by lightning while en route from London. A new management team takes over the company on December 31. Charles C. Tillinghast Jr. retains the board chairmanship, with L. Edwin Smart elected to the new position of board vice chairman. Carl E. Meyer Jr. is then named president/CEO; the former accountant is the first president promoted from within the company in 40 years.

Enplanements at the leading on-time performer grow by 7.4% to 17,486,000, while cargo is up slightly, 1.3% to 679 million FTKs. Operating income is \$2.03 billion while costs are held to \$1.98 billion. This happy imbalance results in an operating profit of \$53.28 million and net gain of \$36.83 million. Overall, the economic performance is a \$154-million turnaround from the previous 12 months.

En route from New York to London on January 11, 1977, Flight 700, a B-747-131 with 349 passengers is subjected to a hijacking attempt by a man claiming to have a grenade and demanding to be flown to Uganda. The assailant is overpowered by nearby passengers and crew members, allowing the Jumbojet to return to its point of origin. The man will be tried and is ordered to receive psychiatric treatment, as well as a short prison term.

An employee warrant offering, announced on February 23, begins on May 11. Half a million \$1.75 warrants are offered to all active TWA, Canteen Corporation, and Hilton International employees in the continental U.S. and the response is so positive that the board of directors, on June 22, authorizes an additional 365,000 warrants. Meanwhile, on June 11, U.S. and U.K. officials approve a new Bermuda II bilateral agreement that allows the continuation of company service to London.

On June 13, all 24 retired CV-880s are sold for just \$3.5 million to Los Angeles-based North Star Maritime Corp., which plans to convert them into freighters. When North Star is unable to finance the purchase, the deal fails; TWA is, however, \$100,000 richer as it is allowed to keep North Star's deposit.

Twice-weekly charter flights for tourists are inaugurated to Cuba on December 1. Another attempt to sell the CV-880s also falls through; this time, the airline is able to keep a \$200,000 deposit.

Enplanements climb to 18,339,000 during the 12 months and a \$64.79-million net profit is earned on total income of \$2.31 billion.

Airline employment in 1978 stands at 35,271. Chairman/CEO Tillinghast and President Meyer oversee a fleet that now comprises 11 Boeing 747-131s, 40 B-707-31Bs, 10 B-707-331s, 35 B-707-331Bs, 11 B-707-331Cs, 26 Lockheed L-1011 TriStar 1s, 39 B-727-231s, 35 B-727-31Cs, and 14 DC-9-15s.

On January 22, Caribbean Holidays, a travel organization, launches a series of weekly charter flights between New York and Havana; TWA provides the airlift at an all-inclusive cost of \$573 per person.

Van Nuys, California-based American Jet Industries, in February, purchases 16 of the 24 CV-880s, plus spare parts, for \$2.4 million. Later, the eight remaining Convair airframes are sold, completely stripped, for scrap at \$5,000 a copy.

The route exchange agreement with **Pan American World Airways** (1) expires in March. Among the new domestic routes introduced are

those to Minneapolis (MSP), Syracuse, Orlando, and Fort Lauderdale. Meanwhile, expanded traffic hubs are established at St. Louis, Albuquerque, and Kansas City.

Newark-London L-1011-200 service is inaugurated on April 30. Two TriStar 200s are leased to **Delta Air Lines**, allowing it to open London service on the same day. New flight attendant and ground personnel uniforms are introduced in June. During the summer, a large scale aircraft interior refurbishment program is undertaken. On August 16, the board of directors approves a plan to reorganize the corporation as a holding company to be known as Trans World Corporation. Under the plan, TWA, together with Hilton International and the Canteen Corporation, become independent operating subsidiaries of the parent.

A stewardess aboard Flight 830, an L-1011 with 88 passengers and en route from New York to Geneva on August 25, is handed a 19-page document by an unknown passenger during the darkness of an in-flight movie. The letter demands the release of Nazi leader Rudolf Hess, Robert Kennedy's assassin Sirhan Sirhan, and the five members of the Croatian nationalist organization held for the previous September's hijacking. The letter threatens to blow up the airliner and the author(s), who does not make good on the threat, is not immediately identified.

Once the aircraft has landed at its destination, a lone assailant, claiming to possess explosives, makes his move and a seven-hour standoff ensues. Finally, the pirate surrenders and is turned over to Swiss police. He will be tried and given a seven-year prison term.

Corporate restructuring is approved by TWA shareholders on October 12 and 5 days later, an order is announced for the purchase of 10 B-727-100s and 3 B-747SP-31s for \$300 million and 1980 delivery; options are taken for 30 more "three-holers" and 6 more Jumbojets.

Once President Carter has signed the Airline Deregulation Act into law, TWA moves ahead on a year of expansion planning for new market introductions. On October 20, the FBI arrests unemployed chauffeur Rudi Kreitlow, a.k.a. Charles Metel, as the mystery man who handed the threatening note to the flight attendant during the August transatlantic flight. The B-707-331C freighter fleet is grounded in early December.

On December 21, 16-year-old Robin Oswald, using three railroad flares as potential weapons, hijacks Flight 541, a DC-9-15 with 87 aboard en route from St. Louis to Kansas City, in a bid to free hijacker Garrett Brock Trapnell, serving a life sentence for his 1972 hijacking. The aircraft puts down at Williamson County Airport, Marion, Illinois, where Oswald, whose mother was fatally shot by a helicopter pilot in May during another attempt to free Trapnell, retains her hostages for nine hours before releasing them and surrendering to authorities. She will be tried in juvenile court, convicted, and sentenced to a juvenile home; she will be released upon reaching her majority, but placed on probation.

Passenger boardings for the year rise 9% to 20,152,000 while freight traffic declines 6.3% to 660.4 million FTKs. Revenues move ahead by 7% to \$2.47 billion while expenses are held to \$2.42 billion. As a result, a \$49.06-million operating profit is earned and net gain moves up by 33.7% to \$86.64 million.

The employee population is reduced by 4.4% in 1979 to 34,036. Trans World Corporation, incorporated under Delaware law, becomes the airline's parent corporation on January 1. The new holding company immediately begins to diversify, seeking and obtaining control of Century 21 Real Estate Corporation. At the same time, it receives the 1978 "Passenger Service Award" from *Air Transport World* magazine.

Orders are officially placed for three B-747SP-31s and, in February and March, a "Kids Fly Free" travel promotion is unveiled.

A B-727-31 with 87 aboard and en route from New York to Minneapolis on April 4, survives a barrel roll and nose dive over Saginaw, Michigan, that may have exceeded the speed of sound, before making an emergency landing at Flint with only three passengers slightly hurt. Pilot Capt. Harvey Gibson reports that, after the wing flaps, spoilers, and leading-edge flaps had all failed to bring the craft under control, he was able to avert a crash by lowering his landing gear.

New York Airways, the scheduled helicopter line in which TWA holds a 15.6% interest, also ceases operations in April; however, in re-

action to the deregulation of the airline industry, other significant domestic route expansion occurs during the year. New destinations now visited include Buffalo, Colorado Springs, Fort Myers, Houston, Knoxville, Omaha, Palm Springs, Providence, Reno, Salt Lake City, Seattle, Toledo, and West Palm Beach. Additionally, new frequencies are launched between 6 cities in Florida and 10 in the Northeast and Midwest. Other new foreign markets include Bahrain, Casablanca, Dublin, Geneva, Nice, Santa Maria, Shannon, and Terceira. On June 14, a B-727-231 flight is delayed by a bomb threat.

Citing soaring fuel costs, the company announces on July 11 that it is discontinuing flights from Boston to the Azores, Lisbon to Casablanca, and Barcelona to Nice. On September 13, Trans World Corporation Chairman L. Edwin Smart breakfasts at New York's Carlyle Hotel with onetime employee Frank Lorenzo, now head of **Texas International Airlines**. Lorenzo, with 4.9% of TWA's stock, offers his former employer, 14 times larger in corporate size, a merger. Smart walks out of the meeting.

Next Flight Out small-package express service is started on October 1. During an October 2-7 visit to the U.S., Pope John Paul II flies TWA, a specially equipped and refurbished B-747-131, *Shepherd One*, transatlantic and a B-727-231, *Shepherd Two*, domestic. Soaring fuel costs force TWA to suspend service to Dublin and Shannon on October 28 after 33 years of a New York-Ireland route.

On November 17, eight Iranians, nearly all of who are students in the Baltimore area, are seized as they are about to board a flight to New York. The men are carrying 3 rifles, 4 telescopic sights, and 15 boxes of ammunition and are charged under federal firearms statutes.

A B-707-131B with 133 passengers lands at St. Louis on November 30 with its nose gear retracted; although the aircraft is badly damaged, there are no fatalities.

Orders are placed on December 10 for 10 B-767-231s, with options for 10 more, preferring them to the Airbus Industrie A310; two more L-1011s are ordered the same day. During the year, seven DC-9-30s and two B-707-320s are sold.

Customer bookings accelerate 12.4% to 22,650,000, but freight is off by 23.4% to 506 million FTKs. Operating income rises 16.9% to \$2.89 billion. Unhappily, expenses (led by soaring fuel prices) jump 21% to \$2.94 billion and leave officials and investors with a net loss of \$27.4 million—a \$114-million downward turn in 12 months.

The employee population is reduced by 5.5% in 1980 to 52,000 and the first of 3 B-747SP-31s is delivered on March 21, followed by a second on April 14. Transatlantic Ambassador Class business service is introduced on April 15. Employing L-1011s and B-747s, TWA becomes all wide-body (six-across seating) over the Atlantic. A B-747-156 is purchased from **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)** on May 1 and the last of three B-747SP-31s is delivered on May 8, allowing nonstop flights from New York-Cairo to begin on June 9.

A B-727-231 and a small USAF transport avoid collision over Iowa City by a vertical distance of only 200 feet on July 16; both aircraft had been assigned to the same space by ATC.

All tour sales and services functions are centralized within the Philadelphia reservations office on September 15 and six days later, on September 21, the Arab Boycott Bureau bans the company from flying in Arab airspace or from landing at airports in Arab nations. The **National Airlines (1)** terminal at New York (JFK) is purchased on December 8 and in a legal action, the company agrees to pay an \$80,000 fine for fare overcharges made during September of the previous year and to refund up to \$629,000 to passengers.

Enplanements in the recessionary year fall by 9.6% to 20,399,000 and freight is off by 14.1% to 416.53 million FTKs. Revenues rise 13.8% to \$3.37 billion, but expenses, at 13.4%, are higher, reaching \$3.39 billion. The operating loss improves to \$18.4 million, but a net loss of \$27 million is again recorded.

The workforce is cut again in 1981, by 14.7% to 29,000, much of the reduction coming in the fourth quarter. A second former Spanish B-747-156 arrives on February 17. Lester Perry, who had hijacked a jetliner to

Cuba in 1969, is arrested in Indiana for another theft on March 10; having apparently reentered the U.S. via the Cuban boatlift of 1980, he will be tried and sentenced. Also in March, the company purchases a pair of B-747-136s from **British Airways, Ltd. (2)**, with the first delivered on the 25th.

On April 2, the company inaugurates domestic flights from its newly refurbished Domestic Terminal (formerly **National Airlines'**) at New York (JFK), where the TWA Flight Center is now the largest airline complex in the world.

Royal Ambassador service is started on May 6 for all first-class passengers on transatlantic, intra-Europe, and domestic transcontinental and long-haul flights. The second British Jumbojet arrives on May 30.

After a 21-year suspension of service, the carrier resumes flights to Peoria; new markets entered include Des Moines, San Antonio, and Little Rock. Construction for the housing of a new B-767 simulator is started at Kansas City. As a result of the PATCO air traffic controllers' strike, TWA is forced to reduce its domestic flights by 19% and its total capacity by 10%.

For a period in September and October, London (LHR) acts as something of a "hub" for TWA passengers returning to the U.S. from European destinations, thereby ensuring full loads on company aircraft. Beginning in November, the company takes advantage of option positions to begin obtaining five additional TriStar 100s.

Claiming to have a gun and a bomb (he does not), a lone assailant pushes his way past station agents and boards Flight 534, a B-707-331B with 88 other passengers already aboard and preparing for departure from Cleveland Hopkins Airport to New York on December 5. Shouting his demands to be flown to Iran, the pirate is tackled by the plane's flight engineer; in the struggle, both fall down the air stairs and are injured. Both are taken to hospital and, upon examination, the hijacker will be found mentally deficient. Just after the new year, he will be sent to a psychiatric facility.

Still, passenger boardings plunge 11.8% to 18,004,000, while cargo falls by 12.6% to 456.87 million FTKs. Revenues advance a minor 3.6% to \$3.395 billion while costs are just less, climbing 1.74% to \$3.391 billion. The operating profit is \$3.78 million; however, a net loss of \$8.97 million, though better than the previous year, must still be absorbed.

The payroll is cut 2.3% in 1982 to 28,464. Domestic Ambassador Class service is introduced on nonstop transcontinental flights on January 11. Because of an error by a veteran air traffic controller, a B-747-131 nearly collides with a **Northwest Airlines** B-727-251 over Lake Michigan on March 4. All five of the new TriStar 100s are in service by May 1. The company, which operates the Stratoliner longer than most other carriers, sells a B-707-131B back to its builder on May 19. The 35th and last L-1011 TriStar is delivered on May 27.

William Hoffman is arrested on October 27 for his unsuccessful attempt to hijack Flight 72, an L-1011 with 109 passengers at Los Angeles. He is reported in stable condition when he is injured in a fall from the plane after being subdued by sheriff's trainee Dennis Robinson. After he is released from hospital, Hoffman will be tried and given a 12-year prison sentence.

The first four of 10 B-767-231s is received at Thanksgiving and the initial unit is placed into service on December 3 over thinner transcontinental routes, including Los Angeles to Washington, D.C. (IAD). Also during the fourth quarter, documents are signed with McDonnell Douglas permitting the lease of 15 MD-82s early in the new year. Late in the year, a B-747-131 is sold to UAS Leasing.

Customer bookings dip 1.7% to 17,701,000, while cargo drops 7.4% to 423.26 million FTKs. Operating income drops 4.69% to \$3.23 billion as costs drop 1.52% to \$3.34 billion. Still, expenses outrun income and leave a \$104.17-million operating loss and pretax net losses of \$30.82 million.

The workforce is cut another 4.6% in 1983 to 28,152 and at the April board meeting a group of former Oppenheimer and Company executives, Odyssey Partners, with 1% ownership, mount an unsuccessful takeover proxy battle, urging that the airline be split off and broken up.

Fifteen DC-9-82s are leased in the spring and the first is placed into service on May 3. Meanwhile, the last of 10 B-767-231s on order are delivered. Also in November, as Odyssey Partners had recommended earlier, the decision is taken by the board of directors to divest the money-losing airline from Trans World Corporation, turning it into a new public company.

In order to compete with **PEOPLEExpress**, TWA on June 1 cuts its fares 25% on six U.S. to London schedules. During the summer, an inclusive-tour Gateway program is introduced. All salaried personnel, management and nonmanagement, take a 10% pay cut on September 1. The last B-707-331 flight is made on October 31 and all other employees accept a 10% pay cut on November 1. Late in the year, as Odyssey Partners had recommended earlier, the decision is taken by the board to divest Trans World Corporation of the money-losing airline.

Passenger boardings for the year are up 5.3% to 18,634,000 as freight jumps 16% to 492.05 million FTKs. Revenue climbs 2.96% to \$3.33 billion and although expenses are only up 1.7%, that amount totals \$3.39 billion. Consequently, a \$65.24-million operating loss is suffered, along with a \$12.37-million net loss. The loss figures are an improvement on the previous year's figures.

Employment falls 4.1% in **1984** to 27,320 and the fleet now includes 10 B-767-231s, 17 B-747-131s, 2 B-747SP-31s, 26 B-727-31Cs, 56 B-727-231s, 33 L-1011 TriStar 1s, and 15 MD-82s. Orders remain outstanding for 4 MD-83s.

The U.S. Supreme Court on January 16 dismisses a challenge by TWA to a ruling by the New York State Human Rights Division barring the airline from requiring all pregnant flight attendants to take disability leave as soon as they learn of their conditions. The Trans World Corporation's 81% equity in the airline is redistributed on February 1. TWA and its financial problems become a separate entity; however, the move does abort a takeover attempt by the Odyssey Partners group, which had planned to breakup the airline and sell its components.

The largest single route expansion in company history is launched on April 29; new destinations, all emanating from New York (JFK), include Atlanta, Memphis, Raleigh/Durham, Norfolk, Milwaukee, Jacksonville, Amsterdam, Brussels, Munich, Zurich, and Kuwait. Simultaneously, service on the highly competitive New York to Chicago route is lessened in an effort to redeploy into a more commanding position on other routes, such as New York to Seattle. It is also decided not to challenge the hub strengths of **USAir** (Pittsburgh), **Delta Air Lines** (Atlanta), or **United Airlines** (Chicago). Two B-747-282Bs are purchased from **TAP (Air Portugal, S.A.)**, with the first delivered on June 4.

On July 24, arrangements are made to sell the premier B-747SP-31 to the government of Brunei, which will convert it into a VIP transport. This deal will later fall through. Also in July, Vice President-Maintenance and Engineering Richard D. Pearson is named executive vice president/chief operating officer.

In September, a number of assorted investment companies controlled by financier Carl C. Icahn quietly begin purchasing TWA stock. The second former Portuguese Jumbojet arrives on October 30 and as of November, nonstop links are offered to 50 other airports from St. Louis, along with 150 flights per day. During the year, employment costs are reduced \$100 million by a 10% salary cut for all noncontract personnel as well as pilots, meteorologists, and flight dispatchers. Talks with the machinists break down in November.

Although domestic traffic declines, international boardings rise 20.2%; overall system bookings fall 0.4% to 18,225,000. On the other hand, cargo accelerates 25.6 to 616.41 million FTKs. Operating revenues grow 9.5% to \$3.64 billion and expenses are contained at \$3.57 billion. The financial turnaround is dramatic, as operating profit swells to \$75.15 million and net gain is \$29.51 million.

Employment grows 6.4% in **1985** to 29,080 and in an important ruling on age discrimination, the U.S. Supreme Court on January 8 rules that the company has violated the law by forcing 60-year-old pilots to retire rather than be transferred to different cockpit jobs. The carrier now remains the only one of the Big Five majors yet to negotiate wage-

reducing labor contracts with its employee groups and it will face a flight attendant strike that forces it to fly for a significant period primarily with management personnel and new hires manning the passenger cabins.

On February 1, TWA becomes the first U.S. airline to fly a twin-engine aircraft across the Atlantic in scheduled passenger service when Flight 810, a B-767-231ER, is placed on the Boston to London, Paris, and Zurich route, flying under the FAA's 75-min. rule. On February 22, the second B-747SP-31 is sold to the UAE; the Gulf state will transform the Jumbojet into a VIP transport.

A B-747-257B is purchased from **Swissair, A.G.** on March 26, a B-747-284B is acquired from the Greek flag carrier **Olympic Airways, S.A.** on April 11 and on April 28, nonstop B-767-231ER flights begin from St. Louis to Paris to Frankfurt and from Philadelphia to London.

Other new frequencies introduced from New York during the year will include a fourth daily nonstop flight to London, a second daily nonstop to Athens, thrice-weekly nonstops to Tel Aviv, daily flights to Copenhagen via London, daily to Geneva via Paris, thrice-weekly to Bombay via Cairo and Kuwait, and daily nonstop to Munich. New domestic operations inaugurated from St. Louis include Atlanta, New Orleans, Minneapolis (MSP), Dallas (DFW), and Norfolk; the number of domestic flights from St. Louis rises past 170 to 200 per day, in addition to a daily B-747SP-31 service, which is also started to London.

By April 29, Carl Icahn's investors have covertly acquired over 5% ownership; Icahn prepares to turn in his 13D form to the Securities and Exchange Commission and on May 3, meets with TWA management to express his interest in taking over the airline. In a May 9 filing with the SEC, Carl C. Icahn discloses that he, and a group he heads, has acquired more than 20% of TWA's outstanding common stock. The amount is increased to 23% on May 14. The next day, the airline files suit in U.S. District Court New York to prevent Icahn from acquiring more shares, using his present holding to influence TWA management or policies, and to require him to divest his holdings.

A second former **Swissair, A.G.** B-747-257B is delivered on May 17 and Icahn, far from dissuaded by either the suit, the adverse publicity generated by the airline, or the work of high-paid and noted Washington, D. C. lobbyists, makes a formal merger proposal of \$18 per share on May 21. He pledges not to make any further moves for 10 days while the suit is decided. Meanwhile, CEO Meyer opens discussions with Frank Lorenzo three days later. The Texas Air Corporation boss, who also owns 5% of TWA's common stock, offers \$20 per share. On May 28, the federal court refuses to bar Icahn's takeover efforts and at the end of the month, Chairman Frank Borman of **Eastern Air Lines** begins to prepare a bid.

By early June, Mr. Icahn has invested over \$100 million in TWA and owns a third of the company. TWA counterattacks as a Missouri judge issues a temporary restraining order prohibiting the financier from acquiring more stock and that state's Senator John Danforth attempts to enact a piece of special-interest legislation that would keep Icahn, as a corporate raider, from owning any airline. Both moves are blocked.

A Jumbojet with 223 aboard lands safely at St. Louis on June 11 after a 125-pound aluminum panel falls off one of its wings; no injuries are reported. Four MD-83s join the fleet during the month's first two weeks.

During a June 11-12 session, representatives of Icahn and Lorenzo work out an arrangement to provide \$16 million in "expenses" to the former in exchange for allowing Texas Air Corporation to takeover TWA. Lorenzo rejects the arrangement and on June 13 the board of TWA joins with that of Texas Air Corporation in agreeing to a \$793-million merger that would see TWA become a wholly owned subsidiary. Although company management seems pleased, the airline's pilots, who had originally opposed the Icahn takeover, are agast at the prospect of working for Lorenzo and their leaders now begin working with Icahn's representatives.

The next day, June 14, Flight 847, a B-727-231 with 145 passengers and piloted by Capt. John Testrake and a crew of 8, has just taken off from Athens for Rome when it is taken over by two armed Shiite terrorists. These will later be reinforced by 10 others who, collectively, now

put the airline through its worst crisis ever. In a 17-day, televised hostage ordeal, the jetliner initially shuttles between Beirut and Algiers four times in four days and USN diver Robert Stethem is murdered. All of the hostages save 32 Americans and the crew are released.

As Testrake and purser Uli Derickson labor aboard the airliner to win the plane's release and save the captive American passengers, negotiations with representatives of the U.S., Algeria, Lebanon, Syria, and Israel are undertaken. The hostages are taken to different Beirut destinations to prevent their rescue by military forces and are held until Israel releases 735 Shiite prisoners.

The last of 39 American hostages of Flight 847 are freed on June 30 and driven to Damascus in a convoy organized by the International Red Cross; within hours of their arrival, all are flown to West Germany for physical exams, reunification with friends, and flights home.

The incident is widely reported. Capt. Testrake, with David J. Wimbish, relives the saga in *Triumph over Terror on Flight 847* (Old Tappan, N.J.: Fleming H. Revell, 1987) while another prisoner, passenger Kurt Carlson, recalls his impressions in *One American Must Die: A Hostage's Personal Account of the Hijacking of Flight 847* (New York: Congdon & Weed, 1986) as does a second passenger, B. Christian Zimmermann in his *Hostage in a Hostage World: Hope aboard Hijacked TWA 847* (St. Louis, Mo.: Concordia Pub. House, 1985).

Pursor Derickson reveals how she was able to respond while "Living With Fear" in *People Weekly* 26 (July 29–August 5, 1985): 69–76, 96–100. The story is retold as "I'm No Heroine!" in *Reader's Digest* 127 (November 1985): 131–137. With Jim Gallo, Dickerson explains "How I Found the Courage to Fight the Terrorists" in *Glamour* 83 (December 1985): 62–64. The lady's story also becomes the subject of the Emmy-nominated 1988 television movie *The Taking of Flight 847: The Uli Derickson Story*, starring Lindsay Wagner.

Also at month's end, an L-1011 replaces the B-767-231 on the Boston to London, Paris, and Zurich service.

In July, while TWA's management is trying to recover from the effects of the Flight 847 ordeal and President Reagan's veiled warnings of further terrorist acts to come, Frank Lorenzo again tries to deal or buy Carl Icahn away from TWA, but fails at least twice. Meanwhile, the carrier's pilots reach accommodation with Icahn, whom they continue to regard as the lesser of two evils. Rebuffed by Icahn, **Eastern Air Lines'** Frank Borman meets with TWA officials on July 13. However, discussions reveal the enormity of the problems EAL would face if it could win the takeover and consequently, Eddie Rickenbacker's old company bows out of the bidding two days later.

"Trans World Express" commuter service is inaugurated from St. Louis to five Missouri and Illinois cities by **Resort Air** on August 5. The same day, Carl Icahn, who now controls 40.6% interest, wins pledges of support from both the pilots and machinists. Although banned in the U.S. as an instrument of terrorism, Beirut-based **Middle East Airlines, S.A.L. (2)** covertly flies a company crew into the Lebanese capital later in the month to recover the B-727-231 of Flight 847. On August 13, TWA's board refuses to give Frank Lorenzo the "lockup" on negotiations that he had requested and, in effect, hands the takeover game to Icahn. Also during the summer, cargo services are expanded to Bombay, Copenhagen, Geneva, Minneapolis (MSP), and Charlotte.

TWA and Texas Air Corporation agree on September 13 to terminate their merger agreement effective upon the signing of a new merger agreement between TWA and an affiliate of Carl Icahn. The three-way deal provides for payment by TWA to Texas Air, upon signing of the Icahn merger, of approximately \$43 million in cash in satisfaction of TWA's termination obligation under the Texas Air agreement. On September 26, TWA signs a merger agreement with Icahn and certain of his affiliates providing for the financier and his group to acquire the remaining shares of common stock for \$19.50 in cash and \$4.50 in preferred stock.

An order is placed on November 4 for 10 McDonnell Douglas MD-80s, while service to the Bahamas and the Caribbean, with nonstop flights to Freeport, Nassau, and San Juan from St. Louis and New York is initiated on November 15. On December 18, Frank Lorenzo renews

his purchase offer to the TWA board, bidding \$22 cash per share; however, Icahn, who had once threatened to dismiss the board, now makes peace with it and offers \$24 cash for each share of common stock still outstanding. With \$360 million invested, Icahn has finally won his airline. The three B-747SP-31s are now sold, two to **American Airlines** and one to the government of the UAE.

Passenger boardings jump 13% on the year to 20,876,000, but freight dips 5.4% to 586.9 million FTKs. Revenues ascend 5.9% to \$3.86 billion, costs jump 99% to \$3.92 billion, and the operating loss is \$63.57 million. Largely due to takeover costs and a disastrous fourth quarter, a net \$193.1-million loss is suffered. The carrier now has \$1.3 billion in debt against \$539.5 million in equity.

Airline employment is reduced by 5.4% in 1986 to 27,500 and Carl C. Icahn becomes TWA board chairman on January 3 and C. E. Meyer is succeeded by Interim President Richard Pearson; Chief Financial Officer Robert A. Peiser is also driven away. Old-line board members like Robert S. McNamara and Jack Valenti are replaced by new personnel, including Icahn relative Elliott Schnall. Five days later, the new chairman writes to company employees assuring them of his interest in the carrier and mentioning a financial cushion provided by Drexel Burnham Lambert approaching a billion dollars. The communication does not persuade workers of their new chief's long-term interest, particularly as so many executives are let go.

On February 28, the carrier announces the winner of a \$50,000 prize for a contest it ran in 1955 for the most accurate prediction of commercial aviation 30 years into the future. Eighty-year old Helen L. Thomas, who says she long ago forgot entering the contest, is judged the best prognosticator.

Securing a monopoly at its largest hub, TWA purchases St. Louis-based **Ozark Air Lines** on March 6 for \$239 million (\$19 per share of common stock). Applications are filed with the DOT that must decide if a super carrier transporting 85% of the traffic generated at the St. Louis bases will restrict trade. In an effort to resist Chairman Icahn's wage and cost-cutting measures, the company's flight attendants, members of the Independent Federation of Flight Attendants, go out on strike on March 7. They are forced to remain out when the new owner hires replacements and continues to operate.

On April 2, Flight 840 is winging from Rome to Athens, an intermediate stop made as part of a longer service from Los Angeles to Cairo. In apparent reprisal for the sinking by the USN of two Libyan gunboats in the Gulf of Sidra a week earlier, Arab terrorists place a bomb under seat 10F of the B-727-231. The plane explodes at 15,000 ft. and although 4 of the 121 people aboard, including a mother, daughter, and baby, are sucked out through a hole blown in the fuselage, the plane is able to land safely at the Greek capital and the bodies are later recovered. No one is ever apprehended in the case.

On April 15, it is announced that the carrier will close down its connection from Cairo to Athens and Rome, with flights to Cairo routed through Paris or Frankfurt. Three forged Bahraini passports are found aboard a B-747-131 en route from Bombay to New York on April 20, prompting extra security checks and a prolonged stopover at Cairo.

The flight attendants legally prevent the airline from hiring any more replacements by calling off their nine-week-old strike on May 17 after agreeing to a mediated contract, which is ratified on May 22.

During the summer, the terrorism scare and effects of the long flight attendant job action depresses transatlantic traffic and leads to a suspension of flights from St. Louis to Paris and Frankfurt, from Los Angeles to Paris, and from New York to Athens. Trans World Corporation is now renamed TW Services and an agreement is reached with **Piedmont Airlines (1)** that will result in the fellow-major's feeding international traffic to TWA's terminal at New York (JFK).

Merger discussion are held with **Piedmont Airlines (1)** during September; the North Carolina carrier will not take over the Howard Hughes pioneer.

The second of two B-747SP-31s is delivered to **American Airlines** on October 16, while **Ozark Air Lines** is officially acquired on October 26

and is subsequently amalgamated. Its entire fleet of 50 jetliners is sold to a leasing firm and then chartered back, a move that saves the carrier \$240 million—more than the cost of the entire Ozark takeover. In addition, TWA gains another \$25 million when the Ozark pension plan is terminated. Also in October, the last B-747SP-31 is passed to **American Airlines**.

An additional income of \$122.5 million is generated when a half-interest in the company's PARES computerized reservations system is sold to **Northwest Airlines** in November. The same month, an arrangement is made to sell the Hilton International Co. to **KLM (Royal Dutch Airlines, N.V.)** In December, Chairman Icahn announces his intention to take over another airline and quietly establishes an investment company, Swan Management, to begin investing in his next target—**USAir**.

Enplanements dip 7.3% on the year to 24,636,000 and cargo is down 9.1% to 539.72 million FTKs. Revenues plunge 17.59% to \$3.18 billion, costs drop 16.99% to \$3.25 billion, and the operating loss deepens to \$75.72 million. The net loss, however, "improves" to minus \$106.32 million, due largely to \$122.5 million in income received from the sale to **Northwest Airline** of TWA's 50% shareholding in the PARS computerized reservations system.

The workforce is increased by 3.9% in **1987**. In January, the KLM board rejects the purchase of the 90-unit Hilton hotel chain, which is now sold to UAL, Inc. for \$975 million, and the Travel Channel 24-hour cable television channel is launched on February 1. On March 4, owner Icahn bids \$1.4 billion (\$52 per share) for the purchase of **USAir** and acquires 15% minority shareholding. Meanwhile, the SEC launches an investigation of Icahn's tactics as part of a broad review of insider trading; the government's examination, distracts Icahn long enough to allow **USAir** to gain the last bit of financial backing required for a successful takeover of **Piedmont Airlines** (1) the next day. Outmaneuvered, Icahn gives up the idea of a **USAir** merger before the end of the first quarter and disposes of his new holdings for a gain.

Daily L-1011 service is inaugurated from New York to Brussels on May 9, along with daily TriStar flights to Stockholm, continuing on to Copenhagen. Frequencies are also resumed from St. Louis to Paris and Frankfurt. Thrice-weekly Los Angeles to Paris nonstops are restarted in June together with services from New York to Athens; however, flights to Bombay again cease.

A B-747-131 arriving at New York from Milan on August 5 passes within 600 ft. of a Pan Am B-727-221 shuttle from Boston before being guided to a safe landing at New York (JFK). An L-1011 with a stuck landing gear is diverted to St. Louis on August 22, where it lands safely on two of its three sets of wheels.

As in 1979, Pope John Paul II again flies specially configured TWA aircraft between September 10–21: the B-747-131 *Shepherd One*, transatlantic and the B-727-231 *Shepherd Two*, domestic. These two aircraft are accompanied by two charter L-1011s.

In October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

In December, Chairman Icahn purchases 5.9 million shares of Texaco stock from Bell Resources for \$34 per share. A man is taken into custody for bullying a flight attendant who had ordered him not to light up in the nonsmoking section of an L-1011 flight from Boston to Los Angeles on December 30.

During the year, Capt. John Testrake, hero of the 1985 Flight 847 hijacking incident, retires to fly humanitarian aid services for the private multinational Mission Aviation Fellowship in the Far East.

As the result of the public perception that the risk of terrorism has subsided, traffic improves, although it is up only 0.3% over the combined TWA-Ozark figures of the previous year, to 24,722,000 passengers flown. Freight, however, recovers by a nice 11.1% to 599.74 million FTKs. Revenues also resume their upward path, growing by 14.87% to \$4.05 billion. Expenses are up only 5.45% to \$3.81 billion,

allowing an operating profit of \$240.43 million. The net bottom line makes a huge turnaround and provides a gain of \$106.2 million.

Airline employment is increased by 3.4% in **1988** to 31,000, including the most important new hire, President Joseph Corr.

Passengers on a New Year's Day Boston to Los Angeles flight defy the smoking ban and shove flight attendants who ask them to stop; four are taken into custody upon landing. The U.S.-owned German carrier **Tempelhof Airways-U.S.A.** becomes the major's first European code-sharing partner. Employing a SAAB 340A painted in modified TWA livery, Tempelhof inaugurates "TWExpress" flights twice-daily from its base at West Berlin's Tempelhof Airport to Brussels. Meanwhile during the spring, the carrier wins an unexpected \$50-million settlement of a decades-old claim against Howard Hughes stemming from the magnate's failure to purchase new aircraft.

As a result of landing gear extension problems while coming in from St. Louis, a B-727-31 with 6 crew and 62 passengers is forced to make a belly landing at Chicago (ORD) on August 27; although the trijet must be written off, there are no fatalities.

At a special meeting on September 7, stockholders, despite an attempt by the company's pilots to initiate a court case, approve Carl Icahn's proposal to recoup the original acquisition cost by taking the company private. The privatization takes \$610.3 million out of TWA (of which \$469 million goes to Icahn), and adds \$539.7 million to TWA's debt. Meanwhile, efforts to purchase **Eastern Air Lines** continue as the result of several summer meetings between Icahn and Frank Lorenzo.

On October 15, Lorenzo's nemesis, the union leader Charles Bryan, meets with Icahn, but on October 17, the TWA leader announces that he has lost interest in any purchase of **Eastern Air Lines**. Nearly a year after the offense, the man accused of bullying the flight attendant over smoking the previous December, is sentenced on November 14 to 15 days in jail.

Also in November, Chairman Icahn completes the privatization of TWA, which now becomes the only privately owned major airline in America. The process increases leverage significantly as public shareholders receive \$20 in cash and \$30 in face amount of 12% subordinated debentures for each share for a total of \$350 million, including \$140 million in cash. Icahn receives the same \$20 per share, or \$469 million and another \$196 million in a new issue of preferred stock. Employees of the carrier, meanwhile, are able to purchase the remaining 10% of outstanding common shares.

Corporate equity falls from plus \$292 million to negative \$31.2 million, but, at the same time, Chairman Icahn sells the Texaco stock purchased the previous year for \$45.25 per share, presenting his airline with a pretax profit of \$222 million. On the passenger service front, the company and **Alaska Airlines** become partners in each other's frequent flyer programs, allowing participants in either program to earn mileage toward awards in both.

Flight 469, a B-727-231 en route from San Juan to Miami with 128 aboard on December 11, is diverted to Grand Turk Island by former Mariel boatlift participant Felix Sanches, who claims to have a bomb and wishes to go to Cuba; he is arrested. Five days later, on December 15, President Corr, no longer able to work with Icahn, quits to become chairman/CEO of Lorenzo's **Continental Airlines**. The corporate structure is now reformed, with all seven top vice presidents now reporting directly to the office of the chairman. During the year, a B-747-131 is sold to **Evergreen International Airlines**.

Passenger boardings climb a slight 1.9% during the year to 25,196,000 and cargo continues upward, by 8.8%, to 652.65 million FTKs. Revenues ascend 7.59% to \$4.36 billion, costs move along at 7.57% to \$4.1 billion, and the operating profit swells to \$259.42 million. A second straight net profit is generated: \$249.73 million; however, the debt-to-equity ratio has shrunk. The airline now has long-term debt of \$2.3 billion and negative equity of \$31.2 million.

The workforce is cut by 3.8% in **1989** to 29,815 and the fleet now includes 14 B-747-131s, 5 B-747-200s (1 Dash-284B and 2 each Dash-257Bs and Dash -282Bs), 11 B-767-231s, 13 B-727-31Cs, 56 B-727-

231s, 35 L-1011s, 29 MD-82s, 4 MD-83s, 7 DC-9-15s, 38 DC-9-30s, and 3 DC-9-41s. One TriStar is withdrawn.

On January 16, corporate headquarters are transferred from Manhattan to Mount Kisco, New York, an hour north of the metropolis near the owner's home. Twelve days later, on January 28, a federal judge rules that the company is liable for civil damages to 3,000 former flight attendants, who were replaced during their 1986 strike. Also in January, the company begins providing B-727-231 connecting service between New York (LGA) and Washington, D.C. (IAD) under contract to **All-Nippon Airways Company, Ltd.**

While on final approach for a landing at Houston after a March 1 service from San Antonio, the cockpit crew of a **Continental Airlines** MD-82 with 117 passengers misunderstands ATC instructions. It begins a 360-degree turn toward a TWA MD-82 with 57 passengers arriving from Austin in the opposite direction. At 900-m. altitude, the two planes miss each other by just 120 m.

Also in March, the U.S. Supreme Court overturns the January court ruling and in a 6 to 3 decision, indicates that the airline was within its rights to give strikebreakers priority over union members returning to work after the end of the Independent Federation of Flight Attendants strike.

In the first major equipment order since Carl Icahn acquired the carrier, an agreement is announced on March 28 for the \$3.6-billion purchase of up to 40 Airbus Industrie A330-300s or A340s. At the beginning of April, two DC-9-32s previously operated by **KLM (Royal Dutch Airlines, N.V.)**, are chartered.

Chairman Icahn attempts to sell his company, but is unsuccessful. His next move is to sell certain assets, including the Chicago-London route to **American Airlines**. Further cost-cutting measures are sought in the form of employee wage concessions. **Air New Zealand, Ltd.** now joins the major's frequent flyer program.

On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. TWA, with 16 security breaches, is faced with \$133,000 in punishment.

Also in June, an offering of \$300 million in senior secured notes is registered with the SEC. The move is unique to the industry in that it is secured largely by its slots at New York, Washington, and Chicago and by its expendable spare parts inventory. Long-term debt ascends to \$2.7 billion, with \$118 million in negative equity.

On July 15, the carrier changes its frequent flyer policy in response to complaints and a lawsuit by a homosexual couple; the new policy allows frequent flyers to share free tickets with any companion, not just relatives. Also in July, daily service is opened from Jacksonville to Orlando, continuing to St. Louis and Salt Lake City. In September, an alliance is signed with **Philippine Air Lines (PAL)**. Under its terms, the two enter into a frequent flyer program partnership and agree to code-share flights on PAL flights from Manila to Los Angeles and San Francisco and on TWA services from Los Angeles and San Francisco to New York (JFK).

During the year, as debts pile up, the flight attendants petitions DOT to review Chairman Icahn's fitness to run an airline; the machinists refuse to come to terms on pay, and the pilots accuse the chairman of bilking the company of \$665 million. In December, the carrier sells and leases back, for a \$210-million gain, eight TriStars and three Jumbos.

To make matters worse, customer bookings rise only 0.6% to 25,346,000, but cargo swells by 10.4% to 720.6 million FTKs. Revenues incline upward 3.29% to \$4.5 billion, expenses jump 9.21% to \$4.48 billion, and operating income plunges to \$24.37 million. There is a net loss of \$298.54 million.

There is no change among the company's 29,815 employees in 1990, the twelfth largest airline workforce in the world. The company's 210-jetliner fleet is 10th largest and on January 16, 11 Jumbos are sold to leasing companies for \$210 million to raise cash and reduce debt; they are then leased back.

In February, the carrier joins with **Northwest Airlines** and **Delta Air Lines** to announce that the three have finalized an agreement to create a new and independent reservations system company, Worldspan. Under

the direction of former Delta Vice President-Management Calvin L. Rader, the new system combines the PARS system, which TWA shares with NWA, with Delta's DATAS II reservations system. Brought together are 12,874 PARS and DATAS II-linked travel agencies and 48,910 PARS and DATAS II terminals.

In March, Jerry Nichols is succeeded as executive vice president/chief operating officer by William Hoar and plans are announced for another resumption of flights to Bombay. Later in the month, two Jumbos are sold outright and six B-767-231s are sold and leased back. The arrangement brings the carrier a profit of \$342 million, although it has to prepay \$107 million in related debt, including prepayment penalties. Another letter of intent is signed to sell and lease back a pair of TriStars for a gain of \$28.5 million.

In May, the company signs a letter of intent to lease 12 Airbus A320s formerly destined for **Braniff, Inc.** In June, a frequent flyer partnership is entered into with **Air India, Ltd.** On August 2, Iraq invades Kuwait, driving fuel prices significantly higher and adding to the problems caused by labor, an old gas-guzzling fleet, and an inadequate route system that sees its international segments cut back greatly due to the Gulf crisis.

Union figures in St. Louis attempt to interest billionaire airline entrepreneur Kirk Kerkorian in a possible takeover, while the company reaches agreement to sell its prized London (LHR) route to **American Airlines**. In September, 12 of the company's 46 slots at Washington, D.C. (DCA) are sold to **United Airlines** for \$19.3 million. Older aircraft that are expensive to operate are withdrawn and capacity shrinks. In October, Chairman Icahn approaches bankrupt **Eastern Air Lines**, inquiring about purchase of that major's Atlanta hub. Also in October, a third nonstop roundtrip is launched from St. Louis to San Jose. No such arrangement will be made.

As a result of these difficulties, particularly in the third and fourth quarter, passenger boardings dip 3.7% to 24,416,000, which is still 10th highest among the world's passenger carriers. Freight drops 5.2% to 682.95 million FTKs. Although revenues are up 2.19% to \$4.6 billion, 10th best among all the world's airlines, expenses increase 18.12% to \$7.39 billion. The previous year's operating profit is turned into a \$162.2-million loss, but the net loss is cut slightly, ending up at \$237.56 million.

Airline employment is increased by 4% in 1991 to 31,000 and the fleet now includes 192 aircraft. Following the outbreak of the war in the Middle East on January 17, the company announces that it will cut its international capacity by 50% and lay off 2,500 employees. Beginning in February, the company coordinates its thrice-weekly service from New York to Seattle with **Alaska Airlines**; at the Washington State airport, passengers from the east are able to connect for flights to Alaska. Much of the carrier's international route network in Europe and the Mideast is curtailed during the Gulf War, with service not fully restored until May. Meanwhile, the pilots and machinists unions in March cobble together a huge wage and work rules concession package designed specifically to make the carrier more attractive to an outside buyer.

Missouri's political leaders join TWA's unions in an effort to find a new buyer for TWA; among those approached is Los Angeles billionaire Kirk Kerkorian, who is offered the \$137 million in labor concessions. At the end of April, the carrier's cash supply has dwindled to just \$290 million, while **Tempelhof Airways, U.S.A.**, in the wake of East and West Germany's unification, becomes a ground-handling organization. As the result of a May 2 agreement, TWA transfers New York, Los Angeles, Boston, and Chicago to London route authority to **American Airlines** on July 1 for \$445 million—the DOT had blocked transfer of the Philadelphia and Baltimore (BWI) routes. To compensate for the AA deal, TWA service to England is increased from Baltimore (BWI) to three weekly flights.

A debt-repurchase plan floated in July is blocked by a judge, while a debt-for-equity restructuring plan, conceived at month's end, will employ usage of the bankruptcy laws. The tentative agreement between the airline and its creditors will have Carl Icahn's control drop from 90% to

30%, while debt holders are to receive a combination of stock, cash, and new debt securities in exchange for their signing on. Company publicists announce that these maneuvers will cut almost a billion dollars in debt from the books.

On August 7, the Federal District Court in Atlanta converts an antitrust lawsuit against nine airlines into a class action that could benefit many consumers and cost the carriers millions of dollars. The antitrust suit charges that this company and the others conspired to keep ticket prices high at 23 hub airports. While the politicians and labor concerns jockey for a chance to take on Icahn, the financier/chairman joins with leaders from **American Airlines** and **United Airlines** to make an offer for destitute **Pan American World Airways (1)**.

Chairman Icahn indicates willingness to offer \$1.3 billion, but he and his partners lose out when a second, higher bid is accepted for the pioneer on August 12 from **Delta Air Lines**. Icahn is, however, able to purchase **Pan Am Express**, which the Atlanta-people do not desire. The route transfer to **American Airlines** persuades Kerkorian to back away from any takeover scheme.

En route from New York to Europe on September 15, a B-767-231ER suffers an engine failure that requires it to descend to a lower elevation and divert to Shannon, Ireland, where the offending power plant is changed. Application for New York (JFK) to London (STN) service is made on September 24.

During November, the two ex-KLM DC-9-32s chartered in 1989 are returned to their lessor.

After changing the moniker, the company begins operating **Pan Am Express** at New York (JFK) as a wholly owned "TWExpress" subsidiary on December 5. Several months of merger discussions with **Continental Airlines** have made little progress by year's end.

Also during the year, Robert W. Rummel, who had served for 18 years as assistant to the owner, publishes his memoirs, *Howard Hughes and TWA* (Washington, D.C.: Smithsonian Institution Press).

Customer bookings drop 14.9% this year to 20,778,000 and cargo is down 21.1% to 544.32 million FTKs. Although revenues are down 20.59% to \$3.65 billion, expenses are down by 15.99% to \$4 billion and force an operating loss of \$353.48 million. There is, however, a \$34.55-million net profit gained through the sale of assets.

Company employment is cut by 15% in **1992** to 25,500 and TWA files for Chapter XI bankruptcy protection on January 31. The filing, with its reorganization plan, shows the corporation with assets of \$2.7 billion, liabilities of \$3.5 billion, and \$200 million in available cash. The unprofitable (read \$27-million loss) Travel Channel cable television programming service launched two years earlier is sold to a Landmark Communications subsidiary in February for \$50 million.

On March 2, the company begins utilizing the morning and early afternoon hours at New York (JFK) to expand its domestic hub. Combined with "Trans World Express," the carrier offers virtual shuttle service linking New York with Washington, D.C. and Boston. New York to Moscow (Sheremetyevo Airport) via Brussels flights commence on March 17.

While retaining its St. Louis to London route, TWA, on May 1, sells its Philadelphia and Baltimore to London routes to **USAir** for \$50 million. Simultaneously, the Constellation Club is opened in Terminal A at New York (JFK) as a luxury lounge for full-fare Ambassador and first-class transatlantic passengers.

On June 1, the first phase of expansion to create a hub at Atlanta is started with a total of 29 daily flights. At the end of the month, 300 employees are laid off at the Kansas City maintenance facility.

During July, a bankruptcy judge approves the sale of all remaining Chicago (ORD) assets to AA for \$221 million. On July 28, an MD-82, on approach for a landing at Dallas (DFW) after a service from Richmond, Virginia, loses certain hydraulic power that results in the crew extending the landing gear into place manually. The plane touches down without incident.

Having aborted takeoff from New York (JFK) on July 30 on a service to San Francisco, the pilot of Flight 843, an L-1011 TriStar 1 with 11

other crew and 280 passengers, is unable to halt his aircraft. Fearing that the plane will run off the end of the runway, he turns the aircraft left and runs it 296 ft. into an adjoining field, where it takes fire. All aboard are safely evacuated (with only 57 minor injuries) before the Lockheed is destroyed. The accident is considered to be a textbook example of how safety procedures are supposed to work.

On August 24, TWA and the TWA Creditors' Committee announce the signing of agreements in principle with the company's three major unions for \$660 million in wage and benefits concessions in exchange for 45% equity state in the airline.

In exchange for the forgiveness of a billion dollars in debt, the company's creditors receive majority 55% control in September. Chairman Icahn, who will lose his chairmanship under this plan—along with the burden of the airline—helps to resolve a \$1.2-billion claim by the Pension Benefit Guaranty Corp.

By October, TWA is a much smaller airline, having eliminated international service from 22 of its 26 destinations and cut its number of domestic markets from 70 to 62. A new schedule is introduced on October 23 under which service connecting New York (JFK) and Detroit (DTT) is increased to five daily roundtrips. Between November and December, 17 L-1011s are returned to lessors and one B-747-131 is sold to **Tower Air**. Jetliners are employed to begin replacing the turboprop services of "TWExpress" partner **Trans States Airlines** from St. Louis to Louisville, Lincoln, Knoxville, and Chicago (MDW).

Passenger boardings shoot up 8% to 22,438,000, but freight dips 1.8% to 534.42 million FTKs. Revenues slip 0.7% to \$3.63 billion, expenses rise 0.6% to \$4.03 billion, and the operating loss climbs to \$404.6 million. The net loss is a huge \$317.85 million.

The payroll is decreased by 10.2% in **1993** to 26,500, which is now the world's 13th largest airline workforce. On January 8, Carl Icahn resigns as chairman and is succeeded by former and retired **Piedmont Airlines (1)** Chairman/CEO William Howard, who officially assumes control six months later.

Icahn's stock is placed in escrow and he even supplies \$200 million to help ease the impact of reorganization costs; the "prince of green-mailing" as he is known, leaves the company with pensions underfunded by a billion dollars. Mark Stevens will review his role with the airline in his *King Icahn: The Biography of a Renegade Capitalist* (New York: E. P. Dutton, 1993).

Company direction is placed in the hands of the board's joint Vice Chairmen Robin H. H. Wilson and Glenn R. Zander, a two-man Management Committee (joint CEOs) appointed by the board, employees, unions, and creditors. Such a dual appointment is uncommon in American airline history, but not in the history of certain European carriers, e.g., **Swissair, A.G.** Employees agree to \$660 million in wage and benefit savings over the next three years in exchange for 45% minority shareholding. Additionally, \$1 billion in debt is eliminated by the reorganization.

Plans are made to remove 10 older B-727-231s and replace them with 6 McDonnell Douglas MD-83s, 12 DC-9-51s previously operated by **Eastern Air Lines (EAL)**, and a Boeing 767-331ER.

Comfort Class service is inaugurated on transcontinental and transatlantic wide-body flights on January 14 and a new reorganization plan is filed with the Federal Bankruptcy Court on February 17. Thrice-daily roundtrips commence on March 2 from Atlanta to Pittsburgh; the same day, daily nonstop flights are started from the Georgia city to 12 new cities via either St. Louis or New York.

On March 22, federal judge Marvin H. Shoob approves a \$458-million settlement of a class action antitrust lawsuit charging TWA and five others with price-fixing. Travelers will now be able to receive discount airfare coupons to compensate for overcharges made by the carriers on flights between January 1988 and June 1992.

On April 4, thrice-daily jetliner flights commence between New York (LGA) and Pittsburgh. Executive bloodletting continues as Senior Vice President-Marketing Robert Cozzi resigns, also in April. In preparation for the summer tourist season, several B-747-131s have upwards of 40

seats removed to create more legroom, which is marketed as Comfort Class coach- and business-class service.

The first of the former EAL DC-9-51s enter service in June. Plans are made to emerge from bankruptcy in July, but a postponement must be sought.

On August 2, TWA is one of seven carriers to win an Air Force contract to provide long and short range international airlift services under the Civil Reserve Air Fleet program; the pact is valued at \$12 million.

On August 8, Vice Chairman/Acting Co-CEO Zander becomes president as former **Piedmont Airlines (I)** Chairman/CEO Howard officially takes the same positions at TWA. The U.S. Bankruptcy Court in August approves the company's reorganization plan, clearing the way for reemergence.

Daily roundtrips commence on September 8 between New York (LGA) and Atlanta's Hartsfield Airport. Owned by its employees and creditors and headed by experienced chief Howard, the company emerges from Chapter XI on November 3.

In exchange for \$600 million in wage and benefit concessions, employees own 45% shareholding. The airline now has \$200 million in cash, including the \$40 million from the sale of Chicago facilities to **American Airlines**, \$10 million from Airbus Industrie, and \$64.7 million from the City of St. Louis, which is participating in a sale-leaseback of TWA facilities in that city. An operating agreement is signed with **Alpha Air** of Los Angeles on December 1; under its terms, the regional begins "TWExpress" feeder flights to seven communities.

The St. Louis gateway to Hawaii is reinstated on December 15 with the initiation of daily nonstops from that Missouri city to Honolulu. The airline, also in December, joins with New York-based EAB; the bank and the airline will issue co-branded MasterCard and Visa credit cards. Following a service from Baltimore to St. Louis on December 30, the last B-727-31 is retired.

Customer bookings for the year decline 15.2% to 18,976,100, a figure still 13th best in the world. Cargo falls 18.8% to 433.7 million FTKs. Revenues plunge 13.1% to \$3.15 billion, the 18th biggest sum in the world, as expenses fall 14.9% to a still-high \$3.43 billion. The operating loss is cut almost in half, down to \$283.98 million, while the net loss position of the previous year is shown as a \$623.7-million net gain.

The latter figure is so strong that it ranks as second best in the world, higher even than that by such perennially strong earners as **Singapore Airlines, Ltd.** and **Cathay Pacific Airways (Pty), Ltd.** It will later be shown that the latter is based on \$1.07 billion in income and extraordinary gains from the bankruptcy emergence; without this extraordinary wind-fall, the company would have recorded a net loss of \$435.83 million.

Airline employment is cut another 12.3% in 1994 to 22,964. Chairman Howard resigns on January 4 and is followed out by Co-Vice Chairman Zander before the month is over. Two new top officers are immediately recruited: chairman/CEO Donald F. Craib Jr., retired chairman/CEO of the Allstate Insurance Group, and President Jeffrey H. Erickson, former chief of **Midway Airlines** and **Reno Air**. Wilson remains as vice chairman. The company occupies its new corporate headquarters at One City Centre, St. Louis, in February, along with its new reservations center in the Agribank Building on that city's Olive Street.

A B-767-330ER acquired from **Deutsche Lufthansa, A.G.** begins nonstop Los Angeles-Paris service on March 16. On March 17 the U.S. government settles an antitrust suit against TWA and five other airlines that agree to changes in their reservations system that the government had complained are employed to fix airfares. Without admitting or denying the accusations, the six agree to end the practice of communicating proposed fare increases to each other through the system maintained by the Airline Tariff Publishing Company.

The new leadership team now undertakes a number of moves designed to increase profitability. Renewed emphasis is placed on European services. Nonstop Los Angeles-Paris flights are inaugurated over the North Pole, while the number of weekly frequencies from New York (JFK) to Europe is increased from 59 to 77. During the first five months, the fleet is increased by the addition of 11 MD-83s and 4 B-767-

331ERs. Arrival of the latter allows retirement of the L-1011s employed on international flights.

In preparation for the fare wars and hectic bookings of the summer, the number of daily departures from the St. Louis hub is increased in April from 257 to 300 plus. Additionally, the Atlanta minihub is all but eliminated on June 1 and daily departures from the Georgia city are reduced to 11 from 57. At the same time, the number of Comfort Class coach- and business-class aircraft seating configurations is increased. Consultant Mort Beyer, president of Washington, D.C.-based Mort Beyer & Associates (later Mort Beyer & Agnew), is recruited to develop a plan to neutralize the threat from **Southwest Airlines** at St. Louis. Beyer's plan, calling for a considerable number of frequencies from the Missouri hub, will not be implemented.

Vacation tours to Russia and China are cancelled on June 4 because of IAPA warnings about unsafe flying conditions; the airline also has difficulty in guaranteeing airline departures within Russia. Chief Financial Officer Richard Shuyler resigns later in the month to become the chief financial officer of **Atlas Air**.

The company halts service to Berlin on July 1, leaving **Delta Air Lines** as the only American airline serving Germany's once and future capital. Vice Chairman Robin Wilson resigns, also in July, and his duties are assumed by Senior Vice President-Operations Edward Paquette. The company joins with the American Society of Travel Agents to ask the DOT to require that carriers operating code-sharing flights list those under only one designator in the reservations system, thereby avoiding confusion.

On August 3, the carrier announces that it will lay off up to 3,000 employees, or 11% of its workforce, for 30 days as part of its effort to cut \$135 million from its annual costs to insure that it has enough cash to make it through the winter. Despite the bad news, employees sponsor the acquisition of a new MD-83 through voluntary wage contributions; the aircraft, painted in a special reversed color scheme, is rolled out at Kansas City ceremonies on September 2 and is christened *Wings of Pride*.

As part of the continuing company cutback, services to Zurich and Geneva are halted on September 7 and flights between Los Angeles and Paris are suspended for the winter. In a continuing effort to unload unprofitable markets, subsidiary **Trans World Express** halts services to 12 cities in the Northeast U.S. during September. An employee and management team is formed to "remake" the airline as President/Chief Operating Officer Erickson assumes the CEO mantle from Chairman Craib; Robert A. Peiser returns from exile and is named executive vice president and chief financial officer.

A tentative agreement is reached with the flight attendants union on September 22, followed by the signing of a new contract with ALPA pilots on September 26. These agreements allow the company to cancel its layoff threat of August. A pact is also concluded during the month with the machinists' union. When the flight attendants' union comes to final terms a little later, TWA has, in effect, achieved a total labor restructuring.

Under overall terms, employees agree to contribute \$130 million per year through 1997 in wage and productivity improvements, surrender \$200 million in snapbacks set to occur, and have their ownership stake reduced from 45% to 30% in order that creditors might take more shareholding in exchange for debt forgiveness. Delivered in March 1970, the second oldest B-747-131 in the fleet is removed from service on September 26.

On October 11, the company proposes a sweeping restructuring in its continuing efforts to avoid failure. In a filing with the SEC, the company recommends that its creditors exchange \$800 million of the \$1.8-billion debt for new debt and equity to help lower interest payments by some \$80 million per year. The proposals, which includes the postponement of six months of lease payments, will have the effect of diluting the employees' 45% ownership to the agreed-upon 30%. Officials hint that, should creditors not buy in, the company may have to file a prepackaged Chapter XI bankruptcy plan. Also during the month, a tentative agreement is signed with the airline's 4,800 flight attendants and a pair of leased B-767s, a Dash 205ER and a Dash-340ER, replace two L-1011s.

On the evening of November 22, Flight 427 is 1,500-feet into its take-off roll from St. Louis en route to Denver. The MD-83 with 142 aboard is forced to swerve in an effort to avoid a Cessna 441 Conquest II twin-turboprop that has strayed onto the wrong runway without clearance. The jetliner clips the smaller aircraft with its right wing, shearing its roof off and killing both people aboard. Eight of the passengers on the transport are slightly injured and all are evacuated after the MD-83 comes to a stop, spraying avgas from its ruptured wing 1,000 ft. down the runway.

One of five sets of landing gear on a Jumbojet partially collapses as it lands at New York (JFK) on December 18; no injuries are reported. On December 20, executives report that the financially troubled pioneer has obtained key leasing agreements with GE Capital Corporation and McDonnell Douglas that will help it survive the winter. Planning is begun for a new "We're up to Something Good" advertising campaign that will be dominated by the first new aircraft color scheme to be introduced since 1974.

Passenger boardings for the year jump 10.5% to 21,038,600 and freight rises 14.9% to 498.1 million FTKs. Revenues advance by 8% to \$3.4 billion, but expenses accelerate 7.2% to \$3.68 billion. Consequently, the pretax loss, down slightly, is \$279.49 million and a net loss figure is not provided.

The workforce grows by 1.3% in 1995 to 23,268. On January 7, a group of company bondholders with 10% and 8% notes reject the airline's restructuring plan, saying it would be a better deal for them if the carrier were just shut down and its assets sold. Early in the month, former British Aerospace plc Chairman John Cahill, who had joined the board in September, is elected nonexecutive chairman.

During the third week of January, the company sets a January 30 deadline for a vote on its latest debt-for-equity plan which, if not acceptable, will force the company into Chapter XI bankruptcy. When progress appears to be made in negotiations with the bondholders, the deadline is extended by the company to March 3.

On February 5, an L-1011 with 237 aboard makes an emergency landing at New York (JFK) just after its takeoff from New York (LGA); no injuries are reported. Ten days later, company officials announce that they will match the fare cuts on travel to the U.S., Europe, and the Caribbean launched by **American Airlines** and **America West Airlines** two days earlier.

On February 26, TWA also matches the fare increase, involving mainly business travelers, announced by **United Airlines** the same day. During the month, the company joins **Delta Air Lines**, **Northwest Airlines**, **United Airlines**, **American Airlines**, and **USAir** in placing commission caps on travel agents.

The DOT fines the carrier \$350,000 on March 5 for failure to disclose its code-sharing arrangements during a series of test telephone calls made by agency officials. Of this amount, \$50,000 will be forgiven if TWA commits no further violations in the next 12 months.

Members of Civic Progress, an organization made up of the CEOs of leading St. Louis-based companies, pledge on March 14 to purchase up to six months of travel on the carrier to demonstrate their confidence in TWA's future.

Trans World One service is introduced on March 15; the new product combines industry-leading customer service and passenger comfort for international business travelers.

On May 9, the carrier breaks ranks with its fellow majors and rescinds its limit on travel agent commissions. In exchange for reinstating the traditional 10% commission on domestic airfares, the company is dropped as a defendant in the class-action lawsuit filed by Travel Network, Ltd. The next day, the airline seeks to push back to 1997 the repayment date on \$197 million in loans owed to former Chairman Carl C. Icahn. If Icahn will agree, he will be able to purchase, at discount, some \$640 million worth of TWA tickets for sale over the next eight years.

On June 21, the first day of stock trading following **Hawaiian Airlines** reemergence from bankruptcy, rumors begin that either TWA or **USAir** will purchase the company. Officials of all three carriers deny such a possibility on June 23. Three days later, TWA's shareholders and

creditors agree to a key aspect of the company's debt restructuring plan which, officials have explained, will make the company profitable by year's end because it eliminates \$500 million of the \$1.7-billion debt. Plans are made to present the reemergence program to the U.S. Bankruptcy Court within a week.

On June 30, TWA files for Chapter XI bankruptcy protection at St. Louis, planning to put into place the prepackaged restructuring plan now agreed to by creditors (including Mr. Icahn) and employee-shareholders. Unlike a normal Chapter XI filing such as the airline had achieved in 1991, this kind of prepackaged arrangement usually allows for quicker emergence. On filing day, the carrier has \$149.5 million in cash and cash equivalents available.

Optimistic about its future, the company in late July enters into an arrangement with Ansett Worldwide Aviation Services, Ltd. for the lease of three MD-83s, the first new aircraft to join the fleet in two years.

After a month's deliberation, the court approves the company's debt reorganization plan on August 4. Five days later, a group of private investment funds is set up to buy all of TWA's ticket vouchers issued under the reorganization program. Company executives point out that the vouchers are worth \$50 each and are good for up to 50% of the purchase price of travel anywhere the airline flies.

For the second time in less than two years, TWA emerges from bankruptcy on August 22. The first former Ansett MD-83 is delivered the next day. It will enter the future in its strongest financial position in a decade.

Following the successful relocation of the Rams NFL football team to St. Louis, TWA, on August 31, announces sponsorship of the team's new stadium, the Trans World Dome.

During late summer and early fall, former Chairman Icahn quietly establishes Global Discount Travel Services in New York and Global Travel Marketing Service in Las Vegas to sell off, at 25% reduction, the tickets he had received as a result of his May 10 deal and the August bankruptcy restructuring.

On September 21, a DC-9-34 is unveiled as the inaugural aircraft repainted in the carrier's new livery, the first color scheme change since 1974; it is employed to inaugurate service from St. Louis to Jackson, Mississippi.

A decade after he was murdered by Arab terrorists during the 1985 hijacking of Flight 847 to Beirut, the late USN Seabee Robert D. Stethem is honored by the USN, which commissions a guided-missile destroyer in his name on October 21. The Port Hueneme, California, ceremonies are attended by the sailor's parents.

With double frequent flyer miles awarded to inaugural passengers, the company launches roundtrip, nonstop flights on October 29 from St. Louis to Mexico City. The first ex-Ansett MD-83 enters service during the month; the next two will begin flying for the company at the end of November and December, respectively.

Also in October, TWA introduces a new livery of the airline's planes. A DC-9-34 is the first plane to arrive at St. Louis wearing the new color scheme.

Also during the month, Pope John Paul II travels to Newark, Baltimore, and Rome on a specially configured TWA B-767-3Y0ER on the final leg of a weeklong visit to the U.S.

The Atlanta-based carrier **Valujet Airlines** sues the company and **Delta Air Lines** on November 9 over landing slots at New York (LGA). Eight days later, U.S. Federal Judge G. Ernest Tidwell clears the way for Delta to lease 10 of TWA's New York (LGA) slots by rejecting Valujet's request for an injunction. Completing a restructuring of routes that sees several eliminated, the major eliminates its "TWExpress" subsidiary in November, turning its services over to **Trans States Airlines**.

TWA, on December 12, files suit against former Chairman Icahn seeking to stop his newly formed travel concerns from selling TWA tickets to the public at a 25% discount. Icahn denies any wrongdoing and accuses the airline of going back on the financial settlement it had earlier made with him; he simultaneously enters a default notice against the airline concerning his \$190-million loan. Outmaneuvered, company executives drop their suit on December 18.

Both engines aboard a DC-9-32 flame out during the aircraft's landing roll at St. Louis Lambert Field on December 19 and the aircraft begins to slide, stopping near the edge of the runway, 70 degrees off runway heading. None of the 54 passengers are injured in an event caused by engine ingestion of snow and slush from the pavement. Two more incidents occur over Christmas week.

During its December 25 landing at San Francisco, the right engine throttle of an MD-82 sticks due to frozen hydraulics; the engine is quickly shut down and the touchdown is completed without further incident.

Two days later while en route from Phoenix to New York, the captain's windshield of an MD-83 cracks while at cruising altitude; an emergency descent is made, along with a safe emergency landing back at the point of origin.

During the year, the company has also paid attention to updating its automation system and to its aircraft fleet. Commitments are made to acquire 20 B-757-200s, to retire the remaining L-1011s, and to hush-kit 28 DC-9s.

Enplanements increase by 3% to 21,592,300, but cargo falls 16.8% to 419.8 million FTKs. Operating revenues also decline, by 2.7% to \$3.31 billion, but costs fall a huge 10.7% to \$3.29 billion. There is a small \$25.08-million operating gain, a big turnaround from the previous year, while the net loss is cut in half to \$227.45 million. With \$287 million in cash on hand, the company has twice the amount of available money now that it had 12 months earlier.

Airline employment stands at 24,969 in 1996, a 7.4% increase. Work begins on hush-kitting 28 of the company's 30 DC-9-30s this year. During the next 12 months, 8 B-727-231s and 1 B-727-231A will be removed from service and replaced by a large number of leased MD-83s.

A major winter storm cripples East Coast airline operations between January 7 and 11. Departures from New York (JFK) are halted on January 8 with incoming flights diverted to St. Louis. Some 900 passengers are affected.

On January 12, the company board adopts a Stockholder Rights Plan or "poison" plan, designed to protect shareholders from a hostile takeover. The stairwell door of a B-727-231 with 74 aboard opens during a flight over Texas on January 17. It is closed by a flight attendant without incident, but the aircraft returns to its San Antonio originating point.

During the month, a B-747-131 is repainted in the company's new livery and appears in a television commercial during Super Bowl week that highlights TWA service back to the days of the Constellation.

Capt. John Testrake, hero of the 1985 Flight 847 hijacking incident, dies at age 68 on February 6. Testrake retired from the company in 1987 to fly humanitarian aid services for the private multinational Mission Aviation Fellowship in the Far East and been stricken with cancer, forcing him to step down from the cockpit in 1994.

The same day, executives of the airline announce that a total of 2,100 pilots, reservations agents, and flight attendants will be hired before year's end and that most of these will fill vacant positions resulting from retirements and normal attrition.

Plans are announced on February 12 for the purchase of 10 B-757-231s and lease of 10 B-747-2Q8s to replace the aging L-1011 and B-747-100 fleet. This is the airline's first major aircraft acquisition program of the post-Icahn era.

It is announced on February 28 that, as a result of the new U.S.-Canada "open skies" agreement, the company will immediately inaugurate twice-daily MD-83 roundtrips, in association with **Air Canada, Ltd.**, between St. Louis and Toronto. The next day the company applies to the DOT for authority to service Japan.

On March 10, TWA becomes the second U.S. carrier after **Northwest Airlines** to order the new Airbus Industrie A330-300; the 10-ship request will later be cancelled.

On March 26, the Hilton Hotels frequent flyer program, the only loyalty plan that allows travelers to exchange hotel points for airline miles and miles for points, adds the company to its roster of airline exchange partners.

Also in March, a new East Coast reservations center is opened at the Norfolk Lake Wright Executive Center; the 40,000-sq.-ft. Virginia facility that employs 500 people is linked to the centers at Los Angeles, St. Louis, and Chicago.

During the month, it is announced that the company will close the majority of its 50 U.S. sales offices under a Sales Office Automation Resources project. Hoping to save \$1 million per year, the airline will have its agents move from fixed locations to what it calls "the virtual office environment of a mobile sales force."

During March, the airline, in a dispute with former owner Icahn over the manner in which he is disposing of \$610 million worth of tickets received in the 1995 bankruptcy settlement, revokes the ticketing plates and agency agreement with Icahn associate Oregon-based Mr. Cheaps Travel.

New services are introduced during the spring to Jackson, Reno, Shreveport, Knoxville, Cancún, Ixtapa, and Puerto Vallarta from St. Louis. Flights are discontinued between Boston and Paris and between New York (JFK) and Frankfurt. As the result of a business strategy dispute with President Erickson in late June, Executive Vice President Peiser and Senior Vice President-Marketing Mark Coleman both resign. Vice President-Revenue Management Marilyn M. Hoppe is appointed acting vice president-management. A new state-of-the-art reservations center is opened at Norfolk on June 24.

As a result of a June 25 controller error at the New York Air Traffic Control Center, a **Virgin Atlantic Airways, Ltd.** B-747-4Q8 en route to New York (JFK) from London (LHR), crosses a checkpoint within two minutes of a company B-767-231ER. The Traffic Alert and Collision Avoidance systems (TCAS) aboard both wide-bodies sound, allowing early evasive action to be taken.

A contract is signed on July 1 for the sale of two more B-747-100s and a B-747-284B. At the same time, an MD-83 is leased from **Alaska Airlines**. It is announced on the same day that the company has hired a total of 212 new pilots during the preceding 12 months. On July 16, an order is announced for 15 new MD-83s.

One of history's most mysterious air disasters occurs on the evening of July 17 when Flight 800, a B-747-131 en route from New York to Paris with 230 passengers, mysteriously explodes and crashes into the sea off Long Island; there are no survivors. A massive rescue and salvage effort follows under the direction of NTSB Vice Chairman Robert Francis; FBI assistant director James Kallstrom oversees a security examination.

Over the next year, dozens of theories concerning bombs, missiles, and mechanical failure surface and dissipate. Among the more interesting accounts is James Sanders' *Downing of TWA Flight 800* (New York: Zebra Books, 1997).

The first of 10 new B-757-2Q8s arrives under charter from ILFC on July 22.

On August 15, an eight-foot section of a wing flap breaks off from Flight 782, a B-727-231A with 112 passengers, on approach to New York (JFK) and plunges onto a South Ozone Park street in Queens; although deep gashes are left in the pavement, no injuries are reported.

Edward Soule is appointed executive vice president/chief financial officer during the third week of August and the premier B-757-2Q8 enters service on September 1 from St. Louis to Orange County-Santa Ana, California.

Prior to the suspension of its New York to Tel Aviv service on September 3, **World Airways** contracts with the carrier to honor those passengers holding tickets valid beyond the end-of-service date. Bringing the number requested to 15, the board of directors during the middle of the month approves the acquisition of 10 more MD-83s. On September 28, the carrier is chosen as the official airline of the new St. Louis Rams professional football team; in honor of the occasion, a B-727-231A is unveiled wearing the image of a Rams football helmet on its forward fuselage. The next day, the Boeing departs Lambert Field on a team charter for Phoenix, where the team will play the Arizona Cardinals. The aircraft will normally provide public transport, flying the team on specific chartered dates.

On October 3, it is announced that members of the carrier's frequent flyer bonus plan can use 30,000 of their accumulated miles to purchase a one-year Ambassador Club membership. As investigation into the crash of Flight 800 continues, the company suffers a significant financial downturn. On October 24, embattled President/CEO Erickson resigns, along with three senior vice presidents, effective in January. Management turmoil will ensue.

A debunked rumor that Flight 800 was the victim of a US Navy missile resurfaces on October 8 when former White House Press Secretary Pierre Salinger asserts in a Paris speech that he has new evidence that the assertion is true. The next day, James K. Kallstrom, chief FBI investigator in the case, asserts that the Salinger information has been on the Internet since August 24 and remains untrue. The entire Salinger incident is very upsetting to relatives and friends of the victims.

The DOS and TWA, together with six other majors, reach an agreement on November 19 to provide speedier notification of the families of U.S. victims in the event of air disasters abroad. The arrangement, lobbied for by groups representing crash victims' families, puts into effect the provisions of a 1990 federal law calling upon the carrier's to provide DOS with a passenger list within three hours of a crash.

Gerald L. Gitner becomes the new vice chairman and acting CEO in early December. David M. Kennedy is named acting executive vice president/chief operating officer with William F. Compton as acting vice president-operations.

Throughout the summer and fall and into the winter, a legal scramble has been in process to assign blame for the explosion and crash of Flight 800. By December 23, lawyers have filed 23 lawsuits against Boeing and TWA seeking compensatory and punitive damages in excess of \$1 billion. The same day, TWA, in an effort to stem the losses it has been suffering on the North Atlantic, announces that it will cut some routes and possibly hundreds of jobs at its JFK International Airport hub early in the new year.

Customer bookings advance 8% to 23,407,000 and 392.53 million FTKs are operated, a 6.1% decline. Although revenues are up 7.2% 5 to \$3.55 billion, expenses increase 14% to \$3.75 billion. The previous year's modest operating profit becomes a \$198.52-million loss while the net loss deepens to \$284.81 million.

The employee population is reduced by 10.7% in 1997 to 22,321. On January 10, TWA joins **Continental Airlines, United Airlines, USAir, and Delta Air Lines** in submitting requested comments to the U.K. Office of Fair Trading concerning the proposed strategic alliance between **American Airlines and British Airways, Ltd. (2)**. They assert that such a pact would give the British and American giants the dominant positions in transatlantic and other markets and that the OFT's proposal to require them to relinquish 168 weekly slots at London (LHR) is insufficient to counterbalance the alliance. BA files a 148-page written response.

Also during January, the company vacates half of its domestic terminal at New York (JFK). It also begins to restructure the St. Louis hub. A number of unprofitable routes are dropped, including service to Athens. During the remainder of the winter season, flights also cease from New York to Frankfurt and from Boston to Paris.

The fleet renewal program is accelerated and efforts are made to acquire 20 MD-83s and 27 B-757s. It is announced that the carrier will halt transatlantic flights by its B-747-100s as part of the effort to cut the huge losses in international services being suffered at New York. The Jumbos will be replaced with B-767s. While it continues to phase out its 12 remaining L-1011s, the company makes plans to withdraw all of its 14 remaining B-747-100s by fall.

Flight 374, a DC-9-51 with 112 passengers, encounters clear-air turbulence over Cape Girardeau during initial descent into St. Louis on January 28; two flight attendants are injured, one seriously.

It is reported in the aviation press on February 1, that **Transaero Airlines**, Russia's second-largest airline, has joined the New Jersey-based investment group Strategic Capital Group for the purpose of joining in a proposal to take over the carrier. TWA will neither confirm nor deny this activity.

On February 3, machinist union leaders, who represent 15,000 of the carrier's 25,000 workers, threaten to sue TWA's board of directors if it makes any additional cutbacks before a purchase, merger, or strategic alliance is considered.

Nine days later, the airline places a hiring freeze on white-collar workers. At the same time, Acting CEO Gitner is named permanent chairman/CEO and is immediately welcomed by a vote of no confidence from the machinist union leadership, whose representatives on the board had lobbied against his appointment.

The carrier's schedule is significantly enhanced on February 15; 28 additional flights are added to 16 cities from the St. Louis hub, bringing the total average daily departures from the Missouri base to 346. Additionally, the New York (JFK) hub also increases to 38 average daily departures. As a result, TWA operates 784 average daily flights to 90 destinations in 79 North American and 11 international cities.

From St. Louis, one additional daily roundtrip flight is added to Las Vegas, Pittsburgh, Hartford, Cedar Rapids, Lincoln, Reno, Norfolk, Albuquerque, Houston, Tampa, Cincinnati, and Phoenix. One additional daily one-way flight from St. Louis is added to Raleigh/Durham, Austin, Charlotte, and San Antonio. From New York (JFK), one additional daily roundtrip is added to Tampa (a resumption of nonstop service), San Juan, and Orlando. Two daily nonstop roundtrips are added to West Palm Beach from New York (LGA).

At month's end, financier Carl Icahn is unable to prove to U.S. District Judge Sonia Sotomayer in a New York hearing just how the airline had damaged his Global Discount Travel Service by default in 1995 and dismisses his antitrust lawsuit. Icahn and TWA agree to negotiate their differences. They will be unable to reach agreement and the suit will be resumed, this time in U.S. Circuit Court in St. Louis.

At the same time, the company's 5,200 flight attendants vote to replace their bargaining agent, the International Federation of Flight Attendants, with a new collective bargaining representative, the International Association of Machinists and Aerospace Workers (IAM). The IAM now represents 20,000 of the carrier's 25,000 workers and holds 3 of the 4 labor seats on the airline's 15-person board.

During the week of March 17, a 57-page article, prepared by a group of people headed by Pierre Salinger, appears in *Paris Match* with new claims that a US Navy missile downed Flight 800. The article is publicly disputed ahead of its appearance by a number of U.S. government officials, including NTSB Chairman James E. Hall in a March 13 speech. Saudi billionaire Prince Al-Waleed bin Talal purchases 5% of the airline's outstanding common stock (2 million shares) on March 18. At the end of the month, the only L-1011 TriStar painted in the company's new color scheme is withdrawn.

The service from New York (JFK) to Athens is withdrawn on April 18. On May 15, in its most aggressive ad campaign in recent memory, TWA dumps its "We're Up to Something Good" approach of 1994. It is replaced by a series of print and electronic commercials that employ its workers to demonstrate the company's new-found on-time and reliability that explains why "We Want to Be Your Airline."

Also on May 15, Flight 327, an L-1011-385 TriStar 1 with 11 crew and 176 passengers, experiences an in-flight separation of the left main landing gear strut door while on approach to St. Louis from Orlando; the aircraft lands without incident and no injuries are reported.

At the beginning of June, the company pledges to award 1,000 bonus miles to every frequent flyer on a flight that is late by 15 minutes or more. The company budgets 115 million miles, but due to its improved service, it only needs to hand out 91 million loyalty credits.

The first new MD-83 from a 1996 order arrives in July. Delayed almost 18 months, implementation of improved automation systems begins early in summer and over the next several months, a yield management system is installed, while plans are made for revenue accounting, weather recovery, crew scheduling, and field sales force systems to be installed.

A memorial mass is held at St. Patrick's Cathedral in New York City on July 17 for mourners who lost loved ones in the Flight 800 disaster a year earlier; following the service, they are bussed to Long Island for an-

other memorial service. There, at the edge of Smith Point Park near the spot where the Boeing crashed into the sea, a black monument has been placed bearing the names of the dead crew and passengers.

On July 21, company officials announce that they will consolidate the carrier's 23 domestic maintenance stations into 13 by year's end; as a result of the measure, 1,000 jobs will be cut, 4% of the company workforce. On August 20, the last 2 victims of Flight 800 are identified, 13 months after the disaster.

In August, two new cargo products are unveiled. NFO Life is a specialized premium medical service, while Shipper Saver, the carrier's most economical cargo offering, provides second-day delivery throughout the continental U.S.

The company discovers that Mr. Cheaps Travel, the ticket discounting travel firm with which it had broken the previous year, is preventing other travel agencies from getting low-fare TWA seats by using fake names and other illegal means to lock in low fares. TWA now blocks the concern from access to its Worldspan computerized reservations system.

On August 26, Mr. Cheaps Travel goes before a judge and obtains a restraining order against the airline. TWA responds by appearing in federal court in Montana on August 29, demonstrating the ticket counter's tactics and having the restraining order lifted. The story is widely reported in Midwest and West Coast newspapers the next day.

The last day of regularly scheduled TriStar service is September 2. The next day, two final L-1011 equipment-recovery services are operated to St. Louis: Flight 327 from Orlando and Flight 37 from Boston. Alerted in advance, traffic controllers at Lambert Field are able to guide the two jetliners to landings on parallel runways at the same time, 10:31 a.m. (CST). The last passenger-carrying segment flown by a Lockheed wide-body in company colors is Flight 840 from Los Angeles to New York (JFK), which arrives later in the afternoon.

Increased nonstop services are launched on September 3 from St. Louis to Cincinnati, Louisville, New Orleans, and Orlando. The company also begins year-round return service from St. Louis to Paris.

On September 4, **Northwest Airlines** raises its domestic fares by 5% and over the weekend most other U.S. majors, except **Southwest Airlines (2)**, join in.

On September 8, **American Airlines**, **Delta Air Lines**, and TWA abandon the fare boost, but when **United Airlines** does not go along, these big three reinstate the higher tariffs the next day.

While landing at New Orleans on September 25 after a service from St. Louis, an MD-83 with 130 passengers overruns the runway and comes to rest in mud at the end of the concrete. No injuries are reported.

Also in September, a B-727-231A is sold to South Africa-based **Nationwide Air Charter (Pty.), Ltd.** via Fortis Aviation.

A new Platinum Frequent Flight plan is introduced for business-class passengers on October 6. In an effort to attract additional business travelers, the first-class cabins in 155 of the carrier's narrow-bodies have each been expanded by 60% since July.

On November 9, the FBI, claiming there is a lack of evidence, officially terminates its criminal investigation into the crash of Flight 800. In a letter to the relatives of crash victims, FBI Assistant Director Kalstrom reports that, after a 15-month probe, "absolutely no evidence" of criminality has been found.

Subject to government approval, a code-sharing agreement is signed with **Air Europa, S.A.** in November. When its terms come into effect in early 1998, Air Europa will add its code to TWA flights from Madrid and Barcelona to New York (JFK) and allow the major to place its code on its services to Palma and Malaga from Madrid and Barcelona. The two companies will also link their frequent flyer programs, coordinate marketing, and offer one-stop check-in.

A code-sharing agreement is begun with **Royal Jordanian Airlines**, also in November. Under its terms, the American major is able to place its two-letter designator on Royal Jordanian flights from New York to Amsterdam and Amman. With this agreement, TWA has become the only U.S. airline offering direct service between New York, Holland, and Jordan.

A board member since 1993, the company's ALPA Master Executive Council chairman and an MD-80 captain, Vice President-Operations William F. Compton is named TWA president/chief operating officer on December 1. Public hearings into the Flight 100 disaster open in a Baltimore auditorium on December 8; the next day, it will be revealed that only 52 Jumbojet center fuel tanks have been inspected worldwide since the tragedy. When the hearings conclude a week later, they prove to have been, at \$300,000, the most expensive ever conducted by the NTSB.

With talks between the company and the IAM stalled, machinists and baggage handlers stop work at St. Louis for an hour on December 6.

A lawsuit filed against the airline by Carl Icahn's Karabu Corporation is dismissed by the U.S. District Court for the Southern District of New York on December 9. Icahn had charged that the airline had breached a security agreement on loans by not complying with certain conditions related to the maintenance of aircraft held as collateral.

On the evening of December 9, machinists and baggage handlers stop work again, for two hours. The job action, which the IAM asserts is a justified work break, causes over 100 flights to be cancelled and a number of passengers stranded.

On December 10, *USA Today* reports the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; TWA demonstrates a 77.6% achievement, good for 8th place.

The schedule is changed on December 18. Gone is service to Jackson, Mississippi, but added are flights from St. Louis to Phoenix, Salt Lake City, Fort Myers, and Cancún, Mexico.

On December 31, it is announced that TWA has finished the year ranked No. 2 for domestic on-time performance as reported by the DOT, up from No. 10 in 1996.

Passenger boardings inch up 0.3% to 23,432,000, while freight plunges 24.8% to 295.11 million FTKs. As the result of cost cutting and route restructuring, operating revenues decline 6.4% to \$3.32 billion. Expenses fall 10.5% to \$3.35 billion, causing a reduction in the operating loss to "just" \$29.26 million. The net loss also shrinks, dropping down to \$110.83 million. Still, TWA is the only U.S. passenger-oriented major to lose money this year.

At the beginning of 1998, TWA is the 14th largest airline in the world in terms of passenger boardings, 13th in terms of fleet size, 16th in employees, and 23rd in terms of operating income.

Airline employment stands at 22,000 and the fleet, 68.9% of which is Stage III certified, includes 183 airplanes: 29 B-727-200s, 58 DC-9s, 5 B-747s, 12 B-757-200s, 14 B-767s, and 65 MD-80s.

On January 1, all of the company's U.S. mail contacts and operations are centered on the St. Louis hub.

Early in January, the company enters into a one-year commercial agreement with **Sun Jet International Sales**. Trans World First, a domestic first-class product, is unveiled on January 12. It is open to full-fare economy passengers as well as first-class ticket holders.

Daily MD-83 roundtrips commence on January 15 between Wichita and Seattle.

On January 26, TWA seeks to expand its dual-designator service with **Royal Jordanian Airlines**. The proposed growth will allow TWA to add codes on Royal Jordanian flights from Amman to Manama, Karachi, Calcutta, and New Delhi. Royal Jordanian will be able to add its codes to TWA flights from New York to Cleveland, New Orleans, St. Louis, and San Francisco.

Under terms of the new draft U.S.-Japan bilateral agreement, TWA, on February 10, files its application with the DOT for authority to operate daily nonstop service from St. Louis to Tokyo (NRT) beginning on June 1, 1999.

Beginning on February 20, the major undertakes daily nonstop \$99 one-way through fares in partnership with the Sun Jet International Sales service "Myrtle Beach Jet Express" between Myrtle Beach and many other destinations via connections at St. Louis and New York (JFK and Newark).

Also during the month, the carrier completes a private placement of \$150 million of 11 3/8% senior notes, which are due in 2006.

The TWQ (the "Q" stands for "quality") product, for business passengers traveling between St. Louis and Chicago (ORD), New York (LGA), and Washington, D.C. (DCA), is launched on March 2. The new offering includes special service agents and laptop workstations at the named airport's gates. Einstein Bros. Bagels are served on the breakfast flights.

U.S. DOT Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14.

Two days later, the DOT authorizes 64 weekly flights to Japan for carriers that in the past have had their services severely limited. TWA gains permission to inaugurate seven weekly flights; although the authority is immediately effective, the company indicates that it will not inaugurate its St. Louis to Tokyo service before June 1999. It also grants the carrier permission to code-share on any of 14 weekly flights from the U.S. to Japan that will be flown by **Delta Air Lines**.

It is announced on March 23 that the company has retired its last B-747-100, after 28 years of service, which is the equivalent of 12 years in the air.

A second weekly roundtrip is inaugurated on April 17 between St. Louis and London (LGW). A third daily roundtrip is started on April 20 between St. Louis and Portland, Oregon; simultaneously, a third daily roundtrip is begun from St. Louis to Toronto.

The company, on April 22, announces an order for 24 MD-83s, to begin delivery in the spring of 1999. Also on April 22, TWA completes the sale-leaseback of 15 B-727-200As. The five-times-a-week St. Louis to London (LGW) service becomes daily on April 30. Also during the month, an order is placed with Boeing for 24 MD-83s, to begin delivery in the spring of 1999.

Premium-fare frequent flyer passengers are identified for a new Aviators program, started on May 1, and these customers are awarded special mileage perks. The program is heavily advertised on television, harkening back to images of intrepid passengers in the early days of commercial aviation.

A one-hour wildcat strike by baggage handlers at both New York (JFK) and at Los Angeles (LAX) during the day cause the company to cancel 49 flights.

On May 8, Judge Kenneth M. Romines of the U.S. Circuit Court in St. Louis rules that former chairman Icahn and Global Discount Travel Service have not violated any agreements with the airline by selling the tickets in question either directly or through travel agents.

The number of daily frequencies between St. Louis and Philadelphia is increased to six on May 11. The next day, TWA receives the 1998 J. D. Power & Associates/*Frequent Flyer Magazine* award as the No. 1 U.S. airline for customer satisfaction on flights of less than 500 miles.

Daily and seasonal B-757-2Q8 nonstop roundtrips commence on May 20 between St. Louis and Anchorage. The service will continue through September 8.

As a result of enhanced airport security measures, the carrier is now allowed to cut some costs and to make last-minute plane changes for passengers by halting, as of June 1, the issuance of advance boarding passes. Simultaneously, new daily nonstop MD-80 roundtrips commence between Portland, Oregon, and Anchorage.

The flight attendant's union, on June 12, wins a \$10-an-hour raise for its members who work aboard the company's B-757s.

Negotiations with the local ALPA chapter continue throughout the month, although some members protesting the slow pace of discussions bring out information pickets. On June 23, the union gives the carrier until June 26 to come to a tentative agreement on a new contract or risk disruptions to its operations during the crucial summer season. TWA does not respond.

As of June 26, pilots begin to refuse to fly voluntary overtime. Due to crew shortages, the company must cancel 60 flights per day on June 27-28.

On July 8, a strategic alliance is signed with **Royal Air Maroc**. Un-

der its terms, the two carriers will begin, on October 25, to share codes on their flights between the U.S. and Morocco.

A tentative contract agreement with the company's 2,500 pilots is reached on July 12; the union-represented flyers will receive a pay raise to 90% of the average paid at all U.S. majors. In addition, TWA will transfer to ALPA either a million shares of common stock or \$11 million for distribution to members on a quarterly basis in 1999.

Flights from St. Louis to Knoxville are increased in early August. Toward the end of the month with a pilots' strike pending at **Northwest Airlines**, that major makes arrangements with a number of other U.S. carriers to accept its tickets. TWA, like the others, recommends reservations and agrees to honor NWA tickets presented at airports on a stand-by basis.

The nine teams of the National Football League that have charter arrangements with the Minneapolis-based major also begin to make contingency plans during mid-August. One, the Tampa Bay Buccaneers, arranges lift from TWA for a contest against the New Orleans Saints on August 29, the day the NWA strike begins.

On August 31, the company adds 2 daily roundtrips between Minneapolis and St. Louis, thereby providing an additional 350 seats out of the Twin Cities during the Northwest strike.

Voting 60% in favor, the 2,500 pilots approve their new contract, which takes effect on September 1. The arrangement provides the flyers with their first raise in 12 years. Company officials indicate that they will soon place a massive new aircraft order, as negotiations are undertaken with Airbus Industrie.

Under terms of a marketing agreement signed with between the two on July 30, customers of **Flugfelag Islands (2)/Icelandair, H.F.** and TWA are able to earn and redeem loyalty points in each other's frequent flyer programs, beginning on September 1.

On September 3, frequencies are increased from St. Louis to Cincinnati, Louisville, New Orleans, and Orlando. The previously seasonal service from St. Louis to Paris simultaneously becomes year-round.

During the second week of September, Chairman/CEO Gitner, speaking before the Wings Club in New York, comes out squarely against the proposed code-sharing alliance between **Northwest Airlines** and **Continental Airlines**. He has less to say about the apparently derailed deal between **United Airlines** and **Delta Air Lines**.

The final scheduled L-1011 service is completed on September 27 between Los Angeles (LAX) and New York (JFK). It is understood that the pioneer TriStar operator will retain a pair of aircraft as short-term backup for its long-haul fleet.

An agreement is entered into with the Archdiocese of St. Louis on October 16 for the transport of Pope John Paul II from St. Louis to Rome on January 27. A B-767-3Y0ER, christened *Shepherd I* for the occasion, will transport the Holy Father home following his visit to St. Louis.

Orders are placed with Boeing on October 21 for four B-757-231s to be delivered before the end of 1999. The aircraft will allow TWA to retire the three of its B-737-231As. In addition, agreement is reached with ILFC for the charter of the B-767-3Q8ER, which will be employed initially in support of the visit of Pope John Paul II.

By October 25, the company has relocated from Houston (HOU) to Gate 20, Terminal A, of Houston (IAD). In addition, the four daily roundtrips from Hobby to St. Louis are also changed over. Plans continue for a move into a new concourse at Terminal A when that addition is ready in April 1999.

The carrier places its two-letter code aboard **Delta Air Lines'** MD-11s as they begin daily return service from Portland, Oregon, to Fukuoka, Japan, on October 28.

The carrier announces, on November 3, that it will launch daily nonstop MD-83 roundtrips on January 31 between St. Louis and Mexico City. A little later in the day, the first phase of the new marketing agreement with **Royal Air Maroc** starts on November 5. Customers of the American carrier may now book segments from the entire TWA system and connect to Casablanca on a code-shared return flight, operated thrice-weekly by RAM, between New York (JFK) and Morocco.

Daily roundtrips between Boston and San Juan, beginning on February 3, are added to the schedule on November 10.

Contract discussions between the IAM and management resume on December 1. A week later, on December 8, IAM members hold a rally at Kiener Plaza in St. Louis to protest against the company's current management, its failure to restore TWA to profitability, and its refusal to reach new labor agreements. Joseph Adinolfi, chairman of Local 142, in addressing his followers gives the carrier's CEO and president a failing report and asks for their resignations.

The next day, the company announces orders and options for 250 state-of-the-art, new technology aircraft in the single largest aircraft request in company history. Engines to power the new planes are simultaneously ordered. Among the new jetliners that will commence delivery in February 2000 are 50 B-717-231s and 50 A318s, plus 25 A320 family aircraft (A319s, A320s, A321s). In addition to 125 firm orders, TWA takes options on 50 more B-717s and 75 A320 family planes.

A strategic marketing agreement is signed with **Kuwait Airways Corporation** on December 16. Under its terms, the two will, during the upcoming spring, link their frequent flyer programs. Additionally, TWA will place its "TW" code on KAC services from Chicago (ORD) to Kuwait City and from Kuwait City to Muscat, Oman, and Dubai.

Year-round daily B-757-2Q8 roundtrip service is inaugurated on December 17 between New York (JFK) and Puerto Plata, Dominican Republic. At the same time, five-times-a-week B-757-2Q8 seasonal return flights are started from JFK to St. Martin, Netherlands Antilles. The St. Martin flights will cease on April 18.

The next day, increased nonstop service to Phoenix, Salt Lake City, Fort Myers, and Cancun begins from St. Louis, together with new frequencies from St. Louis to Palm Springs, California. Service from St. Louis to Jackson, Mississippi, is simultaneously discontinued.

Also on December 18, two new nonstop services are introduced from New York (JFK) to Fort Lauderdale and West Palm Beach, while the number of nonstops from JFK to Tampa is increased.

Just before Christmas, seasonal flights are resumed from St. Louis to Steamboat Springs, Colorado, and to the Mexican communities of Puerto Vallarta and Ixtapa/Zihuatanejo.

Displeased with the pace of contract negotiations and a lack of Christmas overtime pay, many local members of AFA stage a sick-out on December 24-25, forcing the airline, for lack of cabin crews, to cancel some 125 flights on Christmas Eve and Christmas Day. An injunction is obtained from a federal judge on December 26, requiring an end to the unofficial job action, which the flight attendants slowly honor during the remainder of the day and on December 27-28, but not before 75 more departures are cut.

Also on December 28, as negotiations resume with the AFA, the NMB schedules talks between the IAM and management for January 12-23.

Passenger boardings this year advance 2.3% to 23.97 million and represent the best enplanement figure since 1990. The full-year 71.4% load factor is the best since 1978, the beginning of airline deregulation. Cargo traffic, on the other hand, falls 26.83% to 215.94 million FTKs.

Despite the good passenger traffic showing, a 10th straight year of losses is suffered with a net loss of \$120.5 million, due largely to \$42.6 million in special charges generated during the fourth quarter, coming atop revenues of \$3.26 billion. The operating profit is also up, to \$65.15 million on expenses of \$3.32 billion.

A major snowstorm paralyzes much of the Midwest between January 2-5, 1999, including cities from St. Louis and Chicago east to Toronto and Montreal. At St. Louis, exhausted ground workers labor 16-hr. shifts to help keep the airline flying. In appreciation, the company deliberately cancels 60 flights from Lambert Field on January 6 to give the people the day off. The schedule returns to normal on January 7.

During the month, plans are made for the withdrawal of a number of older DC-9s by the end of the year. All of the non-hush-kitted DC-9-10s, DC-9-30s, DC-9-40s, and DC-9-51s will be gone, including the first DC-9-15 delivered to **Ozark Air Lines** back on May 25, 1966. Thirty DC-9-31/32s that satisfy Stage III noise regulation will be retained until replaced by B-717-200s.

Pursuant to its October agreement with the Archdiocese of St. Louis on October 16, the newly leased B-767-3Q8ER, christened *Shepherd I* for the occasion, transports Pope John Paul II home to Rome following his visit to the Gateway City on January 27. For the nine-hour flight, the aircraft has been reconfigured with its first-class cabin transformed into a "Papal suite" with a table and a bed. A variety of other amenities have been provided by various donors and vendors.

Daily nonstop MD-82/83 return service is started on January 31 from St. Louis to Mexico City.

Daily B-757-2Q8 roundtrips between Boston and San Juan begin on February 3.

When pilots of **American Airlines** stage a sick-out between February 6 and 10, TWA seeks to accommodate inconvenienced passengers by adding and upgrading certain of its Caribbean services.

Two additional daily MD-82/83 roundtrips are added on February 11 from New York (LGA) to West Palm Beach, increasing the daily number of frequencies from three to five.

For a few days, also beginning on February 11, an extra B-757-200 roundtrip service is laid on between New York (JFK) and both Puerto Plata and Santo Domingo in the Dominican Republic. Additionally, a B-767 replaces the B-757 employed on the normal daily operation.

It is announced on February 12 that the company will close its Los Angeles reservations office on June 15 and transfer the one in downtown Chicago to a new location.

The previous year's losses are announced by Chairman/CEO Gitner at a St. Louis news conference on February 17. The bad news sends down the price of the company stock on Wall Street. A number of cost-cutting measures will now be put in place, including the elimination of 1,000 of its 21,200 workers. Gitner closes on a positive note, reminding the media that the company finished first among majors in 1998 in on-time performance, as ranked by the DOT.

Citing the current distressed state of the Japanese economy, TWA, on February 18, requests a delay of up to one year in the inauguration of the St.-Louis-to-Tokyo (NRT) route announced for June 1.

A press release of March 16 indicates that President/COO Compton will become president/CEO on May 25. Current CEO Gitner will continue as board chairman and will have added duties as chairman of the board's executive committee. Senior Vice President/Chief Financial Officer Michael J. Palumbo is simultaneously named executive vice president/chief financial officer.

Twice-daily (except Sunday) DC-9-41 roundtrips are initiated on April 5 between St. Louis and Peoria, Illinois. TWA is the only major offering full-size jet service from Peoria.

Mediation between the St. Louis-based major and the IAM, representing 16,000 flight attendants, ground workers, and other employees, is held in Chicago between April 26 and April 30 under the supervision of the NMB. At the end of the scheduled talks, the NMB announces that negotiations will continue, under a blackout, despite the end of the scheduled mediation period.

Daily roundtrips commence on May 1 between St. Louis and El Paso.

Simultaneously, daily MD-83 roundtrips are started from St. Louis to Portland, Maine, via Hartford. This is the carrier's 94th destination worldwide. In addition, twice-daily DC-9-51 roundtrips are begun from St. Louis to Richmond.

Having worked without new contract terms since August 31, 1997, the local lodge of the IAM rejects an offer of binding arbitration from the NMB on May 7. The rejection sets in motion a mandatory 30-day cooling off period before a possible June 10 strike. Both the IAM and management continue to pledge a willingness to negotiate.

On May 11, TWA receives the 1999 J. D. Power & Associates/*Frequent Flyer Magazine* award as the No. 1 U.S. airline for customer satisfaction on flights of less than 500 miles. This is the second year in a row that this prize has been received. Daily DC-9-51 seasonal roundtrip service from St. Louis to Vancouver begins on May 15. The IAM reenters mediated contract negotiations with TWA's management on May 19.

With less than two weeks remaining before the company's 16,000 union workers can legally strike, TWA offers a greatly improved, but final, offer to the IAM on May 28.

On June 1, the company inaugurates DC-9-51 return service from Washington, D.C. (IAD) to its 100th destination, Harrisburg, Pennsylvania.

Agreement on a new contract with the IAM is reached on June 13. A new "focus city" program is announced on June 17. Beginning on November 1, the company will add 12 daily B-757-200 or MD-83 flights in and out of San Juan, bringing the number of daily flights to 15. The enhanced hub will provide daily nonstop service to five new destinations: Los Angeles, Fort Lauderdale, Orlando, Santo Domingo, and Aruba.

The seventieth anniversary of Transcontinental Air Transport (TAT) is celebrated in ceremonies at Columbus, Ohio, on July 8.

The existing "TWExpress" contract with **Trans States Airlines** is renewed on August 16. The regional will continue to offer turboprop service on behalf of the major from St. Louis to 24 Midwestern cities.

In a move that saves taxpayers \$4 million, the wreckage of TWA Flight 800 is moved to a smaller Long Island hangar during the week of September 13. NTSB and other investigators still seek the crash cause. A code-sharing agreement is signed with **Gulfstream International Airlines** on September 24; the regional airline will operate "TWExpress" flights beginning in November.

On October 11, TWA records its 50th day of 100% schedule completion this year, far above previous records set in 1997 and 1998.

The service schedule from San Juan is rearranged on November 1, as the Puerto Rico capital becomes the airline's first "focus city." A total of three MD-80 roundtrips are now offered to Santo Domingo, two to Boston, and one each to Aruba, Fort Lauderdale, and Orlando. Five-times-a-day Boeing 757-2Q8 return service is also launched from San Juan to New York (JFK), along with once-daily roundtrips to St. Louis and Los Angeles. It is warned that flights to Rome, Madrid, and Barcelona will cease in early January.

On November 3, a new marketing agreement is announced with Indianapolis-based **Chautauqua Airlines**. Beginning in the summer of 2000, Chautauqua will offer "TWExpress" regional jet service.

The code-sharing agreement with **Gulfstream International Airlines** begins on November 15. Under its terms, the regional, operating as "TWExpress," allows the major to place its code on Beech 1900D frequencies from San Juan to St. Thomas, St. Croix, St. Kitts, St. Martin, Tortola, and Virgin Gorda.

For the year ending in November, TWA has the best on-time performance among the 7 largest U.S. airlines, based on DOT consumer reports for the domestic operations of 10 reporting U.S. airlines. During these 12 months, 80.9% of the airline's flights arrive within 15 minutes of their posted schedules.

B-767-3Y0ER frequencies from New York (JFK) to Riyadh, Saudi Arabia, flown via Cairo, are increased from three to five on December 1. The last of 27 B-757-231s, which type first began joining the fleet in 1996, is delivered on December 2.

On December 21, a somber but serendipitous ceremony is held at Long Beach Airport to mark the acceptance by TWA of the last MD-80 series aircraft, the MD-83 *Spirit of Long Beach*. Douglas, later McDonnell Douglas and TWA, had started the entire DC revolution with Jack Frye's 1932 letter seeking what became the DC-2/3 family of aircraft. The actual aircraft delivery is completed on December 28, on which date the TWA MD-80 fleet includes 41 MD-82s and 54 MD-83s.

Service from New York (JFK) to Chicago (ORD) is discontinued on December 31. Passenger boardings climb 7.9% to 25,854,000, while cargo falls 3.7% to 207.82 million FTKs. Revenues are up 1.5% to \$3.03 billion, while expenses jump 10% to \$3.65 billion. The operating loss significantly deepens, to \$347.64 million, while the net loss becomes \$353.4 million.

Airline employment at the beginning of 2000 stands at 20,972, a 16.1% decrease over the previous 12 months. Among the world's top 25 airlines, TWA is 13th in passengers, 22nd in employees, 21st in fleet size, and 23rd in operating revenue.

On January 10, service is suspended to Rome, Madrid, and Barcelona and the freed up capacity is placed on company routes to the Mideast, Mexico, and the Caribbean. In Europe, TWA now visits only London, Milan, and Lisbon, with Paris (CDG) served on a secondary basis. The retreat of the pioneer airline from Europe is part of a strategy designed to refocus its resources on markets in the U.S., Caribbean, and Mideast and, hopefully, put an end to 12 straight years of losses.

Physically wearing a huge red bow and ribbon just behind its cockpit, the first B-717-231 is literally unveiled at a St. Louis delivery ceremony on February 17. Pilot training and route proving with the new aircraft begins the next day.

The U.S. FAA upgrade of Malta to Category 1 safety status at the beginning of the year allows TWA to enter into a code-sharing agreement with **Air Malta Company, Ltd.** on February 21. In addition to shared flights, the two will coordinate their frequent flyer programs and scheduling.

TWA becomes the second U.S. B-717 operator when it places its new aircraft into service to Dallas (DFW) and Minneapolis (MSP) from St. Louis on March 2. On March 3, daily B-767-330ER roundtrips are inaugurated from St. Louis to Kahului, Maui, Hawaii.

On April 22, a \$76.12-million first-quarter loss is reported; this is the seventh consecutive quarter of loss.

The marketing alliance with **Air Malta Company, Ltd.** takes effect on May 1. Air Malta places its "KM" designator on the American major's flights from London (LGW) to St. Louis, Los Angeles, San Francisco, Dallas/Fort Worth, Houston, and Orlando and its services from Milan to New York (JFK), Los Angeles (LAX), and San Francisco. At the same time, TWA places its "TW" code on Air Malta connecting services from London (LGW) and Milan to Malta.

Also on May 1, daily B-767-3Y0ER return service is started from St. Louis to Kona, Hawaii. Additionally, when **Tower Air** suddenly stops all scheduled flights late on May 1, its final service from New York (JFK) to Tel Aviv is pulled so abruptly that 300 passengers are left stranded. Most carriers refuse to accept Towers tickets; however, TWA removes a number of restrictions the next day, thereby making deep discount fares available.

To make up for the loss of the B-737-231 theme plane that was withdrawn after the Super Bowl, the official airline of the St. Louis Rams rolls out a newly repainted Rams aircraft, a B-757-2Q8, on May 5, officially debuting it with players and cheerleaders on May 7. Although the aircraft wears a World Championship banner, its not as lucky as its predecessor, as the airline's hometown NFL team will not return to the Super Bowl this year.

On May 8, twice-weekly nonstops begin from St. Louis to Bermuda. Seasonal B-757-2Q8 return service between St. Louis and Vancouver is resumed on May 14; four days later, a new and permanent MD-80 roundtrip is started between the two cities.

Daily MD-82 roundtrips from Fort Lauderdale to San Juan are increased on June 1 from one to three; those from Orlando are increased from one to two. Also on June 1, the code-sharing agreement with **Kuwait Airways Corporation** is expanded to cover services from Kuwait to Frankfurt and Amsterdam, from Amsterdam to New York (JFK), and from Frankfurt to New York (JFK) and Chicago (ORD). The next day, MD-83s reinstate company service from San Antonio to New Orleans.

The fourth B-717-231 is received on June 8 and enters service on June 11 over the company's St. Louis-Dallas (DFW) route. The next day, daily B-717-231 return service is started from St. Louis to Milwaukee. Another B-717-231 will be delivered on June 16. Following disclosure in the *Wall Street Journal* and the *Atlanta Journal-Constitution*, **Airtran Airlines** confirms, also on June 16, that it is, and has been, in merger talks with TWA. It will also later be revealed that Global Airlines Corporation, a company led by Los Angeles financier Emil Bernard but with no flight operations, has also made an offer: \$381 million in stock, debt securities, and cash. Nothing comes of either talk or tender.

On June 22, the carrier begins a cargo code-share (actually, transport of the U.S. mail) with **All Nippon Airways Company, Ltd.** on routes

to Osaka (KIX) from Guam and Honolulu, to Tokyo (NAR) from Chicago (ORD), New York (JFK), Los Angeles, San Francisco, and Honolulu, and from Honolulu to Nagoya.

The 75th anniversary of service in Los Angeles is celebrated on July 1; the heritage is traced back to the beginning of **Western Air Express** in July 1925. Daily B-757-2Q8 roundtrip frequencies between New York (JFK) and Los Angeles are increased from three to four on July 8. TWA is named 20th best-managed company among 20 nonstate-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

While en route from New York (JFK) to Los Angeles on August 7, Flight 849, a B-767-3Y0ER, is forced to make an emergency landing at Kansas City after an engine fails; on the ground, passengers report witnessing flames coming from the affected power plant.

Daily B-757-2Q8 roundtrips commence on September 10 between Los Angeles and Washington, D.C. (DCA). A portion of the cockpit windshield of Flight 003, a B-767-231ER taking off from New York (JFK) on a September 11 service to St. Louis, pops out, causing the pilot to quickly abort. Seven tires are blown as the plane skids to a halt.

The last B-727-231 is retired on September 30 following the conclusion of its Flight 78 from New Orleans to St. Louis. The plane had been subjected to worldwide media attention during 1985 when it was hijacked in the Mideast. TWA is now an all twin-engine operator.

The 50th anniversary of the inauguration of service between New York (LGA) and London (LHR) is celebrated on October 2. To mark the occasion, TWA introduces 50% frequent flyer mileage points on certain of its routes, including its only London service, which is now flown from St. Louis to Gatwick Airport. Five days later, the loss-taking airline is forced to announce that, come January, it is dropping service from New York (JFK) to Lisbon and Milan, leaving only London (LGW) and Paris (CDG) as its only European destinations.

On October 27, a historic agreement is signed with **American Eagle Airlines** under which the American Eagle subsidiary **Business Express** will provide "Trans World Express" services to nine new markets and five existing TWE cities, from which **Trans States Airlines** will withdraw by January 5.

Two days later, on October 29, new daily roundtrip service is inaugurated from (JFK) to Orange County, California. Additionally, the number of frequencies from New York (JFK) to California is also boosted, including those to Los Angeles from four to five and to San Francisco from two to three. The number of daily return flights from New York (LGA) to St. Louis grows from seven to eight.

Beginning in November, the airline and TEAMGroup Media Network install 42-inch, flat-screen televisions in 12 U.S.-based Ambassador Club locations.

The *St. Louis Post-Dispatch* reports on November 7 that Global Airlines Corporation has made its second offer, of \$3.75 a share, to purchase TWA. Although the price is down from the \$5 a share offered in June, it is still more than double the airline's November 7 NYSE closing price of \$1.65 a share. Global does not reveal how much debt it will assume in this offer. The newspaper reminds its readers that, in a recent U.S. filing, TWA has listed \$424 million in long-term debt, \$109 million in capital lease obligations, and \$506 million in post retirement-benefit liabilities other than pensions as of June 30.

A marketing and code-sharing alliance is signed with **America West Airlines** on November 17. When it begins during the first quarter of 2001, it will allow customers of both carriers to book with either carrier for over 500 flights and will provide them with new on-line connections to 145 cities in the U.S., Canada, the Caribbean, and Mexico.

The number of daily roundtrips between St. Louis and New York (LGA) rises from eight to nine on December 1 when TWA begins flying in the first B-717-200 to visit the the "Big Apple" facility. As the year ends, many employees look forward to the January publication of a new company history, *TWA: An Airline and Its Aircraft*. With illustrations by Mike Machat, this is the latest in a well-regarded series of carrier profiles by noted aviation historian R. E. G. Davies.

In severe financial distress and unprofitable since 1994, the company is close to declaring bankruptcy for a fourth time as the year ends. Customer bookings have, nevertheless, risen 2.25% during these 12 months to 26,437,000, although freight traffic has been off 8.94% to 1.89 billion FTKs.

On January 10, 2001, it will be revealed that an arrangement has been worked out with **American Airlines** under which the Dallas-based major will pick up the pieces after TWA files for \$742 million protection. The move, which will be approved by U.S. Bankruptcy Court Judge Peter Walsh on March 12, is set to give AA 23% of the domestic U.S. market and a third mid-continent hub at St. Louis. Thousands of TWA jobs will be integrated and the hated discount ticket arrangement with former TWA Chairman Carl Icahn, who will not be successful in his last minute bid to reacquire the carrier, will be voided. Under the arrangement, the two majors will operate independently through an integration process to be completed by early 2002. During this time, the company will be known as **TWA Airlines**.

TRANS WORLD EXPRESS: United States (1991–1995). **Trans World Airlines (TWA)** takes over the regional partner of failed major **Pan American World Airways (1)** in December 1991, and renames it. With the acquired fleet of 1 de Havilland Canada DHC-7-102 and 6 British Aerospace BAe Jetstream 31s, the new subsidiary continues its feeder operations at Miami and New York (JFK).

A total of 721,168 passengers are flown under both company banners on the year.

Airline employment stands at 650 in 1992 and the fleet grows to comprise 11 Avions de Transport Regional ATR42-320s, 10 Jetstream 31s, and 9 DHC-7-102s. The Florida division, which had previously fed **Pan American World Airways (1)**'s Latin American route system from Miami, is shut down and the aircraft employed there are transferred to New York.

Passenger boardings shoot up 22.6% to 884,239.

The payroll grows 18.5% in 1993 to 770, but the fleet is reduced by one Dash 7 and two Jetstream 31s. President Michael G. Robinson now oversees a route network that includes stops at Albany, Atlantic City, Binghamton, Boston, Buffalo, Baltimore (BWI), Harrisburg, Hartford, Ithaca, Manchester, Newburgh, Norfolk, Philadelphia, Providence, Portland, Richmond, Rochester, Syracuse, Washington, D.C. (IAD and DCA), and Wilkes-Barre. In addition to the company's two daily services, parent **Trans World Airlines (TWA)** adds thrice-daily flights on April 4 between New York (LGA) and Pittsburgh.

In September, a code-sharing marketing alliance is signed with **United Airlines** Under its terms, single booking is available under the UA code and the regional provides feed as "United Express" from 20 cities in the Northeast U.S., providing seamless connections to the major's international destinations served through New York (JFK).

Still, customer bookings decline 15% to 751,407.

Airline employment is reduced by 2.6% in 1994 to 750 and the fleet now includes 11 leased ATR42-300s, 8 chartered BAe Jetstream 31s, and 6 owned DHC-7-102s. At the demand of the parent company, TWX, in September, halts services to 12 cities in the northeastern U.S.; among those impacted are Albany, Syracuse, Rochester, Harrisburg, Providence, and Richmond. Following the crash of a **Simmons Airlines** ATR near Roselawn, Indiana, in December, the FAA orders all ATRs grounded, including those flown by TWX.

Passenger boardings fall another 10% to 674,608.

The workforce grows 2.7% to 770 in 1995. The FAA lifts its ban on ATR flights on January 12, but requires those companies employing it to train their pilots and flight dispatchers to follow new procedures intended to limit the time the aircraft-type spends in potentially dangerous weather. By the fall, the carrier is losing \$3 million per month. In a move designed to save the parent \$24 million per year, TWX is shut down on November 6 and its chartered Jetstream 31s and ATRs are returned to their manufacturers. The next day, the operation is taken over by St. Louis based TWExpress partner **Trans States Airlines**, which places

Jetstream 41s on the routes. Prior to the shutdown, the TWA subsidiary has flown 378,206 passengers this year.

TRANSA CHILE (TRANSPORTES AEREOS DE CHILE, LTDA.): Chile (1954–1963). Mario Contreras, a former airline pilot, and local Santiago businessman Fernando Ovalle set up Transa Chile in June 1954 to operate all-cargo services between Chile and Miami. Employing a pair of Curtiss C-46 Commandos, the concern inaugurates scheduled services in September.

The company's business is successful beyond expectation during the 1950s and two more Commando freighters are placed into service. At the beginning of the 1960s, two Consolidated PBY-6A Catalinas are ordered for a proposed new route from Santiago to Punta Arenas. The new service cannot be initiated, however, as the company goes bankrupt in 1963 before the aircraft can be delivered.

TRANSADRIATICA (1) (SOCIETA ANONIMA ITALIANA DI NAVIGAZIONE AEREA, S.p.A.): Italy (1925–1931). This carrier is formed in Venice in 1925 to provide services along the Adriatic coast. Employing Junkers F-13s, it launches services from Venice to Rome on February 1, 1926. When Junkers G-24 trimotors become available in early summer, flights are started from Venice to Vienna on August 18. On April 21, 1928, a route is opened from Venice to Brindisi via Ancona and Bari.

By 1930, passengers boardings average some 5,000 per year. In 1931, the Transadriatic fleet comprises 8 F-13s and 2 G-24s. The Vienna route is extended through the Alps to Munich on May 1. On December 23, the carrier is purchased by competing **Societa Aerea Mediterranea, S.p.A. (SAM)**.

TRANSADRIATICA (2) (SOCIETA TRANSADRIATICA DE NAVIGAZIONE AEREA, S.p.A.): Italy (1947–1949). This carrier is formed at Venice in April 1947. Taking part of the name of the prewar **Societa Aerea Mediterranea, S.p.A.** merger partner and employing war-surplus Douglas C-47s converted to civil DC-3 standard, it opens services over three routes from Venice in 1947–1948: to Rome and Milan via Padua, to Frankfurt, and to Budapest. Unsuccessful, the airline is one of several merged in 1949 to form **Avio Linee Italiane-Flotte Reunite, S.p.A.**

TRANSAER COLOGNE, GmbH.: Germany (1999–2000). A subsidiary of the Irish charter carrier **Transaer International Airlines, Ltd.**, this company is established at Cologne in late July 1999 following the receipt of a two-year, Ir£1.2-million contract from the German government. Outfitted with a single Airbus Industrie A320-231, TC offers a twice-weekly (Monday mornings and Friday evenings) air bridge service for German civil servants who must commute between Bonn and Berlin.

The German concern is shut down on April 30, 2000, and is not resumed before the parent suspends operations on October 20 and goes into liquidation.

TRANSAER INTERNATIONAL AIRLINES, LTD.: Ireland (1997–2000). Based at Shannon Airport, County Clare, Ireland, **Translift Airways, Ltd.**, in which All Leisure Travel Holdings, Ltd. has acquired a 49% stake, is renamed on April 10, 1997. The mission of providing passenger and cargo charter flights to destinations in Ireland, the U.K., and Europe continues, along with subcharters on behalf of **Aero Lloyd, GmbH**. The carrier's relationship with its new American subsidiary, **Transmeridian Airlines**, does not change.

Chairman/CEO Patrick J. McGoldrick, founder of **HeavyLift Cargo Airlines, Ltd.** and former CEO of **Ryanair, Ltd.**, and President Michael Halper oversee a workforce of 225 and a fleet comprising 2 leased Airbus Industrie A300B4-103s and 6 A320-231s. Two of the latter are leased to Transmeridian, one to **America West Airlines**, and one to **Canair Cargo, Ltd.**

Flights continue and destinations visited include Athens, the Canary Islands, Las Palmas, Los Angeles, Malaga, Orlando, Palma, Salzburg, and Tenerife.

Two Airbus Industrie A300B4-203Fs, first flown as passenger aircraft by **Air France**, are leased by **HeavyLift Cargo Airlines, Ltd.** in July from S-C Aviation. The first enters service in August and is flown on behalf of **KLM (Royal Dutch Airlines, N.V.)**. On weekdays, the freighter, flown by TransAer under contract, provides lift between the Scandinavian hub at Skavsta, Sweden, and Amsterdam. On weekends, the Airbus flies from Amsterdam to Bologna, Italy, and Zaragoza, Spain.

At the end of the year, two A320-231s are leased to **Transmeridian Airlines** for its winter holiday charter schedule.

Early in January 1998, the company is contracted to provide a crew to fly an Airbus Industrie A300B4-203F leased to **HeavyLift Cargo Airlines, Ltd.** and painted in that carrier's colors.

A subcontract is received by HeavyLift from **Lufthansa Cargo, A.G.** in February. It is operated from Frankfurt to and from Athens and Istanbul by the leased Airbus Industrie A300B4-203F flown by TransAer. Another pair of A320-231s are received on February 25.

On August 20, a \$30-million 18-month ACMI contract is signed with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** for the wet-lease of two Airbus Industrie A320-231s. The first aircraft, wearing dual TransAer and Cubana titles, arrives at Havana in early November and replaces Tupolev Tu-154Ms on regional services to Mexico City and Central America. The second aircraft will be delivered before the end of the year.

At the same time, two more A320-231s are chartered to **LAV (Linea Aeropostale Venezolana, S.A.)**. They will be employed on that carrier's northern winter holiday schedule.

Cubana (Empresa Consolidada Cubana de Aviacion, S.A.) and TransAer come to an agreement in January 1999, which is announced on February 7. The Cuban flag carrier will replace its leased DC-10-30 later in the year with a pair of A320-231s leased from the Irish line.

Also during the first quarter, a five-year contract is signed with **Pakistan International Airlines Corporation**. Under its terms, the company will wet-lease four A300B4-203s to assist in the annual Hadj pilgrimage program of the North Asian airline.

The war in Kosovo has a major impact on the company's charter flights to Greece as its aircraft are obliged to fly around the air exclusion zone imposed by NATO regarding Serbia and its Kosovo province. These diversions dramatically increase operating costs.

At the end of April, an A320-231 is chartered to the new Malaga-based Spanish charter operator **Andalusair, S.A.**, which initiates flights on May 1 to the U.K. and Ireland.

The Cubana contract is renewed in mid-August.

Also during the summer, the carrier establishes a new Germany subsidiary, **Transaer Cologne, GmbH**. Equipped with an A320-231, it provides a civil servant air bridge service from Bonn to Berlin.

Meanwhile, Kurdish rebels in Turkey threaten to kill tourists visiting that country. The threats lead to huge cancellations of charter flights by German tour operators, as well as customers from other countries, particularly Greece, who book flights to the Turkish holiday locations.

Two leased Transaer A320-231s, resplendent in a new color scheme, are turned over to **Jamahiriya Libyan Arab Airlines** at Marseilles on December 8. Having suffered major losses caused by the Kosovo conflict, as well as the terrorist threats against its Turkish market and continued fiscal leakage from **Transmeridian Airlines**, Transaer posts a \$14-million loss. Additionally, the company falls Ir£14.5 million into arrears on its aircraft leases.

Airline employment stands at 545 at the beginning of 2000. On April 3, an A320-231 comes off lease with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**. It is initially operated in Cubana colors with Transaer titles.

Also during the spring, two A320-231s are chartered to **Khalifa Airways, S.A.** The A320-231 previously operated by **Transaer Cologne, GmbH**. is repainted and chartered to **Sobelair, N.V.** for a brief summer

engagement that begins on July 5. An A300B4 is chartered to **JMC Airlines, Ltd.** for six months from July 14.

The Khalifa A320s are returned in early July and are sent on a two-month charter to **Air France** wearing Khalifa colors and small Air France titles. The French sojourn ends on August 31. The Sobelair Airbus returns to Ireland on September 2. On September 22, the carrier's American affiliate, **Transmeridian Airlines**, declares Chapter XI bankruptcy. Transaero, which has suffered a huge drain on its cash resources as a result of its \$18-million investment in the American carrier, had also guaranteed Transmeridian's liabilities.

On October 2, a \$15-million bid is accepted by **Air Kosova** for an 18-month wet-lease contract. The upgraded arrangement, which includes training and management consultant services, will be paid for by the U.S.-based Foundation for the Reconstruction of Kosovo. Takeover discussions are now secretly undertaken between financially distressed Transaero and **HeavyLift Cargo Airlines, Ltd.**, but these fail on October 13. Still the largest independent charter airline in Europe, the Irish carrier, unable to secure additional funding during the following week, collapses on October 20, with its CEO, Willie O'Byrne, blaming the failure on the **Transmeridian Airlines** bankruptcy and its own inability to conclude the HeavyLift merger.

The 298 staff employed by Transaero in Ireland are laid off, as are the 136 in Britain, 55 in Greece and Germany, and an additional 56 contract workers elsewhere. The defunct carrier does, however, make arrangements to fly its Irish staff home from various locations. At Dublin, the state-owned airport company Aer Rianta immediately seizes an A320-231 as insurance that it will be paid the Ir£200,000 that it is owed in landing fees and other charges. SunWorld and Falcon/JWT, the Irish tour companies that had employed Transaero capacity, quickly make alternative arrangements to fly vacationers to and from Rome, Malaga, Larnaca, and Lanzarote.

The closure also impacts all of those carriers with which it has leasing arrangements. In addition to nine A320s, the company also leases four A300s from GECAS, the Shannon-based subsidiary of the General Electric, which operates the business first started by GPA. The firm of McStay Luby is brought in to handle not only the airline's liquidation, but also the return of all these chartered planes.

On October 24, **EgyptAir, S.A.E.** seizes an A300B4, owned by GECAS, which it had been operating while **Jamahrya Libyan Arab Airlines** holds on to the two ILFC-owned A320-231s it had been flying. Eventually, all three are released. Transaero is officially wound up on November 1 when the Dublin High Court, with the approval of all creditors, appoints local lawyer John McStay to liquidate the carrier's remaining assets.

TRANSAERO AIRLINES: GosNIIGA, Sheremetyevo Airport, Building 3, Moscow, 103340, Russia; Phone 7 (095) 578-5060; Fax 7 (095) 578-8688; <http://www.russia.net/business/transport/air/transaero/transa.html>; http://www.transport.ru:8100/9/tr_air.htm; <http://www.olvit.iasnet.ru/transport/ind.htm>; Code UN; Year Founded 1990. Transaero is established at Moscow's Sheremetyevo Airport on December 28, 1990 as the first private airline approved for scheduled passenger services in Russia. The shareholders in this, one of the reborn nation's first joint-stock companies, are **Aeroflot Soviet Airlines**, the former State Property Committee, the Moscow city government, and the aircraft manufacturers Yakovlev and Ilyushin.

Alexander Pleshakov, the 27-year-old son of Interstate Aviation Committee chairwoman Tatyana Anodina, becomes president, with Grigory Gurtovoy, son of Yak Aircraft Corporation Chairman Arcady Gurtovoy as executive vice president. The cofounders will initially work closely together.

In 1991, the two obtain from the airline shareholders 1 each Tupolev Tu-154 and one Tu-154M. During the year, a new management organization is established along with a corporate infrastructure. President Pleshakov and Executive Vice President Gurtovoy, together with other executives, visit the U.S. to study airline operations. It is decided to reject the low-cost/no-frills short-haul example of **Southwest Airlines** (2).

Government certification is received in October and in November the airline is registered with ICAO at Montreal. Domestic charters commence on November 5.

In a joint operation with **Aeroflot Soviet Airlines**, nonscheduled flights commence in February 1992; charter destinations include Istanbul and Antalya in Turkey and Sharjah in the UAE. The Tupolev transports bring the company welcome publicity when they transport thousands of Russian Jewish emigrants to Israel and undertake several other airlift missions on behalf of the UN.

Also in February, an order is placed directly with the Voronezh Aircraft Production Plant for one, later two, Ilyushin Il-86(s); they will be the first of their type to offer a three-class interior. The purchase is funded by a loan from a major Russian bank, Menatep.

In July, President Pleshakov acquires from **Aeroflot Soviet Airlines**, then being reformed into **Aeroflot Russian International Airlines (ARIA)**, a fleet of four Ilyushin Il-76s; the two Il-86s, paid for with the bank loan, are also acquired and placed into service on a route to Almaty.

Enplanements for the year total 53,145 and more than 4,600 tons of cargo are transported.

The first non-Aeroflot company approved for scheduled passenger services in the new Russian republic, the carrier inaugurates nonstop roundtrip Il-86 domestic flights in January 1993, linking its Moscow base with the northern mining city of Norilsk twice-weekly. The service scores two other firsts: it is the first for which its customers may choose to sit in either business- or economy-class and the first on which full-meal service is available on flights of under four hours duration.

The government in February awards Transaero route licenses to 15 additional Russian destinations as well as 7 capitals in the CIS.

In March, Transaero becomes the first Russian airline to request Boeing jetliners; on April 9, it receives a pair of B-737-2C9As on five-year operating leases from Shannon Air Leasing. They are first U.S. aircraft to carry Russian registration since the DC-3s of the early 1940s and are placed into service on routes from Moscow to Kiev, Minsk, and Western Europe. The company begins to lobby the Pulkovo Aviation Enterprise, which operates St. Petersburg Airport, for permission to launch service to the city once-known as Leningrad.

Having already trained the flight crews with **United Airlines** at Denver and the service crews with **Air France**, the company is able to launch scheduled "Baby Boeing" flights within days to Almaty, Kiev's Borispol Airport, and Sochi. At the same time, scheduled charter flights to Istanbul commence. Riga and Minsk also soon become destinations. Orders are placed for two more, plus two each B-757-200ERs and B-767-300ERs.

By summer, the new entrant has made almost 1,000 flights, mostly on internal routes to Kiev, Riga, and Minsk. It also begins negotiating with U.S. civil aviation authorities for rights to land in Washington DC, New York, and Chicago. The carrier also becomes the first non-Aeroflot airline to win international route licenses for scheduled services.

On November 2, the carrier initiates its first foreign scheduled route, Moscow to Tel Aviv, with the first B-757-2Y0ER delivered. The route to Israel had been won over strong competition from **Aeroflot Russian International Airlines (ARIA)**. Seven other foreign markets are also opened, including Istanbul and the favorite of many Russian shoppers, Sharjah, UAE.

Enplanements for the first full year of service total 241,716, while 63.3 million FTKs are operated.

Operations continue apace in 1994 and in January the carrier is named the Russian-designated carrier to Tel Aviv with three scheduled services per week. Flight attendants with training from **Air France** are available on all frequencies. Advance booking is introduced as is the first Russian frequent flyer program Privilege (fly 10 trips, get 1 free).

The second B-757-2Y0ER enters service in April and, with its sister, undertakes scheduled frequencies from Moscow to Novosibirsk, Nizhnevartovsk, and Tashkent. At this point, the company wins approval to begin daily roundtrips from Moscow to St. Petersburg. The airline is re-registered on August 18.

Plans are made with **RiAir, A.S.**, formerly **Riga Airlines, A.S.**, to begin feeder services with SAAB 340Bs from a hub at Riga, Latvia; these duly commence in September as RA also begins to code-share with Transaero on the Russian airline's routes from Riga to London and Paris. The flights to the U.K. and France are made under the Latvian partner's authority.

Route authority is sought for the initiation of the company's own flights to New York, Berlin, Frankfurt, and London (LGW), as well as to St. Petersburg and Yuzhne Sakhalinsk. From a low of \$80–\$90 per ton at most Russian airports in early December, avgas prices begin to skyrocket. At year's end, permission arrives from Washington, D.C. for the company to operate into six U.S. cities.

Passenger boardings skyrocket 133.3% to 533,561 (293,880 domestic and 239,680 international).

Airline employment in 1995 stands at 1,801, a 45.2% boost. In January, a B-737-2C9A is leased to **RiAir, A.S.** In mid-February, the Transaero Club frequent flyer program is introduced.

During the spring, scheduled flights are initiated from Moscow to Berlin and Frankfurt. Simultaneously, B-757-2Y0ER flights commence from Moscow to Novosibirsk and Vladivostok.

In early July, a special hall for business-class passengers is opened at Sheremetevo-1 Airport at Moscow.

On December 2, company executives announce plans to inaugurate return service from Moscow's Sheremetyevo Airport to California the following June.

Enplanements for the year skyrocket 121.6% to 1,182,446 while cargo also increases, up 108.9% to 286.07 million FTKs. Operating revenues of \$147 million are reported and exceed expenses of \$145.37 million. A \$1.62-million operating gain is recorded, but no net figures are released.

A total of 99 new employees join the company in 1996 and the owned fleet now includes just 1 Il-86. Also operated, under charter, are 3 each B-757-28As, B-737-236As, and Douglas DC-10-30s, and 2 each B-737-2C9As and B-757-2Y0ERs. The long-range Douglas wide-bodies, formerly operated by **American Airlines**, are chartered to the Russian carrier on behalf of the U.S. major by Fin 3 in Ireland. Orders are placed or outstanding for 10 each B-767s, B-737s, and Il-96Ms.

Various new international markets are entered in the Eastern Hemisphere, including Cairo and Paris. Transaero now operates 140 weekly flights to 18 points in Russia and the CIS and to 7 international destinations. With initiation of the summer schedule, regularly posted flights commence to Lvov, Kishinev, Akmola, Karaganda, Omsk, Apatity, and Krasnoyarsk.

On May 14, the company announces plans for a \$1.2-billion expansion of its fleet in one of the largest airliner acquisitions ever made by a Russian carrier in an international competition. All major international and Russian manufacturers will be invited to participate.

The carrier begins its first transatlantic services to the Western Hemisphere on June 16 with weekly nonstop DC-10-30 roundtrips from Moscow to Los Angeles. The route had previously been flown without success by **Aeroflot Russian International Airlines (ARIA)**. A code-sharing agreement is simultaneously reached with **American Airlines** for services to Chicago (ORD) via New York (JFK) slated to begin next April.

An agreement for code-sharing, joint fleet planning, and schedule coordination is signed with **Aeroflot Russian International Airlines (ARIA)** in July. As the result of a complaint filed by Transaero with the State Antimonopoly Committee in January when it was denied additional route authority, Pulkovo Aviation Enterprise relents on August 19 and grants Transaero authority to add to additional weekly roundtrips to its schedule from Moscow to St. Petersburg.

Weekly nonstop DC-10-30 roundtrips to Orlando from Moscow commence in October. Uncertainties surrounding the nation's presidential election bring a decline in business-class travel.

Customer bookings at Russia's largest independent soar 28.3% to 1,516,700 and 23.58 million FTKs are operated, a 25.2% increase. A \$24-million profit is reported.

The employee population grows by 16.3% in 1997 to 2,209. The fleet will be increased during the year by the addition of three additional chartered B-757-2Y0ERs.

It is reported in the aviation press on February 1 that Russia's second-largest airline has joined the New Jersey-based investment group Strategic Capital Group for the purpose of joining in a proposal to take over **Trans World Airlines (TWA)**. The U.S. major will neither confirm nor deny this activity. The TWA bid is not formalized.

During the second week of the month, the company signs a \$7-million, one-year contract with Greenwich Caledonian, Ltd. of Prestwick, Scotland, for the maintenance of its DC-10-30s engines.

Also during the month, the carrier introduces a competitive new fare structure (low-cost or discount would be the term employed in the West) on the Moscow–Novosibirsk route. Traffic on the new service will consequently double in the next four months.

Dual-designator frequencies are initiated with **American Airlines** in April employing DC-10-30s leased from Fin 3. AA purchases seats on Transaero's new weekly frequencies from Moscow's Sheremetyevo Airport to Chicago via New York, while Transaero, in turn, shares codes on American flights from Chicago to five U.S. points.

Discussions begin with **Estonian Air, A.S.** in May concerning the possibility of an alliance under which the former **Aeroflot Soviet Airlines** division would provide feeder services for the Russian independent.

Cofounder/Chairman Gurdavoy now departs to form a project management business, while the other cofounder and general director, Pleshakov, moves up to the top position.

On June 1, Chairman Pleshakov announces a \$450-million order for six Il-96Ms, to be delivered in the year 2001. By month's end, it is reported that, after a year, traffic on the new Los Angeles route is up by 30%. During July, three B-767-266ERs, previously operated by **EgyptAir, S.A.E.**, arrive under charter.

In an effort to counteract generally high domestic airline fares, Transaero maintains low ticket prices on its Novosibirsk–Moscow route and increases capacity by replacing the B-737-236A previously employed with a DC-10-30. A number of discounts become available to customers tailored to generational and demographic factors. Plans to resume flights to Kishinev, Minsk, and Sochi, suspended for lack of traffic, are shelved when marketing determines that business is not yet sufficient to justify relaunch.

In a follow-up to the Russian Federation's establishment of a representative office in Taipei the previous December, the Chinese Republic's Ministry of Foreign Affairs announces on September 4 the opening of direct commercial aviation links between Taiwan and Moscow. **China Airlines, Ltd. (CAL)** and Transaero are authorized to fly the route.

Also in September, the short-haul subsidiary **Transaero Express** begins revenue services with a pair of Tu-134As.

During the fall, significant tourist traffic comes to Moscow for celebrations commemorating the 850th anniversary of the city's founding. Although plans to visit Manchester, England, are dropped, regularly scheduled return flights begin between Moscow and Strasbourg in October.

Also during the fall, the company signs one of the first strategic marketing pacts between airlines of the former Soviet Union when it agrees to cooperate with Tashkent-based **Uzbekistan Airways** on code-sharing over routes from Moscow to Tashkent, on maintenance, and general schedule coordination and marketing.

On October 1, frequencies on the Los Angeles route are doubled to twice-weekly; free connections are offered to **American Airlines** and **Wings West Airlines**, doing business as "American Eagle," from Los Angeles (LAX) to Monterey, San Diego, San Luis Obispo, Fresno, Santa Barbara, Las Vegas, and Honolulu.

Also during the month, arrangements are completed with ILFC for the charter of a pair of B-767-3Q8ER for eight years beginning in March 1998. In November, a request is made of **Bavaria Fluggesellschaft mbH. & Co.** for two Next Generation B-737-7K9s.

A 30% stake is purchased (for just \$10,000) in **Riga Air** during December. Transaero has already invested \$5 million in the regional.

Early in the month, the company becomes the first Russian airline ever certified by the U.S. FAA. Under FAR 145 rules, the FAA grants the company line maintenance rights for repair of its DC-10-30s and their CV6-50 engines.

Passenger boardings rise 2.4% to 1,550,600, while cargo surges 25.5% to 31.7 million FTKs. Revenues reach \$320 million.

The first Next Generation B-737-7K9s, expected during January 1998, are delayed.

During the first quarter, Russian Federal Aviation Service Director General Gennady Zaitsev places the finishing touches upon an ambitious \$750-million plan to modernize the nation's commercial aviation. The blueprint, announced just prior to March 23 when President Yeltsin dismisses his entire cabinet, contains a number of progressive points.

The nation's 315 airlines will be integrated into 5 to 8 national carriers, the number of regional airlines will be cut to 24, and some 65 small local airlines will be allowed to continue. The regional and local service companies will be required to perform "social" flights to unprofitable points.

Zaitsev's document also indicated that the monopolistic relationships between airlines and airports will end and that the number of federally supported airports will be reduced; all will become joint-stock (limited) carriers within a year. Finally, the civil fleet will be upgraded; leases will be employed by those unable to purchase Western-built transports.

The first B-767-3Q8ER arrives in March; the second is expected to be delivered in November. Both will be employed on domestic routes and replace the DC-10-30s within two years.

The premier Next Generation B-737-7K9 arrives at the end of April, with two more expected before the end of the year. It is placed on the longer domestic segments, along with certain routes into Western Europe. Transaero claims to be the first airline in Russia and the second in the world to offer B-737-700 service.

During the spring, code-sharing flights begin from Moscow to Tashkent in cooperation with **Uzbekistan Airways**. At the same time, the company approaches the U.S. Department of Transportation seeking route authority to open service to New York by the summer of 1999.

A business-class lounge is opened at Sheremetyevo Airport on May 11.

By midyear, the company is operating 250 segments per week, many from its newly upgraded terminal at Moscow's Sheremetyevo-1 Airport. On July 3, Transaero becomes the first commercial carrier to fly nonstop over the North Pole with an 11-hr. DC-10-30 flight from Moscow to Newark via Krasnoyarsk and Toronto.

At the beginning of August, a majority group of shareholders elects a new executive board at an illegally called general meeting. The new board now agrees to sell a 12.38% stake in Transaero to Moscow-based LogoVaz, which is controlled by financier Boris Berezovsky. The old board immediately files suit.

Russian air transport, like other elements of the economy, encounter rocky times after the government devalues the ruble in mid-August. Airlines begin to fix their own rates, pegging tariffs to both rubles and U.S. dollars. On August 26, Transaero fixes its domestic rates at 7.5 rubles to the dollar and its international ticket prices at 8.253 rubles to the dollar, even though the official Central Bank exchange rate is 7.86 rubles to the dollar. The rate will plunge to 16 to 1 within a month.

On September 6, **Aeroflot Russian International Airlines (ARIA)** officially informs Transaero of the termination of their agreement for joint commercial activities, effective October 6, and on mutual financial claims on December 6.

Eight days later, on September 14, Aeroflot goes to court in Moscow to file a claim against Transaero for 4.6 million rubles, following it up a week later with another 4.6-million ruble claim (for maintenance and service charges) and a request that Transaero's bank accounts be frozen. Transaero replies with a countersuit seeking 15.2 million rubles.

Analysts picture the court claims as an attempt by financial magnate Berezovsky to further his takeover of Transaero and with the help of key executives at Aeroflot allegedly loyal to him, to merge the two airlines into a super carrier. There is behind-the-scenes opposition from Aeroflot Managing Director Valey Okulov, which now begins to simmer.

In mid-September, the U.K. CAA chooses **Virgin Atlantic Airways, Ltd.** rather than **British Midland Airways, Ltd.** as the second U.K. airline to operate from London to Moscow. Virgin plans to operate in partnership with Transaero, as holder of the corresponding second Russian license, to convert the four weekly flights allowed under the British license to effect daily service as of October 22.

Replacing a DC-10-30, the B-767-3Q8ER takes over the weekly non-stop return service from Moscow to Los Angeles on September 27. A leased B-737-73S is received in lieu of the two ordered units.

The Russian Federal Aviation Service reports at the end of September that for the period since the beginning of the fiscal crisis in August, the number of citizens traveling domestically in Russia has dropped 30%, while the number of those traveling abroad has fallen by 70%. There is also a 40% drop in the number of incoming tourists.

As the result of an appeal of the September CAA decision by **British Midland Airways, Ltd.**, U.K. Deputy Prime Minister John Prescott, in his dual role as Secretary of State for the Environment, Transport, and the Regions, stops **Virgin Atlantic Airways, Ltd.**'s plans for Russian service from London (LGW). While not indicating that Virgin is out of contention for the route it is planning to fly with Transaero, Prescott demands that the CAA hold new hearings on November 26.

Transaero celebrates its seventh anniversary on November 5, but as the Russian economic situation continues to deteriorate, Transaero's fortunes, to a certain extent, decline as well. By the end of November and into December, the carrier is forced to make significant fleet changes. All of the DC-10-30s are returned ahead of schedule, receipt of the second B-767 is delayed, and two B-757-2Y0ERs are returned to their lessor. The Douglas wide-bodies will be chartered to **Hawaiian Airlines (HAL)**.

On December 1, the Moscow court makes a ruling in the suits brought by **Aeroflot Russian International Airlines (ARIA)** and Transaero against one another. As a balance of the mutual claims, Aeroflot is directed to pay Transaero \$3 million (\$176,000). The final joint agreements between the two carriers end on December 6.

The U.K. CAA reverses its decision to award Moscow authority to **Virgin Atlantic Airways, Ltd.** on December 16 and instead hands it over to **British Midland Airways, Ltd.**

Transaero proudly inaugurates twice-weekly return service between Moscow and London (GTW) on December 18. The flights are direct and no longer go via Riga.

Customer bookings, on 18,729 scheduled flights, decline 5% to 1,285,000.

On January 27, 1999, a Russian arbitration court annuls the airline's recent acquisition by financier Berezovsky's trade group LogoVAZ. This setback ends Berezovsky's influence at Transaero. Meanwhile, with the company's 9 largest Western aircraft removed as a cost-saving measure, Transaero's Boeing fleet comprises only 2 chartered Next Generation B-737-7K9s and 5 B-737s (3 Dash-236As and 2 Dash-2C9As), plus 1 Il-86. In February, the company enters into a code-sharing alliance with **Kras Air (Krasnoyarsk Avialinii-Krasair)**. The event marks the first dual-designator alliance between two Russian carriers. Negotiations for joint operations simultaneously begin with **Siberia Airlines (Sibir)**, **Domodedovo Airlines**, and **Air Kazakhstan Group**.

On March 22, the Next Generation B-737-7K9 is seized at London (LGW) and held as insurance that Transaero will make payments on its major debt for ATC and navigation services to Great Britain, Canada, Denmark, and Iceland. Satisfactory discussions are held in Brussels the following week between officials of Eurocontrol and the airline; meanwhile, although the Next Generation Boeing remains under arrest, the company's other Boeings are allowed to fly in and out of London without harassment.

When first quarter figures are released, they demonstrate that the carrier is back on track financially and has begun to recover. On April 12, Chairman Pleshakov reveals this welcome trend to reporters at a Moscow news conference. He also notes that the airline is implementing a cost-cutting plan that will see the number of employees cut from

2,600 to 1,700, with a view to a further reduction to 1,100. It will also rationalize its routes and seek new financial backing that will allow it to operate an all-Russian fleet, thereby withdrawing the Western aircraft that are so expensive to lease.

It is announced on August 23 that Latvian competition authorities are investigating **Air Baltic Corporation** and Transaero over a price-fixing scheme.

Ilyushin Finance now comes forward with a plan for a pair of pilot projects, one each for Transaero and **Aeroflot Russian International Airlines (ARIA)**, which will see the Russian government guarantee bank loans for the acquisition of new Russian-made airliners. Negotiations between Ilyushin, the banks, and the government now follow.

At the end of September, twice-weekly roundtrips are inaugurated between Moscow and Eilat, Israel, via Tel Aviv. From the end of October through December 15, a 10% fare discount is offered on all flights from Moscow to regions in the CIS.

The carrier celebrates its seventh anniversary on November 5. Direct, twice-weekly return service is launched from Moscow to London (LGW).

On December 29, return frequencies from Moscow to Tel Aviv become twice daily. Passenger boardings plunge 57.3% to 571,647 while freight traffic drops 79.3% to 5.42 million FTKs. Revenues total 2.2 billion rubles (\$89.2 million) and there is a 126-million ruble (\$4.4-million) net gain. The decline in passenger traffic totals 25% on domestic routes and nearly 40% on international services, and is blamed by Chairman Pleshakov on the impact of the August 1998 currency crisis.

Airline employment at the beginning of 2000 stands at 1,147, a huge 46.8% decrease over the previous 12 months. A new Transaero 2000 marketing program is kicked off in early January with a publicity stunt unprecedented in company history. Converted to all-business-class seating, a Next Generation B-737-7K9 flies around the world from Moscow via London (LGW), New York (JFK), Los Angeles, Anchorage, Tokyo (NRT), and Irkutsk. The flight requires 12 days and 58 flying hours.

On March 26, the London terminal for the carrier's weekly roundtrip is switched from Gatwick Airport to Heathrow.

On April 11, the company reveals that, within the past two months, it has signed marketing and code-sharing agreements with **Continental Airlines**, **Ural Air (Ural Too)**, and **Air Kazakhstan**.

The carrier begins to code-share with **Ural Air (Ural Too)** on April 24 over a route from Moscow to Ekaterinburg. The next day, **Airlines-Online.com** reports that the carrier has but four operational aircraft.

The carrier's weekly roundtrips between Moscow and Astana, Kazakhstan, are, in partnership with **Air Kazakhstan**, increased to six per week on June 1. The service to London (LHR) simultaneously is made daily. With two aircraft undergoing required certification checks and out of service during the first half, customer bookings have dropped to just 195,000.

On July 3, the carrier begins to code-share with **Air Moldova International** on a route from Chisinau; seven flights are made into Moscow (Vnukovo) and three to Moscow (Sheremetyevo 1). The daily return service from Moscow to Baku, dropped two years earlier due to the currency crisis after a promising start in May 1994, is resumed on July 15. At a Moscow news conference on August 10, Alexi Mayorov, Transaero's head of flight safety inspection, reports that the safety of his airline's flights is improving. With no crashes in its history, Transaero has had a few close calls or incidents. These, it is noted, have dropped from 23 in 1998 to just eight in 1999; only one has so far been reported in 2000.

Weekly return service is launched between Moscow and Strasbourg on August 26. The smallest of all wide-bodied aircraft available on the market, an A310-324 is leased from Airbus Asset Management on September 10. At the end of the month, Chairman Pleshkov is honored when his name appears in *Expert* magazine as one of the top 100 most influential Russian entrepreneurs.

At the beginning of the winter schedule on October 29, Transaero introduces a number of discount fares. Roundtrip tickets from Moscow to London (LHR), Strasbourg, Frankfurt, or Pafos on Cyprus are cut to

\$199 while "welfare priced" 100-ruble return service is available between Moscow and St. Petersburg.

To help improve its market share against Transaero, **Aeroflot Russian International Airlines (ARIA)**, on October 30, replaces the Tu-154Ms employed on the Moscow to Nizhnevartovsk route with B-737-4M0s. The chartered A310-324 is delivered on November 30.

The company places its Airbus into service on December 3 on both scheduled and charter routes to Frankfurt, London (LHR), Tel Aviv and Almaty. The latter is one of four cities in Kazakhstan, along with Atyrau, to which scheduled Boeing service from Moscow is simultaneously launched.

At a press conference early in the month, Chairman Pleshakov reviews the progress being made toward equipping Transaero with Russian-built airliners. Under a plan first proposed by Ilyushin Finance Company in 1999, a pilot project for a state-supported aircraft leasing program has been agreed to by a number of banks. Following two special meetings, one chaired by President Vladimir Putin, the Russian government has also given its approval. The banks will fund the project at an annual interest rate of 11%–12%, which is much less than that charged by Russian banks.

An arrangement for financing is completed with Ilyushin Finance Company on December 15; under its terms, the carrier will be able to add 10 chartered Tu-204-100s to its fleet between 2001 and 2003 at rates 30% less than those for B-767s.

Having for five years unsuccessfully attempted to get its facilities at Moscow's Sheremetyevo Airport upgraded, the company begins to seriously entertain thoughts of accepting an East Line proposal to move to newly reconstructed Domodedovo Airport. Indeed, that decision will be taken during the first quarter of the new year and will result in the carrier's transfer by May 1.

Passenger boardings this year fall 25% to 430,000. The plunge is blamed on a sharp reduction in the number of unprofitable domestic routes operated; flights to other CIS destinations, particularly Kazakhstan, show good growth while traffic on routes to Germany and the U.K. is up substantially. Indeed, passenger numbers on the service from Moscow to London (LGW) increase by 230%. According to preliminary figures, revenues have advanced to 2.5 billion rubles (\$88.8 million) and profits of 280 million rubles (\$10 million) are expected.

At the end of the year, a new code-sharing agreement is signed with the Republic of China-based carrier **EVA Air (EVA Airways, Ltd.)**. The arrangement will allow EVA, on March 1, to become the first Taiwanese carrier to overfly Russian territory with a new thrice-weekly direct roundtrip service from Taipei to Paris (CDG). In October, Transaero, on behalf of the new partnership, will begin operating a weekly A310-324 return service from Moscow to Taipei.

TRANSAERO EXPRESS: 1/9 Senezhkaya Street, Moscow, 124513, Russia; Phone 7 (095) 453 0136; Fax 7 (095) 456 3375; Code TXE; Year Founded 1997. Transaero Express is founded in September 1997 to offer regional charter service on behalf of **Transaero Airlines**. Vasily Vysotski is placed in charge and he begins revenue services with 1 each Antonov An-26, Tupolev Tu-134, and Yakovlev Yak-40.

TRANSAERO SAMARA: Smyshievskoye Shosse 1A, Samara, 443050, Russia; Phone 7 (8462) 586 218; Code TSL; Year Founded 1994. TS is established at Samara in 1994 to offer regional and domestic passenger charters. V. E. Kruglov is appointed general director and he inaugurates revenue flights with a single Yakovlev Yak-40.

Services continue in 1995–2000, during which years the fleet is increased by the addition of 1 each Antonov An-12 and Ilyushin Il-76.

TRANSAEROS ILLIMANI, S.A.: Bolivia (1972–1980). TI is set up at La Paz in 1972 to provide domestic all-cargo charters. Revenue operations begin with a trio of Curtiss C-46 Commandos.

Its No. 1 engine afire, a C-46D with three crew and a passenger carries out a safe emergency landing at Santa Ana on December 7, 1973;

although the aircraft will be destroyed, all aboard are safely evacuated beforehand.

Service continues until the fall of 1980.

TRANSAFRIK: Sao Tome and Principe (1986–1993). This charter operator, headquartered at Shannon, Ireland, is formed at Sao Tome on November 28, 1984 to offer contract passenger and freight services to destinations primarily in Africa. President C. R. G. Hellinger's company employs 220 workers and beginning on December 1, operates a fleet of 4 Lockheed L-382G Hercules and 2 Douglas DC-8-33Fs.

In 1987, two used Lockheed L-188A Electras replace one DC-8-33F. One had originally been operated by **American Airlines** and the other by **Garuda Indonesian Airways**.

On April 8, possibly as the result of multiple hits from small arms fire, an L-382G with four crew suffers a double engine fire while on final approach to Luena. The plane makes a forced landing in bush country about 1.5 km. from the end of the runway at Luena and although the aircraft is subsequently burned out, there are no fatalities.

In 1990–1991, two DC-8-20Fs and a BAC 1-11-322SR are acquired.

While at 17,000 ft. and en route from Luanda to Lunda Norte Province on March 16 of the latter year, another Hercules freighter, with three crew and six passengers, is hit by a surface-to-air guided missile. The turboprop crashes 32 km. from Malange and there are no survivors.

Three more Hercules freighters are leased from the South African operator **Safair Freighters (Pty.), Ltd.** in 1992. In 1993, the carrier is reformed and with the new name **Transafrik International**, is transferred to Luanda, Angola.

TRANSAFRIK INTERNATIONAL: P.O. Box 2839, Luanda International Airport, Luanda, Angola; Phone 244 (2) 352 141; Fax 244 (2) 393 397; Year Founded 1993. In 1993, the company headquarters of the Sao Tome and Principe-based **Transafrik** are transferred to Luanda, Angola. A new title, **Transafrik International**, is chosen, along with a revised logo and appropriate new aircraft livery. Managing Director Erich Koch's airline continues to specialize in large-scale cargo lifts under difficult conditions. The fleet now includes 1 each British Aerospace BAe (BAC) 1-11-211AH, Douglas DC-8-33F, Grumman G-159 Gulfstream I, Lockheed L-382E Hercules, L-382G Hercules leased from **Safair Freighters (Pty.), Ltd.** of South Africa, and a Bell 206B JetRanger helicopter.

The workforce stands at 200 in 1994 and the fleet is enhanced by the addition of a third Hercules freighter and two Boeing 727-100Fs.

While landing at M'Banza Congo, Angola, after an April 27 all-cargo service from Luanda, a B-727-44F with three crew touches down 2 m. short of the runway; the aircraft veers off the right side of the runway and crosses a road, striking a bus with its right wing. Although the aircraft and bus are badly damaged, there are no fatalities.

The UN is able to broker a shaky peace arrangement between warring factions in the former Portuguese colony. UN monitors will attempt to keep the pact from falling apart.

Services continue in 1995–1997, during which years the fleet is altered and comes to include just 1 Hercules plus 1 each B-727-51, B-727-82, B-727-22F, B-727-23F, and B-727-95F and 1 Bell 206B JetRanger.

The workforce is boosted by three employees in 1998. A Lockheed L-382C is leased from a Bolivian concern early in the year to operate all-cargo services in Africa on behalf of the UN. In mid-June, the plane crashes somewhere in Zambia, losing an engine and suffering its wing to be torn off. No fatalities are reported.

The company becomes the focus of a flurry of publicity over the Christmas holidays when two additional Hercules freighters, which it has leased to operate on behalf of the UN in Angola, are both shot down during renewed fighting between the Luanda government and its principal opposition.

The first, with 14 passengers, is lost on December 26 in the Vila Nova area shortly after taking off from Huambo. Although it appears from initial reconnaissance over the area, recently secured by government forces

from the National Union for the Total Independence of Angola (UNITA), that the aircraft has landed in such a condition that some aboard may have survived, such is not the case. After securing approval from both warring parties, a UN search party visits the scene and finds charred wreckage and bodies.

The second aircraft, with four crew and five passengers, is downed on January 2, 1999, near Huambo, again with no survivors. Due to fierce fighting, a visit to the crash site by a rescue team is not, however, possible for some time.

Other services continue without incident or headline during the remainder of the year. The B-727 fleet at year's end includes 3 Dash-23Fs, 1 each Dash-30C, Dash-31F, Dash-22C, Dash-25F, Dash-95F, and Dash-90C.

Following its second ILS approach in storms to Luanda after an all-cargo service from Salima on February 12, 2000, the B-727-82 with seven passengers lands hard with its right wing low. The wing hits the ground and breaks off. Although no injuries are reported, the jetliner must be written off.

TRANSAIR, LTD. (1): Canada (1956–1979). **Central Northern Airways, Ltd.** and **Arctic Wings, Ltd.** merge at Winnipeg in early 1956. The fleet and route system are based primarily upon the aircraft, services, and DEW Line construction support contracts brought into the partnership by the former CNA. Both of the Curtiss C-46s acquired by CNA in February 1955 are lost, one at Fox, Manitoba, on April 3 and the other at Coral Harbor, Northwest Territories, on July 6. Meanwhile, on May 30, one of the carrier's three Bristol 170 Mk. 31 Freighters exceeds the runway when landing at Beaver Lodge Lake, Northwest Territories, and is lost through the ice. On June 18, a second Bristol Freighter is lost when it falls through the ice at Povungnituk, on Hudson's Bay, sinking 40 ft.

Additional DEW Line air supply contracts are obtained and the first aircraft acquired by the new company is a Douglas DC-4 received in June. It is employed to fly to the Mid-Canada Line bases along a route from Montreal to Ottawa to Churchill, Manitoba. It is followed into service in August by a Consolidated PBY-5A Canso, which will, however, be sold in October. Also during the summer, two de Havilland Canada DHC-2 Beavers are obtained.

Three Avro 685 York C.1s enter service in September. One of these is lost at Fox on September 13; no other information is available.

An Avro 685 York C.1 is lost 33 mi. S of Rankin Inlet on January 8, 1957; although the aircraft must be written off, there are no fatalities. Another Canso flying boat is received in March.

A fifth Cessna 180 is acquired in July but is withdrawn the following month. In August and September, three Douglas DC-3s are acquired from **Canadian Pacific Air Lines, Ltd.** In the latter month, Transair takes over CPAL's route between Winnipeg and Churchill via Dauphin, the Pas, Flin Flon, and Lynn Lake. A Noorduyn Norseman VI sinks at Wabowden Lake on October 20.

Scheduled and contract services continue virtually unchanged over the next three years. In February 1958, a 10-year-old Avro Anson V is withdrawn and scrapped. The last Bristol Freighter is sold to **Wardair Canada, Ltd.** in March. On July 28, a Norseman VI is lost in a fire at Eskimo Point and in August, a decade-old Republic RC-3 is sold to Holiday Enterprises, Ltd.

A Norseman V is lost while landing at Fox Channel on January 18, 1959. Another DC-3 is purchased in April and in November, the carrier's six-year-old Lockheed Model 12A is passed to **Superior Airways, Ltd.** Meanwhile, in June, a Norseman V is destroyed in a crash at Sandy Bank Lake and an Avro Anson V acquired in March 1960 is sold in April to **Spartan Air Service**.

A large USAF DEW Line resupply contract is received in 1961 in addition to a new stop at Thompson on the Winnipeg to Churchill scheduled route. To undertake these new services, four additional DC-4s are acquired between March and May. In May and June, the last four Cessna 180s are withdrawn along with a Norseman IV. A sixth DC-4 joins the fleet in February 1962.

In April 1963, **Trans-Canada Airlines, Ltd.** sells its Prairie Air Service to Transair for C\$1. To service this new network—Winnipeg to Regina via Brandon and Yorkton, plus Regina to Prince Albert via Saskatoon—the state carrier in March–May also provides two more DC-3s and a Vickers Viscount 724.

Airline employment in 1964 stands at 312 and the fleet includes 28 aircraft. The route from Regina to Calgary, via Swifts Current and Medicine Hat, is terminated in January. Simultaneously, the Prairie Air Service is now fully implemented. In April, the 1961 DEW Line airlift contract is once again awarded to the company.

A DC-6 is leased to supplement other aircraft making the regularly offered sportsmen's fishing charter flight to Great Bear Lake from Winnipeg. This is the longest such route in the world. A DHC-2 Beaver is withdrawn in September. Enplanements are now 75,901.

The workforce increases to 349 in 1965. It is decided by the new management team, lead by President M. P. Martyn, to consolidate departments and to reorganize the company along functional lines. The decision is also taken to operate transatlantic charters and these are begun by 1 each new DC-7C and DC-6. A Beech 18S is acquired in February.

In the spring, a Viscount low-fare coach service, The Plainsman, is inaugurated on the prairie routes. Three Norsemen VIs, two PBY-5A Cansos, a DHC-2 Beaver, and an Avro Anson V are also withdrawn as an option is taken on a Lockheed Hercules freighter. Passenger boardings climb to 85,022.

Two DC-4s are withdrawn in 1966, one in March and the other in June. A third Canso is also sold in March. Another DC-3 is received in December. The DC-7C is sold in January 1967 and the first de Havilland Canada DHC-6 Twin Otter joins the fleet in February. The DC-6, a DHC-2 Beaver, and a Norseman VI are sold in June, followed by a 20-year-old Bellanca Air Cruiser in July and the Beech 18S in August.

A DC-4 is sold in April 1968 and two Japanese-made Nihon YS-11A turboprops are acquired in August. Christened *Norway House* and *Cumberland House*, they are the first Transair aircraft to receive individual aircraft names. A DC-3 is lost in a September 25 crash at Coral Harbor.

Formed by merger in April 1969, **Midwest Airlines, Ltd.** is taken over in November. The new subsidiary will be allowed to operate under its own name in modified Transair livery. Three of five Hawker Siddeley HS 748s leased by Midwest prior to the merger are returned by year's end. Meanwhile, a DC-6B is acquired in March, two Grumman G-21A Gooses and a G-73 Mallard in April, and a Shorts SC-7 Skyvan in June. Two DC-4s are sold in September.

Orders are placed for two Boeing 737s, which are delivered in March 1970 and enter service in April on two new routes out of Winnipeg: to Toronto via Dryden, Thunder Bay, and Sault Ste. Marie and to Resolute Bay via Churchill. These B-737-29ACs are the first Transair jetliners to be christened with individual names, i.e., *Fort William* and *Fort York*, respectively. Four Hawker Siddeley Argosy Freighters are obtained between April and July for a new, but ultimately unsuccessful, trans-Canada all-freight service. Meanwhile another **Midwest Airlines, Ltd.** HS 748 is withdrawn in February and a DC-3 in October.

The Vickers Viscount 724 is withdrawn in January 1971, followed by the G-73 Mallard in March and another ex-Midwest HS 748 in April. Two more DHC-6s arrive in July. The DC-6B is sold in June 1972 and the last two DC-4s in August. Two of the last three DC-3s are simultaneously withdrawn. The first of two Fokker F.28-1000s on order is delivered in its yellow and brown livery during October and is named *Fort Resolution*. When it enters service, it is the first of its type to operate scheduled airline service in North America.

Rosella Bjornson is now hired as a Fokker first officer. She will shortly become the first Canadian female airline pilot and the first woman in North America to fly a commercial jetliner on a scheduled service.

Charter frequencies are increased and Jamaica replaces Barbados as a Winnipeg charter destination. Agreements are reached with commuter carriers to provide third-level replacement services in several market areas.

Airline employment is now 500 and a total of 273,000 passenger boardings are generated during the year.

The second Fokker F.28-1000, christened *Fort Prince of Wales*, is placed into service in April 1973. A Canso is sold in May and another in July. Also, in July, the two G-21As are sold to West Coast Air. An Argosy Freighter is sold in October. A B-737-248 is leased from **Aer Lingus Irish Airlines, Ltd.** for the winter 1973–1974 season; named *Fort Rouge* while in Canadian colors, it will be leased again in 1974 and 1975.

The Irish state carrier also provides a B-707-348C, *Fort Garry*, on a five-month charter beginning in December. The employee population numbers 632.

Customer bookings increase 20% to 328,000 while FTKs operated rise an incredible 278% to 3.2 million.

Two additional Twin Otters are procured in February 1974 and the last DC-3 is sold in March. A second Argosy Freighter is sold in July and in October, a B-707-351C is purchased from **Northwest Airlines** and takes the *Fort Garry* name. Scheduled operations begin to Resolute Bay. Charter programs to Hawaii are expanded and the company applies for the Prairie Service route to Regina, Saskatoon, and Prince Albert.

Enplanements for the year total 465,196.

The workforce in 1975 is 842. In February, the final HS 748 is withdrawn and sold. The unsuccessful *Fort Garry* is also withdrawn, on February 8, and sold to **Bangladesh Biman Airlines, Ltd.**, which takes delivery in April. Also in February and into March, the last two Canso flying boats are withdrawn. A second frequency is inaugurated on April 1 between Winnipeg and Toronto via Dryden, Thunder Bay, and Sault Ste. Marie.

The tour operator Filmont Tours International, Ltd. is purchased to ensure feed and the company enters heavily into the areas of maintenance and overhaul of flight equipment and begins to overhaul the government's military B-707s. The **Aer Lingus Irish Airlines, Ltd.** *Fort Rouge* is leased for a final time in December.

Passenger boardings decline 15% to 404,519 and a total of 636,000 FTKs are operated.

Plagued by financial difficulties unresolved since the recession and fuel price increases early in the decade, Transair in 1976 begins to sell off its short-haul routes to third-level carriers, disposing of three. In addition, two DHC-6s are sold to one of the purchasers, **Perimeter Aviation, Ltd.**, in June.

The last two HS Argosy 222 Freighters are disposed of in November along with a DHC-6 that goes to **Calm Air, Ltd.** The workforce is reduced by 1.1% through the year to 757.

Customer bookings accelerate 16.2% to 455,114 while cargo is up by 28.3% to 7.7 million FTKs.

In February 1977, **Pacific Western Airlines, Ltd.** purchases 70% majority control and while seeking government approval, allows Transair to continue under its own name on a limited schedule.

Enplanements for the year total 515,252.

Planning the integration of the Winnipeg-based carrier into its new owner takes up most of 1978. During the year, Transair terminates all of its services east of Winnipeg. Still, passenger boardings rise 10.6% during this final period, to 576,344.

The takeover is officially completed on December 1, 1979.

TRANSAIR, LTD. (2). See **TRANSAIR INTERNATIONAL, LTD.**

TRANSAIR INTERNATIONAL, LTD.: United Kingdom (1947–1960). With start-up capitalization of £1,000, Transair, Ltd. is formed by Gerald H. Freeman at London on February 12, 1947. Three Airspeed AS.65 Consuls are acquired in early summer and are employed to commence ad hoc charter flights from London (Croydon) Airport.

During the spring and summer of 1948, personnel charters are flown to Continental destinations. On September 2, a Consul is destroyed in a crash at Berne, Switzerland; it is replaced later in the month by an Avro Anson I. Contract newspaper carriage flights from London (Croydon)–Paris (LBG) for the Newspaper Proprietors Association commence on October 1.

Another newspaper contract, to Brussels, is obtained in early 1949 and two more Ansons are also obtained, being converted into freighters. By February 28, over 150 tons of papers have been carried to Paris. Later in the year, newspaper flights are started to the Channel Islands and a replacement contract is obtained from **British European Airways Corporation (BEA)** for mail flights; the latter make Transair the first postwar British independent authorized to fly domestic mail. Two BEA associate agreement scheduled routes are also opened: London (Croydon)–Blackpool and London (Croydon)–Ostend–Le Zoute. Three more Ansons are delivered in October and November.

Early in 1950, the owners of **Dennis Aviation, Ltd.** purchase an interest in the carrier and the two companies are gradually integrated during the first half; as part of the arrangement, Transair, Ltd. receives nine more Ansons between February and May. Meanwhile, on February 10, an Anson newspaper freighter is lost in a crash at Paris (LBG).

Lille is added as a stop on the Brussels return route in April and late in that month, three-times-per-week scheduled passenger services Lille–London (Croydon) are inaugurated. On April 26, an ex-**Dennis Aviation, Ltd.** Anson is lost in a crash at Mons, France. A variety of ad hoc charters are also flown and during the summer six ex-**Dennis Aviation, Ltd.** Ansons are sold.

Airline employment in 1951 stands at 80 and the fleet includes 9 Ansons. On February 5, an Anson is lost in a crash on Jersey. Newspaper flights continue to provide the bulk of company business, although a variety of ad hoc charters are also flown.

On February 17, 1952 an Anson crashes into a building at Melsbroeck Airport in Belgium; although destroyed, no one is killed. Early in the year, a contract is obtained to fly American service newspapers from Frankfurt to the U.K. Six DH-89As are obtained in April, but are immediately sold.

Seven former RAF C-47s are purchased during the first quarter of 1953 and converted to DC-3 civil standard; the first enters service on February 3. These aircraft are gradually introduced on the newspaper routes and fly ad hoc charters. During the year, company employment increases to 175. Inclusive-tour routes are introduced during the summer, London (Croydon)–Lourdes and Vienna, and a scheduled service is started to the Channel Islands. Late in the year, two Ansons are withdrawn.

During 1954, company DC-3s fly inclusive-tours to Alghero, Lourdes, Nice, and Graz and fly Air Ministry contracts to the Middle East and North Africa. During a May rail strike, Transair DC-3s fly newspapers to Cardiff and Exeter while, during the October and November dock strike, stranded cargoes are flown to Dutch, Belgian, French, and Austrian destinations plus Nairobi. Three Ansons are sold during the year and replaced by three more DC-3s. During the winter, ad hoc charters are undertaken, flying skiers to Zurich.

In 1955, newspaper flights are added to Dusseldorf, Frankfurt, and Hanover. On April 16, the company is re-registered as Transair International, Ltd.; capitalization is increased to £50,000 and orders are placed for two Vickers Viscount 804s. Inclusive-tour services during the summer are flown to all of the previous year's destinations plus Basel. Zurich skiing charters are again flown at Christmastime. Four DC-3s are sold during the year.

Under contract to **West African Airways Corporation (WAAC)**, three DC-3s fly the queen on a 28-day tour of Nigeria during January and February 1956. Manchester and Dublin are added as stops for the newspaper flights and a full schedule of inclusive-tours are flown to earlier destinations.

During the summer, several DC-3s fly German internal services under contract to **British European Airways Corporation (BEA)**. In September, the carrier becomes a wholly owned subsidiary of **Airwork, Ltd.** Between November 16 and December 14, company DC-3s fly over 300 Hungarian refugees to the U.K. from Austria. Two more DC-3s are purchased during the year.

A DC-3 is sold in April 1957. The two Viscount 804s ordered earlier are delivered in September. On October 1, they are placed in service fly-

ing British troops from London (LHR) to Benina, Idris, Gibraltar, and Malta.

A third Viscount 804 is delivered in April 1958. A new base is opened at London (LGW) in May, from which a daily service is flown, until October, on behalf of **Air France** to Paris and Nice. New inclusive-tour stops introduced during the year include Gibraltar, Tangier, and Toulouse. A Lagos to Dakar route is operated for WAAC and one DC-3 is deleted.

In February 1959, **Airwork, Ltd.** transfers two of its own Viscount 736s to Transair International, so that the latter might initiate colonial coach services. Normal trooping and inclusive-tour charters are flown during the summer. On August 19, a DC-3 crashes into Montseny Peak following takeoff from Barcelona (32 dead). A Viscount inclusive-tour route is flown Blackpool–Toulouse in October and November. During the year, three DC-3s are sold.

Two DC-3s are sold during the second quarter of 1960. On July 1, the carrier is merged into **British United Airways, Ltd.**, losing its identity in the amalgamation.

TRANSAIR INTERNATIONAL LINHAS AEREAS, S.A.: Brazil (1998–2000). Transair International is established at Rio de Janeiro in 1998 to offer long-haul charters and replacement services for established airlines. Equipped with a single Douglas DC-10-15 painted in a simple blue and white livery, the company is immediately engaged to provide flights on behalf of **Air Afrique, S.A.**, **Cameroon Airlines, S.A.**, and **Tunisair, S.A.**

Service is maintained in 1999. On April 24, 2000, the Brazilian Civil Aviation Department suspends the carrier's operating certificate forcing it to close down. The DC-10 is parked at Rio International Airport.

TRANSAIR SWEDEN, A.B.: Sweden (1950–1980). Nordisk Aero-transport, A.B. is founded by Pelle Loven at Stockholm's Bromma Airport in 1950, but changes its name before the inauguration of charter services in 1951. The carrier's original purpose is to deliver the newspaper *Aftonbladet* to Jonkoping and it is equipped with two Airspeed Oxfords with which to perform this task.

The fleet is upgraded with Douglas DC-3s in 1953 in order that charter and inclusive-tour operations might commence. Orebro-based Knut-Oskar Gustavsson is the first tour operator to sign a contract with Transair and on its behalf, the premier charter is operated to Hamburg on April 6. During the remainder of the year, and also on behalf of KOG, Transair operates 12 tour flights to Marseilles and 12 to Pisa.

DC-3 charters to Palma de Mallorca commence in 1954 and are operated with a technical stop at Hanover.

Flights from Stockholm to Germany and southern Europe continue apace in 1955–1956.

In 1957, the company also begins to fly certain replacement services for **SAS (Scandinavian Airlines System)**. With a need for greater capacity, Transair purchases three passenger-configured Curtiss C-46 Commandos. Capt. Carl Gustaf von Rosen delivers the first to Bromma Airport on April 7. The new aircraft are also employed to operate all-cargo charters throughout Scandinavia.

Passenger and freight operations continue apace during the remainder of the year and into 1958. The carrier is reorganized in October and operations are transferred to Bulltofta Airport at Malmo.

In mid-1959, Gosta Ellhammar becomes managing director and at the end of the year, three DC-6s are acquired from **SAS (Scandinavian Airlines System)**. Upon their arrival in 1960, the large aircraft inaugurate tour flights to Las Palmas in the Canary Islands.

The most innovative new service opened during this period is a 31-day excursion, with a stop at McMurdo Sound, Antarctica, introduced on February 1, 1961. In June of this year, the carrier accepts a contract to operate services in the former Belgian Congo in support of the UN. A DC-6B, a DC-3, and a DC-4 are dispatched to Leopoldville to undertake service.

On September 17, the DC-6B, with 5 crew and 11 passengers, including UN Secretary General D. Hammarskjöld, departs Leopoldville

on a service to Ndola, Federation of Rhodesia and Nyasaland (now Zambia), 970 nm. away. Shortly after arriving in the vicinity of its destination, the aircraft descends below minimum altitude and crashes in the bush 9.5 mi. from the airport; there is one survivor, who soon dies. As a diversion, the DC-4 had been sent ahead over the same route, with security taken to make it appear as the aircraft transporting the VIP.

In addition to an accident investigation carried out by the Office of the Director of Civil Aviation of the Federation of Rhodesia, the UN, on October 26, establishes an Investigation Commission under Resolution 1628. Neither body is able to find any evidence of foul play.

As the Congo effort increases, the company, in 1962, increases its African commitment by dispatching three more C-46s and two more DC-3s to work for the UN. Also during the year, a 50% stake in Transair is purchased by SAS (Scandinavian Airlines System).

A DC-3 with 10 passengers operated on behalf of the UN, is shot down near Kamon in the Congo on September 20 (one dead).

A DC-6B arrives from Sabena Belgian World Airlines, S.A. on April 3, 1963 and is christened *Uppsala*. Also during the year, the company enters into a contract with the Congolese government to operate domestic services on its behalf for a two-year period; a subsidiary, Transair Congo, S.A., is established and equipped with the ex-Sabena DC-6B and four C-46s.

SAS sells its stake in the airline in 1964 to Nyman & Schultz, A.B., one of Sweden's largest tour operators.

When the Congo contract ends in the fall of 1965, the Douglas transport is sold to the U.S.-based Boreas Corporation on December 3. The C-46s are transferred back to Sweden where they undertake cargo services on behalf of SAS (Scandinavian Airlines System). Late in the year, Managing Director Ellhammar purchases a pair of DC-7Cs from Northwest Airlines.

The Northwest "Seven Seas" are joined in 1966 by nine more acquired from Eastern Air Lines. The new additions are not popular due to continuing technical problems with their turbo compound engines.

A C-46A freighter with three crew and chartered to the UN, is destroyed as the result of a bad landing at Bunia, Congo, on March 6; there are no fatalities. The surviving Commando freighters are now sold as three Boeing 727-134s are requested.

Nyman & Schultz sells Transair in the spring of 1967 to Svenska Handelsbanken and its holding company, Trident, while the aircraft are sold to and leased back from Eriksbergs Mekaniska Verkstad, A.B., a shipyard at Goteborg. The first B-727-134 arrives in the fall. Christened *Midnight Sun*, it initiates service on November 23 with a charter from Bromma Airport to Las Palmas.

Joint operations with Scanair, A.B., the charter subsidiary of SAS (Scandinavian Airlines System) commence in 1968. Also during the year, 3 B-727-134s are leased to SAS for the next 14 years, as orders are made for another of the type, equipped with cargo doors. In addition, a former Eastern Air Lines DC-7B is acquired for contract use in support of the Swedish Red Cross in operations at Biafra. The aircraft is badly damaged when hit by rebel AAA fire on August 21.

Operations continue apace in 1969-1972; during the latter year, the company base is moved to Sturup Airport, E of Malmo.

Charters continue apace in 1973. Just after takeoff from Miami in heavy rain and lightning on June 21, a DC-7CF freighter, with three crew, crashes into the Everglades; there are no survivors.

On October 15, 1974, a B-707-351C is also purchased from Northwest Airlines. At this point, SAS terminates its contracts with Transair, but is, in turn, found guilty in court of breach of contract and is required to pay the charter airline SKr 20 million.

Rather than pay the huge settlement, SAS purchases Transair in 1975 and operates it as a subsidiary of Scanair, A.B. This year, enplanements total 281,049.

Passenger boardings in 1976 decline 10.7% to 253,884 and the B-707-351C is withdrawn. In 1977, Managing Director Ingmar Astrom oversees a workforce of 270 and operates a fleet of two B-727-134s and one B-727-134C. The third B-727-134 arrives in 1979.

Charters continue to be operated to both domestic and regional destinations until the oil crisis and resulting recession of 1980 force the company's business into decline.

The company's last publicly chartered service is operated on September 6, 1981, with a load of four passengers flown from Rhodes to Malmo. The last flight, on September 8, is a subcharter freight service on behalf of SAS (Scandinavian Airlines System) operated from Copenhagen to Narssorssuaq, Greenland. The four Boeing trijets are now sold and the company shuts its doors. There is a Web site maintained by Tony Edlind at <http://www.geocities.com/TheTropics/Cabana/2207/TransairSweden>.

TRANSAM, S.A. See TACA PERU. S.A.

TRANSAMAZONICA COLOMBIA (TRANSPORTES AVEREO DE LA AMAZONIA, LTDA.): Aeropuerto Vanguardia, Apartado Aereo 234, Villavicencio, Meta, Colombia; Phone 57 (86) 648 076; Fax 57 (86) 648 776; Code TAZ; Year Founded 1990. With a base at Villavicencio's Aeropuerto Vanguardia, Transamazonica is founded in 1990 to provide scheduled, third-level passenger and cargo services to the Amazon region near the Brazilian border.

By 1993, Managing Director Ximeno Gonzales Quintero's fleet includes 4 Douglas DC-3s. Contract services and nonscheduled passenger and freight services are also undertaken. One Douglas is withdrawn in 1994. Operations continue without change during the remainder of the decade.

TRANSAMERICA AIRLINES: United States (1979-1986). The onetime Oakland, California-based supplemental Trans-International Airlines, a division of the Transamerica Corporation, changes its name to Transamerica Airlines on October 1, 1979. The workforce totals 2,583 and the fleet comprises 3 Douglas DC-10-30CFs, 12 DC-8-61/63s, 12 Lockheed L-100-30 Hercules, and 8 L-188AFs. Orders remain outstanding for 3 Jumbojets.

On November 18, an L-188CF with 3 crew is en route from Ogden-Hill AFB to Nellis AFB, carrying a cargo that includes 15 pounds of explosive devices and a minute quantity of thorium, a low-level radioactive material. The aircraft loses electrical power 3 km. from Granger, Utah, a sparsely populated community near Salt Lake City. During the subsequent loss of control, the turboprop spirals toward earth, causing it to exceed its design limits; it breaks up in flight and there are no survivors.

The first B-747-271C is delivered on December 21 and, later in the month, Jumbojet flights are launched and scheduled operations are begun.

Combined enplanements for the carrier under its 2 names total 891,000, an increase of 2.8%. Cargo traffic is down by 10.3% to 377.32 million FTKs.

Under the CAB's revised airline classification scheme, Transamerica is now rated as a "national" carrier in 1980 and by the end of the year, it has achieved a third record year of earnings, despite a traffic drop, higher fuel prices, and the U.S. recession. Describing itself as a "department store of air transportation services," the Oakland-based carrier provides military flights, passenger and cargo charters (including its noted animal shipments), and scheduled service.

Transamerica is now the largest passenger charter operator flying across either the Atlantic or the Pacific. Nonstop scheduled Boeing 747-271C service is inaugurated between Los Angeles and Shannon, Ireland, following delivery of the second Jumbojet on March 26.

The fleet now comprises 2 Jumbojets, 6 DC-8-63CFs, 2 DC-8-61s, 3 DC-8-61Fs, 3 DC-10-30CFs, 8 Lockheed L-188AF/CFs, and 12 L-100-30 Hercules freighters.

Passenger boardings remain level at 929,483, and freight traffic drops off by 12%. Revenues accelerate 29.1% to \$352 million and net profit skyrockets 130% to \$23 million. This is the 20th profitable year out of the past 21.

The employee population is reduced by 13.6% in 1981 to 1,900. Although business falls somewhat, the multipurpose carrier continues to

record important firsts. Long known as a premier shipper of animals, Transamerica begins an agricultural development division to consult on and coordinate projects worldwide, winning an initial contract in the People's Republic of China. Meanwhile, twice-weekly B-747-271C charters are launched between Houston and the Persian Gulf.

Three of the company's Douglas DC-10-30s are leased to **Air Florida**, and a new Jumbojet combi, the company's third, is acquired on June 1. In July, seven of its DC-8-63Fs begin conversion with CFM56 engines to DC-8-73s with GE/SNECMA CFM-56 engines.

Passenger enplanements decline 12.2% to 816,000, but freight traffic increases sharply. By operating 357.7 million FTKs, Transamerica proves itself the largest national in that category. Total revenues earned fall off 8.3% to \$319 million, but net profit rises to \$24.7 million atop an operating gain of \$24 million.

Transamerica continues its extensive and diversified military and civilian operations in **1982**, with an employee population that is reduced 15.8% to 1,600. Nonstop scheduled passenger service from Oakland and Chicago to Shannon is added to the existing Los Angeles to New York route with the first new DC-8-73 on June 2, while a new schedule, under contract to the travel package firm American Hawaii Cruises, is added from St. Louis and Dallas to Honolulu and Tahiti.

The fleet by year's end includes 3 B-747-271Cs, 3 DC-10-30s, 12 DC-8s, 12 Lockheed L-100 Hercules, and 8 L-188A Electras.

Freight traffic jumps 10.3% to 394.44 million FTKs, but passenger bookings decline 37.3% to 512,000. Revenues accelerate 24.96% to \$239.5 million while expenses decline 27.74% to \$213.21 million. An operating profit of \$23.6 million is posted, along with net income of \$23.55 million.

One hundred employees are laid off in **1983** as scheduled service is inaugurated from Los Angeles and San Francisco to Shannon and Paris.

Having repossessed them from bankrupt **Air Florida**, the company's three DC-10-30s are sold to rapidly expanding **Federal Express**. An L-188AF is sold in June.

An L-100-30 with four crew and three passengers crashes in fog 50 km. S of Dundo, Angola, on August 27; there are no survivors.

Passenger enplanements finally rise, up 12.9% to 576,000, and freight traffic increases 2.2% to 402.96 million FTKs. Revenues advance 3.38% to \$247.59 million as costs barely increase, up only 0.59% to \$214.47 million. Keeping the latter figure in check allows Transamerica an operating profit of \$33.12 million and net gain of \$26.65 million.

The employee population rises 3.3% in **1984** to 1,550 and the fleet now includes 13 L-100-30s, 7 L-188AFs, 5 DC-8-61CFs, 7 DC-8-63s, 1 B-747-138, and 3 B-747-271Cs.

The company begins twice-weekly New York City to Tel Aviv Boeing 747-130 service in June, following receipt of a leased Jumbojet once flown by **Deutsche Lufthansa, A.G.** Flights to Ireland are also stepped up during the summer as are tour flights from Midwestern cities to destinations throughout Europe.

While conducting joint charter operations with **LOT Polish Airlines**, the carrier becomes the first U.S. air transport firm to land in Warsaw since 1981. On August 22, the company receives a \$31.9-million USAF contract for Pentagon transportation services. The reengining of its seven DC-8-63s into DC-8-73s is completed, the B-747-130 is subleased for freight operations, and the seven L-188AF Electras and five DC-8-61CFs are leased to other airlines.

Branching out somewhat, Transamerica attempts to form a nonunion subsidiary under its old name, **Trans-International Airways**, a move that leads to increased labor tensions and a breakdown in discussions with pilots in November.

An L-100-30 is destroyed on the ground at Cafunfo, Angola, by rebel gunfire on December 29.

Passenger traffic rises 35.6% to 781,000 and freight traffic jumps 14.9% to 462.82 million FTKs. Revenues rise 21.6% to \$331.3 million while costs are suspended at \$293.2 million. The operating profit balloons to \$38.1 million. Net profit is again reported with that of Transamerica Corporation.

The employee population plunges 32.4% in **1985** to 1,048. As the new year dawns, Transamerica continues its successful, if unusual, business mix of low-fare scheduled service over selective routes, military and tour passenger charters, and various charter cargo operations, specializing in outsize or animal loads and unusual destinations. The bitter contract fight with its unions occupies the carrier again this year. Two DC-8-73s join the fleet in February and President Howard K. Howard becomes CEO in May.

Although there is no timetable, the carrier is put up for sale by its parent in the fall and in November, the onetime German Jumbojet is returned to its lessor.

The transatlantic charter business falls off and contributes, along with other company uncertainties, to a decline in passenger traffic of 15.6%, or 659,000. Cargo dips 5% to 439 million FTKs. Revenues are also down, by 5.4%, to \$278 million and costs fall 1.4% to \$272.5 million. Operating income declines to \$5.6 million and a diminished \$20.8-million net profit is earned.

The search for a buyer continues during the first three quarters of **1986**, but when one does not step forward and carrier is forced to shut its doors on September 30.

Prior to shutdown, a total of 378,000 passengers are flown, a decline of 36% over the previous period a year earlier; freight is down by 43.3% for the same period to 183.48 million FTKs.

Revenues since January plunge 45.8% to \$143.86 million and expenses fall 34.4% to \$163.85 million. The operating loss is \$19.99 million. Sale of assets allows the carrier to close out with a \$2.15-million net gain. The most famous example is the transfer, for \$86.4 million, of its 11-unit Hercules fleet to **Southern Air Transport**.

TRANSAMERICAN AIR TRANSPORT: Argentina (1959–1960).

Established at Buenos Aires in **1959**, TAT inaugurates both passenger and cargo domestic charters with a fleet of four Curtiss C-46 Commandos.

A C-46F with 10 crew is lost at El Sosaedo on May 18, **1960**; there are no survivors.

Unable to achieve economic viability after the disaster, the concern closes down.

TRANSAMERICAN AIRLINES CORPORATION: United States (1931–1934).

On January 1, **1931**, Thompson Aeronautical Corporation is reorganized into a holding company. The Airline subsidiary that emerges is named Transamerican Airlines Corporation, only a slight change in moniker. Tex Marshall continues on as president, with Charles Rheinstrom as traffic manager and future **American Airways** marketing guru Charles Speers as a manager in Detroit.

Previous airmail, passenger, and express routes operated to 17 cities in Michigan, Illinois, Ohio, and Indiana are maintained. Employing newly purchased Stinson SM-6000B Tri-Motors, TAC opens direct and fast services between Chicago and Detroit on April 1. The same day, trans-Lake Erie flights, suspended for the winter, are resumed between Cleveland and Detroit.

During the spring and early summer, Manager Speer wins permission from Vice President/Treasurer Thomas Dunnion to begin at Detroit the experimental use of discounted coupon books. With a 15% markdown, a \$250 block of 10 tickets could be purchased for \$212.50. Although at first reluctant, Speer and Rheinstrom are able to win President Marshall's approval, over the objection of Vice President Dunnion, to sell the "script" systemwide. In 1936, the plan will be adopted industry-wide as the Universal Air Travel Credit Plan.

Sponsored by the company, a Bellanca Pacemaker, piloted by Parker Cramer and Oliver Paquette, departs Detroit on August 5 for a flight to Copenhagen over the North Pole. The aircraft will fly over Greenland, Iceland, and the Faroes and Shetland Islands north of Scotland before disappearing on its final leg into Denmark. Wreckage of the Bellanca will be found in September, but there is no trace of the airmen.

En route from Kalamazoo to Chicago on February 2–3, **1932**, a Stearman C3MB crashes near Marcellus, Michigan, in a blizzard; pilot Francis

Rust is found 17 hours later and dies of his injuries. In March, TAC obtains a 75-year exclusive landing concession from the government of Iceland.

Whether the rights are purchased for some planned international service or for later sale is not known; however, on April 15 and again in July, **Pan American Airways (PAA)** pays a combined \$60,000 for the Icelandic privileges. Meanwhile, pilot George Hill is killed when his Stearman C3MB crashes while landing at Fort Wayne on April 21.

American Airways purchases TAC in late January 1933 in order to operate its AM-27 mail route. Twenty-three aircraft are also turned over, 10 of which are repainted and retained in AA service. Conforming to then existing law, Thompson's survives as a phantom subsidiary with miniscule stock until 1934.

TRANSAMERICAN AIRWAYS: United States (1976–1977). This small regional is set up at Denver during the U.S. bicentennial year of 1976 to offer scheduled passenger and cargo services. Employing Cessna 402s, the new company inaugurates flights linking its base with Santa Fe in New Mexico and the Colorado destinations of Cheyenne, Douglas, Casper, Sheridan, and Gillette.

Unable to achieve viability, the company goes out of business in June 1977.

TRANSAMERICAN CHARTER: United States (1993–1995). TransAmerican Charter is established in the spring of 1993 to offer regional and international charter and inclusive-tour flights with a single Douglas DC-9-32. A contract is signed to provide exclusive charter service for the Miami Heat of the National Basketball Association.

A total of 3,000 passengers are flown by the end of the year. Equal losses of \$259,000 operating and net are reported.

During the fall of 1994, three British Aerospace BAe 146-200s are leased and employed on services from New York and Chicago to Key West.

Traffic figures are not released. Revenues, however, plunge 47.8% to \$1.32 million, but expenses drop further, by 54.1%, to \$1.28 million. As a result, there are equal \$40,000 operating and net profits.

Flights cease in 1995.

TRANSANDINA ECUATORIANA, S.A.: Ecuador (1948–1949). Early in 1948, Transandina is formed at Quito to offer scheduled and non-scheduled passenger and cargo services. After acquiring a pair of Curtiss C-46 Commandos, flights begin on March 15 linking the base city with Esmeraldas in the north and Manta, Guayaquil, and Cuenca further south.

Company income is seriously limited after one of the Commandos makes a forced landing on Cozumel Island, Mexico, on October 23. The second C-46, which constitutes the fleet while the first is under repair, is slightly damaged during a hard landing at Esmerales on January 25, 1949. The machine is quickly repaired and put back into service, but must be written off after crashing at Quito on May 13.

Unable to succeed without aircraft and against earnest competition from **ATECA (Aero Transporte Ecuatoriana, S.A.)**, Transandina joins with its rival in early summer to form **AREA (Aerovias Ecuatorianas, S.A.)**.

TRANSASIAN AIR EXPRESS (PTY.), LTD. See **PACIFIC AIR EXPRESS. LTD.**

TRANSATLANTICA ARGENTINA DE AERONAVEGACION, S.A.: Argentina (1958–1962). A group of former Fuerza Aerea Argentina (air force) officers form Transatlantica at Buenos Aires in March 1958. After an 18-month delays spent obtaining necessary permits and purchasing three former **Trans World Airlines (TWA)** Lockheed L-1649A Starliners, the new entrant inaugurates twice-weekly roundtrip service to Zurich on September 21, 1960 via Rio de Janeiro, Recife, and Lisbon.

Early in 1961, the overseas network is altered somewhat; Recife is dropped in favor of a Dakar stop. Geneva replaces Zurich in Europe, and the route is stretched from Switzerland on to Tel Aviv in Israel. A fourth Starliner arrives from Howard Hughes' carrier during the year's first half.

The carrier joins IATA on July 1; however, by this time, the company has begun to deteriorate badly. By year's end, layoffs occur, workers are unpaid, and accusations of fraud are made. Operations are suspended on November 5.

All operations are shut down in February 1962. Overextended financially, any hope of restarting must be abandoned; company officials resign from IATA on August 21 and shut the doors. As assets are sold off, one of the L-1649As will be returned to **Trans World Airlines (TWA)** two years later; it will be sold to the FAA for a spectacular crash test at Deer Valley Airport, Phoenix, Arizona, on September 3, 1964.

TRANSAVIA AIRLINES (LUCHTVAARTMATSCHAPPIJ TRAN-AVIA, N.V.): P.O. Box 7777, Westelyke Randweg 3, Schiphol Airport, Amsterdam, NL-1118ZM, The Netherlands; Phone 31 (20) 604-6555; Fax 31 (20) 648-4637; <http://www.teldesign.nl/transavia.html>; Code HV; Year Founded 1986. The 612-employee Dutch charter carrier **Transavia Holland, N.V.** changes its name to Transavia Airlines during the summer of 1986 in preparation for the launch of scheduled services. Chairman Peter J. Legro's fleet of 9 B-737-2K2s/2K2Cs and 2 B-737-3K2s receives new livery, a new logo is provided, and new uniforms are introduced. On October 26, scheduled service is launched by Transavia's B-737-2K2s from Amsterdam (Schipol Airport) to London (LGW).

For the year and under both names, the carrier boards 765,350 passengers and hauls 284,000 FTKs. A \$10-million profit is reported.

The payroll is increased by 12.1% in 1987 to 686 and a fourth Amsterdam to London frequency is added in March.

Passenger boardings accelerate 24.8% to 1,006,699, but cargo drops 12% to 11.34 million FTKs.

Two more B-737-3K2s join the fleet in 1988, as orders remain outstanding for four more. After competing with Transavia for two years on the Amsterdam–London route, **KLM (Royal Dutch Airlines, N.V.)** drops out and purchases a 40% shareholding in its former competitor; shareholding in Transavia is now divided between the Dutch flag carrier, Nedlloyd (40%), and institutional investors (20%).

Customer bookings rise 10.8% to 1,100,586. Freight declines another 59.2%.

Company employment grows 13% in 1989 to 686. The airline becomes the first in Holland to offer charter flights to Turkey, including Anatolia, Izmir, Ankara, and Dalatan. A code-sharing agreement is signed with **Continental Airlines**, allowing the Dutch carrier to feed the U.S. major at London (LGW) from Amsterdam. In early fall, scheduled flights begin to Mombasa via Luxor. Scheduled five-times-per-week B-737-3K2 flights are inaugurated in November from Amsterdam to Tenerife and Las Palmas.

Enplanements during the 12 months rise to 1,155,547.

The fleet in 1990 includes 8 each B-737-3K2s and B-737-2K2s/2K2Cs. Following Iraq's August 2 invasion of Kuwait, fuel prices rise from 58¢ to \$1.60 per gallon and service is suspended to a number of Mideast points, including Baghdad, Cairo, and Tel Aviv. When the Mombasa route becomes too expensive to operate in December, it is turned over to **Air Holland, N.V.**

Passenger boardings jump 7.7% to 1,251,946, but freight drops 16.1% to 387,000 FTKs.

The workforce grows to 900 in 1991 and the fleet is increased by the addition of 2 B-757-236s and 2 B-737-3K2s. Several machines are now leased out: a B-737-2K2 to **Britannia Airways, Ltd.** one B-737-2T5A and B-737-212A to **KLM (Royal Dutch Airlines, N.V.)**, along with a B-737-3K2, one B-737-2K2C to **L'Aeropostale, S.A.**, and two B-737-3K2s to **Transmed Airlines, Ltd.** of Egypt.

In January, a cooperative agreement is signed with the Danish charter operator **Sterling Airways, A.S.** The two airlines pledge cooperation on operational, commercial, and technical matters. **KLM (Royal Dutch Airlines, N.V.)** acquires 80% shareholding in July and the two companies almost immediately join their frequent flyer programs.

Like other European carriers, Transavia suffers an off year in bookings as a result of the Gulf crisis, with enplanements declining to

1,159,465. Despite the traffic downturn, income exceeds expenses and leaves profits: \$10.48 million (operating) and \$10.69 million (net).

The employee population is boosted a whopping 30% in 1992 to 1,026 as two more B-757-236s arrive.

Customer bookings recover and ascend 28% to 1,610,368. Revenues ascend 18% to \$242.85 million while expenses climb 23% to \$239.6 million. The happy difference allows an operating surplus of \$3.24 million and a net gain of \$7.94 million.

President/CEO Peter J. Legro oversees a workforce of 1,003 in 1993, down 2% from the previous year. Nine scheduled destinations are visited, including Alicante, Faro, Funchal, Heraklion, Las Palmas, London (LGW), Malaga, Malta, and Tenerife.

A leased 757-236 is delivered by Boeing in March, allowing roundtrip service to begin at month's end from Mulhouse, France, to Athens. A second B-757-236 arrives in April.

Passenger boardings for the year continue their upward trend, rising 2% to 1,653,365, but revenues drop 10% to \$217.75 million. Expenses swell 13% to \$208.21 million and the resulting operating profit climbs to \$9.54 million. A net \$13.21-million profit is generated.

Airline employment is increased by 12.7% in 1994 to 1,130 and services to Palma de Mallorca starts in April. During the summer, a B-757-2K2 receives a colorful new livery in honor of the Dutch national football team. Adorned with soccer balls and the team logo, the aircraft transports the national team to and from the U.S. in support of its participation in the World Cup '94 matches.

Customer bookings this year increase 21% to 2,004,877.

Much of 1995 is spent preparing for the company's thirtieth anniversary. A total of \$1 million is committed to a revision of the corporate image. The change will extend to ticket counters, uniforms, and advertising and, as is usually the case with marketing makeovers, a new aircraft livery. The color scheme applied is chosen by both employees and passengers and retains the company's signature dark green and white in a more modern motif. The first aircraft painted in the spring is a B-737-3K2.

When **KLM (Royal Dutch Airlines, N.V.)** withdraws from Tunis on October 29, the carrier takes over the route, operating it from Amsterdam to Tunisia twice weekly.

Enplanements this year total 2,285,297 and there are profits: \$9.7 million (operating) and \$10.7 million (net).

Nine new workers are hired in 1996 and the owned fleet includes 2 B-757-2K2s, 8 B-737-3K2s, 1 of which is chartered to **KLM (Royal Dutch Airlines, N.V.)**, and 1 B-737-2K2A that is out on lease to **Bouraq Indonesia Airlines**. Orders are outstanding for eight B-737-8K2s and one B-757-2K2.

During June, Transavia is heavily booked to transport Dutch soccer fans to the U.K. to cheer on the successful Netherlands national team in the European football championships.

Customer bookings inch up 1% to 2,308,380, but operating income plunges 11% to \$297 million. Fortunately, costs also drop 11%, to \$289.3 million. The bottom lines also decline with operating gain down to \$7.7 million and a net \$2.4-million profit recorded.

The employee population falls 8.7% in 1997 to 1,040. During the spring, single-class service and simplified fare structures are initiated on all flights. The company is employed by **Ukraine International Airways** to operate scheduled flights on its behalf from Kiev.

By the end of July, the carrier visits 15 scheduled and 60 charter markets and transports 37% of all Dutch charter passengers. Weekly return service is inaugurated on September 24 from Amsterdam to Kathmandu, Nepal. Refueling and a crew change is made at Sharjah.

With the start of the winter schedule on October 1, the carrier offers dual-designator flights with **KLM (Royal Dutch Airlines, N.V.)** from Amsterdam to Casablanca.

Passenger boardings jump 16% to 2,674,440.

Service is maintained in 1998. During the year, three Next Generation B-737-8K2s are scheduled to enter service.

During the first week of November, the company becomes the first non-Greek airline to transport local passengers in Greece. Aviation authorities

in Athens permit the KLM affiliate to transport local passengers on its Amsterdam-originating twice-weekly services between Rhodes and Crete.

Customer bookings this year surge another 15% to 3.07 million.

By the beginning of 1999, airline employment has been increased by 17.1% to 1,218. Two of the three Next Generation B-737-8K2s due for delivery are received by April. On May 28, an order is placed with Boeing for four more, which will begin delivery in 2000.

Passenger boardings rise 14% to 3.5 million. Revenues of \$379 million are generated and expenses are \$363 million. The operating profit slides to \$16 million, while net gain slips \$1 million to \$18 million.

Airline employment at the beginning of 2000 stands at 1,502, a 16.8% increase over the previous 12 months. The "classic" B-737 fleet still includes 6 Dash-3K2s and 1 Dash-3L9. Also operated are 6 Next Generation B-737-8K2s, which are joined by a 7th on March 25, and 4 chartered B-757-2K2s.

Thrice-weekly B-737-3K2 nonstop roundtrips are initiated on April 6 from Amsterdam to Naples. The eighth B-737-8K2 is delivered on April 25 and a B-757-236 is leased from **Royal Airlines, Ltd.** for three months, beginning on April 26. Two more Next Generation B-737-8K2s arrive in May, one each on the 11th and 16th.

In a new kind of advertising campaign that will also be adopted by **easyJet, Ltd.**, a Transavia Next Generation B-737-8K2 emerges from the paint shop on June 15 wearing large "www.transavia.nl" titles.

On August 31, five Next Generation B-737-7Q8s are chartered from ILFC for delivery beginning in April 2002; a Next Generation B-737-8Q8 will arrive in June of the same year.

Just after takeoff from Iraklio Airport on the Island of Crete on September 25, an engine aboard a B-757-2K2 with 228 passengers en route to Amsterdam, catches fire. After dumping fuel, the plane returns to its point of origin. The Dutch tourists aboard are deplaned and sent to Holland aboard another company aircraft later in the day.

A chartered B-757-23A is returned to its lessor at Amsterdam on October 30. Two Next Generation B-737-8K2s are leased to **Air Berlin, GmbH**, for five months beginning November 13; the aircraft are delivered in a hybrid livery complete with Web site titles.

Twice-daily, no-frills, low-fare scheduled B-737-3K2 Basiq Air roundtrips are inaugurated on December 18 from Amsterdam to both Barcelona and Nice. Options to purchase two additional B-737-8Q8s are turned into firm orders on December 22; the new planes will be delivered in 2002.

Customer bookings during these 12 months jump 7% to 3.76 million.

TRANSAVIA EXPORT CARGO AIRLINE: Zakharova Str 44, Minsk, 220034, Belarus; Phone 375 (0172) 363 641; Fax 375 (0172) 275 101; Code AL; Year Founded 1992. With government backing and \$6.5 million in capitalization provided by the MAZ truck concern, Gorizont electronics, and the Atlant appliances firm, a plan is made in December 1992 to turn a military enterprise to civil use. In early spring 1993, the privately owned Transavia Export is founded at Minsk as an all-cargo carrier.

The Belarus military transport regiment, together with 300 of its personnel, ground equipment, and 10 Ilyushin Il-76MDs are transferred to it. In addition, the former Soviet Air Force bases at Machulishchi and Vitebsk are made available. Sergey Mankhaev is named president and scheduled international cargo charters, ad-hoc charters, and fixed contract services commence in May.

The first Il-76MD roundtrip charter to Western Europe is operated in early June; for a two-week period, the giant freighter is contracted to fly German-produced pesticides daily from Luxembourg to cotton producers in Kazakhstan.

Among the scheduled cargo charters now undertaken are thrice-weekly services to Delhi, Sharjah, and Brussels; cargos back from the latter destination include large quantities of Philip Morris cigarettes destined for resale in Minsk and Moscow.

Under auspices of the UN, a fixed contract is received from the government of Angola; four Il-76s are dispatched to the African nation to

transport supplies to high-altitude destinations that are inaccessible due to the large quantities of land mines left over from the civil war. When Belarus agrees to participate in the Somalia relief operation, Transavia Export's Ilyushins airlift the required military equipment.

Operations continue apace in **1994–1997**. During these years, the company operates 20 Il-76MDs and places orders for 8 Boeing 737-800s. The Russian currency crisis of **1998–1999** has a significant fiscal impact and forces abandonment of the Boeing order. By the start of **2000**, the fleet has been reduced by two Ilyushins.

TRANSAVIA HOLLAND (LUCHTVAARTMAATSCHAPPIJ TRANSAVIA HOLLAND, N.V.): The Netherlands (1965–1986). Transavia Limburg, N.V. is founded in November **1965** with former **Martinair Holland, N.V.** official John Block as CEO. The original shareholders are KNSM (Koninklijke Nederlandse Stoomboot Maatschappij, N.V.) (40%) and Foundation Transavia Luchtvaart (60%). Plans to begin charter operations with a Douglas DC-3 are shelved in favor of larger planes now ordered.

Three DC-6Bs begin charter and inclusive-tour service on November 17, **1966** by flying a Dutch dance troupe from Amsterdam to Naples.

During **1967**, the present name is adopted and enplanements total 130,000. The first Boeing 707-123B, originally flown by **American Airlines**, is delivered in **1968** as passenger boardings triple to 390,000. As tour traffic increases in **1969** and flights are planned to additional destinations, a Sud Est SE-210 Caravelle III is placed in service on February 11.

The fleet in **1970** comprises 6 Douglas DC-6s, 1 Boeing 707-123B, and 2 SE-210s. Orders are placed for 5 Boeing 737-200s. Additional service is provided to even more points in southern Europe, the Mediterranean, and North Africa during **1971–1972**. Enplanements in the latter year total 544,440.

The employee population in **1973** numbers 480. Two B-737-2K2s are delivered, the first on May 17.

Passenger boardings jump 22% to 698,000 and the carrier is now flying almost half of all Dutch charter service; freight traffic accelerates by 41%.

Ten more employees are hired in **1974**. Three more B-737-2K2s are placed in service, making a total of 5 short-haul Boeings, 7 Caravelle III/VIRs, 1 707-123B, and 1 Piper PA-31-310 Navajo on hand.

An SE-210 Caravelle VIR is destroyed in a ground accident at Schiphol Airport on June 22. No injuries are reported.

The oil crisis causes significant financial problems; however, KNSM increases its holding from 40% to 60%.

Although passenger boardings dip 1% to 689,680, the number of FTKs flown skyrockets 124.8% to 5.33 million.

Two additional B-737-2K2s and a B-707-320C are added in **1975** as the company enters the airliner leasing business. **Lauda Air Luftfahrt-gesellschaft, A.G.**, **Indian Airlines Corporation**, and **CPAir, Ltd.** are among the first to charter Transavia's excess capacity during winter seasons.

A total of 738,750 passengers are carried and net earnings total 6 million guilders.

In **1976**, airline employment stands at 481. A contract is received from **Saudia (Saudi Arabian Airlines)** to fly teachers and Hadj pilgrims.

Cargo traffic skyrockets 160% to 28.63 million FTKs and passenger bookings move upward 3% to 761,598. Net income ascends to 20 million guilders.

The carrier becomes wholly owned by KNSM in early **1977**. A new logo is now introduced, the repainting of all aircraft in a new livery begins, and new uniforms are adopted for flight attendants, cockpit crews, and ground personnel.

The last SE-210s, the 707-320C, and the Piper Navajo are retired in **1978** as boardings decline. Managing Director P. D. O. Hanrath oversees a workforce of 450 and his fleet comprises 1 B-707-120B, 5 B-737-2K2s, and 3 B-737-2K2Cs. Enplanements drop 6% to 891,380 in **1979**.

Peter J. Legro, Netherlands manager for **Pan American World Airways (1)**, succeeds John Block as chairman in January **1980**. Two B-737-2K2s enter winter contract operations for **British Airways, Ltd. (2)**, one for **Austrian Airlines, A.G.**, and one for **Air Djibouti**, leaving three B-737-2K2Cs and one B-707-123B to be operated on the carrier's charters.

On June 6, a B-737-2K2C with 96 passengers arrives on the island of Rhodes in the Mediterranean on a charter service from Amsterdam and as the baggage is being off loaded, an unexploded bomb tumbles out.

Beginning in November, the company wet-leases the three "Baby Boeings" to **Air Malta, Ltd.** to fly that carrier's European route system.

In **1981**, the carrier becomes wholly owned by Royal Nedlloyd Group as a result of KNSM's merger into that organization and reaches a high point in its history in **1982** by transporting 943,800 holiday travelers. The fleet is now an all-737 unit as the lone B-707-123B is sold. The company now agrees to lease one of the new B-737-2A3As acquired by **PLUNA (Primeras Lineas Uruguayas de Navegacion Aerea, S.A.)** every northern summer to help cover its peak charter activity (at which point the southern summer is PLUNA's low season).

The wet-lease charter of three B-737-2K2Cs to **Air Malta, Ltd.** is concluded in April **1983**. Severe traffic reversals set in as the carrier finally begins to suffer the impact of the world's recession.

Passenger boardings drop 32% to 715,000. The downturn forces the carrier to layoff 6.2% of its workforce.

As forecast during the height of its 1983 woes, the charter airline experiences a turnaround in **1984** even more remarkable than its decline.

Although the workforce is cut 2% to 397, passenger bookings soar 43.9% to 778,600 and cargo skyrockets an incredible 338.1% to 13.98 million FTKs.

Recovery continues in **1985** as the fleet is strengthened through the acquisition of two more B-737-2K2s for a total of nine; orders are placed for two B-737-300s.

Boardings increase 18% to 801,000, but freight dips 2% to 13.7 million FTKs.

The employee population is increased by 13.1% in **1986** to 612 and the fleet includes 9 B-737-2K2s/2K2Cs and 2 B-737-3K2s, with orders outstanding for 2 more Dash-300s.

In January, one of the former is leased to **Challenge International Airlines**. During the summer, the carrier changes its name from Transavia Holland B.V. to **Transavia Airlines, N.V.** A new paint scheme and logo are provided for all aircraft and new uniforms are introduced by pilots, cabin attendants, and other passenger-greeting staff. Emphasis will now be placed on scheduled services.

TRANSAVIO, S.p.A.: Italy (1980–1996). Originally established at Milan in **1980** as an air taxi operation for the Tuscany region, Transavio quickly elects to offer scheduled daily services during the summer. The commuter's single Britten-Norman BN-2 Islander flies nonstop from Pisa to Marina di Campo Airport on Elba.

In **1981–1984**, General Manager Italo Ballerio's company inaugurates Pisa to Grosseto flights as a fleet is created that includes two Islanders, a Piaggio P-166, and various Piper lightplanes.

Service to Rome is started in **1987–1988**, at which point three Fairchild-Swearingen Metro IIIs are acquired. Florence joins the growing route network in **1989**. In **1990**, a Fokker F.27-200 is leased from the Swiss operator **Sunshine Aviation** and is employed to initiate a frequency to Lugano. The Metroliners are withdrawn in **1991**.

Operations continue between **1992** and **1996** as the fleet is revamped to emphasize larger equipment. By the latter year, it includes 13 Boeing 737-200s and 3 B-757-200s and charter services are provided from Milan and Pisa to Elba, Grosseto, Florence, and Bastia while a scheduled route connects Lugano-Agno with Rome.

TRANBRASIL, S.A. (LINHAS AEREAS TRANBRASIL): Rua General Pantaleao Teles 40, Transbrasil Aeroporto, Sao Paulo-SP, CEP-04355-040, Brazil; Phone 55 (11) 525-4600; Fax 55 (11) 543-8048;

<http://www.transbrasil.com.br>; Code TR; Year Founded 1972. In June 1972, owner Omar Fontana changes the name of his earlier airline enterprise, **SADIA, S.A. (Transportes Aereos)** to its present designation. The updated BAC 1-11-500 fleet is repainted in a bright new "jelly bean" livery (designed to project Brazil's natural richness) and the carrier receives an entirely new corporate image as its headquarters are moved to Brasilia from São Paulo's Congonhas Airport, now grown too small.

Orders are placed in 1973 for Boeing 727-100s, despite the onset of financial difficulties occasioned by a sudden rise in fuel prices and a decline in the nation's economy. The carrier is also, in March, the first in the world to order the new Embraer commuter liner, the EMB-110B Bandeirante; the initial aircraft are placed in service on southern routes on April 16.

Meanwhile a cash-and-exchange agreement is reached with **British Midland Airways, Ltd. (BMA)**. In exchange for three Transbrasil Dart Heralds and an undisclosed sum of cash, the U.K. independent sells three of its British Aircraft Corporation BAC 1-11-523s to Chairman Fontana's company.

The government recommends Transbrasil's merger with equally hard-pressed **Cruzeiro do Sol, S.A.** in 1974, but Fontana is unable to obtain the 42% loan guarantee from the National Development Bank that would allow him to become a more financially secure organization and to buy out the older airline.

A BAC 1-11-520FN with 8 crew and 88 passengers hydroplanes off the runway while landing at São Paulo on February 1; there are no fatalities. Later in the month, a replacement BAC 1-11-530 is chartered from **British Caledonian Airways, Ltd. (BCAL)** for 11 months.

The government now pushes the sale of both carriers, but Fontana refuses to sell out to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, believing his funding difficulties can be overcome. The first two B-727-100QCs are delivered on October 2 and will enter service before Christmas. Over the next quarter century, the airline will become the largest operator of this aircraft type in all of South America.

On October 7 and in cooperation with the Brazilian Mail and Telegraph Company, a BAC 1-11-523 begins night airmail flights over a new *Rede Postal Noturna* (nocturnal postal network). Late in the year, BCAL charts two BAC 1-11-518s to Transbrasil, with the first delivered on December 6. They, too, will be purchased.

Additional Boeings are ordered in 1975 and an employee participation plan, the Fundacao dos Funcionarios da Transbrasil (Transbrasil Employees Foundation), is established on October 10, along with a corporate social security system. On November 12, the government decrees a new Sistema Integrado de Transportes Aereos Regional and authorizes the establishment of five new regional carriers to serve the nation.

An EMB-110C, with two crew and seven passengers, fails its takeoff from Chapeco on January 22, 1976, and crashes (seven dead).

In early June, Transbrasil joins with the State of Bahia to form the third-level airline **Nordeste (Linhas Aereas Reginais, S.A.)** as one of the five government-ordained regionals. The new operator begins service on June 15, replacing a number of Transbrasil's domestic flights. Having been withdrawn from the Ponte Aerea Air Bridge service, the last three Dart Heralds are sold. Buyers are also sought for the BAC 1-11-518 and BAC 1-11-523s.

The route network in 1977 now includes points along the eastern seaboard and southeast, plus lines, via Brasilia, to the northeast and Amazon area.

A BAC 1-11-520FN with 5 crew and 37 passengers lands heavily down the runway at São Paulo on January 4, causing its nose gear to collapse. The jetliner swerves off the runway, over a trench, and skids 360 m. to a stop. There are no serious injuries reported.

A new hanger, briefly the largest in South America, is dedicated at Brasilia in March.

Enplanements for the year total 1,186,000 and the financial problems of 1974 appear overcome.

All of the propeller equipment and the final six BAC 1-11-500s by now having been withdrawn and some transferred to **Nordeste (Linha**

Aereas Reginais, S.A.), Transbrasil's fleet in 1978 comprises eight B-727-100QCs and two B-727-100s. An all-cargo service to Miami is opened in March.

Passenger boardings soar 16% to 1,412,000 and freight traffic accelerates by 21%.

In 1979, orders are placed for two B-727-200s. Enplanements jump 16.3% to 1,642,000 and cargo climbs 35.2%.

Airline employment grows by 10.1% in 1980 to 3,261. The fleet is strengthened by the addition of six B-727-100s.

While on initial approach to Florianopolis after an April 12 flight from São Paulo, a B-727-27C with 8 crew and 47 passengers goes off course and crashes into a hill (55 dead).

The all-freight **AeroBrasil Cargo (Aerobrasil Servicos Aereos, S.A.)** subsidiary is created on May 29 to offer flights to overseas destinations with retired Transbrasil aircraft. Night services, under a low-fare Tarifa Economica Noturna (TEN) plan, are inaugurated on October 1-2.

Passenger bookings leap 23.7% to just over two million while cargo rises 14.7%. In terms of passenger km. flown, the carrier is now ranked as the ninth largest in Latin America.

The number of employees is reduced by 11% in 1981 to 2,903. One more B-727-100 is added and the order for two Dash-200s is cancelled in favor of a major request in August for three B-767-200s and nine B-757-200s. In addition, \$35 million is committed to the construction of new hangars.

Two additional efforts to generate additional bookings are now initiated: the low-fare, non-peak time program and a scheme for family travel Tarifas Diferenciadas—Promocionais e Familiares.

As the world economic recession continues to damage Brazil, passenger boardings rise only 0.4% to 2,040,000 while freight is up only 0.9% to 74.99 million FTKs. A \$2-million operating loss is suffered; however, the net profit is \$3.7 million.

The employee population in 1982 numbers 4,083, a 10.5% boost. A B-707-341C freighter is acquired by lease from **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**; it is assigned exclusively to the night mail, *Rede Postal Noturna*, route between São Paulo and Manaus. In preparation for upcoming charter operations, the subsidiary Transbrasil Airlines, Inc. is formed at Miami; Marise Fontana is named general manager. In June, the company seeks permission from the DAC to launch flights from Manaus to Point-à-Pitre on French Guadeloupe; the request is denied.

The carrier remains the only one, other than **Delta Air Lines**, to have both the B-767 and B-757 on order; however, on November 12, the B-757 request is postponed as the B-767 order is confirmed for three machines at \$42 million a copy.

Passenger boardings grow 8.8% to 2,219,633 and cargo climbs 10.3% to 51.72 million FTKs. Revenues ascend 10.9% to \$214.3 million and expenses grow only 6.8% to \$208.6 million, providing a \$5.6-million operating profit and a net gain of \$5 million.

Airline employment is increased 10.3% in 1983 to 4,503. The first of three B-767-2Q4s to be delivered on the year arrives on June 23. Government approvals are won to operate outside of Brazil for the first time and on July 2, a B-767-2Q4 makes the first nonscheduled Brazil to the U.S. charter flight, Brasilia-Orlando. Also in July, B-767-2Q4s are placed in service over the carrier's four major domestic routes. The company is the first in the Southern Hemisphere to operate the advanced Boeing jetliner.

At year's end, the B-757 order is cancelled as several B-727-100QCs are taken in hand for conversion to passenger-only configuration.

Enplanements for the year fall 6.1% to 2,084,171, but freight swells 19.5% to 61.8 million FTKs. Expenses jump to \$177.7 million against revenues of \$166.7 million, leaving losses of \$10.9 million (operating) and \$2.2 million (net).

A total of 77 new employees are added in 1984 as is one B-727-100. Service to the U.S. is suspended. The cancelled B-757 orders are replaced by contracts for three B-737-300s. Weekly stratoliner passenger charters are undertaken (under the marketing name **Aero Brazil, S.A.)**

from São Paulo and Rio de Janeiro via Manaus to Orlando and freight charters to Orlando and on to New York; both services commence on November 3.

Following cancellation of the B-707-341C lease by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, Transbrasil places orders for the world's only B-707-320QCs. The thirtieth anniversary is celebrated in public events throughout the year.

Passenger boardings dip 3.1% to 2,019,673; cargo jumps upward by 23.3% to 76.31 million FTKs. Revenues increase 12% to \$186.8 million and expenses climb only 0.7% to \$176.5 million; profits are \$15.1 million (operating) and \$12.4 million (net).

The workforce is increased 14.4% in **1985** to 5,238. Five frequencies per week now fly to Orlando from Concordia, Florianopolis, Belem, Fortaleza, and Manaus. The Orlando route is stretched to Freeport, Bahamas, on July 5. The fleet is altered to reflect the growing charter and freight success; 8 B-727-100QCs are replaced by 3 B-707-320QCs and 2 more Stratoliner freighters, B-707-349Cs.

The B-737-300 order, meanwhile, is increased to five and two more B-707-320Cs are also requested. Applications are made for the resumption of U.S. service with flights to Washington, D.C., via Orlando and Atlanta.

Passenger boardings accelerate 14.2% to 2,307,000 and freight skyrockets 57% to 119.84 million FTKs. Revenues swell 17.4% to \$223.2 million and expenses ascend 15.3% to \$201.9 million, leaving record profits: \$21.3 million (operating) and \$19.9 million (net).

The employee population grows by 15.7% in **1986** to 6,062 as the requested B-707-320Cs are added, along with two B-737-375s.

Passenger charter services are undertaken to Orlando (113 flights, carrying 27,300 passengers) while all-cargo charters (145 flights) are flown to Montreal.

Recovery of the national economy and new government regulations assist the carrier in boosting its customer bookings by 33.6% to 3,081,189 and its freight traffic by 62.4% to 194.59 million FTKs. Revenues ascend 28.9% to \$287.7 million, but costs are up 32.6% to \$267.71 million, shrinking the operating profit to \$10 million. Net gain, however, increases to \$32.53 million.

The workforce is cut 5.8% in **1987** to 5,713 as the company, early in the year, is designated by the military government as the nation's second flag carrier with permission to service the U.S. Unfortunately, authority is not received from the U.S. due a failure by the two nations to sign a new bilateral agreement. Transbrasil is unable to inaugurate American frequencies and this has a significant impact on the carrier's ability to earn hard currency revenues.

To lower expenses, the carrier not only lays off employees, engages in general cost cutting, reduces the number of directors, and rationalizes its flight operations, but also sells five B-707-320s and three B-727-100s. The eight aircraft are succeeded by three leased B-737-3Q4s. The equipment employed on the **Aero Brazil, S.A.** movements now includes one chartered B-707-323C first flown by **American Airlines**, and a B-707-365C, initially delivered to **British Eagle Airways, Ltd.**; the cargo flights are made by an ex-**Deutsche Lufthansa, A.G.** B-707-330C(F).

Back debt is reduced by almost half through these maneuvers, from \$120 million to \$67 million.

The B-707-330C freighter is destroyed as the result of a bad landing at Manaus in heavy rain on April 11; there are no fatalities among the seven crew.

In October, the carrier seeks a \$50-million loan from the government which, in November, provides \$40 million, with preferential interests rates, saving the airline from bankruptcy. The government, in exchange, acquires 51% controlling interest. Despite this rearrangement, shareholding continues to be held by the employee-owned Transbrasil Foundation (40%), the Fontana family (32%), and miscellaneous minority owners (28%).

Passenger boardings plunge 15.9% to 2,548,593 while cargo drops 16.5% to 173.62 million FTKs. Revenues drop 5.2% to \$272.6 million,

costs rise 1.9% to \$269.6 million, and the operating profit is \$3 million. A net \$50.3-million loss is suffered.

The employee population is reduced by another 11.7% in **1988** to 5,050 and the remaining 6 B-727-100s (sold for \$60 million) are replaced with 3 more leased B-737-300s, Dash-3YOs, and 1 B-707-349C. Orders are placed for 3 B-737-400s.

At the April general shareholders meeting, founder Capt. Omar Fontana retires as chairman/president/CEO and is succeeded by Brazilian Air Force Brig. Gen. Jose Mil-Homens. Discussions are held aimed toward a merger with **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**, with the first step toward the arrangement being the establishment of a joint shuttle service between São Paulo's downtown airport and Rio de Janeiro.

In May-July, Mil-Homens, now fully in charge, reduces the workforce by 5% and shelves earlier plans for the establishment of international services and a union with VASP. Only charters will be operated in the international market following the government's August cancellation of its earlier approval of international flights.

In August, the board of directors votes to file an action for damages against the Brasilia government, claiming that it has broken the financial equilibrium of the public air transport concession. The federal government retaliates for the legal action during September when it intervenes in the airline's affairs, by sacking its new chairman/CEO, Gen. Mil-Homens, and taking over control.

Customer bookings fall again, by 16.2% to 2,134,875 and cargo is down 16.9% to 144.33 million FTKs. Revenues decline 2.9% to \$261.4 million, the operating profit rises to \$3.17 million, and net loss is the same figure as the year before.

The number of company workers is increased by 4.7% in **1989** to 5,288 and the first B-737-4Y0 is received in early spring.

While making a high speed approach into São Paulo on a March 21 service from Manaus, the left wing of the B-707-349C with three crew hits a building 2 km. short of the runway, causing the Stratofreighter to crash into a residential area and burst into flames. All aboard the aircraft are killed, along with 22 people on the ground.

During July, a new four-point program of renewal is announced in the wake of losses since the previous September of \$87 million. An end to state control is promised by a proposal that would have Air Force Gen. Mil-Homens reassume a seat on the board of directors and be replaced as president/CEO by Vice President Flavio Bierrenbach.

The company is able to renegotiate payment of \$120 million in debt, with repayment on a fixed schedule between 1992 and 1997 and takes delivery of its second B-737-4Y0; a third "Dash 400" Baby Boeing arrives in August. An agreement is signed with Ansett Worldwide Aviation Services for the lease of two B-757Fs to replace its two Stratoliner freighters and the last nine B-727-100s and six spare engines are sold for \$33 million.

The carrier's first international scheduled service is inaugurated in September when thrice-weekly B-767-2Q4 roundtrips begin between São Paulo and Orlando and Miami; as a result of a marketing plan labeled "Ecology Tourism," two of the three flights stop over at Manaus.

During October, the regional **TAM (Transportes Aereos Regionais, S.A.)** inaugurates direct competition over the Rio de Janeiro-São Paulo Air Bridge, offering a higher class of service than that provided by Transbrasil and the other majors now operating the shuttle in pool. Also, regularly scheduled service to Orlando is authorized, ending a 15-year monopoly on scheduled international service held by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**.

The so-called "government intervention" ends in December with the restoration of founder Omar Fontana to the positions of chairman/CEO.

Traffic regains its upward momentum during the year as passenger boardings rise 11.7% to 2,462,652 and freight climbs 1.7% to 146.72 million FTKs. Although the carrier suffers an operating loss of \$30.6 million, there is a net profit of \$3.4 million. Still, \$140 million is owed to the state bank.

Company employment grows 15% in **1990** to 4,932. In January, the company opens negotiations with **Aeroflot Soviet Airlines** for pooled

U.S.S.R. to Brazil services. During the first month, a \$105-million recapitalization plan, agreed to at the conclusion of "government intervention," provides \$35 million in initial new equity from the airline's current shareholders. Negotiations are undertaken with **American Airlines**, **Deutsche Lufthansa, A.G.**, and several others aimed at securing an additional \$35 million by May in ownership investment.

The number of weekly charter flights to Miami and Orlando is increased from three to five in April and service is initiated to several domestic points. Biweekly nonstop scheduled roundtrips are initiated in August from Rio de Janeiro and São Paulo to Miami and Orlando. In October, Transbrasil becomes the second Brazilian airline to receive permission to undertake international services north of Florida.

Despite the national recession, customer bookings ascend 5.7% to 2,602,845 and cargo rises 6.4% to 156.14 million FTKs. Revenues jump 33.9% to \$394.5 million and with the lowest operating costs of any airline in Brazil, the operating loss is cut to \$3.2 million. Still, there is a \$51.9 million net loss.

The payroll inches up 0.5% in 1991 to 4,959 and President Omar Fontana's fleet now includes 1 owned Cessna 550 Citation II and 3 B-767-2Q4s. Leased units are 3 B-737-3Q4s, 6 B-737-3Y0s, 2 B-737-375s, 4 B-737-4Y0s, 2 B-767-3Y0ERs, and 2 B-767-231ERs. Orders are outstanding for 2 B-737-4Y0s and 1 B-767-3Y0ER.

Employing five B-737-3Y0s, the company begins a joint operation with **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** in April over the Rio de Janeiro-São Paulo Air Bridge.

Good feelings toward **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** largely evaporate in June as the two carriers engage in intense fare wars under deregulation. So disturbed is Transbrasil that it files an action against **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** with the Brazilian Department of Civil Aviation (DAC), the national air transport body, claiming that its Air Bridge colleague is engaged in "predatory competition." DAC, in its capacity as a regulatory body, rules in July that **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** is not guilty as charged by Transbrasil; the ruling is seen as a further affirmation of national airline deregulation. Employing a B-767-2Q4 leased from the GPA Group, biweekly nonstop roundtrip service is inaugurated from Rio de Janeiro, São Paulo, and Brasília to Washington, D.C. (IAD) on August 7, followed by beyond flights to New York (JFK) on October 26.

The Brasília to D.C. route is the first direct capital-to-capital service between Brazil and the U.S. On November 11, a B-737 plunges in flames into the public square of Recife (17 dead).

Despite this route expansion, passenger boardings drop 9.3% to 2,360,532 while freight plunges 31.1% to 107.47 million FTKs. Revenues decline 14% to \$339.6 million and with costs up, the operating loss jumps to \$35.06 million. The net loss reaches \$60.3 million.

Recession causes the necessity of a 7.2% cut in the employee population in 1992 to 4,603, despite the arrival of two B-737-3Y0s and a B-767-231ER. In January, the company's share in the Air Bridge shuttle rises from 7% to 20%, promising \$25 million in additional annual revenues. Frequencies to Washington, D.C. are increased to six per week in February.

As a result of a worsening financial picture caused by high inflation rates, recession, and political instability resulting from the impeachment of the country's chief executive, President Fontana studies whether his concern should either become a public corporation or consider the possibility of a merger with **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**. Neither move is made; however, a major technical and operating agreement is signed with **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** in April, largely at the urging of GPA Group.

Joint fares and a joint maintenance pool are established and other pooled activities are studied; a breach of contract lawsuit is, meanwhile, filed against the government over its route award policy.

To take advantage of heavier traffic, a **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** MD-11 is assigned, during June, to take over certain of Transbrasil's frequencies from São Paulo to Miami and

Orlando. The New York service introduced the year before proves so popular that its frequency must be increased to daily in July; four flights are made via Miami and three via Washington, D.C.

Customer bookings plunge 13.2% to 2,048,923; however, cargo climbs 25.4% to 134.81 million FTKs. Revenues decline 3.7% to \$327 million, but expenses grow 2.4% to \$383.61 million. As a result, the operating loss deepens to \$64.91 million and there is a huge \$88.06-million loss.

The workforce is increased by 7.5% in 1993 to 4,947 and orders are placed for three Boeing 777s. In June, a broad commercial alliance is signed with **United Airlines**; its terms feature unified reservation services and frequent flyer programs, mutual blocked-seat arrangements, joint check-in, and code-sharing.

The deal with the North American megacarryer is followed, in October, by the signing of a similar, but domestic accord with longtime national flag carrier **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**. The arrangement is designed to keep the capacity of the two airlines adjusted to demand and to rationalize operating costs. It involves coordination of schedules and frequencies and block-space code-sharing on a number of domestic routes, including São Paulo to Goiácircnia, São Paulo to Foz do Iguaçedilu, and Rio de Janeiro to Brasília.

In November, a letter of intent is signed with Embraer for eight EMB-145 Amazon regional jets, which will begin delivery in late 1996.

Now the nation's second largest airline, Transbrasil's passenger boardings jump 22% to 2,499,572 while freight swells 26.8% to 563,000 FTKs. Revenues increase 29% to \$421.95 million while expenses grow only 19.2% to \$467.19 million. Consequently, the operating loss is cut to \$45.24 million and the net loss drops to \$68.97 million.

Airline employment is reduced by 8.6% in 1994 to 4,520 but, during the first quarter, orders are placed for three Boeing 777-200s. At the same time, requests are made for three more Embraer EMB-145 Amazons, the first jet airliner to be designed and built in Brazil. In the first half of the year, Transbrasil suffers a \$35.7-million operating loss.

The government's new economic Plano Real, designed to boost the value of currency by tying it to the U.S. dollar, is instituted in July. The company is restructured during the third quarter, a number of aircraft leases are renegotiated, and layoff notices are given to 8% of the workforce.

Late in September, service is inaugurated linking São Paulo, Curitiba, and Porto Alegre to Buenos Aires. This initiation is followed in December by the start of twice-weekly B-767-3Y0ER flights from São Paulo and Rio de Janeiro to Vienna via Fortaleza. Plans are announced to inaugurate services to Amsterdam the following summer.

Simultaneously, a new regional subsidiary is established at Brasília: **InterBrasil Star (Sistema de Transporte Aereo Regionais, S.A.)**. It will operate in the south and southeastern regions of the country.

Customer bookings swell another 11.2% to 2,781,395, while cargo moves ahead by 16.5% to 656.32 million FTKs. Price increases, as a result of Plano Real, are capped at 1% to 2% a month, allowing the company to receive full value of tickets sold by travel agents. The new economics assist the carrier to record better financial results during the second half of the year. Overall this year, revenues jump 33.3% to \$562.23 million and expenses rise only 13% to \$527.84 million. There is a pretax profit of \$34.38 million and a net gain of \$45.6 million.

The workforce grows by 7.4% in 1995 to 4,855 and a B-737-4Y0 is leased from the Spanish charter carrier **Futura, S.A.** Service is started to Amsterdam in June from São Paulo, Rio de Janeiro, and Fortaleza.

With Marcos Antonio Lacerda de Athayde as president and a fleet of three Embraer EMB-120s, the subsidiary **InterBrasil Star (Sistema de Transporte Aereo Regionais, S.A.)** inaugurates flights on July 3 from the national capital to markets in the interior of São Paulo state and the states of Paraná and Santa Catarina. The company's code-sharing agreement with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** is extended to Brazil-U.S. routes. Later in July, two new weekly frequencies to Vienna are added. A new product, Rainbow Flight, begins in October on a new second daily frequency New York (JFK), this one nonstop from São Paulo.

Enplanements increase by 9.8% to 3,059,486 and freight jumps 12.8% to 740.17 million FTKs. Plano Real proves its worth as operating income swells 33.8% to \$752.69 million while costs are up an almost equal 33.4% to \$703.92 million. Operating gain climbs to \$48.77 million and a net \$49.69 profit is recorded. The latter figure is later adjusted downward to \$47.51 million.

Airline employment is cut by 5.5% in 1996 to 4,590. New service is inaugurated to London (LGW) and to Cordoba.

Customer bookings dip 1% to 3,028,472 and 744.71 million FTKs are operated, a slight 0.6% increase. Revenues climb 11.4% to \$838.43 million and expenses are up only 9.8% to \$773.57 million. Although the operating profit is up to \$64.85 million, net profit slips to \$44.96 million.

The employee population climbs 15.2% in 1997 to 5,288. Early in the year, a block-space and code-sharing agreement is signed with **Trans World Airlines (TWA)**. Also, the Supreme Court of Brazil decrees that the Brazilian federal government must pay the carrier approximately \$180 million as compensation for losses suffered between January 1986 and May 1990 as the result of the government's inflation-fighting efforts.

At the Brazilian capital of Brasilia on July 30, Transbrasil Chairman Dr. Omar Fontana signs a commercial agreement with **Delta Air Lines** Executive Vice President Robert W. Coggin. Code-sharing will be developed, but in the meanwhile, the two carriers will coordinate their schedules in an effort to improve connections, share airport facilities, and begin to merge their frequent flyer programs.

On October 26, dual-designator service begins with **Delta Air Lines** over routes from Miami, Orlando, and Washington, D.C. (IAD) to Brasilia, Rio de Janeiro, and São Paulo. In addition, code-sharing is begun by Delta on Transbrasil connecting service to the Brazilian cities of Porto Alegre, Florianopolis, Curitiba, Belo Horizonte, Fortaleza, Manaus, and Salvador and by Transbrasil on Delta flights from Cincinnati and Atlanta to Denver, Los Angeles, Chicago, Boston, Dallas (DFW), Las Vegas, and Detroit.

The DAC indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Passenger boardings fall 4.3% to 2,899,737, while freight plunges 38.3% to 146.9 million FTKs. Despite an operating loss of \$96.78 million, a \$66.8-million net profit is generated on operating revenues of \$686.23 million.

Airline employment stands at 4,965 in 1998 and the fleet, all of which is Stage III certified, includes 24 airplanes: 13 B-737s and 11 B-767s.

The DAC, which regulates civil aviation, promotes a degree of liberalization in January. Prior to internal air force opposition that slows the process, DAC decrees that the monopoly the company shares with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** on the Rio de Janeiro to São Paulo Air Bridge must end.

Simultaneously, trunk lines are granted permission to compete with regional carriers on services between the downtown city-pairs of São Paulo and Brasilia or Belo Horizonte and Rio de Janeiro and Belo Horizonte or Brasilia. Further, airlines will be allowed to offer discounts of up to 65% on internal flights and any carrier will be allowed to fly charters on any route, with certain conditions. The move will have the desired end of increasing new business, but it will also set off a devastating fare war.

Transbrasil and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** enter the new city-pair markets in February. Employed to handle Air Bridge traffic, the 61-year-old passenger terminal at Santos Dumont Airport, Rio de Janeiro, burns down on February 13, forcing transfer of connections on that end of the route from São Paulo to be transferred to Rio's international airport. Work is begun immediately on a temporary passenger terminal, which is expected to be completed by July; a completely new facility will not, however, be available until late 1999.

Retaining his chairmanship, but surrendering his day-to-day management responsibilities, founder Fontana eases back in late May, turning the company over to his son-in-law, Antonio Celso Cipriani. The new chairman immediately announces a new strategy designed to increase

Transbrasil's domestic market share to 25% through streamlining and a possible equity transfer to **Delta Air Lines**.

In June, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** announces that it will drop out of the joint Rio de Janeiro-São Paulo Air Bridge shuttle and will, in cooperation with **Rio Sul (Servicios Aereos Regionais, S.A.)**, offer its own competition against its former partners, Transbrasil and **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**.

Under a newly signed code-sharing pact with **TAP-Air Portugal, S.A.**, Transbrasil is able to offer daily dual-designator service to Lisbon. The service, which begins on June 29, is flown four times a week by the European carrier, while Transbrasil offers flights thrice weekly. Each of the Brazilian line's flights stop at a different northeastern city, Fortaleza, Recife, or Salvador.

The VARIG-Rio Sul linkup begins in July. The World Cup now leads to a significant reduction in the number of Brazilians traveling, as they prefer to remain home and watch the month of matches on television.

During the first eight months of the year, domestic market share falls by 23.5%. Through the summer, the international schedule is altered. Flights to New York and Vienna are suspended as a new route is opened to Lisbon and a second daily São Paulo-Miami roundtrip is inaugurated.

After months of heavy recruitment by Chairman Cipriani, **Rio Sul (Servicios Aereos Regionais, S.A.)** CEO Paulo Enrique Coco is recruited in September to become Transbrasil's new president/CEO.

The following month, a new effort is made to regain the lost domestic market share. The hub at São Paulo is reworked into six daily banks, which focus on 10 city-pairs. Frequencies are increased between destinations, with a number of new nonstop segments added. In addition, plans are made to implement a yield-management system and paint company aircraft in new livery.

On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Customer bookings for the year inch up 2% to 2.95 million, while cargo traffic drops 5.6% to 138.77 million FTKs. The year's operating loss climbs to \$152.4 million.

The nation's economic downturn, together with toughening competition, leads Transbrasil to initiate a new restructuring plan during the first quarter of 1999. As part of its long-term cost-cutting effort, the airline lays off 300 employees in mid-February.

The April 26 issue of *Gazeta Mercantil* reports that Brazil's airlines will have laid off 3,000 employees by June due to the restructuring programs they have started since the first of the year. Transbrasil, having reduced its domestic flights, has laid off another 300 workers since February.

In September, the government proposes that the nation's four major carriers find a way to merge some or all of their activities under a joint operating agreement or some other form of umbrella.

At the beginning of October, the Brazilian National Development Bank (BNDES) adds to the discussion of airline mergers when its president, Andrea Calabi, announces that BNDES will broker and finance an amalgamation of VASP, VARIG, Transbrasil, and TAM, which may be accomplished in "the medium term." Stating that such a move without additional capital would be pointless, the initiative is publicly opposed by Transbrasil, **TAM (Transportes Aereos Regionais, S.A.)**, and **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, which also does not want to give up any of its market regions in order to participate, begins negotiations with BNDES about a debt roll-over loan and an extension of its debt payments.

Under pressure from BNDES CEO Calabi, TAM and Transbrasil undertake and maintain cooperation negotiations during November and into December. It is suggested that an accommodation will allow for consolidated capacity, which can produce higher rates for the partners.

A \$50 million net loss is reported.

Two B-737-3K9s, previously operated by **Germania Fluggesellschaft, GmbH**, are added on January 4, 2000. Just after landing at Porto Alegre on a February 27 service from Sao Paulo, Flight 202, a B-737-3Q4 with 123 passengers, overruns the wet runway and comes to rest in a ditch 1,000 ft. off the end. The nosegear collapses into the fuselage and the left engine is torn from the wing, but there are no injuries.

On March 9, a B-737-382, previously operated by **TAP-Air Portugal, S.A.**, is also received.

The spring is marked by continuing financial loss. To help reverse fortunes, company executives, facing the necessary return of seven jetliners to GE Capital Aviation Services on June 1, continue discussions with their colleagues from **TAM Transportes Aereos Regionais, S.A.** concerning possible measures that may be implemented for joint profitability.

Additionally, the workforce is reduced by 19% and a 36% cut is made in fixed costs. Negotiations are also undertaken with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, and DAC, the government civil aviation authority, concerning a possible route swap.

It is announced on April 27 that Transbrasil is interested in taking over the long-haul international routes of **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** to Europe and North America. The pioneer will be forced to suspend them on May 15 when its last four MD-11s are returned to their lessors.

Officials from Transbrasil and TAM reveal a joint operational agreement on May 3 designed to save upwards of \$6 million per month for the two carriers. Officials from TAM and Transbrasil announce a joint operational agreement on May 3 designed to save upwards of \$6 million per month for the two carriers. The initial phase of the pact, which includes code-sharing, is to run for six months and if successful, may well lead to a merger of the two concerns.

Also in May, Transbrasil adds one each B-737-3Y0 and B-737-3M8 and suspends its daily B-737-3Q4 roundtrip route from São Paulo to Florianopolis via Curitiba in light of the code-share with TAM.

On August 21, daily B-737-300 roundtrips are inaugurated from Recife to Florianopolis via Maceio, Salvador, and São Paulo. Simultaneously, B-737-3Q4 return frequencies are initiated to Florianopolis from Belem, via Brasilia, Sao Paulo, and Curitiba.

The cost-cutting, code-sharing, operational agreement with **TAM Transportes Aereos Regionais, S.A.** is not renewed on November 3. *Airline Business*, in its December issue, will quote the speculation of analysts who believe that a merger was aborted because TAM does not offer Transbrasil sufficient cash. In any event, all talk of merger ends.

As a direct result of the TAM pact failure, Transbrasil increases frequencies from São Paulo to Buenos Aires on November 6 from one daily roundtrip to two. A B-737-33A is dedicated to the service. At the end of the month, the DAC approves a route swap with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, under which Transbrasil turns over its twice-weekly roundtrip service to London and VARIG gives up its three weeklies to Lisbon. The move allows Transbrasil to offer daily service from Rio de Janeiro to the Portuguese capital.

On December 8, the company accepts delivery of a B-737-3L9 previously operated by **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** and a B-737-46B last flown by **Futura International Airways, S.A.** Both planes are leased.

On a less happy note, founder Omar Fontana dies of a heart attack at São Paulo during the day. B-767-2Q4 weekly roundtrip charters begin on December 30 from São Paulo to St. Martin. The flights will continue through March 2002, after which they will be evaluated and, if successful, will be turned into scheduled flights.

The "classic" B-737 fleet at year's end includes 3 each Dash-33As and Dash-3Q4s, 2 Dash-3K9s, and 1 each Dash-382, Dash-3L9, Dash-3M8, and Dash-3S3, although the latter is parked out of service in Mexico. One B-737-46B is also operated, along with three B-767-2Q4s and -3P6ERs.

This year's loss is R212.83 million.

TRANSCARGA (TRANSPORTES AEREOS DE CARGA, S.A.): Venezuela (1968–1979). When, on September 14, 1967, **LEBCA (Linea Expresa Bolivar, S.A.)** is named the nation's official air cargo carrier by the Ministry of Communications, it is required to undergo reorganization. At this point, all of the company's shares are purchased by the state flag line **VIASA (Venezolana Internacional de Aviacion, S.A.)**.

On January 10, 1968, VIASA forms Transcarga at Caracas as a wholly owned subsidiary; LEBCA itself stops flying on January 22. On April 24, the former independent's traffic rights to Florida and other Caribbean destinations are assigned to Transcarga and four Douglas DC-7CFs allow the company to begin, under VIASA's name, all-cargo flights to Miami.

A DC-8-55F is later added and services are undertaken to New York via Maracaibo, Caracas, and Miami. However, the U.S. refuses to grant Transcarga its own foreign carrier permit for the next decade, due primarily to the fact that the company enjoys no independent shareholding.

Unable to make an impact under its own livery, Transcarga becomes a division of **VIASA (Venezolana Internacional de Aviacion, S.A.)** in 1979.

TRANSCARGA TRANSPORTES, S.A.: Argentina (1961–1963). Employing a Curtiss C-46 Commando freighter leased from **Austral Airlines (Austral Lineas Aereas, S.A.)**, TT begins domestic all-cargo flights in August 1961. Flights continue until late 1963 when Austral recalls its aircraft, forcing the company to go out of business.

TRANSCONTINENTAL, S.A. See TSA (TRANSCONTINENTAL, S.A.)

TRANSCONTINENTAL AIR TRANSPORT (TAT): United States (1928–1930). Backed by the bankers, businessmen, and companies associated with North American Aviation Corporation, TAT is organized and incorporated on May 16, 1928 at New York expressly to operate transcontinental air-rail passenger service. Initial capitalization is \$5 million; NAA Chairman Clement M. Keys is named president of the new enterprise with **National Air Transport (NAT)** General Manager Paul Henderson simultaneously assuming the same post with TAT. Henderson's assistant general manager is Eugene L. Vidal and the general superintendent is longtime airmail pilot Paul F. Collins.

The same day, contracts are let with the Richfield Oil Company for aviation gasoline. General Manager Henderson is asked to lay out a preliminary routing; the path drawn up initially begins at New York and ends at Los Angeles, with stops at Columbus, Indianapolis, St. Louis, Kansas City, Wichita, Dodge City, Albuquerque, Winslow, Kingman, and Las Vegas, New Mexico.

On June 13, the Pennsylvania Railroad, represented by its air-minded President William W. Atterbury, becomes a partner in the TAT undertaking and contributes \$500,000 to the concept of air-rail transport.

Early on, President Keys directs the establishment of a technical committee, chaired by public hero Col. Charles A. Lindbergh who is employed at an annual salary of \$10,000 plus \$250,000 in stock. Lindbergh, with assistance from other leading aviation personnel, personally plans the new entrant's final and refined route, thus giving TAT its popular name, "The Lindbergh Line."

Three members of the technical group, including two railroad representatives, are dispatched to Europe to examine the transport aircraft, airports, and airlines in Germany, France, and the U.K. They find the situation with those aerial communications components far superior to anything in the U.S. After several weeks, the team returns home and prepares a detailed report for Mr. Keys.

As the result of findings from Lindbergh, the European inspection team, and the offer of a superior aircraft from Henry Ford, eleven Ford 5-ATs are purchased (including all five 5-ATs previously operated by NAT). The first of the group, 5-AT-4, is delivered to Eastern Division Chief John Collings at Detroit in November and is christened *City of Columbus*. Sixteen first-tier pilots, each with over 500 hours on Ford

Tri-Motors, are personally hired by Lindbergh, as are 16 replacements, all graduates of the Army Air Corps' Kelly Field training program.

Over \$1 million is appropriated for the construction of weather stations and for the improvement of airports, particularly west of Wichita, Kansas. The latter, as at Kingman, Arizona, is often a major undertaking, from the purchase of land, through the construction of terminal buildings and hangars, runways, lighting, radio buildings, and equipment. Even landing strips at established airports must be upgraded, along with buildings, lighting, and radio equipment. Cash is also expended to purchase specially built 14-passenger "aerocars," trailers to be hauled by 1929 Chrysler roadsters and used to provide ground transport to and from the air fields.

Beginning in April, a handsome house newspaper, *Plane Talk*, is published monthly at St. Louis and details company progress.

Lindbergh, employing the *City of Columbus* as a flying office, personally surveys the entire proposed route. Meanwhile, a number of airfields, terminals, and hangars must be built from scratch and are designed in Indian- or Spanish-style architecture. Between June 20 and July 7, 1929, the new route, the Ford Tri-Motors, and company personnel are market-tested through the transport of 261 passengers on rehearsal trips covering 50,000 miles back and forth between New York and Los Angeles.

The first regularly scheduled departure, for which over 1,000 people have attempted to obtain tickets and for which an equal number have gathered, takes place on July 7. Impressive ceremonies in the main lobby of the Pennsylvania Railroad Station involving TAT officials and the Governor of New York, Franklin Delano Roosevelt are held before the flight. The company's flagship Ford, 5-T-4 *City of Columbus*, renamed *City of New York* for the occasion, is christened with a bottle of ginger ale by another of the airline's vaguely employed aeronautical notables, Assistant to the General Traffic Manager Amelia Earhart. The *City of New York* remains on public display. To the strains of "California, Here We Come" as played by the Long Island Railroad's Sunrise Band, a Pennsylvania Railroad special, *The Airway Limited*, christened by Miss Dorothy Stone at the same time as the Ford, now departs this rail terminus. It travels through the night and reaches the specially built rail-air interchange station at Port Columbus, Ohio, the next morning.

The morning of July 8 begins with a festive Columbus breakfast for dignitaries thrown by TAT General Traffic Manager T. B. Clement. Among those on hand are Col. Henderson, Miss Earhart, Henry and Edsel Ford, Harvey Firestone, and William B. Mayo. Of this group, only Mayo had arrived at Port Columbus by air and so will depart. Outside, before the uninvited crowd that has assembled along with the media to witness the aerial departures, the 5-AT-5 *The Kansas City* is christened.

Afterwards, 5,000 citizens watch in the rain as the lucky passengers (including Col. Henderson, Miss Earhart, and Stutz Motor Co. President Col. Edgar S. Gorrell) pass over a covered walkway to the terminal and then board the two Fords 5-AT-57 *City of Columbus* and 5-AT-8 *City of Wichita*. Each plane is crewed by a pilot, copilot, and courier (flight attendant) and will depart and fly through the day, with four intermediate stops at Indianapolis, St. Louis, Kansas City, and Wichita, to Waynoka, Oklahoma. Fred Harvey's famous girls provide box lunches taken aloft from the Indiana stop and dinner in Kansas. A unique 14-passenger Aero Car trailer then speeds customers and baggage to the railway station where the Atchison, Topeka and Santa Fe Railroad Missionary service then speeds through the dark to Clovis, New Mexico.

At Clovis, the travelers are transferred from the train to two other Fords, the 5-AT-20 *City of Washington*, piloted by Charles Lindbergh, himself, and 5-AT-7 *City of San Francisco*. The latter is a replacement for the 5-AT-9 *City of Los Angeles*, which had suffered engine failure and ground looped across plowed ground into a hangar upon takeoff, causing only delay and some embarrassment. With four stops at Clovis, Albuquerque, Winslow, and Kingman, the two airborne craft in turn make their way on to Grand Central Air Terminal, Glendale/Los Angeles. Interestingly, and due to strong tail winds, the *City of San Francisco* actually lands first at Glendale, at 5:18 p.m. on July 9, 24 min. ahead of

Lindbergh's ship. The Harvey House is also responsible for meals at Clovis and Albuquerque. The entire inaugural trip takes almost exactly 50 hrs. 47 min. and costs each passenger, depending upon train accommodations and trip length, somewhere between \$337 and \$403 one-way.

Return flights mirror this process in reverse and the first, also initiated on July 8, is undertaken from Glendale to Clovis by the 5-AT-34 *City of Philadelphia* and the 5-AT-9 *City of Los Angeles*, piloted by Charles Lindbergh, with guests Douglas Fairbanks and Mary Pickford. The latter aircraft had been christened just before departure by stars Pickford and Gloria Swanson. Lindbergh, accompanied by his wife Anne, departs at Clovis where he awaits the *City of Washington* and flies it on into Glendale; he thus inaugurates both the inbound and outbound legs of the same route on the same day. From Waynoka, passengers continue on to Port Columbus on July 9 aboard the *City of Columbus* and the 5-AT-21 *City of Indianapolis II*. The two aircraft arrive at New York City at 10:35 a.m. on July 10; only two passengers, an unnamed newspaperman and insurance agent Albert S. Hichen, both from Los Angeles, complete the entire trip from California.

Flights continue throughout the summer and fall. It is reported in the August issue of *Plane Talk* that a total of 433 passengers have been transported by TAT during the month from July 7 to August 8. Of these, 150 complete the entire New York to Los Angeles journey, with all the others getting off at various of the intermediate points. A total of 113,240 actual miles are operated, while passenger miles total 432,264.

On September 3, the *City of San Francisco*, possibly hit by lightning during a severe thunderstorm, crashes into Mount Taylor, 60 mi. W of Albuquerque (eight dead). A 50,000 square mile search is unsuccessful and it is not until September 7 that Capt. George Rice, flying the regular eastbound Western Air Express F-10 service, sights the wreckage and radios its location. Enplanements drop after the accident although efforts are made, with publicity, to reverse the trend. The *City of Wichita* is tasked, on October 11, to fly the University of New Mexico football team from Albuquerque to Los Angeles for a game with Occidental College. The plane has its student riders back in New Mexico in time for Monday morning classes.

Thanks to the introduction of personal radio service for passengers, many aloft on October 24 Black Friday are able to send and receive messages from their brokers concerning the status of their stocks on Wall Street. In October, employing a miniature projector and a screen hung on the back of the pilot's door, westbound passengers are treated to the first moving pictures (silent) shown on passenger planes: a newsreel and an *Oswald the Cat* cartoon. TAT purchases rival **Maddux Air Lines**, which has been offering similar service eastward to Kansas City, on November 16. The routes of the two are then merged, making TAT the world's largest trimotor operator and giving TAT a Los Angeles-San Francisco route in the process.

Rates on the transcontinental route are now cut by \$70. At the same time, three flag stops are created: Vandalia, Ohio, St. Elmos and Terre Haute, Indiana. While landing at Indianapolis from St. Louis in a blizzard on December 22, the landing gear of 5-AT-21 *City of Indianapolis* crumples, causing the plane to crash (one dead). This year TAT becomes the first airline to establish its own meteorological department.

When marks and records are discussed at the close of the year, it is learned that 40,000 customers have been transported in just 6 months. Despite the adverse publicity caused by the loss of the *City of San Francisco* and the devastating impact of the October stock market crash, 1929 has been just "swell" for this small segment of U.S. industry.

On January 11, 1930 President Keys announces another fare reduction, noting that TAT tariffs are now less than those charged on certain trains. *Plane Talk* notes the advantages of the "speed of the plane at the cost of the train." Still, winter plays havoc with the schedule; many passengers are unable to complete the air portions of their trips and are escorted through bad weather to trains. In mid-month, President Keys invites **Western Air Express (WAE)** President Harris "Pop" Hanshue to meet in New York City to explore merger possibilities; after discussing the letter with his board, Hanshue declines. Col. Henderson informs the

U.S. Post Office and Warren Irving Glover, the second assistant postmaster general, informs Hanshue that his refusal to merge could be a fatal mistake.

Nine days later, the *Race Special* Ford 5-AT-46, first delivered to **Maddux Air Lines**, with 16 aboard, is caught by a sudden line squall and crashes at San Clemente, near Oceanside, California (15 dead). On February 2, Keys resigns and is succeeded by John L. "Jack" Maddux, who announces that, as of February 4, controlling interest is held by the Pennsylvania Railroad. The carrier is reorganized on February 13 and executive personnel are changed. Henderson, Vidal, and Collins are fired. On February 20, an unnamed AT-5 collides with another aircraft while taxiing at Port Columbus.

Bookings for the first 2 months of the year total 6,800. On April 29, the air-rail fare from New York to Oklahoma City is cut again as the Depression begins to make itself felt on bookings. In Washington the same day, Congress passes the McNary-Waters Act. By this point, the air-rail service has lost \$2.7 million since its opening day.

Fate now steps into the TAT picture in the form of U.S. Postmaster General Walter F. Brown, who controls the awarding of mail contracts (for which subsidy many airlines then depend) and, hence, much of the development of American air transportation. In May, he summons officials or representatives from major air transport concerns to meet with him in Washington, D.C. The chairman of TAT's executive committee, D. M. Sheaffer of the Pennsylvania Railroad, represents the carrier at this May 19–30 "Spoils Conference."

Before awarding a government contract for the central transcontinental route, Brown insists that the two main rivals for it, TAT and Harris "Pop" Hanshue's **Western Air Express**, be merged. Meanwhile, the Ford Tri-Motor *City of Philadelphia* damages its landing gear and propellers in a May 22 emergency landing at LaLande, New Mexico; it will be repaired on the spot and returned to the company's maintenance shops.

As part of its effort to increase its effectiveness, TAT now leases for (ultimately unsuccessful) trial a trio of 18-passenger Curtiss CO Model 18 Condor I biplanes. Celebrating the twentieth anniversary of his Albany—New York flight of May 29, 1910, Glenn Curtiss, first holder of a U.S. Aero Club license, makes his last flight when he takes one of his company's aircraft from New York on May 30. The aviation pioneer will die of a pulmonary embolism at age 52 on July 23.

Brown's desire for efficiency leads to considerable sparring between the two carriers, which is finally resolved in the "Shotgun Marriage" merger of July 16. The new **Transcontinental and Western Air (T&WA)** is created when TAT-Maddux is merged with a part of **Western Air Express** and Pittsburgh Aviation Industries Corporation (PAIC).

Like Western, the previous company's ownership is 47.5%. As lawyers sort out details and attempt to finish work on the final package, the new amalgamation receives Brown's award on August 30 for Contract Air Mail Route No. 34 (CAM-34). The company flies its first all-air, coast-to-coast service on October 25, the day on which the previously elaborate air-rail operation is ended.

In commemoration of the first TAT service, **Trans World Airlines (TWA)** President Charles E. Tillinghast and Pennsylvania Central Railroad President Stuart J. Saunders will dedicate a plaque in the southwest corner of New York's Penn Station 50 years later on July 7, 1969. The seventieth anniversary of TAT is celebrated in TWA-arranged ceremonies at Columbus, Ohio, on July 8, 1999.

TRANSCONTINENTAL AND WESTERN AIR (T&WA): United States (1930–1934). Transcontinental and Western Air, Inc. (T&WA) is formed by merger on July 16, 1930 of a part of **Western Air Express** (47.5%) with **TAT-Maddux Air Lines** (47.5%) and **Pittsburgh Aviation Industries Corporation** (5%). This "Shotgun Marriage," as it is known to airline historians, is the product of a quest for efficiency by U.S. Postmaster General Walter F. Brown, then in charge of granting contract mail routes and subsidies under authority of the McNary-Waters Act. Aircraft received from WAE in the deal include 4 Fokker F-10s, 6 F-10As, 2 huge F-32s, and 4 F-14s.

Simultaneously, an agreement is entered into with **American Airways**: should both companies be awarded transcontinental mail routes, T&WA will pay AA \$284,500 for certain Tulsa property and purchase 20,000 WAE shares for \$1.11 million. On September 30, WAE stops its Los Angeles–San Francisco and Kansas City flights. The **Standard Airlines** division of WAE now goes dormant and its President William John "Jack" Frye and Vice President Paul Richter, are hired as T&WA vice presidents.

Also during September, the Ford 4-AT-7 acquired by T&WA from **Maddux Air Lines** is placed on exhibit at the Pennsylvania Railroad Station at New York City. It will later be donated to the Henry Ford Museum at Dearborn, Michigan, to which it is shipped for display by the railway. The WAE, TAT-Maddux, and PAIC merger is formally completed on October 1.

With the government's concession for Contract Air Mail Route No. 34 (CAM-34) from New York (Newark) to Los Angeles in hand, the new carrier is able to begin advertising \$200 one-way, cross-country flights to be completed in 36 hrs., including an overnight stop. Following ceremonies attended by Newark Mayor Jerome T. Congleton and other city officials as well as Charles Lindbergh, Pilot Henry G. "Andy" Andrews, flying a Ford 5-AT, restarts T&WA's transcontinental service, inaugurating day-and-a-half, coast-to-coast, \$200, one-way, all-air service on October 25.

There will be no more air-rail flights after this Ford departs Newark, New Jersey, at 8:10 in the morning. Its complement of passengers is laden with dignitaries: Postmaster General Walter F. Brown and his assistants Warren I. Glover and E. B. Wadsworth, WAE President Hanshue, Assistant Secretary of Commerce for Air Clarence M. Young, Amelia Earhart; Louise Thaden, and J. C. Cowdin. Meanwhile, two Fokker F-10As, still in the red livery of WAE, have already departed Los Angeles at 5:19 a.m. on the first T&WA west to east flight.

Andrews' all-metal airliner arrives at Kansas City at 6 p.m. that evening via Philadelphia, Harrisburg, Pittsburgh, Columbus, Indianapolis, and St. Louis. Early on October 26, passengers board a company F-10A and continue on to Los Angeles via Wichita, Amarillo, Albuquerque, Winslow, and Kingman, arriving at Alhambra Airport 8 p.m. Meanwhile, the designated eastbound Fokkers had put down at Newark at 7:38 p.m.

Five days later on November 1, T&WA begins the regular operation of WAE's former Los Angeles–Dallas route and pays off on the AA agreement. While landing at Greencastle, Indiana, in bad weather on November 24, the Ford Tri-Motor 5-AT-4 *City of New York* noses up; although no injuries are reported, the plane's propellers and nose engine mount must be replaced.

On January 26, 1931, a Fokker F-10 is fatally damaged when its axle breaks upon landing at Glendale, California. President Hanshue is hospitalized with pneumonia and is temporarily replaced by PAIC official Richard W. Robbins. The final paper work on the "Shotgun Marriage" is completed on February 15.

In late March, delivery is taken on the first of 5 of 11 (later 13) Northrop Alphas.

On March 31, T&WA Flight 5, a Fokker F-10A en route from Kansas City to Los Angeles, having departed its first stop at Wichita, is caught in a storm over Bazaar, Kansas, in mid-morning. The airliner suffers wing failure and crashes; the pilot Capt. Bob Fry, copilot H. Jesse Mathias, and six passengers, including Notre Dame football coach Knute Rockne, are killed.

The adverse publicity that follows will force an end to the use of Fokker wooden-winged aircraft in the U.S. Dominick A. Pisano will review the accident in his "The Crash That Killed Knute Rockne" in *Smithsonian Air & Space* 6 (December 1991–January 1992): 88–93.

The 140-mph Alpha monoplanes are placed into service on April 20 and provide 24-hr. coast-to-coast mail and express service. The company's seven surviving F-10As undergo government inspection at the end of April and are replaced on the transcontinental service by Ford 5-ATs (making it all-Ford for the first time). In May, the Fokker F-32s,

although uneconomical, are, nevertheless, assigned to the Los Angeles–San Francisco service until June 15, when three inspected F-10As return to duty.

The last F-32 flight is made on July 4, a sight-seeing tour over Glendale.

Upon his return to work in July, “Pop” Hanshue is “relieved” of his post in a move led by the General Motors board member Ernest Breech; he returns to his beloved **Western Air Express (WAE)**.

With Breech’s backing, Acting CEO Robbins is now elected company president, with former **Standard Airlines**-WAE official William John “Jack” Frye as executive vice president.

The company completes its first air freight service on August 6, flying a planeload of livestock from St. Louis to Newark, New Jersey. This achievement will later be billed as the first air cargo service in the U.S. Ford 4-AT-31 piloted by Ralph W. Ritchie lands short of the field at Harrisburg, Pennsylvania, on August 14 and crashes; no one aboard is hurt.

Five days later, Ford 5-AT-24 is fatally damaged while landing in rain at Pittsburgh; four aboard are injured as pilot A. D. Smith’s craft overshoots the runway during a storm and slips off the wet runway. The remaining F-10As are back on the line by August 31 but will be withdrawn in 1932–1934. Dayton becomes a “flag stop” on September 28. While taking off from Oklahoma City on December 22, Ford 4-AT-33, originally acquired with **Maddux Air Lines**, crashes (one dead).

Out of gas and radio contact over Mobeetie, Texas, on January 14, 1932, pilot Ted Hereford parachutes from his Northrop Alpha. A Northrop Alpha mailplane, en route to Newark from Columbus in an ice storm, crashes into the Ohio River at Steubenville on March 21–22 (two dead).

The first single-unit wing bin for baggage and mail is demonstrated by company mechanics on Ford 5-AT-34 on April 13; Ford Motor Company officials are so taken with the concept that such compartments will henceforth be factory-built into its Tri-Motors. Also in April, 24-hour, coast-to-coast, transcontinental Alpha mail service is inaugurated.

The entire nose of the Ford freighter 5-AT-51 is destroyed by a ground fire at Amarillo, Texas, on May 8. Ironically, the aircraft will be repaired, returned to service, sold to another carrier, and lost in a second ground fire in June 1938. Again in physical difficulty, the TAT veteran 5-AT-34 *City of Philadelphia* is caught in a hailstorm over Bushland, Texas, on June 5. The fist-sized stones cause \$10,368 in damages to the wing leading edge, wing top, cowls, stabilizer, and fuselage, but do not prevent the aircraft’s “normal” operation for the remainder of her flight.

Flying east of St. Louis on July 3, the propeller blade of Harry Campbell’s Northrop Alpha shears off, causing a vibration that tears loose the engine; with no other choice, Campbell bails out. On August 2, Vice President Jack Frye, unable to obtain modern Boeing 247s because of their manufacturer’s commitment to **United Air Lines**, writes his famous letter to aircraft manufacturers seeking an advanced trimotor and setting forth TWA’s requirements for a modern airliner. T&WA President Robbins signs a contract with Donald Douglas on September 20 for the delivery of one advanced \$125,000 transport, with options to purchase up to 60 more at \$58,000 each. The prototype is designated Douglas Commercial One or, familiarly, DC-1.

While alighting from a Ford 5-AT at Pittsburgh on October 12, a passenger walks into a propeller and is killed. On November 5, the carrier, employing both Fords and Northrop Alphas, initiates 24 hour-a-day service, coast-to-coast, night and day, for passengers as well as freight. Later in the month, the twelfth Alpha is purchased from the NAT division of **United Air Lines**. While landing at Amarillo, Texas, in a December 14 blizzard, Ford 5-AT-37 crashes and is destroyed (two dead).

Due to a mechanical failure, a Northrop Alpha crashes during takeoff from Pittsburgh on January 10, 1933; pilot Harry Zimmerman is not hurt. Pilot Edward A. Bellande skillfully lands his Ford 5-AT-25 with nine aboard and suffering an in-flight fire, at Bakersfield on February 10. Although the aircraft is destroyed, only one passenger, Mrs. Adelaide Helwig, is hurt. A Northrop Alpha is lost on February 26 when its exhausted pilot bails out over Cross Forks, Pennsylvania.

On March 1, new frequencies are introduced on the transcontinental route. The eastbound run now requires 38 hrs. 42 min., while the westward flight takes 39 hrs. 23 min. The former **Maddux Air Lines** Ford 4-AT-31 is sold to **Blue Bird Air Transport** of Chicago on April 10. It is followed out of service by the last ex-Maddux Tri-Motor, 4-AT-36 *The Glendale*, which goes to **Pan American Airways (PAA)** on May 5 for lease to **Cubana (Compania Nacional Cubana de Aviacion, S.A.)**.

On June 1, the North American Aviation subsidiary of General Motors purchases control of T&WA. Ernest Breech is named president and his first act is to cancel a GM trimotor development project undertaken in competition with Douglas. On the same day, the new Boeing 247 of **United Air Lines** enters transcontinental service, cutting 7 hours off of the 27 hours still required by TWA’s Fords to make the trip.

Vice President Operations Fry assigns Daniel W. “Tommy” Tomlinson to monitor the testing of the DC-1 which, with Carl Cover and Fred Herman at the controls, flies for the first time on July 1 from Clover Field at Santa Monica, California. Following an inauspicious inaugural caused by engine difficulties, the new aircraft is extensively and successfully tested over the next three months. On July 28, a Lockheed Model 9 Orion is unable to gain altitude after takeoff from Kansas City and crashes into the Missouri River (one dead).

Beginning in August and continuing for two months, the carrier takes delivery of seven Consolidated Model 20A Fleetsters. At the same time, the first Northrop Delta 1A is leased from its manufacturer and is placed into service on the Kansas City to Los Angeles mail route. On August 29, Ford 5-AT-5, originally delivered to TAT as *The Kansas City*, en route from Amarillo to Albuquerque, is caught in a storm south of Quay, New Mexico, and crashes into the southern end of Mesa Mountain (five dead).

T&WA completes its testing of the DC-1 on September 5 following successful completion of the airplane’s most stringent requirement: a single-engine out flight on September 4 from Winslow, Arizona, to Albuquerque, New Mexico. The aircraft, which had cost the Douglas Aircraft Company \$306,778 to design, build, and test, becomes official T&WA property on September 13, although it will be some time before it is finally handed over.

On October 24, the first Delta 1A is damaged in a forced landing near Grants, New Mexico; it is repaired and returned to service. Day and night transcontinental passenger through-service is initiated on November 5; elimination of the Kansas City stop shortens the westbound route to 28 hrs. 40 min. and the eastward to 24 hrs. 42 min. At \$152.40 one way, a ticket costs \$7.60 more than a railroad fare.

On November 12, the first Northrop Delta 1A, being flown by Harlan Hull, catches fire near Moriarty, about 65 mi. E of Albuquerque; Hull successfully bails out, but the aircraft is destroyed in the ensuing crash. With Donald Douglas as passenger, the DC-1 begins its first transcontinental flight from Santa Monica to Newark on November 15, stopping en route at various airports where it is shown to the press and general public.

In early December, six months after its initial flight, the first—and only—DC-1 is delivered in Los Angeles ceremonies, during which T&WA gives Douglas a \$125,000 check. Jack Frye and Donald Douglas negotiate a revised contract calling for the delivery of 25 stretched production models at \$65,000 each.

Known as the DC-2, the fuselage of the new aircraft will be lengthened by two feet to accommodate an additional row of two seats and Douglas retains the right to sell copies to other carriers. On December 11, while en route to New York from Pittsburgh, a Northrop Alpha ices up over Portage, Pennsylvania; pilot Dean Burford bails out and his cargo (including \$73,000 worth of diamonds) is recovered. Flying westward into the same storm the same day, pilot Henry G. Andrews’ Alpha is also iced up and he, too, bails out. The year’s profit is \$130,000.

As 1934 begins, T&WA employs the DC-1 to fly the mail at night between Glendale and Kansas City. Severely iced, a Lockheed DL-1B crash-lands at St. James, Missouri, on January 31. On February 9, as a result of the so-called “Air Mail Scandal,” the U.S. government cancels existing airmail contracts (effective on February 19) and calls upon the U.S. Army Air Corps to fly the mail.

Having learned of the government's forthcoming airmail action, Jack Frye and **Eastern Air Transport** Vice President Edward V "Eddie" Rickenbacker on February 18–19, fly the prototype DC-1, complete with 10 passengers and 700 pounds of mail, from Los Angeles (Glendale) to Newark via Kansas City and Columbus in a cross-country record time of 13 hrs. 4 min. Rickenbacker, who seldom touches the controls during the mission, graciously receives joint flying credit from Frye, the principal pilot. The flight dramatizes the ability of the airlines to carry mail rapidly over significant distances.

On February 28, all company personnel (save senior officers) and schedules are cut back to two daily Ford transcontinental flights, one each way. By previous arrangement made by Vice President Frye with Douglas and Curtiss-Wright, most maintenance personnel are temporarily hired by those manufacturers. The loss of subsidy payment to T&WA is \$250,000. The Army experiment ends on March 30 and the Post Office advertises for new contracts, which may be let to any company not participating in the May and June 1930 "Spoils Conference."

On April 17, North American Aviation reorganizes its air transport subsidiaries. While T&WA is allowed to continue flying passengers, a new airline, TWA, Inc., is founded to regain the mail contracts. At this point, John D. Hertz Sr., founder of Yellow Cab Company, purchases 11% interest and receives a directorship. The first of three Northrop Gamma 2Ds is delivered on April 30 while the first Douglas DC-2 makes its maiden flight on May 11. The Hertz arrangement is sufficient to win back Post Office mail contracts and with Fords and Gammas purchased from T&WA, the airmail service is resumed by TWA, Inc. on May 13.

On May 13–14, in a highly publicized feat, Jack Frye, piloting the first of the carrier's 3 new Northrop Gamma 2Ds, takes 355 pounds of mail and 85 pounds of express the 2,609 miles from Los Angeles to Newark via Kansas City in a record-setting 11 hrs. 31 min., averaging 227 mph. On May 18, one week after its maiden flight, the first DC-2, *City of Chicago*, is turned over and undertakes a proving flight on TWA's Columbus to Newark via Pittsburgh route on May 18.

Although Douglas will lose \$266,000 on this premier order, the effort will soon turn a huge profit as other airlines make requests. On May 26, with three DC-2s delivered, TWA completes the new Newark–Chicago via Pittsburgh DC-2 run in record time of five hours—for the fourth time in eight days.

DC-2 Newark–Chicago via Pittsburgh service becomes twice daily on June 1. The second Northrop Gamma 2D arrives on June 11 and on June 12 Congress passes a new Air Mail Act, which effectively removes manufacturers from the air transport business and gives them until December 31 to do so. A total of three DC-2s are delivered during the month, with the type certified on June 28.

New York–Kansas City DC-2 flights begin in July; at month's end, 12 new Douglas transports are on hand as is the third Northrop Gamma 2D, delivered on the 11th. During the month, the *City of Chicago*, piloted by John Collings, provides 52 local flights over the namesake city, transporting a total of 728 sight-seeing passengers. At Philadelphia, pilot Carl Flournoy's new *City of Philadelphia* provides 12 promotional flights and on July 5, the Ford Tri-Motor 5-AT-17 is sold to **Pan American-Grace Airways (Panagra)**.

On August 1, DC-2s are placed in service on the carrier's transcontinental route; Sky Chief overnight service from Newark to Los Angeles (Glendale) via Chicago, Kansas City, and Albuquerque, requires but 18 hours, 4 p.m. to 7 a.m. The new operation is advertised as "the first dusk to dawn daily transport schedules between the Atlantic and Pacific Oceans."

Eight more DC-2s are delivered during the month, after which TWA transfers other deliveries of the type to **Eastern Air Lines** and **Western Air Lines** for the next four months. Frequencies on the transcontinental route become twice daily, with one of an express nature and the other multistop.

On August 19, a crowd of 2,500 witnesses the christening of the *City of Albuquerque* by Mrs. Katherine Stinson Otero, America's first woman pilot. The *City of Camden* is named at its namesake city on August 22; a crowd of 2,000 witnesses listens to Capt. Edward V. Rickenbacker

speak of the new aircraft's value. After the *City of Wichita* is christened on August 26, its namesake city provides a complimentary breakfast for 160 local dignitaries to be given promotional rides during the day. The last Ford Tri-Motors are retired on August 31, but are retained in readiness for replacement requirements.

With 20 DC-2s available by September, all TWA Ford 5-ATs except 5-AT-69 begin retirement; the survivor, outfitted with floats, will be employed in a brief and experimental service from Newark to Manhattan's Downtown Skyport. On September 22, R. S. LeRoy's Northrop Alpha, lost and out of gas, makes a forced landing near St. Clairsville, Ohio. Pilot George Rice is injured when his Northrop Alpha must make a forced landing in poor weather near Newhall, California, on November 15.

Displeased that his ticket is stamped "New York," but that his DC-2 has landed in Newark, New Jersey, on November 25, Mayor Fiorello La Guardia demands in front of his fellow passengers—all newspapermen—that he be flown on to Floyd Bennet Field at New York City. TWA, not wishing to be a pawn in a debate between La Guardia and U.S. Postmaster General James Farley over designation of the regional airmail airport, complies with the "Little Flower's" request.

Proceeding westward near Wichita on December 18, a DC-2 experiences an engine failure, loss of a propeller, and engine fire; an emergency landing is made at Kansas city and no injuries are reported. Both T&WA and TWA, Inc. are consolidated on December 27 under the new name Transcontinental and Western Air, Inc. Ownership is now changed as General Motors sells its shareholding to the banking firm of Lehman Brothers and John Hertz Sr. The next day, Henry B. duPont becomes board chairman.

President Robbins, under terms of the Air Mail Act prohibiting retention of CEOs employed at the time of the 1930 "Spoils Conference," is forced to resign and is succeeded by Jack Frye. On the final leg of the December 28 service from New York to Kansas City via Pittsburgh and Chicago, a DC-2 is forced to make an emergency landing at Columbia, Missouri; although no injuries are reported, the aircraft suffers \$10,570.12 in damages. The year's loss is \$407,702.

TRANSCONTINENTAL AND WESTERN AIR LINES, INC. (TWA): United States (1934–1950). On December 27, 1934, in compliance with terms of the Black-McKellar Air Mail Law of June 12, Trans-Continental and Western Air (T&WA) and TWA, Inc. are consolidated into a single new carrier, Transcontinental and Western Air, Inc. General Motors, the former majority partner, sells its principal interest to Lehman Brothers, the New York banking firm, and Yellow Cab founder John Hertz Sr. Jack Frye is named president with Paul Richter as vice president-operations.

The last of three Lockheed Model 9 Orions obtained in 1933 is withdrawn and sold to Wiley Post; it is then converted into the floatplane that he and Will Rogers will employ on their fatal Alaskan trip in August. During the next two years, services will continue as before with additional Douglas DC-2s joining the company fleet. Company highlights in this period are the premier air transport industry adoption of automatic pilots and wing flaps on the new aircraft. The year's net loss is \$407,702.

Filling in as pilot on January 21, 1935, President Jack Frye's Northrop Gamma suffers engine failure near Deep Lake, Arizona, and he is forced to make an emergency landing. While taking off from Pittsburgh early on January 26, Floyd Church's Consolidated Fleetster mailplane ices up and crashes (one dead). Five days later, Ernest Smith's Northrop Alpha mailplane suffers engine failure while approaching Glendale for a landing and crashes.

The first Ford Tri-Motor of **Transcontinental Air Transport (TAT)**, 5-AT-4 *The City of Columbus*, is sold out of service on February 14. Also during February, mail is placed aboard the DC-2s and by mid-month, the remaining single-engine mailplanes are retired. Five more DC-2s are acquired during the month, with one more arriving in March and two in April. **Grand Canyon Airlines (2)** purchases Ford 5-AT-18 on March 27 while the Ford 5-AT-6 and 5-AT-16 are sold to **SACO (Servicio**

Aereo Colombiano, S.A.) at Bogota on April 5. During the second quarter, a crash program of pilot hiring is begun that will double the number of flyers. During the spring, frequencies on the New York to Chicago route rise to four; four are also flown each way each day between New York and Los Angeles. The carrier's DC-2s also offer two return frequencies daily between Chicago and Kansas City.

Having been loaned to the National Aeronautical Association, the DC-1 piloted by Daniel W. "Tommy" Tomlinson breaks its own transcontinental speed record on April 30, flying nonstop from Burbank to New York in 11 hrs. 5 min. Low on fuel in bad weather, Flight 323, a DC-2 en route from Los Angeles to Kansas City crashes at the edge of a Macon, Missouri, farm on May 6 (five dead). This is the first fatal crash of a DC-2 (and the first fatal TWA accident since the Rockne tragedy in 1931). Given that the one passenger killed is an important U.S. senator, Bronson Cutting of New Mexico, the accident becomes one of the most publicized air tragedies of the prewar era. In the face of charges and countercharges, public hearings will be held on the disaster. However, when the Department of Commerce official report is issued, it will blame bad weather and weather reporting for the incident, clearing the airline and its pilots as well as the manufacturer and its aircraft.

Between May 16–19, the DC-1 piloted by Tomlinson sets or breaks 22 records, including eight world records; in the first 2 days of this test series, the aircraft carries a 2,205-lb. load over a 3,107-mi. course in 18 hrs. 22 min. 49 sec. at an average speed of 169.03 mph. Overreacting to the recent tragedy, the company releases both the pilot and copilot of a DC-2 when the investigation of a Chicago runway overrun on June 11 finds pilot error and weather the cause of the accident. No injuries are reported and only the airplane's nose is dented.

In July, Fry authorizes employment of the company's first female flight attendants. In addition, the Ford Tri-Motor 5-AT-69 equipped with floats begins two months of tests in New York Harbor. Certain of these seaplane hops will serve as goodwill flights for city officials and other dignitaries. The onetime *City of Wichita* Ford 5-AT-8 is sold out of service to **Grand Canyon Airlines (2)** on July 16.

On August 2, a DC-2 suffers engine failure after taking off from Albuquerque and makes a nonfatal crash landing in a wooded area near Otto. An investigation will reveal that the underground fuel storage tanks at Albuquerque had been contaminated and that the airplane's fuel tanks were almost completely filled with water. The Texas Company (Texaco), which operates the fuel farm, accepts responsibility for the loss and reimburses TWA for the write-off.

Piloted by William "Bill" Piper, the 5-AT-69 on August 29 begins waterborne commuter flights from "skyports" at the end of Wall Street and the foot of 31st Street to Floyd Bennett Field. During one of his services, pilot Piper flies under both the 59th Street and George Washington bridges, a rare and dangerous feat.

The last Gamma 2D, delivered the previous July, is the first retired; on October 11, it is sold to the Texas Company (Texaco).

For heroism in landing his burning Ford Tri-Motor at Bakersfield, California, back on February 10, 1933, pilot Edward A. Bellande is awarded the Air Mail Pilots Medal of Honor by President Franklin Roosevelt in White House ceremonies on October 29.

During the fall, President Fry agrees to a request from William "Pat" Patterson, president of **United Air Lines**, to join with the other members of the "Big Four," plus **Pan American Airways (PAA)** and Douglas Aircraft Company, in the creation of a jointly funded transport larger than the DC-3A. The first class of air hostesses is graduated from TWA training on December 1 and a second group begins its attendant education, a total of 49 young women in all. The first air hostesses begin flying aboard DC-2s on December 6.

Enplanements for the year total 75,624 and revenue passenger miles flown are 62.45 million. The profit for the year is \$19,404 and is the first in the company's five-year history; with passenger income rising, TWA is no longer entirely dependent upon mail subsidy.

On January 1, 1936, Henry B. duPont resigns as board chairman. The company does not name a successor; however, board member John

Hertz begins to exercise increasing dominance. New uniforms are introduced by cockpit crews; pilots and copilots will henceforth be known as captains and first officers.

Meeting in Chicago on January 14, President Frye joins with **Eastern Air Lines** President Capt. Eddie Rickenbacker, **United Air Lines** President Patterson, and **American Airlines** President C. R. Smith to announce the creation of the trade organization Air Transport Association of America (ATA) and appointment of Edgar S. Gorrell as its first president.

Also during the first month, the DC-1 is sold to the Burbank-based Western Aero & Radio Company for use by Howard Hughes in a contemplated attempt at a new record flight around the world. The aircraft will not be so employed.

The Ford 5-AT-41 is retired on February 3. Having failed to win a mail contract for its New York harbor commuter service, it is shut down and the Ford Tri-Motor 5-AT-69, floats and all, is sold to **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** at Barranquilla, Colombia, on February 11. It is followed out of service by the 5-AT-19 six days later.

When Pittsburgh is cut off from the outside by a flood between March 18 and 22, TWA DC-2s make 60 relief flights from New York during the 4 days delivering passengers and supplies. On March 23, TWA joins with **American Airlines**, **United Air Lines**, **Eastern Air Lines**, and **Pan American Airways** in pledging a \$500,000 pool to assist Douglas in development of a four-engine transport to be called DC-4E (the "E" stands for "experimental"), a 44-seat, 27-ton giant.

The DC-2 *Sun Racer* hits a ridge near Uniontown, Pennsylvania, while approaching Pittsburgh Airport on April 7 and crashes (12 dead). While making a one-engine-out landing at Chicago from New York on May 31, a DC-2 misses the runway and hits a house, ending up in a vacant lot; four aboard are badly hurt. Sleeper berths are introduced in company service on June 1. Piloted by Capt. Andrew Andrews, a DC-2 makes a record flight from New York to Chicago on June 8 in 4 hrs. 6 min. The same plane and crew repeats the same trip a week later in another record, 3 hrs. 48 min. When, on June 25, **American Airlines** introduces the DC-3, TWA responds by ordering \$350,000 in upgrade to the engines of its DC-2 fleet.

On July 6, Tommy Tomlinson, employing a supercharged Northrop Gamma, begins daily test flights into the stratosphere. Distressed by the rising cost of the DC-4E, TWA and **Pan American Airways (PAA)** withdraw from the Douglas aircraft project in mid-month, withhold their payments, and cast their lot with the Boeing 307 Stratoliner effort. The six remaining Consolidated Model 20A Fleetsters are sold later in the year, along with the premier Northrop Gamma 2D. The first new mail destination, Dayton, is awarded on September 17 on CAM-2.

Two Ford Tri-Motors, 5-AT-51 and 5-AT-57, are converted to freighter configuration on October 10 and are leased to a new all-cargo subsidiary, **General Air Freight**. On October 26, its two "Flying Boxcars" begin regularly scheduled air freight service between New York and Chicago via Philadelphia, Pittsburgh, and Columbus. At \$12 per 100 pounds, the operation proves too costly and does not generate sufficient traffic to be maintained, let alone expanded to the West Coast per initial plans. Also in October, new anti-static radio antennas are fitted to company airliners.

During November, Howard Hughes tests a DC-2 at Kansas City. In December, a contract is signed with Boeing for the purchase of six four-engine airliners at \$2 million. Meanwhile, a DC-2 makes the Chicago to New York run in a record 2 hrs. 58 min.—1 whole hour under schedule.

Enplanements for the year total 90,265 and net profit rises to \$205,125.72. The first cash dividend in company history—and the last for 17 years—is now paid: 25¢ per share.

Tomlinson's daily stratosphere tests are concluded on January 24, 1937. En route to Pittsburgh from New York on March 25 with 13 aboard, a DC-2 flips onto its back and dives into a mountain near Clifton, Pennsylvania; there are no survivors in a tragedy later blamed on icing. Orders are now placed for eight Douglas DC-3B Skysleepers (half berths and half day-seats), which are delivered two per month in the second quarter.

On June 1, TWA introduces its new Douglas transports, placing them on the New York to Los Angeles transcontinental Sun Racer service via Chicago or Columbus, Kansas City, and Albuquerque.

The U.S. Post Office bids four new mail routes on June 11. DSTs are also assigned to the New York–Chicago route on June 18, completing the nonstop frequency in 3 hrs. 55 min. The cargo-carrying Ford 5-AT-57 Tri-Motor is sold to Pittsburgh-based Republic Oil Company on July 19.

On August 15, the first DC-3s (without berthing facilities) become available. Also in August, the company is awarded AM-36 Chicago–Dayton, via Fort Wayne, and AM-37 Winslow, Arizona, on the Los Angeles route to San Francisco via Las Vegas. Service is inaugurated over the new routes in September and on September 2 the Ford Tri-Motor freighter 5-AT-51 is retired. On September 22, the old Ford 5-AT-9 Tri-Motor is sold to Pittsburgh-based Gulf Oil Corporation.

Enplanements for the year total 90,000. A net loss of \$959,837 is suffered, the worst in company history to date.

Airline employment in 1938 is just over 1,100 and on January 1 company pilots join ALPA. En route to Burbank from San Francisco on March 1, an off-course DC-2 strikes 9,712-ft.-high Buena Vista Crest northeast of Fresno (nine dead). The search for the wreckage will be abandoned and the plane will not be found until spied by a hiker in the spring.

On May 26, the U.S. Post Office awards the company a new airmail route, AM-38, Phoenix to Las Vegas. It also redefines the carrier's previous AM-37, which is changed to run from San Francisco to Las Vegas. The next day, Howard Hughes sells the original DC-1 to Viscount Forbes, the Earl of Granard, shipping it to London on the deck of a freighter.

When the board refuses to make specified progress payments, Boeing cancels the Stratoliner project in early June. The DC-4E, into the development of which the company has contributed \$100,000, meanwhile makes its initial flight on June 7.

Starring Harry Carey and Richard Dix, the RKO Studios motion picture *Sky Giant* is released during the summer and depicts flight training at a school operated by the airline.

During the aftermath of the New England hurricane of September 21, **American Airlines**, principal carrier in the Northeast, is overwhelmed in its attempt to open air-only communications between New York and Massachusetts.

At the request of ATA President Edgar Gorrell, **Eastern Air Lines**, **United Air Lines**, and TWA, under special permission from Washington, are allowed to contribute aircraft and flight crews to fly emergency relief services over the American routes from New York to Boston. Seven TWA DC-2s are assigned to fly mercy missions in and out of Boston. For 8 days, these planes join aircraft from the 3 other carriers in flying over 8,000 passengers (including refugees out and relief and construction workers in) and 317,000 pounds of mail around the stricken region.

AM-38 is inaugurated, also in September. Having accepted a medal from Herman Goering, pioneer aviator Charles A. Lindbergh is now in corporate disfavor. On December 5, in a move Jack Frye's statement suggests is "routine," the company slogan is changed from "The Lindbergh Line" to "The Transcontinental Line." Although no longer an advisor, the "Lone Eagle" is badly offended.

On December 15, the carrier, responding to orders from John Hertz, who believes the aircraft too expensive, also formally cancels the B-307 contract and becomes involved in a civil suit filed by Boeing. A DC-2 with engine trouble is forced to put down on a grass strip at Hayesville, Ohio on December 20; no injuries are reported. With an engine sent up from Columbus and the help of a local garage for maintenance support, the aircraft is repaired and flown back to Chicago.

During the last week of the year, Frye and long-time Hughes friend Vice President Richter, covertly supply the financier with a list of TWA board members; the fleet meanwhile is reported as comprising 10 DSTs, 9 DC-3s, and 14 DC-2s. The first Boeing SA-307B Stratoliner makes its maiden flight on December 31. Another large deficit is suffered on the year: \$773,263.

In late January 1939, Howard Hughes purchases 12% shareholding, the same amount held by John Hertz. The amount increases and in April, Hughes, heir to the Hughes Tool Company and aviation enthusiast, becomes the principal stockholder; his 25% shareholding is valued at \$1.6 million. He immediately orders Frye to escape the Boeing lawsuit and to resume the Stratoliner contract.

Discussions with Lockheed President Robert Gross and engineers Hale Hibbard and Kelly Johnson concerning the design and manufacture of a new airliner begin in secret at Hughes's Los Angeles home on June 22. The airline seeks a transcontinental airliner that can fly above 250 mph. Years later, Johnson will recall "Flying with Howard" in *Smithsonian Air & Space* 4 (June–July 1989): 102–105.

The first Boeing SA-307B Stratoliner is personally accepted by Howard Hughes on July 13; it will be used for the owner's own purposes, including a planned, but aborted, around-the-world flight. On September 26–29, a chartered DC-3 transports the University of Pittsburgh football team to Seattle for a game against the University of Washington Huskies; the flight is made via Chicago (MDW), Minneapolis, Bismarck, Billings, Helena, and Spokane.

Arriving just after midnight on December 2, a company DC-2 from Chicago and Pittsburgh becomes the first commercial airliner to land at newly opened La Guardia Airport in New York City. The ALPA-organized pilots of TWA sign their first contract with the airline during the year.

The 1939 net loss falls to \$186,000, but due to adjusted mail subsidy, becomes a profit of \$107,000.

In the spring of 1940, orders are placed for 15 DC-3s. When it is decided to purchase the new and secret Lockheed airliner, it is also decided that, in the future, TWA aircraft will be purchased by Hughes Tool Company, which will lease them to the airline. On April 3, a DC-2 is caught in a downdraft over Pittsburgh and crashes; although there are no injuries, the aircraft must be written off.

Three days later, the TWA Stratoliner, christened *Cherokee*, is flown from Portland to Kansas City via Denver. For publicity and photographic purposes, it is given the license number NC1940. Within days, it will establish a new speed record: Columbus to New York at an average ground speed of 349.95 mph. TWA accepts four more Boeings in May and June, christening them *Apache*, *Navajo*, *Comanche*, and *Zuni*. Like the *Cherokee*, they are the first TWA aircraft since the beginning of the company not to bear the fuselage inscription "The Lindbergh Line."

The carrier joins with the other members of the "Big Four" airlines and the ATA on June 25 to form the research group Air Express, Inc. On July 8, Boeing 307 Stratoliners inaugurate the first fully pressurized coast-to-coast service New York–Los Angeles via Chicago, Kansas City, and Albuquerque. The initial flight requires 13 hrs. 40 min., which is 2 hours less than the best DC-3 time.

Having won approval from board members involved, TWA and **Marquette Airlines** agree to a \$350,000 merger of the latter into the former. Because the CAB does not grant immediate approval to Frye's capture of the company and its 564-mile-long AM-58 St. Louis–Detroit via Cincinnati, Dayton, and Toledo, TWA leases the route, beginning on August 15.

On October 11, the second Northrop Gamma 2D is sold to the Texas Company (Texaco). The government's new Priorities Board allows the company only four machines from its DC-3 order by December. With engine loss, a company DC-2 on December 2 is able to make a successful gear-up landing on a hillside near Greensburg, Pa.; no injuries are reported. Also during the year, TWA offers the first-ever in-flight audio entertainment, providing individual receivers to passengers so that they can listen to commercial radio programs.

Passenger boardings increase by 57% to 256,000. The year's net loss is \$232,000.

Making a second approach to St. Louis Airport on January 23, 1941, a DST hits trees and crashes to the southwest (two dead). The research group Air Cargo, Inc. is established by ATA and the "Big Four" on March 14 to study the possibilities of all-cargo operations. The CAB grants permission for the **Marquette Airlines** acquisition in April.

A flight training center for British aircrews, "Eagle Nest," is opened at Albuquerque in June. Under the direction of TWA Capt. Otis Bryan, it will also train pilots for the Army's own Ferry Command. Special Japanese envoy Saburo Kuruu arrives at Washington, D.C. on November 17 aboard a company Stratoliner while on December 5, the **Marquette Airlines** purchase is completed.

Prior to the December 7 Japanese attack on Pearl Harbor, the company's Boeing quintet has recorded 4,522,500 accident-free miles. After a week of discussions, arrangements are completed on December 24 for the company to sell its Stratoliners to the U.S. military; the planes will be leased back and former TWA personnel will form their crews.

The airline also signs a contract on Christmas Eve to operate overseas through a new Intercontinental Division (ICD) created by President Frye the same day and overseen by Capt. Otis Bryan from a base at Washington, D.C. (DCA). Bryan receives orders to come east from his "Eagle's Nest" training facility in New Mexico.

During the last year of peace, the fleet totals 8 DC-2s, 21 DC-3As, 8 DC-3Bs, and 5 B-307s. A total of 439,444 passengers are flown over 200 million revenue passenger miles.

The fleet at the beginning of 1942 numbers 40 aircraft: 3 DC-2s and 37 DC-3s. The words "The Transcontinental Line" painted above the cabin windows of these aircraft are now rubbed out and replaced with the phrase "Victory is in the Air—Buy Bonds."

Capt. Bryan, meanwhile, goes about the business of assembling the ICD at Washington, D.C. Aircraft are transported to National Airport and personnel are recruited or assigned. Among these are the colorful cowboy Capt. Milo Campbell and aircraft mechanic Roy Davis, who will go on to enjoy an almost legendary career as a maintenance chief with the airline. It is he, incidentally, who will, 15 years later, serve as inspiration for Arthur Hailey's portrait of the most famous mechanic in aviation literature, *Airport's* Joe Patroni.

En route to Burbank from Indianapolis on January 16-17, DC-3 Flight 3 smashes into Potosi Mountain, near Las Vegas, in darkness; all 22 aboard are killed, including popular movie actress Carole Lombard. Donald B. McComb Jr. will examine "The Mystery of Flight 3: What Could Happen on a Plane?" in *Airliners* 7 (March–April 1994): 45–48, 54.

The Boeing 307 fleet, including Hughes's personal machine, is turned over to the U.S. Army on January 27; the aircraft are designated C-75s. In the 19 months since entering commercial service, the 5 aircraft have transported 110,000 passengers over 4.52 million miles. To increase range by 1,000 miles, the military takes out the cabin pressurizing system and removes 7 seats from each transport, replacing them with 1,000-gallon fuel tanks.

The B-307 *Navajo*, in camouflage and with a temporary CAB certificate, the USAAF designation of C-75, and TWA crew, undertakes the carrier's first contract overseas flight on February 26, taking a cargo of proximity fuses from Washington, D.C.'s Bolling Field to Cairo. The 17-day roundtrip mission, both a cargo run and a proving flight, is flown by ICD chief Bryan and copilot Floyd Hall (future president of **Eastern Air Lines**) via West Palm Beach, Puerto Rico, Belem, Natal, Monrovia, Liberia, Accra, Kano, and Khartoum.

Following this premier wartime company operation and, indeed, the first use of land transports overseas for the USAAF under contract to a U.S. domestic airline, two Stratoliners are permanently assigned to this Washington, D.C.–Egypt route.

Having been acquired by the military from **American Airlines** in February, the original Douglas Sleeper Transport (DST) *Flagship Texas* is chartered to TWA; after a month's operation, the early DC-3 is redesignated a C-49E on March 14 and is flown under air force contract.

The last three DC-2s are sold to **Northeast Airlines** on April 16. On April 18, a VIP military shuttle is started to the U.K.; three B-307s are allocated to the three-year commitment. Stewards for these flights are provided by **Eastern Air Lines**, the only U.S. carrier to refuse, in the prewar years, to hire female flight attendants.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing

Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen and promised by ATA President Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities and dispatch aircraft to Edmonton, Alberta. There they participate in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Also in June, one Stratoliner is diverted to undertake a series of South Atlantic flights from Natal, Brazil, to Accra on the Gold Coast. While trying to land at Chicago (MDW) from Knobnoster Army Airfield in Missouri in bad weather on October 15, the C-49E, the first Douglas Sleeper Transport (DST) that began service with **American Airlines** as the *Flagship Texas* in 1936, crashes (nine dead).

While flying above an Allied Atlantic convoy in November, a B-307 piloted by Capt. S. T. Stanton is mistaken by a freighter for a German bomber and is fired upon; although hit in the tail by a 20-mm. shell, the aircraft is able to safely complete its flight.

Eighteen of the first 20 Douglas C-54s are assigned to TWA's ICD.

With loaned Boeing test pilot Eddie Allen at the controls, the first Lockheed Model 049-46-10 Constellation makes its maiden flight from Lockheed Air Terminal on January 9, 1943. When the two **Pan American Airways (PAA)** Boeing 314s, *Dixie Clipper* and *Atlantic Clipper*, transporting President Roosevelt and his company to Casablanca arrive at Bathurst, Gambia, on January 13, they are met by Capt. Bryan and three TWA-crewed Douglas C-54s. One is to be the primary aircraft, one secret service, and one the backup aircraft. The four-engine landplanes fly the VIPs 1,500 miles to the conference site where meetings with Prime Minister Churchill and Premier Josef Stalin begin the next day.

On January 24, Bryan flies his important passengers to Liberia to visit President Edwin Barclay for a day before returning to a Bathurst rendezvous with the *Dixie Clipper*. Bryan's C-54s next fly to Natal, Brazil, where they again meet the Boeing and transport Mr. Roosevelt and company to Port of Spain, Trinidad.

Ten company pilots serving in Air Transport Command are among those participating in a mass flight of 30 Curtiss C-46 Commandos from Miami's Homestead Field to Karachi via Puerto Rico, Trinidad, Bahamas, Brazil, Ascension Island, Accra, Kano, El Geneina, Khartoum, Asmara, Aden, and Salalah, where they arrive on April 21. Following a month of orientation and training for locally recruited crew members, the big transports are positioned at the Assam bases of Tezpur and Jorhat to begin scheduled supply flights over the Himalayan "Hump" to the Chinese city of Kunming.

Meanwhile, on May 10, the CAB allows TWA to inaugurate Los Angeles–San Francisco service. In July, the Constellation prototypes requisitioned by the military are designated C-69s. Also, one of the DC-2s sold to the military earlier is returned as a C-32A for use in pilot and mechanic training at Kansas City. On October 5, the carrier purchases a 22% interest in Lowell Yerex's **TACA (Transportes Aereos Centro Americanos, S.A.)** and also acquires stock in the associated companies **Aerovias Brasil, S.A.** and **British West Indies Airways, Ltd.**

During the last week of November, President Roosevelt arrives at Oran by ship where he and his party are picked up by Capt. Otis Bryan's TWA-crewed C-54s. These transport the chief executive to General Eisenhower's headquarters at Carthage and then to Cairo where FDR and Winston Churchill meet with Chiang Kai-shek. After talking to the Chinese leader, the president is flown on to Tehran for a conference with Russian dictator Josef Stalin. From the Iranian capital, the C-54s return to Cairo, Carthage, and then to Dakar where Roosevelt takes a ship back to the U.S.

En route from the Azores to Casablanca on March 25, 1944, an ICD C-54 passes over an Allied convoy covered by two USN escort carriers. Fighter aircraft from these "jeeps" rendezvous with the transport, but

turn away upon establishment of its identity. Long-range RAF Bristol Beaufighters, seeking German reconnaissance planes or surfaced U-boats, happen upon the Douglas later in the day. Mistaking it for a Focke-Wulf 200 Condor, they shoot it down; there are no survivors.

Employing a new Army-owned Lockheed L-049 (C-69) painted with watercolors in quickly removable TWA livery, Howard Hughes and Jack Frye, with 3 other crew and 12 VIP passengers, fly nonstop over the 2,300-mi. from Burbank to Wright Field, Ohio, in an unofficial record time of 6 hrs. 57 min. on April 19. The aircraft, after a few days of unsanctioned demonstration flights, is then turned over to the military, which is not pleased with the commercial advertising gained by the company at its expense. Hughes, no friend of Gen. Arnold, had gained considerable publicity from a plane his company did not own.

A 20% interest is acquired in **Hawaiian Air Lines** in May, while a B-307 flies the first films of the D-Day invasion to the U.S. on June 8. New York to Chicago all-cargo services commence on June 12. The remaining Stratoliners are returned by the military in July; during their wartime careers, the 5 have flown over 7.5 million miles and made in excess of 3,000 transatlantic flights. Military changes made in 1942 are reversed as the long-haul transports are returned to civil airliner standard.

Gen. T. B. Wilson returns from war service to his board chairmanship on September 27. A DC-3 crashes in a storm near Hanford, California, on November 5 (24 dead) and on November 14 a commitment is made to take 10 L-049s. Air Cargo, Inc., the research group, is closed down on November 29, having compiled a number of studies. A DC-3 crashes near Los Angeles on December 1 (eight dead).

During the year, the ICD as a whole flies 60,000 passengers and 11.5 million pounds of priority mail and freight, but the company's overall net profit is just \$2.8 million.

A new Lockheed L-049 Constellation makes a 2 hr. 53 min. flight from Kansas City to Washington, D.C. on February 15, 1945. New York to San Francisco Stratoliner services are resumed on April 1 following the christening of the B-307 *Zuni* by Mrs. James H. Doolittle. In May, Boston-Chicago flights are started via Albany, Binghamton, Williamsport, Pittsburgh, and Cleveland. The CAB grants TWA permission to serve Washington, D.C. and Boston. On June 1, the board, in the famous North Atlantic Case, rules that TWA is to be granted a seven-year transatlantic service permit.

The European service area assigned to Hughes' carrier is divided with **Pan American Airways (PAA)**, but includes Rome and Athens. TWA is granted sole right to land at Paris and is also permitted through-rights to India via Cairo to Bombay.

A new transcontinental DC-3 all-freight service is initiated on July 1. During the summer, a freight-tariff schedule is filed with the CAB. In August, an agreement made the previous year to acquire minority shareholding in and provide support to **Philippine Air Lines (PAL)** is honored.

On V-J Day in September, it is recorded that the ICD has logged over 15.6 million miles in the air and lost 43 of 1,700 employees in 9 crashes. Among the losses are a C-87 that disappears between Natal and Ascension Island and a low-flying C-54 hospital plane apparently shot down by a German U-boat between Iceland and Newfoundland. Total profit achieved by the airline from all of its wartime government contracts is a miniscule \$181,900.

An order is signed on September 14 for 36 L-049 Constellations, including the first 12 manufactured. A new civilian ICD is established at New York and four ex-AAF C-54s are received on September 7. A Constellation leased from the Army Air Force on October 1 lands in Rome on October 9, the first commercial airliner to land in the Eternal City since V-E Day.

The premier owned L-049 is delivered on November 15 and christened *Star of the Mediterranean*. On November 24, a DC-4 breaks the Atlantic crossing record, Gander to Rineanna, Eire, in 6 hrs. 45 min. The second L-049 Constellation is delivered on December 7 and is named *Star of the Persian Gulf*; even prior to receipt of aircraft certification on December 11, one, the leased *Paris Sky Chief*, is employed to make a New York-Paris via Shannon proving flight on Thanksgiving Day.

A VIP publicity flight headed by Postmaster General Robert Hannegan is made to France, again via Gander and Shannon, on December 3. The 3,870-mile flight, at an average speed of 316 mph., takes 12 hrs. 57 min.

The year's last L-049s, the *Star of Paris*, later *Star of Dublin*, and the *Star of Madrid*, arrive on December 13 and 20, respectively. The carrier participates in the establishment of **Ethiopian Airlines, S.C.** on December 26 and provides management and technical assistance.

At year's end, the fleet comprises 94 aircraft, including 8 DC-4s, 5 B-307s, 53 DC-3s, and 17 C-47s under conversion into DC-3s, the first 10 L-049s, and 1 B-17 under conversion into an executive transport. Net profit climbs to \$33,672,000.

In January 1946, 18 units of the L-049 order are converted to L-649s. The fourth L-049, *Star of California*, is delivered on January 1, followed by the fifth, *Star of Africa*, on January 30. On February 3, Jack Frye and Lee Flanagan, to celebrate Lockheed's twentieth anniversary, fly a Constellation with 45 passengers nonstop over a 2,740-mile great circle course from Burbank to New York (LGA) in 7 hrs. 27 mins. (average speed: 330 mph.). Following its use for promotional flights, the L-049 *Star of Paris* is delivered. The first postwar commercial America-Europe landplane service is inaugurated by Capt. Hal Blackburn, with 35 passengers, in the *Star of Paris* on February 6, New York-Paris via Gander, Newfoundland, and Shannon, Ireland, in 19 hrs. 46 min.

The same day, the Philadelphia Eagles pro football team signs a contract for charter service for the 1946 season. On February 7, a Constellation reaches Cairo, following a proposed New York to India route. The seventh L-049, *Star of India*, is delivered on February 9. The *Star of Rome*, with Archbishop Francis Spellman of New York on board, begins service to Italy's capital city on February 11.

Piloted by Howard Hughes and Joe Bartles, with movie stars Linda Darnell, Paulette Goddard, Cary Grant, Veronica Lake, Myrna Loy, Frank Morgan, Walter Pidgeon, William Powell, Tyrone Power, Edward G. Robinson, Randolph Scott, David O. Selznick, and Gene Tierney aboard, the L-049 *Star of California* flies Los Angeles to New York in 8 hrs. 38 min. on February 15.

Later in the day, the eighth L-049, *Star of India*, arrives; it is followed four days later by the double delivery of the *Star of Ireland* and the *Star of Tripoli*. The *Star of Madrid* departs Cape Town for the U.S. on February 19. Pending Allied approval, the company signs a local operation pact with the Italian government on February 23.

The new Constellations give TWA a tremendous boost over its rivals, **American Airlines** and **United Air Lines**. The company's L-049s begin 11 hr. 25 min. westbound and 9 hr. 15 min. eastbound transcontinental Super Sky Chief service on March 1, with a 25 min. refueling stop at Chicago. New York to Chicago 3-hour nonstop Constellation flights commence six days later. The two available services are christened Sun Beam and Lake Michigan. Regularly scheduled New York to Paris and Geneva service is begun by the *Star of Madrid* on March 11.

On March 28, the Allied Commission approves the Italian government's contract with Hughes' airline for the formation of **Linee Aeree Italiane, S.p.A. (LAI)** within 60 days. The next day, the *Star of Rome*, with three crew and nine passengers, is severely damaged when it overshoots a landing at Washington, D.C.; although no injuries are reported, the plane must be written off.

On April 1, the Paris terminus is extended to Cairo, when a new DC-4, *Le Moulmein Pagoda*, covers the 6,000 miles from New York to Egypt via Paris in 29 hrs. The next day, two New York to Pittsburgh and one New York to Milwaukee routes are opened. Regularly scheduled Rome to New York service begins on April 3. Two days later, a 35% interest is taken in **Technical and Aeronautical Exploitation Company, S.A. (TAE)**, the Greek national airline; technical and management contracts are signed as well.

On April 10, the British put pressure on the Italian government not to ratify the American contract and three days later, Rome announces a delay as it is concerned over the British stand on the forthcoming peace treaty's aviation clause. On April 14, the Philadelphia Phillies professional

baseball team charters a plane to fly the team back from Chicago. A provisioning plane arrives at Madrid on April 26 prior to the opening of regularly scheduled weekly service to New York.

Paris to Lisbon and Madrid service commences on May 1. Two days later, Constellation service is inaugurated from Chicago to Cairo via New York, Paris, and Madrid. Company pilots set a strike date on May 4, but back off when the Truman administration establishes an emergency wage board to investigate their demands. Nonstop New York–San Francisco overnight service is inaugurated on May 13–14.

The Italian government, on June 25, approves contracts from both TWA and its rival, **British Overseas Airways Corporation (BOAC)**, governing its civil airlines; TWA drops its demand for exclusive rights. On June 26, a B-17G is purchased from the government's war surplus depot at Altus, Oklahoma; it will be refitted as an executive transport and employed to survey current and planned air routes.

Washington, D.C.–Cairo multistop service begins on July 8 and two days later, a DC-4 arrives at Boston's Logan Airport from Dhahran on the first transatlantic flight to the U.S. from Saudi Arabia. On a routine training flight northeast of its facility at Reading, Pennsylvania, on July 11, the ICD's L-049 *Star of Lisbon* crashes into a hayfield (five dead); the tragedy is caused by an electrical system design flaw. The CAB orders the grounding of the 16-ship L-049 fleet between July 12 and September 20, decimating the airline's domestic and international schedules.

Meanwhile, on July 26, the *Star of Dublin* is damaged at Shannon when its right gear collapses after landing; no injuries are reported. On August 1, the CAB grants permission to service Shanghai from India via Southeast Asia. During the period of the L-049 grounding, C-54s are pulled from domestic runs to service transatlantic routes. Also, the company accepts the findings of the president's emergency wage board with regard to pay, rules, and working conditions for its pilots.

When Constellation operations resume, new night services are offered: the West Coast to the East Coast in 10 hrs. 10 min. and the East Coast to the West Coast in 11 hrs., 40 min., with Chicago the only stop both ways. With the carrier taking 40% interest, it finally assists in the formation of **Linee Aeree Italiane, S.p.A. (LAI)** on September 16. On September 20, TWA provides assistance to the government of Saudi Arabia in establishing **Saudi Arabian Airlines** and receives technical and management contracts in return. The 11th L-049, the *Star of the Adriatic*, is delivered on September 29, followed by the twelfth, *Star of the Red Sea*, on October 5.

The Constellation *Star of India*, with eight crew, crashes at New Castle, Delaware, during an October 13 ferry flight, but all aboard escape the resulting fire after the plane skids off the wet runway and smashes into parked cars.

New York to Chicago service is resumed the next day and West Coast service is also expanded. Following a 34-hour ultimatum demanding action on wage increase demands, the airline's 1,400 pilots and copilots, led by ALPA President David L. Behncke, go out on strike, stranding 3,000 passengers and grounding the airline from October 21 to November 15. The strike costs the carrier \$8 million and as a result, delivery is cancelled on eight L-049s. Meanwhile, on October 26, the carrier assists in the formation of **Iranian Airways**; it takes 10% shareholding and is given a five-year management contract. On October 29, the B-17G executive transport flies company representatives to the IATA meeting at Cairo.

The strike ends on November 14 with an agreement to arbitrate; a new pact is signed two days later and the carrier is able to resume its domestic schedule. New York to Paris flights resume on November 18.

On December 17, an L-049 with 54 aboard makes a forced landing at Columbus, Ohio; no injuries are reported. The L-049 *Star of Cairo* with 9 crew and 14 passengers en route from Paris to New York via Shannon and Gander, crashes into the River Fergus while on final approach to Shannon, Ireland, on December 28 (13 dead).

A total of 852.99 million passenger miles are flown on the year. The net loss for the year is \$14.5 million.

Through passenger service from New York to Bombay via Jerusalem is begun by the L-049 *Taj Mahal* on January 5, 1947. **Air India, Ltd.** is

now appointed the company's general agent for India; the new arrangement gives the Indian carrier its first link to the U.S. During a board meeting on January 9, arrangements are made for the Hughes Tool Company to loan the carrier \$10 million.

Two days later, shareholding in **Aerovias Brazil, S.A.** and **British West Indies Airways, Ltd.** is reduced to less than 10%, with most of the stock in the former sold to local interests. On January 15, the nation's first international all-cargo frequency is started, the New York–Cairo flight of the *Shanghai Merchant*, which also marks the first regularly scheduled direct all-freight service ever operated over the North Atlantic.

Following a "business disagreement," Jack Frye, Chairman T. B. Wilson, and Executive Vice President Paul Richter resign on February 22. Frye is succeeded by board member LaMotte T. Cohu while Warren Lee Pierson becomes board chairman. The dismissal of Frye and Richter, carried out by Hughes advisor Noah Dietrich, is revealed in a terse one sentence announcement in the March issue of the employee newsletter *Skyliner*.

While en route to Europe on March 11, the astrodome of the L-049 *Star of Cairo* fails at 19,000 feet, blowing out navigator George H. Hart. The next day, all Constellations are temporarily ordered to fly at 12,000 feet pending a report on Hart's fatality. Also in March, the outstanding order for 18 L-649 Constellations is cancelled.

The new L-049 *Star of the Yellow Sea* is delivered on March 28. Also at month's end, it is reported that the L-049s' three daily transcontinental roundtrips transport 3,300 passengers every 30 days, as compared to **American Airlines**, which has flown 3,500 with 12 DC-4 services.

During the spring, lukewarm merger discussions are held between Howard Hughes and Juan Trippe of **Pan American Airways (PAA)**. With 12 new Constellations available for overseas flights, 8 earlier units are transferred to domestic routes. In response to the introduction of Douglas DC-6Bs by **American Airlines** and **United Air Lines**, President Cohu orders an increase in New York–Chicago Constellation frequencies on April 30. Also in April, the B-17G executive transport is sold to the government of Iran.

While on a training flight, the L-049 *Star of Athens* crashes into Delaware Bay, near Cape May, New Jersey, on May 12 (four dead). Also in May, three more L-049 Constellations are delivered, including the *Star of China*, and the *Star of the China Sea*, and one unnamed unit.

A DC-4 completes a transatlantic flight on three engines on June 10 and on July 9 the first airborne Roman Catholic communion service is held aboard a New York–Paris Constellation flight. New York–San Francisco via Chicago overnight L-049 flights begin on July 17.

Also in July, the U.S. Senate's Special Committee to Investigate the National Defense Program opens hearings into Hughes's wartime contracts. On August 6–7, the TWA owner charges in testimony that Maine Senator Owen Brewster has offered him a deal: no hearings if TWA is merged with **Pan American Airways (PAA)** and the latter's "Chosen Instrument" international airline scheme is supported. The hearings collapse in the midst of charges of misconduct against Senator Brewster, who will be defeated when running for reelection in 1952. The Constellation *Star of Dublin* is, meanwhile, shifted to domestic service on August 2.

On October 18, the cancelled L-649 program is reinstated, with the 12 ordered aircraft upgraded to L-749 models. The L-049 *Star of Madrid* is written off at Newcastle on November 18 in a training accident (four dead). A DC-4 crash-lands at New Castle, Delaware, on November 19 (five dead).

A total of 113 million revenue passenger miles are flown on the year and the adjusted net loss is \$5.377 million.

The 20% interest in **Hawaiian Airlines** is sold in 1948. As the result of a hydraulic leak, the *Star of Paris* is badly damaged by a ground fire at San Francisco on January 31. Flying a great circle route, an L-049 flies from Burbank to New York (LGA) on February 3 in a record 6 hrs. 39 min. The 12 L-749s are delivered between March and June and are placed on the international routes; on June 1, President Cohu resigns.

The L-049 *Star of Lisbon* is shifted to domestic service on July 18, followed by the *Star of Geneva* on July 27, the *Star of Dublin* on July 28, and the *Star of Rome* on August 17.

The corporate board, meanwhile, votes on August 10 to convert a \$10-million Hughes loan into \$10-per-share common stock, increasing the billionaire's interest from 46% to 76%. The authorized shares of common stock are increased from three to four million at the same board meeting.

On October 1, all-sleeper luxury service, the Paris Sky Chief, is introduced; the return frequency is known as the New York Sky Chief. The first all-sleeper deluxe transatlantic service by a U.S. carrier, it is also the only such offering at this time. The same day, a former military C-69, converted to civil L-049 status and christened *Star of Switzerland*, is delivered; it is followed into service by the *Star of Zurich*, another former C-69, which arrives on November 30.

An L-049 with 5 crew and 18 passengers is damaged beyond repair while landing at Los Angeles on November 25; there are no fatalities.

The fleet at year's end still possesses 72 DC-3s. During the first full year of operations, the ICD transports 48,000 transatlantic passengers. Meanwhile, several more transcontinental services have been opened: Sky Meteor, Sky Queen, Sky King, and Sky Century. The adjusted net loss declines to \$1.278 million.

New York to Zurich Constellation service begins on January 15, 1949 and Ralph S. Damon is elected TWA president on January 25. Employing DC-3s, TWA inaugurates two-flights-per-night Kansas City to Los Angeles Sky Coach service on February 6–7 via Wichita, Amarillo, Albuquerque, and Phoenix. The fare is \$59.50 for the 10-hour flight; free coffee is provided. Also in February, the carrier's shareholding in **TACA (Transportes Aereos Centros Americanos, S.A.)** is significantly reduced.

An order is placed on May 31 for 20 L-749As and the twentieth anniversary of coast-to-coast service is celebrated on July 9. When the government of Iran steps in to reorganize **Iranian Airways**, TWA's five-year management contract is cancelled.

In September, a restyling program for the interiors of the 35 Constellations on hand is inaugurated. This is the largest program of its type yet undertaken by a U.S. airline. Two former L-049s of **KLM (Royal Dutch Airlines, N.V.)** are acquired in November; one will be employed as a personal transport by Howard Hughes while the other will be placed into service as the *Star of New Foundland*.

The L-049 *Star of the Persian Gulf* is damaged in a December 18 landing accident. Employing B-307 Stratoliners and Douglas DC-4s, TWA launches \$110 coach fare transcontinental flights on December 27. During the year, Zurich is added to the European route network and service to Israel is resumed after the end of the independence conflict. North Atlantic bookings rise to 53,000.

An L-749 flies from Gander to Lisbon on January 31, 1950 in a record 7 hrs. 35 min. On February 22, an order is placed for 12 Martin 2-0-2As and 30 4-0-4s; the former are to be leased until the latter are delivered. Also during the month, the first four L-049s, operated by **Air France** since June 1946, are purchased; they will be christened *Star of the Azores*, *Star of Egypt*, *Star of London*, and *Star of Lebanon*. The former **KLM (Royal Dutch Airlines, N.V.)** Constellation employed by Howard Hughes since November is sold to TWA on February 26 and is named *Star of New Foundland*.

The first direct New York to Paris radio-teletype circuit is opened on March 1, followed the by initiation, five days later, of coast-to-coast daytime DC-4 coach service. A new base is occupied at Kansas City on March 24, from which the company can direct its operations and co-ordinate facilities; the location of every plane in operation can now be traced from this locale. During these early months, Milan becomes a company destination. On May 17, the company is renamed **Trans World Airlines, Inc. (TWA)**.

TRANSCONTINENTAL SUR, S.A.: Uruguay (1992–1994). Transcontinental Sur is established at Montevideo in 1992 to offer all-cargo

charter and contract services throughout South America. Revenue operations begin with a single leased Boeing 707-321C.

Financial problems mount in 1993 and unable to maintain economic viability, the company is forced to shut down in 1994.

TRANSEAST AIRLINES: Riga International Airport, Riga, LV-1053, Latvia; Phone 371 7207 771; Fax 371 7207 772; <http://www.junik.lv/~tea>; Code T4; Year Founded 1992. Transeast is set up at Riga in December 1992 to offer scheduled regional passenger and cargo air services. J. Mutjanko is appointed managing director and he is provided with a single Yakovlev Yak-40. Revenue flights commence in May 1993 to Jonkoping, Sweden. Enplanements for the first full year of service in 1994 total just 1,025.

Airline employment stands at 20 in 1995 and in March a new line is opened from Riga to Billund, Denmark. This year Managing Director Mutjanko's Yak-40 transports a total of 7,319 passengers, a huge 85.9% increase over the previous 12 months.

The workforce is reduced to 11 in 1996. The Yak has another good year as customer bookings soar 28.5% to 9,403. The employee population grows to 28 during 1997. Passenger boardings move up 2.9% to 9,667.

The workforce is cut 25% in 1998 to 21. Customer bookings also move downward, falling 27.9% to 7,000.

Customer bookings fall 18.6% in 1999 to 5,000. In an effort to generate additional income, charters are introduced from Riga to various European cities.

A total of 24 workers are employed at the beginning of 2000, a 14.3% increase over the previous 12 months. Sergey Avvakumovs is named managing director.

TRANSEAIR, INC.: Case Postale 9, Longue-Pointe de Mingan, Quebec G0G 1V0, Canada; Phone (418) 949-2261; Fax (418) 946-2304; Year Founded 1971. Originally established as Transports Aériens Sept-Iles, Inc. in 1971, this concern begins nonscheduled lightplane passenger and cargo charters to other points in Quebec and along the St. Lawrence River. The first two Douglas C-47As (military DC-3s) are purchased in 1978, followed by a Convair CV-240 in 1979.

Another C-47A and a four-engine DC-4 are acquired in 1982. In 1985, the company is reformed and adopts its present name. Revenue flights continue through the remainder of the decade.

En route to Lac Bienville on February 28, 1989, a C-47A, with two crew crashes near Quebec City; there are no survivors.

Service continues in the 1990s. In 1998–1999, the company operates a pair of C-47As and a CV-540.

TRANSGABON (COMPAGNIE AERIENNE GABONNAISE, S.A.): Gabon (1961–1968). Reformed under a new name in the spring of 1961, Founder/Chairman Jean-Claude Brouillet's pioneer carrier continues to provide internal air services in the newly independent country of Gabon. Chief Leon M'Ba is president.

Unable to provide its own transnational services, Gabon, on June 26, becomes a member of the French-sponsored long-haul consortium **Air Afrique, S.A.**

Transgabon retains responsibility for domestic and regional services within Gabon, employing most of its earlier fleet of de Havilland DH 89A Dragon Rapides, a Nordyn Norseman, and a Douglas DC-3. Before the end of September, three more DC-3s have been purchased from and delivered by **Air France**.

Over the next three years, Transgabon continues to improve its fleet and services. In 1964, the fleet includes 3 DC-3s, 1 DH 89A, 1 Beech 18, 3 Cessna 182s, 2 Bristol 170 Mk. 25s, and 1 each C-195 and C-205.

UAT French Airlines, S.A., which has provided support and assistance since 1961, purchases the carrier from its founder at the beginning of 1965. Traffic figures are released for the first time and show enplanements of 72,200. A total of 40 domestic points are served by the end of 1967.

During the first quarter of 1968, **Air Gabon (Compagnie Aerienne Gabonaise, S.A.)** is purchased and merged. Transgabon not only acquires the small line's fleet of 1 Britten-Norman SN-2 Islander (one of the first in West Africa), 4 Beech 18s, 3 C-185s, 2 C-180s, 1 C-310, and several helicopters, but markets at Port-Gentil, Libreville, Gamba, Tchibanga, and Lambarene. The latter outpost has long been the adopted home of Dr. Albert Schweitzer.

In July, Transgabon becomes the country's national carrier under the official name of **Societe National Transgabon, S.A.**, though it continues to be known as Transgabon.

TRANSGABON (COMPAGNIE TRANSPORT AERIEN DU GABON, S.A.): Gabon (1948–1968). While in the U.K. in 1948, pilot Jean-Claude Brouillet, proprietor of a trucking company based at Libreville, French Equatorial Africa, purchases a de Havilland DH 82 Tiger Moth, which he takes to France en route back to FEA. In Paris, he engages the Farman Company mechanic Louis Laurent and together, the two fly the aircraft back to Libreville, arriving after a 22-day hop. Just after arrival, a storm destroys the aircraft.

Brouillet and Laurent are able to convince local foresters to provide them with a FFr 5-million loan, with which a DH 89A Dragon Rapide is acquired. With airfields constructed by their backers and authority from the colonial government to operate a mail service, the two entrepreneurs are able to begin flying from Bitam to Lambarene in 1949 via Oyem and Booue.

These mail services continue for the next two years, despite the arrival of **Air France** with its French government authority to take over internal air service much the same way **Sabena Belgian World Airlines, S.A.** has in the Belgian Congo. With assurances from the colonial government that it still free to operate under its authority, Brouillet's concern surveys possible passenger routes.

Compagnie Transport Aerien du Gabon, S.A., also known unofficially as Transgabon, begins DH-89A domestic services in 1951. The inaugural route stretches from Libreville to Port Gentil via Equata, Dome les Barnes, and Gongoue. While competition begins with **Air Gabon, Compagnie Aerienne Gabonaise, S.A.** formed the same year, additional DH-89As are brought in.

Under an unofficial understanding with **Air France**, the company works to improve its frequencies and equipment in 1952–1959, adopting a variety of aircraft ranging from Norduyn Norsemen to Douglas DC-3s. A number of replacement services are offered on behalf of the French flag carrier.

French Equatorial Africa becomes Gabon on August 17, 1960. Chief Leon M'Ba, an associate of Chairman Brouillet since the late 1940s, becomes president in February 1961. **Air France** now transfers its internal traffic routes to **UAT French Airlines, S.A.** or its predecessors. Compagnie Transports Aeriens du Gabon, S.A. is now renamed **Compagnie Aerienne Gabonaise, S.A.**, but remains Transgabon to almost everyone except shareholders.

TRANSGABON (SOCIETE NATIONAL TRANSGABON, S.A.): Gabon (1968–1977). In July 1968, Transgabon becomes the country's national carrier under the official name **Societe National Transgabon, S.A.** Previous routes are maintained as is participation in the long-haul consortium **Air Afrique, S.A.** Indeed, the new Transgabon is refinanced, with FFr 40 million provided in equal installments by **Air Afrique, S.A.** and the government of Gabon.

Over the next two years, the fleet is increased to include 4 Douglas DC-4s, 4 DC-3s, 1 BN-2, 1 Beech 18, 1 Beech 58 Baron, the old Norduyn Norseman, 1 Bell Model 47J helicopter, and 10 small Cessnas.

Destinations on the route network, usually visited at least weekly, include Bata, Bitam, Booue, Fougamou, Franceville, Kango, Lambarene, Lastoursville, Libreville, Makokou, Mayumba, Medouneu, Mitzi, Moanda, N'Dende, Ndjole, Okonja, Oyem, Pointe-Noire, Port-Gentil, and Tchibanga.

Air Afrique, S.A. and other shareholders are reduced to minority stakes in 1971 as the government of Gabon provides two each Hawker Siddeley HS-748s and DC-6A/Bs. As Transgabon grows in size and stature over the next five years, both **Air France** and **UTA French Airlines, S.A.** withdraw or significantly reduce their competition with the company within Gabon.

In May 1977, the carrier is reformed and renamed. Gone is the familiar Transgabon marketing title and in its place is a trendy new marketing name **Air Gabon** and the new official title of **Compagnie National Air Gabon**. At this point, the airline possesses a heterogeneous fleet that includes 3 Fokker F.28s (2 1000s and 1 4000), 2 DC-6As, 1 DHC-5 Buffalo, and 1 Sud-Est SE-210 Caravelle III.

TRANSGLOBE AIRWAYS, LTD.: United Kingdom (1965–1968). On August 1, 1965, **Air Links, Ltd.** is officially renamed Transglobe Airways, Ltd. Simultaneously, a new Bristol Britannia 314 begins flying a number of inclusive tours from London (LGW) Airport on behalf of **British United Airways, Ltd.** Destinations visited include Palma, Dubrovnik, Rimini, and Tunis. Later in the year, several charters are flown to Baghdad on behalf of **Caledonian Airways, Ltd.** The company's final two Canadair C-4 Argonauts finish their charter careers in October and November, respectively, and are withdrawn. Another Britannia 314 joins the fleet on December 12.

Early in 1966, Bolton Steamship Company, Ltd. buys 42% of the carrier and invests £250,000. During January, the carrier's two Britannia 314s participate in a supply airlift between Dar es Salaam and Lusaka. A Britannia 302 is acquired in May and is employed to begin flying the first of seven pro rata charters to the U.S. In September, an agreement is signed with **The Flying Tiger Line** to purchase two Canadair CL-44D-4s; however, they are not delivered.

In January 1967, a Britannia 309 is leased from **Ghana Airways, Ltd.** for a year. During the summer season, a total of 27 transatlantic group charters are flown to Mediterranean resorts on behalf of Mediterranean Villas and Lord Brothers. In May, a lease-sale deal is made with **Seaboard World Airlines** for the acquisition of six CL-44D-4s. Petitions to the ATLB for scheduled licenses to North America are turned down in December.

Offices are opened in Hong Kong and Toronto early in 1968 and in February an 11.6% share in the company is purchased by the Liverpool-based shipping group Ocean Steamship, which invests £200,000 in the carrier. The American CAB in April grants wide charter privileges and the first CL-44D-4 is now delivered.

By the start of the summer group charter season, three Canadairs are in service. On September 1, two CL-44D-4s are leased to **Trans-Mediterranean Airways, S.A.L.** In early November, Bolton Steamship Company and Ocean Steamship pull out, forcing the carrier to collapse on November 28.

TRANSINDO AIR CHARTER: Halim Perdanakusuma Airport, Jakarta, 13610, Indonesia; Phone 62 21 800 7222; Fax 62 21 809 7227; Year Founded 1990. Transindo is established at Jakarta in 1990 to offer executive and small group passenger charters and medevac flights across the nation. By 2000, the company employs 20 full-time pilots and operates 2 each Grumman Gulfstream G-1159A Gulfstream IIIs and British Aerospace HS-125-700s, plus 1 HS-125-800 Hawker.

TRANSKEI AIRWAYS CORPORATION (PTY.), LTD.: P.O. Box 772, Mantanzima Airport, Umtata, South Africa; Phone 27 (471) 23 368; Fax 27 (471) 310 632; Code KV; Year Founded 1976. TAC is organized at Umtata on September 24, 1976 to serve as the national airline of the independent homeland of Transkei. R. P. Wronsley is named chairman with Maurice S. Pike as managing director. During the fall and early winter, a fleet is assembled comprising 1 Beech King Air 100, 1 Beech King Air 200, and 1 Britten-Norman BN-2 Islander.

Revenue services begin on February 4, 1977 over a six-times-per-day roundtrip route to Johannesburg. Enplanements for the year total 5,168.

During 1978–1980, traffic increases and the fleet is bolstered by the addition of a new Hawker Siddley HS 748-2A and another Islander. Enplanements at the 52-employee company total 8,546 in 1981, rising to 12,717 in 1983.

During 1984–1989, service is launched to Umtata, Port Elizabeth, and Durban. Sipo Mdllele becomes managing director in 1987.

In 1990, Peter Cressey is named managing director. An Aerospatiale AS-350B Ecureuil is acquired and rotary-wing services are started within Transkei to Lusikisiki, the Mkamban game reserve, and the Mzamba Wild Coast Casino.

In 1991 and 1992, the South African independent **Safair (Pty.), Ltd.** acquires one each British Aerospace BAe 146-100QT and BAe 146 QC for overnight parcel services. During the day, the aircraft are re-configured to passenger service and under contract to Transkei, begin to fly between Johannesburg and Umtata. Airline employment in 1993 totals 63.

Three workers are released from the former “national airline of the Republic of Transkei” in 1994. The new South African government, having reintegrated Transkei into South Africa, grants the carrier authorization for services from Umtata to Cape Town, Margate, and Pietermaritzburg, but the routes are not immediately initiated. K. A. Faure becomes chairman and Peter Cressey returns as managing director.

Flights continue in 1995–1999, during which years there are no significant changes in personnel, fleet, or operations.

TRANSLIFT AIRWAYS, LTD.: Ireland (1991–1996). Translift is established at Shannon Airport, County Clare, in October 1991 to offer passenger and cargo charter flights to destinations in Ireland and the U.K. Major emphasis is on the provision of supplementary capacity for the world’s scheduled carriers during peak demand periods.

Chairman and CEO Patrick J. McGoldrick, founder of **HeavyLife Cargo Airlines, Ltd.** and former CEO of **Ryanair, Ltd.** and President Michael Halper assemble a workforce of 125 and a fleet comprising 1 each Douglas DC-8-71 and DC-8-71F. Capitalization in equity and loans of \$3.7 million are provided by the British investment capital firm 3i Corporation and by CIN Venture Management.

Revenue flights commence during the last week February 1992 with an all-cargo charter from Paris to Bombay on behalf of **Air France**. Passenger flights commence at the end of April and 100,000 charter travelers are flown during the next 8 months.

A new Airbus Industrie A320-231 is chartered in May 1993; christened *Caitlin Shligigh*, it begins scheduled operations from Dublin and Shannon to Los Angeles on October 11. Holiday tour destinations now include Tenerife, Palma, Malaga, Las Palmas, Athens, and the Florida city of Orlando.

Bookings for the first full year climb to 325,000.

Airline employment stands at 225 in 1994 and the fourth A320-231 is received in July. Two of the Airbuses are chartered to **Leisure Air** in the U.S. The company also begins to operate services from Germany to Salzburg, Athens, and Mediterranean holiday destinations on behalf of **Aero Lloyd, GmbH**.

Two additional A320-231s and an A300B4-103 are chartered in 1995, with the former pair being leased out to Canair Cargo, Ltd. in Canada. In addition, a third A320-231 is received from and operated on behalf of **Virgin Atlantic Airways, Ltd.** The Atlanta-based subsidiary **Trans-Meridian Airlines** is established in the fall and the company’s passenger charter business formerly conducted with **Leisure Air** is transferred to it, along with two A320-231s.

A second A300B4-103 arrives in 1996; however, the VAA charter ends. One of the A320-231s is leased to **America West Airlines**. All Leisure Travel Holdings, Ltd. acquires a 49% stake in the company early in 1997 and on April 10 the company name is changed to **Transaer, Ltd.**

TRANSMED AIRLINES, LTD.: Egypt (1989–1993). Organized at Cairo in the summer of 1989 by a consortium of Egyptian and Middle Eastern private investors, Transmed names Fadi Saab as president. Two Boeing 737-204s are leased from **Britannia Airways, Ltd.** and employed to begin passenger charters on December 1.

Three chartered B-737-4Y0s join the fleet in September 1990. Destinations visited come to include Luxor, Abu Simbel, Alexandria, Aswan, Hurghade, Amsterdam, Barcelona, Athens, Catania, Bucharest, Faro, Dusseldorf, Izmir, Graz, Madrid, Lisbon, Milan, Marseilles, Paris, Nice, Rome, Venice, Toulouse, and the Gulf states. The marketplace is searched for a pair of B-707 freighters.

Although the Boeing Stratofreighters are not added as planned, operations otherwise continue apace in 1991. Airline employment reaches 120.

In 1992, the fleet includes 2 B-737-3K2s leased from **Transavia Airlines, N.V.**; a B-737-3M3 chartered from **Eurobelgian Airlines, S.A.**, a B-737-33A leased from **Air France**, and two B-737-4Y0s chartered from GPA Group. Having encountered fiscal difficulties during a time of economic downturn, the company shuts its doors in 1993.

TRANSMERIDIAN AIR CARGO, LTD. (TAC): United Kingdom (1962–1979). **Transmeridian Flying Services, Ltd.**, founded by Thomas D. Keegan and a group of airline pilots, is registered at Liverpool on October 5, 1962. With Albert H. Benson as managing director and with a Douglas DC-4 leased from **Keegan Aviation, Ltd.**, it begins revenue flight operations on December 15.

DC-4 long distance charters in January 1963 are flown to such destinations as Athens, Nice, and Brindisi. In the spring and summer, flights are also undertaken to the Middle East and Far East; a second DC-4 is leased in July. Charters to Continental destinations are flown late in the year.

During the year, a total of 1,126 passengers are transported in 94 non-scheduled flights.

In January 1964, new charters are undertaken to Holland and France and on January 11, a long-haul flight to Damascus is flown. Other destinations visited include Stuttgart, Rotterdam, Lourdes, Palma, and Belgrade. At this point, emphasis is placed upon freight services. A DC-7BF is delivered in December.

The two DC-4s are taken off lease in January 1965. The DC-7BF enters service in March, undertaking all-cargo charters to various points in the Middle East and Far East, some on behalf of the Ministry of Defence. Two DC-7CFs are purchased in January and February 1966, allowing sale of the DC-7BF in March. Long haul charters, including livestock transport, are undertaken to Africa, the Middle East, and Far East.

Cargo charters with the two Douglas freighters continue apace in 1967. A third DC-7CF is acquired in November; however, one of the earlier two models is sold in December. Late in the year, TFS becomes a wholly owned subsidiary of Trans World Leasing and changes the carrier’s name to **Trans Meridian (London), Ltd.** Capt. Reginald Stokes replaces Benson as managing director.

In January 1968, Europe’s only all-cargo airline purchases another DC-7CF. Several of the freighters are leased to other airlines. The base of operations is switched from Cambridge to London (STN). A Canadair CL-44D-4 is purchased in December.

The CL-44D-4 enters service in February 1969, beginning three months of livestock flights from the U.K. to Asmara, Ethiopia. Other freighter destinations during the year include Khartoum and Uganda. Two DC-7CFs are sold in April. Two more swing-tail Canadairs begin operations later in the year.

In January 1970, the company’s Canadair’s fly supplies into Nigeria and on January 22 make the first U.K. relief flight to any African nation, taking 20 tons to Lagos from Entebbe for **Uganda Airways Corporation**. A. L. MacLeod succeeds Reginald Stokes as managing director in July, at which time the company begins trading under the name Transmeridian Air Cargo, Ltd. Also at this time, a CL-44D-4 is leased from Conroy Aircraft Company.

Trans World Leasing purchases **British Air Ferries, Ltd.** in October 1971 and three more Canadairs are purchased in November and December. In the spring of 1972, two Transmeridian CL-44D-4s are briefly transferred to the new associate, but are found unsuitable. Meanwhile, Transmeridian enters into scheduled cargo service and inaugurates regular operations to West Africa and the Far East.

The 500-employee company enjoys a 30% increase in sales as 46.71 million FTKs are operated.

In 1973, long-haul freight charters and the new scheduled flights continue apace. A CL-44B Skymonster is acquired to handle outsize loads. In April 1974, a CL-44D-4 is sold to **Transvalair, Ltd.** of Switzerland, a Trans World Leasing interest. New offices are opened in Maastricht, Muscat, Hong Kong, Lagos, and Vienna.

The workforce in 1975 stands at 291. In May, weekly CL-44D-4 all-cargo flights are initiated from London (STN) to Kano and Lagos. New long-haul flights to the Far East are undertaken and labeled Genghis Khan and those begun to Africa are known as Impala. In December, a CL-44D-4 is leased to **Limburg Airways, B.V.** and flies worldwide charters from Maastricht. Freight traffic accelerates 48% to 118 million FTKs.

The Limburg lease ends in August 1976 while long haul flights to the Middle East and Far East continue. Regular charters are introduced between London (STN) and Cairo and Asmara in support of the Middle East oil industry. In November, the Sultan of Oman pays Transmeridian £250,000 to fly the Gerry Cottle's Circus from the U.K. to Oman.

The carrier's eight CL-44Ds transport a total of 164.63 million FTKs on the year, an increase of 24.7%.

Airline employment at the beginning of 1977 stands at 284. In March, two ex-AeroPeru (**Empresa de Transportes Aereos de Peru, S.A.**) DC-8-50Fs are placed in service, bringing Chairman W. B. Slater and Managing Director M. B. Hacker's fleet to 10 aircraft: the 2 DC-8-50Fs, 1 Conroy CL-44-O, 01 de Havilland DH 104 Dove, and 6 Canadair CL-44Ds.

Control of TAC is obtained by the Trafalgar House Group in June when Cunard Steamship Line, Ltd. acquires Keegan's 90% interest.

Just after takeoff from Hong Kong on September 2, a CL-44D with four crew suffers the loss of its No. 4 engine; control is lost and the plane plunges into the sea. There are no survivors.

TAC Heavylift, Ltd. is formed on October 31, 1978 on a two-thirds to one-third shareholding basis by Cunard Steamship Line, Ltd. (which had recently taken control of Transmeridian Air Cargo) and Eurolatin Aviation, Ltd., owners of **IAS Air Cargo, Ltd.**, then involved in the (later cancelled) establishment of a proposed African cargo airline. Simultaneously, the Dove is retired.

The amalgamation of the two cargo operators is completed on August 15, 1979.

TRANSMERIDIAN AIRLINES: 680 Thornton Way, Lithia Springs, Georgia 30122, United States; Phone (770) 732-6900; Fax (770) 732-6956; <http://www.transmeridian-airlines.com>; Code T9; Year Founded 1995. TA is established at Atlanta on June 30, 1995 as a subsidiary of the Irish charter operator **Translift Airways, Ltd.** to offer domestic and international charter and subservices for major and national airlines. Glen Schaab is president, with David Ray as senior vice president-operations.

Revenue flights commence from Chicago (ORD) and Detroit (DTT) on October 30 with two Airbus Industrie A320-231s leased from the parent. Costs exceed revenues and there are losses: \$690,000 (operating) and \$699 million (net).

Operations continue in 1996 as a total of 196,000 passengers are transported. Operating income of \$20.7 million is generated, but expenses are \$23.23 million. As a result, the operating loss deepens to \$2.57 million and the net loss rises to 2.59 million.

The company enjoys a beneficial 1997. On April 10, **Translift Airways, Ltd.** is reformed into **TransAer International Airlines, Ltd.** Also in April, two Boeing 727-251As formerly operated by **Northwest Airlines** are acquired, beginning service by month's end to a variety of Northeast destinations.

When **Great American Airways** encounters regulatory problems, also in April, TransMeridian contracts with the city of Myrtle Beach, South Carolina, and tour operator World Technology Systems to provide charter service that supplements regular flights schedules. The WTS charter operation is known as **Sun Jet International Sales** and the South Carolina service as "Myrtle Beach Jet Express."

Beginning in September and continuing through the following February, tour operator World Technology Systems sponsors a promotion in which every passenger purchasing a "Myrtle Beach Jet Express" ticket will receive two free rounds of championship golf at a selected course.

Two A320-231s painted in the colors of its parent with TransMeridian titles are leased in the fall to operate winter passenger charters to Florida and Caribbean destinations.

Customer bookings accelerate 41.3% in 1997 to 277,000. Operating revenues jump 78.7% to \$23.4 million, but expenses grow 90% to \$23.32 million. Consequently, the previous year's operating loss becomes a slight \$56,000 gain; there is also a tiny net profit of \$75,000.

Early in January 1998, the company enters into a one-year commercial agreement with **Trans World Airlines (TWA)**. Beginning on February 20, the major undertakes daily, nonstop, \$99 one-way throughfares in partnership with the **Sun Jet International Sales** service "Myrtle Beach Jet Express" between Myrtle Beach and many other destinations via connections at St. Louis and New York.

In March, bankrupt **Sun Jet International Airlines** files a reorganization plan. By mid-April, President/CEO Kent Elsbree's **Sun Jet International Sales**, via its subcontracts, offers daily flights from Orlando and Tampa/St. Petersburg to Newark and twice-daily roundtrips to Newark from Fort Lauderdale. These flights are operated by TransMeridian, **Sun Pacific International Airlines**, and the start-up **Winair**.

On June 20, twice-daily (except Tuesday) roundtrips begin from Fort Lauderdale to New York (JFK), along with daily return flights between Fort Lauderdale and Long Island-MacArthur Airport at Islip, New York. Daily (except Tuesdays) roundtrips simultaneously commence from Islip to Orlando. The service is also subcontracted to TransMeridian, **Sun Pacific International Airlines**, and **Winair**.

When Hurricane Bonnie threatens Myrtle Beach on August 25, the company employs one of the trijets committed to "Myrtle Beach Jet Express" service to evacuate passengers to Newark. Two first come-first serve flights are operated in the early evening.

For the third consecutive year, the popular New York to Myrtle Beach air service gives away one free golf play for every ticket purchased. Each passenger receives two rounds of championship golf at a choice of five courses from September 9 through February 28. Courses participating in this year's promotion are Angels Trace, Deer Track, Raccoon Run, Toski Links, and Wicked Stick.

Passenger boardings drop 9.1% to 318,000. Although revenues of \$42.95 million are earned, expenses are \$47.93 million. The operating loss improves to \$4.08 million, while the net loss is \$5.83 million.

The fleet comprises 5 A320-231s and 1 B-727-227A at the beginning of 1999.

On takeoff from Montego Bay on January 2, an **Air Jamaica, Ltd. (2)** A310-324 blows a tire and thus becomes unavailable for service. The scheduled flight to Atlanta is cancelled. In Georgia the next day, the B-727-227A is leased from TransMeridian to operate the return flight to Jamaica.

While en route from Atlanta as Flight 56, the trijet with 110 passengers is forced to divert to Jacksonville when passengers report smelling smoke. No problems are found and the flight to Jamaica is completed.

By the first quarter, **Sun Jet International Sales** has flown over 1,000,000 passengers on its "Myrtle Beach Jet Express." A second daily roundtrip "Myrtle Beach Jet Express" service is inaugurated on March 4.

A new nonstop service is inaugurated by **Sun Jet International Sales**, also on March 4, from West Palm Beach and Orlando to Newark. The flight brings the total number of daily flights from Florida to New York to seven, including six daily (except Tuesday) roundtrips simultaneously reinstated from Fort Lauderdale to New York (JFK) and Islip.

Once more, the actual service is provided by aircraft operated by **Sun Pacific International**, **TransMeridian**, or **Winair**.

The capacity of **Sun Jet International Sales** is reduced on April 16, when the FAA issues an emergency order suspending the operating certificate of **Sun Pacific International** due to continuing maintenance problems. **Winair** also encounters regulatory problems; it, too, will cease operations, on July 6.

Preparing for an April 16 departure from Newark to Florida, a **Sun Jet International Sales** flight, operated by **TransMeridian**, must be evacuated after a bomb threat is received. No explosive device is found and the service eventually departs.

The loss of two of its three contracting carriers and problems at the third force the airline to incur significant additional operating expenses for replacement aircraft and revamped scheduling, travel protection for passengers, and hotel and meal costs. Unable to continue, **Sun Jet International Sales** shuts down at 3 p.m. on June 25, leaving numerous ticket-holders stranded.

Despite the loss of the **Sun Jet** contract, passenger boardings jump 58.3% on the year to 546,000. Revenues advance 57.8% to \$67.77 million, while expenses are up 47.8% to \$70.87 million. The financial picture improves to \$3.09 million (operating) and \$3.15 million (net).

A total of 250 workers are employed at the beginning of 2000. Since its founding, the carrier has transported its customers to over 100 destinations worldwide. A new and revised livery featuring a darker blue color is unveiled on June 30.

TransMeridian declares Chapter XI bankruptcy on September 22. Less than a month later, on October 18, **Transaer International Airlines, Ltd.** shuts down and is liquidated. That carrier had suffered a huge drain on its cash resources following its \$18-million investment in the American carrier; it had also guaranteed **TransMeridian's** liabilities. As might, perhaps, be expected, **TransMeridian** does not fold, but stays active. One A320-231, 2 B-727s, 1 Dash-281A, and 1 Dash-287A remain in the register as the year ends.

Overall customer bookings during these 12 months plunge 25.5% to 407,000.

TRANSMILE AIR SERVICE SDN. BHD.: Mezzanine-2 Block B, Letter Box 20, Wisma Semantan 12, Jalan Gelenggang, Kuala Lumpur, 50490, Malaysia; Phone 603-253-7718; Fax 603-253-7719; http://www.transmile.com; Code TH; Year Founded 1992. Privately owned **Transmile** is set up in 1992 by **Transmile Sdn. Bhd.**, which also includes **Transmile Engineering**, **Transmile Management**, **Transmile Spares**, and **Transmile Helicopters**, in affiliation with **Sterias Tours & Travel (M) Sdn. Bhd.** **Tan Sn Zalnol Mahmood** is chairman, with **Gan Boon Aun** as managing director. From its base at Kuala Lumpur, Chief Pilot Capt. Gavin Barry Minter's 322-employee carrier is prepared over a year to offer domestic scheduled and charter passenger and cargo services. During this period, an owned fleet is assembled that includes 4 Cessna 208 Caravan Is and 1 Boeing 737-248C.

Revenue services commence on November 28, 1993 and a B-737-205C leased in early 1994. Domestic destinations served in 1995-1998 include Kota Kinabalu, Kuching, Labuan, Langkawai, Layang-Layang, Miri, Peninsula Malaysia, Sandakan, Sibul, and Tawau. Regional markets include Bangkok, Chang Mai, Christmas Island, Denpasar, Hat Yai, Jakarta, Macau, Manila, Medan, Padang, Phnom Penh, Phuket, Shenzhen, Singapore, Surabaya, Ujiong, U-Tapao, and Yangon.

The owned fleet during these years is increased by the addition of one each Cessna 406 Caravan II, B-737-230C, B-737-2X6CA, plus the B-737-205C leased in 1994. One Cessna 208 Caravan I is withdrawn.

In November 1997, two former **Malaysia Airlines, Ltd. (MAS)** Douglas DC-10s are ordered for use on Hadj service the following spring. Once the holy duty is completed, the two will be converted into freighters.

In addition, a marketing agreement is signed with the Indonesian carrier **Mandala Airlines**.

The Asian economic crisis has an increasingly dramatic impact on this carrier, causing a significant downturn during the latter year and the

suspension of all regional service except routes to Kuching, Labuan, and Kota Kinabalu. Operations temporarily cease during the third week of March 1999.

Employing its fleet of four Boeing 737-200s, the company resumes seasonal, ad hoc, and long-term exclusive flights at the end of October on behalf of tour operators, government agencies, corporate incentive groups, and labor agencies. Services commence between Peninsula Malaysia and Sabah and Sarawak and to regional points in Indonesia, Thailand, the Philippines, Vietnam, Myanmar, Cambodia, and Southern China.

Flights continue in 2000 and a B-727-2F2F is purchased from **THY Turkish Airlines (Turk Hava Yollari, A.O.)**. Late in the year, the company paints its Web site address on the fuselage sides of its B-737 fleet.

In addition, a marketing agreement is signed with the Indonesian carrier **Mandala Airlines**.

The Asian economic crisis has an increasingly more dramatic impact on this carrier, causing a significant downturn during the latter year and the suspension of all regional service except routes to Kuching, Labuan, and Kota Kinabalu. Operations cease during the third week of March 1999.

TRANSNIGER AVIATION, S.A.: Niger (1968-1994). The FBO and charter operator **Transniger Aviation** is established at Niamey, Niger's capital city, in 1968. Revenue flights, including passenger and cargo contract services and air taxi work begin with a pair of Cessna 185s.

Over the next 12 years, airline employment grows to 30 and the fleet is increased by the addition of 2 Piper PA-23 Aztecs, 2 Cessna 402s and 2 C-404s. Enplanements in 1982 total 2,800.

Flights continue with little change over the next 7 years, as Abdou M. Goge becomes president and the workforce is increased to 40.

A scheduled airline division of the air taxi and charter operator is established in early spring 1989. Scheduled flights are inaugurated in April with the Cessnas to regional destinations, including Agadez, Maradi, Tahoua, and Zinder. The routes operated were originally flown by **Air Niger, S.A.** before its liquidation in 1986.

Flights continue during the remainder of the decade and into the 1990s, with the fleet increased by the addition of one each Britten-Norman BN-2A Islander and a Fokker F.27-200 Friendship. In 1994, the carrier is renamed **Nigeravia, S.A.**

TRANSOCEAN AIR LINES (TAL): United States (1948-1960). Organized by Orvis M. Nelson and associates at Oakland, California, in the spring of 1946, **Orvis Nelson Air Transport** accepts a USAAF Air Transport Command subcontract from **United Air Lines**. Employing the first of 12 leased Douglas C-54s (military DC-4s), Nelson begins Honolulu to California contract military personnel flights on March 18.

On March 28, Nelson marries UAL stewardess Edith Frohboese, who will become **Transocean's** first flight attendant. Having made a profit of \$70,000 with no extraordinary expenses on his inaugural flight, Nelson elects to incorporate his large irregular on June 1, changing its name, at the suggestion of dispatcher Ray Foster, to **Transocean Air Lines (TAL)**; \$200,000 in capitalization is realized through a public stock offering.

Although the Honolulu to Oakland flights continue with government aircraft, two war-surplus C-54s are now purchased and modified to civil DC-4 standard as the large irregular prepares to specialize in unusual air transport (some say "tramp") operations around the globe.

The first commercial contracts undertaken are a series of charter flights flown under subcontract to **Philippine Air Lines**. Nelson, flying the DC-4 *Taloo-Manila Bay*, undertakes the inaugural flight to Manila via Wake Island and Guam, on July 22. With **Pan American Airways (PAA)** employing only male flight attendants, Edith Nelson now has the distinction of becoming the first stewardess to complete a transpacific crossing for a commercial airline. Flights on behalf of PAL continue throughout the fall and at this time, TAL, due to a shipping strike and Pan Am's withdrawal from the route, becomes the only U.S. commercial link to the former colony. Meanwhile, Taloo Academy of Aeronautics is established

at the Oakland base to meet GI and civilian requirements for flight and mechanical education. Flights to Shanghai begin in September.

The second company DC-4 enters service in October and allows the initiation of service to Bangkok in November. At the request of Thai officials, some \$6.2-million gold bullion taken by the Japanese from Thailand during the war is transported to the U.S. for safekeeping. Five of the company's owned and leased aircraft transport the cargo from Osaka to the U.S. in nine days. The initial ATC contract is completed in December, with two trips per day having been flown since spring. Profits for the year total \$500,000.

TAL's third DC-4 becomes available in January 1947 and a DC-4B joins the fleet in April. During the year, the company begins a three-year contract for the USN and CAA to operate the Landing Aids Experimental Station at Arcata, California. In addition, the carrier transports 750 military dependents from Seattle to Tokyo and 25,000–30,000 civilian workers to Pacific bases; both of these contracts are undertaken for the U.S. Army.

The company establishes an operations and maintenance base at Windsor Locks, Connecticut, to supply the Oakland base and provide for supplementary operations to Europe and, on behalf of the government, the carrier makes emergency relief missions from Oakland to London and Paris transporting food and clothing.

During the summer, in the first transatlantic coach service, the carrier flies 600 vacationing U.S. college students under charter to Europe. Upwards of 7,000 immigrant craftsmen are transported from London to Toronto beginning on June 26. From Seattle, 800 fishermen are flown to Naknek in Alaska. As a footnote, the carrier also converts a Boeing B-17G into a personal transport for **Philippine Air Lines** President Col. Andreas Soriano.

In 1948, two more Army contracts are accepted: to transport 2,700 dependents between the U.S. and Germany and to fly another 700 dependents from Seattle to Tokyo. One hundred transatlantic flights are made, under contract to the USAF, in support of the Berlin Airlift. Meanwhile, 146 Curtiss C-46 Commandos, with outsized fuel tanks, are ferried from the U.S. to China for use by the Nationalist air force. TAL is the first airline to book group tours from California to Honolulu and to inaugurate them as air tourist common carrier service.

Twice-weekly DC-4 refugee flights are undertaken between Rome and Caracas while operations and maintenance bases are established at Wake Island and Guam. The mass air transportation of pilgrims participating in the Muslim Hadj to Jeddah is pioneered. On behalf of the International Refugee Organization, the carrier, beginning on August 5, transports 25,000 war refugees from Munich to Caracas and beginning on December 8, 13,000 evacuees from Shanghai to the Philippine Islands, including the city's entire 5,000-member strong colony of White Russians and Jews.

TAL in 1949 undertakes a two-year Navy contract to fly cargo from Seattle to Adak. In March, a C-54 piloted by Orvis Nelson with a crew of 11 circles the world from Bradley Field to Oakland via Gander, Shannon, Frankfurt, Rome, Damascus, Karachi, Calcutta, Hong Kong, Okinawa, Tokyo, Guam, Wake, and Honolulu. A Middle East division is established to assist with the development of aviation in the region.

A contract is undertaken on behalf of **Pak-Air, Ltd.** to establish domestic and international services. A one-year arrangement is made with the MATS to make weekly cargo flights from California to Oriental destinations. Commercial operations over the Pacific and Atlantic now account for 72% of all business.

On June 18, Nelson shares a contract with **Seaboard & Western Airlines** from the IRO and Youth Argosy to fly U.S. students to Europe and European displaced persons to America. On August 14–15 during one of the latter flights, a C-54A with 9 crew and 49 passengers en route from Rome to Caracas via Shannon and Gander overflies Ireland by 150 miles due to radio interference. Although the four-engine transport comes about, it runs out of fuel and crashes into the sea five mi. W of Kilkee, County Clare (nine dead). The plane floats for 20 minutes, allowing a trawler to rescue the survivors, including famed aviatrix Ruth Nichols.

The USN Alaskan contract continues in 1950. Bush flights are also made in that territory in support of the Petroleum No. 4 (PET 4) Project. On April 17, Youth Argosy seeks CAB backing for cut-rate charter flights to Europe for U.S. students. The regulators weigh bids from TAL, **Seaboard & Western Air Lines**, and **The Flying Tiger Line**; a month later, the government grants summer student routes to Europe to all three applicants.

On June 3, a TAL/**Icelandic Airways H.F.** U.S. to U.K. charter flight with British war brides and children must be rerouted via Cuba and France when the British refuse landing permission to this attempt to circumvent the CAB's student charter certificate. At Havana, the charter passengers are shifted to **Cubana (Compania Cubana de Aviacion, S.A.)**, which is allowed to complete the flight to London on June 7.

Meanwhile, the previous day, the CAB orders TAL to end its passenger services and places a permanent ban on charter flights for war brides at month's end. A new and open-ended contract is now made with the USAF to mount 25–30 flights per month from California to Tokyo as part of the Korean Airlift. Commercial operations are now limited to emergencies as the carrier dedicates seven DC-4s to the airlift and undertakes upwards of 47 California to Japan flights per month, representing 11% of the total lift provided by commercial and irregular carriers.

In 1951, Nelson accepts a six-year contract from the U.S. Army to fly soldiers to domestic destinations. He also agrees to provide en route service to MATS transport aircraft at Wake Island. Although the Korean Airlift represents most of the carrier's business this year, other opportunities are accepted. For example, 1,500 fishermen are transported from the West Coast to Alaska. **Air Jordan** is established for the Hashemite Kingdom of Jordan.

Interline traffic exchange and ticketing agreements are begun with several U.S. trunk lines and foreign flag carriers, most especially **Northwest Airlines**. Company officials meet with their colleagues from Minneapolis and reach several agreements. TAL leases three DC-4s to NWA for two years for use on the Korean Airlift while NWA makes several of its new Martin 2-0-2s available to the nonscheduled carrier. Retaining the basic Northwest livery, the aircraft are given TAL titles.

Under joint contract to **Japan Air Lines Company, Ltd. (2)** and **Northwest Airlines**, TAL, employing Martins, inaugurates Japan's domestic air service, as Japanese pilots are forbidden to fly commercial aircraft. Several other chartered 2-0-2s are employed on domestic military charters.

In July, the carrier wins a CAB contract to provide airmail service in Micronesia, which flights it begins during the fall with four USN-supplied, 10-passenger Consolidated PBV Catalina flying boats. Operated on behalf of the Interior Department, this service also includes scheduled passenger and cargo flights.

The year ends in tragedy. On November 5, a Martin 2-0-2 with 3 crew and 26 passengers on a domestic military flight, crashes near Tucumcari, New Mexico, while on approach (1 dead). A Curtiss C-46F with two crew and two passengers on approach to Fairbanks, Alaska, crashes on December 30; there are no survivors.

A DC-4 and its 4-man crew disappears between Point Barrow and Fairbanks, Alaska, on January 1, 1952. Commercial flights are limited during the year as the Korean Airlift continues. On April 9, an aircraft is lost when it crashes into Miharayama Mountain.

In 673 Korean flights since 1950, the company has transported 4,900 tons of freight, 20,000 military passengers, and 7,112 patients. A contract is signed to provide modifications for R5C-1s (USN-designated C-46s). Simultaneously, a fleet of five C-54s are modified to civil DC-4 standard and delivered to Saudi Arabia; one aircraft is for the exclusive use of King Ibn Saud.

In July, the carrier receives a DC-6A; christened *The Royal Hawaiian*, it is placed in transpacific service. Late in the year, a U.S.-Europe all-cargo service is launched under contract to **SAS (Scandinavian Airlines System)**.

Demands of the Korean Airlift begin to lessen in 1953, allowing greater opportunity for commercial services. Low-cost passenger tours

are inaugurated from California to Honolulu. The first 12 Japanese commercial pilots trained at Taloa Academy of Aeronautics are graduated. On March 20, 35 are killed, including 30 airmen en route to the Far East, when a C-54G, leased to MATS and inbound from Roswell AFB, New Mexico, crashes at Alvarado, near Oakland, California.

An Army contract for the transport of 360 military dependents across the Pacific is completed and seven DC-4s are dedicated to the transport of \$6.2 million in gold bars from Japan to New York City.

While on a July 12 Guam–Oakland flight, the chartered DC-6A *The Royal Hawaiian* with 8 crew and 50 passengers, crashes 300 mi. E of the former point in the vicinity of Wake Island; there are no survivors.

Aircraft and crews are leased to major Hollywood studios, which use them in the John Wayne films *The High and the Mighty* and *Island in the Sky*, both based on the novels of former TAL pilot Ernest K. Gann.

A management and support contract is signed with the government of Iran to operate **Iranian Air Lines**. A two-month Army contract sees 3,400 military dependents flown from Europe to the U.S. A government of Pakistan contract is initialed on December 22, leading to the establishment and operation of commercial flights from Kabul to Cairo.

Three more Army contracts are accepted in 1954. The first is completed in January and February and entails the transport of 3,000 military dependents from Europe to the U.S. The second provides for the carriage of 360 more dependents over the same routes during the next 6 months.

The company in February completes 43 months on the Korean Airlift, during which time it has flown 17.75 million miles. Taloa Academy of Aeronautics is expanded to provide training opportunities for returning veterans. Pilots are trained and certified there for the reborn **Deutsche Lufthansa, A.G.** and Tokyo to San Francisco service is inaugurated on behalf of **Japan Air Lines Company, Ltd. (2)**.

The first simulator to be constructed by an airline is built by Taloa Academy of Aeronautics personnel to train DC-4 pilots. To aid in support of Dr. Salk's anti-Polio research, the company transports thousands of monkeys to the U.S. from India and the Philippines.

Under contract to a church group determined to help rebuild war torn South Korea, TAL, in Operation Noah's Ark, flies a DC-4 loaded with 30 goats, 550 rabbits, and 2 million bees to Seoul. An 18-month contract for the modification of **United Air Lines'** entire DC-3 fleet is accepted. Late in the year, in 206 flights (then believed a record for commercial airlines), TAL carries 30,000 soldiers and dependents across the Atlantic in a single month.

Airline employment in 1955 stands at 3,000. The largest U.S. irregular carrier owns a fleet of 114 aircraft and operates them from 28 offices around the globe. TAL agrees to service and maintain all MATS aircraft landing at the company's Wake Island facility. Taloa Academy of Aeronautics begins training **Deutsche Lufthansa, A.G.'s** transatlantic navigators.

A DOD contract is accepted in 1956 for the overhaul of Hawaiian Air National Guard F-86 fighter planes. The tenth anniversary is celebrated, at which time it is noted that over a billion revenue passenger miles have been flown since 1946, together with 85 million cargo ton-miles.

Taloa Academy of Aeronautics' handbuilt DC-4 simulator, along with company aircraft, are used as props in the Doris Day and Louis Jordan movie *Julie*. The Trust Territory contract with the Interior Department is renewed and by August, 21 United DC-3s have been overhauled. Overhauls are also undertaken on the DC-4s flown by **Thai Airways Company, Ltd.** and **Braathens SAFE, A.S.** Calling itself a "supplemental air carrier," a term later taken over by the CAB, TAL commences group tour charters from Honolulu to the Pacific islands.

A six-month contract is received from the MATS in 1957 to fly 190 tons of supplies per month between Travis Air Force Base and Tokyo. The company participates in the transatlantic delivery of Hungarian refugees to the U.S. and group tour charters are opened to the Orient. Capacity for these operations is provided by four Lockheed L-749 and L-749A Constellations acquired from **British Overseas Airways Corporation (BOAC)**.

The first of two L-1049H Super Constellations is delivered during the summer and are the first aircraft leased from Air Finance Corporation, formed by hotel owners Joseph Drown and Conrad and Barron Hilton. The aircraft fly from Oakland to Okinawa on behalf of the U.S. military via Honolulu, Wake Island, and Guam.

In significant financial difficulty, Chairman Nelson agrees to sell 40% shareholding to the New York-based Atlas Corporation, an investment group.

TAL in 1958 agrees to participate in Operation Quick/Trans, a one-year DC-4 cargo shuttle between USAF bases in the continental U.S. Employing leased Boeing B-377 Stratocruisers, the company opens scheduled airline service from Honolulu to Guam. It also starts scheduled flying from Oakland to Los Angeles, Chicago, and New York. One Super H Constellation is leased to **Deutsche Lufthansa, A.G.** for a year.

In 1959, the fleet includes 6 DC-4s, 4 Lockheed L-749/L-749A Constellations, 2 L-1049G and 2 L-1049H Super Constellations, and 3 Boeing B-377s. The Stratocruisers, the number of which is increased throughout the year, fly scheduled frequencies from Oakland to Okinawa via Honolulu, Wake Island, and Guam as TAL finally becomes a scheduled transpacific carrier.

Financially drained by the costs of its aspirations and the Atlas sale of most of the carrier's aviation support subsidiaries, TOA must sell off its older Connies. One is passed to **Korean National Airlines** on July 31, while the Austrian charter concern **Aero Transport Flugbetriebsgesellschaft, GmbH**, soon thereafter purchases a second.

Having served the company for three years as a flight attendant, Sherry Waterman retires to write her memoirs, *From Another Island: Adventures and Misadventures of an Airline Stewardess* (Philadelphia: Chilton, 1962).

TOA completes its final transpacific flight on January 6, 1960; the company goes bankrupt on July 11 and its Micronesian service is taken over by **Pan American World Airways (1)**. On September 2, the ex-airline's 14 Stratocruisers, originally valued at \$14 million, are purchased at a scrap auction by the Airline Equipment Company for \$105,000.

TRANSOCEAN AIRWAYS: United States (1989–1990). Having moved to Philadelphia and planned to initiate overseas charter operations, **Gulf Air** finds that it must have a new name to avoid confusion with that already worn by the Gulf states consortium carrier. After several false starts, the name adopted honors the pioneer carrier of Orvis Nelson and becomes official in May 1989.

The fleet of the 600-employee large regional now includes 5 Boeing 727-200s, 7 B-727-100s, and 2 Convair CV-580s and an agreement is signed with the ILFC for the charter of 2 Douglas DC-8-71s.

Throughout the year, the company seeks new capitalization, but all avenues fail, forcing it to file for Chapter XI bankruptcy protection in December. During the year, TransOcean's passenger boardings decline 8.2% to 591,060. Unable to continue, the airline ceases operations in February 1990 and is liquidated the following month.

TRANSOCEANIC AIRWAYS (PTY.), LTD.: P.O. Box 22860, Helderkruijn, Gauteng, 1733, South Africa; Phone 27 (11) 467-0326; Fax 27 (11) 465-2754; <http://www.transoceanic.net>; Year Founded 1998. The Isle of Man-based international holding company Odyssey Group, Ltd. establishes Transocean near Johannesburg in 1998 to provide ACMI leases and all-cargo charters. Under this arrangement, Transoceanic will provide wet- or dry-leased aircraft, together with maintenance and insurance support or operate on-demand freight services for others, including humanitarian organizations. While flying the latter, the company will employ the marketing title Africargo Airlines (Pty.), Ltd.

Neil Robertson is named CEO and offices are established at Accra, Entebbe, Gaborone, Johannesburg, and Port Louis. Plans are made to establish an international and operations office in Le Caudan Waterfront, Port Louis, Mauritius, toward the end of the year or early in the next.

There, global sales operations for all Odyssey Group operations will be set up, as well as a state of the art operations center to keep track of airline activities.

A large fleet of aircraft is acquired, including 1 Boeing 707-320C jet freighter, 5 Canadair CL-44D Swing-tails, 3 (later 5) NAMC YS-11Fs, 1 Lockheed L-100-20 Hercules, and 1 BAC 1-11-400. Africargo charters and other revenue activities commence with the Boeing and two Canadairs during the summer.

The company accepts delivery of two refurbished Canadairs, the three YS-11Fs, and the Hercules at Entebbe in September. The BAC is delivered in December.

Service is maintained in 1999.

In April, Transoceanic, still operating as Africargo Airlines (Pty.), Ltd., is taken over by **Congo Commercial Airlines, S.P.R.L.**, based at Kinshasa. Initially, the South African carrier is allowed to retain its previous identity. Congo Commercial, to escape continuing hostilities in the Congo, is now relocated to Bujumbura, Burundi, and is renamed **City Connexion Airlines, S.A.** Operations continue much as before, employing the 2 Africargo Canadair CL-44Ds, 3 Lets, and 1 Piper Aztec. Medical and evacuation flights become a specialty.

During the summer, the cargo division is renamed CCA Africargo. Africargo Airlines CEO Neil D. Robertson remains in charge. Plans are made to acquire two CL-44Ds that are currently out of service at Greensboro, North Carolina. One will be operated and the other employed for backup.

TRANSPERUANA (COMPANIA DE AVIACION TRANSPERUANA, S.A.) (1): Peru (1961–1970). Originally established as an air taxi at Lima on October 1, 1961, this concern begins lightplane ad hoc flights to the Montana and Selva districts.

In 1964, the company is reorganized into a charter airline. The fleet is upgraded by the addition of five Curtiss C-46s, two Douglas DC-3s, and a Fairchild C-82 Packet freighter. Flights are undertaken from Lima to Trujillo and Chiclayo.

In early 1965, one more Curtiss freighter and a Douglas DC-3 are purchased and are employed to inaugurate scheduled multistop cargo flights to the coast from Iquitos. Within four years, the fleet has been increased by one more C-46 and the future appears bright. This view proves erroneous, however.

Ultimately unprofitable, the company allows its permits to expire in July 1969 and declares bankruptcy on September 25, 1970.

TRANSPERUANA (COMPANIA DE AVIACION TRANSPERUANA, S.A.) (2): Peru (1997–1998). The second TransPeru is established as a domestic carrier at Lima late in 1997. The company is equipped with a single former **American Airlines** B-727-23 and several Convair CV-580s and Nihon YS-11A turboprops.

Revenue operations commence to Cuzco, Arequipa, Juanjui, Iquitos, Huanuco, Tarapoto, Trujillo, Tingo Maria, and Pucallpa.

It is believed that the carrier ceased operations in late 1998.

TRANSPORT FLUGGESELLSCHAFT, GmbH.: Germany (1965–1970). The West German all-cargo carrier Transport Flug is established at Frankfurt in the spring of 1965 to operate freight charters to European destinations on behalf of **Deutsche Lufthansa, A.G.** Revenue flights commence in July employing a single Douglas DC-4 that wears a simple black and white livery.

Two more DC-4s are acquired in 1967 and in March 1969 competing All-Air (Allgemeine Lufttransport, GmbH.) is purchased and merged. That concern's DC-4s are added to the Transport Flug fleet. Later in the year, two DC-6As are purchased from **Germanair Fluggesellschaft, mbH.**; neither is repainted, but are flown with Transport Flug titles over the Germanair's basic red color scheme.

Transport Flug goes out of business in 1970.

TRANSPORT INTERNATIONAL AERIENNE, S.A.: Belgium (1992–1993). TIA is established at Brussels in 1992 to offer domestic and regional express and cargo flights. Revenue operations commence with a pair of Cessna 406 Caravan IIs. The company is unable to achieve viability in a year of recession and ceases operations before its first birthday.

TRANSPORTES AEREO TRANSANDINO, S.A.: Venezuela (1947–1949). TAT is set up at Caracas in 1947 to provide domestic and regional passenger and cargo services. Revenue operations commence with a fleet of 4 Curtiss C-46 Commandos and continue until the carrier goes bankrupt in 1949.

TRANSPORTES AEREOS, C.A.: Venezuela (1962–1968). TA is established at Maiquetia in 1962 to take over the 3 Curtiss C-46 Commandos and an operating certificate of bankrupt **Aguilas Venezolanas, C.A.** The new concern operates to its predecessor's markets until it, too, fails, in 1968.

TAB is set up at Cochabamba, Bolivia, in 1977 to offer all-cargo services to regional and domestic destinations. Operations commence with a pair of Curtiss C-46 Commandos.

Operations continue apace over the next two decades, during which years the fleet comes to comprise 1 each Lockheed L-100 Hercules turboprop and Douglas DC-8-54F jet freighter.

Destinations visited by General Manager Luis Guereca Padilla's aircraft in 1997–1999 include Buenos Aires, Bahia Blanca, Chos Malal, Comodoro Rivadavia, Cordoba, Cutral Co., Malarque, Mar del Plata, Medellin, Neuquen, Puerto Deseado, Puerto Montt, Rincon de los Sauces, Rio Gallegos, Rio Grande, San Carlos de Bariloche, San Martin de Los Andes, Temuco, and Trelew.

TRANSPORTES AEREOS COMERCIAL, S.A.: Mozambique (1966–1971). TAC is established at Nampula in 1966 to provide smallplane domestic and regional charters. Employing a fleet of 1 each Piper PA-23 Aztec, PA-24 Comanche, and PA-30 Twin Comanche, non-scheduled flights are made on demand throughout the country and to the Comoros, Madagascar, Malawi, Mauritius, Rhodesia, and South Africa. In addition, a Monday-only scheduled roundtrip service is provided linking the carrier's base with Vila Cabral.

A Cessna 206 is acquired in 1967 and is employed to make weekly shellfish flights from Nampula to Blantyre and Salisbury. Revenue operations continue as described into 1971.

TRANSPORTES AEREOS DA INDIA PORTUGUESA (TAIP): India (Goa) (1955–1961). TAIP is formed in the Portuguese enclave of Goa on August 15, 1955. Equipped with de Havilland DH 114 Herons, the company provides a link to two other small colonies on the Indian subcontinent, Damao and Diu. During the next four years, the fleet is increased, first by the addition of Vickers Vikings and then by Douglas DC-4s. The British-made transports allow establishment of a route to Karachi while the American-made aircraft allow a link with Lisbon itself via Karachi and Bahrain.

Finally, DC-4 service is started from Goa to Lourenco Marques via Aden, Dar es Salaam, and Beira. When the government of India ends Portugal's Indian empire in late 1961, TAIP ceases operation.

transport for passengers, cargo or documents, TACA Group decides at the end of April to remedy that situation. The subsidiary TAI is established at Guatemala City to provide frequencies.

Equipped with a fleet of Cessna 208B Grand Caravans operated by Costa Rican pilots of SANSA (**Servicios Aereos Nacionales, S.A.**) under contract, the new entity begins regular flights to Puerto Barrios, Coatepeque, Retalhuleu, Quetzaltenango, Huehuetenango, and El Quiche.

Service is maintained without incident or headline in 1999–2000.

TRANSTAR: United States (1986–1987). On June 25, 1985, **Southwest Airlines (2)** purchases Houston (HOU)-based **Muse Air** for \$60 million in stock and cash. In addition to the changes made at the end of the purchase year, CEO Lamar Muse, who will soon retire, plans additional changes.

Before these can be made, the carrier is renamed **TranStar** in February 1986 and its livery is changed to a deep blue ("Empyrean"), with green, pink, and light blue accents. Service is inaugurated to Miami in March, but halted to McAllen, Texas. Frequencies on the company's increasingly longer route segments are upscaled so as not to compete with **Southwest Airlines (2)**'s deep-discount fare structure. The fleet remains comprised of 8 Douglas DC-9-51s, with 4, later 6 McDonnell Douglas MD-83s on order.

In April, headquarters are transferred to Houston and Empyrean Clubs are established at the Hobby Field hub, as well as the carrier's other two centers at New Orleans and Los Angeles. Flights to San Francisco commence in June.

Although traffic figures are consolidated with those of **Southwest Airlines (2)**, company officials report that for the year, the subsidiary has revenues of \$149 million and costs low enough to allow a \$7.7-million operating profit and net gain of \$1.67 million.

Unable to make a profit in its new guise, the first big nonsmoking airline is forced to quit. On July 29, 1987, President/CEO W. W. Franklin announces that the company will cease operations on August 9. Thereafter, its assets are liquidated.

During the year's first half, the company transports 1,190,128 passengers and earns revenues of \$79.7 million. Expenses multiply, however, to \$90.4 million and "unacceptable losses" of \$10.7 are suffered.

TRANSTAR AIRLINES: United States (1993–1994). Transtar is established at Orlando, Florida, in the spring of 1993 to offer holiday and inclusive-tour flights on behalf of the public charter company Wings of the World. Revenue flights commence on May 30 with a leased Douglas DC-10-10. A leased B-737-247 joins the fleet later in the year; however, the airline does not survive long enough to see its first birthday.

TRANSTATE AIRLINES (PTY.), LTD.: Australia (1996–2000). Transtate is established at Cairns as the airline subsidiary of Transjet Corporation (Pty.), Ltd., owners of **Jetcraft Aviation (Pty.), Ltd.**, in the fall of 1996. The new unit is needed to offer scheduled commuter services over routes acquired from **Flight West Airlines (Pty.), Ltd.** Revenue flights, under the direction of Transjet Managing Director Randal McFarlane, commence in November with 6 Embraer EMB-110P1 Bandeirantes and 1 de Havilland Canada DHC-6-300 Twin Otter.

Flights continue without incident or headline in 1997. A Pilatus Britten-Norman PBN-2 Islander is added to the fleet in 1998 as a number of additional routes are taken over from **Sunstate Airlines (Pty.), Ltd.** Enplanements for the year total 12,810.

Destinations visited in western and northern Queensland in 1999 include Cooktown, Normanton, Karumba, Mornington Island, and Mount Isa. Also, under a long-term contract with P&O Australian Resorts, flights are also offered regularly to Dunk, Brampton, and Lizard Islands. Passenger boardings for the year skyrocket 79% to 61,000.

The workforce totals 45 at the beginning of 2000. *AsiaPulse News* reports on May 12 that the company will soon be merged with **McKinlay Air Charter (Pty.), Ltd. (Macair)**, with the new partner's name surviving. When the event occurs a month later, the passenger activities of Transtate are passed to Macair, while **Jetcraft Aviation (Pty.), Ltd.** continues to provide express freight services. Although the Transtate homepage on the World Wide Web will remain up in early 2001, visitors to it are deflected to the Macair site.

TRANSTATE AIRWAYS: United States (1980). Transtate is set up at Oxford, Connecticut, in 1980 to provide daily roundtrip air taxi flights to Atlantic City via New York (LGA). Although Britten-Norman BN-2 revenue frequencies are duly inaugurated, in the face of soaring energy costs, they can only be maintained for the summer months.

TRANSUPER (TRANSSUPER GLAVNOE TRANSPORTNEO UPRAVLENIE): Russia (1993–1994). Transuper is established at Moscow in 1993 to provide domestic all-cargo ad hoc charter flights. V. I. Prikhodko is general director and revenue service is initiated with a single Ilyushin Il-76. The company's operating license is not renewed when due in 1994.

TRANSVALAIR, LTD.: Switzerland (1973–1983). Established at Sion Airport in September 1973, this charter operator is originally known as **Valair**. As the result of Trans World Leasing investment, the company title is changed prior to the inauguration of flight services in April 1974. Capt. J. Claude Rudaz is appointed managing director and the fleet comprises two Canadair CL-44Ds. Unable to continue in the face of recession, the company, after a decade of quiet operations, disappears in 1983.

TRANSVALAIR, S.A.: France (1986–1990). The second company to carry the Transvalair moniker is established under General Manager Yves Tardiel at Cherbourg in early 1986. Outfitted with a single Beech 99, it inaugurates scheduled passenger service to Southampton in April.

The company also acquires a pair of newly certified, but 37-year-old, ex-French military Nord 2501 transports. A contract is won from the French Railways subsidiary Service National de Messageries (SER-NAM) and the updated Nord's begin nightly roundtrip small parcels service between Paris and Toulouse.

In 1987, Transvalair establishes a sister company, **ACE (Air Charter Express, S.A.)**, which operates a pair of Douglas DC-3s between Paris and Brussels on behalf of DHL Corporation. Operations cease in 1990.

TRANSWAY AIR INTERNATIONAL, INC.: Liberia (1990–1998). Transway is established at Monrovia, Liberia, in 1990 to provide on-demand all-cargo flights to international destinations. Revenue flights begin with a single Boeing 707-323C.

In 1993, the company is transferred to a new base at Entebbe, Uganda. President Roger Sherman's concern continues flights with the Boeing into 1998 before shutting down.

TRANSEWE AIRWAYS, A.B.: Sweden (1986–1998). Transwede is conceived by Thomas Johnsson as AeroCenter Trafikflyg, A.B. at Stockholm's Arlanda Airport on April 1, 1985 to operate both scheduled and nonscheduled flights. Leif Lundin is president and his initial fleet comprises Fokker F.27-600s, which undertake charter flights throughout Scandinavia.

Late in the year, the company's name is changed to the current title and as three Aerospatiale SE-210 Caravelle XRs arrive, a new corporate identity is unveiled, including a distinctive blue, yellow, and white aircraft livery.

At the same time, a maintenance joint venture and marketing agreement is signed with **Finnair, O/Y**.

Charter, inclusive-tour, and other passenger and cargo flights are undertaken from Scandinavian destinations to points in Europe, the Mediterranean, and later, Florida. In 1986, two McDonnell Douglas MD-83s join the fleet.

For the first full year of operations, a total of 199,287 passengers are flown.

Icing causes an SE-210 Caravelle XR to fail its takeoff from Stockholm on a January 6, 1987 charter; the aircraft lands hard back on the runway, slides off and catches fire. Although the aircraft is damaged beyond repair, there are no fatalities.

Johnsson's operation now takes partners as major client Star Tours/Fritidsresor purchases 35.6% shareholding and Stockholm-Saltsjon, a Wallenburg company, acquires 52% majority ownership. During the summer and under the 90-min. rule, MD-83 charter service is started from Oslo and Stockholm to Fort Lauderdale, Florida.

A total of 750,000 passengers are transported during the 12 months.

Operations continue apace in 1988 to destinations in Europe, Florida, the West Indies, the Mediterranean, and the Maldives. During the year, a subsidiary, **Sultan Air, A.S.**, is established and provided with the surviving two SE-210 Caravelle XRs.

In 1989, the fleet of Sweden's largest private airline includes 2 Caravelle XRs, 1 B-737-205, 4 leased MD-83s, 1 of which is subleased to **Finnair, O/Y**. Orders are outstanding for 2 B-737-5Q8s and 20 MD-87s. Plans are made to inaugurate scheduled services in competition with **SAS (Scandinavian Airlines System)**.

Enplanements total 858,318, but losses are suffered: \$5.2 million (operating) and \$548,000 (net).

Company employment is increased by 10.9% in 1990 to 459. In addition to the original aircraft, the fleet also includes 2 more B-737-205s, 1 B-737-217, which is leased to **Sultan Air, A.S.**, 4 leased McDonnell Douglas MD-83s and 2 leased MD-87s. Orders are outstanding for a pair each of B-737-5Q8s and MD-83s. One Caravelle is retired and in May, travel industry official Lars Svenheim is appointed president.

Late in the year, a B-737-205 is sold to **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)**. At the end of December, founder Johnsson sells his remaining shares to NRT; ownership is now NRT 71%, Stockholm-Saltsjon 20%, and **Sterling Airways, A.S.** of Denmark 9%.

Passenger boardings slip 0.7% to 852,352 and revenues ascend 13.9% to \$155.4 million. The operating loss increases to \$19.8 million; however, a net \$175,440 profit is generated.

A B-737-205 is leased to **Time Air Sweden, A.B.** in 1991 as a second leased MD-83 and two leased MD-87s are received. Early in the year, the carrier joins in a Transnordic Group alliance with **Sterling Airways, A.S.** and **Norway Airlines, A.S.** As a result of a change in the **Maersk Air, A.S.** service to London, scheduled deep discount MD-83 service is inaugurated in March from Stockholm to London (LGW). Sterling

acquires an additional 24% interest in April, buying out Stockholm-Saltsjon and taking 4% from NRT; shareholding in Transwede is now NRT 67% and Sterling 33%.

The fleet in 1992 comprises the B-737-205 leased to **Time Air Sweden, A.B.**, 6 MD-83s, 1 of which is leased to **Norway Airlines, A.S.**, 2 MD-87s, another of which is also leased to Norway Airlines, and 1 Caravelle XR.

In 1993, Chairman Bo Johansson and President Christer Petren oversee a workforce of 425. Three more MD-83s are delivered in the spring, two of which are leased to **Centennial Airlines, S.A.** In May, the airline's shareholding is acquired by the SARA Group of travel and hotel companies.

The company orders five Fokker 100s in July, taking options on two more. The Caravelle and B-737-205 are withdrawn when the chartered Fokker 100s arrive, beginning in October.

Enplanements for the year total 1,325,000.

Airline employment balloons 96.5% in 1994 to 835 and the leased fleet now includes 9 MD-83s, 1 MD-87, and 7 Fokker 100s. Two of the MD-83s remain chartered to the Spanish **Centennial Airlines, S.A.** and the MD-87 is out to the Greek **Venus Airlines, S.A.**

By the summer, the carrier is mounting 20-times-per-week service from Stockholm to London (LGW). In July, a code-sharing agreement is signed with **American Airlines**, covering new scheduled flights between London (LGW) and Stockholm (Arlanda Airport).

Passenger boardings increase 53.4% to 2,033,100.

The workforce is cut by 55.1% in 1995 to 375. The company enters into two block-seat marketing agreements with European neighbors. The first provides for dual-designators on domestic Swedish routes with **Swissair, A.G.** The other begins in August with **Finnair O/Y** and covers flights from Stockholm to London (LGW). The two Scandinavian airlines also agree to frequent flyer program linkage and joint maintenance services.

In December, the Transwede Engineering division based at Stockholm's Arlanda Airport is sold to FFV AvioComp for \$19 million; the arrangement includes a three-year maintenance contract for the airline's planes. A B-757-236 painted in the nation's yellow and blue colors is delivered in mid-month and is christened *Anne Anke*.

Enplanements this year fall 15.3% to 1,721,100.

Seventy-five more employees retire or are laid off in 1996 and a number of aircraft leases are ended, including those for two Fokker 100s and two MD-83s. These are replaced by charters for one B-757-236ER and another MD-87.

In June, a 50% stake is taken by **Braathens SAFE, A.S.** of Norway in order to acquire the Swedish line's scheduled services. The company is restructured during the remainder of the year and the separate charter company **Transwede Leisure, A.B.** is established to undertake flights for various tour operators. It takes the Boeing and McDonnell Douglas jetliners, leaving what is left of Transwede, to operate Fokker 100s.

Customer bookings drop 12.2% to 1,511,200.

Flights continue in 1997. Destinations visited include Halmstad, Jonkoping, Lulea, Ostersund, Stockholm (Arlanda Airport), Sundsvall, and Umea. In May, a Fokker 100 is leased from Debis Airfinance for three years.

During the year, **Transwede Leisure, A.B.** is renamed **Blue Scandinavia, A.B.** In December, **Braathens SAFE, A.S.** purchases the company's remaining stock and takes complete control. Plans are made to rename the carrier **Braathens Sverige, A.B.** and to make it a part of the alliance that has been forged between Braathens, **KLM (Royal Dutch Airlines, N.V.)**, and **Northwest Airlines**.

Passenger boardings plunge 44.4% to 862,249.

In January 1998, KLM takes a 30% stake in new parent **Braathens, S.A.**, which has also changed its identity. At this point, Transwede is renamed **Braathens Sverige, A.B.**

TRANSEWE LEISURE, A.B.: Sweden (1996–1997). During the fall of 1996, **Transwede Airways, A.B.**, following purchase of half its stock by **Braathens SAFE, A.S.**, is restructured to allow creation of this

international and domestic charter operation. Per Odegaard is CEO and he employs a workforce of 300. Revenue flights on behalf of various tour operators commence from Stockholm's Arlanda Airport with a fleet of 3 McDonnell Douglas MD-83s, 1 MD-87, and 2 Boeing 757-200s. Early in 1997, the company is renamed **Blue Scandinavia, A.B.**

TRANSWEST AIR, LTD.: Box 100, Municipal Airport, Prince Albert, Saskatchewan S6V 5R4, Canada; Phone (306) 764-1404; Fax (306) 763-1313; <http://www.athabaskaairways.com>; Code 9T; Year Founded 2000. Athabaska Airways, Ltd. General Manager Jim Glass announces on August 4, 2000, that following 40 years of competition, his carrier will takeover Air Sask Aviation, Ltd., the airline division of **La Ronge Aviation Services, Ltd.** on August 15. The new entity, renamed **Transwest Air, Ltd.** on September 9 in an employee contest won by Lisa Tremblay, is based at Prince Albert. From there, it operates 40 fixed-wing and 3 rotary-wing aircraft and employs over 300 people.

Twice-weekday roundtrips are inaugurated on October 30 from Brandon, Manitoba, to Edmonton, Alberta, via Regina and Saskatoon.

TRANSWEST AIRLINES (PTY.), LTD.: Australia (1967-1982). Originally known as TransWest Air Charters (Pty.), Ltd., this carrier is formed at Jandakot, Western Australia in 1967. Originally flying nonscheduled services only, the carrier in the 1970s becomes a scheduled operator.

Destinations regularly visited include Port Hedland, Maribee Bar, Mount Newman, Nullagine, Goldsworthy, Shap Gap, Derby, Fitzroy Crossing, Halls Creek, Margeret River, Leonora, Laverton, Kalgoorlie, and Perth.

The fleet grows to comprise 2 de Havilland Canada DHC-6-200 Twin Otters, 1 Cessna 404, 2 Britten-Norman BN-2 Islanders, 2 Cessna 421s, 8 Cessna 310s, 2 Beech Super King Air 200s, 1 Beech B-55 Baron, 1 Cessna 206, and 1 Cessna 210.

In January 1982, the carrier is taken over by **Skywest Airlines (Pty.), Ltd.**

TRANSWESTERN AIRLINES: United States (1978-1984). Originally formed as a private partnership in mid-1978, Logan, Utah-based Transwestern is equipped with a fleet of 9 Piper PA-31-350 Navajo Chieftains and 1 PA-31-310 Navajo. The new commuter carrier undertakes scheduled services linking its base with Salt Lake City, Moab, and Grand Junction.

Enplanements total 8,460 by December 31.

The workforce is increased by 44.4% in 1979 to 52. Passenger boardings skyrocket 384.9% to 22,000 and 45,000 pounds of cargo are carried.

In 1980, the fleet includes 2 Beech 99s, 8 Piper PA-31-350 Navajo Chieftains, the original Piper PA-31-310 Navajo, and 1 PA-34 Seneca.

Customer bookings, because of recession, fall by 21.8% to 16,761. On the other hand, freight traffic increases an unbelievable 474% to 255,872 pounds.

Airline employment increases 150% in 1981 to 80. The carrier is reorganized into a public corporation, with George Bagley named president. He is assisted by Executive Vice President Edward H. Allen and Vice President-Operations Stanley Johnson. The fleet is altered to include 4 Beech 99s and 3 Navajo Chieftains while the route network is enhanced and now features stops at Logan and Salt Lake City, Utah, Grand Junction, Colorado, Reno, Nevada, and Boise and Sun Valley, Idaho.

Enplanements climb 36.1% to 22,914, but cargo falls 9.7% to 245,000 pounds. Revenues total \$1,493,273 and expenses are \$1,533,170. Although an operating loss of \$39,897 is suffered, a net gain of \$67,970 is achieved.

Airline employment in 1982 stands at 168 and a fifth Beech 99 joins the fleet. Management is also changed, as President Bagley is succeeded by M. Christianson.

Passenger boardings increase 169.7% to 61,981, but freight plunges again, falling 79.6% to 50,000 pounds.

Two more Metro IIs are delivered in 1983 and Seattle-based **Horizon Airlines** purchases the third-level operator in October.

For its 10 months of independent operation on the year, Transwestern boards 75,519 customers, a 52.5% boost. Horizon integrates its purchase completely by January 1984.

TRANZIT AVIA TRANSPORT ENTERPRISE (TRANZIT AVIA TRANSPORTNOE PREDPRIATIE): Russia (1994-1991). TATE is established at Moscow in 1994 to offer regional passenger and cargo charters. V. I. Drutikov is appointed director general and he begins revenue services with 2 Antonov An-24s and 1 An-12. Flights continue in 1995-1999. During these years, the previous fleet is replaced with a pair of An-32s.

The impact of the Russian currency crisis makes it impossible for the carrier to remain in business.

TRAPAS AIRLINES. See **SOCIETE FRANCAISE DE TRANSPORTES AERIENS DU PACIFIC SUD (TRAPAS)**

TRAVEL AIR SERVICE. See **VIKING AIRWAYS**

TRAVEL SERVICE AIRLINES, A.S.: Canaria Travel, Jungmannova 6, Prague, 110 00, Czech Republic; Phone (02) 24 97 70 00; Fax (02) 24 94 80 25 Code TVS; Year Founded 1996. Formed in the spring of 1996 as an affiliate of **CSA Czech Airlines**, TVS will be reformed into the house airline of the Canaria Travel Group. Ownership will be divided between the flag carrier (35%), Canaria, and private interests. TVS will have the distinction of being the first airline in the Czech Republic to operate a Next Generation Boeing.

In early May 2000, a Next Generation B-737-86N is accepted from GECAS and is placed into service operating charters to points in Europe, the Mideast, the Far East, and Africa. Another aircraft, a Dash-4Q8, is expected from ILFC. During the summer, the carrier begins employing the large international terminal at Ruzyně Airport, which is located 17 km. W of Prague.

In September, the B-737-4Q8 is tasked to provide capacity for weekly roundtrip charters between Frankfurt and Monrovia on behalf of the new Liberian concern Simon Air. Later in the fall, two B-737-4Y0s are chartered from GECAS, with one subchartered to **Jordan Aviation, Ltd.** on October 30.

As the year ends, delivery of a second Next Generation B-737-86N is anticipated in June

TRAVELAIR: United States (1990). Travelair is founded at Newark in late spring 1990 by Dominick Borzoman, former president of **Holiday Airlines**. Operations are inaugurated to Hartford, Nantucket, and Martha's Vineyard on July 12 with 2 Shorts 330s. In August, Iraq invades Kuwait, driving up fuel prices which, when combined with the deepening recession, conspire to drive this new commuter out of business in early November.

TRAVELAIR, S.A.: Apartado 381, Pavas Airport, San Jose, Costa Rica; Phone (506) 232-7883; Fax (506) 220-0413; <http://www.centralamerica.com/cr/trav/travlair.htm>; Code U3; Year Founded 1991. Travelair is established at San Juan's Pavas Airport in 1991 to provide scheduled daily flights to many of the nation's far-flung destinations. Employing a pair of Pilatus-Britten-Norman PBN-2A Trislanders and a PBN-2 Islander, the company undertakes roundtrips linking its base with Barra del Colorado, Carrillo, Golfito, Liberia, Nosara, Palma Sur, Puerto Jimenez, Punta Islita, Quepos, Tamarindo, Tambor, and Tortuguero.

Operations continue apace in 1992-2000. The company's schedule is regularly updated at its World Wide Web homepage on the Internet.

TRAVERSE CARGO AIRLINES, LTD.: Tekhnopark Business Center, All-Russia Exhibition Center, Moscow, 129223, Russia; Phone 974 62 69; Fax 234 50 371; <http://www.traverse-cargo.ru>; Year Founded 1993. The freight forwarding concern Traverse Cargo is

established at Moscow in **1993** as a limited liability company to provide services in the Russian and CIS markets. Over the next six years, the company specializes in making arrangements for the transport of passengers and cargo. Freight cargos include industrial equipment, consumer goods, medicines, computer hardware, telecommunications, oil, gas, and military equipment, and hazardous materials.

In **1999**, the decision is taken to join with the closed joint stock company Sukhoi Civil Aviation Company that has been authorized by the Sukhoi design bureau (best known for its ground attack aircraft), in the creation of a freight airline. Under the leadership of Director General Nikolai Sergeevich, the new concern launches Ilyushin Il-76T charter flights to China, the United Arab Emirates, and various CIS and European locations. Antonov An-12s and An-32s are also employed.

After what it terms "a short break associated with solving our organizational problems," Traverse returns to the skies in August **2000** with a fleet of 5 Il-76Ts.

TRB AIRLINES: United States (1969–1972). TRB is set up at Centerline, Michigan, in **1969** to operate domestic all-cargo services. Revenue flights commence with a pair of Curtiss C-46 Commandos and continue until the company goes bankrupt in the summer of **1972**.

TREK AIRWAYS (PTY.), LTD.: South Africa (1953–1976). Equipped with a Douglas DC-3 acquired for it in the U.K. by subsidiary **Meredith Air Transport, Ltd.**, this charter operator is reformed by Tom Meredith, Jock Hamilton, and five colleagues from **Tropic Airways (Pty.), Ltd.** in May **1953**. Revenue flights are inaugurated to Amsterdam from Johannesburg on December 21.

In August **1954**, charter services similar to those flown earlier by TA are initiated to such northern European communities as Dusseldorf and London via Entebbe, Cairo, Malta, Zurich, or Vienna from East Africa and from Leopoldville, Kano, and Palma de Majorca from the West Africa. Two Vickers 498 Viking 1s are purchased from **Airwork, Ltd.** in October and November, one of which is named *Louis Trichardt*.

A third Viking 1, the *Piet Relief*, is acquired in late **1955**, and the three continue to make the five monthly roundtrips that each are permitted by the National Transportation Commission to fly to Europe.

Two Douglas DC-4s are purchased in December **1957** from **Northwest Airlines**. They enter service in April **1958**, at which point the Vikings are removed from scheduled flights and assigned to operate charters. The domestic South African charter subsidiary **Protea Airways (Pty.) Ltd.** is created later the same year.

Low fare passenger service is introduced in **1959** by General Manager P. C. E. Gratz's carrier, bringing considerable success. Routes are extended twice weekly from Johannesburg to London, Paris, Frankfurt, Rome, and Athens via Entebbe, Wadi Halfa, and Malta.

A DC-4 with 6 crew and 61 passengers makes a forced landing near El Badary, Egypt, on September 3, **1960**; although the aircraft is a total loss, there are no fatalities.

Two Lockheed L-749As, including one named the *Andries Pretorius*, are leased from **South African Airways (Pty.), Ltd.** in December **1961**, while the remaining DC-4 is sold to **Luxair, S.A.** In order to avoid being shut out from a Continental destination when its traffic rights to Dusseldorf expire in May **1962**, Trek inaugurates roundtrips to Luxembourg in February. The company will remain the designated South African carrier on that route for its entire history.

When the nations of Black Africa begin to ban South African aircraft from their airspace during the summer of **1963**, Trek returns its two Constellations to SAA in August. Beginning in October and continuing for the remainder of the year, DC-6Bs are leased from **UAT (Union Aeromaritime de France, S.A.)**.

Two L-1049A Starliners, formerly operated by **Deutsche Lufthansa, A.G.**, are acquired in February and March **1964**. These long-legged piston airliners allow Trek to continue service to Europe via the West African coast in a manner similar to the Springbok services provided by

South African Airways (Pty.), Ltd. Technical stops are available at Windhoek, Luanda, and Ilha do Sal.

A cooperative agreement is signed with **Luxair, S.A.** and under its terms, joint operations of the new Lockheeds commence in April, with the European line providing connecting service from Luxembourg onward to London. One of the Starliners is transferred to Luxair, which, not having been banned from the routes, can fly in any African airspace.

Shareholding is revised in early **1965** to include Rentmeester Beleggings (Pty.), Ltd. (40%), South African Marine Corporation (Pty.), Ltd. (Safmarine) (25%), and private interests (35%). Airline employment is now 130. On May 7, on behalf of **South African Airways (Pty.), Ltd.**, the company begins roundtrip Wallaby route flights once every two weeks from Johannesburg to Perth via Mauritius and the Cocos Islands.

With the flag carrier also providing a service every two weeks, South Africa is able to match the trans-Indian Ocean Wallaby frequencies of **Qantas Empire Airways (Pty.), Ltd.** These flights continue until September, when SAA is able to place additional Douglas DC-7Bs on the run. Enplanements for the year are 10,094.

Starliner flights commence on February 15, **1966**, from Johannesburg to Rio de Janeiro via Luanda. This is the first nonstop commercial service across the South Atlantic by a South African airline.

A third L-1649A Starliner and an L-1049E Super Constellation are purchased from **Air France** in April. It is employed, beginning on July 5, to operate a weekly roundtrip from Johannesburg to Tokyo, via Mauritius, Colombo, and Hong Kong.

Authority for 10 additional European roundtrips is granted by the South African government in **1967**. An order is sent to Boeing for a B-707-320B Stratoliner.

After the tragic loss of a SAA B-707-344C, with 123 killed, at Windhoek on April 20, **1968**, Trek volunteers to give its place on the Boeing assembly line to **South African Airways (Pty.), Ltd.** The state carrier promises to turn over one of its older Boeings as soon as the new plane arrives from Washington State.

A Bristol Britannia is leased in June to undertake the Luxembourg service; however, one Starliner is retained in front line service to operate the connecting service for **Luxair, S.A.** to London through September 30. At this point, all three of the Starliners are converted into freighters.

A B-707-348, wearing its own livery and **Luxair, S.A.** stickers, is leased from **Aer Lingus Irish Airlines, Ltd.** and enters service from Johannesburg on October 22.

South African Airways (Pty.), Ltd., in accordance with its pledge the previous April, turns over a B-707-344B on May 30, **1969**.

A former **Qantas Airways (Pty.), Ltd.** Boeing 707-138B is purchased during the early **1970s** and a second B-707-138B is acquired in **1974**. The company ceases operations in the spring of **1976** and the Boeings and Starliners are passed to **Luxair, S.A.**, to which many employees migrate as well. After Trek Airways shuts down, the subsidiary **Protea Airways (Pty.), Ltd.** soldiers on alone until rising expenses (led by fuel costs) force the company out of business in **1980**.

When the South African domestic independent **Flitestar, Ltd.** is created in 1991, the shareholders, Rentmeester Investments and Muelkin & Safmarine, will name their holding company in honor of this charter pioneer.

TRI AIR: United States (1987–1989). Taking a leaf from the book of **Jetstream International Airlines**, Tri Air, established at Hyannis, Massachusetts, in March **1987**, is named in honor of its aircraft. Employing a three-motor Pilatus-Britten-Norman PBN-2A Trislander, daily roundtrips are inaugurated on April 1 linking the company's base with Nantucket and Martha's Vineyard. Operations continue apace until August **1989**.

TRI STAR AVIATION: Box 88, Weyers Cave, Virginia, 24486, United States; Phone (540) 234-8998; Fax (540) 234-9901; Year Founded 1984. Tri Star is established by Marvin Shank in **1984** to offer

on demand FAA Part 135 air taxi flights, cargo operations, and also to engage in aircraft management.

By 2000, Shank oversees the flights of 1 each Beech King Air 90, Cessna 414 Conquest, C-421, and Piper PA-23 Aztec. Revenues reach \$300,000.

TRI-STATE AIRLINES: United States (1982–1984). Tri-State is established at White Lake, New York, in 1982. Employing a fleet of 3 Piper PA-31-350 Navajo Chieftains, the third-level operator undertakes scheduled passenger and cargo services, expanding, during the remainder of the year and into 1983 to Albany, Binghamton, Montgomery, Monticello, Poughkeepsie, Manchester, Harrisburg, Nantucket, New Bedford, and Newark.

Rapid growth and recession contribute to hurt income in 1984 and all routes are suspended in August except those to Nantucket, Newark, and Manchester. These and other cost-cutting measures do not help and the carrier shuts down in the fall.

TRI-STATE AVIATION: United States (1969–1978). Tri State is established by Carlton Clark as the FBO at Huntington, West Virginia. In the fall of 1969, Edward Hyman and Morris Griffiths establish a company airline division to provide scheduled passenger and cargo services to Colubus and Cincinnati. Aero Commander 500B and Britten-Norman BN-2 Islander daily roundtrips commence in November, but only continue through May 1970.

TRIAx AIR, LTD.: 1 Kings Road, New Haven, Enugu, Nigeria; Phone 234 (42) 337 777; Code TIX; Year Founded 1992. Triax is established as a subsidiary of Prince Arthur Eze's Triax Group at Enugu Airport in October 1992 to offer passenger charter flights to destinations throughout Africa and the Mideast. Revenue operations commence on November 17 with a single Boeing 727-82. In 1993, a leased B-727-264 is placed into service.

Flights continue in 1994–2000, during which years Chairman Eze and General Manager Capt. D. Okatachi acquire a B-727-22. Destinations now visited include Abuja, Lagos, Port Harcourt, and Owem.

TRICON INTERNATIONAL AIRLINES: United States (1968–1975). Tricon is established at Dallas (DAL) in 1968 to provide scheduled passenger and cargo services to regional destinations. Employing a Beech 18, daily roundtrips are duly inaugurated, linking the company's base with Shreveport, Longview, Tyler, Waco, Temple, and Austin.

Operations continue apace until 1975.

TRIGANA AIR SERVICE: Mendawai No. 40, Kebayoran, Jakarta-Selatan, Indonesia; Phone 62 (21) 772 337; Fax 62 (21) 772 337; <http://www.geocities.com/WallStreet/5470/indo.htm>; Year Founded 1992. TAS is established at Jakarta in the fall of 1992 to offer domestic scheduled and charter passenger and cargo services. Operations commence with a fleet that includes 3 Beech Super King Air 200s, 2 de Havilland Canada DHC-6-300 Twin Otters, and 3 Fokker F.27-600 Friendships.

A DHC-6-100 with two crew fails its takeoff from Pogapa on December 8 and crashes; although the freighter is damaged, there are no fatalities.

Flights continue without incident in 1993, but not in 1994. Another DHC-6, a Dash-300 with two crew and two passengers, crashes into a cloud-shrouded mountain ridge at the 7,050-ft. level near Nabire, Papua New Guinea, on November 4; there are no survivors.

Flights continue in 1993–2000, during which years an F.28-4000 jetliner is also employed. There are numerous accidents.

While taxiing at Jakarta on May 14, 1996, the No. 1 propeller of the Fokker F.27-600 *Jayapura* chews into the right wing of a parked F.28. Both aircraft are damaged, but repairable.

Just after landing at Ilaga on September 30, a DHC-6-300 with two crew and three passengers overruns the runway and falls over an embankment; although the aircraft must be written off, there are no fatalities.
