In September, the number of Dallas (DFW) to Huntsville, Alabama, daily frequencies is increased to four with the addition of a DC-10-10 flight. Twice-daily Phoenix to Nashville flights begin on October 15 and, the next day, a DC-10-10 brushes a **Continental Airlines** plane on the taxiway at Newark; 23 people suffer minor injuries in the emergency evacuations that follow. As recession-induced losses mount, Chairman Crandall reports in a December New York speech that the company has elected to chop \$8 billion in future capital expenditures by giving up its options on 37 Fokker 100s, 33 B-757-223s, 12 B-767-323s, and 11 MD-11s. Simultaneously, an agreement is signed to provide all of the computer needs of **Cyprus Airways, Ltd.**

Passenger boardings inch upward by 3.7% during the year to 75,990,000 and freight moves ahead by 10.1% to 1.23 billion FTKs. Although revenues jump 9.9% to \$12.09 billion, expenses shoot up 10.42% to \$12.08 million and leave only a \$17.5-million operating

profit. The net loss deepens to \$166.42 million. AMR Corporation as a whole earns \$12.9 billion in revenues, but its operating profit plunges to just \$5 million.

Company employment grows by 4.8% in 1992 to 102,400. The first state of the art airline maintenance facility to be built in the U.S. in over two decades, the Alliance Maintenance and Engineering Base is opened at Fort Worth on January 16. At month's end, London (LHR) and Manchester to Bermuda via New York (JFK) service is launched.

Also in January, an agreement is signed with Busch Entertainment Corporation for cooperation in a wide range of travel programs, especially those centering around the theme parks of Sea World, Busch Gardens, Cypress Gardens, Sesame Place, and Adventure Island.

American Flagship business-class service is introduced on New York to Los Angeles flights, beginning on February 4; it will be introduced on the New York-San Francisco route later in the year. Next-morning package delivery service is started from Dallas (DFW) on February 17 to some 10,000 U.S. communities. Also during the month, AMR Corporation is able to obtain a \$420-million capitalization, after underwriting discounts, through the sale of six million shares of common stock.

Flights from Miami to Paris begin in March, the same month in which the Decision Technologies division begins to market AIRMAX, a new yield-management computer system for small airlines. Also during the month, a sales and marketing agreement is signed with the Irish carrier **Ryanair, Ltd.** That carrier's London to Dublin services will now be promoted by AA in the U.S.

Roundtrip MD-80 service is inaugurated on April 5 between Chicago (MDW) and Dallas (DFW). A major revision of the company's fare structure, the Value Pricing Plan, is introduced on April 9. The approach eliminates more than 85% of the half-million separate fares offered by incorporating a four-tier structure with many price reductions and simplified administrative procedures.

America West Airlines, Northwest Airlines, and Continental Airlines file suit in federal court charging Crandall's company with predatory pricing designed to put them out of business. Intense price competition will make the plan unfeasible and lead to its abandonment amidst losses of \$166 million in the second quarter and \$85 million in the third. If a plan had existed, as the litigants charge, to cause the elimination of those companies operating under Chapter XI, it failed.

In May, subsidiary AMR Eagle orders 15 additional Jetstream Super 31s for its regional partners; their delivery will bring the fleet's Jetstream total to 75, the largest collection of the type in the world. Also in May, an interline agreement is signed with Hyannis, Massachusetts-based **Cape Air**.

On June 16, daily B-767-323ER service is introduced from Chicago to Berlin and London (STN), providing the British capital's second airport with its first direct passenger service from the U.S. Passengers arriving in London are able to connect with **Ryanair, Ltd.** for flights to Ireland.

In protest against an AA decision to add a second daily flight between Miami and the Islands, **Cayman Airways, Ltd.** places an open letter in *The Wall Street Journal* on June 18. It asks CEO Crandall to discontinue this new service at the risk of jeopardizing the jobs of the smaller airline's 360 employees. The new schedule stands.

On July 7, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** files a new complaint with the European Commission, accusing AA of using its jointly run reservation system to discourage passengers from using the Spanish flagline.

When the National Football League (NFL) exhibition and regular season begins in August, the company maintains its exclusive contract to provide lift for "America's Team," the Dallas Cowboys.

In September, Chairman Crandall joins the CEOs of **Federal Express, Delta Air Lines, and United Airlines** in arguing that the **USAir/British Airways, Ltd. (2)** deal should not be approved by the U.S. government unless major new traffic rights are received from the U.K. Later in the month, a marketing and code-sharing arrangement is reached with **Ansett New Zealand, Ltd.** which provides for joint marketing and

code-sharing on selected flights from Auckland to domestic New Zealand destinations.

In October, Chairman Crandall, who is elected president of IATA for a year, ends the four-tier Value Pricing Plan fare structure. A strategic marketing and code-sharing alliance is signed with **South African Airways (Pty.), Ltd.** on November 4; the American major gains entrance into the South African market via Johannesburg by feeding SAA flights at New York (JFK). The two companies also offer each other reciprocal frequent flyer program linkage.

American Eagle carrier **Simmons Airlines** purchases the assets of **Metroflight Airlines** at Dallas (DFW), also in November, and AMR Consulting Group is established as a new subsidiary.

In December, 576 management positions are cut and two A300B4-605Rs are put into service wearing a polished-metal paint scheme. Despite objection from **Air Canada, Ltd.**, an agreement is announced late in the month with **Canadian Airlines International, Ltd.** aimed at selling the northern neighbor \$2-billion worth of administrative and technical services over the next 20 years. In exchange, there will be an up-front C\$246-million (\$195-million) investment in the Canadian carrier equal to a 33.3% equity interest and 25% control. Two AMR representatives will join CAT's board and the entire deal is contingent upon approval of the U.S. and Canadian governments, as well as PWA Corporation, Ltd.'s successful capital restructuring.

Customer bookings for the year swell 13.2% to 86,007,078 while cargo rises 32.6% to 1.63 billion FTKs. Although revenues advance by 12.3% to \$13.58 billion, expenses are up 13.1% to \$13.68 billion and guarantee that the operating loss will rise to \$310 million. Net loss zooms to \$787 million. Revenues for the AMR parent ascend 11.7% to \$14.4 billion, making it the second best earner in the air transportation industry behind **UPS (United Parcel Service)**.

Expenses, however, force an operating loss of \$25 million. Following the adoption of a new accounting system and a \$165-million write-off of the unworkable Confirm hotel reservations system, net loss quadruples to \$935 million. Even without the Federal Accounting System (FAS) 106 figures, American does better than **Delta Air Lines** and **USAir** group, both of who finish the year with larger losses. Only **UPS (United Parcel Service)**, among American majors, has a higher net worth than AMR at year's end.

Although the payroll is cut by 10.2% in 1993 to 91,973, the carrier's workforce is still the largest of any airline in the world.

Just after landing at Caracas following a January 21 service from Miami, Flight 918, an A300B4-605R with 300 passengers, is hit by three bullets in the left fuselage. The type of weapon or shooter is unknown; security forces quickly seal off the runway where the Airbus has landed.

Also in January, discussions begin with **Reno Air** which, when completed, may provide for cooperation in frequent flyer programming, advertising and promotion, as well as airport slot sharing and financial and capital access arrangement.

During the month, the company receives the "Cargo Development Award" from *Air Transport World* magazine.

Later in the month, the company begins to base a number of its MD-11s at Miami (MIA); on January 31, the McDonnell Douglas wide-bodies begin flying from that Florida station to Buenos Aires, Santiago, London (LHR), and Dallas (DFW). The carrier complains to the DOT on February 13 that **Air France** and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and their governments unfairly restrict its opportunities to sell the SABRE system in France and Spain.

With cumulative losses from the past two years now at \$1.2 billion and with no relief seen in the airline recession, the corporation adopts a "transition plan" in February for coping with the downturn. Key elements include route revisions, a 25% fleet rationalization, and other cost-cutting moves, such as the deferment or elimination of \$8 billion in capital spending and associated interest payments and a \$70-million cut-back in food and beverage services.

On February 23, Chairman Crandall agrees to delay, for 18 months, a final decision on whether or not to close his unprofitable Raleigh-Durham

hub while North Carolina officials attempt to increase traffic. A cost-cutting decision is made on February 26 to remove 25 DC-10-10s from service rather than return newer, leased A300B4-605Rs.

Also in February, the company becomes an Olympic Alliance partner of **Ansett Australia (Pty.), Ltd.** In addition to frequent flyer program linkage and shared lounge services, the American major begins to code-share with Ansett on several domestic services to and from Sydney, Melbourne, and the Gold Coast.

On March 2, daily MD-11 roundtrips commence between Miami and New York (JFK). Chief pilot William A. James dies on March 3 at the age of 52. Federal Judge Marvin H. Shoob now approves a \$458-million settlement of a class-action antitrust lawsuit charging this airline and several others with price-fixing; travelers will now be able to receive discount airfare coupons to compensate for fare charges collected between January 1988 and June 1992.

A severe winter storm over the eastern U.S. during the weekend of March 12-14 forces the company to cancel 1,100 flights that Saturday and Sunday. On March 17, the Equal Employment Opportunity Commission sues the company, charging it with age discrimination in the hiring of pilots by taking only those who can make captain before retirement.

The total cumulative number of passengers boarded by AA and its predecessors as of March 31 is 1,168,899,988.

When **Southwest Airlines** announces its entrance into the market on April 7, American begins to drop 48 flights, or 40% of its schedule, from the San Jose hub.

Just after touchdown at Dallas (DFW) on April 14 following a service from Honolulu, Flight 102, a DC-10-30 with 13 crew and 189 passengers, drifts to the right and goes off the runway. It comes to rest in mud, with its nosegear and left main landing gear collapsed; there are no fatalities, but at least 30 are injured during the evacuation.

During the month, the company announces its DC-10-10/A300B4-605R choice and that it will lay off an additional 2,000 employees during the year, as well as drop its route from Chicago to London (STN).

The city of Nashville reaches an unusual agreement with **USAir** on April 27 to acquire that carrier's Charlotte to London route for \$5 and to shift the U.S. end of the route to Nashville. There AA is permitted to operate the run in exchange for Chairman Crandall's pledge not to pull out of the Music City hub. The deal stems from **USAir's** recently approved alliance with **British Airways, Ltd. (2)**, opposed by American, **Delta Air Lines**, **United Airlines**, and **Federal Express**, which requires the American partner to relinquish several London routes.

On April 29, Dallas (DFW) to Brussels service is inaugurated; it is the first new American Airlines European service from the Texas airport to be started in five years.

Flights to Madrid from Dallas (DFW) are suspended as are London (STN) frequencies from Chicago (ORD). The use of laptop computers and CD players is banned on May 12 for safety during takeoffs and landings. The same day, tentative agreement is reached with **Reno Air** for the latter to sublease two gates at American's San Jose terminal and to join the major's frequent flyer program. By the end of May, 48 of 124 daily San Jose departures are suspended while a significant number of frequencies are added at DFW and Miami.

As the result of a decision announced two months earlier, American, in early June, begins to ground 25 of its 49 DC-10-10s.

Just after takeoff from Savannah, Georgia, on June 18, an MD-82 experiences a fire in its left engine. While the aircraft returns to its point of origin for an emergency landing, the blaze is put out by onboard equipment. After touchdown, all aboard are evacuated through the forward door evacuation chutes and no injuries are reported.

Also during the month, **Continental Airlines** and **Northwest Airlines** bring suit against the company for \$1 billion, charging losses are due to AA's Value Pricing Plan fare structure of the year before.

A final agreement is signed with **Reno Air** under which the new entrant will lease gates at AA's San Jose facility and participate in its frequent flyer program. Other items mentioned in January are also part of

the deal. As of June 30, corporate employment is 116,884 with the airline subsidiary overseeing 97,535, an increase since January.

The American Airlines Museum, named in honor of C. R. Smith, is relocated into a new building on July 3; a major feature is the restored DC-3 *Flagship Knoxville* shown in a static display out front. The 53-year-old aircraft had been restored at Tulsa during the preceding 12 months and is flown to Dallas (DFW), where it is put aboard a truck for the short journey to the museum.

Two days later, the DOT awards the carrier the Philadelphia to London route that **USAir** was forced to cede as a result of its recent link with **British Airways, Ltd. (2)**. In mid-month, weekly flights to Europe total 250.

Also in July, the AMR Consulting Group is expanded into the AMR Training and Consulting Group. SABRE is marketed globally to travel agencies in 64 countries; over 25,000 travel agency offices employ it on more than 101,000 terminals. As a result of SABRE's popularity, the AMR Corporation now creates the SABRE Technology Group. Meanwhile, flight services are increased to Chicago, San Juan, and Miami and AMR turboprops begin to replace jetliners on lighter routes.

The carrier announces on August 4 that it will delay start-up of the new route to London until the following April because it has not yet received landing rights to Heathrow Airport, to which it had planned to begin flying on November 1. It requires a Galveston jury less than three hours after receiving the **Continental Airlines** and **Northwest Airlines** case to declare American not guilty of predatory pricing in connection with its failed Value Pricing Plan fare structure plan.

On August 14, a code-sharing agreement signed with **British Midland Airways, Ltd.** allowing passengers arriving at London (LHR) from New York, Philadelphia, Miami, Chicago, and Los Angeles easier connections to Brussels, Amsterdam, Frankfurt, and the U.K. cities of Belfast, Edinburgh, Glasgow, Leeds, Bradford, and Teesside.

On August 28, it is announced that a \$77-million renovation project at Los Angeles has been cancelled; the next day, the company teams up with Jack White & Co. to market its American AAdvantage money market fund mileage class, which grants one frequent flyer mile for every \$10 invested. Three days later, AA begins laying off the first of 450 pilots.

The world's largest airline fleet comprises 687 aircraft: 35 A300-600ERs, 33 B-767-323ERs, 22 B-767-223ERs, 8 B-767-223s, 71 B-757-223s, 120 B-727-223As, 13 B-727-123s, 51 Fokker 100s, 18 MD-11s, 47 DC-10-10s, 9 DC-10-30s, and 260 MD-80s. Although 42 new aircraft are added during the year, capacity is to be cut 3% by year's end and a year's deferral is arranged with Boeing for 4 B-757-223s and 4 B-767-223s. Following the busy summer season, the fleet is cut by 25 DC-10-10s and 28 B-727-223As. A total of 350 pilots are laid off on August 31, resulting from the company's decision to park many of its DC-10-10s.

On September 1, the company changes from analog to digital telephone technology and contracts with Seattle-based Claircom Communications to equip its aircraft. Later in the month, it is announced that the carrier will eliminate 5,000 positions by the end of the following year as the airline accelerates the retirement of its DC-10-30 and B-727-223A fleets. A rumor that the megacarrier will be split into three companies is dismissed. As a result of a disagreement with the city over how the project should be funded, American cancels a \$77-million renovation project at Los Angeles (LAX).

In early October, it is announced that up to 1,000 management personnel will be laid off by late December. At the same time, 6 DC-10-30s are grounded, in addition to the DC-10-10s already parked. Vice President-Maintenance David Kruse indicates that, although a sales team has been formed to dispose of some of the 42 DC-10-10s on the block, a number will be cannibalized for spare parts. In addition, 67 of the B-727-223As will be modified to satisfy Stage 3 noise requirements and kept in service beyond the year 2000.

Meanwhile, following weeks of talks and after all-night negotiations just before the deadline, the flight attendants' union breaks off contract talks on October 31 and calls for a nationwide boycott. Also in October, American Eagle converts 20 ATR72-210 options into firm orders.

The code-share alliance with **British Midland Airways, Ltd.** takes effect on November 1. The airline moves to impose a new contract on November 1 and, on November 15, AFA files a federal lawsuit claiming four counts of unfair labor practices against American.

The company's flight attendants walk out on November 18 in disagreement with AA over staffing, scheduling, work rules, and health benefits for retirees and promise to remain out 11 days in order to hamstring the carrier during the Thanksgiving holiday. Service to passengers is immediately disrupted. After five disastrous days of the job action, it is called off on November 22 after President Bill Clinton takes the unusual step of getting AFA President Denise C. Hedges and AA Chairman Crandall to submit their cases to binding arbitration.

Despite an apparent resumption of normalcy, the company dismisses 15 flight attendants on December 8 for their actions during the walkout. The same day, the B-727-100 type is retired from the company's fleet, following completion of a service by the last B-727-77 from Monterrey, Mexico, to Dallas (DFW).

Also in December, a five-year cooperative marketing partnership agreement is signed with Nashville-based Gaylord Entertainment Company; under its terms, AA becomes the "official" airline of the Grand Ol' Opry and Opryland. At the same time, the Decision Technologies subsidiary forms an Australian unit based at Sydney, AADT Australia (Pty.), Ltd. It is reported on December 31 that 290 management personnel have retired and another 286 have been terminated.

During the year, Dan Read publishes his biography of the chairman, *The American Eagle: The Ascent of Bob Crandall and American Airlines* (New York: St. Martin's Press, 1993).

Passenger boardings for the year decline 4% to 82,567,345; only Delta now flies more customers. Freight moves ahead by 25.7% to 2.14 billion FTKs, twelfth highest among global carriers. The four carriers making up American Eagle transport 10,415,953 passengers, almost double the next largest regional grouping, "USAir Express."

Revenues climb 9.7% to \$14.78 billion, the world's highest such airline income. Expenses move up only 4.5% to \$14.41 billion (including \$688 million in special charges and \$190 million from the November strike) and as a result, a \$374-million operating profit is earned, fifth best in the business. The net loss is cut to \$314 million. Parent AMR Corporation earns revenues of \$15.8 billion, up 9.9%. Although there is a \$690-million operating profit, a net loss is still posted: \$110 million.

Airline employment is reduced by 4% in 1994 to 90,300 and 14 DC-10-10s and 31 B-727-223As are retired.

A total of 775 ground workers are laid off on January 7. On January 18, AA joins with **Delta Air Lines**, **Northwest Airlines**, and **United Airlines** in agreeing to pay \$30 million in \$5 fare coupons and lawyers fees to settle a class-action suit over tax-related surcharges on jet fuel at Chicago's airports. A code-sharing agreement is entered into with **Gulf Air, Ltd.** in February, allowing passengers onward flights from London (LHR) to Abu Dhabi, Bahrain, Doha, and Muscat.

On March 9, a jetliner with 60 passengers skids off the runway at Columbus while landing in a snowstorm; no injuries are reported. The U.S. government settles an antitrust suit against AA and five other airlines on March 17. They agree to changes in their computerized reservations system operations which, it is alleged, are used to fix airfares. Without admitting or denying the accusation, the companies pledge to end their practice of communicating proposed fare increases through the system maintained by the Airline Tariff Publishing Company.

On April 4, the U.S. Supreme Court agrees to review an Illinois Supreme Court ruling permitting members of the carrier's frequent flyer program to sue under a state law for having imposed new conditions on accumulating mileage credits for free flights.

In early spring, *American Flagship* service is introduced in the New York-San Diego, Miami-Los Angeles, and Washington-Los Angeles markets. At the same time, the San Jose hub is closed and a number of jet routes are shifted away from Dallas (DFW). Two American Eagle carriers take up the slack at the Texas airport. **Simmons Airlines** places its ATR72-212s on the longer routes and **Wings West**

Airlines transfers over a number of SAAB 340Bs to expand service on short-haul markets.

The long-delayed \$177-million equity-for-services purchase of 25% shareholding in **Canadian Airlines International, Ltd.** is completed on April 27. Under terms of the arrangement, AMR Corporation also obtains a comprehensive strategic alliance and a 20-year data processing contract with the Canadian airline for data processing, computer, and reservations system services worth \$115 million in year one. The two carriers also link their frequent flyer programs and AMR agrees to provide such other services as training, U.S.-originated reservations, pricing and yield management plus operations planning and accounting. Code-sharing will commence in 14 months.

Later in the month, three divisions of AMR Information Services (American Airlines Decision Technologies, SABRE Development Services, and Transportation Automation Services) are merged into SABRE Decision Technologies.

A 60-day, nonbinding memorandum of understanding is signed with **LOT Polish Airlines, S.A.** on May 10; under its terms, the two agree to share communications, reservations, and technical support systems while working on a code-sharing agreement. Service is inaugurated to London (LHR) from Philadelphia, Nashville, and Raleigh-Durham beginning on May 27 and five days later, on June 1, 50 more pilots are laid off.

Also in June, the carrier leases two MD-11s to new entrant **USAfrica Airways**, allowing it to begin services from Washington, D.C. (IAD) to Johannesburg. It also takes delivery of its 75th and last Fokker 100; the plane is the 250th of its type built. Another 75 Fokker 100 options are still held.

Also during the month, *American Flagship* service is extended to the routes leading from Boston to Los Angeles and from Miami to Dallas-Fort Worth, San Francisco, and Seattle. Contract talks, which will drag on for the next 18 months or so, open between the carrier and the Allied Pilots Association.

The code-sharing agreement signed with **Gulf Air, Ltd.** takes effect in July, covering flights between New York (JFK) and Doha, Abu Dhabi, Muscat, and Bahrain via London (LHR). At the same time, the same kind of pact is signed with **Transwede Airways, A.B.** for frequencies between London (LGW) and Stockholm (Arlanda Airport). A significant increase in services to London is also announced, including new routes from Philadelphia, Raleigh-Durham, and Nashville; the megacarrier now enjoys a total of 9 U.S. gateways to the U.K. capital and a total of 133 flights per week in the U.S.-U.K. market.

On July 18, the company protests a General Services Administration order mandating that airlines join the Civil Reserve Air Fleet (CRAF) program as a prerequisite to government contract awards.

After purchasing blocks of seats and providing marketing assistance and feed to JFK, American begins its code-sharing program with **Gulf Air, Ltd.** in August; weekly flights are made by Gulf Air's A340-300s.

A B-747SP-31 is simultaneously sold to **Kazakhstan Airlines**, while on July 20, the second B-747SP-31 is sold to the government of Dubai.

To save \$35 million in 1995, the carrier announces on September 22 that it will contract out the work of 550 agents at 30 airports, beginning in the new year. The next day the company threatens to ground more planes and cut more jobs unless its labor unions agree to new concessions. At the same time, Vice President/Treasurer Teri Teat is placed in charge of a four-month effort to streamline the headquarters and management staff in an effort to save another \$75 million.

The AMR American Eagle subsidiary begins a quarter of difficulties on October 5 with the crash of a **Simmons Airlines** ATR72-212 turbo-prop in Indiana. On October 12, a B-727-223A is the first commercial airliner to reopen service to Port-au-Prince, Haiti, since UN sanctions were imposed three months earlier.

En route from Dallas to Tokyo on October 14, Flight 61, an MD-11 carrying 167 passengers and 19 crew members, suffers an in-flight incident when passenger Steven Low unaccountably attempts to force open one of the plane's doors 30,000 feet above Jackson Hole, Wyoming. The crew subdues the man and the wide-body is forced to land at Seattle-Tacoma

International Airport where Low is arrested by the FBI. Company officials tell a local television station that a person would need to know a numerical code to open the door and that even in that case, outside air pressure in-flight would have prevented the door from opening.

A number of actions are announced later in October, including: grounding of 28 B-727-223As and DC-10-10s; contracting out of agents' positions at 30 airports and the restructuring of the reservations and sales agent department; and closure, the following May 1, of the pilot and domestic flight attendant crew bases at Nashville and Raleigh-Durham.

American Eagle's tenth anniversary is celebrated on November 1. The company joins with **Japan Air Lines Company, Ltd. (2)** on November 3 to announce that, effective New Year's Day, members of their frequent flyer programs will be linked and allowed to earn credits good toward the plans of either airline.

A code-sharing agreement with **Qantas Airways (Pty.), Ltd.** comes into effect on November 15. Under its terms, the AA designator will be applied to 12 Qantas services per week between Sydney and Los Angeles while the QF Qantas designator will be displayed for a number of AA frequencies between Los Angeles and Chicago, New York, Boston, and Washington, D.C.

An A300B4-605R flies into unexpected turbulence over the Caribbean on November 28; a total of 46 people are injured, 6 seriously. Also in November, the electronic ticket delivery network of the SABRE reservations system becomes available to all travel agencies.

It is announced on December 2 that the company will cut 551 more fleet service and facilities maintenance personnel. On December 9, the FAA places a prohibition on the operation of ATR turboprops, which comprise much of the American Eagle fleet. Fortunately, American Eagle President Robert Martens is meeting at AMR headquarters in Dallas with the presidents of the four confederated regionals and they are quickly able to come up with a plan to reconfigure the combined Eagle fleet around the country. A sufficient number of SAAB 340Bs and ATRs will be switched around so as to limit revenue losses over the major holiday period to \$50 million.

By year's end, a total of 31 DC-10-10s have been grounded, with 8 returned to lessors or used for spare parts. Overall customer bookings slip another 1.8% on the year to 81,085,935, but cargo surges 10% to 2.36 billion FTKs. Revenues increase by 2% to \$16.1 billion and allow a pretax gain of \$402 million and a net profit of \$228 million. The positive reports trigger profit sharing payments to employees for the first time since 1989.

The workforce stands at 89,400 in 1995, a 1% decrease. A power failure at Newark (EWR) on January 9 forces the carrier to cancel half of its thirty departures from the New Jersey airport; electrical supply returns to normal on January 10.

When a flight attendant discovers that food being served to 61 passengers appears to be contaminated, the captain of a jetliner bound for London (LHR) on January 29, returns his aircraft to New York (JFK). Two days later, the company caterer, Sky Chefs, identifies the source of the problem as a sticky mass of old soda and coffee under the laminate of a cracked service counter and reports there was no contaminated food aboard the aircraft.

The same day, it is announced that American is one of three majors which will increase roundtrip fares on flights starting or ending in Denver by an average of \$40 per flight. This will help cover increased costs of flying into the new Denver International Airport when it opens at the end of February.

Also in January, an agreement signed the previous November with **Japan Air Lines Company, Ltd. (2)** begins. The two carriers will offer reciprocal general freight sales representations in certain regions and link their frequent flyer programs on international services. Joint operations commence with **LOT Polish Airlines, S.A.** during the month, including code-sharing on return flights from Warsaw to New York (JFK), Miami, Chicago (ORD), and Los Angeles.

On the domestic front, a decision is taken to reduce the carrier's hub at Raleigh-Durham. A B-727-223 is sold to Aircraft Leasing, Inc. for

conversion into a freighter for **Kitty Hawk Air Cargo**. A highlight of the year's first month is receipt of the 1994 "Public Relations Award" from *Air Transport World* magazine.

Having failed to receive either the lease or maintenance payments as scheduled on February 3, the carrier repossesses the two MD-11s chartered to **USAfrica Airways**. The new entrant, already in deep financial trouble, declares Chapter XI bankruptcy a week later.

On February 11, American joins in the **Delta Air Lines** initiative that places a cap on travel agent commissions. Four days later, it is one of five majors against which Travel Network, Ltd., franchiser of 350 travel agencies, files a suit concerning the practice. Also on February 15, the carrier, along with **America West Airlines**, announces substantial fare cuts for winter and spring travel in the U.S., Europe, and the Caribbean. Among the regularly scheduled passengers flying into Santo Domingo on February 23 is former President Jimmy Carter, visiting on an undisclosed mission (it will later be revealed that Carter is involved in diplomatic negotiations with the ruling junta).

On February 26, the company matches a fare increase, mainly involving business travelers, announced the same day by **United Airlines**. Also in February, the company begins discussions with **Air France** on a possible strategic alliance.

On March 1, an MD-11 while landing at Dallas (DFW) suffers a near collision with a commuter plane waiting to take-off. An agreement is signed with **Midway Airlines (2)** on March 2 under which the Illinois-based national begins to build up a hub at Raleigh-Durham to replace the one being abandoned by AA. American and Midway link their frequent flyer programs and Midway subleases seven gates at the North Carolina airport from the major; soon thereafter it launches its first 22 daily departures.

The March 1 Dallas (DFW) incident leads the FAA to issue an emergency order on March 3 banning the practice of allowing planes, between sundown and sunrise, to taxi and wait for takeoff clearance on runways also being used for landings.

Shortly after take-off from New York (LGA) on March 8, one of the engines of an MD-80 shuts down, forcing the pilot to make an emergency landing in Buffalo.

On March 15, Donald J. Carty is named president of the new airline group within AMR Corporation. At the same time Carty's elevation is announced by Chairman Crandall, it is also noted that 900 management positions will be cut in an effort to save \$93 million per year. During the month, a new product, Executive Coach, is unveiled; it is designed to cater to full-fare passengers.

When Club America Vacations abruptly shuts down on March 30, it leaves nearly 2,000 passengers stranded at destinations in Mexico and the Caribbean. Although U.S. law requires airlines providing outbound transportation to return stranded passengers if a charter firm goes out of business, that is not possible in this case as the carrier involved, **Private Jet Expeditions**, has itself failed two weeks earlier. Consequently, AA becomes one of several U.S. and Mexican operators to assist in the return of the tour operator's clients. Indeed, the last stranded vacationers are returned by the major on April 4 from Aruba and Jamaica.

On March 31, in response to a move into summer fare sales in certain of its markets by **Northwest Airlines** the previous day, AA offers discounts of up to 50% on all domestic flights booked by April 15. The fare cut is immediately matched by **United Airlines**. Also during the third month, AA reaches agreement with **Midway Airlines (2)** for frequent flyer program linkage, airport slot-sharing, and joint promotion and advertising activities.

On April 2, the tailpipe in the No. 2 engine of an MD-11 catches fire on the taxiway at New York (JFK). During the plane's evacuation, unknowingly ordered by the pilot after the fire is out, 47 of the 108 passengers and crew are hurt.

A major aircraft deal is signed with **Federal Express** on April 7. Under its terms, the freight operator will take over the remaining 11 options of AMR Corporation for the McDonnell Douglas wide-body and

purchase all 12 of those already delivered. The first planes will begin arriving at the FedEx Memphis facility within two years.

When the pilot of a B-757-223 improperly sets the parking break during the reading of the checklist at the gate at San Antonio on April 11, the plane begins to roll. The pilot applies the breaks sharply and three passengers are hurt (one seriously) as the plane stops suddenly. After ground personnel check the brakes, the flight is released for continued service.

On April 27, AA and its chapter of AFA settle a series of long-running, noneconomic disputes stemming from the strike at Thanksgiving 1993. During the last week of April, a strategic alliance is entered into with **BWIA International Airways, Ltd.** That company begins transferring its New York operations into the AA terminal at John F. Kennedy International Airport and its reservations personnel are familiarized with the SABRE reservations system. By month's end, the company has reduced its daily departures from Raleigh-Durham from 60 to 29.

A freak hailstorm with pellets ranging in size from 3" to 6" strikes Dallas (DFW) on April 29. Both **Delta Air Lines** and American aircraft suffer damage, with AA taking by far the greatest pounding. A total of 54 AA transports are hit, including 1 MD-11, 27 MD-80s, 12 Fokker 100s, 7 each B-727s and B-757s plus 24 ATRs and SAAB 340s of **Simmons Airlines**. On April 30, the major must cancel 219 departures from DFW.

On May 1, when **Continental Airlines** opens what has become an annual seasonal airfare competition, AA quickly matches that carrier's discounts of up to 35% for off-peak summer travel on certain days. The same day, AA closes its pilot and domestic flight attendant crew bases at Nashville and Raleigh-Durham, which practically shuts down the hubs at those two airports.

A total of 199 flights are cancelled at DFW on May 1 due to storm damage; the next day another 167 are not flown. The number of cancellations at DFW is down to 114 on May 5. A B-767-223ER with a damaged wing makes an emergency landing at San Francisco on May 30. All but 10 of the aircraft damaged at DFW on April 29 are returned to service by month's end.

Also during the month the company takes advantage of the unilateral opening of U.K. regional airports by the British Transport Department and inaugurates the first flights from the U.S. to a non-London U.K. airport when it starts flying from Chicago (ORD) to Birmingham. It also launches a second daily roundtrip frequency from Boston to London (LHR).

In order to achieve a greater share of business from the U.S. Postal Service, the company appoints Vicki Moore, former managing director of air-freight commercial accounts as its "postal czar," to oversee sales to the USPS as well as adherence by the airline to that agency's high standards.

Airline employment at Raleigh-Durham has been reduced by 600 positions by June 15 as the number of daily departures from that community have fallen to just 17, including flights to Chicago, Dallas (DFW), Miami, New York (JFK), and London (LGW). **Midway Airlines (2)** takes over another five gates.

With the beginning of summer, the company introduces a new strategy of offering shuttle service each half hour on long-haul routes in an effort to lure a greater number of business travelers at full-fare. Planes and frequencies are removed from smaller cities in order to enhance services between Los Angeles, San Francisco, Dallas, Chicago, New York, and Washington, D.C. The number of frequencies between Dallas and New York (LGA) is doubled to 20 per day.

En route from Los Angeles to New York on June 26, a DC-10-10 is violently buffeted by air turbulence 37,000 feet over Wisconsin; 17 passengers are injured, forcing the pilot to divert to Chicago where the injured are treated.

John Samuel, the managing director of revenue management development, is named the airline's director of interactive marketing. He will go on to supervise development of American's Internet products, including the successful NetSAAs.

The arrangement with **BWIA International Airways, Ltd.** begins in July. In addition to a shared computerized reservations system, marketing, ground-handling, and airport amenities, the two begin to share

codes on each other's flights. Specifically, the BWIA code appears on AA flights from New York and Miami to Orlando, Washington, D.C., and Boston. The AA designator is shown on BWIA flights from Antigua via Miami to New York and from Barbados to Antigua, St. Lucia, Port of Spain, and St. Martin and between Port of Spain and Grenada and Georgetown. Also in July, code-sharing flights with **Singapore Airlines** commence between Chicago and Singapore.

On August 2, an agreement is signed with **Japan Air Lines Company, Ltd. (2)** that will link the reservations systems of the two carriers; under terms of the agreement, AMR Corporation will also purchase a 25% stake in the responsible JAL computer division.

In association with **Canadian Airlines International, Ltd.**, dual-designator flights are undertaken during the summer from New York to Toronto and from Chicago, Miami, and Dallas (DFW) to Toronto and Montreal. At the same time, AA inaugurates new Canadian services of its own, which it code-shares with CAI, from Chicago to Ottawa, Calgary, and Winnipeg and from Dallas (DFW) to Calgary and Vancouver. Meanwhile, AA executive Barbara Amster moves to CAI where she becomes vice president-management.

A tentative six-year agreement is reached on August 14 between the carrier and leaders of its chapter of the Transport Workers Union; if approved by the rank-and-file, the pact, which includes a temporary wage freeze and an early-retirement package, will save AA substantial revenues.

On August 18 the main terminal at New York (LGA) must be evacuated for more than an hour as police investigate a bomb threat made against the major.

Also in August, AMR Eagle President Robert E. Martens resigns and is succeeded by **Continental Airlines'** CFO Daniel P. Garten, who had worked for AA as vice president-financial planning prior to moving over to Continental in 1977. During the month, Washington and Caracas commence an intense series of discussions concerning Venezuelan aviation safety standards.

A company ticket agent is arrested on September 1 after acquiring as many as 116 fraudulent tickets over the previous year. He sold many of them at reduced cost or gave them away. It is alleged that some of the tickets have found their way to Dallas Cowboys' players and former players, including Michael Irvin, Charles Haley, Alfredo Roberts, Everson Walls, and Ron Springs. Also in September, baggage handlers, concerned over seniority issues, refuse to accept an offered six-year contract.

In early September, **Delta Air Lines, USAir, Continental Airlines, Deutsche Lufthansa, A.G., Trans-World Airlines (TWA), and Air Canada, Ltd.** file suit against American Airlines in U.S. District Court in Miami. They are concerned that the \$974 million AA will receive from the \$4.6-billion Dade County Capital Improvement Program for the construction of a new 47-gate terminal at Miami (MIA) is unreasonable and unfair to them. On September 16, Flight 5516, a **Canada 3000, Ltd.** B-757-28A en route from Denmark to Toronto, comes within 3 mi. horizontal and 2,000 ft. vertical of Flight 53, a company B-767-323ER en route from Scotland to Chicago. The loss of required separation is blamed on an ATC trainee at Gander, Newfoundland.

After a number of passengers complain that company employees have not provided prompt help with wheelchairs, which is required under the Air Carrier Access Act, the DOT fines AA \$25,000 on October 1; the government does, however, allow the airline to use \$15,000 of that amount to purchase new wheelchairs.

On October 2, **USAir** admits that it is holding merger talks with the parent companies of **United Airlines** and **American Airlines**. Next day, **British Airways, Ltd. (2)** announces that it is reevaluating its alliances in North America in light of the **USAir** announcement.

After further talks and deliberations, the baggage handlers accept a new six-year contract on October 4. Six days later, the arbitration process begun the previous October to resolve a contract dispute with the AFA is concluded. On October 11, the arbitrator grants the company's flight attendants a 17% pay increase, most of the vacation time, and the work rules AA had sought to alter. The company is permitted to

reduce staffing on some flights, with the union able to file grievances concerning these before a government panel.

During a freak snowstorm at Denver on the evening of October 22, Flight 2037 is unable to depart for over an hour when it is blocked on a taxiway by a **United Airlines** B-727, stuck in the snow. Also in October, the carrier begins to cooperate with **Alitalia, S.p.A.** on cargo flights from Rome to Miami.

Flight 1572, an MD-83 with 77 people aboard, strikes the tops of a line of trees on a ridge as it is making a nonprecision approach to Bradley International Airport at Windsor Locks, Connecticut, on November 12. The pilot converts his descent into an emergency landing and one person is injured in the evacuation that follows.

Talks between American and **USAir** on a possible merger are undertaken in early November, but go nowhere. Those between the Pittsburgh-based major and UAL continue until their collapse at Thanksgiving.

While on final approach to the airport at Cali, Colombia, on December 20, Flight 965, a B-757-223 with 8 crew and 156 passengers, goes off course and crashes into an 8,900-ft. peak in the Andean mountains, 38 miles from Cali (160 dead). The bodies of all of the victims, except one, are recovered by rescue workers before December 26. The disaster is the first fatal crash for the company since the DC-10 crash in 1979.

Also in December, a code-sharing agreement is signed with **Singapore Airlines** to begin in six months over the Chicago-Singapore route. During the year, service has been eliminated in 19 city-pairs.

Enplanements dip 2.6% to 79,674,313, but cargo rises 3% to 2.97 billion FTKs. Revenue figures are reported rising 4.6% for the AMR Airline Group as a whole to \$15.5 billion. Individual balance sheets show operating income is up 4% for American Airlines to \$13.3 billion, down 2% for American Eagle to \$775 million, and up 2% for American Cargo to \$677 million. Overall costs are up an equal 4.6% to \$14.93 billion and group operating profit totals \$564 million. This is down from the previous year because of a massive fourth quarter write-off to cover the costs of employee early-retirement programs and planned aircraft retirements. The pretax net loss deepens to \$81 million.

Airline employment is 88,400 in **1996**, a 0.8% reduction. Three DC-10-30s are leased to the Russian independent **Transaero Airlines**, which will employ them to launch service to new European destinations, as well as Los Angeles in June and Orlando in October.

A major East Coast winter storm cripples operations throughout the Northeast during January 7-9; on the first day of the blizzard, AA cancels all of its flights in that region. Early in the month, the company and the Allied Pilots Association launch a joint review of operating procedures and training.

On January 14, searchers find the remains of 9-year-old American Michael Claros, the last missing victim of the December 20 disaster. An A300-600R encounters severe turbulence during a flight on January 17; three passengers are severely injured as the plane descends from 33,000 ft.

With support from the airline, the Allied Pilots Association during the third week of January requests federal mediation of contract talks that have been under way for the last 18 months.

During the first week of February, **ANA (All-Nippon Airways Co., Ltd.)** joins with American, **Delta Air Lines**, and **Continental Airlines** in calling for renewed bilateral discussions between the U.S. and Japan. Hopes are expressed by ANA President/CEO Seiji Fukatsu during a Washington, D.C. visit that operations originally authorized in 1952 will be liberalized for those airlines not original partners to the first bilateral.

During the second week of the month, flight operations and pilots' union representatives begin visiting the carrier's different stations to acquaint pilots with findings made regarding the crash of Flight 965 in December.

Pilot David Poole, having smelled smoke and fearing there is fire on board shortly after his A300B4-605R backs away from its New York (JFK) gate on February 20, orders the aircraft evacuated; 34 are injured (2 serious) in the process. No sign of fire is found.

Two days later, company officials send other carriers a list of more than 500 parts that have been scavenged from the wreckage of the B-757 lost in Colombia in December. It warns that some of the items, including jet engines, landing gear, and electronic components, may be offered to them for sale.

Also on February 22, AA opens a reservation center in Dublin that eventually will be responsible for handling most European reservations for the airline. The Irish office is opened as a consolidation of American's London reservation site. Other reservations centers throughout Europe will be absorbed there.

Without a pilots contract, the carrier continues to insist that it will purchase no new aircraft. As the sale of a dozen MD-11s to **Federal Express** is completed, the company begins to reconfigure A300B4-605Rs, used in the Caribbean, for service over shorter transatlantic routes. The Airbuses will be replaced by B-727s that the carrier had originally planned to retire. The company also sells DC-10s to FedEx in exchange for cash and hush-kits.

The daily Miami to Maracaibo service is suspended on March 2 along with daily San Juan to Caracas flights. The action is taken because exchange controls are hampering the airline's ability to take currency out of the country. American sues the Venezuelan government for \$18.8 million over the controls that have restricted access to scarce dollars during the nation's continuing financial crisis.

On March 22, mechanics working on a B-757-223 recently arrived from Latin America find almost 65 lbs. of cocaine hidden inside and behind the cockpit ceiling panels. AMR Airline Services in March wins a five-year, \$10-million contract to handle the interline transfer of baggage for all 60 carriers operating from Los Angeles (LAX).

In flight over the Atlantic Ocean on April 7, a B-757-223 with 194 passengers encounters unexpected severe turbulence. One of the aisle carts becomes airborne and strikes a flight attendant's leg when it lands, resulting in serious injury.

Also in early spring, flights are suspended between San Juan and Caracas and between Miami and Maracaibo because of Venezuelan foreign exchange controls that force companies to buy dollars on more expensive open exchange.

On May 1, the company begins to code-share with **Singapore Airlines, Ltd.** American's AA designator is applied to Singapore flights from Singapore to Los Angeles and San Francisco; there connecting passengers may directly board American flights, with shared SQ designations, and fly on to Chicago. The same route may be followed in reverse.

The same day the company begins its only new transatlantic service of the summer, daily nonstop roundtrips from Boston to Paris. The route had previously been operated by **Northwest Airlines**, which gave it up, and had been sought by **USAir**. Indeed, transatlantic capacity is decreased by 8% to 238 weekly nonstops from 8 U.S. cities to 13 European destinations.

Also at the beginning of the month, the ABC television network begins to produce and supply in-flight programs for the carrier's domestic and international services. Offerings include segments from *Good Morning America*, *This Week with David Brinkley*, *Nightline*, and *Wide World of Sports*. In addition, full episodes of situation comedies will be provided, including *Ellen* and *Home Improvement*.

Five minutes after a B-757-223 lands at New York (JFK) from the Dominican Republic on May 24, the body of a dead man, who may have stowed away in the plane's wheel well and fallen, is found floating in a Long Island marina near the airport.

En route from El Paso to Chicago (ORD) on June 3, Flight 722, an MD-82 with 68 passengers, encounters turbulence 30 mi. N of Childress, Texas; nine people are injured.

Two days later, Flight 873, an MD-82, with 4 crew and 137 passengers, makes a hard landing at Albuquerque after a flight from Dallas (DFW); the aircraft chews up 100 ft. of runway, but is not itself badly damaged, except for its tail skid. Three people receive minor injuries.

In a move that will remain controversial for years, the company signs a comprehensive marketing agreement with **British Airways, Ltd. (2)** on June 11. The two profitable giants anticipate winning government approval on a route network that will stretch from North and South America to Europe and Asia. Chairman Crandall notes, however, that AA will not cede its slots at London (LHR) to gain that approval. British regulators begin the long-running approval debate on June 21 when they find the linkage plan constitutes a merger, which requires further scrutiny.

The comprehensive code-sharing agreement with **Canadian Airlines International, Ltd.** comes into effect during the month.

Daily dual-designator flights of **Virgin Atlantic Airways, Ltd.** commence with **Delta Air Lines** on June 26 between London (LHR) and Washington, D.C. (IAD); the American major purchases blocked seats upon the British line's flights to its eighth U.S. gateway city. A340-311s perform the service Monday through Thursday and Saturday while B-747-238Bs take over on Fridays and Sundays.

The inaugural flight brings Virgin Atlantic Chairman Richard Branson to Washington, where he spends a week lobbying U.S. lawmakers against the proposed strategic alliance of **British Airways, Ltd. (2)** and American. Spectators at Dulles are surprised when the A340-311 taxis up to the gate wearing the slogan "No Way BA/AA" boldly painted on its fuselage. The aircraft, however, is only the first indication that Virgin has opened a multimillion-dollar campaign in the U.S. to block the pact between its British rival and the U.S. major.

The AMR board on July 1 approves reorganization of The SABRE Group into a separate, wholly owned subsidiary. **Virgin Atlantic Airways, Ltd.** code-sharing partner **Delta Air Lines** during the first week of July joins in the VAA lobbying effort against the AA-BA alliance.

EU Competition Commissioner Karel Van Miert, on July 7, offers tentative terms to AA and BA for the approval of their planned linkup. In order to avoid concerns relating to their dominance of the best positions at U.K. airports, the two majors will be required to give up 267 of their present weekly landing and takeoff slots at London (LHR and GTW). Additionally, if other carriers request it within six months after the alliance is launched, the two must also cut their frequencies from London to Dallas, Miami, and Chicago.

On July 8, the U.S. Justice Department begins an antimonopoly probe of the alliance between **British Airways, Ltd. (2)** and **American Airlines** announced on June 11. The DOJ seeks information from **Virgin Atlantic Airways, Ltd.**, which continues to oppose the union, concerning its 1993 antitrust suit against the former British state carrier. AA and BA, simultaneously, object to the EU terms offered the previous day.

On descent for New York (JFK) after a flight from London on July 13, Flight 107, an MD-11 with 180 passengers encounters turbulence at a point near Westerly, Rhode Island; one passenger is seriously injured.

Also in July, officials of **TACA International Airline, S.A.** (TACA Group) and American sign a memorandum of understanding for establishment of a strategic partnership. Due to intense opposition from other Latin American carriers, as well as **Continental Airlines** and **United Airlines**, the pact will remain enmeshed in bureaucratic regulatory wrangling during the next year.

B-727-223A service is started on August 1 between Dallas (DFW) and Oklahoma City. While en route from Caracas to Miami on August 7, Flight 902, an A300B4-605R with 8 crew and 275 passengers, is subjected to a bomb threat telephoned to company headquarters in Venezuela. As a precaution, the Airbus lands at Aruba, where a search is conducted, but no bomb is found.

Grounding out of the continuing dispute between Washington and Caracas over Venezuelan aviation safety standards, a two-day disruption of air service between the U.S. and Venezuela occurs on the afternoon of August 7 through August 8. Late on the second day, government and aviation officials from the two countries agree to end reciprocal flight cancellations and AA resumes flights to Caracas on August 9. The U.S. FAA will downgrade Venezuela's civil aviation

authority to Category III on August 16, claiming that it does not meet minimum international aviation-safety standards.

While en route from New York to Zurich on August 12, a B-767-323ER, with 12 crew and 138 passengers, is diverted to Sydney, Nova Scotia, after a small fire breaks out in the cockpit; a second B-767-323ER is dispatched to the little airport to take the passengers on to Switzerland.

In an effort to accelerate the contract talks between the airline and its pilots union, President Carty begins direct participation in the talks during the last week of the month.

The pilot of Flight 1170, a B-757-223 with 6 crew and 183 passengers en route over the Atlantic Ocean from San Juan to Boston on August 29, reports a missile contrail, off the right side of the airplane. The Boeing is not damaged and no injuries occur. The NTSB report of the incident does not indicate whether or not any follow-up on the report is made.

A cargo alliance signed with the Canadian Air Cargo subsidiary of **Canadian Airlines International, Ltd.** takes effect on September 1. Under its terms, each acts as the others sale agent in respective territories and creates a cargo network of over 420 destinations worldwide.

On September 2, after nearly two years of negotiations, AA and leaders of the Allied Pilots Association reach a tentative agreement on a new contract. The pact, which calls for a cumulative 5% wage increase through the year 2000, will now be sent for a vote to the 8,606 rank-and-file pilots for approval.

Following the lead of **Continental Airlines**, AA and three other major airlines on September 3 agree in principle to settle a suit by the American Society of Travel Agents. It charges the carriers with illegally conspiring to cap travel agent commissions on domestic airline tickets; the five will reportedly pay a total of \$87 million, but will be able to retain the controversial \$50 commission cap.

By September 4, the company is offering nine daily B-727-223A non-stop roundtrips between Dallas (DFW) and Oklahoma City. The same day, a second daily roundtrip is introduced between Oklahoma City and Chicago (ORD).

After two years in a holding pattern, the code-share agreement with **LOT Polish Airlines, S.A.** finally takes off on September 16. Six weekly flights are inaugurated from Miami to Warsaw via New York (JFK) while daily service is initiated from Los Angeles to Warsaw via Chicago (ORD). The U.S. carrier performs the domestic segments while LOT handles the international service with one of its B-767-350ERs.

Agreement is reached with **China Airlines, Ltd.** during September for code-sharing on certain AA domestic services in the U.S. and on CAL return services from Taipei to Los Angeles and San Francisco.

Also during the month, the code-share arrangement with **Canadian Airlines International, Ltd.** is expanded to cover American Eagle services from New York (JFK) to Baltimore (BWI), Boston, Philadelphia, Pittsburgh, and Washington, D.C. (IAD). Chicago will become part of the agreement within a month. A code-sharing agreement is also now entered into with Dallas-ForthWorth-based **Lone Star Airlines**.

On October 1, the NTSB issues a report on its findings in the 1995 Cali disaster. The captain had entered incorrect data into the onboard computer that locked the plane on a course for the wrong navigational beacon. The safety experts conclude that additional cockpit automation might have prevented the accident by acting in a failsafe mode.

The same day, jet service is restored on services from Dallas (DFW) to Cincinnati and Wichita while the number of daily MD-80 frequencies between DFW and Kansas City is increased from 8 to 10. The new flights are seen as a counter to those offered by new entrant **Vanguard Airlines**.

Two weeks later, company officials announce that a \$20-million order has been placed with Allied Signal for the installation of its Enhanced Ground Proximity Warning System (EGPWS); the carrier's entire 635-plane fleet will be equipped with the new EGPWS. A code-sharing agreement is signed with **Tam-Mercosur (Transportes Aereos Mercosur, S.A.)** during the month. Under its terms, TAM-Mercosur purchases blocked seats on AA's daily roundtrips from Miami to Asuncion.

Flight 346, an MD-82 with 93 passengers and arriving from Chicago (ORD) is diverted from New York (LGA) and makes an emergency landing at New York (JFK) on October 28 after its nosegear fails to deploy; three people are slightly injured during the plane's evacuation.

The same day the DOT charges AMR Corporation and its affiliated reservations system SABRE Group Holdings with violating laws against deceptive advertising, charging that SABRE unfairly lists AA flights ahead of those for other carriers on the computers of travel agents employing the system.

On November 1, the company prepares to join with **El Al Israel Airlines, Ltd.** in offering dual-designator flights from Newark and Chicago to Tel Aviv and domestic code-sharing on AA frequencies beyond those gateways to Miami and Los Angeles. The alliance becomes embroiled in U.S.-Israel politics and is not effected.

The same day, nonstop B-757-223 flights commence from Los Angeles to Maui; the twinjet replaces a DC-10-30. Also on November 1, daily nonstop B-767-323ER return service is inaugurated between Dallas (DFW) and Santiago, Chile.

Simultaneously, the Aviation Enforcement Office of the U.S. Dept. of Transportation accuses the company's AMR parent and its affiliated reservations system SABRE Group Holdings of violating federal rules regarding computer reservation bias through distribution and use of its "Preference MAAnager" software on the computers of travel agents.

During four days in the first half of the month, a B-757-223 specially equipped with an Allied Signal Enhanced Ground Position Warning System (EGPWS) carries out a trial of the system at 22 airports in Central and northwest South America. Aboard for the multiple approaches and landings are pilots, engineers, and representatives from Boeing, the FAA, Allied Signal, the Allied Pilots Association, and **United Airlines**.

The State Department and American, together with six other majors, reach an agreement on November 19 to provide speedier notification of the families of U.S. victims in the event of air disasters abroad. The arrangement, lobbied for by groups representing crash victims' families, puts into effect the provisions of a 1990 federal law calling upon the carrier's to provide the State Department with a passenger list within three hours of a crash.

Also during November's third week, a new \$6-billion, long-term order for 103 aircraft is placed with the Boeing Commercial Airplane Group; the order is made contingent upon company pilots agreeing to terms of a contract negotiated in September. Delta Air Lines will make a similar commitment to Boeing in the spring. Meanwhile, the APA board of directors approves the new pilots' contract by a vote of 10-8.

Flight 1447, an MD-82 with 5 crew and 114 passengers, suffers an uncontained engine failure during its takeoff roll at Dallas-Fort Worth International Airport in Texas on November 23; the departure, scheduled for Acapulco, is aborted and all aboard are evacuated (one injury).

Following the award of \$20 million to two businessmen who had initiated a lawsuit because of a car crash, the company on December 5 turns off two 63-ft-tall illuminated signs on a freeway median at Dallas-Fort Worth. Prior to the suit and the jury verdict, local officials had received complaints that over 30 automobile accidents had been caused by drivers stopping to read the gate information for the scores of flights displayed.

British regulators announce the next day that, in order to avoid a full scrutiny of their proposed alliance, both AA and **British Airways, Ltd. (2)** must give up some of their takeoff and landing slots at London (LHR). Both companies had earlier warned that such a requirement could destroy the pact. On December 9, the European Commission issues a set of concerns about the alliance, holding that it will dominate transatlantic air travel. The EC advises that it has the legal power to block the arrangement, while BA disputes that stand.

In early December, an agreement is reached with **Federal Express** under which the Memphis-based company will trade 30 engine noise-reduction ("hush") kits to American in exchange for 14 used DC-10-10s.

In light of the weakening financial position of **Canadian Airlines International, Ltd.** during the year, AA has been forced to reduce the fees

it charges the Canadian major. Meanwhile, an ongoing lobbying effort to gain additional routes to Japan remains unsuccessful in the face of the acrimonious U.S.-Japan debate over cargo services.

At a point some 75 mi. E. of San Jose, Flight 407, an MD-83 with 5 crew and 115 passengers, encounters turbulence on December 25; one cabin attendant is seriously injured.

A negotiated four-year contract with company pilots is rejected by a 61.2% margin in voting by their rank-and-file on December 30. The next day, the company reports that the number of disruptive passengers this year has more than doubled, rising from 296 to 836.

Customer bookings slip 0.2% to 79,260,830 and cargo dips 1% to 2.94 billion FTKs. AMR Corporation, which spins off SABRE, registers a 4.6% increase in operating revenues to \$16.21 billion. Group expenses inch up just 0.1% to \$14.76 billion, leaving a huge \$1.44 billion operating profit. The previous year's \$86-million loss becomes a \$1.01-billion net profit. Debt as a percentage of capitalization is now 66%, down from 83% just two years earlier. AA itself contributes \$573.8 million of the net gain.

During the first week of January 1997, the U.K. Office of Fair Trading announces that it will approve the BA-AA alliance if the two majors agree to promote competition by relinquishing 168 weekly slots at London (LHR).

En route over the Atlantic Ocean on January 7, Flight 2009, an A300B4-605R with 265 passengers encounters clear air turbulence; 6 persons are injured, one seriously.

In something of a surprise that is felt from the AA boardroom to Wall Street, the Allied Pilots Association leadership on January 8 announces the result of the December 30 vote. The members reject the tentative labor contract negotiated in September and threaten to strike if the deal is not sweetened. As a result, Boeing is notified that the November aircraft order must be placed on hold. Two days later, the airline agrees to binding arbitration from the NMB in an effort to settle its contract impasse with the pilots.

Just after landing at Dallas (DFW) the same day on a service from Richmond, an MD-82 with 59 passengers, suffers a hydraulic failure. With the cabin filling with smoke, an emergency evacuation is carried out, during which one customer is slightly injured.

Also on January 10, **Delta Air Lines** joins **Continental Airlines**, **United Airlines**, **USAir**, and **Trans-World Airlines (TWA)** in submitting requested comments to the U.K. Office of Fair Trading concerning the proposed strategic alliance between AA and **British Airways, Ltd. (2)**. All five protest that such a pact would give the British and American giants the dominant positions in transatlantic and other markets and that the OFT's proposal to require them to relinquish 168 weekly slots at London (LHR) is insufficient to counterbalance the alliance. BA replies with a 148-page response to raised questions.

American, in the midst of its labor difficulties and also having had to delay an aircraft deal, is reassured when **British Airways, Ltd. (2)** issues a statement on January 14. BA states that it remains optimistic that the pact with AA will be completed by summer despite a new threat from the European Union's Competition Commission, which is insisting that the two huge carriers turn over some slots to be employed by competitors at London (LHR). If the U.K. Board of Trade and Industry approves the BA-AA compact under its present arrangement, the EU warns, it will take the U.K. to the European Court of Justice.

On January 15, the NMB terminates its arbitration service and frees both parties to seek whatever "self-help" remedies are possible, including a pilots strike. Also during this week, the American Eagle division receives FAA approval to start operation of its new Part 145 ATR Regional Aircraft Maintenance Center, at the former K. I. Sawyer AFB at Gwinn, Michigan.

Management and the pilots intensify their sometimes-heated negotiations during the first week of February amidst threats of a strike by the flyers by mid-month. Leaders of the Allied Pilots Association offer work-rule concessions valued at \$212 million in savings to the company over the next five years. In exchange, they seek an annual 3% salary in-

crease through the remainder of the century and 2% in the year 2000, 7.25 million stock options at \$10 below market value, and a promise that pilots of the American Eagle subsidiaries will be prohibited from flying the new regional jets.

During the week of February 2, European Union officials, led by Competition Commissioner Karel Van Miert, hold closed hearings at Brussels on the AA-BA merger proposal. BA CEO Ayling puts forward the case for the compact while officials from **Virgin Atlantic Airways, Ltd., Delta Air Lines, United Airlines, and Continental Airlines** speak in opposition.

By February 7, thousands of travelers, concerned over a possible strike by American's pilots are seeking other modes of transport or booking backup flights with other carriers. The same day, two USAF F-16s fly within 5 km. of an MD-82 near Clovis, New Mexico; the warning system aboard the jetliner alerts its cabin crew, which maneuvers to a higher altitude. The interception is the second with civil aircraft that day by Air National Guard planes and the third in two days.

Also during the second week, BA CEO Ayling, in a speech before the Aviation Club of Great Britain, challenges the objections of the other majors to the AA-BA pact. He indicates that as a result of the agreement, transatlantic passenger growth should increase by 20% for all companies flying over that ocean.

With an APA-backed strike date approaching, AA cancels most of its overseas flights on February 13; the same day, President Clinton orders the airline and union to mediate their increasingly bitter differences. Fissures within the pilots' union are proving an obstacle to successful resolution as the 9,000 pilots of the major see the 2,000 flyers at the American Eagle subsidiaries as a threat to take over more of their domestic routes as small regional jetliners are introduced.

The next day, thousands of prospective AA passengers around the country struggle to make last-minute changes in their travel plans in the face of the pending strike. As midnight approaches, APA officially calls the strike, but at 24 minutes after midnight President Clinton invokes the emergency powers of the 1926 Railway Labor Act (which also governs airline employee walkouts) to halt the work stoppage for a 60-day cooling off period. President Clinton also names Robert O. Harris, Anthony V. Sinicropi, and Helen M. Witt to a three-person emergency board that must recommend a nonbinding resolution to the dispute within a month. Still, the short strike costs the airline at least \$70 million in lost business from potential customers who have booked their flights elsewhere.

As a result of the pilot dispute, American officials notify Boeing that it must delay taking delivery on \$6 billion worth of jetliners, mostly B-737s, scheduled to begin joining the fleet in early 1998. If an arrangement with the flyers can be worked out, the planes may be able to come between late 1998 to 2000. At the same time, many business travelers have learned a valuable lesson over the past month and now have second thoughts about purchasing discounted tickets from consolidators as many airlines refuse to honor the tickets of their rivals, especially American.

While en route from West Palm Beach to Chicago on February 28, an MD-82 with 100 passengers encounters turbulence 9,200 ft. over Atlanta; 6 unbelted people receive injuries.

The September 1995 suit against American's Miami (MIA) terminal project by six other international airlines receives a blow in early March when the DOT rules that Dade County's charges for the carrier's expansion are fair and just.

Just after landing from a Dallas (DFW) service, Flight 320, an MD-82 with 5 crew and 103 passengers, slides off the left side of icy Runway 5R at Cleveland Hopkins Airport on March 5. The right main landing gear collapses and an emergency chute evacuation is carried out during which 5 passengers are injured. Deicing chemicals had been applied to the runway just before the aircraft touched down.

APA and management negotiators resume contract negotiations on March 17 at an undisclosed location; a company official reports the next day that the mediated talks are productive. On March 19 the negotiations end with an agreement in principle upon a new contract that includes a concession by the union on which pilots will fly regional jetliners. The

deal will now be given over for approval or rejection to the APA board and membership before the new April 28 strike date. As the pilots consider the contract, they announce an agreement with management on March 25 to extend the April 28 date until at least 30 days after the rejection of a new contract by either side.

Fifty minutes after takeoff from Newark (EWR) for Chicago on March 26, the pilots of a Fokker 100 with 92 passengers receive an indication of hydraulic malfunction. The twin-engine jetliner is diverted to New York (JFK), where it lands without incident. Also during the month, planning begins with **AVIANCA (Aerovias Nacionales de Colombia, S.A.)** for code-sharing on services between the U.S. and Colombia.

The company's frequent flyer agreement with **British Airways, Ltd. (2)** is expanded on April 1. In addition to the base agreement which permits members of one program to claim awards by flying on the other airline, Executive Club and AAdvantage are strengthened to permit members of either to earn and redeem miles on all routes except transatlantic.

At the same time, the frequent flyer relationship with **Canadian Airlines International, Ltd.** is modified. Heretofore, it has only been possible for members of one carrier's program to upgrade on the other airline if the flight was dual-designator; now, members may upgrade from economy to the next class up on any of each other's flights.

APA board members endorse the tentative contract with management on April 4 and send it on to the 9,300 rank-and-file members, who vote their approval by a 69% to 31% margin on May 5.

The next day executives proudly announce that they are installing fixtures on 278 aircraft, 40% of the fleet, to hold defibrillators that can revive victims of sudden cardiac arrest.

The battle over the proposed alliance with **British Airways, Ltd. (2)** returns to Washington, D.C. during the second week of April. EU Competition Commissioner Karl Van Miert meets with Attorney General Janet Reno and Federal Trade Commission Chairman Robert Pitofsky to examine the plan. Meanwhile, Sen. Michael De Wine (R-Ohio), chairman of the U.S. Senate Subcommittee on Antitrust, Business Rights, and Competition, holds hearings on the proposed pact.

Dual-designator frequencies are initiated with the Russian independent **Transaero Airlines** in April employing DC-10-30s that it has leased from the U.S. major. AA purchases seats on Transaero's new weekly frequencies to Chicago via New York while Transaero, in turn, shares code on American flights from the Chicago to five U.S. points.

On April 22, **Virgin Atlantic Airways, Ltd.** Chairman Richard Branson testifies before the U.S. Senate's antitrust subcommittee hearings on the proposed BA-AA pact. The lawmakers are told that higher prices and poor service would come of the union.

Having originally been unscrupulously traded on the black market to a family in Fingal, Ireland, a rare, 8-month-old Siberian tiger cub named "Jodie" is turned over to the Irish Seal Sanctuary. Nursed back to health over a two-month period, the cub is readied to go to its new home at the San Fernando Wildlife Way Station in California. Flown to London on April 25, the small cat is sent to Los Angeles via an American flight the next day and is then trucked by **Burlington Air Express (BAX)** to San Fernando. Both airlines donate their services to save what might otherwise have been 1 of only 470 Siberian tigers remaining in the wild.

When a passenger's carry-on luggage leaks ammonia during an April 26 service from Dallas (DFW) to Chicago, the captain of the affected MD-82, with 105 teary-eyed passengers, elects to divert to St. Louis. No injuries are reported.

Just after takeoff from Tucson for Dallas-Fort Worth on April 28, the left PWJT8D engine of Flight 230, an MD-82 with 118 passengers, fails, forcing the aircraft to make a safe emergency landing back at its point of departure. Engine parts are later found scattered around a housing area near the airport.

Also during April, a memorandum of understanding for cooperative services is signed with **China Eastern Airlines Company, Ltd.** The two will develop reciprocal code-sharing programs for flights between the U.S. and Shanghai and Beijing.

Following the pilots' acceptance of their new contract on May 5, AA is able to quickly renegotiate its aircraft order with Boeing. On May 15, the AMR American Eagle commuter subsidiary reaches a preliminary agreement with the pilots' union to replace the four separate contracts in place with the affiliates with one master accord.

En route from Boston to the Caribbean on May 12, Flight 903, an A300B4-605R with 9 crew and 155 passengers, is asked by ATC to hold in the area of West Palm Beach because of weather. About 10 miles from that city, the aircraft encounters clear air turbulence in which one person is seriously injured. The aircraft is diverted to Miami (MIA).

The Toronto *Globe and Mail* will report the embarrassing May 19 story of "the casual stowaway" in its June 4 edition. Dressed in a T-shirt and cut-off jeans, the 12-year-old son of Miami resident Darlene Livingstone, without a passport or any money, leaves home on a great adventure. After reaching the international airport aboard public transport and an airport shuttle bus, he joins a passenger line, walks through airport security, and is ushered aboard an American aircraft and into a first-class seat. He is not checked at any time for a ticket or papers and ends up in Jamaica. Only after he has landed and seeks to continue on to one of the island's resorts is the boy found out and returned home. Mrs. Livingstone hires a lawyer and sues the airline, the airport, and the FAA.

American places second to **Southwest Airlines (2)** in the results of a survey of consumer satisfaction released on May 24. Two days later, incumbent APA leader, Capt. Jim Sovich, finishes third in a three-person presidential election. AMR, on May 29, makes a \$300-million offer to purchase the **USAirways Shuttle** from the consortium of New York banks that owns it. **USAirways** plans to acquire the service are on hold while it develops a cost-cutting plan to return that major to profitability.

During the month, agreement is reached to begin, subject to government approval, the implementation of a major code-sharing agreement with **TAM (Transportes Aereos Regionais, S.A.)**; the document covers dual-designator services between 41 Brazilian cities and 25 communities in the U.S. and Canada. A similar accord is reached with the companies of the **TACA International Airlines, S.A.** group.

Pursuant to an April agreement, code-sharing also begins in May between AA and **AVIANCA (Aerovias Nacionales de Colombia, S.A.)**. The two coordinate schedules and allow the passengers of each airline to make connecting flights to either network with one ticket.

The Committee on Commerce of the U.S. Senate opens hearings on June 5 concerning the AA-BA alliance. The two majors encounter significant opposition in testimony given to the lawmakers. The Government Accounting Office recommends that the two give up a number of valuable landing rights at London (LHR) in order to increase competition on transatlantic service into the British airport. The Transportation Department testifies as to its desire to reach an "open skies" agreement with the U.K. which would allow carriers of both countries to fly to and beyond the two countries.

The company is embarrassed in early June when an employee dresses as Cuban dictator Fidel Castro to greet passengers departing Austin for the carrier's first direct flight from that Texas city to Miami. At the same time, the decision is taken not to initiate service from Miami to the Venezuelan cities of Maracaibo, Valencia, and Margarita.

Ground is broken at Chicago (ORD) on June 10 on a 7,800-sq.-ft. addition to the company's cargo facility and the EU Commission announces on June 12 that it will rule on the proposed alliance before November 30. A third daily B-727-223A roundtrip flight from the Dade County Airport to Caracas begins on June 15. Two days later, the carrier announces that it will hire some 360 flight attendants before year's end.

On June 21, New Otani Hotels becomes the newest partner in the carrier's frequent flyer program and, seven days later, it is announced that, starting in the fall, frequent flyer mileage will be offered to viewers of ABC television who can prove they watched certain shows. Arriving from Colombia, a company jetliner is impounded at the Alfonso Bonilla Aragon International Airport in California on June 25 after police find nearly 197g. of heroin stashed beneath an armrest of one of the passenger seats.

Also in June, **Canadian Airlines International, Ltd.**, by virtue of its code-sharing pact with AA, becomes the first Canadian airline to offer scheduled service to Central America. Via its code-sharing agreement with American Airlines, it inaugurates dual-designator services from Toronto to Miami, where American takes over and flies through passengers to El Salvador and Guatemala.

During the Paris Air Show in France this month, AMR's American Eagle subsidiary places \$1.1 billion in orders for 42 Embraer EMB-145 jets and \$1.4 billion in requests for 25 Canadair RJ700s. Deliveries of the former will begin in February 1998 and of the latter in 2001.

On July 1, a fourth daily B-727-223A roundtrip begins, for the summer only, from Miami to Caracas and Chairman Crandall notes that, in 1998, the company will open 9 to 12 additional gates adjacent to Terminal 2W of Dallas (DFW).

AA announces on July 2 that it will now permanently offer discounts of up to 50% on its North American flights to parents of children under two years of age who employ safety seats. Parents must provide the safety seat; other airlines quickly follow suit in implementing this measure.

On July 9, **LOT Polish Airlines, S.A.** begins to share its code on all American flights between Chicago and Miami and between New York (JFK) and Los Angeles. LOT had previously placed its LO designator code only on selected flights between those cities.

En route from Seattle to New York (JFK) on July 10, Flight 242, a B-757-223 with 5 crew and 128 passengers, encounters clear air turbulence 35 mi. SE of Dickinson, North Dakota; 22 persons receive minor injuries as the aircraft suddenly plunges. Upon recovery, the narrow-body is diverted to Denver.

Basic agreement is reached with **Japan Air Lines Company, Ltd. (2)** on July 21 on an all-encompassing business deal that includes shared dual-designator flights. When a new bilateral is completed between the U.S. and Japan, AA and JAL will sign a formal contract.

A wide-ranging new strategic partnership between **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and **American Airlines** is tentatively concluded, also on July 21. Under its terms, AMR Corporation would acquire a 10% stake in Iberia's owner, SEPI, which also controls **Aerolineas Argentinas, S.A.** and **Austral Airlines, S.A.** and Andes Holdings, which owns Interinvest, the holding company for the two Argentine airlines. It will also lead an effort to find additional investors who will purchase up to 35% additional Interinvest shareholding from Andes.

In addition, Iberia and American will begin to share codes on flights from the U.S. to Spain and link their frequent flyer programs. In South America, American would establish reciprocal frequent flyer arrangements with both **Aerolineas Argentinas, S.A.** and **Austral Airlines, S.A.** and code-share on certain of their internal routes.

The delayed code-sharing agreement with **Hawaiian Airlines (HAL)** is concluded on July 22. American is able to attach its two-letter booking code in worldwide reservations systems to Hawaiian's daily DC-9-51 flights among the Hawaiian islands. The two will coordinate flight schedules to provide convenient connections between AA's mainland-to-Hawaii flights and Hawaii's domestic network.

On July 27, American, its tenure as the longest-serving carrier operating from Washington, D.C. (DCA) with a commemorative B-757-223 flight from that point to Dallas (DFW). For two weeks prior to the event, AA offers a free roundtrip ticket for two to the first five people to loan it any authentic company souvenirs, e.g. ticket stub, baggage tag, from any flight departing Washington, D.C. (DCA) in June 1941.

Meanwhile, the U.S. major's almost-partner **British Airways, Ltd. (2)** and Iberia discuss a 10% equity stake for the U.K. flag carrier as well as a strategic partnership with the usual frequent flyer program linkage and code-sharing on routes between Madrid and London. Significant opposition quickly materializes from **Continental Airlines** and **United Airlines**, which fear not only an AA-BA linkup, but the potential domination of Latin American routes by American as well.

Nonstop service between Nashville and Los Angeles ends on July 30. Cancellation of its last remaining nonstop, which eliminates first-class

service between Nashville and Los Angeles, provokes an outcry from the entertainment industry in both cities.

In a sting code-named Operation Snowbird, FBI and Drug Enforcement Administration agents, using an informant, telephone taps, and hidden video cameras on American planes, penetrate a ring of aircraft mechanics suspected of helping smuggle a half ton of Colombian heroin and cocaine worth millions of dollars into Miami (MIA). Six AA mechanics are arrested on the night of July 31 at Miami (MIA), although another American mechanic escapes the roundup. Drugs are found stashed in fish-net type material behind panels in planes' ceilings, lavatories, kitchens, and the cockpit areas of sophisticated avionics and electronics equipment.

Also on July 31, the American Eagle subsidiary reaches agreement with the pilots of its four separate airlines for one contract covering the next 16 years.

A strategic cargo alliance is entered into with **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** in August, with the South American carrier responsible for boosting sales for AA Cargo in Chile. At this point, the new relationship with **Aerolineas Argentinas, S.A.** is confirmed.

AMR Corporation sells its Data Management Services subsidiary in August to Louisville-based National Processing Co. In addition, the concern names CAE Inc. as its primary source for simulators and orders four for delivery in 1998. Jay N. Miller is appointed director of the American Airlines C. R. Smith Aviation Museum.

A new program of discounted flights for those over age 62 is announced on August 10. On August 19, **Virgin Atlantic Airways, Ltd.** Chairman Richard Branson goes before the U.S. House of Representatives' Committee on Transportation and Infrastructure to again condemn the proposed alliance between American and **British Airways, Ltd. (2)**.

During the last week of August, existence of a training manual, *Latin American Pilot Reference Guide*, is revealed in response to lawsuits growing out of the 1995 Cali, Colombia, crash. Certain parts of the booklet cast aspersions upon Latins in general and South American Division Chief Peter Dolara is quick to apologize.

On September 4, **Northwest Airlines** raises its domestic fares by 5% and, over the weekend, most other U.S. majors, except **Southwest Airlines (2)**, follow suit. Also in the first week of September, **LanChile Airlines (Linea Aerea Nacional Chile S.A.)** signs a full-scale code-sharing agreement with American designed to increase the number of its U.S. destinations and also to permit its customers to travel from any city in Chile to any destination in the U.S. airliner's worldwide network.

On September 8, **American, Delta Air Lines, and Trans-World Airlines (TWA)** abandon the fare boost, but when **United Airlines** does not go along, these big three reinstate the higher tariffs the next day. Meanwhile on September 8, Chairman Crandall tells the Society of Airline Analysts that AA will scrap its proposed merger with **British Airways, Ltd. (2)** unless European Community conditions are softened.

Also on September 8, American begins to code-share on **Canadian Airlines International, Ltd.** wide-body flights from Vancouver to Taipei. The dual-designator flights commence in nine U.S. cities and transit via the British Columbia capital on to Taiwan. The AMR management fee for CAI is simultaneously reduced.

On September 10, an agreement is reached with the National Council of La Raza, which had promised to organize a boycott against the airline over the August training manual incident. AA pledges to hire more minorities and increase donations to Hispanic causes.

U.S. District Court Judge Stanley Marcus finds the cockpit crew of the doomed Cali aircraft guilty of "willful misconduct" in a summary judgment at Miami on September 11. The judge makes his ruling based on the fact that the pilots had continued to descend into Colombia's treacherous mountains even after they knew they were lost. American appeals, but the ruling clears the way for survivors and relatives of crash victims to sue the airline for far more than the \$75,000 limit imposed under international law.

On September 12, **United Airlines** requests that the U.S. DOT investigate the new arrangement between AA and **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**.

Chairman/CEO Crandall reports that the carrier is in the early stages of testing O&D yield management for revenue enhancement. If the program is successful, it could increase carrier revenues in excess of \$50 million within a year. Meanwhile, plans are announced to hang a collection of contemporary art in the new Admiral's Club at the terminal at Washington, D.C. (DCA). Painters will include Claes Oldenburg, Jim Dine, and Sol LeWitt.

For the past two months, the Nashville entertainment industry has been particularly vocal in its outcry of the suspension of service between "Music City" and Los Angeles. On the evening of September 22, representatives of the Nashville Chamber of Commerce collect signatures outside of the ASCAP award dinner on a petition to the airline. Simultaneously, major music industry leaders hold a conference call with AA representatives to express their dismay.

The airline now reverses its decision on the Nashville route and agrees to offer two daily roundtrip flights between Nashville and Los Angeles. The announcement, timed to coincide with the Country Music Association's CMA awards show to be broadcast September 24 from Nashville, is revealed from the stage at Opryland by CMA Director Ed Benson just before the telecast. Flights commence next day.

Also during the third week of September, EU Competition Commissioner Van Miert refuses to compromise over requirements for approval of the BA-AA pact. To win approval, the two must relinquish 353 weekly departure and arrival slots to other carriers wishing to compete with the alliance. The two argue that, should they be forced to reduce any slots, they have the right to sell them, rather than just have them handed over to competitors. Meanwhile, the two continue to work together on the periphery of agreement, utilizing enhanced frequent flyer benefits and joint pricing on certain routes.

Two operational incidents involve AA aircraft on September 25. In the first, an ATC error causes an MD-80 and a **Federal Express A300B4-605F** to pass within 800 ft. vertically and 2.3 mi. horizontally near McAlester, Oklahoma. Later, the right engine catches fire on an MD-80 that has just deplaned its passengers at Dallas (DFW) Gate 6; no injuries are reported and the fire is quickly extinguished.

Also on September 25, a cooperative service agreement is concluded with **Air Liberte, S.A.** to carry AA passengers beyond Paris to other French cities as soon as the governments of France and the U.S. conclude a bilateral.

Although the majors disagree over Latin American routing, they band together behind **United Airlines** on October 1 when the Chicago-based giant cuts commissions paid to travel agencies for writing tickets. Although commissions on roundtrip domestic flights remain at \$50 and there is no cap on international flights, rates are reduced from 10% to 8% for domestic and international ticketing.

Also on October 1, a contract is entered into with **Business Express** to provide feed to the major at Boston. The American Connection service will initially be offered to four New England communities and later expanded to seven.

Daily nonstop B-757-223 roundtrips commence on October 1 between Dallas (DFW) and Caracas, Venezuela. In addition, service between Miami and Caracas is doubled to twice daily.

While en route from Chicago to Miami during the day, an MD-82 with 89 passengers encounters clear air turbulence at 33,000 ft. over Florida; two aboard are injured and are taken to hospital as soon as the aircraft lands at its destination.

At the same time, fumes develop aboard Flight 931, a B-757-223 with 184 passengers preparing for takeoff from Miami to Ecuador, which sickens passengers and force the jetliner's evacuation. The cause of the incident will be determined as having been a leak in one of ten 50-lb. bags of Dovicide A, a hazardous pesticide. The illegal containers have not been labeled as hazardous or packaged securely and have been placed aboard by PABS Trading as extra passenger luggage.

Two days later, the principal distributor, Executive Freight Consolidators, again attempts, via PABS Trading, to place unlabeled Dovicide A packages aboard Flight 931. This time the FBI steps in and arrests

EFC President Angel Fuentes, who appears in federal magistrate court on October 8.

The travel agent payment initiative is matched on October 6 by American, **Continental Airlines**, **Delta Air Lines**, **USAirways**, and **Northwest Airlines**. **Southwest Airlines** and **Kiwi International Air Lines** announce that they will maintain the 10% scale. The travel agency industry, which, despite ticketless travel, still writes 80% of all tickets, sold, protests.

On October 13, a pact is signed with **Air Liberte, S.A.**; as soon as a new U.S.-France bilateral is signed, 27 French cities will be opened to AA passengers via Paris (ORY).

A smoke alarm goes off aboard Flight 27, an MD-11 with 26 crew and 154 passengers en route from Seattle to Tokyo (NRT) on October 21, forcing an emergency landing at Chitose Airport, near Sapporo on the northern Japanese island of Hokkaido. No problems are found and the plane departs for its original destination within 40 minutes of landing.

Also during the month, a new freight terminal is opened at Caracas and scheduled passenger service to Latin America from New York, DFW, and Miami is expanded to 94 daily flights.

On November 1, daily nonstop B-757-223 roundtrips are inaugurated between Dallas (DFW) and San Jose, Costa Rica. Simultaneously, daily nonstop MD-80 roundtrips are launched from San Antonio to Mexico City.

A strategic alliance agreement is signed with **China Airlines, Ltd. (CAL)** on November 5. The agreement will take effect on December 1.

A \$1-billion order is placed with Boeing during the first week of November for 4 more B-777-223 IGWs and 4 B-767-323ERs; AA now has 11 of the former type on firm order for delivery before century's end. When the **TAM (Transportes Aereos Regionais, S.A.)** TAM-Meridionalis is unable to begin its own São Paulo-Miami service and postpones it for a year, American steps in to provide the flights on a code-sharing basis.

Company officials must admit, during the second week of November, that the hoped-for alliance with **British Airways, Ltd. (2)** will not be in place in time for the start of the 1998 summer travel season. Without government approvals, it is impossible for the two to schedule a hearing before the IATA slot committee (which sets international airport slot arrangements) when it meets in early December.

Meanwhile, diplomatic negotiations involving the U.S. and British governments and the European Commission (which has taken a hard line on competition) continue toward the EC's preliminary recommendation goal of January 1, followed by a final decision on April 1. U.S.-U.K. discussions on a new "open skies" bilateral air agreement remained stalled.

Dual-designator flights with **Canadian Airlines International, Ltd.** commence on November 19 from Toronto to Nicaragua and Costa Rica. Again, CAI flies the Toronto to Miami leg, where the U.S. major takes over and continues the services into Central America.

Despite AA's larger bid, **USAirways** elects, during the third week of November, to purchase the **USAirways Shuttle** by exercising its original option. The price is \$285 million; American receives a \$10-million negotiated breakup fee. At month's end, final agreement is reached with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** along the lines negotiated in July.

Under terms of a mid-October agreement, the company plans to begin to code-share on U.S.-South Korea flights on November 20 with **Asiana Airlines, Ltd.** The actual inauguration of dual-designator flights must, however, be postponed.

The new agreement with **China Airlines, Ltd. (CAL)** comes into effect on December 1. In addition to linking frequent flyer programs and simplifying check-in procedures, the two will code-share on services between Taipei and Dallas, Chicago, Miami, New York, and Washington, D.C. via the CAL gateways at Los Angeles and San Francisco.

Also during the day, ground is broken for a new \$1.9-million "glass hangar" addition to the C. R. Smith Aviation Museum at Dallas (DFW).

Having allegedly struck a flight attendant while on a December 2 Manchester, England, to Chicago flight, computer programmer Dennis Dale Gerber is arrested upon his deplanement, taken before a U.S. Mag-

istrate's Court, and charged with interfering with a flight crew, a crime punishable by 20-years in prison.

The code-sharing agreement with **Aspen Mountain Airlines** is expanded on December 3. The major places its codes on Aspen's Dornier 328s and offer two flights daily, except Saturday, between Dallas (DFW) and Chihuahua, Mexico, two flights daily Monday-Thursday, and one flight on Friday and Sunday between DFW and Del Rio, Texas. These new flights complement the dual-designator the two carriers have introduced over the past several months on Aspen flights from DFW to Pensacola, Santa Fe, Knoxville, and between Denver and Bozeman.

USA Today reports, on December 10, the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; AA demonstrates an 80% achievement, good for 4th place.

Also on December 10 a giant storm dumping heavy wet snow blankets the Chicago area with as much as 8 inches. American and **United Airlines** are forced to cancel between 25-40% of their flights from O'Hare International Airport. Many delays are caused by poor visibility at other affected airports further east.

On December 15, daily, nonstop, MD-80 roundtrips begin between Miami and Denver; the service, previously seasonal, will now be offered year-round. MD-80 nonstop roundtrips simultaneously start from Dallas (DFW) to Guadalajara and Los Cabos, with the new Los Cabos flight being the carrier's second roundtrip to that popular resort destination in Baja, Mexico. The same day, daily B-MD-80 roundtrips commence from Dallas to Puebla, Mexico, about 50 miles southeast of Mexico City, and from Miami to Monterrey.

Seasonal (through March) thrice-weekly B-757-224 flights resume on December 20 between Miami and Eagle and Vail, Colorado.

Also in December, AMR, the parent of **American Airlines**, executes the formal agreements with SEPI and Andes Holdings concerning **Aerolineas Argentinas, S.A.**, subject to approval by the U.S. Department of Justice.

Passenger boardings rise 2.2% to 81,139,000, while freight inches up 0.3% to 2.4 billion FTKs. Operating revenues for AMR Corporation accelerate 4.3% to \$16.9 billion while expenses advance 3.8% to \$15.33 billion. Operating profit ascends to \$1.56 billion, while a net gain of \$1.3 billion is recorded. AA itself generates \$14.3 billion in operating income and produces a \$766.5-million net profit.

At the beginning of 1998, American is the largest airline in the world in terms of fleet size and net profit, 2nd in operating income and operating profit, 3rd in passenger boardings and number of employees, and 16th in terms of freight carried.

The fleet roster holds a massive 638 units, 87.8% of which are Stage III certified; these include: 78 B-727-223As, 90 B-757-223s, 71 B-767s, 35 A300B4-605Rs, 16 DC-10s, 75 Fokker 100s, 13 MD-11s, and 260 MD-80s.

While en route from São Paulo to Miami on January 3, the off-duty First Officer of a B-767-323 with 13 crew and 132 passengers suffers a seizure; the aircraft diverts to Bogota, where the flyer is taken to the hospital.

The carrier begins code-sharing with **Aero California (Aerocalifornia Servicios Aereos, S.A. de C.V.)** on January 5. The AA code is placed on Aero California transborder flights from Los Angeles to Culiacan, Durango, Hermosillo, La Paz, and Tijuana and from Tucson to Hermosillo, Mexico.

Twice-daily roundtrip B-757-223 service is inaugurated on January 6 from San Francisco to Boston; simultaneously, a late-night departure is offered from San Jose, California, to Boston designed to complement the two existing San Jose-Boston daytime roundtrips. At the same time, daily B-757-223 return flights commence between New York (JFK) and Cuzco, Peru, via Lima.

On January 9, a baggage cart drives in front of Flight 2027, a B-727-223A with 7 crew and 107 passengers taxiing for takeoff at Philadelphia

for Dallas (DFW). The right main gear strikes the tug and one of its towed carts; the bottom of the fuselage and the left wing root are damaged, but no injuries are reported from anyone aboard the aircraft. The tug driver is seriously injured and most of his luggage train is damaged or destroyed.

While on final approach to New York (JFK) on January 10, a **Delta Air Lines** MD-88 given the wrong ATC clearance comes within 10 seconds of a collision with an American B-767-223ER that is taking off.

On January 15, AMR Eagle officials, led by President Garton, announce that the availability of regional jets, the previous August's single Eagle pilot contract, and changes in the economics of the regional airline business dictate consolidation. Consequently, AMR will integrate all four of its commuter airlines into a single carrier beginning in May; by year's end, the world's largest regional airline will operate as a sister carrier to AA.

At the same time, it is noted that AMR Eagle and Embraer, the aircraft manufacturer, have signed a \$1.1-billion export-finance contract with the National Development Bank of Brazil. The arrangement provides a line of credit that will cover the cost, over three years, of the airline's acquisition of the 42 ERJ-145 Amazons ordered at the June 1997 Paris Air Show; 22 of which are expected before year's end.

On January 17, AA becomes the first U.S. carrier to offer its customers the option of ticketless travel on all of its flights between the U.S. and Europe.

Also during the month, a final agreement is signed for AA's purchase of 8.5% equity in **Aerolineas Argentinas, S.A.** During the last week of the month, the company begins training its first class of new pilots (12 cadets) since February 1993.

Flight 882, an A300B4-605R, aborts its takeoff from Santo Domingo on January 28 due to hot brakes; when the aircraft stops, all aboard are quickly evacuated.

On January 30, a new bilateral air agreement is announced between the U.S. and Japan. Under its terms, the company will be allowed to add 90 weekly roundtrips to the 46 already flown.

It is announced on February 4 that the company will add 6 first-class seats to 106 of its MD-80s; by August 1999, the twin-jets, employed on business routes, will have 20 first-class seats each.

Flight 1340, a B-727-223A with 6 crew and 115 passengers, lands in mud 200 ft. short of runway 14R at Chicago (ORD) on February 9. The jetliner smashes two stanchions of approach lights, suffers the separation of its No. 1 engine plus both main gears, and slides 2,000 ft. before coming to rest. No injuries are reported. It will be reported that the trijet is the same one damaged when it hit a baggage cart at Philadelphia in January.

As of February 15, AA begins to change its in-flight movies twice monthly, instead of the industry-standard once per month.

A major code-sharing agreement is signed with **Japan Air Lines Company, Ltd. (2)** on February 25. Although no start-up date is indicated, the two announce that they will share their designations on each other's flights to and beyond U.S. and Japanese gateways. Additionally, the existing linkage of frequent flyer programs on international routes will be extended to domestic services.

Also during the month, the carrier resists a French government demand, made during its negotiations with the U.S. over a new "open skies" bilateral agreement, that it transfer to Paris (CDG) from its historic home at Paris (ORY).

The code-sharing agreement with **LOT Polish Airlines, S.A.** is expanded on February 27. American places its AA code upon LOT's roundtrip B-767-35DER services from Warsaw to New York (JFK) and Chicago (ORD). LOT in turn is allowed to place its code on American connections to Boston and Washington, D.C. (IAD) via New York (JFK), to Seattle via Chicago (ORD), and to San Francisco and Dallas (DFW) via both New York (JFK) and Chicago (ORD).

The first two Embraer ERJ-145ER (Extended Range) jetliners are delivered to **Simmons Airlines** on February 28.

In February, the FAA fines American \$250,000 for repeated failure of its employees and contractors to display their badges while in high-security areas at Dallas (DFW); the citation is appealed.

On March 1, the company begins training a new class of 30 pilots. It will begin a new class every month through December. At mid-month, plans are announced for the acquisition of 7 additional B-777-223 IGWs for delivery in 1999.

The same day, the AAdvantage Executive Platinum frequent flyer program is unveiled for those who travel 100,000 miles per year via AA; the program perks include guaranteed seats on the next plane if a flight is cancelled, first-class upgrades 100 hours in advance, Admiralty Club discounts, and so forth.

Also on March 1, the company signs a full code-sharing marketing alliance with **China Eastern Airlines Company, Ltd.** Once government approvals are received, the two will share codes on flights from Los Angeles, Chicago (ORD), and Washington, D.C. (IAD) to Shanghai and Beijing.

The next day, a morning nonstop service is initiated from Newark (EWR) to London (LHR); a similar service to Heathrow Airport is launched from Chicago (ORD).

The code-sharing agreement with **LOT Polish Airlines, S.A.** is further expanded on March 4; five new U.S. gateways are added to the program, including Cleveland, Denver, Phoenix, Syracuse, and Washington, D.C. (DCA). The DCA and Syracuse flights connect through New York (JFK), while the others connect via Chicago (ORD).

On March 8 the 55-year-old first officer of an MD-83 en route from Dallas (DFW) to Ontario, California, suffers a heart attack; despite a fast emergency descent and landing at the Lubbock, Texas, airport, the officer dies.

U.S. Secretary of Transportation Rodney E. Slater and Japanese Transport Minister Takao Fuji are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies in Washington, D.C. (IAD) on March 14. Two days later, the DOT authorizes 64 weekly flights to Japan for carriers that in the past have had their services severely limited.

American wins authority to offer 28 weekly flights; these will comprise daily services from Chicago, New York, and Boston to Tokyo and from Dallas (DFW) to Osaka. The company will now enjoy seven routes rather than its previous three.

The Commerce Committee of the U.S. Senate again holds hearings that focus upon the proposed AA-BA alliance. Following presentations by Chairman Crandall and BA CEO Ayling, Assistant Attorney General Joel Klein indicates that, unless the two companies surrender a significant number of gates and slots at London (LHR), the U.S. Department of Justice will recommend to the DOT that it disapprove the partnership.

An evening departure is started on March 29 from Chicago (ORD) to London (LHR), bringing to four the number of daily departures between the "Windy City" and the British capital.

Although the carrier has settled out of court many of the lawsuits arising from the December 1995 Cali disaster, a jury in Miami during the month orders American to pay \$565,000 to the family of a 27-year-old Colombian killed in the crash.

In a special promotion with AT & T Wireless through June 30, the carrier, beginning on April 1, gives the first five minutes of in-flight calls to passengers on a complimentary basis.

On April 5, daily B-727-223A roundtrips begin between Miami and the resort destination of Cozumel, Mexico. Also, frequencies from Chicago (ORD) to Mexico City are doubled from one daily roundtrip to two. Daily nonstop B-757-223 roundtrips from Boston to Bermuda also start; the seasonal service will be concluded in October.

The same day, daily nonstop B-767-323ER roundtrips begin between Dallas (DFW) and Manchester, England. Additionally, a third daily nonstop roundtrip is initiated between Miami and Lima, Peru, and, for the summer season, a second daily roundtrip is begun from Chicago (ORD) to Albuquerque.

The new "open skies" bilateral air agreement is signed between the U.S. and France on April 8. On April 13, hubbing arrangements at San Juan are changed. Jet service is reduced to one-flight-a-day between the Puerto Rican capital and both Aruba and St. Martin and is discontinued

to Antigua, Barbados, Grenada, St. Croix, and St. Lucia. Also ended are seasonal services to U.S. points started the previous fall. At the same time, 128 workers are laid off and the flight attendant crew base is closed, forcing the relocation of 202 cabin crew.

Additional schedule changes occur on April 13. Daily nonstops are increased from three to four between Nashville and New York (LGA), from six to seven between Chicago (ORD) and Detroit (DTT), from seven to eight between Chicago (ORD) and San Francisco, from four to five between Chicago (ORD) and San Jose, and one daily return flight is resumed from Dallas (DFW) to Bakersfield. Frequencies between DFW and Leon, Mexico, are simultaneously boosted from one daily roundtrip to two.

Dual-designator flights with **Aero California (Aerocalifornia Servicios Aereos, S.A. de C.V.)** are expanded on April 20. The U.S. major places its code on the Mexican line's flights from Los Angeles to Loreto, Los Cabos, Tijuana, and Manzanillo. Aero California continues to seek government approval to place its "JR" code on American services from Mexico to U.S. gateways and beyond.

The code-sharing agreement with **LOT Polish Airlines, S.A.** is expanded in April; 10 new U.S. gateways are added to the program, including Boston, Cleveland, Dallas (DFW), Denver, Phoenix, San Francisco, Seattle, and both airports at Washington, D.C.

Despite their emergence in rival camps, AA and **United Airlines** jointly announce that they are engaged in finding a way to make it possible to interline E-tickets, which cannot now be transferred between airlines, even among those in alliance. A solution is promised by summer 1999.

A marketing alliance is entered into with **USAirways** on April 23. Under its terms, the two majors agree to link their frequent flyer programs, share lounges at various airports, and cooperate in such areas as joint purchasing. Code-sharing will be left for later discussion if permission can be obtained from their respective pilot unions and the government. The AMR subsidiary SABRE Group now also signs a 25-year, multibillion-dollar contract to take over all of **USAirways'** information technology functions.

American, which is engaged in a legal battle to prevent interstate service from Love Field in Dallas, now announces that it will, itself, engage in direct competition with **Southwest Airlines (2)** from the historic battleground airport where Southwest is currently the only major operator. Beginning in August, the first service will employ MD-80s and be operated 14 times a day to Austin.

Continental Airlines holds two gates at Dallas (DAL), but elects not to go up against Southwest again, nor American. It does, however, announce that its subsidiary, **Continental Express**, will inaugurate nonstop Embraer ERJ-145 roundtrips to Cleveland Hopkins Airport in early July. The announcement causes the governing board of Dallas (DFW) and American to file suit in state court seeing an injunction to block the service.

Thrice-daily Fokker 100 nonstop roundtrips commence on May 1 between Chicago (MDW) and Dallas (DFW). The same day, nonstop daily B-767-323ER return service is started between Miami and London (LGW), complementing the daily nonstop return frequency already offered between Miami and London (LHR). Seasonal dailies commence the same day from Chicago (ORD) and Glasgow.

Additional schedule changes also occur on May 1. From Chicago (ORD) frequencies are increased to Portland (2 to 3), to Tampa (2 to 3), to Tulsa (4 to 5), and to San Jose (5 to 6). Daily seasonal roundtrips resume between New York (JFK) and Seattle, while year-round trips between Dallas (DFW) and Guadalajara are also increased (3 to 4).

Nonstop, dual-designator, all-cargo roundtrips with **Japan Air Lines Company, Ltd. (2)** commence on May 1 from Chicago (ORD) to Tokyo. Simultaneously, enhanced medical kits are added on board domestic flights; the boxes include drugs to assist with asthma, epileptic seizures, cardiac attacks, and diabetic difficulties.

In "celebration" of the third anniversary of the U.S.-Canadian "open skies" pact, **Canadian Airlines International, Ltd.** launches daily

dual-designator roundtrips on May 4 between Toronto and Boston. At the same time, the DOT formally approves the carrier's pact with the TACA Group of Central American airlines.

En route from Washington, D.C. to Chicago (ORD) on May 13, Flight 1275, a Fokker 100 with 4 crew and 35 passengers, encounters clear air turbulence 20 mi. E of Fort Wayne, Indiana; one flight attendant is seriously injured.

On May 15, **American Eagle Airlines (2)** introduces Embraer ERJ-145 Amazon services using the new Brazilian jetliners painted in AEA colors. The initial flights, operated by **Simmons Airlines**, include five daily roundtrips from Chicago (ORD) to Cincinnati, six per day from Chicago to Cleveland, and a daily roundtrip from the Chicago to Milwaukee.

The introduction of **Canadian Airlines International, Ltd.**'s Boston service helps to bring about a greater change than anticipated. Having watched the AA share of cross-border traffic drop from 95% to 50% since 1995 and concerned that CAI's success may impact U.S. pilot jobs, the U.S. major's Allied Pilots Association now triggers a related contract clause. American, as a result, is forced to drop code-sharing with CAI during the second week of May over 14 of 35 cross-border routes.

A broad marketing agreement is signed with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on May 18. In addition to linking their frequent flyer programs, the majors will code-share on numerous flights between the U.S. and Spain.

Pepsi-Cola finally breaks Coca-Cola's monopoly on company services on May 19 and will now be available to passengers on all flights.

Following the company's annual meeting, a titan of the industry, Chairman/CEO Crandall, retires on May 20 and is succeeded by President Carty. Under the leadership of Assistant Attorney General Klein, the U.S. DOJ now issues an advisory ruling under which it recommends disapproval of the proposed AA-BA alliance to the DOT unless the pact is "significantly restructured."

A new daily nonstop A300B4-605R route is opened on May 21 between Boston and London (LGW). It is designed to complete the twice-daily roundtrips already provided between Boston and London (LHR).

On May 25, the company and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** sign a marketing and flight-sharing pact covering their routes from Miami to Madrid.

Also in May, AMR Eagle's four semiautonomous carriers (**Simmons Airlines, Flagship Airlines, Executive Airlines, and Wings West Airlines**) begin a seven-month period of amalgamation into **American Eagle Airlines (2)**, now viewed by AMR as a sister of **American Airlines**. The presidents of **Simmons, Flagship, and Wings West** are provided with appointments elsewhere within AMR Eagle and are mostly replaced with vice presidents at each of the new airline's hubs (former **Executive Airlines** President George Hazy takes over the San Juan post).

Also during the month, the carrier's pilots union meets with its colleagues from **British Airways, Ltd. (2)** to discuss ways in which they can cooperate should the alliance actually emerge.

As a result of enhanced airport security measures, the carrier is now allowed to cut some costs and to make last-minute plane changes for passengers by halting, as of June 1, the issuance of advance boarding passes.

Additionally, daily seasonal roundtrip service is resumed between Dallas (DFW) and Jackson Hole, Wyoming. Also at the beginning of the month, the governing board of Dallas (DFW) files suit against AA to prevent it from offering long-haul interstate flights out of Love Field.

Daily RJ-145LR service from Dallas (DFW) to Indianapolis and Columbus begins on June 5. Dual-designator service begins with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on June 10, with AA placing its code aboard the Spanish major's flights to and from Miami, San Juan, and New York (JFK).

The company schedule is further revised on June 15. From Chicago (ORD) daily flights are advanced in number to Newburgh, New York (from 3 to 4), to Denver (from 7 to 8), and to El Paso (from 2 to 3). Frequencies from Dallas (DFW) are simultaneously boosted to San Fran-

cisco (from 10 to 11), to Seattle and Philadelphia (7 to 8), to Detroit (6 to 7), and to Monterrey, Mexico (5 to 6).

The number of flights to Santo Domingo from New York (JFK) also grow in number on June 15 from three to four. The same day, a third daily roundtrip is started between San Jose and Austin and a sixth daily roundtrip is begun from San Jose to Chicago (ORD).

The U.S.-France bilateral accord reached on April 8 is formally signed on June 18 in a ceremony by French Foreign Minister Hubert Vedrine and U.S. Secretaries Madeleine K. Albright (State) and Rodney E. Slater (Transportation). The pact opens the way for new transatlantic code-sharing and additional frequencies.

A fire at Buenos Aires late in the third week of June causes the carrier, along with others, to cancel a number of flights on June 20-21; the flight schedule returns to normal on June 22.

Also on June 22, the carrier's redesigned homepage on the World Wide Web must be taken offline when the number of hits overwhelms the site following a heavy publicity campaign. The hardware will be reconfigured.

On June 25, the company joins with **British Airways, Ltd. (2)** in making a new proposal designed to speed acceptance of the planned alliance between the two majors. Under their new suggestion, the pact would be frozen until rival carriers are given 196 weekly takeoff and landing slots at London (LHR). The slots would be newly available—not taken from either BA or AA. Even as the proposal is filed with the DOT, competitors reject it, claiming that the two companies would still dominate the profitable U.S. to London (LHR) market.

The DOT approves the TACA Group-AA alliance in June, with some restrictions, including a prohibition on code-sharing beyond Mexico City. Under terms of the agreement, AA will place its designation upon 149 weekly TACA flights from 9 U.S. communities to 10 Central American destinations. TACA will place its codes on 126 weekly AA services from 8 points in 7 Central American countries to U.S. gateways and beyond.

The company on July 1 places its code on flights of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** beyond Madrid to Barcelona, Malaga, and Palma de Mallorca. Simultaneously, frequencies from New York (JFK) to Port-au-Prince are doubled from one daily roundtrip to two.

In the July issue of the airline's AAdvantage frequent flyer program newsletter, the company announces that effective the following February 1, the number of frequent flyer miles needed to earn a first- or business-class seat will be increased anywhere from 10,000 to 25,000 miles.

Following ceremonies at Dallas (DFW), a company B-767-323ER launches daily nonstop roundtrips on July 6 to Manchester, England. This is the company's fourth European destination from its DFW hub.

On July 8, the DOJ grants the AMR Corporation clearance to proceed with its equity investment in Interinvest, S.A., which owns **Aerolineas Argentinas, S.A.** and **Austral Lineas Aereas, S.A.**

A Texas district court issues a temporary injunction on July 9 barring the launch of **Continental Express** service to Ohio; the airline appeals immediately.

Also on July 9, Flight 574, an A300B4-605R with 9 crew and 242 passengers and en route from San Juan to Miami, suffers a fire in its No. 1 engine just after takeoff from Puerto Rico. The aircraft returns to its point of origin and completes a safe emergency landing; airport fire trucks meet the aircraft and extinguish the flames. All aboard are evacuated down chutes and 28 passengers receive minor injuries.

The dispute between Allied Pilots Association members and American concerning code-sharing services with **Canadian Airlines International, Ltd.** deepens as the union recommends that its members not accept additional flying time. American is forced to cancel hundreds of flights during July for lack of flight crews.

In Brazil on July 16, AA begins to place its codes on **TAM (Transportes Aereos Regionais, S.A.)** services between São Paulo and Porto Alegre.

Also on that day, a company jetliner flies directly through the restricted space over the White House at Washington, D.C. The *Washing-*

ton Post reports the incident, one of a number of White House airspace violations, on September 22.

On July 17, after a three-day trial in U.S. District Court in Miami, a jury finds American Airlines guilty of wrongful death in the 1995 Cali disaster and awards the parents of Ernesto Montero, a college sophomore killed in the December crash \$2.4 million in compensation.

The new arrangement with TACA Group begins in July when the U.S. major places its "AA" code aboard TACA Group services from Dallas (DFW) to Guatemala City and to San Jose via Guatemala City; from Los Angeles to Guatemala City and from LAX to San Salvador.

Dual-designator service with **Asiana Airlines, Ltd.** finally begins on July 20. American places its "AA" code on Asiana's flights from Seoul to Los Angeles, San Francisco, Seattle, and New York (JFK).

During the heatwave that impacts the U.S. in the period after July 29, the company refuses to carry pets as checked baggage if the temperature rises above 85°F. The heat animals experience in the hold waiting for takeoff and again after landing can cause their deaths.

Nonstop service is inaugurated on August 1 between San Jose, California, and New York (JFK). Also on August 1 as part of the new alliance with **USAirways**, members of the carrier's frequent flyer program can begin claiming mileage for travel on both carriers. In addition, Admiral Club members may access any of **USAirways'** 26 Clubs and vice versa. Simultaneously, new daily B-757-223 roundtrips are initiated from San Jose to Washington, D.C. (IAD) and to New York (JFK).

While en route from Miami to Los Angeles on August 9, Flight 823, a B-757-223 with 9 crew and 187 passengers, encounters severe air turbulence at 31,000 ft. during a storm 45 mi. N of Tampa; 8 aboard are slightly injured and the aircraft returns to its point of origin.

The code-sharing pact with **TAM (Transportes Aereos Regionais, S.A.)** is expanded on August 12 as AA places its code on TAM services from São Paulo to Brasília, Curitiba, and Rio de Janeiro.

On August 15, an arrangement is reached between the major and its pilots. Under its terms, AA is allowed to maintain its code on six CAI flights added after January 7, 1997 and to add its code to one more flight later in the year.

At the same time, the major places a \$2.2-billion order for 15 additional B-777-223 IGWs, bringing to 34 its firm orders for the long-haul transport.

The code-share with TACA Group is expanded on August 26 on four new routes: San Francisco to San Salvador; Houston (IAH) to San Salvador, as well as to Roatan, Honduras, on Saturdays, and from Washington, D.C. (IAD) to San Salvador.

En route from Chicago (ORD) to Los Angeles on August 27, Flight 453, an MD-80 with 76 passengers, develops a fuel leak from its left engine. The aircraft is diverted to Phoenix, where passengers are evacuated down the plane's inflatable slides. No serious injuries are reported.

Also on August 27, the airline and its sister, **American Eagle Airlines (2)**, reach agreement with **Northwest Airlines** that will allow them to accept NWA tickets in the event that a strike, looming in two days, occurs. Although both companies recommend reservations, they will accommodate ticketed NWA passengers at airports on a stand-by basis.

Seeing him as an important link with its heritage at Dallas (DAL), the company now assigns DFW Special Services Director Walter Hagan as its "Ambassador of Love" in preparation for the initiation of flights from the Texas airport at month's end. Hagan, who had joined AA at Love in 1949 and served there for the next 15 years, will assist customers with any problems.

Intrastate Fokker 100 and MD-82/83 roundtrips commence on August 31 between Dallas (DAL) and Austin, 14 times a day. Meanwhile, the airline and the city of Fort Worth continue to oppose an effort by **Continental Express** to initiate interstate flights to Cleveland.

On September 1, daily DC-10-30 roundtrips are inaugurated from San Jose to Tokyo (NRT).

Thrice-daily roundtrip MD-82/83 service is inaugurated between Austin and Houston (HOU) on September 9, with a same-plane connection on to a new thrice-daily service from Houston (HOU) to New York (LGA).

On September 15, **China Eastern Airlines Company, Ltd.** becomes the first airline from the People's Republic of China to place its codes on the flights of a U.S. airline. The company's two-letter designator is assigned to selected American flights between Los Angeles (LAX) and New York (JFK), Chicago (ORD), Dallas (DFW), and Washington, D.C. (Dulles) as well as on services between San Francisco and Chicago (ORD).

At a London news conference on September 21 it is announced that **Cathay Pacific Airways (Pty.), Ltd.** has joined its first airline alliance, the new "OneWorld" grouping established to compete with the "Star Alliance" headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by American and **British Airways, Ltd. (2)**, which continue their battle to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. **Canadian Airlines International, Ltd.** and **Qantas Airways (Pty.), Ltd.**, both of which already have marketing partnerships with AA and BA, are also charter members. Leaders of the five companies indicate that they will coordinate ticketing and flight schedules and cooperate on frequent flyer programs. Other carriers will be invited to join and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces its membership before the day is over.

One airline that will not be invited to join, **Virgin Atlantic Airways, Ltd.**, hires a truck with a sign painted on its side proclaiming "no way" and has it parked, illegally, outside the building where the "OneWorld" news conference is held. A spokesman for Virgin indicates that, to get the company's point across, his airline will gladly pay the parking ticket.

It is announced on September 24 that the company will launch daily B-767-223ER roundtrips from Chicago (ORD) to Amsterdam on May 3, 1999, followed by daily B-767-223ER roundtrips from New York (JFK) to Frankfurt on May 16.

Due to Hurricane Georges, American and its American Eagle affiliate **Executive Airlines** are forced to suspend operations in many locations during the week of September 24-30.

The company enters into a strategic marketing agreement with **Finnair O/Y** on September 29 that includes reciprocal frequent flyer programs, code-sharing on some transatlantic flights, and a move by Finnair into the AA terminal at New York (JFK). The programs will take effect on April 1.

The same day, AMR Corporation, the airline's parent, announces plans to sell most of AMR Global Services in order to concentrate on its core airline business. It also completes a \$500-million buyback of common stock.

On October 1, **Asiana Airlines, Ltd.** is able to place its code on American services from its four gateway cities to other U.S. points served by American. In honor of Halloween, passengers on the carrier's long-haul services will be able to view any of six films by the legendary director Alfred Hitchcock during October.

As the two airlines have yet to reach complete agreement, implementation of a seat-sharing pact with **Japan Airlines Company, Ltd. (2)** is postponed on October 1; the arrangement is now expected to proceed early in the new year.

On October 5, American and **Executive Airlines** announce that special fares will be offered in October for flights between the U.S. mainland and areas struck by the tropical storm, including Puerto Rico and Haiti. The low-cost flights will be designed to assist family and friends coming to help with the rebuilding process.

Beginning on October 7, American places its "AA" code on **British Midland Airways, Ltd.** services via Manchester to the Scottish cities of Aberdeen, Edinburgh, and Glasgow.

After three days of unproductive talks with their British counterparts concerning an "open skies" bilateral air agreement, U.S. negotiators in London depart the conference. Complicating the talks has been a British demand that the U.S. accept without further delay the AA-BA alliance and U.S. insistence that the pact will not be given antitrust status until the British agree to "open skies."

With no further talks scheduled on the "open skies" accord, DOT officials, on October 9, cancel planned October 26 hearings on the proposed AA-BA alliance. American simultaneously puts out a press release indicating that it is committed to the BA relationship despite the failure of government talks. Chairman/CEO Carty does remind the public that the new "OneWorld" alliance will prove helpful to the carrier's customers.

American also begins dual-designator service in October when it places its AA code aboard **China Eastern Airlines Company, Ltd.** flights from LAX and San Francisco to both Shanghai and Beijing.

Just after takeoff from Toronto on an October 14 service to New York (LGA), smoke is detected in the galley area of a Fokker 100 carrying 4 crew and 82 passengers, as breakfast is being heated. The Dutch-made jetliner makes a safe emergency landing back at its point of origin. No fire is found and the plane is allowed to depart an hour later.

Electronic ticketing is made available on October 15 on flights to 44 foreign countries. Senior executives from **Gulf Air** and American Airlines meet at AMR headquarters at Dallas (DFW) on October 15 to discuss an expansion of their commercial partnership. As a result, Gulf Air is authorized to place its "GF" code on AA flights between London (LHR) and New York (JFK), Miami, and Chicago (ORD) beginning in the winter.

Also on October 15, an MD-80 suffers an uncontained engine failure upon takeoff from Boston; the jetliner returns, lands, and is towed to the gate where its passengers deplane.

After it is agreed that the three DC-10-30s out on lease to the Russian carrier Transaero Airlines may be returned early, their lease is picked up on October 18 by **Hawaiian Airlines (HAL)**. Two will be quickly transferred, with a third delivered after maintenance.

En route from London (LHR) to Chicago (ORD) on October 20, Flight 87, an MD-11 with 15 crew and 181 passengers, is diverted to Boston after the pilot smells smoke in the cabin. On the ground, the problem is found to be an air conditioning unit and, two hours later, the plane departs for its original destination—four passengers lighter.

Shareholders of **Aerolineas Argentinas, S.A.** vote on October 24 to approve the Interinvest purchase. Hurricane Mitch causes the company to cancel flights into Belize as well as Cancún and Cozumel in Mexico on October 27-29.

Also on October 29, *The Financial Times* reports that **British Airways, Ltd. (2)** will scale back plans for an alliance with American because the demand by regulators for the exchange of hundreds of takeoff and landing slots at London (LHR) in exchange for approval is too high. The journal suggests that the U.K. major will seek ways to integrate with American in phases.

BA denies the story and the existence of any plans for a scaled-back pact. Across the Atlantic at Dallas (DFW), however, an American spokesman confirms that the two majors have held discussions concerning a gradual phase-in of their transatlantic partnership in order to please regulators. While remaining committed to a full-fledged alliance, the two recognize that a slower integration would allow U.S. and British officials time to solve the London (LHR) slot controversy.

Daily B-757-223 roundtrip service from Boston to Bermuda, begun on a seasonal basis in April, ends on October 31.

At the beginning of November, Chief Financial Officer Gerard J. Arpey outlines plans for the year ahead in light of worldwide economic instability. Ten less aircraft will be accepted and plans for the initiation of certain international routes will be deferred, including Chicago (ORD) Moscow and Amsterdam, Boston and New York (JFK) to Tokyo (NRT), and new nonstop flights from Miami and Asuncion, Paraguay.

AMR completes its purchase of a 10% stake in Interinvest on November 3 and thereby gains 8.5% ownership of **Aerolineas Argentinas, S.A.** and 9% of its regional affiliate **Austral Airlines, S.A.** Although U.S. regulators rule that neither American nor its parent may take any direct control over either carrier, that matter becomes moot when Aerolineas appoints its new management team. American's former managing director for Argentina, Diego J. Cousino, becomes CEO,

with its former managing director of international planning, C. David Cush, as chief operating officer.

Under a code-share agreement reached on October 26, American places its AA code on **Air Liberte, S.A.** domestic flights on November 4. Passengers traveling on American to and from the U.S. are able to transfer at Paris (ORY) to Air Liberte's services to Bordeaux, Montpellier, Nice, Perpignan, Strasbourg, Toulon, and Toulouse.

It is announced on November 15 that, as a cost-cutting measure, 8 DC-10-30s will be retired earlier than expected.

A definitive merger agreement is signed with **Reno Air** on November 19; the Texas-based major will acquire Reno for a total cash consideration of \$124 million. The Reno board of directors recommends that stockholders accept American's offer of \$7.75 per common share and \$27.50 per share of 9% Series A Cumulative Convertible Exchangeable Preferred Stock. Reno will not be operated as a separate subsidiary, but will be integrated into AA's operations as soon as all necessary authorizations are received and employee and fleet integration issues are decided.

Given that there is virtually no overlap on the routes served by the two carriers, American believes that the acquisition will give customers the benefits of a more comprehensive travel network, particularly on the U.S. West Coast, and will enhance the network of "OneWorld" partners. Arrangements with those partners, particularly **Canadian Airlines International, Ltd.** and **Qantas Airways (Pty.), Ltd.** will stand.

A fourth daily Fokker 100 roundtrip service is initiated on December 1 between Chicago (ORD) and White Plains, New York. The next day, it is announced that the carrier will launch daily B-767-323ER roundtrip service from Los Angeles and Paris (ORY) on June 1.

When **TAM-Meridonais, S.A.**, the long haul subsidiary of **TAM (Transportes Aereos Regionais, S.A.)**, takes delivery of its first A330-222 at the end of November, it becomes the first airline in Latin America to take delivery of a long-range, next generation Airbus. The aircraft is placed into service in early December over a direct twice-daily return route from São Paulo to Miami. The flights are the first for the company outside of South America.

While en route from Washington, D.C. (IAD) to Miami on December 6, Flight 1275, an MD-80 with 85 passengers, experiences fumes in the cockpit, causing the pilot to make an emergency landing at Raleigh-Durham. The fumes are from a light fixture, which is quickly repaired; the jet is quickly on its way to Florida after a minimum delay.

On December 9, Alaska Air Group President William S. Ayer announces that a letter of intent for the creation of a marketing partnership has been signed between its subsidiaries, **Alaska Airlines** and **Horizon Air**, and AMR Corporation and its subsidiaries, American and **American Eagle Airlines (2)**. The alliance will greatly expand travel and mileage opportunities for AAG passengers and strengthen the marketing presence for the corporations in California, the Pacific Northwest, and the West Coast. The four airlines will implement a fully reciprocal frequent flyer relationship; code-sharing is also under discussion, but remains subject to labor contract provisions. Alaska also announces that notice has been provided to **Northwest Airlines** of its intent to modify an existing marketing agreement. Talks are underway and it is hoped that it might be maintained.

The same day, American's acquisition of **Reno Air** clears federal antitrust reviews and takes effect. Reno will be folded into American by the end of August.

Also on December 9 a strategic alliance is entered into with **LAV Venezuelan Airlines (Linea Aeropostal Venezolana, S.A.)**. In addition to the usual linkage of frequent flyer programs, marketing, ground handling, and other activities, the two agree to implement code-sharing as soon as government approvals are received.

Under the arrangement, American will place its AA code on Aeropostal's flights between Miami and the Venezuelan cities of Caracas, Maracaibo, and Porlamar as well as between San Juan and Caracas. It will also place its code on certain Aeropostal flights connecting at Caracas, Maracaibo, and Porlamar to other cities in Venezuela.

On December 10, AA unveils a revolutionary voice-recognition system that will allow people to check gate information, arrivals, and departures by speaking directly to the system instead of via Touch-Tone.

On December 14, the company announces that it will inaugurate daily MD-80 roundtrips between Boston and New York (JFK) on January 31.

Seasonal nonstop MD-80 daily return service is inaugurated on December 15 between Newark (EWR) and Ft. Lauderdale. This frequency complements the existing thrice-daily roundtrips between Newark and Miami. Additionally, MD-80 frequencies between Dallas (DFW) and Los Cabos, Mexico, are doubled to twice daily. Simultaneously, daily nonstop MD-11 return flights commence between Dallas (DFW) and Osaka (KIX).

After three years of legal maneuvering, the Second Appellate District Court, Division Two, rules on December 16 that the assault and battery case *Marcelle Becker v. American Airlines* must go forward in the Santa Monica Superior Court of Judge Candice Cooper on February 17. Becker had originally charged Capt. Edwin Frost and the flight attendants on the July 6, 1995 service with assault and battery as well as animal cruelty in the death from injuries of her dog, a Maltese named *Dom Perignon*, which had apparently gotten loose.

Next day, the carrier initiates five-times-a-week B-757-223 seasonal return service between San Francisco and Vail/Eagle County; flights will continue through March 28.

In a move designed to strengthen its route network in the South Pacific, American concludes a code-sharing agreement with **Air Pacific, Ltd. (2)** on December 18. Under the arrangement, in the new year American will place its "AA" code on Air Pacific's four weekly return flights between Los Angeles and Nadi.

Depending upon the route flown, customers are able to view, free of charge, three classic Christmas movies in all classes of service from December 20-27. The selections are *It's a Wonderful Life*, *Miracle on 34th Street*, and *Christmas in Connecticut*.

AMR Services, which provides ground services for over 200 airlines at over 60 major airports, is sold by AMR Corporation on December 28 to a subsidiary of Castle Harlan, a New York City merchant bank.

Customer bookings dip 0.04% to 81.47 million, while cargo traffic falls 2.4% to 2.34 billion FTKs. Revenues jump 3.2% to \$17.44 billion, while costs are up 1.1% to \$15.49 billion. The operating profit climbs to \$1.95 billion, while net gain rises to \$1.79 billion.

A powerful winter storm hits the U.S. Midwest and eastern Canada between January 2-4, 1999, with traffic by all carriers severely curtailed at such cities as Chicago, Detroit, Cleveland, Toronto, and Montreal.

On January 5, a company MD-80 slides off a slippery runway just after landing at Montreal on a service from New York (LGA); no injuries are reported. Having provided two weeks' notice, the carrier, also on January 5, ceases its flights between Dallas (DFW) and Puebla, Mexico. Because of low demand, the route had proven a fiscal failure. The company also serves notice that it will halt plans to invest \$10 million in that city's international airport.

At the end of the year's first week, it is announced that the company will take delivery of 45 Boeing jetliners over the next 12 months: 24 B-737-823s, 11 B-777-223 IGWs, 4 B-767-323ERs, and 6 B-757-223s. It will retire 9 DC-10-10s, 6 B-727-223As, and 1 MD-11. By year's end, the fleet will total 677 jetliners.

A B-767-333ER makes a hard landing while landing at London (LHR) on January 15; no serious injuries are reported. The next day, it is announced that AA will commence daily B-767-223ER roundtrips on June 1 between Los Angeles and Paris (CDG).

On January 20, American officially dedicates its new facilities and gates at its third Dallas (DFW) terminal. Nine new gates and other facilities at Terminal B, valued at \$120 million, complement existing AA and **American Eagle Airlines (2)** facilities at Terminals A and C.

Also on this day, in a move analysts see as having been taken to counter American's enhanced operations in the west via its acquisition of **Reno Air**, **United Airlines** makes an offer to take over Phoenix-based **America West Airlines**.

The first B-777-223 IGW is delivered on January 21. In a PR ploy, American goes "back to the future" the next day when a new B-757-223 rolls out of a hangar at Fort Worth's Alliance Airport painted in the carrier's 1959 livery—an orange and dark blue color scheme with a distinctive lightning bolt insignia on the silver fuselage. The retro-painted jetliner will spend the year taking part in a series of events commemorating the fortieth anniversary of jet service in the U.S. When not involved in special activities, the aircraft will fly in regularly scheduled service, visiting cities throughout the route network.

Just after landing at Charlotte, North Carolina, on a January 24 service from Dallas (DFW), Flight 544, a Fokker 100 with 4 crew and 70 passengers, is seen to have smoke coming from the main landing gear. The aircraft moves to a taxiway, where an emergency evacuation is carried out without injury. Airport firefighters will report the smoke has come from hydraulic fluid leaking onto the jetliner's brakes.

On January 25, the company celebrates 25 years of service between Chicago (ORD) and Minneapolis (MSP) by providing refreshments to customers leaving the Minnesota city on any departure. In the years since 1979, departures to Chicago have grown from one to ten and to Dallas (DFW) from one to seven.

Also on January 25, with the "back to the future" B-757 as a backdrop, Chairman/CEO Carty announces that later in the year the carrier will begin construction of a 1.9 million-sq.-ft., \$1-billion terminal at New York (JFK). The facility, with 59 gates, is tentatively scheduled to open in 2006. Following the ceremony, the B-757-223 recreates the first coast-to-coast jet service between New York and Los Angeles flown 40 years earlier to the day. A press release issued in commemoration notes that American, in the years since, has flown more than 169,000 jet flights, carried 23 million passengers and transported 35 million pieces of luggage between the two coastal cities.

TNT Express Worldwide and American Airlines Cargo sign a worldwide airline service level agreement on January 28. The pact is the first of its kind between TNT and a U.S. carrier and will extend its reach, particularly into South and Central America. Improved service standards and block-space cargo availability in the freight holds of the carrier's new B-777-223s are important components of the new arrangement.

When **Delta Air Lines** on January 29 raises business ticket prices by 2% and leisure ticket costs by 4%, American is one of four majors to quickly follow suit. The move, the first tariff boost for U.S. airlines in 18 months, is seen as the opening salvo in an opening series of across-the-board fare hikes.

The second B-777-223 IGW is delivered, also on January 29. Nine more will arrive through the year. Company officials announce that lower deck cargo space will be sold during the upcoming proving flights.

During the month, representatives of the pilots union and management begin discussions concerning the pilots' salaries of recently acquired **Reno Air**. Some Reno pilots earn less than half the annual salaries of their AA counterparts and the union wishes the new men placed on the American contract receive pay retroactive to December 23. Outside reporters see the demand made partly in fear that jobs could be lost if lower-tier wage scales become fixed.

Both AA and **American Eagle Airlines (2)** begin service from Terminal B at Dallas (DFW) on February 1. Simultaneously, the "OneWorld" global alliance is implemented with **British Airways, Ltd. (2)**, **Canadian Airlines, Ltd.**, **Cathay Pacific Airways (Pty.), Ltd.**, and **Qantas Airways (Pty.), Ltd.** It is announced during the day that regularly scheduled B-777-223 IGW service from Dallas (DFW) to Osaka (KIX) will begin on October 1.

On February 3, American places its code on the two daily return flights from Miami to São Paulo made by the A330-222 of **TAM-Meridionais**, the long haul subsidiary of **TAM (Transportes Aereos Regionais, S.A.)**.

B-777-223 IGW proving flights are conducted in February between Dallas (DFW) and London (LGW), Osaka, Tokyo (NRT), Miami, Chicago (ORD), and Los Angeles.

Negotiations between the pilots union and management break down on February 6. Barred by federal law from striking over the issue, pilots in large numbers begin calling in sick or refuse to fly overtime. A total of 90 flights are cancelled during the day, followed by 240 more on February 7.

On February 8, the company announces that it will launch thrice-daily nonstop MD-80 roundtrips on September 9 from New York (LGA) to Houston (HOU). An additional 414 flights are cancelled. CEO Carty informs a news conference that management is actively considering asking for an injunction against the pilots' job action. On the other hand, the carrier's boss, calling his pilots "grownups," refuses to require doctor's notes from flyers calling in unfit for duty.

While on approach into Raleigh on a February 8 service from Chicago (ORD), Flight 1754, an MD-80 with 6 crew and 132 passengers, encounters severe turbulence. One flight attendant is seriously injured, while 4 other attendants and 1 passenger are hurt slightly.

The "blue flu" continues into February 10, when AA is able to prevail upon U.S. District Judge Joseph Kendall at Dallas to order the pilots back to work. Even so, the company is forced to drop over 1,000 of its 2,250 flights this day. Since the work slowdown has started, some 2,400 of the carrier's 9,000 pilots have participated in the action, grounding 2,657 flights, stranding an estimated 265,000 travelers, and forcing some businesses to seek alternative ways to ship their cargo. It is estimated the impasse costs American upwards of \$19 million each day.

Despite instructions from their union to resume work, 1,170 flights are grounded on February 11 as pilots defy the court order and bring the total of stranded travelers to 350,000 in 5 days. Lawyers for the airline return to Judge Kendall's court seeking a contempt ruling, with a hearing granted for the next day. While AA goes to court, negotiators meet for the first time since February 9 to discuss union demands.

An agreement is simultaneously reached between American and **Northwest Airlines** that allows NWA to accept American tickets in the event of further pilot disruptions to American's flight schedule. The pact takes effect immediately.

At least one competitor, **Trans World Airlines (TWA)**, moves to take advantage of the situation while also assisting passengers stuck in the hard-hit Caribbean area. It upgrades its services from New York (JFK) to Puerto Plata and Santo Domingo from B-757 to B-767 equipment, while adding a second daily B-757-224 roundtrip.

In a major development announced on February 12, American signs a letter of intent with **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)** that will allow it to acquire a major stake in the airline. The U.S. major diligently begins due to establish AeroPeru's financial situation preparatory to determining actual shareholding. AeroPeru's current shareholders, CINTRA of Mexico (35%), parent of **Aeromexico (2)** (**Aerovias de Mexico, S.A. de C.V.**) and **Delta Air Lines (35%)** will, as the arrangement proceeds, divest themselves of their shares.

Also on February 12, American, **British Airways, Ltd. (2)**, **Iberia Spanish Airlines (2)** (**Lineas Aereas de Espana, S.A.**), and SEPI (the state holding company that presently owns Iberia) signs an important agreement in Madrid, one that has been delayed since November by wrangling over management issues. Under its terms, the Spanish flag carrier strengthens its relationship with the Anglo-Americans by selling to them, via SEPI, a combined 10% equity stake. For £226 million, BA takes the majority 9% share, with AA acquiring 1%; each of the foreign airlines receives a seat on Iberia's board of directors. SEPI will sell an additional 30% of the airline in a June flotation on the Madrid stock exchange.

Management and union lawyers argue before Judge Kendall during the day and he agrees to rule on February 13. Meanwhile, 2,443 of the carrier's 9,400 pilots call in sick, forcing the airline to cancel 1,102 flights. To date, the airline has lost approximately \$40 million.

The work slowdown on February 13 results in 845 flights cancelled for the day and notice is given that another 209 will be scrubbed on February 14. As of this date, 5,600 flights have been cancelled since the

work action started, costing the airline between \$67 million and \$90 million. More than 500,000 travelers have been left at the gate.

Even though the pilots' sick-out continues to be a more grass roots movement than most airline labor actions, Judge Kendall, calling the movement a "shakedown," finds the Allied Pilots Association, its president, Capt. Rich LaVoy, and its vice president, Capt. Brian Mayhew, all guilty of contempt of court. The judge indicates that he will decide by February 17 on an 8-figure fine, but orders the union to be prepared for the exact amount by depositing \$10 million with the court. LaVoy and Mayhew are ordered to remit a total of \$15,000, also as a deposit against the final payment.

Judge Kendall's citation has the desired effect as pilots on February 14 begin taking themselves off the sick list. Still, 231 flights must be cancelled because not all of the pilots are immediately available and some aircraft are out of position. By the evening of Valentine's Day, the number of "sick" pilots is less than 900 and is fast approaching what management considers the normal 400-500 range.

Most of the CEOs of the "OneWorld" alliance meet in Sydney, Australia, on February 15. There, **Iberia Spanish Airlines (2) (Líneas Aereas de Espana, S.A.)** is formally welcomed into the group.

Also on February 15 negotiations between management and the APA over the **Reno Air** pilots situation resume; because some pilots are not immediately available for flying, 250 flights (11% of the schedule) must be cancelled. The same day, the airline sues the FAA and three chemical companies for the \$2.89-million cost of repairing an MD-82 that had slid off the runway at Cleveland on March 5, 1997 after deicing chemicals had been applied to the pavement.

The schedule is back to normal on Tuesday, February 16; only 17 departures must be scrubbed. Since February 6, nearly 6,000 flights have been cancelled, costing American between \$67 million and \$90 million, and inconveniencing 600,000 passengers.

As a result of the labor action, the Santa Monica case of dog owner Marcelle Becker, scheduled to open on February 17, is delayed until March 4.

Also during the day, the first of 24 Next Generation B-737-823s to be delivered during the year arrives at the Maintenance and Engineering Center at Tulsa, Oklahoma, for familiarization training.

Lawyers for American inform the U.S. District Court in Dallas that the recently ended sick-out by its pilots has caused the company pre-tax losses exceeding \$150 million, as more than 6,600 flights were cancelled in a 10-day period. The net loss in revenues between the issuance of the restraining order and the time the job action actually ends is put at \$58.7 million. Federal Judge Kendall indicates that he will maintain and extend his temporary restraining order to the APA until May 12 and will delay by at least six weeks his decision on how much to punish the union for originally ignoring his back-to-work order.

On February 18, American begins to code-share on the **Air Pacific, Ltd. (2)** nonstop B-747-219B return routes operated between Nadi and Los Angeles (LAX). The Fiji-based carrier simultaneously announces that a fifth weekly roundtrip between the two cities will commence in June.

The company and the APA hold discussions on the **Reno Air** issue. Management proposes that an independent arbitrator help resolve the dispute, an offer it will repeat on February 21. The two sides will agree that, if two or more bargaining sessions fail to break their stalemate, a private mediator will be called in.

Six plaintiffs from Illinois file a class-action complaint against the Allied Pilots Association in San Francisco Superior Court on February 19 seeking \$200 per passenger delayed or stranded by the 10-day pilot job action.

The carrier attempts to make amends with its best customers and the general traveling public. It sends notices to AAdvantage frequent flyer members offering them two free upgrades, plus double miles, for trips taken between February 18 and February 28. On February 20, a fare sale begins on both domestic and international seats.

A new 10,000-sq.-ft., \$1.9-million "glass" hangar is dedicated at the C. R. Smith Aviation Museum at Dallas (DFW) on February 22. The new facility will house the restored DC-3 *Flagship Knoxville*; dedication remarks are made by Apollo astronaut Buzz Aldrin. The hangar also houses the new American Airlines Hall of Honor and plaques honoring the first three inductees are unveiled: Capt. Bill James, and two former vice presidents, Carlene Roberts-Lawrence and William "Bill" Littlewood.

The same day, two Chicago residents file a class-action suit against the APA in Tarrant County District Court in Tarrant County, Texas, seeking \$50 million in damages; Tarrant County is the actual home of the Fort Worth-based pilots union.

In another example of air rage, Flight 181 en route from Orlando to Chicago (ORD) with 240 passengers on February 23 must be diverted to Miami. There, a man who had been restrained in flight for drunkenness and attacking his girlfriend, is arrested; the woman continues on to Illinois.

Airline operations are now back to normal in Latin America. For example, Mrs. Gillian Thompson, the country manager, tells *The Grenada Voice* on February 23 that, although 400 passengers travelling to and from Grenada were left stranded, all flights are now fully on schedule.

On February 25, airline management and the APA agree that, if they cannot break their stalemate over the **Reno Air** matter in two more bargaining sessions, they will call in a mediator.

The carrier provides lift from Cleveland to Honduras of Dr. Russell E. Raymond, who will join other members of his family in attending children for a week at the Charity Hospital at San Pedro Sula.

On March 1, the company cuts its flying schedule approximately 4% to give itself scheduling flexibility in the event of future pilot actions.

Also on the first day of the month, the carrier begins to place its "AA" code on **Qantas Airways (Pty.), Ltd.** flights from Auckland to Sydney and Brisbane.

The company's first daily nonstop, roundtrip, scheduled B-777-223 IGW service begins on March 2 over the company's route from Dallas (DFW) to London (LGW). The same day, the new B-737-823 enters revenue service over daily return routes from Chicago (ORD) to Los Angeles (LAX) and from Los Angeles to Washington, D.C. (IAD).

Pursuant to the December 16 ruling of the Second Appellate District Court, Division Two, the assault and battery case *Marcelle Becker v. American Airlines* begins in the Santa Monica Superior Court of Judge Candice Cooper on March 4. Becker had originally charged Capt. Edwin Frost and the flight attendants on his service with assault and battery, along with animal cruelty in the death from injuries of her dog, a Maltese. The hearing will be transferred to the U.S. District Court after the U.S. Attorney for Los Angeles becomes involved, indicting Becker on one count of interfering with a flight attendant, a federal crime.

Also on March 4, two Fort Worth residents file a class action lawsuit at Fort Worth against the APA seeking at least a 50% refund of the cost of American tickets for all passengers affected by the recent sick-out. Damages could allegedly exceed \$100 million.

Having completed its review of the finances of **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)**, American informs the airline on March 8 that it will not, after all, take an equity stake or provide fresh capital. The news is catastrophic as the airline, caught by increased regional competition amidst a regional financial crisis, is left without sufficient cash to continue paying for fuel and other services.

Unions, representing AeroPeru's 1,500 employees, hold rallies on March 9, but are unable to prevent an announcement by company officials in late afternoon that the end is nigh. CINTRA of Mexico and **Delta Air Lines** offer no comment. At 12:01 a.m. on March 10, AeroPeru is turned over to Indecopi, a government agency that handles bankruptcies. The airline now ceases international operations, but plans to continue domestic flights a few days later. Assets will be employed to pay outstanding debts and, hopefully, the government will find a way to restart AeroPeru's operations at a later date.

On March 11, the Allied Pilots Association, which had not been in favor of an original investment, issues a statement noting its opposition to any increased ownership of **Canadian Airlines, Ltd.** by the AMR Corporation. The airline had earlier asked Canada's Department of Transport to consider relaxing the restriction that limits foreign ownership of that carrier to 25%.

Thrice-weekly roundtrips are launched by **Japan Air Lines Company, Ltd. (2)** on March 15 between Tokyo (NRT) and Dallas (DFW); a number of frequencies are marketed with American.

The company simultaneously introduces its new quarterly Latin American in-flight magazine *Nexos*. Written in Spanish and Portuguese, it is available on all AA flights to and from the 33 destinations served in Mexico, Central and South America, the Caribbean, and Madrid, Spain.

Also on March 15, **Northwest Airlines**, which has been recalcitrant in the past, joins American, **Delta Air Lines**, **Southwest Airlines (2)**, **United Airlines**, and **USAirways** in raising business fares by 1% and imposing another 3% hike on leisure tickets. United had begun this second round of ticket price increases on March 12.

Twice-daily B-737-823 roundtrips commence between Boston and Chicago (ORD) and daily B-737-823 return service from Chicago (ORD) to San Jose, California.

The week also begins well when, on March 15, the company distributes a record \$341 million in profit-sharing checks to its employees; it is estimated that, in the U.S. alone, the economic impact of the payout will exceed \$1 billion.

Chief Financial Officer Arpey reports on March 17 that the recent pilots' sick-out will cost AMR Corporation more than \$200 million in pre-tax earnings during the first quarter.

On March 18, a naming agreement valued at \$5 million per year is reached with the Dallas Arena Group. The new home of the Dallas Mavericks and Dallas Stars will be named the American Airlines Center when it opens in the fall of 2001.

Following an earlier announcement by the government of St. Lucia that it will no longer pay \$1.5 million per year to the company to cover its cost of providing service to Miami, American announces on March 19 that it will discontinue direct service to the island in April. The Caribbean press reports that flights will be maintained to Grenada, which is paying a subsidy similar to that halted by its neighbor. The carrier has yet to decide whether or not to continue service into Guyana; it has indicated to the country's government that it wishes security and fire services beefed up at Cheddi Jagan International Airport.

Following a ground breaking ceremony for a major improvement to Concourse G of O'Hare International Airport, the B-757-223 wearing the special vintage 1959 livery departs for San Francisco in celebration of the fortieth anniversary of Chicago to San Francisco jet service.

Under terms of the February 21 arrangement that calls for the appointment of a private mediator, George Nicolau enters discussions between management and the Allied Pilots Association at Fort Worth on March 21. A former president of the National Academy of Arbitrators, Nicolau has handled arbitration for the National Hockey League and Major League Baseball.

On March 26, the European Commission announces that, on the basis of its initial inquiry, it has determined that **Air France** has discriminated against AA's SABRE reservations system by favoring Amadeus, the system in which it is part owner. The Commission enters an objection to the fact that the French major provides Amadeus with more accurate information than that which is given to SABRE or other reservations systems, thereby putting the latter at a competitive disadvantage. A procedure is started against the carrier for abusing a dominant position.

On March 27, *The New York Times* reports the March 22 death in Santa Monica, California, of 99-year-old Arthur Raymond. Raymond had led the design team for the Douglas DC-3, first ordered by AA President C. R. Smith.

Daily nonstop scheduled B-777-223 IGW roundtrips are started by AA on March 28 from Dallas (DFW) to Tokyo (NRT). While celebrating the forth-fifth anniversary of service between the Spain and the U.S.,

Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.), also on March 28, inaugurates daily nonstop A340-313 roundtrips between Barcelona and New York (JFK). Iberia is the only carrier operating nonstops between the two cities; however, the services are offered as dual-designator flights with American.

The dual-designator pact with **Finnair O/Y** also takes effect on March 28. In addition to mutual frequent flyer benefits, passengers are able to employ their tickets on Finnair flights from New York (JFK) to Helsinki. Finnair and American also cooperate on flights via Stockholm. Under this arrangement, the Finnish carrier is able to place its code on AA services between Chicago (ORD) and Stockholm for passengers making online connections to Finnair's flights between Stockholm and points in Finland. AA places its code on Finnair flights between Stockholm and Helsinki as a continuation of its Chicago-Stockholm service.

Finnair also places its "AY" code on American and American Eagle flights from New York (JFK) to Boston, Dallas (DFW), Los Angeles, Miami, San Francisco, and Washington, D.C. (DCA).

The next day, the company begins dual-designator service aboard **Qantas Airways (Pty.), Ltd.** flights from Sydney to Adelaide, Brisbane, Cairns, Melbourne, and Perth.

The strategic marketing agreement with **Finnair O/Y**, entered into on September 29, takes effect on April 1. The program includes reciprocal frequent flyer programs, code-sharing on some transatlantic flights, and a move by Finnair into the AA terminal at New York (JFK).

On April 12, the first day of hearings by U.S. District Judge Kendall to determine how much the APA should be fined for the February sick-out, the judge quickly denies a pilots' motion to dismiss the case. Kendall also rules that lawyers for the APA may not call their 600-pilot witness list and ask each flyer if he/she were truly ill. Instead, Kendall chides the APA, noting that its members returned quickly to work as soon as he found their union in contempt. Referring to a U.S. television evangelist who conducts spiritual healings, the judge suggested that his ruling saw "more people miraculously healed than at a Benny Hinn crusade."

Expert witnesses for the pilots are allowed to dispute the \$58-million loss the airline claims it has suffered. Professor Geoffrey Heal of Columbia University and airline industry analyst Robert Mann put the figure at between \$1.4 million and \$4.7 million.

On April 15, the APA is fined \$45.5 million for not halting the illegal sick-out; the union has assets of \$38 million. The fine is second in size only to a \$64-million fine against the United Mine Workers of America in the mid-1980s (a penalty later overturned on appeal to the U.S. Supreme Court). Judge Kendall requires the union to deposit another \$10 million, but agrees to stay his order for 15 days to allow the union to file an appeal, which it does the next day with the 5th Circuit Court in New Orleans.

The restraining order initially ignored by the union remains in effect until May 10 and APA President LaVoy indicates that it will be obeyed. Despite the legal proceedings, the assimilation issue involving the purchase of **Reno Air**, the root cause of the sick-out, remains unresolved.

On April 19, the APA is granted a stay by Judge Kendall until April 28 upon the deposit of another \$10 million towards damages caused to the airline by the work slowdown.

Following an announcement by Jamaican Finance Minister Omar Davies that taxes on diesel, gasoline, and fuels would be increased by 30%, demonstrations on the island national flare up on April 19 and rage into full-scale civil unrest. American, joined by **British Airways, Ltd. (2)**, **BWIA (British West Indies Airways, Ltd.) (2)**, and **Air Canada, Ltd.**, are forced to cancel services to Jamaica on April 20.

Calm is restored in Jamaica on April 21, following three days of deadly protest, arson attacks, and clashes between demonstrators and police which leave seven dead. American resumes its services to Kingston three days later.

Meanwhile, on April 22, the long-planned alliance with **LanChile Airlines (Lineas Aerea Nacional Chile S.A.)** receives tentative approval from the DOT, with certain restrictions. Although the two are allowed to coordinate their routes and jointly market tickets on each

other's flights through code-sharing, computerized reservations and fare coordination are restricted and the Miami-Santiago route is excluded from antitrust immunity for a period of 18 months.

Just after takeoff from Trinidad for Miami on April 23, a B-757-223 with 200 passengers develops engine problems. The pilot dumps fuel and returns to Piarco Airport, where a safe emergency landing is made.

On April 26 it is announced that on October 1 AA will move all of its Paris flights from Orly Airport to Charles de Gaulle International Airport Terminal 2A. Orly has been American's Paris base since 1985. The carrier has invested some \$6 million in improvements in the new facilities and will operate a schedule nearly identical to that at Orly.

Although San Jose has an airport curfew from 11:30 p.m. to 6:30 a.m. Pacific Time, airlines are allowed to fly in during those hours if they are delayed due to mechanical, weather, or ATC problems. The *San Jose Mercury News* reports on April 27 that the city attorney's office has sent letters to six carriers threatening to sue or ban them from the airport, citing numerous violations of the curfew. The companies committing these "blatant violations" include, in addition to American, **Mexicana Airlines, S.A. de C.V., Northwest Airlines, Reno Air, Southwest Airlines (2), and United Airlines.**

In court papers filed on April 28 by the Allied Pilots Association, which is appealing a contempt of court ruling that resulted in a \$45-million fine, the union agrees to label its battle with management over the purchase of **Reno Air** as "minor" under federal labor law. This concession undercuts the APA's legal defense of its February sick-out. At the same time, American and the APA agree to a permanent injunction barring the union and its members from any future actions over the Reno dispute.

CEO Gary Cullen and strategic director Larry Stanley, representing the considered opinion of the airline's management, ask the **Aer Lingus Irish Airlines, Ltd.** board on the morning of April 29 to join the "OneWorld" airline alliance, headed by **British Airways, Ltd. (2)** and American. Both the U.K. and U.S. majors, with whom Aer Lingus will have direct marketing agreements, have agreed to sponsor the Irish line's membership in the airline grouping. The board accepts this recommendation, which is passed along to Mary O'Rourke, public enterprise minister.

The Irish Times, in reporting the move later in the day, indicates that one or both of the major alliance partners may take a small equity stake (5% to 10%) valued at approximately £60 million, with company employees also gaining shares. Completion of the alliance arrangement will clear the way for a public offering of Aer Lingus stock which, in turn, would raise the funds needed for future growth and expansion.

British Airways, Ltd. (2), reacting for "OneWorld" to the Irish line's announcement, expresses its pleasure, but notes that definitive arrangements must still be completed both with itself and American before entrance into the group can be accomplished.

On April 30, the *Irish Independent* reveals that Ms. O'Rourke had given her approval to the strategic alliance plan the previous evening, as had a group of the airline's union's. The latter also express fear that **Aer Lingus** management is placing too much emphasis on getting partners who are willing to purchase shareholding. The airline staff, which already has a 5% stake, largely wishes to remain state employed.

Twice-daily MD-80 roundtrips begin on May 1 from Houston (HOU) and Washington, D.C. (DCA), with same-plane continuing service between Houston and San Antonio. With the jetliner on the ground less than 30 min. at HOU, the route is an effective new connection between San Antonio and the nation's capital.

Also on May 1, the company begins a major upgrade of its services from the West Coast. Many are offered as dual designator flights with code-sharing partners **Reno Air, Alaska Airlines, and Horizon Airlines.** On this date, daily MD-80 return service is inaugurated from San Jose to Orange County Airport as well as B-747-223 service to San Diego, and by B-757-223 from Seattle to New York (JFK). The same day, B-777-223s are introduced on the carrier's two Tokyo routes.

Simultaneously, the West Coast buildup continues with the addition of one daily nonstop roundtrip from San Diego to New York (JFK);

from Los Angeles (LAX) to New York (JFK), Chicago (ORD), and Dallas (DFW); from Seattle to Chicago (ORD); and from San Francisco to Dallas (DFW). These increases allow the carrier to offer a total of 18 daily flights each way on both the LAX-DFW and LAX-ORD routes, and 11 roundtrips daily in the LAX-JFK and San Francisco to DFW markets.

Not to be lost given the day's other events, is the introduction of a new 24-page in-flight magazine for children, *Landing Zone*.

Daily B-767-223ER roundtrips from Chicago (ORD) to Amsterdam begin as announced on May 3.

Also on May 3, management and the APA work out an agreement concerning the pilots' sick-out in February. The union will deposit \$20 million in an escrow account until the appellate process is completed. If the APA is successful, its funds will be returned.

The dual-designator pact with **TAM (Transportes Aereos Regionais, S.A.)** and its long-haul subsidiary **TAM-Meridionais, S.A.** is further expanded on May 6. AA begins to place its code on TAM flights from São Paulo to Florianopolis, Fortaleza, and Recife. TAM is allowed to place its "JJ" code on AA domestic services.

As a result of the ongoing evaluation of aircraft in the fleet of **Reno Air, AA**, on May 6, orders 3 more B-737-823s, which will replace 3 of Reno's leased MD-80s.

Just after takeoff from St. Thomas for San Juan on May 6, Flight 314, an MD-80 with 128 passengers, suffers a fire in its No. 1 engine. A safe emergency landing is made back at the point of origin and, four hours later, a replacement aircraft takes the passengers on to their destination without further incident.

After a year of detail resolution, American and **Japan Air Lines Company, Ltd. (2)** implement the first phase of code-sharing on routes between the U.S. and Japan and on other routes beginning on May 10. American places its "AA" designator on JAL flights from Tokyo (NRT) to Chicago (ORD), Dallas (DFW), Los Angeles, San Francisco, and New York (JFK); between Osaka (KIX) and Los Angeles; between Nagoya and Los Angeles; between both Tokyo (HND) and Osaka and other Japanese cities; and between the U.S. and both Bangkok and Singapore via Tokyo (NRT).

JAL initially places its code on American and **American Eagle Airlines (2)** flights from Dallas (DFW), Chicago (ORD), San Jose, and Seattle to Tokyo (NRT) and on American's new route from Dallas (DFW) to Osaka (KIX). JAL also is able to assign its designator on American and **American Eagle Airlines (2)** frequencies from Los Angeles, Dallas (DFW), and Los Angeles and other internal U.S. communities.

In the first predatory pricing case since the government deregulated the airline industry in 1978, the DOJ, on May 13, files suit against the major for allegedly trying to quash competition, led by **Vanguard Airlines**, at Dallas (DFW). The filing, announced by antitrust chief Assistant Attorney General Joel I. Klein, is the most developed of several being pursued against a number of the nation's major carriers. New entrants **Sun Jet International** at Long Beach and **Western Pacific Airlines (WestPac)** on routes to Colorado Springs are other alleged AA price-cutting victims.

American responds with a statement claiming the allegations are unwarranted and that it will challenge the findings. Analysts reviewing the case the next day believe it to be a warning to other airlines to avoid anticompetitive practices against start-ups.

Daily B-767-223ER roundtrips from New York (JFK) to Frankfurt begin on May 16. First announced on April 27, a reciprocal frequent flyer agreement with **El Al Israel Airlines, Ltd.** takes effect on May 17.

After nine months of negotiations, including a final two weeks in Washington, D.C. with assistance from the National Mediation Board, the airline and AFA announce a tentative agreement, also on May 17. The pact is subject to ratification by the company's 20,000 flight attendants, a process expected to take several weeks.

In Los Angeles on May 17, U.S. District Court Judge Harry L. Hupp grants a continuance, due to the illness of a key witness, to July 20 of the Marcelle Becker trial. Mrs. Becker, meanwhile, has retained the

services of nationally known trial lawyer and author Mark Lane, author of *Rush to Judgment* and *Plausible Denial*.

The antitrust suit filed against the carrier worries the U.S. airline industry and is attacked by top executives at rival carriers on May 18. Both Gordon Bethune of **Continental Airlines** and Gerald Greenwald of **United Airlines** decry the government action as being without merit and worry over the possibility of dangerous new legal precedents concerning the government and the flying business.

On May 19, the Argentinean government postpones to August talks with the U.S. on a new aviation trade agreement in order to accommodate the schedules of officials involved. The move disappoints the U.S. State Department, which lets it be known that the code-sharing pact between **Aerolineas Argentinas, S.A.** and American will not be approved without a new liberal aviation agreement.

Former Chairman/CEO Crandall, also on May 19, joins the board of the radio broadcasting company Chancellor Media. Earlier, he had joined the board of American Express.

While landing at New York (JFK) on May 24, a **British Airways, Ltd. (2)** Concorde comes within 500-ft., both horizontally and vertically, of an American B-767-223ER that had just taken off on a service to Frankfurt.

Under the auspices of World Relief, Flight 333 from New York (LGA) delivers the first group of Kosovo refugees to Chicago (ORD) on May 26. The six people in two families had originally been flown into the U.S. aboard a **Tower Air** B-747 Jumbojet as part of the U.S. government's commitment to accept 20,000 people displaced from the war-torn Yugoslavian province.

Also on May 26, AA announces that it will add eight jet departures on December 15 to the 42 already flown out of its San Juan base, almost a 20% increase over the previous year's schedule.

New daily Los Angeles (LAX) to Paris (CDG) B-767-323ER roundtrips commence on June 1, together with daily Dallas (DFW) to Anchorage B-757-223 roundtrips. Daily nonstop B-737-823 service is also started between Seattle and Boston, while nonstop service is increased between Seattle and both DFW and Chicago (ORD), as well as between San Francisco and ORD.

While landing during a thunderstorm at Little Rock late in the evening after a service from Dallas (DFW), Flight 1420, an MD-82 with 6 crew and 139 passengers, runs off the end of the runway and skids 1,000 feet. It plunges over a stone embankment, strikes a metal walkway, and breaks into three pieces that come to rest near a river and catch fire. Nine aboard, including 20-year veteran Capt. Richard Buschmann, are killed instantly, with two others dying later in at the hospital.

Beginning June 3, American places its "AA" code on **Finnair O/Y** services between Helsinki and San Francisco. American and **Canadian Airlines, Ltd.** become, on June 17, the first airlines to implement technology allowing two carriers to issue electronic interline tickets on each other's flights.

The company enters into a European marketing alliance with **Sabena Belgian World Airlines, S.A.** and **Swissair, A.G.** on June 22. As soon as government clearances are received, AA and Sabena will code-share on each other's flights between Chicago and Brussels and on Sabena services between Boston and Brussels. AA and Swissair will code-share on flights between Chicago and Zurich and on Swissair flights between Zurich and both Miami and Boston.

Beginning on June 24, the FAA, together with outside experts, joins with American personnel to conduct an audit of the carrier's safety and training programs. It is hoped that the review will reveal why AA has had more crashes than any other U.S. carrier in the past six years.

Finding the arrangement no longer profitable, **British Midland Airways, Ltd.**, also on June 24, serves notice on AA that it will be terminating its code-share agreement with the U.S. major in March 2000.

Just after departure from San Diego on June 25, an MD-80 with 133 crew and passengers reports problems with its right engine. The flight is diverted to Miramar Naval Air Station, where a safe emergency landing is uneventfully completed.

While taxiing at Chicago (ORD) on June 29 preparatory to departure for Stockholm, the right wing of Flight 80, a B-767-323 with 13 crew and 173 passengers, contacts the left wing of a B-767-223 with two mechanics aboard, stopped on the ramp while repositioning. Damage is slight and no injuries are reported.

Daily nonstop B-737-823 roundtrips are launched on July 2 between Los Angeles (LAX) and Hartford, while one daily flight is added in the Oakland-Dallas (DFW) and Seattle-Dallas (DFW) markets.

On July 8, because its employees and contractors have repeatedly failed to display their badges in high-security areas at Dallas (DFW), AA is subjected to the \$250,000 FAA fine that had originally been levied in February 1998 but that had since been appealed.

It is announced on July 12 that twice-daily nonstop MD-80 roundtrips will begin on September 8 between Long Beach and Chicago (ORD). Simultaneously, it is noted that thrice-daily B-727-223A roundtrips will commence on November 1 between Miami and Tampa.

On July 15, U.S. District Judge Wilkie Ferguson dismisses an antitrust suit brought against American by passenger Matthew Zifrony, who has claimed that AA has illegally driven smaller competitors out of business or off routes, thereby costing consumers more in ticket fares. Zifrony's examples had included **Vanguard Airlines** and **Pan American World Airways (1)**.

After months of lobbying, hearings, and debate, on July 30 the DOT dismisses the joint American Airlines-**British Airways, Ltd. (2)** application for antitrust immunity, which has been pending before it since January 1997. Principals from the two carriers indicate that they will seek other ways to expand their global partnership, concentrating on the possibilities of the new "OneWorld" alliance.

A second daily nonstop is added on August 1 between Los Angeles (LAX) and Honolulu and between San Jose and New York (JFK).

On August 13, the Canadian government, in the face of a possible collapse of **Canadian Airlines, Ltd.**, loosens its competition regulations to allow discussions between that concern and its rival, **Air Canada, Ltd.** The stakes are raised on August 24 when, after some days of speculation in the Canadian press, Gerald Schwartz, CEO of Toronto-based Onex Corporation comes forward at Montreal with an ambitious plan to purchase and merge both airlines. Onex is a buyout specialist that also operates Lantic Sugar, Ltd. and the airline catering company Sky Chefs. An accommodation is quickly gained with and approved by **Canadian Airlines, Ltd.**, under which it will be quickly purchased by Onex.

Under the Onex scheme, valued at C\$5.7 billion (\$3.81 billion), a new concern, AirCo, would be created. Shareholders in **Canadian Airlines, Ltd.** are to be paid C\$2 cash or 0.2424 common share of AirCo for each of their common stock. Shareholders in **Air Canada, Ltd.**, when given the chance, will be offered C\$8.25 cash or one AirCo share for each of their common stocks. Retaining the name Air Canada, the enlarged Canadian operator would retain headquarters in Montreal.

For its part, Onex, according to Schwartz, will invest C\$1.2 billion in AirCo. Of this amount, the corporation will invest C\$475 million, including C\$225 million financed by a loan from AMR Corporation, parent of American, while AMR itself will put in C\$275 million in AirCo equity and convertible debt. In addition, both concerns will join together in investing a further C\$250 million in AirCo debts and warrants. When the paperwork is finished, Onex will own a 31% stake, AMR 14.9%, and public shareholders 54%, or the majority. Key to this venture will be a shift of the reformed Air Canada away from its membership in the "Star Alliance" and into the AA-dominated "OneWorld" international grouping. AA would also provide reservation and accounting systems for the single carrier. Efficiencies would be gained by the elimination of 5,000 jobs, as well as other cost cutting measures such as route consolidations.

The offer is to be sent to both airlines by certified mail within two weeks and will expire on November 8. In 1995, Onex made a hostile takeover attempt on John Labatt, Ltd., which it eventually lost.

The Onex bid, viewed as "unsolicited" and "below-market" in value, is not welcome at **Air Canada, Ltd.** and will be officially said so in a press release on August 27. Meanwhile, Air Canada president/CEO

Robert Milton, in a message to employees on August 24, indicates that other bids and counter-offers may be expected. Initial responses from shareholders and analysts are surprise and caution.

Figuratively speaking, the stadium is filled in anticipation when the contest, on August 25, begins to take on the trappings of the first international alliance dual. Speaking on behalf of the "Star Alliance," **Deutsche Lufthansa, A.G.** announces that the grouping will do everything reasonable to maintain the presence of Air Canada "in the team for the sake of our customers and fair competition."

Also on August 25, following a two-and-a-half-year investigation by the U.S. Drug Enforcement Administration, Customs Service, Bureau of Alcohol, Tobacco and Firearms, and Miami-Dade County Police, a sting called Operation Ramp Rats nets 58 federally indicted suspects. Most of those caught up in the drug raids in New York, Miami, and Ft. Lauderdale are American Airlines baggage handlers, ramp agents, and contract food service workers, and three federal inspectors are also caught. AA, which has cooperated in the investigation, quickly points out that no management employees, pilots, or flight attendants were involved and that the number taken into custody represent only a "small percentage" of the carrier's workforce. Still, the raids further damage the company's image in the days ahead as media reports of the arrests circulate.

At midday on August 26, the three airlines directly involved in the Canadian airline matter plus Onex agree on one point: they will exercise a vow of silence until their business is completed.

On August 31, the **Air Canada, Ltd.** board of directors adopts and announces a shareholders' rights plan designed to give the carrier time, beyond November 8, to consider alternatives. Under the plan's "poison pill" provisions, should any bidder not approved by the company board attempt a takeover (by purchasing more than 10% of Air Canada's common stock), shareholders will receive one share of new stock for each one they already own, thereby diluting the bidder's airline stake. The directors also call for a special shareholders meeting on January 7 to consider proposals, a move immediately protested by Onex, which files suit in court to force a meeting on or before November 8.

The operations of **Reno Air** are folded into AA late on August 31 adding more than 150 nonstop daily flights to the major's West Coast route network. On this day, Reno employees begin wearing AA uniforms, the carrier's jetliners belong to American's fleet, all Reno flights become AA flights, and all airport signage is changed from Reno to American. Repainting of the Reno fleet will begin in January.

The operations of **Reno Air** are folded into AA late on August 31, adding 182 daily flights and 23 new routes, to the major's West Coast network. On this day, the nearly 2,100 inherited employees begin wearing AA uniforms, Reno's 25 MD-80s/MD-90-30s belong to American's fleet, all Reno flights become AA flights, and all airport signage is changed from Reno to American. Repainting of the Reno fleet is scheduled for January.

Company flight attendants, by a 73% margin, reject a tentative labor contract in September; thereafter, the 22,000 members of the Association of Professional Flight Attendants (APFA) work without a labor pact as negotiations are reopened.

The company's French base is transferred from Paris (ORY) to Paris (CDG) on October 1. Also in October, the European Commission reports that, after a 28-month investigation, it has found no basis for the AA charges that the Amadeus reservations system had engaged in exclusionary conduct that had hindered SABRE's ability to successfully compete in Europe. Code-sharing flights between Miami and Santiago with **LanChile Airlines (Lineas Aerea Nacional Chile, S.A.)** also commence in October.

In November, a U.S. judge rules that passengers disrupted by the February pilot sick-out may sue the Allied Pilots Association. The union has become a defendant in a \$50-million consumer group suit.

Following four months of an attempted alliance raid, AA and its Canadian partner are unsuccessful in their hostile bid to take over **Air Canada, Ltd.** and thus cause it to defect to "OneWorld" from the "Star Alliance." On December 4, largely as a result of "Star Alliance" help,

the Canadian major is able mount a successful defense that not only sees it save itself but also win approval for a takeover of AA partner **Canadian Airlines, Ltd.** The entire adventure involves some gain for AMR, as it receives \$107 million from the sale of its CAI stock and tax credits on its loss.

Following arrival at its Miami stop on a December 8 service from Lima to Chicago (ORD), Flight 1226, an MD-80 with 103 passengers is subjected to a bomb threat that forces aircraft evacuation. No explosives are found and the plane is able to resume its flight.

Twice-daily MD-80 roundtrips begin on December 16 from Los Angeles to Houston (HOU).

Also in December, former SBC Global Markets President William Hannigan succeeds Michael Durham as president/CEO of SABRE Holdings Corp. At the same time, AMR Chairman Carty announces that, prior to March 31, AMR will divest itself of its remaining 83% stake in SABRE, distributing 107 million shares of SABRE common stock to AMR shareholders. The arrangement will net \$5.21 per share for SABRE stockowners.

Although the carrier has added 45 aircraft to its fleet this year, its new B-777-227s still cannot fly in the more fully integrated relationship desired with **British Airways, Ltd. (2)** due to continuing failure of U.S.-U.K. bilateral talks.

Overall, customer bookings inch up a slight 0.1% to 81.5 million, while cargo climbs 7% to 2,511,439,000 FTKs. Revenues for AMR Corporation rise 1.2% to \$17,730,000,000, while costs are up 6.7% to \$16,574,000,000. Operating profit falls to \$1,156,000,000, while net gain drops to \$985 million. The 25% drop in the latter figure is blamed on the failed pilot sick-out.

Airline employment at the beginning of 2000 stands at 86,100, a 5.5% increase over the previous 12 months. Among the world's top 25 airlines, AA is 3rd in total passengers, 16th in FTKs, 4th in employees, and the leader in fleet size. AMR Corporation is 2nd in operating revenue and 3rd in both operating profit and in net profit.

Employing ERJ-145s, **American Eagle Airlines (2)** takes over the eight-times-a-day American service on January 5 between Dallas (LOV) and Austin.

Top management is restructured in January into an Office of the Chairman. Under the plan, a number of vice presidents are promoted by Chairman Carty into new or reconfigured posts, including Executive Vice President-Operations Robert Baker, who becomes vice chairman.

On January 26, a comprehensive code-sharing agreement is signed with **Cathay Pacific Airways (Pty.), Ltd.** Pending government approval, AA will place its designator code on Cathay flights between the U.S. and Hong Kong, as well as Cathay's intra-Asian services to and from Hong Kong.

On February 3, American announces a new effort to provide more coach cabin seating space and satisfy customers upset with operational delays across the industry. It will spend \$70 million to remove and replace 7,200 seats (6.4% of total capacity) from 700 jetliners, with half the work to be accomplished by summer. The first aircraft with the roomier cabin is an MD-80 returned to scheduled service on February 12.

Having been earlier seconded as chief operating officer to **Aerolineas Argentinas, S.A.**, David Cush returns in February and is named vice president-international planning and alliances. A comprehensive code-sharing agreement is signed with **THY Turkish Airlines, A.O.** on February 28.

American takes over two-thirds of the **American Eagle Airlines (2)** service between Dallas (DFW) and Knoxville on March 2, providing Fokker 100 roundtrips twice-daily; Eagle provides a third service employing an ERJ-145. The same day, B-757-227 daily roundtrips are started from Los Angeles to Orlando.

On March 14, AA confirms that it has received word that **Canadian Airlines, Ltd.** will depart the "OneWorld" alliance on June 1. **Air Canada, Ltd.** is a member of the rival "Star Alliance." The next day, in an unrelated matter, the SABRE spin-off is completed as AMR distributes common shares to stockholders. On March 29, AA announces that

it is trading in to Boeing the 5 former Reno MD-90-30s; only **Delta Air Lines** now flies the type in the U.S.

When the summer season begins in April, new or increased service is phased in from Los Angeles to Boston, Denver, Hartford, Las Vegas, Oakland, Phoenix, San Francisco, San Jose, and St. Louis. Simultaneously, new or increased frequencies are progressively staged from San Jose to Chicago (ORD), Dallas (DFW), Honolulu, Los Angeles, New York (JFK), and Phoenix.

The company also suspends service from Las Vegas to Colorado Springs, Oklahoma City, and Orange County, while increasing flights from that point to Reno; it also cancels 17 flights from Reno and Tahoe to Chicago (ORD), Las Vegas, Orange County, San Diego, Portland, and Seattle.

The major relieves **American Eagle Airlines (2)** of its Chicago (ORD) to Baltimore (BWI) responsibility on April 2, flying MD-80s between the two points four times a day. Four weekly B-767-327ER roundtrips begin on April 3 from Orlando to São Paulo and Rio de Janeiro.

Flight 1123, a B-757-227 en route from Dallas (DFW) to Denver on April 13, makes an emergency landing at Tulsa after the flight crew witnesses the top layer of metal being sucked off part of the front of the left wing slats. The incident is reminiscent of the stripping of metal from the fuselage of an in-flight **Aloha Airlines** B-737 some years earlier.

Security guards at Santo Domingo on April 14 are able to arrest three would-be stowaways to the U.S. hiding in the landing gear compartment of a company aircraft before it takes off.

Employing Fokker 100s reconfigured to carry only 56 first-class passengers, five daily roundtrips are initiated from Dallas (LOV) to Chicago (ORD) on May 1, along with four daily roundtrips from the battleground Texas airport to Los Angeles. The new service marks a return to Love Field following a 26-year absence.

Simultaneously, the daily B-767-227ER return service from New York (JFK) to Paris (CDG) is doubled.

Air Canada, Ltd. and **Canadian Airlines, Ltd.** announce on May 19 that they will end their code-sharing arrangements with **American Airlines** on or before October 1. Canadian and American had been partners for a decade.

Also in May, B-777-227s enter service on the Miami to London (LHR) route.

Dallas (DFW) replaces Chicago (ORD) on June 1 as U.S. terminus of the daily B-767-327ER return service to Zurich. Simultaneously, new daily B-767-327ER roundtrips are introduced between Chicago (ORD) and Rome. Two weeks later, B-777-227s, outfitted with the new "777 Flagship Suites" first-class cabin enhancements, are introduced on the Miami to Buenos Aires route.

In order to expand services from Los Angeles (LAX) and San Jose, AA, on July 2, ends virtually all of the services once operated by **Reno Air**, including most of the ex-Reno routes into California, Oregon, Colorado, Washington, and Oklahoma emanating from Las Vegas and Reno.

The company's efforts to limit long-haul operations from Dallas (LOV) end in early July after the U.S. Supreme Court declines to hear the carrier's petitions. At the same time, the airline, in response to the recently announced merger between **United Airlines** and **USAirways**, enters into linkage talks with **Northwest Airlines**.

Orders are placed on August 1 for 6 more B-777-227ERs and 3 B-737-827s with deliveries to begin at the end of 2001.

At the end of August, AA petitions the National Mediation Board to intervene in its ongoing, but still unsuccessful, contract talks with APFA. Thrice-daily Fokker 100 roundtrips are launched from Dallas (LOV) to New York (LGA) on August 31. The new service begins a week ahead of that slated by new entrant **Legend Airlines**, already an arch Love Field rival.

On September 1, the carrier announces that, two months hence, it will enter the Boston to Washington (DCA) market in competition with Delta Shuttle and **USAirways Shuttle**. Six daily Fokker 100 roundtrips will be offered which, when coupled with existing service by **Business Ex-**

press and **American Eagle Airlines (2)**, will boost AA service at Boston to almost 200 daily flights.

A possible move that could unravel the entire international alliance picture is announced on September 13. If KLM and BA merge, AA will quit "OneWorld" in favor of another unnamed grouping.

New Paris (CDG) authority is received in mid-September; American will add seven weekly flights from Chicago (ORD) and San Jose, California.

Relief is immediate when, on September 22, BA and KLM call off their merger discussions. The same day, the U.S. 5th Circuit Court of Appeals denies a request from the APA to overturn the \$45.5-million fine for the illegal sick-out conducted early in the previous year after a federal judge had ordered the pilots back to work.

As is the case with many U.S. carriers, American has suffered a huge number of delays and other problems this year that have led to a downturn in perceived service and an increase in passenger complaints. In an effort to alleviate the key difficulties at Chicago (ORD), the carrier, on October 1, restructures its schedules by revamping its flight schedules out of Dallas (DFW) and adding greater time between connecting flights.

Under a new code-sharing agreement with **THY Turkish Airlines (Turk Hava Yollari, A.O.)**, AA this day also places its designator on THY services from Istanbul to New York (JFK), Chicago (ORD), and Miami. The Turkish line is permitted to code-share on AA domestic flights from those gateways.

On October 3, the company notes that, in association with **EVA Airways, Ltd.**, it will begin daily B-777-227ER roundtrips between San Jose and Taipei in April. The *London Sunday Times* reports on October 22 that "OneWorld" partner **British Airways, Ltd. (2)** has begun talks with **Air France** and **Delta Air Lines** concerning its possible membership in their "SkyTeam" alliance.

The code-sharing agreement with **Japan Air Lines Company, Ltd. (2)** is expanded on October 25 as the Japanese carrier places its designator on AA services to four Mexican destinations (including Mexico City and Guadalajara) from Dallas (DFW) and from New York (JFK) and Chicago (ORD) to Toronto, Montreal, and Ottawa.

Under a code-sharing agreement signed with **TAP-Air Portugal, S.A.** on June 13, American, on October 29, places its designator on TAP flights from Lisbon to Boston, Newark, and New York (JFK). TAP is able to place its code on AA domestic flights beyond those three gateways.

Nonstop service between Los Angeles and Toronto is restarted on November 1 with a Next Generation B-737-827, but is halted between New York (JFK) and Frankfurt. Poor loads also bring an end to flights from Orlando to São Paulo and from Seattle to Anchorage.

The same day, the previously announced Washington (DCA) to Boston Fokker 100 service begins, as do thrice-daily MD-82/MD-83 return flights between New York (LGA) and St. Louis and daily roundtrips between Los Angeles and Tulsa. The code-sharing agreement with **Qantas Airways (Pty.), Ltd.** is now expanded as the company places its designator on flights from Vancouver to Sydney via Honolulu, and from Sydney to Christchurch.

On November 21, Flight 8, the DC-10-30 service from Honolulu to Dallas (DFW), is the last by the company using the Douglas wide-body; all DC-10s are thereafter retired from AA passenger schedules.

Daily Dallas (DFW)–Maui via San Jose B-757-227 service begins on November 22.

From the enhanced San Jose hub, AA launches daily B-757-227 roundtrips on December 15 to Maui and to Miami. MD-83 daily nonstops are also begun from New York (LGA) to West Palm Beach and seasonally (through March) from Dallas (DFW) to Telluride.

AMERICAN AIRWAYS (1): United States (1921–1922). The first American Airways is set up at College Point, Long Island, New York, in the spring of 1921 to offer services to New York City. Revenue flights commence with 1 Curtiss HS-2L flying boat and, in the inaugural season, a total of 600 passengers are flown over 4,000 miles.

The company's fleet is enlarged in **1922** by the addition of 3 more HS-2Ls, 5 Curtiss MF flying boats, and 1 Aeromarine 40. Only 75 passengers are carried over 1,500 miles before the company ceases operations in the late spring.

AMERICAN AIRWAYS (2): United States (1930–1934). American Airways is created on January 25, **1930** as the principal air transport operating subsidiary of The Aviation Corporation (AVCO), then chaired by Averill Harriman. Initial capitalization comprises 40,000 shares of \$100 preferred stock and 10,000 common shares. Frederick G. Coburn is president of AVCO, but he is not given a separate president for the subsidiary. A proposal is put forward that AVCO's various operating subsidiaries exchange all of their stock with AA for common stock in the latter given in proportion to the relative value of the merger partners.

Except for **Embry-Riddle Aviation Corporation**, all agree and the reorganization is accomplished on February 1. The former subsidiaries and their stock acquisitions are: **Colonial Airways Corporation** (2,226); **Southern Air Transport System** (2,074); and **Universal Aviation Corporation** (4,288). Additionally, Aviation Corporation (a composite of **Interstate Airlines**, **Alaskan Airways**, and **Cuban Aviation Corporation**) receives 1,025 shares. Embry-Riddle is offered 387 shares but declines. With the tables turned upside down, the former independent subsidiaries are now controlled by AA, which in turn is controlled by the four former subsidiaries, now stockholders and divisions.

A Travel Air 6000A of the Universal division crash-lands at Kansas City, Kansas, on January 27 (five dead). On February 3, a Pitcairn PA-6 of the Colonial division, while buzzing Hartford's Brainard Field upon arrival from Newark, hits the field house and crashes (one dead). Another Colonial division PA-6 crashes into trees at Silver Creek, New York, on the same day; the pilot is uninjured.

Caught in thick fog near the Hackensack River on April 18, a Colonial division Fairchild 71 hits a high-tension wire and crashes (four dead). On April 29, Congress passes the McNary-Watres Act and, on May 1, the **Central Air Lines** subsidiary of the Universal division completes its final run and is closed down, turning over its Tulsa to Kansas City route to the Southern Air Transport (SAT) division. Between May 15 and June 9, President Coburn participates in the so-called Washington, D.C. "Spoils Conference," held between Postmaster General Walter Fogler Brown and representatives of major air transport concerns. An effort is now made to win a southern transcontinental airmail route and a bid is made for Contract Air Mail Route 33 (CAM-33). There is only one competitor, **Southwest Air Fast Express (SAFEWAY)**, owned by Erle P. Halliburton.

On June 5, the Colonial division Ford 5-AT-33 *Nacomis*, with 15 aboard, fails its takeoff from Boston for New York. The aircraft suffers engine failure and crashes into the water at the end of the runway (one dead).

In the "Great Hangar Fire" at Chicago on June 25, a Fokker F-10, 1 Fokker Model 8 Super Universal, and 4 F-10As of the Universal division are destroyed. Also in June, William "Bill" Littlewood, whose technical expertise will become vital in the years ahead, joins the carrier as safety officer.

The Universal division's **Braniff Air Lines** subsidiary is closed down on July 1. Simultaneously, three former Interstate Stearman LT-1s are assigned to the Universal division. At the same time as the July 16 merger of **Western Air Express** and **TAT-Maddux Air Lines**, an agreement is entered into with the new **Transcontinental and Western Air, Inc. (T&WA)**. Should both companies be awarded transcontinental mail routes, T&WA will pay AA \$284,500 for some Tulsa property and purchase 20,000 WAE shares for \$1.11 million. On the strength of this agreement, American offers to buy out Halliburton, enticing him with a potentially large cash payoff. The entrepreneur accepts and AA takes over SAFEWAY, turning it into a division even before it is paid for and immediately assigning to it the former **Braniff Air Lines** Tulsa–Dallas service.

On October 1, the Universal division's Northern Air Lines subsidiary completes its final Chicago–Cleveland service. On October 10, the Post

Office awards CAM-33 to American Airways. The Southern Air Transport division inaugurates the 2,102-mile CAM-33 on October 15, flying from Atlanta to Los Angeles via Jackson, Shreveport, Dallas, Fort Worth, Big Spring, El Paso, Douglas, Tucson, and Phoenix. The aircraft assigned to undertake the operation are drawn from 3 sources: 5 Fokker F-10As from T&WA, 9 Ford 5-ATs and 2 Lockheed Vegas from the SAFEWAY purchase, and 6 F-10As from the Universal division. One-way passenger fares over the whole route are \$147.15.

With the government's concession for CAM-34 in hand, T&WA inaugurates 36-hour, single stop (Kansas City), coast-to-coast, all-air service on October 25. Five days later, T&WA pays off on the AA agreement and AA finalizes the purchase of SAFEWAY. Also in October, tiny **Delta Air Service**, operating between Atlanta and Dallas (DFW), is acquired. The Northern Air Lines subsidiary of the Universal division completes its last Chicago–Kansas City flight on November 15 and is then shut down. A Fokker F-10A crashes at Dallas on November 22; there are no injuries.

On December 1, a stop in Hartford is added on the Newark–Boston service of the Colonial division. At year's end, the Southern Air Transport division is renamed Southern Transcontinental Airways. All of this expansion during the 12 months results in losses of \$3.4 million.

The last of the company's biplane mailplanes, 12 Stearman 4CM1s, enter service in April **1931**. In May, CAM-28 and new AM-30 are consolidated and passenger services are initiated from St. Louis to Omaha via Kansas City in early June. At the same time, AM-30 is stretched west to Denver, but that mail run is sublet to **United States Airways** as a payment to the small carrier's defection from the United Aviation group.

A new mail route is opened on June 15 when flights begin from Chicago to New Orleans via St. Louis, over two amalgamated mail routes: AM-2, Chicago–St. Louis–Memphis and an AM-33 northward extension from Jackson–Memphis–New Orleans. Meanwhile, CAM-20 from Albany to Cleveland and CAM-16 from Cleveland to Nashville via Cincinnati and Louisville are combined into a single AM-20. Then the Albany terminus is extended down to New York City while the Nashville stop is continued south to Fort Worth via Memphis.

Flights over the new Fort Worth to New York route commence on June 15. Southern Transcontinental Airways maintains the route for which it is named until June 30, at which time STA is renamed the Southern division. Four 5-ATs and 10 F-10As are assigned to the new unit. The two Vegas previously employed are scrapped while five Ford 5-ATs are transferred (to the Colonial division) or sold to T&WA. The route network at midyear totals 23,026 miles.

A Stearman C3MB is lost in an accident at Fredericksburg, Texas, on July 18. On July 21 the Universal division operations manager, F. Edward Hamann, filling in on a St. Louis–Evansville mail run, is killed when his Pitcairn PA-6 Super Mailwing crashes at Centralia, Illinois.

On August 1, the former **Western Air Express (WAE)** routes from Amarillo–Dallas and El Paso–Albuquerque are acquired, the latter for mail only. Eight days later, an Embry-Riddle division Ford 5-AT-29 crashes into the Little Miami River near Cincinnati following the literal loss of the starboard engine during takeoff for Atlanta (six dead). Also in August, the first of 16 Fairchild Pilgrim 100s join the fleet. These enter service on the Dallas–Brownsville and Chicago–St. Louis routes in September.

Twice per day Chicago–Cincinnati Pilgrim flights commence in November, followed by an equal frequency between Cleveland and Louisville in December. On December 31, a Pilgrim 100A crashes near Columbus (four dead). President Coburn is able to cut the company's loss to "only" \$1 million for the year; however, the cumulative loss under his presidency has reached \$38 million.

The last of 16 Pilgrims, 6 new Model 100Bs, are delivered in February **1932**. On March 10, Chairman/President Coburn resigns by request and is replaced by Lamotte T. Cohu, who in turn appoints Cyrus R. "C. R." Smith as vice president for operations, a new department designed to provide centralized administration for the various subsidiaries. These are now pared from four to two: the Eastern Division, based at New

York, and the Southern Division, located at Fort Worth. The Pilgrim 100Bs are introduced into service on March 12 on a six-days-a-week schedule between New York City and Montreal. En route to Burbank from Phoenix on March 19, a Fokker F-10A strikes a fog-shrouded high-tension wire and crashes (seven dead).

In April, **Century Air Lines** and **Century Pacific Airlines** are purchased (in a 140,000 share stock exchange); their owner, Errett L. Cord, becomes an AA director. As a result of the acquisition, the enhanced American receives 12 Stinson SM-6000Bs, which increase the fleet total to 89 aircraft. Embry-Riddle's participation, withheld in 1930, is now finally secured. Also in April, Edward V. "Eddie" Rickenbacker is hired away from General Motors to serve as vice president.

Just-nominated Democratic presidential candidate Franklin Delano Roosevelt, with his wife Eleanor and sons Elliot and John, are flown from Albany to Chicago via Buffalo and Cleveland, on July 2 aboard the company's Ford 5-AT-75 to give his acceptance speech; both Roosevelt and American Airways obtain maximum publicity.

Later claiming a desire for flight experience, Howard Hughes, a.k.a. Charles Howard, serves as a copilot, flying the Fort Worth to Cleveland route for two months—the only steady job he holds during his entire life—at \$250 per month. On September 8, a Fokker F-10A en route to Dallas from El Paso, strikes a peak in the Guadalupe Mountains and crashes (three dead).

On January 20, 1933, a Stearman 4CM1 mailplane crashes at Boerne, Texas (one dead). The same day, another 4CM1 crashes at Marietta, Georgia, and another pilot is killed. On January 31, the Thompson Aeronautical Corporation (and its operating airline, **Transamerican Airlines**) is purchased, together with its AM-27 route (Bay City, Michigan, to Chicago) and 23 aircraft, 10 of which are retained.

In early February, **Martz Air Lines** is acquired; it is allowed to continue operations over its Wilkes Barre–New York–Buffalo route until it is amalgamated on March 31. Following flight testing of the Vultee V-1 prototype during the month, it is turned over to the carrier. Also in February, three new airmail routes are inaugurated: Boston to Albany on AM-20; Buffalo to Detroit on AM-27; and Toledo to Columbus on AM-27.

As the result of his efforts to cut out certain extravagances, Director Cord becomes involved with Wall Street financiers Robert Lehman and W. Averill Harriman in a struggle for control of AVCO, which he wins on March 15. As a result, Chairman/President Cohu resigns and is replaced by Cord, who retains the AVCO chairmanship. Rickenbacker, on the wrong side during the power struggle and remaining loyal to Lehman and Harriman, resigns, but C. R. Smith, who has by now convinced Cord to purchase Condor IIs, is retained.

While taking off from Fort Worth on March 16, a Pilgrim 100A takes fire and makes a nonfatal crash landing. Six days later, a Pitcairn PA-6 Super Mailwing is lost when its pilot is forced to bail out over Conneaut, Ohio.

In early April, the first class of female flight attendants is hired. May Bobeck, Agnes Nohava, Marie Allen, and Velma Maule are given three days of hostess training in a Chicago hangar. Four Curtiss T-32 Condor II biplane transports are delivered later in the month. The first is placed into service on May 3 between Chicago and New York via Detroit and Buffalo; with Velma Maule aboard to assist passengers, the trip is also the inaugural flight for American's long succeeding line of stewardesses. The new frequency is known as the Valley Service from its passage over the Susquehanna River valley.

An experimental night sleeper service is tried out in July aboard a Ford Tri-Motor equipped with a dozen folding seats that can be collapsed into six berths. The successful trial results in an order for six T-32A/B sleeper planes. Meanwhile, six Lockheed Model 9 Orions are delivered in July–August. On October 1, the company's Fords inaugurate a new Chicago to Washington route via Indianapolis, Cincinnati, and a new stop at Charleston, West Virginia.

In December, high speed Lockheed Model 9 Orions are placed into service on new mail and express schedules between Fort Worth and

Cleveland and Los Angeles. Former **United Air Lines** official Lester D "Bing" Seymour is appointed president on Christmas Day. The loss for the year totals \$160,245.

On February 9, 1934 as a result of the so-called "Airmail Scandal," the U.S. government cancels existing airmail contracts and calls upon the U.S. Army Air Corps to fly the mail. American Airways continues to handle its unsubsidized passenger traffic. While taking off from Bryantsville, Kentucky, en route to Louisville on February 12, a Pilgrim 100A strikes a tree and crashes (one dead).

Iced up, the motor of a Pilgrim 100A stops over Petersburg, Illinois, on March 6 and the plane crashes (four dead). The loss of subsidy payment to American is \$375,000. On March 17, the first Curtiss T-32A sleeper plane is delivered. These are now placed into service on the company's transcontinental route.

The Army Air Corps experiment ends on March 30 and the Post Office advertises for new contracts with the provision that these may not be awarded to carriers that had participated in the famous "Spoils Conference" held in May–June 1930.

During the first quarter, the company is involved in another high-profile charter. Following his conviction for the kidnapping of Charles F. Urschel the previous year, George "Machine Gun" Kelly is sentenced to life at the new federal island prison of Alcatraz. An AA Condor II is chartered by the U.S. Bureau of Prisons to transport Kelly to San Francisco, where newsreel cameras capture his deplanement. He is taken by police van to the dock from whence he is sent by boat to "The Rock."

Incidentally, in his memoir *The Violent Years* (Hillman Books, 1960), FBI Special Agent Melvin H. Purvis writes that as part of the kidnapper's ransom request, Urschel notes that passenger aircraft fly over the hideout at a certain time each day. Reviewing schedules, Purvis and his colleagues are able to determine that AA is the carrier in question and that from the flight times, the Paris, Texas, area holds the hideout.

AVCO now retires from the air mail business and its subholders take over American's shareholding. On April 12, the carrier is reformed under Delaware law and renamed **American Airlines**. This expedient, retroactive to April 11, qualifies the company to share in the government's distribution of new mail contracts later in the month.

AMERICAN AIRWAYS CHARTERS: United States (1979–1982). AAC is established at Miami in 1979 to offer nonscheduled passenger and cargo charters between the U.S. and Cuba. Operations continue apace until the U.S. Department of Treasury halts all charter flights to and from the island on April 9, 1982. Declared an agent of the Cuban government by the Treasury the same day, the carrier is ordered to shut down, but is allowed to operate several last flights prior to April 17 in order to allow U.S. and Cuban travelers to return home.

AMERICAN CARRIER CORPORATION: United States (1970–1971). ACA is set up at Chicago (MDW) in 1970 to provide scheduled Beech 18 courier and cargo flights to Minneapolis, Detroit, Cleveland, and occasional points in the northeast. Passengers are infrequently flown and operations cease in 1971.

AMERICAN CENTRAL AIRLINES (1): United States (1978–1979). The first ACA is set up at Greeley, Colorado, in 1978 to provide Piper PA-31-310 Navajo scheduled commuter flights to Denver and Fort Collins. Services cannot be maintained a year.

AMERICAN CENTRAL AIRLINES (2): United States (1980–1985). Organized as **Mid-Continent Airlines (2)** in 1964, the small Dubuque-based commuter carrier is acquired by Terry Hudik and Mike Gedman in July 1980, reformed, and then begins scheduled services to five points with a fleet comprising 2 Piper PA-23 Aztecs and 1 PA-31-310 Navajo. A total of 2,003 passengers are flown during the remainder of the year.

Five Piper PA-31-350 Navajo Chieftains are acquired in 1981 as orders are placed for 2, later 5, Embraer EMB-110 Bandeirantes. Four new cities are added to the route network that now includes Minneapolis

(MSP), Waterloo, Omaha, Janesville, Dubuque, Sioux City, Cedar Rapids, Des Moines, and Chicago.

Passenger boardings skyrocket 892% for the first full year of reorganized operations, climbing to 17,860, and a \$61,000 operating profit is generated.

The workforce is increased 109.6% in 1982 to 174. With others holding rights to the Mid-Continent name, the new corporate identity, American Central Airlines, is unveiled in January. The first EMB-110 is received in the spring and is employed to initiate Essential Air Service (EAS) flights to Clinton and Ottumwa, Iowa, replacing those formerly provided by **Mississippi Valley Airlines**. When the second Bandeirante is delivered during the summer, the company receives an EAS contract to replace **Ozark Airlines'** service to Mason City and Fort Dodge.

Three more EMB-110s arrive in the fall and join the company's 7 Navajo Chieftains. Attempting to land in dense fog at Dubuque on December 27, a Bandeirante crashes, killing its pilot and copilot, the only people aboard.

Customer bookings climb 170% to 48,229 and revenues skyrocket 117.4% to \$5 million. Although expenses ascend 96.5% to \$4.4 million, they are not able to prevent a \$600,000 operating profit.

The payroll is significantly upgraded in 1983, rising 53.9% to 200 workers. The company's fleet of 13 Embraer EMB-110P Bandeirantes and 8 Piper PA-31-350 Navajo Chieftains maintain services from the Dubuque, Iowa base to 24 destinations, including Chicago (ORD and MDW), Moline, Rockford, Cedar Rapids, Clinton, Des Moines, Dubuque, Mason City, Ottumwa, Sioux City, Waterloo, Detroit, Manistee, Minneapolis, Rochester, Kansas City, Lincoln, Omaha, Sioux Falls, Beloit/Janesville, Marshfield, Oshkosh, and Wisconsin Rapids.

Passenger boardings during the 12 months skyrocket 133.6% to 112,650.

Early in 1984, the 7 EMB-110s of **Fairflight, Ltd.** are purchased; upon their delivery later in the year, ACA will become the world's largest Bandeirante operator with 13. Due to alleged aircraft safety violations, the FAA grounds the 317-employee carrier on December 8. Enplanements through November total 170,209.

The company applies for recertification in January 1985 and resumes a limited number of flights along its route network. The loss of a month of revenue makes it impossible for the new president, James Pickett, to continue operation and ACA is forced to file for Chapter XI bankruptcy on March 9. The Bandeirantes continue operations while efforts to reemerge are made. Despite the company's recertification by the government on June 8, all services cease on July 24 and the assets are sold.

AMERICAN EAGLE (AMR). See **AIRCAL; AIR MIDWEST; AIR VIRGINIA; AVAIR; BUSINESS EXPRESS; CHAPARRAL AIRLINES; COMMAND AIRWAYS; EXECUTIVE AIR CHARTER; EXECUTIVE AIRLINES; FLAGSHIP AIRLINES; METRO AIRLINES/METROFLIGHT; METRO EXPRESS II; NASHVILLE EAGLE; SIMMONS AIRLINES; WINGS WEST AIRLINES**

AMERICAN EAGLE AIRLINES (1): United States (1980-1981). AEA is founded at Baltimore in 1980; equipped with a pair of Boeing 707-321Bs first flown by **Pan American World Airways (1)**, it inaugurates passenger charters on April 13 to Frankfurt, West Germany and to Caribbean destinations. The company also wins a contract to transport Muslims during the summer as part of the annual Hadj pilgrimage to Mecca.

Certification is received for the inauguration of scheduled services over its former charter routes to the Caribbean. **American Airlines** protests this authority to the CAB due to the similarity in company names. The new and unfilled schedule, together with the costs of fighting the Dallas-based major, almost immediately threatens to bankrupt AEA.

A total of 45,000 passengers are flown in the fourth quarter.

Charter service is resumed for the winter holiday season, but AEA shuts down in April 1981, filing for Chapter XI bankruptcy protection. It will not reemerge.

AMERICAN EAGLE AIRLINES (2): P.O. Box 61916, MD 5475, Dallas-Fort Worth International Airport, Dallas, Texas 76155, United States; Phone (817) 967-1295; Fax (917) 967-30977; <http://www.aa.com>; Code AA; Year Founded 1998. Initially a confederation, followed by four wholly owned coordinated companies, American Eagle is the regional subsidiary the AMR Corporation, parent of affiliated **American Airlines**. By the end of 1997, the four companies **Simmons Airlines, Executive Airlines (3), Flagship Airlines, and Wings West Airlines**), whose pilots had signed a single pilot contract in August, are collectively operating 1,400 flights per day to 127 cities in the U.S., Caribbean, and Canada.

The four airlines combined transport a total of 12,117,534 passengers during the month.

The fleet comprises 46 Aero International (Regional) ATR42-320s, 38 ATR72-212/212As, and 115 SAAB 340B/B-Plus turboprops. Orders are outstanding for 3 ATR72-212As, 25 Canadair RJ700s, and 42 Embraer ERJ-145 Amazons, relabeled ExpressJets. AEA is the North American launch customer for the stretched Canadair CRJ-700, which is expected to begin joining the fleet during the first quarter of 2001.

On January 15, 1998, company officials, led by AMR Eagle President Daniel P. Garten, announce a change in operation. The availability of regional jets, the previous August's single Eagle pilot contract, and changes in the economics of the regional airline business dictate consolidation. Consequently, by the year's end, AMR will integrate all four of its airlines into a single carrier that becomes the principal subsidiary of AMR Eagle Holding Corporation.

At the same time, it is noted that AMR Eagle and Embraer, the aircraft manufacturer, have signed a \$1.1-billion export-finance contract with the National Development Bank of Brazil. The arrangement provides a line of credit that will cover the cost, over three years, of the airline's acquisition of the 42 ERJ-145 ExpressJets ordered at the June 1997 Paris Air Show, 22 of which are expected before year's end.

Also in January, a major code-sharing agreement is entered into with **Midwest Express Airlines**. The agreement will come into effect at the time of the merger. The first two Embraer ERJ-145ER (Extended Range) ExpressJets are delivered on February 28.

During the second quarter, the new carrier's field services organization begins to take shape. A number of appointments are made at the end of April (effective July 1), including David D. C. K. Kennedy, who becomes senior vice president-field services, while Ed Criner, **Flagship Airlines** vice president-flight operations is named AEA's vice president-flight operations.

Reporting to Mr. Kennedy will be six new hub vice presidents: Mike Costello at Dallas/Ft. Worth; Dave Brown at Los Angeles; Jacques Vachon at Miami; Robert Hamilton at New York (JFK); and former **Executive Airlines (3)** President George Hazy at San Juan.

G Concourse, located in Terminal 3, adjacent to American Airlines' H and K concourses at Chicago (ORD), is renovated and now features 20 exclusive Jetway passenger loading bridges for use with the airline's new regional jets and turboprops.

Two ERJ-145LRs join the fleet at the beginning of April and one of the ERJ-145ERs has an engine change, becoming an RJ-145MR. All of the ExpressJets will eventually be LR (Long Range) models. Those now on hand are employed for training and federally required proving flights.

Also, on April 30, the company's four semiautonomous carriers (**Simmons Airlines, Flagship Airlines, Executive Airlines (3), and Wings West Airlines**) begin a seven-month period of amalgamation into this single mammoth operation, now viewed by AMR as a sister of **American Airlines**. The presidents of **Simmons, Flagship, and Wings West** are provided with appointments elsewhere within AMR and are replaced with vice presidents at each of the new airline's hubs. Simmons becomes the core of AEA. It will be followed into the merger by Flagship in May and Wings West in June.

On May 1, the combined new carrier is the world's largest regional airline. It is also the third largest airline operating out of Chicago (ORD) and, based on daily departures, the seventh largest air carrier in the U.S.

The dual-designator pact with **Midwest Express Airlines** now begins at Los Angeles and Dallas (DFW). Midwest passengers in Los Angeles are able to connect with Eagle flights to Bakersfield, Carlsbad, Fresno, Monterey, Palm Springs, San Diego, San Luis Obispo, and Santa Barbara. From Dallas (DFW), connections are available to 32 more communities in the South and Southwest.

On May 15, AEA introduces Embraer ERJ-145 ExpressJet services using the new Brazilian jetliners painted in AEA colors. The initial flights, operated by **Simmons Airlines**, include five daily roundtrips from Chicago (ORD) to Cincinnati, six a day from Chicago to Cleveland, and a daily roundtrip from the Chicago to Milwaukee.

Simultaneously, agreement is reached with the Transport Workers Union of America for a new single-carrier contract. The agreement covers flight dispatchers, mechanics, and ramp-service personnel.

On May 18, **American Airlines** signs a broad marketing agreement with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, which includes linkage of frequent flyer programs and code-sharing.

Four-times-a-day ERJ-145LR service from Chicago (ORD) to Indianapolis begins on June 5, along with five-times-a-day roundtrips to Columbus. Under the May 18 AA-Iberia pact, the Spanish major, beginning on June 10, is allowed to place its "IB" code on certain American Eagle frequencies beyond its Miami gateway to Orlando and Houston (Intercontinental Airport).

Also in early June, the decision is taken to separately maintain the certificate of Puerto Rico-based **Executive Airlines (3)**, moving its operating certificate to Dallas-Ft. Worth on July 1. The physical merger of the company into American Eagle Airlines is delayed.

Twice-daily roundtrip ERJ-145LR service is inaugurated to Des Moines on June 26, with two more daily roundtrips added to the Indianapolis schedule.

On July 1, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** begins dual-designator service with AEA aboard the latter's frequencies from New York (JFK) to Philadelphia and Pittsburgh.

Chicago (ORD) to Cedar Rapids ERJ-145 flights commence on July 7; the Embraers replace turboprops on two of the six daily frequencies. Simultaneously, ERJ-145s begin to replace turboprops on flights from O'Hare to Cleveland, Columbus, and Cincinnati.

Enplanements for July surge 9.2% to 1,231,923 and represent the largest one-month increase in the 14-year history of the American Eagle system.

On August 2, ERJ-145 ExpressJets replace turboprops on two of the five daily company roundtrips between Chicago (ORD) and Dayton.

Twice-daily ERJ-145 service is started on August 7 from Chicago (ORD) to Shreveport, Louisiana. The day's new schedule also allows the carrier to provide jet service between Shreveport and its Dallas-Fort Worth hub, replacing one of its 12 existing turboprop roundtrips.

Two more turboprop Chicago-Cedar Rapids services become ERJ-145 on August 27. Simultaneously, the airline and its sister, **American Airlines**, reach agreement with **Northwest Airlines** that will allow them to accept NWA tickets in the event that a strike, looming in two days, occurs. The next day, all five daily services between Chicago and Dayton become ERJ-145.

While on approach to Chicago (ORD) from Wausau, Wisconsin, on September 17, Flight 4146, an ATR42-320 with 3 crew and 13 passengers, experiences wake turbulence from a Boeing 727. The flight attendant suffers a broken ankle.

By September 22, American Eagle has received 12 of 42 ERJ-145s ordered the previous year. Thrice-daily ERJ-145 flights to Duluth and Superior from Chicago (ORD) commence on September 28.

Twice-daily nonstop ERJ-145 roundtrips begin from Chicago (ORD) to Montgomery, Alabama, on October 5. Daily ERJ-145 nonstop roundtrips are simultaneously introduced between Montgomery and Dallas (DFW).

On November 1, thrice-daily ERJ-145LR roundtrips commence between Chicago (ORD) and the new Northwest Arkansas Regional Airport that serves Fayetteville, Bentonville, Rogers, and Springdale. Si-

multaneously, the company's current ATR72-212 service between Dallas (DFW) and Fayetteville's Drake Airport is transferred to Northwest Arkansas Regional.

The regional, on November 12, exercises 8 of its 25 options for the 50-seat ERJ-145. The move accelerates the company's plan to attain the maximum number of regional jets permitted to it under existing labor agreements with the Allied Pilots Association (APA). With the new order, American Eagle will reach its limit of 67 aircraft, applicable to jetliners with 45 seats or more, at the end of 2001.

Two of the carrier's 11 daily ATR72-212 roundtrips between Dallas (DFW) and Northwest Arkansas Regional Airport are replaced on November 14 by ERJ-145LRs.

ATR72-212A nonstop roundtrip service is inaugurated by **Executive Airlines (3)** between Ft. Lauderdale and Nassau on November 16, four times a day. Simultaneously, American Eagle replaces a turboprop with an ERJ-145LR on one of its eight daily roundtrips between Abilene and Dallas (DFW).

It is announced on November 23 that, effective January 6, an ERJ-145LR will replace an ATR72-212 on one of the carrier's six daily roundtrips between Chicago (ORD) and Peoria.

In response to a TCAS warning, an ATR72-212A with 3 crew and 48 passengers en route from Nassau on December 1, executes an emergency pull-up at a point 30 mi. SE of Ft. Lauderdale, during which the flight attendant falls and breaks her leg. The service to Ft. Lauderdale is completed and the flight attendant is taken to a local hospital.

On December 4, in a move to strengthen its regional presence in the Northeast, American Eagle purchases **Business Express Airlines** from the Philadelphia-based investment partnership Dimeling, Schreiber & Park for an undisclosed price. American Eagle gains the Business Express slots at New York (LGA). The regional will operate as a separate entity until all takeover arrangements are completed. Business Express, meanwhile, negotiates with **Delta Air Lines** and **Northwest Airlines** concerning its regional partnerships with those majors.

On December 7, ERJ-145LRs replace turboprops on 2 of the carrier's 11 daily roundtrips between Dallas (DFW) and Houston (HOU).

On December 9, Alaska Air Group president William Ayer announces that a letter of intent for the creation of a marketing partnership has been signed between its subsidiaries, **Alaska Airlines** and **Horizon Air**, and AMR Corporation and its subsidiaries, **American Airlines** and **American Eagle**. The alliance will greatly expand travel and mileage opportunities for AAG passengers and strengthen the marketing presence for both corporations in California, the Pacific Northwest, and the West Coast. The four airlines will implement a fully reciprocal frequent flyer relationship; code-sharing is also under discussion, but remains subject to labor contract provisions.

Two more daily nonstop ATR72-212A roundtrips are added on December 10 between Ft. Lauderdale and Nassau. Twice-daily Saturday and Sunday ERJ-145LR roundtrips from Columbus to Miami are begun on December 12. American Eagle is the only airline to provide Columbus with nonstop service to Miami, although the service is only for the winter season.

Two days later, on December 14, the company announces additional schedule enhancements. On February 23, the company will augment **American Airlines'** twice-daily roundtrips between Long Island MacArthur Airport and Chicago (ORD) by operating two new daily ERJ-145ER roundtrips of its own. Thrice-daily ERJ-145ER roundtrips will start on March 8 from Chicago (ORD) to Memphis.

The number of daily roundtrip SAAB 340B roundtrips between Los Angeles (LAX) and Bakersfield are doubled on December 15 from two to four.

As the result of intensive lobbying by U.S. Senator Trent Lott (R-Miss.), American Eagle announces on December 21 that it will replace turboprops on three of the company's six daily roundtrips from Jackson, Mississippi, to Dallas (DFW) on February 19.

When an ice storm sweeps across the south on December 23, American Eagle is forced to cancel all of its flights from Dallas (DFW) to

Shreveport and Alexandria, Louisiana, Fort Smith and Texarkana, Arkansas, Jackson, Mississippi, and the Texas communities of Abilene, Killeen, Longview, Tyler, Waco, and Wichita Falls.

ERJ-145LR frequencies from Dallas (DFW) to Hobby Airport are doubled to four on December 28. The next day, a second daily nonstop roundtrip is added between Dallas-Fort Worth and Montgomery, Alabama.

Passenger boardings for the year jump 6.5% to 11.44 million as AEA moves up the ranks. Cargo traffic climbs 13% to 393,000 FTKs and revenues jump 10.2% to \$1.12 billion.

Early in January 1999, American Eagle is named 1998 "Regional Carrier of the Year" by *Commuter World* magazine. Peter M. Bowler becomes the carrier's new president.

American Airlines, on January 20, officially dedicates its new facilities and gates at its third Dallas (DFW) terminal; nine new gates and other facilities at Terminal B, valued at \$120 million, complement existing American Airlines and American Eagle facilities at Terminals A and C.

Also during the month, American Eagle becomes the first U.S. regional airline to be awarded Extended Over-water Certification by the FAA. The new certification allows **Executive Airlines (3)** to initiate daily ATR72-212A roundtrips on February 1 between San Juan and Port of Spain, Trinidad.

Both **American Airlines** and American Eagle begin service from Terminal B at Dallas-Fort Worth on February 1. ERJ-145s replace ATRs on three of the six daily roundtrips between Jackson, Mississippi, and Dallas (DFW) beginning on February 19.

Augmenting the twice-daily **American Airlines** schedule between Long Island's MacArthur Airport and Chicago (ORD), American Eagle launches twice-daily ERJ-145 roundtrips between the two points on February 23.

On March 8, American Eagle launches thrice-daily nonstop ERJ-145 roundtrips from Chicago (ORD) to Memphis.

The acquisition of **Business Express Airlines** is completed on March 11. Initially, it is operated as a separate company, with President Ellmer remaining in place, but now reporting to American Eagle President Bowler. Marketing relationships, including code-sharing with several other airlines, is continued. Rather than perform costly modifications to conform Business Express aircraft to Eagle specifications, Eagle will retire units of the Business Express SAAB fleet as their leases expire and gradually replace them with American Eagle aircraft.

A dual-designator pact with **Finnair O/Y** takes effect on March 28. In addition to mutual frequent flyer benefits, **American Airlines** passengers are able to employ their tickets on Finnair flights from New York (JFK) to Helsinki and from Chicago (ORD) to Stockholm.

Finnair also places its "AY" code on American and American Eagle flights from New York (JFK) to Boston, Dallas (DFW), Los Angeles, Miami, San Francisco, and Washington, D.C. (DCA).

Thrice-daily ERJ-145 nonstops are introduced between Dallas (DFW) and Knoxville on March 29. The world's largest regional airline, the carrier now offers 1,300 daily flights to 128 cities throughout the U.S., Canada, the Bahamas, and the Caribbean. The same day, it is announced that thrice-daily ERJ-145 nonstop roundtrips will commence on July 1 between Greenville/Spartanburg and Chicago (ORD), with twice-daily ERJ-145 nonstop return service simultaneously launched from the South Carolina community to Dallas (DFW).

Daily nonstop ERJ-145 roundtrips begin from Chicago (ORD) to Madison, Wisconsin, on April 19; the flights replace one of the seven daily ATR42-320 turboprop flights currently operated. ERJ-145 frequencies from Chicago (ORD) to Madison are doubled on April 26. Also on April 26, four of the company's nine daily ATR42-320 flights between Chicago (ORD) and Grand Rapids, Michigan, are also replaced with ERJ-145s.

On May 8, descending through clouds on a service from Baltimore (BWI), a SAAB 340B with 3 crew and 27 passengers lands some 7,000 ft. beyond the approach end of Runway 4R at New York (JFK). The tur-

boprop skids 300 ft. and travels 215 ft. across the 600-ft. Engineered Materials Arresting System (EMAS) before its landing gear sinks approximately 30 inches into the EMAS, halting the plane. One customer receives minor injuries. This is the first operational use of the new foam concrete arrestor bed installed later in the previous year.

After a year of detail resolution, **American Airlines and Japan Air Lines Company, Ltd. (2)** implement the first phase of code-sharing on routes between the U.S. and Japan and on other routes beginning on May 10. JAL initially places its code on **American Airlines** and American Eagle flights from Dallas (DFW), Chicago (ORD), San Jose, and Seattle to Tokyo (NRT) and on American's new route from Dallas (DFW) to Osaka (KIX). JAL also is able to assign its designator on **American Airlines** and American Eagle frequencies from Los Angeles, Dallas (DFW), and Los Angeles and other U.S. communities.

Infolatina in Mexico City reports on May 14 that competition from global airline alliances such as "OneWorld" is getting stiffer for the two major Mexican airlines owned by the holding company CINTRA. It is reported that AEA-2 is now planning to introduce ERJ-145 frequencies into Chihuahua, Coahuila, and other parts of northern Mexico.

Having provided a two month notice, the carrier, on May 19, ceases its unprofitable thrice-daily roundtrips between Chicago (ORD) and Central Wisconsin Airport.

Nonstop ERJ-145 roundtrips are started on May 20 between Chicago (ORD) and Pittsburgh, four times a day. In addition, as **Executive Airlines (3)** continues amalgamation, it simultaneously initiates daily ATR72-212A return service between San Juan and Grenada.

Five-times-a-day ERJ-145LR roundtrips commence on June 1 between Baltimore (BWI) and Chicago (ORD). The same day, a third daily nonstop ERJ-145 roundtrip is added between Dallas (DFW) and Montgomery. The unprofitable thrice-daily flights between Montgomery and Chicago (ORD) are eliminated, as are the twice-daily services between Chicago (ORD) and Shreveport and Los Angeles and Carlsbad/Palomar.

Also eliminated, on June 15, are the unprofitable five-times-a-day nonstop roundtrips between Dallas (DFW) and Gregg County Airport at Longview, Texas.

Handlers at Fort-de-France, Martinique, and Pointe-à-Pitre, Guadeloupe, who have for some time been involved in an industrial dispute with American Eagle, prevent the carrier from operating its flights into those two points from San Juan on June 18. Consequently, the carrier indefinitely suspends those services.

ERJ-145 nonstop roundtrips between Cleveland and New York (LGA) are started on July 29, six times a day. The new service is made possible by the carrier's addition of the La Guardia Airport landing slots that came with the acquisition of **Business Express**.

Four-times-a-day ERJ-135 roundtrips between Chicago (ORD) and Omaha commence on August 1.

The carrier's first ERJ-135 is delivered at Dallas (DFW) in ceremonies on August 18. The new aircraft will undergo a two-month workup and enter revenue service in October.

Twice-daily ERJ-145 roundtrips commence on August 26 between Dallas (DFW) and Grand Rapids, Michigan.

The carrier's new ERJ-135 is introduced on October 1 on routes between Chicago (ORD) and both Evansville and Madison; at the same time, turboprops are replaced by ERJ-145s on the route from Chicago (ORD) to Milwaukee. New ERJ-145 roundtrips commence on October 2 from Chicago (ORD) to Fort Wayne and Green Bay.

Thrice-daily ERJ-145 return flights begin on November 1 between Cleveland and New York (JFK).

Executive Airlines is not integrated during the year. On December 14, the carrier accepts its 44th ERJ-145, the 200th regional jet unit to come off the Embraer production line.

Customer bookings inch up 0.1% to 11,458,000, while cargo falls 9.1% to 336,000 FTKs. Revenues jump 15.4% to \$1.3 billion.

Fired by the company for refusing to fly during a 1996 ice storm, Capt. Michael LaGrotte is awarded \$10 million by a jury in a civil suit that concludes on January 2, 2000.

Employing ERJ-145s, American Eagle takes over the eight-times-a-day **American Airlines** service on January 5 between Dallas (LOV) and Austin.

New twice-daily ERJ-145 roundtrips are launched on February 21 from Dallas (DFW) to Cedar Rapids, along with new four-times-a-day ERJ return service from Dallas (DFW) to Milwaukee.

A code-sharing agreement is signed with **Northwest Airlines** on February 29; under its terms, Eagle places the "NW" code on its SAAB 340B services from Los Angeles to Bakersfield, Fresno, Monterey, Palm Springs, San Diego, Santa Barbara, and San Luis Obispo.

American takes over two-thirds of the American Eagle service between Dallas (DFW) and Knoxville on March 2 providing Fokker 100 roundtrips twice daily; Eagle provides a third service employing an ERJ-145. The same day, new ERJ-145 nonstops are inaugurated twice daily from Dallas (DFW) to Fort Wayne.

Bob Reding is appointed chief operating officer, also in March.

The major also relieves Eagle of its Chicago (ORD) to Baltimore (BWI) responsibility on April 2, flying MD-80s between the two points four times a day. The same day, 5 of the 11 daily flights from Dallas (DFW) to Lubbock are upgraded to ERJ-145s.

New thrice-daily ERJ-145 return service from Dallas (DFW) to Corpus Christi and Lubbock and from Chicago (ORD) to Chattanooga begins on April 3. This is followed by the introduction of twice-daily ERJ roundtrips between Chicago (ORD) and Baton Rouge on April 24.

On May 1, ERJ-145s replace SAAB 340Bs on four of the carrier's nine daily roundtrips between Dallas (DFW) and Midland and Odessa. The unprofitable Chicago (ORD) to Lansing route is closed the same day.

New thrice-daily ERJ-135 return service is introduced on May 26 from Dallas to Savannah.

In June, CEO Reding announces that the carrier's Chicago (ORD) operation will be all-jet by year's end and that a new 13-gate satellite terminal, featuring covered boarding bridges, will be built at Dallas (DFW).

Four of nine daily roundtrips from Dallas (DFW) to Oklahoma City are upgraded to ERJ-145 on July 5, the same day the carrier's last SAAB 340B is withdrawn at Miami.

When a Farmingdale, New York, **Executive Airlines** Jetstream 31 crashes near Wilkes-Barre in July, Eagle officials point out that the operator should not be confused with the Puerto Rico-based Eagle carrier **Executive Airlines**.

Twice-daily ERJ-145 roundtrips commence on September 6 from Dallas (DFW) to Madison, Wisconsin. On September 26, the carrier announces that it will become a launch customer for the new Embraer ERJ-140 and that it is converting its remaining ERJ-135 orders into Dash-140 requests.

Dallas (DFW) to Fort Smith, Arkansas, twice-daily ERJ-145 return flights are started on October 5. On October 27, a historic agreement is signed with **Trans World Airlines (TWA)** under which the American Eagle subsidiary **Business Express** will provide "TWExpress" services to nine new markets and five existing "TWExpress" cities from which **Trans States Airlines** will withdraw by January 5.

Chicago (ORD) does, indeed, become all-jet on November 2 when the service to Traverse City becomes the last converted from turboprop to ERJ. A new 13-gate facility, complete with covered passenger bridges, is opened north of Terminal A at Dallas (DFW) on November 4.

Employing SAAB 340Bs, "TWExpress" service is launched on December 2 from New York (JFK) to Albany, Buffalo, Montreal, Providence, Rochester, Syracuse, and Worcester, Massachusetts.

Thrice-daily roundtrips are launched on December 15 from Chicago (ORD) to Greensboro, North Carolina.

AMERICAN EXPORT AIRLINES (AMEX): United States (1937–1945). A subsidiary of the shipping company American Export Lines created to offer transatlantic air service, this carrier is incorporated in April 1937 as **American Export Airlines (Amex)**. John E. Slater is named board chairman and CEO. Application is made to the U.S. gov-

ernment for a route to Europe and in September 1938, a Consolidated Model 28 or PB-5 flying boat is purchased with which to undertake route surveys.

On May 9, 1939, the company approaches the newly formed CAB for a transatlantic certificate. The PB-5 undertakes three transatlantic survey flights. The CAB begins consideration of the company's route request in October, but places it on hold as the European war intensifies. Amex renews its efforts amending its route request from London and Paris to Lisbon. In December, orders are placed for three as yet to be designed Vought-Sikorsky VS-44A flying boats.

On July 15, 1940, the CAB awards and President Franklin D. Roosevelt confirms a seven-year temporary route permit for service from New York to Lisbon. Capt. Charles F. Blair is appointed chief pilot to operate projected airmail service. Blair will recall his service in his often reprinted memoir *Red Ball in the Sky* (New York: Random House, 1952, 1957, 1969).

The Amex's authority is legally challenged in the U.S. Court of Appeals by **Pan American Airways (PAA)**, with the result that American Export Airlines is forced to restructure and separate from its parent.

A little later, the carrier requests a \$1.2-million mail subsidy from the Appropriations Committee of the U.S. Senate; this, too, is opposed by PAA and the mail contracts are not granted. On October 15, a contract is drawn up for the purchase of **TACA (Transport Aereos Central Americanos, S.A.)**. This arrangement will also be opposed both in the U.S. and in Latin America and the CAB denies approval of the foreign takeover on December 4, 1941. On December 7, the Japanese attack Pearl Harbor.

Although support for mail carriage is not received, Amex presses on. On January 12, 1942 the company signs a contract with the Naval Air Transport Service (NATS) to operate a wartime transatlantic route in support of the military. Three brand new Vought-Sikorsky VS-44A flying boats are purchased, labeled "Flying Aces," and extolled for their comforts (full-length beds, minimum vibration, full galleys, lounges, dressing rooms, and smoking room) in company advertising.

The first \$2.1-million VS-44A is christened *Excalibur* by Mrs. Henry A. Wallace on January 17, although it takes three attempts before the champagne bottle, finally weighed down with a length of angle iron, breaks across the plane's duralumin-skinned bow. The next day, Amex's chief pilot, Capt. Blair, makes two proving flights from cold Long Island Sound.

A temporary CAB certificate is received on February 10 for a transatlantic route, New York to Foynes (Northern Ireland). Meanwhile, Blair and his crew work the *Excalibur* to flight readiness in March and April, making practice takeoffs and landings from the St. Johns River at Florida's Jacksonville Naval Air Station.

Meanwhile, the second VS-44A, the *Exeter*, also arrives in April. The first NATS VS-44A European mission is undertaken by the *Excalibur* as a proving flight on May 26; regularly scheduled weekly roundtrips begin on June 20.

Chief pilot Blair, on June 22–23, makes the first westbound nonstop transatlantic flight with passengers and mail, flying the *Excalibur* from Foynes to New York in 25 hrs. 40 min. The Royal Navy's Adm. A. B. C. Cunningham, en route to Washington as Britain's representative to the Combined Chiefs of Staff, is an impressed traveler on this inaugural service. The *Excambian*, arrives in June and joins the *Exeter* in beginning regular nonstop operations between New York and Ireland on July 1.

Crossings are successfully made throughout the war as the VS-44As prove to be the longest-legged aircraft in commercial service at the time and the only ones capable of flying commercially scheduled, nonstop, transatlantic routes. During a rushed liftoff from the Bay of Exploits at Botwood, Newfoundland, on October 3, the *Excalibur* fails to become airborne and crashes; Flight Engineer Michael Doyle and half the passengers are killed.

To be on the safe side in terms of potential weather difficulties, in the winter season the southern route is flown via Bermuda and Bathurst. Following a reorganization in February 1943, Amex's entire transatlantic

service is taken under NATS control. On July 14, the *Exeter* and *Excambian* receive their final Approved Type Certificates from the government.

Not only do the two flying boats launch nonstop flights along such wartime supply avenues as Bermuda–Trinidad–Puerto Rico–Africa, but establish several records in 1944 that hold for a few years. In January, Capt. Blair flew a 21 hr. 26 min. Foynes to New York service with 19 passengers and 2,686 pounds of mail. The fastest nonstop Europe to America flight of 16 hrs. 57 min. occurred in July and a nonstop New York to Foynes transatlantic speed record of 3,329 in 14 hrs. 17 mins. was established in October. The Navy contract is concluded on December 31. In just over a year and a half, the VS-44As have completed 405 transatlantic crossings.

In January 1945 American Export begins flying leased Douglas C-54s to Casablanca for the USAAF's Air Transport Command. During the spring, merger negotiations begin between Amex CEO Slater and Ralph Damon, who, as executive vice president, is in charge of **American Airlines** during the military absence of C. R. Smith.

On June 1, the CAB announces a finding in its North Atlantic Route Case. Both Amex and **Transcontinental and Western Air Lines (TWA)** will be allowed to compete on the over-ocean service with **Pan American Airways (PAA)**, with the former operating about the 50th parallel, including London. Simultaneously, it is announced that Amex has been purchased (for \$3 million) by **American Airlines** and will constitute its new Trans-Atlantic Division. CAB approval for the arrangement is received on July 5.

AMERICAN FALCON, S.A.: Av. Santa Fe, 1060 Buenos Aires, Argentina; Phone 54 (11) 4811 0215; Fax: 54 (11) 4815 6657; <http://www.americanfalcon.com>; Code WK; Year Founded 1995. American Falcon is initially established in 1995 as an affiliate of Florida-based **Falcon Air Express** to provide lift for members of the North American Olympic Committee at the Mar del Plate Pan American Games.

Over the next five years, both a wet- and a dry-leased fleet is established that comprises, at one time or another, 2 Boeing 707-320s, 5 Fokker F-28-4000s, and 2 Douglas DC-9-32s. On behalf of over 80 travel agencies, seasonal charters are offered in summer and winter to such Argentinean and international destinations as Punta Cana, Saint Martin, Margarita Island, Cancún, Havana, Rio de Janeiro, and San Salvador.

The company also flies charters on behalf of the Argentine National Football Team, the San Lorenzo Racing Club, and others, while simultaneously operating corporate flights for Coca-Cola, Bianchi, Arcor, General Motors, Daimler-Chrysler, Siembra, and Perez Compaq.

Finally, replacement scheduled services are from time to time provided on behalf of **Southern Wings, S.A.** and **LAPA (Lineas Aereas Privadas Argentinas, S.A.)**.

AMERICAN FLIGHT SERVICES: P.O. Box 16638, Washington Dulles International Airport, Washington, D.C. 20041, United States; Phone (703) 581-1600; Fax (703) 771-8002; Code CY; Year Founded 1987. Originally established in 1987 as Chantilly Aviation, this passenger charter and aircraft sales agency has had a corporate image change by 1997. Daniel Y. Stapleton Jr. is president and he continues to oversee revenue flights that are made with a fleet of 2 Cessna 172s, 1 C-182RG, 1 C-182, 1 Beech A-36, 1 Piper PA-23 Aztec, 1 PA-31-310 Navajo, and 1 PA-31-350 Navajo Chieftain.

AMERICAN FLYERS AIRLINE CORPORATION: United States (1949–1971). Established at Ardmore, Oklahoma in 1949 by Reed W. Pigman, this charter operation flies without serious incident during the next 16 years. On April 1, 1960, two each Lockheed L-049 and L-149 Constellations are purchased from **Delta Air Lines**. This is Pigman's first four-engine equipment.

The former **Qantas Empire Airways (Pty.), Ltd.** L-1049G *Southern Prodigal* is leased from Lockheed in 1961 and during the next year, two more L-1049Gs are also purchased. Arrangements are made in 1962 to

acquire a pair of Lockheed L-188Cs, which had originally been ordered by **Capital Airlines** and then passed to the start-up Sports Aloft, which is unable to begin operations.

The new L-188Cs enter service in January and February 1963. On September 23, a DC-3 must make an emergency wheels-up landing at Shreveport, Louisiana, but none of the 31 persons aboard is hurt.

Previously leased by **Capitol Airways** and first flown by **Trans-Canada Airlines, Ltd.**, two L-1049E Super Constellations are purchased from California Airmotive on April 8, 1964. They are followed into service by a pair of L-1049Es first flown by **Qantas Empire Airways (Pty.), Ltd.**

In the first use of a large turboprop for a coast-to-coast charter by an entertainment group, the L-188A is leased by The Beatles at a cost of \$75,000. Between August 19 and September 20, it transports the Fab Four and its entourage on its 24-city tour across the U.S.

Coming in from a ferry flight, an L-749 Constellation with three crewmen aboard overshoots the runway while landing at Ardmore, Oklahoma, on September 19, 1965; injuries are minor. The company wins a CAB permit, on September 30, to undertake services to Mexico. Revenues for the year total \$8.16 million; expenses are \$7.6 million and the net profit is \$441,367.

En route from Fort Ord, California, to Fort Benning, Georgia, on an NATS charter on April 22, 1966, Flight 280D, a Lockheed L-188A Electra with 92 servicemen and a crew of 6, strikes a 963-ft. hill while on initial approach to Ardmore, Oklahoma, and crashes (83 dead). The tragedy is later determined to have been caused by a heart attack suffered by pilot-owner Pigman.

Three L-188Cs are purchased from **Northwest Airlines** between June and November. As the result of the CAB's reopened transatlantic charter investigation, an over-ocean certificate is also won by the supplemental on November 26, effective that day. Revenues total \$8.65 million. Although a \$79,756 operating loss is suffered, a \$542,765 net profit is realized.

A fourth L-188C arrives from **Northwest Airlines** on January 24, 1967 and two Boeing 727-185Cs join the eight Electras late in the year.

A total of 230,000 passengers are originated. Revenues advance 23% to \$10,593,913. This year, a \$279,796 operating profit is obtained, but a net loss of \$549,727 occurs. The employee population is 350.

Early in 1968, the Boeing jetliners enter service and in midyear the company is purchased by the Pittsburgh Coke and Chemical Company. Despite the receipt of \$13,673,227 in revenues, the year's net loss increases to \$3,161,668.

Headquarters are moved to Harrisburg, Pennsylvania, in 1969, the same year two Douglas DC-8-63CFs are acquired. Merger discussions begin with **Universal Airline Company**. The fleet now includes 2 B-727-185Cs, 2 DC-8-63CFs, and 4 Lockheed Electras.

The 136 members of an air charter group sponsored by the Association of English and American Students Abroad are stranded at New York (JFK) on September 6. AFA reports that the British Board of Trade has bared the landing of its aircraft in London because of the "charter unworthiness" of the group's sponsor.

Enplanements total 318,941 and revenues reach \$20.8 million. The net loss doubles, up to \$6.28 million.

Planning for a merger with Universal moves ahead in 1970 and as a result, the workforce is cut back by 63.7% to 196. In January, an L-188A is sold to **Holiday Airlines**.

A total of 343,686 charter passengers are carried, an increase of 7.2%. Revenues advance to \$21.55 million. The loss declines by two million in each reporting category, but continues as minus figures: \$3.83 million (operating) and \$5.07 million (net).

Operations continue largely unchanged until June 4, 1971 when the purchase of AFA by Universal is confirmed.

AMERICAN INTER-ISLAND: United States (1977–1982). After the April 27, 1976 crash of an American Airlines' B-727-223A at Harry S. Truman Airport at St. Thomas, the Allied Pilots Association (APA), AA's

pilot union, indicates its unwillingness to continue operations into an airport which has been plagued with problems over the years.

Having acquired a fleet of four (later five) Convair CV-440s from **Delta Air Transport, S.A.** and formed this subsidiary with Cyrus Collins as president, American halts jetliner flights to St. Thomas on May 24, 1977. With APA approval, American Inter-Island plans to operate a 45-mile shuttle service between St. Thomas and Alexander Hamilton Airport on St. Croix where they will be able to connect with American jets. Revenue flights commence on November 1.

After runway improvements at St. Thomas have been completed, American reinstates 727-223A service to Harry S. Truman Airport on June 10, 1982, directly from Florida and New York. Once the subsidiary is no longer required, it is sold for \$3 million to Carlsbad, California-based **Air Resorts Airlines**.

ARA will briefly operate its new acquisition on scheduled and charter services between St. Thomas, St. Croix, and San Juan. By year's end, the Caribbean operation is closed down and the five Convairs are flown to the Golden State.

AMERICAN INTERNATIONAL AIRWAYS (1): United States (1945–1948). AIA is established in late 1945 to offer nonscheduled charter services to various overseas destinations, including Europe. In the spring of 1947, following their return to San Diego by the bankrupt **Universal Airways**, five Boeing 314s are purchased for \$500,000 from the U.S. War Assets Administration. The *Anzac Clipper*, *California Clipper*, *American Clipper*, *Dixie Clipper*, and *Capetown Clipper* are reconditioned using parts from a sixth Boeing 314, the *Atlantic Clipper*.

All of the ships are completely refurbished and given back the luxurious fittings removed by the previous owners. The *Capetown Clipper* is renamed *Bermuda Sky Queen* and is the first to be refurbished. She is ferried to Baltimore in July and, after an inspection by CAB examiners, is placed into service under the command of Capt. Charles Martin on an initial October 2 flight from Baltimore to Poole, via Foynes and Gander.

En route from England to Maryland on the return leg of her inaugural roundtrip on October 14, the flying boat, under charter to London-based **Air Liaison, Ltd.**, runs out of fuel because of stiff head winds and lands at sea. The aircraft, its 7-member crew, and 62 English emigrant passengers, drift for 100 miles before the USCG's *Bibb* arrives. After all aboard are transferred to the cutter, the *Bermuda Sky Queen* drifts into the ship and is fatally damaged. She must be sunk by gunfire.

During the last two months of the year and into the next, the four remaining Boeing 314s are hangared at San Diego. All are sold to **World Airways** in 1948. AIA (1), after operating less than one complete transatlantic service, ceases operations due to recessionary pressures.

AMERICAN INTERNATIONAL AIRWAYS (2): United States (1980–1984). Organized as a nonscheduled subsidiary of American International Industries at Atlantic City, New Jersey, in late 1980, this company is successor to **Commercial Airlines**, a charter operator certified earlier in the year. Overseen by former **Hughes Airwest** President Russell V. Stephenson, William Davis (also ex-Hughes), and one-time **McCulloch International Airlines** executive John E. Gallagher, the carrier begins nonscheduled revenue flight operations on September 15, 1981, with one (later three) Douglas DC-9-33RC wet-leased from **Hawaiian Airlines (HAL)**.

The FAA grants the company a permit on December 1 to operate its own Part 121 charter flights. A pair of de Havilland Canada DHC-7s are acquired during the spring of 1982 to offer short-haul East Coast charters to Atlantic City. Sixty thousand passengers are transported to the gambling mecca from Miami, St. Louis, Chicago, and New Orleans before year's end.

AMI continues to emphasize these specialized tour services until October 15, when nongambling public charter flights are launched from Dallas (DFW) to Las Vegas, the U.S. West Coast, and Mexico. Permission is received from the government to inaugurate scheduled passenger and cargo flights on December 6.

During that year, 425,105 travelers fly the new entrant's DC-9-33CFs and two DHC-7s. This turnout encourages company officials to consider a complete shift to scheduled service. In December, the carrier inaugurates the first such flight to Atlantic City.

Full commitment to scheduled service is taken in February 1983 and routes are extended from a hub at Atlantic City to Boston, Cleveland, Detroit, Ft. Lauderdale, Miami, Orlando, and Tampa. Meanwhile, in April, two DC-9-80s (MD-80s) are chartered from **Hawaiian Airlines (HAL)**. Three casinos, which offer "Stay and Play" packages for those arriving at Atlantic City, underwrite the new routes to Boston, Cleveland, and Detroit. Scheduled service is a large initial success; 28,000 passengers (84.4% load factor) are transported in June alone.

Other new markets entered during the summer months include Chicago, Pittsburgh, West Palm Beach, and Philadelphia, site of the carrier's soon-to-be new hub. The final changeover from charter to scheduled operations is completed during the fourth quarter, by which time services are operated into 11 Northeast, Midwest, and Florida markets.

American International's 7 chartered DC-9-33CFs and leased DHC planes fly 374,809 passengers on the year, but, despite casino aid, scheduled start-up costs are heavy and, on revenues of \$52.9 million, a net loss of \$11.8 million is suffered, atop an operating loss of \$8.9 million.

1984 is a significant year for the new national. On January 5, a major new hub is opened at Philadelphia, leading to an immediate traffic boost. In March, Bruce B. Edmondson becomes the new president/CEO. The fleet of 7 DC-9-33CFs (now with a new paint scheme, using a dark blue upper fuselage and new "American International" titles) is, by summer, providing low-cost service between Philadelphia and Atlantic City and to 11 other markets in the Northeast, Midwest, and Florida.

Unfortunately, the financial realities of commerce cannot keep pace with the company's dream; over \$15 million is lost in the year's first half. On July 19, American International Industries, in which Reno-based KB Equities is major shareholder, is forced to file for Chapter XI bankruptcy. Airline operations continue until suspended on September 14, pursuant to receipt of a court injunction grounding half the fleet. Although it is announced that flights will resume in three days, they do not.

During the first half of 1988, the former airline's fitness certificate is purchased by **Connie Kalitta Services** with plans to restart the airline, which will eventually be successful.

AMERICAN INTERNATIONAL AIRWAYS (3): United States (1991–1999). The 600-employee all-cargo airline **Connie Kalitta Services** is renamed in 1991. With a fleet of 2 Douglas DC-8-61Fs and 1 Boeing 727-100F, President/CEO Conrad "Connie" Kalitta's carrier undertakes to continue passenger/cargo flights to international and domestic destinations under the day-to-day direction of Vice President/General Manager William Gray. The holding company, Bounty Aviation—named after the racing car owner's vehicle Bounty Hunter—is established to control upcoming additions.

On the year, AIA transports a total of 187.68 million FTKs of cargo, down 5.9% from the previous year.

The fleet is dramatically increased during 1992 by the addition of 1 more DC-8-61F, 1 each B-727-23F and B-727-35F, 10 DC-8-50Fs (including 2 Dash-55Fs from **Air Charter Systems, Ltd.**), 1 DC-8-73F, 2 DC-9-10Fs, and 4 B-747-146/-146Fs, the latter purchased from **Japan Air Lines Company, Ltd.** (2). **Kalitta Flying Services** is established under the leadership of President Donald Schilling to provide on-demand air ambulance and freight flights with smaller aircraft. At the same time, **American International Cargo** is set up; capitalized by Bounty Aviation (60%), it will be headed by Vice President/Managing Partner Betty Ward, who owns the remaining shares.

The first B-747-146F arrives on October 30 as one of three Jumbojets to be delivered during the year, having been converted by GATX-Airlog from a passenger plane to a freighter in a record 86 days.

Cargo traffic during the 12 months skyrockets 150.3% to 400.15 million FTKs. Profits are made: \$8.6 million (operating) and \$4.3 million (net).

Airline employment is cut 22.8% in **1993** to 502 as the DOT reclassifies the freight operator as a national airline. In May, the company begins to fly old **Zantop International Airlines** routes as **American International Freight**. The new subsidiary's headquarters will eventually be transferred to Terre Haute, Indiana under Vice President/General Manager Steve Murray.

A heavy aircraft maintenance concern is established at Oscoda, Michigan, and becomes the AIA division Bounty Maintenance Services. On August 2, AIA is one of seven carriers to win an Air Force contract to provide long- and short-range international airlift services under the Civil Reserve Air Fleet program; the pact is valued at \$5 million.

Freight jumps again, up 43% to 572.13 million FTKs. Revenues increase 81.8% to \$149.4 million, expenses are kept low, and grant an operating profit of \$25.5 million. Net gain nearly quadruples to \$18.96 million, placing it 21st among the world's airlines.

The workforce is reduced another 6.4% in **1994** to 470. The fleet now includes 1 each B-727-23F, B-727-35F, B-727-22C, 1 leased B-747-132F, B-747-238BF, DC-8-62, and DC-8-63CF, plus 2 each B-747-146s, B-747-146Fs, DC-8-51F, DC-8-52s, DC-8-54Fs, and DC-8-61Fs, 3 DC-8-61s, 4 L-1011-200s, 6 DC-8-55Fs, and 16 B-727-223s.

On March 15, one of the carrier's B-747-146s is painted in the colors of the fictitious PAC Atlantic Air and employed in the new Wesley Snipes motion picture *Drop Zone*. Later in the year, a contract is signed with Marshall Aerospace, Ltd. in Cambridge, England, for the conversion of the L-1011-200 TriStars into a freighters. Four others will also be purchased and converted. They will join the B-747-146s in providing passenger charters to customers such as tour operators and cruise lines.

Cargo accelerates 7.5% to 614.87 million FTKs and revenues skyrocket 85.6% to \$287 million. Expenses grow by 83.7% to \$256.07 million and allow profits to continue to grow to \$30.92 million (operating) and \$27.23 million (net).

Airline employment will grow dramatically during **1995**, reaching a total of 2,000 workers by year's end. During the first week of January, the carrier purchases the failed **MGM Grand Air** and its fleet of 3 DC-8-62s and 3 B-727-191s. American International is now restructured into Grand Holdings, Inc., with AIA and MGM Grand Air as its two subsidiaries. Grand Holdings, Inc. President David P. Ahles indicates that MGM's outstanding charters will be honored with the DC-8s and that the B-727s will either be converted to cargo configuration or sold as luxury aircraft "as is."

While landing at Panama City, Panama, on June 3 in heavy rain after a cargo flight from Miami, a B-747-238, with five crew collides with the approach lights about 230 feet from the runway; although the Jumbojet is badly damaged, no personnel injuries are reported.

On July 1, majority interest in MGM Grand Air is sold to Richard Page's Minneapolis-based **Front Page Tours**; AIA continues to hold a 20% interest. President Page renames his new unit **Champion Airlines** and it is provided with 1 DC-8-62 and 1 each Boeing 727-91, B-727-223, and B-727-224A, all leased from AIA, plus a 200-person workforce (a 66.7% increase over what it had been under MGM), that includes most of the former MGM employees.

Also during the month, Marshall Aerospace begins test flying the company's L-1011-200F and two B-747-269Bs are purchased from **Kuwait Airways Corporation, Ltd.**

The premier TriStar freighter is delivered during the second week of August and is placed into service on company routes from Miami to South America. In September, one of the new B-747-269Bs is contracted out to Warner Bros. and is painted in the livery of the fictional Oceanic Airways. The aircraft spends two days at Key West, Florida, taking part in the filming of the forthcoming action film *Executive Decision* starring Kurt Russell and Steven Segal.

Two more L-1011-200Fs arrive during late fall and are placed upon U.S. transcontinental services. A contract is obtained to ship 1.5 million lbs. every night between December 10-24.

The carrier's 54 aircraft carry 1.04 billion FTKs, a 38% increase. Expenses outdistance income and there are losses: \$2.45 million (operating) and \$5.58 million (net).

The workforce is increased by 50% in **1996** to 3,000. During September, a B-747-136 is leased to Hollywood; it is repainted to resemble the U.S. government's VC-25A for the Harrison Ford film *Air Force One*.

Cargo traffic increases 13.8% to 1.19 billion FTKs. Expenses are such, however, as to generate a \$9.7-million operating gain, but a \$12.11-million net loss.

At the beginning of **1997**, the 3,000-employee company has all 8 of its L-1011-200Fs in service, wearing the company's red and white livery.

Flight 903, a B-747-269B freighter with seven crew makes a hard landing at Manaus, Brazil, on March 22 following a flight from Miami; the Jumbojet sustains slight damage and no one is injured.

The 20% stake in **Champion Airlines** is sold to Carl Pohlad and **Northwest Airlines** on March 27 as the two gain control over the Minneapolis-based charter operation.

During late spring, three L-1011-200Fs are wet-leased to **Emery Worldwide**, which wishes to compare them in cargo service with similarly chartered DC-10s.

An agreement is signed with Travel Charter International in April under which the company will initiate passenger charters from Detroit to Europe on behalf of the tour operator. A pair of L-1011s will provide lift to Paris, Frankfurt, Rome, and Athens.

On May 1, the company, via the good offices of Fortis Aviation, purchases three Boeing 747-2B4BCs from **Middle East Airlines, S.A.L. (2)** for \$60 million. The Jumbojets will be delivered in September after conversion into full freighters. The Lockheed wide-bodies assist AIA to boost its traffic during the summer job action at **UPS (United Parcel Service)**.

In anticipation of significant growth in the new year, **Emery Worldwide** makes arrangements during early August to charter three of AIA's L-1011-200Fs. At the same time, discussions are held between Chairman Kalitta and the owners of Kitty Hawk, Inc. concerning a possible merger.

AIA's American International Freight division initiates four-times-a-week Convair 580 roundtrips on September 8 between Terre Haute and Toronto. Also during the second week of September, an agreement is signed with **Alaska Airlines** to share space on one of the major's B-737-200C flights between Seattle and Anchorage and Juneau.

On September 22, Conrad Kalitta signs a letter of intent to combine the Kalitta companies with Kitty Hawk, Inc.; Kalitta will receive 5.1 million shares of Kitty Hawk common stock, \$22 million in cash, and a "significant management role" in the combined operation. In a related transaction, **Kitty Hawk Air Cargo**, the airline operating subsidiary of Kitty Hawk, Inc., purchases 16 AIA B-727s for \$51 million in cash. The first three aircraft will start flying under its new livery on October 1, with the remainder arriving at approximately one per month thereafter.

The next day, a public offering of 4.1 million shares of common stock is sold by Kitty Hawk. Net proceeds of the equity offering and proceeds from a \$340-million offering of senior secured notes of the company (due in 2004) will fund the merger with Kalitta, retire the existing debt, and be used for general corporate purposes.

In November, the company is formally purchased into Kitty Hawk, Inc., parent of **Kitty Hawk Air Cargo**. Connie Kalitta becomes a member of the Kitty Hawk board and plans are put in place to amalgamate the two companies.

A total of 1.41 billion FTKs are operated, an increase of 18.4% over 1996. Operating revenues, however, decline by 5% to \$426.49 million while expenses rise 2.4% to \$449.53 million. The previous year's operating gain becomes a \$22.57-million loss, while the net loss grows to \$47.41 million.

At the beginning of **1998**, AIA-3 is the 24th largest airline in the world in terms of freight carried. The fleet now includes 4 B-747-100Fs, 6 B-747-200Fs, 12 DC-8-50Fs, 12 DC-8-61Fs, and 8 L-1011-200Fs.

Although it is anticipated that the carrier will disappear into **Kitty Hawk Air Cargo** during the first quarter, the amalgamation process is slowed.

For departure from Tocumen International Airport at Panama City on February 6, the captain of Flight 840, an L-1011-200F with five crew, elects to use a runway that is 2,000 ft. shorter than the longer of the parallel runways. During the takeoff, after the landing gear is rotated, he elects to abort; after touchdown, all main landing gear tires of the Tri-Star freighter are blown and the airliner is stopped on the runway. No injuries are reported.

On March 12, AIA contracts with Boeing Wichita for the modification of two B-747-2B4BCs combi jetliners into special freighter configuration. The first of the two will begin modification in June with delivery scheduled in September; the second will arrive in Wichita in July and be delivered in October.

Following the difficulties encountered with opening the cargo handling operation at Hong Kong's new Chek Lap Kok Airport after July 6, a number of carriers opt to fly into the new airport at Macau and to utilize the facilities of its MASC Ogden Cargo Services. Among them is AIA, which flies an empty B-747-2B4BC to Macau from Melbourne during the third week of July and departs full for Los Angeles. Thereafter, it is sent to Wichita for modification.

Conrad Kalitta retires during the summer and, on September 2, Simu-Flite Training International President Charles C. Carson II, a former executive with **Southern Air Transport**, is named AIA president. While Kitty Hawk reorganizes several other acquired Kalitta units, its management confirms that AIA will remain in Ypsilanti.

Clark Stevens, former **Mesa Air Group** chief operating officer, becomes AIA vice president-technical services at month's end.

The carrier's first B-747-2B4BC is received from Boeing's conversion facility in Wichita in early October and is placed under a three-year aircraft, crew, maintenance, and insurance (ACMI) contract with **Fast Air Chile, S.A.**

The second B-747-2B4BC arrives from Boeing on November 13 and begins revenue services on November 17 under a two-year ACMI contract with North Atlantic Airways. Under terms of this arrangement, as with other ACMI pacts, AIA provides the aircraft, crew, maintenance, and insurance while the shipper arranges all freight, cargo handling, fuel, and other costs. The ACMI agreement will bring into the airline's coffers approximately \$1.5 million monthly.

Chairman/CEO Thomas Christopher of the parent **Kitty Hawk Air Cargo** announces on December 11 that the company is evaluating the economics of its passenger charter business. One B-747-146 has been parked pending a decision about its disposition or cargo conversion; the second B-747-146 will be parked in early January. The two remaining L-1011s will remain in service as the evaluation is continued.

Further actions to achieve profitability at the AIA division are revealed by Chairman Christopher on December 28. To cut losses, the workforce will be reduced during 1999 in excess of 50% from 2,700 to 1,200 and a reduction in the number of aircraft from 42 to 19. All of the Convair turboprops plus the Stage II DC-8-50 and DC-8-61 will be retired. Emphasis will be placed on the divisions core business of moving freight using its own aircraft.

This year, cargo traffic falls 6.06% to 1,325,613,000 FTKs. Revenues decline by 7.8% to \$417.59 million, while costs drop 16.4% to \$397.56 million. There is a \$20.3-million operating profit and a net loss of \$9.22 million.

To create a more unified image among its operating units on February 3, 1999, Kitty Hawk, Inc. changes the name of AIA-3 to **Kitty Hawk International**.

AMERICAN INTERNATIONAL FREIGHT. See **AMERICAN INTERNATIONAL AIRWAYS** (3)

AMERICAN JET, S.A.: Aeroparque Jorge Newbery, 1425 Buenos Aires, Argentina; Phone 54 (1) 315-3665; Fax 54 (1) 315-0581; Year Founded 1982. AJ is established at Buenos Aires in 1982 and over the next 15 years becomes the nation's largest on-demand airline. By 1997, President Bonnie Stewart's concern offers a wide range of nonscheduled

services, both fixed- and rotary-wing. The fleet now includes 2 each Learjet 25Ds and Learjet 35As, plus 1 each Cessna 560 Citation V, IAI 1125 Westind Astra, Cessna 500 Citation I, Cessna 550 Citation II, Learjet 24D, Learjet 25G, Swearingen Metro II, Swearingen Merlin IVC, Piper PA-31-310 Navajo, and Bell 206B JetRanger.

During the year, the company introduces a pair of Dornier 228-212s, the only aircraft of their type in the country, on unscheduled services in Neuquen province in support of the transport needs of various energy companies. It also brings in the nation's first Metro 23, which it operates under contract in Catamarca Province on behalf of the mining company Minera La Alumbrera, Ltd.

At the beginning of 1998, the carrier applies to the government for scheduled route rights. The authority is not granted and unscheduled flights are maintained during the remainder of the decade.

AMERICAN JET CHARTER: Wiley Post Airport, Hangar 14, Oklahoma City, Oklahoma 73008, United States; Phone (800) 495-5453; Fax (405) 495-5472; Year Founded 1986. AJC is established at Oklahoma City in 1986 to provide on-demand passenger charters throughout the U.S. Fourteen years later, the company employs three full-time and five part-time pilots and flies two Cessna 340s and one each North American NA-265-60 Sabreliner, Beech King Air 90, and Beech 58 Baron.

AMERICAN OVERSEAS AIRLINES (AOA): United States (1945-1950). On June 1, 1945, the CAB announces its approval of new **American Export Airlines (Amex)** routes to Europe. Simultaneously, it is announced that the carrier has been purchased (for \$3 million) by **American Airlines**, which will transform it into its new Trans-Atlantic Division. Approval for the arrangement is received from the CAB on July 5.

Six former USAAF Douglas C-54s, turned over to Amex at the completion of their military use and obtained as part of the takeover, are delivered in September. They are taken in hand and quickly brought up to civil DC-4 standard as the *Flagship Stockholm*, *Flagship Frankfurt*, *Flagship Oslo*, *Flagship New England*, *Flagship Glasgow*, and *Flagship Keflavik*.

The Vought-Sikorsky VS-44A *Excambian*, still painted in her sky blue and light gray USN camouflage, flies from Foynes to New York on October 23, completing the final transatlantic service by her type. She and her flying boat sister *Exeter* are now retired.

One of the remade DC-4s, the *Flagship New England*, is employed on October 24 to make the first scheduled transatlantic voyage by a commercial landplane, from the Boston-area Hanscom Field in Bedford to the London-area Hurn Airport in Hampshire. Despite the need to refuel at Gander, Newfoundland, and Shannon, Ireland, en route, the hop is made in a record time of 14 hrs. 5 min.

The Trans-Atlantic Division is renamed American Overseas Airlines on November 10. Service to Chicago is initiated on November 19 and to Washington and Philadelphia on November 25. The amalgamation process is completed on December 5, with C. R. Smith as president and former **Pan American-Grace Airways (PANAGRA)** General Manager Harold Harris as vice president and general manager. By the close of the year, AOA is scheduling transatlantic flights daily.

Early in 1946, two more DC-4s, the *Flagship Shannon* and the *Flagship Reykjavik*, join the fleet. The *Flagship Stockholm* departs New York for Copenhagen and Stockholm on February 2, opening regularly scheduled weekly service. At an average cost of \$1.6 million each, an order is placed with Boeing on March 21 for eight Model 377s. The premier L-049 Constellation, *Flagship Copenhagen*, is received on March 25, followed by the *Flagship Great Britain* on March 29. Before the first quarter is over, three more DC-4s are received: the *Flagship Amsterdam*, the *Flagship Gander*, and one unnamed unit.

The third L-049, *Flagship Holland*, is delivered on April 4 and New York to Oslo flights commence on April 5. The inaugural aircraft arrives at the Norwegian capital three days later and is off to the U.S. within two

hours of landing. On April 9, another Constellation, the *Flagship Sweden*, is placed into service.

On May 1, orders are placed for eight Boeing 377 Stratocruisers and, two weeks later on May 15, the L-049s *Flagship America* and *Flagship Eire*, join the fleet. On May 18, the *Flagship Amsterdam* opens regular passenger service to West Berlin via Ireland, London, Amsterdam, and Frankfurt; two days later, on May 20, the final Constellation, *Flagship Norway*, is delivered.

The retired flying boats *Excambian* and *Exeter* are sold, via the Reconstruction Finance Corporation, to **Tampico Airlines** on June 17; both will be employed in various nonscheduled operations over the next decade. Also in June, AOA becomes the third U.S. carrier, after **Pan American Airways (PAA)** and **Transcontinental and Western Air Lines (TWA)**, to offer Lockheed L-049 service to London.

Daily services to Europe are increased on July 10, but two days later, the Civil Aeronautics Administration (CAA) temporarily grounds the American industry's Constellations, causing changes in the European schedule and the greater use of DC-4s. The final DC-4, the *Flagship Washington*, is delivered on August 29. After conferring with Gen. Lucius D. Clay, C. R. Smith announces on September 1 that AOA will expand its services to Germany.

En route from New York to Berlin on October 3 via Gander and Shannon, the DC-4 *Flagship New England*, with 8 crew and 31 passengers, encounters bad weather and is diverted to Stephenville, Newfoundland, from Gander. Upon the completion of refueling, the four-engine transport takes off, hits a cloud-covered hillside, and crashes; there are no survivors.

On November 3, the company's 30,000th passenger (cumulative) is boarded. A Lockheed sets a New York to London nonstop speed record with the first commercial all-freight load during a survey flight completed on November 21. On November 27, a specially converted DC-4 arrives at Newark, en route from Shannon, Ireland, to California, carrying six Irish-bred racehorses, marking the first livestock Atlantic crossing and long-distance hop for horses.

Philadelphia to London Constellation service is resumed on December 22 followed by Washington, D.C.-Amsterdam flights on December 31.

Daily New York to Shannon nonstop service begins on February 25, 1947. Lunch in New York and breakfast in London flights start on March 1. Seventeen days later, thrice-weekly New York-Iceland service is inaugurated. When AOA places an ad in Moscow on April 15 offering return trips from the foreign ministers council meeting it is the first advertisement placed in the Soviet Union by a U.S. carrier.

Radiotelegraphy service is offered on transatlantic flights beginning on June 18; this is the first aircraft-to-ground radio message service provided for passengers. Also during the month, the DC-3 *Flagship Helsinki* inaugurates scheduled Western service to Helsinki.

Having been pressed into service by rebels fighting the Paraguayan government, the company's former flying boat *Exeter*, while flying supplies out of Montevideo, is lost during a night landing near the Punta Brava lighthouse on the River Plate on August 15.

Daily New York to Shannon flights are resumed on September 2 after a brief halt. The next day, the carrier completes its 15,000th transatlantic crossing. Supported by the Air Line Pilots Association (ALPA), company pilots go out on strike on October 1. Two days later, USAF pilots take over the Iceland service. ALPA suspends its strike on October 18, pending arbitration and, on October 19 a new pact is signed, providing the highest pilot pay in commercial flying history to date. The 100,000th boarding (cumulative) is celebrated on November 22.

On February 5, 1948, transatlantic L-049 Irish Mercury service is inaugurated. Two planes are added on the West Berlin to Frankfurt route on April 4 and the number of New York-Frankfurt-West Berlin trips are increased on July 2, as the carrier begins participation in the Berlin Airlift. Indeed, with the introduction of twice-daily C-54 roundtrips between Frankfurt and Berlin on July 19, AOA is the first civilian airline to participate in the massive operation. The civilian airlift, under the direction of E. P. Whitfield, **British European Airways Corporation (BEA)**'s manager in Germany, begins on August 4.

The carrier continues its Frankfurt to West Berlin service after October 29, despite curbs placed on other airlines. After fire closes Keflavik Airport on November 17, three westbound flights are forced to return to Shannon. An AOA Constellation is renamed *Flagship Scotland* on November 29 and next day, St. Andrew's Day, opens Scottish Mercury service to Glasgow.

Following the resignation of John E. Slater as board chairman, a tentative agreement to merge with its chief rival, **Pan American Airways (PAA)** is reached on December 11. Discussions will continue for two years, although a formal application will be made to the government.

Company participation in the Berlin Airlift ends early in 1949. Over a period of 274 days, AOA has flown some 28,000 passengers and 6.5 million tons of cargo between Frankfurt and West Berlin. The first Boeing 377 is delivered on June 13 and is christened *Flagship Great Britain*, later *Flagship Scandinavia*. On June 19, the carrier celebrates its seventh anniversary with its 18,522nd flight from New York to Europe. The second Stratocruiser, the *Flagship Europe*, arrives on July 30.

Departing the new Idlewild Airport on August 17, the Boeing 377, *Flagship Europe*, initiates AOA New York to London Stratocruiser flights. Three days later another B-377, the *Flagship Holland*, is delivered. The Stratocruiser *Flagship Ireland* arrives on September 17, followed by the *Flagship Norway* on October 6, the *Flagship Sweden* on November 10, and the *Flagship Denmark* on November 18.

Meanwhile, during October, AOA flight attendant Jane Hinckley assists in the birth of the first baby delivered aboard a Stratocruiser; the surprise event occurs 19,000 feet above the Atlantic while the plane is en route from England.

The last B-377, *Flagship Scotland*, is received on January 5, 1950. New York to Hamburg service is inaugurated on March 5. The final DC-4 received, the *Flagship Washington*, is the first sold, to **Oxnard Sky Freight** on May 16. On May 22, a B-377 flies from Paris to New York in a record 13 hrs. 50 min. Two days later, the company celebrates the eighth anniversary of its first transatlantic flight. The AOA-PAA merger plan is rejected by the CAB during the month.

The 20,000th transatlantic crossing is made on June 9 and, on September 2, the carrier begins the first New York-Dusseldorf-Cologne through service. On September 25, President Harry S. Truman, reversing his earlier rejection of the transaction, overrules the CAB and the **Pan American World Airways (1)** deal is completed. **Trans World Airlines (TWA)** files a lawsuit to block implementation of the arrangement, which is eventually upheld by the U.S. Supreme Court.

Pan American World Airways (1) is enlarged still further (at a cost of \$17.45 million) and **American Airlines** refocuses its attention upon the U.S. domestic scene for three decades.

AMERICAN TRANS AIR: P.O. Box 51609, 2141 South High School Road, Indianapolis, Indiana 46251, United States; Phone (317) 247-4000; Fax (317) 247-7091; <http://www.ata.com>; Code TZ; Year Founded 1973. ATA is formed by former Voyager 1000 travel club chief pilot J. George Mikelsons at Indianapolis, Indiana, in late spring 1973 to provide airlift to various parts of the world under contract for his new Ambassador Travel Club (Amtran). A Boeing 720 (B-707-23) is leased, for \$20,000 per month, from **American Airlines**. Christened *Miss Indy*, it inaugurates the club's activities with an African tour in August. Expenses skyrocket in the fourth quarter as a result of the Yom Kippur War's impact on oil prices.

During the remainder of the decade, another ex-AA Boeing 720 (B-707-23), named *Spirit of Indiana*, is acquired (in the fall of 1978), the membership enjoys travel, and after 1976 the operation becomes profitable.

In 1980, Chairman Mikelsons acquires five B-707-123Bs from **American Airlines** as the company prepares to expand. Additional bases are established at New York (JFK), Detroit, and Chicago (ORD). An application for certification is filed with the CAB late in the year.

Charter authority is received from the CAB in January 1981, allowing nonscheduled public charters, tours, and contract service flights

(especially military troop flights) to commence on April 1 to such destinations as Las Vegas and Honolulu.

A total of 96,426 passengers are flown on the year. Despite start-up costs, profits are generated on the \$12 million in revenues: \$1 million (operating) and \$587,513 (net).

The employee population skyrockets 81.5% in 1982 to 245. All of the B-720s, except *Miss Indy*, are retired as the company takes delivery of a Douglas DC-10-40, formerly flown by **Northwest Airlines**, and two ex-AA B-707-323Bs. A contract is signed with **Air Florida** to fly subcontracted services on its behalf from the Midwest to Florida.

In July, the Ambassador Travel Club becomes a formal for-profit subsidiary.

Bookings during this full year as a common carrier rise a dramatic 180% to 269,532. Revenues accelerate 154.2% to \$30.6 million while expenses, although up by 156.3%, are held to \$28.2 million. Net profits total \$1.97 million and come atop an operating gain of \$2.33 million.

The payroll is again dramatically increased in 1983, rising 121.4% to 582. Four B-727-123s and a DC-10-10, the latter once flown by **Laker Airways, Ltd.**, are now added to a fleet that already includes another DC-10-40 and 8 B-707-123/323Bs. On May 25, the carrier joins fellow charter operator **Global International Airways Corporation** in suing the Port Authority of New York and New Jersey to prevent it from enforcing new noise regulations that will ground the airlines' flights from New York and Newark.

Membership in the Ambassador Travel Club stands at 23,000 in the Indianapolis area and during the year, Chairman/CEO Mikelson decides to replace his eight Stratoliners rather than hush-kit them.

Enplanements balloon 129.9% to 618,532 and operating income skyrockets 150.2% to \$76.46 million. Although expenses are up 154.4% to \$71.81 million, they allow an increase in profits to \$4.65 million (operating) and \$3.73 million (net).

The fleet in 1984 includes 5 B-707-123Bs, 3 B-707-323Bs, 1 DC-10-40, and 1 DC-10-10. Beginning in January, the company purchases from Boeing a fleet of 9 ex-**Delta Air Lines** Lockheed L-1011-50 TriStar 1s for \$13,265,000 apiece while trading in its 8 Stratoliners for \$9 million each.

During the year, the carrier is restructured; a holding company, Amtran, Inc., is created with ATA and the Ambassador Travel Club as its subsidiaries. The first Lockheed L-1011-50 TriStar 1 is delivered in December.

Customer bookings swell another 81.1% to 1,119,000. Revenues total \$129.4 million, the year's operating profit is \$7.98 million, while net gain of \$5.86 million is celebrated.

The workforce in 1985 stands at 1,281. Arrangements are made to acquire another L-1011-50 and 8 B-727-21s/-22s, the latter from **Pan American World Airways (1)** and **United Airlines**. The DC-10-10 is sold in November and the last TriStar 1 arrives in December.

Newly elevated to the category of national airline, America's largest charter operator, "America's Vacation Airline," is able to boost its passenger traffic by 20.9% to 1,353,000 passengers flown. Revenues jump 18.8% to \$165.69 million, costs are up 14% to \$149.83 million, and the operating profit climbs to \$15.85 million. Net profit dips to \$5.39 million.

Airline employment rises 1.5% in 1986 to 1,300 and delivery of the last of the Boeing trimotors is completed in late winter. "World Cruise by Private Jet" around-the-world flights are inaugurated in the spring on behalf of Hemphill Harris Travel Corporation; at \$23,000 per head, 88 L-1011-50 TriStar passengers are taken around the world in 35 days in two-abreast, first-class seating. In May, the company makes a limited entry into the scheduled marketplace, operating thrice-weekly B-727-21 flights from Indianapolis to Tampa, Ft. Myers, and Ft. Lauderdale and from New York to Aguadilla, Puerto Rico.

On August 10, incorrect handling of a loose oxygen generator by a company mechanic working in the forward cargo hold of Flight 131, a DC-10-40 on the ground at Chicago (ORD), results in a temperature of 430°C, setting a fire that consumes the aircraft. There are no injuries or fatalities.

Despite the summer downturn in transatlantic traffic caused by the terrorism threat and the Chernobyl nuclear accident, the charter airline enjoys a good year. Several Lockheeds are wet-leased to **Air Algerie, S.A.**, **Air Jamaica, Ltd.**, and **World Airways** to make up for capacity unneeded after wholesalers begin cancelling charters.

Additionally, new summer business to Las Vegas and Honolulu is generated, with scheduled service to the former point initiated during the fall. A SITA Gabriel computerized reservations system is installed on October 1.

Customer bookings accelerate 43.2% to 1,938,000 and revenues rise 11.6% to \$184.88 million. With expenses up 17.8% to \$176.64 million, the operating profit drops to \$8.42 million and net gain is down to \$1.08 million.

The workforce grows again in 1987, up by 33.2% to 1,731. Amber Vacations, Inc. is founded to offer packaged tours for popular service destinations. Weekly roundtrip charter flights are inaugurated on September 22 from Chicago and Detroit to London.

The public perception of an end to the threat of terrorism helps traffic grow, although late in the year the company all but gives up on its scheduled service experiment, retaining only a single Indianapolis to Ft. Myers route.

Passenger boardings move ahead by 7.2% to 2,078,000 and revenues surge 37.6% to \$254.33 million. Expenses grow by 38.6% to \$244.6 million, the operating profit is \$9.73 million, and net profit climbs to \$3.2 million.

Hiring continues in 1988 as the employee population is increased by 6.8% to 1,789. The fleet now includes 10 L-1011-50 TriStar 1s and 8 B-727-21s/-22s. Orders are placed for 6, later 7, B-757-200s.

The Chicago and Detroit to London weekly charters end on May 31; however, an effort is made to better equalize the highs and lows of seasonal demand, while simultaneously increasing market share in Europe. A new maintenance and training facility is opened at Indianapolis where the company is able to provide its own maintenance checks and offer contract maintenance services to other operators.

The decision is now made not to curtail scheduled operations, but to expand them. Thus a new route is opened from San Francisco to Honolulu and Maui.

Despite this progress, customer bookings plunge 12.1% to 1,880,497 and revenues slip 0.16% to \$253.94 million. Costs decline 8.82% to \$223.02 million and allow an operating profit of \$30.91 million. Net gain doubles to \$6.95 million.

The workforce is reduced by 3.2% in 1989 to 1,731 and the fleet of the nation's largest charter operator is increased by four leased B-757-212ERs, which were once flown by **Singapore Airlines, Ltd.**

A new American Trans-Air Training Corporation subsidiary is established at Indianapolis and contract pilot training is offered. In addition, the subsidiary American Trans Air ExecuJet is set up to offer charter and small group passenger charters with one each Cessna 501 Citation I and Learjet 35, plus a Bell 206B JetRanger helicopter.

A specially configured L-1011-50 is now made available for the first annual first-class around-the-world tour; cost per passenger is \$45,000. With its colors modified, another L-1011-50 is put out on lease with **Aer Lingus Irish Airlines, Ltd.**

In conjunction with Amber Vacations, weekly nonstop departures are launched in December from Indianapolis to Jamaica.

Passenger boardings rebound, climbing 24.1% to 2,234,000. Revenues also move ahead, by 9.9% to \$279.1 million. Expenses increase 14.3% and cut operating income to \$18 million. Net profit falls almost three-quarters to \$4.4 million.

In 1990 the 1,731-employee carrier operates a fleet of 10 L-1011-50s, 4 B-757-212ERs, 2 B-757-2Q8ERs, and 7 B-727-21s/-22s.

When rival charter carrier **Skyworld Airlines**, based in Denver, sells its fleet and exits the transportation business in July, Amtran, Inc., parent of American Trans Air, purchases its associated **Ports of Call** travel club for \$500,000.

Amber Air Freight Corporation is now established to handle the company's cargo sales and marketing and to provide assistance to other airlines with their air freight handling requirements.

Following Iraq's invasion of Kuwait in August, the company devotes much of its capacity to the transport of U.S. troops to Saudi Arabia during Operation Desert Shield.

On the year, customer bookings jump 11.5% to 2,521,000 and revenues climb 32.43% to \$389.62 million. Expenses, led by increased fuel prices, grow at the high percentage of 36.86%, reaching \$357.29 million. Operating income slides to \$12.33 million and net profit plunges to \$743,000.

The payroll grows by 38.7% in 1991 to 2,401 and, in January, nonstop charters are undertaken from Portland, Oregon, to Honolulu under contract to the tour wholesaling company Sun Trips, Inc. During the Gulf War, the carrier flies more missions (494 roundtrips) and lifts more American troops (108,000) than any other U.S. passenger carrier. Indeed, it transports more soldiers to the Mideast than any carrier providing contract services from any nation.

Although \$50 million is generated from Operation Desert Storm work, the company must still postpone salary increases (executives take pay cuts) as the military contracts are reduced toward summer and tour traffic is slow to recover.

Passenger boardings for the year decline 5.3% to 2,388,595 while revenues rise 14.13% to \$421.85 million. Expenses are only up by 14.84% to \$410.55 million and guarantee an operating profit of \$11.3 million. Net profit, primarily from the sale of slots at Chicago (ORD), explodes to \$5.58 million.

Company employment is increased by 9.4% in 1992 to 2,412 and the fleet now includes 6 chartered B-757s, including 4 Dash-212s and 2 Dash-2Q8s, and 13 L-1011-50s, 1 of which is chartered. Also included are 7 leased B-727-227As, newly acquired during the first quarter from Polaris Aircraft Leasing Corporation in exchange for 7 B-727-21s/022s.

The company is caught up in the fare wars between the major airlines and suffers financial reversal. Scheduled nonstop service is inaugurated in December between Chicago (MDW) and the Florida destinations of Ft. Myers, Ft. Lauderdale, St. Petersburg, and Orlando. At the same time, scheduled flights are also begun between Midway Airport and Las Vegas.

American Trans Air Training Corporation is expanded during the year to include the ATA Aviation Training Academy for mechanics.

Although customer bookings ascend 11.3% to 2,657,960 (14.5% scheduled), revenues advance only 1.9% to \$421.8 million. Expenses, meanwhile, swell 3.9% to \$418.5 million and lower the operating profit to \$3.2 million. There is a \$2.1-million net loss.

Early in 1993, the twentieth anniversary year, George Mikelsons assumes complete ownership. The Air Mobility Command, formerly the U.S. MAC, awards the carrier a \$47.2-million contract. Part of this income is used to support the inauguration of a twice-weekly B-757-212ER service linking Norfolk Naval Air Station, Virginia, with the Indian Ocean island of Diego Garcia, via Philadelphia, Shannon, Sicily, and Bahrain. The 27 hr. 15 min. flight over the world's longest scheduled route is occasionally even longer, with routing via Manila and Singapore.

Chicago to Sarasota service is initiated on February 1. A public stock offering of 3.1 million shares is made during May, of which 2.6 million shares come from the Amtran, Inc. parent and the remainder from owner Mikelsons; the sale brings in \$37.4 million which will be employed to purchase new transports. Common stock is now traded on the NASDAQ exchange under the symbol AMTR.

Twice-weekly B-757-212ER charter flights to Riga, Latvia, (Mikelsons's native land) via Belfast begin in June. The public offering, completed by September 30, reduces long-term debt from \$68 million to \$56 million and increases stockholders' equity from \$32 million nine months earlier to \$72 million.

About 4,000 German citizens, who earlier purchased cut-rate air trips to the U.S. from Marlo Reisch of Hamburg, are stranded on August 21 when ATA stops honoring tickets obtained from the insolvent tour operation.

Having been named executive vice president back in June, John P. Tague is promoted to the post of president/chief operating officer in October. Late in the year, scheduled flights begin to four Florida destinations from Milwaukee. Earnings for the third quarter are very weak, owing to a \$2.5-million default of the German tour operator. Scheduled services are inaugurated in December from Chicago (MDW) to Phoenix.

The last B-727-100s are retired during the year.

Passenger boardings climb 19.2% to 3,149,000 (29.5% scheduled) and revenues swell 10.9% to \$467.9 million. Expenses are up 10.4% to \$462.2 million and allow operating income to grow to \$5.66 million. Net profit is \$3.03 million.

Airline employment is increased by 19.3% in 1994 to 3,950 and now only 1 Cessna 501 Citation I, a Learjet 35, and 10 L-1011-50s are owned; all of the rest of the fleet is leased. These units include 1 L-1011-50, 1 each B-727-2B7A, B-727-2Q8A, B-727-208A, 8 B-727-227As, 3 B-727-264As, 2 B-727-290As, 4 B-757-212s, and 2 B-757-2Q8s.

Charter flights begin to Brazil during the winter holiday season. Non-scheduled flying remains a bulwark of company income as over 400 destinations are served. At the beginning of April, nonstop scheduled service is started from Chicago (MDW) to Nassau.

On April 23, the Apollo reservations system, joined by Galileo, Worldspan, and System One inform the airline that it will block the airline from employing their services unless it begins paying booking fees. Unlike Southwest Airlines, which also has minimal participation in computerized reservations systems, ATA quickly signs up with Galileo and System One. Scheduled services are now increased to more than half of the total services offered.

After signing a contract with Pleasant Hawaiian Holidays, direct and daily scheduled roundtrip flights are initiated by ATA to Honolulu and Maui from Chicago (MDW) via Los Angeles (beginning on March 24) and San Francisco (starting on May 19). Two TriStar 1s, painted in Pleasant Hawaiian titles, are dedicated to the service.

The state of Indiana and city of Indianapolis are able to assemble a \$40-million incentive package in August which successfully convinces owner Mikelsons of Hoosier loyalty and prevents a franchise relocation to Florida. Later in the fall, B-757-212ER service is inaugurated to Hawaii from Indianapolis. On September 7, the carrier places orders for 6 more B-757-200s and 4 additional leased L-1011 TriStar 1s.

On September 15, after several years of political turmoil, the U.S. government demands the resignation of Haiti's ruling military junta and two days later, former president Jimmy Carter negotiates their removal. Shortly thereafter, the B-757-212ER *Spirit of Indianapolis* is contracted by the U.S. State Department to fly the deposed military leader, Gen. Raoul Cedras, his family and associates, from Port-au-Prince to Panama.

The year's customer bookings increase 42.6% to 4,237,870 and revenues jump 24.1% to \$580.52 million. With expenses up only 23.8% to \$572.11 million, there are increased profits: \$8.4 million (operating) and \$3.48 million (net).

Airline employment stands at 4,700 in 1995, a 19% increase, and the fleet is increased by the addition of five more jetliners. The largest charter airline in the U.S. now opens an office in Frankfurt, Germany. A new 72-hour ticketing policy gives travel agents greater flexibility in providing public service to tourists and vacationers.

Service to Los Angeles and San Francisco from Indianapolis is initiated in March. President/Chief Operating Officer John Tague resigns in June. During the spring and summer, additional charters are laid on from San Diego and Oakland to Honolulu and Maui. A total of 12 flights per week are offered on behalf of Pleasant Hawaiian Holidays to Honolulu and Maui, while five services per week are flown from San Francisco to Maui and two to Honolulu.

In the fall, a new operating plan is initiated. The company begins to emphasize scheduled services over its earlier charter approach and 33 new departures are started from the carrier's gateway cities of Chicago, Indianapolis, Boston, and Milwaukee. In addition, a new intra-Florida network is established. This expansion in low-fare service proves quite

beneficial. Enplanements increase 26.7% to 5,368,171 and operating income surges 23.2% to \$715 million. Costs are up 22.1% to \$698.5 million and the operating gain doubles to \$16.5 million. A net \$8.52-million profit is posted.

The workforce is cut 21.5% in 1996 to 3,690. Severe winter conditions in the Northeast force a significant number of cancellations of Boston departures. At the beginning of the second quarter, seasonal service is inaugurated from New York (JFK) to Shannon, Dublin, and Belfast. The company joins with **Chicago Express Airlines** to create the "ATA Connection," which provides commuter links to Midway Airport from Dayton, Des Moines, and Grand Rapids.

Higher fuel costs and increased competition devastates the carrier's scheduled business during the second and third quarters.

On May 12, just after takeoff from Chicago (MDW) en route to St. Petersburg, Flight 406, a B-727-290 with 112 passengers, suffers rapid cabin depressurization. The pilot and engineer pass out, requiring the copilot to take over and push the plane to a lower altitude and make an emergency landing at Indianapolis. Five flight attendants and six passengers are treated for ear discomforts at local hospitals. The incident, coming just a day after the **Valujet Airlines** Everglades disaster, causes the company to lose passengers during late spring and summer as well as \$17 million in anticipated income.

Having completed a particularly helpful audit of the airline's routes and corporate structure, Stanley L. Pace, former senior partner and director of Bain & Co., is recruited by founder Mikelsons and named president/CEO on August 12. Parent Amtran, Inc. announces on August 23 that its American Trans Air unit will discontinue some scheduled flights and reduce its fleet size in an effort to cut costs and concentrate on its charter services.

Services to West Palm Beach and Grand Cayman end on September 4. Scheduled flights to Montego Bay are suspended on October 1, while nearly all scheduled departures from Boston end on October 26, including those to St. Petersburg, Ft. Myers, Miami, and Ft. Lauderdale. Miami and San Diego scheduled frequencies end on October 27.

On November 1, owner Mikelsons receives the annual Tony Jannus Award for outstanding contributions to scheduled aviation. The reduction in scheduled flights continues, however, and on November 14 the last service is concluded between Boston and Las Vegas. Five B-757-212s are returned to their lessor at month's end and 15% of the workforce is laid off. Flights from Boston to Orlando, with connections to Nassau and Sarasota, are operated through December 2. A homepage is opened on the World Wide Web.

Still, overall customer bookings accelerate 5.8% to 5,680,496.

Revenues also grow 5% to \$750.85 million while expenses jump 12.9% to \$786.9 million. The previous years operating and net gains turn into losses of \$36.05 million and \$26.67 million, respectively.

The employee population is increased by 13% in 1997 to 5,012.

Thrice-weekly B-727-200 return service is inaugurated on January 24 between Kent County Airport, Grand Rapids, Michigan, and Orlando. This new service is a preamble to a massive product growth during the spring and summer.

Thrice-weekly return service is launched on April 8 between Indianapolis and San Francisco, followed by the initiation of the same number of roundtrip frequencies from the Hoosier city to Los Angeles the next day. On April 22, the carrier increases its nonstop service between San Juan and Orlando from four flights per week to daily.

On May 28, President/CEO Pace resigns. He receives a \$3-million compensation package ("golden parachute") payable over the next two years. While a search is begun for a permanent replacement, the company is run by a three-person executive committee headed by Executive Vice President/Chief Operating Officer Jim Hlavacek, reporting to Chairman Mikelsons.

On June 4, the company introduces twice-daily return flights between Chicago (MDW) and New York (JFK). At the same time, direct service from Chicago to San Juan increases from 4 to 12 weekly departures and

that to Los Angeles, San Francisco, and Phoenix becomes thrice-daily, except Saturdays.

Also on June 4, twice-daily return frequencies are introduced between New York (JFK) and Chicago (MDW). Daily nonstops are also launched from JFK to Indianapolis and St. Petersburg, with direct or connecting service added to Los Angeles, San Francisco, Phoenix, Las Vegas, and San Juan. The thrice-weekly flights between Indianapolis and Los Angeles/San Francisco become daily services. Simultaneously, thrice-weekly return frequencies are initiated from Indianapolis to Las Vegas, two to Cancún, two to Ft. Lauderdale, two to Sarasota, and one to St. Petersburg. These departures raise the number of weekly departures out of Indianapolis from 80 to 99.

With the introduction of the summer schedule on June 4, the company also institutes daily nonstop service from St. Petersburg to New York (JFK) and six-times-a-week flights to San Juan.

Simultaneously, the San Juan to Orlando route is doubled to twice-daily, while that from San Juan to Chicago (MDW) rises from 4 to 12 weekly departures. New six-times-a-week service is started from San Juan to New York (JFK). From Los Angeles, 12 weekly departures are added to New York (JFK) and 8 to St. Petersburg. Service from LAX to Chicago (MDW) becomes thrice daily, except Saturdays, when it is twice daily.

Former President Tague returns to his previously vacated post on June 19. Also in June, unsuccessful merger discussions are held with **Valujet Airlines**.

During July, \$100-million worth of 7-year, 10.5% notes are sold and the company negotiates a 4-year, \$50-million revolving credit line.

Nonstops from Milwaukee are replaced with connections via six gates at Chicago (MDW).

Effective August 21, electronic ticketing—"EZ Ticketing"—becomes available on all scheduled flights to and from Chicago (MDW), Indianapolis, and Milwaukee to five Florida cities, San Juan, Honolulu, Maui, Cancún, Phoenix, Las Vegas, New York (JFK), Los Angeles, San Francisco, Dayton, Des Moines, and Grand Rapids.

During the fourth quarter, a yield management program is put in place. At the end of the year, a new B-757-28AER is leased.

Passenger boardings decline 6.6% to 5,307,390, while operating revenues are up 4.3% to \$783.19 million. Expenses fall 2.2% to \$769.7 million and allow a \$13.48-million operating profit. A \$1.57-million net gain is celebrated.

In celebration of the company's twenty-fifth anniversary in 1998, the carrier paints a B-727-227A in a special purple-based livery. In addition, two Lockheed TriStars 1s are given a special purple and white color scheme which advertises tour sponsor Pleasant Hawaiian Holidays, which renews its five-year-old partnership with ATA on April 3.

Chicago (MDW) departures continue to receive emphasis with a commitment to operate 12 gates, a 50% increase, and to make improvements to the current gates and concourse. On May 1, new frequencies are added from that point to Dallas (DFW) and to Denver; additional departures are offered to Orlando, St. Petersburg/Clearwater, San Francisco, Phoenix, and Ft. Lauderdale.

Having been repainted and received a maintenance check, another L-1011 is delivered in early May, this one purchased from **Trans World Airlines (TWA)**.

On behalf of Pleasant Hawaiian Holidays, the airline launches service from San Diego to Hawaii on May 16. This inauguration is followed on May 26 with a new service to San Juan.

Chicago (MDW) to Los Angeles service is increased to thrice-daily on June 5. All of the expansion at Chicago requires the addition of 500 more workers.

Also in June, a letter of intent is signed with **Royal Jordanian Airlines** for the acquisition of 5 L-1011-500s, plus a stock of spare parts. The jetliners will be integrated over the next 18 months. This arrangement is followed with an order for 2 additional B-757-200s; both will be delivered in the fall of 1999, 1 replacing a B-757-2Q8 going off lease.

A purchase agreement with **Royal Jordanian Airlines** is signed on August 4 for the 5 TriStars; the first is scheduled to be placed into service in early December.

Thrice-weekday roundtrips commence on July 7 between Chicago (MDW) and New York (LGA); the route is traveled twice daily on Saturdays.

On August 19, the company announces that it will, beginning on February 7, operate daily B-727-200 nonstop winter season nonstops between Indianapolis and Montego Bay.

With a pilots job action looming in two days, **Northwest Airlines** makes arrangements with a number of carriers on August 27 for the accommodation of displaced passengers. ATA, in a press release, recommends that potential customers make reservations, but notes that it will also take NWA ticket holders on a stand-by basis.

On August 31, with the Northwest strike two days old, ATA adds one daily roundtrip frequency from Chicago (MDW) to Milwaukee and Madison, Wisconsin, and to Grand Rapids, Michigan.

Flights continue apace during the remainder of the summer and fall. On December 7, the carrier announces that it will offer thrice-weekly seasonal service from New York (JFK) to Shannon and Dublin in Ireland between June 3 and September 7, 1999.

Customer bookings jump 16.95% to 6.16 million during the 12 months. Revenues advance 17.4% to \$919.4 million, while costs rise 9.7% to \$843.99 million. The operating profit increases to \$75.4 million, while the net gain skyrockets to \$40.08 million.

The first former **Royal Jordanian Airlines** L-1011-500 enters revenue service early in January 1999 along with a B-757-200.

Another B-757-200 is ordered for delivery in June 2000.

On January 20, ATA announces that it will cease service to Milwaukee in the spring. Two days later, Funjet Vacations of Milwaukee hastens to advise travelers that it will continue to work with the airline through the winter holiday season and will switch over to **Sun Country Airlines** on May 1.

Beginning on February 7, the company operates daily, nonstop B-727-227A flights between Indianapolis and Montego Bay for the winter season.

Daily service from Milwaukee to Orlando is discontinued on April 30. Customers may, however, continue to take advantage of "ATA Connection" partner **Chicago Express Airlines'** six daily roundtrips from Orlando to Chicago (MDW), where connections with ATA service to Milwaukee and 21 others cities can be made.

In an agreement set to close before the end of March, ATA, on February 26, purchases **Chicago Express Airlines** for an undisclosed sum.

Announced on March 1, thrice-weekday and twice-weekend-day roundtrips are initiated on May 1 between Chicago (MDW) and Philadelphia.

On May 26, the carrier's Amtran parent announces that it has completed the previously announced acquisition of all outstanding stock of **Chicago Express Airlines**.

The next day, *The Wall Street Journal* reporter Susan Carey, in a piece concerning charter airlines and the Balkan crisis, quotes ATA officials as expecting to earn \$125 million in military business this year. Half of it will be in short-term contracts, termed "expansion flying," generated during the Kosovo crisis.

Scheduled L-1011 direct thrice-weekly roundtrip service is inaugurated on June 1 between Chicago (ORD) and Dublin and Shannon.

B-727-227A roundtrips are initiated on June 9 between Ft. Lauderdale and San Juan, six days a week. On June 15, two additional B-727-227A flights are launched between Orlando and San Juan, bringing weekly frequencies in this city pair to 18 roundtrips. Six-days-a-week L-1011-500 TriStar 1 roundtrips to San Juan from New York (JFK) begin the next day.

Overall passenger boardings accelerate 14.2% to 7,045,000 while operating revenues surge ahead by 22.1% to \$1,122,366,000. The carrier's initial break through the "billion dollar revenue barrier" allows

the U.S. Department of Transportation to elevate ATA into the ranks of U.S. major carriers.

With costs up 22.3% to \$1,032,339,000, the company is able to achieve a \$90.02-million operating profit. Net gain rises to \$47,342,000. Airline employment at the start of 2000 stands at 7,000.

In late March, a B-757-2Q8ER is subleased to **Air Malta Company, Ltd.** for use on that carrier's twice-weekly summer service to New York (JFK). Twice-daily B-757-2Q8ER roundtrips commence on April 3 between Washington, D.C. (DCA) and Chicago (MDW).

On May 4, the company places an order via ILFC for 37 Next Generation, enhanced performance B-737-8Q8s, which will begin delivery during the second quarter of 2001. ATA is launch customer for this winglet-equipped "Baby Boeing" version. It also requests 10 B-757-300s, with which to replace its L-1011.

New daily B-757-2Q8ER roundtrips are started on May 7 from Boston to Seattle, with a second flight operated on Wednesdays and Sundays. Simultaneously, thrice-daily B-757-2Q8ER return service is launched between Boston and Chicago (MDW), with same plane flights continuing on to Denver, Dallas (DFW), and Seattle.

Frequencies from Los Angeles to Maui are increased from five every week to six on May 14; Sunday roundtrips commence on May 14 between Los Angeles and Cancún.

Daily return flights from Chicago (MDW) to New York (LGA) are increased from five to seven on September 15, along with increases at Washington, D.C. (DCA) of three to five and Philadelphia of three to four.

Service is halted over the Indianapolis-Chicago (MDW) route on November 9 and turned over to "ATA Connection" **Chicago Express Airlines**.

In association with the tour operator Pleasant Hawaiian Holidays, twice-weekly L-1011-500 roundtrips are launched on December 17 from New York (JFK) to Honolulu; these are followed on December 22 with twice-weekly return flights to Honolulu from Chicago (ORD).

AMERICANA DE AVIACION, S.A.: Peru (1991-1997). ADA is established at Lima in 1991 to offer domestic scheduled passenger and cargo flights. Leandro Chick is chairman with Carlos Morales as general manager; they commence service with a leased fleet of 1 each Boeing 727-27, B-727-76, and B-727-162, plus 2 B-727-77s. The Dash-76 is withdrawn in 1992.

Operations continue apace in 1993-1996. During these years, the fleet is revised as the Dash-100s are traded in for 1 each B-727-230, Dash-230A, and Dash-193. Destinations visited include Chicago, Cuzco, Juliaca, Iquitos, Puerto Maldonado, Tacan, and Tumbes.

Having suffered financial problems for some time, the company attempts a merger with Santiago-based **National Airlines, S.A.** in 1997. When the amalgamation does not occur, Americana folds.

AMERIFLIGHT: 4700 Empire Ave., Hangar #1, Burbank, California 91505, United States; Phone (818) 980-5005; Fax (818) 980-5018; Code AM; Year Founded 1968. Gary Richards establishes Ameriflight at Burbank, California, in 1968, as a subsidiary of All Systems International, to provide charter passenger and cargo flights. Over the next 20 years, the company spreads nationwide, with hubs established at Seattle, Salt Lake City, Oakland, Portland, Dallas, Columbus, Atlanta, New York City, and Ontario, California. California Air Charter is taken over in 1987.

Operations continue apace for the next two decades and, by 1989, the fleet includes 1 Beech King Air 90, 19 Beech 99s, 4 Cessna 208 Caravan Is, 1 leased Dassault Falcon 20CF, 2 de Havilland Canada DHC-6-100s Twin Otters, 3 DHC-6-200s, 4 Gates Learjet 35As, and 1 Piper PA-31T Cheyenne II.

In 1990, 8 additional Beech 99s are acquired; however, the Twin Otters, King Air, and one Caravan are withdrawn. There are no changes in 1991, but 4 more Beech 99s are chartered in 1992.

In **1993**, service is provided to 94 U.S. cities and Tijuana, Mexico, with a fleet that includes 40 Piper PA-31-310 Navajos, 32 Beech 99s, 3 Cessna 208 Caravan Is, 3 Piper PA-31T Cheyennes, 6 Dassault Falcon 20CFs, 4 Fairchild Metro IIIs, and 1 Piper PA-32 Cherokee Six. In April, the fixed-wing division of Van Nuys, California-based **Wings Express** is purchased and merged.

Three more Beech 99s are acquired in **1994**.

Airline employment in **1995-1996** stands at 535 and the fleet now includes 38 Beech 99s, 11 Beech 1900Cs, 12 Fairchild SA-26 Expeditors, 9 Fairchild Metro IIIs, 21 Piper Lances, 42 Piper Navajos, and 5 Learjet 35As. Bases are also established at Phoenix, Colorado Springs, Billings, Teterboro, Cincinnati, and San Antonio.

In July **1997**, the company purchases a majority stake in two-year-old Troutdale, Oregon-based **Sports Air Travel**. President Richards now oversees 535 workers and a huge fleet of 165 commuter and executive aircraft. These offer 500 daily departures to 30 U.S. states, Mexico, and Canada.

While landing at Seattle-Tacoma on August 13, a Beech 1900C freighter with one pilot stalls and falls, tail-first, onto the runway; although the plane is damaged, the flyer is not hurt.

The amalgamation of **Sports Air Travel** is completed by January **1998**. Gained in the process are 19 Cessna 402Cs and 2 C-310s. By the end of the year, airline employment stands at 550, including 250 flight personnel.

Service continues apace in **1999**. While en route from Las Vegas to Sacramento with a cargo of banking paperwork on the night of October 14, Flight 121, a Piper PA-31-350, crashes into Gass Peak 11 mi. N of its departure point, and explodes, killing its pilot.

AMERIJET INTERNATIONAL: 498 South West 34th St., Ft. Lauderdale, Florida 33315, United States; Phone (954) 359-0077; Fax (954) 359-7899; <http://www.amerijet.com>; Code JH; Year Founded 1974. With a base at Ft. Lauderdale, Florida, Amerijet is established in **1974** to undertake domestic and international small cargo flights as well as passenger and air ambulance charters. Leased business aircraft, including Gates Learjets, Cessna 401s, and Dassault Falcons, make up the fleet acquired by founder David Bassett, the son of South American missionaries.

In **1976**, the company signs its first cargo contract with **Purolator Courier Corporation**, and purchases its first aircraft.

Amerijet takes on debt in **1980** to expand its jet fleet, which enables the concern to pick up business from other overnight shipping services and begin developing an independent airline business. Initial long-term contracts are obtained from **Burlington Air Express (BAX)**, **DHL Worldwide Express**, **Emery Worldwide**, **UPS (United Parcel Service)**, and international carriers.

In **1986**, permission is received to offer scheduled cargo services. A larger fleet of 5 B-727-100s, 5 Falcon 20s, and 4 Cessna 402Cs is obtained and service is inaugurated late in the year.

In **1987**, the first full year of operation, a total of 44 million FTKs are flown. Revenues are \$13.9 million, but expenses are higher. As a result, the operating loss is \$2 million and net loss is \$2.4 million.

As a result of the previous year's losses, the fleet is altered in **1988** to comprise 5 Cessna 402s, 6 Falcon 20s, 2 Cessna 401s, and 1 B-727-100.

The revised 60-employee carrier is able to increase its freight traffic by 50% to 66 million FTKs. Revenues, too, jump upward, by 38.7% to \$19.3 million. The operating loss is cut to \$584,000 and net loss is \$306,000.

The workforce is increased to 215 in **1989** as 7 more Boeing trijets come on line, 1 each Dash-46F, Dash-23F, Dash-25F, Dash-51F, Dash-21C, Dash-173C, and Dash-227F. Several of these are used to fly replacement service for **Burlington Air Express**.

Consequently, cargo traffic jumps 18.6% to 76.17 million FTKs. Revenues exceed expenses and guarantee profits of \$670,000 (operating) and \$699,000 (net).

In response to increased demand for services from the Midwest to destinations south of the border, the carrier opens offices in Chicago and

Cincinnati in July **1990**. A Midnight Moonlight Freighter service is introduced linking flights from Oakland and Denver with Chicago.

Still, recessionary factors cause freight to fall by 18.7% to 60.8 million FTKs. Although revenues are up 60.2% to \$27.07 million, costs ascend 72.8% to \$28.05 million and cause an operating loss of \$977,565. There is a net loss of \$1.19 million.

Airline employment declines 53.5% in **1991** to 100 and the fleet now includes 7 B-727-100s, 3 Dassault Falcon 20s, 1 Cessna 501 Citation I, and 1 Cessna 401.

Cargo recovers and climbs 8.6% to 68.16 million FTKs. Revenues fall 7.1% to \$25.14 million, expenses are off 13.6% to \$24.24 million, and the operating profit is \$898,518. Net gain totals \$789,929.

Employment grows by 150 workers in **1992** and freight moves ahead by 5.4% to 71.82 million FTKs. Revenues jump 9.9% to \$27.64 million, expenses keep pace by 13.5% to \$27.58 million, and operating income slides to \$59,849. There is a \$23,449 net loss.

The workforce declines 18.6% in **1993** to 175, but the fleet remains unchanged. Destinations served from Miami include Antigua, Barbados, Cancún, Dominica, Grenada, Guyana, Merida, Mexico City, Port of Spain, St. Kitts, St. Lucia, St. Martin, and St. Vincent.

President Bassett and officials of the Ft. Lauderdale-based freighter watch as cargo traffic declines 16.7% to 59.84 million FTKs. Revenues swell 7.1% to \$29.61 million, expenses drop 5.3% to \$26.11 million, and operating profit recovers and grows to \$3.49 million. The net loss becomes a \$3.36-million net profit.

Airline employment plunges another 48.6% in **1994** to 260 and the fleet now includes 3 B-727-233AFs and one each B-727-227AF, B-727-173C, B-727-21C, B-727-51F, B-727-25F, B-727-23F, and B-727-46, plus 1 Cessna 501 Citation I.

Freight recovers, growing 21% to 72.42 million FTKs. Revenues swell 18.5% to \$35.08 million while expenses only rise 16.1% to \$30.31 million. Consequently, there is an operating surplus of \$4.77 million and a net gain of \$3.92 million.

The workforce stands at 387 in **1995**, a 48.8% increase.

Service to Georgetown, Guyana, begins in June. During December, the company's Miami warehouse is moved into a new 105,000-sq.-ft. facility.

The company's 10 B-727Fs operate 112.79 million FTKs, a jump of 55.7% over the previous year. Operating income far exceeds expenses, leaving healthy profits of \$11.08 million (operating) and \$8.94 million (net).

The employee population is increased by 25.8% in **1996** to 487 and, on January 2, a new weekly return route is inaugurated from Miami to Port-au-Prince, Haiti, via Fort-de-France. The community is the company's 19th international destination and makes Amerijet the only U.S.-based cargo carrier currently serving that point.

Five old **Pan American World Airways (1)** B-727-221s are purchased from storage in the Arizona desert and are transported to Miami; several will be used for spare parts while the others are returned to service as freighters.

Cargo traffic blossoms again, rising 37.8% to \$155.43 million FTKs. Revenues accelerate 26% to \$65.48 million while costs soar 43.4% to \$58.92 million. The operating profit slides to \$6.89 million while a \$3.81-million net profit is reported.

Markets served in **1997** include Antigua, Barbados, Cancún, Dominica, Grenada, Guyana, Merida, Mexico City, Port-au-Prince, Port of Spain, St. Kitts, St. Lucia, St. Martin, and St. Vincent.

The first of the B-727-221Fs is received in April. Good through December 20, the company, also in the second quarter, introduces a "Shop-and-Ship" consumer air freight promotion, offering an air freight discount for customers who shop and then ship with Amerijet. The program is aimed at allowing tourists to rid themselves of excess baggage and bulky packages.

In July, a new office and warehouse facility is opened at E. T. Joshua Airport on St. Vincent. During the month, the company also moves into a new building that it has designed and constructed at Georgetown, Guyana.

Regularly scheduled, twice-weekly air-cargo return flights are inaugurated between Miami and Aruba on August 5. The next day, service is started to the Dominican Republic, with five-times-a-week flights to Santo Domingo and twice-weekly roundtrips to Puerto Plata. With the addition of these destinations, Amerijet provides scheduled service to 18 Caribbean destinations and 34 total destinations throughout North America, the Caribbean, Mexico, and South America.

Following a three-day inspection by the FAA, the company voluntarily suspends operations on December 24. After resolving a number of issues concerning missing records and manuals, improperly secured hazardous material cargo, preflight checks by flight crews, and cargo weight and balance problems, the company is able to resume its schedules on December 30.

A total of 190.42 million FTKs are operated—an increase of 22.5% over the previous year. Operating revenues jump 35.7% to \$88.89 million, while expenses rise 36.9% to \$80.19 million. Consequently, the operating gain improves to \$8.69 million, while a \$5.08-million net profit is recorded.

Services are gradually increased under FAA supervision until fully restored on January 28, 1998. By this point, employment has fallen 45% to 260.

Scheduled all-cargo flights are inaugurated on March 1 from Ft. Lauderdale to Kingston and from the Jamaican airport to a number of smaller Caribbean Islands, five times a week. The carrier works in partnership with newly formed Airways Cargo Services, Ltd. and rents use of a 5,220-sq.-ft. warehouse beside the **Air Jamaica, Ltd. (2)** cargo terminal at Norman Manley Airport.

Freight traffic on the year slips 0.7% to 129.45 million FTKs. However, revenues increase by 12.5% to \$100 million, while costs are held in check at \$92.76 million. The operating profit slides to \$7.24 million, while net gain drops to \$1.06 million.

A southern cargo hub is opened in Grenada on February 4, 1999. A de Havilland Canada DHC-7 freighter stationed at the new base provides direct daily scheduled service to Trinidad, St. Vincent, St. Lucia, Martinique, Guadeloupe, Barbados, and Dominica.

In August, a year after moving its flight operations to Ft. Lauderdale, the company, unhappy with problems in clearing its shipments, returns to Miami.

AMERISTAR JET CHARTER: Addison Airport, Dallas, Texas 75287, United States; Phone (972) 248-2478; Fax (972) 931-6011; <http://www.instar.com/ameristar>; Year Founded 1982. AJC is set up at Addison Airport in 1982 to provide worldwide passenger and cargo charters. Revenue flights commence and continue over the next 15 years and bases are also established at El Paso, Lubbock, and Ypsilanti, Michigan.

In 1998–2000, 1 Dassault Falcon 20 and 1 each Learjet 24, Learjet 24D, and Learjet 25 fly from Addison Airport while 1 Falcon 20 and 1 Learjet 24D are based at El Paso. The facility at Lubbock handles 1 Learjet 24F plus 3 Beech King Air 90s and 1 Super King Air 200. The largest fleet component is stationed at Willow Run Airport in Michigan and comprises 3 Falcon 20s, 2 Learjet 24s, 1 Learjet 24D, and 1 Learjet 25B.

AMISTAD AIRLINE: United States (1967–1980). Organized at Del Rio, Texas, in early 1967, this small third-level operator launches scheduled Cessna 310 and Piper PA-32 Cherokee Six flights to San Antonio and to Houston via Victoria on February 14.

Operations continue apace until the commuter halts its daily roundtrips in 1980.

AMPHIBIAN AIR TRANSPORT SERVICE: United States (1947–1949). Charles Babb, an aircraft broker from Glendale, California, purchases two former **Hawaiian Air Lines** Sikorsky S-43s on July 31, 1947 and employs them to inaugurate air taxi flights to Catalina Island. Two former USN JRS-1s (military designation for the Sikorsky

S-43) arrive on October 2 and 25; converted to civil airliner standard, they join the one-time Hawaiian Air Lines aircraft before year's end.

One of the former Navy planes is fatally damaged in a hard landing in September 1948. Written off as irreparable, the aircraft is towed out to sea and sunk in 50 fathoms of water. Unable to maintain its viability after this incident, AATS goes out of business on July 12, 1949, selling its remaining aircraft to Rose Pechuls and Kirk Kerkorian, who employ them to begin **LA Air Service**.

AMPHIBIOUS AIRWAYS, LTD.: New Zealand (1949–1961). Amphibious Airways, Ltd. is established by Harry English and a syndicate of local businessmen at Invercargill, at the south end of South Island, late in 1949. A Grumman G-44A Widgeon is purchased from the Australian Petroleum Corporation, Ltd. at Sydney and is employed, beginning on October 1, 1950, to offer nonscheduled passenger and freight services to Stewart Island, as well as to numerous other small destinations in the Fjordland and Southland regions of South Island.

The successful seaplane charter operation grows and in 1952 acquires a second Widgeon. Operations continue apace throughout the decade, but as the years continue, economic recession and lack of vision forces the carrier to stagnate.

In 1955, English and several other board members resign to form Auckland-based **New Zealand Tourist Air Travel, Ltd.** Forward-moving itself, NZTAT purchases and merges Amphibious Airways, Ltd. in August 1961.

AMSA (AEROLINEAS MUNDO, S.A.): Dominican Republic (1986–1994). AMSA is established at San Juan in 1986 to pick up the pieces of the failed Air Mar Freight System, which had operated a pair of Curtiss C-46 Commandos to Santo Domingo during the previous four years. Just after creation, the new concern transfers its headquarters and operations to the Dominican Republic. Revenue flights commence with the Commandos, as well as two second-hand Lockheed L-1049G Super Constellations.

One Constellation is gone by decade's end, replaced by a pair of Douglas DC-7Fs.

A **West Indies Air Transport** Douglas C-54Q, with one crewman aboard, suffers a hydraulics failure while taxiing at Borinquen on February 3, 1992, and crashes into the right wing of an unoccupied AMSA L-1049H before falling into a ditch. A fire breaks out and both aircraft are destroyed, although no injuries are reported.

Flights with the DC-7Fs continue until 1994.

AMURAVIA TRANS: Blagoveshensk Aeroport, Amurskaya Region, 675019, Russia; Phone 7 (41622) 24307; Fax 7 (41622) 79456; Code AAX; Year Founded 1992. After Aeroflot Soviet Airlines is broken up in late 1992, this local division is reformed into a joint stock company in early 1993, with ownership divided between employees (51%) and various other interests (49%). Viktor A. Medvedev is director general and his fleet includes 32 Antonov An-2s, 3 Let L-410UVPs, 13 Yakovlev Yak-40s, 3 Tupolev Tu-154B/Ms, 18 Mil Mi-8/17s, and 6 PZL Swidnik Mi-2s. The mission of providing local and regional passenger and cargo services is continued.

Enplanements are first revealed in 1994 and total 178,881; they decline by 30% to 173,700 in 1995.

It is understood that revenue operations continue without significant change during the remainder of the decade; exact information is, however, unavailable.

AMURAVIATRANS (LANIER A/O): Trude Alley 1, Komsomolsk-na-Amure, 681000, Russia; Phone 7 (42172) 44728; Fax 7 (42172) 46938; Year Founded 1994. Amuraviatrans is established at Komsomolsk-na-Amure, Russia, in 1994 to provide ad hoc all-cargo services to domestic, regional, and international locations. S. A. Belov is appointed general director and he begins revenue flights with an unspecified number of Antonov An-12s.

While landing at Bunia, Zaire, on March 27, **1995**, an engine aboard an An-12BP with six crew and four passengers, catches fire; the crew is unable to extinguish the flames and although all aboard escape, the aircraft is burned out.

Flights continue apace during the remainder of the year and for the next three years. By **1998–1999**, the fleet includes 5 An-12s, 1 An-26, and 1 Mil Mi-8.

ANA (AUSTRALIAN NATIONAL AIRLINES [PTY.], LTD.): Australia (1936–1957). With a November goal for integration, Australian National Airlines (Pty.), Ltd. is incorporated on July 1, **1936**. Capitalized at A£250,000, the carrier is the result of an agreement between **Holyman's Airways (Pty.), Ltd.** (founded by pioneer aerial entrepreneur Ivan Holyman in October 1934), Adelaide Steamship Company, Orient Steam Navigation Company, the Union Steam Ship Company of New Zealand, and Huddard Parker, Ltd.

When the amalgamation is completed, its organizers plan for a merger of **Holyman's Airways (Pty.), Ltd.**, **Adelaide Airways (Pty.), Ltd.** (founded in 1935), and **West Australian Airlines (Pty.), Ltd.** (founded in 1921). The same day as the incorporation, **Adelaide Airways (Pty.), Ltd.** acquires **West Australian Airlines (Pty.), Ltd.** following, on August 3, with the inauguration of Adelaide–Broken Hill–Melbourne service. The ANA merger takes effect on November 2.

The new carrier's combined fleet comprises 1 Douglas DC-2 (the *Bungana*, introduced by Holyman's in June), 2 de Havilland DH 86s, 5 DH 89s, 2 DH 84s, 3 DH 50s, 2 Shorts S-16 Scions, and 7 miscellaneous types.

Route rationalization begins and new services are introduced: on November 5, Adelaide–Broken Hill–Mildura and Renmark–Mildura–Broken Hill; on December 14, daily Melbourne–Wagga/Sydney; and on December 20, Perth–Adelaide DC-2 flights via Kalgoorlie, Forrest, and Ceduna. Meanwhile, on November 10, a second DC-2 previously ordered by Holyman is received and christened *Loongana*.

The Adelaide–Broken Hill via Renmark/Medura route is altered on May 31, **1937** to run Adelaide–Melbourne via Renamrk, Broken Hill, and Medura. A joint daily service is introduced with rival **Airlines of Australia (Pty.), Ltd.** on August 30; DC-2s fly Brisbane–Adelaide via Sydney and Melbourne.

In the fall, **Airlines of Australia (Pty.), Ltd.** is purchased from British Pacific Trust, Ltd.; the new subsidiary is allowed to continue operations under its previous identity. In December, the first of four ordered DC-3s, the *Kuruna*, is placed in service.

In **1938**, the DC-2 *Kyeema* crashes into Mount Dandenong, Victoria (18 dead); the public outcry leads to unusual official inquiries.

Late in **1939**, an offer made to purchase troubled **Ansett Airways (Pty.), Ltd.** is spurned by its founder/owner Reginald Ansett.

A second DC-3, the *Kyilla*, joins the fleet in **1940**. Beginning on December 20, **1941**, the carrier's DC-3s evacuate 922 civilians from Port Moresby to Cairns; eight days later, the evacuation of Rabaul is undertaken with 75 people rescued.

The four **Koninklijke Nederlandsch-Indische Luchtvaart Maatschappij (KNILM)** Douglas DC-5s, together with several DC-2s and DC-3s, also participate in humanitarian work in the war's early days. All attempt to escape from the Japanese onslaught on the Netherlands East Indies, with several making it to Australia or New Guinea. From February 17 until early May **1942**, the DC-3 *Kyilla* ferries war materiel and personnel from Cairns and Townsville to Port Moresby. A number of Australian and ex-Dutch aircraft are brought together in the joint Allied Directorate of Air Transport during the spring. This composite organization will provide support until activation of a formal U.S. 5th Air Force transport command can be accomplished.

Covered by P-40 fighters, the *Kyilla* is joined by the *Kuruna* and three 5th USAAF C-47s in flying troops from Port Moresby to Wau, May 22–26.

The subsidiary **Airlines of Australia (Pty.), Ltd.** is fully absorbed on November 1, strengthening the parent's fleet by two Stinson Model A5

and a DH 89; the routes of the Airlines of Australia are temporarily abandoned. The U.S. 374th Troop Carrier Group is activated on November 7, replacing the Allied Directorate of Air Transport. The carrier's DC-3s, beginning on November 22, participate in resupply missions in the Buna-Gona campaign.

The USAAF, which had taken possession of the ex-KNILM DC-3 *Torenvalk* in May, turns it over to ANA on December 6, along with the DC-5 *Zonvogel*, and a few former Netherlands East Indies Air Force Lockheed C-60 Lodestars. All retain their military livery and are based at Archerfield, near Brisbane.

Service is provided anew on January 1, **1943** over the ex-**Airlines of Australia (Pty.), Ltd.** routes. Just after the start of the first quarter, the USAAF charts several of the former Dutch airliners to operate courier services to various points in the Southwest Pacific theater of operations.

The Stinsons are rebuilt and rechristened *Tokana* and *Binana*, while resupply and courier services are maintained to New Guinea through **1944** on behalf of the Allied war effort. The former KNILM DC-3 *Wielewaal*, which had served as transport for Gen. Douglas MacArthur's VIP staff the previous year, is turned over to ANA on April 1 and on May 1, with larger aircraft becoming available, the DC-5 *Zonvogel* also becomes available for civil service.

With nine DC-2s/DC-3s and the DC-5 *Zonvogel*, ANA in **1945** is the nation's most important domestic carrier other than **Qantas Empire Airways, Ltd.** One of the DC-3s, the ex-KNILM *Torenvalk*, is turned over to RAAF No. 33 Squadron on March 17; it will crash at Higgins Field, Queensland, on May 5. Six-times-per-week Melbourne–Kerang service is inaugurated on June 11.

On August 15, the war with Japan ends and, the next day the Australian National Airlines Act passes the parliament, providing for a state-owned rival.

A DC-3 crashes near Tacloban, Leyte, on November 20 (15 dead). The USAAF, meanwhile, allows ANA to retain the DC-5 *Zonvogel* and two C-39s (military DC-2s).

A DC-3 crashes into a river near Hobart, Tasmania, on March 10, **1946** (25 dead). During the spring, war surplus U.S. and Australian C-47s are purchased, converted to civil DC-3 standard, and employed to open new services: on July 1, daily Sydney–Canberra; on July 22, six-times-per-week Melbourne–Wynyard; and on August 1, six-times-per-week Perth–Kalgoorlie.

Meanwhile, the undercarriage of the former KNILM DC-5 *Zonvogel* is damaged at Kingsford Smith Airport on June 4; repaired, the former Dutch DC-5 returns to service in mid-month and is the last airworthy example of her type anywhere. The rare aircraft is withdrawn from regular company flights on July 19.

Seven DC-4s are flown to Australia from California during the summer, giving their ANA crews long-haul, over-water experience.

Trans-Australian Airlines (Pty.), Ltd. commences operations on September 9 and, six days later, the ANA DC-4 *Warana* inaugurates fortnightly Sydney–Vancouver service via Fiji, Canton, Honolulu, and San Francisco, on behalf of **British Commonwealth Pacific Air Lines, Ltd. (BCPAL)**. The carrier's first DC-2, the *Bungana*, is retired late in the month after having logged 29,000 hours and 4.75 million miles. She is followed out of service by her sister, the *Loongana*, on October 15.

The frequency of the Vancouver DC-4 service is advanced to weekly on February 21, **1947**. Having been held in reserve at Melbourne's Essendon Airport for well over a year, the former KNILM DC-5 *Zonvogel* is sought by Gregory Board's nonscheduled **New Holland Airways (Pty.), Ltd.** in November. On December 16, a five-times-per-week DC-3 route is launched from Melbourne to Deniliquin.

New Holland is able to complete purchase of the DC-5 *Zonvogel* on January 2, **1948** and the aircraft is flown to Sydney, its new base, where it is rechristened *Bali Clipper*. After ANA DC-4s have crossed the Pacific 255 times with 7,000 passengers, the BCPAL contract ends on April 21. Two DC-4s are now sold to the overseas carrier.

Having been granted a license to fly Italian immigrants to Australia, the *Bali Clipper* departs Darwin for Rome on May 10. Thereafter, under

covert circumstances very much against Australian law, the aircraft makes its way to Israel. On June 1, the Deniliquin route is extended to Narrander; a number of DC-4 charters are flown to Italy during the summer and fall, returning with immigrants from Europe.

On September 2, the DC-3 *Lutuna* is destroyed when it hits a mountaintop near Quirindi, New South Wales (13 dead). Its own overseas application rejected and unable to directly enter that market, the carrier, on October 18, assumes a 40% interest in the newly reorganized Hong Kong-based **Cathay Pacific Airlines (Pty.), Ltd.** Cathay is able to maintain services to Siam and Singapore, but will not be allowed to extend routes to Australia. On November 8, the company's first DC-3, the *Kuruna*, crashes near the top of Mount Macedon, Victoria (two dead); stewardesses and passengers escape just before the wreck explodes.

Later in the month, the carrier takes a 49% interest in the new **Air Ceylon, Ltd.** and secures a 10-year contract to operate it with ANA crews. Also, in cooperation with **MacRobertson-Miller Airlines (Pty.), Ltd.**, the company **Air Beef (Pty.), Ltd.** is formed to transport frozen meat to Wyndham.

Three new Bristol 170s are delivered in early 1949 and one, the *Pakara*, is immediately dedicated to the Air Beef operation, flying frozen carcasses from the slaughtering station at Gleuroy, in Western Australia's Kimberly District, to Wyndham for shipment overseas. DC-4s are introduced on the Adelaide-Perth route on January 4.

The Kerang DC-3 route is extended to Hay on March 23. A number of new DC-3 routes are introduced during the summer: on August 1, daily Sydney-Mildura; on August 15, daily Brisbane-Mackay; and on September 1, weekly Sydney-Narranda, six-times-per-week Melbourne-Dubbo, and weekly Adelaide-Mildura. ANA DC-4s, in **Air Ceylon, Ltd.** livery, commence Colombo-Singapore and London flights during the fall.

Six-times-per-week Melbourne-Bairnsdale via Sale DC-3 services commence on March 24, 1950 followed on May 1 by weekly Melbourne-Parkes flights and on June 5 by daily Melbourne-Devonport operations. The DC-4 *Anana*, with 5 crew and 24 passengers, is lost at York, in Western Australia, on June 26 (28 dead).

A total of 616,000 passengers are carried on the year.

ANA DC-4s, in **Air Ceylon, Ltd.** livery, commence Colombo-Sydney service on January 28, 1951. DC-3 six-times-per-week Melbourne-Mildura via Swan Hill service is inaugurated on May 29. The year's boardings soar to 666,987.

Twice-weekly Sydney-Hobart DC-4 flights begin on February 15, 1952. A DC-4 must be written off following an October 16 accident at Sydney Airport.

The Civil Aviation Act becomes law on November 18, establishing a "two-airline" policy that provides for the regulation of competition on trunk routes and equality of capacity. Thrice-weekly Melbourne-Swan Hill via Kerang DC-3 services are launched on December 15. In the Air Beef operation, over 5,000 slaughtered cattle are transported to Wyndham in the project's peak year. Passenger bookings for the year fall, however, to 608,833.

In the spring of 1953 the carrier receives two DC-6s from **National Airlines** in the U.S.; these are christened *Kurana* and *Nairana*. Financial difficulties force suspension of London-Sydney **Air Ceylon, Ltd.** services flown under contract by ANA DC-4s. The year's boardings drop further, down to 570,335.

Enplanements in 1954 rebound, up to 638,191. To compete with the Vickers Viscounts of **Trans-Australian Airlines, Ltd.**, ANA begins to acquire DC-6s in February. The new type is employed to launch Melbourne-Hobart via Wynyard services on April 1, 1955. On October 3, tourist-class fares are introduced. In November, **KLM (Royal Dutch Airlines, N.V.)** purchases the 49% interest held by the carrier in **Air Ceylon, Ltd.** as well as the long-haul contract. Traffic falls to 614,153.

Weekly Brisbane-Bowen DC-4 flights start on December 7, 1956. As financial problems persist, the carrier submits a plan to the Department of Civil Aviation calling for the integration of all domestic airlines; the idea is rejected. Bookings accelerate to 626,359.

Original founder, Sir Ivan Holyman, dies in January 1957. As the fiscal situation worsens, **Ansett Airlines of Australia (Pty.), Ltd.** tenders a purchase offer in June. With no alternative except bankruptcy, the offer is accepted on August 28. Formal purchase is completed on October 4 and flight schedules are integrated on October 21. Although the amalgamated carrier would be known as **Ansett-ANA** until 1969, Holyman's once-powerful airline effectively dies in 1957, being carried on by his one-time bitter rival, Reginald M. Ansett.

ANA (AUSTRALIAN NATIONAL AIRWAYS [PTY.], LTD.): Australia (1929-1931). Late in 1929, Sir Charles Kingsford-Smith and Charles Ulm, who had won fame over the past year with a series of long distance flights in the Fokker F-VIII *Southern Cross*, form ANA as the first unsubsidized commercial carrier on the continent. In addition to the *Southern Cross*, memorialized in the founders' book *The Flight of the Southern Cross* (New York: National Travel Club, 1929), the fleet is built up to include four Avro 10s: *Southern Sun*, *Southern Star*, *Southern Cloud*, and *Southern Moon*.

The first regular, unsubsidized commercial service in Australia by multiengine aircraft is inaugurated on January 1, 1930 as a daily, six-hour, 500-mile mail and passenger Avro 10 route is opened from Sydney to Brisbane; daily Sydney-Melbourne flights commence on June 1. The new services prove so successful that systemwide fares are actually dropped from A£9.13 to A£8.

Among the noted pilots participating on these runs and, incidentally, introducing instrument flying to Commonwealth air transport, are not only Kingsford-Smith and Ulm, but Patrick G. Taylor, J. Mollison, E. Chaseling, G. U. Allen, J. Pentland, and P. Lynch-Blosse.

Melbourne-Hobart service is launched in January 1931. In the nation's first major commercial air disaster, the *Southern Cloud* is lost in the mountains of New South Wales on March 21 (eight dead); despite extensive searches by Kingsford-Smith and Ulm, the wreckage is not found until October 26, 1958. The public outcry leads to huge passenger traffic declines. The story will be reviewed in I. R. Carter's *Southern Cloud* (London: Angus & Robertson, 1964).

When the **Imperial Airways, Ltd.** de Havilland DH 66 *City of Cairo*, attempting to reach Darwin as part of the experimental England-Australia mail operation, crashes at Koepang, Timor, the *Southern Cross* flies to Timor on April 25. There, Kingsford-Smith retrieves the packets and Capt. R. Mollard and crew fly them to Darwin. The mail is picked up by the **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)** de Havilland DH 61 Giant Moth *Apollo* and flown to Brisbane. On April 29, the Avro 10s *Southern Sun* and *Southern Star* fly the post from Brisbane-Sydney-Melbourne in two hops.

The same aircraft makes the return mail flight over the same routes (in reverse) on April 23-27. On May 14 and May 17, the *Southern Moon*, *Southern Sky*, and *Southern Sun* participate in the incoming and outgoing legs of the second experimental England-Australia airmail flight.

Meanwhile, severe traffic declines and mounting financial difficulties force the decision to shut down the carrier on June 26. Reclaiming the *Southern Cross*, Kingsford-Smith goes on to make several additional pioneering flights before perishing in the Bay of Bengal in November 1935. His diaries will be employed to create a posthumous autobiography, *My Flying Life* (London: A. Melrose, 1937).

ANADYR UNITED AIR DETACHMENT: 6 Portovaya Street, Shakhterski-3, Magadan Area, Russia; Year Founded 1996. AUAD is established at Magadan in 1996 to provide domestic and regional passenger and cargo charters as well as rotary-wing aerial work. Grigori A. Parkhotko is commander and he begins revenue flights with a fleet that includes 6 Antonov An-26s, 4 An-2s, 3 An-24s, and 18 Mil Mi-8s.

ANCHORAGE AIRWAYS: United States (1981-1983). Anchorage Airways is established by D. Craig Clark at Anchorage, Alaska, in 1981 to provide scheduled passenger and cargo services to regional destinations. Revenue flights begin with a fleet of Cessna 402s and 441s and

Britten-Norman BN-2 Islanders. On April 5, **1982**, Anchorage is purchased by local competitor and former **Air Logistics of Alaska** owner Leslie Bay, who operates the carrier for a year.

ANDALUSAIR, S.A.: Malaga International Airport, Spain; Year Founded 1999. Andalusair is established at Malaga early in the second quarter of **1999** as the latest in a long line of Spanish charter airlines. Outfitted with a single Airbus Industrie A320-231 leased from the Irish operator **Transaer International Airlines, Ltd.**, Andalusair launches revenue services on May 1 flying British and Irish tourists to Palma de Mallorca and other Spanish resort locations.

ANDERSON AVIATION SALES: United States (1968). Employing Piper lightplanes, this Phoenix, Arizona-based distributor briefly flies scheduled local routes beginning on August 1, **1968**. The service halts by year's end.

ANDES (AEROLINEAS NACIONALES DEL ECUADOR, S.A.): Aeropuerto Simon Bolivar, P.O. Box 3317, Guayaquil, Ecuador; Phone 593 (4) 284 490; Fax 593 (4) 394 490; Code ED; Year Founded 1961. Captain Alfredo V. Franco del Monaco forms ANDES, now the largest and oldest cargo airline in Ecuador, at Guayaquil in **1961**. After five years of in-country all-cargo freight operations, the carrier becomes one of the few Latin American lines to receive an all-cargo permit from the U.S. CAB.

With this certificate, ANDES, flying two Curtiss C-46 Commandos, inaugurates international freight services in October **1966** along a route from Cuenca to Miami to Cuenca, with stops at Panama and Guayaquil.

In **1968**, the fleet is upgraded by the addition of two Douglas DC-6A freighters and Quito joins the route network. A total of 3.6 million pounds of equipment are flown in **1969** as the company hauls drilling equipment and personnel to and within Ecuador for such companies as Gulf, Anglo-Ecuadorian Oil Fields, Shenandoah, Ada, Texaco, and Western Geophysical.

A third DC-6A is acquired in **1970** and a new sales manager, Agustin Martinez, is employed. Freight transported rises to 4 million pounds. In **1971**, orders are placed for Canadair CL-44s and International Oil becomes another domestic customer. The last C-46 is withdrawn at the end of **1972**.

Two Canadair CC-106 Yukons, without the type's famed swing-tail, are purchased from the Canadian military in **1973–1974**. They are converted to civil CL-44D standard before entering service.

A leased Lockheed L-1049H with three crew fails its takeoff from Miami on December 15, **1973** and crashes into several houses; all aboard the aircraft are killed, along with six people on the ground.

The C-46s are withdrawn during the mid-**1970s**. Company President Dr. Armando Arce's carrier employs 140 people in **1978**, the year in which the first jet freighter, a DC-8-32F, is obtained from **Overseas National Airways**.

A DC-8-53F is delivered in **1981** allowing frequencies on the Miami service to be increased. During the **1980s**, the propeller aircraft are diverted to the domestic linkage of the country's three main cities. Airline employment in **1990–1991** is 104 and one of the Canadairs is withdrawn. Dr. Arce's fleet in **1992–1993** comprises the two Douglas jet freighters and the route network is unchanged from a decade earlier.

Vinicio Donoso is general manager in **1994** and scheduled international destinations visited from Guayaquil and Quito include Miami and Panama City.

It is understood that a DC-8-32F and DC-8-53F continue operations without change during the remainder of the decade; exact information is, however, unavailable.

ANDES (AEROVIA NACIONAL DEL SUR, S.A.): Peru (1948–1951). ANDES is formed at Lima on April 6, **1948** to fly internal all-cargo charter operations with a fleet that grows to comprise four Curtiss C-46 Commandos. Services are initiated on May 12 to Tacna, Iquitos,

and Pucallpa. During the remainder of the decade and into the 1950s, the company flies a total of six Commandos, though not all simultaneously.

After only three years of operations, the unprofitable company ceases flying in March **1951**.

ANDESA (AEROVIA NACIONAL DEL ECUADOR, S.A.): Ecuador (1946–1948). ANDESA is formed at Guayaquil on May 6, **1946**; it is the first Ecuadorian airline not controlled by a foreign operator. The initial fleet comprises 3 Curtiss C-46s and all-cargo services are started linking the base with Marca in the south with Quito via Manta. Extensions from Quito to Esmeraldas and Tulcan are soon initiated.

A Curtiss C-46D with 3 crew and 27 passengers crashes a mile from Cuenca, Ecuador, on July 17 (30 dead).

Another C-46A and two Noorduyt Norseman are purchased from the American nonscheduled airline **ATCO** in September. In October, a contract is signed with the Shell Oil Company for support of its oil exploration activities in the Oriente coast. Much of the carrier's work is now performed on behalf of Shell, from which ANDESA receives roughly 60% of its income.

A C-46A with 5 crew and 10 passengers is lost while landing at Rio Yavari, Peru, on January 17, **1947**; although the aircraft must be written off, there are no fatalities.

The Shell contract is terminated on April 24 and income from unsubsidized local service flights is insufficient to cover operational expenses. As a result, revenue service is halted in October. Between October 17–20, the government attaches all of the concern's assets for nonpayment of taxes. With ANDESA unable to resume business, these assets are sold on February 11, **1948**.

ANDREA, S.A.: Peru (1990–1992). As soon as domestic deregulation is law in **1990**, Andrea is established at Santiago to undertake revenue passenger services. Three Fokker F.28s are chartered from **Linjeflyg, A.B.** in Sweden, with the first arriving in July **1991**.

Services commence on August 1 and are expanded somewhat after the delivery of the second Fellowship in September. Unable to achieve economic viability before its third jetliner can be delivered, the company declares bankruptcy in December. Arrangements are made to return both active Fokkers once the company suspends operations in January **1992**.

ANDREW FLYING SERVICE: United States (1965–1966). Named for its founder, AFS is organized at Honolulu in early **1965** to offer scheduled passenger flights to local destinations. Charters and sight-seeing frequencies are also undertaken and constitute the principal business.

Employing small Cessnas and a de Havilland DH 104 Dove, the company commences revenue operations on April 1. These continue until the company is taken over by **Sky Tours** in **1966**.

ANGEL AIRLINE COMPANY, LTD.: 495 3rd Floor, Tower B, Benchachinda Building, Vibhavadi Rangsit Rd., Chatuchak, Bangkok, 10900, Thailand; Phone 66 (2) 953-2260; Fax 66 (2) 953-2261; http://www.angelairlines.com; Code 8G; Year Founded 1998. At a time when most Asian airlines are in trouble due to the region's financial crisis, Angel is established at Bangkok at the beginning of **1998** to operate scheduled domestic routes not currently served—or served well—by **Thai Airways International, Ltd. (THAI)**. Shareholding is divided between Better Grade Investment, JVK Holdings, Peak Management & Consulting Service, Ultra Gain Worldwide, and Worldwide Trading and Supplier.

Somchai Benjarongkakul is president/CEO and he obtains a leased fleet that includes one Dornier 328-110, a Beechjet 400A Bizjet, and most importantly, a B-737-5H6, chartered from **Malaysia Airlines, Ltd. (MAS)**.

Revenue flights commence on September 20 as the little Boeing, christened *Yos-Siam*, flies from Bangkok to the southern resort island of Phuket. Other destinations visited by the jetliner during the remainder of

the month and in the fourth quarter include a twice-weekly service to Singapore and the northern Thailand community of Chiang Mai. The Dornier operates from Bangkok south to Udon Thani, while the Beech operates charters.

Flights continue in 1999 as Angel, rather than the older **Bangkok Airways, Ltd.** is designated by the government as the nation's second national carrier. In April, the fleet is enhanced by the addition of a chartered MAS B-737-4H6 in a revised livery.

Two more leased MAS units of the same type are acquired before year's end.

Unable to make payments on the Dash-400s, all are repossessed in April 2000, forcing Angel to shut down its regional operations. Domestic services are maintained with the Dash-5H6 and smaller aircraft already on hand. Company officials approach **China Southwest Airlines Company, Ltd.** and charter a B-757-2Z0 with which to restart regional flights by May.

On June 1, President/CEO Bencharongkul orders his company, which is now losing some 20 million baht (\$500,000) a month, to stand down for 30 days as it is reorganized. **Thai Airways International, Ltd. (THAI)** agrees to accommodate passengers holding Angel tickets.

The restructuring program begins with the appointment of former **Bangkok Airways, Ltd.** executive Virachai Vannukul as chief advisor, Magellan Corporation official Rudi Fischer as marketing advisor, and ACM Yuthapong Kittikachorn as vice president-operations and engineering. Targets for revision are funding, aircraft leases, marketing objectives, the route network, and personnel. A number of employees, informed that they will receive only half of their previous salaries, resign, including 20 of 70 flight attendants.

Negotiations are held with four operators in Europe, Asia and the Mideast seeking an arrangement that will keep the carrier out of bankruptcy. The chairman is able to arrange the sublease of a Lockheed L-1011 TriStar 1 from **Kampuchea Airlines (2)** and announces that daily flights to Hong Kong will start on July 15.

The company reports on July 12 that it has lost 3 billion baht (\$75 million) on unprofitable domestic routes since its 1998 start-up. In response to the news, the government grants permission for a doubling to 30% the portion of equity that may be sold to a foreign airline. Still, no deal is forthcoming.

Despite the receipt of a rescue plan from Fischer, the carrier teeters on the brink of collapse by mid-month. The announced Hong Kong service is cancelled and advisors Vannukul and Fischer join Marketing Director Srisawasdi and her deputy in their July 17 resignation. Despite these setbacks, Angel perseveres in its search for a strategic partner. Daily TriStar flights to Hong Kong begin on July 22.

It is reported on October 8 that Angel will sign a new marketing and code-share agreement with **China Northern Airlines Company, Ltd.** Under its terms, the previous TriStar lease will end as CNA provides a pair of Airbus Industrie A300B4-622Rs in November with which to operate Angel's domestic and international routes from Bangkok.

ANGELES FLYING SERVICE: United States (1964–1967). Founded by Bill Fairchild at Port Angeles, Washington, during the summer of 1964, AFS is equipped with a variety of small aircraft, including Piper PA-23 Aztecs and a Beech 18. Scheduled passenger service is inaugurated to Seattle on September 8 and is continued until the company is acquired by **Puget Sound Airlines** on August 28, 1967.

ANGLIAN AIR CHARTER, LTD.: United Kingdom (1950–1970). This air taxi firm is founded at the North Denes airfield, near Great Yarmouth, in 1950 to offer pleasure and charter flights. An Auster 5 is acquired in early 1951 allowing operations to begin. Another Auster 5 is acquired in 1956. Operations continue apace during the remainder of the decade.

The first Auster is sold in 1961 and the second is lost in a crash at Gorleston, in Norfolk, on September 9, 1962. Auster J/1N and J/5G Austers are added in 1963 and 1964.

Two Cessna 170s are acquired in 1969 as the company begins charter support of the North Sea oil industry. A Britten-Norman BN-2 Islander is purchased in March 1970. On August 1, the company joins in a merger with **RigAir, Ltd.** and **Norfolk Airways, Ltd.** to form **Air Anglia, Ltd.**

ANGLO CARGO (ANGLO AIRLINES, LTD.): United Kingdom (1983–1992). Organized by Terry Oldham, former **British Island Airways, Ltd.** joint managing director, and his wife Maggie at London (LGW) in late 1983, Anglo Cargo is equipped with a Boeing 707F purchased from **British Caledonian Airways, Ltd. (BCAL)**. Terry names himself chairman with Maggie as managing director, one of the few female airline managing directors in the world.

Revenue, freight, and contract air service flights begin in January 1984 linking the company's base, on behalf of **ZAS Airline of Egypt**, with destinations in Africa and the Middle East. Tobacco is the first cargo.

Late in the decade, two B-707-338Cs are acquired from **Qantas Airways (Pty.), Ltd.** and a British Aerospace BAe-111-487GK, the only one of its kind ever built as a freighter, is leased from the Romanian carrier **Tarom (Transporturile Aeriene Romane)**. **Monarch Airlines, Ltd.** is contracted to provide maintenance support at Luton Airport.

In late 1990, the two Boeing 707-338Cs are withdrawn and replaced by a B-757-200F leased from Ansett World Aviation Services.

Anglo Cargo provides freight assistance to the allies during both Operation Desert Shield and Operation Desert Storm.

A weekly general cargo service is undertaken to Accra, Ghana, from early 1991. In recognition of its Gulf War service, the company is honored with an invitation to the International Air Tattoo at Fairford, U.K. during July.

Unable to make a profit and incurring increasing expenses in a recessionary period, the 82-employee carrier closes its doors in January 1992.

ANGLO-NORMANDY AIRWAYS, LTD.: United Kingdom (1973–1979). The air taxi and charter operator Anglo-Normandy Airways, Ltd. is formed on Guernsey, Channel Islands, by N. Stevens and J. Smith on January 9, 1973. With a Piper PA-23 Apache leased from Channel Aviation, Ltd., the company begins flight operations on January 12. The first owned aircraft, a Piper PA-23 Aztec is delivered in March, but does not begin revenue flights until June 5. Meanwhile, two Aztecs leased from Spooner Aviation, Ltd. are used for interisland flights.

A variety of charter missions are now undertaken to both southern England and northern France. Between April and August 1974, three more Aztecs come on line and charters resume. While ferrying back a Piper PA-31-350 Navajo Chieftain from New Zealand in August, co-founder N. Stevens is killed when the aircraft crashes. The tragedy forces the carrier to cease flying; J. Smith sells the assets to J. S. Hamilton and Thomas R. Miller.

Hamilton and Miller reform Anglo-Normandy Airways, Ltd. on January 9, 1975, renaming it Anglo-Normandy Aviation, Ltd. Flights are resumed with two Piper Aztecs and that number steadily grows over the next four years.

In 1979, Sir Derek Bailey sells **Aurigny Air Services, Ltd.**, to Anglo-Normandy Aviation, which allows the larger scheduled carrier to retain its previous identity and maintain its administrative headquarters on Alderney. A subsidiary, Anglo-Normandy Aeroengineering, Ltd., is formed to take over company maintenance needs and additional revenue options remain available as Anglo-Normandy Aztecs fly contract/charter flights over the next 15 years.

ANGOLA AIR CHARTER, S.A.: CP 3010, Luanda, Angola; Phone 244 (4) 330 994; Fax 244 (4) 392 229; Code C3; Year Founded 1990. TAAG-Air Charter, S.A., a subsidiary of **TAAG Angola Airlines, S.A.**, is reformed in 1990 and provided with a new corporate identity. International, regional, and domestic nonscheduled passenger and cargo services continue with one each leased Boeing 707-351C, B-707-382C, and B-707-373C.

The latter, after completing its 1,000th roundtrip between Luanda and Europe is christened *City of Ostend*; it continues to operate from a base at the Belgian city of the same name.

Two B-707-324Cs are chartered in 1991 to replace the earlier aircraft and are joined by a B-707-347C in 1992. In 1993 a B-707-351C and a Lockheed L-382G Hercules are acquired. A new livery is introduced on one of the hush-kitted B-707-324Cs.

These are followed into service during 1994 by one each B-727-21F and B-727-116C. A B-727-23F is chartered in 1995, but in 1996 the B-727-21F is withdrawn. There are no significant changes in 1997.

In need of freight capacity and with the DC-8-54 still in the shop, the new **Lignes Aeriennes Congolaises, S.A.** wet-leases a B-707-324C from Angola Air Charter in early January 1998. Cargo flights commence on behalf of LAC on January 25 transporting food supplies for the United Nations.

The company operates invisibly in 1999. At the beginning of May 2000, its fleet is enhanced by the delivery of a B-727-151C previously operated by **Emery Worldwide**. The former **Pacific International Airlines** B-727-23F is acquired at the end of July.

ANGOLA AIR CHARTER. See **TAAAG ANGOLA AIRLINES**

ANGOLA AIRLINES. See **TAAAG ANGOLA AIRLINES**

ANHSA (AEROVIAS NACIONALES DE HONDURAS, S.A.): Honduras (1950–1986). Private interests form this charter carrier at Tegucigalpa in 1950 to transport government-monopolized liquor (*aguardiente*) around Honduras. In 1957, the larger **SAHSA (Servicio Aereo de Honduras, S.A.)** purchases 75% shareholding. The subsidiary is now left to wither. Two DC-3s spend the next 23 years flying scheduled passengers and cargo from Tegucigalpa to Ahuas, Brus Laguna, Puerto Lempira, La Ceiba, La Union, and Olanchito.

SAHSA takes 95% of the stock in 1980 and now provides President Rolando Figueroa's ANHSA with much of its domestic freight and passenger work. The fleet is increased by the addition of 1 new de Havilland Canada DHC-7 and 2 ex-SAHSA DC-3s.

En route from La Ceiba to San Pedro Sula on April 28, 1982, the DHC-7, with 48 passengers, is taken over by four antigovernment revolutionaries. They demand the release of 86 colleagues from Honduran jails, a ransom of one million lempiras, fuel for a flight to Cuba, and publication of a political tract. At San Pedro Sula, the aircraft is surrounded by police and over the next three days, as negotiations continue, all of the passengers are released. Finally, on May 1, the government provides another transport, which flies the pirates to Havana.

In 1983, the DHC-7 is withdrawn. The route network in 1985 includes Ahuas, Brus Laguna, Guanaja, La Ceiba, La Union, Olanchito, Puerto Lempira, Roatan, San Pedro Sula, Tegucigalpa, Tocoa, Trujillo, and Utila. The carrier is absorbed into its parent in 1986.

ANIC AIRWAYS: Trg Dragutina Domjanica 6/II, Zagreb, 41260, Croatia; Phone 38 (41) 203 233; Fax 38 (41) 204-253; Code N3; Year Founded 1992. Anic is founded by Damir Anic at Zagreb, Croatia, on March 30, 1992. A single Avions de Transport Regional ATR42-320 is leased and employed, beginning on February 13, 1993, to inaugurate scheduled passenger services linking the company's base with Split, Dubrovnik, Pula, Vienna, Budapest, Zurich, Tirana, and Ljubljana.

Operations continue and frequencies are increased in 1994–1995 as the fleet is expanded through the addition of 4 Boeing 737-200s and 3 Cessna 402s. Unhappily, the concern is forced to suspend flights during the Yugoslavian civil war. President Anic makes plans in 1996–1998 to resume flights and keeps its certificates current.

No information has been found for the years 1999–2000 and it is possible that, given the Kosovo crisis, that Anic did not restart.

1128. ANJILL AIRLINES: United States (1968–1970). Anjill is set up at Forty Fort, Pennsylvania, in 1968 to provide scheduled daily air taxi flights linking Wilkes-Barre and Scranton with Teterboro, New Jersey.

Piper PA-31-310 Navajo roundtrip revenue frequencies are inaugurated and maintained into 1970.

ANSA (AEROLINEAS NACIONALES, S.A.): Panama (1988–1996). With a base at Aeropuerto Mascos A Gelabert at Panama City, ANSA is formed in 1988 to offer scheduled third-level passenger and cargo services throughout the nation and into Costa Rica. By 1993, General Manager Manuel Gonzalez's fleet comprises 3 Pilatus-Britten-Norman PBN-2 Islanders and 2 Cessna 206s. One of the Islanders is withdrawn in 1994. Although service is maintained in 1995, the company shuts down in 1996.

ANSA (AEROLINEAS NACIONALES, S.A. de C.V.): Mexico (1988–1990). ANSA is established at Hermosillo in the summer of 1988 to offer domestic services. Outfitted with three Fokker F.27s, revenue flights commence in September. Early in 1989, authority is sought to inaugurate flights linking its base with Las Vegas, Phoenix, El Paso, and Albuquerque. However, before these can be initiated, the company goes out of business in 1990.

ANSETT AIRLINES OF AUSTRALIA (PTY.), LTD.: Australia (1936–1990). As a railway protection measure, Reginald M. Ansett, in January 1936, is ordered by the Victoria Transport Board to cease his Melbourne–Hamilton motor bus service begun in 1929. Undaunted, Ansett purchases a Fokker Model 4 Universal and forms an airline, **Ansett Airways (Pty.), Ltd.** On February 17, pilot Vern Cerche flies six passengers above the old bus route from Hamilton to Melbourne's Essendon Field. A mail contract becomes a part of the Universal service on May 25.

After adding an Airspeed Envoy, the Melbourne–Hamilton frequency is increased to twice daily on February 8, 1937. The carrier is reorganized and capitalization is increased to A£135,000 on April 14; orders are placed for two Lockheed Model 10A Electras, the first of which is delivered from the United States on July 8, followed by the second 23 days later.

New routes are opened from Melbourne to Mildura and Broken Hill on September 5, Norrander and Sydney on October 4, and from Sydney to Adelaide via Norrander and Mildura on November 29.

Sunday-only direct Melbourne–Sydney flights begin in April 1938. During the year, a flying school is opened at Hamilton. Newly received Lockheed Model 10 Electras are placed on the Adelaide–Sydney route in late fall. Within a few months of the Electras' introduction, the carrier's entire fleet, save one of the two Lockheeds, is destroyed in a February 28, 1939 hangar fire at Essendon Airport.

An offer from V. C. Holyman of ANA (**Australian National Airways [Pty.], Ltd.**) to purchase the little airline is turned down. In July, the government's Department of Civil Aviation awards an A£45,000 annual subsidy. Commercial operations are halted during 1940–1941, save for service on the Hamilton–Melbourne route with an Electra that escaped the 1939 conflagration.

Having obtained two additional Electras, Ansett, in June 1942 begins flying regular Melbourne–Cairns service on behalf of the U.S. military; in addition to this scheduled route, occasional services are also offered during the remainder of the year and through 1944 to other points, including Darwin and Sydney.

Military and civil contracts are cancelled on January 21, 1945. On February 5, the Electras resume commercial flights over routes from Melbourne to Adelaide via Mount Gambler and to Canberra via Wagga.

A former military Douglas C-47 with 25 passengers is lost during ascent over the Derwent River estuary on March 10, 1946; there are no survivors.

Having survived World War II, the second Electra is lost in a crash at Parafield, South Australia, on May 16; there are no survivors. The holding company Ansett Transport Industries, Ltd. is formed on May 31 to control the owner's multifaceted and growing empire of trucking, manufacturing, trading, hotel, and other associated enterprises. The carrier's first two Douglas DC-3s are placed in service in June.

On July 1, daily Sydney–Canberra DC-3 flights commence, followed by the launch of six-times-per-week Melbourne–Wynyard DC-3 operations on July 22. Melbourne–Hobart DC-3 service is inaugurated in December.

Ansett forms **Barrier Reefs Airways (Pty.), Ltd.** in mid-1947; this subsidiary begins Consolidated PBV Catalina service on October 8 to the resort Daydream Islands, off Mackay. At year's end, second-class DC-3 fares are introduced on the main routes.

Fares are cut by 20% in March 1948 in an effort to attract new business. Ansett Transport Industries opens Hayman Island resort in 1950, which is served by BRA's Catalinas. BRA is merged into its parent during 1952 and the holiday Catalina flights continue.

In the first of many airline purchases, the company acquires and merges **Trans-Ocean Airways (Pty.), Ltd.** (founded in 1947) in 1953; that carrier's Sydney–Lord Howe Island and Hobart routes are assumed. All flying boat operations are eventually combined into one division: Ansett Flying Boat Services. The fleet is consolidated in 1954 as new Convair CV-340s enter service.

During 1955–1956, four DC-6Bs are introduced. A DC-3 freighter with two crew strikes the water short of the runway while on final approach to the airport at Frederick Henry Bay, Tasmania, on January 12 of the latter year (one dead).

In March 1957, orders are placed for additional CV-340s and four Vickers Viscount 700s. In June, a A£3-million offer is made to acquire financially troubled **ANA (Australian National Airlines [Pty.], Ltd.)**, the Commonwealth's largest independent carrier and the same airline that had suggested purchase of Ansett back in 1939. ANA's board accepts the tender on August 28 and the purchase is formalized on October 21 under the operating name **Ansett-ANA, Ltd.** Simultaneously, the small **Queensland Airlines (Pty.), Ltd.** is also purchased.

The government's Civil Aviation Agreement Act of 1957, supplementing the 1952 law, now comes into force; applied specifically to Ansett and the government-owned **Trans Australian Airlines (Pty.), Ltd.**, it confirms an equal "two-airline" policy. A letter of intent for two Lockheed L-188A Electra turboprops for Ansett-ANA is signed on September 25, with the formal contract signed on December 9.

Combined traffic figures for the year show a total of 833,536 passengers flown.

A low-fare Douglas DC-4 service is started to Perth on January 11, 1958. Brisbane–Mount Isa via Longreach CV-340 flights are inaugurated on February 1. On February 5, **Butler Air Transport (Pty.), Ltd.**, in which Ansett holds 52% interest, is acquired outright and merged; although Butler's two Viscount 832s are retained, three former **British European Airways Corporation (BEA)** Elizabethans employed by the merger partner are returned to England. For administrative purposes, **Queensland Airlines (Pty.), Ltd.** is made a subsidiary of **Butler Air Transport (Pty.), Ltd.** Daily Sydney–Coolangatta and Melbourne–Canberra via Cooms flights commence on May 10 and July 7, respectively.

The Airline Equipment Act becomes law, providing that Ansett and TAA rationalize their operations so that, on any given route, each would integrate schedules, etc., to ensure that neither receives more than half of the traffic. The law forbids excess capacity and mandates the purchase of airliners of similar performance. Small **Southern Airlines (Pty.), Ltd.** is purchased and merged on November 1. Enplanements are 785,928, down from 1957.

The first L-188A Electra is delivered on February 27 1959; with "Prop Jet Electra" titles, it enters service over the Melbourne–Sydney–Brisbane route on March 18. The second Electra is received in mid-April.

Direct Viscount 832 flights from Melbourne to Coolangatta are inaugurated on May 16. On June 30, the carrier finds itself with 12% minority interest (formerly held by ANA) in the newly reformed **Cathay Pacific Airlines (Pty.), Ltd.** of Hong Kong.

Melbourne–Alice Springs via Broken Hill operations commence on July 1 and on July 7 Golden Orchid flights begin to Port Moresby as Ansett and TAA take over New Guinea services from **Qantas Empire Airways (Pty.), Ltd.** During July, Guinea Holdings, parent of **Guinea**

Airways (Pty.), Ltd. is purchased as is control of **South Pacific Airlines (Pty.), Ltd.**

Permission is received from the government and, in November, a third L-188A Electra is ordered. On December 17, Ansett renames Butler Air Transport the **Airlines of New South Wales (Pty.), Ltd.** The year's boardings skyrocket to 957,301.

Two more Ansett subsidiaries are renamed on January 17, 1960: **Guinea Airways (Pty.), Ltd.** becomes **Airlines of South Australia (Pty.), Ltd.** and **South Pacific Airlines (Pty.), Ltd.** becomes **Airlines of New Zealand (Pty.), Ltd.** The latter receives two DC-3s transferred from the parent and will begin revenue services on December 14. The third Electra is received in February and enters service in March.

Mandated Airlines (Pty.), Ltd., **Gibbes Sepik Airways (Pty.), Ltd.**, and **Madang Air Services (Pty.), Ltd.** are now also taken over and are combined into **Ansett Airlines of Papua New Guinea (Pty.), Ltd.** Employing Bell Model 47Js, Ansett joins with TAA in inaugurating a helicopter service between the new Yarra River Heliport and Essendon Airport on December 20. Bookings advance to 973,421.

The fleet in 1961 comprises 3 L-188As, 5 Viscount 832s, 1 Viscount 747, 4 DC-6Bs, 2 Fokker F.27-100s, 3 CV-440s, 3 DC-4Fs, 11 DC-3s, 1 Bristol 170, 3 Bell Model 47Js, and 1 Bristol 171.

A Viscount 832 with 4 crew and 22 passengers fails its takeoff from Sydney on November 30 and crashes into Botany Bay; there are no survivors.

Based on the number of passenger miles flown (this year's boardings pass the million mark for the first time), Ansett ranks as the world's 30th largest airline, ahead of such well-known names as **South African Airways (Pty.), Ltd.** and **El Al Israel Airlines**. The combined fleet of Ansett and its subsidiaries in 1962 comprises 84 aircraft.

Controlling interest is taken in **MacRobertson-Miller Airlines (Pty.), Ltd.** in July 1963. The **Air Beef, Ltd.** operation begun by ANA in 1948 now ends when a new road is constructed into Western Australia's Kimberly District; in the 25-year enterprise, 57,000 frozen cattle carcasses have been carried.

Orders are placed for four Boeing 727-100s. Enplanements total 1,092,690.

Airline employment in 1964 stands at 4,480. A Piaggio P-166 and two Boeing 727-77s are delivered, the first of the Boeings arriving at Melbourne's Essendon Airport with a B-727-76 of **Trans-Australian Airlines (Pty.), Ltd.** on October 26. Although the TAA "three-holer" reaches land before Ansett's, the latter's aircraft is able to land first, gaining publicity from local television cameras. The nation's first domestic jetliners enter service against each other on November 2.

In an effort to further air freight development, C. L. Warton is appointed general freight manager and two DC-4F freighters are also added.

Passenger boardings accelerate 19% to 1,349,000 and freight traffic is up by 12%.

The workforce is increased to 5,015 in 1965. The third B-727-77 is delivered in September along with 2 Carvair freighters, these joining a fleet that also includes 2 other B-727-77s, 5 DC-6Bs, 5 Viscount 832s, 1 Viscount 747, 6 Fokker F.27-200s, 1 Piaggio P-166, 3 L-188As, 10 DC-3s, 7 DC-4s, 1 Cessna, 1 Sikorsky S-61N, and 7 Bell Model 47Js. DC-6Bs are replaced on the New Guinea run by L-188s.

An F.27-200 with 4 crew and 19 passengers crashes during final approach to Launceston on March 17; there are no fatalities.

Passenger boardings increase 18.6% to 1,662,000 and freight traffic is up by 13%.

A Bell 206, an S-62A, and the fourth B-727-77 are acquired in 1966 as orders are placed for DC-9-31s with which to begin a program of fleet standardization. En route from Mt. Isa to Brisbane on September 22, a Viscount 832 with 4 crew and 20 passengers crashes 16 km. from the Queensland community of Winton; there are no survivors.

Enplanements for the year fall slightly to 1,623,757.

Airline employment in 1967 is 5,207. Three DC-6Bs, 1 DC-4F, 3 DC-3s, and the Viscount 747 are retired following introduction into service

of 3 DC-9-31s in January–March. Passenger boardings rise 6.5% to 1,736,638 and revenues are reportedly up 10.6%.

The employee population in 1968 is 5,697. Two more DC-9-31s are added, leading to the withdrawal of 2 Viscount 832s, 2 DC-6Bs, the last 2 DC-3s, and all but 2 Sikorsky S-61N helicopters, which operate over the Barrier Reef, North Queensland. Enplanements jump 16% to 2,017,867 and freight climbs 15.2%.

The ANA suffix is dropped in 1969. **MacRobertson-Miller Airlines (Pty.), Ltd.** becomes a wholly owned subsidiary, but is allowed to continue operations under its previous name. At this point, a new red and white color scheme is introduced on company aircraft, which also wear a stylized "A" on their red tails.

The last two DC-6Bs are stricken as 13 Nihon YS-11As are ordered from Japan. Sir Reginald Ansett is knighted. Bookings balloon to 2,286,396.

The workforce in 1970 grows to 6,667. One B-727-77 and 5 DC-9-31s are added as the YS-11A order is cancelled and the last Viscount 832s are retired. Orders are placed for B-727-277As.

A man with a cap pistol pushes his way onto a DC-9-31 on the ground at Sydney on May 14 as it prepares for departure to Brisbane. The crew preoccupies the pirate while the 60 passengers escape, thereby putting him in a position where he must surrender. The man will be tried and given a prison term of five years.

Passenger boardings this year climb 9.7% to 2,532,000 and cargo ascents 5.7%.

The L-188As begin conversion into freighters early in 1971 as two more DC-9-31s and another B-727-77 enter service. Complete retirement of the Viscounts and Electras is within sight. The route network now extends for 20,000 unduplicated miles.

An F.27-200 is damaged beyond repair in a hangar fire at Melbourne's Essendon Airport on March 25.

In June, all maintenance, flight operations, and freight services are moved to Melbourne's new Tullamarine Airport.

A total of 2,684,232 passengers are flown on the year and freight climbs 5.7%.

The employee population in 1972 is 7,007, up 0.33%. The fleet now comprises 1 newly added B-727-277A, 6 B-727-77s, 1 DC-4F, 12 DC-9-31s, 12 Fokker F.27s, 3 L-188As, 2 Carvairs, 1 S-61N, and 1 Bell 206.

Two Electras are converted into L-188AFs at the Lockheed Aircraft Service Company in California during July; they return "down under" and enter all-cargo service in October.

On November 15, in one of the nation's rare skyjackings, a man takes over a scheduled F.27 service from Adelaide to Darwin with a .22-caliber rifle. At Alice Springs, he releases all aboard except one stewardess, whom he holds as hostage. While walking toward a demanded light plane, he is jumped by a private detective; breaking free, he runs into the bush and leans against his rifle. At first, news reports identify the man, M. Nelson, as being fatally shot by police in the abortive attempt to hijack the plane. He is, in fact, named Peter Sandeman, dead by suicide when his effort fails.

Enplanements grow 8.2% to 2,924,000, but cargo dips 0.2%. Passenger boarding climb 3.3% to 280,000, and its freight traffic rises 6%.

A second B-727-277A is placed in service in 1973 and a B-727-76 is leased from **Trans-Australian Airlines (Pty.), Ltd.** Local operations in Papua New Guinea are handed over from **Ansett Airlines of Papua New Guinea (Pty.), Ltd.** to the new **Air Niugini (Pty.), Ltd** in November.

The workforce is now 7,563. Passenger boardings rise 21% to 3.5 million while cargo soars 25%.

A former **American Airlines** L-188A is purchased in August 1974. In one of the greatest airline evacuations in recent history, Ansett transports 5,417 people following the Christmas Day cyclone devastation of Darwin.

On the year, boardings accelerate 8.8% to 3,836,000 and cargo is up 9.3%. Passenger boardings rise 12.9% to 368,000, while freight, at 57.9 million ton kilometers, jumps 10.36%. The subsidiary **MacRobertson-Miller Airlines (Pty.), Ltd.** does nearly as well with bookings up 8.9%

to 315,000. With airline operations accounting for 70%, Ansett shows total revenues of \$A272.7 million and net gain of \$A8.19 million (\$11.6 million U.S.).

Airline employment in 1975 totals 8,413. The fleet now comprises 6 B-727-277As, 6 B-727-77s, 12 DC-9-31s, 11 F.27s, 1 S-61N, and 1 Bell 206.

The ex-AA Electra received the previous year is converted to L-188AF freighter configuration in August.

Passenger traffic grows 5.7% to 4,056,000, but freight is off 5.3%.

One more B-727-277A is delivered in 1976 as two B-727-100s are retired. The workforce declines 3.1% to 8,140. Service is launched from Cairns–Alice Springs via Mount Isa. Passenger boardings dip 4.3% to 3,880,000, but cargo is up 2.4%. Passenger boardings reach 4,103,616 in 1977.

One more B-727-77 is retired in 1978 as the eighth B-727-277A is received, along with another S-61N; four more B-727-200s are ordered. Passenger boardings are up 7.2% to 4,422,394 and freight rises 2%.

The workforce is increased a scant 0.6% in 1979 to 8,581. Two B-727-77s are sold as two additional B-727-277As enter service. Passenger boardings jump 10.5% to 4.6 million. Late in the year, Sir Reginald Ansett sells Ansett Transport Industries to Rupert Murdoch's News, Ltd. and Sir Peter Abeles's Thomas Nationwide Transport (TNT) on a fifty-fifty basis; Ansett remains chairman while 30-year veteran executive E. J. B. "Ted" Forrester also stays on. At the same time, the last remaining interest held in **Cathay Pacific Airlines (Pty.), Ltd.** is sold to its parent, the Swire Group.

The Murdoch-Abeles acquisition is consummated in January 1980, with the two principals becoming joint chairmen. Henceforth, News, Ltd. and not the airline itself will employ all managing directors.

In March, the largest aircraft purchase contract in the history of Australian aviation is signed: A\$600 million (\$437 million U.S.) for 5 B-767-277s, 12 737-277s (plus 4 options) and 4 B-727-277As. In July, Ansett Air Freight, the airline cargo division, is formed as a separate division under ATI. The first B-767-277 also arrives in July.

Walter Landor Associates is hired to perform a complete makeover of the carrier's image. Later in the year, the first international route is opened as B-727-277As inaugurate service to Christchurch, New Zealand. During the year, the workforce is reduced 5.3% to 8,124.

Although freight dips 6.6% to 50.87 million FTKs, passenger boardings rise 6.8% to 4,449,000.

Airline employment grows 3.6% in 1981 to 5,419 as the holding company, Ansett Transport Industries, Ltd. is created. In May, the wholly owned subsidiary **Airlines of Northern Australia (Pty.), Ltd.** is formed to replace the defunct **Northern Airlines (Pty.), Ltd.**

Four B-727-277As and eight B-737-277s are delivered to the parent, beginning in June. Simultaneously, eight DC-9-31s begin one-per-month retirement, although one is wet-leased to **Air Vanuatu (Operations), Ltd.** for two months.

On July 2, **Ansett Airlines of South Australia (Pty.), Ltd.** is retitled **Airlines of South Australia (Pty.), Ltd.** while **Ansett Airlines of New South Wales (Pty.), Ltd.** is renamed **Air New South Wales (Pty.), Ltd.** Simultaneously, **MacRobertson-Miller Airlines (Pty.), Ltd.**, which has been operating under its own name since becoming a wholly owned subsidiary in 1969, is renamed **Airlines of Western Australia (Pty.), Ltd.**

A new "stars-and-stripes" livery is introduced late in the year; the single word "Ansett" now appears on the all-white aircraft fuselages. Founder Sir Reginald Ansett dies in December.

Freight accelerates 17.4% during the year to 59.7 million FTKs, but enplanements remain level at 4,967,736.

The workforce is reduced 2.9% in 1982 to 8,169. The fleet begins the year with 4 B-737-277s, 16 B-727-277As, 10 Fokker F.27s, 3 Lockheed L-188AFs, and 3 helicopters. Five F.27s are withdrawn later on as 4 B-737-277s are added.

On January 1, the ANSACARE computerized reservations system is introduced in an effort to alleviate some of the difficulties handicapped persons have in making flight arrangements. The last DC-9-31 is withdrawn in September; it had also been the first to arrive, in January 1967.

Freight declines 3.4% to 57.67 million FTKs and passenger boardings drop 3.6% to 4,788,774.

Airline employment is cut another 10.1% in 1983 to 7,347. In an effort to reduce two years of decline, the owners appoint E. J. B. "Ted" Forrester general manager with Graeme J. McMahon as his deputy. The first of four B-767-277s to arrive during the year is delivered on May 4. Eight B-737-277s are also received.

Although freight is up 3.1%, passenger boardings for the national are off again, down 8.7% to 4,371,296; however, freight jumps 5.1% to 60.49 million FTKs.

The employee population is increased 2.3% in 1984 to 7,534. A fifth B-767-277 joins 4 others in a fleet that now also includes 13 B-727-277As, 12 B-737-277s, 1 Fokker F.27-500, and 5 F.27-200s. The B-727-277A *Frank Hann* is leased to **Trans-Australian Airlines (Pty.), Ltd.** between May 1 and November 30.

Ansett—the original Electra operator that has flown its turboprops the longest—disposes of its L-188AFs at midyear.

Passenger boardings climb 4.8% to 4,581,000, but cargo declines 4.2% to 84.56 million FTKs.

Ansett's workforce increases 4.9% in 1985 to 7,792. Orders are placed in July for 12 B-737-377s and 6 Airbus Industrie A320s (with 8 options). In late spring, a frequent flyer program, Golden Wing, is established and attractively appointed lounges are opened at the stations in Sydney, Melbourne, Perth, Adelaide, Brisbane, and Canberra.

Passenger boardings for the parent are up 4.6% to 4,791,000, while cargo grows 9.3% to 73.19 million FTKs.

The payroll grows 7.5% in 1986 to 8,374 and, in January, the fiftieth anniversary is celebrated. In March, orders are placed for 6 MD-83s for delivery the following January. In April, the separate leasing company Ansett Worldwide Aviation Services (Pty.), Ltd. is established while the national parliament begins the May Inquiry, a deregulation study of the national air transport scene. Meanwhile, in August, ATI gains 50% control of the New Zealand domestic airline **Newman's Air, Ltd.**, while in October, the national seeks a contract to manage distressed **PLUNA (Primeras Lineas Uruguayas de Navegacion Aerea, S.A.)** of Uruguay.

Also in October, the first B-737-300s become available for lease. Late in the fall, the subsidiary **Ansett New Zealand, Ltd.** is formed. During the year, US\$84 million is spent to upgrade the Hayman Island resort.

Customer bookings jump 5.5% to 5,071,000, but freight falls by 3.9% to 70.33 million FTKs.

In 1987 the employee population rises 8.1% to 9,053. **East-West Airlines (Pty.), Ltd.** is acquired, but continues operations under its own name as a subsidiary. In addition, 20% shareholding is acquired in **America West Airlines**. Nonstop daytime flights are inaugurated in July from Melbourne to Hamilton Island and night services begin to that destination from Melbourne.

Passenger boardings accelerate 3.5% to 5,249,000 and cargo climbs 9.8% to 77.23 million FTKs.

Hiring continues in 1988 as the workforce reaches 9,459, a 4.4% increase. During July–September, the company introduces 100 new flights per week to business travel and holiday destinations and its services now include 112 flights per week from Melbourne to Sydney, 110 from Sydney to Melbourne, 81 from Sydney to Brisbane, and 78 from Brisbane to Sydney.

In early October, fares are increased across-the-board at approximately 5.75%; later in the month, General Manager Forrester retires and is succeeded as managing director by Graeme J. McMahon.

Customer bookings jump 9.4% to 6,197,000 and freight rises by 9.1% to 85.97 million FTKs.

Largely as a result of a job action by pilots that will begin during the summer, the workforce is cut 4.2% in 1989 to 9,059. During the spring, Australian artists David Rankin, Clifton Pugh, and Rolf Harris paint a B-727-277A in a cheery animal motif. In June, it is employed for a three-day series of Dream Flights offered to the nation's disadvantaged children; the plane is sold to **Federal Express** at month's end. On July

17, the carrier introduces Executive Class business service and upgrades its first-class product, Premier Class.

On August 24, pilots from Ansett, **Australian Airlines (Pty.), Ltd.** and **Qantas Airways (Pty.), Ltd.**, are suspended. The Australian Federation of Air Pilots has spent months contesting the government's decision to grant only a 6% wage increase instead of the 13% requested. Union members respond to the suspension by resigning en masse. Without pilots, Ansett is forced to temporarily shut down. In an effort to maintain essential air service, the government turns to the Royal Australian Air Force in September (with unhappy early results) and also invites those international airlines making more than one stop in Australia to begin carrying domestic traffic. **Cathay Pacific Airways (Pty.), Ltd.**, **Thai Airways International, Ltd. (THAI)**, **Garuda Indonesian Airlines, Malaysian Airlines, Ltd. (MAS)**, **Continental Airlines, Singapore Airlines, Ltd.**, **British Airways, Ltd. (2)**, and **Olympic Airways, S.A.** are able to provide only 22,000 of the 250,000 seats required weekly.

As a result of its shareholding in **America West Airlines**, Ansett is able to turn to the U.S. carrier for help. Complete with crews, 3 B-737-3G7s are leased to provide Australian domestic capacity, while 3 B-737-377s are dry-leased to the Phoenix-based major.

The labor difficulty causes passenger boardings to drop 30.7% to 4,297,000 and freight to decline by 37.8% to 53.46 million FTKs.

Company employment grows by 6.1% in 1990 to 9,611. Domestic flight operations are back to normal by February and the **America West Airlines** Boeings are returned. The first physical act in the initiation of domestic deregulation occurs on March 1 when the DOT opens the terminal-access process by requiring Ansett and **Australian Airlines (Pty.), Ltd.** to make available a limited amount of gate space for new entrants at the airports at Sydney, Melbourne, Adelaide, and Perth.

In preparation for Australian airline deregulation, Ansett Transport Industries, Ltd. gradually divests itself of most peripheral activities; the airline itself changes its name to **Ansett Australia (Pty.), Ltd.** during the fall. A new logo and livery are introduced and all aircraft are repainted and new uniforms are introduced. Statistics for the year are provided under its new name.

ANSETT AIRLINES OF NEW SOUTH WALES (PTY.), LTD.: Australia (1958–1981). On February 5, 1958, **Butler Air Transport (Pty.), Ltd.**, in which Ansett Transport Industries, Ltd. holds 52% interest, is acquired outright, together with its subsidiary, **Queensland Airlines (Pty.), Ltd.** and merged. Although Butler's 2 Vickers Viscount 832s are retained, 3 former **British European Airways Corporation (BEA)** Elizabethans employed by the merger partner are returned to England.

The company is renamed **Ansett Airlines of New South Wales (Pty.), Ltd.** in December 1959 and continues operation of Butler's services to and from destinations in Queensland and New South Wales. Shortly thereafter, Ansett Flying Boat Services operations are integrated. The first of 4 Fokker F.27-200s is delivered on February 12, 1960 and enters service before the end of the month.

A DC-3C with three crew crashes near Sydney on December 11 during a training flight; there are no survivors.

Service continues apace in 1961–1963. In 1964, Ansett Airlines of New South Wales (Pty.), Ltd. transports a total of 272,958 passengers. Airline employment is 194 and the fleet comprises 8 aircraft.

The workforce in 1965 stands at 175. The Ansett carrier operates a fleet comprising the same 4 Fokker F.27-200s and 4 Douglas DC-3s. Orders are outstanding for another Dutch-made Friendship.

A DC-3 is lost at Warranambool on April 1; there are no fatalities.

In November, five stops in New South Wales served by the carrier are transferred to another airline with a loss of passengers estimated to be 50,000 per year. A severe drought also reduces revenues. Still, enplanements grow slightly, up 1% to 275,715.

Bookings drop to 222,000 in 1966, due largely to the previous year's route restructuring.

In 1967, the workforce is 220 and the fleet comprises 8 aircraft: 1 DC-3, 5 F.27-200s, and 2 Shorts S-25s. Passenger boardings accelerate to

245,362. Ten more employees are hired in **1968** as enplanements climb to 254,495.

Airline employment grows to 244 in **1969** as bookings accelerate to 272,813.

The fleet in **1970** includes 4 F.27-200s and 1 new F.28 Fellowship; the jetliner is placed into intrastate service, the first within New South Wales. Capt. I. A. Brown is named operations manager. Passenger boardings rise a slight 3.9% to 283,884 as cargo falls by 0.8%. Bookings total 253,720 in **1971**.

In **1972** the workforce of the Ansett subsidiary stands at 260, up 0.1% over 1971 while its fleet comprises 5 Fokker F.27-200s. Enplanements climb 4% to 280,000 and freight is up by 6%.

Two additional Dutch-made Friendships are received in **1973**. Employee numbers grow to 286. Passenger boardings advance 11.3% to 309,000 and cargo traffic is up by 5%.

The eighth F.27-200 is obtained in **1974**, the same year that the flying boat service between Sydney and Lord Howe Island is, upon completion of a runway on the island, suspended. The last 2 Shorts S-25 Sandringham 4s, which have flown the Lord Howe run for over a decade, are now sold to the U.S. operator **Antilles Air Boats, Inc.** Customer bookings accelerate 8.4% to 368,000.

In **1975** the payroll is 288 and the fleet includes 6 F.27-200s and 1 F.27-600. Two of the former are replaced by F.27-500s late in the year. Bookings rise 2.8% to 381,000, but cargo is down 10.2%.

The employee population in **1976** drops 6.2% to 270. Two more F.27-200s are withdrawn and succeeded by F.27-500s received in July. Enplanements fall 1.8% to 374,000, and freight is off 2.9%.

A total of 391,346 passengers are carried in **1977**. Two additional F.27-500s are received while the last F.27-200s are sold.

In **1978**, cargo is up 1.3% and enplanements are up 6.6% to 418,788. Airline employment in **1979** stands at 330. Enplanements climb 4.2% to 436,634, while cargo accelerates 13.3% to 913,000 pounds.

The workforce grows by 3.3% in **1980** to 1,102. Freight slips 5.3% to 861,000 pounds, but bookings grow, up 2.8% to 448,713. On July 2, **1981** the carrier is renamed **Air New South Wales (Pty.), Ltd.**

ANSETT AIRLINES OF PAPUA NEW GUINEA (PTY.), LTD.: Australia (1960–1973). During **1960**, Ansett Transport Industries, Ltd., parent of **Ansett Airlines of Australia (Pty.), Ltd.**, acquires the assets and routes of **Mandated Airlines (Pty.), Ltd.**, **Gibbes Sepik Airways (Pty.), Ltd.**, and **Madang Air Services (Pty.), Ltd.** These are combined to form Ansett Airlines of Papua New Guinea (Pty.), Ltd. Employing certain aircraft of the merger partners as well as airlines from the Ansett fleet, the new subsidiary undertakes many of the previous services between Australia and the mandated territory.

Within a decade, significant improvements have been made. In **1970–1971** the fleet comprises 5 Fokker F.27s, 6 Douglas DC-3s, 2 de Havilland Canada DHC-6 Twin Otters, and 1 Shorts SC-7 Skyvan.

Airline employment in **1972** totals 260. A DC-3 is damaged beyond repair at Wapenamunda on July 17.

The Skyvan, with a pilot and three passengers, smashes into Mt. Siluwe on September 1; there are no survivors. Enplanements climb 7% to 316,000 and freight rises by an equal amount.

Scheduled passenger and cargo flights continue in something of a status quo situation until November 1, **1973**. Then the Ansett airline is dissolved and replaced by the new national airline of Papua New Guinea, **Air Niugini (Pty.), Ltd.**, in which Ansett holds 16% interest.

ANSETT AIRLINES OF SOUTH AUSTRALIA (PTY.), LTD.: Australia (1960–1981). During July **1959**, Guinea Holdings, parent of **Guinea Airways (Pty.), Ltd.**, is purchased by Ansett Transport Industries, Ltd. On January 17, **1960**, **Guinea Airways (Pty.), Ltd.** becomes **Airlines of South Australia (Pty.), Ltd.** Scheduled passenger and cargo services are operated from Adelaide to Port Lincoln, Kangaroo Island, Whyalla, Mount Gambier, Broken Hill, and Ceduna. A charter service is also provided to the government's Woomera Weapons Research Establishment.

By **1974** the carrier's enplanements are rising; at 195,000, they are 8.4% higher than just a year earlier. By **1978**, employment at General Manager L. Connelly's company is 129 and the fleet comprises of 3 Fokker F.27-200 Friendships. On July 2, **1981**, the carrier is renamed **Airlines of South Australia (Pty.), Ltd.**

ANSETT AIRWAYS (PTY.), LTD. See **ANSETT AIRLINES OF AUSTRALIA (PTY.), LTD.**

ANSETT AUSTRALIA (PTY.), LTD.: 501 Swanston St., Melbourne, Victoria, 3000, Australia; Phone (61) 3-9623-3333; Fax (61) 3-9623-3444; <http://www.ansett.co.au>; Code AN; Year Founded 1990. During the fall of **1990**, in preparation for Australia airline deregulation, the pioneering **Ansett Airlines of Australia (Pty.), Ltd.** is renamed. Despite the change, it will continue to remain the oldest scheduled passenger airline to bear its founder's name. A new color scheme is applied to the carrier's 34 aircraft. It features white fuselages, black "Ansett Australia" markings, and a version of the Australian flag on the tail. New uniforms are provided for the company's 9,611 employees.

In November–December, flight attendants are involved in an exchange program with customer service representatives from **America West Airlines**. The program, initiated by Ansett Managing Director Graeme J. McMahon, is designed not only to share experiences but to provide some Ansett flight employees experiences in a deregulated environment that they may pass on to others.

A total of 5,276,034 passengers are transported on the year under both names, a 21.7% increase over 1989. Freight traffic jumps 14.3% to 60.25 million FTKs.

The workforce is cut 5.8% in **1991** to 9,050 and the fleet now includes 11 Airbus Industry A320-211s, 5 Boeing 727-277As, including 1 leased out to **Polynesian Airlines/Cook Islands International**, 16 B-737-377s, 5 B-767-277s, 3 Fokker 50s, including 1 leased to **Austrian Air Service**, 2 out-of-service Fokker F.27-200s, and 1 F.27-600QC.

During February, new services are started from Perth to Brisbane and Cairns, with both routes operated via Ayers Rock.

B-737-377s enter service in May on the Sydney to Ayers Rock service. In September, keeping pace with **Australian Airlines (Pty.), Ltd.**, the carrier introduces a stringent frequent flyer program that requires an A\$30 entrance fee and awards credits good only for one year.

Passenger boardings leap upward by 24.9% to 65,81,369 and freight climbs 41.6% to 83.87 million FTKs. Expenses exceed income and there is a A\$23.8-million operating loss.

A twelfth A320-211 joins the fleet in **1992** and orders are placed for 10 A321-111s. A fare and semantics war is entered into with competing **Australian Airlines (Pty.), Ltd.** during April. To counter Australian's new Premier Class, Ansett drops its first-class service to business-class level, business to economy, and offers deep discounts on coach seating. In addition, Australian files suit against Ansett, claiming that its monopoly use of Hamilton Island Airport violates the national trade practices law. The suit will later be dropped.

Ansett now withdraws from its support contract with **Polynesian Airlines, Ltd.** (renewed for a decade in 1987); five years of legal wrangling and claims by both sides will ensue.

Rival **Australian Airlines (Pty.), Ltd.** is taken over by **Qantas Airways (Pty.), Ltd.** in September, following the government's surprise July decision to reverse its ban on cross-airline investment. In conciliation to struggling Ansett, the new International Air Services Commission authorizes the company to operate international flights on Asian routes not flown by Qantas. Meanwhile, in August, a code-sharing agreement is signed with the American major **Northwest Airlines**. It is followed in September by a marketing deal with **United Airlines** that provides for code-sharing on numerous Ansett domestic services.

Customer bookings for the year increase 35.9% to 7,507,643 while cargo accelerates 22.9% to 86.81 million FTKs. The year's operating profit is A\$12.1 million.

In 1993, Chairman Kenneth E. Cowley and Managing Director McMahon, who began with the company as a mail boy in 1955, employ 11,159 workers. The fleet over the past two years has been expanded by the addition of 3 British Aerospace BAe 146-300s and 1 leased B-737-33A.

As a result of its 25% purchase of **Qantas Airways (Pty.), Ltd.**, **British Airways, Ltd. (2)** in January drops its frequent flyer affiliation. Ansett immediately takes up new alliances with **Alitalia, S.p.A.** and **Deutsche Lufthansa A.G.** The arrangement with the German line will provide for reciprocal frequent flyer programs, shared lounges in Sydney, Melbourne, and Brisbane, and connecting services from Frankfurt to Sydney and Brisbane via Melbourne.

The marketing agreement is initiated with **United Airlines** in February; the program provides for frequent flyer program linkage, reciprocal lounge access, and code-sharing over various Ansett domestic routes to such destinations as Melbourne, Sydney, and the Gold Coast.

In July, company officials are nearly as surprised as those at **Qantas Airways (Pty.), Ltd.** when the Australian International Air Services Commission awards Ansett the majority of slots that will become available to Australia when the new airport opens at Osaka (KIX) late in 1994. Ansett is authorized four weekly B-747 services and plans are made to begin service, possibly with leased Jumbojets. In celebration of its international status, the company establishes an international division and prepares to implement a new corporate identity.

In August, the company signs an agreement, effective the following year, to code-share and to participate in the frequent flyer program of **Malaysia Airlines, Ltd. (MAS)**. The company's first international market, Bali, is opened in September. Flights to the popular Indonesian vacation resort are conducted from Perth, Sydney, Brisbane, Melbourne, and Darwin.

The subsidiary **Ansett W.A. (Ansett Western Australia [Pty.], Ltd.)** ceases to trade as a company subsidiary and is folded back into its parent, now known as Ansett Australia Holdings, as are the subsidiaries **EastWest Airlines, Ltd.** and **Ansett Express (Pty.), Ltd.** Equity partnership discussions are held with both **Singapore Airlines, Ltd.** and **Air New Zealand, Ltd.**

Passenger boardings jump 6.4% to 9,260,418 while freight grows by 4.9% to 94.76 million FTKs. The pretax profit is \$A42.8 million.

The integration of **EastWest Airlines (Pty.), Ltd.** and **Ansett Express (Pty.), Ltd.** is completed on January 1, 1994. During the spring, the company begins to make plans for its own public stock offering, two years hence, during which it hopes to raise upwards of A\$1 billion.

Having divested itself of most of its peripheral activities over the past three years, Ansett Transport Industries, Ltd. now changes its name to Ansett Australia Holdings, Ltd. to reinforce its airline focus. The first code-sharing service with **Malaysia Airlines, Ltd. (MAS)** begins in June on services from Australia to Auckland and Christchurch, New Zealand.

In August, a new blue and gold livery is unveiled, which, although it ends Ansett's use of a stylized Australian flag, retains the Southern Cross and adds a new seven-point "Ansett Star." A stylized "A" is painted on aircraft tails and the airline's name on fuselage sides.

A new subsidiary—Ansett International (Pty.), Ltd.—is created and two, later three, B-747-312s (dubbed "Spaceships") are leased from **Singapore Airlines, Ltd.** At the same time, the company relinquishes its rights to fly to Singapore and Malaysia. Employing the chartered Jumbojets, the company in September inaugurates a deep-discount, one-month fare to lure passengers aboard its new services from Sydney to Osaka's new Kansai International Airport (begun on August 30), as well as its new thrice-weekly roundtrips to Hong Kong.

In October, just two weeks after making application for the only weekly Sydney–Beijing route available, Ansett withdraws its request, deciding that B-747 operations to China will prove too expensive.

The crew of a B-747-377 with 253 passengers (including 247 Japanese), aborts the aircraft's October 20 flight to Osaka and turns back to Sydney's Kingsford Smith Airport after an indicator shows low oil pressure in one engine, which is shut down. The plane's nosewheel mechanism fails

to lock on touchdown, sending the 11-year-old jet into an 800-m. skid before it comes to rest 600 m. from the end of the runway. No injuries are reported but investigations reveal the skin of the plane to be damaged on a 10–15-m. stretch forward of the nosewheel area.

Also during the month, the carrier inaugurates code-sharing services with **Malaysia Airlines, Ltd. (MAS)** via Sydney and Melbourne, to Adelaide, Cairns, Canberra, the Gold Coast, and Hobart and from Sydney, Melbourne, and Adelaide to Kuala Lumpur. The two carriers, under the pact initiated a year earlier, also link their frequent flyer programs.

Plans are made at the end of the year for the introduction into the fleet of the first of 5 A320-211s and the retirement of the last 2 remaining F.28-1000s and 2 F.28-3000.

Enplanements for the year climb 6.8% to 11,289,000, but freight declines by 3.9% to 104.49 million FTKs. Ansett Holdings reports its revenues up 12.8% to A\$2.2 billion and that profits have been generated: A\$154.6 million (operating) and A\$112.2 million (net).

After two years of cost cutting, the company's workforce in 1995 totals 15,000. To celebrate the centenary of Banjo Peterson's famous song *Waltzing Matilda*, a B-737-377 has a scene from the song painted on its forward fuselage.

Discussions are held concerning possible shareholding for **Air New Zealand, Ltd.** In addition, new frequencies are inaugurated to Hong Kong, Japan, and Indonesia. The first A320-211s arrive in August. The company begins to shift smaller aircraft off regional routes, which it turns over to such affiliates as **Kendall Airlines (Pty.), Ltd.**

Code-sharing starts with **EVA Air, Ltd.** in November over a thrice-weekly B-747-377 route from Sydney via Kuala Lumpur to Taipei; shared seating is also assigned on certain Australian domestic frequencies. The same month, a pact begins with **Virgin Atlantic Airways, Ltd.** that provides for joint U.K. to Australia via Hong Kong fares and shared marketing in London and Sydney. Meanwhile, a third B-747-377 arrives from **Singapore Airlines, Ltd.**

During the third week of November, a memorandum of understanding is signed with TNT, Ltd. Under its terms **Air New Zealand, Ltd.** will purchase from TNT a 25% stake in Ansett Australia for A\$200 million. In addition, it has the option through February 15, 1998, to purchase another 25% for A\$225 million. If this second stock option is not taken up, TNT will have the option to buy back the initial 25% share. Both the Australian Foreign Investment Review Board and New Zealand's Commerce Commission must review the deal. By month's end, the code-shared service between Australia and Malaysia is up to 11 flights each week: daily from Melbourne to Kuala Lumpur, 4 flights direct from Sydney, and 4 flights from Sydney to Kuala Lumpur via Melbourne.

In December, twice-weekly, block-seat, code-sharing flights begin with **Aerolineas Argentinas, S.A.** on the trans-Tasman service from Sydney to Auckland aboard an Ansett B-747-377. The flights are planned to connect with the Argentine major's flights to and from Buenos Aires. Also during the month, the carrier undertakes its own weekly flights from Sydney to Taiwan, exclusive of **EVA Air, Ltd.**

The traffic figures of 11,508,172 represents only domestic passengers.

Airline employment grows by 6.5% in 1996 to 17,977. In a preliminary January ruling, the New Zealand Commerce Commission disapproves of **Air New Zealand, Ltd.'s** arrangement with TNT, Ltd. It advises all interested parties that they may make written comments on the proposed sale until February 29 and give oral presentations in March, but that it will make a final determination on April 3. Twice-weekly B-747-377 flights to Jakarta commence in February.

To improve connections with regional affiliates and among its own fleet, the carrier, during the first quarter, installs a new flight management system developed by **Deutsche Lufthansa, A.G.** The new system is able to take the schedules of competing airlines into consideration when revising Ansett's own schedule.

The New Zealand Commerce Commission, fearing a monopoly over New Zealand's domestic routes, rules on April 3 that **Air New Zealand, Ltd.** may not purchase the TNT, Ltd. interest in Ansett.

KLM (Royal Dutch Airlines, N.V.) and **Royal Tongan Airlines** become partners in April. The former joins in initiating joint international services and joins with Ansett on domestic Australian routes between Adelaide, Brisbane, Cairns, Canberra, Melbourne, and Sydney. Royal Tongan code-shares on Ansett's trans-Tasman routes. In May, four-times-per-week B-767-324ER service is inaugurated from Sydney to Kuala Lumpur via Jakarta.

The Commerce Commission reverses its April decision in late June after News, Ltd., which also holds 50% interest in Ansett Australia (Pty.), Ltd., steps forward at mid-month and acquires 100% ownership of **Ansett New Zealand, Ltd.** The new equity arrangement ends New Zealand government's monopoly concerns; however, the TNT, Ltd. purchase still must be approved by two Australian bodies, the Foreign Investment Review Board and the Competition and Consumer's Commission. These arrangements will be completed over the summer.

On July 2, Ansett begins to code-share with **Korean Airlines/Korean Air (KAL)** over return routes from Brisbane and Sydney to Seoul. Company B-747-377s fly the route twice weekly. Other new services are independently inaugurated to Jakarta, Taipei, and Kuala Lumpur.

The formal A\$325-million buyout of the **TNT, Ltd.** interest is approved by the TNT board in early September. **Air New Zealand, Ltd.** pledges to invest A\$150 million in Ansett (taking 65% of the needed funds from its own cash reserves, while borrowing the remainder), while the Australian airline's remaining half-owner, the News, Ltd., pledges a third of that amount.

The ANZ courtship finally pays off in October as the company is able to acquire both Ansett stockholder and Australian government approval for its purchase of a 50%, A\$475-million stake in the Australian independent's parent, Ansett Holdings. News, Ltd. CEO and Ansett Chairman/CEO Cowley is given a new contract that retains his services for another five years.

A major commercial agreement is now put in place between the two carriers that will implement code-sharing on trans-Tasman flights to Auckland and internal Australian domestic routes, offer passengers reciprocal frequent flyer program participation, and lounge and club facilities.

To replenish its coffers after the Ansett purchase and to increase the number of shares held by foreign investors from 35% to 49%, **Air New Zealand, Ltd.** now offers a prorated issue of 121 million shares for sale. The offering brings in NZ\$242 million, including NZ\$47 million (US\$32.9 million) from rival **Qantas Airways (Pty.), Ltd.**, which now holds a 19.4% stake.

Electronic ticketing comes to Ansett during the third week of November. When the service is introduced on 28 domestic routes, it is so successful its first day that a 20% passenger use rate is experienced. On December 2 the company announces that ticketless travel will be available on all 140 domestic routes by the first of the year. The board now seeks to appoint new leadership; Chairman Cowley and Chief Operating Officer Hugh Thorburn both resign to make way for former **Cathay Pacific Airways (Pty.), Ltd.** Managing Director Rod Eddington.

Full customer bookings (domestic and international) inch up 2.8% to 12,160,000 and operating income moves up 5.5% to A\$2.56 billion. Costs, however, rise 9.5% to A\$2.57 billion and leave an A\$14.47-million operating loss. Still, a net A\$45.47-million net profit is reported. Debt stands at A\$1.7 billion.

The workforce is reduced by 5.1% in 1997 to 17,067. Former Cathay Managing Director Eddington becomes AA's executive chairman on January 9. On January 28, he joins Sydney Olympic Games chief executive Mal Hemmerling in announcing that the company is one of seven chosen to be official airlines for the Sydney 2000 games.

Code-sharing flights with **Air New Zealand, Ltd.** commence on February 1 on 66 weekly flights connecting Sydney and Brisbane with Auckland. With a first quarter loss anticipated, the company abandons its attempts to secure the rights to serve Bangkok presently held by **Qantas Airways (Pty.), Ltd.**

Also during the first quarter, an A320-211 is given a special new livery promoting the Sydney 2000 Olympic Games. The plane is unveiled at the Airshows Down Under '97 exposition.

Ansett, which flies from Sydney to Jakarta four times a week adds a fifth weekly roundtrip on March 20.

Preparations are also made to retire the company's last six "three-holer" Boeing 727s; those remaining are given special titles denoting the type's 33 years of service to the airline.

Piloted by Capt. Lionel Griffiths, Flight 36, a B-727-277 with a full complement of passengers, completes Ansett's final regularly scheduled B-727 service from Hobart to Melbourne's Tullamarine Airport on April 1. As the aircraft taxis to the gate, it passes through a salute of water cannon spray provided by airport fire trucks. Three days later, the last two B-727-277s fly six special sight-seeing flights over Melbourne for company employees. The A\$60-seats for the flights go rapidly and the day is finished with a large and festive send-off party at the Melbourne Jet Base.

At the end of April, CEO Eddington indicates that cost-cutting measures must continue and that certain as-yet unnamed elements should be merged with those of **Air New Zealand, Ltd.** Thirteen joint task forces are established to work out the process of merging important functions the two airlines now operate separately. The Australian Consumer Commission in early May indicates that Eddington must submit to them any merger plan before it takes effect.

The company also embarks upon fleet rationalization beginning in May. Four F.28-4000s are sold to **Flight West Airlines (Pty.), Ltd.**, along with the former AA routes north of Brisbane to Papua New Guinea, from Brisbane to Prosperine, and from Brisbane to Norfolk Island in the Tasman Sea.

The 5 remaining Fokker 50s are turned over to **Skywest Airlines (Pty.), Ltd.** Five B-727-277As are withdrawn from service and sent to Aviation Partners in Miami, Florida, for conversion into freighters. Acting on behalf of **Kendell Airlines (Pty.), Ltd.**, the company agrees to trade 4 Fokker 50s to **Skyways, A.B.** of Sweden in exchange for 4 SAAB 340As. Ansett now elects to delay any decision on long-term fleet replacement program concerning Boeing or Airbus aircraft until the year's second half, by which time it will have had a chance to consult with **Air New Zealand, Ltd.**

On the financial front, the state of the company's coffers and an upcoming second-quarter loss forces CEO Eddington to request that Ansett's unions delay half of the US\$12-million wage increase they had achieved the previous year in an enterprise bargaining arrangement.

When the Australian travel industry threatens to take all of its business to rival **Qantas Airways (Pty.), Ltd.**, Ansett backs off a plan to cut commission rates by 20% for charter and domestic flights booked by travel agents; Qantas has not lowered rates.

Discussions between the carrier, **Air New Zealand, Ltd.**, and **Singapore Airlines, Ltd.** are revealed in May. Plans are afoot for a code-sharing arrangement that will grant the two Australasian carriers new inroads into Europe via Singapore, as well as marketing, sales, and pricing cooperation with the Southeast Asian major.

En route from Osaka (KIX) to Brisbane on May 27, Flight 822, a B-747-312 with 11 crew and 79 passengers, hits a short, sharp pocket of air turbulence south of Papua New Guinea. Sixteen Japanese tourists and a cabin attendant are hurt; upon arrival at the airliner's destination, 12 are treated on scene for cuts, lacerations, and bruises while five are hospitalized.

As the relationship with **Air New Zealand, Ltd.** solidifies, Ansett, in early June, announces that it will close its own offices at Auckland, London, Frankfurt, Singapore, and Los Angeles and combine its operations in those cities with its partner.

On June 21, AA, **Singapore Airlines, Ltd.**, and **Air New Zealand, Ltd.** jointly sign a memorandum of understanding for the creation of the largest airline alliance in Southeast Asia. The compact contains what has become the normal large-scale partnership compact ingredients of shared networks, codes, marketing, scheduling, reservations, planning,

purchasing, cargo, frequent flyer programs, information technologies, and ground and passenger services. Arrangements for certain kinds of financing, fleet rationalization, and relationships with other partners remain to be sorted out. Permission is quickly received from New Zealand regulators, but the process with the Australian Competition and Consumer Commission will take months.

Ansett and **Air New Zealand, Ltd.** merge their domestic New Zealand courier and air cargo units during July.

Beginning August 18, Ansett runs a special three-week promotion. Those customers who spend A\$10 or more at a Shell gasoline station receive scratch cards that give them a chance to win 1 of 10,000 free flights, including 2,000 to Ansett's foreign destinations.

On September 3 the company and **Polynesian Airlines, Ltd.** both withdraw their claims against one another in their dispute stemming from Ansett's 1992 withdrawal from a support contract. The terms agreed to in the court settlement are not made public.

Also during the fall, a marketing and code-sharing agreement is signed with the regional carrier **Hazelton Airlines (Pty.), Ltd.**

An A320-231 arrives under lease from ILFC in October. Underscoring its alliance with Ansett and its trans-Tasman presence in Australia, **Air New Zealand, Ltd.** in early October, lists 277.7 million B shares on the Australian Stock Exchange. It is the carrier's first listing outside of New Zealand.

As the result of a detailed set of recommendations from Bain Consulting, CEO Eddington orders a wide-ranging corporate review of airline practices to begin in November. A staff publication details the procedures to be followed as a concerted method is sought to break into significant profitability.

Also in November, it is announced that the carrier will replace the unprofitable first-class service offered aboard its B-747-200s with an enhanced business-class product. Simultaneously, it is noted that Ansett is investing A\$167 million (US\$116 million) in a renovation of its domestic terminal at Sydney Airport in preparation for the 2000 Olympic Games.

Beginning in November, Subway™ sandwiches are served during afternoon tea on flights from Sydney, Melbourne, Brisbane, and Adelaide that depart between 1:30–4:00 p.m.

During December, both Ansett and **Qantas Airways (Pty.), Ltd.** are absolved by the government of any responsibility to surrender slots to new entrants starting service from any of Australia's airports.

Enplanements this year jump 10.8% as 13,469,000 passengers are transported. Revenues for Ansett Holdings inch up 1% to A\$2.188 billion, while costs rise .02% to A\$3.183 billion. This year, there is a small A\$5.05-million operating profit and a nice A\$38.31-million net gain.

At the beginning of 1998, Ansett Australia is the 24th largest airline in the world in terms of passenger boardings and 25th in number of employees. The fleet of 72 aircraft is 93.1% Stage III certified and includes 5 Fokker F.28s, 22 B-737s, 3 B-747s, 11 B-767s, 20 A320s, and 11 BAe 146s.

The familiar hat sported by domestic flight attendants is dropped from the corporate wardrobe on January 1.

During the first week of January, a team of six legendary swimming stars (Australians Murray Rose and Shane Gould, Americans Greg Louganis and Mark Spitz, Krisztina Egerszegi from Hungary, and Vladimir Salnikov from Russia) serve as media representatives for the company during the World Swimming Championships at Perth.

Noting that traffic is down by over 65%, the company, also in January, joins with **Qantas Airways (Pty.), Ltd.** and **Air New Zealand, Ltd.** in planning for a suspension of service to Seoul and other Korean cities. At the same time, the carrier joins with **Air New Zealand, Ltd.** and **Singapore Airlines, Ltd.** in petitioning the Australian Competition and Consumer Commission for approval of their strategic alliance.

With the start of the business travel year on February 2, the company makes several schedule changes for the times of departure from Sydney, Melbourne, Adelaide, Perth, and Darwin. Noting a sharp drop

in traffic, the biweekly Sydney–Seoul–Brisbane–Sydney service is suspended on February 8.

Early in the year, a three-way code-sharing pact is entered into with **Air New Zealand, Ltd.** and **EVA Airways, Ltd.** The pact takes effect on April 1 with the introduction of dual-designator flights to Taipei. Plans for code-shares to Hong Kong, Osaka, and China are shelved because the bilateral agreements between the affected nations do not allow third country code-shares.

Also at the beginning of the second quarter, the company institutes a new program under which employees will receive significant benefits if they retire early. Over 1,000 workers indicate interest.

On April 4, a new Saturday-only night roundtrip is introduced from Brisbane to Bali.

On May 14, the company joins with **Air New Zealand, Ltd.** in signing a memorandum of understanding to join the "Star Alliance" in 1999. Certain unspecified "customer benefit" prerequisites must now be fulfilled.

Due to a lack of traffic and discounts that produced losses, the carrier, on May 31, suspends its daily roundtrips from Sydney to Kuala Lumpur via Jakarta.

On June 8, the Australian Competition and Consumer Commission gives its draft approval for the airline's alliance with **Air New Zealand, Ltd.** and **Singapore Airlines, Ltd.**

Meetings are held between management and representatives from 10 unions on June 11 to inform them that it will sell its in-flight catering operations and its Ansett Air Freight door-to-door retail freight business in 1999 as part of a drive to cut \$135 million from its operating costs. It also begins discussions on the latest enterprise bargaining agreement, or labor agreement.

Continuing to signal a return to its core airline operations, Ansett, at the beginning of July, sells its remaining resort interest, the Hayman Island resort, together with its controversial half-interest in Hamilton Island Airport, to an Australian hotel owners' group for A\$59 million (\$36.5 million).

On July 31, the Australian Competition and Consumer Commission grants regulatory approval of the tripartite pact between Ansett, **Air New Zealand, Ltd.**, and **Singapore Airlines, Ltd.** The endorsement allows Chairman Eddington to move more quickly on a whole range of operational and marketing strategies he has been publicly discussing in order to cut costs and increase market share.

Saturday-only B-737-300 roundtrips commence on August 1 from Sydney and Melbourne to Broome via Alice Springs, with connections to Darwin and Ayers Rock.

Early in September, Chairman Eddington is appointed deputy chairman of Rupert Murdoch's News, Ltd., half-owner of the airline. Eddington will also remain in charge at Ansett Australia.

Beginning on September 16, Chairman Eddington starts to reveal to employees and the public the first of some 70 points of a 3-year initiative designed to produce 10% profits that can be sustained.

In addition to planning for a five-year, A\$1-billion fleet renewal undertaking, the initiation of new alliances, and cost-cutting, Eddington announces that it will turn over most of its East Coast regional routes to its low-cost subsidiary **Kendell Airlines, Ltd.** To operate the new services, the Kendell board approves the acquisition of 12 new regional jets, either Canadair CRJs or Embraer ERJs. Within a month, the airline chooses the former.

In this plan, flights to Launceston will end, while only one daily service will be retained from Melbourne to Hobart. Flights to Rockhampton, Mackay, Bellina, and Coffs Harbour are also suspended. Frequencies will end between Canberra and Brisbane and between Canberra and Adelaide, while those from Canberra to Melbourne and Sydney will be reduced. Kendell will assume all of these flights in November 1999.

Having lost A\$55 million (\$33 million) on Asian services the previous year and continuing to take losses this year, Eddington notes that flights to a number of destinations must cease.

In addition, a significant cut will be made in the senior executive ranks. The jobs of 300 managers are vacated and these personnel are required to reapply for posts in a streamlined bureaucracy—and many will not be successful.

It is noted on October 5 that the route from Sydney to Shanghai has been suspended because of China's delay in granting Australia preferred tourist destination status. A new flight to Taipei will, however, be added, along with service to Fiji, on October 25.

Glenn Mitchell of the *Victoria Herald Post* reports on October 26 that Ansett has entered the record books with a "first" it probably would as soon have not earned. Increasing heroin and amphetamine use on its domestic and international aircraft have forced it to, controversially, fit its planes with syringe disposal bins. The dramatic public health step against a clear risk to the safety of customers and staff, taken after consultation with the Los Angeles-based International Airline Medical Advisory Council, is applauded by the Australian Medical Association, but condemned as "insane" by Prime Minister John Howard's National Council on Drugs. The Ansett action has been triggered by the September arrest of an Ansett passenger who had publicly injected heroin while on a flight from Melbourne to Brisbane. The airline, like others, reports that syringes containing heroin and amphetamines have been found in toilet bowls and in seat pockets by cabin-cleaning crews.

On January 5, 1999, Ansett sells its 68.2% stake in the Australian Diners Club payment card company to Diners Club International. The move is made as part of the airline's effort to improve its profit margin.

After a two-day period in which special decals are applied, a B-737-377 is unveiled on January 19 wearing a striking, 12 m.-long visual image of the 3 Sydney 2000 Olympic Games mascots—Olly the kookaburra, Syd the platypus, and Millie the echidna. The aircraft, with actors in costumes representing the three, depart Sydney for a goodwill flight around Australia. They will visit Broome, Port Hedland, Kalgoorlie, Alice Springs, Hobart, Adelaide, Brisbane, Melbourne, and other points.

Having elected not to take a stake in **China Airlines, Ltd. (CAL)**, **Singapore Airlines, Ltd.** now turns its attention to Ansett.

Beginning on February 1, Ansett places its code aboard **Flight West Airlines (Pty.), Ltd.** daily roundtrip flights operating from North Queensland to Port Moresby.

Two B-747-412s are leased from **Singapore Airlines, Ltd.** on February 4. On February 10, Ansett joins with **Qantas Airways (Pty.), Ltd.** in voicing opposition to the "open skies" aviation policy currently being studied by the government's Productivity Commission.

A strategic agreement with **All Nippon Airways Company, Ltd. (ANA)** is announced on February 16. Under its terms, the two companies link their frequent flyer programs and offer common use of airport lounges and through check-in services. Code-sharing on revenue passenger flights will commence shortly.

Accompanied by Chairman Eddington and Deputy Chairman/CEO Cheong Chong Kong of **Singapore Airlines, Ltd.**, News Corp. Senior Executive Vice President Lachlan Murdoch, on behalf of owner Rupert Murdoch, meets with Australian Prime Minister John Howard and Treasurer Peter Costello in Canberra on March 22. Singapore had unsuccessfully attempted to gain shareholding in **Qantas Airways (Pty.), Ltd.** in 1992 and has remained desirous of a gaining a larger foothold in the big Australian domestic market. The conference follows on the heels of a visit to Canberra earlier in the month by Singapore Prime Minister Goh Chok Tong.

As reported in *The Age* next day, the men lobby the government leaders for permission to have Singapore Airlines buy a stake in Ansett, which is now jointly owned by News Corp. and **Air New Zealand, Ltd.** Although unstated, Singapore's stake is believed to be the same 25% that British Airways, Ltd. holds in Qantas Airways. Doreen Siow of Reuters reports that the arrangement will see News Corp. turn over its 50% stake in Ansett for more than A\$500 million. As Prime Minister Howard tells the Australian Broadcasting Corporation, half of Ansett Australia is already foreign-owned and any sale to Singapore Airlines would be a simple foreign transaction that should be worked out by the

companies involved under Australian law. Approval is expected from the Foreign Investment Review Board, which will next review the offer.

Also at the time of their visit, Murdoch and Eddington ask Howard and opposition leader Kim Beazley to oppose a national "open skies" policy toward foreign airlines.

At a joint news conference on March 25, News Corp. Chairman Murdoch, Chairman Eddington, and Deputy Chairman/CEO Kong formally announce the understanding under which News Corp. is selling its 50% stake in Ansett to Singapore Airlines for A\$500 million. Several hurdles remain to be jumped before the deal is officially completed, including regulatory approvals, due diligence, **Air New Zealand, Ltd.**'s preemptive right to buy News' stake in place of Singapore Airlines, and the conclusion of a sale and purchase contract. If these conditions are satisfied, the transaction will be finalized in the months after July 1 and Eddington will remain in his post for at least two years.

At a news conference on March 27, Sir Selwyn Cushing, chairman of **Air New Zealand, Ltd.** and of its major shareholder, Brierley Investments, indicates that his airline may exercise its preemptive right to match the Singapore Airlines offer. To that end, a task force is put together to investigate the possibility of full ownership of Ansett.

Air New Zealand, Ltd. and Ansett formally become the seventh and eighth members of the "Star Alliance" on March 28; Singapore Airlines, which hopes to purchase Ansett as well as a stake in **Thai Airways International, Ltd. (THAI)**, has indicated that it, too, wishes to join the multinational alliance.

Under terms of the code-sharing arrangement, daily ANA service between Osaka (KIX) and Sydney via Brisbane is replaced, also on March 28, by Ansett-operated B-747-412 flights carrying ANA's code.

At the beginning of April, Ansett renews its agreement with **Hazleton Airlines (Pty.), Ltd.** for another five years. Ansett also gains right of first refusal on a minimum 20% of Hazleton's shares.

As the Singapore merger perks along in April, Ansett and its rival, **Qantas Airways (Pty.), Ltd.** continue to find themselves on the same side in their continued opposition to the government's proposed "open skies" policy for domestic routes. Both companies hint broadly that they will reduce regional services if foreign airlines are allowed to operate within Australia.

Representatives from the two carriers meet with the Australian federal transport minister, employing various commercial arguments to support their opposition. Their efforts are apparently made to no avail; indeed, on April 30, both airlines are publicly rebuked by the minister, whose spokesman informs the Australian Associated Press that the civil leader objects to their using services to regional Australians as a bargaining chip.

On May 3, both carriers deny allegations reported in the *Sydney Morning Herald* that they are considering a blackout on discounts for domestic airfares before and during the 2000 Sydney Olympic games.

Airline officials submit a complaint to the Australian Football League (AFL) on May 24 concerning disruptive and abusive behavior by members of the Adelaide Kangaroo team on a June 23 return flight from Perth. The AFL promises an investigation.

Brierley Investments, Ltd. announces on May 25 that it has spent approximately NZ\$106 million (US\$57 million) to purchase **Air New Zealand, Ltd.** shares on-market. This was done to lift its stake in the flag carrier from 42% to 47.11% and increase its influence in the wider Australasian airline scene now being played with Ansett Australia and Singapore Airlines, Ltd. Some analysts suggest that the next step may be for ANZ to exercise its preemptive right to acquire the News Corp. share in Ansett and when fully in control of the Australian line to invite Singapore to buy into a merged entity. Others speculate that Brierley is seeking a way to prop up an unprofitable asset before selling it. Neither Ansett nor Singapore offer comment.

The Singapore Shipping Times on May 27 quotes Glenn Robertson, Ansett's Olympics General Manager, as stating that his carrier has already achieved A\$650 million in new and projected sales from its sponsorship of the 2000 Sydney games. It is anticipated that, by the time the contests

commence in September next, Ansett will have earned at least A\$900 million, as against sponsorship costs of A\$50 million in cash and kind.

News Corp., Ltd., on June 9, recesses its talks with both **Air New Zealand, Ltd.** and **Singapore Airlines, Ltd.**, but indicates that, once the two have come to terms concerning their equity investment in Ansett, discussions may continue. A day later, Singapore pulls out of the negotiations altogether, indicating that it will now look at investing in the flag carriers of Thailand or South Africa. In fact, Air New Zealand, Ltd. has quietly exercised its preemptive right over the News Corp. shares to block the SIA bid. Within a few days, News Corp. raises the prospective sale price for the airlines by almost A\$200 million.

On July 1, Ansett begins to code-share on all **Singapore Airlines, Ltd.** services from Australia to Singapore, plus seven weekly roundtrips to London and four-times-a-day flights to Bangkok.

In October, Ansett, as official airline of the 2000 Summer Olympics, unveils a B-737-33A adorned with the Olympic mascots "Syd," "Millie," and "Olly."

Also during the fall, Brierley Investments works to put its own financial house in order and attend to the fiscal base of **Air New Zealand, Ltd.** At the same time, Ansett employees are able to put forward an A\$500-million counterbid for the News Corp. shares.

On November 15, 2 B-757s are sold to **DHL Worldwide Express**. A dedicated BAe 146 freighter service is inaugurated on November 30 from Melbourne and Adelaide to Alice Springs and Darwin. Frequencies between Sydney and Hong Kong become daily on December 3.

Customer bookings dip 0.4% on the year to 13,399,000. Group operating revenues inch up 0.1% to A\$2.32 billion even as expenses fall 2.4% to A\$2.23 billion. The operating profit jumps to A\$97.56 million while net gain nearly doubles to A\$103.64 million.

The workforce stands at 14,876 at the start of 2000, reflecting a 7.7% reduction in force over the previous 12 months. Among the world's top 25 airlines at the beginning of the new millennium, Ansett Group has the 25th largest net gain.

Most Australian domestic service is cancelled on February 11 as company employees meet to discuss working conditions. Thrice-weekly roundtrips from Sydney to Taipei end next day.

Air New Zealand, Ltd. acquires the outstanding News Corp. 50% stake on February 18 for A\$680 million. Payment includes A\$580 million (NZ\$744 million) up front plus another installment within a two- to four-year period equal to 10.5% of ANZ's issued shares (or a cash equivalent). When the transaction is completed, Ansett will have an effective value of A\$1.36 billion. Although **Qantas Airways (Pty.), Ltd.** objects, the Australian government, which has eliminated ownership requirements on foreign ownership of domestic carriers in order to pump up airline competition, permits the sale. The new airline combine boasts A\$6.7 billion in assets, an A\$5.8-billion revenue base, and 24,000 employees.

The company's licensed aircraft mechanics launch a series of three-hour strikes at Australian airports on March 6 to protest against potential job losses coming from the company's sale to ANZ.

In a move planned the previous year, both Ansett and **Air New Zealand, Ltd.** join the "Star Alliance" on March 28. On April 4, a meeting of ANZ shareholders authorizes the carrier's executives to pay the NZ\$744 million (A\$580 million) in up-front tranche for Ansett Australia as soon as the paperwork for the acquisition is completed. As earlier agreed, the second installment will come later.

During the spring, **Air New Zealand, Ltd.** begins to review future group opportunities, including personnel and fleet requirements, as well as the stalled CRJ strategy of Ansett subsidiary **Kendall Airlines, Ltd.** and potential competition from, among others, Sir Richard Branson's newly formed **Virgin Blue, Ltd.**

Out of a job almost from the moment of the ANZ takeover, Executive Chairman Eddington is elected the new CEO of **British Airways, Ltd.** (2), assuming his new post on May 1. Craig Wallace, general manager of commercial planning and a close Eddington associate, is named his interim successor. The last B-727-200F operated by Ansett Australia Cargo is withdrawn on May 22 and returned to its lessor, **Kitty Hawk Aircargo**.

Also during late May, a company B-767-324ER brings the Olympic flame from Athens to New Zealand via Guam. On May 30, Ansett General Manager Garry Kingshott announces that, after the merger, neither carrier will change its name.

On June 8, the specially chartered A320 *Unity* flies the Olympic flame (in a miner's lantern) to Ayers Rock, where it is carried off the plane by a Sydney Games board member, Anna Booth, to begin a 100-day trans-Australia torch relay prior to the Sydney XXVIIIth Olympiad in September.

Permission for the Ansett takeover is granted by the Australian Competition and Consumer Commission in late June. The authority requires that Ansett International be ensured of continued service development into and out of Australia and subjects **Air New Zealand, Ltd.** to conditions limiting its right to rationalize Ansett personnel and routes.

The Ansett purchase is completed on June 23. Three days later, ANZ Managing Director Jim McCrae indicates that the integration of Ansett's business fully into ANZ will take up to 18 months, although most of the work is expected to be finished within a year.

Despite fuel hedging that has saved A\$37.4 million over the past year, it is acknowledged in July that avgas costs over that period have risen 49.5% to A\$362.4 million.

During the first week of August, **Singapore International Airlines, Ltd.** is able to complete a 25% purchase into Ansett's new parent, thereby gaining three board seats and a voice in the management of the Australian subsidiary.

ANZ Chairman Sir Selwyn Cushing announces a regrouping of the two merger partners on August 10 into a new Air New Zealand Group, Ltd. structure.

The carrier and **Qantas Airways (Pty.), Ltd.** now become involved in a fare war with discount airline **Impulse Airlines (Pty.), Ltd.**, which is offering A\$33 one-way seats between Brisbane and Sydney.

On August 14, the two begin to match the upstart's prices for the route.

When the Air New Zealand Group, Ltd. comes into effect, also on August 14, it features three coordinating core units and special purpose business units. The core units include a strategic leadership Corporate Centre, a Commercial and Operational Core, and an Australasian Airline System Core, which coordinates the group's three domestic airline families (Ansett Australia, the Ansett regionals in Australia, and the New Zealand domestics). Ansett International and Air New Zealand International are left as separate entities, along with cargo, terminal, and engineering services.

Cushing also announces certain personnel changes. Ansett's interim CEO Wallace is now replaced by Andrew Miller, ANZ's domestic operations chief, while ANZ's marketing boss, Garry Kingshott, is named to lead the Ansett international division. Three other Ansett executives are released.

With assets of A\$6.69 billion (NZ\$8.58 billion), 24,000 staff, 186 aircraft, and 19 million annual passengers, the new group is viewed as one of the top 20 airline groups in the world.

The fare wars intensify as the month continues. To grab the initiative before **Virgin Blue, Ltd.** starts up in early September, Ansett and Qantas both offer a presale for one day of 250,000 tickets discounted by 85%; fares for shorter trips drop as low as A\$55 while transcontinental tickets can be had for A\$165. As the XXVII Olympics open on September 15, the carriers find that Australian demand for flights to Sydney is much lower than expected—most residents decide to view the games on television.

Qantas Airways (Pty.), Ltd. Deputy CEO Gary Toomey is named **Air New Zealand, Ltd.** CEO on September 28, effective in December.

Ansett begins code-sharing on ANZ domestic services in New Zealand on October 2. Four days later, Ansett Holdings purchases a 20% stake in the east coast regional Hazelton Airlines (Pty.), Ltd. from the Hazelton family. On October 12, the holding company makes an A\$15.3 million (US\$14.2 million) offer for the 13.11% ownership the family retains.

On October 29, the carrier begins four-times-a-week roundtrip service from Melbourne to Hong Kong.

ANSETT EXPRESS (PTY.), LTD.: Australia (1990–1992). In preparation for Australian airline deregulation, the former **Ansett NSW (Pty.), Ltd.** changes its name during the fall of 1990. Hubbing at Brisbane rather than Sydney, the carrier expands from New South Wales, becoming a point-to-point operator to other states. Under both names, General Manager Jon Hutchinson's 309-employee company, equipped with 2 new Fokker 50s and 6 F.28-4000s, the latter acquired from **East-West Airlines (Pty.), Ltd.**, flies a total of 553,773 passengers on the year, a 68.7% boost over 1989.

The workforce is cut 2.6% in 1991 to 301 and the fleet now includes 7 Fokker 50s, 3 of which are out of service, 2 Fokker F.28-1000s, 2 F.28-3000s leased from **Cimber Air, A.S.**, 5 F.28-4000s, and 1 Mohawk 298 chartered from **Southern Pacific Regional Airlines, Ltd.** A number of new routes are initiated including a high-speed Sydney–Canberra shuttle, service to Canberra, Rockhampton, and Mackay. In addition, frequencies are launched to Tasmania from Brisbane, Canberra, and Launceston. Customer bookings inch up 1.8% to 549,319.

Operations continue apace in 1992 and, in late 1993 the company ceases to trade as an Ansett subsidiary and is folded into its parent.

ANSETT NEW ZEALAND, LTD.: New Zealand (1986–2000). In August 1986, the subsidiary Ansett New Zealand, Ltd. is formed to provide New Zealand government-ordered competition with **Air New Zealand, Ltd.** over domestic routes. The older Ansett entity, **Airlines of New Zealand (Pty.), Ltd.**, together with **Newman's Air, Ltd.**, forms the basis upon which the new company will be built. The concern is jointly owned by Ansett (50%), **Newman's Air, Ltd.** (22.5%), and Brierly Investments (the remainder). Former **Air New Zealand, Ltd.** executive Ross B. Keenan is CEO.

The new entrant is provided with two de Havilland Canada DHC-7-102s in July 1987. Daily commuter flights are now begun from Auckland to Wellington and Christchurch. The first purpose-built terminal is opened at Wellington on July 23.

Flights are added in September to Glentanner near Mount Cook, Rotorua, and Queenstown. Two more terminals are opened—Auckland on October 30 and Christchurch on November 5.

Claiming release of its traffic figures will weigh against it in the competition with Air New Zealand, Ansett refuses to make available any results. It does, however, begin to install its award-winning Golden Wing lounges at the major New Zealand airports.

In January 1988, the carrier shares with **Air New Zealand, Ltd.** the 1987 "Passenger Service Award" from *Air Transport World* magazine. During the summer, 5 Boeing 737-177s are leased from the parent, which has obtained them from **Deutsche Lufthansa, A.G.** by way of **America West Airlines**.

New destinations visited, starting in July, include Dunedin and Palmerston North. In October, daily nonstop and direct first-class and hot meal service is initiated between Auckland and Christchurch, while earlier services to Mount Cook, Queenstown, and Rotorua are maintained.

Although traffic figures are again withheld, the press notes how the privatized state carrier's monopoly is broken by the Boeings and follows the new competition, widely denounced in some quarters.

Brierly Investments withdraws from the airline and Newman's has no option but to follow. Ansett Transport Industries takes up the vacated shareholding and the carrier becomes a wholly owned ATI subsidiary.

Early in 1989 orders are placed for 7 British Aerospace BAe 146-300 Whisper Jets and 2 BAe 146-200QC Quick Convertibles. In April, a New Zealand Airpass is introduced for international travelers planning extensive travel in the country; it allows them to construct their own itineraries at considerable savings.

Wellington–Nelson roundtrips begin in June. In addition, **Rex Aviation, Ltd.** becomes a Transair commuter affiliate, offering connecting services across Cook Strait.

The premier Whisper Jet arrives in July and allows the carrier to provide the nation's first jet service into Queenstown. Also during the

month, frequencies are initiated to Invercargill and withdrawn from Glentanner. Orders are now placed for 6 B-737-500s.

Northern Air, Ltd. becomes a commuter affiliate, providing a Transair link to Auckland from Whangarei.

Former **Polynesian Airlines, Ltd.** General Manager John Buchanan is appointed CEO in October and the first BAe 146-200QC enters service, operating as a passenger plane by day and a freighter at night.

A major 39% expansion of service is launched across the flight network in November. Frequencies between Auckland and Christchurch are increased from 46 to 87 per week while, percentage-wise, service between Auckland and Wellington grows by 21% and between Wellington and Christchurch, 15%. Indeed, the new schedule, taking advantage of the newly delivered BAes, increases the company's total number of flights per week from 350 to 551. Beginning in December, smoking is banned on all flights.

The 1990 fleet is increased by the addition of a second BAe 146-200QC and two de Havilland Canada DHC-8-100s, which replace the DASH-7s. Authority is sought to begin flights to Asia, North America, and into the Pacific.

Executive Class service is introduced in January; it replaces first-class service entirely and, offering several amenities, is available for NZ\$33 over regular fares. Also during the first quarter, the former German B-737-177s are all withdrawn.

In May–June, the company nearly stops flying, but agrees to continue on after receiving reassurances from the New Zealand government. This, plus a promise from **Qantas Airways (Pty.), Ltd.** to continue flying Ansett passengers to the country even after its purchase (in conjunction with **Japan Air Lines Company, Ltd. (2)** and **American Airlines**) of **Air New Zealand, Ltd.** is implemented. Also in June, the airline introduces New Zealand's first in-flight bar service on domestic flights.

In November, Auckland to Christchurch service is increased from 47 to 87 flights per week.

In January 1991, the company begins nonstop BAe 146-300 "Whisperjet" service from Queenstown to Rotorua. **Rex Aviation, Ltd.** begins Transair roundtrips in October between Wellington and Blenheim.

For the first time, customer bookings exceed one million this year.

Operations continue apace in 1992 and, in September, a marketing and code-sharing agreement is signed with **United Airlines** that give the U.S. major access to various New Zealand destinations via Auckland.

In 1993, Managing Director Craig Wallace employs a workforce of 1,015 and operates a leased fleet comprising 7 BAe 146-300s, 2 DHC-8-102s, and 2 BAe 146-200QCs. The Canadian-built de Havillands offer commuter flights to Blenheim, Nelson, Palmerston North, Whakatane, and Whangarei. Fierce competition continues with **Air New Zealand, Ltd.** and the operating loss increases from NZ\$18 million to NZ\$20 million.

The employee population grows by 1% in 1994 to 1,030, although the fleet is not changed. A new livery is introduced in January and, in June, **Malaysia Airlines, Ltd. (MAS)** begins to code-share on the Auckland–Christchurch routes.

All frontline personnel (reservations, ground handling, etc.) receive new uniforms in July. A new corporate logo and livery are introduced in November.

Enplanements for the year total 1.9 million and the loss "improves" to minus NZ\$5 million.

Twenty-eight new employees join the company in 1995, a workforce increase of 6.8%. The first BAe 146-300 to wear the new livery enters service early in January. It immediately goes on tour, introducing the Auckland Warrior's Rugby League team to the country.

Additionally, a third de Havilland, chartered from **Flight West Airlines (Pty.), Ltd.** joins the fleet, and replaces a BAe 146-300 on the Christchurch to Invercargill service. The freed-up capacity allows the company to put on additional BAe 146-300 flights during March–April on the main trunk route between Auckland and Wellington while the B-737-200 fleet of rival **Air New Zealand, Ltd.** is grounded for engine repairs.

While on approach to Palmerston North after a June 9 service from Auckland, Flight 703, a DHC-8-102 with 3 crew and 18 passengers is unable to completely lower its main landing gear. As the crew struggles to accomplish this task, the aircraft falls below minimum altitude, hits the peak of a tree line, and crashes 8 km. from the runway (4 dead).

In the late fall, **Rex Aviation, Ltd.** takes over the **Northern Air, Ltd.** Transair link between Whangarei and Auckland.

A national air traffic controllers' strike occurs on December 4–6 and 12–15. The job action has an impact on traffic as, for example, on December 14, when the company is only able to operate 7 of its usual 15 Wellington to Auckland services.

Plans are made late in the year to begin flying to Hamilton. Passenger bookings ascend 5.6% to 1.9 million, but financial results are not reported.

The Transair commuter brand is replaced on February 29, 1996, by a new Ansett New Zealand Regional service. **Rex Aviation, Ltd.** takes over the Whakatane to Auckland route previously flown by Bell Air, Ltd. Rex now provides all Ansett New Zealand Regional flights with a fleet of 5 Embraer EMB-110P-1 Bandeirantes.

In March, flights commence in cooperation with **Cathay Pacific Airways (Pty.), Ltd.** on trans-Tasman routes to Auckland and Christchurch. In early April, fearing that a monopoly would be created over domestic routes, the New Zealand Commerce Commission refuses an application by **Air New Zealand, Ltd.** for permission to purchase a half-interest in **Ansett Australia (Pty.), Ltd.**

The Commerce Commission reverses its April decision in late June after the News Corp., which also holds 50% interest in **Ansett Australia (Pty.), Ltd.**, steps forward at mid-month and acquires 100% ownership of **Ansett New Zealand, Ltd.** The new equity arrangement ends New Zealand government's monopoly concerns; however, the TNT, Ltd. purchase still must be approved by two Australian bodies, the Foreign Investment Review Board and the Competition and Consumer's Commission. The government panels approve the acquisition in September and ANZ is reformed with a separate new board of directors and management.

In October, **Rex Aviation, Ltd.**, operating as Ansett New Zealand Regional, ceases services to Whakatane. The Bandeirantes are relocated to the Auckland–Whangarei sector, replacing the Piper PA-31-350 Navajo Chieftains that had operated the route previously.

The fleet in 1997 includes 10 BAe 146s and 3 DHC-8-102s. Arrival of a fourth DHC-8-102, on lease from **Flight West Airlines (Pty.), Ltd.**, in the spring allows Hamilton service to begin and the company now controls 30% of the domestic market in competition with **Air New Zealand, Ltd.**

Throughout the first half of the year, merger discussions are held between the carrier's new leadership and the management of **Qantas Airways (Pty.), Ltd.** concerning a possible takeover of the New Zealand regional by the Australian major.

When merger discussions break down during the summer of 1997, **Qantas Airways (Pty.), Ltd.** gives consideration of moving the BAe 146 fleet of its **Nation's Jet System (Pty.), Ltd.** subsidiary to New Zealand and entering the Kiwi domestic market directly. It may also elect to compete only on the more profitable of Ansett New Zealand's local routes.

To mark the occasion of its tenth anniversary in July, the airline commissions artist Dick Frizzell to turn one of its Whisper Jets into a flying display of children's artwork as a fund-raiser for the staff-administered Ansett Stars Charitable Trust.

During the fall, negotiations with Qantas resume.

A cooperative agreement with **Qantas Airways (Pty.), Ltd.** is signed during the first quarter of 1998. Under its terms, the two companies agree to link their frequent flyer programs and Ansett New Zealand is able to introduce ticketless travel. Although discussions concerning a possible takeover continue, no firm decisions are made.

Route rationalization is undertaken and, as the result of continuing losses, the route between Auckland and Whangarei is closed on August

1. The DHC-8-102s begin flying to Dunedin in September while a BAe Jetstream 32 is placed on the route between Wellington and Rotorua in October.

On revenues of NZ\$261 million, a loss of NZ\$2.9 million must be reported. Heavy competition, the Asian economic crisis, and a huge drop in New Zealand tourism have all contributed to the downturn.

The first of 3 additional Jetstream 32s is delivered in March 1999, replacing the long-serving Bandeirantes. A new terminal is opened at Wellington in June, the same month in which partner Rex Aviation becomes a wholly owned subsidiary.

Midyear, the carrier is plagued by a series of one-day strikes for the carrier to cut its weekly schedule from 100 to 18 services, with some destinations dropped entirely. The strife leads to a pilot lockout on September 16 after the aviators fail to accept a new cost-cutting contract.

The airline refuses to negotiate with the pilots and, instead, prepares to hire replacement pilots, including many newly available after the failure of **Debonair Airways, Ltd.** on September 30. The flyers accept the earlier-offered contract on October 14 and ratify it on October 24; most services are back to normal by year's end.

The carrier is sold by News Corp., Ltd. in March 2000 to a New Zealand investors group headed by the airline's CEO Kevin Doddrell and Clavell Capital executive David Belcher. In early June, the carrier is renamed Tasman Pacific Airlines of New Zealand, Ltd.; shortly thereafter, the renamed entity is awarded the first ever Qantas franchise and is rechristened **Qantas New Zealand, Ltd.** on June 26. Launch day for the new carrier is September 4.

ANSETT NEW ZEALAND REGIONAL. See **REX AVIATION, LTD.**

ANSETT NSW (PTY.), LTD.: Australia (1989–1990). **Air New South Wales (Pty.), Ltd.** is renamed in 1989 and its Fokker F.27-500s are given a new livery. Early in 1990, its route system is realigned and it begins operations with a pair of Fokker 50s. In the fall, the company, in preparation for Australian airline deregulation, changes its name to **Ansett Express (Pty.), Ltd.**

ANSETT N.T. (ANSETT AIRLINES OF THE NORTHERN TERRITORY (PTY.), LTD.): Australia (1987–1991). Ansett N.T. is established in 1987 to connect Cairns with Northern Territory tourist destinations employing a Fokker F.28 Fellowship and a British Aerospace BAe 146. Weekly Fellowship "Reef to Rock" service is inaugurated in September between the Great Barrier Reef and Ayers Rock. Also started is thrice-weekly service from Cairns to Ayers Rock.

Operations continue apace in 1988–1989. In 1990, the 34-employee carrier transports a total of 116,034, a 54.8% increase over the previous year. Freight traffic surges ahead by 84.8% to 214,000 FTKs.

When **Ansett Australia (Pty.), Ltd.** assumes most of this subsidiary's routes in early 1991, the carrier has no option but to close down, which it does in April. During its quarter of operation, the airline transports a total of 38,159 passengers.

ANSETT W.A. (ANSETT WESTERN AUSTRALIA (PTY.), LTD.): Australia (1984–1993). **Airlines of Western Australia (Pty.), Ltd.** is renamed Ansett W.A. in December 1984; Theodore Karasek is managing director. In 1985, airline employment declines 4.1% to 428.

Freight dips 14.7% to 5.22 million FTKs, while enplanements rise a slight 0.6% to 399,000.

The workforce grows 7.7% in 1986 to 464 and the fleet includes 8 aircraft: 4 F.28-1000s, 2 F.28-4000s, and 2 BAe 146-200s. Daily, the BAe 146-200s operate the world's longest commuter airline run on Earth—17 hrs. 20 min. to 14 points across Australia's three largest states, Western Australia, Queensland, and the Northern Territory.

Passenger boardings swell 6.9% to 441,579 as freight increases by 5% to 45.79 million FTKs.

Employment continues to increase in 1987, rising 17.4% to 412. Although the fleet remains the same, orders are placed for 3 more BAe

146s. Customer bookings jump 8.7% to 457,708, but cargo is down again, by 3.1%, to 4.76 million FTKs.

The employee population swells another 18.7% in **1988** to 489 as 1 Fokker F.28 is replaced by 2 BAe 146-200s. Passenger boardings swell 24.3% to 568,927 and freight recovers, growing by 3.4% to 4.93 million FTKs.

The workforce is cut by 22.5% in **1989**, largely as a result of the same pilot job action which so severely impacts parent **Ansett Airlines of Australia (Pty.), Ltd.** Customer bookings decline 22.1% to 443,321 and cargo is off 23.8% to 3.75 million FTKs.

Company employment grows by 10.6% in **1990** to 419 as a good year is enjoyed. The fleet is increased to 3 F.28-1000 Fellowships, 2 F.28-4000s, and 5 BAe 146-200s. Passenger boardings swell 18.7% to 525,000.

The payroll is cut 7.2% in **1991** to 389 and the fleet is increased by the addition of 2 more F.28-4000s. Customer bookings inch up to 528,220 and freight does better, growing by 17.4% to 3.72 million FTKs.

Employment falls another 14.4% in **1992** to 333 and the fleet now includes 6 BAe 146-200s, 3 F.28-1000s, and 2 F.28-4000s. Passenger boardings decline 8.6% to 497,638 while freight falls 5.7% to 3.33 million FTKs.

In **1993**, General Manager Robert Buckey's carrier ceases to trade as an **Ansett Australia (Pty.), Ltd.** subsidiary and is folded back into its parent.

ANTARES AIR COMPANY: 33/35-2 Pyatnitskaya Street, Moscow, 109017, Russia; Phone 7 (095) 396-0980; Fax 7 (095) 396-0980; Year Founded 1996. Antares is set up at Moscow in **1996** to provide international and domestic nonscheduled all-cargo charters. A. M. Kulik is general director and he begins and continues revenue flights with a fleet that includes 1 each Tupolev Tu-134, Antonov An-12, An-24, and An-26.

ANTEI AOOT: 1 Itzhenemaya Street, Omsk, 644503, Russia; Phone 7 (3812) 164533; Fax 7 (3812) 164577; Code TEY; Year Founded 1993. Antei is established at Omsk in **1993** to provide domestic charters with a fleet of 5 Antonov An-12B freighters. In **1996**, the company expands, providing international services emanating out of a new mini-hub at Sharjah, U.A.E.

By **2000**, Director General Igor Poznakhinev's 72-employee company is providing all-cargo services to points in Russia, the Mideast, East Africa, and Southeast Asia.

ANTEL AIR COMPANY: 1 Inzhenernaya Street, Omsk, 644103, Russia; Phone 7 (3812) 352 038; Fax 7 (3812) 565 915; Code TEY; Year Founded 1996. Antel is founded at Omsk in **1996** to provide domestic and international nonscheduled all-freight charters. Igor Poznakhinev is general director and he begins revenue flights with a fleet that includes 2 Antonov An-12s and two An-8s.

ANTIGUA AND BARBUDA AIRWAYS INTERNATIONAL, LTD. See ANTIGUA PARADISE AIRWAYS, LTD.

ANTIGUA PARADISE AIRWAYS, LTD.: Antigua and Barbuda (1994–1995). The new national flag carrier of Antigua and Barbuda, also known as **Antigua and Barbuda Airways International, Ltd.**, is set up in the spring of **1994**. Employing a leased Boeing 727-200A, nonscheduled services are inaugurated to Newark (EWR) and New York (JFK) during the summer.

In the fall of **1995**, the company moves to Manassas, Virginia, and is reformed as **Prestige Airways**.

ANTILLANA DE NAVEGACION AEREA, S.A. (SUN AIRWAYS): Dominican Republic (1989–1990). ANA, also known as Sun Airways,

is established at Santo Domingo in the fall of **1989** to offer charter and inclusive-tour passenger flights to destinations throughout the Caribbean. With green on white livery, the company's lone Douglas DC-8-62, leased from Argosy International, begins revenue services during the winter holiday season.

Political stress, recession, and the rise in the price of avgas following Iraq's August **1990** invasion of Kuwait force the company into bankruptcy.

ANTILLAS AIR CARGO, S.A.: Cargo Building 68, JFK International Airport, Jamaica, New York, United States, Dominican Republic; Phone 800-447-0417; Fax 718-244-0764; http://www.antillasair.com; Year Founded 1983. Antillas is established by Constantino Gorospe at Santo Domingo, Dominican Republic, in **1983** to provide domestic and international cargo charters. Revenue flights to Miami are provided by a Gorospe-piloted Douglas C-54 while local and Caribbean flights are launched with a pair of Curtiss C-46D Commandos. Late in the year, a Douglas DC-7F is added and employed to operate return charters to Miami and New York.

Over the next decade, a headquarters is established at New York (JFK), while other offices and warehouses are opened at Miami.

The Douglas freighter fails its takeoff from Miami on November 5, **1992** and crashes into the sea (three dead). It is replaced with another aircraft, which maintains services throughout the remainder of the year and into the next. Unable to recover financially from the previous year's disaster, the company stops flying in **1993**.

Within a year or so, Chairman Gorospe has reorganized his concern and restarted flights, employing Douglas DC-8-73F and Boeing 727-200F jet freighters chartered from **DHL Worldwide Express**. By **1998**, these aircraft are operating over 10 flights every week.

The company expands in **1999**. Weekly flights to Costa Rica commence in February. In May, an addition to the carrier's Santo Domingo warehouse is opened, doubling existing space. Service to Guatemala begins in July.

The company relocates to a new bonded Miami facility in May **2000**. An Airbus A300B4F is placed on the New York–Santo Domingo route at the beginning of summer and is the only wide-body freighter currently serving the island nation. Later, cargo flights to Jamaica, Haiti, Nicaragua, and Panama also begin.

ANTILLES AIR BOATS: United States (1963–1981). Senior **Pan American World Airways (1)** pilot Charles F. "Charlie" Blair, the former chief pilot of **American Export Airlines (Amex)**, founds Antilles Air Boats at St. Croix, Virgin Islands, on October 23, **1963**. Organized to provide local flights throughout the British and U.S. islands, Blair's company initially employs a single Grumman G-21A Goose, which makes the first scheduled roundtrip flight from St. Croix to St. Thomas on February 1, **1964**. Required to return to transatlantic service, Blair hires a pilot, who maintains service at five roundtrip flights per day.

A second Goose arrives before year's end, purchased from Dean Franklin of **Chalk's Airlines**; it is followed by a third in **1965**. Facilities remain primitive; the aircraft are tied to mooring buoys and passengers are ferried to and from shore in two 16-ft. Boston whalers. The first waterfront concrete aprons are introduced in **1966**; these allow passengers to board the aircraft directly and lead to retirement of the powerboats.

Beginning in October **1967**, the company expands its route network from St. Thomas to the eastern Puerto Rican community of Fajardo. Enplanements for the year total 93,093. On January 22, **1968**, the last Vought-Sikorsky VS-44A flying boat *Excambion*, a type which Blair had flown for Amex years earlier, is purchased from **Catalina Air Lines** and renamed *Excalibur VII*. Flights from St. Croix to Fajardo begin in May. During the year, the *Excalibur VII* completes over 1,000 flights for the company. Bookings jump to 157,000.

By **1969** the company is offering some 30 to 40 flights each day between St. Croix and St. Thomas, in addition to visits to the islands of St.

John and Puerto Rico. The *Excalibur VII* is damaged while taxiing for takeoff from St. Thomas Bay on January 3 and must be beached.

A survey finds that she is beyond economical repair and the decision is reached to retire her. Blair retires from Juan Trippe's airline during the year to devote all his time to his airline and his new wife, movie star Maureen O'Hara. In November, flights commence from St. Croix to San Juan.

During the year, Capt. Blair's memoirs, *Red Ball in the Sky*, which were first published in 1952, are reprinted (New York: Random House).

Passenger boardings for the year reach 173,000.

Service is inaugurated in January 1970 from St. Thomas to Roadtown, Tortola. Isla Grande Airport in San Juan harbor becomes a destination from St. Thomas in February. During the month, a Goose loses an engine on takeoff from St. Thomas, hooks a wingtip float, and crashes; no injuries are reported, but the craft is smashed beyond repair. Passenger boardings for the year reach the 200,000 mark. Revenues total \$2.15 million.

By the start of 1971 the fleet has grown to include 14 Geese and 3 Catalinas, including one standard Consolidated PBY-5A and 2 Convair CV-285ACF "Super Catalinas" purchased from Alaska Airlines. The pilot roster includes 19 captains, including the former fighter pilots Colonels Robert Scott and George Ruddell.

During the year, the *Excalibur VII*, out in the open for over a year, begins to deteriorate badly. Too expensive to overhaul, the boat's hull and wings are laid up on a quayside lot at the company's Charlotte Amalie facility where they remain.

Grumman G-73 Mallards join the fleet in 1972 and frequencies between St. Thomas and St. Croix reach 33 per week. In March, the *Excalibur VII* is repainted, mounted on a concrete base, and converted into a hotdog stand.

In 1973, Blair travels to Rose Bay, Australia, where he purchases the 2 Short S.25 Sandringhams, the *Islander* and the *Beachcomber*, flown on the Sydney-Lord Howe Island service by Ansett Flying Boat Services. In the spring, flights begin from St. Croix to Basseterre, St. Kitts, and to Nevis.

Early in the tenth anniversary year of 1974, Blair pilots the former, renamed *Excalibur VIII*, back to the Virgin Islands; his wife, Maureen O'Hara acts as stewardess. When it is placed into service on the St. Croix-St. Thomas route, Antilles Air Boats becomes the only American airline ever to fly the type.

During the first quarter, 2 Grumman G-73 Mallards are purchased from Chalk's International Airlines; the former Miami-based amphibians begin service in March-April. In early October, the *Excalibur VIII*, makes a demonstration flight up to Washington, D.C. Enplanements for the year are 262,353.

The workforce in 1975 is 170. The second Sandringham arrives at St. Croix in the spring and is renamed *Southern Cross*. It is joined by two more G-73 Mallards. During the summer, the two S.25s are employed to offer seven-day flight-seeing cruises throughout the Caribbean from the company base at Christiansted.

While passengers are ashore, the flying boats are moored in hotel harbors, not far from pleasure boats. Meanwhile, the 20 Grumman amphibians not only put in charters, but also fly passengers between island locations on schedule. Passenger boardings climb 4% to 272,739.

The twelfth anniversary is celebrated in February 1976. On March 3, the two-millionth passenger (cumulative) is boarded. During the spring, service is inaugurated to Virgin Gorda. An application is filed with the CAB for authority to serve Culebra from Puerto Rico and the Virgin Islands. During the year, the VS-44A *Excalibur VII* is donated and transferred to the Naval Aviation Museum at Pensacola, Florida.

Customer bookings for the 12 months jump 5.1% to 255,048.

In the summer of 1977, the Sandringham *Southern Cross* is employed to fly the Atlantic, retracing Blair's Amex routes. While in Europe, sight-seeing tours are offered to destinations in both Great Britain and Ireland. Enplanements total 254,996.

Charles Blair and three passengers die in the crash of a Goose off St. Thomas on September 1, 1978. Following this tragedy, Maureen O'Hara

returns to St. Croix to try to keep the carrier alive. Culminating several days of tests conducted to determine the cause of the fatal September crash, a Goose sinks off St. Croix on November 12, minutes after its pilot and two FAA officials escape. Four days later, on behalf of her injured son Christopher, Lisa Devine sues Mrs. Blair in New York's Federal Court for negligence in connection with the September crash.

The year's passenger boardings drop 20.4% to 211,791 and freight traffic is down by 10.9% to 1.7 million FTKs.

Difficulties and costs prohibit Mrs. Blair from making a go of her husband's airline and the company is sold to Resorts International in April 1979. Despite the transfer of ownership, this unique airline, which continues operations under its original name, suffers traffic and financial reversals.

Customer bookings decline 23.2% to 163,000 and cargo is off by 26.9% to 1.24 million FTKs.

The fleet in 1980 comprises 6 Grumman Geese and 7 Mallards.

A second straight year of traffic reversal is suffered as enplanements fall 23.6% to 124,249 passengers while freight drops 43.3% to 705,252 FTKs.

After transporting 46,646 passengers during the year's first two quarters, financially distressed Antilles Air Boats is forced to cease operations in June 1981 and close its doors forever on September 15. It is now sold to Virgin Islands Seaplane Shuttle, a new company that employs the Mallards to resume service in March 1982. The story of AAB comes to an end in 1983 when Mrs. Blair and Smithsonian Air & Space Museum curator Robert Mikesh arrange for the permanent loan of the VS-44A *Excalibur VII* to the Bradley Air Museum (now New England Air Museum) in Connecticut. After years of restoration paid for by Sikorsky Aircraft and conducted by 113 retired employees, the giant flying boat is recommissioned *Excambian* in ceremonies led by Mrs. Blair at the NEA Museum on November 19, 1998.

ANTILLES AIR SERVICES, S.A. See AIR ANTILLES, S.A.

ANTILLIAANSE LUCHTVAART MAATSCHAPPIJ, N.V. See ALM ANTILEAN AIRLINES, N.V.

ANTINEA AIRLINES, S.A.: Route d'El Borma, Wilaya Ouargia, Hassi Messaoud, Algiers, 30500, Algeria; Phone 213 (9) 736583/4; Fax 213 (9) 736582; Code HO; Year Founded 1999. Antinea is one of six new carriers formed after the Ministry of Transport "deregulates" Algeria's airlines toward the end of 1999. Initially granted temporary authority, the privately owned carrier acquires a pair of ex-Euralair International, S.A. Boeing 737-210Cs, which are employed to initiate flights in October from Algiers to Bejaia, Constantine, Hassi Messaoud, Oran, Tiemcen, and Paris (CDG).

Plans are announced in early July 2000 for the acquisition of a B-737-300 with which to begin service to the Belgian expatriate community at Mulhouse and boost recent flights to another service to Charleroi.

ANTONOV AIRLINES. See ANTONOV DESIGN BUREAU

ANTONOV AIRTRACK INTERNATIONAL CARGO AIRLINES: 19/21 Frunze Street, Kiev, 252080, Ukraine; Phone 38 (044) 462-5574; Fax 38 (044) 462-5574; Code UAP; Year Founded 1994. Former Antonov Design Bureau officials, flight test pilots, and development employees establish this international charter carrier at Kiev in April 1994. Boris Soldatenko is president and he recruits a staff of 140 and begins revenue flights with 2 Antonov An-32Bs, an An-26, and 1 An-124-100 Ruslan.

The status of this company in light of the Russian currency crisis of 1998-1999 is unknown.

ANTONOV DESIGN BUREAU: 1 Tupoleva Street, Kiev, 252062, Ukraine; Phone 380 (044) 442-5366; Fax 380 (044) 442-6124; Code ABD; Year Founded 1989. Following its 1989 marketing agreement

with **Air Foyle, Ltd.** to operate Antonov freighters in western Europe and aware of the success of that venture, this division of the long-established Ukrainian aircraft manufacturer seeks its own operating authority in **1992**.

With permissions in hand, the builder, under the leadership of CEO A. G. Bulianenko, undertakes worldwide outsized cargo flights beginning in early **1993**. The inaugural fleet includes 1 An-225, 3 An-124-100 Ruslans (flown with **Air Foyle, Ltd.**), 1 An-22 Anteïs (the world's largest turboprop transport), and 1 An-12. Outsized cargo continues to be a major emphasis, along with support for mineral exploration concerns operating in Siberia.

Operations continue in **1994** and the fleet is expanded through the introduction of 7 additional An-12s and another An-22.

In April, a number of laid off employees establish their own carrier, **Antonov Airtrack International Cargo Airlines**. During September, the Anteïs is contracted to transport Ariane rocket segments from France to Kourou in French Guyana.

The company remains active in the world and CIS ad hoc oversize freight business in **1995–1999**, gradually increasing its presence, particularly with contracts to trouble spots on behalf of the UN. The fleet comes to include 9 An-124-100s (5 of which remain out on lease to **Air Foyle, Ltd.**), 3 An-22 Anteïs, 2 each An-12s and An-32Bs, and 1 each An-24RV, An-72, An-74T, and An-225.

On December 19, **1997**, the Ukrainian government grants national cargo carrier company status to the Antonov bureau in order to make negotiations easier for the concern with foreign partners.

An agreement with **Air Foyle, Ltd.**, signed the previous fall, takes effect in early **2000**. Two more An-124-100s, previously operated by **Aeroflot Russian International Airlines (ARIA)**, are taken in hand by the design bureau, which has, by now, renamed its Air Foyle joint venture partnership Antonov Airlines.

In an effort to further enhance income-earning capacity, the design bureau begins, during late spring and summer, the conversion of civil standard of two ex-military An-223 Mriya super heavy transports.

Media rumors of a pending merger with **Volga-Dnepr Airlines** are quashed on August 21. Working from the U.K. base of **Air Foyle, Ltd.** base, sales representatives mount an extensive campaign during the fourth quarter to expand Antonov Airlines representation in Asia. New general sales partners are found in South Korea, Singapore, Taiwan, Thailand, and the Philippines.

ANV (AVIACION NACIONAL VENEZOLANA, S.A.). See **LAV VENEZUELAN AIRLINES: LINEA AEROPOSTAL VENEZOLANA, S.A.**

AOA ZAMRUD AVIATION CORPORATION: Indonesia (1969–1973). AOA Zamrud is formed at Jakarta in April **1969** through the merger of the **Aircraft Owners Association** and **Zamrud Airlines**. With a fleet of 5 Douglas DC-3s, President Utojo Utomo's carrier provides scheduled passenger and cargo services throughout the Lesser Sunda Islands. Destinations visited include Denpasar, Surabaya, Waingapu, Ruteng, Maumere, Koepang, and Dili. Contract service flights and passenger and cargo charters are also flown about the country.

The combination of the world recession of the early **1970s** and increased expenses force the company out of business in **1973**.

AOM AIR COMPANY (AOM AVIAKOMPANIYA): Russia (1994–1996). AOM is established at Moscow in **1994** to offer domestic passenger and cargo services. V. V. Chigaev is appointed general director and he begins revenue flights with a fleet that includes 3 Antonov An-12s, 2 Yakovlev Yak-40s, and 1 each An-24, An-26, Ilyushin Il-76, and Tupolev Tu-134. Flights cease in **1996**.

AOM FRENCH AIRLINES, S.A.: Strategic Orly 108, 13–15 Rue du Pont des Halles, Rungis Cedex, F-94526, France; Phone 33 (1) 49 79 10 45; Fax 33 (1) 49 79 10 11; <http://www.flyaom.com>; Code IW;

Year Founded 1989. On January 1, **1992**, Chairman/CEO Marc Rochet's 1,020-employee **Air Outre Mere, S.A.** is merged with another French independent carrier, **Minerve, S.A.**, by their collective new owners, the Sega banking group (a subsidiary of Credit Lyonnais) to form AOM French Airlines, S.A. The **Minerve, S.A.** interest held by Club Mediterranean—19.8% of the entire shareholding—is sold to Altus France, another Credit Lyonnais partner; stockholding is divided between Altus France (93%) and Credit Lyonnais (7%). Marc Rochet continues as chief of the new aerial enterprise, a new corporate identity, centered on the AOM initials and including logo and livery, is introduced, and the fleet is significantly upgraded.

Although the number of MD-11 requests is reduced to 3, 3 more DC-10-30s are chartered, bringing the company total to 6, together with 5 MD-83s. Two DC-8s are purchased; one is a Dash-62CF and the second a Dash-73, which is immediately leased to **Time Air Sweden, A.B.** The route networks of the merger partners are maintained and new service is inaugurated to Tokyo, Barcelona, San Francisco, Havana, Tehran, and Taipei. Start-up costs occasion a FFr 260-million loss.

Another DC-8-73 is received in **1993**, but it, too, is soon chartered. Frequencies continue to be offered by the 1,010-employee airline to the French West Indies, French Polynesia, Reunion, Los Angeles, Bangkok, Tokyo, Ho Chi Minh City, Paris, and Nice.

Enplanements total 1,234,000 while 16,720 tons of cargo are flown. Revenues jump 27% to \$356 million, but the loss is still high, at \$32.6 million (FFr 186 million).

Airline employment in **1994** stands at 1,500 as Paris to Reunion service becomes daily, with all flights nonstop except for a single frequency that stops at Marseilles. Papeete is served via Los Angeles, now the company's only American destination. The one-millionth passenger (cumulative) is boarded in May on a flight between Paris (ORY) and Nice. Weekly Nice to Tel Aviv service starts on July 19 and, also in July, the Bangkok route is extended, weekly, to Noumea, French Caledonia, as part of a code-sharing arrangement with **Air Caledonie International, S.A.**

In the fall, the DC-8-62CF is chartered to the Belgian operator **Cargo Lion, S.A.** Credit Lyonnais considers the divestment of its subsidiary and opens talks toward that end with the independent charter operator **Air Liberte, S.A.** The former **Air France** routes from Paris to Colombo, Sri Lanka, and Male, Maldives, are taken over on December 18.

Passenger boardings climb to 1.3 million, revenues are \$563 million, and there is a net \$11-million profit.

The workforce is increased to 2,200 in **1995** and the fleet includes 9 MD-83s and 9 DC-10-30s. Twelve-times-per-day return service is flown between Paris and Nice. AOM takes over seven domestic routes following the deregulation of French skies, including an important route from Orly Airport to Marseilles.

To add capacity, 2 Douglas DC-10-30s are chartered from **Air Afrique, S.A.** The best entry in a Marseilles newspaper's children's' painting contest becomes a special aircraft color scheme that is unveiled on an MD-83 in mid-June. The plane is named *Alizee* after the winner. During the month, long-haul flights are inaugurated to Quito and Lima in South America.

Late in October, the company receives an unsolicited FFr 400-million (\$80-million) merger offer from **Air Liberte, S.A.** Chairman/CEO Lofti Belhassine. If the tender is accepted, the combined company would become France's largest independent airline overnight; it is rejected by the Consortium de Realisation, S.A. (CDR), the asset management subsidiary of the state-owned bank Credit Lyonnais, which suggests that the true value of the carrier is FFr 1.2 billion. The CDR also lets it be known that AOM will not be sold for at least two years because it needs time to consolidate what appears to be a slim financial success.

Even so, as the result of the restructuring plan submitted by Credit Lyonnais in order for that financial institution to receive its own state-aid package, AOM is put up for sale. With **Air France** under European Commission acquisition restriction and costs too high for other French independents to bite, the carrier keeps flying.

On October 28, a new service is instituted from Paris (ORY) to Montpellier; it will be followed by a route from the historic Paris airport to Strasbourg. The twice-weekly roundtrip from Paris to Noumea via Bangkok is rerouted on November 2. To take advantage of the withdrawal of **Air France** from Sydney, AOM begins to fly from Paris to New Caledonia via Colombo and Sydney.

Also during the final quarter, the company does join with **Air Liberte, S.A.** in reducing fares on the Paris–Nice route, the busiest in the country, to \$138, a 50% cut.

Customer bookings move up to 2.4 million, including 1.13 million on domestic services. Operating revenues total \$630 million and, despite the “for sale” sign, a slim \$5.4-million net profit is posted. The net gain is the company’s first profit ever.

The **Air Afrique, S.A.** DC-10-30 lease is continued in 1996 and, on January 1, French domestic airspace is fully deregulated. AOM now operates 7 domestic routes and international services to 11 points in Australia, Peru, French overseas territories in the South Pacific and Caribbean, Cuba, plus Los Angeles, with a fleet of 8 MD-83s and 14 DC-10-30s. Orders are placed for additional DC-10-30s with which to increase frequencies and open new routes.

New domestic services are started at the beginning of February from Paris (ORY) to Toulon, Pau, and Perpignan.

In mid-February, the company receives an order from the government’s Transport Ministry to transfer its operations from the west terminal at Orly Airport to the outdated south terminal; the western facility is slated to be turned over to **Air France** by the end of March.

Not only does AOM refuse the order it files a complaint against the government with Aeroports de Paris and the European Union and publicly protests its treatment on the side of its aircraft. Along the fuselages of all 22 of its MD-83s and DC-10-30s is painted the phrase “Je Veux Rester a Orly Ouest!” which reads in translation “I want to stay at Orly West.” Within nine days of the order, the airline signs up 20,000 passengers in a consumer group to write letters protesting the action.

Two more MD-83s join the fleet in late March. At this point, company officials elect to comply with the government eviction notice and, after obtaining the “best gates,” transfers its terminal from Orly West to Orly South.

During March, the carrier increases frequencies on its Paris–Nice and Paris–Marseilles routes to 11 roundtrips per day.

The Credit Lyonnais management subsidiary CDR, in something of a surprise move, dismisses Chairman/CEO Marc Rochet during the second week of June. He is succeeded by Euralair Group CEO Alexandre Couvelaire, who is given a mandate to merge with **Air Liberte, S.A.**

On July 14, the company launches a code-sharing agreement with **Air Liberte, S.A.**, which also includes a variety of partnership arrangements. The two independents begin to coordinate their programs, linking their frequent flyer programs and undertaking dual-designator frequencies over their domestic routes. They also coordinate schedules and long-haul operations to the French Caribbean.

The financially troubled **Air Liberte, S.A.** is placed into receivership on September 26 and its chartered Douglas wide-bodies are returned to Finland. Given six months by the Creteil bankruptcy court to develop a workable reorganization plan, AL chairman Belhassine promises to write a recovery program by the end of October, at which time \$120 million in fiscal year losses must be reported.

Following further exploration into the company’s finances during the first week of October, the Creteil bankruptcy court determines that **Air Liberte, S.A.’s** fiscal situation is worse than was originally reported. Even though a number of unprofitable routes are now cut, the court announces that it must have outside acquisition bids by October 14 in order to avoid ordering the company liquidated.

Suitors for the stricken airline begin to emerge late in the week. With pressure to keep it in French hands and its unions seeking acquisition, **Air France** expresses interest. Under European Commission restrictions against acquisition of other carriers during the time of its \$4-billion state

bailout, it appears unlikely that the independent will be placed under the major’s umbrella.

Other companies expressing an interest include AOM, which has been seeking a merger, along with **British Airways, Ltd. (2)**, **Virgin Express, Ltd.**, **TAT European Airlines, S.A.**, and **Corsair, S.A.**, the in-house airline of France’s largest tour operator, Nouvelles Frontières.

Seeking to protect the interest of its TAT subsidiary, BA CEO Robert Ayling complains to the European Commission that AOM should not be allowed to seek ownership of **Air Liberte, S.A.** It, too, remains up for sale as the result of restructuring plans announced in the wake of a 1995 state-aid package to its parent, Credit Lyonnais.

With AOM and **Air France** out of the picture, two airlines, Nouvelles Frontières, and a group of private investors submit offerings for **Air Liberte, S.A.** to the Creteil bankruptcy court on October 14. The bid by a group including **British Airways, Ltd. (2)** and **TAT European Airlines, S.A.** will be accepted before year’s end.

In late fall, one of the MD-83s is painted in a dark blue “planets” color scheme and will be employed on Club Mediterranean charters flights to holiday resorts during the winter schedule.

The workforce stands at 1,450 in 1997. On September 18, a strategic partnership agreement is signed with **Swissair, A.G.** When implemented on November 1, the pact will involve code-sharing on flights by both companies and joint marketing activities.

On the appointed date, code-sharing begins on routes from Paris (CDG) to Zurich and Geneva, from Nice, Lyon, and Marseilles to Zurich, and from Nice to Geneva.

The fleet now includes 13 DC-10-30s and 11 MD-83s. At year’s end, one of the Douglas wide-bodies is chosen to be repainted in a color scheme designed to show company support for the World Wildlife Fund.

Enplanements reach 3 million and operating revenues total \$641 million.

In February 1998, a code-sharing agreement is signed with **TAP-Air Portugal, S.A.**, effective at the end of March. At the same time, the company implements a strategic partnership with **Sabena Belgian World Airlines, S.A.** The two begin to coordinate their schedules at Paris (ORY) to allow seamless connections for passengers originating in Belgium and wishing to travel on to Toulon, Nice, and Marseilles, as well as to such overseas destinations as French Guiana.

These relationships are deepened on March 29 when the carrier joins with **Swissair, A.G.**, **Sabena Belgian World Airlines, S.A.**, **Austrian Airlines, A.G.**, **TAP-Air Portugal, S.A.**, and **THY Turkish Airlines, A.O.** to form the “Qualiflyer” group. Although members will retain their own identities, they will engage in a long list of joint activities, including ground handling, lounges and ticket offices, frequent flyer benefits. Collaborative activities that will be added as soon as details can be worked out include maintenance and overhaul, cargo, in-flight catering, information technology services, and duty-free concessions.

The carrier launches thrice-daily return services at the end of April between Paris (ORY) and Zurich; the flights are dual-designator offerings made with **Swissair, A.G.**

During the spring, plans are made to take over the bulk of the charter business of **Air Charter, S.A.**, which Air France has announced will close in November. Orders are placed for two A340-211s.

At the same time, one of the company’s DC-10-30s is given a special World Wildlife Fund livery, which reproduces artwork by children emphasizing endangered animal species.

While taking off from Antalya, Turkey, on a June 6 service to Paris, an MD-83 with 7 crew and 163 passengers suffers the explosion of its left main landing gear tires. Debris is sucked into the left engine, which is disabled. The aircraft is able to execute a safe emergency landing, skidding down the runway to a stop. No injuries are reported in the chute evacuation that follows.

Consortium de Realisations, the defeasance subsidiary of Credit Lyonnais, puts AOM up for sale again on August 15. Over the next several months, **British Airways, Ltd. (2)**, **Deutsche Lufthansa, A.G.**, and **Swissair, A.G.** all step forward to become takeover candidates. With no

resolution possible before year's end, Lufthansa requests on December 16 that bid considerations be pushed back to January 15. The plea is granted.

A DC-9 with 184 passengers is forced to return to Francisco S.A. Carneiro Airport on December 24 after developing engine problems; a safe emergency landing is made and no injuries are reported.

Enplanements total 3.5 million and revenues this year reach FFr 4.4 billion (\$760.4 million).

Airline employment stands at 2,400 at the beginning of 1999, a huge 65.6% increase. The fleet now includes 28 airplanes, including 13 DC-10-30s, 10 MD-83s, and 3 B-737-500s.

The sale of AOM is completed by Consortium de Realisations on February 3. Marine Wendel/Groupe Alpha purchases 51% majority control, with SAirGroup, the parent of **Swissair, A.G.**, winning the remaining 49% stake. With Switzerland having elected not to join the European Union, Swissair has actively sought to bypass the problems of non-membership by acquiring strong minority stakes in a number of carriers from EU states.

The fleet is bolstered in the spring by the arrival of a pair of former **Air France** A340-211s chartered from the leasing arm of Airbus Industrie. These twinjets will complement the company's DC-10s.

Following the inability of management and the pilots union to reach agreement on a new wage package for the flyers, company pilots strike the airline between July 30 and August 3. All but one of its long-distance flights are cancelled by AOM on August 2, plus 30% of its medium-range flights, including those on domestic and European routes. A number of charter flights are also scrubbed. Thousands of French vacationers are stranded.

A 50.01% stake in AOM is purchased in August by Tailbout Antibes, B.V., a financial institution owned by the investment houses of Alpha Group and Marine Wendel. The minority share is taken by SAirGroup, parent of **Swissair, A.G.**, with which Tailbout maintains close affiliation. The two already hold 66% of **Air Littoral, Ltd.**

Daily frequencies between Paris (ORY) and Zurich are boosted from three to five on October 31.

Never having enjoyed French market success, **British Airways, Ltd.**, on May 5, 2000, sells its 86% stake in its loss-making subsidiary, **Air Liberte, S.A.**, to Tailbout. Plans are announced late in the month for a merger of the three airlines into a single carrier that can offer domestic French competition for **Air France**.

Wet-leased by **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)**, AOM's DC-10-30 initiates service between Havana and Paris (CDG) on June 5.

Work toward the merger of Air Liberte, AOM, and Air Littoral later in the year moves ahead in June despite stiff union resistance. AOM President Alexandre Couvellaire is tapped to head the new, but (as yet) unnamed entity within the framework of the "Qualiflyer" group. Ownership plans are put into place for a new airline holding company, Participations Aeronautiques, to be held by SAirGroup (49%) and Tailbout Antibes, B.V. (51%). Merger approval sought from the European Commission is granted on August 1.

At the end of July, SAirGroup President/CEO Philippe Bruggisser announces creation of a "Conseil de Surveillance," a revised management structure for the about-to-be-merged airlines. Chaired by Alexandre Couvellaire, the body's executive management will be headed by Paul Reutlinger, current **Sabena (Belgian World Airlines, S.A.)** CEO, who will move to Paris to guide the fusion of the three into one and also become vice chair of the Belgian airline's board of directors.

Merger approval for creation of the new airline is sought from the European Commission and is granted on August 1. The process of creating a single French carrier comes unglued at month's end as SAirGroup CEO Bruggisser announces that not one, but two companies will be formed. One, comprised of elements of Air Liberte and Air Littoral, will be created at Nice and operate all aircraft up to the size of Fokker 70s. Meanwhile, AOM will be left as the second, intact entity at Paris (ORY) to operate all jetliners of 100 seats or more. The revised idea is put to the French unions for approval, hopefully by October.

In a September 18 interview with *Aviation Daily*, CEO Reutlinger admits that labor problems and integration concerns are a significant complication; completion of merger arrangements may not be finished for a year.

During the month, several DC-10s experience technical failures that result in flight cancellations or delays. Customer Club Med expresses concern, along with the French civil aviation authority DGAC.

The **Swissair, A.G.** services between Paris (ORY) and Geneva are taken over on October 29.

APA (AEROVIAS PANAMA, S.A.): Panama (1956-1965). **AVISPA (Aerovias Interamericans de Panama, S.A.)** is renamed during the fall of 1956. Although the corporate identity is changed, the company continues its two-pronged mission of all-cargo service to Miami and passenger flights between the Florida city and Lima. A Douglas DC-4 is purchased in December and is employed to inaugurate passenger flights to Kingston and Medellin.

In 1957-1959, APA and **TAN (Transportes Aereos Nacionales, S.A.)**, together with the Ecuadorian airline **CEA (Compania Ecuatorianas de Aviacion, S.A.)** from which APA has been wet-leasing a DC-6, participate in a low-fare consortium. APA, however, withdraws from the arrangement in 1960 to join **RAS (Rutas Aereas de Colombia, S.A.)** in a similar compact. The DC-4 and chartered DC-6 are retained, while two Curtiss C-46 Commandos continue to offer freight flights.

The new RAS compact allows the Panamanian airline access after 1961 to Bogota and to Caracas via Barranquilla and Maracaibo. On April 22, 1962, a DC-3 with 40 aboard crashes into Colombia's Baudo Mountains; there are no survivors. Also during these years and beyond, several APA Commandos are chartered by the UN for operations in the war-torn Congo.

Financial difficulties in 1964 become terminal and with little warning, APA stops flying on January 19, 1965.

APA INTERNACIONAL AIRLINES, S.A.: P.O. Box 524039, Miami, Florida 33152, United States; Phone (305) 526-3304; Fax (305) 871-4012; Code 7P; Year Founded 1994. The Dominican Republic company of APA Internacional, formerly **Apair (APA Internacional Airlines, S.A.)**, is reformed in early 1994. Rafael Trujillo is named president and a new hub is established at Miami, which the company uses as its address. Funding is found from private interests as well as **Faucett Peruvian Airlines, S.A.** The latter, under a joint marketing agreement, also wet-leases one of its Lockheed L-1011s to the reborn firm and agrees to provide maintenance. Painted in a version of its previous operator's bright red and white livery, the TriStar 1 begins flying between Santo Domingo and Miami in July.

Beginning in 1995, Faucett also wet-leases a DC-8F to APA. Together, the two begin to share codes on APA's scheduled routes from Santo Domingo to Puerto Plata, Miami, San Juan, and New York.

Operations continue apace in 1996-1997. During the latter year, the company enters into a code-sharing arrangement with **Pan American World Airways (2)**. This arrangement ends with the failure of the U.S. carrier early in 1998.

Service between Miami and Santo Domingo is maintained in 1999-2000.

APACHE AIRLINES (1): United States (1930). Founded at Phoenix in early 1930, the first Apache Airlines begins scheduled passenger services to Globe in March. Traffic is insufficient to continue operations and the company stops flying in July.

APACHE AIRLINES (2): United States (1957-1973). Established at Phoenix in the fall of 1957, the second Apache Airlines is equipped with a fleet of 3 each de Havilland DH 104 Doves and DH 114 Herons. Scheduled passenger services are inaugurated on November 12 linking the company's base with Tucson, Lake Havasu, Las Vegas, and Show Low.

On September 21, **1964** the carrier initiates flights from Douglas to Tucson; these are made for **American Airlines** and are the first route replacement flights made by a commuter for a trunk line in the U.S.

The two-year-old local competitor **Caravan Airlines** is acquired in **1967** and in **1968** the company enters into an interline arrangement with **Frontier Airlines (1)**. Operations continue apace in **1969–1970**.

A Dove with 12 aboard crashes near Coolidge, Arizona, on May 6, **1971**; there are no survivors. The company is unable to weather the recession and fuel price increases of the early **1970s** and ceases operations in **1973**.

APAIR (APA INTERNACIONAL AIRLINES, S.A.): Dominican Republic (1980–1986). Formed by private interests at Santo Domingo in April **1980**, the carrier acquires a Boeing B-707-320C during the summer of **1981**. Scheduled Stratoliner flights are started on December 15 linking Santo Domingo and Puerto Plata with New York via San Juan and Miami.

Although plans are made in **1985** to add Douglas DC-8F freighters, the airline is unable to earn back its start-up costs and is forced to close in **1986**.

APARTE TAXI AERO, LTDA.: Rua Cel-Tobias Coelho 147, Sao Paulo-SP, CEP-04357070, Brazil; Phone 55 (11) 275-7857; Fax 55 (11) 275-7857; Code AP4; Year Founded 1987. Aparte is set up at Sao Paulo in September **1987** to provide air transport for the executives and workers of the Acesita, Cenibra, Usiminas, and Usinas Mecanicas steel companies. P. P. V. Pedrosa is placed in charge and oversees these corporate shuttles for the next decade.

In **1998–2000** the workforce totals 20 and 1 each Beech King Air 90, Embraer EMB-110 Bandeirante, and EMB-120 Brasilia are operated.

APASA (AEROVIAS PANAMA, S.A.): Panama (1965–1966). Following the demise of **APA (Aerovias Panama, S.A.)** in January **1965**, a group of Panamanian industrialists elect to revive its operations under a new name. Having assumed the previous carrier's debt and taken over two of its Curtiss C-46 Commandos, APASA is formally established at Panama City in August.

Three Douglas DC-7s are acquired from **United Air Lines** and services are flown over APA's old routes. The Panamanian government revokes the company's license in November **1966**, forcing it to shut down.

APEX AIRLINES: United States (1987–1989). Randy Pilgreen sets up Apex Airlines in January **1987** as the scheduled airline division of his Janesville, Wisconsin-based FBO, MST Aviation. Employing a Piper PA-31-310 Navajo, the small regional inaugurates daily scheduled passenger Essential Air Service (EAS) linking its base with Milwaukee.

Roundtrips continue until the government's EAS subsidiary for Janesville is ended on October 1, **1989**.

APOLLO AIRLINES: United States (1969–1981). Apollo is organized at Goleta, California, in **1969** and undertakes passenger and cargo charter and mail flights with a single Beech 18. Scheduled passenger service is initiated in October **1976** from Santa Barbara to San Jose. During **1977**, the first full year of such operations, the company transports a total of 17,189 passengers.

Airline employment grows by 87.2% in **1978** to 146 and a fleet of 5 Handley Page HP-137 Jetstreams painted in the company's new livery are placed into service. The company now replaces **Hughes Airwest** at Santa Barbara. Bookings increase by 164%, up to 45,325.

With routes to such destinations as Santa Barbara, Bakersfield, Oakland, San Francisco, Sacramento, San Jose, Las Vegas, and Los Angeles, the company increases its route network in **1979** by a huge 368.6% to 2,212 unduplicated miles. Simultaneously, Aeronautical Development Associates, Ltd. in the U.K. undertakes to upgrade the carrier's HP-137s, which are now known as Apollo Jetstreams.

Enplanements of 113,000 customers represents a 150.1% increase. Cargo also swells, up 60% to 60,000 pounds.

The employee population is cut by 19.5% in **1980** to 214. Justin Colin unsuccessfully attempts to convince President Terrance Cedar, new Operations Director Steven Pocock, and the carrier's ownership to join the **Golden Gate Airlines** commuter system then being assembled. Expansion proceeds as Fresno and Oxnard join the route network.

A new Redwood hangar is opened for maintenance and headquarters operations and which also houses the carrier's new computer system. An in-flight magazine is introduced and the fleet of 5 Handley Page HP-37 Jetstreams and 3 Piper PA-31-310 Navajos is painted in new livery.

Customer bookings advance by 7% to 121,802, but freight is down by 4.7% to 57,000 pounds.

The bottom falls out in **1981**. The PATCO air traffic controllers' strike and resulting ATC difficulties devastate Apollo. The company suffers a 44% drop in passenger boardings, down to 67,821 and a catastrophic cash flow problem. Following the bankruptcy of both **Golden Gate Airlines** and **Swift Aire**, Apollo also closes its doors in September. Its assets are purchased by a Houston-based holding company, Gulf Central, which reforms the carrier into **Pacific Coast Airlines**.

APOLLO AIRLINES, S.A.: Greece (1994–1996). Apollo is established at Athens in late **1994** to offer international nonscheduled charters and inclusive-tour flights. President/Managing Director Georgion Hadjis assembles a workforce of 90 and 2 Airbus Industrie A300B4s, formerly flown by **Pan American World Airways (1)** and **Delta Air Lines**, are leased; these inaugurate revenue flights on March 25, **1995**.

Plans to charter a third A300B4 in **1996** fall through; however, orders are placed for 4 McDonnell Douglas MD-80s. Enplanements reach 160,000 before the company shuts its doors in December.

APOLLO AIRWAYS: United States (1968–1972). This small regional is set up at Chicago's Meigs Field in **1968** to provide scheduled daily Beech 18 roundtrips to local intrastate destinations.

Passenger and cargo flights continue until **1972**.

APOLLO AVIATION: United States (1973–1974). Once associated with the Apollo moon-landing program, Colonel Benjamin Moore establishes this small commuter airline at Lima, Ohio, during the first quarter of **1973**. Moore, who acquires an "Allegheny Commuter" contract, purchases a Beech 99 and employs it, beginning on March 1, to inaugurate daily roundtrips to Columbus and Toledo.

Unable to maintain viability, Apollo goes out of business exactly one year later, on February 28, **1974**.

APPALACHIAN AIRLINES: United States (1977–1980). Appalachian is established by King Rogers at Blountville, Tennessee, in February **1977** to provide scheduled passenger and cargo services to regional destinations. Employing a Piper PA-31-310 Navajo, Rogers inaugurates daily roundtrips on March 15, linking his Tri-Cities Airport base with the airfields at Wise, Virginia, and Bluefield and Charleston, West Virginia.

Operations continue until March 15, **1980**.

APSA (AEROLINEAS PERUANAS, S.A.): Peru (1956–1971). In association with two Peruvian nationals, Cornell N. Shelton, owner of the Honduran carrier **TAN (Transportes Aereas Nacionales, S.A.)** forms APSA at Lima on September 16, **1956**. In cooperation with TAN and a second Shelton airline, **CEA (Compania Ecuatorianas de Aviacion, S.A.)**, APSA begins C-46 international service from Lima to Santiago de Chile via Autofagasta on June 17, **1957**. On August 6, the Curtiss flies northward Lima to Tegucigalpa via Guayaquil and Managua. From the Honduran capital, TAN provides connecting flights to Miami. A second C-46 joins the first by year's end.

APSA applies to the U.S. CAB for Miami rights in August **1958**, but in the face of litigation receives only a temporary one-year permit and is required to divest itself of "foreign interests" (i.e., Shelton). **Pan American World Airways (1)** provides new evidence on January 28, **1959** of Shelton's influence on APSA.

The CAB case is settled in February 1960. Shelton transfers his interest in APSA to Peruvian owners and the U.S. government authorizes a two-year permit. Simultaneously, two Lockheed L-188s are ordered and, in late spring, two Douglas DC-6s are delivered. Lima–Miami via Panama DC-6 service commences on July 13.

Service is started by the DC-6s to Bogota in 1961. In 1962, two DC-7Bs are taken into service the L-188 contract is cancelled.

A Convair CV-990A, leased from F. B. Ayer, joins the fleet on November 15, 1963 and arrangements are made with **Northeast Airlines** to provide connecting service from Miami to New York. On December 23, Coronado service is inaugurated from Miami to Buenos Aires via Bogota and Lima.

South American expansion is undertaken in 1964 as service is launched to La Paz, Montevideo, and Asuncion. On November 7, one-stop Miami–Rio de Janeiro via Lima CV-990A flights commence.

When Shelton dies in January 1965 his trustees retain 23% interest in APSA, with 33% held by the Cisneros and Popular y Porvenir groups and 10% in private hands. A second CV-990A is placed in service on February 1. CV-990A flights are launched from Lima to Mexico City via Guayaquil on March 1.

The Mexico City Coronado service is extended to Los Angeles on August 18, 1966. A third C-46 enters service the same month.

All routes and services are maintained in 1967–1968 as a third CV-990A is chartered from **Northeast Airlines** in June of the latter year. A C-46 is withdrawn during August 1968.

On January 11, 1969, a lone gunman, a citizen of Mexico, forces Flight 60, a CV-990A with 118 passengers and preparing to land at Miami after a flight from Buenos Aires, to divert to Cuba. Four years later, the pirate will be sent to Mexico City, where he will be tried and receive a 25-year prison term.

Lima to London via Madrid and Paris flights are inaugurated during the spring with a DC-8-52 leased from **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)**.

Due primarily to the high costs of its aircraft leases, the carrier encounters severe financial difficulties in 1970. Unable to overcome its massive \$22-million debt (\$19 million to the CV-990A builder General Dynamics), APSA ceases trading on May 3, 1971. All of the aircraft are repossessed by their owners and Peru's first attempt to gain entrance into the international air-transport market goes with them.

APSA (AEROVIAS PUNTARENAS, S.A.): Costa Rica (1961–1982). A third-level carrier founded at Puntarenas in 1961, this company begins scheduled services to destinations throughout the western half of the nation. During the remainder of the decade and into the 1970s the fleet grows to comprise 1 each Douglas DC-3, C-46, Convair CV-440, and Lockheed L-188 Electra.

APSA terminates regularly scheduled long-haul flights in 1978, and those routes are taken over by SANSA. The company remains as a local agency and is renamed **APSA (Aeroservicios Puntarenas, S.A.)**. Retaining its Convair, DC-3 and a Piper Aztec, APSA offers scheduled flights from San Jose to Puntarenas, Los Chilles, and Upala.

Unable to survive higher fuel bills, the company halts operations in 1982.

AQUAIR LUTFAHRT GmbH: Germany (1981–1984). Aquair is established at Munich in 1982 to offer scheduled, international, third-level passenger service. Outfitted with Beech King Air A90s, the company undertakes flights linking its base with Saarbrücken, Innsbruck, and Elba. Unable to achieve viability in a time of recession, the company halts trading in 1984.

AQUATIC AIRWAYS (PTY.), LTD.: Australia (1975–1993). Aquatic Airways (Pty.), Ltd. is formed by Victor Walton at Palm Beach, New South Wales, in 1975 to provide charter and scenic passenger flights along the coast, Sydney to Newcastle, beginning with a single Cessna

185 floatplane. Equipped by 1982 with a fleet of two de Havilland DHC-2 Beavers, revenue flights commence from Palm Beach (located north of Sydney) to Rose Bay and Newcastle. Nonscheduled passenger overflights of Sydney Harbor, with emphasis on the opera house, are also undertaken.

A GAF Nomad N.22 amphibian is acquired by Managing Director Walton in 1987 as government permission is received to inaugurate thrice-daily scheduled flights from Newcastle to Sydney Harbor.

Operations continue apace in 1988–1991 with passenger enplanements of approximately 15,000 per year. A third DHC-2 is added in 1992 and the carrier's operation is now the only scheduled seaplane service in all of Australia. Flights continue into 1993 but are discontinued for financial reasons.

AQUILA AIRWAYS, LTD.: United Kingdom (1948–1958). Capitalized at £20,000, this flying boat operation is formed by Barry Aikman, former RAF Transport Command Chief Navigation Officer, and is registered on May 18, 1948. A fleet of three ex-**British Overseas Airways Corporation (BOAC)** Short S.25 Hythe (Sunderland III) flying boats is assembled; christened *Hampshire*, *Hazlemere*, and *Halstead*, all are committed to the Berlin Airlift, beginning on August 4. When their service is completed on December 15, a total of 265 sorties have been flown and 1,409 tons of supplies delivered to the former German capital.

Aquila Airways, Ltd.'s first commercial proving flight as a **British European Airways Corporation (BEA)** associate is made on March 23 and 24, 1949, Southampton–Lisbon and Madeira. Regularly scheduled operations over that route are begun on June 11. Some 3,000 passengers are carried before the holiday season ends in the fall. During the year, 9 S.25 Hythes are acquired and are christened *Hawkesbury*, *Henley*, *Howard*, *Hobart*, *Hythe*, *Hudson*, *Hungerford*, *Hemsdale*, and *Hudson II*; in addition, an S.25 Sandringham I is purchased and named *Himalaya*.

On January 12, 1950, the S.25 *Hampshire* flies Winston Churchill nonstop Madeira–Southampton. Madeira operations resume for the summer and on July 7, scheduled Southampton–Jersey flights are inaugurated. Madeira summer schedules are flown in 1951—the year the S.45 Solent *Sydney* is purchased—and 1952. During the latter year, the route is extended to Las Palmas. Also, British athletes are flown to the Olympic games at Helsinki. On January 21, the S.25 Hythe *Hudson* is lost in a crash in Funchal Bay.

In March 1953, Aquila Airways, Ltd., is purchased by the holding company British Aviation Services, Ltd. (Britavia) and Managing Director Aikman resigns his position, but remains on the board. The Hythe *Hungerford* is destroyed in a takeoff accident at Southampton in May. No new routes are opened during the year, but 6,000 people are carried on those scheduled flights already offered.

On February 15, 1954, Britavia turns over ownership of the carrier to Peninsula and Oriental Steam Navigation Co., Ltd. A second Short S.45 Solent, the *City of Funchal*, is acquired in April and the first, the *Sydney*, inaugurates a Southampton–Marseilles and Capri holiday service on June 3, the every-two-weeks operation becoming weekly on July 1.

The S.45 Solent 4s *Awateri* and *Aotearoa* are purchased in January and May 1955 and employed to extend routes to Santa Margherita and Genoa on June 4 and 5. These end on September 25 at the close of the summer holiday season. On January 8, 1956, Southampton–Las Palmas via Lisbon operations are launched by the *Aotearoa*. Mr. Aikman resigns from the board in May and the Lake Geneva town of Montreux is added to the route network in June.

On November 15, 1957, the *Sydney*, en route to Lisbon with 55 aboard, fails its takeoff and crashes into a hill at Chessell Down, Isle of Wight (46 dead); among the victims are 6 newlyweds. Unable to compete against crash-generated bad publicity, more efficient land-based aircraft, and an increasing number of inclusive-tour operators, the Solents are gradually withdrawn from various routes as traffic falls.

Facing mounting debt, the last sustained flying boat operator in the U.K. closes its doors after the final Madeira–Southampton Solent flight on September 30, 1958.

Years later, a noted company pilot will recall Aquila's activities in "Flying Boat Finale: Capt. Archie Jackson Recounts the Last Years of U.K. Flying Boat Services," *Air Pictorial* 58 (March 1996), 153+.

AQUILAS VENEZOLANAS, C.A.: Venezuela (1961–1962). AV is set up at Maiquetia in 1961 to operate all-cargo domestic charters. Revenue operations commence with 3 Curtiss C-46 Commandos, but cannot be sustained. When the company fails in 1962, its fleet passes to **Transportes Aereos, C.A.**

ARAB AIR CARGO, LTD.: Jordan/Iraq (1982–1990). Jointly owned by the governments of Jordan and Iraq, AAC is formed in March 1982. Two Boeing 707-3D3C freighters are supplied by **Alia Royal Jordanian Airlines** and in conjunction with that carrier, scheduled services are initiated on May 1, 1983. Destinations visited from Amman include Amsterdam, Brussels, Dubai, Larnaca, London, and Rome. **Iraqi Airways** plays little role other than as a control agent. UN sanctions and the invasion of Kuwait lead to a cessation of services in 1990.

ARAB AIRWAYS, LTD.: Jordan (1946–1958). The Arab Airways Association (Arab Airways) is formed on January 1, 1946. Owned by Transjordan parties, with a small British interest, the new carrier is equipped with de Havilland DH 89 Dragon Rapides flown by ex-RAF personnel. Revenue flights begin late in the year.

Following the acquisition of Douglas DC-3s, routes are opened in 1947–1950 to Cairo, Beirut, and Baghdad. On June 13 of the latter year, Israel forces a DC-3 to land when it attempts to fly over the southern Negev; American passengers are immediately released, but the other five are held for two days until they can be turned over to the Arab League. Israel retains the aircraft.

Operations continue apace in 1951–1952 without further diplomatic incidents. Through **Aden Airways, Ltd.**, **British Overseas Airways Corporation (BOAC)** acquires an interest in August 1953. The carrier is now reorganized and renamed **Arab Airways (Jerusalem), Ltd.** A service is started to Aden via Jeddah.

In 1955, the airline becomes a subsidiary of the **British Overseas Airways Corporation (BOAC)** holding company, Associated British Airlines (Middle East) and in 1958 it suspends operations.

ARAB AIRWAYS (JERUSALEM), LTD. See **ARAB AIRWAYS, LTD.**

ARAB WINGS, LTD.: Jordan (1975–1998). **Alia Royal Jordanian Airlines** and **Executive Jet Aviation** jointly form this executive passenger charter and contract service operator at Amman in May 1975. Services are initiated to a number of Arab capitals employing 1 Rockwell Sabreliner 75A and 2 Gates Learjet 35s.

Although the fleet and services remain unchanged, shareholding is revised during the 1980s with Alia becoming majority owner and the government of Oman taking a minority interest. The 50-employee company averages 2,000 enplanements per year.

In 1989–1994, Managing Director Sharif Ghazi R. Nasser's fleet comprises 1 Canadair CL-600, 1 Pilatus-Britten-Norman BN-2 Islanders, and 2 Sabreliners.

Flights continue in 1995–1997, during which years the Canadair and Islander are replaced with 1 each Dassault Falcon 50, Boeing 727-100, and B-727-200.

In order that **Royal Wings Airlines, Ltd.** might have a business division, Arab Wings is merged into that new concern in January 1998.

ARABIAN AIRWAYS, LTD.: Aden (1937–1940). Formed during the summer and equipped with a Monospar ST.25 and two Short Scions, Arabian Airways begins scheduled service from Aden to Hadramaut and Djibouti on September 30, 1937. In December, Aden–Mukalla weekly flights commence. The outbreak of World War II forces abandonment of this experimental operation.

ARAWAK AIRLINES, LTD.: Trinidad and Tobago (1970–1973). This company is founded at Port of Spain in June 1970 to take over the service to Tobago dropped by **British West Indies Airways, Ltd. (2) (BWIA)**. The fleet comprises 1 Convair CV-440 and 1 Beech 99.

A lone gunman takes over the CV-440 on November 17, 1971 during an intra-island flight from Trinidad and Tobago. When the aircraft returns to Trinidad, the pirate surrenders.

The company is reformed as Caribbean United Airways, Ltd. in 1973.

ARAWAK AVIATION: Hangar 59, Ft. Lauderdale Executive Airport, Ft. Lauderdale, Florida 33309, United States; Phone (954) 491-5800; Fax (954) 491-6002; Year Founded 1987. Arawak is set up at Ft. Lauderdale in 1987 to provide executive and small group passenger charters to national and international destinations. In 2000, the company operates 1 each British Aerospace BAe (HS) 125-400 Hawker and Cessna 550 Citation II.

ARC RUSS: 88 bud Volokolamskoe Road, Moscow, 123362, Russia; Phone 7 (095) 491 3771; Fax 7 (095) 491 8638; Code Rur; Year Founded 1999. Under the direction of Chairman Vladimir Moseenko, **REMEX Airlines** is renamed in early 1999. The Siberian Lease Company remains the principal shareholder and the fleet now comprises 4 Ilyushin Il-76Ts, 1 Il-76M, and 1 Yakovlev Yak-42D.

The pattern of regular holiday charters begun by REMEX is continued to points in Greece, Spain, and Turkey. Long-haul flights are also made to over 50 destinations in Africa, China, and Europe.

ARCA COLOMBIA (AEROVIAS COLOMBIANAS, S.A.): Calle 19, No. 8-81, Oficina 303, Apartado Aereo 14430, Bogota, Colombia; Phone 57 (1) 334-7651; Fax 57 (1) 284-3476; Code ZU; Year Founded 1960. Captain Hernando Gutierrez Sanchez founds ARCA at Villavicencio in 1960 and begins all-cargo passenger and cargo charter service in the area and to Bogota with a pair of Douglas DC-3s. The main base is switched to Bogota in mid-decade. A Curtiss C-46 Commando freighter enters service in November 1969.

Employing a leased DC-6, the carrier, in early 1973 begins scheduled passenger service between Bogota and Cucuta. A DC-6A is acquired and all-cargo services are initiated linking Bogota, Cali, and Medellin.

Scheduled passenger services cease in January 1977 and are replaced by a concentration on all-freight flights. Two Douglas DC-8-40Fs are purchased and with U.S. permission in hand, scheduled cargo flights begin to Miami; a lone DC-3 is retained for local charter work.

Throughout the early and mid-1980s the founder maintains most freighter services launched during the previous two decades and increases frequencies. New routes are opened throughout the Caribbean and into northern South America.

Although the fleet does not change, by 1987 freight traffic is up 69.1% to 16.06 million FTKs.

Cargo traffic skyrockets in 1988, zooming upward by an unbelievable 208.6% to 26.21 million FTKs.

Freight grows further in 1989, advancing 27.3% to 30.7 million FTKs.

In 1990, the increased fleet comprises 4 leased DC-8Fs. Through August, cargo is up 69.2% to 50.6 million FTKs.

The company is reduced to 2 DC-8Fs in 1991. Statistics are again only partial and show, through September, that freight is up 33.7% to 67.75 million FTKs.

Cargo declines by 5.2% in 1992 to 71.11 million FTKs.

In 1993, General Manager Sanchez's fleet grows to include 1 each DC-8-53, DC-8-51F, DC-8-53F, DC-8-55F, and DC-8-54F, the latter chartered from **Liberia World Airlines**. A DC-6 is also flown. The principal scheduled service continues from Bogota to Miami via Cali.

Cargo traffic declines 9.1% to 77.88 million FTKs on the year.

Operations continue apace in 1994, but freight traffic falls 12.3% to 63.1 million FTKs. The company's 5 aircraft operate 29.14 million FTKs through August 1995, a decline of 33.2%. Services continue in 1996–2000; however, the fleet is altered to include 3 DC-8Fs and 1 DC-10-10F.

ARCADA FLYING SERVICE: United States (1981–1984). In 1981, an FBO based at Eureka, California, elects to inaugurate passenger and cargo charter services employing 2 Piper PA-31-350 Navajo Chieftains. Thrice-daily scheduled roundtrips are instituted to Oakland and Portland a year later.

Plans are unfulfilled to acquire a Piper T-1040 in 1983 and the company shuts its doors in early 1984.

ARCHANA AIRWAYS, LTD.: 41-A Friends Colony East, Marthura Road, New Delhi, 110065, India; Phone 91 (11) 684-2001; Fax 91 (11) 684-7762; http://www.rediff.co.in/rediff_on_the_net/freecopy/travel/noticeb/archana.htm; Code F5; Year Founded 1993. Formed as a subsidiary of Bhartiya Vehicles & Engineering, Ltd. at New Delhi in May 1993 to offer regional services, Managing Director A. K. Bhartiya's new entrant begins service during the summer with a single Czech-made Let 401UVP Turbolet. Minority shareholding is acquired by the provincial government of Madhya Pradesh and 3 more L-401s arrive during the fall.

C. K. S. Raje becomes managing director in 1994 and a fourth Turbolet is ordered. The company is granted scheduled airline status by the government late in the year.

In January 1995 orders are placed with Bombardier Regional Aircraft for 2 de Havilland Canada DHC-8-200s. Two leased DHC-8-300s enter service on an interim basis to nine destinations on March 13, with the owned machines being delivered during September and October. Enplanements total 29,225.

Airline employment stands at 238 in 1996 and the carrier suffers a disastrous traffic year.

While landing at Kanpu on May 18, an L-410UVP with 3 crew and 16 passengers overshoots the runway and stops against a wall. There are no fatalities.

While on approach to Bhutar following a July 11 service from Shimla, a Let L-410UVP with three crew and six passengers, crashes into a forest on the Bandi Hill, near Kanda; there are no survivors.

By December, the fleet includes only 2 Let L-401s. Passenger boardings plunge 58.7% to 18,300.

The workforce is increased a slight 0.8% in 1997 to 240. Services must be suspended until the inoperable Let can be returned to service in September.

Meanwhile, orders are placed for another L-410 and 3 Boeing 737s even as the carrier becomes a possible takeover target for fellow-independent NEPC Airlines, Ltd.

During the fall, a code-sharing agreement is signed with Indian Airlines, Ltd.

Customer bookings skyrocket 64.3% to 30,063.

Service is maintained in 1998; however, customer bookings fall another 52.7% to 14,000. The workforce is reduced by 0.8% to 238 at the beginning of 1999. Flights continue apace during the remainder of the year and into 2000.

ARCO (AEROLINEAS COLONIA, S.A.): Uruguay (1957–1981). The Montevideo motor coach company ONDA: Organizacion Nacional de Autobuses, S.A. forms ARCO at Montevideo on January 9, 1957, although the new air transport subsidiary is not fully activated for seven years.

In early 1964, ONDA officials decide to offer a coach-air shuttle service directly across the Rio de la Plata from Laguna de los Patos Airport at Colonia, in southwestern Uruguay, to Aeroparque Airport in Buenos Aires. This is in competition with the Short S.25 Sandringham flying boats of Aerolineas Argentinas, S.A. and CAUSA (Compania Aeronautica Uruguay, S.A.).

Employing three former CAUSA passenger-configured Curtiss C-46s to fly between the two capitals and GM Super Jet Coaches for the ground transport up from Montevideo to Laguna Airport (where ONDA owns and operates the tower and terminal), the company begins daily frequencies in July. Two C-46Fs are obtained in 1965.

A heavy storm damages the C-46s on the ground at Colonia in July 1966, forcing a suspension of operations until the fall. During this down time, carrier president Dr. Conrado H. Hughes obtains two second-hand C-46s and a CV-240 from the U.S.

Following the demise of CAUSA (Compania Aeronautica Uruguay, S.A.) in 1967, the 34-employee carrier settles down to regular operation of its cross-channel service. The fleet is upgraded in the 1970s; two Convair CV-240s replace the last C-46s in 1970 and two ex-Bar Harbor Airlines CV-600s are added, one each in 1976 and 1981.

Flights continue without incident until December 1986, when increased fuel costs and a decline in traffic force the carrier to cease operations. After the company declares bankruptcy in the spring of 1987, its Colonia–Buenos Aires passenger service is taken over by Aero Uruguay, S.A. employing a former Horizon Air Fokker Fairchild F-27A Friendship.

ARCO (AEROVIAS RAMALES COLOMBIANAS, S.A.): Colombia (1939–1941). Ex-SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.) Captains Fritz Herzhauser and Hans Hoffman found ARCO at Villavicencio on October 30, 1939. Employing the Ford 8-AT *Santander*, the 5-AT-54 *Bolivar*, and two Beech 17 Staggerwings, one of which is christened *General Paez*, the company inaugurates a route from Villavicencio north to Arauca and Puerto Carreno on the frontier with Venezuela. Although emphasis is placed upon freight and cattle transport, border guards and security forces are also flown to outlying posts.

The Colombian government, probably under U.S. pressure against German-oriented South American interests, requires the state airline AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.) to purchase ARCO and its surviving planes on April 25, 1941.

ARCO BERMUDA, LTD.: Bermuda (1968–1971). Arco Bermuda is established in 1968 to operate nonscheduled long haul cargo charters. A single Douglas D-7C is acquired and employed to begin revenue services, which last until operations are suspended in March 1971.

ARCTIC CIRCLE AIR SERVICE: 6260 Old Airport Way, Fairbanks, Alaska, 99706, United States; Phone (907) 474-0112; Fax (907) 474-0116; Code 5F; Year Founded 1973. Established as an air taxi operation at Fairbanks in January 1973, ACAS inaugurates light-plane revenue services to Fort Yukon and to various other local bush destinations on February 1. The fleet grows during the remainder of the decade to comprise 2 Piper PA-31-350 Navajo Chieftains, 1 Britten-Norman BN-2 Islander, 5 Cessna 207s, 2 Cessna 206s, and 1 Cessna 185.

In 1979 the company is purchased by the Owitichyaa Zhee Native Corporation, which also acquires Wind River Air Services and merges the two under the leadership of President Douglas A. Butler.

Airline employment in 1980 stands at 56. Scheduled passenger and cargo flights to Fort Yukon start on March 1. Late in the year, an arrangement is reached with Wien Air Alaska to provide replacement services with 2 newly acquired Embraer EMB-110 Bandeirantes.

After Wien Air Alaska files for Chapter XI bankruptcy in November 1984, ACAS appears to be unable to generate sufficient traffic to continue operations. The expected closure does not immediately occur and operations continue through 1985 until September 1986.

In 1988, the FAA proposes to cancel the airline's operating certificate for various FAR violations, including failure to operate. Once again, the small all-cargo carrier fights back. It is purchased by new owners in 1989 and its headquarters are transferred to Bethel.

Operating authority is regained in 1990 and operations resume to village destinations surrounding the new base. The fleet in 1991 includes 2 Shorts SC-7 Skyvans and 1 Cessna 206. Freight traffic increases by 5.1% over the previous year to 3,153,000 pounds, most of which is mail.

Overweight by 324.8 pounds at takeoff on March 3, 1992, a Shorts SC-7 Skyvan suffers an in-flight cargo shift that causes the aircraft

to roll right, crash, and catch fire; the freighter is destroyed and its lone pilot is killed.

President Irvin K. Terry's operation continues apace in 1993. Airline employment stands at 29 in 1994 and the fleet now includes 3 Skyvans. Enplanements total 4,614 and 1.3 million pounds of freight are flown.

Operations continue apace in 1995, but not without cost. While landing at Chevak on March 29, a gust of air slams a Cessna 206 to the runway. The pilot is not hurt and after determining that most of the damage is confined to his tail skid, he elects to fly out of the remote airfield.

On May 25, the engine of a Cessna 206 stops just after the plane has departed Bethel for a cargo flight to a remote destination. The pilot is able to perform a safe emergency landing in a streambed in rough terrain. He walks out, but it will take five months to recover the plane.

In 1996, Arctic Circle flies not only the 2 Skyvans, but also 4 Cessna 207As, 2 C-402Cs, 2 C-208 Caravans, 1 C-206, and 1 Piper Cherokee Lance.

Just after takeoff from Nunapitchuk on a March 25, 1997 all-cargo service to Bethel, a Shorts SC-7 collides in midair with a Cessna 207A, which is also climbing away; both aircraft fall from about 800 ft. onto the surface of a frozen lake and both pilots are killed.

Flights continue in 1998–2000. During the former year, revenues of \$4.8 million are generated.

ARCTIC PACIFIC: United States (1958–1959). Arctic Pacific is formed at Seattle, Washington, in the spring of 1958 to provide non-scheduled services throughout the continental U.S. Operations commence with 2 Curtiss C-46 passenger-configured Commandos, 2 Douglas DC-3s, and 1 Consolidated PBY-5A Catalina flying boat.

A C-46F that is but 1,759 pounds over its authorized weight limit and carrying 3 crew and 45 passengers, crashes while taking off from Toledo, Ohio, on October 30 (22 dead). The subsequent government investigation will also determine that the aircraft was operating with unapproved engine types. These serious safety deficiencies lead to revocation of the company's operating certificate early in 1959.

ARCTIC TRANSPORTATION SERVICES: 5701 Silverado Way, Unit L, Anchorage, Alaska 99518, United States; Phone (907) 562-2227; Fax (907) 563-8177; <http://www.atsk.com>; Code 7S; Year Founded 1996. Tracing its heritage back to the early 1950's, Wilfred Ryan's **Ryan Air Service**, previously known as **Unalakleet Air Taxi**, is reformed in 1996 and renamed. Under the leadership of Jack Eckets, the FAR Part 135 carrier continues to offer scheduled mail and cargo service throughout Alaska and into western Canada from hubs at Aniak, Bethel, Emmonak, Kotzebue, Nome, St. Mary's, and Unalakleet.

By 1999, ATS employs 65 people and operates a fleet of 15 Cessna 207As and C-402Cs. Late in the year, a new CASA C-212-200 Aviocar freighter is acquired. The new fleet flagship, with its 5,500-lb. payload, can fly oversized freight into the airstrips at any of the 68 villages visited.

ARCUS AIR LOGISTIC, GmbH: Germany (1987–1995). Arcus is established at Mannheim in 1987 to provide scheduled third-level commuter services linking its base with regional domestic destinations. Flights commence and continue for two years with a single Rockwell Commander 690B. Orders are placed in late 1990 for two Dornier 228-212s.

The Dornier 228-212s arrive in December 1991 and are placed into daily service between Mannheim, Dresden, and Leipzig.

Operations continue apace in 1992–1993 and during these years Erhard Ding is managing director. He adds a pair of Cessna 421s. In January 1994, a Dornier 328-110 is ordered; it will be delivered in June. Late in the year, a Bavarian tour operator makes plans to acquire the airline and rename it **Air Germanica, GmbH**. When the transaction is complete in the new year, the company will withdraw from scheduled service and offer only charters.

Air Germanica, GmbH does not survive a year and in 1996 Arcus returns to scheduled service under the name **Arcus Air Luftfahrtunternehmen, GmbH**.

ARCUS AIR LUFTFAHRTUNTERNEHMEN, GmbH: Flugplatz Neuostheim, Mannheim, D-68163, Germany; Phone 49 (621) 496 040; Fax 49 (621) 496 048; Code ZE; Year Founded 1996. Late in 1994, a Bavarian tour operator makes plans to purchase **Arcus Air Logistic, GmbH**, and rename it **Air Germanica, GmbH**. Upon completion of the transaction on January 1, 1995, Arcus withdraws from scheduled services and offers only charters.

Air Germanica, GmbH does not survive a year and in 1996 Arcus returns to scheduled work under this new name. Erhard Ding remains managing director and flights over previous routes are operated with a pair of Dornier 228-220s.

Service is maintained in 1997–2000, during which years the fleet is enhanced by the addition of three Fairchild Dornier 328-110s.

AREA (AEROVIAS ECUATORIANAS, S.A.): Ecuador (1949–1968). The two small and unprofitable rival carriers **ATECA (Aero Transporte Ecuatoriana, C.A.)** and **Transandina Ecuatoriana, S.A.** merge in 1949 to form the Guayaquil-based AREA. The initial fleet comprises the partners' larger aircraft (3 Douglas DC-3s and 1 Curtiss C-46) and service is rationalized over their previous networks; destinations now served include Guayaquil, Quito, Tulcan, Esmeraldas, Manta, Cuenca, and Macra. The shakedown process is completed toward the end of 1950.

Two ex-**Pan American Airways (PAA)** Boeing 307 Stratoliners, formerly named *Clipper Rainbow* and *Clipper Comet*, are purchased from William "Bill" Conrad's Miami-based Airline Training, Inc. in early 1951 (one receives the name *Quito*). With permission from the U.S. CAB, the two pressurized airliners are employed during the summer to inaugurate flights from Guayaquil to Miami via Panama.

Late in the year, the Ecuadorian government provides assistance by cancelling the cabotage rights of **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)**; it also provides a short-term, direct, \$1-million loan. Another DC-3 is also added.

Unwilling to create a diplomatic incident, the government does not attempt to halt the cabotage network being run by the American carrier **Pan American-Grace Airways (PANAGRA)**. As a result, in 1952–1953, the U.S. airline is able to drive AREA off of its main Quito–Guayaquil trunk route.

Having completed an all-cargo service from Miami on March 27 of the latter year, a C-46F with two crew makes a hard landing at Tocumen Airport in Panama City; although there are no fatalities, the aircraft is damaged beyond repair.

Suffering from the results of the crash as well as severe competition from PANAGRA, AREA suspends revenue operations late in 1954.

The Boeings, together with the Douglas aircraft and 6 Avro Anson Vs purchased in 1953, are withdrawn. Reimported to the U.S., the onetime *Clipper Comet* is sold to Leo Aimonette of Newcastle, Wyoming, on May 25, 1955. The former *Clipper Rainbow* is sold to **Aigle Azur Extreme Orient Airlines, S.A.** and is delivered to the French carrier's Saigon base on March 19, 1957.

Following four years of inactivity, AREA returns to service in 1958. Flight 222, a DC-3 with 3 crew and 29 passengers, crashes into Mt. Illiniza, Ecuador, on April 7; there are no survivors.

In late spring 1959 a Fokker F-27A, used as prototype for the U.S.-made Fairchild model, is delivered and it is employed, beginning on July 9, to fly Guayaquil–Quito, in competition with both **Pan American-Grace Airways (Panagra)** and **CEA (Compania Ecuatoriana de Aviacion, S.A.)**. DC-3s are obtained to offer frequencies to smaller towns.

On November 7, 1960, the F-27A with 3 crew and 34 passengers crashes at the 15,000-ft. level of a dormant volcano 10 miles S. of Quito, Ecuador, during initial approach and explodes; there are no survivors.

Following the F-27 disaster, two Douglas DC-4s (one of which is named *Ciudad de San Juan*) are purchased from **Northwest Orient Airlines** as replacement in 1961.

In June 1964, three DC-7Bs are acquired from **Continental Airlines** and are christened *Guayas*, *Pinincha*, and *Azuay*. Later in the year, service to Miami, suspended in 1954, is resumed. AREA and **CEA (Compania Ecuatorianas de Aviacion, S.A.)** engage in spirited domestic competition in 1965, during which the latter spurns a merger proposal from its rival.

While taxiing at Miami on March 15, 1966, a DC-7B runs into a ditch, breaking its main spar; the plane must be written off. A de Havilland DH 106 Comet 4 is obtained in late spring from **British Overseas Airways Corporation (BOAC)** and is placed in service from Guayaquil to Miami via Bogota. The two displaced DC-7Bs are transferred to the Guayaquil–Quito run and the DC-3s to outlying destinations.

A DC-7B is lost in a ground accident at Miami on March 1, 1967.

New overseas routes are announced in October and plans are made to acquire a Lockheed L-100 civil Hercules freighter.

In early 1968, the company's Comet 4 is impounded at Miami for nonpayment of fees. Leaving the British plane in American hands, AREA now leases a Convair CV-990A from **Alaska Airlines** and employs it to initiate service from Guayaquil to Montevideo via La Paz and Asuncion.

After a successful landing at Macuna, Ecuador, on May 16, an L-100-20 Hercules with six crew becomes stuck in deep mud; an effort is made to build a ramp under the aircraft, during which enterprise the turboprop catches fire and is destroyed. There are no fatalities.

Sustained competition with **CEA (Compania Ecuatorianas de Aviacion, S.A.)** and the effort to meet its aircraft costs now place a severe strain on company finances. The situation worsens, no additional CV-990A flights can be made, and AREA goes bankrupt at the end of the year.

ARGO AIR INTERNATIONAL, S.A.: Dominican Republic (1971–1991). Having obtained a permit from the U.S. CAB to operate scheduled all-freight service to Miami, Argo is founded on February 13, 1971, and inaugurates flights to Miami and several cities in the Antilles. The initial fleet comprises 3 Curtiss C-46s and 1 Douglas DC-6A. An ex-USAF C-121A is purchased late in the decade; modified to L-749A civil standard, the Constellation undertakes freight charters to various destinations around the Mediterranean.

As the result of increased fuel prices and the adverse impact of the world economic situation upon all-cargo operators, the company is forced out of the scheduled business in 1981. CEO Frank Fine's carrier does, however, continue charter operations. The Constellation is lost in an accident off St. Thomas in October.

Other than acquisition of a replacement Constellation, there are no other changes in the fleet in 1982–1984.

During the spring of 1985, a Douglas DC-8-55NB is acquired; it had originally entered service in March 1965 as the *Asama*, the first combi freighter operated by **Japan Air Lines Company, Ltd. (2)**. In December, an ex-USAF Boeing KC-97L reconfigured to civil standard, is purchased from Kolar, Inc. Flown to Miami for last minute engine changes, the giant aircraft enters commercial service in the spring of 1986.

Two more Stratocruisers join the fleet by 1989, by which year the company is offering three roundtrip cargo services per week, two to Santo Domingo and a third to Belize, where freighter services are flown on behalf of Belize International Airlines, Ltd. These operations continue apace until 1991 when the world recession drives the company from the skies altogether.

ARGONAUT AIRWAYS CORPORATION: United States (1949–1966). AAC is established at Miami, Florida, in 1949 to provide irregular services to Latin American markets employing several Curtiss C-46 Commandos leased from the USAF. These flights continue for the next decade. In January 1959, a supplemental air carrier certificate by the CAB is awarded and the fleet is increased to five Commandos.

Operations are maintained over the original life of the certificate, but the government refuses to renew the permit. It does allow the company

to continue its supplemental flying until November 7, 1962, when it is forced to stand down and withdraw four C-46s.

Company owners elect to continue operations on a contract basis and gain access to two Douglas DC-7Bs, which are registered to Southern Pipeliners, Inc. of Hialeah, Florida. This ad hoc arrangement continues until 1965 when operations are suspended. An attempt is made to merge the moribund carrier with **Southeast Airlines** in 1966, but fails. All remaining assets are thereafter liquidated.

ARGOSY AIRLINES: United States (1978–1979). Argosy is set up at Ft. Lauderdale, Florida, in 1978 to provide scheduled daily roundtrip shuttles to Great Harbour Cay. Douglas DC-3 and Convair CV-440 revenue frequencies are inaugurated in the spring.

While on a May 12 ferry flight, the CV-440 with three crew suffers first the failure of one engine and then loss of power to the second; the Convair is ditched in the Ohio River, but there are no fatalities. Flights are maintained with the Douglas transport.

While on a September 21, 1979 ferry flight, a DC-3 with four crew disappears off Ft. Lauderdale; no wreckage or bodies are found and nothing further concerning the fate of the flight is known.

With both of its airplanes lost, Argosy now shuts its doors.

ARI WORLDWIDE AIRCRAFT CHARTERS: Air Rutter International, 3250 Airflite Way, Long Beach, California 90807, United States; Phone (562) 490-6359; Fax (563) 490-6328; Year Founded 1992. Dori F. Abouzeid establishes Air Rutter International at Long Beach in 1992 to provide worldwide executive and small group passenger charters. Within five years, President Abouzeid employs seven pilots and operates a fleet of 1 each Cessna 560 Citation V, C-650 Citation III, C-592 Citation, and C-550 Citation II.

ARIA. See **AEROFLOT RUSSIAN INTERNATIONAL AIRLINES**

ARIANA AFGHAN AIRLINES COMPANY, LTD.: Afghan Authority Building, P.O. Box 76, Ansari Watt, Kabul, Afghanistan; Phone 93 25 541; Fax 93 21 015; Code FG; Year Founded 1955. The Royal Afghan Government (51%) and the Indamer Company of India (49%), founded postwar by American Peter Baldwin, form Aryana Afghan Airlines, Ltd. on January 27, 1955. The Indamer Company provides four Douglas DC-3s, which begin domestic operations from a Kabul base during the summer, making a three-hour flight to Mazar-e Sharif via Kunduz. They also begin the company's long tradition of transporting Muslim pilgrims on Hadj to Mecca.

On June 27, 1956, the government signs an Air Transport Development Project Agreement with the U.S. for the development of the nation's commercial air system.

To implement the 1956 pact with the U.S., the carrier is reincorporated in 1957; the Afghan government again takes 51% controlling interest, but **Pan American World Airways (1)**, under State Department prodding, acquires Indamer's 49% holding for \$200,000. The spelling of the previous name Aryana (the ancient Greek name for Afghanistan) is now changed.

On June 1, the American carrier is awarded a \$2.05-million management and technical assistance contract financed by the International Cooperation Administration; Pan Am agrees to run the airline, training its personnel and expanding its operations. Incidentally, the CIA now intercedes with the American CAB to award Pan Am a certificate for Kabul. Two days later, a wet-leased DC-4 with an Afghan crew departs New York (IDL) for Kandahar; from that point, it will fly Hadj pilgrim flights to Mecca for the remainder of the summer.

With ICA funding, the U.S. FAA sends a Civil Aviation Assistance Group to Afghanistan in 1958 to design and oversee the building of a modern airway and airport plan at key communities in the country. Meanwhile, PAWA-1 trainers and Afghan crews, flying DC-3s, inaugurate regional services from Kabul to Delhi via Amritsar, and to Karachi.

In 1959 the U.S. Export-Import Bank lends Ariana the funds with which to purchase two Douglas DC-4s; under **Pan American World Airways (1)** tutelage, on September 11 these commence international services of Kandahar to Frankfurt via Tehran, Beirut, Ankara, and Prague. The weekly return flights are thus operated over what is marked as The Marco Polo Route.

Flight 202, one of the new DC-4s, with 5 crew and 22 passengers, fails its takeoff from Beirut for a scheduled flight to Tehran on November 21 and makes a forced landing (24 dead).

With U.S. Export-Import Bank funding for three years, beginning in 1960, a DC-6Bs and several more DC-3s are acquired in May, with the four-engine propliner coming from **Pan American World Airway (1)**'s Latin American fleet; these are employed as DC-4 replacements. A new route is launched to London (LGW). On June 10, again at the State Department's request, Pan Am accepts a \$4.6-million foreign aid contract to train personnel for Ariana.

Lack of traffic causes frequencies on The Marco Polo Route to be reduced to twice monthly in the spring of 1961 and, in August, service to Karachi is withdrawn altogether. Meanwhile, as a result of the new equipment's introduction, Kabul-New Delhi traffic increases dramatically.

When Pakistan closes its border to Afghanistan in September 1962, **Ariana** is called upon to inaugurate an emergency airlift to India, taking in raisins and pomegranates to trade for tea. Three of the carrier's four DC-3s and its only DC-6 are committed to this "Fruit Lift."

Everett Wood arrives from Pan Am's internal German service at the end of 1962 to become Ariana's chief pilot, with Jack Race as his assistant. While training local flyers, the two Americans help the company maintain domestic services from Kabul to Kandahar, Herat, Kunduz, and Mazari-e Sharif and international frequencies to Tehran, Delhi, and Beirut.

To date, the American major has received \$412,000 in fees in addition to the income from its original contract. Enplanements during the latter year exceed 25,000.

The operational headquarters are moved to Kabul from Kandahar in 1963. Piloted by Capt. Vincent Serapio, a DC-3, on "Fruit Lift" duty, makes a forced landing in the Logar valley southeast of Kabul on March 9. The aircraft is wrecked during an attempt to fly it out 24 days later.

On April 1, the U.S. AID loans the government of Afghanistan \$2,625,000 at .75% for 40 years; the government, in turn, is required to pass on the money to the airline at 3.5% for 10 years. When this is accomplished, Ariana orders another DC-6A and two Convair CV-240s. The Douglas and both Convairliners arrive in September. Enplanements this year total 31,500.

A CV-440, purchased from **Allegheny Airlines**, joins the fleet in March 1964, replacing two DC-3s and inaugurating services to Kunduz and Herat; Kabul to Peshawar and Karachi flights start during the summer. Meanwhile, government shareholding in the company is redistributed between the Monopoly Department (16%), the Civil Aviation Department (15%), Da Afghanistan Bank (10%), and miscellaneous (10%). A slump in domestic air traffic occurs during the fourth quarter, due largely to the opening of paved highways over some major routes within Afghanistan.

Still, overall passenger boardings grow 10% to 35,000; the workforce stands at 571 and revenues of \$2.9 million are earned.

The ICA contract with Pan Am for assistance expires in July 1965 and is replaced by a much reduced two-year deal. Kabul to Tashkent DC-6 service is started and passenger pooling agreements are signed with **Pakistan International Airlines Corporations (PIA)**, **Indian Airlines Corporation**, **Iran Air**, and **Aeroflot Soviet Airlines**. In cooperation with the latter, DC-6B service to Tashkent begins in July. On August 13, the DC-6B resumes the full Marco Polo Route, flying from Kabul and Kandahar to London via Beirut and Frankfurt.

The workforce is increased to 607 and a total of 44,704 passengers are carried on the year. The fleet in 1966 comprises 1 CV-440, 2 DC-6A/Bs, and 2 DC-3s; an order is placed for 1 Boeing 727-113C.

The **Pan American World Airways (1)** management contract is concluded in 1967. Although Capt. Wood and his American flying col-

leagues will depart, a new maintenance and technical contract is signed. **Bakhtar Afghan Airlines** is formed to begin taking over Arian's domestic services with DC-3s, and later, de Havilland Canada DHC-6s. Capt. Inam Al-Haq Gran succeeds Woods as chief pilot in December.

The carrier's first jetliner, the B-727-113C ordered in 1966, is delivered on March 23, 1968 and is placed on the international routes, allowing expansion of the London service, now rerouted via Tehran, Istanbul, and Frankfurt. The employee population is 757. Enplanements total 59,254 and revenues of \$5.5 million are generated.

On final approach to London (LGW) on a service from Frankfurt on January 5, 1969, Flight 701, a B-727-113C with 8 crew and 57 passengers, crashes into a tree and a house near the runway; 50 people aboard the aircraft are killed along with 1 person on the ground.

The lease of a replacement "three-holer" is arranged with **World Airways**.

A DC-3 and a DC-6 are both damaged beyond repair in a ground collision at Kabul on January 15; there are no fatalities.

A total of 46,212 travelers are flown as traffic drops dramatically.

Employment grows 2% in 1970 to 652. A new B-720B is delivered in January 25. Five other aircraft are still in the company fleet: 2 DC-3s, 2 DC-6A/Bs, and 1 CV-440. Passenger boardings rise 3.4% to 47,838 and freight traffic increases 17.9%.

On January 1, 1971, Ariana transfers its last domestic routes and responsibilities to **Bakhtar Afghan Airlines**. The arrival of a second B-727-113C, purchased from Executive Jet Aviation in June allows retirement of the propeller equipment and the inauguration of new services to Paris and Amsterdam. Boeing 727-113C routes are extended in 1972 to Istanbul, Lahore, and Amritsar.

The last **Pan American World Airways (1)** technician departs in 1973; however, a second B-720B, purchased from Juan Trippe's carrier, joins the fleet in May. European frequencies are increased as a consequence. In June, three Yakovlev Yak-40s are purchased from the Soviet Union and are assigned to **Bakhtar Afghan Airlines, Ltd.** The carrier also participates in the UN-sponsored refugee exchange between Bangladesh and Pakistan, carrying some 48,000 persons. The workforce is now 783. Traffic and revenue figures are not revealed as the last emir surrenders his throne in a military coup.

Service is inaugurated in 1974 to Peking, Tokyo, Baghdad, Dacca, and Kathmandu. The political atmosphere begins to change as certain factions in the new republic seek closer relations with the Soviet Union. Enplanements in 1975 are 79,900. The employee population in 1976 is 772. Passenger boardings increase a slight 1% to 80,707, while freight grows a more substantial 22%. A Douglas DC-10-30 is ordered.

After 12 years of service as the carrier's chief pilot, Capt. Gran is murdered near his Kabul home in 1977. A total of 100,292 passengers are carried this year. As the result of political unrest in 1978, bookings dip 5.2% to 95,607 and cargo falls 10.6%.

Airline employment at Chairman F. A. Khaleqyar's carrier totals 809. The first wide-body, a DC-10-30, joins the fleet on September 21, 1979. Political unrest continues and Soviet forces invade the nation on December 24. During the Christmas onslaught, the DC-10-30 is hit by a rocket and reduced to junk, which must later be sold. A puppet regime loyal to Moscow is established at Kabul on December 27. Except for **Aeroflot Soviet Airlines** and **Indian Airlines Corporation**, all foreign air carriers suspend flights into Kabul.

Service is suspended in 1980 to Amsterdam, Frankfurt, London, Paris, Istanbul, and Rome. A route is added to East Berlin (Schoenfeld Airport) in 1981; the remaining B-720B is withdrawn. Soviet airliners begin to replace the American units during 1982-1983. Enplanements for the two years are, respectively, 66,000 and 80,000.

During 1984-1986, the route system is dramatically reduced; international services are extended only to Amritsar, New Delhi, Tashkent, East Berlin, Prague, and Moscow. Foreign flights primarily transport injured Soviet and government personnel. Traffic figures are not available. Having remained grounded for most of its life, the DC-10-30 is sold to **British Caledonian Airways, Ltd. (BCAL)** in 1985.

On October 23, 1985, Ariana is merged with the domestic carrier **Bakhtar Afghan Airlines, Ltd.**, which now becomes the national airline. Service to Amritsar and East Berlin is suspended. Enplanements total 183,677.

Airline employment grows 15.7% in 1987 to 1,307 and the fleet now includes 1 each B-727-113C and B-747-155C, 2 Tu-154Ms, 2 An-24s, 4 An-26s, and 2 Yak 40s, with orders outstanding for 2 more Yak 40s. Firing U.S.-made surface-to-air missiles on June 11, Afghan guerrillas down an An-26 with 55 aboard (53 dead). Still, new frequencies are added to Prague, Moscow, and Tashkent.

Despite the conflict, passenger boardings jump 18.9% to 226,482; however, freight is down by 19% to 8.15 million FTKs.

The impending withdrawal of the Soviet forces helps the company's international traffic to significantly increase in 1988. In February, the company is renamed Ariana Afghan Airlines.

Citing security reasons, **Indian Airlines Corporation** suspends its twice-weekly roundtrips between New Delhi and Kabul in December. Its presence in the Afghan capital is, however, retained through the chartering of a weekly B-727-113C services from Ariana.

An An-26 is destroyed on December 10, with the loss of all 25 passengers; there are no other details concerning the accident.

Customer bookings balloon 25% to 78,801 and cargo recovers, up 20% to 10.55 million FTKs.

Evacuation of Russian troops is completed by February 15, 1989, and anti-Soviet forces take over the capital and the government on April 28.

Terrorists attempt to takeover an An-26 with 4 crew and 35 passengers en route from Kabul on June 18, shooting the copilot. When the rear ramp door is opened in-flight to facilitate the pirates' escape, a forced landing must be made onto a hill at Zabol, Iran (6 dead).

Passenger boardings inch upward by 1% to 79,302 while freight at the 1,584-employee flag line swells 31% to 13.86 million FTKs.

1990 is also a good year, at least through the first 11 months for which records are released.

Customer bookings increase 18% to 84,889. Cargo declines 19% to 10.15 million FTKs. Now those Islamic factions that had driven out the Soviets turn on each other and wage civil war.

The fleet in 1991 includes 2 each Antonov An-24s, An-26s, Yakovlev Yak-40s, and Tu-154Ms, and 1 each Boeing 727-113C and B-727-155C. Ariana, which now flies to Delhi, Dubai, Prague, Moscow and Teheran, begins discussions with French aviation officials concerning the possibility of a regular Paris-Kabul flight.

Passenger boardings decline 1% to 92,276 and freight falls 26% to 8.2 million FTKs.

Ariana's weekly charter flights between Kabul and New Delhi cease on March 13, 1992, when **Indian Airlines Corporation** resumes thrice-weekly services to the Afghan capital.

On May 29, a Tu-154M and both Yak-40s are destroyed in a rebel rocket attack on Kabul Airport; the wreckage will be written off on August 1. Service between Kabul and Peshawar, Pakistan, is resumed on June 1; air links had been severed in 1979 after the Soviet invasion.

On August 6, **Air France** sells the company three used 727-228As at \$4 million each as replacements and a number of Afghan pilots are sent for training in France. The first B-727-228A is scheduled to arrive in Kabul on August 25.

The first Boeing trijet actually is delivered to the Afghan capital on October 18. The welcoming ceremony is spoiled when a cow, tethered for sacrifice, breaks free and makes a run for freedom; it is killed by an airport security guard's Kalashnikov. Enplanements for the year total just 45,000.

Information on the period 1993-1995 is based on Associated Press correspondent Ian Stewart's October 30, 1995 story, "Through Bullets and Hijackings, Afghan Airline Keeps Flying." In 1993, President Abdullah Samadi's carrier employs 1,584 workers. An alleged threat by mujahedeen rebels under Gulbuddin Hekmatyar to shoot down any aircraft attempting to take off or land at Kabul on January 10 causes the cancellation of all civil air traffic from the airport, including Ariana

flights to Delhi, Amritsar, Dubai, and Tashkent. Service is resumed three days later.

In addition to domestic routes, the airline continues its services to Amritsar, Delhi, Dubai, Moscow, Prague, and Tashkent. Traffic statistics are reported through October and show that passenger boardings are off 31% to 29,000 and freight is down 24% to 4.05 million FTKs.

In the years that follow, Ariana literally soldiers on, attempting to provide a civil airline service where no civil aviation system exists, operating to airports and hangars ringed by surface-to-air missiles that guard against attack by forces opposed to President Burhanuddin Rabbani.

Tickets for the remaining routes are sold on an ad hoc basis and passengers arriving at terminals find none of the amenities normally expected—even the arrival and departure boards are in disrepair. The Bank of Afghanistan, Ariana itself, and the government continue to foot the bill for airline operations, while President Rohullah Aman attempts to keep aircraft repaired and essential schedules honored.

The anti-Rabbani council led by Prime Minister Gulbuddin Hekmatyar and northern warlord Gen. Abdul Rashid Dostum continue to claim that Ariana is being used for military purposes. The group claims to have hard evidence that the airline is using military airports and transporting counterfeit money, ammunition, and military personnel from Moscow and New Delhi.

On September 1, 1994, the council threatens to shoot down the carrier's planes beginning on September 3; Ariana officials again deny the company's involvement in politics and state that it is flying as a public transport concern and is not carrying arms but such necessities as medicines.

The company's route network continuously shrinks in 1995. The provincial capitals of Mazar-e Sharif, Kandahar, and Herat all fall to enemies of the Kabul government and, as the result of a diplomatic break between Rabbani's government and Pakistan, services to Peshawar are terminated.

While on approach to Jalalabad after a September 11 service from Kabul, an An-26 with 6 crew and 40 passengers runs out of fuel and makes a forced landing (3 dead).

Taliban tribesmen hijack a B-727-228A, en route to Dubai with an all-freight cargo and no passengers, to Kandahar on September 21.

By the end of the month, the airline is down to seven operable aircraft, maintenance is questionable, and one domestic route remains, Kabul to Jalalabad. By October, the company does not even have sufficient electricity to power its ground equipment or radios.

In October 1996, Pakistan provides the company with a temporary maintenance and operational base at Karachi Airport. On December 7, 1 B-727-228A, 2 Yak-40s, and 2 An-24RVs are allowed to begin scheduled twice-weekly services to the provincial capitals of Herat, Jalalabad, and Kandahar. In addition, weekly roundtrips are launched from Kabul or Jalalabad to Amritsar and Dubai.

The fleet of Acting President F. M. Fedawai at the beginning of 1997 includes 2 B-727-228As, 2 An-24RVs, 2 An-26s, 1 Tu-154M, 2 Yak-40s, and 1 DHC-6-300 Twin Otter. A workforce of 1,584 is in place and helps the company resume many of the services suspended earlier.

As part of the civil war between the government and Taliban forces, troops of the latter, on September 9, take over the airport at Mazar-e Sharif, 5 mi. E of the city, capturing several company aircraft.

A Yak-40 crashes while landing at Jalalabad on October 29 (one dead).

A total of 39,839 passengers are flown this year, together with 20.9 million freight FTKs.

En route from Kandahar to Herat on January 13, 1998, an An-26, with 6 crew and 45 passengers, encounters bad weather that prevents its arrival. The plane turns back and makes an unsuccessful attempt to land at the former Soviet air base at Shindand and then tries to make it back to Kandahar. Unable to do so, it next turns toward Quetta, capital of Pakistan's Baluchistan province but, probably out of fuel, it crashes 70 miles N. of that city. There are no survivors.

On March 19, one of the company's two remaining B-727-228As, with 45 passengers, crashes 300 ft. below the summit of 3,000-ft. high

Sharki Baratayi Mountain while on descent to Kabul from Kandahar; there are no survivors. This is the 16th Ariana plane to crash since the airline was founded and the 9th with fatalities.

Service is maintained throughout the remainder of the year. Customer bookings total 53,000 and 9.9 million FTKs are operated.

In July 1999, the Taliban-led government of Afghanistan admits that it is harboring Osama bin Laden, the Saudi-born alleged terrorist sought by the U.S. for the 1998 bombing of its embassies in Nairobi and Dar es Salaam. As a result, on August 10, the American government blocks all of the airline's assets (roughly \$500,000) within U.S. jurisdiction as part of a sanctions program designed to punish the Kabul regime.

Reuters, Ltd. reports on August 31 that the Indian government, without explanation, has requested that Ariana suspend its flights in and out of the northern Punjabi state of Amritsar.

To punish the Taliban Islamic movement for its failure to turn over Saudi dissident Osama bin Laden, wanted in connection with the death of 200 people in the destruction of two U.S. African embassies on August 7, the UN, on November 14, institutes sanctions against the government of Afghanistan.

Banned are Ariana's twice-weekly passenger and thrice-weekly cargo roundtrips to Kandahar, Dubai, and Sharjah, the weekly service from Kabul to Jeddah, and three weekly flights to India. Still, 30–35 weekly domestic services are maintained.

Using spare parts scavenged from wrecked aircraft at Kabul Airport, company mechanics are able to keep aloft a fleet of 5 Antonovs and 2 B-727-228As.

A total of 140,000 passengers are flown on the year and 7.39 million FTKs are operated.

With permission from the UN, the company signs an aircraft, crew, management, and insurance (ACMI) contract with **Air Gulf Falcon** on February 4, 2000. Under its terms, the Jumbojets of the Sharjah-based ACMI specialist will transport 12,000 Afghan Hadj pilgrims in 90 flights (3 a day) to and from Mecca in 2 phases between February 9 and April 23.

While on a February 6 domestic service from Kabul to Mazar-e Sharif, a B-727-228A with 128 passengers is taken over by armed gunmen, who order the jetliner to land at Uzbekistan, Kazakhstan, and Moscow. Passengers are released at each point, including 10 at both Kazakhstan and Moscow.

On February 8, the aircraft is flown to London (STN) where negotiations begin. A crew member is injured after being thrown from the plane the next day following the escape of the pilot and three other cabin crew. The skyjack ends early on February 10 with the arrest of 19 people and the release of all hostages, 60 of whom ask for political asylum in a scene leading to charges that the entire event has been staged.

Wearing Ariana colors, the first **Air Gulf Falcon** transport delivers 127 Muslim pilgrims from Kandahar to Saudi Arabia on the morning of February 22.

Promising to impose tighter security, President Mullah Hamidullah Akhund is able to obtain the return of his Boeing, which lands at Mazar-e Sharif's airport on March 2.

On August 14, the UN Security Council grants Ariana special permission to fly a group of 135 sick children to Germany on August 16; treatment has been organized by the German charity Peace Village.

Fearful of losing their licenses, company pilots and flight engineers make a public appeal on August 27 that the UN sanctions against Afghanistan be lifted.

ARIES DEL SUR, S.A.: Chacabuco 90, Piso 7, Capital Federal, Buenos Aires, 1035, Argentina; Phone 54 (1) 477-1078; Fax 54 (1) 334-7367; Year Founded 1997. This domestic operator is established at Buenos Aires in 1997 to provide ad hoc all-cargo services. Pedro Racini is named general manager and he undertakes services employing a Douglas DC-10-30CF.

ARISTA INTERNATIONAL AIRLINES: United States (1979–1984). The New York-based travel agency Tourlite International elects to

form its own inclusive-tour and charter airline, **Tourlite International Airlines**, at John F. Kennedy International Airport in December 1979. The tour operator seeks operating authority from the CAB, which is received in July 1980. Recession and the PATCO air traffic controllers' strike (with subsequent ATC restrictions) prevent start-up in 1981.

Early in 1982, the company name is changed and the new Arista leases a pair of Douglas DC-8-62s from **SAS (Scandinavian Airlines System)**. The inaugural flight is finally made on April 4, from New York to Athens. A total of 45,000 passengers are flown during the remainder of the year. Although revenues of \$14.3 million are generated, expenses are \$16.7 million. As a result, a \$2.36-million operating loss is suffered.

Holiday, vacation, and other tour flights are initiated in 1983 to Rio de Janeiro, Manchester, London (LGW), Paris, Munich, Rome, and Tel Aviv. Customer bookings reach 132,000, but Arista loses \$1.22 million.

The carrier stops flying in 1984 and the two jets are returned to Stockholm.

ARIZONA AIR SEDONA: United States (1993–1994). **Skywest Airlines** subsidiary **Aviation Services West** purchases and renames the previously independent small regional **Air Sedona** in March 1993. President Jack Seeley's company continues its operations from its Sedona, Arizona, base with 1 Cessna 172, 1 Cessna 182, and 1 Cessna 207. Services cease in 1994.

ARIZONA AIRWAYS (1). See **FRONTIER AIRLINES (1)**

ARIZONA AIRWAYS (2): United States (1991–1999). The second Arizona Airways is established at Tucson on October 1, 1991 to offer passenger and cargo flights to Albuquerque and Hermosillo. President/CEO Jim Swartz prefers to wait until spring before launching scheduled operations.

Revenue flights commence from Tucson to Phoenix and Albuquerque in March 1992, with a pair of Beech 1300s. By year's end, a total of 858 passengers are flown. International service to Hermosillo, Mexico, begins in October 1993.

Phoenix and El Paso join the route network during the spring of 1994. Three Beech 1900Cs operate these services and help to insure that customer bookings skyrocket to 47,223, along with 58,000 pounds of freight. Despite the positive traffic picture, expenditures and debts continue to mount, forcing Swartz to temporarily shut down in August 1995.

When services resume, the fleet is altered to include 2 Beech 1900Cs and 2 Beech 1300s. Flights continue in 1996–1998 and employment reaches 100. Markets visited from Tucson now include Albuquerque, Ciudad Obregon, El Dorado, Guaymas, Hermosillo, Luaghlin, Long Beach, and Phoenix.

The continuing battle with costs puts the company out of business in 1999.

ARIZONA PACIFIC AIRLINES: United States (1981–1983). APA is set up at Las Vegas, Nevada, early in 1981 to provide scheduled passenger and cargo flights. Convair CV-440 and CV-580 revenue flights commence linking the company's base with Flagstaff, Santa Barbara, and the Grand Canyon. Due to the ATC restrictions caused by the PATCO air traffic controllers' strike, the airline cannot operate long beyond summer.

The company is reformed in 1982. Gone are the large Convairs, replaced with Cessna lightplanes. Scheduled and charter flights are offered and continued to the Grand Canyon. Further information on scheduled activities after 1983 is not available.

ARKANSAS AERO: United States (1973). The scheduled air taxi Arkansas Aero is set up at Jonesboro in 1973 to provide local services. Although flights commence, they cannot be maintained for more than a few months.

ARKANSAS AIRLINES. See **AIR ARKANSAS**

ARKANSAS AVIATION. See FEDERAL EXPRESS

ARKANSAS TRAVELER AIRLINES: United States (1980–1984). Mountain Home, Arkansas-based Mountain Home Air Service is reformed and renamed in August 1980. Scheduled passenger and cargo flights continue to be flown to Memphis via Bartlesville and Mountain Home.

President Thomas L. Fleming's Piper PA-31-310 Navajo and Beech 55 Baron daily roundtrips are maintained without change until the carrier suspends service in late 1984 and closes its doors.

ARKHANGELSK AIR CONCERN (ARKHANGELSKI AVI-AKONCERN): 163070 Arkhangelsk, Vaskovo Airport, 163070, Russia; Phone (81822) 50936; Fax (81822) 50165; Code 5N; Year Founded 1992. An autonomous division of Aeroflot Russian International Airlines originally created at Arkhangelsk as a division of the old Aeroflot Soviet Airlines, AAC, in 1992, begins its own domestic scheduled services plus charter flights to destinations in Europe. Boris I. Zadorin is the general manager with a fleet of 8 Antonov An-24s, 6 An-26s, 12 Tupolev Tu-134s/-154s, 10 Yakovlev Yak-40s, and 12 Mil Mi-8 helicopters. Enplanements total 1,262,256.

Fully on its own in 1993, the company suffers severe traffic downturns. In May, a Tu-134 must make an emergency landing at its home airfield just after takeoff because missing hydraulic fluid has somehow been replaced with lemonade.

Passenger boardings plunge 47.8% to 854,030 while freight is off 46.3% to 84.7 million FTKs.

Regional and domestic charter operations continue apace in 1994 and, late in the year, plans are made to begin testing the new Ilyushin Il-114 in the spring.

Customer bookings fall again, dropping 13.6% to 737,800. Cargo declines as well, down 11.8% to 74 million FTKs.

Flights continue in 1995–1998, during which years Comdr. Vasili Razlviski becomes general manager. Although the mission of regional service continues, the fleet is altered to include fewer fixed-wing and additional rotary-wing aircraft. This will allow additional contract helicopter work. Present during the latter year are 22 An-24/26s, 30 Let L-410UVPs, 19 Mi-8/17s, 14 Mi-6s, 10 Mi-2s, and 9 Mi-26s.

Flights continue apace in 1999. On February 16, 2000, the Moscow media reports that the carrier has increased the number of its flights and started several new routes from the north. Key among these is a resumption of service between Petrazavodsk and Moscow after a five-year hiatus; flights are operated thrice weekly from Kirovsk to Moscow via Petrazavodsk.

ARKHANGELSK AIRLINES: Russia (1994–1995). AA is established at Arkhangelsk Airport in 1994 to offer domestic passenger and cargo charters. Viktor S. Andropov is appointed general director and he launches services with 1 Tupolev Tu-134A, 4 Antonov An-24Bs and 3 An-26s. Plans are made to acquire an Ilyushin Il-76 freighter. In 1995, the company is renamed AVL Arkhangelskie Vozdushnye Linie.

ARKIA ISRAEL AIRLINES, LTD.: P.O. Box 39301, Dov Airport, Tel Aviv 61392, Israel; Phone 972 (3) 690-2222; Fax 972 (3) 699-1390; <http://www.arkia.co.il>; Code IZ; Year Founded 1950. The El Al Israel Airlines, Ltd. associate Eilat, Ltd. is formed at Tel Aviv in July 1949 to serve as the nation's domestic carrier. Capitalization is provided on a fifty-fifty basis by El Al Israel Airlines, Ltd. and by Kanfot, a holding company of the labor federation Histadrut. Yaacov Hozman is named managing director.

The first aircraft acquired is a de Havilland DH 89A Dragon Rapide turned over from the Israeli Defense Forces on July 4. This is followed by a Curtiss C-46 Commando, turned over from El Al Israel Airlines, Ltd. on October 11, which retains its El Al markings and crew.

This Commando is employed by Eilat to make its first official flight, Tel Aviv–Elat, on February 28, 1950. In September, the present name is

chosen. Late in the year, a second Dragon Rapide is provided by the military. Frequency on the single route increases to twice weekly by year's end and during the first 10 months, 13,000 passengers are transported.

With improvement in land access to Elat, the C-46 is grounded and in May 1952 the Dragon Rapides take over the service. Two more DH 89As are placed on the service in 1953. Commando flights are resumed in February 1955 and the DH 89As launch nonscheduled flights to Rosh Pinna's Mahanaim Airport and to Sdom. On October 9, two military Douglas C-47s are obtained and converted to civil DC-3 standard.

The Douglas transports are placed in service in February 1956, replacing the C-46 and Dragon Rapides. Another DC-3, leased from BKS Air Transport, Ltd., is also employed. Passenger boardings this year are 23,000. In April 1957 two more C-47s are obtained and after modification are also introduced, helping the year's enplanements to triple to 65,000.

Rosh Pinna becomes the second scheduled destination in 1958 and is served by both DC-3s and two ex-USAF TC-45Gs (Beech 18s). During the year, an agreement is signed with the French Turbomeca firm to provide commercial helicopter service on a fifty-fifty basis under the name Arkia-Aliza.

Three Sud-Est SA-318C Alouette IIs are placed in service in May and June 1959. As business increases, another DC-3 is placed in service during the summer of 1960 via a lease from British European Airways Corporation (BEA). Two more converted C-47s are modernized and added to the fleet in January and June 1961. During the year, the carrier obtains a nonscheduled carrier license from the government and begins flying charters to European destinations on behalf of El Al Israel Airlines, Ltd. Due to financial loss, Arkia-Aliza ceases operations in May. Service continues apace in 1962–1963.

With a surge in tourism to Elat in 1964 occasioned by the opening of new hotels, Arkia is forced to add additional capacity. Two Handley Page Herald 200s are placed on the Tel Aviv–Elat route in April and May. Airline employment is now 85, enplanements total 158,000, and total revenues are \$1.433 million.

Lev Bigan becomes general manager in 1965. A third Herald is purchased. Passenger boardings climb 15% to 181,700. Charter flights to Massada begin in January 1966 and on the year, a total of 177,000 passengers are flown. Herald service to Nicosia begins in March 1967. During the Six-Day War of June, the carrier's Handley Page Herald 200s serve as flying ambulances.

In July, the carrier begins flights into the occupied territories, including Kalandia Airport in Jerusalem and the Sinai towns of Ophira, St. Catherine, and Sharm-el-Sheikh. Beginning on August 1, the company initiates air tours of battle sites from the recent conflict. A Herald is leased on November 16 for six months from Bavaria Fluggesellschaft, GmbH. Bookings reach 193,217 on the year.

The employee population stands at 152 in 1968. The last two DC-3s are retired and two additional Herald 200s join the fleet, one a release of the German aircraft used earlier. With the war over, the company flies 69% more hours this year. Passenger boardings accelerate 79% to 469,593. Revenues reach \$3 million.

Two additional Herald 200s are chartered in 1969. The first Vickers Viscount 833, purchased from British United Airways, Ltd., joins the fleet on October 16.

Coming in after an October 26 training flight, the new ship, with five crew, is destroyed as the result of a bad landing at Tel Aviv; there are no fatalities.

A second Viscount 833 is purchased from British Midland Airways, Ltd. on December 20. Non-Viscount passenger bookings on the year reach 471,000.

Another Viscount 833, purchased from British Midland Airways, Ltd. is delivered on February 21, 1970. Another Viscount, an 814D, is added on April 8, 1971. It is followed by the arrival of another ex-British Midland Airways, Ltd. 831 on September 19, 1972. In December, the carrier joins with the FBO Kanaf Air Services to form a lightplane operation, Kanaf-Arkia Airlines, Ltd., on a fifty-fifty basis.

Among the small planes to be operated into the future are Cessna 172s and 337s, Metro II/IIIs, Piper Navajo PA-31-350 Navajo Chieftains and Cherokee/Cherokee Sixes, Britten-Norman BN-2A Islanders, and de Havilland Canada DHC-6-100 Twin Otters.

Just after the passengers aboard a Viscount 833 deplane at Nicosia, Cyprus, on April 9, 1973, the aircraft is shot at by Arab guerrillas in two speeding jeeps. Firing back with a submachine gun, an Israeli security guard hits one of the vehicles, killing its driver. Out of control, the jeep crashes into the Vickers, causing substantial damage to an engine and an area of the wing. The surviving terrorists are captured.

In June, a Herald 200 is sold to **British Island Airways, Ltd.** and in December another Viscount 831 is purchased from **British Midland Airways, Ltd.** Despite the effects of the Yom Kippur War, overall-cargo traffic rises 6.2% while passenger boardings jump 15.2% to 677,409.

In 1974 the workforce is 4,850 and the fleet includes 10 aircraft. On March 7, a Viscount 831 is purchased from **Alidair, Ltd.** Passenger enplanements dip 4.7% to 647,000 as a result of the Yom Kippur War. The Nicosia stop is suspended as a result of the Greek-Turkish war. A new trademark is adopted in 1975 as Tel Aviv-Mitzpe Ramon services are inaugurated. Traffic jumps 10% to 715,000.

In 1976, bookings drop 10.9% to 637,000. Still, the workforce is increased by 11.4% to 412. Carrier officials elect to offer jet service in 1977, purchasing a BAC 1-11-523 on August 16 and leasing a second on May 20, 1978. This service expansion fails as declining traffic and soaring fuel prices combine to cause financial loss. Four Herald 200s are sold along with the Viscount 814D.

Losses continue into 1979. On September 12, one BAC 1-11-523 is sold to **Dan Air/Dan Air Services, Ltd.** A Viscount 831 is leased to **Intra Airways, Ltd.** on September 20 and sold to **Jersey European Airways, Ltd.** on December 18. At the end of the year, it is decided to privatize the carrier completely. In March 1980, Kanaf Arkia purchases 75% interest with the remaining 25% sold to Arkia employees. In July, the second BAC 1-11-523 is sold to **Philippine Airlines**. Enplanements total 365,958.

Early in 1981, the carrier is renamed **Arkia Israeli Airlines, Ltd.** as airline employment is increased 5.3% to 400. On May 8, a Boeing 737-210 is purchased from **Wien Air Alaska**; it is leased to **Air Berlin USA** and will be returned in December. Two new de Havilland Canada DHC-7-102s are acquired in October and November and placed in domestic service from Sde Dov Airport, Tel Aviv.

Passenger boardings drop 21.3% to 301,697, but cargo is up by 11.1% to 224,000 FTKs.

Three more Viscounts are sold in 1982 and a third Dash 7 is purchased. The B-737-210 returned from **Air Berlin USA** is placed in service on April 2. Two new B-737-2E7s are delivered on March 2 and 15, 1983 while the earlier B-737-210 is sold to **Dan Air/Dan Air Services, Ltd.** on March 30. The last Viscount 833 is sold on April 6, and the fleet is reconstituted to include 2 B-737-2E7s, 3 de Havilland Canada DHC-7-102s, 4 Fairchild Metro IIs, 1 Metro III, 5 Piper Navajo Chieftains, and 8 Britten-Norman BN-2 Islanders. A B-737-2E7 is sold to **Dan-Air, Ltd.** on December 22. Passenger boardings dip 21.3% to 301,697.

In 1984, Arkia assumes the dual responsibility of providing domestic, commuter-type services while providing international charter flights to West Germany, France, Italy, Rhodes, the U.K., and Austria. To execute the latter mission, the carrier leases back the **Dan Air/Dan Air Services, Ltd.** B-737-2E7 for the Christian tourist season in March-April and charters an **El Al Israel Airlines, Ltd.** Boeing 707-458 on April 1. Meanwhile on March 22, the second B-737-2E7 is also sold to **Dan Air/Dan Air Services, Ltd.**

On May 7, a B-727-95, christened *City of Jerusalem*, is leased for a year from Aeron Aviation Corp. On December 15, a B-707-349C is leased for three months from **Aer Lingus Irish Airlines, Ltd.** Another **El Al Israel Airlines, Ltd.** B-707-331B is chartered from the flag carrier on April 1, 1985. On May 1, Arkia and **Sun d'Or, Ltd.** sign a joint operating agreement providing for the coordination of charter operations and aircraft.

The first B-707-458 leased from **El Al Israel Airlines, Ltd.** is returned on July 13, 1986. On October 12, an El Al B-707-358C is leased for three months; the lease is renewed for nine months on April 20, 1987. To support increased traffic to Elat's resorts, two more **El Al Israel Airlines, Ltd.** B-707-358Bs are leased in the spring. Another DHC-7-102 is acquired on August 15. Passenger bookings rise 35% to 510,428 and revenues jump 30.4% to \$30 million.

Two B-707s are returned to **El Al Israel Airlines, Ltd.** in early 1988; however, a B-707-358C is chartered on a long-term basis on March 9. Customer bookings climb 4% to 518,521, but cargo is down by 1.6% to 4.93 million FTKs.

A DHC-7-102 is purchased from **Maersk Air, A.S.** on June 17, 1989 and a B-707-323B is chartered from Jetran, Inc., on December 14. Options are taken on three Avions de Transport Regional ATR72s and a fourth Dash 7 arrives.

The fleet in 1990 includes 1 B-707-323B leased from **Florida West Airlines**, 2 B-707-358Cs leased from **El Al Israel Airlines, Ltd.**, 2 B-737-258As chartered from the same source, 1 leased DHC-6-300, and 4 DHC-7-102s. Airline employment climbs 17.2% in 1991 to 612 and as recession reaches Israel, the fleet is reduced. Gone are the B-707-323B and one B-707-358C. One more Dash 7 is, however, added.

Passenger boardings inch up 1.6% to 584,355 and revenues increase 5.4% to \$59 million.

Six new workers are hired in 1992 and Chairman/CEO Israel Borovich's domestic-oriented fleet now includes 1 DHC-6-300 and 7 Dash 7s. Enplanements decline to 533,500 in this recessionary year.

In 1993, the employee population of Chairman I. Arnon's airline is cut 27.2% to 450. During the year the large holding company Koor purchases a 17.8% shareholding.

Two B-757-258s are leased from **El Al Israel Airlines, Ltd.** in April and the two B-707-358Cs are withdrawn.

Employing an Airbus Industrie A300B4 leased from **Egyptair, S.A.E., Air Sinai, Ltd.** inaugurates a new weekly Cairo to Tel Aviv via Sharm-el-Sheikh return service in March; the route is pooled with Arkia.

Other destinations now visited from Tel Aviv include Elat, the Dead Sea, Gush, Katif, Haifa, Jerusalem, Masada, and Rosh Pina. Charters are also flown to such European cities as London, Paris, Frankfurt, and Berlin.

Passenger boardings move ahead by 22% to 650,700.

There is no change in the workforce during 1994 even though passenger traffic is up significantly. Customer bookings advance by 14% to 742,100.

The workforce grows to 1,000 during 1995. The company's 29 aircraft transport a total of 822,200 customers, an increase of 10.8%. Revenues total \$130 million and expenses are such as to allow a net profit of \$7 million.

The fleet in 1996 includes 10 DHC-7-102s, 1 IAI 1124 Westwind, 1 DHC-6-300, 1 B-737-281, 2 B-747-123Fs, which are leased to **Polar Cargo Airlines** 1 B-747-128F that is chartered to **Atlas Air**, 1 B-747-2B3F that is leased to **Air France**, 2 B-737-258As, and 1 B-757-258, all 3 of which are chartered from **El Al Israel Airlines, Ltd.**

In March, company DHC-7-102s take over El Al's scheduled flights to Cyprus.

On April 18, company officials, in a complex arrangement, purchase 11 B-737s from **Canadian Airlines International, Ltd.** for \$60 million. The planes (3 Dash-275Cs, 2 each Dash-242Cs, Dash-217As, and Dash-296As, and 1 each Dash-2T5A and Dash-2T2C) are then leased back to CAI for US\$1,079,100 per month for a six-year period, bringing Arkia a profit of US\$17.7 million. As part of the arrangement, CAI is given the option of continuing the lease of individual aircraft for two-year periods, up to four years, after 2002.

The acquisition is financed by a loan from the Bank of Hapoalim, underwritten by a lien on the planes and the monthly payments and a cash deposit of US\$12 million. Arkia receives the US\$12 million as a loan from Bank Leumi, backed by a lien on its deposits and negotiable bonds. The airline also announces its intention to sell five of its remaining aircraft during this year.

Destinations visited in **1997** include Elat, Haifa, Jerusalem, Kiryat Shimona, Rosh Pina, and Tel Aviv. In July, a B-737-281 is sold to **Lan-Chile Airlines (Linea Aerea Nacional Chile, S.A.)**. Orders are placed for a B-757-200 and two B-757-300s, for delivery in 1999–2000.

Late in the year, plans are made to begin replacing the 12 DHC-7-102s in the fleet and orders are placed with Aero International (Regional) for 3 ATR72-500s. The new aircraft will be employed on the popular routes linking Tel Aviv with Elat.

Enplanements on scheduled services during the year total 1.25 million. An additional 200,000 charter passengers are flown, while 47,000 hotel rooms are also sold. Revenues of \$200 million are generated and allow earnings of \$9.2 million.

In March **1998**, the company, together with **El Al Israel Airlines, Ltd.**, begins discussions concerning the formulation of a joint low-fare company for charter services. Such an operation would offer the two carriers a chance to circumvent the government's Sabbath restrictions.

Traffic figures reported for the first six months of the year show a decline of 9.9% over the same period a year earlier, with bookings down to 470,000.

A \$250-million order is placed with Boeing on July 31 for a pair of B-757-300s, plus two options, for delivery beginning during the first quarter of 2000. Meanwhile, 2 B-757-258ERs are wet-leased from **El Al Israel Airlines, Ltd.** All 6 of the major's other B-757s are chartered each Saturday and are operated to Europe, helping El Al to partially beat the Sabbath ban.

A plan is made during the second half of the year for additional aggressive expansion in the new year.

Passenger boardings fall 6% to 1.15 million even as revenues accelerate 2.5% to \$191.05 million.

On January 5, **1999**, the premier ATR72-500 is received, allowing the replacement of three DHC-7-102s. The other two ATRs will be received in February and March.

Also during the month, the carrier joins with two other investors to establish a new airline in Nigeria. With \$4 million in shareholding divided between Arkia (30%), Koor Industries, Ltd. (30%), and local Nigerian investors (40%), **Empire Aviation, Ltd.** is set up at Lagos under the direction of Arkia Executive Vice President Shlomo Hanael. Outfitted with two of the three just-discarded Israeli DHC-7-102s obtained under lease, the new entrant inaugurates service at the end of the month from the Nigerian capital to Kano, Port Harcourt, Abuja, and Benin.

A cooperative agreement is signed between Arkia Israel and Frankfurt-based **Aero Lloyd Flugreisen GmbH. & Co. (Luftverkehrs K.G.)** on January 24 under which the two will jointly market charter flights and lease aircraft. The partnership is the first for Arkia with a European airline.

The company's first owned B-757, a formerly owned Dash-258, is acquired at the end of March, along with a third ATR72-500.

Flights continue apace during the remainder of the year as the Israeli government works to deregulate the nation's air transport market. Traffic remains heavy on the domestic routes from Tel Aviv to Eilat, Haifa, Rosh-Pina, and Kiriat-Shimona, with over 45% being generated on weekends when **El Al Israel Airlines, Ltd.** is prohibited from operating.

Passenger boardings jump 9.4% to 1,057,000. Revenues total approximately \$217 million (as compared to \$60 million in 1988).

On January 31, **2000**, Arkia becomes the second airline in the world (after **Condor Flugdienst, GmbH.**) to take delivery of the B-757-300, receiving a new B-757-3E7 trimmed in orange and blue.

Charters between Tel Aviv and Tivat, Montenegro, begin in April.

During late spring, Arkia is awarded its first international scheduled route; ATR72-520 roundtrips between Tel Aviv and Amman consequently commence on August 15.

The renewal of fighting between the Palestinians and Israelis in October has an impact on bookings. Also affected are reservations for the new weekly or twice-weekly scheduled service to Tel Aviv from five German cities, flown in cooperation with **Aero Lloyd Flugreisen, GmbH. & Co.**

Briefly suspended, the weekly B-757-2E7 return service from Tel Aviv to Geneva resumes on October 14.

A decline in tourism to Israel during the month due to violence between the Israelis and Palestinians causes a significant downturn in business and forces the carrier to lay off 140 workers on November 1.

ARLINGTON JET CHARTER: 5070 South Collins, Arlington, Texas 76018, United States; Phone (817) 467-4571; Fax (817) 472-9725; Year Founded 1990. Established at the Municipal Airport of its namesake city in **1990**, Arlington, within seven years, is offering a wide variety of passenger charters and executive flights. Six pilots operate one each Learjet 25B, Beech Super King Air 200, and Turbo Commander 690.

ARMENIAN AIRLINES: Zvartnots Airport, Yerevan, 370542, Armenia; Phone 7 (8852) 282 860; Fax 7 (8852) 151 393; http://www.armenianairlines.com; Code R3; Year Founded 1991. Another former **Aeroflot Soviet Airlines** division, Armenian separates from its onetime parent in **1991** after having transported 1.83 million passengers during 1990. At the Zvartnots Airport base at Yerevan, V. V. Nazarian becomes general director and takes over 51 aircraft from Aeroflot, including Ilyushin Il-76s, Tupolev Tu-154s, Tu-134s, and Yakovlev Yak-40s. In addition to domestic frequencies, charter flights are undertaken to Milan, Paris, and London.

While landing at Yerevan on December 5, **1992**, the nosegear of a Tu-154A with 8 crew and 146 passengers hits a concrete wall; although the aircraft is damaged, there are no fatalities.

Scheduled flights commence on March 9, **1993**. Combining its numbers with the previous year's figures, the company is able to transport some two million passengers, despite the difficulties caused by the Armenian-Azerbaijan war over the Nagomy-Karabakh enclave.

Airline employment stands at 2,180 in **1994**; H. R. Hovannissian is general director, with J. J. Dekker as managing director. Options are taken on 2 Airbus Industrie A310-200s and the fleet comprises 11 Tu-154s, 9 Tu-134s, 9 Yakovlev Yak-40s, and 2 Ilyushin Il-86s.

Destinations served with 55 weekly flights include Amsterdam, Ashkabad, Athens, Beirut, Burgas, Fujairah, Moscow, Novosibirsk, Paris, Rostov, Sverdlovsk, and Tehran. Although traffic figures are not released, it is reported that revenues of \$26.8 million allow a profit of \$4.8 million.

Customer traffic figures are not provided in **1995** either, although the company announces a profit of \$966,000 on operating revenues of \$32.1 million. Early in the year, the two Il-86s, during their overhauls, are repainted in the company's new color scheme.

Early in **1996**, the Armenian government begins to search for an investor who will take the airline private and provide sufficient capital to acquire a pair of Boeing 757s.

Plans are made to inaugurate service to Frankfurt, Warsaw, Larnaca, Tashkent, Tel Aviv, Cairo, and New Delhi. New destinations added since 1994 include Adler, Dubai, Ekaterinburg, Kharkov, Minsk, Odessa, Simferopol, and Volgograd. Enplanements total 353,200.

Airline employment stands at 341 in **1997** and the fleet includes 2 Il-86s, 9 Tu-134s, 10 Tu-154s, and 9 Yak-40s. The privatization process commences in July. New services commence to Frankfurt, and also to London (LGW). The company signs a reciprocal code-sharing agreement with **British Mediterranean Airways, Ltd.** in December. Customer bookings accelerate 11.7% to 400,000.

Negotiations commence with Airbus Industrie early in **1998** for the acquisition of an A310. In addition, plans are made to inaugurate new services to Milan and New Delhi before the end of the year.

An A310-308, formerly operated by **Kuwait Airways Corporation**, is received in September, complete with a new tail logo. It replaces the two Il-86s on services to most European capitals beginning in October.

Flights continue in **1999**. Although the government considers plans to privatize the carrier, the \$15–\$20 million investment needed to make it saleable prohibits forward progress. It will later be reported that enplanements for the year have fallen 34% and a loss of \$1.6 million has been suffered.

On February 22, 2000, the Armenia's transport minister, Ervan Zakharian, reports that the carrier requires \$15 million in the next two years just to survive. A new strategic alliance is signed with **Aeroflot Russian International Airlines (ARIA)** on March 17 covering joint flights and services.

In an October 3 interview with the on-line *Russia Today*, Armenia's National Aviation Union Chairman Dmitry Atabashyan declares the carrier to be in a precarious condition and suffering continuing declines. He reports that the fleet has fallen from 18 units at the beginning of the year to just 11—3 Tu-154s, 3 Yak-40s, 2 Tu-134As, 2 Il-86s, and 1 leased A310. Additionally, the national aviation industry is fragmented to a point where 23 independent services provide ground support for each aircraft departing Erevan Airport.

ARMSTRONG AIR SERVICE: United States (1984–1989). AAS is established by Richard K. Armstrong at Dillingham, Alaska, late in 1984 to provide scheduled passenger and cargo services to local communities and bush destinations. Employing Cessna 185s and de Havilland Canada DHC-2 Beavers, the company begins revenue flights in January 1985, linking its base with Ekwok, New Stayhok, and other locales.

Following several accidents, the company is grounded by the FAA on August 13, 1988. Able to resolve its difficulties, Armstrong is able to begin flying again in the fall, but cannot achieve viability. The last service is operated in January 1989 and the carrier shuts down.

ARNARFLUG HF. See **EAGLE AIR, LTD.**

ARNHEM AIR CHARTER (PTY.), LTD.: Australia (1991–1998). AAC is established at Darwin in 1991 to offer charter and contract service flights to surrounding destinations in the Northern Territories. Revenue flights commence with five Piper PA-31-350 Navajo Chieftains.

A Piaggio P-68 is acquired in 1992 and operations continue apace in 1993–1994. The company encounters severe financial problems in 1995 and briefly shuts down in November.

Flights resume in 1996 as President Robert C. McDonald oversees a 13-employee company. As the fiscal situation improves in 1997, 3 Cessna 402Cs and 1 Embraer EMB-110P1 Bandeirante are added to the fleet.

The company is purchased by **Airnorth (Pty.), Ltd.** in 1998.

AROOSTOCK AIRWAYS: United States (1965–1973). John C. Philbrick forms **P. & M. Flying Service** at Presque Isle, Maine, in early 1965 to provide passenger charter flights to Augusta, Portland, and Boston. Employing single-engine Pipers, he inaugurates revenue flights on May 3. Services continue and the company name is changed to Aroostock Airways in 1968.

At this point the commuter begins scheduled services, but it does not survive the recession and oil crisis of 1973.

ARPA (AEROLINEAS PARAGUAYAS, S.A.): Terminal ARPA, Aeropuerto Silvio Petirossi, Asuncion, Paraguay; Phone 595 (21) 215-0723; Fax 595 (21) 215-0111; Code A8; Year Founded 1994. ARPA is set up by **TAM (Transportes Aereos Regionais, S.A.)** in early spring 1994 to operate domestic feeder flights on its behalf. Miguel Candia is named president and he begins revenue flights on May 14 with a fleet of three Cessna 208 Caravan Is leased from the parent.

ARROW AIR: P.O. Box 026062, Miami International Airport, Miami, Florida, 33126, United States; Phone (305) 526-0900; Fax (305) 526-0933; <http://www.arrowair.com>; Code JW; Year Founded 1983. George Batchelor's **Arrow Airways (2)** is renamed Arrow Air in early 1983. The workforce totals 875 and the fleet comprises 2 Douglas DC-10-10s, 1 DC-8-73, 10 DC-8-63s, 1 DC-8-54, and 4 Boeing 707-320Cs. Orders are outstanding for 1 DC-10-10 and 1 DC-8-73.

During the year, new scheduled domestic services are opened from Miami to New York and Denver and from New York and Tampa/Miami

to Denver. Simultaneously, flights are begun from New York to Guyana and from Denver to San Juan via Tampa and Miami. In addition, a Denver to London service compliments that started to the British capital from Tampa the previous year. Charter services, including those undertaken for the U.S. military, are continued.

Enplanements for the year skyrocket 93.8% to total 825,000, while freight traffic accelerates 31.9% to 109.4 million FTKs.

The payroll is cut 25.7% in 1984 to 650. Following FAA "white glove" inspections early in the year, the company is given a variety of penalties and is barred from carrying out its expansion plans, pending the correction of its shortcomings. The problems are cleared up by summer and all restrictions are lifted; Arrow receives a \$33.6 million Pentagon contract for FY 1985. When Connecticut-based Value Vacations, for which Arrow is a carrier, fails in August, the airline refuses to provide transport home for the program's stranded passengers. Lawsuits are filed.

The carrier substantially restructures its route network, beginning in October, to concentrate upon Caribbean and South American destinations as well as military and other contract services and inclusive-tour charters. Gone are domestic scheduled flights plus those to London and in their place are newly introduced passenger frequencies to Aguadilla and San Juan (Puerto Rico), Puerto Plata (Dominican Republic), and Georgetown (Guyana) flown from the company's hubs at New York, Philadelphia, and Miami.

Scheduled cargo flights are maintained from New York to Port au Prince via Miami and San Juan. Although headquarters are maintained in Miami, the principal hub is shifted to San Juan.

Enplanements total 1,108,172 and cargo jumps 19.3% to 113.1 million FTKs.

The workforce is reduced by 23.1% in 1985 to 500 and the fleet now includes 10 DC-8-60/70s, 3 DC-10-10s, and 4 B-707-320Bs. Jonathan D. Batchelor becomes President/Chief Operating Officer in February and, in early spring, following payment of a \$34,000 penalty to settle matters with the FAA, passenger services are originated from San Juan to Miami, New York, Philadelphia, Montreal, and Toronto. Orlando becomes a customer destination in May.

Meanwhile, scheduled cargo flights begin from the Puerto Rican hub to New York, Miami, Antigua, St. Kitts, and Haiti. A whistleblower, company pilot Michael Sanjanis, contacts the Miami office of the FAA citing the carrier's continuing unsafe maintenance practices. A new route from Tampa is initiated in the fall to Merida via Cancun and Cozumel. Worldwide charters continue to account for approximately one-half of the company's business.

A chartered DC-8-63PF with 256 aboard, including 248 101st Airborne Division soldiers returning home to Fort Campbell, Kentucky, after a six-month peacekeeping assignment in the Sinai, crashes one mile from the end of the runway while taking off from Gander, Newfoundland, on December 12; there are no survivors.

The death toll is the highest ever in an air crash on Canadian soil. Arrow becomes a target of intense adverse public and political attention. Two Canadian books detail the tragedy: T. C. Badcock, *A Broken Arrow* (St. Johns, Newfoundland: Al Clouston Publications, 1988) and Les Filotas, *Improbable Cause* (Toronto, Ont.: McClelland, Bantam, 1991). The most extensive American review of the disaster is conducted by the U.S. House of Representatives' Subcommittee on Crime, published in *Fatal Plane Crash in Gander, Newfoundland, December 12, 1985: Hearings*. 101st Cong., 2nd sess. (Washington, D.C.: GPO, 1991).

During the third week of December, Arrow launches flights to Mexico's Yucatan peninsula from Boston, Philadelphia, and Tampa.

Passenger boardings plunge and, for the year as a whole, are off by 31.3% to 844,000; cargo is down 30.5% to 27.6 million FTKs. Revenues total \$134.7 million and with costs low, a net profit of \$229.91 million is generated.

A \$7.6-million Military Airlift Command contract to fly USN personnel is received on February 2, 1986 and Congressional hearings into the Newfoundland crash begin three days later. On February 8, FAA regulators, who have been investigating the carrier, order all of

Arrow's passenger DC-8s grounded for using undocumented spare parts and unsafe and unapproved maintenance practices. Company officials cry foul, claiming the regulators are bending to political pressure to close the airline.

Simultaneously, the Pentagon suspends its new and old military transport contracts (worth \$21 million) pending its own review. Unable to continue, the airline declares Chapter XI bankruptcy on February 11; although Arrow continues to fly three DC-10s on military cargo charter, no more passenger flights are allowed.

By December 31, the onetime national carrier has flown a total of 127.3 million FTKs. Revenues for the year plunge by 69% to \$41.71 million, expenses decline 66.3% to \$45.46 million, and a \$3.76-million operating loss is taken. The net loss increases to an identical \$3.76 million.

Operations continue apace in 1987 as Richard L. Haberly, in May, becomes president/chief operating officer. Two DC-8-62CFs are acquired and an arrangement is entered into with **Deutsche Lufthansa, A.G.** under which Arrow will assume responsibility for the onward shipment into Central and South America of the German carrier's freight shipments arriving in Miami.

Cargo climbs a slight 0.2% to 127.5 million FTKs and revenues fall 21.1% to \$32.9 million. Expenses also decline, by 31.9%, to allow operating income of \$6.2 million and net gain of \$6 million.

The workforce is increased by 20% in 1988 to 120. The carrier's five DC-8 freighters transport 35.9% more freight, 173.26 million FTKs, than a year earlier. Revenues skyrocket 91.5% to \$40.8 million; however, costs are also up. As a result, operating profit falls to \$5.1 million and net gain is down to \$5.2 million.

Employment is cut by 20.8% in 1989 to 95 and the fleet includes 4 DC-8-62Fs and 3 DC-8-63Fs. Cargo increases 68.6% to 292.03 million FTKs and revenues sweep upward by 23.4% to \$50.3 million. The operating profit dips to \$4.4 million and net gain falls to \$4.6 million.

The number of workers explodes by 114.7% in 1990 to 204 as a fourth DC-8-63F joins the fleet and assists in the delivery of cargo to Saudi Arabia in the fall in support of the Allied buildup known as Operation Desert Shield.

Despite this work, recessionary and oil costs cause difficulties, including a 16.1% decline in freight to 255.98 million FTKs. Revenues move up by 46.3% to \$73.6 million, expenses jump 55.5% to \$71.44 million, and operating income slips to \$2.15 million. There is, however, a net loss of \$251,695.

The workforce is reduced by 38.7% in 1991 to 125 and the fleet now includes 5 DC-8-62Fs and 4 DC-8-63Fs. Significant cargo is transported in support of the U.S. military commitment in the Persian Gulf, with overall tonnage climbing by 40.9% to 360.58 million FTKs. Revenues move ahead by 23.5% to \$87.37 million, expenses rise 19.8% to \$84.91 million, and operating income totals \$2.46 million. There is a net gain of \$1.76 million.

Employment in 1992 grows to 280 and the fleet is increased by the addition of 3 DC-8-62Fs, 1 DC-8-62C, and 1 Boeing 727-291F. Recession does not impact traffic nearly as bad as finances.

Cargo rises 23.5% to 445.43 million FTKs while revenues plunge 11.7% to \$77.18 million. Expenses are down 7.2% to \$78.79, leaving an operating loss of \$1.61 million and a net loss of \$1.04 million.

CEO Batchelor and President Richard L. Haberly's payroll jumps 64.3% in 1993 to 460 and the fleet is increased by the addition of 4 DC-8-63s. Destinations now regularly visited include Miami, Hartford, Columbus, New York, San Juan, Bournquen/Aguadilla, San Jose, Costa Rica City, Panama City, Caracas, Asuncion, and Santiago de Chile.

Passenger subservice is initiated for several scheduled carriers. Freight declines 19.4% to 359.17 million FTKs, but revenues ascend 31.6% to \$101.58 million. Expenses grow only 28.1% to \$99.39 million and allow operating income of \$2.18 million. Net gain is \$1.73 million.

The fleet in 1994 comprises 1 each B-727-291F, DC-8-63F, DC-8-62AF, 2 each B-727-247s, B-727-225Fs, and DC-8-63CFs, 3 B-727-225AFs, and 8 DC-8-62Fs. Charter flights to Buenos Aires under the company's own banner begin in January; however, due to FAA safety

concerns, the company soon thereafter grounds its entire fleet. A total of 9,000 passengers are flown during the entire year.

Cargo, on the other hand, falls another 32.1% to 441.53 million FTKs. Revenues jump ahead by 20% to \$121.86 million while expenses rise 23.7% to \$122.95 million. As a result, there are losses: \$1.09 million (operating) and \$3.93 million (net).

Government safety concerns are initially resolved and the carrier prepares to resume operations in early 1995, with a workforce of just 335.

While on approach to the airport at Manaus, Brazil, on January 29, a DC-8-62F with three crew strikes a line of trees during a go-around after a missed landing; when the No. 4 engine fails, the captain declares an emergency and is able to land without further incident. No injuries are reported.

On March 17, the FAA grounds up to 6,000 propeller-driven aircraft nationwide until their owners can inspect them for unsafe bolts. Company maintenance personnel are unable to produce maintenance records for any of its aircraft and will thus be unable to carry out this urgent safety directive. Consequently, the government grounds the carrier.

Five days later, the FAA recommends revocation of Arrow's operating certificate for this latest safety failure. In April, it is fined \$1.5 million for the use of unapproved, bogus parts and falsified maintenance records.

Arrow manages to avoid its permanent closing but, even after it resumes operations as a freight airline in June, huge declines in traffic are suffered. Enplanements plunge 90% to just 1,000 while 209.29 million freight FTKs are operated, a 61.2% decline. The costs associated with the year cause additional fiscal downturn; there is a \$9.24 million operating loss and a net loss of \$10.17 million.

There is no change in the employee population in 1996. Although a DC-10F operator earlier, the company now elects to employ Lockheed TriStars in a freighter capacity. The first, an L-1011-385-1-15, arrives at Miami on January 27 wearing billboard-sized "Arrow" titles on its forward fuselage and a huge black "A" on its white tail. Two days later, it enters service on a cargo run to San Juan. Two more TriStars will arrive later in the year.

Traffic grows, rising 28.4% to 268.8 million FTKs. Operating revenues jump 19.5% to \$61.09 million, but costs surge 22.1% to \$73.66 million. The operating loss grows to \$12.64 million while the net loss deepens to \$11.8 million.

The employee population is reduced 16.4% in 1997 to 280. The fleet now includes 3 L-1011-200Fs and 6 DC-8-62/63Fs. During the first quarter, a new San Juan minihub is opened and services to South America are expanded, including the introduction of scheduled flights to Peru.

In July the company's authority to operate two weekly return cargo services from the U.S. to Argentina is sold, for an undisclosed price, to **Federal Express (FedEx)**.

In anticipation of significant growth in the new year, **Emery Worldwide**, in August, makes arrangements to lease one of Arrow's L-1011Fs.

A total of 375.18 million FTKs are operated, a 39.6% increase over 1996. Operating revenues increase 43.7% to \$87.82 million while expenses rise 37.7% to \$101.56 million. Consequently, the operating loss deepens to \$13.74 million and there is a \$15.23-million net loss.

Houston's only nonstop all-cargo Saturday service to South America is inaugurated on January 24, 1998 when a DC-8-62F begins roundtrips to Iquitos and Lima, Peru and Quito and Guayaquil, Ecuador.

America's oldest all-cargo airline still operating under its original name, Arrow's senior management is restructured on June 29. CEO Batchelor succeeds Todd Cole as board chairman, while retaining his title of CEO. Cole remains on the board and Vice President-Operations Guillermo J. "Willy" Cabeza is named president/chief operating officer.

Special ceremonies are held in Lima on December 30 honoring the company for its 25 years of service in Peru. The coveted "El Contenedor de Oro" (Gold Container), given to the best cargo airline serving the nation, is presented by the Asociacion Peruana de Agentes de Carga, Internacional.

The fleet at year's end includes 7 DC-8-62Fs, 2 DC-8-63Fs, and 3 L-1011-200Fs.

Cargo traffic plunges 52.46% this year, dropping to 178.35 million FTKs. Revenues inch up just 0.2% to \$87.98 million, while expenses jump 9.2% to \$110.87 million. The operating loss rises to \$22.88 million, while the net loss worsens, reaching \$23.93 million.

Thrice-weekly DC-8-62F all-cargo return service is inaugurated on January 29, 1999, from Miami to San Jose, Costa Rica, via Panama City. On February 11, President Cabeza completes merger negotiations with Frank and Barry H. Fine. As a result, Arrow is to be acquired from Puerto Rico-based International Air Leases by **Fine Air Services** for \$115 million in cash and operated as a subsidiary under its current name. Cabeza will remain as president and no layoffs are foreseen.

The Federal Trade Commission (FTC) completes its review of the merger during March and, on April 9, the DOT approves the acquisition. Only **Gemini Air Cargo** has filed a regulatory objection to the arrangement, which is not heeded. In an interview with Reuters, Ltd. on April 15, Barry H. Fine, president/CEO of **Fine Air Services**, notes his plans to keep Arrow as a separate cargo carrier for up to two years, primarily because of the strong customer loyalty President Cabeza has built up in the shipping industry. Fine indicates that Arrow will add new services in the southern region of South America over the next three to four months, with Bolivia and Brazil seen as the initial markets.

Following the arrival of a company freighter at Miami from Guayaquil on August 30, U.S. Customs Service inspectors find 2,720-lb. of cocaine, with a wholesale value of \$21 million, in the plane's cargo of fresh fish. When no one turns up to claim the grouper, flounder, and eels, it is suspected that the perpetrators have been tipped off.

Senior Vice President/Chief Operating Officer John Zappia is appointed president of the fine parts and engine sales business, **Fine/AAA Interair**, in February 2000. He is succeeded by Guillermo Cabeza, who had been president of Arrow before its takeover by Fine.

Arrow and **Fine Air Services**, through the holding company **Fine Air Services Corporation**, declare Chapter XI bankruptcy on September 27; both lines will continue operating through reorganization.

ARROW AIRWAYS (1): United States (1930). Established at Memphis, Tennessee in late summer 1930, Arrow is equipped with a single Stinson that is employed to begin scheduled passenger service to Little Rock, Arkansas, in October. Without enough traffic to cover start-up expenses, the trans-Mississippi operation stops in November.

ARROW AIRWAYS (2): United States (1947-1983). George E. Batchelor forms **Arrow Airways** in 1947 to offer scheduled and charter services from a base at Miami. Several DC-3s are acquired, including one from **Pacific Southwest Airlines** that crashes on December 7, 1949.

Douglas services continue to be flown until 1953, when flight operations are suspended after the Civil Aviation Administration suspends the company's certificate for maintenance violations. The carrier now goes dormant.

Batchelor thereafter establishes Batchelor Enterprises as a holding company for the airline and for the leasing companies **Batch-Air** and **International Air Leases**. These nonflying concerns occupy the founder until new flying opportunities appear in the wake of airline deregulation.

Following his acquisition of **Capitol International Airways** early in 1980, George Batchelor also reactivates **Arrow Airways**, basing it at White Plains, New York. An initial fleet is acquired comprising 6 Boeing 707-320Cs and CAB certification is received in May.

Cargo charter flights on behalf of the Military Airlift Command commence on May 26, 1981 and regularly scheduled freight service is launched to San Juan from New York and Miami in August. A total of 1.3 million FTKs are operated during the remainder of the year.

Scheduled Atlanta to San Juan cargo flights begin in March 1982 and, in April, route authority to Montego Bay is acquired from the CAB. Scheduled passenger flights begin in July between Los Angeles and Montego Bay. The CAB gives the company a temporary permit on August 12 for flights from Florida to England. One-way midweek \$99 flights are launched on November 11 from New York to Miami and

scheduled Tampa to London passenger frequencies are initiated on December 15. Enplanements total 51,150 and 74.5 million FTKs are flown. The company is renamed **Arrow Air** in early 1983.

ARROW AIRWAYS, LTD. See **CANADIAN PACIFIC AIR LINES, LTD.**

ARTAC AVIATION, S.A.: c/o Infanta Maria Teresa, 9-5A, Madrid, E-28016, Spain; Phone 91-393-6447; Fax 91-393-7067; Year Founded 1994. Artac is established at Madrid in 1994 to offer regional and international passenger charters. By 1997, Operations Manager Jose Luis Olaya oversees a workforce of 17 and flights by a pair of Fairchild Metro IIs. Revenues reach \$1.8 million.

Flights continue in 1998-2000.

ASA (AEROVIAS SUD AMERICANA, INC.): United States (1947-1965). ASA is established at Miami Springs, Florida, in the summer of 1947 by a group of former employees of **US Airlines** to carry cargo. Having acquired a Curtiss C-46 Commando, the concern inaugurates business on October 17 with a flight to Havana transporting several jeeps and spare tires for the all-terrain vehicles. A return flight is immediately performed with a cargo of flowers and Cuban cigars and tobacco. Services of this nature continue for the next five years.

In August 1952, the CAB awards ASA the first certificate for scheduled international all-cargo services between Miami and Bogota. Additional C-46s are acquired (eventually a fleet of six will be simultaneously operated) and revenue flights commence in December.

In December 1959, the CAB authorizes the carrier to serve Colombia, Ecuador, Panama, Peru, Nicaragua, Costa Rica, British Honduras, Honduras, and El Salvador. To handle this additional network, the company acquires two Douglas DC-4s in 1960, reducing the number of C-46s to three.

During the early 1960s, ASA finds it increasingly difficult to maintain its economic viability. In 1962 it seeks a merger with **Riddle Airlines**. Rebuffed, the company staggers on until it suspends operations on May 10, 1965. **Airlift International**, as Riddle is now known, seeks to purchase a 42% interest in order to acquire the company's certificate, but approval for this arrangement is denied by the CAB in January 1969.

ASA (ST. PETERSBURG-AMERICAN AIRLINES): Russia (1994-1995). ASA is set up at St. Petersburg in late 1994 as a joint concern sponsored by the St. Petersburg Civil Aviation Department and Russian and American shareholders. Operations commence over international routes in the CIS with an unspecified number of Antonov An-12s, Tupolev Tu-134s, and Tu-154Ms. The enterprise does not achieve viability and disappears within a year.

ASAHI AIR LINES COMPANY, LTD. (ASAHI KOKU CORPORATION): Sunshine 60 32nd Floor, No. 1-1 3-chome, Higashi-Ikebukuro, Toshimaku, Tokyo, Japan; Phone 81 (3) 3988 9572; Fax 81 (3) 3988 9043; http://www.owl.or.jp/aeroasahi; Year Founded 1982. Originally formed as **Aero Asahi, Ltd.** on July 1, 1982, the Japanese third-level carrier is a merger of **Asahi Helicopters, Ltd.** (founded in 1955) and **Toyo Aero Survey, Ltd.** (founded in 1960). With a rotary-wing fleet exceeding 50 machines of 6 types from the U.S., West Germany, France, and Russia, **Aero Asahi Corporation, Ltd.** plans to offer scheduled helicopter flights and shortly after its creation orders 2 Boeing-Vertal 234s, which will not be delivered. The fixed-wing fleet, inherited from **Toyo Aero Survey, Ltd.** consists of but 2 Rockwell Aero Commanders.

The fleet in 1983-1984 grows to include Bell 212, 214STs and 412s, plus an Aerospatiale AS-332L Super Puma and an Aerospatiale AS-355F TwinStar. The company also operates a Mil Mi-8 "Hip," the only Russian-made helicopter flying in the West. During July of the former year, a Bell 412 is sent to the People's Republic of China under long-term lease to the China Marine Vertical Flight Aircraft Co. to provide offshore support missions for the China Oil Development Company.

Following the August 12, 1985 crash of a **Japan Air Lines Company, Ltd. (2)** Boeing 747SR (520 dead), the company's Super Puma, the only one of its type in Japan, is employed to haul aircraft wreckage down from the mountain crash site.

A shuttle service is now begun for visitors to the Tsukuba Expo '85, held at Tsukuba Gakuen Toshi, located some 30 miles N of Tokyo. Approximately 400 passengers are flown in 32 daily services before the exposition closes on September 16.

A majority 51% stake is taken in **Osaka Airways, Ltd.** and its 13 helicopters on October 1. Acquisition of Osaka, which offers aerial photography and flight training and which enjoyed a ¥ 357-million turnover in 1984, is completed on November 27. The same day, the Ministry of Transport approves an Aero Asahi, Ltd. proposal to offer regular helicopter service between Tokyo's Haneda and Narita Airports.

A second Super Puma is requested from Aerospatiale on April 1, 1986. Upon its receipt later in the year, it will initially be used for offshore service between Japan and Korea. If demand warrants, it may later be dedicated to passenger flights.

Following its years of service as a unit of Aero Asahi, Ltd., the fixed-wing division is renamed Asahi Air Lines Company, Ltd. in June. Scheduled fixed-wing commuter services are started from Osaka to Oita, Matsuyama, Hiroshima, and other destinations. Managing Director Kyosuke Sekimoto's fleet is comprised of 2 Cessna 402s and 3 Pilatus-Britten-Norman BN-2A Trislanders.

Thrice-daily BN-2A roundtrips begin on July 1 between Tanegashima and Yakushima, north of Kagoshima. No sooner has this route been started than another concern begins to serve it with a high-speed jetfoil.

Two Embraer EMB-110P Bandeirantes are ordered for the new fixed-wing enterprise in September. Rotary-wing flights continue under the Aero Asahi, Ltd. moniker; both entities will be covered here.

Asahi Air Lines Company, Ltd. takes delivery of its two Bandeirantes in early 1987.

After six years of nonscheduled helicopter charter flights, Aero Asahi, Ltd. inaugurates scheduled Bell 412 flights on April 15, linking Haneda Airport, Narita Airport, central Tokyo, Yokohama, Tsukuba, Osaka, Kobe, Kyoto, and Osaka Airports. The new "City Airlink" service is a joint venture with **Japan Air Lines Company, Ltd. (2)** and fulfills a promise for a shuttle service first announced by the Japanese Transport Ministry in April 1970.

During the fall, the Japan Maritime Safety Agency reports the slow sinking of the island Okinotorishima, 1,000 miles from Tokyo. A \$5.8-million contract is accepted by Aero Asahi, Ltd. from the agency and 2 Super Pumas are dispatched, along with 17 government ships, to reinforce the island with iron blocks. For the year, the aerial Asahi group suffers a loss of \$850,000.

Two Cessna 206s and three Beech 55s are added to the Asahi Air Lines Company, Ltd. operation in 1988. Public concern about helicopter noise forces a delay in "City Airlink" expansion during the spring; however, problems are resolved and eight-times-per-day shuttle flights between the airports with a pair of Bell 412s is begun by Aero Asahi, Ltd. on June 20. Still, bookings must be made in Japan until the company can be linked to the **Japan Air Lines Company, Ltd. (2)** computerized reservations system.

During the summer, typhoons and various rainstorms play havoc with the "City Airlink" schedule. Still, in early fall, 10 companies step forward to acquire \$4.6 million in shareholding.

Meanwhile, interest is taken in **Yokohama Air Service, Ltd.** and the travel agency Asahi Sky Ace Company, Ltd. An Aerospatiale AS-332L purchased from **Canadian Helicopter Corporation, Ltd. (CHC)** is dispatched to Malaysia to support offshore oil drilling by Japan's Idemitsu-Kosan Company, Ltd. The rotary-wing company enters the flight-seeing market on December 9 and, over the next month, transports 2,154 sightseers over the holiday season, along with 1,667 skiers. These events, plus the transport of 4,283 "City Airlink" passengers, help the carrier to turn the previous year's loss into a \$4.2-million profit.

In the spring of 1989, Aero Asahi, Ltd. contracts with the Japanese post office to undertake the study of a plan for the possible helicopter delivery of mail. During the same period, the company purchases 1 each Aerospatiale AS-332L Super Puma and 1 Sikorsky S-76A. The twin-engine rotary-wing fleet now includes Bell 212s, 214STs, 222s, 412s, Aerospatiale AS-355s, SA-330Js, and AS-332Ls, Kawasaki BK-117s, an MBB BO-105, the S-76, and a single Mil Mi-8, which arrived as part of the original 1982 merger. In addition, 3 Bell 47Js, 11 Aerospatiale AS-350Bs, and 37 Bell 206L/Rs are on hand, many of which are operated in support of the country's agricultural business, including rice spraying.

During March, "City Airlink" inaugurates services to Yokohama. In the worst accident by a Japanese-owned helicopter to date, the Bell 412 on lease in China crashes while landing at Taku Heliport, Tenchine, on May 5 (10 dead). Also in May, a contract is received by Aero Asahi, Ltd. from Tokyo Electric Company, Ltd. for assistance in the construction of two major power lines, stretching over 255 miles. Late in the year, a third Bell 412 is assigned to "City Airlink," which transports a total of 13,100 passengers on the year (average load factor 23.5%).

In 1990, 2 more Bell helicopters crash, bringing the total accidents in the past 2 years to 6, with 25 fatalities. In one of these, a LongRanger accident, Japan's first female commercial helicopter pilot, Miss Yumi Take, is killed.

Success of the jetfoil competition forces Asahi Air Lines Company, Ltd. to cease its interisland commuter operation between Tanegashima and Yakushima on March 11.

On August 20, a Bell 206L-3 LongRanger, chartered to the Japan Broadcasting Corp., crashes into the sea near Okinawa (four dead), while on September 21, an MBB BO-105 strikes a power line near Tokyo and crashes into a mountain (three dead).

Beginning on October 28, President Terada orders a weeklong suspension of services while the Japan Civil Aviation Board (JCAB) conducts a special inspection of Aero Asahi, Ltd.'s headquarters and Tokyo heliport base; the shutdown extends through the remainder of the year. Hideki Ikeda is now named Aero Asahi, Ltd. president, succeeding Sadayuki Terada, with Noboru Funami as the new managing director. "City Airlink" enplanements reach 15,600.

It is arranged for **Japan Air Lines Company, Ltd. (2)**'s new Air Academy to take over the Asahi Air Lines Company, Ltd.'s in the West Seto region from a base at Hiroshima next April. To equip the new endeavor, JAL in November places a ¥1.6-billion order for a pair of British Aerospace BAe Jetstream 31s.

When the new Makurazaki regional airport opens in Kagoshima Prefecture in December, Asahi Air Lines Company, Ltd. inaugurates scheduled services linking it with Tanegashima and Yakushima.

Flight activities resume at Aero Asahi, Ltd. in January 1991 on a limited basis, with only regular customers served. The company makes operational changes to increase safety in accordance with a report submitted to the Japanese Ministry of Transport. During the first quarter, three Bell 214Bs are sold to the Apple Valley, California operator, CRI Helicopters.

The JAL Air Academy, the flight training subsidiary of **Japan Air Lines Company, Ltd. (2)**, opens at Nishi (West) Hiroshima Airport in early March. Later in the month, JAL Air Academy is placed in charge of the Asahi Air Lines Company, Ltd. commuter operation in the Nishi-Seto region, which its parent, **Japan Air Lines Company, Ltd. (2)**, had acquired the previous November. The service is renamed **J-Air Company, Ltd.**, in order that the public may gain the impression that the service is operated and supported by JAL. JAL also undertakes an advertising campaign for the new operation.

J-Air Company, Ltd. services commence in April. Until the Jetstream 31s can be delivered in August, the new flights will be made with Asahi's Bandeirantes.

In April, the Civil Aviation Bureau demands that Aero Asahi, Ltd. reduce its helicopter fleet from some 80 machines to 45 as a condition of license renewal. The Indonesian subsidiary **Asahi Airways** is formed during the spring. As an incentive to lure passengers to its new

Japan-U.S. routes, **Japan Air Lines Company, Ltd. (2)** offers 50% discount on "City Airlink" fares for its first- and business-class passengers.

Although eight-times-per-day Bell 412 services are maintained between Haneda International and Narita Airports, the intercity commuter service is suspended in April. Reportedly, it has not turned a profit since start-up and has lost \$10 million, \$2 million more than its start-up cost.

An appeal is now made by the Seibu Saison Group and the Civil Aviation Bureau, acting as intermediary, to JAL for fiscal assistance to Aero Asahi, Ltd. On May 22, the flag carrier replies in the negative, stating that it is unfamiliar with the commercial helicopter business and sees no gain to be made from helping the distressed operator. It also notes the economics of the J-Air, Ltd. start-up, which the major considers a form of economic rescue.

With the arrival of the Jetstream 31s in August, the Bandeirantes are returned by **J-Air Company, Ltd.** to Asahi Air Lines, Ltd. The new pressurized turboprops begin flying on behalf of the JAL affiliate from Hiroshima to Oita and Matsuyama.

Due to poor weather during the summer rainy season and the recent typhoon period, "City Airlink" is only able to achieve a 36.7% load factor in September. That figure declines again in October as losses, posted over the previous three years, continue to grow. At the end of the month, "City Airlink" partners Aero Ashai, Ltd. and **Japan Air Lines Company, Ltd. (2)** notify Japan's Ministry of Transport that it will cease its unprofitable operations in November.

On November 20, **J-Air Company, Ltd.** launches Jetstream 31 services from Hiroshima to Nagasaki and from Hiroshima to Komatsu.

In 1992, Managing Director Noboru Funami replaces the Bandeirantes in the Asahi Air Lines Company, Ltd. fleet with a pair of Cessna 206s and two Beech 58 Barons. Orders are placed by Aero Asahi, Ltd. on July 8 for 15 McDonnell Douglas MD Explorers, a new helicopter without a tail rotor currently under development in Arizona.

Fixed-wing commuter flights by Asahi Air Lines Company, Ltd. continue apace in 1993-1994 with 2 Beech 58s, 2 Beech 95 Travelairs, 2 Cessna 402s, and 1 each Cessna 206 and Cessna 207. Meanwhile, the rotary wing fleet of Aero Asahi, Ltd. has been increased to include 4 SA 330Js, 8 AS-355Fs, 14 AS-350Bs, 3 AS-332Ls, 26 Bell 206B JetRangers, 3 Bell 20Rs, 6 Bell 312s, 3 MBB BK-117s, and 6 Sikorsky S-76s.

The largest helicopter operator in Japan, Aero Asahi, Ltd. acquires the first of 5 McDonnell Douglas MD Explorers in July 1995. The advanced rotary-wing aircraft is the first of its type to enter service in Japan. Orders are outstanding for 13 more, which will be added over the next 4 years. Its operations, together with those of Asahi Air Lines Company, Ltd., continue apace in 1996-1997.

In 1998, the rotary-wing and fixed-wing Asahi flying concerns remain core companies of one of Japan's leading corporate groups, The Saison Group, which comprises nearly 200 companies and 4 research institutes. Capitalized at ¥ 740 million, offices are maintained at Hokkaido, Tohoku, Osaka (KIX), Kyusyu, and 44 other domestic locations, as well as Manila. The workforce totals 1,415.

President Tachihiko Endou of Asahi Air Lines Company, Ltd., which had sales of ¥ 1.6 million the previous year, now operates a fleet that includes 1 Beechjet 400 bizjet, 2 CASA C-212-100s, and 5 CASA C-212-200s.

President Toru Nakamura of Aero Ashai, Ltd., which had sales of ¥ 29.39 million the previous year, now operates at fleet of 5 SA-330Js, 3 AS-332Ls, 13 AS-350Bs, 8 AS-355Fs, 4 Bell 204Bs, 31 Bell 206Bs, 1 Bell 214ST, 1 Bell 230, 6 Bell 412s, 2 Fuji Bell 205Bs, 1 MBB BO-105S, 2 BK-117s, 3 MD-900s, and 4 Sikorsky S-76s.

Operations continue in 1999-2000.

ASAHI HELICOPTERS, LTD.: Japan (1955-1982). Founded at Tokyo on July 20, 1955, Asahi Helicopters, Ltd. undertakes rotary-wing passenger and cargo charters throughout the nation, along with contract services flights. Among the nonscheduled services flown are those in support of the offshore oil industry, aerial survey and photography, and

agricultural spraying. Operations are conducted not only in Japan, but in China, Bangladesh, South Korea, and Indonesia as well.

By the early 1980s, the fleet comprises over 50 helicopters of 6 types from the U.S., West Germany, France, and Russia. In order to obtain the necessary permits and routes to provide scheduled service, the 750-employee company purchases **Toyo Aero Survey, Ltd.** and forms **Aero Asahi Corporation, Ltd.** on July 1, 1982.

ASAHI TEIKI KOKU KAI (ATKK): Japan (1927-1945). The Air Transport Department of the major newspaper *Asahi Shimbun*, which has sponsored the pioneer public carrier **Tozai Teiki Koku-Kai (TTKK)**, establishes an in-house airline in February 1927. Its purpose is to haul the press (including periodicals and paperback books) up and down the west coast of Honshu from Tokyo to Niigata and from Osaka to Niigata via Toyama. While TTKK employs license-built Dornier Komets, ATKK takes over its Nakayima biplanes for its cargo business, continuing it with little notice, primarily during summers.

Early in 1929, TTKK is merged into the new state carrier **Japan Air Lines Company, Ltd. (1)**. The managing editor, Masuichi Midoro, and his assistant Katsuyoshi Nakano, specifically exempt ATKK from the transfer and keep it in operation on the newspaper's behalf over the next 16 years. The remembered highlight of this period is the 94 hr. 18 min. (51 hr. 19 min. flying time) flight which it sponsors to London in April 1937 to obtain photographs of the coronation of King George VI. Piloted by Masaaki Iinuma and Kenji Tsukagasaki, the Mitsubishi Karigane 1 *Kamikaze-gou (Divine Wind)* significantly impresses Western observers.

ASERCA (AEROLINEAS REGIONAL DE CENTRO, C.A.): Avda Bolivar Norte, Torre Exterior, Piso 8, Valencia, Venezuela; Phone 58 (41) 573 111; Fax 58 (41) 220 210; <http://www.asercaairlines.com>; Code R7; Year Founded 1993. **Aeroservicios Carabobo, S.A.**, founded by Simeon Garcia at Valencia, is renamed **ASERCA, S.A.** in 1993 when it receives permission to inaugurate domestic charter services. Revenue flights commence with a leased fleet of 3 Douglas DC-9-32s and 1 DC-9-31. The fleet is altered in 1994 to include 4 chartered DC-9-31s and 1 DC-9-32.

Permission is received in 1995 to begin scheduled services. At this point, the name is changed again, becoming ASERCA (Aerolineas Regional de Centro, S.A.). Another chartered DC-9-31 enters service.

The fleet is increased by two more DC-9-31s in 1996-1997 and destinations visited now include the Venezuelan cities of Barcelona, Maracaibo, Puerto Ordaz, and San Antonio. In addition, international services are operated to Aruba, Barquisimeto, Georgetown, and Maturin.

Airline employment at 9 Venezuelan airports stands at 1,200 at the beginning of 1998. More than 1,300 weekly departures are offered to 9 domestic and 3 Caribbean destinations (Aruba, Santo Domingo, and St. Martin). Additionally, the company serves the city of Caracas with more than 35 daily departures and 100 connections within the country.

A new corporate livery is unveiled early in the spring. At the same time, the company is one of several making an offer to participate in the privatization of **Air Aruba, N.V.**

It is announced on June 29 that the tender process for the privatization of Air Aruba has been successfully completed. The task force charged with overseeing the AA privatization unanimously decides to recommend the ASERCA tender to the government and parliament of Aruba just as soon as approval can be obtained from Air Aruba's shareholders. That action is completed on July 9.

ASERCA Chairman Simeon Garcia now becomes president of Air Aruba, N.V. A strategic marketing agreement between the airline and its new partner is signed with **Continental Airlines** on September 18. The pact will lead to code-sharing on Continental flights between the U.S. and Venezuela and on ASERCA flights to domestic Venezuelan destinations beyond Caracas. It will also allow ASERCA to code-share on Continental services from Houston to Aruba and on **Air Aruba, N.V.** flights from Aruba and New York/Newark, Miami, and Tampa. Customers will

be able to earn Continental OnePass frequent flyer miles aboard flights of either of the Latin carriers.

On October 28, the Air Aruba Reprivatization Task Force announces the formal and final closing of the participation and restructuring agreement between Air Aruba, the Legal Entity Aruba, and ASERCA Group. ASERCA Group is now officially the largest shareholder in Air Aruba with a 70% stake. Within days, the financial restructuring of the airline and the work of the task force are completed and the airline is able to continue operating on its own financial strength.

ASERCA Group leases a pair of Boeing MD-90-30s from Hwa-Hsia Leasing, Ltd. of Taiwan on November 19. The one retained by ASERCA for use in Latin America is the first new aircraft delivered to a Venezuelan airline in more than a decade. The other is subleased to **Air Aruba, N.V.**, which will employ it on its North American routes.

A third MD-90-30, which is also slated for **Air Aruba, N.V.** is delivered in 1999. In December, Venezuela is hit by floods and landslides that kill thousands and close the Caracas Airport for weeks. The airline loses significant income.

In terrible fiscal shape, **AVENSA (Aerovías Venezolanas, S.A.)** is pushed by the government in early 2000 toward a joint venture—just short of a merger—with ASERCA. On April 6, the two carriers sign a letter of merger intent.

In late spring, AVENSA is approached by **LAV Venezuelan Airlines, S.A. (Aeropostal)** with a buyout offer. Under the proposal, AVENSA would pay \$20 million for 80% majority control. In June, the AVENSA board rejects the Aeropostal offer, preferring the union with ASERCA instead. Even though the two plan a joint service from Caracas to Madrid with ASERCA aircraft in July, the matter of paying off \$53 million in debts, however, remains.

On October 16, it is announced that service to Europe will resume on November 24.

Plans for a merger with AVENSA are dropped on November 3.

ASERCA, S.A. See **ASERCA (AEROLINEAS REGIONAL DE CENTRO, S.A.)**

ASHEVILLE FLYING SERVICE: United States (1982–1983). AFS is set up at Asheville, North Carolina, in early 1982 to provide daily roundtrip air taxi services to Raleigh/Durham. Although Piper PA-23 Aztec revenue frequencies are duly inaugurated, they are only maintained for a year.

ASI CHARTER: 6005 Propeller Lane, Sellersburg, Indiana 47172, United States; Phone (812) 246-4696; Fax (812) 246-4365; <http://www.aircraft-specialists.com/Pages/ASiCharter.html>; Year Founded 1995. ASI is set up at Clark County Airport at Jefferson, Indiana, in 1995 to offer a variety of passenger and executive charters and air express services. The concern is a subsidiary of the FBO Aircraft Specialists, established in 1976 as a maintenance facility, which has grown to include nonscheduled flight services.

Within three years, President Eric Taylor's company employs nine pilots and operates two Learjet 35As and one each Learjet 31A and Cessna 208 Caravan I.

ASIA PACIFIC AIR, LTD.: Malaysia (1995–1998). APA is established at Kuala Lumpur in early 1995 to offer nonscheduled flights to tourism destinations in the country. Hairun Nilsa Abu Bakar is named CEO and services commence late in the first quarter with a Fairchild Metro 23. In mid-February 1996, orders are placed for four more Metro 23s; the first of these enter service during April, with the remainder being delivered throughout the remainder of the year.

The carrier is unable to survive the Asian economic recession that begins in mid-1997 and is forced out of business in 1998.

ASIA PACIFIC AIRLINES COMPANY, LTD.: 8f. 108, Sec. 5, Nanking E. Road, Taipei, Taiwan; Phone 886 (2) 762-2448; Fax 886 (2) 762-2048; http://www.caa_motc.gov.tw/airline.e_ap.html; Year

Founded 1988. Rotary-wing Asia Pacific is established at Taipei in 1988 to provide scheduled air taxi and energy industry support services to domestic locations. The fleet grows over the next 12 years to include 3 Bell 412SP helicopters.

ASIA TENGARA AVIATION SERVICES SDN BHD: City Heliport, Lot 4888, Jalan Segambut Tengah, Kuala Lumpur, 51200, Malaysia; Phone 60 (3) 261-0555; Fax 60 (3) 261-3472; Year Founded 1994. Captain Nasir Ma Lee is named managing director of this new rotary-wing operation that is set up at Kuala Lumpur in 1994. Oil industry and transportation support services begin with a helicopter fleet that includes five Bell 206L LongRangers.

These nonscheduled operations continue without change until 1996, when a Boeing 737-300 is acquired with which to undertake regional passenger charter flights.

No information is available concerning fixed-wing operations in the 1997–2000 period.

ASIAN SPIRIT: Nigi Nigi Nu Noos 'e', Nu Nu Noos Beach Resort, White Beach, Boracay, The Philippines; Phone 63 (36) 288-3101; Fax 63 (36) 288-3112; <http://www.pworld.net.ph/user/nigingi/asian.html>; Code RIT; Year Founded 1996. The last of four new entrants to be formed in the Republic of the Philippines following deregulation of that country's air transport in early 1995, Asian Spirit is the only one to be entirely focused on turboprop domestic operations.

Owned by a number of Philippine aviation workers under the group name of the Airline Employees Cooperative, the company, which had originally planned to open shop in December, formally incorporates in February 1996. Antonio Buendia is appointed general manager.

A pair of de Havilland Canada DHC-7-102s are purchased and begins daily roundtrips in March to Baguio, Catarman, Caticlan, Cauayan, Daet, Masbate, and Tablas. Operations continue apace during the remainder of the year until December, when a Nihon YS-11A-200 is acquired.

Early in 1997, the new Japanese-made turboprop begins flying from Manila to Virac and San Jose. The company encounters rough financial flying and reverts to a charter operation. All but one of the DHC-7s is withdrawn and the company begins flying vacationers two or three times daily from Manila to Caticlan Airport.

From here, they are transferred to a resort on Boracay. Uniquely, the central reservations office is located in a resort on Boracay, which has no airfield and is located 20 min. from Caticlan by outrigger.

From June 1998 onward, the air transport situation in the Philippines becomes critical as labor and management at **Philippine Airlines (PAL)** move toward closure for Asia's oldest airline. In August, however, Asian Spirit is grounded by the Air Transportation Office over safety concerns.

When closure of the flag carrier becomes inevitable in mid-September, the leaders of the nation's four independent airlines are summoned to a meeting with Philippine President Joseph Estrada in Malacanang. It has become necessary to find a way to increase the gap between the 230,000 monthly domestic seats provided by them and the 280,000 offered by PAL.

Meeting with Estrada on September 22, company executives and the leaders of **Cebu Pacific Air, Grand International Airways, Air Philippines**, and several other small operators promise to acquire additional aircraft and fill any vacuum left by PAL within a month. For its part, the government indicates a willingness to grant incentives, including higher fares and concessional loans, designed to help them speed up their capacity build-up.

Asian Spirit is allowed to resume flying, but its efforts will have little impact on the seat requirement.

Airline employment stands at 120 at the beginning of 1999. By now, the fleet has been increased by the addition of two Let L-410UVPs from the Czech Republic.

Early in the spring, the company leases several Nihon YS-11As from **Aboitiz Air**, which will employ them to open a new hub at Cebu on July 1. Although Aboitiz continues to utilize the cargo spaces, the Japanese-made turboprops now offer Asian Spirit passenger flights

from Cebu to Naga, Cagayan de Oro, Tagbilaran, Butuan, Dipolog, Bacolod, and Caticlan.

Flights continue apace during the remainder of the year. While en route from Manila to Cauayan on December 7, Flight 100, a Let L-410UVP with 2 crew and 15 passengers, crashes in the mountainous area of Kasibu in Nueva Vizcaya province, 96 km. from its destination. The pilot of the flight, Capt. Rolando Salandanan, was formerly vice president-operations at **Cebu Pacific Air**. The wreckage is found the next day and there are no survivors.

On March 21, **2000**, the carrier accepts delivery of the first of 3 CN-235-200s leased from IPTN in Indonesia. The new arrivals will replace aging NAMC YS-11s.

Thrice-weekly roundtrips are launched on September 1 between Cebu and Surigao, while six-times-a-week return flights begin on November 1 from Cebu to Dipolog.

ASIAN STAR: Tynistanov St. 120, Bishkek, 720000, Krygystan; Phone 7 (3312) 263 455; Fax 7 (3312) 263 666; Year Founded 1995. A joint venture of the Uliss Insurance Company and Krygystan Aba Yoldoru, Asian Star is set up at Bishkek in **1995** to operate passenger charters and inclusive tour services. Boris Roinik is named president with Raisa Mambetalieva as director general. They begin and continue revenue flights with a single Tupolev Tu-154M.

By **1999-2000**, the fleet is doubled to include 2 Tu-154Ms.

ASIANA AIRLINES: Asiana Bldg, 10-1, 2-Ka Hoehyun-Dong, C.P.O. Box 142, Seoul, 100-052, South Korea; Phone 82 (2) 758-8351; Fax 82 (2) 758-8080; <http://www.flyasiana.com>; Code OZ; Year Founded 1988. In need of more Korean lift in the national market than **Korean Airlines/Korean Air (KAL)** can provide, the Republic's outgoing President Chun Doo Hwan awards a license for a second Korean airline to the Kwangju-based Kumho Group in February **1988**. Originally formed as **Seoul Air International** early in the year, this conglomerate subsidiary is capitalized at \$36.5 million, with the Korean Development Bank a minority (35%) shareholder.

Former Korean Air Force Maj. Gen. Yong Tae Park is named executive vice president under Chairman Ing Sung Hwang, a former Republic of China transport minister. Asiana is equipped in late fall with the first 2 of 6 GPA Group leased Boeing 737-4Y0s to be delivered. Orders are also placed for 5 additional B-737-400s, 4 B-747-400s, and 2 B-767-300s, with 3 additional options. Pilots are recruited from among the unemployed flyers of **Korean Airlines/Korean Air (KAL)** and **Air France**. Domestic revenue services are inaugurated on December 23 from hubs at Seoul and Cheju.

A total of 6,796 passengers are transported by year's end. Revenues are \$62.3 million, but expenses are higher, bringing an operating loss of \$39.9 million and net downturn of \$46.3 million.

Employing the leased B-737-4Y0s, the carrier, freed of government requirements that it supply only domestic service, stretches a new route in **1989** to Pusan, following it with international services to Fukuoka, Nagoya, and Tokyo, made possible by the delivery of two B-767-38EERs. A strong maintenance department is established that allows the first 737 checks to be performed late in the year. A total of 900,000 passengers are flown on the year.

The **1990** fleet of the 3,000-employee private airline includes two B-767-38EERs, 10 leased B-737-4Y0s, and 2 B-737-53As. Four-times-per-week B-767-38EER service is started from Seoul to Tokyo in February. Orders worth \$6 billion are placed on September 1 for 11 B-747-400s, 12 B-767-300s, and 13 B-737-400s. Two more B-767-38EERs arrive in October, along with the first Jumbojets; these allow the initiation of services to Bangkok and Hong Kong.

A total of 2.28 billion revenue-passenger-miles are flown during the year while revenues total \$150.2 million. Expenses are \$199.7 million and cause an operating loss of \$49.5 million. Net loss is \$64.2 million.

In need of pilots, the company contracts with Vero Beach, California-based FlightSafety to provide training; the first class group of cadets

graduates in October **1991** and is quickly followed into training by a second.

The first of three B-747-48ECs is delivered in October and is employed to inaugurate daily Seoul to Los Angeles service on November 15; by year's end, Asiana is flying 84 scheduled domestic flights per day as well as 70 international frequencies per week to destinations in China, Japan, Southeast Asia, and over the new route to Los Angeles.

The fleet in **1992** comprises 5 B-767-38EERs, 10 leased B-737-4Y0s, 2 B-737-48Es, 1 leased B-737-53A, and 3 B-747-48ECs. Orders are outstanding for 11 B-737-48E, 5 B-747-48ECs, 3 B-747-48EFs, and 8 B-767-38EERs. Nonstop flights are inaugurated from Seoul to New York and San Francisco on December 9. Enplanements total 5,057,806. Expenses exceed income and the operating loss is \$693,112. The net loss is \$58,000.

Airline employment is increased by 25% in **1993** to 3,880 as two more B-747-48ECs are acquired. Service is initiated during March-April to Toyama, Paris, New Delhi, Berlin, and Brussels.

Ho Chi Min City joins the route network on July 1 followed by Honolulu on July 20.

While on final approach for the third time to Mokpo Airport on a July 26 service from Seoul, Flight 733, a B-737-5L9 with 6 crew and 110 passengers, collides with Mount Ungeo, 4 nm. N of the runway (68 dead). This is Asiana's first major accident.

On November 1, the company becomes launch customer for the B-767-38E freighter.

Passenger boardings increase 15% to 5,950,359 while freight traffic moves ahead by a remarkable 95% to 441.7 million FTKs. Revenues ascend 48% to \$651.26 million while expenses climb 54% to \$644.15 million. The happy difference results in an operating surplus of \$7.1 million. The net loss increases to 63,000.

Employment at the carrier is boosted another 28.9% in **1994** to 5,000. Weekly roundtrips commence on June 23 between Seoul and Khabarovsk; Asiana is the first Korean carrier to offer regularly scheduled flights to the Russian Far Eastern destination.

In early September, a strategic code-sharing alliance is signed with **Northwest Airlines**; under terms of the agreement, the company will share frequent flyer programs, terminal and lounge facilities at four U.S. airports, and cargo space on flights between Korea and the U.S.

Plans to initiate new thrice-weekly roundtrips to Seattle are postponed in order that the carrier might take advantage of key tourism opportunities.

Code-sharing flights commence in cooperation with **Northwest Airlines** on October 30 on flights between Detroit and Seoul (NWA) and Seoul and Saipan, Honolulu, San Francisco, Los Angeles, and New York-JFK (Asiana).

The first B-747-48ER arrives in December and service to Russia and mainland China begins at year's end.

Customer bookings balloon 28.2% to 7,626,936 while freight nearly doubles, climbing to 795.62 million FTKs. Revenues of \$993 million allow a net profit (the first) of \$37 million.

Two important revenue-sharing pacts are inaugurated in January **1995**. One with **Air China** covers flights to Beijing from Seoul and Pusan while the second, with **China Eastern Airlines Company, Ltd.**, provides for joint income over a route from Seoul to Shanghai.

Thrice-weekly B-767-38EER roundtrips commence between Seoul and Seattle-Tacoma International Airport on May 22.

Having spent \$1 million to renovate an 85,000-sq.-ft. facility at New York (JFK) that had previously been employed by **Japan Air Lines Company, Ltd. (2)**, Asiana moves in mid-July. The number of weekly flights into Kennedy advances to 12 as 2 new weekly roundtrips are started between New York and Seoul.

Traffic figures are reported only through September, but are gratifying. Passenger boardings are up 19% over the same period a year earlier to 6,753,412 while cargo rises 47.8% to 858.65 million FTKs. The good traffic report translates into profits: \$126.52 million (operating) and \$24.43 million (net).

Twice-weekly service is inaugurated on November 1 between Seoul and Brussels; the return flights stop at Vienna.

Thrice-weekly B-767-38EER roundtrips between Seoul and Cairns, Australia, commence on December 3.

Airline employment stands at 6,177 in 1996 and, in January, the company wins the "Market Development Award" from *Air Transport World* magazine.

Code-sharing flights begin in February with **Austrian Airlines, A.G.** over a route from Seoul to Vienna. As the result of an investigative report by *The Wall Street Journal*, the U.S. Department of Justice and FAA both begin a probe during the second week of July to determine if company pilots had received preferential treatment while training in the U.S.

In November, code-sharing begins with **Qantas Airways (Pty.), Ltd.** from Seoul to Sydney and Cairns, four-times-per-week. The two companies also agree to coordinate ground handling services at the Korean and Australian destinations. Flights to London commence in December.

Full-year traffic figures show a 12.3% increase in customer bookings to 10,030,521 and operating income jumps 14.4% to \$1.42 billion. Costs climb 20.9% to \$1.36 billion, leaving an operating gain of \$62.33 million. There is a huge \$64.07-million net loss.

The workforce grows 2.9% in 1997 to 6,404. With the blessing of the South Korean government, Switzerland-based Pacific Investment Capital, Ltd. acquires an \$80-million, 19.02% stake during January. During the month, the company places a \$175-million order for GE CF6-80C2 engines. It also receives the annual "Market Development Award" from the industry magazine *Air Transport World*.

On April 1, electronic ticketless travel is introduced systemwide, making Asiana the first airline in the world to have fully integrated this service. Dual-designator frequencies from Seoul to Sydney and Cairns are increased to five per week beginning in April. Frankfurt joins the route network in May.

A code-sharing agreement with **THY (Turkish Airlines, A.O.)** takes effect on August 1; employing Asiana B-747-48ECs with dual designated flight numbers, the two initiate twice-weekly roundtrips between Seoul and Istanbul.

In the wake of the July **Korean Airlines/Korean Air (KAL)** disaster on Guam, Asiana, on August 25, decides to suspend operations to Agaña International Airport on the island until September 11 when it is expected that the island airfield's safety devices will be repaired.

During the summer, a strategic alliance is entered into with **American Airlines**. On September 1, the carrier cuts its roundtrip fares to seven Asian destinations from seven U.S. markets to \$679 and up.

At this point, the company firms up an order with Airbus Industrie for three A330-200s and three A330-300s, to be delivered between the fall of 1999 and summer of 2001.

In early October, a B-747-R8F-4Q8F is chartered from ILFC for 10 years, beginning in April 1999.

A new dual-designator alliance is entered into with **American Airlines** on October 17. The three-year-old code-sharing pact with **Northwest Airlines** is concluded on October 30.

The next day, twice-weekly B-767-38EER roundtrips commence between Seoul and New Delhi, India. Code-sharing on South Korea-U.S. flights, scheduled to begin with **American Airlines** on November 20, is postponed.

It is announced on December 2 that the company, since July 1, has run a campaign to collect small change to be used in a special fund-raising program for North Korean children. Through the generous support of the airline's passengers, it is able to turn 88 million in donations over to the Korean committee of UNICEF.

Late in December, the company defers delivery of its first B-777, as well as the B-747-4Q8F.

Passenger boardings climb 5.3% to 10,565,307 while revenues jump 13.2% to \$964.01 million. With costs of \$763.62 million, the company enjoys a \$200.38-million operating profit, but also must face a huge \$281.43-million net loss.

At the beginning of 1998, Asiana is the 20th largest airline in the world in terms of operating profit.

In January, because of the nation's growing economic difficulties, the carrier suspends services from Seoul to Frankfurt, Vienna, Istanbul, and Frankfurt. Passenger flights to Macau and Honolulu are suspended, along with an all-cargo service to New Delhi. Asiana is also forced to delay acceptance of several new aircraft, including one each B-747-48EC and B-767-38EER. Ten airplanes will also be sold.

Other cost-cutting measures put into effect include a hiring freeze, a management reorganization (and the weeding out of 20% of the top executives), rotating one-month unpaid lay offs for all employees to protect all from permanent redundancies, salary cuts, nonpayment of bonuses, and other savings.

With the beginning of the summer schedule in March, new routes are opened from Seoul to the Chinese communities of Changchun, Harbin, and Guangzhou. Some of these are marketed as Flying Magic service.

A block-space, code-sharing agreement is signed with **Singapore Airlines, Ltd.** on April 10; under its terms, the Korean carrier, starting four days later, places its two-letter "OZ" code on Singapore's A310-324 thrice-weekly roundtrips between Singapore and Seoul. The new flights replace Asiana's existing B-767-38EER roundtrips between the two capitals.

Dual-designator service with **American Airlines** finally begins on July 20. American places its "AA" code on Asiana's flights from Seoul to Los Angeles, San Francisco, Seattle, and New York (JFK).

Twice-weekly flights are introduced on September 1 between Shanghai and the island resort of Cheju.

On October 1, Asiana is able to place its code on American services from the four gateway cities and other U.S. points.

Landing at Anchorage on November 11 after a service from New York (JFK), Flight 221, a B-747-48EC with 18 crew and 220 passengers, begins to taxi over an icy ramp area towards its gate. As the plane reaches N-6 and begins to turn left, it continues straight ahead, with the nose-wheels sliding sideways. The left, outboard engine of the Jumbojet strikes the left wingtip of **Aeroflot Russian International Airlines (ARIA)** Flight 853, an Ilyushin Il-62M with a crew of 11 and a contract cleaner aboard preparing for departure to San Francisco. The Boeing's left wingtip then strikes the Ilyushin's vertical stabilizer. Except for a sprained wrist claimed by the cleaner, no other injuries are reported. The captain of the Korean 747 immediately orders all four engines shut down and the passengers are disembarked using air stairs. Immediately after the collision, the Russian crew and cleaner, after turning off all power, also exit their aircraft.

While taxiing at New York (JFK) on November 30 after arrival from Anchorage, a B-747-48EF with two crew strikes a crane located in a taxiway safety area and is substantially damaged. Nether man aboard the plane is hurt, but the crane operator receives minor injuries.

In early December, Asiana enters into a major codesharing agreement with **China Eastern Airlines Company, Ltd.** In addition to the usual sharing of frequent flyer programs, marketing, and ground handling, the two undertake regular shared roundtrip service from Seoul to Yantai, four times a week.

The dual-designator arrangement with China Eastern Airlines is enhanced on December 29. Two additional weekly roundtrips are added from Seoul to Yantai and new twice-daily nonstop roundtrips are inaugurated between Seoul and Shanghai.

Enplanements during the 12 months fall 16.5% to 8.95 million, while cargo traffic drops 13.7% to 1.8 billion FTKs.

The first quarter of 1999 is strong for Asiana and allows its leadership to begin planning for better times. Revenues during the three months total \$252 million and exceed the company's \$214-million goal.

When the summer schedule begins on April 1, Asiana increases the number of its weekly roundtrip flights to Osaka (KIX) from 7 to 14. The number of weekly return services from Seoul to Australia simultaneously grows from 4 to 6. The next day, service is resumed to Saipan and Guam.

Exiled Chinese dissident Wang Xizhe, seeking to return home to pay respects to his deceased father, is a passenger on the company's April 5 B-747-48ER service from New York to Beijing via Seoul. When the Jumbojet arrives at the South Korean capital, Wang, who does not have clearance to continue on to China, is removed from the aircraft and booked on a flight to Bangkok. The Hong Kong-based Information Centre of Human Rights and Democratic Movements in China informs Reuters, Ltd. that the airline had been warned by Chinese authorities of Wang's boarding and that the carrier would be held responsible if his flight were completed. When Wang arrives in Bangkok, Thai officials prevent him from holding a news conference and order him to return to his point of departure. The dissident returns to Seoul on April 8, returning to New York next day.

As the Korean economy continues its recovery during the spring, Asiana agrees to take delivery of the B-767-38EER and B-747-48ER postponed the previous year.

Following the latest **Korean Airlines/Korean Air (KAL)** accident on April 15 and government penalties, Asiana's market share increases. By the end of the month, the company claim's 40% of all domestic passengers, up from 30% for all of 1998.

Additional new services added during the summer include an expansion of frequencies to Fukushima and replacement of the B-737 flown to Hong Kong with a B-767-38EER. Suspended services to Taipei are resumed, seven times a week. The new restrictions imposed by the Philippine government during May in an effort to save **Philippine Airlines (PAL)** cause Asiana to scuttle plans for an expansion of flights to Manila.

In the area of cargo, new frequencies are added to Sendai and Frankfurt and from Seoul to Brussels to Seoul via New York (JFK). The number of flights over existing routes from Seoul to New York (JFK), Chicago (ORD), London (LHR), Brussels, Amsterdam, and China are also boosted.

Four men who joined the company in 1990 as pilot trainees are advanced to the rank of captain on November 29 in a ceremony that marks the first time civilian flyers had been so promoted in Korean aviation history. Previously, all Asiana or Korean Air captains had been ex-air force or foreign pilots.

In December, company workers shut the carrier down for five hours one day before the carrier agrees to a 10% wage increase.

Passenger boardings and cargo traffic this year remain level with figures from a year earlier. On revenues of \$1.7 billion, a net \$9.7-million profit is generated.

New B-737-4Y0 roundtrips to Guilin and Xian in mainland China begin on April 2, 2000; Asiana is the first foreign carrier to land at the former destination. On June 11, in cooperation with **Cargolux Airlines International, S.A.**, twice-weekly Seoul to Brussels roundtrips are started, employing the European carrier's B-747-47UFs.

On June 14, a company B-737-4Y0, which had earlier in the month been secretly diverted from its usual Seoul-Pusan route for crew training, flies a South Korean delegation to P'yongyang. Following the historic talks, the small plane returns the government leaders in triumph.

A320 Thursday-only roundtrips begin on June 22 from Seoul to Chongqing, China.

ASMARA AIRLINES: Eritrea (1994–1995). Asmara is established in the spring of 1994 to offer regional services. Revenue flights commence in midyear with a fleet of 7 Dornier 228-212s. Operations cease within a year.

ASN AEROSTAN (AIRSTAN): 12 Z. Sultan Str., Kazan, Tatarstan, 420022, Russia; Phone 7 (8432) 329 231; Fax 7 (8432) 329 481; <http://www.kazan.ru/air>; Code JSC; Year Founded 1994. Airstan is established at Kazan in 1994 as a closed joint-stock company specializing in long-distance international air carriage of heavy and oversized cargo. It is, in fact, a subsidiary of the industrial-financial corporation TatInTrade, which includes several other Tatarstan Republic enterprises. R. Iskhakov is chairman, with A. Galunov as general director.

At first, all capital of the charter operation consists of one Ilyushin Il-76TD, as well as pilots and technicians, who are recruited from **Aeroflot Russian International Airlines (ARIA)** and **Volga-Dnepr Airlines**.

In cooperation with **Heavylift Cargo Airlines, Ltd.** and several other cargo carriers, the company inaugurates services to 20 nations in Europe, Africa, and Asia.

During 1995b, Taliban freedom fighters in Afghanistan capture the company plane during one of its regular airlifts and hold the crew as prisoners. After some hours, the Ilyushin's pilots are able to disarm the guard and escape to the U.A.E. flying in difficult conditions at only 50 meters height.

Flights continue during the remainder of the year and beyond into 2000. During these years, the fleet is increased with a second Il-76TD and an Antonov An-26, as well as a Yakevlov Yak-40, which is employed for executive charters.

ASPEN AIRWAYS: United States (1953–1991). Founded by Clyde Bonham as an FBO at Denver, Aspen commences an air taxi service to Colorado's ski resorts in June 1953. Having obtained a special exemption from the CAB, Aspen begins scheduled service in 1955 with Beech Bonanzas, ferrying members of the Aspen Institute for Humanistic Studies to and from Denver. The operation is enlarged on March 27, 1965 to provide scheduled Douglas DC-3 and de Havilland DH 114 Heron service to its namesake city's ski areas.

The CAB grants the carrier a certificate for the route on March 9, 1967. Gerald Hickman is named president and the fleet is now increased by the addition of Convair CV-340s and CV-440s. The workforce is now 41 and a total of 15,000 passengers are originated during the year. Operations continue apace in 1968–1969.

Due to a checklist completion mistake, a CV-240 with 3 crew and 49 passengers makes a wheels-up landing at Aspen on January 17, 1970, and skids for 4,300 ft. before stopping; there are no fatalities.

Boardings for the year climb to 42,000 passengers and FTKs rise to 6,000.

Enplanements total 35,916 in 1971. The company enjoys a solid "B" average in 1972. The workforce stands at 82. Passenger boardings skyrocket 56.2% to 82,000 and cargo traffic does better, up 83%.

Enplanements in 1973 total 97,000. The number of employees has fallen to 77 by 1974. Customer bookings accelerate 3.1% to 100,000, but freight traffic is down by 18.6%.

The workforce in 1975 is 121. Two Convair CV-580s are acquired and the company contracts two CV-440s with crews to McCulloch Development Corporation to fly the real estate firm's prospective customers. Constructed by Pitkin County, a new transportation center and terminal is occupied at Aspen's Sardy Airfield. Enplanements grow by 20.4% to 114,154.

Employment grows by 9.1% in 1976 to 132. Passenger boardings accelerate 19% to 136,000. The company's 10 Convair CV-580s assist enplanements to reach 229,949 in 1977. Charter and contract service flights also continue to be operated, not only within the U.S., but to Mexico, Canada, and the Caribbean as well. Net profits total \$11,000 on operating income of \$6.43 million.

The workforce totals 260 in 1978, an increase of 57.6%. New routes are opened to Durango and Montrose, Colorado, and plans for additional expansion are studied. Meanwhile, a number of new marketing initiatives are undertaken, including three undertaken in cooperation with regional travel agencies.

Passenger boardings jump 10.3% to 256,353 while FTKs rise 29.2% to 45,000. Overall revenues advance to \$7.76 million, but expenses fly higher, reaching \$8.46 million. This unhappy imbalance results in an operating loss of \$697,000 and a net loss of \$21,000.

The number of workers is increased by 28% in 1979 to 320. The carrier adopts a deliberate policy emphasizing replacement service and avoiding competition with subsidized airlines; thus, Aspen closes its routes to the New Mexico communities of Albuquerque and Farmington and to the Colorado towns of Gunnison and Durango. At the same

time, a new Golden State division is set up and the company moves into California to replace those routes abandoned by **Air California**, **Pacific Southwest Airlines (PSA)**, and **United Airlines** in the wake of deregulation.

A hub is established at Burbank and routes are extended from Burbank and Los Angeles to Lake Tahoe; San Francisco and San Jose to Lake Tahoe; Bakersfield to Los Angeles; and Los Angeles to San Francisco via Stockton and Modesto. To provide the extra capacity required, two more CV-580s are purchased and the entire Convair fleet receives a new paint scheme. In addition, the new destinations are trumpeted via several innovative advertising campaigns.

Passenger boardings jump 28% to 328,433 and cargo accelerates 38.7% to 63,000 pounds. Operating income bounces upward by 56.2% to \$12.17 million, but expenses (led by fuel prices) sweep to \$12.56 million, a 48.4% boost. As a result, the carrier suffers an operating loss of \$431,000 and a net failure of \$350,000.

The employee population is increased by 7.3% in 1980 to 296 and the fleet includes 10 CV-580s. Terence O. Dennison is appointed vice president operations. In early spring, the route to Montrose, Colorado, is suspended as are flights in the Bakersfield and Los Angeles area. Direct Los Angeles to Lake Tahoe service is inaugurated and during the two-month strike at **Pacific Southwest Airlines (PSA)**, the carrier helps to alleviate traffic demand by covering that company's Burbank-San Francisco run. The British Aerospace BAe 146 is examined as a Convair replacement.

Customer bookings leap ahead by 6.5% to 349,579 as does freight, by 29.6%, to 92,856 pounds. Revenues accelerate 47.8% to \$17.9 million, with expenses lagging behind at \$17.5 million. The profits are \$351,000 (operating) and \$304,000 (net).

The number of employees is cut by 13.8% in 1981 to 255. A new Denver-based central reservations facility, complete with a \$300,000 Rolm ACD/CBX computer system, is occupied during the first quarter. On June 1, Aspen becomes a subsidized replacement carrier for **Western Airlines** on the major's Salt Lake City to West Yellowstone route.

However, passenger boardings are down significantly, due largely to the PATCO air traffic controllers' strike, falling 30.3% to 243,502; cargo falls even more, off 32.5% to 57,179 pounds. Operating income plunges 56.5% to \$16.91 million while expenses accelerate to \$17.29 million. Consequently, the company suffers a \$379,000 operating loss and a net downturn of \$656,000.

The workforce in 1982 totals 240 and the fleet includes 10 Convair CV-580s. Enplanements rebound as a variety of new charter destinations are added, including Sun Valley, Jackson Hole, and Durango. Enplanements jump a full 14% to 277,000.

An 11th Convair is purchased in 1983 and, with the bankruptcy of **Continental Airlines**, Aspen acquires the short-haul Denver to Colorado Springs service, which it operates on behalf of **United Airlines**. The arrangement helps passenger traffic to increase by 31.9% to 367,000 transported passengers. Cargo skyrockets 92.7% to 747,000 pounds.

The fleet in 1984 includes 11 CV-580s and a new marketing agreement is entered into with United. Orders are outstanding for 8 British Aerospace BAe 146-100s. Customer bookings rise 21.1% to 443,598 and freight jumps 19.9% to 895,044 pounds.

Early in the 20th anniversary year of 1985, the 469-employee Aspen places its first two British Aerospace BAe 146-100s into service. These are employed on the routes from Denver to Amarillo and Lubbock as well as Denver to Aspen ski-season services and charter flights to Aspen from California.

Simultaneously, the company begins twice-daily CV-580 flights over the Essential Air Services (EAS) routes abandoned by **Frontier Commuter** between Denver and the Wyoming communities of Sheridan and Gillette. Enplanements climb 28.7% to 571,028, while cargo skyrockets 84.4% to 1.65 million FTKs. Revenues ascend 32.4% to \$35.45 million.

Airline employment declines by 20% in 1986 to 375. The Denver-based large regional becomes a full-fledged "United Express" code-sharing partner on September 1. The long-familiar leafy logo is aban-

doned as the carrier's aircraft, including a third BAe 146-100 received late in the year, are repainted in the modified colors of its major new partner.

Passenger boardings swell 12.5% to 642,496 and cargo moves upward a slight 0.6% to 1.66 million FTKs. Revenues advance 7% to \$37.92 million, expenses rise 8.3% to \$36.92 million, and the operating profit is \$1 million. Net profit grows by two thirds to \$933,200.

The fleet in 1987 includes 3 BAe 146-100s and 11 CV-580s. As the result of a fare war during ski season, the Texas-Denver BAe service is terminated in January. In February, the carrier moves into a new terminal at Aspen that it shares with **Rocky Mountain Airways**; connections with the **United Airlines** gate are made by minibus on the ramp. Charters to the West Coast end in March.

In August, jet service is discontinued from Lubbock, Midland, and Amarillo, Texas, to Denver.

Customer bookings ascend 31.1% to 842,171 and cargo climbs by 15.4% to 1.94 million FTKs. Revenues jump 31% to \$49 million, expenses swell 32.2% to \$48.79 million, and the operating profit is down to \$212,000. Net gain also declines, to \$229,000.

Airline employment grows by 34.1% in 1988 to 503 and the "United Express" carrier's fleet includes 4 BAe 146s and 10 CV-580s. Gary B. Hickman, son of president Gerald Hickman, is appointed chief operating officer.

Just after landing at Durango on February 2 after a service from Denver, a CV-580 with 3 crew and 38 passengers, collides with a snowbank; although the aircraft is damaged, no injuries are reported.

Passenger boardings rise 7.8% to 900,000 and revenues ascend 19% to \$58 million. Expenses, however, jump 24.5% to \$60.73 million and leave an operating loss of \$2.43 million. The net loss is \$2.51 million.

The 36-year-old large regional does not enjoy a good final year.

Just after takeoff from Stapleton Airport at Denver on January 20, 1989, a CV-580 with 3 crew and 36 passengers, loses power to the No. 2 engine. The turboprop attempts to return, but while landing, loses power to No. 1 engine. The plane lands on a dirt road near the runway, hits a fence, and comes to rest in a pile of logs with its nosegear collapsed. There are no fatalities.

In October, Farmington, New Mexico-based **Mesa Airlines** attempts to buy Aspen, but withdraws when a sale to Los Angeles investor Burt Sugarman is announced. Shortly thereafter, the Sugarman arrangement falls through and **WestAir Airlines**, doing business as "United Express," of Fresno, California, opens negotiations. High labor costs at Aspen and an opportunity to replace failed **Presidential Airways**, cause WestAir's chairman, Timothy Flynn, to back away.

In December, after several months of negotiations, the company is finally able to sell itself. All company stock, the year-round Denver-Aspen route, the seasonal ski vacation jet routes to Aspen from Chicago, Los Angeles, and Dallas (DFW), plus four BAe 146s, are sold to **Air Wisconsin**, which plans to operate its new acquisition as a subsidiary. The fleet of 10 aging Convairs is sold separately. Aspen owner Donald Ringsby later reports to employees that **Mesa Airlines** is able to purchase the turboprop routes for \$4 million.

Enplanements for the year fall to 798,905 and cargo to 403,000 pounds. Revenues for 550-employee Aspen increase a slight 2.6% to \$59.8 million, but costs rocket upward again and generate losses of \$5.4 million (operating) and \$5.5 million (net).

Final arrangements for these sales are completed by February 1990 with the **Air Wisconsin** portion of the takeover being finished on May 1. That transaction costs AW \$3 million in cash and five-year 8.5% notes for \$2.5 million plus the assumption of \$2 in liabilities. The workforce is now reduced by 49.1% to 280 and Aspen flies on behalf of its "United Express" parent throughout the year, transporting a total of 403,621 passengers, a 49.5% decline over the previous year. Revenues are \$33.3 million and produce an operating loss of \$2.3 million and a net loss of \$1.4 million. As a cost-saving measure, **Air Wisconsin** merges its subsidiary in July 1991.

ASPEN AVIATION: 69 E. Airport Road, Aspen, Colorado 81611, United States; Phone (970) 925-2522; Fax (970) 920-9841; Year Founded 1981. AA is set up at Aspen-Pitkin County-Sardy Field, Colorado, in 1981, to offer passenger charter and small group executive flights; many incoming flights bring wealthy skiing parties. By 2000, the carrier employs 9 pilots and operates 2 Learjet 35As and 1 each Beech Super King Air 200, Aero Commander 690D, and Cessna 206 Stationaire.

ASPEN MOUNTAIN AIR: United States (1996–1999). To fill the voice created when **Continental Express** stops flying into the Aspen/Snowmass market, Ronald P. Stone and Pat Imeson join with local business interests, including the Crown family and Ines Interest, Ltd. (both owners of Aspen Skiing Company), to create the airline service group Peak International.

During the summer of 1996, Peak International, with Stone as chairman/CEO, purchase majority interest in **Lone Star Airlines** and the five-year old airline is amalgamated into their new AMA. Aspen founder Stone becomes chairman/CEO, while Lone Star President Paul Trenary resigns. Arrangements are made with Fairchild Dornier to lease a fleet of Dornier 328-110s.

Employing two Fairchild Dornier 328-110s, the company inaugurates scheduled revenue services from a new Aspen hub on November 1; six-times-a-day service is launched between Denver and Aspen and four-times-a-day return nonstops between Denver and Dallas.

Lone Star's regional markets in Colorado, Texas, Arkansas, Missouri, New Mexico, Oklahoma, Tennessee, and Mexico are also served. Included are its Essential Air Services (EAS) routes to eight south central U.S. communities flown with Fairchild Metro 23s, including two wet-leased from **Merlin Express**.

The year's combined traffic figures for Lone Star and Aspen combine reach 98,218, a 15.5% increase over Lone Star's 1995 report.

In February 1997, a marketing and code-sharing agreement is signed with **Frontier Airlines (2)**. The arrangement covers passenger services between Aspen and Denver.

A code-sharing agreement is signed with **American Airlines** during the spring and the route network is increased as twice-daily, dual-designator roundtrips are inaugurated between Dallas-Fort Worth and Aspen and to Knoxville, Tennessee. During the Paris Air Show in June, orders are placed for four Fairchild Dornier 328JET regional jetliners.

On June 27, twice-daily, dual-designator Fairchild-Dornier 328-110 roundtrips are introduced between Dallas (DFW) and Santa Fe, New Mexico. Twice-daily, nonstop, code-sharing roundtrips commence on September 15 between Dallas (DFW) and Pensacola, Florida.

The code-sharing agreement with **American Airlines** is expanded on December 3. The major places its codes on Aspen's Dornier 328-110s as they offer two flights daily, except Saturday, between Dallas (DFW) and Chihuahua, Mexico, and two flights daily Monday–Thursday and one flight on Friday and Sunday between Dallas (DFW) and Del Rio, Texas.

These new flights complement the dual-designator the two carriers have introduced over the past several months on Aspen flights from Dallas (DFW) to Pensacola, Santa Fe, Knoxville, and between Denver and Bozeman.

The roundtrip Dallas–Knoxville service is increased on December 18 to thrice daily.

Passenger boardings soar 65.7% to 165,728.

Airline employment stands at 470 at the beginning of 1998. Service is provided to 22 cities with a fleet of 15 jet-prop aircraft. During the first half, the company petitions for landing slots at Chicago (ORD); from that airport, nonstop flights would be launched to Sioux City, Iowa, and Branson, Missouri.

On August 7, the carrier voluntarily seeks protection under Chapter XI of the U.S. bankruptcy code, while simultaneously requesting and obtaining an order from the federal bankruptcy court in Dallas, Texas, approving interim financing that will allow it to continue operations.

The company announces on September 3 that it will reduce its fleet of aircraft to a level sufficient to focus on several key U.S. and trans-border routes and that it will maintain its EAS routes until an acceptable replacement carrier is selected by the government. Routes to be continued are from Dallas-Fort Worth to Aspen, Chihuahua, and Branson and from Denver to Aspen and Bozeman.

On September 4, flights are cut from Dallas (DFW) to Del Rio, from Del Rio to Torreon, and from Chihuahua to El Paso. Frequencies from Dallas (DFW) to Pensacola and from Denver to Sioux City are shut down on September 11. Service to Knoxville from Dallas (DFW) ends on September 30 and, on October 30, flights from Dallas (DFW) to Santa Fe cease.

On October 9, Fairchild refuses to renew the carrier's Dornier 328-110 lease. Consequently, AMA must immediately cease service to Aspen from Dallas (DFW) and Denver; from Denver to Bozeman; and from Dallas (DFW) to Chihuahua. Fairchild Metro 23s will continue to fly on EAS routes from Dallas (DFW) to Hot Springs, Mountain Home, El Dorado, and Harrison in Arkansas; Jonesboro and Brownwood in Texas; Enid and Ponca City in Oklahoma, and the Mississippi community of St. Louis.

During the last week of October, the DOT selects Billings, Montana-based **Big Sky Airlines**, in preference to three other applicants, to take over the AMA EAS routes from Dallas (DFW). AMA begins to hand over the routes in mid-November, along with the two wet-leased Merlin 23s it has been operating. Big Sky adds two aircraft of its own and makes arrangements to dedicate a fifth turboprop. The transfer is completed on December 15 without loss of service.

Enplanements during the last year of service total 200,000. AMA Chairman Stone, who has been working to develop a new business strategy patterned after the defunct **Aspen Airways**, shuts the carrier down at the beginning of 1999.

ASSESMAN AIRLINES. *See* IRAN ASSESMAN AIRLINES

ASSISTAIR, LTD.: United Kingdom (1974–1975). Geoff Rosenbloom forms Assistair at Glasgow Airport in December 1974 to offer charter flights in support of the oil industry; he also establishes a base at Aberdeen and purchases two Piper PA-27 Aztecs.

Revenue flight operations begin in January 1975 and destinations include not only Scottish cities, but cities in Holland, Norway, and Belgium. A post office contract is awarded and the Aztecs fly five-nights-per-week mail service Edinburgh–Aberdeen and Montrose. During the summer, the company is sold to **Burnthills Aviation, Ltd.**

ASSOCIATE AIR AMBULANCE SERVICE. *See* ZIA AIRWAYS; AIR NEW MEXICO

ASSOCIATED AIR TAXI, LTD. *See* CENTRAL BRITISH COLUMBIA AIRWAYS, LTD.

ASSOCIATED AIR TRANSPORT: United States (1952–1962). Formed at Miami in early 1952, Associated launches irregular all-cargo services with a Curtiss C-46A Commando leased from the USAF. Flights to civilian and military markets, largely in the Southeast, continue for the remainder of the decade.

In December 1959, the company, by now flying five C-46As, is issued a two-year CAB certificate as a supplemental air carrier.

A chartered C-46A with 3 crew and 54 passengers, crashes short of the runway at McGuire AFB, New Jersey, on February 13, 1960; although the plane must be written off, there are no fatalities.

The government now elects not to renew its permit; however, legal challenges to that decision cause the CAB to grant interim operating authority. Both the temporary license and the airline end in October 1962.

ASSOCIATED AIRLINES (PTY.), LTD.: Nomad Road, Essendon Airport, North Essendon, Victoria 3041, Australia; Phone 61 (3)

9374-1777; Fax 61 (3) 9379-7321; Code V2; Year Founded 1992. An FBO established at Essendon Airport in 1937, Associated, better known for its maintenance and overhaul operations, elects, in **1992**, to offer local passenger and cargo services. Operations commence with 2 Cessna 402Bs, 1 Cessna 310B, and 1 Cessna A.21C.

A Canadair CL-601 Challenger is acquired in **1994** and, by **2000** the fleet also contains 1 Fokker F.27-500F and 1 Gulfstream IV executive jet.

ASSOCIATED AIRWAYS, LTD. See **PACIFIC WESTERN AIRLINES, LTD.**

ASSOCIATED AIRWAYS JOINT COMMITTEE: United Kingdom (1940–1947). To coordinate and utilize the services of domestic companies owned by British railroads and Capt. Gordon Olley in the event of war, National Air Communications is formed as the carriers receive subsidy. When World War I begins on September 3, **1939**, **British Airways, Ltd. (1)** and **Railroad Air Services, Ltd.** aircraft are directed to Exeter to operate on behalf of the government and all other civil flights are prohibited.

On May 5, **1940**, this organization is formalized in a meeting with the Secretary of State for Air. Members of the new Associated Airways Joint Committee (AAJC) are **Air Commerce, Ltd., Great Western and Southern Air Lines, Ltd., Isle of Man Air Services, Ltd., Olley Air Service, Ltd., Railway Air Services, Ltd., Scottish Airways, Ltd.,** and **West Coast Air Services, Ltd.** Although certain limited services by individual companies are allowed to resume in more remote areas of the British Isles, these are cancelled on May 22. All available AAJC aircraft are ordered to specific RAF stations on May 22 to begin participation in the evacuation of the British Expeditionary Force from Dunkirk.

Finding the operation too dangerous for civil aircraft, officials halt AAJC flights, allowing members to resume certain civil flights on June 3. As the situation deteriorates, all civil operations are again suspended on June 15 and available aircraft are sent to France via Exeter for evacuation flights. Four de Havilland DH 86s must be abandoned at Bordeaux on June 18. The rescue flights end on June 24 and AAJC members are allowed to resume their limited schedules, as described in their individual entries.

On September 22, **1942**, officials of the membership meet with government representatives at Carlisle to prepare arrangements in the event of a German invasion. When such a catastrophe does not occur, the civil aircraft find themselves sharing British airspace with a vast and growing armada of Allied warplanes assembled through **1943** for the Combined Bomber Offensive and the upcoming invasion of Normandy in June **1944**. In October of the latter year, AAJC officials offer the government an extensive plan for a new postwar network of air services both within Britain and Europe.

V-E Day occurs on May 8, **1945** and member companies thereafter reintroduce domestic flights. The work of the committee is concluded on January 1, **1946** when wartime restrictions on civil aviation are revoked. On August 1, the new **British European Airways Corporation (BEA)** is established; internal operations are maintained for the new state carrier by AAJC member airlines. The services, aircraft, and staff of all AAJC carriers are acquired by BEA on February 1, **1947**, formally ending the organization.

ASTANAIR AIR AVIAKOMPANIA: Astan, Kazakhstan; Code A7; Year Founded 1998. Astanair is established at Almaty in late spring **1998**. Having obtained a British Aerospace BAC 1-11-528FL, the new entrant launches regularly scheduled flights on July 21 to Almaty, as well as to Kyzylord, Aktubinsk, and Uralsk. No information is thereafter available.

ASTEC AIR EAST: United States (1980–1982). AAE is established by Arthur E. Volk at Republic Airport, Farmingdale, Long Island, New York, in the fall of **1980**. Equipped with a fleet of 7 Piper PA-31-310 Navajos and 6 PA-34 Senecas, it inaugurates scheduled services on No-

vember 10 linking its base with Albany, plus the Connecticut communities of Bridgeport, New Haven, and Hartford.

Operations continue apace in **1981** and the fleet is increased by the addition of a Piper T-1020. ATC restrictions, occasioned by the summer PATCO air traffic controllers' strike, bring terminal fiscal difficulties and Astec Air East is forced to shut its doors in June **1982**.

ASTOR AIR: United States (1984–1985). A division of Ludlow Aviation, Astor Air is set up at Hadlock, Washington, in late **1984** to provide scheduled passenger and cargo commuter flights to Portland, Oregon. Cessna 402 revenue flights commence in early **1985**, but only continue for a few months.

ASTRA AIR SERVICES, LTD.: New Zealand (1991–1992). Richmond Harding forms Astra Air Services, Ltd. at Auckland in **1991** to provide scheduled commuter services between the North and South Islands. Two Dornier 228-212s inaugurate service in midyear but President Harding's operation cannot establish viability and closes in **1992**.

ASTRAKHAN AIRLINES (ASTRAKHAN AVIALINSKI): Nari-manovo Airport, Astrakhan, 414023, Russia; Phone 7 (8512) 249 396; Code ASZ; Year Founded 1992. Following the breakup of Aeroflot Soviet Airlines in **1992**, Astrakhan is reformed, but retains its mission to provide local passenger and cargo services. Shareholding is divided between company employees (51%), the Russian state (25%), and private investors (24%).

V. M. Stepanovich is general director and he conducts operations with a fleet containing an unspecified number of Tupolev Tu-134s, Antonov An-24s and An-2s, Yakovlev Yak-42Ds, plus Kaman Ka-26 helicopters.

Services continue in **1993–1994**. Enplanements in the latter year reach 123,581.

The fleet comprises 44 aircraft in **1995**, all former Soviet types. Passenger boardings fall 13.9% to 108,500, but freight climbs 8.1% to 2.68 million FTKs.

Flights continue in **1996–1999** and, during these years, the fleet includes 13 An-2s, 9 An-24s, 5 Tu-134s, 2 Yak-42Ds, and 15 Ka-26s.

Falling traffic and rising fuel bills cause the airline to struggle as it enters the new millennium. Flight attendants, on April 24, **2000** claim that the airline is using threats and blackmail against them to prevent a strike.

A new service is initiated on July 14 between Strakhan and Iran. Still, it is reported that the carrier continues to struggle in its ability to attract full passenger loads.

ASTRAL AVIATION. See **SKYWAY AIRLINES**

ASTRO (SERVICIOS AEREOS ASTRO, S.A.): Argentina (1979–1993). Astro is formed at Buenos Aires in **1979**; Dr. Julio A. Mendizabal is named president. Equipped with a single Britten-Norman BN-2A Islander, the third-level carrier begins flying scheduled services from its base to Colonia and Carmelo. During the **1980s**, the fleet is increased by the addition of another Islander and two Convair CV-600s.

Increased competition and the general turndown in the airline business at the end of the decade leads to a decline in income and in **1991** the commuter goes bankrupt. Funding is located and the carrier is able to resume and continue operations in **1992** under the direction of Serafin Campos. Economic viability cannot be achieved, and the company closes down for good in **1993**.

ASTRO AIR: United States (1968–1969). Set up at Lompoc, California, in **1968** as the operational affiliate of Air Astro Transportation, Astro Air inaugurates daily roundtrip scheduled de Havilland DH 104 Dove and Piper PA-31-310 Navajo passenger frequencies to San Francisco and Los Angeles. Unable to achieve viability, the company fails within a year.

ASTRO AIRLINES: 4th Floor, 163 Nanking East Road, Section 5, Taipei, Taiwan; Year Founded 1997. AA is set up at Taipei in late **1997**

as a scheduled regional passenger subsidiary of **U-Land Airlines, Ltd.** The carrier is equipped with a single Boeing McDonnell Douglas MD-82, which begins revenue flights in January **1998**.

Flights continue in **1999** and into **2000**. On May 31 of the latter year, parent U-Land Airlines, Ltd. is grounded indefinitely for safety concerns. As U-Land had serviced the carrier's plane and cannot now do so, Astro must shut down as well.

ASTRO AIRWAYS: United States (1972–1980). Astro Airways is set up at Pine Bluff, Arkansas, in **1972**, to operate both charter and scheduled passenger and cargo services. Employing Piper PA-23 Aztecs and de Havilland DH 114 Herons, the company links its base with New Orleans, Little Rock, and Memphis. Daily roundtrips continue until **1980**.

ATA AEROCONDOR TRANSPORTES AEREOS, S.A.: Aerodrome Municipal de Cascais, Domingos, Rana, 2775S, Portugal; Phone 35 (11) 444 3430; Fax 35 (11) 444-4444; <http://www.aerocondor.com>; Code 2B; Year Founded 1994. The general aviation/FBO concern Aerocondor, Ltd. is established in **1951** and, over the next 35 years, engages in airframe and avionics maintenance, as well as pilot training, aerial photography and cartography, and aerial advertising. Ad hoc lightplane charters are flown and a Consolidated PB76A Catalina is acquired with which to fight fires.

With the formation of the Aerocondor Transportes Aereos division in **1986**, President Victor Joao Lopes de Brito is able to undertake domestic and regional charters with his fleet's Beech 58 Baron and Piper PA-31-310 Navajo.

A contract is signed with **TAP-Air Portugal, S.A.** in **1991** under which the company, employing a pair of Dornier 228-200s, launches scheduled feeder service from Madeira to Porto Santo.

A Shorts 360-300 is acquired in **1995** and, in **1997**, the carrier begins scheduled service over a route Lisbon–Branganca–Vila Real.

A second Shorts 360-300 is purchased in **1998**.

Aerocondor's fire-fighting capability is significantly increased in **1999** when it acquires a Canadair CL-215. By **2000**, the company employs 120.

ATA CONNECTION. See **CHICAGO EXPRESS AIRLINES**

ATAPSA (AEROVIAS TRANS-AMERICA PERU, S.A.): Peru (1964–1967). ATAPSA is formed at Lima in February **1964** to offer regional charter services, which do not begin immediately. Following acquisition of a Douglas DC-3 and traffic rights from various sources, nonscheduled flights are inaugurated in September **1965** to Manaus, Brazil, Leticia, Colombia, and the Peruvian cities of Tarapoto, Pucallpa, Iquitos, and Tingo Maria.

Unable to compete against larger carriers, the unprofitable independent shuts its doors in **1967**.

ATC AIRLINES, S.A.: Terminal de Carga Internacional, Bodega 5, Aeropuerto Eldorado, Bogota, Colombia; Phone 57 (1) 414-7083; Fax 57 (1) 413-5431; Year Founded 1992. ATC is set up at Bogota on October 12, **1992**, to offer domestic and international all-cargo services. Carlos F. Child is president/CEO and he oversees a workforce that will reach 120 within 4 years. An alliance is entered into with the U.S. freight operator **Fine Air** and revenue flights commence with 3 Douglas DC-8-51Fs in March **1993**.

Destinations visited in **1998** include Caracas, Luxembourg, Miami, Panama City, Port Lamar, Quito, and Sao Paulo. An order is placed for 1 Lockheed L-1011F.

Airline employment stands at 120 in early **1999**. The company is now the second largest all-cargo carrier in Colombia.

ATC RUSS: 88 bid Volokolamskoe Road, Moscow, 123362, Russia; Phone 7 (095) 491 3771; Fax 7 (095) 491 8638; Code RUR; Year Founded 1999. Under the direction of chairman Vladimir Moseenkoiv, **REMEX Airlines** is rebranded in early **1999**. The Siberian Lease Com-

pany remains the principal shareholder and the fleet now comprises four Ilyushin Il-76Ts, an Il-76M, and a single Yakovlev Yak-42D.

The pattern of regular holiday charters begun by **REMEX** is continued to points in Greece, Spain, and Turkey. Long-haul flights are also made to more than 50 destinations in Africa, China, and Europe.

ATECA (AERO TRANSPORTE ECUATORIANA, S.A.): Ecuador (1947–1949). A group of seven local investors set up ATECA at Quito in November **1947**. After assembling a fleet of 2 Douglas DC-3s and 10 single-engine lightplanes, including Stinsons and Pipers, the company begins scheduled passenger and cargo services in early **1948**. A route network is built up linking Quito with all of the nation's major towns: Tulcan and Esmeraldas in the north and Manta, Guayaquil, and Macara further south.

Unable to get ahead in competition with rival **Transandina Ecuatoriana, S.A.**, ATECA merges with its competition in early **1949** to form **AREA (Aerovias Ecuatorianas, C.A.)**

ATESA (AERO TAXIS ECUATORIANOS, S.A.): Ecuador (1960–1982). ATESA is organized at Quito in the summer of **1960**. After assembling a fleet of small Cessnas, nonscheduled passenger and cargo charters are undertaken to various points in the nation from Mariscal Sucre Airport.

During the **1970s**, the fleet is upgraded by the addition of 3 Nord 250 Noratlases and 1 Britten-Norman BN-2A Islander. Operations continue without incident, except for the loss of a Noratlas, with all 22 aboard, in the Andes on May 3, **1974**.

Operations cease in **1982**.

ATHABASKA AIRWAYS, LTD.: Canada (1955–2000). AA is formed by Floyd R. Glass at Prince Albert, Saskatchewan, in **1955** to offer provincewide charter flights with a Cessna 180 from Prince Albert, Lac la Ronge, Isle a la Crosse, and a main base at Buffalo Narrows. A helicopter unit is established in **1962** and the first twin-engine aircraft, a Cessna 310, is delivered in **1964**.

In **1985**, thirty years after start-up, the carrier's 100 employees oversee the operation of 3 de Havilland Canada DHC-6 Twin Otters, 1 Cessna 500 Citation I, 1 Cessna 441 Conquest II, 1 Beech King Air 90, 2 DHC-2 Beavers, various small Cessnas, and a rotary-wing fleet of 7 Bell 206B JetRangers, 3 Sikorsky S-55Ts, and 1 S-58. There are no changes in **1986–1987**.

A float-equipped DHC-6-100 with two crew and seven passengers, is destroyed as the result of a bad landing on Maudsley Lake on June 13 of the latter year; although the aircraft must be written off, there are no fatalities.

Two DHC-6s are withdrawn in **1988** as are three JetRangers and the S-58.

Operations apace continue in **1989–1990**. Scheduled services are introduced by President Floyd Glass in **1991** and two Beech 1900s are acquired with which to provide them.

By **1992–1993**, destinations visited include Regina, Saskatoon, Prince Albert, Lac la Ronge, Points North, Wallaston Post, Stony Rapids, Fond du Lac, and Uranium City.

Services continue apace in **1994–1995** with a fleet that now includes 5 Sikorsky S-55BTs, 4 Bell 206B JetRangers, 2 Beech 1900Cs, and 1 each Cessna 441 Conquest, DHC-2, DHC-3 Otter, DHC-6-100, and DHC-6-200.

Operations continue in **1996–1998**; however, there are fleet changes. One Beech 1900C and 1 Bell 206B JetRanger are withdrawn and replaced by 2 1900Ds, 1 DHC-6-100, and 1 Sikorsky S-55BT. New markets added include Winnipeg and Brandon.

After an uneventful **1999**, General Manager Jim Glass announces on August 4, **2000**, that, following 40 years of competition, it will takeover Air Sask Aviation, Ltd., the airline division of **La Ronge Aviation Services, Ltd.**, on August 15. The new entity, renamed **Transwest Air Ltd.** on September 9, is based at Saskatoon, from which it operates 40 fixed-wing and 3 rotary-wing aircraft and employs over 300 people.

ATI-AERO TRANSPORT ITALIANI, S.p.A. See **AERO TRANSPORT ITALIANI, S.p.A. (ATI)**

ATI AIR COMPANY: UI, Yanvorskoga Vostania 17-2, Kiev, Ukraine; Phone 380 (4) 429 04078; Fax 380 (4) 429 04078; Code TII; Year Founded 1996. The all-cargo charter operator ATI is established at Kiev in late 1996. Revenue operations are initiated and continue with a fleet of 5 Ilyushin Il-76s.

ATKIN AIR CHARTER: Lincoln Regional Airport-Harder Field, 1420 Flightline Drive, Lincoln, California 95648, United States; Phone (916) 645-6242; Fax (916) 645-7132; <http://www.atkinair.com>; Year Founded 1995. Kent and Niki Atkin establish this FBO at Lincoln, California, in 1995. Simultaneously, the co-owners also elect to establish a charter business and, by 2000, the company employs four full-time pilots. Flights are made throughout the state and nation by 2 each Piper PA-34 Seneca IIs and Cessna 182 Skylanes, along with 1 C-414 Chancellor and C-T210 Turbo Centurian.

ATLANT SOYUZ AIRLINES: 10/2 Nikolskaia Street, Moscow, 103062, Russia; Phone 7 (095) 246-9419; Fax 7 (095) 246-8503; Code 3G; Year Founded 1991. V. A. Shpilkin and S. D. Leitchenko establish Atlant Soyuz Airlines at Moscow in December 1991 to provide international, regional, and domestic scheduled and charter passenger and cargo services. At the same time, **Atlant SV Airlines** is established as a subsidiary at Simferopol in the Ukraine.

Atlant Soyuz does not acquire aircraft of its own, but leases them from its offspring, **Atlant SV Airlines**, which in turn charters its requirements from the Ukraine Air Force. In this manner, Leitchenko, who remains in Moscow as general director of the parent company, acquires 1 Ilyushin Il-62, 4 Il-76TDs, and 1 Tupolev Tu-134 with which to commence revenue operations during the summer of 1992.

Operations continue apace in 1993-1997. During these years, as the carrier comes more and more to concentrate on freight operations and the fleet is increased by the addition of 4 more Il-76TDs and 1 Tu-154B.

Like several airlines that have appeared after the collapse of the Soviet Union, Atlant Soyuz has come to specialize in facilitating lift for the *chelnoki*, also known as shuttle or suitcase traders. Thousands of these small-time merchants, usually young men but sometimes even middle-aged housewives, have traveled to such foreign lands as China, Greece, and Africa, and often the Mideast, to find low-priced goods to sell for large profits at home.

In mid-August 1998, the Russian ruble is devalued. Almost immediately, many of the *chelnoki* must quit, as they can no longer afford to pay for hard currency to make their acquisitions. Additionally, the devaluation impacts the Russian air cargo carriers engaged in this trade, forcing them to cut back on scheduled flights and particularly on charters.

Flights continue in 1999. On May 5, 2000, the Russian media reports that the carrier's close cooperation with **East Line Aviation** may soon result in the two cornering the cargo market in Moscow.

ATLANT SV AIRLINES: Central Airport, Simferopol, Crimea, Ukraine; Phone 380 (0652) 272 322; Fax 380 (0652) 272 322; Year Founded 1991. V. A. Shpilkin and S. D. Leitchenko establish Atlant SV Airlines at Simferopol in December 1991 as a subsidiary of their Moscow-based **Atlant Soyuz Airlines**. Like its parent, Atlant SV is established to offer regional, domestic, and international cargo and passenger services, both scheduled and charter.

Atlant SV does not acquire aircraft of its own, but charters them from the Ukraine Air Force. It also subleases aircraft to **Atlant Soyuz Airlines**. In this manner, V. A. Shpilkin, who moves to the Crimea to serve as the airline's general director, is able to assemble a fleet of 3 Ilyushin Il-62Ms, 1 Il-62, and 40 Il-76MDs.

Revenue operations commence in September 1992 and continue apace in 1993-2000. During these years, the workforce grows to 425 and the fleet is reduced by 1 Il-62M and 8 Il-76MDs; 1 Tupolev Tu-154M is added.

The company signs long-term contracts with the UN and the International Committee of the Red Cross to provide logistical support for peacekeeping and disaster relief operations. Charter flights to the U.S. commence in 1995.

ATLANTA EXPRESS AIRLINE CORPORATION: United States (1982-1983). Atlanta Express is formed as a subsidiary of American Financial at Hartsfield International Airport in the spring of 1982 to offer scheduled third-level passenger and cargo flights linking the company's base with Macon, Columbus, Anniston, Charlotte, Chattanooga, Raleigh, and Florence. Employing a fleet of 2 de Havilland Canada DHC-7s and 2 Shorts 330s, the company initiates daily roundtrip operations on May 15.

On June 22, 1983, the company is purchased by and merged into Charlotte-based **Sunbird Airlines**.

ATLANTA ICELANDIC AIRLINES, H.F.: Iceland (1989-1991). AIA is established at Reykjavik in 1986 to offer charter passenger and cargo flights to northern Europe and Atlanta, Georgia. Revenue services commence in February employing a wet-leased B-707-320s to fly on behalf of **Caribbean Airways, Ltd.** between Barbados and London.

In February 1988, the company enters into an agreement with the Finnish tour operator Hasse on the wet-lease of the B-707-320 on charters from Helsinki to Cyprus and Crete.

A contract is signed with **Air Afrique (2) (Societe Aerienne Africaine Multinationale, S.A.)** in August to transport Islamic pilgrims from countries in west and central Africa to Jeddah.

In early 1989, Boeing 737-210C leased from the U.S. carrier **Express One International** and a Douglas DC-8-61 leased from and flown on behalf of **Finnair, O/Y**. Hadj flights on behalf of **Air Afrique (2) (Societe Aerienne Africaine Multinationale, S.A.)** commence in May; they will be flown annually thereafter. An Embraer EMB-110P1 Bandeirante is acquired in November for lease to its local **Servissair** affiliate.

The B-737-210C is wet-leased to **Deutsche Lufthansa, A.G.** in October 1990 to operate scheduled cargo services within Europe for 18 months.

The DC-8-61 is replaced in May 1991 with a chartered Lockheed L-1011 TriStar 1, the company's first wide-bodied jetliner. The Lockheed is almost immediately wet-leased to **Sudan Airways, Ltd.** Recessionary forces now attack company business, including the contract with **Finnair, O/Y**, now ended. The company is reformed in the fall and reborn as **Air Atlanta Icelandic, H.F.**

ATLANTAIR, LTD.: Canada (1981-1983). Established at Moncton, New Brunswick, this third-level operator launches Cessna charters and some scheduled flights to destinations around New Brunswick late in 1981. Unable to survive recession, the enterprise folds in 1983.

ATLANTIC AERO: Piedmont Triad International Airport, 7716 Airline Drive, P.O. Box 35408, Greensboro, North Carolina 27409, United States; Phone (910) 668-2878; Fax (910) 668-7890; <http://www.atlantic-aero.com>; Year Founded 1972. Atlantic Aero is established as an FBO at Piedmont Triad Airport in October 1972, with John E. Godwin Jr. as president and general manager. The company, which will eventually provide comprehensive services to all levels of aviation users, begins by providing refueling and maintenance services, aircraft management, flight training, and hangar facilities.

During the 1970s, AA becomes the first company at GSO to offer jet charters. Don S. Godwin becomes president in 1984 and, two years later in 1986, the carrier's charter department enters the overnight feeder freight business, using Cessna 208 Caravan Is to support contracts from major package express airlines such as **Federal Express** and **UPS (United Parcel Services)**.

In response to rapid growth, the express service is reborn in 1990 as **Mid-Atlantic Freight**, a sister company with common management. Executive charter and group passenger services continue with 1 each Cessna 560 Citation V, C-501 Citation I, Beech King Air 90, Beech Super King Air 200, and Beech 58 Baron.

ATLANTIC AIR: United States (1979–1984). Stratford, Connecticut-based Atlantic Air is formed by Michael J. Lehrman in 1979 to offer charter services to various New England destinations with a fleet that grows to comprise 6 Piper PA-31-310 Navajos. In the spring of 1981, the Pipers are returned and replaced by 3 Beech 99s. There are employed to inaugurate scheduled passenger and cargo flights on May 22 from Bridgeport to Nantucket and Martha's Vineyard.

During the remainder of the year and in 1982–1983, service is expanded and new markets are opened to Baltimore, Boston, Philadelphia, and White Plains. The fleet is increased by the addition of 1 Beech 1900B.

In November 1984, the company is purchased by the Marketing Corporation of America and is reformed into **Business Express**.

ATLANTIC AIR (PTY.), LTD. See **PHOENIX AIRWAYS (PTY.), LTD.**

ATLANTIC AIR TRANSPORT, LTD.: United Kingdom (1969–1998). Organized at States Airport, Jersey, in September 1969 to offer FBO, aircraft and equipment sales, **General Aviation Services, Ltd.**, founded by Michael J. H. Collett, begins air taxi flights to England and the other Channel Islands, in 1970. Employing a fleet made up of a Cessna 310, 336, and 337, nonscheduled flights continue apace in 1971–1973.

As many charter flights are made to the French coast, the airline, when officially named in 1974, is christened **Air Atlantique, Ltd.** spelled in the French manner. Totally rebuilt during 1975, a former **Hunting Surveys, Ltd.** Douglas DC-3 begins flying on the carrier's behalf in 1976.

The company is reorganized into two divisions in early 1977. The **Air Atlantique, Ltd.** section will emphasize international all-cargo charter flights, while **Air Corbiere, Ltd.** will fly passengers. A second DC-3 expands the number of contract flights performed.

New investment is found in 1978 and **Air Atlantique, Ltd./Air Corbiere, Ltd.** is half-owned by General Aviation Services, Ltd. Michael Collett continues as chairman, 12 employees are hired, and a fleet of 3 Douglas DC-3s is assembled to complement the 3 Cessna 310s already on hand. Enplanements for the year total 1,536.

Airline employment jumps 50% in 1979 to 18. One DC-3 and one C-310 are withdrawn in favor of two DC-6A/Bs, acquired from **Greenlandair**, which are the first of their type to enter British registry in 15 years, and two Piper PA-23 Aztecs. The oil crisis requires elimination of the DC-6s; one is leased to a South African firm and the other is scrapped by year's end.

On October 29, the company joins the Royal Mail program known as "Spokes from Speke," flying a DC-3 each night from London (STN) to the sorting hub at Liverpool (Speke Airport) and back to Stansted for distribution.

Customer bookings increase 36% to 2,400. Operating income is \$2.2 million and leaves a net gain of \$250,000.

The workforce is increased to 36 in 1980 and customer bookings reach 7,800. To generate capital, several newspaper delivery and post office contracts are accepted and executed. With the removal of the DC-6Bs, additional DC-3s are now purchased.

The employee population is increased by 10% in 1981 to 40 and the fleet now includes 7 DC-3s and 3 Cessna 310s. An operations and maintenance base is occupied at Blackpool and renewed emphasis is placed on nostalgia-generating flight-seeing operations. Passenger boardings swell 2.5% to 8,000 and revenues reach \$1.8 million. Profits are \$400,000 (operating) and \$110,000 (net).

Operations continue apace in 1982–1983. By 1984, the company is spread out much too thinly: maintenance and engineering are at Exeter, headquarters are on Jersey, and aircraft are based at Jersey, Blackpool, London (CTN), Glasgow, Newcastle, Shannon, Belfast, and the Dutch city of Maastricht.

To somewhat reduce the costs incurred with this situation, the company is divided into two divisions: **Air Atlantique, Ltd./Air Corbiere, Ltd.** and 2 DC-3s are left on Jersey while the new **Atlantic Air Trans-**

port, Ltd., with 6 DC-3s is moved to London (STN) in 1985. There, it takes over the facilities of **Instone Airlines, Ltd.** as well as its Bristol Freighter, the last of the type outside of Australasia.

To celebrate the fiftieth anniversary of the DC-3 and the sixtieth of **Northwest Airlines**, a DC-3 is repainted in Northwest livery and joins a B-747 Jumbojet from the American major in a unique fly over of the North Weald air show.

By 1986, the carrier is required to move again, this time to the airport at Coventry. A hangar and office complex is occupied and a flight school, Atlantic Flight Training, is opened.

Modified to dispense spray, 2 DC-3s and 5 Britten-Norman BN-2 Islanders are employed to honor a contract with the U.K. government's marine oil pollution control service. Enplanements are 27,424.

The workforce is increased by 31% in 1987 to 55 and the fleet now includes 1 DC-6A/B named *Jimmy the One*, 6 DC-3s, 5 Britten-Norman BN-2 Islanders, and 1 Cessna 310. The big Douglas transport, acquired from a Detroit company, is placed into service on charter routes in March. The marine oil pollution control fleet is expanded by 5 DC-3s and 2 Islanders.

Passenger boardings jump 14.3% to 32,000 and freight increases 31.3% to 613,000 FTKs. Revenues total \$2.9 million and expenses are held low enough to allow an operating profit of \$900,000 and net gain of \$300,000.

The employee population grows by 11.1% in 1988 to 200 as a pair of leased British Aerospace BAe 748-B2s are purchased and employed to inaugurate scheduled services to the Channel Islands. The over-water experiment is a failure as customer bookings actually decline.

The Channel route is given up in 1989 and the leased turboprops returned. General Aviation Services reacquires full shareholding. The company works to expand its flight-seeing and freight business. Additional scheduled and charter passenger and cargo flights throughout the U.K., Europe, Africa, and the Middle East. Headquarters are transferred to Coventry Airport in the West Midlands and Chairman Collett's fleet is much improved, despite the removal of the Bristol Freighter.

Company employment is increased by 6.1% in 1990 to 105 and the fleet now includes 2 DC-6As, 8 DC-3s, 2 DC-3Fs, and 7 Cessnas.

Still, largely because of the slowdown in traffic at the time of Operation Desert Shield, passenger boardings decline 11.1% to 12,000. A total of 7.8 million FTKs are hauled. The year is, however, profitable. On revenues of \$15 million, an operating profit of \$4.5 million is generated along with net gain of \$1.1 million.

Ten more workers are hired in 1991. Customer bookings dip 2.2% to 4,500 and freight falls down to 1.75 million FTKs. Revenues ascend to \$16 million and allow an operating profit of \$3.5 million and net gain of \$1.2 million.

In 1992, Chairman Collen and Managing Director James Foden oversee a workforce of 130 and a fleet 2 DC-6As, 8 DC-3s, 3 DC-3Fs, 2 Cessna 406s, and 2 Cessna 310s. A Fairchild Metro III is acquired. Frequencies on the Coventry–Gloucester route are increased while new services are offered from Jersey and Guernsey to Liverpool, Swansea, and Rennes. In October, the "Spokes from Speke" program is revised becoming Royal Mail Skynet.

In 1993, the company is reformed into a holding company, **Atlantic Air Transport, Ltd.**, and splits its passenger and freight operations into two operating subsidiaries. **Air Atlantique, Ltd./Air Corbiere, Ltd.** becomes **Atlantic Airways, Ltd.** and **Atlantic Air Transport, Ltd.** becomes **Atlantic Cargo, Ltd.** Air Atlantique Reconnaissance takes responsibility for maritime patrol and Pollution Control takes over environmental work.

In its most spectacular service to date, the marine oil pollution control DC-3 fleet of the new Pollution Control division is called upon in January to battle the pollution caused when the tanker *Braer* is wrecked in Scotland's Shetland Islands.

In a step away from its reliance on piston-engine freighters, the carrier orders a pair of Lockheed L-188CF Electras; the first arrives from the U.S. in November, after having been recalled from **ALM Antillean Airlines, N.V.** It enters service before Christmas.

The second Electra, leased from **Zantop International Airlines**, arrives in January **1994**. Early in the year, company DC-3s fly spare parts to Ireland to assist a stranded B-767 and later, during the summer, convey sightseers over the beaches of Normandy. Three vintage aircraft are acquired in the fall for use on the air show circuit—a Scottish Aviation Twin Pioneer 3 and 2 Avro Shackleton Mk. IIs.

In addition to these aircraft, the fleet at year's end includes 8 DC-3s, 2 DC-6A/Bs, 2 Electras, 1 Shorts 360, 1 Piper PA-31-350 Navajo Chieftain, 2 Islanders, 3 Cessna 310s, 2 Cessna 402s, 3 Cessna 404s, 2 Cessna 172s, 2 Cessna 152s, 1 Auster J1, and 1 Fairchild-Swearingen Metro III, the only one on the U.K. civil register.

A third L-188CF is acquired in early **1995** as the company undertakes European nighttime freight services for DHL, Ltd. In addition, a Lockheed L-100-30 Hercules is wet-leased from **Safair (Pty.), Ltd.** It is employed to fly ad hoc cargo around Europe. During the summer, it also provides support for the motor-rally team camps of the Rallye Granada-Dakar scattered about the Mauritania desert.

Airline employment grows to 148 as operations continue apace in **1996**. The fleet includes 4 leased Electras, 9 DC-3s, and 1 each Metro III, Cessna 500 Citation I, and Cessna 406 Caravan II. The DC-6s are converted into quick-change models, able to change swiftly back and forth between freighters and pollution control aircraft.

The reconnaissance division is sold and the Pollution Control unit is folded, with the company now operates marine pollution control reconnaissance under contract to the U.K. Department of Transport.

In early **1997**, the new Air Atlantique Historic Flight division is created. The DC-3s, together with a newly acquired Scottish Aviation Twin Pioneer, are transferred to it. Special services, air show appearances, and historic preservation activities are the specialty of the new unit.

The fleet of the parent organization is increased by the addition of another Electra, an L-188AF purchased in June from **Fred Olsens Flyselskap, A.S.**

A total of 4.1 million FTKs are operated during the year.

The Coventry-based company changes its corporate identity once more. At the end of March **1998**, its passenger and cargo operations are combined as **Atlantic Airlines, Ltd.** Non-airline business, including Air Atlantique Historic Flight, are marketed under the **Air Atlantique, Ltd.** name. A new livery is introduced.

When **Hunting Cargo Airlines, Ltd.** is sold in midyear, its 3 L-188Cs are purchased by Atlantic, 1 for parts and the other 2 for revenue service once they have undergone heavy maintenance.

Through August, a total of 7.03 million FTKs are operated.

ATLANTIC AIRLINES, LTD.: Coventry Airport, Coventry, England, CV8 3AZ, United Kingdom; Phone 44 (1203) 307 566; Fax 44 (1203) 639 037; <http://www.randburg.com/fa/atlantic.html>; Code NL; Year Founded 1998. Atlantic Air Transport, Ltd., which has operated under a number of titles during its business life, is reformed again in March **1998**. Under the direction of Chairman Michael Collett, the company's passenger air transport and all-cargo subsidiaries are combined under the present name. Employing 5 Lockheed L-188CFs and 2 Douglas DC-6s, the airline flies charters throughout the U.K. and northern Europe.

The non-airline operations, including contract maritime reconnaissance and pollution control, together with the DC-3s of the newly formed Air Atlantique Historic Flight, are flown under the name **Air Atlantique, Ltd.**, one of the company monikers previously employed.

In addition, an affiliated company, **Highland Airways, Ltd.** is established at Inverness Airport, Scotland, to provide air charter and aviation services, and to provide training with a flight school operation.

Enplanements during the 12 months total 45,000, while cargo traffic climbs 19.5% to 4.92 million FTKs.

Former **AB Airlines, Ltd.** Managing Director Tony Auld becomes deputy group managing director in mid-November.

The carrier nearly doubles its freight traffic in **1999**, operating 8,125,000 FTKs.

Under a contract with **Air Littoral, S.A.**, the company stations an L-188AF at Marseilles in February to operate nightly Air Littoral Ex-

press mail and parcel roundtrips to Paris (CDG).

The fleet is upgraded in the first week of May by the addition of a Convair 440 freighter previously operated by **Argo Air International, S.A.** The only one of its type flying in Europe, the Convairliner is employed both for cargo and as an air show display.

With the increase of its Electra fleet to 9, the company is able to station an L-188AF at Belfast International Airport on August 1 to undertake nightly express parcel flights to Coventry on behalf of Mayne Nickless Express. The company is now the world's largest Electra operator.

Later in the month, Atlantic and its various divisions, stage an impressive Coventry air show. Present are the DC-6A and CV-440, as well as at least 7 DC-3s, which, at one point, put on a formation flyby for spectators.

ATLANTIC AIRWAYS: United States (1923). Atlantic Airways is set up at Hingham, Massachusetts, in early **1923** to offer flights south to Newport, Rhode Island and New York City. Employing 2 Curtiss HS-2L, 1 Curtiss MF, and 1 Aeromarine 40 flying boat, revenue services duly commence and when the flying season ends in the fall, a total of 1,701 passengers and 1,500 lbs. of freight have been transported.

The company is unable to continue in **1924**.

ATLANTIC AIRWAYS, LTD. (1): United Kingdom (1993). In **1993**, Michael Collett, chairman of General Aviation Services, which owns **Air Atlantique, Ltd.**, the airline operation of **Atlantic Air Transport, Ltd.** and **Air Corbiere, Ltd.**, reforms his two operating subsidiaries. Passenger services are transferred to a new company, Atlantic Airways, Ltd., while cargo services pass to **Atlantic Cargo, Ltd.**

Atlantic Airways, under the leadership of joint Managing Director Colin Wright, possesses a fleet that includes 1 Douglas DC-3, 1 Fairchild Metro III, 2 Cessna 404 Titans, 1 Cessna 402, and 3 Cessna 310Rs. The 21-employee company's mostly charter flights are undertaken between Jersey and Guernsey and between those Channel Islands and Gloucester, Liverpool, and Coventry.

Subsequent operations are reported with **Atlantic Air Transport, Ltd.**

ATLANTIC AIRWAYS, LTD. (2): Canada (1974–1987). Originally formed as the airline division of the St. John's, Newfoundland-based **FBO Provincial Airlines, Ltd.**, this small carrier begins scheduled services to Bangor, Maine, with two Douglas DC-3s in **1974**. The DC-3s are replaced in **1978** by a Saunders ST-27 and a Piper PA-31-310 Navajo. New frequencies are opened to Fredericton and Bathurst, New Brunswick.

During **1980–1986**, the fleet is upgraded to include a Piper PA-31-350 Navajo Chieftain and a Beech King Air 200. A route is opened from St. John's to the French island of St. Pierre. In late fall of the latter year, Canadian oil companies contract with the carrier for the provision of King Air ice surveillance flights. When the parent purchases **Eastern Flying Service, Ltd.** in **1987**, it is merged with Atlantic Airways, Ltd. to form a larger carrier that will fly under the **Provincial Airlines, Ltd.** banner.

ATLANTIC AIRWAYS FAEROE ISLANDS, A.S. (ATLANTS-FLOG): Vagar Airport, Soervagur, FR-380, Faeroe Islands; Phone 298 33344; Fax 298 33380; Code RC; Year Founded 1987. Atlantic Airways, A.S. is formed in association with **Cimber Air, A.S.** of Denmark at Vagar Airport in the Faeroe Islands in July **1987** with Henri Mortensen as managing director. A British Aerospace BAe 146-200A is acquired from **Pacific Southwest Airlines (PSA)**, the Faeroe government takes fiscal control, and scheduled services are opened on March 28, **1988** to Copenhagen and Billund. Enplanements by year's end total 68,000.

Operations continue apace in **1989**, as the Faeroe government obtains complete control and shareholding. During the summer, frequencies to Copenhagen are increased to three per day. In **1990–1991** the fleet still includes just the single BAe 146-200A.

In **1992** an application is made to begin scheduled services to London (LCY) and, in **1993**, President Henri Mortensen oversees a workforce of 34. The London request is not authorized.

Early in **1994**, the color scheme of the BAe is modified to place greater emphasis on the red and blue national colors. Two Bell 212 helicopters are acquired and, in April, the company takes over the scheduled interisland helicopter service previously provided by SL Helicopters, which serves as the government coast guard.

The carrier's route network includes 11 stops on 8 islands. In **1995–1996**, Eydfinnur Jacobsen is chairman, with Magni Arge as managing director. The workforce grows to 46 and flights commence to Aarhus and Reykjavik.

From mid-June to mid-September **1997**, the carrier joins with **Greenlandair, A.S. and Flugfélag Islands, H.F. (2)/Icelandair**, in cooperation with Greenland Tourism, to increase the number of Icelandic tourists visiting Greenland. Four weekly roundtrips are provided with a Fokker 50 and a fifth weekly frequency provided by a BAe 146-200A.

Flights continue in **1998–2000**. Early in the latter year, a second BAe 146-200 is acquired. It spends its first few months out on lease to **British Midland Commuter, Ltd.**

ATLANTIC AND GULF COAST AIRLINE: United States (1937). Established at Savannah, Georgia, in late spring **1937**, Atlantic and Gulf Coast Airline acquires a single Stinson Model A Tri-Motor and employs it to begin scheduled passenger flights to Jacksonville in May. Unable to generate sufficient revenues to cover start-up costs, the operator stops flying in August.

ATLANTIC AVIATION CORPORATION: New Castle County Airport, P.O. Box 15000, Wilmington, Delaware 19850, United States; Phone (302) 322-7000; Fax (302) 322-7227; <http://www.atlanticaviation.com>; Year Founded 1927. One of the nation's oldest FBOs, Atlantic Aviation is established at Wilmington, Delaware, in **1927**. Very early on, the company begins to engage in charter operations. Seven decades later, AAC not only flies from New Castle County, but has aircraft stationed at six other locations. These provide executive and small group charters throughout the U.S. and worldwide.

An IAI 1124A Westwind II is stationed at Wilmington; a Beech Super King Air 200 is housed at Waycross–Ware County Airport in Georgia; and a Canadair 601 Challenger is based at Palm Beach, Florida. Further north, 1 each Grumman G-1159 Gulfstream II and Learjet 35A are based in White Plains, New York; 2 British Aerospace BAe (HS) 125-700 Hawkers, 1 BAe (HS) 125-800 Hawker, 1 Cessna 560 Citation V, and 1 Canadair Challenger are held at Teterboro Airport in New Jersey; 1 Grumman G-1159 Gulfstream III is based at Trenton, New Jersey; and 1 Super King Air 200 flies from Harrisburg, Pennsylvania.

ATLANTIC CARGO, LTD.: United Kingdom (1993). In **1993**, Michael Collett, chairman of General Aviation Services, which owns **Air Atlantique, Ltd.**, the airline operation of **Atlantic Air Transport, Ltd. and Air Corbiere, Ltd.**, reforms his two operating subsidiaries. Passenger services are transferred to a new company, **Atlantic Airways, Ltd. (1)**, while cargo services pass to the new Atlantic Cargo, Ltd.

Atlantic Cargo, under the leadership of joint Managing Director Colin Wright, possesses a fleet that includes 2 Lockheed L-188Cs, 2 Douglas DC-6s, 2 DC-3s, 1 Fairchild Metro III, and 1 Cessna 406 Caravan II. Regional flights are inaugurated and continued by the 45-employee freighter.

Subsequent operations are reported with **Atlantic Air Transport, Ltd.**

ATLANTIC CENTRAL AIRLINE: United States (1975–1976). This international commuter is established at Bangor, Maine, in late January **1975** to provide passenger and cargo services to St. John, New Brunswick. Although daily Beech 18 roundtrips are inaugurated on February 19, they can only be maintained into early **1976**.

ATLANTIC CITY AIRWAYS: United States (1963–1977). ACA is founded at Bader Field, Atlantic City, New Jersey, in **1963** to offer air taxi flights to surrounding communities, including Newark. Nonsched-

uled operations continue apace until June 30, **1970** when the carrier becomes a member of the "Allegheny Commuter" network. Employing Beech 99s, the company inaugurates scheduled passenger flights linking its base with Wildwood/Cape May and Millville/Philadelphia.

In the next several years, services are introduced to Newark, Trenton, Asbury Park, and Monmouth. The fleet is upgraded by the addition of the first of 6 de Havilland DHC-6 Twin Otters. Enplanements total 68,319 in **1975** and in **1976** they grow a modest 2% to 69,713.

While on final approach to Cape May County Airport at Wildwood, New Jersey, on December 12, 1976, Flight 977, a DHC-6-300 with two crew and eight passengers, crashes 4,000 ft. short of the runway (four dead).

In July **1977**, the carrier is reformed and renamed **Southern Jersey Airways** when Donald C. Young succeeds his father as chairman/president.

ATLANTIC CITY EXPRESS. See JETTRAIN

ATLANTIC COAST AIR SERVICES, LTD.: United Kingdom (1935–1937). Atlantic Coast Air Services, Ltd. is formed in early **1935** and employing a Short Scion, begins daily Lundy–Barnstaple flights in April. The company is reregistered as **Lundy and Atlantic Coast Air Lines, Ltd.** on April 26, **1937**.

ATLANTIC COAST AIRLINES: 515A Shaw Road, Dulles, Virginia 20166, United States; Phone (703) 925-6000; Fax (703) 925-6299; <http://www.atlanticcoast.com>; Code DH; Year Founded 1989. Atlantic Coast Airlines is officially formed at Dulles International Airport, outside Washington, D.C., on December 15, **1989** as a subsidiary of the California-based conglomerate WestAir. **WestAir Airlines** Vice President Paul Rasmussen is placed in charge and provided with a fleet of four British Aerospace BAe Jetstream 31s and three Embraer EMB-120 Brasilias. "United Express" revenue flights commence the same day over many of the routes of bankrupt **Presidential Airways**.

In **1990**, WestAir Holdings, Inc., parent of **WestAir Airlines, NPA**, and Atlantic Coast, elect to reform its airlines into two divisions. NPA is merged into **WestAir Airlines** and under that name becomes the corporation's West Coast division. Atlantic Coast Airlines is the East Coast division; Kerry Skeen is appointed president.

In March, daily roundtrips are inaugurated from Washington, D.C. (IAD) to White Plains and Binghamton, New York; daily nonstop roundtrips are launched in April from Washington, D.C. (IAD) to Syracuse, New York, and Wilkes-Barre and Scranton, Pennsylvania. The combined schedule represents a 54% increase in service from one month to the next.

By year's end, the two units serve a total of 64 cities, with Atlantic Coast Airlines offering 205 daily departures to 28 communities. Traffic and financial figures are reported with those of the parent.

"United Express" flights begin from Washington, D.C. (IAD) to both Dayton and Cincinnati in February **1991**. To handle growth, the company in April takes the transfer of two Brasilias and a Jetstream 31 from WestAir's west coast division.

During September, WestAir elects to sell its east coast division to an investment group headed by former **Pan American World Airways (1)** Chairman C. Edward Acker. The men pay \$14.2 million for the operation and agree to assume a \$2.8-million debt. Former **Southern Jersey Airways** President Donald Young becomes CEO Acker's vice president-flight operations while current President Skeen remains during the transition.

The 550-employee company continues operation without a break as four-times-per-day roundtrip service is launched from Washington, D.C. (IAD) to Dayton and that from D.C. to Columbus is increased to five-times-per-day. Thrice daily Jetstream 31 flights are begun from Raleigh-Durham to Charlottesville on September 4 while, in November, three Shorts 360s frequencies from Raleigh-Durham to Jacksonville and New Bern, North Carolina, are supplemented by the addition of

three thrice-daily Jetstream 31 flights. Enplanements total of 646,153 passengers, a huge 105% increase over the previous year.

The 37-aircraft fleet in 1992 includes 24 Jetstream 31s and 13 Brasilias, with 4 Jetstream 31s on order. To complement **United Airlines** jet service, Brasilia flights are increased in February from Washington, D.C. (IAD) to Boston, Newark, Hartford, Manchester, and Burlington. New scheduled services are introduced on those Washington, D.C. (IAD) routes to the northeast in June.

These are followed by September's launch of the first scheduled passenger frequencies from New York State's Stewart International Airport to Toronto. The first phase in the development of Newark (EWR) as a northeast base is inaugurated in December with the launching of non-stop flights to Buffalo and Rochester. Customer bookings move ahead by 28.8% to 789,086.

Early in January 1993, orders are placed for 17 Jetstream 41s. During the first quarter, the airline begins new services from Washington D.C. (IAD) to Rochester and Philadelphia, bringing its total of daily departures to 100, to 35 destinations.

On April 1, the "United Express" carrier completes acquisition of the Dulles-based operations of **Air Wisconsin**, including 12 de Havilland Canada DHC-8s. Further south the same day, the company initiates a new series of 30 daily frequencies to service the major's hubs at Orlando and Miami from 10 more domestic and 13 international destinations.

Operations commence on May 1 from the former Pease AFB, New Hampshire, in May with a daily flight to Washington, D.C. (DCA) and one-stop, four-times-per-day service to New York (LGA). The premier Jetstream 41 is delivered during the month.

The first Jetstream 41 enters service in June, the same month Pease-Newark frequencies commence. A major flap occurs in August when Richard Douglas, executive director of the President's Committee on the Employment of People with Disabilities, is denied permission to board a Jetstream 31 unless he can do so himself, which he does by dragging himself up the airplane's steps. **United Airlines** Chairman Stephen M. Wolf, in writing Transportation Secretary Federico Pena on the matter, urges the government to make lifting devices for small regional aircraft more widely available.

All of the expansionist activity leads to a tremendous boost in passenger traffic, as bookings climb 85.2% to 1,447,937. Although a revenue figure is not provided, expenses allow an operating profit of \$2.56 million and a net gain of \$37,000.

The leased fleet in 1994 includes 30 Jetstream 31s, 14 Jetstream 41s, 12 EMB-120s, and 5 each DHC-8-102s and DHC-8-311s.

While on final approach to Port Columbus International Airport in light snow after a January 7 service from Washington, D.C. (IAD), "United Express" Flight 6291, a BAe Jetstream 41 with 3 crew and six passengers, stalls and descends into a line of trees. The aircraft comes to a stop against the side of a commercial building 1.2 mi. short of the runway (5 dead).

The company, as a result of its previous year's losses, undertakes a restructuring that includes an expensive return of the Brasilias and Dash-8s to their manufacturers. Florida operations are terminated. Still, a \$140-million order is placed in December for 20 more Jetstream 41s.

Passenger boardings move ahead by 6.8% to 1,545,872 and revenues ascend 6.8% to \$158.91 million. Expenses shoot up 24.3% to \$182.19 million and cause a pretax loss of \$23.27 million. A huge \$25.13-million net loss is also suffered.

The restructuring begun the previous year is successfully completed in 1995. Nine new J-41s begin delivery in January and, during the first half of the year, arrangements are made to sell 5 of the company's 18 landing slots at White Plains, New York.

On November 7, the carrier contracts with PROS Strategic Solutions for installation of an electronic yield and management system. At the same time, it negotiates a new \$20-million line of credit with Shawmut Capital Corporation. With completion of its slot sale at White Plains, frequencies from that New York city to Washington, D.C. (IAD) are reduced to six per day. Scheduled departures reach 131,470.

Although enplanements are down 7.8% this year to 1,424,716, revenues drop 1.2% to \$156.96 million, and costs are off 20.9% to \$144.12 million, the 1994 losses are turned into profits: \$12.84 million (operating) and \$12.9 million (net).

The employee population stands at 1,300 in 1996 and the fleet includes 36 Jetstream 41s and 30 Jetstream 31s.

On September 11 the airline covers the cost of the charter of 2 J-32s and 1 J-41 to transport 30 Washington, D.C. students, their chaperons, and recent West Point graduates to the 4-day "Reach for Tomorrow" program that exposes selected young people to higher education and relevant role models.

In late September, the carrier becomes the first regional airline to incorporate the advanced CRM training program developed by the FAA into its operational system. The PROS Strategic Solutions electronic yield and management system comes on line during the fall.

In November, the carrier begins to outfit its turboprop fleet with Allied Signal's global positioning, flight management, and communications addressing and reporting systems. In December, orders are placed with Aero International (Regional) for a dozen Jetstream 41s.

Scheduled departures climb to 137,924, customer bookings move ahead by 2.7% to 1,462,447, and operating income swells 15.9% to \$182 million. Expenses climb only 12.5% to \$162 million and profits accelerate; company bookkeepers report a \$19.8 million operating gain and a net gain of \$19.1 million.

Employment grows by 3.8% in 1997 to 1,350. During the last week of January, a \$240-million order is placed with Bombardier for 12 Canadair RJ200 Regional Jets, with options taken on 36 more. Meanwhile, given the manufacturer's planned cessation of J-41 production, the company elects not to take the 8 remaining turboprops it has on order.

In February, corporate headquarters and the company's system control center are transferred to Sterling, Virginia, near Dulles International Airport. With 188 daily departures, ACA is now the largest carrier at Washington, D.C. (IAD). At the beginning of the summer schedule, ACA offers 427 daily departures from 39 airports in 17 states.

In March, the Master Executive Council of the carrier's Air Line Pilots Association (ALPA) chapter recommends that **United Airlines** purchase RJs and operate them in the manner of **Air Canada, Ltd.** UA prefers larger jetliners. Discussions regarding flyers for ACA's new Canadairs continue between the pilot groups of UA and ACA.

In May, President/CEO Skeen and Virginia Governor George Allen hold a press conference in which it is announced that the company will build a \$10-million, 85,000-sq.-ft. maintenance facility at Dulles International Airport. A Governor's Opportunity Grant of \$175,000 and a \$100,000 grant from Loudoun County are provided; the remainder of the cost will be funded through bonds issued by the county.

Nonstop weekend BAe Jetstream 41 service to the Cape Cod Islands from Washington, D.C. (IAD) is initiated on May 23 and will continue through June 8. The company begins five nonstop weekday J-41 services between Baltimore (BWI) and Boston on June 2. Weekend flights are also flown.

A full pattern of daily service begins June 9 to the Cape Code Islands with a minimum of two daily flights Monday through Wednesday and three flights Thursday through Sunday. Passengers arriving at Nantucket Memorial or Martha's Vineyard Airports are also given the option of a connecting flight to the neighboring island.

Underwritten by Alex Brown & Sons and Robinson-Humphrey, the company now completes placement of a \$50-million aggregate principal amount of convertible subordinated notes. The income will be applied to the cost of the new jetliners and to repurchase 1.46 million shares of ACA stock held by British Aerospace.

In an official July 11 hand-over ceremony in Montreal, Canada, President/CEO Kerry Skeen takes delivery of the first of 12 new Canadair RJ200ER jets acquired in January from Bombardier Regional Aircraft Company. Following the presentation, the ACA executives and other company employees board the aircraft for its maiden flight home to Washington, D.C. (IAD), clearing U.S. airspace at Burlington, Vermont,

a destination for ACA's Jetstream 41. Upon arrival at Washington, D.C. (IAD), the jet is welcomed by company employees in a celebratory reception at the airport.

Two more RJ200ERs are scheduled to arrive by year's end, but as the current UAL pilots contract prohibits regional affiliate pilots from operating jet service, Atlantic Coast makes contingency plans to operate flights independent of "United Express." To that end, the aircraft are delivered in a three-tone blue color scheme with company titles.

Beginning on August 1, nine roundtrip "United Express" flights are offered every business day between Washington, D.C. (IAD) and New York (LGA) in competition with **Delta Air Lines** and **USAirways Shuttle**. Flights depart every two hours beginning at 6:30 a.m., with the 10:30 p.m. departures from Dulles and La Guardia the last scheduled flights of the day for any air carrier between those two airports.

The pilots of **United Airlines** vote to allow "Delta Connection" pilots to fly regional jets on behalf of the major carrier. After crew workup and proving flights, the premier Canadair jet enters "United Express" service on September 9 as the company inaugurates flights from Washington, D.C. (IAD) to Hartford, Greensboro, and Charleston.

On October 1, four-times-per-weekday J-41 "United Express" service is inaugurated from New York (JFK) to Baltimore (BWI), and to Pittsburgh, with less frequent service on weekends. Later in the month, six of the January RJ200 options are converted to firm orders and six to conditional; the units of this \$125-million request will begin to arrive a year hence.

Also during the month, a cooperative agreement is signed with Daytona Beach-based Embry-Riddle Aeronautical University. Under its terms, selected graduates will be hired by the Dulles-based "United Express" carrier.

Seasonal service to the Cape Cod Islands ends on October 30. The following month, ACA exercises options for 12 additional Canadairs, of which 6 orders are firm and 6 are conditional.

"United Express" J-41 service from Washington, D.C. (IAD) to Raleigh-Durham is replaced with Canadair RJs on November 20. New daily roundtrips commence two days later from Dulles to Ft. Myers and Jacksonville, Florida, and Nashville, Tennessee.

A new J-41 is received at year's end.

Passenger boardings climb 13.9% to 1,665,238 on 146,069 scheduled departures. Operating revenues surge 12.6% to \$205.4 million, while expenses are up 8.5% to \$176.5 million. The operating gain shoots up to \$28.9 million, while net profit inches up \$400,000 to \$14.5 million.

Daily RJ200 roundtrips commence on January 1, 1998, between Washington, D.C. (IAD) and Tampa.

The company, in January, applies to the DOT for permission to launch thrice-daily Canadair roundtrips in June from Chicago (ORD) to Springfield, Missouri. As of this month, the company has received 5 of 18 ordered RJs on hand.

A major strategic agreement is entered into with **Deutsche Lufthansa, A.G.** on January 23. Under its terms, the two link their frequent flyer programs, receive automatic luggage check-in, as well as boarding passes and seats for flights on both, and onetime check-in at their departure city.

Dual-designator flights commence from Washington, D.C. (IAD) to Charlottesville, Cleveland, Greensboro, Newport News, Norfolk, Pittsburgh, Raleigh-Durham, and Syracuse.

Daily nonstop RJ200 roundtrips begin on February 1 between Washington, D.C. (IAD) and Atlanta.

Four-times-a-weekday Jetstream 41 roundtrips are initiated on March 2 between Washington, D.C. (IAD) and Wilmington, North Carolina. Canadair thrice-daily "United Express" roundtrips commence on March 16 between Dulles and Indianapolis.

Four-times-weekday CRJ200 roundtrips begin on April 1 between Savannah, Georgia, and Washington, D.C. (IAD).

Four-times-weekday "United Express" Jetstream 41 roundtrips commence on April 16 between Worcester, Massachusetts, and Washington, D.C. (IAD).

Also in April, a tentative agreement is reached between the carrier and its 150-member chapter of the Association of Flight Attendants (AFA). When put to the membership for a vote, the deal fails. To keep the dispute from escalating, both sides ask the National Mediation Board (NMB) to step in.

At the same time, ACA executives announce the replacement of multistop turboprop services from Maine to Dulles with four additional nonstops employing Canadairs.

"United Express" service between Washington, D.C. (IAD) and Charleston, South Carolina, is expanded on May 1; twice-daily service continues to be offered by Jetstream 41s while two other daily roundtrips are provided by Canadair RJs. The same day, jets are also employed to expand existing turboprop service between Dulles and Portland, Maine, by adding a daily nonstop roundtrip Canadair flight.

Having enjoyed a profitable first quarter and with the highest rated stock of any regional airline in the world, ACA, in May, increases its firm orders for Canadairs from 18 to 23. At the same time, the board authorizes a 2-for-1 common stock split.

In order to improve operational performance and provide an increased number of connecting opportunities, the company begins to operate seven daily banks of flights into Washington, D.C. (IAD) on June 10, up from two-and-a-half. The primary banks peak at 40 aircraft. The main arrival times are 7:55 a.m., 12:25 p.m., 4:40 p.m., and 9:35 p.m.; secondary banks are 10:15 a.m., 1:50 p.m., and 6:00 p.m.

The revised banks include a new nonstop, four-times-a-day "United Express" CRJ roundtrip service to and from Greenville and Spartanburg, South Carolina.

Daily CRJ "United Express" roundtrips commence on June 24 between Chattanooga and Chicago.

On July 8, the number of daily "United Express" roundtrips between Raleigh-Durham and Washington, D.C. (IAD) is increased from 10 to 15. Ten services are provided by Jetstream 41s and five by CRJs.

Thrice-daily "United Express" CRJ roundtrips commence on August 3 between Charleston, West Virginia, and Chicago (ORD). In addition, the four-times-per-day "United Express" Jetstream 32 roundtrips from Charleston to Washington, D.C. (IAD) are expanded by the addition of a midday CRJ nonstop roundtrip between the two cities.

On September 8, ACA reacts to the growing demand for capacity in light of the **Northwest Airlines** pilot strike that began on August 29. ACA upgrades its twice-daily "United Express" return service from Detroit (Metro Airport) to Washington, D.C. (IAD) from J-41s to CRJs for the remainder of the month. In addition, the airline will operate, as necessary, two aircraft simultaneously for some flights, increasing capacity still further.

The number of daily "United Express" Jetstream 32/41 roundtrips between Washington, D.C. (IAD) and Newark are increased on September 9 from 13 to 16. The next day, the company and representatives from the AFA sign a new four-year contract; rank and file flight attendants begin the ratification process on September 11.

Thrice-daily CRJ "United Express" roundtrips commence on October 1 between Wilkes-Barre/Scranton and Chicago (ORD). Simultaneously, Jetstream 32s begin flying from Wilkes-Barre/Scranton to Washington, D.C. (IAD), four times a day.

Daily CRJ "United Express" roundtrips begin on October 31 from Washington, D.C. (IAD) to Detroit (DTT), Hartford, and Columbus. The Canadair service to Detroit and Hartford complements **United Airlines** B-737 service to Detroit and Hartford, but is new to Columbus; J-41s also continue to serve on the routes. AFA members ratify the new contract on October 8.

An extensive new "United Express" flight schedule, due to take effect on January 31, is announced on December 9, with tickets to go on sale on December 12.

The turboprop "United Express" service of **Great Lakes Aviation** to Fargo is replaced on December 15 when Atlantic Coast introduces thrice-daily, roundtrip, Canadair CRJ200 "United Express" jetliner service to Hector International Airport at the North Dakota city from

Chicago (ORD). Simultaneously, twice-daily "United Express" CRJ roundtrips are started from the same point to Sioux Falls.

Also on December 15, twice-daily CRJ "United Express" roundtrips commence from Chicago (ORD) to Peoria, Illinois.

On December 17, ACA signs a \$210-million order with Bombardier for the acquisition of 10 more CRJ200ERs, plus 10 options, with deliveries to start in July 2000. Simultaneously, a comprehensive new 10-year "United Express" marketing agreement is signed with **United Airlines**.

At this point, ACA operates a fleet of 74 aircraft, including 14 CRJs, 32 J-41s, and 28 J-32s.

Enplanements during the 12 months increase 51.9% to 2,531,648. Revenues shoot ahead by 41.1% to \$289.9 million, while costs rise 34.3% to \$237.3 million. The operating profit climbs to \$52.6 million, while net gain doubles to \$30.4 million.

By the beginning of **1999**, airline employment has been increased by 33.3% to 2,000.

On the appointed January 9 date, CRJ service is increased to Raleigh-Durham and Columbus, with new jet flights added to Dayton and Burlington, Vermont. The popular schedule of hourly flights to, from, and between Raleigh-Durham and Washington, D.C. (IAD) is maintained, while jet service is upgraded to a total of six flights a day. Additional Jetstream 32/41 service is added to Syracuse (up to seven daily flights from four), Rochester (two additional "United Express" flights totaling six a day, plus one daily jet flight by **United Airlines**), and Newport News, Virginia (up to five flights from four).

"Pilot deviation" is examined by the FAA after a near-miss incident on February 25, near Washington, D.C. (IAD), where two USMC F/A-18 Hornets pass within 300 ft. vertically and 1 mi. horizontally of a company Jetstream 41.

The company's hourly "United Express" flight schedule between Newark (EWR) and Washington, D.C. (IAD) is upgraded on March 15 by the addition of 4 CRJ roundtrips as part of the 16 daily departures. The new service has been made possible by the delivery at the beginning of the month of a 16th Canadair.

On April 4, "United Express" CRJ roundtrips are started from Columbus to Jacksonville via Washington, D.C. (IAD), four times a day.

A new \$21-million, 70,000-sq.-ft. "United Express" concourse is opened at Washington, D.C. (IAD) on May 3. Equipped with 12 gates, it is occupied solely by ACA and is connected directly to the "B" concourse by a "skybridge" open to the public.

On May 4, all eight daily "United Express" roundtrips between Washington, D.C. (IAD) and New York (LGA) are upgraded from turboprop to CRJ. In conjunction with **United Airlines'** simultaneous expansion of service over the route from thrice daily to eight times a day, the United/"United Express" network now offers hourly jet service between the two major cities with a total of 16 flights every day.

Simultaneously, the number of daily "United Express" roundtrips between Washington, D.C. (IAD) and Norfolk, Virginia, are increased from 9 to 16, allowing for hourly service.

Twice-daily CRJ200ER "United Express" roundtrips begin on May 17 from Chicago (ORD) to Savannah/Hilton Head. An additional CRJ200ER "United Express" roundtrip is simultaneously started from Sioux Falls to Chicago (ORD); this creates a new schedule that replaces the previous combination of jet and turboprop service.

Columbia, South Carolina, is served by "United Express" CRJ200ERs four times a day from Washington, D.C. (IAD), starting on May 25. A 20th CRJ200ER is received during the month.

For several weeks during the spring, Fairchild Aerospace hints that it has found a launch customer for its new Fairchild 428JET regional aircraft. The identity of the mystery airline is revealed at the Paris Air Show in mid-July as ACA, which has placed a conditional \$733-million order for 30 of the new regional jets, plus 25 328JETs. The entire order cannot be converted to firm status until approval is received from code-share partner **United Airlines**.

The Washington Post reports on August 28 that three former customer service and baggage handling agents at Washington, D.C. (IAD) have

been indicted on embezzlement charges in connection with the sale of hundreds of fake airline tickets (valued up to \$1 million); a warrant is out for a fourth person.

On September 9, an agreement is signed with Fairchild Aerospace for the acquisition of 25 328JETs, which will be operated by the new subsidiary under a "Delta Connection" contract with **Delta Air Lines**.

A separate subsidiary, ACA Management, Inc., is simultaneously established to operate 20 additional Canadair RJs requested on August 16 from Bombardier Aerospace. It will later be renamed Atlantic Coast Jet. Company pilots are reassured that the new planes will be flown by ACA flyers.

"United Express" CRJ service is again expanded on October 31 as the Dash-100ERs operate all four daily roundtrips between Washington, D.C. (IAD) and Burlington, Vermont, and four of six return services from Washington, D.C. (IAD) to Albany.

On November 19, two new daily "United Express" CRJ roundtrips are started from Chicago (ORD) to Charleston; CRJs simultaneously replace J-41s on three of five daily return flights to the West Virginia capital from Washington, D.C. (IAD).

On December 13, flight crews begin training in a new RJ flight simulator facility at Washington, D.C. (IAD).

Following the demise of **United Feeder Service** in November, the carrier, on December 15, begins a four-month process of taking over the UFS "United Express" routes from Akron and Canton to Chicago (ORD) by introducing two daily CRJ return flights of its own.

Passenger boardings accelerate 27.5% to 3,231,000. Operating revenues jump 19.8% to \$347.36 million as costs climb 25.6% to \$298.07 million. Profits fall to \$49.29 million (operating) and \$28.26 million (net).

Chairman C. Edward Acker retires on January 1, **2000**. He is succeeded, per an original announcement back on October 21, by President Kerry Skeen, while Thomas Moore becomes the new company president.

CRJ "United Express" frequencies from Savannah to Chicago (ORD) and Washington (IAD) are significantly increased on January 31. The same day, service is started to Chicago (ORD) as an extension of the four CRJ Roanoke to Washington, D.C. (IAD) routes.

New six-times-a-day "United" Express Jetstream 32 roundtrips commence on April 2 between Washington, D.C. (IAD) and Shenandoah Valley Regional Airport, Virginia. Simultaneously, new four-times-a-day "United Express" CRJ roundtrips are started between Chicago (ORD) and Sioux Falls.

The first 328JET for Atlantic Coast Jet is received from Fairchild Aerospace on April 27.

Canadair CRJ200ER "United Express" service from Washington, D.C. (IAD) to Indianapolis is expanded to six daily roundtrips on May 4, the same day, four-times-a-weekday, once on Saturday CRJ return service is boosted between Washington, D.C., (IAD) and Portland, Maine.

Four-times-a-day CRJ United Express frequencies are initiated on June 8 from Washington, D.C. (IAD) to Louisville.

On July 1, Mike Davis becomes chief operating officer of Atlantic Coast Jet, which completes its FAA certification on July 21.

Atlantic Coast Jet begins "Delta Connection" service from Washington, D.C. (IAD) to New York (LGA) with 5 328JETs on August 1. In order to circumvent legal and contractual requirements, the flights are marketed as "ACJet/Delta Connection". The same day, new CRJ "United Express" roundtrips commence between Chicago (ORD) and Tulsa.

Having previously ordered the Fairchild 428JET, company officials are disappointed when, in mid-August, the manufacturer, citing high costs, indicates that it will not build the jetliner.

Four-times-a-day 328JET roundtrips are launched by "ACJet/Delta Connection" on August 21 from New York (LGA) to Portland, Maine, along with thrice-daily roundtrips to Greenville and Spartanburg and five daily nonstops to Providence.

The mainline "United Express" service from Washington, D.C. (IAD) to Providence is upgraded to CRJ200ER on September 6 as thrice-daily

CRJ200ER "United Express" roundtrips begin from Colombia, South Carolina, to Chicago (ORD).

Four-times-a-day 328Jet "ACJet/Delta Connection" return service is inaugurated on October 1 from New York (LGA) to Burlington; it is followed on October 15 with twice-daily 328Jet flights from New York (LGA) to Indianapolis. These flights are made under an exemption to the over-all 30-day moratorium on the implementation of new flights by all airlines imposed by LGA in September.

Thrice-daily "ACJet/Delta Connection" 328Jet roundtrips begin on November 1 from New York (LGA) to Raleigh/Durham and from New York (LGA) to Columbus, Ohio, on November 15. Twice-daily "ACJet/Delta Connection" 328JET roundtrips start on December 1 between New York (LGA) and Nashville.

ATLANTIC COAST AIRWAYS CORPORATION: United States (1929). ACAC is formed at New York in the summer of 1929 to offer passenger flights to the beaches and resorts at Atlantic City, New Jersey. Operations are begun in September with a single Keystone-Loeving C-2H amphibian. Within a month of the October stock market crash, the carrier goes out of business.

ATLANTIC COAST JET/AC JET. *See ATLANTIC COAST AIRLINES*

ATLANTIC EXCELLENCE ALLIANCE. *See AUSTRIAN AIRLINES, A.G.; DELTA AIR LINES; SABENA BELGIAN WORLD AIRLINES, S.A.; SWISSAIR, A.G.*

ATLANTIC EXPRESS AIRLINES: United States (1981–1983). Atlantic Express is established at Republic Airport at East Farmingdale, Long Island, New York, in late 1981 to offer scheduled regional passenger commuter service.

With a fleet of four new Fairchild Metro IIIs, the new third-level airline inaugurates daily roundtrip flights to Albany, Syracuse, and Boston on January 17, 1982. Presque Isle, Maine, joins the system in April.

A victim of the recession, the operator shuts its doors in early 1983.

ATLANTIC FLIGHT GROUP: Miami International Airport, Miami, Florida 33186, United States; Phone (305) 871-1111; Fax (305) 871-2221; Year Founded 1981. AFG is set up by Michael Kiester at Miami (MIA) in 1981 to offer executive and small group charters to destinations throughout the U.S. and Caribbean. Flights continue over the next 15 years and, by 2000, the fleet includes 1 Learjet 24 and 1 Cessna 402B Business/Utiliner.

ATLANTIC GULF AIRLINES: United States (1983–1986). St. Petersburg-based AGA receives certification from the CAB in September 1983. Employing a pair of Convair CV-580s, scheduled flights are inaugurated on October 15 to Atlanta, Miami, and Tallahassee. Enplanements during the next two-and-a-half months total 55,000.

Employing wet-leased Vickers Viscounts, the Florida network is expanded in the spring of 1984. On October 10, the company, deep in start-up debt, files for Chapter XI bankruptcy. Merger discussions are held with Air Illinois, also in Chapter XI and not operating. Under a wet-lease agreement with the Illinois concern, a British Aerospace BAC 1-11-401 and its flight crews are provided to help maintain AGA's basic schedules. A total of 96,000 passengers are flown on the year.

Early in 1985, AGA is sold to United Resources, which signs a letter of merger intent designed to combine the carrier's staff and reservations system with Air Illinois' BACs, staff, reservations system, and maintenance components. Hopefully, the two bankrupt airlines can be merged into one solvent new entrant. Orders are even placed for four Aerospa-tiale Mohawk 298s, which will not be delivered. The BACs continue to operate on routes to Miami, West Palm Beach, Tallahassee, the Turks and Caicos Islands, Providenciales, Grand Turk, and, on behalf of **APA International Air**, Puerto Plata.

Although company officials attempt to reorganize and find new capitalization, the carrier must be sold again in early 1986 and a 50% interest is taken by a group of unidentified investors who have no previous airline experience. Flights continue until the carrier shuts down on September 1.

The FAA revokes the Air Illinois operating certificate in late 1987. In early 1988, a new carrier, **Oceanair**, is established as successor to Air Illinois/Atlantic Gulf Airlines and takes possession of the two BAC 1-11-200s from bankrupt AGA. An effort is made to overturn the revocation of the Air Illinois authority, but this initiative also fails. **Oceanair** is unable to begin operations.

ATLANTIC GULF AIRWAYS: 1100 Lee Wagener Blvd., Suite 110, Ft. Lauderdale, Florida 33315, United States; Phone (954) 359-6060; Fax (954) 556-8844; <http://gator.naples.net/nfn02257/atlantic>; Year Founded 1988. AGA is established at Ft. Lauderdale in 1988 to provide executive and small group passenger charters anywhere in the U.S., Canada, Mexico, the Caribbean, and Central America. The company's five pilots fly one each PA-23 Aztec and PA-31-350 Navajo Chieftain. A base is also maintained at Miami, along with a second Navajo Chieftain.

ATLANTIC, GULF AND CARIBBEAN AIRWAYS. *See FLORIDA AIRWAYS; PAN AMERICAN AIRWAYS (PAA)*

ATLANTIC ISLAND AIR, H.F.: Iceland (1991–1992). AIA takes up the charter challenge in the fall of 1991. Revenue operations to northern Europe are undertaken with a single Boeing 727-276A. Like its predecessor, it is unable to achieve either traffic or economic viability, Atlantic Island closes its doors in late spring 1992.

ATLANTIC ISLAND AIRWAYS, LTD.: Canada (1994–1996). AIA is established at the end of 1994 to offer passenger charter and inclusive-tour flights. The first of three leased Fokker F.28-1000s is delivered from **USAir** in December.

Flights commence in January 1995 and continue just over a year.

ATLANTIC SOUTHEAST AIRLINES (ASA): 100 Hartsfield Centre Parkway, Suite 800, Atlanta, Georgia 30354, United States; Phone (404) 766-1400; Fax (404) 209-0162; <http://www.irinfo.com/asai>; Code EV; Year Founded 1979. ASA is founded at College Park, Georgia, on March 5, 1979 by former **Southern Airways** executives A. M. Voorhees, George F. Pickett Jr., Robert Priddy, and John Beiser. Equipped with a fleet of 3 de Havilland DHC-6-200 Twin Otters, this commuter is headquartered at Hapeville, Georgia, with an operating base at Atlanta's Hartsfield Airport. Initial capitalization is provided in the form of \$10,000 contributions by each of the three founders, plus \$500,000 in seed money from a venture capitalist.

Voorhees is named chairman, Pickett is chosen president, and the initial workforce totals 15. Five-times-per-day roundtrips commence on June 27 between Atlanta and Columbus, Georgia, and the new entrant flies 12,170 passengers and a ton of cargo in the next six months.

A new route is started from Atlanta to Macon in 1980 and bookings for the first complete year skyrocket 390%, up to 59,677; 6,000 pounds of freight are hauled. The number of routes is expanded by five additional cities in the tri-state market during 1981 while orders are placed for 2 DHC-7-102s to augment the 4 available Twin Otters and 3 recently added Embraer EMB-110 Bandeirantes. Enplanements increase another 149% to 148,672 and 145,000 pounds of cargo are hauled. Net gain is \$1.31 million.

Success continues in 1982 as the payroll is increased by 45.2% to 196 and the fleet by 2 new Dash 7s. Service is initiated to Greenville, South Carolina, in April and late in the year the company switches from the computerized reservations system of **Braniff International Airways** to that of **Delta Air Lines**.

The company goes public in August. ASA flies 197,818 travelers, an increase of 33.1%; however, freight traffic dips 9% to 132,000 pounds.

On the year, revenues soar 54.5% to \$13.2 million, expenses rise 57% to \$10.3 million, and the net profit is \$1.4 million, the latter on top of an operating gain of \$2.89 million.

Airline employment increases 67.3% to 333 in **1983** and **Southeastern Airlines** is acquired by purchase on April 1. The same day, **Coastal Air, Ltd.** is acquired for 340,000 shares of common stock. Passenger boardings jump 81% to 358,000 and cargo accelerates 69.2% to 224,000 pounds. Revenues grow 80.4% to \$23.78 million and costs rise 99.2% to \$20.48 million. The operating profit climbs to \$3.29 million and a net profit of \$1.5 million is reported. The Georgia-based commuter now moves from the ranks of the small regionals to that of the large.

If earlier years were good for ASA, **1984** is spectacular. The fleet grows to include 5 DHC-7-102s, 5 Shorts 360s, and 11 EMB-110 Bandeirantes. On May 1, ASA enters the "Delta Connection" commuter network as a feeder for the major's main Atlanta hub. The commuter joins with **Delta Air Lines** in opening a mini-hub at Memphis in December.

To handle the increased load of serving 19 markets in this hub-and-spoke arrangement, the carrier orders 10 EMB-120 Brasílias. It also recruits a number of additional pilots, including several from failed **Aeromech Airlines**.

These moves collectively result in 71.5% more boardings, up to 613,900. Cargo skyrockets 237.8% to 755,000 pounds. Revenues of \$42.7 million, up 79.4% in just one year, are earned as costs are held to \$31.9 million, a 55.6% boost. The operating profit increases to \$10.8 million and a net gain of \$5.3 million is recorded.

The payroll increases 45.4% in **1985** to 900 as the "Delta Connection" carrier, in ceremonies staged for the North American launch customer by the manufacturer, takes possession of the No. 2 prototype of the Embraer EMB-120 Brasília on June 4. While awaiting FAA type certification in July, the aircraft is employed in crew training and route-proving duties. The first of 6, later 7, EMB-120 production units arrives in August and are placed into service on September 15.

An unsuccessful bid is now made to acquire another "Delta Connection" airline, **Rio Airways**. Still, enplanements for the year increase 60% to 982,252 and freight is up by another large percentage, 93.2%, to 1.45 million pounds. Revenues grow by 72.1% to \$75.31 million. Costs, although up by 82%, still total only \$60.1 million and allow an operating profit of \$15.21 million. Net profit doubles to \$10.32 million.

Airline employment rises 11.1% in **1986** to an even 1,000 and the fleet includes 5 DHC-7-102s, 8 Shorts 360s, 14 Bandeirantes, and 7 Brasílias. During the year, Delta takes a 20% interest and 2 more EMB-120s are purchased from **Air Midwest**.

En route for delivery from San Jose dos Campos to Atlanta on September 20, the company's ninth Brasília, with two crew and three passengers, crashes into a cloud-shrouded 5,000-ft. mountain peak in Brazil's Maniqueira range about 20 miles from San Jose; there are no survivors.

The Memphis hub is closed during late fall and in December, a new hub is opened at Dallas (DFW). It is serviced by 6 Bandeirantes and 3 Brasílias, which fly to 5 initial markets as a replacement for the former Dallas "Delta Connection" partner **Rio Airways**.

Passenger boardings jump 17.7% to 1,156,202 and cargo grows 2.3% to 1.49 million pounds. Revenues ascend 22.5% to \$92.29 million, expenses are up 22.7% to \$73.77 million, and the operating profit is up to \$18.52 million. Net gain improves only modestly to \$10.53 million.

The fleet of the 572-employee large regional in **1987** includes 23 Embraer EMB-120 Brasílias, 2 DHC-7-102s, 16 EMB-110 Bandeirantes, and 8 Shorts 360s. Orders remain outstanding for another 14 Brasílias.

In January, the company receives the 1986 "Regional Airline of the Year" award from *Air Transport World* magazine. As the result of its commitment to **Delta Air Lines** at Dallas (DFW), ASA opens services to 11 cities within feeder range of the Texas airport.

Cofounder Priddy takes a sabbatical in August and then purchases 12% shareholding in **Air Midwest**. In December, six-times-per-day frequencies are stretched from Dallas (DFW) to Longview, Texas and Atlanta.

Customer bookings at ASA swell 25.9% to 1,456,019 and freight rises by 27.5% to 1.9 million pounds. Revenues advance 29.1% to \$119.14 million, costs are held to a moderate 36.2% increase of \$100.5 million, and the operating profit is \$18.64 million. Net profit moves up to \$11.26 million.

In January **1988**, cofounder Priddy is able to succeed founder Gary Adamson as president/CEO of **Air Midwest**. Meanwhile his old concern disposes of 1 Bandeirante and 4 Shorts 360s while bringing its Brasília total to 29 by the addition of 6 new EMB-120s.

While en route from Dallas (DFW) on May 24, an EMB-110P1, with two crew and six passengers, is unable to climb away from an intermediate stop at Lawton, Oklahoma; the aircraft loses altitude and strikes the ground, with a section catching fire. Although the wreck must be written off, there are no fatalities; still, all aboard are injured in some degree.

Passenger boardings leap upward by 8.9% to a record 1,585,536 and cargo climbs by 10.4% to 2.1 million pounds. Revenues increase 15.1% to \$137.14 million and expenses are up 17.3% to \$117.89 million, leaving operating income to move up to \$19.24 million. Net gain is \$11.51 million.

The workforce is increased by 4% in **1989** to 1,477. The "Delta Connection" partner receives 9 additional Brasílias, bringing its fleet total to 36, plus 13 Bandeirantes and 4 DHC-7-102s.

Benefiting from the **Eastern Air Lines** strike, the large regional is able to boost its customer bookings by 26.2% to 2,001,217. Revenues swell 31.3% to \$180 million while costs are only half that figure. As a result, operating income jumps to \$43.97 million and net gain reaches \$27.61 million.

The number of employees swells 6.9% in **1990** to 1,588 as the fleet accelerates to 58 turboprops: 43 Brasílias, 13 Bandeirantes, and 2 Dash 7s. Sixteen EMB-120s remain on order. With both **Eastern Air Lines** and **Eastern Metro Express** about to depart Atlanta via bankruptcy, ASA prepares for growth.

The year's enplanements are level at 2,001,635 as freight grows by 3.5% to 2,187,000 pounds. Revenues climb a modest 3.9% to \$187.22 million, expenses rise 8.2% to \$147.36 million, and operating income slips to \$39.86 million. Net gain drops to \$25.39 million.

The workforce is increased by 8.9% in **1991** to 1,721 and the fleet is increased by 6 Brasílias while 2 Bandeirantes are sold. Nine EMB-120s remain on order. Following the January failure of **Eastern Air Lines** and **Eastern Metro Express**, services are inaugurated from Atlanta to, Pensacola, Charlotte, Gulfport/Biloxi, Nashville, and Tri-Cities Regional Airport in Tennessee.

While on final approach to Brunswick, Georgia, following an April 5 service from Atlanta, Flight 2311, an EMB-120RT with 3 crew and 20 passengers, suddenly pitches up. It rolls to the left until the wings are nearly vertical, and then plunges into the ground 9,975 ft. short of the runway; there are no survivors. Among the victims are former Texas senator John G. Tower and his daughter.

Passenger boardings jump 12.5% to 2,251,036, but freight drops 11.7% to 1.93 million pounds. Revenues ascend 18.5% to \$221.91 million, costs move ahead by only 15% to \$169.39 million, and the operating profit jumps to \$52.52 million. Net profit balloons to \$32.5 million.

The 1,800-employee ASA in **1992** flies 58 Brasílias, 11 Bandeirantes, and 2 DHC-7s. Orders are placed for 8 Avions de Transport Regional ATR72-210s, while 20 options are also taken. In October, the carrier's ALPA-represented pilots sign a new three-year contract.

Customer bookings move ahead by 7.4% to 2,416,609 and revenues climb 6.2% to \$235.57 million. Expenses are only \$174.76 million and foster an increase in operating income to \$60.81 million. Net gain moves to \$37.06 million.

The payroll grows by 3.2% in **1993** to 1,857 and the fleet grows by 2 more EMB-120s. The Dallas (DFW) hub is expanded during the spring as the first of the new ATR72-210s arrive and enter service in May. In a cost-reducing expedient by the parent, the new turboprops replace **Delta Air Lines** jets beginning on June 1 in the southwestern markets of Corpus Christi and Tulsa, followed, on July 1, by Lubbock, Ok-

lahoma City, Amarillo, and Wichita. At the same time, new services are initiated to Louisville, Springfield, and Jackson. ATR72-210 turboprop replacement flights begin in October from Dallas (DFW) to Houston and San Antonio.

Passenger boardings jump 10.1% to a record 2,661,386 while freight ascends 18.2% to 2.34 million pounds. Revenues shoot up 22.5% to \$288.46 million and expenses climb only 20.6% to \$210.84 million. As a result, operating profit advances to \$77.62 million and net gain reaches \$50.54 million. Both profit lines rank ASA among the world's top 25 airlines—operating is 16th and net gain is 12th highest.

Airline employment is cut by 8.5% in 1994 to 1,700 and 4 additional ATR72s are delivered in early spring to begin flying from the carrier's Atlanta hub. During this period and through the fall, the company comes to serve a total of 37 markets from its Atlanta hub and 26 more from Dallas (DFW). Late in the year, plans are made for additional expansion over additional thin routes to be received from **Delta Air Lines** and the leasing of five British Aerospace BAe 146-200 jetliners.

Overall customer bookings leap ahead by 17.2% to 3,120,294, while cargo advances 27.6% to 2.98 million FTKs. Revenues climb 8.2% to \$312.09 million and expenses increase 8.1% to \$227.81 million. Pretax profit moves up to \$84.27 million while net gain reaches \$52.65 million. This was despite November–December jitters caused by the ATR icing concern that resulted from the crash of a **Simmons Airlines** commuter-liner on October 31.

Airline employment in 1995 stands at 2,200, a 29.4% increase. Shortly after departure from Atlanta on August 21, Flight 7529, an EMB-120 with 20 aboard, suffers an engine failure when part of a propeller blade snaps off the No. 1 engine; the pilot crash lands in a hayfield near Carrollton, Georgia (5 dead). A badly burned passenger, Michael Hendrix, walks away from the wreckage and calls his wife from a nearby house; he will die of his wounds in hospital on September 16. Two other travelers severely injured in the disaster will both die on September 20.

Flight attendant Robin Fech will win praise in two popular magazines for her passenger support activities before and after the accident. Thomas Fields-Meyer praises her as “Steady Under Fire,” in *People Weekly* 64 (October 23, 1995): 80–82. William H. Hendrix, the brother of passenger Michael Hendrix, writes of “The Angel of Flight 7529,” in *Family Circle* 109 (July 16, 1996): 84–87.

Also during the month, the leadership of the ALPA Master Executive Council at ASA begins negotiations with the company on a new contract; no one expects the process will take as long as it eventually does.

Arrangements are completed during the month with BAe Asset Management Organization for the 5-year lease of 5 BAe 146-200s, with options taken for another 15. If all of the options are exercised, the deal will be worth \$160 million.

After refurbishment at the Air Wisconsin third-party maintenance division and FFV Aerotech in Nashville, 4 BAe 146-200s are received in October and begin to conduct proving flights to potential destinations.

On December 1, the U.S. District Court in Atlanta denies an emergency request for a preliminary injunction and dismisses a lawsuit filed by ALPA that would have prohibited ASA from operating the new BAe 146s.

Two of the new jetliners are employed later in the day to inaugurate the company's first jetliner service over six routes from Atlanta, including one to Asheville, Chattanooga, and Tri-Cities Regional Airport in Tennessee. Another frequency departs south from Atlanta to Gainesville.

On December 7, after eight months of unsuccessful negotiation, the local chapter of the Association of Flight Attendants (AFA) requests a mediator from the National Mediation Board (NMB) be assigned to the talks. Scheduled departures this year are 207,868.

Enplanements dip 1.7% to 3,066,897 and freight traffic plunges to 480,000 FTKs. Still, operating income increases 5.3% to \$328.72 million and costs, up 11%, are held to \$252.85 million. The operating gain slides to \$75.87 million and the net profit slips to \$51.13 million.

Airline employment is increased by 18.2% in 1996 to 2,600 and orders are placed for 30 Canadair RJ2s, with options taken on 60 more.

On February 13, the Atlanta City Council approves a company plan to relocate all of its Hartsfield International Airport services from 12 gates on Concourse D North and 3 gates at Concourse C South to 15 gates at Concourse C North. Scheduled departures drop to 192,726.

Unable to reach agreement on a new contract, the company and its pilots invite the NMB to participate in their deliberations as of the beginning of May.

Late in the year, the board of directors authorizes a reorganization of the company. The formation of a new holding company structure, ASA Holdings, Inc., which will own 100% of the airline's common stock, is completed on December 31.

Customer bookings jump 18.2% this year to 3,632,000, there are 192,726 scheduled departures, and 653,000 FTKs are operated, a 12.6% increase. Revenues climb 14.2% to \$375.3 million while expenses are up 14.8% to \$290.14 million. Profits swing upward again as the operating line reads \$85.15 million and a net gain of \$56.61 million is reported.

The employee population is reduced by 12.4% in 1997 to 2,270.

The company reorganization into ASA Holdings, Inc. takes effect on January 2. Its common stock is listed for trading on NASDAQ's national market under the ASAI symbol.

On January 10, ASA places a \$600-million order with Bombardier Regional Aircraft for 30 Canadair RJ200s with spare parts as well as an option for 60 additional aircraft. The company reorganization is completed during the month. ASA Holdings is created with the airline as its principal subsidiary.

Negotiations with pilots over a new contract intensify during the first quarter, with some members of the local ALPA chapter holding informational picketing in Atlanta and Dallas. Concerned with issues surrounding introduction of the carrier's regional jets during the summer, both sides in April hire a private mediator because they feel the NMB is not advancing the process quickly enough to satisfy either side.

At the annual meeting on May 21, a Stock Appreciation Rights (SAR) program is approved and a Non-Qualified Stock Option plan is adopted. These initiatives will require the carrier to pay a \$3.1-million charge associated with their finalization.

On June 19, the company reaches agreement with BAe AMJ to gradually return the BAe 146-200s as Canadairs become available; BAe AMJ, in turn, will lease them to **Air Wisconsin**. ASA must pay a one-time fee of \$2.6 million to return the British-made aircraft.

Fifteen-year veteran pilot and ALPA Air Safety organization member Capt. Stuart Updike Jr. on August 22 receives ALPA's “Presidential Citation for Outstanding Service” in recognition of his “unselfish personal dedication and long-standing service in the advancement of air safety.”

The first RJ200 is delivered during the last week of August wearing the company's new livery, which mirrors that of parent **Delta Air Lines**. As additional units arrive, they will replace the carrier's five, leased BAe 146-200s.

The union representing ASA's flight attendants ratifies a new 5-year contract on September 9. Experimental RJ200 service is begun in October between Atlanta and Macon.

Canadair flights are inaugurated daily on December 1 from Atlanta to Detroit (DTW) and from Detroit (DTW) to New York (JFK). On December 6, jet service is halted by **Delta Air Lines** between Atlanta and Gainesville, Florida. “Delta Connection” partner ASA moves in to replace the route with 8 daily BAe 146-200 and ATR 72-210 roundtrips of its own.

Passenger boardings rise 3.9% to 3,774,617 on 190,501 scheduled departures, but freight declines 13% to 568,000 FTKs. Operating revenues advance 2.7% to \$385.29 million, while expenses advance 5.4% to \$305.7 million. The operating profit slides to \$79.58 million, while net gain drops to \$54.51 million.

Canadair RJ200s replace the BAe 146-200s during January 1998 on the “Delta Connection” roundtrips between Atlanta and Gainesville. Discussions on a new contract agreement resume between the carrier and ALPA on January 28.

Daily nonstop Canadair CRJ200ER "Delta Connection" return flights commence on May 1 from Atlanta to Asheville, North Carolina, and south to Fort Walton Beach, Gainesville, and Panama City, Florida.

Twice-daily, nonstop "Delta Connection" Canadair roundtrips commence on June 1 between Atlanta and Newburgh, New York. Daily CRJ roundtrips are simultaneously started between Atlanta and Louisville.

Daily CRJ nonstop "Delta Connection" roundtrips commence on July 12 between Atlanta and Fayetteville, North Carolina. After three days of intensive bargaining, the pilots' local union leadership and the carrier come to a tentative contract agreement on July 22. With ballots counted at the ALPA headquarters in Washington, D.C., it is revealed on August 21 that 91% of the airline's 500 pilots have voted and by a margin of 89% approve the new pact with management.

Daily CRJ nonstop "Delta Connection" roundtrips are begun on October 1 between Atlanta and both Evansville, Indiana, and Lexington, Kentucky. Eight days later, the company announces that it will inaugurate new CRJ service from Atlanta to Albany, Georgia, Tallahassee, and Wichita early in 1999.

CRJ frequencies between Atlanta and Evansville are increased to thrice daily on November 1, the same day new daily CRJ nonstop "Delta Connection" roundtrips are initiated from the Atlanta hub to Dothan, Alabama.

Daily roundtrip CRJ "Delta Connection" flights begin on December 1 from Atlanta to Wilmington, North Carolina. On December 17, the carrier announces that it will launch thrice-daily CRJ "Delta Connection" return flights from the new Northwest Arkansas Regional Airport to Atlanta on March 2, together with six daily roundtrips from that point to Dallas (DFW).

The fleet at year's end includes 12 ATR72s, 13 Canadairs, and 63 EMB-120s.

Customer bookings during these 12 months accelerate 6.7% to 4,026,946, while cargo traffic falls 13.62% to 491,000 FTKs. Revenues advance 6.4% to \$409.85 million. With expenses of \$313.82 million, there is an operating profit of \$96.03 million and a net gain of \$66.13 million.

Just after takeoff from Wichita Falls, Texas, on January 26, 1999, one of the two engines of an EMB-120 fails and smoke enters the aircraft cabin; an emergency is declared and the turboprop makes a safe landing back at its point of origin.

On February 16, it is announced that parent ASA Holdings will be purchased outright by **Delta Air Lines** for \$700,000 (\$34-per-share) in cash. ASA will operate as a fully owned subsidiary. The transition of ASA into a subsidiary will be coordinated on an interim basis by the senior vice president for airport customer service, John N. Selvaggio.

On March 8, two shareholders of ASA Holdings file suit in Georgia to block Delta's takeover. Meanwhile, the airline's parent hires Morgan Stanley Dean Witter to identify other possibilities for the company and its stockholders other than buyout by the major. Delta, meanwhile, continues the process of acquisition and makes plans to closely integrate the schedules of the two airlines.

On April 4, a CRJ200ER replaces the EMB-120 employed on the nonstop "Delta Connection" service between Atlanta and Jackson, Mississippi. Simultaneously, there is an increase in nonstop Canadair roundtrips between Atlanta and the Florida communities of Fort Walton Beach, Gainesville, and Panama City, as well as Gulfport and Biloxi, Mississippi.

EMB-120 "Delta Connection" service is increased, also on April 4, between Atlanta and Florence, South Carolina. and Brunswick and Golden Isles, Georgia. On April 19, 29-year Delta veteran W. E. "Skip" Barnette, previously the major's vice president-Atlanta Worldport, is named the new president of ASA Holdings, Inc. as well as its ASA airline subsidiary, effective May 11. Electronic ticketing becomes available on all flights as of April 26.

Daily nonstop CRJ200ER "Delta Connection" roundtrips commence on May 1 between Atlanta and Corpus Christi, Texas. On May 11, a spe-

cial ASA Holdings, Inc. shareholders meeting approves the airline's operation as a wholly owned subsidiary of **Delta Air Lines**.

In five southeastern cities where Delta adjusts its schedule, ASA adds replacement jet service.

At Augusta, ASA replaces one Delta flight with a daily "Delta Connection" jet flight starting on July 1; between them, the two partners offer a total of 10 daily roundtrips from Atlanta to Augusta.

At Daytona Beach, ASA introduces jet service with three new flights, one on June 1 and two more on July 1. These replace two Delta flights, but still leave a total of seven daily roundtrips between Atlanta and the Florida community.

At Melbourne, ASA begins "Delta Connection" jet service with four flights, two starting on June 1 and two on July 15. Delta and ASA now offer eight daily roundtrips to Atlanta, compared to six previously offered by the major alone.

At Montgomery beginning on June 1, ASA replaces one Delta flight with a CRJ200ER service. On July 1, ASA replaces one Delta flight to Tallahassee with a jet service of its own. It is reported on July 5 that the company will, on October 1, terminate flights between Jacksonville and Atlanta.

It is announced on July 8 that nonstop thrice-daily CRJ200ER "Delta Connection" roundtrips will begin on September 1 from Atlanta to Fort Wayne. The same schedule is started on October 1 for flights from Atlanta to Des Moines and Toledo.

Beginning on August 1, ASA inaugurates thrice-daily CRJ200ER "Delta Connection" roundtrips between Atlanta and Islip; this is Atlanta's only nonstop service to the Long Island city. Daily Canadair nonstop "Delta Connection" roundtrips are launched from Atlanta to Austin, Houston (HOU), and San Antonio.

New daily CRJ "Delta Connection" roundtrips are started on November 1 between Atlanta and Sarasota; simultaneously, service is boosted by two flights from the Georgia hub to Northwest Arkansas Regional Airport.

Frederick W. Reid is named chairman in November, with Jeff Simmons becoming chief financial officer. On November 19, the company unveils its first CRJ200ER theme jet, honoring the city of Atlanta and nearby Stone Mountain.

Overall passenger boardings surge 23.2% to 4,962,000, while cargo grows 4.8% to 514,000 FTKs. Operating revenue advance 18.6% to \$486.05 million, while costs are up 20.1% to \$376.59 million. Operating profit improves to \$109.46 million, while net gain climbs to \$71.08 million.

Airline employment at the beginning of 2000 stands at 3,082, an increase of 18.7% over the past 12 months.

Twice-daily "Delta Connection" CRJ roundtrips commence on January 3 between Atlanta and Manchester, New Hampshire.

Between January and May, the company takes delivery of 7 refurbished ATR72-212s previously operated by **Mount Cook Airlines, Ltd.** in New Zealand and requested when they became available last fall. All are delivered in new colors reflecting ownership by **Delta Air Lines**.

Daily CRJ200ER return flights commence on February 1 from Atlanta to Worcester, Massachusetts. One of the company's last turboprop service introductions occurs on March 2 when EMB-120s start thrice-daily roundtrips from Atlanta to Huntington, West Virginia.

New CRJ200ER nonstop "Delta Connection" roundtrips begin on March 16 from New York (LGA) to Columbia, South Carolina, Greensborough, Richmond, and Jacksonville. The largest regional jet order in airline history is placed on March 29 when "Delta Connection" CEO David Siebenburg, acting on behalf of ASA and **Comair**, signs a \$10-billion, 4-year order with Bombardier Aerospace for a mix of 94 CRJ100s, CRJ200s, and CRJ700s. ASA's share will include 24 Dash-200s and 18 Dash-700s.

On April 2, new thrice-daily CRJ nonstop flights are started from Atlanta to Grand Rapids, Michigan and to South Bend, Indiana. Later in the month, the company joins with **Comair** in placing the largest regional jet order in history—500 CRJs from Bombardier Aerospace.

In direct competition with **American Eagle Airlines (2)**, ASA, on May 1, initiates its first regional jet service from Dallas (Dallas (DFW)), CRJ200ER thrice-daily "Delta Connection" roundtrip routes to Columbia, South Carolina, and Lubbock. The same number of frequencies is launched on June 1 between Atlanta and White Plains.

Also on June 1, daily CRJ "Delta Connection" return frequencies are begun from Atlanta to Houston (IAH) and Knoxville. Twice-daily Canadair roundtrips are initiated between Atlanta and Toronto, along with daily return flights to the Canadian city from New York (JFK).

Leasing gate space at Dallas (LOV) from startup **Legend Airlines**, ASA initiates long six-times-a-day CRJ200ER "Delta Connection" roundtrips to Atlanta on July 1. Simultaneously, new CRJ200ER "Delta Connection" thrice-daily return service is started from Dallas (DFW) to Amarillo and Savannah. Ten more CRJ200ERs are requested on July 25.

A proposal to merge the pilot unions of the "Delta Connection" partners ASA and **Comair** with that of **Delta Air Lines** is rejected by the ALPA executive council in late August.

Twice-daily CRJ200ER "Delta Connection" roundtrips, code-shared with **Aeromexico (2)**, **S.A. de C.V.**, commence on September 1 between Monterrey, Mexico, and both Dallas (DFW) and Atlanta. Thrice-daily "Delta Connection" CRJ200ER return flights begin on October 1 between Dallas (DFW) and Charleston. The same frequency is employed on new November 1 routes from New York (LGA) to Knoxville and Raleigh/Durham.

ATLANTIS AIRLINES: United States (1978–1989). The first airline to be formed after President Carter signs the Airline Deregulation Act, Atlantis is organized as a closed corporation with 14 investors at Myrtle Beach, South Carolina, on October 31, **1978**.

The 78-employee company inaugurates daily roundtrip service on a Myrtle Beach–Charlotte, North Carolina, route on April 1, **1979**. Other destinations visited come to include Greensboro, Columbia, Hilton Head, and the Tri-Cities Regional Airport in Tennessee. The carrier's four aircraft transport a total of 30,000 passengers during the remaining three-quarters of the year.

Competing **Air Carolina** is taken over by the company in September **1980**, by which time the Atlantis fleet has grown to include 3 de Havilland Canada DHC-6 Twin Otters and 3 Piper PA-31-350 Navajo Chieftains.

Lou Sutton is named president in March and is one of the few female CEOs in the U.S. commuter airline industry. Corporate headquarters are now transferred to Florence, South Carolina, and a hub is established at Charlotte, from which routes are stretched to five cities in Carolina and Georgia. Enplanements for the first full year total 38,170.

Atlantis enjoys great success during its first three years. In **1981**, it carries 60,438 passengers, a 58% increase. Another Navajo Chieftain is acquired together with a Fairchild-Swearingen Metro II. Service is inaugurated to Florence and Atlanta's Hartsfield Airport, which becomes the company's second hub on September 8.

Chairman William Best and President Lou M. Sutton's workforce grows to 102 in **1982**. From the western hub at Atlanta, new routes or frequencies are started to a number of cities in North Carolina, Georgia, South Carolina, and Tennessee. These include five daily roundtrips from Florence to Charlotte, four to Atlanta, four between Augusta and Charlotte, four between Charlotte and Myrtle Beach, and six between Hickory and Charlotte.

In May, a joint marketing program is started with **Eastern Air Lines**. Bookings rise 30% to 78,806.

The first of four new British Aerospace BAe Jetstream 31s arrives in early **1983** and is placed on the Florence to Atlanta route. A total of 81,638 travelers are accommodated.

Through a new arrangement concluded late in **1984**, the carrier is slightly renamed and its flights will be designated **Eastern Air Lines** flights.

On April 8, **1985**, the company begins operations as a member of the **Eastern Air Lines** commuter network as **Eastern Atlantis Express**. As

a member of the major's team, Atlantis' mission is to provide feeder service to Eastern's Charlotte hub with its fleet of Metros, Twin Otters, and 4 new British Aerospace BAe Jetstream 31s, all wearing the parent's livery. Record passenger traffic is recorded as the number of passengers flown increases by 11.3% to 90,643.

The workforce stands at 152 in **1986** and the fleet now includes 6 Jetstream 31s, 1 Twin Otter, and 1 Metroliner. Unable to generate the revenues needed to support them on their North Carolina and Tennessee services, two chartered BAe Jetstream 31s are returned to their manufacturer in April. Passenger boardings decline for the small regional, down 9.1% to 82,393.

Early in **1987**, the company files an antitrust action against both **Eastern Air Lines** and **Eastern Metro Express**. The lawsuit charges the two with illegally conspiring to prevent Atlantis from serving certain markets that feed the major's Atlanta hub. Customer bookings drop again, falling 10.4% to 73,787.

While the lawsuit brews, Atlantis continues to operate through April **1988**, transporting a total of 21,557 passengers, a decline of 7.5% over the same period a year earlier. As the second quarter gets underway, the legal matter is concluded through an out-of-court settlement.

In exchange for \$110,000 in cash and 100,000 shares of Metro stock, Atlantis' owners agree to dismantle their company, hand over the leases on 4 of its Jetstream 31s along with 3 South Carolina routes, and close their doors. The arrangement is completed on February 15, **1989**.

ATLAS AIR: 2000 Westchester Ave., Purchase, New York, United States; Phone (914) 701-8000; Fax (914) 701-8001; http://www.atlasair.com; Code 5Y; Year Founded 1992. Atlas is established by Michael Chowdry at Denver in late **1992** as a wholly owned subsidiary of his Aeronautics Leasing; the company is established as a vehicle through which to employ its owner's aircraft. As overcapacity forces companies to shift away from Boeing Jumbojets to smaller airliners, Chowdry sees the opportunity to establish a niche for "just-in-time" and air cargo services tailored to the needs of customers. Pilots are recruited from **Trans World Airlines (TWA)** and the former **Pan American World Airways (1)**.

In January **1993**, the company receives DOT approval to offer long-haul, all-cargo services with a fleet of 3 chartered Jumbojet freighters: 1 each B-747-128F and B-747-212F as well as 1 B-747-2D3F, which is the former **Alia Royal Jordanian Airline Prince Ali**. Thrice-weekly revenue flights commence late in the month to Taipei from New York and Chicago via Anchorage.

Other new markets opened during the year include New Delhi and Amsterdam. A total of 42.15 million FTKs are hauled and revenues reach \$30.46 million. Expenses are \$30.48 million and the operating loss is \$16,798. Start-up costs bring a net loss of \$2,433.

In the spring of **1994** another B-747-2D3F and a B-747-228F are placed into service. They allow the carrier to expand its contract air cargo flights in May with new services on its Chicago–Taipei route. At the same time, an office is opened in Luxembourg, headed by former **Cargolux Airlines International, S.A.** executive Johannes Einarsson. Late in the month, twice-weekly roundtrip services are inaugurated between Chicago and Hong Kong via Seoul. Many flights are now made to augment the work of other carriers on routes to the Far East and South America.

Richard Shuyler, who resigns from the same position at **Trans World Airlines (TWA)**, becomes the airline's new chief financial officer in June. Three additional Dash-230C Jumbojet freighters, purchased from **Deutsche Lufthansa A.G.**, join the fleet by year's end; one more acquired from the German carrier remains outstanding, along with three options. Long-term cargo contracts with several leading airlines are made or renewed, including one with **KLM Royal Dutch Airlines, N.V.** and **China Airlines, Ltd. (CAL)**.

On the year, cargo skyrockets 142.9% to 102.4 million FTKs and revenues accelerate 150% to \$102.5 million. A \$13.9-million operating profit is reported, along with a net gain of \$3.6 million.

Following its receipt in March 1995, a newly modified B-747-230C begins scheduled service in April under contract to **KLM Royal Dutch Airlines, N.V.** A purchase agreement is concluded with **Alitalia, S.p.A.** during the first half; under its terms, 3 Italian B-747s will be purchased and converted into freighters.

In June, an initial public stock offering of four million shares is made. The lease with **KLM (Royal Dutch Airlines, N.V.)** begins in July and allows the Amsterdam-based major to inaugurate a joint weekly cargo service with **Garuda Indonesia** from The Netherlands to Jakarta.

A B-747-230C is chartered from **Lufthansa Cargo Airlines, A.G.** on October 31 and is delivered to a modification center for changes. The first **Alitalia, S.p.A.** B-747-243BC is acquired and the next day arrives at Hong Kong Aircraft Engineering Co., Ltd. (HAECO) for conversion to Atlas Air standard.

On November 2, Atlas joins with HAECO in announcing their implementation of the largest B-747 freighter-conversion program; under its terms, HAECO will convert 10 Jumbojets for the carrier within the next two years.

Employing a second B-747F wet-leased from Atlas, KLM Cargo introduces twice-weekly services on November 7 from Amsterdam to Penang, Malaysia. On Tuesdays, there are stops at Dubai, Kuala Lumpur, and Jakarta and on Thursdays, at Dubai, Kuala Lumpur, and Singapore.

A five-year agreement is signed with **China Airlines, Ltd. (CAL)** on November 13. The Nationalist Chinese airline pledges to fully utilize at least one Atlas freighter. On November 28, the company sells \$100 million in 12.25% Pass Through Certificates due in 2002. Generated revenues will be employed to purchase an equal amount of equipment notes to pay for the three **Alitalia, S.p.A.** Jumbojet conversions.

A contract is signed with **SAS (Scandinavian Airlines System)** on December 20 for the long-term dedication of a company Jumbojet freighter to services between the U.S. and Scandinavia. A second **Alitalia, S.p.A.** Jumbojet arrives at HAECO on December 31. Also at year's end, the DOT rates the company as a national airline.

A total of 221 million FTKs are operated and revenue statistics show the carrier's exciting growth. Operating income skyrockets 66% to \$171.3 million, while costs are held way down to \$128.6 million. Profits shoot up to \$42.7 million (operating) and \$17.8 million (net).

The employee population stands at 145 in 1996. In January, the carrier receives the annual "Cargo Development Award" from *Air Transport World* magazine. Atlas now serves 44 cities in 24 countries. The modified Lufthansa Jumbojet now enters dedicated service on behalf of **Lufthansa Cargo Airlines, A.G.**, guaranteeing an additional \$25 million in fees to Atlas income.

The two converted **Alitalia, S.p.A.** B-747 freighters join the fleet during the first quarter, along with two on lease, one of which is a B-747-228F subleased from **Cargolux Airlines International, S.A.** and the other is a Dash-128F chartered from **Arkia Israeli Airlines, Ltd.**

In March, one of the new aircraft, painted in full SAS Cargo livery and markings, is dedicated to providing all-cargo services between the U.S. and Scandinavia under the December contract with **SAS (Scandinavian Airlines System)**. Also during the first quarter, **Swissair, A.G.** becomes a wet-lease cargo customer.

The premier unit of four **Federal Express (FedEx)** B-747-245Fs to be acquired under lease this year arrives during the first week of April. A contract is entered into with Langdon Asset Management Co. on May 1 under which Langdon Asset Management, acting as agent, will acquire six B-747-2D7Bs from **Thai Airways International, Ltd. (THAI)** and sell them to Atlas. All will be delivered over the next 18 months and modified by Boeing at Wichita with deliveries beginning in the fourth quarter and continuing for a year.

On June 18, a three-year contract is signed with **Thai Airways International, Ltd. (THAI)**, under the terms of which the American freighter agrees to provide the Thai flag carrier with B-747-200F service. The \$256-million agreement with THAI will commence during the fourth quarter when the newly converted former THAI Jumbojet enters

service. Other foreign airlines with which the carrier holds contracts include **SAS (Scandinavian Airlines System)**, **KLM (Royal Dutch Airlines, N.V.)**, **British Airways, Ltd. (2)**, and **Deutsche Lufthansa, A.G.**

Cargo traffic skyrockets 120.8% to 151.58 million FTKs and operating income also soars, rising 84% to \$315.7 million. Expenses are up only 32.6% to \$227.6 million and leave much larger profits: \$88.1 million (operating) and \$37.8 million (net).

In January 1997 the company purchases a B-747-283BC operated by **Philippine Air Lines (PAL)**. Atlas assumes the lease and sends the aircraft to Wichita for conversion into a freighter. Also during the month, the company receives the annual "Cargo Development Award" from the industry magazine *Air Transport World*.

The company enters into a three-year contract during February with a consortium of Latin American carriers; under its terms, Atlas will provide a wet-leased B-747F to transport their cargo.

On March 15, two contracts with **China Airlines, Ltd. (CAL)** are extended to the year 2001, bringing the value of the agreements to approximately \$150 million.

In June, orders are placed for 10 B-747-47UFs, powered by GE CF6-80C2 engines, for 1998 delivery; options are taken on another 10 Dash-47UFs. Five older B-747Fs are returned to their lessors during July as the carrier writes off \$17 million in related costs. Simultaneously, Atlas is able to post a \$16.6-million gain from prepayment of debt.

Due largely to the costs of the B-747F writeoff, a shuffle of management chairs occurs in October. CEO Mickey Foret resigns and is succeeded by Chairman Chowdry, who assumes the titles of president/CEO.

In November, two more B-747Fs operated by **Philippine Air Lines (PAL)** under lease are obtained after the two carriers negotiate their early return. Once in hand, Atlas dispatches them to Wichita for conversion into freighters.

Although traffic figures are not available, the company reports that its operating revenues have grown by 27% this year to \$401 million. Expenses total \$317.9 million and allow somewhat smaller profits: \$83.1 million (operating) and \$23.4 million (net).

On January 28, 1998, it is revealed that, following an organizing vote, company pilots have rejected representation by ALPA. Early in the year, three of the chartered B-747-245Fs are returned to **Federal Express (FedEx)**.

During the spring, \$539 million of EETC debt financing is arranged for the 5 new B-747-47UFs and another \$325 million of unsecured debt is placed, which will result in the redemption of \$100 million of 12.25% secured Equipment Notes in January 1999.

In June, a long-term agreement is signed with **British Airways, Ltd. (2)** under which a new Atlas B-747-47UF will be flown for the U.K. major. Agreement is reached with Lufthansa Technik, A.G. under which the maintenance subsidiary of **Deutsche Lufthansa, A.G.** will maintain the airline's new fleet of B-747-47UFs.

A long-term agreement is signed with **Cargolux Airlines International, S.A.** on July 16 for the use of the company's second new B-747-47UF as soon as it is delivered.

The first of the new Jumbojets is delivered on July 29 at Everett, Washington, and duly begins flying on behalf of BA in August from London (STN) to Hong Kong.

The second B-747-47UF arrives in early August and is immediately put to work under contract to **Cargolux Airlines International, S.A.** On August 6, the company proudly announces that, based on figures released by the airport, Atlas is now the leading freight carrier at Miami (MIA).

The carrier purchases its 20th Jumbojet freighter on August 10 when it purchases a B-747-228F operated by **Air France**. The plane will be delivered during the first quarter of 1999.

All three B-747-271Cs operated by **Cargolux Airlines International, S.A.** are purchased by Atlas on September 30; it is anticipated that the trio will be operating in the U.S. line's colors by year's end.

On October 6, the carrier enters into a long-term agreement to provide B-747-200F air freight services on behalf of **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Starting right away, Iberia utilizes the

Atlas aircraft to provide scheduled services on its routes with Atlas supplying not only the planes, but the crews, maintenance, and insurance.

The third B-747-47UF is delivered at mid-month and, on October 20, Atlas signs a second contract to provide air freight services for **Cargolux Airlines International, S.A.**

Employing one of the ex-Cargolux B-747-271Cs, Atlas begins to fly transatlantic air freight services at the end of the month on behalf of **El Al Israel Airlines, Ltd.**

A standard aircraft, crew, maintenance, and insurance (ACMI) agreement is signed with **Federal Express (FedEx)** on November 12 for the use of two wet-leased B-747-47UFs on international air freight services. Under terms of the agreement, Atlas will provide FedEx with the aircraft, crew, maintenance, and insurance for airport-to-airport operations.

Under contract to Taylor, Michigan-based Pathfinder Air Resources, a company B-747-47UF brings a record 132.5-ton payload into Detroit (DTW) on November 17 after a nonstop flight from Amsterdam, The Netherlands. The cargo contains auto parts from Pathfinder customers, including various automotive OEMs and their suppliers.

On December 5, in cooperation with Miami-Dade County, the World Relief Corporation, and Catholic Relief, which have collected water, nonperishable food items, medical supplies, and hospital equipment, an Atlas Jumbojet transports 650,000 pounds of relief aid to Managua, Nicaragua, for survivors of Hurricane Mitch. The fourth B-747-47UF is delivered on December 8 and is employed to fly a second relief mission to Managua on December 18; the plane is met by Nicaraguan First Lady Maria Dolores.

A total of 53.57 million FTKs are operated during the year. Revenues increase by 5% to \$422.2 million and the operating profit climbs to \$135.8 million. A net \$46.2-million gain is reported.

On February 22, 1999, the company exercises two of its options to purchase additional B-747-47UF in the year 2000. Two new agreements are signed on February 24. The first concerns a restructuring and continuation of the November ACMI contract with **Federal Express (FedEx)** for the use of two B-747-47UFs. The second provides for the placement of a B-747-245F with **LADECO Chile Airlines, S.A.** under a standard ACMI contract.

On March 9, Miami (MIA) releases a report on cargo traffic. With 208,096 tons, Atlas is clearly the airport's top freight operator; **American Airlines**, with 165,650 tons, is second.

The next day, Alaska's governor, Tony Knowles, has the pleasure of announcing that Atlas has established a new cargo pilot base at Anchorage, one of several bases being set up to serve the carrier's worldwide cargo fleet. Between 35 and 70 pilots and crew members will be stationed in Alaska within the next three months.

On April 8 the company places a B-747-245 under contract with one of its existing customers that had previously been operated under an ACMI contract for **SAS (Scandinavian Airlines System)**.

In an election overseen by the NMB, company pilots vote to join ALPA by a 77% majority, according to results announced at the NMB headquarters on April 26.

A six-month ACMI contract is signed with **Cathay Pacific Airways (Pty.), Ltd.** on July 12 covering the use of a B-747-200F.

Late in the year, the decision is taken to move company headquarters from Golden, Colorado, to Harrison, New York; the carrier's New York (JFK) operation will also be transferred there. Chief Financial Officer Stephen Nevin resigns rather than relocate.

Cargo traffic surges 73.7% during the year to 93.06 million FTKs and revenues double 50.7% to \$637.1 million. Costs rise 20.1% to \$376.59 million, granting a \$187.5-million operating profit. The net gain increases to \$135.8 million.

Airline employment stands at 1,286 at the beginning of 2000, a remarkable 100.9% increase over the past 12 months. In celebration of the millennium, company freighters now begin to wear a new livery that features a slightly larger globe on their tails.

In cooperation with Fundaven Venezuela, a company B-747-47UF transports tons of urgently need supplies into Valencia in early January

to assist victims of the country's December floods and mudslides; water, nonperishable food items, medical supplies, and hospital equipment are on the manifest of this first Jumbojet relief flight.

On March 12, the company approaches Luxembourg-based **Cargo Lion, S.A.** with a proposal that it become the U.S. carrier's European operating arm.

In a move seen as political, the British government, in March, prohibits **British Airways, Ltd. (2)** from renewing its wet-lease of an Atlas B-747-47UF. Another new Dash-400 is accepted on April 25 and is immediately put under ACMI contract with **China Southern Airlines Company, Ltd.**

At the beginning of May, the British government grants British Airways Cargo short-term approval to continue its Atlas B-747-47UF charter; the Jumbojet makes twice-weekly return freight runs from London (STN) to Osaka (KIX) and provides a weekly service to Frankfurt.

The ACMI contract with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** ends on June 30. At the end of the month, the UK government, having reviewed the issues involved, grants permission for BA to wet-lease an Atlas freighter for a full year, allowing it to continue its four weekly roundtrips to Hong Kong from London (STN).

In July, the carrier is able to privately refinance two aircraft loans and a revolving credit facility, thereby saving \$1.3 million in interest payments.

B-747-47UF ACMI flights on behalf of **China Southern Airlines Company, Ltd.** commence on September 15 between Shenzhen and Chicago (ORD).

The first of 3 B-747-300SF (Special Freighters) is received on October 16.

ATLAS AIRLINES: United States (1976). George Wertjes establishes Atlas Airlines at Muncie, Indiana, during early 1976 to provide daily roundtrip scheduled passenger services to Fort Wayne and southeast to Dayton and Cincinnati. Although Piper PA-31-310 Navajo frequencies are inaugurated, they only continue for a few months.

ATLAS AVIATION, LTD. See **KENTING EARTH SCIENCES, LTD.**

ATRUVERA AVIATION: Ulitsa Lensovieta 29, St. Petersburg, 196143, Russia; Phone 7 (812) 291-1178; Fax 7 (812) 108-4855; Code AUV; Year Founded 1994. This military flight detachment, stationed at St. Petersburg, is detailed in 1994 to provide civilian cargo services. K. Dorgovtsov is appointed director general of the undertaking and he begins services with 5 Ilyushin Il-76MDs, plus several Antonov An-124s and An-12s.

Flights continue in 1995–2000. During these years, Aleksander V. Ivanov becomes director general and the fleet shrinks to include 2 Il-76Ms and an Il-76T.

ATS (AIR TRANSPORT SERVICE, S.A.): Zaire (1992–1996). ATS is established at Kinshasa in 1992 to offer regional passenger charter flights to destinations throughout central Africa and to Paris. Revenue operations commence with 3 Aerospatiale Sud-Est SE-210 Caravelle IIIs. Flights cease during the civil war in 1995–1996.

ATS VULCAN, LTD.: Blackbushe Airport, Camberly, Surrey, England, United Kingdom; Year Founded 1975. V. B. Allen forms this small charter and air taxi concern at Blackbushe Airport at Camberly, Surrey, in 1975. Operations begin with a single Piper PA-23 Apache.

In 1994, the business continues, with the fleet enhanced by the addition of 2 Piper PA-31-310 Navajos.

Flights continue in 1995–2000.

ATSA (LINEAS TRANSCONTINENTALES DE AERO-TRANSPORTES, S.A. de C.V.): Mexico (1943–1959). American and Mexican

businessmen organize ATSA, often known as Aero-Transportes, at Monterrey in 1943; the two groups of nationals each contribute half of the 1 million pesos initial capitalization. Based at San Luis Potosi and equipped with a mixed fleet of Stinsons, WACOs, and Vultee V-1As, the carrier launches operations on February 21, 1944. Four Boeing 247Ds are acquired during the summer and, on November 6, flights begin to Brownsville, Texas.

Traffic uncertainties and long delays ensue in 1946–1947; however, by May 1948, Mexican shareholding has been increased to 62% and two DC-3s are added. Additional routes are added, including transcontinental service from Mazatlan to Tampico. With routes out of Mexico City and two services to U.S. boarder towns, ATSA, by 1949, is the nation's third largest carrier. Operations continue apace in 1950 and, on January 9, 1951, express service is started Mexico–U.S.–Canada. A DC-3, with eight aboard, crashes near Blanco on October 8; there are no survivors.

In 1952, the carrier attempts to enlarge its market share by increasing its sphere of influence through a confederation with two other carriers: **ALASA (Aerovias Latino Americanas, S.A. de C.V.)** and **TAJ (Transportes Aereos Jalisco, S.A. de C.V.)**. The combined fleet totals 44 transports; however, only a few are modern. The compact is ended in September as all three carriers recover their assets and resume their independent functions.

The Mazatlan–Tampico route is suspended in 1953. As ATSA fortunes decline in 1954–1955, it comes to rely upon **Mexicana Airlines, S.A. de C.V.** for assistance in marketing, reservations, operations, and maintenance. As an affiliate of the large independent, ATSA begins flying a Monterrey–Brownsville replacement service on behalf of its partner.

In 1959, **Mexicana Airlines, S.A. de C.V.** purchases complete control and merges ATSA into its operation.

ATYRAU AIRWAYS (ATYRAU UNITED AVIATION DETACHMENT): Atyrau Airport, Abyrau, 456017, Kazakhstan; Phone 7 (31222) 31062; Fax 7 (31222) 388585; Code JOL; Year Founded 1996. Atyrau United Aviation Detachment is established at Abyrau in 1996 to provide domestic all-cargo services and rotary-wing aerial work. Viktor V. Plynin and Kommunar A. Kanatov are coleaders and they undertake revenue flights with 1 each Antonov An-24, An-2, and Mil Mi-8.

Flights continue in 1997–2000, during which years the fleet is increased by the addition of 2 more An-24Bs and 2 Tupolev Tu-134A-3.

The marketing name Atyrau Airways is employed beginning in July 1998 when the carrier becomes part of the **Air Kazakhstan** Group.

AUDI AIR: United States (1983–1988). Walter Audi establishes this small commuter named after himself at Fairbanks in the summer of 1983. Outfitted with Piper and Cessna lightplanes, the carrier inaugurates scheduled passenger and cargo flights in October linking its base with Fort Yukon and with Ruby, Galena, Koyukak, Nalato, and Kaltag.

Operations continue apace until the company goes out of business in September 1988.

AUGSBURG AIRWAYS, GmbH: Flughafenstrasse 6, Augsburg, D-86169, Germany; Phone 49 (821) 270 970; Fax 49 (821) 3109 892; <http://www.augsburgair.de>; Code IQ; Year Founded 1995. Based at Augsburg in Bavaria, **Interor Airways, GmbH.** is renamed on November 6, 1995. Interor Expeditions remains the parent, with Haindl Papier a major shareholder. Managing Director Olaf Dlugi oversees a workforce of 165 and a fleet comprising 2 Beech 1900Cs and 3 de Havilland Canada DHC-8-100s, including a DHC-8-106 chartered from **Tyrolean Airways, GmbH.** for the summer. Orders are outstanding for 2 DHC-8-300s. Destinations visited include Dusseldorf, Berlin, Cologne, Bonn, and Florence, Italy.

The new Canadian-made turboprops begin to arrive in mid-1996 and introduce the carrier's new livery. On October 1, Augsburg signs an agreement with **Deutsche Lufthansa, A.G.** becoming the German major's first franchise partner. One each DHC-8-100 and DHC-8-300 are

painted white with the "Team Lufthansa" logo applied to their fuselages. These commence daily service, under DHL flight codes, on October 27 from Munich to Leipzig, Dortmund, and Erfurt.

The workforce is increased a dramatic 64.9% in 1997 to 315. Agreement is reached with **Deutsche Lufthansa, A.G.** in February that the franchise agreement should be deepened to include service to and from Frankfurt. In order to gain slots at that airport, Augsburg must surrender its service to London (LCY) from Cologne and Bonn.

Four-times-a-day "Team Lufthansa" roundtrips commence in March from Augsburg to Frankfurt. On April 7, the German regional inaugurates thrice-daily roundtrips from Munich to Paderborn and daily roundtrips from Munich to Turin. The "Team Lufthansa" DHC-8s will also add weekly flights from Munich to Elba and St. Tropez.

The DHC-8-106 leased from **Tyrolean Airways, GmbH.** the previous summer is again retained for the summer schedule; this time it is repainted in "Team Lufthansa" colors. A total of 20 new routes are added to the network.

As a result of this expansion, passenger boardings skyrocket 112.4% to 308,400.

"Team Lufthansa" flights continue in 1998. A total of 18 German points are visited, along with flights from Munich to both Prague and Turin and from Frankfurt to London (CTY).

Passenger boardings, due largely to these flights undertaken for the German major, skyrocket 86% to 574,292. Revenues skyrocket 100.5% to \$84.83 million.

As a result of the airline's rapid growth, the airline's organization is restructured on January 1, 1999. A number of new positions are created and filled: vice president-financial, Jorg Schwingeler; vice president-operations, Gunther Weiss; vice president-maintenance, Martin Bauer; manager-flight systems, Capt. Adolf Herzner; chief pilot, Paul Stober; and chief cabin attendant Daniela Zolda. In addition, airline employment overall grows by 40.7% to 356.

On February 9, a \$45-million order is placed with Bombardier Aerospace for 3 DHC-8Q-300s to be delivered during the first quarter of 2000. A month later, on March 9, a \$65-million order is sent in for 3 Next Generation DHC-8Q-400s, scheduled for delivery in June and August 2000 and March 2001.

Augsburg, the largest "Team Lufthansa" affiliate, currently serves 43 routes to 23 cities in Germany and niche markets such as the islands of Elba, Corsica, Sylt, and Sardinia.

The chartered **Tyrolean Airways, GmbH.** "Team Lufthansa" DHC-8-106 is employed between June 27 and September 12 to offer Sunday return service from Munich to St. Tropez.

New twice-daily return service is introduced on October 31 from Nuremberg to Zurich, while frequencies on the Nuremberg to Hamburg route are increased from three to five every day.

In an effort to capture some of the 70,000 passengers that take a ferry between Newcastle and Hamburg every day, the company, on November 1, launches daily DHC-8-300 "Team Lufthansa" roundtrips above the sea route. The same day, thrice-daily DHC-8-300 services are introduced from Hamburg to Nuremberg and from Munich to Strasbourg.

Also during the year, a shuttle-bus service is started between the airport and the Augsburg railroad station.

Customer bookings jump 29.8% to 863,544, with 703,281 flown on behalf of "Team Lufthansa." Operating income surges 19.2% to \$91 million.

To cover the late delivery of its new DHC-8-Q300s, Augsburg, on February 1, 2000, signs a wet-lease contract with **Titan Airways, Ltd.** under which the British operator will fly its British Aerospace BAe 146-200 over the German airline's Augsburg–Berlin route until the end of March.

The company's 3 DHC-8-100s are replaced, beginning on March 28, with an equal number of new DHC-8-Q300s. The first of the quiet new turboprops introduces twice-daily "Team Lufthansa" roundtrips from London (LCY) to Munster Osnabruck.

Wearing Augsburg ("Team Lufthansa") colors, a new DHC-8-Q400 is displayed at the Farnborough Air Show in July; the demonstrator makes a post-show tour of Germany in August.

Wearing its own colors, a **British European** British Aerospace BAE 146-300 is wet-leased on November 3 to operate out of the Augsburg base on behalf of "Team Lufthansa."

AUGUSTA-AIR LUFTFAHRTUNTERNEHMEN, GmbH: Augsburg Airport, Augsburg, D-86169, Germany; Phone 49 (821) 700-3147; Fax 49 (821) 700-3153; Year Founded 1995. AAL is set up at Augsburg, Germany, in 1995 to offer executive and small group passenger charters throughout the country and northwestern Europe. Hans Schnedier is general manager and, within 5 years, his fleet includes 4 Beech Super King Air 300s, 1 King Air 90, and 1 Beech 400 Beechjet executive jetliner.

AUGUSTA AIRWAYS (PTY), LTD.: Australia (1980-1997). Formed at Port Augusta Airport, Port August, South Australia, in 1980, Augusta Airways (Pty.), Ltd. undertakes scheduled local service and charter flights to a variety of destinations in southwestern Australia and in eastern and northern South Australia. Among the stops visited by owner Tony and Christine Kingham's carrier are Adelaide, Alton Downs, Arrabury, Bedourie, Birdsville, Clifton Hills, Cordillo Downs, Cowarie, Durham Downs, Durrie, Etadunna, Glengyle, Marree, Moolawatana, Mulka, Port Augusta, and Roseberth. Operations continue apace in 1981-1986.

In 1987, Managing Director Ian A. Kingham's fleet comprises 1 Cessna 402, 1 Cessna 421, 1 Piper PA-31-350 Navajo Chieftain, and 1 Aero Commander 690. A second Chieftain is acquired in 1990. Fleet, employment, and routes do not change in 1991-1992.

The Kingham's fleet in 1993 includes 3 Navajo Chieftains and 1 Aero Commander 690. A schedule of 12 weekly Port Augusta-Adelaide roundtrips continues apace in 1994 and enplanements for the year total 11,500.

Although service continues apace in 1995-1996, no new details are provided. In 1997, Managing Director Christine Kingham oversees a workforce of 42. Flights to the city of Woomera are added. Traffic figures are not provided before the company ceases operations at the end of the year and is merged with **Lincoln Airlines (Pty.), Ltd.** to form **Airlines of South Australia (Pty.), Ltd. (2).**

AURIGNY AIR SERVICES, LTD.: La Planque Lane, States Airport, Forest, Guernsey, Channel Islands, United Kingdom; Phone 44 (1481) 66444; Fax 44 (1481) 66446; <http://www.aurigny.com>; Code GR; Year Founded 1968. In 1967, **British United Airways (Channel Islands), Ltd.**, withdraws its de Havilland DH 114 Heron Guernsey-Alderney service, resulting in a loss of air service to the latter Channel Island. Frederick Morton, chairman of the Harbor and Transport Committee, approaches Sir Derek Bailey, owner of Staverton-based **Glos-Air, Ltd.** (which has just taken delivery of a new Britten-Norman BN-2 Islander) for assistance.

Taking the ancient French name for the island, Bailey's Glos-Air, Ltd. is transformed into Aurigny Air Services, Ltd., at Alderney, in February 1968. Charles Poole is named managing director and Frederick Morton departs his committee to become general manager. BN-2 services are inaugurated on March 1, Alderney-Guernsey. During March and April, two more Islanders are acquired satisfying government requirements for licensure.

During the next seven months, all of the interisland routes are opened for service: Alderney to Guernsey, Guernsey to Jersey, and Alderney to Jersey. A fourth Islander is purchased and the year's passenger enplanements total 45,989.

Another Islander is acquired in March 1969 and on April 1, a no-reservations system is introduced. Traffic increases significantly; on August 8, a record one-day boarding of 632 passengers is reported. Enplanements for the year, reported in the following February, are 150,000.

On January 1, 1970, the former **British United Airways (Channel Islands, Ltd.)** Alderney-Southampton route, abandoned the previous day, is taken over; replacement services are also begun Guernsey-Jersey

and Alderney-Dinard, France. During the summer, interisland flights reach 100 per day. Three BN-2As are added during the year; all, like the earlier aircraft, are presented in a canary yellow and red livery.

The first Britten-Norman BN-2A Trislander is delivered on June 29, 1971 and orders are placed for 6 additional Islanders. When the Trislander enters interisland service on October 1, Aurigny becomes the world's first commercial operator to fly the type. The bright yellow trimotor will even become the star in a series of children's books.

The carrier's fleet by 1972 includes 7 Islanders and 2 Trislanders and during that year services are inaugurated to Cherbourg. Two more Islanders are received in 1973 while 3 more Trislanders are obtained in 1974-1975.

In 1979, Sir Derek Bailey sells Aurigny Air Services, Ltd., to Guernsey-based **Anglo-Normandy Aviation, Ltd.** and J. H. Possnicker is named managing director; however, no obvious service changes are made and the administrative headquarters remains on Alderney. The subsidiary Anglo-Normandy Aeroengineering, takes over the carrier's maintenance and adds revenue through the operation of small plane contract and charter flights under the **Anglo-Normandy Aviation, Ltd.** title. Airline employment stands at 80 and the fleet now comprises 2 de Havilland Canada DHC-6-100 Twin Otters, 6 Britten-Norman BN-2A Trislanders, and 2 BN-2 Islanders. Boardings total 222,285.

Economically unviable, the Twin Otters are removed in 1980-1981. In 1982, 242,251 passengers are carried and in 1983, 234,238. The three-millionth passenger is boarded in March 1984. Craig Nelson is named managing director and the year's boardings jump to 243,394. Airline employment reaches 30 (22 pilots) by 1985 and the fleet includes 2 BN-2 Islanders and 7 BN-2A Trislanders. Enplanements rise to 257,670. In January 1986, a Trislander is given a color scheme sponsored by the Channel Islands' TBS Bank. The Islanders now begin to be withdrawn, even as passenger boardings accelerate to 260,000.

Craig Alexander becomes managing director in 1987 as the company is taken over by Exxtor International (Channel Islands). **Guernsey Airlines, Ltd.** is purchased from **British Air Ferries, Ltd.** and is allowed to operate as a subsidiary. Destinations now served include Alderney, Bournemouth, Cherbourg, Dinard, Guernsey, Jersey, and Southampton.

Two additional Trislanders are acquired and the Islanders are returned to service in 1988. Passenger boardings increase 8.4% to 306,547; one of these is the company's four-millionth passenger (cumulative).

The workforce is increased by 21.6% in 1989 to 124 and **Guernsey Airlines, Ltd.** is sold to the International Leisure Group. Customer bookings inch upward 1.6% to 311,761.

A Shorts 360 is leased from **Maersk Air, A.S.** during the first quarter of 1990. Following the company's 22nd birthday celebration on March 1, the turboprop is employed on April 1 to inaugurate a new route from Southampton to Cherbourg. Flights between Jersey and Guernsey commence in May and the last Islander is sold to **Monseratt Airways, S.A.** in August. Traffic figures show bookings up to 317,695.

The payroll is sliced by 3.5% in 1991 to 122 and the Islanders are again withdrawn as another Trislander, the eighth, takes their place. War, recession, and weather conspire to force passenger boardings down 6.6% to 298,026. Employment inches up 1.5% in 1992, the twenty-fifth anniversary year, to 134 and a ninth Trislander is acquired. A new Royal Mail contract is won, but customer bookings slip 1.3% to 294,136.

In 1993, Managing Director Craig Alexander oversees a workforce of 120 and a fleet of 9 Trislanders and 1 Shorts 360. Scheduled and charter services are provided on inter-Channel island routes and frequencies to Southampton, Cherbourg, and Dinard. Through November, passenger boardings are down 8.5% to 258,701.

Scheduled and charter flights continue apace in 1994, including an overnight mail service for the British post office and air ambulance services to Great Britain from the Channel Islands. Again, traffic figures are reported through November, but this time the picture has improved, up 8.5% to 280,741.

Thirty employees are recruited in 1995 as the company enjoys another good year. In London, meanwhile, the Civil Aviation (Aerial Advertising)

Regulations now officially allow sponsored paint schemes on commercial aircraft. The new managing director, Andrew Round, seizes on the possibility of these rules for his small airline. Passenger boardings through November are up 10.7% to 310,817.

The workforce is increased by 33.3% in 1996 to 200 and the company's fleet includes 10 aircraft. In February, a Trislander is painted as a "logoprop," an advertising concept first advanced by **Western Pacific Airlines (Westpac)** in the U.S. and made legal by the previous year's civil aviation regulations. Sponsored by the Royal Bank of Scotland International, Ltd., it is named *Nessie*, after the Loch Ness monster, a cartoon image of which is portrayed on the front of the fuselage. The bank pledges that, for every passenger carried by *Nessie* by December, it will make a donation to the "Save the Children" fund.

Three more commercial concerns now approach Managing Director Round's carrier in search of sponsoring aircraft liveries: Hambros, a Channel Islands-based financial group; ITEX, a computer consultancy; and Steeple Finance. During this year, Aurigny transports a total of 310,106, a decline of 6%.

The workforce is cut 25% in 1997 to 150. A fourth corporate-sponsored aircraft color scheme is unveiled in March—a Trislander painted in the blue and white livery of Islands Insurance and christened *Polly C*. Customer bookings fall 4.7% to 295,602.

During the spring of 1998, a fifth corporate-sponsored aircraft color scheme is revealed, a brown and beige livery applied to a Trislander on behalf of Mercury Asset Management.

Passenger boardings during the 12 months slide 10.1% to 266,000, while 55,000 FTKs are also operated.

On March 19, 1999, the company is granted route authority to serve the island of Guernsey from London (STN). The decision comes as a major surprise to **Jersey European Airways, Ltd. (JEA)**, which had recently committed larger aircraft and additional services to Guernsey after the sudden withdrawal of **KLM U.K., Ltd.**

Correspondent Nick Mollet reports in the April 15 issue of the *Guernsey Press* that JEA will not appeal to the Royal Commission against the decision to grant Aurigny a conditional license to operate from the island to London (STN). Aurigny Managing Director Andrew Round tells Mollet that his company will take on up to 20 additional workers. He also announces that, from the end of the month, Aurigny will operate two SAAB 340As, one dedicated to serving a route from Guernsey to London (STN) and the other from the island to Amsterdam.

Leased from **Danish Air Transport, A.S.**, the first SAAB 340A arrives on Guernsey from Southend on May 21, with the second scheduled to be delivered in August. For the next two weeks, it undergoes trials on the new route to England. During the same period, the airline and the *Guernsey Press* sponsor a contest whose first prize is a weekend for two in London, including accommodation and tickets to a West End show.

Thrice-weekday and twice-weekend SAAB 340A roundtrips commence on June 4 between Guernsey and London (STN). On July 1, daily service begins to Amsterdam.

Passenger boardings climb 6.4% to 300,000, while 38,000 FTKs are operated.

Complementing the previous year's launch of service to Stansted and Amsterdam, the carrier, on March 22, 2000, begins SAAB 340A flights from Guernsey to Manchester.

The company and its sister, Anglo Normandy Aeroengineering, Ltd., are sold by the Exeter Group in June to the Close Brothers, plc, a private equity group. A new holding company, Aurigny Anglo Aviation, Ltd., is formed to control the carrier and the tech firm; ex-**Fairflight, Ltd.** Former **Gill Airways, Ltd.** Managing Director Malcolm Hart succeeds Andrew Round as Aurigny's new managing director.

The change of ownership does not impact the "LogoProp" program, as another Trislander is unveiled in August wearing advertising for the Jersey-based financial concern Quilter & Co., Ltd.

AUS-AIR (PTY.), LTD.: Australia (1956–1999). Privately owned **Australian Air Charters (Pty.), Ltd.** is formed at Mentone in 1956 to

offer passenger and cargo charters throughout Victoria. Flights are undertaken with a Percival Proctor Mk. 111 from Melbourne's Moorabbin Airport and several Tasmanian points. G. William "Bill" Dart and Jack Mills purchase the company in 1959. In October 1960, Mills sells his share to Dart, who upgrades to a Cessna 172B, later a 182E, and begins to seek airline business under the name **Dart Air**.

Following receipt of contracts from the Peter McCallum Institute and the State Electricity Commission of Victoria, Dart is able to add staff and aircraft and open a headquarters at Moorabbin Airport. Employing primarily Cessna equipment, the small, nonscheduled operation achieves contracts with **Trans-Australian Airlines (Pty.), Ltd.** for the transport of night freight and with Esso-BHP to ferry Bass Strait drilling crews to Sale. The transport of daily newspapers to Canberra is also begun as operations continue apace for the next 20-odd years.

By the middle 1980s, the fleet comprises 2 Piper PA-31-350 Navajo Chieftains, 2 Piper PA-31-310 Navajos, 1 GAF Nomad N.22, 1 Piper PA-34 Seneca, and 1 Piper PA-23 Aztec. Following the government's 1983 decision not to renew its long-standing two-airline policy, Dart elects to establish a full-fledged, nonaligned regional passenger airline. Two Embraer EMB-110P1 Bandeirantes are ordered and a computer-based reservation system is developed, based upon that operated by TAA. Service is inaugurated to Smithton in northwest Tasmania in 1986, followed by flights in 1987 to the Tasmanian communities of Devonport and Wynyard.

In 1988, the company is reorganized and the present name is adopted. The fleet comprises 1 Beech 55, 1 Beech 58, 1 Piper Aztec, 2 Piper Navajos, and 4 Navajo Chieftains. Upon the arrival of the 2 Brazilian turboprops, scheduled services are introduced to King Island. Launceston is added to the route network in 1989 and enplanements total 72,000.

The Beech equipment and Aztec are replaced in 1990 by 2 more Chieftains and 3 Embraer EMB-110s. Without affiliation, the airline in October is denied use of the passenger terminal at Launceston Airport. Recession causes passenger boardings to drop to 61,000. Revenues total \$A4.73 million, but costs bring an \$A353,000-net loss. One Bandeirante is withdrawn in 1991 as enplanements plunge to 24,924. Revenues slide to \$A3.91 million and the net loss is cut to \$A83,000.

An additional Chieftain is acquired in 1992 and passenger boardings climb 1.8% to 26,450. Revenues total \$A3.67 million, but a net profit of \$A80,000 is generated. In 1993, Managing Director Dart oversees 48 employees and a fleet of 7 Navajo Chieftains, 2 Navajos, and 1 Bandeirante.

Operations continue apace in 1994; however, two Chieftains are withdrawn. Enplanements for the year total 26,702. An Embraer EMB-110 Bandeirante is acquired and service continues apace in 1995.

A second Brazilian-made Bandeirante joins the fleet in 1996.

Destinations visited from Melbourne and Moorabbin in 1997–1998 include Burnie/Wynyard, Devonport, Flinders Island, King Island, Launceston, Merimbula, and Smithton.

Unable to maintain its fiscal viability, the company is shut down in July 1999.

AUSTIN AIRWAYS, LTD.: Canada (1934–1987). The charter and contract services operator **Capreol and Austin Air Services, Ltd.** is formed at Toronto as a partnership by Jack and Charles Austin on March 1, 1934 to provide on-demand flights to northern Ontario and Quebec.

The partnership is dissolved and Jack Austin incorporates Austin Airways, Ltd. at Toronto on May 22, 1935. Operations are started with 1 de Havilland DH 82A Tiger Moth and 2 WACO biplanes to Lake Ramsay, near Sudbury; **Eclipse Airways, Ltd.** is acquired and merged.

Although the head office remains in Toronto, the base of operations is shifted to Sudbury in 1938. Four years later, in 1942, a base is founded at Nakina and flights begin to Lansdowne House, Fort Hope, and Ogoki Point. Another base is established at South Porcupine in 1943 to serve the Timmins region. Another base is set up at Moosonee/Moose Factory in 1944 and scheduled flights are initiated.

The first Douglas DC-3s enter service in **1952** along with a Consolidated PBY-5A Canso flying boat. **Nickle Belt Airways, Ltd.**, also based at Sudbury, is purchased and merged. The carrier in **1953–1957** participates in hauling supplies and personnel during the great mid-Canada construction airlift flown in support of the DEW Line.

A pair of Douglas DC-3s join the fleet, one each in January 1956 and January 1957. In **1958–1960** a scheduled service is offered over a Timmins–Rouyn–Noranda route, but is suspended for lack of regular traffic. The second DC-3 is sold in April 1959.

During **1961–1973** the fleet grows to include some 23 small aircraft, plus 6 DC-3s and 2 Consolidated PBY-5A Cansos; the latter are modified into waterbombers and fly forest fire-fighting missions.

A variety of charter and contract services are maintained, including aerial survey and photography, cargo, and forest fire reconnaissance. A number of aircraft are lost in operational accidents.

One DC-3 with two crew is withdrawn following a nonfatal January 9, 1964 crash near Rupert River, Quebec.

On initial approach to Timmins on a November 9, 1969 flight from Winisk in bad weather, a DC-3 with two crew and four passengers crashes two miles short of the runway (two dead). A third is lost in a crash at the Quebec city of Val d'Or on June 19, 1970.

Austin Airways, Ltd. is acquired by Stanley Deluce and his family and merged into their **White River Air Services, Ltd.** in **1974**; the more familiar Austin Airways, Ltd. name is retained as the company title. Enplanements for the year reach 32,500. A DC-3 and a de Havilland Canada DHC-6-300 Twin Otter are acquired in March and July **1975**. Passenger boardings soar 50% to 75,000.

A second DHC-6-300 is acquired in April **1976**. The first of two Hawker Siddeley HS 748s to be delivered on the year arrives in May and enters service in June. The second is delivered in December.

A DC-3 with two crew and six passengers aborts its takeoff from Fort George, Quebec, on December 10 and crashes; there are no fatalities even though the Douglas is damaged beyond repair.

The last 3 DC-3s having been withdrawn, the fleet in **1977–1978** comprises 4 HS 748s, 2 Cansos, 6 DHC-6-300s, 1 Cessna Citation, 1 Cessna 402, 2 Cessna 337s, 3 Avro Ansons, 5 DHC-3s, 10 DHC-2s, 5 Cessna 185s, and 2 Cessna 180s.

Hooker Air Services, Ltd. and **Ontario Central Airlines, Ltd.** are purchased and merged in **1979**.

While being checked on the ground at Moosonee prior to departure on July 15, an HS 748-2A freighter with a cargo of 1,600 Imperial gallons of avgas, explodes and is destroyed in a rapidly spreading fire; both pilots are able to escape an instant before a fireball erupts.

Coming in from Pickle Lake on November 1, Flight 607, a DHC-6-300 with two crew and a passenger, strikes the NDB tower at 126 ft. and crashes into Big Trout Lake; there are no survivors.

By **1980**, the route network has been increased to 27 Ontario stops plus Rupert House, Quebec and points in the Northwest Territories. A contract is accepted to operate DHC-6s from Timmins to Cochrane via Sudbury and Kapuskasing, for **NorOntair, Ltd.** Bell Canada, Ltd. contracts for the operation of a Twin Otter service to and from Pickle Lake. Three HS 748s (complete with maintenance and crew training contracts) are provided to the Danish carrier **Maersk Air, A.S.** under lease. A new HS 748 is acquired in December.

In July **1981**, Austin Airways, Ltd. begins the provision of air ambulance service for the Ontario government under the title "Bandage 4." Thunder Bay-based **Superior Airways, Ltd.** is purchased, but is briefly allowed to continue operations under its own name while providing its new owner scheduled access to Minneapolis. Another HS 748 is purchased in September.

The Deluce family now establishes the holding company Delpex Holdings, which takes 50% interest in another airline, **Air Ontario, Inc.** At year's end, airline employment stands at 370 and the fleet's main components include 9 HS 748s, 5 DC-3s, and 11 DHC-6s.

Austin Airways, Ltd. becomes associated with **Air Inuit, Ltd.** and **Air Creebec, Ltd.** in **1982**, providing the affiliates with technical support

and commuter routes in northern Ontario, Quebec, and the Northwest Territories. An HS 748 is sold to **Eastern Provincial Airways, Ltd.** in April and a DHC-6-300 to Air Creebec in October.

While landing at Landsdown House in a snowstorm on November 23, **1983**, a DHC-6-300 with two crew and five passengers touches down short of the runway, causing the collapse of the nose- and right-landing gears; the aircraft catches fire and four passengers are killed.

The fleet grows during **1984–1985** to comprise 11 HS 748s, 10 DHC-6s, 3 Beech 99s, 3 DC-3s, 6 Cessna 402s, and 1 Cessna 310. The employee population rises to 330. The scheduled services of **Torontair, Ltd.** are taken over by Canada's oldest operator, linking Toronto with Belleville, Kingston, and Elliot Lake.

In order to improve its feed, **Air Canada, Ltd.** acquires 75% control of Delpex Holdings and its two airline subsidiaries in October **1986**. Austin is merged into **Air Ontario, Inc.** in **1987** Up until that point, it was the oldest continuously operated airline in Canada.

AUSTIN EXPRESS: 1901 East 51st St., Suite 210, Austin, Texas 78723, United States; Phone (512) 236-1110; Fax (512) 236-1110; <http://www.austinexpress.com>; Code 7V; Year Founded 1998. Austin Express is established on January 1, **1998** and on January 5, employing a pair of Fairchild Metroliners, begins daily weekday roundtrips to Beaumont and Tyler. The new commuter aims to provide convenient service for local business travelers who want to conduct out-of-town business and return home the same day.

A new schedule is issued on July 6 and plans are announced for expansion in the coming months to Corpus Christi, San Antonio, McAllen, Abilene, and San Angelo. To acquaint potential customers with upcoming events, a homepage is opened during the fall on the Internet's World Wide Web.

Enplanements for the year total 8,000.

Customer bookings for **1999** fall 11.7% to 7,000.

By mid-April **2000**, the company is operating one roundtrip route, Austin to Tyler, Texas, six times a day. Work progresses on returning a grounded Metro II to service.

Delayed for some months, flights to Corpus Christi commence on July 5.

AUSTRAL AIRLINES (AUSTRAL LINEAS AEREAS, S.A.): Avda Corrientes 485, 9 Piso, Buenos Aires, 1398, Argentina; Phone 54 (1) 340-7800; Fax 54 (1) 317-3992; <http://www.austral.com.ar>; Code AU; Year Founded 1955. Aerovias Monder, S.A. is formed at Buenos Aires on December 14, **1955**. With backing from the industrial concerns of Luis de Ridder and Menendez Behety, Aerovias Monder, S.A. is renamed **Austral** (Compania Argentina de Transportes Aereos, S.A.) and is registered under that name on June 23, **1957**. The fleet is outfitted with several Douglas DC-3s acquired during the fall, as well as a Curtiss C-46 Commando *Caiquen* purchased for \$120,000 from L. B. Smith Aircraft. Nonscheduled Curtiss C-46 charter services to Miami begin during the summer of **1958** and 2 Curtiss CW-20Ts are acquired for \$270,000 each.

On January 1, **1959**, twice-daily CW-20T flights commence from Buenos Aires to Commodoro Rivadavia via Bahia Blanca and Trelew. Twice-weekly service to Rio Gallegos will soon follow. On January 16, a C-46A with 5 crew and 47 passengers crashes off Mar del Plata while landing (51 dead) and on May 15, a DC-3 plunges into the Atlantic in the same area (10 dead).

The Rio Gallegos route is extended to Puente Arenas in November **1960**. An attempt to merge with financially troubled **Aerotransportes Litoral Argentina, S.A.** is abandoned when the Argentine government elects to provide it with a subsidy. When **Transcontinental, S.A.** ceases operations on November 8, **1961**, its routes, aircraft, and personnel are taken over. Enplanements for the year total 128,000.

The government decree of early **1962** acknowledges the 1961 consolidation with Transcontinental. Fortunes, however, decline; in the spring, employee salaries cannot be paid for lack of income. In October, a lease

is arranged with **Pan American World Airways (1)** for use of its first DC-6B, *Clipper Liberty Bell*, when it comes off a two-year charter to **Capital Airlines/United Air Lines**.

To keep the carrier afloat, the government in early 1963 grants it a 53-million peso subsidy. Enplanements decline to 71,000. During 1964–1965, the government subsidy increases to 54 million pesos. **Pan American World Airways (1)** now takes a 22% interest and replaces the company's C-46s with 11 Douglas DC-6Bs, beginning with the *Clipper Liberty Bell* now re-registered.

In 1966 the airline begins a program of cooperation with its rival, **ALA (Aerotransportes Litoral Argentina, S.A.)**, which appears to be almost a merger. Austral takes a 30% interest in ALA and leases several C-46s to it. Railway mail contracts are received in another government move to increase funding.

Decree No. 17,285—The Código Aeronautico—is placed into effect in 1967 establishing a balance between **Aerolinas Argentinas, S.A.** and Austral-ALA. In June, joint orders are placed for 4 BAC 1-11-420ELs. The first of the British-built jetliners arrives from the U.K. on October 12, followed by the second on November 8. At the end of the month, the first jetliner inaugurates BAC scheduled services in South America, flying a trunk route down the Patagonian coast previously operated by DC-6Bs.

The second BAC 1-11-420EL enters service in January 1968, with the other two joining the fleet on September 24 and December 17. Also in December, a BAC 1-11-408EF is leased for two months from **Channel Airways, Ltd.** Orders are placed for 3 BAC 1-11-521s.

The fleet is further enhanced in 1969 by the addition of 3 Nihon YS-11A-300s and 3 BAC 1-11-521s, the latter delivered at the beginning of November.

During a domestic flight on November 8, Argentinean L. Posadas Melgarejo hijacks one of the BAC 1-11-521s. Although he initially threatens to shoot a child if he is not immediately flown to Havana, he is, however, persuaded to surrender during a refueling stop at Montevideo, Uruguay.

Having lost its No. 1 engine while climbing away from Buenos Aires on December 17, a C-46A with two crew makes an emergency landing in a small sports field; there are no fatalities.

SADIA, S.A. (Transportes Aereos) leases a BAC 1-11-521 for eight months beginning in September 1970.

The inclusive-tour subsidiary **SolJet, S.A.** is formed on January 1, 1971 and begins DC-6B service to Lagos del Sur on January 29. On March 26, Austral and ALA merge to form the Austral Airlines as of April 1, and the amalgamation is recognized by government decree on May 10. Meanwhile, the BAC 1-11-521 chartered to **Sadia, S.A. (Transportes Aereos)** is returned in April and is almost immediately sold to **Court Line Aviation, Ltd.**

Capitalization is increased to AP15 million. The fleet now comprises 4 BAC 1-11-420ELs, 2 BAC 1-11-521s, and 2 YS-11A-300s from Austral, and 4 BAC 1-11-420ELs, 3 BAC 1-11-521s, and 2 YS-11A-300s from ALA. The original C-46 *Caiquen* is the only 1 of 16 Commandos employed over the years to remain in service.

The DC-6Bs are now withdrawn, including the former **Pan American World Airways (1)** *Clipper Liberty Bell*, which is sold to **Inair Panama, S.A.** The regional routes to Bolivia, Chile, and Uruguay are integrated along with domestic services.

The unduplicated route mileage in 1972 is 30,000. On August 16, having escaped from a prison in the southern part of the nation, 10 Argentine political extremists hijack Flight 811, a BAC 1-11-521 with 96 aboard and en route from Trelew to Buenos Aires. They force it to land in Santiago de Chile, seeking political asylum in return for release of the passengers and crew, but surrender when given an ultimatum by the Chilean army. Ten days later, the pirates are given permission to take off for Havana aboard a **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** airliner.

A general agreement is signed with **Aerolineas Argentinas, S.A.** on December 1; feeder routes are divided between the two carriers and trunk lines pooled.

Despite withdrawal of service to Bolivia and Chile, Austral's domestic services provide two years of solid profits in 1973–1974, by which time the old **ALA (Aerotransportes Litoral Argentina, S.A.)** has been fully integrated. The BACs are now given an all-white color scheme, with a six-tone "color band" in green, orange, or lilac along their fuselages.

On October 10, 1973, a BAC 1-11-420EL with 49 aboard is commandeered by four pirates while on a flight from Buenos Aires to Salta. The aircraft is diverted to Tucuman, where the hijackers ask for a smaller plane for a flight to Cuba and release all but 11 hostages. The government at first refuses to grant the demand, but relents after the last passenger is released.

A BAC 111-521FH with 6 crew and 68 passengers fails its takeoff from Bahia Blanca on December 4, 1973, and attempts an emergency landing. Uniquely, the Argentine Navy has placed an arresting cable across the 950-m. runway to stop incoming A-4s and the jetliner attempts to employ the landing cable. When the BAC pushes into the restraint, it snaps, puncturing a fuel tank. Although a spark causes the fuel to ignite, the plane is not burned out until after all aboard are safely evacuated.

The **British Caledonian Airways, Ltd. (BCAL)** BAC 1-11-509 *Isle of Iona* is chartered for three months during the winter of 197–1974. It will be purchased by Austral a year later, along with the DASH-501 *Isle of Staffa*.

Revolution and depression bring increased government regulation and chaos in 1975–1977—route terminations, concession cessations, and a modification to the tariff structure.

On August 11, 1977, a chartered BAC 1-11-420EL with 79 persons aboard, most of whom are on honeymoon or vacation, crashes near San Carlos de Bariloche (45 dead).

An effort to promote sales is made with the introduction of a new BAC livery; the "color band" shades are changed to blue, green, red-orange, and brown.

On January 27, 1978, during replenishment of the oxygen system aboard a BAC 1-11-420EL at Buenos Aires, a fire breaks out which very nearly destroys the jetliner.

To make up for the capacity lost over the last six months, the company, in April, leases a pair of former **American Airlines** BAC 1-11-401s. The "color band" paint scheme is changed again; the BACs are again shown in white, with red and blue cheatlines. Enplanements total 961,863.

Orders are placed for 2 DC-9-51s that are placed in service during 1979. The C-46 *Caiquen* is withdrawn in July and passenger boardings for the year soar 34.1% to 1,459,580 and freight traffic climbs 13.4%.

The government takes control of the airline in 1980 when the company's private owners encounter terminal financial difficulties. One of the leased BAC 1-11-401s is returned in October. Five additional DC-9-80s are ordered; however, increased fuel prices and recession cause bookings to drop to 1 million.

Two MD-80s (MD-81s) are delivered on January 8, 1981. The second leased BAC 1-11-401 is returned during February.

Having arrived at Rio de Janeiro after a flight from Tucuman on May 7, Flight 901, a BAC 1-11-529FR with 5 crew and 26 passengers, is placed into a holding pattern after two missed approaches; the aircraft is unable to maintain its hold and crashes into the River Plate. There are no survivors.

Enplanements for the year are level at 1,054,000.

Two MD-83s are placed in service during 1982–1983. Bookings advance slightly to 1,124,000 in 1982, but drop to 1.1 million in 1983.

Daily service continues to link 21 domestic destinations in 1984 as bookings swell to 1,287,728. The workforce in 1985 totals 1,700 and the fleet includes 8 BAC 1-11-500s and 3 MD-80s. Passenger boardings dip 6.6% to 1,208,000 and cargo is off by 6.2% to 80.4 million FTKs.

The payroll is increased by 11.8% in 1986 to 1,900 as the government begins the privatization of the carrier. An MD-81 with 30 aboard crashes during a thunderstorm while on approach to Buenos Aires on May 7; there are no survivors. Customer bookings increase 20.6% to 1,457,000 and freight jumps 19.3% to 95.94 million FTKs.

One hundred more employees are hired in **1987** for a 5.3% boost. After seven years of government control, the company is completely restored to private hands by year's end, being acquired by the Cielos del Sur holding company for \$20 million. Amadeo Riva is chairman, with Nestor Fania Bouvier becoming the new president. Although passenger boardings dip 2.9% to 1,414,000 (35% of Argentine domestic traffic), cargo climbs 11.4% to 15.18 million FTKs.

Employment at the newly reprivatized airline grows 3.1% in **1988** to 2,057 and the fleet now includes 11 jetliners: 2 McDonnell Douglas MD-83s, 1 leased MD-81, and 8 BAC 1-11-500s. Orders are placed for 3 MD-82s, with options on 3 more. A modernization program is unveiled which includes new uniforms, redone aircraft interiors, and beefed-up in-flight menus.

The company joins IATA in May and begins to lobby the government for international authority.

While on final approach to Posadas in fog on June 12 after a service from Resistencia, the leased MD-81 with 6 crew and 16 passengers goes off course, strikes a treeline, crashes, and catches fire; there are no survivors.

The lost aircraft is replaced with an MD-82, leased, for six months beginning in September, from **Martinair Holland, N.V.**

Customer bookings continue to plunge, dropping 15.4% to 1,215,811, while freight dips 5.1% to 14.42 million FTKs.

In **1989**, a pair of MD-82s are leased, one each from **Adria Airways** and **Martinair Holland, N.V.** Following the privatization of Aerolineas Argentinas in **1990**, a consortium led by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** acquires 70% majority shareholding during the second quarter of **1991**. The MD-82s are returned in the summer and are replaced by two MD-83s chartered from the Spanish flag line. Operations continue apace in **1992** and the fleet receives another leased MD-81.

The workforce totals 2,000 in **1993** as services continue over the company's 27-point Argentine domestic route network. Through July, enplanements total 641,500. The feeder **Inter Austral, S.A.** is established.

Airline employment is cut by 100 positions in **1994**, down to 1,900, and the fleet now includes 7 leased DC-9-32s, 2 chartered MD-81s, and 3 leased MD-83s, including 1 from **Aerolineas Argentinas, S.A.** Three BAC 1-11-518FGs are up for sale. Passenger boardings for the first half of the year increase by 26.1% to 868,064 but freight drops 24.8% to 2.74 million FTKs.

There is no change in the workforce during **1995**. The company's 15 aircraft, through June, transport a total of 867,047, down 0.1% over the same period a year earlier. Cargo, on the other hand, increases by 8.5% to 2.97 million FTKs. At the end of the year, the subsidiary **Inter Austral, S.A.** is renamed **Austral Express, S.A.**

The employee population remains unchanged in **1996**.

Markets now visited include Bahia Blanca, Buenos Aires, Cordoba, Mar del Plata, Mendoza, Montevideo, Neuquen, Rio Gallegos, Rosario, and Tucuman. The operations of **Austral Express, S.A.** are largely absorbed, leaving it with just one route, Buenos Aires to Rosario.

For the whole year, customer bookings are up a welcome 14.4% to 991,997, but freight is down, by 12.1%, to 2.61 million FTKs.

The fleet in **1997** includes 7 DC-9-32s, 3 MD-83s, 2 MD-81s, and 2 CASA CN-235s. Electronic ticketing is introduced in January in certain markets served from Buenos Aires.

Andes Holding, S.A., the parent via the holding company Interinvest of **Austral** and **Aerolineas Argentinas, S.A.**, which is held by Bankers Trust, Teneo, and Merrill Lynch & Co., announces in February that it will consider offering for sale its total shareholding in both airlines (an 89% stake in the former and a 63.5% stake in the latter). Although no official announcement is made, **VASP Brazilian Airlines (Viacao Aerea Sao Paulo, S.A.)** quietly places a \$300 million bid.

A wide-ranging new strategic partnership between **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** and **American Airlines** is tentatively concluded at the end of July. Under its terms, AMR Corporation would acquire a 10% stake in Iberia's owner, SEPI, which also

controls the Argentine carriers **Aerolineas Argentinas, S.A.** and **Austral** and lead an effort to find additional investors who will purchase up to 35% additional shareholding. In addition, Iberia and American will begin to share codes on flights from Spain to the U.S. and link their frequent flyer programs.

In South America, **American Airlines** establishes reciprocal frequent flyer arrangements with both **Aerolineas Argentinas, S.A.** and **Austral** and code-shares on certain of their internal routes. Meanwhile, the U.S. major's almost-partner **British Airways, Ltd. (2)** and Iberia discuss a 10% equity stake for the U.K. flag carrier as well as a strategic partnership with the usual frequent flyer program linkage and code-sharing on routes between Madrid and London. Significant opposition quickly materializes from **Continental Airlines** and **United Airlines**, which fear not only an AA-BA linkup, but the potential domination of Latin American routes by American as well.

Traffic figures are released through July and show a 5.4% increase in passenger boardings to 1,045,000. Freight, however, plunges 37.5% to 1.63 million freight FTKs.

On October 10, Flight 2553 on a flight from Posadas, approaches Buenos Aires' Jorge Newberry Airport during a violent storm. The DC-9-32 with five crew and 69 passengers plunges 24,000 feet into a swamp on the banks of the Uruguay River, near the town of Fray Bentos, hitting at a 70-degree angle. The wreckage is found next day and there are no survivors.

Late in the year, another DC-9-32 appears wearing the telephone number for electronic ticketing painted in billboard-sized titles along its fuselage sides. Also, documents are signed that will allow American Airlines' parent AMR Corporation to purchase 10% of the holding company Interinvest, which owns both **Austral** and **Aerolineas Argentinas, S.A.**

Flights continue in **1998**.

While landing at Buenos Aires after a January 4 service from Resistencia, Flight 2547, an MD-83 with 70 passengers, skids off the runway in bad weather; no injuries are reported.

The American Airlines investment in Interinvest receives government approvals all around in the first half of the year.

On October 8, Manuel Ribeck, a partner in a Chicago-based law firm, files a \$378-million lawsuit against the airline and its insurers on behalf of the families of all of the passengers killed in the previous year's disaster at Buenos Aires.

Shareholders in Interinvest approve the acquisition on October 24. AMR Corporation completes its purchase of a 10% stake in Interinvest on November 3 and thereby gains 8.5% ownership of **Aerolineas Argentinas, S.A.** and 9% of its regional affiliate **Austral**. Although U.S. regulators rule that neither **American Airlines** nor its parent may take any direct control over either carrier, that matter is mooted when Aerolineas appoints its new management team. American's former managing director for Argentina, Diego J. Cousino, becomes CEO, with its former managing director of international planning, C. David Cush, as chief operating officer.

A \$120-million, 10-year contract for its information technology functions is signed by **Aerolineas Argentinas, S.A.** on November 17 with the SABRE Group. The contract also calls for the SABRE group to provide specialized information technology services to **Austral**.

Enplanements for the year total 1,221,000 while 3,112,000 FTKs are operated.

Plans to integrate the carrier into **Aerolineas Argentinas, S.A.** are shelved during the spring of **2000** pending determination of the parent's fate. As a result, the five leased former **Air France** B-737-228As that begin to arrive at the end of March all wear **Austral** colors. As they enter service, they replace the ex-Iberia DC-9-32s, the first two of which are withdrawn and sold for scrap on June 14.

On October 13, SEPI and the government of Argentina reach an accord on future financing for the carrier and its **Aerolineas Argentinas, S.A.** parent. The Spanish holding company agrees to invest another \$650 million while Argentinean authorities pledge to provide whatever amount is required to maintain the nation's 5% stake. On the other hand,

significant additional cost-cutting remains to be implemented and three of the carriers' six employee unions, fearing job cuts and salary reductions, are already on record as being against the terms of this bailout.

AUSTRAL EXPRESS, S.A. See **AUSTRAL AIRLINES (AUSTRAL LINEAS AEREAS, S.A.); INTER AUSTRAL, S.A.**

AUSTRALASIAN JET CHARTER (PTY.), LTD.: Hangar 31, Essendon Airport, Bristol Street, Victoria, 3041, Australia; Phone 61 (3) 9379-6999; Fax 61 (3) 9379-5949; Year Founded 1989. This charter and executive air service is established by the Lamb family at Essendon Airport in 1989, under the direction of Chairman/Managing Director Alistair Lamb and Director General Andrew Lamb. General Manager Michael Bartlett recruits a workforce of 25 and operates a large fleet that includes 2 Cessna 404 Titans and 1 each Beech 58 Baron, Beech 76 Dutchess, Cessna 310, C-340, C-500 Citation I, Piper PA-31-310 Navajo, and PA-31T Cheyenne.

Operations continue apace during the 1990s. In 1993, the sister company **Independent Air Freighters (Pty.), Ltd.** is also set up at Essendon and begins domestic all-cargo charters with a pair of leased Douglas DC-9-33Fs.

AUSTRALIA-ASIA AIRLINES (PTY.), LTD.: Australia (1989-1996). Formed as a wholly owned subsidiary of **Qantas Airways (Pty.), Ltd.** in 1989, Australia-Asia is created to avoid the diplomatic prohibition placed upon the flag line's previous service to Taiwan. Because of political difficulties, the new entrant does not immediately begin revenue services.

In fact, it is not until mid-1991 that Chairman John F. Ward and General Manager Roger Parks lease a Boeing 767-338ER from the parent. On November 10, scheduled flights are initiated to Taipei from Sydney, followed by Brisbane. The service is the first to be offered direct from Australia to Taiwan and cuts 2 hours off the next shortest connection via Hong Kong. Traffic figures will not be released.

Successful operations continue in 1992-1993. On March 25, 1994, the B-767-338ER is replaced by the Boeing 747SP-38, the *City of Gold Coast-Tweed*. The *City of Traralgon*, another B-747SP-38, is chartered from the parent on April 18. Each will undertake one weekly 8-hr. 45-min. roundtrip flight from Sydney to Formosa. Enplanements for the year total 83,972 and a total of 20.7 million FTKs are carried.

When **Qantas Airways (Pty.), Ltd.** is privatized in 1995, the need for the artificial airline largely ends. The political implications of a private company dealing with Taiwan are viewed differently in Beijing from those of a state corporation. As a result, the exclusive business of Australia Asia with the Republic of China winds down.

The *City of Gold Coast-Tweed* and *City of Traralgon*, repainted in Qantas colors, are returned to the parent organization on June 27, 1996. The company remains in low-key operation, maintaining its listing in the directories published by Macmillan, *Flight International*, and other concerns. It will be folded back into its parent before the end of the year.

AUSTRALIAN AERIAL SERVICES (PTY.), LTD.: Australia (1924-1934). Early in 1924 AAS is formed at Sydney as a subsidiary of the Larkin Aircraft Company, Ltd. On June 2, Capt. Frank Roberts, flying a Sopwith Wallaby, begins to transport mail from Sydney to Adelaide. Later in the summer, a Sopwith Antelope and two Sopwith Gnus are placed in service. The first de Havilland DH 50 employed in Australia is placed on the Sydney-Adelaide service in early November.

The Sydney-Adelaide service is opened for DH 50 passengers on January 1, 1925. The Cootamundra-Sydney segment of the route is withdrawn on July 19 and replaced two days later with twice-weekly frequencies from Broken Hill-Mildura and Melbourne-Hay. Services are maintained with little change in 1926-1929.

Weekly flights from the **QANTAS (Queensland and Northern Territories Aerial Services [Pty.], Ltd.)** Camooweal stop to the Northern Territory town of Daly Waters are inaugurated on February 19, 1930;

here the mail is put on a truck and sent by road to Birdum from where it is dispatched to Darwin by train. The Broken Hill-Mildura and Melbourne-Hay routes are closed on June 9 for lack of traffic.

The Daly Waters end of the service from Camooweal is extended to Birdum Creek (mail only) in January-March 1931. The company's operations are taken over by QANTAS on November 1, 1934.

AUSTRALIAN AIR CHARTERERS (PTY.), LTD. See **AUS AIR (PTY.), LTD.**

AUSTRALIAN AIR EXPRESS (PTY.), LTD.: P.O. Box 1324L, 2nd Floor, 399 Elizabeth St., Melbourne, Victoria, 3001, Australia; Phone 61 (3) 9241 6599; Fax 61 (3) 9241 6603; <http://www.aae.com.au>; Code XM; Year Founded 1992. During the spring of 1992, AAE is established at Melbourne by the Australian Postal Corporation and **Qantas Airways (Pty.), Ltd.** as a joint venture, all-cargo carrier. Allen Buckley is named CEO and, with Qantas support, additional hubs are set up at Brisbane, Cairns, Perth, and Sydney.

Employing a fleet of 2 each British Aerospace BAe 146-300QTs and Fairchild Metro Is and 1 each Boeing 727-100F, B-727-200F, and BAe 146-100F, revenue flights begin on August 1. Destinations visited include Adelaide, Brisbane, Cairns, Canberra, Darwin, Gove, Groote Eylandt, Hobart, Launceston, Mackay, Maryborough, Melbourne, Mount Isa, Perth, Rockhampton, Sydney, and Townsville.

Service is maintained without change during the remainder of the decade.

AUSTRALIAN AIRLINES (PTY.), LTD.: Australia (1986-1993). Timed to coincide with the arrival and introduction of the first Boeing 737-376s in August 1986, the **Trans-Australian Airline (Pty.), Ltd.** name of General Manager James Strong's 40-year-old carrier is shortened and a new logo and green and gold livery are unveiled. Featuring a kangaroo on the tail, as **Qantas Airways (Pty.), Ltd.**, this new look is the creation of Melbourne-based Ken Cate design. In September, three BAe Jetstream 31s are delivered and enter service on 37 Queensland routes (to Brisbane, Cairns, MacKay, and Coolangatta) in October.

An Airbus Industrie A300B4-203 is sold to **Toa Domestic Airlines Company, Ltd.** in November for delivery the following March and on November 22 the B-727-276A *John Fawcner* is withdrawn from service and placed into storage. Late in the year, the 8,797-employee carrier enters into a comprehensive marketing arrangement with **Air New Zealand, Ltd.** aimed at intensifying the competition with rivals **Qantas Airways (Pty.), Ltd.** and **Ansett Airlines of Australia (Pty.), Ltd.**

Enplanements for the entire year under both names jump 6.2% to 5,101,778, but freight dips 5% to 5.92 million FTKs. Revenues advance 14.8% to A\$870.8 million and net gain rushes up to A\$37.8 million, a new company record.

The workforce grows 1.2% in 1987 to 9,564 as the last of the 12 new B-737-376s join the fleet. The company's forty-first anniversary is celebrated in February. Ted Harris is now appointed chairman to succeed the retiring Neil Smith and, on April 11, the B-727-276A *John Eyre* makes its last flight. A number of new services are initiated in June and July, including: Sydney-Darwin, Adelaide-Alice Springs-Darwin, Sydney-Alice Springs, Darwin-Alice Springs-Melbourne, Darwin-Brisbane, and Darwin-Adelaide. Also during July, weekly Saturday flights are undertaken between Melbourne and Cairns. In August, the B-737-376s step up the Melbourne-Cairns frequency to daily. At the year's end, Flight Deck Club members receive access to the Red Carpet Club lounges of **United Airlines** under a new reciprocal agreement.

Passenger boardings ascend 1.5% to 5,166,000, but freight is down 12.3% to 51.18 million FTKs. Revenues swell 8.8% to A\$690.9 million, but costs rise and knock the operating profit down 34.1% to A\$18.15 million.

The payroll is increased another 1% in 1988 to 9,661. The first in a series of 10 A\$499 B-737-200 holiday charters sponsored by the Western Australian Tourism Commission occurs in January over a route from

Melbourne to Perth. Low add-on fares are made available for connections from Sydney, Adelaide, Hobart, Canberra, and Launceston.

In April, the carrier becomes a public company and increases its services from Sydney to Melbourne and Brisbane and from Melbourne to Brisbane as additional frequencies are added from Sydney to the Gold Coast, from Adelaide to Tasmania, and directly from Melbourne to Maroochydore on the Sunshine Coast. In June, the company opens a resort on Lizard Island, on the Great Barrier Reef some 150 miles north of Cairns.

During July and August, additional flights are added between Sydney and Cairns and nonstop weekend return flights from Melbourne to Cairns are resumed. During the summer, the carrier establishes a hub at Alice Springs to service the demand from tourist traffic to the country, which features an increase in return flights Alice Springs to Cairns and to Sydney. An agreement is reached with Airbus Industrie in September permitting the deferral of an order for 9 A320s until 1992.

An important milestone is reported for the month as the carrier, for the first time, takes the lead in market share away from **Ansett Airlines of Australia (Pty.), Ltd.**

A DHC-6-300, with two crew and four passengers, fails its takeoff from Dunk Island on November 18, descends, crosses a grassy area, bounces off a concrete culvert, and comes to rest on the other side of a road; although the Twin Otter is destroyed, there are no fatalities.

Australian bicentennial celebrations and Brisbane's EXPO '88 cause customer bookings to jump 18.5% to 6,124,000. Cargo also recovers, up 5.1% to 53.79 million FTKs. Revenues also increase, growing 16.8% to A\$881.75 million and an after-tax A\$37.9-million profit is celebrated.

The workforce is cut 1.7% in 1989, due largely to the pilot's job action that begins in August. Meanwhile, back in January, the company begins to offer its first- and business-class passengers free access to its Flight Deck Clubs and upgrades its food and beverage services.

In March, Australian Cargo, an independent freight division, is reorganized; Paul Block is named assistant general manager in charge of the cargo operation. During the month, it is reported that the company has captured 47.4% of the domestic business market. A 33.3% stake is, during June, taken in the regional carrier **Sunstate Airlines (Pty.), Ltd.**

With the tourist boom and national economy slowing, the government now requires all CEOs running government entities to reapply for their positions, which now all have salary caps. Australian's general manager, James Strong, accepts a position with a law firm. All executives reporting to government entity CEOs must also reapply for their positions, and white-collar stability at the airline suffers as Assistant General Manager David Wiltshire attempts to keep operations moving.

Having for several months contested the government's decision to grant only a 6% wage increase instead of their request for 30%, the flyers of Australian, and their Australian Federation of Air Pilots (AFAP) union brothers from competing Ansett, are suspended. In response, the pilots register en masse on August 24; without pilots, Australian is forced to shut down. In an effort to maintain essential air service, the government turns to the Royal Australian Air Force in September (with unhappy early results) and also invites those international airlines making more than one stop in Australia to begin carrying domestic traffic.

Under this cabotage invitation, **Cathay Pacific Airways (Pty.), Ltd.**, **Thai Airways International, Ltd.**, **Gardua Indonesian Airlines**, **Malaysian Airlines, Ltd.**, **Continental Airlines**, **Singapore Airlines**, **British Airways, Ltd. (2)**, and **Olympic Airways, S.A.** are able to provide only 22,000 of the 250,000 seats required weekly. The company now begins to wet-lease aircraft from European charter operators, whose summer season has already finished; led by 2 B-757-2T7ERs from **Monarch Airlines, Ltd.**, 11 aircraft (including 9 B-737-300s) are requested, with 4 arriving by month's end.

Seven more transports, again flown by crews from other airlines, arrive in October; maintenance for the planes is provided by Australian. During the month, the airline begins to recruit replacement pilots. An unnamed B-727-277 is leased from **Dan-Air/Dan-Air Services, Ltd.** on November 7.

As a result of the labor problems, passenger boardings decline 29.3% to 4,531,200 and freight is off 30.5% to 44.51 million FTKs. With the financial year ending before the strike, fiscal statistics do not reflect the downturn. Revenues are up 14.1% to A\$944.2 million and the operating profit is A\$95.3 million. Net gain is A\$58.6 million.

Company employment inches upward by 0.7% in 1990 to 9,549 as domestic operations return to normal by February. Since the previous October, a total of 245 pilots, including 120 returning AFAP members, are recruited and all 280 needed for full service are in cockpits by mid-month. Later in the month, **Qantas Airways (Pty.), Ltd.** executive John Schaap is appointed CEO and, by month's end, 21 company Boeings are back in the air. Domestic airline deregulation's first physical act is initiated on March 1 when the DOT formally opens a terminal access program. Consequently, both Australian and **Ansett Airlines of Australia (Pty.), Ltd.** are required to make available a limited amount of gate space for new entrants at the airports at Sydney, Perth, Adelaide, and Melbourne.

The first of nine ordered B-737-476s is delivered in April, the same month that a second wet-leased **Dan Air, Ltd.** B-727-277 is returned; indeed, the last wet-leased foreign transport is released in May. The route network, as of this month, includes 21 points in Australia, the majority of which are centered in the eastern half of the nation. Via its Australian Regional subsidiary, 100% shareholding is taken in **Sunstate Airlines (Pty.), Ltd.** on July 1.

In August, fares are discounted for foreign travelers who fly the airline between its eight most popular multicity itineraries. The company begins to operate under airline deregulation on November 1.

Customer bookings accelerate 28.1% to 5,803,757 while cargo increases by 15.4% to 52.4 million FTKs. Long after the pilot strike is over, it continues to have a financial impact. Revenues skyrocket 82% to A\$626 million. Operating income reaches A\$15 million and the net profit is A\$7.5 million.

The workforce is reduced by 11.6% in 1991 to 8,400 and the fleet now includes 4 A300B4-203s, 10 B-737-276As, including 1 out of service, 16 B-737-376s, 9 B-737-476s, including 1 leased to **Malaysian Airlines, Ltd. (MAS)**, and 2 Fokker F.27-600 Friendships. Orders are outstanding for 7 B-737-476s. The B-727-276A *Freeman Cobb* is sold out of service on March 6. Also in March, four-times-per-week transcontinental service is initiated from Sydney to Yulara, initially via Alice Springs. The carrier is restructured in April. Not only are many functions centralized at the Melbourne headquarters, but also six individual business units are created: Australian Airlines, Australian Resorts, Regional Airlines, Catering, Westpac Travel, and Australian Cargo.

Beginning in July and continuing through November 9, the carrier runs a "best seats in the world" promotional contest; entrants win transportation prizes and seats at such premier events as the British Open and 1992 Olympic Games.

On August 1, the carrier completes its 100% purchase of **Eastern Australia Airlines (Pty.), Ltd.** by purchasing the remaining 42% equity held by the regional's chairman, John C. Rosworth. Also in August, the new subsidiary **Australian Airlink (Pty.), Ltd.** is created to begin operations over coastal routes from Brisbane to Darwin and from Cairns into central Australia and to Perth.

Keeping pace with **Ansett Australia (Pty.), Ltd.**, the carrier, in September, introduces a stringent frequent flyer program that requires an A\$30 entrance fee and grants credits good only for one year. In order to allow the carrier to return to full profitability before its sale, the government, in October, delays the formal privatization of Australian "for at least six months." The B-727-276A *Bert Hinkler* completes the last AA service by its type on December 31, flying a service from Melbourne to Adelaide to Melbourne to Sydney to Melbourne.

Passenger boardings move ahead another 14.1% to 6,619,000 and freight ascends 2.5% to 52.34 million FTKs. Revenues accelerate 35% to A\$1.04 billion and a net profit of A\$49.7 million is reported.

The payroll grows 13.1% in 1992 to 9,500. Ten B-737-276As are withdrawn and 5 more B-737-476s arrive. Beginning in April, a war of fares

and semantics is entered into with competing **Ansett Australia (Pty.), Ltd.** To counter its rival, Australian eliminates first-class service, replacing it with Premier Class. Business class is succeeded by Australian Club service and economy- and coach-class tickets are discounted to 60%.

In September, the carrier is taken over by **Qantas Airways (Pty.), Ltd.** following the government's surprise July reversal of its long-standing ban on cross-shareholding between the country's airlines. An A\$400-million (US\$303-million) merger is completed between the two carriers in November. It instantly makes the combined company, which will be integrated under the Qantas name, the 15th largest airline in the world in terms of ticket sales.

Customer bookings advance 24.1% to 7,308,248 while cargo inches up 1.9% to 36.41 million FTKs.

Integration of the two carriers is completed on May 6, 1993. On that date, the first Australian B-737-376, repainted in the red and white livery of Qantas, is rolled out in ceremonies at the former Australian maintenance base at Tullamarine, Melbourne.

AUSTRALIAN AIRLINK (PTY.), LTD.: Level 9, Building B, 203 Coward St., Mascot, New South Wales, 2020, Australia; Phone 61 (2) 691-4115; Fax 61 (2) 691-4312; <http://www.qantas.com.au/flying/regional/index.html#airlink>; Code KN; Year Founded 1991. Australian Airlink, Ltd. is formed at Melbourne, Victoria, in the summer of 1991 as a subsidiary of **Australian Airlines (Pty.), Ltd.** Jackie Cook is named managing director and the fleet is equipped with 4 British Aerospace BAe 146-100 jetliners. Daily nonstop services are undertaken in August from Sydney to Cairns and Coolangatta. Other examples of national frequencies initiated during the month include flights from Darwin to Brisbane, Cairns to Alice Springs, Darwin, and Grove, and Cairns to Perth via stops in Central Australia. A total of 106,556 passengers are flown by year's end.

Neither fleet nor employment changes in 1992. Customer bookings do, however, increase to 246,102. With the acquisition of its parent by **Qantas Airways (Pty.), Ltd.** in September, Australian Airlink becomes a subsidiary of a new parent. The company's aircraft are repainted in modified Qantas livery, complete with kangaroo tails.

Services continue apace in 1993 and orders are placed for 3 leased BAe 146-200s and 2 chartered 146-300s with which to increase services in Western Australia. Although traffic figures are not released, it is noted that new Managing Director Peter Moore's carrier suffers a loss of A\$ 2.4 million.

Bryan Banston succeeds Moore as managing director in early 1994. The BAe 146-200s arrive in September, followed by the Dash-300s two months later. The former, based at Brisbane, are deployed on routes to, between, and from Rockhampton, Mackay, Prosperine, and Canberra, increasing flights over the latter route from 6 to 20 each week.

The BAe 146-300s based at Cairns fly to, from, and between Ayers Rock, Alice Springs, Perth, Gove, and Darwin. On November 14, 2 BAe 146-100s are placed on routes from Perth to Broome, Port Hedland, Karratha, and Kalgoorlie.

Again, no traffic figures are given (media estimates claim approximately 400,000 boardings), but the loss is said to have "improved" to A\$2.07 million.

At the beginning of 1995 the Australian Airlink serves 16 airports, including five in Western Australia, four in the Northern Territory, five in Queensland, plus Adelaide and Canberra.

Qantas Airways (Pty.), Ltd. international and domestic services arriving at Perth, Adelaide, Brisbane, and Cairns are able to transfer to an affiliated carrier for flights into the interior.

Flights continue in 1996-1997. Beginning on June 1, 1998, Airlink introduces new twice-daily frequencies from Brisbane to Canberra and a new daily roundtrip between Brisbane and Rockhampton. The carrier also shares an Avro RJ70 with **Norfolk Jet Express (Pty.), Ltd.**

Australia's largest regional airline, Airlink, at the beginning of 1999, flies to 19 cities in 5 Australian states. On April 1, thrice-daily BAe 146-200 roundtrips begin from Brisbane to Hamilton Island.

AUSTRALIAN EMPIRE AIRWAYS (PTY.), LTD. See **QANTAS EMPIRE AIRWAYS (PTY.), LTD.**

AUSTRALIAN JET CHARTER (PTY.), LTD.: P.O. Box 205, Ross Smith Avenue, Kingsford Smith Airport, Mascot, New South Wales, 2020, Australia; Phone 2 693 2855; Fax 2 689 2204; Code AJC; Year Founded 1983. An affiliate of Australian Jet Charter Aircraft Sales (Pty.), Ltd., AJC is established at Kingsford Smith Airport at Mascot, New South Wales, in 1983. Tony King is managing director, with John Wright as president. Executive flights are inaugurated throughout the nation with a fleet that includes 3 Cessna Citation Is, 1 Cessna Citation II, 1 Canadair 600, and 2 Dassault Falcon 20s.

Operations continue apace during the remainder of the decade; in the early 1990s oil industry charters are also undertaken to the Russian Far East and northern Japan.

An Australian investment group, together with **British World Airlines, Ltd.**, purchases control in 1997. Capt. Ian Vanderbeek becomes managing director and by 2000 his 26-member workforce has increased to 31. Contract management services are now offered and the executive jet fleet is reinforced with a passenger-configured British Aerospace BAe Jetstream 32EP. Annual sales of A\$2 million plus are enjoyed.

AUSTRALIAN NATIONAL AIRWAYS (PTY.), LTD. See **ANA (AUSTRALIAN NATIONAL AIRWAYS [PTY.], LTD.)**

AUSTRALIAN REGIONAL AIRLINES QUEENSLAND (PTY.), LTD.: Australia (1988-1993). With Peter R. Ryan as chairman/general manager, ARA is formed at Garbutt, Queensland, in early 1988 to provide regularly scheduled commuter services over routes previously flown by **Air Queensland (Pty.), Ltd.** An initial fleet of four (later five) de Havilland Canada DHC-6-300 Twin Otters is acquired, outfitted with bubble windows for sight-seeing. Services are inaugurated from Cairns to Townsville, Mackay, the Barrier Reef Islands, and other regional stops and enplanements total 116,153.

An additional bubble window Twin Otter arrives in 1989; however, due largely to the nationwide pilot job action, passenger boardings decline 25.6% to 66,601. Orders are placed for two Fokker F.27-600 Friendships. Two Fokker F.27-600 Friendships are requested in early 1990 as AR takes over a number of routes from the failed Norfolk Airlines Group. A.R.Q. is formed later in the year as a subsidiary of **Australian Airlines (Pty.), Ltd.** through the merger of two small regional carriers **Air Queensland (Pty.), Ltd.** and **Resort Airlines (Pty.) Ltd.** Employing the new Fokker F.27-600s, flights are inaugurated over re-worked route networks.

The Fokkers are replaced in 1991 with a DHC-8-102 and a total of 126,228 passengers are boarded. The fleet is revised again in 1992 and comes to comprise 5 DHC-6-300s. During the fall, the company begins to market its repair capabilities; in October, its first contract for aircraft modification is won from Vanuatu-based **Vanair**. The DHC-8-102 is transferred, along with a major route, to **Sunstate Airlines (Pty.), Ltd.** As a result, customer bookings fall 14% to 147,993. In September, ARA's parent, **Australian Airlines**, is acquired by **Qantas Airways (Pty.), Ltd.**

In 1993, ARA is eliminated by its new owners and its assets and aircraft are transferred to the regional, Queensland-based **Sunstate Airlines (Pty.), Ltd.**, itself once an Australian Airlines subsidiary. A profit of A\$104,340 is reported. Operations continue apace in 1994, although this year there is a loss of A\$375,900.

AUSTRALIAN TRANSCONTINENTAL AIRWAYS, LTD.: Australia (1935). ATA is formed at Adelaide in the early summer of 1935 with the mission of initiating regularly scheduled services across the continent, north to south. Flying an Avro 10, Capt. J. Chapman begins service Adelaide to Darwin on August 19. Traffic does not support the route and without subsidy, the company is forced stop flying on October 11.

AUSTRIAN AIR SERVICES (AAS): P.O. Box 50, Fontanastrasse 1, Vienna 7, A-1107, Austria; Phone 43 (1) 638 510; Fax 43 (1) 685 505; Code SO; Year Founded 1980. Established at Vienna on February 4, 1980, this domestic passenger airline is owned by **Austrian Airlines (Oesterreichische Luftverkehrs, A.G.)** (26%), and the governing bodies of the airports at Vienna, Salzburg, Graz, Klagenfurt, and Linz (14.8% each). Drs. Anton Heschgi and Hubert Papousek, CEOs of the flag carrier, are named joint managing directors. Two Fairchild-Swearingen Metro IIs inaugurate scheduled service between the five landing fields on April 1, the same day that the nation's second commuter airline, **Tyrolean Airways, A.G.**, is established at Innsbruck.

A third Metro II is added in 1982 and operations continue apace in 1983–1984. A Metro II, with two crew and eight passengers, is destroyed as the result of a bad landing at Vienna on September 17 of the latter year; there are no fatalities.

Austrian Airlines, A.G. orders a Fokker 50 for its charge in September 1985 and operations continue apace in 1986–1987.

An historic agreement is signed on January 28, 1988, between **Austrian Airlines, A.G.**, **Austrian Air Services**, and **Tyrolean Airways, A.G.** rationalizing airline services by prohibiting parallel routing. **Tyrolean Airways, A.G.** is guaranteed protection of its lucrative Innsbruck–Vienna route and, like AAS, agrees to a maximum of 52-seat equipment. The first two Fokker 50s are acquired later in the year. The fleet is completely altered in 1989, as the Metroliners are all replaced by 4 Fokker 50s. A net \$98,000 profit is earned.

Company employment is increased by 13.1% in 1990 to 43 as a fifth Fokker 50 joins the fleet. **Austrian Airlines, A.G.** becomes a 100% controlling partner and Peter Bolech and Edgar Kozak become joint managing directors. Passenger boardings ascend 18.1% over the same period a year earlier to 108,733. Revenues climb 17.3% to \$13.5 million and net profit rises to \$289,000.

Another Fokker 50 arrives in 1991 followed by 2 more in 1992. In 1993, joint managing directors Bolech and Kozak oversee a workforce of 86 and a fleet of 7 Fokker 50s. Vienna to Salzburg via Linz service is maintained.

Following the takeover of **Tyrolean Airways, A.G.** by **Austrian Airlines, A.G.** during the first quarter of 1994, plans are made to integrate the route network of the new subsidiary with that of AAS, with the Tyrolean name surviving.

This plan is abandoned the following year and the wholly owned subsidiary continues its flight schedules as before with 7 Fokker 50s.

AUSTRIAN AIR TRANSPORT (AAT): Austria (1964–1998). AAT is formed at Vienna in 1964 as a charter subsidiary of **Austrian Airlines (Oesterreichische Luftverkehrs, A.G.)**. The carrier is initially owned by a number of local government and private interests with the flag carrier holding 40% interest. Dr. Franz Kotrba is named managing director. Employing a Vickers Viscount leased from the parent, AAT undertakes charter and inclusive-tour flights to destinations in Europe, Africa, the Mideast, and various Mediterranean resorts.

In 1965, revenues advance by 40% and enplanements jump 50% to 20,000. Largely unheralded, services continue through the remainder of the decade and into the 1970s. The carrier is reorganized in September 1973 and **Austrian Airlines, A.G.** is granted full control with 80% shareholding. Passenger bookings climb from 356,700 in 1981 to 500,200 in 1983.

Scheduled services linking Vienna with Graz, Linz, Klagenfurt are undertaken in 1986–1987, employing a fleet of 3 Fairchild Metro IIs and 1 Cessna 310. This competition with **Austrian Air Service** is withdrawn in 1988.

Operations continue apace in 1989–1992. In 1993, joint managing directors Angelika Stix and E. Hotarek oversee a workforce of 13. Aircraft continue to be leased from the parent and flown as required on non-scheduled, inclusive-tour services from Vienna, Linz, Salzburg, Graz, and Klagenfurt to holiday destinations in Africa, Europe, and the Mideast. During the year, 2 A310-324s, 12 MD-81s, 1 MD-82, 5 MD-87s, and 4 Fokker 50s are chartered at various times.

With 11 employees in 1994, the number of leases is increased. Eight Fokker 50s, 6 MD-82s, 5 MD-87s, 7 MD-81s, and 2 MD-83s fly on behalf of the charter arm during the year.

Flights continue until 1998, at which point the airline is folded back into its parent and its “OG” code is assigned to the new GO low-cost subsidiary of **British Airways, Ltd.** (2).

AUSTRIAN AIRLINES (OSTERREICHISCHE LUFTVERKEHRS, A.G.): 1107 Vienna, Fontanestrasse 1, Vienna, A-1107, Austria; Phone 43 (1) 17660; Fax 43 (1) 686 526; http://www.aua.com; Code OS; Year Founded 1957. Before either actually launch operations, **Air Austria**, formed by the Austrian People's Party, with assistance from **KLM (Royal Dutch Airlines, N.V.)** and **Fred Olsen's Flyselskap, A.S.**, and **Austrian Airways**, created by the Austrian Socialist Party with help from **SAS (Scandinavian Airlines System)**, agree to a merger on September 30, 1957. **Oesterreichische Luftverkehrs, A.G.** (Austrian Airlines), the name taken, is that of the prewar carrier founded in 1918 and merged into **Deutsche Lufthansa, A.G. (DLH)** in January 1939.

Shareholding in the new joint enterprise is divided three ways: Austrian private interests 42%; elements of the public sector 28%; and the remaining 33% is divided between **SAS (Scandinavian Airlines System)** and **Fred Olsen's Flyselskap, A.S.** Four Vickers Viscount 779s are leased from the latter because, under terms of the government's peace treaty with the Allies, Austria's airlines in the future will be prohibited from purchasing German or Japanese aircraft.

Austrian-manned Viscount 779 (the peace treaty also specifies that no foreign pilots may fly Austrian aircraft) revenue services begin on March 31, 1958 over a Vienna–London route; additional international routes are planned and developed throughout the year.

Viscount 779 flights are launched Vienna–Manchester via Frankfurt am Main on April 5, 1959. A chartered DC-3, with three crew and two passengers, flies into Alfabia Peak, Mallorca, on May 2; there are no survivors. A Vienna–Moscow Viscount 779 service is initiated on June 5.

Four Viscount 837s replace the 779s in February 1960. One of the new Vickers Viscount 837s, with 6 crew and 31 passengers and on approach from a Vienna service, crashes 11 km W. of Sheremetyevo Airport, Moscow, on September 26 (31 dead).

Planning for domestic frequencies is undertaken in 1961. A pooling agreement is signed with **Cunard-Eagle Airways, Ltd.** in August for service Innsbruck–London (LGW). The Viscount 745 *Johannes Brahms* joins the fleet.

In 1962, Douglas DC-3s are acquired and orders are placed for 5 Sud SE-210 Caravelle VIRs. DC-3 domestic operations commence on January 5, 1963. The carrier's first Caravelle VIR is delivered on February 20 and is placed in service on the international routes.

The workforce totals 1,282 in 1964. Three additional Caravelle VI-Rs join the fleet. A 40% shareholding is taken in the newly formed charter subsidiary **Austrian Air Transport (AAT)**. The carrier leases aircraft to AAT beginning with a single Vickers Viscount that inaugurates revenue flights during the summer. Systemwide, enplanements total 289,569 and revenues are \$12.2 million.

In 1965, new service is inaugurated to Munich from Vienna and Klagenfurt/Salzburg and from Salzburg to Amsterdam. The fleet now includes 11 aircraft: 4 Caravelle VIRs, 4 Viscount 837s, and 3 DC-3s. Passenger boardings increase 26% to 391,309.

Airline employment is 1,590 in 1966. Two Hawker Siddeley HS 748s replace the DC-3s. Enplanements swell to 451,963. Another Caravelle VIR is added in 1967 and a number of frequencies are increased. The company now flies 5 SE-210s, 2 HS 748s, 4 Viscounts, and 1 Aero Commander. The SE-210s replace Viscounts on some routes, bringing to 76% the number of seat-miles offered by jetliner. Bookings accelerate 12% to 513,594.

The employee population is 1,788 in 1968. Preparations are made for the inauguration of transatlantic service and a Boeing 707-329 Strato-liner is leased from **Sabena Belgian World Airlines, S.A.** late in the year. Bookings dip to 469,593.

In early 1969, the government, in an effort to improve the airline's fortunes, appoints, according to tradition, new joint managing directors, one from each political party: Dr. Anton Heschgi, Socialist, and Dr. Hubert Papousek, Conservative. The two, working in harmony, reduce the workforce by 15% to 1,426. The fleet now comprises 5 Caravelle VIRs, 3 Viscount 837s, and 1 HS 748s.

One HS 748 is withdrawn from the European network as the company is further reorganized and all unprofitable and domestic services are dropped. Vienna to New York via Brussels Stratoliner service is launched on April 1 as part of a fifty-fifty pool agreement with **Sabena Belgian World Airlines, S.A.**

Enplanements for the year rise to 516,525. Revenues total \$20.4 million.

Airline employment climbs 5.5% to 1,504 in 1970. En route from Frankfurt to Vienna on February 21, a Caravelle suffers a blast of unknown origin in its freight compartment; the plane is able to safely return to Frankfurt.

Nine Douglas DC-9-32s are ordered as the last HS 748 is sold and disposal of the Viscounts begins. Boardings dip 1% to 511,000, but freight is down by 10%.

A total of 28 new employees are hired in 1971. The pooled transatlantic service is terminated on March 31 and the chartered B-707-329 is returned to **Sabena Belgian World Airlines, S.A.** In turn, an extensive technical and operational arrangement is made with **Swissair, A.G.** The first DC-9-32 is delivered on June 19 and the last Viscount 837 is sold on September 24. A total of 594,000 passengers are carried on the year.

As the last of the DC-9-32s arrive and enter service in 1972, retirement of the Caravelle VIRs begins and will make Austrian an all-Douglas operator. Routes are extended to additional points in Eastern Europe. On March 29, an agreement on technical and operational cooperation is signed with **Swissair, A.G.**

Construction is started on a new Vienna Airport maintenance facility. On November 16, the stock capital is raised to 1 billion Austrian shillings. Cargo traffic skyrockets 50% and passenger bookings jump 25% to 791,774. The company's first net profit, 8.6 Austrian shillings, is posted.

The last Caravelle VIR is sold on January 16, 1973, and an order for 5 DC-9-51s is placed on July 25. Shareholding in **Austrian Air Transport (AAT)** is increased to 80%. During the year, the company enters the transatlantic charter market, operating a DC-8-63CF under charter from **Overseas National Airlines.**

Passenger boardings rise 18% to 830,698 and freight is up 34%.

Airline employment stands at an even 2,000 in 1974. A new maintenance base is opened at the Vienna Airport on June 25. Passenger traffic rises a slight 1.2% to 840,785, but freight grows 8.1%.

On April 28, 1975, the new computerized reservations system OSCAR is introduced. A route is opened to Brussels and permission for new routes is received during the summer for inauguration the following year. The first of the five DC-9-51s is delivered on September 14; with a second received days later, it enters service in October, becoming only the second in the world to be employed in regular airline operations. Employment dips to 1,950. Passenger boardings climb 9% to 912,640, and a \$13.9-million net profit is posted.

Fifty employees are hired in 1976. New DC-9-51 services are inaugurated with two new aircraft on January 4 from Vienna to Cairo, Düsseldorf, Stockholm, Helsinki, and London via Salzburg. On May 24, the carrier pays its first dividend to shareholders. A third DC-9-51 is added. Passenger bookings exceed the 1-million mark for the first time, rising 16% to 1,060,834; cargo soars 26%. A sixth consecutive profitable year is announced.

A fourth DC-9-51 is delivered in 1977. On October 13, 8 DC-9-81s are ordered.

A chartered BAC 1-11-420EL with 5 crew and 74 passengers crashes 34 km. from the runway while on initial approach to San Carlos de Bariloche on November 21 (46 dead)

Enplanements for the year total 1,127,490.

A Vienna-Madrid route is started on April 1, 1978. A total of 29 cities in 25 countries in Europe and the Middle East are now served from gateways at Vienna, Graz, Linz, Klagenfurt, and Salzburg. Chairman Otto Binder's carrier now employs 2,057 workers and possesses a fleet comprising 5 DC-9-51s and 9 DC-9-32s.

On November 13, the Austrian chancellor inaugurates the new head office at Vienna. A 50% stake is taken, during December, in the **WA-Vienna Airport Restaurant-und Hotelbetriebsges, mbH.** Passenger boardings climb 9% to 1,239,000, and freight is up 11%.

New service is started from Vienna to Larnaca and Jeddah on November 13, 1979. With the beginning of the winter season in late October, a DC-9-32 is chartered to **Air Malta, Ltd.**

Late in the year, plans are made to resume domestic services after a seven-year suspension. Bookings rise 5% to 1,301,596, and cargo accelerates 14%.

The workforce is increased by 7% in 1980 to 2,500. On February 4, the carrier invests 26% of the capital required to form **Austrian Air Services** with additional shares in the new domestic airline being taken by regional governments and local interests. **Air Malta, Ltd.** returns the DC-9-32 at the end of the third quarter.

Service between five Austrian cities begins with two Fairchild Metro IIs on April 1. On the same day, **Tyrolean Airways, A.G.** is established at Innsbruck.

The first DC-9-81 is delivered to Austrian Airlines; christened *Wien*, it commences Vienna-Zürich service on October 26. **Transavia Holland, N.V.** now begins a contract to fly one of its B-737-2K2Cs on behalf of the Austrian flagline. Orderly retirement of the DC-9-32s begins, with the first sold to **Texas International Airlines** on December 7; orders are placed for Airbus Industrie A310-221s. Passenger boardings decline \$2 to \$1.2 million and cargo falls 1%.

The employee population is increased by 2.7% in 1981 to 2,719. On March 1, Vienna-Tripoli service begins; four days later, the carrier acquires 50% of the nation's leading tour operator, Touropa. Malta and Nice are included in the route network as of March 29. On March 31, the first DC-9-51 lands at Dhahran. The first DC-9-81 charter flight is made Vienna-Aswan-Mombasa on October 10. During the year, another DC-9-32 is delivered to **Texas International Airlines** and 4 DC-9-81s are integrated into the fleet.

Passenger boardings accelerate 5.7% to 1,358,130, and cargo is up 12% to 14.93 million FTKs. A net \$5.1-million profit is earned on total revenues of \$297.2 million.

The employee population stands at 2,700 in 1982. The first automatic landing of an Austrian Airlines DC-9-81 is made on February 5, during a Yuma, Arizona, test flight. New routes are begun to Doha, Tunis, and Baghdad via Larnaca. Orders are placed for 2 Airbus Industrie A310s and the veteran marketing director, Fritz Feitl, is named managing director of **Tyrolean Airways, A.G.**

Passenger traffic dips 3% to 1,320,215, but freight rises 9% to 14.67 million FTKs. A twelfth consecutive net profit is reported, 76.5 million Austrian shillings.

Eighty new employees are hired in 1983 as a Klagenfurt and Vienna to London frequency is inaugurated. The last 3 of 5 DC-9-32s are sold to **Muse Airlines.**

Boardings rise 6% to 1,865,207 and cargo climbs twice that percentage, up 12% to 16.6 million FTKs. The annual net profit of \$4.4 million is the 13th consecutive net gain.

Routes are opened to Tehran and Kuwait in 1984 as the workforce grows 6.6% to 2,838. On December 19, Austrian Airlines becomes one of two launch customers for the MD-87, ordering four.

Cargo grows 19.3% and passenger boardings rise 6.3% to 1,982,000. On revenues of \$227 million, a \$3.9-million net profit is reported.

Airline employment is boosted 2.2% to 2,900 in 1985. A DC-9-32, en route from Rome to Vienna with 65 aboard on June 24, returns to Rome after the airline's office receives a bomb threat. Two Fokker 50s are ordered for **Austrian Air Services, GmbH.** in September and joint Man-

aging Director Hubert Papousek is also chairman of the Association of European Airlines.

Passenger bookings climb 5% to 1,538,000 while freight is flat. Revenues total \$227.83 million and expenses are \$226.8 million; profits are \$1 million (operating) and \$4.5 million (net).

The payroll is boosted a scant 1.6% in 1986 to 3,063. In cooperation with **Air France**, flights begin to Lyon. In June, the A310-221 order is changed to two of the long-range Dash-322 models.

In July the carrier initiates twice-weekly return service to Riyadh, Zagreb, Venice, and Barcelona. In December, weekly MD-87 service is initiated from Vienna's Schwechat Airport to Tehran.

Enplanements dip 1% to 1,983,000 while cargo is off by 3.2% to 3.43 million FTKs. During the 16th consecutive profitable year, Austrian earns revenues of \$294.84 million, up 29.4% and has costs of \$101.55 million, up 38.3%. The operating gain rises to \$8.1 million and net profit is \$8.38 million.

Airline employment grows 6% in 1987 to 3,155 as joint Managing Directors Papousek and Heschgi report in March that the company's most important route is that between Vienna and Frankfurt. The first 2 of 4 ordered McDonnell Douglas MD-87s join the fleet of their European launch customer later in the year.

Passenger boardings ascend 12.3% to 2,228,890 while freight is level with the previous year. Revenues advance 8% to \$455.9 million and costs are held low enough to allow an operating profit of \$12.8 million. The net gain dips to \$7.1 million.

The workforce is increased 12.9% in 1988 to 3,552 and the fleet is increased with the addition of 2 MD-87s, 1 A310-324, and 2 Fokker 50s. The latter are introduced on regional and domestic routes. On January 28, Austrian Airlines, its **Austrian Air Services, GmbH**, subsidiary, and **Tyrolean Airways, A.G.** sign an accord rationalizing domestic services by avoiding parallel routing. During the first two quarters, the company introduces business-class service on all European and Mideast flights and begins service to Monastir, Izmir, and Dhahran.

In May, the government sells 25% of its interest to private investors in the first of three annual privatization sales. The carrier is privatized to the extent of 25% in June, with **Swissair, A.G.** purchasing 3% shareholding.

Customer bookings rise 2.3% to 2,280,444, but cargo dips 0.7% to 19.86 million FTKs. Revenues climb 10% to \$541.7 million, but expenses also rise, forcing the operating profit down to \$4 million. Net gain, however, zooms up to \$9.8 million and is the 18th consecutive profit.

The number of employees is increased by 9.3% in 1989 to 3,893 as privatization continues. The longest serving and most durable duo in Europe, joint Managing Directors Papousek and Heschgi celebrate 20 years in control of Austria's air transport industry. The A310-324 received late the previous year enters regional service in February and in March opens five-times-per-week roundtrip frequencies from Vienna to New York. Additionally, daily flights begin from Linz to Salzburg and Zurich and from Vienna to Stuttgart.

On March 25, Vienna-East Europe frequencies are increased to 54 per week, making the company second only to **Deutsche Lufthansa, A.G.** in western service to Eastern Europe. Meanwhile, to assist in fleet expansion payments, the share capital is increased in April by a \$65-million stock offering (400,000 shares) via the Austrian stock market; 3.5% total shareholding (77,000 shares) is acquired via this avenue by **All Nippon Airways Company, Ltd. (ANA)**. **Swissair, A.G.** increases its holding from 8% to 10% while **Air France** acquires a 1.5% shareholding. The new shares issue reduces Austrian government holdings to 61.4%. In May, the company initiates a marketing agreement with **Air France** that calls for code-sharing on flights from Vienna to Paris and Nice. A sixth weekly Vienna to New York roundtrip is added in June while twice-weekly roundtrips commence between Vienna and Lisbon.

In cooperation with **Aeroflot Soviet Airlines** and **All Nippon Airways Company, Ltd. (ANA)**, joint twice-weekly service, employing the Austrian's second new A310-324, are inaugurated on July 16 from Vienna to Tokyo via Moscow and over Siberia; the frequencies are the

first by a twin-engine commercial jetliner over the trans-Siberian route. Expenses and revenues are split 40-40-20 between Austrian, ANA, and Aeroflot; the frequencies, which employ Austrian cockpit crews, mixed cabin crews, and a Soviet navigator, were to have begun on April 16, but are delayed for several weeks.

Twice weekly scheduled service is resumed in August between Vienna and Dhahran, Saudi Arabia. Salzburg joins the network for the winter ski season as a stop on the New York to Vienna service and, beginning in November, the company begins a frequent flyer program for U.S. travelers called *MileageCheques*.

Passenger boardings for the year surge 15.8% to 2,069,617 and freight skyrockets 87.1% to 36.37 million FTKs. Revenues advance 11.4% to \$611.5 million, allowing a profit of \$28 million.

Company employment is increased by 8.4% in 1990 to 4,221 and the joint service to Tokyo via Moscow becomes, with the addition of a third A310-324, thrice weekly in March. By April, state shareholding has been reduced to 51.9% as the carrier continues to be privatized. As part of that process, **All Nippon Airways Company, Ltd. (ANA)** increases its shareholding to a full 5%. As the result of a significant demand for flights into Eastern Europe by Japanese businessmen and tourists, the Japanese air transport company links its Vienna service into Austrian's extensive eastern route network.

At a price equivalent to \$358 per share, the airline issues 400,000 new shares of stock in May. The offering reduces the governments holding to 51.9% and increases the shareholding of **Swissair, A.G.** to 10% and of **All Nippon Airways Company, Ltd. (ANA)** to 9% (with the \$65-million purchase of another 157,000 shares, the total Japanese stake is 234,000 shares).

Also during the second quarter, code-sharing is introduced with **Aeroflot Soviet Airlines** on the route from Vienna to St. Petersburg and with **CSA (Czechoslovak Airlines)** on the run from Vienna to Prague. A block-space agreement is signed with **Finnair, O/Y** covering service over the Vienna to Helsinki route, which will be provided with Finnish aircraft. Later, joint code-sharing on aircraft from both companies will be offered from Vienna to Helsinki via Stockholm. A line pilot since 1960, Capt. Erich Mara succeeds Dr. Hubert Papousek on July 1, becoming president and joint managing director, with Georg Urbanski and Dr. Herbert Bammer as deputy presidents.

The company now joins the European Quality Alliance, partners in which also include **Swissair, A.G.** and **SAS (Scandinavian Airlines System)**. In addition to catering and maintenance agreements, Austrian and **Swissair, A.G.** agree to launch code-shared flights from Vienna to Zurich and Geneva, from Linz to Zurich, and from Salzburg to Zurich. Later, the two companies will code-share on the Swiss routes from Zurich to Amman, Riga, and Vilnius and link their frequent flyer programs. Additionally, Austrian elects to join with **SAS (Scandinavian Airlines System)** in offering code-sharing on routes from Vienna to Copenhagen, Stockholm, Hamburg, and Goteborg.

A fourth weekly frequency is introduced to Tokyo during November. At the same time, a 49% share is taken in the Vienna-based regional **Rheintalflug-Rolf Seewald, GmbH**. At the year's end, two new holiday packages are introduced: "Vienna for a Song" and "Austrian Holidays Ski Escapades." Customer bookings ascend 6.5% to 2,760,000. Revenues grow to \$801 million and the operating loss is \$21 million. A net \$11.3-million profit is earned, the 20th such gain in a row.

The payroll climbs 3.1% in 1991 to 4,259 and the fleet now includes 3 A310-324s, 7 MD-81s, 1 MD-82, 1 MD-83, and 5 MD-87s. Orders are outstanding for 1 A310-324, 7 A320-214s, 6 A321-111s, 2 A340-300s, and 1 MD-83.

In April, **Rheintalflug-Rolf Seewald, GmbH**, opens de Havilland Canada DHC-8-100 replacement service on behalf of the flag carrier over a route from Graz to Zurich. The following month, joint passenger services are inaugurated with **Olympic Airways, S.A.** over a route from Vienna to Athens.

Following the outbreak of fighting in Yugoslavia's secession crisis, the company, on June 29, suspends services into Zagreb, capital of Croatia.

On July 5, A310-324 biweekly roundtrips from Vienna are undertaken to Johannesburg, South Africa.

The inaugural Airbus delivers the Imperial Ball Orchestra and the Mozart Spectaculum for special performances.

In cooperation with **Swissair, A.G.**, twice-weekly flights are inaugurated, also in July, from Zurich to Leningrad and Kiev via Vienna. To meet the demand for capacity caused by the Yugoslav situation, the airline switches from Fokker 50s to MD-81s on many of its Balkan services.

In August, twice-weekly MD-81 service is resumed from Vienna to Dhahran and Riyadh, Saudi Arabia. Six-times-per-week Vienna to Istanbul frequencies become daily and, jointly with **Swissair, A.G.**, thrice-weekly flights begin from Vienna to Kiev and Leningrad. In October, the company begins two additional MD-80 services with Swissair from Zurich to Kiev and Vienna. During the year's second half, new services are also inaugurated to Leningrad, Nairobi, and Johannesburg.

Passenger boardings slide 3.9% during the year to 2,652,902, but freight swells 16.9% to 59.93 million FTKs. Revenues rise 8.3% to \$847.4 million, but costs are more and force an operating loss of \$34.01 million. There is a net loss of \$11.15 million, thus breaking the consecutive run of profits.

The workforce grows 4.3% in 1992 to 4,441 as 5 MD-82s enter service. In March, African frequencies are increased and Vienna-Vilnius service is introduced. Employing an Austrian A310, the carrier begins cooperating with **SAS (Scandinavian Airlines System)** on a four-times-per-week nonstop Vienna-Chicago route on March 30. New markets are also initiated at Minsk, Hamburg, Goteborg, and Amman. The joint service with **All Nippon Airways Co., Ltd.** and **Aeroflot Soviet Airlines** is temporarily suspended during the summer due to the Japanese carrier's financial difficulties and the breakup of the Russian partner. At the same time, the carrier joins with **Tarom Romanian Airlines** to offer code-sharing on flights from Vienna to Timisoara and Bucharest.

Passenger and cargo handling at Austrian and Swiss airports pass to Austrian Airlines or **Swissair, A.G.** on September 1. In a unique plan unveiled in July, the two carriers, effective November 1, begin to operate such customer services as booking offices, check-in, and passenger lounges, jointly in their home markets. Also in November, the carrier establishes Austrian Airlines Lease and Finance Co., Ltd. as a subsidiary. Throughout the year, the company discusses a possible 51% majority takeover of Bregenz-based **Rheintalflug-Rolf Seewald, GmbH**.

Customer bookings recover, growing by 15.8% to 3,071,617, and revenues ascend 16.5% to \$780.81 million. Expenses are up 17.6% to \$828.41 and as a result, the operating loss is increased to \$47.6 million. The net loss increases to \$73 million.

The workforce totals 4,000 in 1993, down 9.9% from the previous year. The fleet now includes 3 A310-324s and 1 Dash-325, plus 9 Fokker 50s, 7 MD-81s, 6 MD-82s, 3 MD-87SRs, and 2 each MD-83s and MD-87ERs.

Destinations visited from Vienna, Graz, Linz, Klagenfurt, and Salzburg include Aleppo, Amman, Amsterdam, Ankara, Athens, Baghdad, Beirut, Belgrade, Berlin, Brussels, Bucharest, Budapest, Cairo, Chicago, Copenhagen, Damascus, Dharan, Dusseldorf, Frankfurt, Geneva, Goteborg, Graz, Hamburg, Helsinki, Istanbul, Innsbruck, Izmir, Johannesburg, Kiev, Klagenfurt, Larnaca, Linz, Lisbon, London, Ljubljana, Madrid, Malta, Milan, Minsk, Moscow, Munich, Nairobi, New York, Nice, Odessa, Paris, Prague, Riyadh, Rome, Salzburg, St. Petersburg, Sofia, Stockholm, Stuttgart, Tehran, Tel Aviv, Timisoara, Thessaloniki, Tirana, Tokyo, Tripoli, Turin, Venice, Vienna, Vilnius, Warsaw, Zagreb, and Zurich.

In February, the company elects not to merge **Rheintalflug**, announcing that it is in the major's interest to keep the regional independent and flying replacement services on its behalf. A marketing alliance is entered into with **South African Airways (Pty.), Ltd.** in March that calls for code-sharing on flights of the two airlines between Vienna and Johannesburg. The following month, a similar agreement is signed with **KLM (Royal Dutch Airlines, N.V.)** covering joint flights between Vienna and Amsterdam and with **Ukraine International Airlines** for fre-

quencies from Vienna to Odessa, Kiev, and Dnepropetrovsk. A joint handling company is also set up in Kiev.

Effective July 1, the supervisory board appoints Dr. Herbert Bammer and Mario Rehulka as the airline's new joint managing directors. As the result of separatist Serb threats to shell the Croatian airports of Zagreb, Pula, and Rijeka, Austrian joins **Deutsche Lufthansa, A.G.** on September 13 in suspending services into Zagreb. The German carrier elects to terminate its Frankfurt-Zagreb service in Graz, Austria.

Following management's early November announcement that it will cut back the workforce by 500 jobs the next year, the carrier is shut down by a four-day strike of air and cabin crews protesting the early retirement of 16 pilots.

Passenger boardings inch up 1.8% to 2,643,843 while freight increases 17.5% to 86.44 million FTKs. Revenues climb 11.5% to \$870.35 million, but costs are up 13% to \$935.8 million. As a result, the operating loss swells to \$65.45 million while the net loss is trimmed to \$43.18 million.

The number of employees is cut another 8.9% in 1994 to 3,905 and, in March, the flag carrier assumes a 42.85% stake in **Tyrolean Airways, GmbH**. Ownership is divided between Gernot Langes-Swarovski GmbH, Austrian Airlines, and Leipnik Lundenburger Industrie AG. Plans are made to integrate the route networks of the new subsidiary and **Austrian Air Services**. A letter of intent is signed with **Delta Air Lines** in April for a marketing cooperation agreement, which will feature a code-share and blocked-seat arrangement on the Vienna to New York service.

Thrice-weekly roundtrip flights commence on June 1 between Vienna and Aleppo, Syria. The same day, twice-weekly frequencies are inaugurated from Vienna to Ankara, Turkey; twice weekly to Odessa, Ukraine; and four times per week to Ljubljana, Slovenia. In cooperation with **Delta Air Lines**, code-sharing and block-spaced flights commence on July 1 over the New York (JFK) to Vienna route.

It is announced in August that a code-sharing agreement has been signed with **British Midland Airways, Ltd.** Under its terms, Austrian purchases blocked seats on BMA services to Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside while BMA is given its first opportunity to connect, via Vienna, with continuing services to Africa, the Mideast, and Eastern Europe.

The joint service with **All Nippon Airways Co., Ltd.** is resumed in October, minus the **Aeroflot Russian International Airlines (ARIA)** partner, with Austrian aircraft thrice weekly from Osaka (KIX) to Vienna and twice weekly from Tokyo's Narita Airport to Vienna. In addition, ANA aircraft operate a weekly code-shared Tokyo (NRT) to Vienna service.

On the afternoon of October 31, the airport at Graz, 150 kilometers (90 miles) south of Vienna, receives an anonymous call saying a bomb is about to go off. The caller signs off with the Nazi salute "Sieg Heil." It is one of three bomb hoaxes to be perpetrated in Austria during the day.

A bomb alert on a November 1 flight from Cairo to Vienna causes the plane to turn back to the Egyptian capital shortly after takeoff; the MD-81 is searched, but no bomb is found.

Also in November, a code-sharing and block space agreement comes into effect with **Iberia Spanish Airlines (Lineas Aereas de Espana, S.A.)** on routes from Vienna to Madrid and Barcelona. Plans are made late in the year for the initiation, during the next year, of new or additional services to Beijing, Riga, Almaty, and Washington, D.C. (IAD).

Overall customer bookings decline by 4.2% to 2,531,834, but cargo is up 6% to 91.82 million FTKs. Revenues inch up 1.4% to \$882,602,000, but even though expenses decline by 9.3%, they still total \$902,820,000. Consequently, there is an operating loss of \$20,218,000. On the other hand, a \$774,600 net income is generated.

Airline employment in 1995 stands at 3,862, a 3% increase. During the year, the carrier introduces a new livery and restyled cabin interiors.

Four Fokker 70s are ordered in January. Under a new dual-designator pact with **LOT Polish Airlines, S.A.**, the Warsaw-based flag carrier begins operating its ATR 72s from Krakow to Vienna. The service com-

plements a **Tyrolean Airways, A.G.** Fokker 50 service over the same route begun the previous November.

In January–February, two additional new code-sharing pacts take effect. The first, with **Air China**, provides for cooperation on a service from Vienna to Beijing, with two extensions from the Chinese capital to Shanghai. The other, with **Air Mauritius, Ltd.**, provides for code-sharing on a route flown by AM aircraft from Vienna to Mauritius.

Two A340-211s join the fleet at the beginning of March and, on March 8, an “open skies” accord is signed between the U.S. and Austrian governments. The route between Vienna and Chicago is closed on March 26 and passengers previously booked on that route are shifted to **Swissair, A.G.**

With **Air China** having purchased an 80-seat allocation, the carrier inaugurates twice-weekly, dual-designator, 9-hr. 15-min. roundtrips on March 31 from Vienna to Beijing. At the same time a three-way block-space code-sharing service is launched with **Delta Air Lines** and **Swissair, A.G.** by Austrian A310-324s flying from Vienna to Washington, D.C. via Geneva. Flight attendants from all three carriers provide in-flight services.

During the first week of April, joint flights with **Swissair, A.G.** commence between Zurich and Almaty via Vienna; the route complements an existing service from Zurich to Minsk, via Vienna. At the same time, the current cooperative Vienna–Zurich route is converted into an every-2-hours shuttle.

As the result of the new alliance between **Deutsche Lufthansa, A.G.** and **SAS (Scandinavian Airlines System)** announced on May 11, the latter now reshuffles its strategic relationships, dropping that with Austrian. Austrian, meanwhile, enters into a code-sharing pact with **CSA Czech Airlines** covering six weekly roundtrips between Vienna and Prague.

When the peak tourist season begins in late spring–early summer, the new A340-211s inaugurate nonstop roundtrips from Vienna to Johannesburg and are placed on the route from Vienna to New York.

In July, accounting services are transferred, as a cost-cutting measure, to a Bombay, India, facility where **Swissair, A.G.** is already processing financial information. Also in midyear, the new “open skies” pact with the U.S. takes effect.

As the result of the tense military situation in Croatia, both Austrian and **Swissair, A.G.** suspend flights to Zagreb on August 2. The boycott will be lifted a week later.

Wearing a new corporate logo and revised color scheme, the first Fokker 70 arrives during the third week of October. It is employed, beginning on October 29, to inaugurate regional jetliner service from Vienna to Munich, Berlin, and Minsk. When the second arrives in November, it begins flying from Vienna to Geneva, Tirana, and Turin.

Passenger boardings jump 7% to 2,707,560 and freight swells 33.7% to 122.72 million FTKs. Operating revenues move ahead by 21.1% to \$1.06 billion, but expenses, up 19.7%, are \$1.08 billion. As a result, there is a \$16.92-million operating loss. Still, the net picture is much better as a \$20.22-million profit, later adjusted upward to \$29.8 million, is posted.

The workforce is increased by 4.6% in 1996 to 4,146. Code-sharing flights begin with **Asiana Airlines** in February over a route from Vienna to Seoul; a new route is opened to Osaka (KIX) during the spring. The last 2 Fokker 70s are delivered in March.

When U.S. antitrust immunity is granted in June, a trilateral code-share with **Swissair, A.G.** and **Delta Air Lines** begins from Vienna to Washington, D.C. via Zurich. Code-sharing with **Delta Air Lines** also starts from Vienna to New York (JFK) and beyond to five U.S. cities and from Vienna to Atlanta, which joins the route network just in time for the Olympics. The Georgia route also provides beyond service to five more U.S. destinations. In return, **Delta Air Lines** is allowed to code-share on Austrian flights from Vienna to 13 European cities. The arrangement takes the form of block-seat purchases: Delta and Swissair purchase seats six-times-per-week on the Austrian service while Austrian sells seats from Vienna to Washington and Geneva.

Also in June, code-sharing service is initiated with fellow-Austrian carrier **Lauda Air, GmbH.** on frequencies from Vienna to Milan, Nice, and Rome and with **Iran Air** from Vienna to Tehran, the latter arrangement employing Austrian aircraft.

On October 1, weekly roundtrips commence from Vienna to Dnepropetrovsk, the former closed industrial city in the Ukraine where Soviet space rockets were built. The area remains an important steel and manufacturing center.

Deutsche Lufthansa, A.G. and Austrian commence code-sharing flights in October from Vienna to Berlin, Hamburg, and Dusseldorf. The same month, Austrian and **Singapore Airlines** provide code-share on a route from Vienna to Singapore.

The company leases an Antonov An-12 and, at the end of October, launches joint all-cargo services into Eastern Europe in cooperation with Air Sofia.

To honor the nation's 1,000th birthday, the carrier, just before winter, places into service the A321-111 *Pinzgau* wearing the faces of 24 distinguished Austrians along the sides of the fuselage from front wheel to tail; the red-white-red tail is adorned on each side with a painting of Wolfgang Amadeus Mozart. Other new markets now initiated include Skopje and Kosice.

Enplanements climb 7.6% to 3,520,317 while 135.97 million freight FTKs are operated, a 9.6% increase. Operating income is ahead by 3.5% to \$1.22 billion, but costs are up 3.1% to \$1.23 billion. The operating loss declines to \$7.2 million and a \$25.6-million net profit is reported.

A Bosnian refugee facing deportation from Germany hijacks Flight 104, an MD-87 with 33 passengers, on January 7, 1997, but is overcome by police after the jetliner lands in Berlin. The unnamed man is sent back to his native country, shortly thereafter.

The next day, officials in Geneva announce that **Swissair, A.G.**, together with its European partners Austrian and **Sabena Belgian World Airlines, S.A.**, will be deepening the relationship with **Delta Air Lines** in the U.S. with the intention of increasing everyone's share of the North Atlantic air travel market. The alliance will be called “Atlantic Excellence.”

Service begins to Delhi, Cape Town, and Sarajevo. During the third week of March, **Deutsche Lufthansa, A.G.** agrees to sell almost half of its 39.7% stake in **Lauda Air, A.G.** to Austrian while, at the same time, a tentative equity agreement is signed with Lauda.

In May, the U.S. DOT approves the carrier's plans to expand its blocked space, code-share agreements with **Delta Air Lines** and **Swissair, A.G.** to 30 U.S. cities beyond Atlanta, New York, and Cincinnati. In return, Delta will purchase seats on the alliance partners' flights to eight cities beyond Brussels, Zurich, and Vienna.

On May 14, an office is opened in Shanghai under the direction of Alfred W. Brader. The company increases its twice-weekly services to Beijing to three weekly roundtrips on May 28; two of the flights are extended on to Shanghai.

The agreement with **Lauda Air, A.G.** takes effect on June 1 when Lauda surrenders 36% shareholding. Despite loss of majority control, founder Nikki Lauda remains CEO of the carrier bearing his name.

When the winter schedule begins on October 26, Austrian turns over to **Lauda Air, A.G.** its routes to the Baltic cities of Riga and Vilnius. That carrier launches daily Canadair services over them and adds its own new route from Vienna to Tallinn.

The same day, Austrian inaugurates twice-weekly A310-324 roundtrips from Vienna to New Delhi under a block-seat, code-sharing agreement with **Air India, Ltd.** Under the accord, the Indian flag carrier will reserve 30 seats for its customers on each of the nonstop roundtrips.

During November, the company joins with **Lauda Air, A.G.** and **Tyrolean Airways, A.G.** to create Austrian Airlines Group-Cargo. The airline has a turnkey freight network for 118 destinations in Europe, the Mideast, the Far East, the U.S., and Australia.

On December 15, Austrian begins to code-share on **Delta Air Lines** flights from Daytona Beach, Florida, to Vienna via Atlanta. At Vienna, passengers are able to make seamless connections aboard Austrian flights.

Passenger boardings this year increase by 9% to 3,010,893 while freight jumps 28.9% to 164.96 million FTKs. Operating revenues surge 13.9% to \$1.12 billion, while expenses are up 11.2% to \$1.1 billion. Although the operating profit climbs to \$27.2 million, net gain declines to \$10.2 million.

On January 28, 1998, a memorandum of understanding is signed with **TAP-Air Portugal, S.A.** for a broad commercial agreement that includes **Lauda Air, A.G.**; plans are made to begin code-sharing on routes from Austria to Portugal during the summer.

The new Portuguese alliance is deepened on March 29 when the carrier joins with **Swissair, A.G.**, **TAP-Air Portugal, S.A.**, **Sabena Belgian World Airlines, S.A.**, **THY Turkish Airlines, A.O.**, and **AOM French Airlines, S.A.** to form the "Qualiflyer" group. Although members will retain their own identities, they will engage in a long list of joint activities, including ground handling, lounges and ticket offices, and frequent flyer benefits. Collaborative activities that will be added as soon as details can be worked out include maintenance and overhaul, cargo, in-flight catering, information technology, and duty-free concessions.

Flights between Vienna and New York (JFK) are increased to 12 per week on May 1.

In July, the company places into service a highly visible MD-83 with a bright yellow fuselage sporting a metal-gray ribbon swirling down and aft on its sides from cockpit windows to tail. Below the windowline on each side of the forward fuselage in huge block black letters are the titles for "Magic Life," the inclusive-tour concern on whose behalf the airliner will be operated.

On August 26, the company takes delivery of the first A330-323-200 to be received by any European airline. The Dash-202, christened *Dachstein*, will be flown to North American and Asian destinations. For example, the new plane introduces a third weekly roundtrip frequency on the block-seat, code-sharing service from Vienna to New Delhi flown with **Air India, Ltd.** Three more A330s, all Dash-223s will be delivered over the next year.

During September, a planned capital increase is put off until spring, due partly to turmoil in financial markets. Twice-weekly roundtrip service is initiated on September 24 from Vienna to Kathmandu, Nepal; return flights refuel in New Delhi.

A code-sharing agreement signed with **Air France** in August takes effect on October 1. Under its terms, the two will share the seven daily return flights between Vienna and Paris. In addition, Air France will place its codes on Austrian flights into Eastern Europe while the Austrian designator will be shown on French domestic routes.

With several stock markets around the world suffering a downturn in early fall, the Austrian government now delays plans to reduce its holdings in the carrier via a fourth quarter \$68-million capital increase. As the government would not have participated in the share issue, its stake would have dropped from 51.9% to a figure just under 40%.

Austrian joins the Dividend Miles frequent flyer program of **USAirways** on December 1.

On December 9, a 25-billion Austrian schillings (US\$2.13-billion) order is placed with Airbus Industrie for 6 A320s and 1 A321 to be delivered between March 2001 and June 2003. It is simultaneously announced that scheduled service will be started in the new year to Baku, Yerevan, Tashkent, Atyrau, and Montreal.

Three days later, on December 11, the carrier's dual-designator pact with **Delta Air Lines** is expanded as the Austrian flag carrier places its code on Delta's daily, nonstop B-757-232 return service between Atlanta and Guatemala City.

Also during the year, the previously independent charter subsidiary **Austrian Air Transport (AAT)** is folded back into its parent and its "OG" code is assigned to the new GO low-cost subsidiary of **British Airways, Ltd. (2)**.

Customer bookings for the year ascend 13.9% to 3,423,252, while cargo traffic decreases 2.6% to 160.98 million FTKs. The Austrian group, which also includes **Tyrolean Airways** and 35.9% of **Lauda Air, A.G.**, shows profits. The operating gain skyrockets 90% to 1.28 billion

Austrian schillings (US\$101.9 million), while a net profit of 1.18 billion Austrian schillings is posted—an 85% boost.

During the first quarter of 1999, the A321-111 *Pinzgau*, which had been wearing a livery depicting the busts of 24 famous Austrian citizens, is repainted to commemorate the one hundredth anniversary of the death of composer Johann Strauss.

On the evening of March 24, Austrian halts all scheduled service into Belgrade in anticipation of NATO air strikes against Serbian military targets in the campaign for an independent Kosovo. A spokesman, in making the announcement, indicates that the situation will be evaluated further; however, that night, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade, as well as to Sarajevo, Mostar, Zagreb, Split, Skopje, Tirana, Ljubljana, Timisoara, and Sofia remains halted on March 25–31 and for much of the duration of the NATO's Operation Allied Force bombing campaign. Austrian employs ground transportation to bring travelers from Skopje to Sofia. Flights that cross over the area are rerouted, resulting in lengthy delays.

With the start of the summer schedule on March 28, new service is inaugurated to Harare. Return A330-223 service is inaugurated on March 31 between Vienna and Shanghai, four times a week.

Once the UN lifts air restrictions against Libya at the beginning of April, airline officials open negotiations with their counterparts in Tripoli concerning a resumption of scheduled services.

On April 8, **All Nippon Airways Company, Ltd. (ANA)** sells its 9% stake in Austrian to Bank Austria and SKWB Schoellerbank, which take shares worth a nominal 160 million Austrian schillings and 74 million Austrian schillings, respectively.

The carrier, on April 19, opens a subscription period (to run through May 25) during which eight million common bearer shares with a nominal value of 100 Austrian schillings (US\$7.85) each will be issued to reinforce the modernization and enlargement of the aircraft fleet. In the new share issue, 13 old shares entitle a stockholder to buy four new ones; all of the new shares carry dividend rights backdate to January 1, 1999.

The long-awaited capital increase of 800 million Austrian schillings (US\$63.69 million) will raise the group's share capital to a nominal value of 3.4 billion Austrian schillings. CA IB Investmentbank Aktiengesellschaft is global coordinator, with Salomon Smith Barney and Dresdner Kleinwort Benson as joint lead managers for international placement.

By April 23, the company is able to fly to all of its previous Balkan destinations except Belgrade, Skopje, and Tirana.

CEO Mario Rehulka reports on April 26 that the Austrian group, including Austrian Airlines, **Lauda Air**, and **Tyrolean Airways**, have lost revenue in each of the past five weeks because of the Kosovo crisis, including 4.4 million Austrian schillings (US\$340,000) the week of April 19.

As the result of the suspension of UN sanctions against Libya, Austrian, on May 2, is able to resume its twice-weekly roundtrips between Vienna and Tripoli. Simultaneously, frequencies between Vienna and Beirut become daily.

Twice-weekly A330-223 roundtrips commence on May 3 between Vienna and Montreal.

Reuters, Ltd. reports on May 7 that the carrier's stock has suffered heavy selling pressure during the day amid speculation that the new share issue is not doing well, primarily because of the Kosovo crisis and the nation's proximity to the war-torn Yugoslavian province. Still, it is reported that allocation of shares will be made on May 12, with trading in subscription rights running from May 19 to 21. Hopes for a successful float remain high.

On May 25, Austrian is moved to the blue-chip ATX index. When the company reports a quadrupling 155.4 million (\$12.37 million) of its pre-tax loss in the first quarter, shares on the ATX fall 4.19% to 25.39 euros.

Operation Allied Force is concluded on June 11.

In light of the earlier announcement of a strategic alliance between **Air France** and **Delta Air Lines**, Austrian, on August 16, announces

that it will reevaluate its participation in the Swissair-led "Qualiflyer" group. **Swissair** had previously held a close commercial arrangement with **Delta Air Lines**. When it becomes known in September that Delta will depart the Atlantic Excellence Alliance in October, Austrian elects to abandon the "Qualiflyer" compact in favor of the "Star Alliance." The fact that SAirGroup has without notice attempted to purchase the 9% stake in Austrian held by **All Nippon Airways Company, Ltd.** does not help matters. Incidentally, Austrian had just introduced the A320-214 *Neusiedlersee* in a special livery honoring the "Qualiflyer" alliance.

A number of political and natural difficulties have befallen the airline this year including the Kosovo crisis, the Freedom Party controversy in Vienna, the Turkish earthquakes, and soaring fuel prices.

The service to Almaty, begun in March 1995, ceases in December.

Passenger boardings move ahead by 2.6% to 3,780,000 while cargo jumps 19.6% to 87,044,000 FTKs. Income rises 4.5% to \$1,259,002,000 while costs are up 8% to \$1,257,021,000. The operating gain plunges to \$1.98 million while net profit can only reach \$12,654,000.

The workforce at the beginning of 2000 stands at 5,897, a 3.7% increase over the past 12 months.

A new A330-223 is delivered on January 17 wearing the "logo box" color scheme of the "Star Alliance."

After six months of successful changeover and an investment of ATS 500 million, the full Austrian Airline Group (Austrian, **Lauda Air**, and **Tyrolean Airways**) becomes the 10th official member of the "Star Alliance" on March 26. The same day, the Cape Town extension of the company's Vienna to Johannesburg service is dropped; instead, Austrian begins to code-share on **South African Airways (Pty.), Ltd.** flights on the Cape Town sector.

Although service to Helsinki is now suspended, weekday roundtrips begin from Vienna to Belgrade. Weekly A340-211 roundtrips are initiated from Vienna to Chicago (ORD).

As part of an overall cost rationalization and also because of Zimbabwe's failing economy, the carrier, five days later, halts stopover in Harare on its Vienna-Johannesburg route. Arrangements are made to code-share on the twice-weekly Johannesburg-Harare return flights of **Comair (Commercial Airways (Pty.), Ltd.)**.

The carrier also takes delivery of 2 A330s and 2 A320s during the first quarter and as the year progresses, progress is made toward the airline's privatization.

A marketing and code-sharing agreement is signed with **El Al Israel Airlines, Ltd.** on July 14; dual designator services are scheduled to begin on November 1.

On August 3, it serves notice that it will discontinue service to Johannesburg in April 2001. On August 22, officials announce that they will increase its current 36% stake in **Lauda Air Luftfahrtgesellschaft, A.G.** to 59% over the next 11 months.

The European Commission informs Austrian Airlines on October 13 that it has serious concerns about its cooperation with **SAS (Scandinavian Airlines System)** and **Deutsche Lufthansa, A.G.** within the "Star Alliance" on both competition and the large number of routes from Austria to Germany and the Nordic countries.

AUTAIR HELICOPTERS (EA), LTD.: Box 41951, Wilson Airport, Nairobi, Kenya; Phone (2) 501918; Fax (2) 503362; Year Founded 1964. Autair Helicopters of East Africa is established at Nairobi in 1964 as a subsidiary of **Autair International Airways, Ltd.** Young F. W. "Freddie" Wilcox is sent out to operate the concern, which serves as Bell distributor for Kenya and also provides various charter services.

Although the parent concern is taken over by Court Line, Ltd. in 1965, Wilcox and his Bell 47Gs are left to continue operations without interference from the U.K. This situation will continue long after Autair International becomes **Court Line Aviation, Ltd.** and fails under that concern in the 1970s.

Indeed, Freddie Wilcox remains the company chairman throughout the remainder of the decade, even though Capt. Mark Underwood is

brought aboard to serve as general manager. The fleet now includes 1 each Bell 47G3, Bell 206B JetRanger, and 3 Bell 206L LongRangers.

AUTAIR HELICOPTERS (SOUTH AFRICA), LTD. See **COURT HELICOPTERS (PTY.), LTD.**

AUTAIR INTERNATIONAL AIRWAYS, LTD.: United Kingdom (1953-1969). Autair, Ltd. is formed by Ronald Myhill and W. H. Armstrong at London as the U.K.'s first helicopter operator in 1953. A fleet of 6 Bell Model 47s and 3 Sikorsky S-51s is acquired. The latter initiate revenue operations on June 17, 1954 with a flight from London (LHR) to a construction site on the Thames River. U.K. Sikorsky operations are initially based at London Gatwick (LGW) and then London Luton (CTN) Airport.

Meanwhile, the Bells are based at Dusseldorf and participate in a variety of charters, including aerial advertising, police crowd control, and in southern France, support of the motion picture industry. The staff grows to 30 in the U.K. and others continue to be employed overseas, including those of an associated Canadian company formed in June 1957 and provided with the 3 S-51s from Luton.

In early 1960, the former **World Wide Helicopters, Ltd.** operations manager, Gerald Threlfall, is hired and he acquires the company's first fixed-wing aircraft, a Douglas DC-3, in April. For this machine, Autair forms an air transport subsidiary, **Autair (Luton), Ltd.**; however, the Douglas transport is leased to the Israeli carrier **Arkia Israeli Airlines, Ltd.** until a company facility can be established at Luton Airport at year's end. Company officials now include Autair founder W. H. Armstrong as chairman and Gerald Threlfall as managing director.

Two DC-3s are purchased from **British European Airways Corporation (BEA)** in March 1961 and during the summer, the 3 American-made aircraft fly a variety of inclusive-tour and ad hoc charter flights to Europe, including several on behalf of competing nonscheduled carriers **Tradair, Ltd.** and **Skyways, Ltd.**

Two Vickers Vikings are purchased in January 1962, followed by a third in June, plus another DC-3 in February. During the year, a daily cargo run is initiated to West Berlin's Tempelhof Airport from Amsterdam and, on behalf of German tour agencies, the company undertakes inclusive-tour flights from Tempelhof to the Mediterranean.

Three more Vikings enter service in the spring of 1963 and although there is no change in the charter network, the company is allowed to open its first scheduled service—weekly London (CTN) to Blackpool—on October 1.

During the summer, a Handley Page Herald is leased for four months from its manufacturer and the 3 Airspeed AS.57 Ambassadors of **Globe-Air** are purchased; the first is placed on the scheduled route in August while the other two are delivered in November-December. Enplanements total 31,593 (2,227 scheduled).

A new hangar and headquarters are opened at London (CTN) in 1964 while the 2 new Ambassadors join the third in displacing Vikings on inclusive tours; the Vikings displace DC-3s on the London (CTN) to Blackpool frequency, now advanced to nine per week. Construction is completed on a new hangar and offices at the Luton Airport base. The subsidiary **Autair Helicopters (EA), Ltd.** is established at Nairobi.

A DC-4 is purchased in January 1965. On April 15 the airline is acquired by the steamship company **Court Line, Ltd.** for £215,000. Two DC-3s and 3 Vikings are sold during the year, leaving the 3 Ambassadors, 2 Vikings, and 1 DC-4 to fly 72,701 passengers and over a million pounds of freight and mail. In November, orders are placed for 2 Hawker Siddeley HS 748s. Airline employment grows to 175 while enplanements, mainly on the London-Blackpool service, increase to 72,701.

The 2 HS 748s join the fleet in February-March 1966. Meanwhile, during February a Bristol 170 Mk. 21 freighter is added. The 2 HS 748s are received in April. On May 24, the London (CTN) to Blackpool route is extended to Glasgow (Abbotsinch); the first HS 748 enters revenue service on this extension on May 31. A DC-3 is sold in August and in

November three Heralds are purchased from **British European Airways Corporation (BEA)**. Passenger boardings reach the 81,000 mark as Autair opens a new North London Air Terminal in Finchley Road.

A Teesside-London scheduled route formerly operated by **BKS Air Transport, Ltd.** is taken over on January 1, 1967, with Luton Airport the London terminus. Herald flights begin on the Glasgow scheduled route on March 28. The introduction of the Handley Pages allow the carrier to expand its charter business, including a new nonscheduled HS 748 operation from London (CTN) to Wick.

Following the failure of **Treffield International, Ltd.** in June, Autair is able to acquire that company's Mediterranean tour flights from Bristol and Cardiff. The last DC-3 is sold in August.

Coming in from Luxembourg on September 14, a chartered Airspeed As.57 Ambassador 2, with 5 crew and 64 passengers, overruns the runway at London (CTN) and, upon hitting the ground beyond, suffers the collapse of its undercarriage; there are no fatalities.

Bookings for the year are 97,100.

The Bristol 170 is withdrawn in January 1968, followed by a Viking and an Ambassador in May. Meanwhile, in February-May, the company's premier jetliners, 1 BAC 1-11-408EF (originally built for **Channel Airways, Ltd.**) and 4 BAC 1-11-416EKs, are delivered. The Greek-derived adjective halcyon is employed to name the new arrivals that become, in order: *Halcyon Cloud*, *Halcyon Days*, *Halcyon Breeze*, *Halcyon Dawn*, and *Halcyon Sun*.

On April 1, the Heralds launch several new routes: Dundee to London (CTN); Teesside and Hull to Amsterdam; Dundee, Hull, and Teesside to Isle of Man; Teesside to Belfast and Dublin; and Teesside, Carlisle, and Dundee to Jersey. During the month, orders are placed for 5 BAC 1-11-518FGs and, in a preview of events to come, the Brough to London (CTN) service is suspended on October 31. Enplanements total 167,500.

Airline employment in 1969 stands at 410. On March 27, company operations from Brough are transferred to Leconfield and on April 1, the London base is switched from Luton Airport to Heathrow Airport (LHR), where all Luton-bound services now terminate.

Two more BAC 1-11-518FGs are requested during the month as the carrier signs a five-year, £30-million contract with the volume-oriented tour operator Clarkson's Holidays, Ltd. All of the twin-engine jetliners will have their wings modified so as to increase lift for heavy tourist loads.

In August, one of the BACs logs 402 hrs. 36 min. (a 13 hr.-per-day average), which is a world record for airliner utilization. Losing £150,000 per year on scheduled services and only the Scottish city of Dundee willing to offer subsidy to retain them, Autair suddenly terminates all of its scheduled routes on October 31 and sells its three Heralds during November, the last Ambassador already having been sold in May.

The company's inclusive-tour business, on the other hand, is proving a great success and to accentuate this emphasis, Court Line changes the company name from Autair International Airways to **Court Line Aviation, Ltd.** on September 11, effective the next January 1. Meanwhile, inclusive-tour contracts are signed with 11 more travel booking agencies and two BAC 1-11-518FGs arrive in December, the same month in which the *Halcyon Cloud* is returned to BAC, which sells it to Cambrian Airways, Ltd. This year, boardings reach half a million.

AV AIR: United States (1985-1988). Lynchburg-based Air Virginia is formed in January 1979 as successor to the earlier **Cardinal Airlines** and launches service to Washington, D.C. on March 19. Passenger boardings in 1980 are 176.9% greater than in 1979, and traffic increases steadily thereafter. In 1981, 81,600 passengers are boarded; enplanements in 1982 total 142,000 and in 1983—the year in which **Mid-South Airlines** is purchased—217,000.

The trend slows somewhat in 1984 as the company encounters financial difficulties. Nevertheless, its British Aerospace BAe 748s and Fairchild-Swearingen Metro IIs are able to maintain a schedule of over 130 weekday flight departures along its system, which extends to 17 points in Maryland, Virginia, New York, New Jersey, Ohio, North Carolina, Pennsylvania, and the District of Columbia. In October, the airline

is purchased by Dimitri P. Nicolas and, on the year, a total of 248,000 travelers are carried.

Early in 1985, the three remaining BAe 748s are withdrawn from service in favor of an 18-unit Metroliner fleet. On May 14, the carrier's new president, Curt Coward, announces an order for 10 new Metro IIIs and changes the 350-employee company's name to AV Air, effective November 1.

The following day, May 15, it inaugurates flights as the third member of the **American Airlines** "American Eagle" commuter network. The first Metro IIIs arrive in October.

Passenger boardings for the year decline 7.2% to 230,288.

The payroll is increased 14.3% in 1986 to 400 and four Metroliners are withdrawn. Despite its affiliation with American Airlines, the Virginia-based carrier is unable to improve its traffic report. An attempted buyout by President Coward fails.

Customer bookings fall 3.6% during the 12 months to 222,000.

The route network is realigned in late spring 1987 to focus on the new **American Airlines** hub at Raleigh-Durham. On June 15, "American Eagle" flights begin to 14 spoke destinations. These daily services double by year's end as discussions are held between President Dimitri Nicholas and "American Eagle" concerning the possibility of the major buying out the commuter.

While on final approach to Washington, D.C. (IAD) after a service from Newark on December 18, icing causes both engines of a Swearingen Metro, with two crew and six passengers, to fail. The aircraft makes a forced landing in a field and, although it is damaged beyond repair, there are no fatalities.

Passenger boardings rally and increase by 58% to 351,800.

In financial difficulty after the talks with American break down, the company abruptly ceases its 55 daily operations out of Raleigh-Durham on January 15, 1988 and files for Chapter XI bankruptcy, claiming \$9.1 million in assets and \$12 million in liabilities. AMR Corporation steps forward to inject a cash transfusion, which allows service to begin again on February 3.

Shortly thereafter, some \$3 million in company assets are sold to fellow AMR subsidiary **Nashville Eagle**. Included in the package is an assumption of the leases of AV Air's 4 Metro IIs and 14 Fairchild Metro III, 9 of the latter being already owned by AMR and leased to the Virginia operation.

During its initial climb away from Raleigh-Durham in light drizzle and fog on February 19, Flight 3378, a Swearingen Metro III with 2 crew and 10 passengers, reaches a height of 300 ft. before crashing into a reservoir, 100 ft. from the shoreline. Located 5,100 ft. W of the runway, the wreckage continues on until it stops in a wooded area. There are no survivors.

Twenty slots at Washington, D.C. (DCA) are sold to **Command Airways** in March for \$800,000. In midyear, the FAA cancels the failed airline's operating certificate.

AV ATLANTIC: United States (1992-1997). AV Atlantic is established at Miami in early 1992 as the airline division of HCL Aviation to offer passenger charter and inclusive-tour flights to Caribbean and other Latin destinations from a hub at Savannah, Georgia.

Revenue services commence with 2, chartered Boeing 727-23s and 1 B-727-225A.

A total of 105,000 passengers are carried on the year and revenues of \$13.9 million are earned. In a rare first-year feat for a start-up carrier, AV Atlantic generates profits of \$252,000 (operating) and \$236,000 (net).

A fourth leased B-727, another Dash-23, plus a B-727-259A are acquired in 1993 as the good times continue.

Enplanements jump 20% to 126,000 and revenues skyrocket 121%; still, expenses are high, causing a \$54,000 operating loss. Net gain, however, totals \$82,000.

Operations continue apace in 1994 as a B-727-290A enters service. Passenger boardings plunge 38.9% to 77,000. On the other hand, even

though revenues fall 7% to \$15.2 million, there are profits: \$103,000 (operating) and \$311,000 (net).

Yet another trimotor arrives in **1995**, a B-727-212A, which helps, along with the upturn in the fortunes of the world airline industry, to increase traffic.

Enplanements jump 31.6% to 104,000 and revenues again exceed expenses. Profits grow to \$970,000 (operating) and \$826,000 (net).

The fleet is enlarged early in **1996** by the addition of a second B-727-225A. Wearing a plain white fuselage with an American flag on the tail, it is leased to the Dole for President campaign and is christened *Leader's Ship*.

A contract is entered into with **Aerolineas Argentinas, S.A.** in March. The Argentine major establishes a small hub at Miami (MIA) and Av Atlantic agrees to base a B-727-23 there, painted in modified Aerolineas colors, to provide alternate-day connecting flights to New York (JFK), Montreal (YUL), Toronto, Mexico City, Punta Cana, and St. Martin. Flights commence on April 15.

Following the Republican convention in July, the *Leader's Ship* is renamed *Partners' Ship* and billboard-sized "Dole-Kemp 1996" titles are painted above the windowline. The aircraft will be returned to the carrier in early November.

In the wake of the May **Valujet Airlines** disaster, the company is subjected, like other similar U.S. airlines, to intense FAA scrutiny. AV Atlantic fails its safety check and its operating certificate is suspended in December, forcing it into Chapter XI bankruptcy protection.

Traffic and fiscal information is reported through November. It shows customer bookings up 10.4% to 94,965 and operating income up to \$22.13 million. Costs total \$25.28 million, the operating loss is \$3.15 million, and a net \$3.08-million loss is posted.

The company resumes operations in January **1997**. Unable to maintain its house to sufficiently impress FAA examiners with progress in maintenance, safety, and training, the carrier is shut down again in March and ordered on the last day of the month to pay a \$136,000 fine. It is authorized to fly only two of its seven aircraft.

AVAIIKI AIR: Cook Islands (1991–1992). Formed at Rarotonga in **1991**, Avaiki Air is equipped with a Pilatus-Britten-Norman PBN-2 Islander and a de Havilland DH 114 Heron and inaugurates scheduled interisland services in July.

Unable to obtain two Dornier 228-212s for which it is negotiating, the small regional ceases operations in the spring of **1992** following the crash of its Islander.

AVAIR, LTD.: Ireland (1978–1984). Avair is formed at Dublin in **1978**, initially to offer air taxi charter services about the nation and across the Irish Sea to Great Britain while serving as the country's Beech Aircraft distributor. Scheduled revenue flights, in association with **Aer Lingus Irish Airlines, Ltd.** begin in May **1981** linking the company base with Cork, Silgo, Waterford, Belfast, Londonderry, Blackpool, East Midlands, Jersey, and the Isle of Man.

Services are maintained with a fleet that grows to include Shorts 330s, Beech 99s, Beech Super King Air 200s, and King Air C90s. Unable to maintain viability in a period of world recession, the company goes bankrupt on February 23, **1984**.

AVALON AIR TRANSPORT: United States (1953–1963). AAT is established by Wilton R. "Dick" Probert at Long Beach, California, during the summer of **1953** to take over scheduled services to Catalina Island abandoned by **United Air Lines**. Employing a Grumman G-21 Goose, roundtrip revenue flights commence on August 27. Permission for the transport of mail over a contract Star Route is received from the CAB on July 1, **1955**.

Operations continue apace in **1956**. Having been abandoned some years before at Ancon Harbour, near Lima, Peru, by her previous owners, the Vought-Sikorsky VS-44 *Excambion*, originally flown by **American Overseas Airlines (AOA)**, is put up for sale in early **1957**. President

Probert purchases it from Baltimore-based Aviation Exchange Corporation on May 17 and beginning on June 2, flies it to Long Beach via Aca-pulco, twice facing disaster from wing damage en route. The flying boat is refurbished during the summer and placed into service in early fall.

The fleet in **1958** features 8 G-21s and the *Excambion*, now known as *Mother Goose*. A Sikorsky S-43 is purchased from **Reeve Aleutian Airways** on March 3; however, the aircraft is written off following an accident at Catalina Island later in the year. The *Excambion* and the Geese continue to provide services without incident in **1959–1962**. The propeller blade of a G-21A fails at Catalina Island on July 17 of the latter year as the plane is preparing to take off; the seven passengers are forced to await another aircraft.

Airline enplanements total 80,000 in **1963**, and the company changes its name to **Catalina Air Lines**.

AVANT AIRLINES, S.A.: Bucarest No. 214, Providencia, Santiago de Chile, Chile; Phone 56 (2) 337-0800; Fax 56 (2) 337-0875; <http://www.chilnet.cl/empresas/1/96794750.htm>; Code OT; Year Founded 1996. Avant is established at Santiago in late **1996** to operate international passenger charter and inclusive-tour flights throughout South America. Two Boeing 737-224s are chartered from International Air Leases in December; they arrive wearing startling bright pink-and-white and blue-and-white liveries.

Revenue flights commence in January **1997**. On June 3, the Tur Bus transportation company announces that it will purchase 100% shareholding by June 7. Jesus Diez-Martinez becomes president, with Fernando Fernandez as general manager.

A total of 216,020 passengers are flown on the year.

During January **1998**, Avant purchases **National Airlines, S.A.** for an undisclosed price. Plans are announced for the two carriers to compete with **LADECO Chilean Airlines, S.A.** and **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** in an effort to capture a quarter of the nation's domestic passenger market. The Avant fleet is increased by the addition of 3 B-737-204As.

By July, **National Airlines, S.A.** enjoys a 12.1% market share and Avant 14.1%. As of July 1, the decision is taken to concentrate domestic operations with one airline and long-haul flights with another. On July 6, National turns over its local service operations to sister Avant and begins to concentrate on international services. Avant is now expected to maintain the combined 26.3% domestic market share of both airlines.

On December 17, a cooperative marketing agreement is signed with **Continental Airlines**. Beginning in the new year, the two airlines will offer code-sharing on flights between the U.S. and Chile and over domestic U.S. and Chilean routes.

As the year ends, Avant is offering more than 120 weekly departures from Santiago to a number of Chilean cities, including Arica, Iquique, Antofagasta, Calama, Copiapo, La Serena, Concepcion, Temuco, Valdivia, Puerto Montt, Balmaceda, and Puenta Arenas. It also provides nonstop return service between Santiago and Mendoza, Argentina.

The code-sharing agreement with **Continental Airlines** begins in March **1999**. It is extended to include **COPA (Compania Panamena de Aviacion, S.A.)** on December 2.

Enplanements for the year total 536,000 and 3.37 million FTKs are operated. Operating income totals \$60 million.

Some \$5 million are invested during **2000** in a new hangar and to improve operations. Following the April 28 "demerger" of **Alitalia, S.p.A.** and **KLM (Royal Dutch Airlines, N.V.)**. Executive Vice President/Chief Operating Officer Fernandez seeks a European alliance with the former.

AVANTI AIR, GmbH. & COMPANY, K.G.: AM Kraftenborn 10, Buedingen, D-63654, Germany; Phone 49 6041 82730; Fax 49 6041 837399; <http://www.avanti-air.de>; Code EEK; Year Founded 1995. Avanti is set up at Frankfurt Airport in **1995** to provide executive and small group passenger charters throughout Germany and Northern Europe, as well as shuttle services on behalf of various airlines.

By 2000, Operations Manager Markus Baumann oversees the workforce of 12 pilots and a fleet that includes 1 each Beech 1900C and 1900D, Super King Air 200, and King Air 90.

AVASTAR JET CHARTER & MANAGEMENT SERVICES: 1675 Airport Road, Waterford, Michigan 48327, United States; Phone (248) 666-3000; Fax (248) 666-2466; Year Founded 1996. AvaStar is set up at Oakland-Pontiac Airport in 1996 to provide FAR Part 135 on-demand passenger charters. A workforce of nine is hired and flights commence, and continue, with a fleet that includes 1 each Beech Super King Air 200, British Aerospace BAe (HS) 125-731, Learjet 25D, and Learjet 35D.

AVBASE AVIATION, LTD.: 6200 Riverside Dr., Cleveland, Ohio 44135, United States; Phone (216) 265-9500; Fax (216) 265-9501; Year Founded 1993. AvBase is established as an FBO at Cleveland-Hopkins International Airport in 1993. A charter department is simultaneously established under the direction of Peter Wood. On its behalf, Aero Charter is contracted to begin nonscheduled executive and small group passenger charters with 2 North American Sabreliners and 1 Beech King Air 100.

AVCOM. See AVIONES COMERCIALES DE GUATEMALA, S.A.

AVCOM AVIATION COMMERCIAL. See AVCOM SP

AVCOM SP: Sheremetyevo 1 GosNII-Ga, Moscow, 103340, Russia; Phone 7 (095) 578-5212; Fax 7 (095) 578-0019; Code J6; Year Founded 1990. Avcom SP, also known as **Avcom Aviation Commercial**, is established at Moscow's Sheremetyevo Airport in 1990 as a subsidiary of the GosNII-Ga state research institute of civil aviation. Plans are made to provide executive charters and air express services to Western Europe. Evgeni Y. Bakhtin is appointed general director and oversees a workforce that includes 15 full-time and six part-time pilots. The company also offers maintenance and sales, as well as spare parts.

Revenue flights commence in 1993 with 2 each Yakovlev Yak-40s, British Aerospace BAe (HS) 125-400s, and BAe (HS) 125-700s. During the year, Avcom also flies spot charters to Russia with a leased Douglas DC-10-30CF based at Amsterdam and acquires membership in IATA.

Flights continue in 1995-2000. During these years, Director Bakhtin increases his fleet through the addition of 1 each Yak-40, Yak-42, Tupolev Tu-134, and BAe (HS) 125-700.

AVCORP COMMUTER, LTD.: New Zealand (1983-1986). Nelson-based James Air, Ltd., a subsidiary of James Aviation, Ltd., is renamed AVCORP Commuter, Ltd. in 1983. The 15-employee carrier continues to maintain a link to New Plymouth, Palmerston North, Rotorua, Wanganui, and Wellington. The fleet of 1 Cessna 404, 1 Cessna 402, 1 Beech 99, and 1 Aero Commander 500 is also available for charter and contract service flights.

Unable to maintain its economic viability, the company is forced to permanently suspend services in 1986.

AVDEV AIRLINES OF AUSTRALIA (PTY.), LTD.: Australia (1974-1987). Advanced Airlines (Pty.), Ltd. is formed at Mascot, New South Wales, in September 1974. Equipped with two Beech Super King Air 200s, the commuter inaugurates services in December over routes from Sydney to Lord Howe Island and from Sydney to Gunnedah and Toowoomba.

In 1981, the company is purchased by Aviation Developments Operations, Ltd. and renamed. The fleet is enhanced by the addition of 1 de Havilland Canada DHC-6, 1 de Havilland DH 114 Heron, 1 Cessna 402, 1 Beech B-55 Baron, and 1 Bell 206B JetRanger helicopter. In 1982, **Davey Air Services (Pty.), Ltd.** is purchased and merged, along with its 2 Embraer EMB-110 Bandeirantes, 1 DH 114, and 1 Piper PA-31-310 Navajo. This acquisition is followed by that of

Thorpe's Transport (Pty.), Ltd. and its Britten-Norman BN-2 Islander and Beech Baron in 1983.

Destinations in the New South Wales and Queensland route network in 1984-1986 include Badu Island, Bamaga, Bourke, Brewarrina, Broken Hill, Cobar, Forbes, Lord Howe Island, Newcastle, Nyngan, Parkes, Saibai Island, Sue Island, Sydney, Thursday Island, Wilcannia, Yam Island, and Yorke Island. As the result of a fall in traffic and adverse financial returns, the carrier is forced to cease operations in 1987.

AVE (AEROVIAS DEL VALLE, LTD.): Costa Rica (1951-1978). This air taxi is founded at San Isidro el General in December 1951 and begins lightplane flights to a variety of small towns in the eastern half of Costa Rica. As **LACSA (Lineas Aereas Costarricenses, S.A.)** begins to concentrate on regional and international services during the late 1950s and 1960s, the domestic routes that it suspends are picked up by **AVE (Aerovias del Valle, S.A.)**.

In the 1970s, company Douglas DC-3s start to frequent destinations in western Costa Rica and the fleet is upgraded by the addition of Britten-Norman BN-2 Islanders.

In 1976, the commuter airline **ACASA (Aerovias Cariari, S.A.)** is purchased and merged. Costs surrounding the ACASA integration and a thinness of traffic combine to force the carrier to cease operations in 1978.

AVENSA (AEROVIAS VENEZOLANAS, S.A.): Avenida Universidad, Torre El Chorro, Edif 29, Piso 2/3, Apartado 943, Caracas, 101, Venezuela; Phone 58 (2) 562-3022; Fax 58 (2) 563-0225; Code VE; Year Founded 1943. Venezuela's first privately owned airline is formed by Andres Lord Boulton at Caracas on May 13, 1943, the day the government grants him permission to operate. Capitalized at \$150,000, shareholding is divided between the founder (70%) and **Pan American Airways (PAA)**. All-cargo service with the ex-PAA Ford 5-AT-22 begins to the interior on December 1; meanwhile, the 5-AT-61 is acquired from the Colombian Petroleum Company for spares.

Early in 1944, the carrier's shareholding is reorganized as capitalization is increased to \$200,000 (600,000 bolivars); PAA interest is reduced from 30% to 23% and Andres Boulton's to 31% as the German Vegas group takes 23% and **LAV (Linea Aeropostal Venezolana, S.A.)** gains 23%.

The fleet is increased to three 5-ATs, a Stinson Model A, a Lockheed Model 12, and five ex-USAAF C-39s (military version of the Douglas DC-2). Emphasis is placed on ferrying supplies and equipment to the Cartero oil-producing region with passenger service initiated in December between Caracas and Ciudad Bolivar.

The fleet is increased in 1945 by the addition of the first of 28 Douglas DC-3s (the last 2 are finally received in 1969). To compete more equally with **LAV (Linea Aeropostal Venezolana, S.A.)** and **Linea Aerea TACA de Venezuela, S.A.**, the carrier is reorganized again in 1946. PAA's share rises to 37% as capitalization is increased to two million bolivars and additional DC-3s are delivered. The 5-AT-22 is sold to the Shell Company in Ecuador in May.

Continuing arrival of Douglas transports in 1947 allows retirement of the Fords and the Stinson. By 1948 the fleet comprises 11 DC-3s and 2 Lockheed Model 12As.

Major domestic destinations served in 1949-1951 include Maracaibo, Coco, Barquisimeto, Maiquetta, Barcelona, Maturin, Caracas, and Ciudad Bolivar. Stops are also made at 14 smaller communities. Meanwhile, on December 15, 1950, a C-47D with 3 crew and 28 passengers, crashes on Mount Carmelo, near Velera; there are no survivors.

Three DC-4s are placed in service in 1952. A DC-3 with five passengers fails its climb out of Caracas on December 25 and makes a forced landing into the sea (three dead).

Two ex-**KLM (Royal Dutch Airline, N.V.)** Convair CV-340s join the fleet in 1953, along with a DC-4 leased from **California Eastern Airlines**. In November 1954, AVENSA: Aerovias Venezolanas, S.A. receives authority from the U.S. CAB to inaugurate a service to Miami and takes delivery of 2 new CV-340s ordered from California.

In **1955**, the fleet is further strengthened by the acquisition of 5 Curtiss C-46 freighters, which are employed on domestic all-cargo flights. In June, DC-4 service is begun to Miami via Curacao and Kingston. Another CV-340 is received and the Miami route is extended to New Orleans in **1956**.

The first of 3 Convair CV-440s is delivered in **1957** as orders are placed for 5 Fokker F-27As, license-built in Maryland by Fairchild. A chartered DC-3, with three crew and five passengers, crashes into the Penas Blancas Hills, near Niquito Trujillo, Venezuela, on September 3; there are no survivors.

Acquired upon the failure of its U.S. owner, the onetime **California Eastern Airlines** DC-4 is sold to a U.K. concern in November.

Three ex-**Pan American World Airways (1)** DC-6Bs are purchased in **1958** and introduced on the Miami and New Orleans run. The first 2 F-27As enter service on the domestic network on September 18 and 25, respectively, followed by 2 more on December 3 and 5. A C-46 all-cargo route is opened from Caracas to Miami.

The last CV-340 and F-27As enter service in **1959**.

Orders are placed in February **1960** for a Convair CV-880. To take over its international service, AVENSA joins with competing **LAV (Linea Aeropostal Venezolana, S.A.)** to form the long-haul carrier **VIASA (Venezolana Internacional de Aviacion, S.A.)** on November 21, **1960**. Capitalized at \$3 million, AVENSA holds 45% of the shares and the new entrant is given the option of acquiring the remaining **Pan American World Airways (1)** interest in AVENSA.

In **1961**, the 1960 order for a CV-880 is cancelled as **VIASA (Venezolana Internacional de Aviacion, S.A.)** now orders two of the aircraft. On October 1, the new international carrier takes over AVENSA's Miami flights, followed by assumption of the New Orleans route a few days later. AVENSA's European routes would also be turned over.

En route from Caracas to Maracaibo on November 27, a DC-6B with 43 passengers is diverted by 5 pirates to Curacao, Netherlands Antilles. The aircraft and hostages are quickly released and the hijackers are extradited back to Venezuela where all are sentenced to four-year prison terms.

With **VIASA (Venezolana Internacional de Aviacion, S.A.)** well underway, full attention is turned during **1962–1963** to development of the local and regional network as an order is placed for a DC-9-32. On February 25 of the former year, an F-27A with 3 crew and 20 passengers, crashes at Margarita Island while on a domestic flight; there are no survivors. Most of the Fairchilds will be sold by year's end.

On November 28 of the latter year, 6 terrorists hijack a CV-340 with 3 crew and 11 passengers and force the pilot to circle Ciudad Bolívar while dropping leaflets urging the public not to vote in the upcoming national elections. The plane flies to Port of Spain, Trinidad, where the pirates are held and the plane is allowed to return to Maiquetia, the flight's original destination. The hijackers are later extradited back to Venezuela and receive prison terms.

The fleet is further strengthened in **1964** by the introduction of the first of a fleet of 7 CV-580s and, more significantly, the carrier's first jetliner, an ex-**VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** Sud-Est SE-210 Caravelle III. The DC-9-32 is received and placed in service during **1965** and, in **1966**, orders are placed for 2 DC-9-14s.

The 2 DC-9-14s arrive in May **1967**, but are immediately leased to **VIASA (Venezolana Internacional de Aviacion, S.A.)**, being returned in **1968**. Meanwhile, on March 21, a CV-580, with 50 aboard and en route from Caracas to Maracaibo, is hijacked to Santiago, Cuba. The craft is released by Castro's authorities and is returned to Caracas the next day.

The final DC-3 from the 1945 allotment is received in **1969** and one of the CV-440s is upgraded into a CV-580. One of the last three C-46 freighters is lost in a crash in Costa Rica on May 22, **1970** (six dead).

En route from Barcelona to Caracas on October 12, **1971**, Flight 564, a CV-580 with 41 passengers, is captured by a lone gunman and diverted to Cuba.

Enplanements for the year total 530,011.

Airline employment in **1972** totals 1,930. The fleet now includes 2 DC-9-14s, 1 DC-9-30, 1 Caravelle III, 7 CV-580s, 3 CV-340s, 2 C-46s, and 2 DC-3s.

New tourist services are started to the island of Margarita and to the Amazon zone (Canaima).

A C-46F with two crew fails its takeoff from San Fernando on April 6 and crashes; both flyers are killed.

Passenger boardings jump 16.2% to 633,000 and freight traffic is up by 13%.

The fleet at the beginning of **1973** comprises 2 DC-9-14s, 1 DC-9-31, 1 Caravelle III, 7 Convair 580s, 3 CV-340s, 2 Curtiss C-46s, and 2 DC-3s.

While en route from Velera to Barquisime on May 18, a CV-580 with 37 passengers is taken over by a lone gunman, who demands the release of 97 prisoners from a Venezuelan jail. When the request is refused, the aircraft is flown to Cuba.

An SE-210 Caravelle III is damaged beyond repair when its wick strikes the runway on touchdown at Barquisimeto, Venezuela, on August 21; there are no fatalities.

A pirate takes over a DC-9-14 on October 31 while on a domestic service from Barquisimeto to Caracas and holds a gun to a stewardess, demanding to be flown to Cuba. When informed by the captain that the Douglas is nearly out of fuel and must land, the gunman shoots himself.

In the midst of all this chaos during the year, the carrier goes bankrupt. The airline is taken over by its founder, Andres Lord Boulton, who is determined to make it profitable once more. He has the support of AVENSA's unions in the enterprise.

On December 22, **1974**, Flight 358, a DC-9-14 with 6 crew and 69 passengers, loses control, crashes, and explodes approximately 5 min. and 32 km. out after takeoff from Maturín International Airport; there are no survivors.

Operations continue apace in **1975**. On April 28, **1976**, Pan Am withdraws from the carrier, after which AVENSA's ownership becomes 70% private and 30% government. The last two C-46s are withdrawn during these years.

During **1977–1979** the fleet is further revised, as the SE-210, C-46s, DC-3s, and all but 2 of the CV-580s are replaced by 4 Boeing 727-100s and another DC-9-32. In honor of the company's former association with Pan Am, the company places a logotype on its aircraft fins which closely resembles the old PAA globe-and-wing emblem.

En route from Caracas to Puerto Ordaz on November 6, **1980**, a DC-9-32 with 60 passengers is taken over by 2 hijackers claiming to have a gasoline bomb. The Douglas is ordered to Havana, where Cuban police arrest the pirates.

Enplanements for the year total 1,863,928. A \$760,000 net profit is reported.

The fleet in **1981** comprises 4 B-727-100s, 4 DC-9-32s, 2 DC-9-14s, and 2 CV-580s.

In a coordinated December 7 strike in the skies over Venezuela, 11 hijackers seize 2 **LAV Linea Aeropostal Venezolana, S.A.** DC-9s and an AVENSA B-727-100 with 250 aboard. The pirates force the crews to fly to Colombia and later to Tegucigalpa, Honduras, and Guatemala City. Twenty-two hostages are freed at an Aruba stop and 67 in Colombia, while Caracas newspapers receive a ransom demand for \$10 million plus freedom for 12 jailed in Venezuela. The 3 airliners with 11 gunmen, 89 passengers, and 19 crew members, are flown to Havana on December 8, where the pirates are taken into custody. The 3 planes and those remaining aboard are allowed to return to Caracas the next day.

Passenger bookings accelerate 13.2% to 2,147,383. Revenues jump 28% to \$99 million while expenses climb 18% to \$85 million; the profits are \$14.2 million (operating) and \$5.6 million (net).

The fleet is again rearranged in **1982** as the company begins to retire its 6 DC-9-14/32s and replace them with 3 additional B-727-200s and 5 more CV-580s. The Boeing trijets wear billboard-sized titles on the sides of their fuselages.

On March 11, **1983**, due to a faulty instrument-landing system, a DC-9-32 with 5 crew and 45 passengers crashes while landing in fog at Barquisimeto Airport, in western Venezuela. As the stress causes a fatigue crack in the left main landing gear to fracture, the plane slides off the runway and breaks up (23 dead).

Enplanements for the year total 2,247,764. Profits are \$1.9 million (operating) and \$1.6 million (net).

The workforce is increased 9.3% in **1984** to 1,720. Passenger bookings decline 7.6% to 2,089,212. Revenues rise 9.2% to \$45.3 million, but expenses jump 13.1% to \$44.7 million; profits fall to \$630,670 (operating) and \$533,324 (net).

The founder's nephew, Henry Lord Boulton, becomes president/CEO in **1984**. During its initial climb away from Cabimas on May 28, **1985**, a CV-580 with five crew and eight passengers, strikes a hill with its tail, requiring the aircraft to make a forced landing, during which the cockpit crew dies.

Despite the fact that deferred maintenance was primarily to blame, the pilot and copilot involved in the fatal 1983 DC-9 crash are tried in **1986**, convicted, and sentenced to 15 years in prison.

In **1987**, AVENSA is granted authority to operate routes to Lisbon, Madrid, and Rome. The routes will remain largely unused for a decade. Enplanements for the year are up to 2,776,587.

In **1988** the 1,878-employee carrier operates a fleet that includes 15 aircraft: 9 B-727-100s, 4 B-727-200s, and 2 Convair CV-580s. It enjoys a very good year as passenger boardings increase 32.4% to 4,107,377.

Statistics for **1989** show customer bookings down by 6.6% to 2,786,790. Airline employment in **1990** stands at 2,596 and the fleet includes 20 aircraft: 9 B-727-100s, 9 B-727-200s, and 2 CV-580s.

The Venezuelan government, under the leadership of President Carlos Andres Perez, chooses to deregulate the domestic market and CEO Boulton begins planning how best to take advantage of the new regulatory environment.

In September, USAir Leasing and Services is chosen as the marketing agent for 5 aircraft slated for disposal: 3 DC-9-30s and 2 B-727-100s. The **USAir** subsidiary will sell other aircraft for the airline later on.

The nonunion charter subsidiary **Serivensa, S.A.** is established in December; it will employ aircraft leased from the parent that wear a livery remarkably like that employed by **Pan American World Airways (1)** during the 1950s.

Passenger boardings during the 12 months jump 22.2% to 3,405,905.

The payroll is increased by 4.4% in **1991** to 2,710. The fleet is altered by the removal of both CV-580s, all B-727-100s, except for 3 Dash-22s, and an increase in the number of B-727-200s by 1 Dash-2M7A, which, together with 1 B-727-281A, is leased to **Mexicana Airlines, S.A. de C.V.**

In addition, 2 chartered B-737-229As are acquired along with 1 owned B-737-3Y0, 2 B-757-236s, 1 DC-9-31, 3 DC-9-32s, and 4 DC-9-51s. Statistics are only reported through July and show enplanements of 1,504,186 and freight traffic of 14.53 million FTKs.

During the year, over furious union opposition, AVENSA begins to outsource its reservations, ground handling, and other activities, while flight attendants begin to work as individual contractors who must pay their own health and unemployment insurance premiums.

Ten employees are laid off or not replaced in **1992**. Eighty-two-year-old founder Andres Boulton still controls an extended family empire that controls a dozen Venezuelan companies with revenues in combined excess of \$2 billion. Again, statistics are reported only for the first half-year.

Through June, passenger boardings are down 5.6% to 1,354,371 while freight falls 40.7% to 6.86 million FTKs.

Having failed its initial climb away from Villavicencio on September 19, a C-46F with 11 crew crashes in flames while attempting an emergency landing; there are no survivors.

In **1993**, Chairman Boulton and President Henry Lord Boulton oversee the same sized workforce as in the previous year. Destinations served from Caracas include Anaco, Barcelona, Barquisimeto, Canaima, Carupano, Ciudad Bolivar, Coro, Cumana, Las Piedras, Maracaibo, Ma-

turin, Meridia, Mexico City, Miami, Panama City, Porlamar, Puerto Ordaz, San Antonio, San Tome, and Valerad.

The subsidiary **Serivensa, S.A.** undertakes low-cost flights to Bogota, Quito, and Lima. New Venezuelan President Rafael Caldera abandons many deregulatory reforms, including an arcane currency conversion rule. The airline is unable to get the dollars it needs to purchase spare parts in the U.S. and many aircraft are idled.

Enplanements are up to 1,479,551 through September.

Airline employment totals 2,700 in **1994** and the fleet now comprises 3 B-727-281As and DC-9-31s, 4 DC-9-32s, 2 B-737-229As, and 1 each B-737-3Y0, B-727-22, and B-727-2D3A. During the spring, **Serivensa, S.A.**, with permission from the U.S. DOT, successfully takes over the AVENSA shuttle operation between Venezuela and Miami, increasing the market share from 7% to approximately 45%. The company's finances are so wobbly that it must shut down for a day in May because it has failed to pay its fuel bill. On May 15, the company stops flying its Caracas to New York route.

When the top executives of the Boulton family group give consideration to having low-cost, low-fare **Serivensa, S.A.** take over in June all of AVENSA's remaining international frequencies, including the New York service, a number of family members voice strong resistance. They unsuccessfully seek removal of the 64-year-old president, Henry, charging him with incompetence and corruption. By fall, AVENSA's only international route is from Caracas to Mexico City.

After having faced intense competition from both AVENSA and Serivensa, **LAV (Linea Aeropostal Venezolana, S.A.)** goes bankrupt in October.

Passenger boardings through the first nine months drop 45.7% to 1,015,478 and freight plunges 56.6% to 4.02 million FTKs.

Domestic services continue in **1995** with a fleet that now includes 4 DC-9-51s, 3 each DC-9-31s, B-727-2D3As and B-727-281As, 2 B-737-229As, and 1 B-727-22.

As **Serivensa, S.A.** has continued to grow, CEO Boulton has come to rely more and more on contract cockpit crews. The pilot's union, which has been powerless under deregulation to obtain backing from the government to halt this process, folds up during the summer and becomes, itself, a company subcontractor.

At the end of October, the carrier enters into a code-sharing pact with **Mexicana de Aviacion, S.A. de C.V.** on routes between Caracas and Mexico City. At about the same time, AVENSA comes to share passenger flights among the Caribbean islands with **Air France**.

Revenues for the year reach \$250 million and there is a net gain of \$11 million.

Services continue apace in **1996-1997**. Airline employment in these years has been reduced to just 600, with most jobs paid for on a contract basis. Following the demise of **VIASA (Venezolana Internacional de Aviacion, S.A.)**, Transport Minister Gen. Moises Orozco rules that AVENSA may not begin service to Lisbon, Madrid, or Rome on their granted routes because those routes, through lack of use, have been vacated. Instead, he claims, the routes belong with the VIASA estate and may be sold with its assets. AVENSA files suit to stop the revocation of its routes, while, in a separate lawsuit filed over the same issue, the nation's other airlines counter that VIASA, by its bankruptcy, has forfeited the routes, which should be open for reallocation.

The lawsuits work their way through the Venezuelan legal system and, by spring **1998**, are on the docket of the Supreme Court. At the same time, Gen. Orozco is sacked and succeeded by Julio Marti.

The Supreme Court rules in July that the government cannot revoke the AVENSA grant, with Chief Justice Cecilia Sosa Gomez declaring that AVENSA now has the right to begin flying over the previously disputed routes.

During late summer, AVENSA is granted permission to operate from Caracas to Rome, Madrid, Lisbon, Oporto, Milan, Tenerife, and Santiago de Compostela. To operate the new service, a DC-10-30 is leased from **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** in early December, entering service on December 18.

Flights continue apace in **1999**, though with vastly diminishing returns. In December, Venezuela is hit by floods and landslides that kill thousands and close the Caracas Airport for weeks. The airline loses significant income.

During the second week of January **2000**, AVENSA is able to settle \$23 million in past debt. Still, the carrier, together with its sister, **Serivensa, S.A.**, are facing bankruptcy. To add to their woes, the government's civil aviation authority has been grounded a portion of their fleet and services have been cut dramatically, with those to Madrid, Rome, and Lisbon suspended.

The carrier is forced to turn to the government for a loan; political leaders agree, but demand reorganization. At the beginning of April, Wilmar Castro succeeds Henry Boulton as chairman of both AVENSA and Serivensa. The company also begins discussions with **ASERCA (Aerolineas Regional de Centro, S.A.)** concerning a joint venture, signing a letter of merger intent on April 6.

In late spring, AVENSA is approached by **LAV Venezuelan Airlines, S.A. (Aeropostal)** with a buyout offer. Under the proposal, AVENSA would pay \$20 million for 80% majority control. In June, the AVENSA board rejects the Aeropostal offer, preferring the union with ASERCA instead. Even though the two plan a joint service from Caracas to Madrid with ASERCA aircraft in July, the matter of paying off \$53 million in debts beforehand, however, remains.

Company officials announce on August 18 that Korean-based Asian International and a local consortium representing Germany-based Davis Trading have indicated an interest in purchasing a 50% stake in the airline for \$35 million. The two groups would help with restructuring and provide funds for capital requirements.

At the end of September, a Stage III compliant B-727-2D3A is acquired. Meanwhile, the DC-10-30 that had been returned is refurbished and sent on to **LAC (Lignes Aeriennes Congalaises, S.A.)**

On October 16, it is announced that service to Europe will resume on November 24. A DC-10-30, previously operated by **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, is chartered for the flights.

Plans for a merger with ASERCA (**Aerolineas Regional de Centro, S.A.**) are dropped on November 3.

AVEX AIR (PTY.), LTD.: South Africa (1968–1986). R.N. Turvey and M. Van Ginkel establish this charter operation at Germiston's Rand Airport in **1968** to complement their business as a flight school and Piper Aircraft distributorship. Revenue flights to domestic locations commence with 3 Piper PA-23 Aztecs and 1 PA-31-310 Navajo.

During the early **1970s**, a subsidiary, **Grand Central Air Charter (Pty.), Ltd.**, also known as Grand Central Airways (Pty.), Ltd. is set up at Grand Central Airport at Halfway House. During the decade, Avex also undertakes cargo and other contract service flights (for example, the transport of newspapers) with a Douglas DC-3.

Service is continued until **1986**.

AVIA AIR, N.V.: P.O. Box 69, Queen Beatrix International Airport, Oranjestad, Aruba; Phone (297) 834-600; Fax (297) 826-355; Code 8R; Year Founded 1987. Avia is set up on Aruba in **1987** to provide scheduled passenger flights throughout the eastern Caribbean region. Revenue flights begin and continue with a single Embraer EMB-110P1 Bandeirante.

AVIA AIR CHARTER (PTY.), LTD.: South Africa (1994–1995). **Avia Air Charter (Pty.), Ltd.** is established by Gert De Klerk's Wonderair (Pty.), Ltd. at Sinoville in the fourth quarter of **1994** to provide passenger and cargo services to domestic and regional destinations. Revenue flights commence on December 1 with 2 each Douglas DC-3 Turbos and DC-6s. The former, wearing civilian registration, have been reregistered with the South African Air Force since the previous November. At the same time, authority is received from the government for operation of a scheduled service from Johannesburg to London (LGW).

Late in the year, De Klerk, who in terms of personal flare is often compared to **Virgin Atlantic Airways, Ltd.** Chairman Richard Branson, files suit against several Pretoria-based newspapers. These have suggested in early 1993 that his aircraft have a history of covertly running guns to the UNITA organization in Angola.

Following an equipment search, the company acquires the Boeing 747SP-44 *Maluti* on April 28, **1995** under charter from **South African Airways (Pty.), Ltd.** The aircraft is repainted and is also rechristened, as the *Gauteng*.

After conducting several proving flights to the U.K., the *Gauteng*, on May 8, inaugurates thrice-weekly, deep-discount roundtrips between Johannesburg and London (LGW). Avia is the nation's first independent carrier to ply the lucrative U.K. passenger route.

Unable to achieve viability or succeed in its competition with **British Airways, Ltd. (2)** or **South African Airways (Pty.), Ltd.** on the route, the new entrant closes down on August 2. The *Gauteng* is returned to SAA.

It will later be reported that De Klerk's concern had not only oversold its London seats, but had failed to pay Rand 100 million up front to cover possible bankruptcy. It had even had insufficient funds on hand to cover the check written to South African Airways to cover the lease of the Jumbojet.

AVIA AIR COMPANY: 269/88 Kropotkina Street, Novosibirsk, 630111, Russia; Phone 7 (3832) 267 789; Code AWL; Year Founded 1996. Yuri Petrov establishes AAC at Novosibirsk in **1996** to provide domestic and international all-freight charters. He begins revenue flights with 2 Antonov An-12s and 1 An-26.

AVIA AIRLINES, A.B.: Sweden (1940–1993). Legendary Swedish aviatrix Birgit Thyring and her husband establish Avia Airlines, A.B. on the island of Gotland in **1940** to transport mail and passengers back and forth to the mainland. During World War II the family company flies target planes on Farosund for the Swedish military. Following V-E Day in **1945**, operations are enhanced as air taxi, night mail, crew training, and agricultural services are added. Operations continue apace for the next 30 years.

Nils Bjorkman and Lennart Gustavsson purchase Avia Airlines, A.B. in **1976**; however, no significant changes are made again until **1984**, when the company is purchased by the shipping concern Gotlandsbolaget, A.B. Bo Peterson is named managing director and, late in **1985**, the decision is made to offer scheduled regional services.

Employing an initial fleet of 2 Swearingen Metro IIs and 4 Shorts 330s, scheduled passenger and cargo flights are begun in **1986** from Visby Flyglaft on Gotland to Kalmar and Norrkoping.

Operations continue apace in **1987** and negotiations are successfully completed for the acquisition of Karlstad-based **Golden Air, A.B.** Enplanements in **1988** total 132,600.

Bert-Ake Eriksson succeeds Peterson as managing director in **1989**, as passenger boardings climb 15% to 156,000. Eriksson withdraws the Fairchild in **1990** and acquires 2 Shorts 360s.

The fleet in **1991** comprises 2 Shorts 360s and 6 new SAAB SF340As. Scheduled domestic and regional destinations visited include Orebro, Arland, Norrkoping, Visby, Linkoping, Copenhagen, Mora, Stockholm, Riga, and Kalmar. Charter passenger and cargo services are also flown.

Swedish domestic air traffic is deregulated in **1992**. On July 15, a merger is completed with rival **Salair, A.B.**, although the Avia Airlines, A.B. name is retained. During the second half of the year, the new managing director, John Stahl, replaces his Shorts 360s with another SF340A and 3 SF340Bs.

The workforce in **1993** totals 97. The company name is changed to **Skysways Avia, A.B.** as ownership is assumed by Salenia, A.B., the shipping and offshore energy concern that had engineered the Avia merger with its previous subsidiary **Salair, A.B.**

AVIA EXPRESS CRUISE: Kutuzovsky Prospect 26, Mineralnyy-vody Airport, Moscow, Russia; Phone 7 (095) 249-1975; Code E6;

Year Founded 1995. AEC is set up at Moscow in 1995 to offer executive and small group passenger charters to domestic and regional locations. A. A. Beznikov is general director and he begins revenue flights with a single Yakovlev Yak-40.

Service is maintained in 1996–1997, during which time two freighters are obtained and emphasis is placed on all-cargo flights. Revenues are such during the latter year as to allow an operating profit of \$89,232.

A total of 847.03 million FTKs are operated in 1998, a 153.3% increase over the previous year. Revenues jump 182.2% to \$1.83 million, expenses accelerate 199.5% to \$1.72 million, and there is a \$64,134 operating profit.

Flights continue in 1999. A Tupolev Tu-204 is operated on behalf of **Perm Airlines** on return services from Moscow to both Chita and Barnaul. A total of 290 million revenue passenger miles are flown.

Airline employment stands at 140 at the beginning of 2000. AEC, which has resumed an emphasis on passenger service, operates a fleet of 3 Tu-154s, 4 Tu-134As, and 5 Yak-40s. It operates 40 scheduled flights a week, along with a significant number of domestic and regional charters.

Under a new agreement between Russia and Bulgaria, Avia Express Cruise launches scheduled five-times-a-week Tu-154 service between Moscow and Varna and Burgas on April 29.

In collaboration with **Donavia (Donskie Avialinii)**, 10 regularly scheduled return flights between Moscow and Donetsk open on July 13; seven of the flights are provided by Avia Express and three by Donavia.

AVIA MOST: Leninsky Prospect 1/5/88, Moscow, 113054, Russia; Year Founded 1995. Avia Most, like Avia Express Cruise, is established at Moscow in 1995 to provide executive and small group passenger charters to domestic and regional destinations. Yu N. Semonov is general director and he begins revenue flights with a pair of British Aerospace (BAe) 125-700 bizjets.

AVIAARKTIKA: U.S.S.R. (1930–1960). The operational arm of Glavsevmorput or Glavnoc Upravlenie Severnogo Morskogo Puti (North Sea Route Administration), Aviaarktika (Department of Polar Aviation) is formed at Krasnoyarsk on September 1, 1930. The deputy commander of Glavsevmorput, Mark Shevelev, is placed in charge. The initial fleet is made up of Junkers F-13s and 6 Dornier Wal flying boats.

In 1932, the organization's headquarters are moved to Moscow and additional aircraft are obtained, including four-engine ANT-6s and twin-engine ANT-4s. During the remainder of the 1930s, Aviaarktika undertakes to provide air service in the sparsely settled areas of Siberia. Bush and proving flights are made along the Rivers Ob, Irtysh, Yenisei, and Lena. Bases are established at Omsk, Krasnoyarsk, Irkutsk, and Yakutsk. Although passenger enplanements are few (180 passengers in 1933) and freight carried is slight, rescue, medical, and resupply flights are frequent.

In mid-February 1934, the first great test is presented and passed when a number of Aviaarktika flyers, including Mikhail Vodopyanov and Vasily Molokov, rescue all 104 crew members of the ship *Chelyuskin*, which is crushed in the ice not far from the Bering Strait. Route proving flights are now undertaken to survey possible commercial routes in the region.

Between February 11 and March 19, 1935, Vasily Molokov, flying a Polikarpov R-5, undertakes to prove the viability of an air route to potential mineral-mining locations by flying a multistop mission from Moscow to Krasnoyarsk, and then north to Dickson on the Kara Sea. The intrepid airman then takes a Dornier Wal on a 13,000-mile multistop epic from Krasnoyarsk to Uelen, the most easterly point in the nation; he then returns along the north Siberian coast, arriving at Dudinka on September 12 after a nearly two-month trip.

To discover the possibility of a trip to the North Pole, two aircraft, led by Mikhail Vodopyanov, makes a successful proving flight from Moscow to Rudolf Island, the country's northernmost point of land, and return between March 29 and May 21, 1936. In a 56 hr. 20 min. transcontinental flight undertaken on July 20, Valery P. Chkalov and two crew

fly an ANT-25 in a transcontinental trip from Moscow to the Island of Udd (now Chkalov) in the Sea of Okhotsk near the mouth of the Amur River. Then, between July 22 and September 19, Vasily Molokov takes his Wal on a 16,400-mile (200-hours flying time) circumnavigation of the U.S.S.R. east from Moscow.

In perhaps the greatest feat in Soviet aviation to date, 4 ANT-6As and 1 ANT-7, under the direction of Chief Pilot Mikhail Vodopyanov, with Vasily Molokov flying the number two aircraft, depart Moscow for Rudolf Island on March 22, 1937, arriving on April 17. From that point on May 21, Mikhail Vodopyanov flies a scientific team led by Ivan Papanin to a landing just beyond the North Pole, where the first polar research station is established. The aircraft now resupply the station.

Meanwhile, between June 18–20, Valery P. Chkalov flies his ANT-25 over a 6,200-mile Great Circle route via the North Pole to Vancouver, Washington. This flight is followed on July 12–14 by a second transpolar ANT-25 flight made by Mikhail Gromov and his crew over 6,036 miles from Moscow to San Jacinto, California.

The year's last attempt by Aviaarktika to fly in polar regions ends in tragedy. On August 12, Sigismund Levanevskiy, filling in for an ill Mikhail Gromov, and five others depart northward from Moscow in a DB-A (modified ANT-6), but, after turning back, are lost. Numerous search flights are unsuccessful.

Following the great activities of 1937, the work of Aviaarktika becomes almost routine in 1938–1960. Passenger and cargo services are maintained, even during World War II, and airstrips and airfields are improved, as are services to the many small communities on the organization's route map. Although equipment changes are slow in coming, almost all aircraft upgrades are small and easily flown into remote areas. Having greatly improved in the postwar years, the state airline, **Aeroflot Soviet Airlines**, is finally ready to take over Aviaarktika on January 3, 1960.

AVIACION DEL NOROESTE, S.A. de C.V. See NOROESTE: AVIACION DEL NOROESTE, S.A. de C.V.

AVIACION Y COMERCIO, S.A. (AVIACO LINEAS AEREAS): Spain (1948–1999). A group of Bilbao businessmen on February 18, 1948 establish A y C to operate Bristol 170 all-cargo charter flights of agricultural products from Spain to destinations in northern Europe. When the agriferry business does not prove possible, the company, in late 1949, applies for and receives permission to begin passenger flights as well.

A Bristol 170 must be written off following a November 24 accident at Mahon Airport, Spain; there are no serious injuries or fatalities reported.

The first scheduled passenger service is flown from Bilbao to Barcelona via Madrid in early 1950; it is followed by flights from Bilbao to Marseilles, the Balearic Islands, and Spanish North Africa. The route to Spanish Guinea is withdrawn in 1951 and replaced by services to Brussels and Amsterdam.

Operations continue apace in 1952 and on August 13, 1953, **Philippine Airlines (PAL)** announces its intention to purchase shareholding. While en route from Bilbao, a Bristol 170 Mk. 21 with 5 crew and 28 passengers, crashes into the Somosierra Mountains, N. of Madrid near Guaderrama, on December 4; 12 passengers survive, including U.S. State Department courier P. J. Douglass.

Services continue as before during 1954–1956. On September 29 of the latter year, an airliner crashes into a house in the Canary Islands (two dead).

A 5% share is acquired in the new Moroccan state carrier **Royal Air Maroc** in 1957. The year is operationally disastrous.

En route from Santiago de Compostella to Madrid on May 9, a Bristol 170 Mk. 21 with 5 crew and 32 passengers, is lost near Madrid's Barajas Airport; there are no survivors.

A Bristol 170 Mk. 21E is lost at Tetuan, Morocco, on September 11; circumstances of the accident are unknown.

A DH-114 Heron 2D with 5 crew and 17 passengers must be written off following a bad landing at Fuenterrabia Airport on October 26; there are no fatalities.

A DH-114 Heron 2D, with two crew and two passengers, is lost at sea near Palma de Mallorca on November 15; there are no survivors.

The rash of accidents continues in 1958. A DH-114D with 2 crew and 14 passengers is lost south of Barcelona on April 14; there are no survivors. An SE-161 Languedoc with 21 aboard crashes in a heavy rain-storm outside the city of Madrid on December 4; again, no one survives.

A Bristol 170 Mk. 21E with 3 crew and 15 passengers is lost near Mahon, Spain, on March 13, 1959 (one dead).

The state carrier **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)** takes 66% controlling interest in 1960, the remaining shares being subscribed by the Spanish government and private sources; that arrangement will eventually be reversed insofar as Iberia's share will decline to 33% and the government's will increase 67%. With Sud SE-210 Caravelles leased from **Sabena Belgian World Airlines, S.A.**, inclusive-tour operations are inaugurated.

Additional domestic routes are opened in 1961-1971 as Iberia's subsidiary's market is defined. Leased Caravelles are provided by Iberia as the Belgian models are returned. In 1964, a vehicle ferry is opened from Barcelona to Palma de Mallorca employing two Aviation Traders, Ltd. ATL-98 Carvairs. The modified DC-4s are sold to **Dominicana, S.A.** in 1969. By the early 1970s, A y C is flying 6 Convair CV-440s throughout the Iberian peninsula and into North Africa.

Operations continue apace in 1972. While on initial approach for a July 6 landing at Las Palmas, Flight 331, a DC-8-52 with 10 crew aboard on a positioning service, crashes into the ocean 14 mi. offshore; there are no survivors.

While on final approach to Funchal, Portugal, on a February 1, 1973 positioning flight, an SE-210 Caravelle XR with three crew, lands in the ocean and sinks; there are no survivors. As wreckage cannot be recovered, a crash cause will never be determined.

While on final approach to the airport at La Coruna on an August 13 flight in heavy fog from Madrid, an SE-210 Caravelle XR with 6 crew and 79 passengers, crashes short of the runway; all aboard the jetliner are killed, along with 1 person on the ground.

In 1974-1977, charter flights are extended to additional points in Europe, Africa, the Canary Islands, the Middle East, and North America. The fleet continues to expand as Caravelles and DC-8s are transferred to it from Iberia. The Convairs are replaced by Fokker F.27-600 Friendships.

Chairman/President Manuel Ortiz Sanchez's company employs 1,209 workers in 1978. Enplanements reach 2,347,056. In 1979, the fleet of what is now Spain's second largest carrier includes 12 DC-9-32s, 6 DC-8-52s, 4 SE-210s, and 6 F.27-600s.

Passenger bookings accelerate 25% to pass the three million mark (3,129,407 cumulative) in annual boardings.

Airline employment is 1,733 in 1980. Two additional F.27-600s and 2 DC-8-63s are acquired. With the beginning of the winter season in October 1981, a DC-9-41 is leased from **Finnair O/Y** to increase capacity to holiday destinations. Still, the world economic recession causes traffic to fall; bookings are 2,735,754.

Carlos Espinosa de los Monteros is named board chairman in 1982 with Jose Saenz Insausti as managing director. The Finnish DC-9-41 is returned at the end of the first quarter as the first of 8 DC-9-32s are received to help handle a traffic increase.

Boardings soar 25.8% to 3,687,000. Still, a \$16-million operating loss is suffered.

The workforce remains steady at 1,732 in 1983. All of the DC-8s and one DC-9s are withdrawn as emphasis on domestic service rises; four more F.27-600s are delivered.

In thick fog at Madrid's international airport on December 7, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** Flight 350, a B-727-256 with 9 crew and 84 passengers, is taking off for Rome when its crew sights Aviaco Flight 134, a DC-9-32 with 5 crew and 37 pas-

sengers, taxiing out onto the active Runway 1 for takeoff to Santander. Flight 350 unsuccessfully attempts to take evasive action, but it is too late. The aircraft collide, with the Boeing's left wing and left main landing gear being torn off. The two planes catch fire and are destroyed. Although 8 crew and 30 passengers escape burning Flight 350, there are no survivors from Flight 134.

This is the second airline disaster at Barajas Airport within a 10-day period and causes union and airline officials to complain bitterly about the lack of ground radar and warning lights.

Cargo is up 12% to 5.69 million FTKs, and passenger bookings accelerate 2.3% to 3,969,000. Although revenues jump 14.3% to \$219 million, expenses grow faster and the operating loss swells to \$25 million.

Three DC-8-54CFs and 8 DC-9-34s are received during 1984 as a DC-9-32 and an F.27-600 are retired. Freight soars 32% to 5.99 million FTKs, but accelerates to 4,238,892. The net loss this year is \$15.3 million.

The workforce is reduced 8.5% to 1,547 in 1985. Boardings dip 6.8% to 4,010,000 and freight is off by 13.8%. Total revenues fall 3.9% to \$218 million; still, an operating profit of \$7.5 million is generated. There is a net loss of \$12.2 million.

In 1986, enplanements swell 2.7% to 4.1 million and revenues jump 15.9% to \$280.7 million.

Airline employment grows 1.1% in 1987 to 1,514. Passenger boardings are level at 4,123,000 and cargo is down a sharp 38.2% to 240.9 million FTKs. Revenues slip by 8.9% to \$32.5 million, but costs are held down and allow an operating gain of \$2.6 million.

The workforce remains the same in 1988 and the fleet continues to feature 13 DC-9-32s, 8 DC-9-34s, and 8 Fokker F.27-600s. Iberia continues to increase its shareholding as customer bookings decline slightly to 4,028,233. The bottom falls out of the cargo business as the number of FTKs flown plunges to 7.73 million.

The payroll is increased by 2.4% in 1989 to 1,551. Enplanements move ahead to 4,545,941, but freight declines to 7.6 million FTKs. Profits are generated: \$36 million (operating) and \$19 million (net).

Company employment grows by 6.7% in 1990 to 1,780 and 5 McDonnell Douglas MD-83s join the fleet. Orders are outstanding for 13 MD-88s. Passenger boardings ascend 8.4% to 4,680,000 and freight recovers, climbing 11.9% to 8.95 million FTKs. Revenues jump 39.2% to \$440 million. Operating profit reaches \$46 million and the net gain totals \$35 million.

Company employment climbs another 4.5% in 1991 to 1,860 and the fleet now includes 13 owned and 5 leased DC-9-32s, 3 DC-9-34s, 2 DC-9-34CFs, 4 chartered MD-83s, 8 F.27-600s, and 5 MD-88s. The initial unit of the latter type is delivered in August and is the first such model to enter service in Europe.

Orders are outstanding for 8 MD-88s.

Although customer bookings are up 6.8% to 5 million, cargo is off 5.6% to 8.54 million FTKs. Revenues inch up 1.4% to \$446 million and allow an operating profit of \$45 million. Net profit is down to \$27 million.

The employee population swells 4.6% in 1992 to 1,946. The MD-83s are returned and replaced by 5 more MD-88s.

On March 30, the fuselage of a DC-9-32 with 5 crew and 94 passengers and arriving at Granada from Madrid in gusty conditions, breaks in two as the end result of a hard landing that blows all of the main landing gear tires; 26 passengers are injured.

Enplanements climb 3.8% to 5,442,961 and revenues swell 7% to \$477 million. Expenses are up only 6.2% to \$426 million and leave an operating surplus of \$51 million. Net profit slips to \$21 million.

In 1993, Chairman Miguel Aguilo and General Manager Javier Alvarez oversee a workforce of 1,696, down 12.8% from the previous year, and a fleet that includes 15 DC-9-32s, 13 MD-88s, 8 F.27-600s, 3 DC-9-34s, and 2 DC-9-34CFs. New services are inaugurated from Zaragoza to London (STN) and Paris, from Asturias to London (STN), and from Valladolid to Paris.

Other destinations now visited from Madrid include Valencia, Almeria, Badajoz, Barcelona, Bilbao, Fuerteventura, Granda, Ibiza, Jerez, La

Coruna, Lanzarote, Las Palmas, Malaga, Mallorca, Menorca, Murcia, Oviedo, Palma, Pamplona, Reus, San Sebastian, Santander, Seville, Tenerife, Valladolid, Vigo, Vitoria, and Zaragoza.

On July 14, the National Institute for Industry, the carrier's majority shareholder, forms the subsidiary Teneo, S.A. and transfers 67% of its shares to it.

Passenger boardings fall 6.6% to 5,031,660 while freight declines 8.4% to 7.09 million FTKs. The year's operating profit is \$19.01 million while a net gain of \$8.33 million is reported.

Airline employment is cut 1.8% in 1994 to 1,813. The carrier's entire fleet of F.27-600s is sold to **Cubana (Empresa Consolidada Cubana de Aviation, S.A.)** in January, with deliveries beginning in March.

While landing at Vigo after a March 21 service from Madrid, the left wing of a DC-9-32 with 6 crew and 110 passengers, strikes runway approach lights and the aircraft touches down 50 m. short of the runway. There, both main landing gears separate from the fuselage and the Douglas skids 580 m. to a stop. Although the plane is damaged beyond repair, there are no fatalities.

Passenger boardings for the year inch up 1.8% to 5,177,453, but revenues decline by 2.7% to \$441.73 million. Expenses also dip 0.5%, to \$432.88 million, allowing profits of \$8.85 million (operating) and \$3.02 million (net).

Seventeen employees are laid off in 1995, a 0.9% decrease in the workforce. Flights commence from Zaragoza to Frankfurt, but traffic figures for the year are mixed.

Customer bookings dip 1% to 5,224,071, but freight rises 5.3% to 230.96 million FTKs. Operating revenues this year are \$494.68 million, up 12%, while expenses are up 11.7% to \$483.45 million. While the operating profit grows to \$11.22 million, there is a net downturn of \$250,582.

The workforce is cut another 10.6% in 1996 to 1,606; however, traffic resumes a skyward projection. To celebrate the Vuelta '96 Spanish national bicycle race, the livery of the company's airliners is slightly changed to include images of a number of bicycle racers above the window cheatlines.

Enplanements inch up 1.1% to 5,216,877 and 7.05 million freight FTKs are operated, a 0.6% increase.

Destinations visited in 1997 include Alicante, Asturias, Barcelona, Fuerteventura, Ibiza, Jerez de la Frontera, Lanzarote, Madrid, Malaga, Menorca, Palma Mallorca, Pamplona, Santa Cruz de la Palma, and Valencia.

On May 12, AVIACO and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** begin dual-designator flights over their domestic routes.

On October 26, Iberia integrates its own resources, together with those of its domestic subsidiary AVIACO, its charter operation, **VIVA AIR (Vuelos Internacionales de Vacaciones, S.A.)**, and its regional **Air Nostrum, S.A.** under one centralized operational holding company. Long-term plans are made to institute a single Iberia branding over all three, but due to potential union problems, this plan will be implemented in phases. Meanwhile, in the short run, coordination becomes the theme of the day.

Although the companies are held as separate legal entities, a management committee made up of the commercial directors from each airline now allocates the group's fleet, crew, and scheduling according to perceived daily requirements for each route. All passenger revenue receipts are turned into a central office, while all marketing activities are also centralized. Under this reorganization, VIVA begins to drop unprofitable charters, while AVIACO dumps unprofitable routes off on Air Nostrum, thereby freeing up capacity for Iberia.

The Spanish pilots union, SELPA, concerned that modernization and cost-cutting plans afoot at Spain's airlines might badly impact its members, stages a one-hour strike at the end of October as a symbolic protest against them.

Passenger boardings reported through November are up 4.7% to 5,072,678, while cargo traffic rises 11.6% to 7.15 million FTKs.

Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.) purchases all of AVIACO's outstanding stock at the beginning of 1998, making Spain's second largest carrier a 100%-owned subsidiary of the largest.

The company seeks to integrate the resources and schedules of AVIACO and to redeploy its pilots to fly a range of aircraft with which they are not familiar. A new arrangement is entered into with the pilots' union, SEPLA, in April. To accommodate the enlarged airline's European operations, a new terminal is planned for the Madrid Airport, large enough for the unified network.

By the end of the year, the unit's 185 aircraft, flying primarily to domestic destinations in Spain, account for 23% of Iberia's daily departures.

When Iberia refuses to hire 43 pilots specified in the April labor accord, AVIACO's 323 flyers commence a series of strikes beginning on January 26, 1999. Another job action occurs in early February, followed by a third on February 10. The latter forces the cancellation of 70 flights, primarily in the northern Spanish regions of Galicia and Asturias as well as the southern region of Alicante. A spokesman for SEPLA simultaneously indicates that, unless the pilots are employed, there will be three more work stoppages before the end of March.

Iberia, meanwhile, continues the integration process as the AVIACO MD-88s are repainted in Iberia colors, along with some of the new DC-9-32s. AVIACO is fully absorbed into the main operation on August 13.

AVIACION NACIONAL VENEZOLANA, S.A.: Venezuela (1933-1935). On July 3, 1929, the Venezuelan government signs a contract with the French carrier **Aeropostale, S.A. (1)** for the transport of mail in the trans-Orinoco area. **Compagnie Generale Aeropostale de Venezuela, S.A.** is registered at Caracas on December 23 and receives its official permissions on January 30, 1930. Led by Paul Vachet and employing a Latecoere 26, the company undertakes weekly scheduled flights from Maracay west to Coro and Maracaibo and east to Tumeremo via Ciudad Bolivar and Guasipati. During the year, the Latecoere 26 is supplemented by 3 Latecoere 28s.

On January 9, 1931, airmail flights are initiated from Ciudad Bolivar to Trinidad in the French West Indies. Services continue apace in 1932.

Following the collapse of **Aeropostale, S.A. (1)** in France, the Venezuelan government purchases the subsidiary on December 31, 1933, renaming it Aviacion Nacional Venezolana. Under a Ministry of Labor and Communications contract, a French management team headed by Robert Guerin runs the airline for a year, changing little.

On January 1, 1935, the company is renamed again, becoming **LAV (Linea Aeropostal Venezolana, S.A.)**. Capitalized at 1.16 million Bolívars, the carrier, an autonomous government entity, is placed under the command of Lt. Colonel Francisco Leonardi.

AVIACON ZITOTRANS: 8V Dobrolubova Str., Yekaterinburg, 620014, Russia; Phone 7 (3432) 520510; Fax 7 (3432) 519313; Code AZS; Year Founded 1995. The charter operator Aviacon is established as an open joint stock air company at Yekaterinburg in June 1995, with Andrei Kuznetsov as director general. A workforce of 50 is recruited and a fleet, comprising 2 Ilyushin Il-76TDs and 1 each Il-76T and Tupolev Tu-154M, is purchased.

Revenue flights begin in June 1996 and flights are made worldwide, excluding the Western Hemisphere. Popular destinations visited during the year and in 1997-2000 include Istanbul, Sharjah, Ras al Khaimah, Gerona, Bergamo, Larnaca, Athens, Thessaloniki, Varna, and Bourgas.

AVIACSA (AVIACION DE CHIAPAS, S.A. de C.V.): Hangar 13, Zona "D" Zona Hangares, Apto. Intal Co. de Mexico, Distrito Federal, 15520, Mexico; Phone 52 (5) 756 650; Fax 52 (5) 756 455; Code 6A; Year Founded 1990. AVIACSA is organized at Mexico City by Luis de Pau, former president of the Airline Pilot Union's Savings & Pension Fund, on May 5, 1990 to provide domestic and regional second-level service, both scheduled and nonscheduled. The initial flight equip-

ment of President Jose A. Martinez Navarro's 330-man carrier is a Fairchild F-27J and two leased British Aerospace BAe 146-200 jetliners once operated by the failed U.S. large regional **Presidential Airways**, with orders placed for two more.

While on final approach to Tuxtla on a May 10 charter, the F-27J with 5 crew and 33 passengers, strikes a line of trees and crashes 4.5 km. from the runway (21 dead).

Scheduled flights are inaugurated from a base at Tuxtla Gutierrez in September as AVIACSA becomes the first Mexican regional to operate jet equipment from its inauguration. Lighter routes are traveled by a Pilatus Britten-Norman PBN-2 Islander.

During the remainder of the year and into **1991**, routes are started to Cancún, Merida, Monterrey, Oaxaca, Tapachula, and Tuxtla Gutierrez. The first full year for the regional is not a good one. Martinez Navarro is indicted during the spring in a savings and pension fund fraud case and is succeeded by Francisco Espojol.

Although thrice-weekly service is inaugurated to Chetumal in the summer, their manufacturer ties up the 2 BAes ordered for nonpayment in the fall, forcing lease of an Israeli Aircraft Industries IAI Arava 102.

In January **1992**, lease requests are placed for 4 Fokker 100s; the first pair, chartered from GPA Group, enter service in March, followed by the third in April and the fourth in July. Meanwhile, in March, the two leased BAe 146-200s are officially repossessed for nonpayment. Simultaneously, the national Attorney General indicts Chairman de Pau and six others for allegedly defrauding the pension fund of \$55 million; the chairman and the fund's comptroller, Ricardo Lopez Buicio, flee the country. During the year, new routes are started to Ciudad Juarez, Guatemala City, and Villahermosa.

In **1993**, President Capt. Francisco Espejel Vargas oversees a workforce of 245. A new Monterrey service is initiated. Control of the company is purchased in **1994** by the expanding regional **Aeroexo (Transportes Aereos Ejecutivos, S.A. de C.V.)**, but is allowed to continue operations as the separate company Consorcio Aviaca SA de CV. At the end of the year the company begins to replace its Fokker 100s with two B-727-225As leased from its parent.

Operations continue apace in **1995-1999**. Alejandro Morales Mega is now chairman with Eduardo Morales Mega as president. Airline employment stands at approximately 375 and the fleet includes 9 Boeing trimotors and 4 Douglas DC-9-15s. Destinations visited include Cancún, Chetumal, Chicago, Guadalajara, Houston, Las Vegas, Merida, Monterrey, Oaxaca, Tapachula, Tijuana, Tuxtla Gutierrez, and Villahermosa.

Early in **2000**, the company begins to replace its DC-9s with 6 leased ex-Air New Zealand, Ltd. B-727-276As. The Mexican Pilots Union reports on March 29 that the company has fired 11 pilots for refusing to fly an unsafe aircraft. The carrier's remaining 85 flyers complain that they are being forced by management to fly more hours than legally permitted on routes from Monterrey to Houston and Las Vegas.

AVIAENERGO ROA: Kitaisky Proezd 7, Moscow, 103074, Russia; Phone 7 (095) 220-5203; Fax 7 (095) 260-8208; Code 7U; Year Founded 1994. Under the direction of general director A. R. Blagonravov and flight operations director Marat Morozov, the transport division of the Ministry of Energy begins to offer charter flights in February **1994**. Revenue services are initially provided with a pair of Tupolev Tu-154Ms.

As the year progresses, 3 Ilyushin Il-62s and another Tu-154M are acquired and scheduled services linking Moscow with several regional cities is inaugurated. On the year, a total of 500 flights are completed, transporting 30,000 passengers and 300 tons of cargo.

The company's 13 aircraft help customer bookings to skyrocket in **1995** to 138,000.

Although the Ilyushin passenger planes are withdrawn, new holiday and vacation routes are opened to the Mideast and Southern Europe during **1996**. The fleet in **1997-2000** includes 4 Tu-154Ms, 2 Yakovlev Yak-40s, and 1 Antonov An-74. The company also branches into rotary-wing aerial work with 4 Mil Mi-8s.

AVIAEXPRESS AIRLINES AND SERVICES, LTD.: Ferihegy 1 Airport, P.O. Box 136, Budapest, H-1675, Hungary; Phone 36 (12) 967 092; Fax 36 (12) 967 891; Code RX; Year Founded 1991. Organized at Budapest's Ferihegy Airport in February **1991** to offer both charter and scheduled passenger and cargo services to destinations throughout the region and country, AviaExpress names Sandor Horvath as managing director and hires 11 workers.

Revenue flight operations commence in **1992** with a fleet comprising 3 Let 410UVPs and 2 Yakovlev Yak-40s. Destinations visited include Belgrade, Istanbul, Vienna, Graz, Brussels, Sofia, and Ushgorod. Enplanements total 267, of which only 46 are scheduled.

A McDonnell Douglas MD-500 helicopter is acquired in **1993**, along with a Yak 42. In **1994**, orders are placed for 1 each Cessna 421 and Cessna 172 while services are planned for Dresden, Graz, Leipzig, and Vilnius.

The anticipated markets are opened in **1995-2000**, along with Croatia, Kosice, and Zagreb, service that is briefly interrupted by the 1999 Kosovo crisis. One each L-410UVP and Yak 40 are withdrawn.

During these years, AviaExpress also undertakes regular cargo charters on behalf of **MALEV Hungarian Airlines, Ltd.** from Budapest to Chishinau, Kiev, Skopje, and Tirana. The flights are operated with leased Antonov An-12s, An-26s, An-74s, or Ilyushin Il-76s.

AVIAKOR AIR TRANSPORT (AVIAKOR-PROIZVODSTAVENNO KOMMERCHESKAYA AVIATRANSPORTNAYA): 32 Ulitsa Pokovskaye, Samara 52, 443052, Russia; Phone 7 (8462) 252420; Code VCR; Year Founded 1993. Aviakor is established at Samara in **1993** to operate all-cargo charter services to destinations throughout the CIS, Africa, Europe, and Asia. General director G. N. Svetin begins revenue services with a single Antonov An-12, increasing that number during **1994**.

Flights continue in **1995-1999**, during which years the fleet comes to comprise 2 An-74s and 1 each An-12, An-24, An-26, Yakovlev Yak 40, and Mil Mi-8 helicopter. The company discontinues the provision of public charter service, flying only its own business.

AVIAL AIR COMPANY (AVIAL AVIAKOMPANIYA): 1/11 Orlikov Pereulok, Moscow, 107139, Russia; Phone 7 (095) 207-8941; Fax 7 (095) 975-4033; Code AK; Year Founded 1991. Avial is founded at Moscow on March 21, **1991** to offer both passenger and cargo charter services to destinations in Europe, North Africa, and the Mideast. President Victor Makatsyubov recruits a workforce of 54 and begins revenue flights on December 24, **1992b**, with a pair of Antonov An-12s.

The fleet is expanded during the remainder of the decade through the addition of 1 leased Tupolev Tu-154 and 3 Ilyushin Il-76TDs. Service area emphasis changes and principal destinations visited now include Jakarta, Kaohsiung, Kota Kinabalu, Kuala Lumpur, Langkawi, Penang, and Taipei.

AVIALINII DAGESTANA: Airport, Makhachkala, Dagestan, Southern Zone, 367016, Russia; Phone 7 (87222) 73701; Year Founded 1995. AD is set up at Makhachkala in **1995** to provide regional passenger charters. Revenue flights begin and continue with a fleet of 2 Tupolev Tu-154Ms, 6 Antonov An-24s, and 4 An-2 biplanes.

AVIALINII TARTARSTAN. See TARTARSTAN AIRLINES

AVIAMEER AIRLINES, S.A.: Belgium (1958-1960). Unable to continue as founding owners of **LTU (Lufttransport Union)**, Englishmen Ronald Myhill and Bernard Dromgoole transfer their Vickers Viking from that German charter operation to Antwerp. Here they found a non-scheduled Belgian company in early **1958** to fly the aircraft. The Viking is employed to undertake ad hoc and inclusive-tour charter flights to Mediterranean and European resorts until Aviamer fails in the spring of **1960**.

AVIANCA COLOMBIAN AIRLINES (AEROVIAS NACIONALES DE COLOMBIA, S.A.): Ave. El Dorado 93-30, Piso 5, Bogota 1, Colombia; Phone (57-1) 413-9511; Fax (57-1) 413-8716; <http://www.avianca.com>; <http://latina.latino.net.co/empresa/avianca/main.html>; http://www.flylatinamerica.com/acc_avianca.html; Code AV; Year Founded 1940. Due to international political considerations, all German employees of SCADTA (**Sociedad Colombo-Alemana de Transportes Aereos, S.A.**) are dismissed on June 8, 1940 and replaced by employees of **Pan American Airways (PAA)**, the major shareholder. Nine days later, the carrier receives its present name and shareholding is revised to show the U.S. carrier with 64% interest, the Colombian government with 15%, and local interests with 21%. The surviving SCADTA fleet is taken over, including the Ford Tri-Motors 5-AT-86, 5-AT-108, 5-AT-114, and 5-AT-1, also known as the *Santander*. On October 3, the February 23 merger between SCADTA and **SACO (Servicio Aereo Colombiano, S.A.)** is formally effected and the latter's fleet of 2 Curtiss Condor T-32Cs and 2 Lockheed Model 10E Electras is taken over.

The small Villavicencio-based carrier **Aerovias Rames Colombianas, S.A.** (founded in 1940), together with its fleet of 3 Beech 27 Staggerwings, 1 Ford 5-AT and 1 Ford 8-AT, is purchased from its owners, Hans Hoffman and Fritz Herzhauser, on April 25, 1941 and merged. During 1942–1945, under **Pan American Airways (PAA)** direction, the carrier's route system is rationalized.

During these years, 3 Boeing 247Ds are lost: the *Rodrigo de Bastidas* in an October 24, 1942 crash; an unnamed C-139 by fire in 1943; and an unnamed C-146 in a February 27, 1944 crash. Meanwhile, the fleet is augmented in 1944 by 2 C-39s (military version of the Douglas DC-2) and the introduction in October 1945 of 3 Lockheed L-18 Lodestars.

Meanwhile, in a labor dispute, the airline is grounded for several weeks in mid-November 1944 following the resignation of pilots and mechanics. On October 22, 1945, AVIANCA makes headlines when it hires four U.S. women pilots.

The last Ford 5-ATs are withdrawn in 1946 and replaced by Sikorsky S-38s and 4 Consolidated PB5-5As, while 6 DC-3s join the fleet, succeeding the earlier surviving B-247Ds and Junkers W-34s. On March 21, a DC-3 launches the carrier's first international service from Cali to Quito, Ecuador; this route is extended to Guayaquil on May 10.

Late in the year, the first 4 of an eventual fleet of 24 DC-4s are delivered. In a test, several are employed to fly the first chartered revenue flights from South America to Europe, ostensibly to bring home Colombians stranded at the end of World War II.

Flights begin to Balboa in the Panama Canal Zone on January 4, 1947. A C-54B with 4 crew and 13 passengers and en route from Bogota to Barrancabermeja on January 14, disappears; the wreckage is found near Puerto Araujo, Colombia, on January 29 and there are no survivors. Meanwhile, on January 22, a DC-4 inaugurates direct Miami service, becoming the first airliner from a South American west coast country to do so.

One of the new four-engine Douglas transports, with 4 crew and 49 passengers, slams into Mount Tablazo near Bogota on February 15; there are no survivors. A DC-3 crashes near Bogota on February 26 (seven dead).

Former Minister Sans de Santamaria is appointed general manager on June 12. A Cuenca operation is launched on July 22, signaling the establishment of an Ecuadorian network in one of the rare examples of full cabotage (i.e., the airline of one country operating domestic services within the borders of another nation).

Ecuador's network is increased by the addition of Manta to the system on July 23, 1948. Enplanements for the year total 432,500. The Miami DC-4 route is extended, on a biweekly basis, to New York on April 20, 1949. A DC-3 is lost near the Colombian city of Bojaca on August 13 (31 dead).

Tulcan is added to the Ecuadorian network on January 10, 1950. DC-4 service to Lisbon, Paris, and Rome begins on March 6. A C-47D is damaged beyond repair at Ipiates, Colombia, on March 11; there are no fatalities.

En route from Quito to Guayaquil on May 2, a C-47D with 3 crew and 12 passengers smashes into a mountain at Chimborca, Ecuador; there are no survivors.

The fleet is increased through the acquisition of 6 Curtiss C-46As and orders are placed for 6 Lockheed L-749A Constellations.

A C-47D freighter with two crew is lost at Barranquilla on August 29; there are no fatalities. Flights to Jamaica start on September 17.

The carrier expands its cargo capacity on January 10, 1951. A DC-3 with three crew crashes at Bogota on April 2; although the aircraft must be written off, there are no fatalities. The L-749As are delivered in May and are placed on the Bogota to New York route on June 24.

Ecuador threatens to end the carrier's rights into the country on July 1 unless reciprocal rights are provided by Colombia. On July 3, a new L-749 route is inaugurated to Madrid. Three days later the company begins commercial night flights. Flights to Ecuador are barred beginning on August 7. The next day, the Ecuadorian ban is modified; AVIANCA may continue its international stop, but cannot provide local service. A DC-3 is destroyed in an accident at Barranquilla on July 9; there are no fatalities.

In accordance with a mutual agreement between **Pan American World Airways (1)** and **Pan American-Grace Airways (PANAGRA)**, AVIANCA suspends its Ecuadorian cabotage network (and all flight south of Colombia) in an orderly fashion throughout the remainder of the year.

LANSA (Lineas Aereas Nacionales, S.A.) is purchased on September 10, but is allowed to operate as a separate entity. **Pan American World Airway's** interest is now reduced to 39%. Bogota to New York frequencies are raised to five per week on May 1, 1952, while Colombia to Europe flights are increased to four per week on August 1. **SAT (Sociedad Aerea de Tolima, S.A.)** is acquired and merged late in the year. Together with **LANSA (Lineas Aereas Nacionales, S.A.)**, the carrier reports bookings of 700,000 and the transport of 70,000 tons of freight since January.

With the Constellation fleet fully operational, L-749A service to Frankfurt begins on February 27, 1953. On March 15, a \$1-million contract is signed with Lockheed Aircraft Services International. Six-times-per-week Bogota to New York City flights begin on April 1 while Hamburg joins the route network on April 17.

Orders are now placed for 4 L-1049Es/Gs. A DC-3 is lost under uncertain circumstances at San Luis de Pelenque, Colombia, on September 19.

En route from Medellin on January 11, 1954, a DC-3 with 3 crew and 18 passengers is lost at Manizales; there are no survivors.

The carrier begins to increase its freight space on the Miami-Colombia route on March 22 through the use of "speedpack" containers attached to the undersides of its aircraft. The first L-1049E, delivered in late winter, begins service to Paris and Frankfurt via Bermuda and Santa Maria in the Azores, on April 24; Caracas is added as a stop on this route six days later. On May 1, **LANSA (Lineas Aereas Nacionales, S.A.)** is completely absorbed.

Contract pilot training begins at MacArthur Field, New York, on July 27. En route from Hamburg to Bogota on August 9, an L-749A with 9 crew and 21 passengers, crashes into a peak on Terceira Island in the Azores after takeoff from Lajes (30 dead).

L-1049E Bogota–New York via Kingston, Jamaica, service is initiated on October 1. On November 27, one of these flies from Jamaica to New York in a record 4 hrs. 57 min.

One more L-1049E, plus an L-1049G, is delivered, beginning in early 1955. On a scheduled March 9 flight from Cali, a C-47A with three crew and five passengers is lost at Trujillo; there are no survivors. The last of 6 C-46s is withdrawn toward year's end.

On August 10, 1956, a DC-3 crashes near Villavicencio (six dead).

A C-47D with 3 crew and 12 passengers is lost in the Trujillo Mountains near El Solado, Colombia, on March 9, 1957; there are no survivors.

On June 1, L-1049G service is inaugurated to Lima via Quito; San Juan is added as a stop on the European route on June 30. Official records show a million passengers transported for the first time in a single year.

The subsidiary **Helicol (Helicopteros Nacionales de Colombia, S.A.)** is formed in **1958** to offer rotary-wing air taxi services into the countryside, as well as Ecuador and Peru, from bases at Bogota and Barranquilla. The fleet comprises 68 passenger planes, including a dozen freighters. Bookings reach 1,435,712.

A DC-4, en route from Miami to Lima with 14 aboard, disappears near Casma, Peru, on June 23, **1959**; the wreck is found near Mt. Baco the next day and there are no survivors. During the year, 4 L-749As join the fleet, including 1 from **Trans World Airlines (TWA)** and 3 from **British Overseas Airways Corporation (BOAC)**.

On January 21, **1960**, as the result of a faulty landing approach, the L-1049E *Colombia*, with 46 aboard, crashes into Montego Bay, Jamaica, and explodes (37 dead). On June 30, an order is placed for 2 Boeing 720Bs, while a B-707-121 is chartered from **Pan American World Airways (1)**. Employing the leased Pan Am Boeing 707-121, *Clipper America*, the carrier launches jet service on the New York via Miami route on October 16. In terms of passenger kilometers flown, the carrier closes the year ranked as the fourth largest airline in Latin America.

A Bristol 170 Mk. 31E with three crew is destroyed as the result of a bad landing at Ibiza on October 1, **1961**; there are no fatalities. The first of 3 B-720-059Bs earmarked for the company makes its maiden flight on October 19.

In a ceremony at Seattle on November 8, President Juan Pablo Ortega accepts the first B-720-059B, which is christened *Bolivar*. The second B-720-059B, *Santander*, is delivered on November 24. The new aircraft are both named in honor of revolutionary heroes.

Both are placed into service on the New York run from Bogota via Kingston, Montego Bay, and Miami, on December 1; first-class passengers are promised that they will soon enjoy *Red Ruana* service.

The *Clipper America*, leased from **Pan American World Airways (1)**, is now returned. During the year, the remaining 2 L-1049Es are modified to L-1049G standard.

The fleet in **1962** now comprises 25 DC-3s, 12 DC-4s, 2 B-720-059Bs, 4 L-749As, 3 L-1049Es/Gs, and a variety of miscellaneous types. With the introduction of the carrier's new timetable on January 16, AVIANCA introduces fine Red Ruana amenities in first class. Stewardesses introduce new Red Ruana jackets and capes as part of their uniforms.

The Lockheeds are relegated to domestic trunk routes on January 19 as the Boeings begin the carrier's all-jet intercontinental service.

A Bristol 170 Mk. 31E with three crew is destroyed as the result of a bad landing at Valencia on April 19; there are no fatalities.

In October, the Lima route is extended to Buenos Aires and a new route is opened to Mexico City via Panama City.

Boardings for the year are 1,074,909.

In September **1963**, **SAMSA (Sociedad Aeronautica de Medellin, S.A.)**, having gone into liquidation, is purchased; despite protests from **Aerocondor (Aerovias Condor de Colombia, S.A.)**, the new subsidiary is revamped and allowed to continue operations under its previous identity. Problems of integration are highlighted by a pilots' strike November 20–26. Still, bookings for the year climb to 1,354,496.

In **1964**, AVIANCA is the first South American airline to place orders for B-727s.

A DC-3 with 28 aboard disappears while on a March 22, **1965**, Bogota–Bucaramanga flight. The wreck is found two days later near Pan de Azucar Peak and there are no survivors. The third B-720-059B is delivered on April 8; christened *Narino*, she is placed into service at month's end.

On October 17, the DC-3 *Ciudad de Managua*, with 18 aboard, collides with a small aircraft over Bucaramanga while on a domestic flight; both planes crash (19 dead). The first B-727-59 is delivered late in the year.

B-727-59 service begins in early **1966** as a route is opened to Manaus, Brazil, via Leticia. As the result of the pilot's having a heart attack, a DC-4 with 61 aboard crashes into the Caribbean after takeoff from

Crespo Airport, Cartagena, on a January 14 domestic flight (51 dead). On Christmas Eve, a DC-3 with 29 aboard goes down near the Cascubel River; there are no survivors.

Airline employment in **1967** stands at 7,530. The fleet now comprises 3 B-720Bs, 4 B-727-59s, 14 DC-4s, 16 DC-3s, 3 L-1049Es/Gs, 3 L-749As, plus 2 C-54 and 2 C-47 freighters. Orders are placed for 1 B-707-320C, 2 B-737-159s, and 2 Hawker Siddeley HS 748s. A B-727-59, the first of an order for 12, is delivered on January 16 and is christened *Camilo Torres*; in early February, she begins flying a route to Santiago de Chile.

Upon entering service, the new trimotors are the first company aircraft to display the new red and white color scheme chosen to replace the ancient blue and white Condor motif. The name "AVIANCA-Colombia" is displayed in black and white block titles and the Condor logo on the tail is replaced by small Colombian flags. It is quickly learned that the new jetliners lack sufficient cargo space and thus the order is switched so that the last 2 delivered will be Dash-259s.

A DC-3 with 17 aboard crashes near Sogamoso on April 27; there are no survivors. On September 9, another DC-3, with 20 aboard and en route from Barranquilla to Magangue, is hijacked by three passengers and forced to land at Santiago, Cuba. The plane and its passengers return to Cuba next day minus the three pirates, who are granted political asylum.

The former **Pan American World Airways (1)** B-707-321B *Clipper Bald Eagle* is acquired on September 8 and rechristened *Bolivar*; it enters long haul service in November. Enplanements for the year total 1,757,835.

On March 5, **1968**, a DC-4 with 4 crew and 28 passengers is hijacked by 1 Jordanian and 2 Colombians while on a domestic flight from Riohacha to Barranquilla. The pirates force the plane to fly to Havana, where it arrives nearly out of fuel from battling strong head winds; after the pirates deplane, the Douglas is allowed to return to Colombia. In Cuba, the Colombians are able to obtain medical aid for their sick Mideast leader.

A B-707-359B is received new from Seattle, also in March; christened *Sucre*, it is placed on the international service on April 1. The first HS 748 Series 2A is received from Great Britain on September 7.

In a rare double hijacking, two "Castro Sympathizers" simultaneously hijack two airliners, a B-727-59 and a DC-4 with a total of 139 passengers and crewmen, during their September 22 domestic flights from Barranquilla and force them to fly to Cuba, landing at Camaguey and Santiago, respectively, three hours apart. One plane returns the next day and one on September 24.

Another brand new B-737-159 is delivered on November 20 and, in December, the "Baby Boeing" joins the HS 748s in flying domestic routes as the Constellations begin retirement. During the year, **Pan American World Airway's** shareholding is reduced to 25%.

On January 7, **1969**, a DC-4 on a domestic flight from Riohacha to Maicao with 60 aboard, is seized and forced to fly to Havana. J. G. Caro Montoya, 18, is seized at Cartagena, on March 11 during an attempt to divert an airliner from a domestic flight; he is wounded in the process and an airline employee, mistaken by police for a hijacker, is shot dead.

On April 5, nonstop service is initiated from New York to Barranquilla. A man wielding a knife forces a domestic flight to be diverted to Cuba on April 15. On May 20, 4 gunmen force a B-737-159 with 59 passengers and on a domestic flight from Bogota to Pereira, to fly to Havana.

The company wins permission on May 26 to extend its services to Los Angeles and San Francisco and Bogota–Los Angeles service begins on July 2.

Meanwhile, three men and a woman hijack a DC-4 on June 20; they allow the plane to land and discharge its passengers before proceeding to Havana.

A skyjacker unsuccessfully attempts to take over a DC-4 just after its takeoff from Barranquilla on July 10 on a flight to Santa Maria; the aircraft, with the subdued pirate, returns to its point of origin.

Three armed men force a DC-4, flying from Santa Marta to Riohacha on August 4, to fly to Havana.

On August 23, an HS 748 with 30 aboard and en route from Bucaramanga to Bogota, is hijacked by two passengers with revolvers and is forced to fly to Cuba; the plane returns to Colombia with its passengers next day. Also in August, the last L-1049G Super Constellation is withdrawn from service, later to be scrapped.

One more B-720B is acquired, from **Western Airlines**, on September 24. On November 13, a DC-4 with 61 passengers and en route from Cucuta to Bogota, is seized by 6 armed men who order it flown to Cuba. During a refueling stop at Barranquilla, the pirates allow a pregnant woman and another passenger to deplane.

A total of 1,935,516 passengers are carried systemwide on the year.

The carrier completes the introduction of its now well-recognized bright "AVIANCA Red" color scheme in **1970**, completely replacing the older livery originated by **Pan American World Airways (1)**. Two DC-4s and 4 DC-3s are replaced by another B-707-359B.

The airline is plagued by skyjackings during the first half of the year. On March 11, a B-727-21 with 78 passengers and en route from Bogota to Barranquilla, is hijacked to Cuba by 4 armed men. While on a May 21 domestic flight from Yopal to Sogomoso en Boyaca, a DC-3 with 26 passengers is also ordered to Havana. Range limitations require stops at Barrancabermeja and Barranquilla en route. A couple with 5 children in tow take over an HS 748, which is flying between Bogota and Bucaramanga, on May 31; it, too, is diverted to Cuba. Another B-727-21, with 99 passengers, is taken over during a Cucuta to Bogota service on June 26 and also sent to Cuba.

Freight is up 5.2% this year and passenger boardings rise 5.4% to 2,046,000.

A C-54E freighter with two crew is destroyed as the result of a bad landing at Bogota on January 21, **1971**; there are no fatalities.

B-707-320C service is started to Zurich on April 28. Meanwhile, the 2 B-737-159s are replaced by 3 B-727-59s.

The airline spends much of the spring season fending off more skyjacks. While en route from Barranquilla to Medellin on April 25, one of the passengers aboard a DC-4 attempts to take it over and divert it to Cuba, but is subdued by the crew and other passengers. Four days later, a skyjacker succeeds in capturing a B-707-320C en route from Los Angeles to Bogota; however, the aircraft is recaptured when it makes a refueling stop at Panama City. En route from Monteria to Cartagena on May 8, a DC-4 is hijacked to Maracaibo, Venezuela, by a single assailant who surrenders as soon as the Douglas touches down. A third unsuccessful hijacking occurs on June 21 when a lone gunman, attempting to take over a DC-4 flying from Monteria to Medellin, is overpowered by the plane's crew.

Bookings decline to 1,961,340. The employee population is 7,500 in **1972**. The unduplicated route mileage grows to 41,000 as direct, twice-weekly Bogota-Rio de Janeiro via Sao Paulo service is inaugurated on January 17.

A DC-3 with 3 crew and 18 passengers collides with a company C-54D carrying three crew and 18 passengers near Las Palamos, Colombia, on July 29; both planes crash and all aboard are killed.

Passenger boardings increase 3% to 2,022,000 and cargo is up 1.9%.

Juna Pablo Ortega retires as president in **1973** and is succeeded by Sabas Preteit. The fleet is increased by 2 additional B-720Bs. An upgraded "AVIANCA Red" color scheme is unveiled and is applied everywhere, especially upon aircraft.

En route from Pereira to Medellin on May 30 with 82 passengers aboard, a B-727-59 is taken over by four armed men who force it to land in Aruba, Netherlands Antilles, demand the release by Colombia of 39 political prisoners, and seek \$200,000 in ransom. As a show of good faith, 31 hostages are released. The next day, the Colombian government rejects the demands and the hijackers reduce their demand for a prisoner release and cut the ransom request to \$170,000. In the air over the Caribbean for a second day, the pirates return the plane to Aruba for a third time at dusk. On June 1, the jetliner is forced to fly to Buenos

Aires, but lands, instead, at Resistencia, Argentina. The next day, the pirates receive a \$50,000 ransom, abandon the aircraft, and disappear.

After an HS 748-2A with 4 crew and 40 passengers lands on a wet runway at Bucaramanga on July 5, it hydroplanes off the runway, crashes through the perimeter fence, and crosses a street, crashing into four houses; two people in the dwellings are killed.

En route from Villavicencio to Casanare in dense fog on August 22, a DC-3A with 3 crew and 14 passengers strikes a hill while on approach to its destination (16 dead).

On December 27, a DC-4 is lost to fire at Cartagena.

The year's enplanements rise to 2,132,718 and revenues are up by 20%.

The carrier marks its fifty-fifth anniversary in **1974**. Weekly departures from the U.S. to Colombia are increased to 29, due to the ever-growing popularity of that South American nation for vacationers; U.S. airlines will also increase frequencies.

Hijackers Carlos Arturo Tabares, Pedro Julio Rodriguez, and Jorge Hernando Avila seize a B-727-59 with 85 aboard during a May 10 domestic flight from Pereira, and land at Bogota, where they release 25 women and children and demand a \$300,000 ransom instead of the flight to Cuba originally required. The plane departs for Peru and Cali before returning to Bogota. The next day, Colombian police, disguised as maintenance workers, storm the plane, killing 1 hijacker, capturing the other 2, and freeing all the hostages. Of these, 14 passengers and a stewardess are hurt during the evacuation out emergency exits and off the wings.

Police in Cali storm a second B-727, a Dash-24C with 122 passengers, hijacked by Eduardo Martinez on July 24 during a Pereira to Medellin flight and kill this pirate as well.

Lost in rainy weather on a flight from Tumaco to Buenaventura on August 12, a Hipper DC-3 (modified with long-range fuel tanks and up-rated engines) with 3 crew and 24 passengers, crashes into Trujillo Mountain NE of Cali. There are no survivors and the wreckage will not be located for two months.

Passenger boardings for the year increase a slight 1.4% to 2,163,000 while freight swells 18%.

The fleet in **1975** includes 2 B-707-359Bs, 7 B-720Bs, 9 B-727-59s/24Cs, and 2 HS 748-B2s. An order is now placed for 1 B-747-124.

The carrier's U.S. and Canada advertising budget is increased to \$1 million. On a grim note, the body of a stowaway, which falls from the wheelwell of a B-707-359B over Biscayne Bay on March 22, is recovered by authorities, but is not identified.

Coming in from Bogota to Barranquilla in bad weather on September 30, a B-727-24C with 4 crew must make a second attempt to land, during which it hits trees 1,000 m. short of the runway and crashes; there are no survivors.

The former **Pan American World Airways (1)** B-727-21 *Clipper Wuchtrumme* joins the fleet on November 11. Passenger traffic jumps 10% as 2,384,000 passengers are carried, but cargo drops 15%.

The workforce in **1976** is 7,288. A new top management team, headed by Ernesto Mendoza, is appointed. The fleet is altered during the year as a leased B-707-320C is dedicated to an all-cargo route, 2 B-720Bs are sold, and 2 additional B-727-21s/221s are purchased.

En route from Pereira to Bogota on April 24, a B-727-21 with 30 passengers is hijacked by a man protesting the government's "neglect of the peasants." When the plane lands at its destination the pirate is taken in hand by police.

The nose gear of the former **Western Airlines** B-720B is damaged beyond repair as the result of a bad landing at Mexico City on August 16; there are no serious injuries reported, but the aircraft is written off.

AVIANCA's first wide-body, the B-747-124 formerly operated by **Continental Airlines**, is delivered in November. It is christened *Eldorado* and, following a ceremonial visit to the nation's four largest cities, is placed in service on December 6 over the Bogota-Frankfurt via San Juan, Madrid, and Paris route. The company is the first in Latin America to operate a Jumbojet, which is soon thereafter also introduced on

flights to Miami and New York (JFK). Freight traffic climbs 11% as passenger boardings advance 13% to 2,697,000.

The last remaining **Pan American World Airways (1)** shares are purchased in 1977 and the carrier is reorganized. Shareholding is now controlled by private Colombian interests (72%) and the national government (28%).

A bomb is taken from a B-720B at Bogota on January 4, shortly before its departure for Caracas with 125 passengers aboard. A B-707-359B is withdrawn in February.

Bookings skyrocket to 3,013,010. On revenues of \$184.4 million, the profit is \$7.1 million.

Airline employment is increased in 1978 to 8,022. The fleet is again altered as 2 B-707-320Cs and 1 B-727-259A are added and 1 B-720B is sold; an order is placed for a B-747-259B/C. A BAe (HS) 748-B2 is sold to **Dan-Air/Dan-Air Services, Ltd.** on March 23. Service is inaugurated to London, Rome, Rio de Janeiro, and Buenos Aires; unduplicated route mileage is thereby increased 33.1% to 55,277.

Two gunmen, falsely claiming to be armed, force a B-727-259 with 119 passengers and en route from Santa Maria to Bogota, to fly to Aruba and Curacao on May 11, gaining arms in the process; policemen and crew members overpower the pirates at the latter point. During the incident, a total of 2 passengers and 2 security personnel are wounded.

Passenger boardings jump 8.6% to 3,310,726 and freight is up 21.5%. Revenues increase to \$215.8 million, allowing a \$6.4-million net profit.

Airline employment is increased 1.4% in 1979 to 7,287. The oldest airline in the Americas celebrates its sixtieth anniversary in the spring. The B-747-259B/C enters service on June 8 along with 2 B-727-259As; 1 more B-720B is retired. Service is begun to Montevideo and La Paz.

Cargo dips slightly, but passenger boardings soar 19% to 3,956,000. The number of workers is increased by 10.7% in 1980 to 8,067. One B-707-320C is retired as orders are placed for 3 additional B-727-259As.

The B-720B *Santander* is damaged beyond repair as the result of a bad landing at Quito on January 27; there are no fatalities.

A B-727-259 with 137 aboard is commandeered on December 15 by members of the M-19 guerrilla group during a domestic flight from Bogota to Pereira. It is forced to land at Santa Marta and then Barranquilla, where 21 hostages are released. The aircraft takes off for Havana the next morning, spends the night at Panama City, and after making a refueling stop at Mexico City, arrives at the Cuban capital on December 17. There the remaining 54 hostages are freed as the pirates are taken into custody.

A B-727-259A is delivered on December 4 and on December 26 the B-727-259A order is increased to 5, at a cost of \$75 million.

Freight skyrockets 132% and bookings advance 2.1% to 4 million. In terms of passenger kilometers flown, the carrier now ranks as the fifth largest in Latin America.

The fleet in 1981 comprises 1 B-747-224C, 1 B-747-124, 5 B-707-320Bs, 2 B-707-320Cs, 3 B-720Bs, 7 B-727-200s, 7 B-727-21s, and 4 B-727-100Cs; orders are placed for 3 B-767-259ERs.

En route from Bucaramanga to Cucuta on February 6, a B-727-21 with 77 passengers is taken over by 2 men who protest the Colombian political situation. The aircraft is allowed to land at its scheduled destination and, after 10 hours of negotiations, the pirates surrender to police.

A B-747-124SF is leased from **El Al Israel Airlines, Ltd.** on July 21 for a year and on August 28, the carrier agrees to pay a \$31,000 fine to settle CAB complaints that it violates denied-boarding compensation rules in the U.S.

Passenger boardings fall 9% in the face of world economic recession to 3,661,988, but cargo climbs 39% to 199 million FTKs.

The workforce is reduced 3.6% in 1982 to 6,595. When the Israeli Jumbojet is returned in July, a second B-747-124SF is immediately leased from **World Airways**. A B-747-283B is chartered from **SAS (Scandinavian Airlines System)** on August 3.

Enplanements for the year are 3,764,549 and freight rises 17% to 232.8 million FTKs. Revenues earned are \$285 million.

Airline employment climbs 3.1% in 1983 to 6,800. A B-747-259B is chartered from Chemco on May 30 and is christened *Cartagena de In-*

dias. Withdrawn on July 16, the B-720B *Narino* is sold as is to the USAF for spare parts to support the KC-135E tanker upgrade program.

Later in the year, a B-727-21 is also retired.

En route from Paris to Bogota via an intermediate stop at Madrid on November 27, Flight 011, the chartered Scandinavian B-747-283B with 19 crew and 173 passengers, flying too low, strikes first one 2,247-ft. hill and then a second while on final approach to Madrid's Barajas Airport. The Jumbojet hits the ground with the right wing (which breaks off), cartwheels, and breaks into five pieces (181 dead).

Passenger boardings for the year dip to 3,759,000 and freight traffic is level. Revenues advance to \$322.7 million, but expenses are also up, 22.3%, to \$353.8 million, leaving a \$31-million operating loss.

The employee population is reduced 4.9% in 1984 to 5,990. Orders are placed for 3 B-767-200s and 1 B-747-123 is chartered on May 20 to replace the Jumbojet lost in Spain.

Boardings remain level at 3,966,738, while cargo is up 0.2% to 221.52 million FTKs. On revenues of \$404.1 million, a \$24.65-million loss is suffered.

The workforce roller coaster ride continues, as employment is increased 7.7% in 1985 to 6,419. A B-747-224C is briefly held by Miami officials early in the year when cocaine is found aboard.

Passenger boardings dip 3% to 3,660,000, and freight falls 11% to 194.25 million FTKs. Revenues drop 8% to \$370.6 million and the loss accelerates 24% to \$30.47 million.

In January 1986, Comercial Antiqueno Bank President Herman Rincon-Gomez is elected president of the airline and a whole new management team is put in place. Operationally, the airline's on-time record is but 66%.

In March, 2 B-727-2A1As are leased from the Intercredit Corporation. Two days after the airline's security chief leads an operation finding \$5-million worth of cocaine on a cargo jet preparing to depart for Miami, he is murdered in a drive-by shooting by gunmen on a motorcycle. Insurance executive Orlando J. Cabrales becomes president in November and at year's end, another B-727-21 is delivered.

During the year, the airline's \$170-million debt is renegotiated with various banks.

Customer bookings drop another 2.1% to 3,778,303 and cargo declines 10.3% more to 174.31 million FTKs. Revenues plunge to \$345.9 million, but costs are held low enough to allow an operating profit of \$14.5 million and net gain of \$2.8 million.

The workforce is cut 4.4% in 1987 to 5,356. A new livery is adopted for the company's 2 B-747 Jumbojets, 2 B-707-359Bs, 2 B-707-321Cs, and 19N727s. The Jumbojet chartered in May 1984 is returned during February.

Passenger boardings are off another 1.3% to 3,726,138 and freight plunges 11.7% to 153.98 million FTKs. Revenues advance upward to \$359.3 million and costs are held low, allowing an operating profit of \$14.8 million and net gain of \$3.3 million.

Airline employment moves ahead by 27.4% in 1988 to 6,825, but on-time performance sinks to but 32%. A fleet renewal program is initiated; 2 B-767-259ERs arrive under lease from GPA Group and enter service.

En route from Cucuta to Cartagena on March 17, Flight 410, a B-727-59 with 7 crew and 136 passengers, crashes into a mountain near the point of origin; there are no survivors.

Gonzalo Carreno hijacks a B-707-359B with 135 aboard on May 23 and forces it to fly to Panama and Aruba, where the passengers are allowed to deplane; the aircraft returns to Colombia where Carreno, who had been holding the plane with a toy grenade, vanishes into the countryside near Cartagena. He will be captured the next day.

The B-747-259B is briefly impounded at Miami by the U.S. Customs Service in June 4 after 422 pounds of cocaine are discovered in a shipment of 2,000 boxes of flowers. Indeed, the consignment contains only 22 boxes of real flowers (red roses), which are donated to Miami Baptist Hospital; the other 1,988 are filled with dope. A customs official tells the *Miami Herald* that this is the 14th time since January that agents have seized an AVIANCA jet with cocaine aboard at the Miami airport;

the seizure brings the amount of cocaine found aboard the Colombian airline's aircraft in that period to 5,000 pounds.

The airline is required to pay half of a \$7.5-million fine (\$3.5 million) to recover the Jumbojet and to install a large, new security system. In August, AVIANCA suspends cargo flights to Miami.

Customer bookings for the year decline again, down to 3,447,497. Still, a net \$5.3 million profit is generated on revenues of \$305.5 million.

The payroll remains unchanged in 1989. In April, the airline renews, for another decade, the unique airmail operation first initiated back in 1931. Under the arrangement, the company will be able to continue maintaining its own post offices, corps of postmen, and sell stamps.

Just after takeoff from Bogota on a November 27 service to Cali, a bomb explodes aboard Flight 203, a B-727-59 with 6 crew and 101 passengers, igniting vapors in an empty fuel tank which detonate, causing the trijet to disintegrate in midair; there are no survivors. The explosion is reportedly caused by Pablo Escobar's drug criminals seeking to kill 5 police informants believed aboard. There is national outrage over reports that police join looters in stripping the bodies of the dead for valuables.

Under the leadership of President Cesar Gaviria Trujillo, the nation's economy enters a neoliberal phase beginning in December that will lead to airline deregulation in less than three years. Since the beginning of the decade, the airline has paid out over \$14 million in drug-related fines, mostly in the U.S.

Passenger boardings swell 3% to 3,554,120, but freight plunges 37% to 80.12 million FTKs. The oldest airline in the Americas is now 70 years old.

Having arrived in rain and heavy fog at New York City after a January 25, 1990 service from Bogota via Medellin, Flight 052, a B-707-359B with 9 crew and 149 passengers, is forced into three holding patterns. The aircraft runs down to just 5 min. of fuel and is unable to make its initial approach into Runway 22L at JFK International Airport. During the go-around, the engines fail and the aircraft crashes into trees on a hill 12 mi. SE of the airport at Cove Neck on the north shore of Long Island (73 dead). Improper command of English by the flight crew in its communications with ATC are judged a contributing factor in the disaster. Peter Garrison reviews the accident, "AVIANCA 052: How Did It Happen?" *Flying* 118 (October 1991): 44-47.

A B-727-264A, first flown by **Mexicana Airlines, S.A. de C.V.** as the *Mexicali*, arrives under lease later in the first quarter.

Just after takeoff from Bogota on an April 26 service to Barranquilla, a member of the M-19 guerrilla group gets out of his seat aboard the former *Mexicali* and opens fire on a candidate for Colombia's presidency. Security men for the dead politician open fire, killing the perpetrator.

The company receives its first B-767-259ER, wearing the company's new red and white color scheme, under charter in March; a second wide-body arrives on August 14. The January accident, combined with recession and fear of terrorism in the wake of Iraq's August invasion of Kuwait, leads to a 10% decline in customer bookings to 3,204,672. Cargo, however, grows 5% to 84.21 million FTKs.

The payroll is reduced by 13.6% in 1991 to 5,900 and the fleet now includes the 1 remaining B-707-321B, 2 B-707-359Bs, 1 each leased B-727-35 and B-727-51, 5 B-727-59s, 1 B-727-24C, 3 chartered B-727-264s, 2 leased B-727-2A1As, 1 leased B-727-2H3A, 2 chartered B-727-2Q9As, 3 leased B-727-259As, 1 chartered B-747-259B, and 2 chartered B-767-259ERs.

A heavy expenditure and the employment of expert staff, trained dogs, and more careful checks begin to make a dint on the drug problem. Late in the year, a special agreement is reached with the U.S. Customs Service allowing the airline to fly belly cargo in its B-767-259ERs to U.S. destinations. Alvaro Jaramillo Buitrago is appointed president/CEO in December.

By year's end, the company has been able to pay down \$115 million of its \$170 million debt, not including \$55 million in interest payments made.

During the year, Colombian President Trujillo, a champion of free markets, permits domestic airline liberalization. The national civil avia-

tion department, AeroCivil, approves new airlines and awards new routes, while dropping its policing of ticket prices. Consequently, AVIANCA begins to face competition from several start-ups.

This deregulation of the Colombian airline industry rocks the company as its share of domestic passenger traffic begins to fall from 61.36% to 58.21%.

Still, passenger boardings inch up 2% to 3,270,291 while freight climbs 19% to 99.83 million FTKs. Expenses exceed income and there are losses: \$34.8 million (operating) and \$51.26 million (net).

The employee population is sliced 30.2% in 1992 to 4,325 as all of the Stratoliners and two B-727-59s are retired. In January, AVIANCA becomes the last of the major Latin American carriers to complete a fleet renewal program when it signs a contract with GPA Group for the lease of 11 McDonnell Douglas MD-83s. Also in January, the company's Condor computerized reservations system comes on line; it is an off-spring of the Maxipars system of **British Airways, Ltd.** (2).

At the same time, the carrier is able to acquire 58% of its own foreign debt, with a discount of 53%, thus reducing its debt, in foreign currencies, to \$21.1 million. The first MD-83 is delivered on March 20 as the company now begins to coordinate its schedules with subsidiary **SAM Colombia Airlines, S.A.** in order to reduce overlapping and increase efficiency. The ex-*Mexicali* is returned in September.

Customer bookings fall 1.2% to 3,231,339 and cargo plunges 11.4% to 88.4 million FTKs. Revenues ascend 8.5% to \$438.95 million, but expenses shoot up 17% to \$473.28 million. Consequently, the operating loss is slightly higher at \$34.32 million and the net loss is cut to \$6.77 million.

In 1993, Chairman Augusto Lopez and President Alvaro Jaramillo oversee a workforce of 5,900, up 36.4% over the previous year. The fleet is increased by the addition of 11 leased McDonnell Douglas MD-83s, 2 B-757-2Y0s, and 6 Fokker 50s, the first of the latter arriving on May 4.

The new turboprop is the first high-performance Fokker 50 and it enables the company, on June 1, to inaugurate a new route from Bogota to the airport at Manizales in western Colombia, which is located at the 6,600-ft. level.

Markets served from Bogota now include Buenos Aires, Caracas, Frankfurt, Lima, Los Angeles, Madrid, Manaus, Miami, New York, Paris, Quito, Rio de Janeiro, and Santiago de Chile.

The government's regulatory body, Aerocivil, transfers all maintenance and safety responsibility to the nation's individual airline operators.

In July, a marketing alliance is signed with **SAETA (Sociedad Anonima Ecuatoriana de Transportes Aereos, S.A.)** and, in September-October, a joint code-sharing roundtrip service is inaugurated over a route from Bogota to Cuzco via Guayaquil. Older B-727-59s are retired as the new MD-83s enter service later in the year.

Passenger boardings decline another 2% to 3,169,081 while freight suffers a 42% downturn, falling to 50.9 million FTKs. The year's losses are \$7.2 million (operating) and \$5.15 million (net).

The workforce is cut to 4,200 in 1994. The company celebrates its seventy-fifth anniversary in the spring and adopts an all-white aircraft color scheme with red titles. All of the new aircraft are on hand by spring, giving AVIANCA the youngest overall fleet in the Americas. A new Fokker 50 is damaged at Cucuta on May 28.

On August 14, the former **SAS (Scandinavian Airline System)** B-767-383ER *Astrid Viking* is leased long-term for use on the service from Bogota to Miami. Membership is taken in the Latinpass frequent flyer program and services are inaugurated to Bahia, Quibdo, Sao Paulo, and Newark.

An arrangement is concluded with Grupo Bavaria under which AVIANCA takes management control of **SAM Colombian Airlines, S.A.** and the air taxi-helicopter operator **Helicol, S.A.**

Although the government of new President Ernesto Samper is more conservative, it cannot put the liberalization genie back in the bottle. Domestic airlines, including AVIANCA, continue to add capacity, start new routes, cut fares, and engage in fare wars.

Customer bookings recover, climbing 19.5% to 3,786,510, while cargo continues its slide 2.5% to 27.34 million FTKs. Revenues advance 17.4% to \$405.6 million while expenses swell 16.4% to \$410.23 million. The operating loss is cut to \$4.62 million while the net loss advances to \$11.98 million.

Airline employment is increased a huge 77.1% in **1995** to 5,900.

Losing market share to other domestic airlines under deregulation, the company begins a major restructuring program during the first quarter. Thirteen levels of bureaucracy are reduced to 5 and the number of vice presidents is dropped from 8 to 5; in addition, 50 divisions are cut to just 26. It will require two years of work with management and unions for details to be worked out.

Having been convicted for his role in the 1989 bombing of Flight 203 over Bogota, Dandeny Munoz-Mosquera, a top Medellin drug cartel hit man, is sentenced on May 5, by the Federal Court in Brooklyn, New York, to 10 consecutive life terms. Captured the previous year, Munoz-Mosquera is the first person to be tried, convicted, and sentenced under a 1986 U.S. antiterrorism statute that makes it a federal crime to kill U.S. citizens abroad; two of those aboard Flight 203 were Americans.

The U.S. FAA downgrades Colombia in October from safety Category I to Category II. AVIANCA calls upon Aerocivil to improve air safety while taking the responsibility to have its own aircraft delivered in or retrofitted with TCAS and GPS avionics.

Traffic figures for the year are mixed. Passenger boardings increase by 2% to 3,860,869, but freight continues its downward spiral, falling 17% to 40.40 million FTKs.

The workforce stands at 3,400 in **1996**. Domestic market share reaches 42%, more than twice that of AVIANCA's nearest rival. Still, it is down 17 points since deregulation began in 1991.

In December, the company decides to repaint several of its older aircraft in distinctive new color schemes. A B-727-2A1A receives the treatment and promotes AVIANCACIONES with billboard-sized titles. The lone B-727-2H3 is given a red fuselage, a white tail with AVIANCA titles, and the word BANCOQUIA painted in huge letters along its side.

In December, the carrier enters into a marketing and blocked-seat agreement with **American Airlines** for code-sharing services over U.S. routes beyond its gateways at New York, Los Angeles, and Miami. The pact, along with several others involving AA in Latin America, will be held up in regulatory disputes.

Traffic figures remain mixed. Customer bookings climb another 4% to 4,060,297 while cargo drops another 13% to 40.54 million FTKs. A net \$2.96-million profit is celebrated.

During the spring of **1997**, a dual-designator alliance is signed with TACA Group. A recession during the spring significantly impacts the carrier's restructuring efforts.

Pursuant to a formal April agreement, code-sharing begins in May between AVIANCA and **American Airlines**. The two coordinate schedules and allow the passengers of each airline to make connecting flights to either network with one ticket.

At the end of August, the company, in cooperation with Colombia's leading hotels, unveils a major cut-rate vacation package for North American passengers who wish to winter in the nation. The plan is part of an \$8.5-million effort to upgrade facilities, equipment, security, and to promote tourism.

In October, the decision is taken by AVIANCA to restructure its domestic network. All flights fewer than 90 minutes are assigned to **SAM Colombian Airlines, S.A.**, leaving the major to concentrate on domestic trunk routes and international services.

In November, services and marketing of both AVIANCA and **SAM Colombian Airlines, S.A.** are placed under the direction of Vice President Juan Manuel Beltran.

Enplanements this year total 3.86 million. Revenues this year reach \$708.8 million, with expenses pegged at \$672.3 million. As a result, there is a \$36.5-million operating profit and a net gain of \$4.2 million, which is later adjusted downward to \$2.54 million.

Airline employment stands at 2,926 in **1998**. The 22-plane fleet is 86.4% Stage III certified and includes 3 B-727-200s, 4 B-757-2Y0s, 4 B-767s, and 11 MD-83s.

One of the largest privately owned airlines in South America, the carrier operates more than 170 departures daily to over 20 destinations in Colombia and 18 international destinations on 5 continents.

On November 19, a \$3-million contract is signed with **World Airways**. Under its terms, a wet-leased MD-11 will be operated on ACIANCA's behalf on daily nonstop return passenger services from Bogota to New York (JFK) between December 10 and January 17.

Passenger boardings during the 12 months slide 2.4% to 3.77 million. Despite revenues of \$504.3 million, there is a \$5.5-million net loss.

Just after takeoff from the northwest city of Bucaramanga on April 12, **1999**, on a service to Bogota, Flight 9463, a Fokker 50 with 5 crew and 41 passengers, is taken over by 5 members of the Cuban-backed National Liberation Army (ELN). Posing as businessmen, the pirates force the aircraft to land on a clandestine airstrip near Simiti, some 80 mi. NW of Bucaramanga. The same strip had earlier been dynamited by government troops because of its use by drug runners. After landing, the hostages are spirited down the Magdalena River in northern Bolivar province by canoe. Among the hostages are Congressman Juan Manuel Corso, two senior directors of Ecogas, and an American citizen who is a resident of Mexico. The skyjacking is somewhat ironic in that U.S. officials are currently meeting with Colombian President Andres Pastrana to review his country's dire human rights record.

Hundreds of Colombian soldiers and police, including counterinsurgency specialists and crack commandos, unsuccessfully search by air and ground. The next day, 5 elderly hostages and a baby are released, due to the intervention of the International Committee of the Red Cross. The other prisoners remain missing.

Two additional captives are released on April 16. On April 26, the ELN issues a statement announcing that its is preparing to free the passengers and crew and will issue a proposal to end the nation's long-running war. The group warns that the hand over will go ahead only if the government pulls security forces out of a rural area around the northern town of Simiti. It also demands that it return radio-telephones, confiscated in the wake of the hijack, to jailed ELN leaders Francisco Galan and Felipe Torres, who will coordinate the release operation.

In response to the ELN message, the government of President Pastrana indicates that it will not meet any demands issued by the Marxist rebels for the release of the hostages, period. At this point, a curtain of silence descends upon the case.

On May 5, it is announced that the carrier has selected Worldwide Flight Services to provide passenger and skycap services, effective May 16, for its B-757-2Y0 services at Newark.

Two days later, the ELN releases seven additional hostages; the action gains the group little good will. Eight more go free on June 18.

During the summer and fall, the carrier enters into alliances with **SAM Colombia Airlines, S.A.** and **COPA (Compania Panamena de Aviacion, S.A.)**. Grupo TACA provides a leased B-767-3S1 on a short-term September 6-January 4 lease.

Late in the year, Colombia's airline safety is recertified by the U.S. FAA. At the same time, Valores Bavaria, S.A. injects \$50 million in new capitalization for fleet expansion.

Overall customer bookings drop 3.1% to 3,656,000 and 61.09 million FTKs are operated.

A marketing and code-sharing agreement is signed with **Mexicana Airlines, S.A. de C.V.** on February 24, **2000**; dual-designator flights will be offered between Colombia and Mexico and joint services will be provided to one another at the Bogota and Mexico City hubs.

Eight more hostages are released on April 18 from the Fokker 50 hijacked on April 12, 1999; five people are still held.

As a result of the recertification, the U.S. and Colombian regulatory agencies, in late spring, agree to an increase in the number of flights

between the two nations. In June, AVIANCA is allocated seven frequencies, three of which will begin this year and four in 2001.

The company celebrates its sixtieth anniversary on June 14.

AVIANCA INTERNATIONAL: 394 Flight Line Drive, Macon, Georgia 31297, United States; Phone (912) 788-1200; Fax (912) 788-3845; Year Founded 1988. Avianca is set up at Middle Georgia Regional Airport in 1988 to provide private and corporate charter and air ambulance service throughout the Southeast and Caribbean. Within 12 years, the company employs nine pilots and flies two Learjet 25Bs and a Learjet 25D.

AVIANOVA, S.p.A.: Italy (1986–1996). Organized as a fifty-fifty partnership between **Alisarda, S.p.A.** and **Aero Transport Italiana, S.p.A. (ATI)**, Avianova is formed at Rome in September 1986. Felice Molinaro is named president with Sebastiano Barrera as general manager.

A fleet of 3 Avions de Transport Regional ATR42-200s is transferred from **Aero Transport Italiani, S.p.A. (ATI)**. Scheduled revenue services are inaugurated, primarily over thin routes, on behalf of **Alitalia, S.p.A., Aero Transport Italiani, S.p.A. (ATI)**, and **Alisarda, S.p.A.** in August 1987, linking the company base with Rome and Milan. The network is expanded in October with frequencies initiated to Bari, Catania, and Bologna.

Between 1988 and 1990, the fleet is increased to 8 ATR42-200s. Destinations now visited include not only those noted above but Florence, Munich, Vienna, Perugia, and Rimini. Vacation and tour flights are made to various destinations throughout Europe and the Mediterranean islands. The Rome-based small regional **Aliblu, S.p.A.** is taken over in 1989 and merged as the Alitalia group acquires an interest and company headquarters are transferred to Rome. In late fall 1990 the company joins with the West German regional **Delta Air Regionalflugverkehr, GmbH.** to provide five-times-per-week service between Florence and Stuttgart.

Two more ATR42s are added in 1991 and one of the shareholders, **Alisarda, S.p.A.**, is renamed **Meridiana, S.p.A.** Giuseppe Sebastini becomes general manager in 1992. **Meridiana, S.p.A.**, which takes over many of the regional's international routes, divests its 50% shareholding in December. It is acquired by the IMI Bank of Luxembourg, S.A.; ICCRI Brussels Lambert S.p.A., and Meridiana Finance, S.p.A., all of which are owned by IRI, the state holding company for **Alitalia, S.p.A.** Enplanements total 328,398; the international percentage of this figure is down by half.

Airline employment stands at 150 in 1993 and the fleet includes 11 ATR42-300s. Indirectly 100%-owned by **Alitalia, S.p.A.**, the regional original red and blue livery is changed to that of the Alitalia group. It continues to undertake 75% of its replacement services for its flag line partner; however, it also continues to operate for **Meridiana, S.p.A.** between Florence and Zurich and, during the summer, to Olbia.

Avianova flights link Florence with Milan, Munich, and Vienna. Additionally, services are offered from Milan to Perugia, from Rome to Rimini, and, seasonally, from Olbia to Florence and Perugia and from Milan to Bastia. Passenger boardings inch up 1% to 82,162.

The fleet is expanded in 1994 through the addition of 3 ATR72-210s. Traffic figures are only reported through the first half of the year and, as of June, show customer bookings up 4.1% to 38,992.

Under a plan to cut costs, **Alitalia, S.p.A.** in April 1995 orders 15 Fokker 70s for its subsidiary. In addition to markets around Italy and Germany, France, and Switzerland are visited from Florence, Milan and Rome, and the carrier also begins services from Turin and Bologna. The first three Fokkers are received in December.

During January 1996, the new Fokker 70s begin replacing the major on its thinner domestic and regional routes.

The remaining Fokker 70s arrive by summer. On November 1, Avianova is absorbed into **Alitalia, S.p.A.**, where it forms the nucleus of Alitalia Team, a new low-cost division.

AVIAOBSHEMASH SHAREHOLDERS AIR COMPANY: Box 70, 3 3rd Mytischenskaya St., Moscow, 129626, Russia; Phone (095) 287-0113; Fax (095) 287-7859; Code OBM; Year Founded 1992. This joint stock company, also known as Aviaobshemash Airline, is established at Moscow in 1992 to provide domestic and international passenger charters, largely on behalf of the Russian space industry. Gennadi P. Onopriyenko is general director and he begins revenue flights with a fleet that initially includes 2 Yakovlev Yak-40s, 8 Antonov An-12s, 3 An-24s, 7 An-26s, 2 An-32s, and 1 Ilyushin Il-76T.

By 1998–2000, Director General Onopriyenko oversees a workforce of 20 and services provided by 1 each Antonov An-12, An-24, 2 An-26s, 2 Yak 40s, and 1 Ilyushin Il-76T.

AVIAPRAD AIR COMPANY: 1B Utrennig Pereulok, Ekaterinburg, 620025, Russia; Phone 7 (3432) 26 6961; Fax 7 (3432) 26 6961; Code VID; Year Founded 1996. Aviaprad is set up at Ekaterinburg (Sverdlovsk) in 1996 to offer nonscheduled international and domestic all-cargo services. A workforce of 71 is assembled by DG Anatoli Paderov and two Ilyushin Il-76TDs are acquired. Revenue flights are launched and continued to destinations throughout the CIS, as well as to London (STN), Ostend, China, and Ras al Khamah in the U.A.E.

AVIAPRIMA AOZT: Russia (1994–1996). Aviaprima is established at Sochi Airport in 1994 to fly charter passenger services throughout the CIS and into Western Europe. V. P. Soikhanov is appointed general manager and he begins revenue services with a fleet that comprises an unspecified number of Tupolev Tu-154s and Tu-134s, plus Ilyushin Il-18s.

An order is placed for a B-737-500, but it is not delivered as the company goes out of business in 1996.

AVIAPRIMA SOCHI AIRLINES. See SOCHI AIRLINES

AVIAROSS AIR COMPANY (AVIAROSS AVIACOMPANII): P.O. Box 10, Moscow, 115582, Russia; Phone 7 (095) 459-0414; Fax 7 (095) 392-1994; Code DW; Year Founded 1993. Aviaross is founded at Moscow in 1993 to provide domestic passenger and cargo charter services. General Director Boris S. Baldin begins revenue flights with a pair of Antonov An-12s.

Two An-32s are ordered in 1994. These arrive and enter service in 1995. It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

AVIASTAR: Prospect Antonova 1, Ulanovsk, Russia; Phone 7 (8422) 202 575; Fax 7 (8422) 209 561; Code FUE; Year Founded 1992. Formed at Ulyanovsk in 1992 as the transport division of a local production company, Avistar is one of many small carriers formed upon the breakup of the Soviet Union. V. V. Mikhailov is named general director and he acquires a fleet that includes 3 Antonov An-26s, 1 An-8, 1 An-12, 2 Yakovlev Yak-40s, 4 Ilyushin Il-76s, 1 An-124 Ruslan, and 2 Mil Mi-8 helicopters. Scheduled and nonscheduled passenger and cargo services are undertaken throughout Russia, the CIS, and to several neighboring countries.

The company is best remembered as the first to crash a giant Antonov An-124-100 Ruslan cargo freighter. Having leased one from the Ulyanovsk Aircraft Production Factory, the plane has only 17 hours flying time when it is crashed in Iran on November 15, 1993.

Flights continue in 1994–1995, during which years the Il-76s are withdrawn. In July 1996, the carrier proposes an upgrade for the Ruslan. The An-124-130 will be equipped with 4 General Electric GE CF6-80 engines and be flown by an 8-person crew (4 flight crew and 4 engineers or loadmasters).

There is no indication that such an aircraft is flown in 1997–1999. DG Mikhailov's fleet in the latter year includes 2 each An-12s, Mi-8s, and Yak-40s, 3 An-26s, and 1 Il-76T.

AVIATA (TAMBOV AIRLINE): Tambov Airport, Zone ATD, Tambov, Central Regional Zone ATD, 392019, Russia; Phone 7

(052) 322108; Code TVL; Year Founded 1996. The regional scheduled and charter carrier Aviateca is established at Tambov in 1996. Alexander I. Frovlov is CEO and he begins revenue flights, including various nonpassenger aerial services, with 8 Antonov An-24s and 30 An-2 biplanes.

AVIATECA (AEROLINEAS DE GUATEMALA, S.A.): Avenida Hincapie 12-22, Zona 13, Guatemala City, Guatemala; Phone 502 (2) 318 261; Fax 502 (2) 347 846; http://flylatinamerica.com/acc_aviateca.html; Code GU; Year Founded 1946. The Guatemalan government establishes this locally owned national airline (the first in Latin America) at Guatemala City in March 1946. Initially, the government takes 30% interest and invites interested private parties to assume the remainder; when subscribers do not step forward, the entire shareholding is taken by the state on July 20, and the new entrant is named AVIATECA (Empresa Guatemalteca de Aviacion, S.A.).

The airline does not immediately begin services, waiting until July 7, 1948 to launch international Douglas DC-3 and Curtiss C-46 flights to Belize and San Jose, Costa Rica. Traffic does not warrant maintenance of the routes and they are cancelled by year's end.

The carrier now concentrates on developing its domestic route network and operations continue apace in 1949–1951. The old Ford Tri-Motor, 5-AT-74, acquired during the carrier's formation, is sold to the Northwest Agricultural Aviation Corporation in Montana in March 1950.

On May 2, 1952, the government orders a probe of the carrier's continuing financial problems, which have resulted in a \$260,000 deficit.

The most spectacular events of the next two years are air disasters.

En route from Guatemala City on an all-cargo service, a C-46D with two crew smashes into Tecpan Mountain on December 15, 1953; there are no survivors.

A DC-3 with three crew and seven passengers is lost in a landing accident at Guatemala City on October 8, 1954; although the aircraft must be written off, there are no fatalities.

In 1955, the U.S. CAB grants the carrier permission to fly cargo to New Orleans from Guatemala City under terms of a three-year certificate; simultaneously, it is permitted to fly passengers from Guatemala City to Miami via Belize. In 1956, the carrier loses two domestic service aircraft within one week.

En route from Puerto Barrios on May 24, a DC-3 with 3 crew and 28 passengers is lost near Panzos, N of Guatemala City (30 dead). A second Douglas transport, with 30 aboard, goes down on May 30; there are no survivors.

All-cargo services to New Orleans commence during the summer. The primary northbound lift is consumed by chicle, fruit, and flowers, with general merchandise flown south. Passenger frequencies to Miami are inaugurated with a DC-4 in May 1957. The CAB authorizes flights to Houston in 1959, but once started they are soon terminated for lack of traffic.

In August 1961, the company obtains the former **Pan American World Airways (1)** DC-6B *Clipper Viking*, renaming it *Chichicastenango*; a second Douglas follows at the end of the year. During the middle 1960s, AVIATECA, now also flying Fairchild C-82 Packets, is allowed to fly to Miami, San Salvador, and Mexico City. Service is also opened to San Pedro Sula in Honduras.

A DC-3 is lost under unexplained circumstances at Guatemala City on April 5, 1962.

Following a careful examination of competing types, CEO Col. Aguillar announces at Guatemala City in November 1970 that the first jetliner to be purchased by the company will be a British Aircraft Corporation BAC 1-11-516. The first jetliner, a BAC 1-11 518 chartered from **Court Line Aviation, Ltd.**, enters service at month's end.

Wearing a yellow and orange livery, the BAC 1-11-516 is delivered on March 25, 1971 and, in public ceremonies, is christened *Quetzal*. The **Court Line Aviation, Ltd.** BAC is returned on April 6.

While climbing away from Cerro Alux, Guatemala, on May 11, a Curtiss C-46A with 3 crew and 29 passengers crashes into the mountains (five dead).

Flights begin to the Yucatan city of Merida in Mexico in September 1972; the city is added to the New Orleans route the following June. With Mexican service intermittent during the decade due to bilateral treaty difficulties, the airline further develops at home, starting frequencies to the tourist towns of Flores and Puerto Barrios. The last C-46 is withdrawn at the beginning of 1973.

A Convair CV-440 is delivered in March 1974. Later in the year, the airline is renamed Aerolineas de Guatemala, S.A. and new livery, logos, and uniforms are unveiled.

Two CV-340s are acquired in 1975; they are christened *Tikal* and *Quirigua*.

A DC-3 is damaged beyond control by a Tikal Petan fire on February 17.

Formerly operated by **Court Line Aviation, Ltd.**, a second BAC 1-11-518 is purchased in September.

En route from Uxactun on November 18, a DC-3 with 4 crew and 18 passengers crashes in Peten State (15 dead).

In 1976, in cooperation with the Spanish flag line **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, which supplies the equipment and crew, AVIATECA begins "The Route of the Mayans" DC-10-30 service to Madrid via Santo Domingo.

Just after takeoff from Guatemala City on April 27, 1977, the No. 1 engine of a CV-440 with 6 crew and 22 passengers, fails, forcing the pilots to attempt an emergency landing in rough terrain. The Convair crashes during the maneuver and there are no survivors.

A DC-3 is destroyed on September 30 as the result of a bad landing at Flores; one passenger is killed.

By early 1978, President Enrique Valladaree Morris's 550-employee airline has stopped its transatlantic flights, preferring to improve its regional network instead.

In April, a BAC 1-11-523, previously flown by **Transbrasil, S.A. (Linhas Aereas)**, is acquired. The aircraft is barely received when, in May, the decision is taken to sell it to **Cayman Airways, Ltd.**

While on final approach to La Aurora from Guatemala on June 8, the cargo of cows and horses aboard a DC-6B with three crew, becomes unbalanced, causing the pilot to lose control. The Douglas crash-lands on a small soccer field surrounded by houses without hitting any dwellings, but the plane is destroyed and all of its occupants, human and animal, are killed.

A bird strike while on takeoff from Flores on July 26 causes the crew of a DC-3 to attempt a forced landing at the end of the runway; the Douglas goes off the end of the concrete into a swamp and sinks. There are no fatalities.

In 1979–1980, AVIATECA replaces its British-made jetliners and larger propeller airplanes with 3 Boeing 727-173Cs, originally flown by **World Airways** and now leased from the Ministry of Defense of Guatemala. The original BAC 1-11-516 *Quetzal* is sold to **Philippine Air Lines (PAL)**.

Two DC-3s are retained for its weekday flights to Flores, the only domestic route now retained. During the remainder of the decade, the airline inaugurates a new route to Houston and upgrades its fleet by the addition of a former **Malaysia Airlines System, Ltd. (MAS)** B-737-2H6A, plus a Douglas DC-6A.

A B-727-173C with 90 aboard, including many tourists en route to visit the Mayan ruins in northern Guatemala, crashes into a remote jungle area while on approach to Santa Elena Airport on January 18, 1986; there are no survivors in the nation's worst air disaster.

Operations continue apace with no route or fleet changes and enplanements for the 350-employee airline reach 101,861. Passenger boardings climb 11.3% in 1987 to 114,837.

The workforce is dramatically increased, by 42.9%, in 1988 to 500. The airline is in significant financial trouble and great difficulty is encountered in locating the funds with which to pay the lease fee it owes to the Guatemalans for the charter of the 2 B-727-173Cs.

Still, a new blue and gold color scheme is introduced for the Boeings in October. Traffic figures are only reported for 11 months; however, they show mixed growth. Customer bookings are down 4.8% to 96,176, but cargo is up by 1.5% to 10.29 million FTKs.

Company employment remains unchanged in **1989** even as the airline is 70% privatized during the first half of the year. The withdrawal of the government from the airline allows the initial opening for **TACA International Airline, S.A.**'s plan to set itself up as TACA Group or "The Airlines of the America," with a strong 30% minority shareholding.

Under this pact, the two companies begin joint purchasing, fleet rationalization, and cooperation on support services, including maintenance, catering, and ground handling.

Passenger boardings for the year improve to 105,134 and freight skyrockets 82.6% to 16.88 million FTKs.

Both the workforce and fleet remain unchanged in **1990**. Through the year, customer bookings are up to 191,800 and 7.78 million FTKs are flown. Revenues total \$38.68 million. The leased fleet in **1991** includes 1 each B-737-247, B-737-2H6A, 1 B-737-242A leased from **TACA International Airlines, S.A.**, and 2 B-737-3Q8s.

Bookings swell to 278,900 and revenues advance to \$47.59 million.

In **1992**, new frequencies are initiated to Belize, Cancún, and Chicago. The fleet is upgraded when the B-727-100Cs are replaced by 2 more leased B-737-3Q8s and 2 B-737-247s, one of which is subleased back to **TACA International Airlines, S.A.** Enplanements rise to 449,837 and income jumps to \$72.94 million.

President Ing Julio Obols Gomez and General Manager Maj. Jorge Adrian Solares Carranza oversee a workforce of 500 in **1993**. The route network now includes a single domestic route, Guatemala City to Flores, and international markets at Belize, Cancún, Chicago, Houston, Miami, New Orleans, Panama City, and San Salvador. Bookings reach 486,219 and revenues are \$75.36 million.

The leased fleet in **1994** includes 3 B-737-2H6As and 1 B-737-3Q8. Schedules are maintained as before.

Early in **1995**, the U.S. reservations centers of the TACA Group members are consolidated in a single El Salvador facility.

Flight 901, a newly-leased B-737-2H6 with 7 crew and 58 passengers, departs Miami on August 9 for a service to San Jose via Guatemala City, San Salvador, and Managua. While on its initial approach for a landing at the intermediate San Salvador stop, the aircraft collides in bad weather with the 2,181 m.-high San Vicente (Mt. Chinchontepec) volcano. There are no survivors from El Salvador's worst air disaster.

The leased fleet in **1996** includes 4 B-737-2H6As and 1 B-737-242A. By year's end, TACA Group operates a significant international route network which includes 14 points in Central America, 12 in South America, 3 in Mexico, and 8 in the U.S.

During the first half of **1997**, the company is involved with TACA group planning for code-sharing flights with **American Airlines**.

TACA Group's presence in Cuba is enhanced in August when the carrier launches thrice-weekly roundtrips to Havana from Guatemala City.

During the fall, a number of company aircraft are repainted in a new TACA Group livery, which features a white fuselage and a blue tail, with a red vertical slash over which appears a logo consisting of five golden macaws, which represent the group members.

In November, TACA Group begins service to Santo Domingo. Thrice-daily service to Dallas (DFW) from San Salvador, San Jose, and Guatemala City begins in December.

Airbus Industrie achieves a historic victory over its Boeing competitors in April **1998** when it signs a gigantic South American consortium purchase agreement. Under its terms, the TACA Group, including **TACA International Airlines, S.A.**, **SAHSA (Servicio Aereo de Honduras, S.A.)**, **NICA (Nicaraguenses de Aviacion, S.A.)**, **LACSA (Lineas Aereas Costarricenses, S.A.)**, and **AVIATECA**, promises to take 32 A320-family planes, plus 32 options.

Other participants are **TAM (Transportes Aereos Regionais, S.A.)**, on behalf of itself and its subsidiaries, which agrees to acquire 38 A320-family aircraft, with 37 options and **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**, which will take 20 A320-family aircraft,

with 20 options. Largely invisible service provided under the TACA banner continues in **1999–2000**.

AVIATIK. See **AERO ASSOCIATION LUCERNE**

AVIATION (PTY), LTD.: South Africa (1919–1922). A pair of brothers and former Royal Flying Corps officers, Frank H. and Shirley Soloman, who had received civil licensure in England, make the first flight from a South African air field at Miuzenberg, on November 22, **1919**.

Thereafter, the brothers, employing a pair of de Havilland DH 6 bi-planes, fly nonscheduled services to a number of South African destinations. Demonstrations are also put on at fairs and other gatherings, with joyrides sold in the manner of American barnstormers operating at this same time throughout the U.S.

In February **1922**, one of the brothers' airplanes carrying four passengers crashes into an unused smokestack on the Green Point Commons in Cape Town; there are no survivors. Witnessed by many people, the adverse publicity from the tragedy causes the pioneering concern to shut its doors.

AVIATION ASSOCIATES. See **METRO AIRLINES**

AVIATION BOREAL, LTD.: CP 1390, Valdor, Quebec J9P 5Y8, Canada; Phone (819) 823 0405; Fax (819) 825 1352; Year Founded 1988. Jean-Marie and Blandine Arsenault form this cargo carrier, originally known as Transport Nord-Ouest, in **1988** to provide nonscheduled all-cargo services in eastern Canada, particularly to those points not served or not served well by surface transport. Two Douglas DC-3s, which can be equipped with skis, are employed to supply mining sites and hydro projects at such locations as Jams Bay, Hundson Bay, and Ungava Bay.

Services are maintained, largely without change, over the next 12 years.

AVIATION CHARTER: 9960 Flying Cloud Drive, Minneapolis, Minnesota 55347, United States; Phone (612) 943-1519; Fax (612) 942-9264; Year Founded 1982. AC is set up at Flying Cloud Airport in **1982**, originally as an FBO with a small charter service. Over the next 15 years, the company increases its nonscheduled operations and increases its fleet to handle an increase in executive travel, hunting and fishing group lift, and cargo.

By **2000**, the company operates 4 each Beech King Air 100s and King Air 90s, 2 each Cessna 550 Citation IIs and Super King Air 200s, and 1 each C-500 Citation I, Dassault Falcon 10, and C-414 Chancellors.

AVIATION ENTERPRISE PULKOVO. See **PULKOVO AIRLINES (AVIATION ENTERPRISE PULKOVO)**

AVIATION METHODS: San Francisco International Airport, San Francisco, California 94128, United States; Phone (415) 875-1700; Fax (415) 697-9399; http://www.flyami.com; Year Founded 1976. Aviation Methods is originally established at San Rafael, California, **1976** to provide business jet crew training. Successful beyond expectation, the new company transfers to San Francisco the following year to approach the national market.

In **1978**, the company is approached by a corporate concern in Minneapolis to operate its business aircraft. An office is opened in Minnesota. During the next two decades, the company comes to operate aircraft from multiple locations and has developed procedures and systems that enable it to operate its aircraft from any location.

In an effort to guard itself against the impact of aviation economy downturns, the concern begins to diversify in **1989**, purchasing the ground support equipment manufacturer Regent Manufacturing. The following year, it purchases Sheffield, a manufacturer of precision sheet metal and machined aircraft components.

Corporate charter continues to dominate the concern's business and, by 2000, the company operates regularly from seven major locations.

A Canadair 600 Challenger flies from San Francisco while one each Dassault Falcon 20 and British Aerospace BAe (HS) 125-700 Hawker are housed at Philip Billard Municipal Airport at Topeka, Kansas. Three aircraft are based at Seattle's King County Airport: 1 each Challenger, Cessna 525 Citation, and Learjet 35A.

Another Challenger is stationed at St. Louis and a Hawker is based at White Plains, New York. At Minneapolis (MSP), Aviation Methods houses 4 Hawkers, 1 IAI-1124 Westwind, and 1 Grumman G-1159 Gulfstream II. A Hawker is also stationed at Louisville.

AVIATION NATAL (PTY.), LTD. (AVNA): South Africa (1965–1975). Aviation Natal is established as an air taxi and passenger charter operation at Dundee Airport in Natal in 1965. Revenue operations are undertaken with 3 Beech C-45s.

In 1968, a license is obtained from the government and regularly scheduled flights commence, under the marketing name Avna, linking the company's base with Durban, Newcastle, and Vryheid. Frequencies are maintained into mid-decade.

AVIATION QUEBEC LABRADOR, LTD.: CP 575, Sept-Iles, Quebec G4R 4K7, Canada; Phone (418) 962-7901; Fax (418) 962-9202; Code QLA; Year Founded 1995. Jacques Cleary sets up AQL at Sept-Iles in 1995 to offer scheduled passenger services to regional destinations in Quebec and Labrador, including Montreal's Dorval Airport. Revenue flights commence and continue with 3 Embraer Emb-110 Bandeirantes.

AVIATION SERVICES: United States (1978–1979). Unable to complete a year of scheduled flying, Aviation Services begins Cessna 402 passenger flights in 1978 linking its Reno, Nevada, base with Ely, Elko, and Tonopah in Nevada plus San Francisco.

AVIATION SERVICES, INC. (ASI): United States (1965–1969). Milton M. Adamson, his son Gary Milton, and Gary's friend Donald F. Beilman, join together in the spring of 1965 to begin an air mortuary service. With a combined initial investment of \$6,000 in a Cessna 206, Gary, Donald, and their friend Calvin C. Hermann, with advice from Milton M., establish Aviation Services, Inc. (ASI) at Wichita, Kansas, on May 7; eight days later, the tiny company is certified by the FAA, to serve as both an FBO and a charter operator.

The air mortuary business is not immediately successful, requiring the partners to obtain other jobs and the company to branch out into air ambulance work. Following receipt of a \$400 bank loan, passenger and freight charters are inaugurated in 1966, including a number of flights for skydivers.

In addition, the company is low bidder on seven airmail routes, which requires the addition of more Cessna 206s and a twin-engine Cessna 402C; the majority of these routes are inaugurated in October.

With charter work having improved during the first quarter of 1967, Gary Adamson elects to inaugurate scheduled passenger flights in April over an 80-mile route between Wichita and Salina abandoned a few months earlier by **Central Airlines**.

Later in the summer, a second service is started from Wichita to Springfield, Missouri. Neither passenger route generates much traffic (an average of one traveler per trip) and the company faces the possibility of closing them down.

Having flown a Cessna 402C over the mail route from Dodge City, Kansas, to Pueblo, Colorado, for two years, Adamson's company is familiar with the limitations for large aircraft at the previous station. When **Frontier Airlines (1)**, which has been serving the former cattle boomtown with Douglas DC-3s, finds that it must depart because its newer and larger Convair CV-580s cannot be handled there, it signs a replacement contract with ASI, one of the first replacement agreement programs in U.S. commercial aviation history.

Following the introduction of ASI's Cessna 206 commuter service in October 1968, passenger response is warm enough to warrant the introduction of scheduled traveler flights to other destinations in western Kansas. A pair of Beech 99As are ordered and enplanements for the year total 4,672.

On May 15, 1969, the company, to better reflect its geographical base, is renamed **Air Midwest**.

AVIATION SERVICES WEST: United States (1989–1995). Skywest Airlines President Jerry Atkins oversees the 1989 creation of a new subsidiary, **Aviation Services West**, which will provide charter and tour flights in Utah and Arizona, with special emphasis on the Grand Canyon. It launches revenue flights in the spring with a de Havilland Canada DHC-6-300 Vistaliner; its traffic figures will for years be reported with those of its parent.

Little is heard of this airline outside of its service area over the next five years. By 1995, the Vistaliner is gone and the fleet has been increased to include 1 Fairchild Metro II, 3 Beech King Air 90s, 2 Shorts 330-300s, and 1 Learjet. Enplanements are reported to the Regional Airline Association for the first time and total 57,237.

No further information is available.

AVIATION WEST, LTD.: United Kingdom (1985–1986). G. S. Mimms establishes Aviation West, Ltd. at Bristol in 1985 to offer air taxi, air ambulance, charter, and scheduled services with a fleet comprising 1 Pilatus-Britten-Norman PBN-2A Trislander, 2 Pilatus-Britten-Norman PBN-2 Islanders, 1 Cessna 414, and 2 Aerospatiale AS-350B Ecureuil helicopters. Scheduled revenue passenger commuter flights are inaugurated linking the company's base with Alderney, Bournemouth, Cherbourg, and Exeter. Late in 1986, the company name is changed to **Air Camelot, Ltd.**

AVIATOR, S.A.: 1A Papaflessa Str., Athens Airport, East Terminal, 167 77 Helliniko, Athens, Greece; Phone 30 (1) 964-8811; Fax 30 (1) 964-8816; Year Founded 1995. Aviator is set up at Athens in 1995 to provide corporate and executive passenger charters throughout Southeast Europe and the Mediterranean. Within five years, the company employs eight pilots and operates 1 each Beech Super King Air 200 and 1 Piper PA-31-350 Navajo Chieftain.

AVIATRANS CARGO AIRLINES (ATRAN): Zemiyanoy val 66, Moscow, 109004, Russia; Phone 7 (095) 144079; Fax 7 (095) 2444933; Code V8; Year Founded 1993. ATRAN, a longtime **Aeroflot Soviet Airlines** operating agency, is reorganized as a public limited company at Zhukovski, in the Moscow region, in late 1993 to provide all-cargo charter services to members of the CIS. General Director Roman R. Krishtal and his 450 employees hold most of the company stock.

Revenue flights begin from Moscow's Domodedovo Airport with 4 Antonov An-12s, 2 An-32s, and 4 Ilyushin Il-76TDs. To overcome the lack of ground-handling equipment at smaller airports, these units are equipped with belly-door systems to unload cargo more quickly and easily to prevent theft. Additionally, every shipment is accompanied by armed security personnel.

Operations continue apace in 1994, with the airline now feeding cargo from the region to **Lufthansa Cargo, A.G.** at its Sheremetyevo hub. With the Airport Moscow ground-handling service, jointly owned with **Aeroflot Russian International Airlines (ARIA)**, serving as catalyst, a marketing agreement between the two carriers creates the largest international air cargo operation in Russia.

The Il-76TD roundtrips to Ostend commence during the summer, employing a fifth former Aeroflot Il-76TD received in April. The imported cargo is a steady stream of Lygett & Myers Phillip Morris cigarettes for the growing number of smokers in the Russian republics. Other cargoes are flown to 56 CIS destinations, although competition begins with **Volga-Dnepr Airlines**.

Flights continue into **2000** and the fleet is increased to 7 An-12s, 5 An-26s, 3 An-32s, and 6 Il-76TDs. An alliance is entered into with **UPS (United Parcel Service)** and service is provided throughout Russia and abroad to Luxembourg, Genoa, and Berlin (Schoenfeld Airport).

AVIAZUR, S.A.: New Caledonia (1990–1995). President R. Le Bouhellec's commuter operation is formed at Aeroport de Magenta, Noumea in **1990**. Equipped with 1 Pilatus-Britten-Norman PBN-2 Islander and 1 Cessna 310, the new entrant inaugurates interisland services late in the year. The fleet is enlarged in **1992** by the addition of another Islander and 2 Beech King Air 200s.

Operations continue apace in **1993–1994**, but cease in **1995**.

AVIES, A.B.: Tallinn, Lithuania; Phone (372) 552 4233; Fax (372) 221 2951; <http://www.tallinn-airport.ee>; Year Founded 1999. Avies is set up at Tallinn Airport in **1999** to operate domestic and regional passenger and cargo services, both scheduled and charter. Operations begin and continue with 1 each Piper PA-31-350 Navajo Chieftain and Let L-410UVP.

To provide more comfort and longer range for its executive charters, the company adds a Learjet 55 in **2000**.

AVIESA, S.A. de C.V.: Toluca International Airport, Acto. de Guadalupe No. 60, Paseos del Bosque, Edo, 53290, Mexico; Phone 52 (5) 364-0892; Fax 52 (5) 364-1978; Year Founded 1995. Aviesa, or "Air Taxi," is set up by Isaias Chavez at Toluca International in **1995** to offer nonscheduled fixed-wing executive flights, small group passenger charters, and rotary-wing aerial work, including passenger flights. By **2000**, the company employs 8 pilots and operates 1 each Dassault Falcon 900B, Grumman G-1159A Gulfstream III, North American Sabreliner, Learjet 35A, Beech King Air 90, and Bell 206B JetRanger.

AVIO LIGURE, S.p.A.: Italy (1975–1980). This domestic commuter is established at Florence's Peretola Airport in July **1975**. Chairman E. Frignani and Managing Director A. Pompei assemble a fleet of 2 Yakovlev Yak-40s imported from the East Block. Scheduled revenue services are inaugurated in April **1976**, linking the company base with Rome and Milan.

Two additional Yak-40s are received in **1977–1978**. Unable to maintain viability in the face of traffic declines, rising expenses led by increased fuel prices, economic downturn, and adverse publicity caused by the Soviet invasion of Afghanistan, the company is forced to cease operations in **1980**.

AVIO LINEE ITALIANE-FLOTTE REUNITE, S.p.A.: Italy (1949–1952). In **1949**, Fiat-backed **Avio Linee Italiane, S.p.A.** assumes the leadership in uniting several unsuccessful smaller competitors: **Airone, S.p.A., Societa Italiana Servizi Aerei, S.p.A. (SISA), and Transadriatica (Societa Transadriatica di Navigazione Aerea, S.p.A.)**. The new company, **Avio Linee Italiane-Flotte Reunite, S.p.A.**, assumes and maintains the route network of its merger partners with a combined fleet of 7 Fiat G.12s and 12 Douglas DC-3s.

The amalgamated carrier does not, however, enjoy success and goes bankrupt. On March 31, **1952**, its assets and all but a few routes, which are transferred to **Alitalia, S.p.A.**, are taken over by **Linee Aeree Italiane, S.p.A. (LAI)**.

AVIOGENEX, LTD.: Narodnih Heroja 43, Belgrade, 11070, Yugoslavia; Phone 381 (11) 609 290; Fax 381 (11) 603 154; <http://www.aviogenex.co.yu>; Code JJ; Year Founded 1968. Genex Airlines is formed on May 21, **1968** as the air charter division of the state-owned trading firm Generalexport. Operations are to be conducted in association with another Generalexport affiliate, Yugotours. Initial equipment comprises 2 Tupolev Tu-154s. Inclusive-tour and charter flights are inaugurated on March 30, **1969**, over a route Belgrade–Dusseldorf.

Service continues in **1970** without incident. Coming into Rijeka, Croatia, on a flight from London (LGW) on May 23, **1971**, Flight 130,

a Tu-134A with 7 crew and 76 passengers, makes a bad landing at high speed. The right wing detaches and the aircraft slides 700 m., catching fire before stopping (78 dead).

In **1972–1977**, a network of charter destinations is built up in the Mediterranean, Europe, and the Middle East, while all-cargo flights are made to points in the Middle East, North Africa, and the Persian Gulf.

A Tu-134A-3 freighter with six crew and two passengers crashes while landing at Libreville on April 2 of the latter year; there are no survivors.

Airline employment in **1978** stands at 230 and the fleet comprises 5 Tu-134As. Enplanements are 373,414. A sixth Tu-134A is added in **1979** as a total of 329,580 passengers are carried, a decline of 13.3%.

Airline employment is increased by 7.4% in **1980** to 321. Two additional Tu-134As are delivered in April, bringing the total to seven. Passenger boardings decline 6.4% to 307,623. On total revenues of \$22.4 million, expenses are \$17.8 million, producing an operating profit of \$4.6 million.

M. Grudic succeeds M. Djordjovic as president in **1981** and the employee population is increased by 3.3% to 318. Two Yak 42s join the fleet. Boardings soar 21.6% to 373,617 and total revenues climb 43.5% to \$32 million.

Airline employment in **1982** is 320, a 0.6% boost. Cargo falls 28.6% to 859,000 FTKs and bookings plunge 23.8% to 285,000. Revenues are off 31.7% to \$21.9 million.

Employment falls by 5.7% in **1983** to 280. The Yugoslav charter carrier's first U.S.-made airliners—two Boeing 727-2H9s—are delivered in the first quarter and join a fleet of 7 Tu-134As. Boardings climb 20.1% to 342,000, but cargo falls 11.4% to 761,000 FTKs. Revenues increase 5.4% to \$17.4 million and expenses are held to \$17.1 million, a 3.8% boost. A welcome \$263,000 operating profit can thus be posted.

The workforce is 330 in **1984**, a 5.8% boost. Cargo skyrockets 416% to 222,000 FTKs and enplanements accelerate 15.4% to 396,940. Revenues swell 72.5% to \$27 million, providing a net profit of \$830,000 atop an operating gain of \$7.4 million.

Employment grows 12.8% in **1985** to 327 and the fleet comprises 3 B-727-2H9s, 4 Tu-134As, and 7 Yak 42s. Passenger traffic jumps 24.6% to 493,700 and freight grows 36.4% to 3.54 million FTKs. Revenues are up 14.4% to \$21.25 million and low expenses allow an operating profit of \$8.5 million. Net profit dips to \$85,000.

Three new employees are hired in **1986** and during the winter ski season the three Boeings are leased out. The Yugoslav charter carrier's enplanements dip 2.8% to 479,934 and cargo is also off, by 3.2% to 3.43 million FTKs. Operating revenues increase by 22.1% to \$25.9 million and profits are made: \$10.4 million (operating) and \$115,000 (net).

The workforce is increased by 9.1% in **1987** to 360 and the fleet includes 3 B-727-2H9s and 4 Tu-134As. The first of 2 ordered B-737-2K3As is delivered in August.

Passenger boardings jump 14.2% to 548,286, but freight is down again, by 1.1% to 3.11 million FTKs. Revenues zoom upward 38.8% to \$36 million, expenses climb 16.5% to \$18 million, and the operating profit is \$17.9 million. A net \$920,000 gain is celebrated.

Airline employment grows by 27.8% in **1988** to 460 and the fleet now includes 2 B-737-2K3s, 3 B-727-2H9s, and 4 Tu-134As. Customer bookings move ahead by a slight 1.5% to 556,405 and cargo jumps 43.9% to 7.36 million FTKs. Revenues accelerate by 30.5% to \$47 million and low costs allow operating income to reach \$21.2 million. A net \$1.35-million profit is generated.

The number of employees is boosted 6.5% in **1989** to 490. Arrangements are made during the year's first half to acquire 4 B-737-2K5s from **Hapag-Lloyd Fluggesellschaft, mbH**, to be delivered the following spring. Meanwhile, the last of the Tu-134s are withdrawn in the fall.

Passenger boardings ascend 5% to 584,034 and freight increases 61.2% to 11.86 million FTKs. Revenues swell 5.1% to \$49.4 million and profits of \$22.4 million (operating) and \$1.49 million (net) are generated.

Company employment is cut by 10.2% in **1990** to 440 and the fleet is all-Boeing by May.

Customer bookings swell 8.6% to 634,000, but cargo declines 4.8% to 11.3 million FTKs. Revenues accelerate 31.3% to \$64.8 million, but the operating profit falls to \$19.4 million. There is a \$5.5-million net loss.

The payroll is sliced by 21.1% in **1991** to 347 and the fleet now includes 2 B-737-2L8As, 1 B-727-243A, 2 B-737-2K3As, and 2 B-737-2K5As. The Yugoslav civil war has a devastating impact upon both the tourist business and the company.

Passenger boardings plunge 66.9% to 209,257 and freight declines 66.4% to 3.8 million FTKs. Revenues fall 41.1% to \$37.6 million and the net loss shoots up to \$11.1 million.

The workforce total returns to 440 in **1992**; however, the Yugoslav fighting causes the company, now a Serbian organization, to suffer another horrible year. Customer bookings freefall by 72% to 58,600 as the fleet spends much of the year on the ground. Unable to continue operations in the face of sanctions in **1993**, the company shuts its doors.

This subsidiary of the General Export Holding Company, Ltd. is allowed to resume operations in **1996**. Managing Director Dragan Aksentijevic attempts to revive tourist charters, in partnership with the Genex subsidiary Yugotours. The company undertakes a large number of IT flights between April and October, while undertaking wet-lease operations on behalf of foreign carriers the remainder of the year.

Operations continue in **1997–1998**, with Avioimpex increasingly directing its activity and commercial interest into wet-lease arrangements abroad. The fleet now includes 1 B-727-243A, 2 B-727-2L8As, and 2 B-737-2K3As. During these years, the growing conflict in Kosovo has minimal impact.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, Avioimpex, on March 24, **1999**, halts all service from Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further; that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Flights from Belgrade remain halted for the duration of the NATO Operation Allied Force campaign that ends on June 11. Continuing economic sanctions on the Yugoslav government now severely hampers the company's activities.

AVIOIMPEX MACEDONIAN AIRWAYS: 11 Oktonwri K14, P.O. Box 544, Skopje, 91000, Macedonia; Phone 389 (91) 11 43 44; Fax 389 (91) 11 75 16; <http://www.avioimpex.com.mk>; Code M4; Year Founded 1992. With greater independence, Macedonia is able to form its own airlines and thus Avioimpex, a joint stock company for aviation and trading, is born on May 15, **1992**. Under the direction of President Ilja Milev, the Skopje-based concern will offer vacation charters. A Yakovlev Yak-42 is acquired and a McDonnell Douglas MD-82 is leased from **Adria Airways (Adria Aviopromet) (2)**. These commence revenue flights in October to Basel, Berlin, Dusseldorf, Geneva, Hamburg, Istanbul, Ljubljana, Munich, Stuttgart, Vienna, and Zurich. A total of 11,043 passengers are transported by Christmas.

While en route from Geneva to Skopje on October 1, **1993**, bad weather forces the Yak-42D with 8 crew and 108 passengers to divert to Ohrid; while on descent to the new point, the plane crashes into Mount Trojani at the 4,900 ft. level (115 dead).

Customer bookings for the first full year of service reach 121,135.

Domestic and regional services are maintained in **1994–1995**, during which years the fleet is altered to include 1 Antonov An-12B leased from **Air Sofia**, 3 each other chartered Yak-42s and Tupolev Tu-154Ms, and 1 Douglas DC-9-33CF provided by **JAT Yugoslav Airlines**. Enplanements respectively total 186,965 (**1994**) and 215,625 (**1995**).

Two of the Yak-42s are withdrawn in **1996**, even as passenger boardings climb to 220,000. Despite continuing political problems in the area, General Manager Illija Smilev's Avioimpex continues to grow in **1997–1998**. One each McDonnell Douglas MD-81 and MD-83 join the fleet as Copenhagen, Frankfurt, and Zagreb are added to the route network. Customer bookings dip to 218,429 during the former year, but rebound, climbing to 273,310 in the latter.

Service is maintained without fanfare in early **1999**, but the peace does not last.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, Avioimpex, on March 24, halts all scheduled service into Belgrade as Yugoslav airspace is closed. A spokesman, in making the announcement, indicates that the situation will be evaluated further; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Service to Belgrade, as well as to Sarajevo, Mostar, Zagreb, Split, Skopje, Tirana, Ljubljana, Timisoara, and Sofia remains halted on March 25–31 and for much of the duration of the NATO bombing campaign.

Although the fighting requires that Avioimpex be grounded, the company is able to generate some income by operating, on behalf of the UN Human Rights Commissioner and International Organization for Migration, a number of refugee flights. For example, a Yak-42D on May 4 transports a group of 41 Kosovo ethnic Albanians to Bucharest. The refugees are the first of 6,000 for which the Romanian government has agreed to provide temporary housing.

On May 5, a group of 153 displaced people are airlifted to Zurich, the first to arrive in Switzerland from Macedonia. The Swiss, who have agreed to accept 2,300 Kosovo Albanians currently in overcrowded Macedonian camps, will become familiar with Avioimpex MDs, as they make the refugee flights in the next month.

Additional relief flights north into Western Europe will also be completed in the days ahead until Operation Allied Force is concluded on June 11.

Partially as a result of the mercy services, enplanements for the year reach 278,000 and 6,627,000 FTKs are operated.

Airline employment at the beginning of **2000** stands at 350 and the fleet includes 1 each DC-9-33, MD-81, MD-83, Tu-154M, and Yak-42D. An ex-**Korean Air** MD-82 is leased on August 1.

AVIONES COMERCIALES DE GUATEMALA, S.A. (AVCOM): Avenida Hincapie, Zona 13, Hangar 21, Aeropuerto Aurora, Guatemala City, Guatemala; Phone 502 (2) 315 821; Fax 502 (2) 324 946; Year Founded 1989. AVCOM is established at the Guatemala City airport in **1989** to provide charter passenger and cargo flights throughout the nation and to neighboring Central American countries. Revenue operations begin and continue with 3 de Havilland DHC-6-300 Twin Otters. A fourth Twin Otter is acquired in **1994**.

Operations continue apace in **1995** and, in late October **1996**, the carrier acquires a DHC-7-102. Maritsa Surug is the executive in charge when the company becomes affiliated with **TACA International Airlines, S.A.** Flights continue into **2000** as 2 more Twin Otters join the fleet.

AVIONES DE PANAMA, S.A.: Panama (1964–1986). Originally formed as an air taxi at Panama City in **1964**, Aviones de Panama undertakes charter flights from Paitilla Airport to stops in San Blas and Darien provinces. The fleet in **1979** includes 4 Britten-Norman BN-2 Islanders, 1 de Havilland Canada DHC-2 Beaver, and 1 Cessna 402.

By **1981**, 4 more Islanders and 1 BN-2A Trislander have been acquired, allowing the inauguration of scheduled services to the destinations previously served on an ad hoc basis. Traffic does not justify the decision, however, and revenues are not encouraging. An Islander is sold in **1985**.

Unable to maintain its viability, the company stops flying in **1986**.

AVIONS BLEU, S.A.: France (1949–1952). AB is set up at Perpignan in May **1949** to provide independent passenger and cargo services with a single Douglas DC-3. Operations continue without incident until June **1951**, when a second Douglas transport and a Curtiss C-46 Commando freighter are added. Flights cease in **1952**.

AVIOR (PTY.), LTD.: Australia (1980–1987). Founded at Redcliffe in Western Australia, Avior's initial fleet comprises 1 Piper PA-31-350 Navajo Chieftain and 1 Beech B-55 Baron. Scheduled commuter fre-

quencies are flown northward along the coast from Perth to Geraldton. Other destinations served include Kalbarri, Eneabba, Southern Cross, Kalgoorlie, Kambalda, Useless Loop, Denham, and Carnarvon.

The fleet in the middle 1980s contains 3 Navajo Chieftains and 1 Aero Commander; Bunbury is added to the route network. Financial difficulties ensue for Managing Director D. Holzigar's operation and although the fleet is downsized to 2 Chieftains and 1 PA-31 Navajo, the carrier is unable to maintain its viability and must cease operations in 1987.

AVIRON (THE PALESTINE AVIATION COMPANY, LTD.): Israel/Palestine (1936–1948). Supported openly by the Histadrut Federation of Labor and the Jewish Agency and covertly by the underground Haganah, this pioneer is established by Yitzhak Ben Yaacv at Afqim, near the Sea of Galilee, in the British territory of Palestine on July 21, 1936.

Established to offer flight lessons and to develop scheduled services between Tel Aviv and Haifa and the Jordan Valley, the company acquires 1 de Havilland DH 82A Tiger Moth, 1 Polish RWD 8, and 1 RWD 13 and begins operations in March 1938. Services include not only training, but charter and supply drops to settler outposts as well.

The Tiger Moth is scrapped following its crash landing near Afqim in May 1939. In 1940, the fleet includes 2 RWD 8s, 2 RWD 13s, 1 RWD 15, 3 Taylorcrafts, and 1 Miles M3A Falcon Major. Scheduled services are started to Tiberias. All the while, covert air reconnaissance missions are flown on behalf of Haganah—in secret due to British opposition. World War II developments in 1942 force scheduled activities to cease; however, a Czech-built Benes-Mraz Be.550 Bibi is acquired in June.

The British Mandate Government does not permit the resumption of scheduled operations in 1945. Aviron's fleet flies charters within Palestine and internationally to Cyprus, Nicosia, and London. An ex-RAF Auster J/1 Autocrat is added on May 11, 1946, 2 Canadian-built DH 82Cs are acquired in August 1947 and 1 DH 89A Dragon Rapide is purchased in December. Meanwhile on November 29, the Benes-Mraz Be.550 is destroyed in a crash at Beit Yitzchak.

The Miles M3A crashes at Marsa-Aalem on February 12, 1948. Anti-aircraft fire downs a Tiger Moth near Maale Hachamisha on March 28. On April 13, terrorists destroy the RWD 15 at Lydda Airport. An RWD 13 is destroyed on the ground when Egyptian Spitfires strafe Sde Dov airfield on May 15. The same month, anti-aircraft fire claims the second DH 82C near Ramat Rachel and 2 Taylorcraft, an RWD 13, and an RWD 8, are transferred to the Israeli Defense Forces. At this point, Aviron ceases operations.

AVISPA (AEROVIAS INTERAMERICANAS DE PANAMA, S.A.): Panama (1951–1956). AVISPA (Aerovias Interamericanas de Panama, S.A.) is founded at Panama City in November 1951 specifically to transport shrimp from Panamanian ports to Miami. A C-46, leased from **Lineas Interamericanas Aereas, Ltda.**, is employed and flights, under a Panamanian government concession, continue for several months, beginning in March 1952. During the next two-plus quarters, cargo is hauled to and between the following markets: Barranquilla, Bogota, Caracas, Guayaquil, Lima, Maracaibo, and Miami.

Unable to sustain operations, the company is reorganized late in the year and begins flying scheduled passenger and freight services to domestic points on August 1, 1953, including the Costa Rican border town of Changuinola. Late in the year, the U.S. CAB grants the company permission to start passenger flights to Miami.

In the spring of 1954, a DC-6 is leased for six months from **Trans-Caribbean Airways** and employed during the summer to inaugurate El Panama service to Florida. In 1955–1956, following the lead of the Honduran discount carrier **TAN (Transportes Aereos Nacionales, S.A.)**, AVISPA undertakes the practice, in conjunction with **CEA (Compania Ecuatorianas de Aviacion S.A.)**, of flying low-fare Sixth Freedom flights from Miami over Panama and on to Lima via Guayaquil. Renamed **APA (Aerovias Panama, S.A.)** during the fall of the latter year, the carrier purchases a DC-4 in December.

AVISPA (AEROVIAS PILOTAS ASOCIADOS, S.A.): Colombia (1955–1962). Led by Carlos Amortegui, Juan White, and Jaime Castro, a group of former **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** pilots form AVISPA on February 3, 1955. After purchasing a pair of Douglas DC-3s, the associates open scheduled second level service from Medellin to such destinations as Cauca, Puerto Berrio, and Chigorodo.

Like other similarly sized and underfinanced new entrants, the company is only able to fly for six years before it is forced into bankruptcy in 1962.

AVISTAR CYPRUS, LTD.: P.O. Box 5532, Nicosia, Cyprus; Phone 357 (2) 459 533; Fax 357 (2) 477 367; Year Founded 1990. Avistar is founded at Nicosia in 1990 to provide ad hoc domestic passenger and cargo charter services. Revenue flights begin with a single Boeing 707-320C.

AVISTO, LTD.: P.O. Box 61, Eichweg 3, Oberglatt, CH-8184, Switzerland; Phone 41 (1) 850-5757; Fax 41 (1) 850-5758; Code AK8; Year Founded 1990. Avisto is established at Oberglatt in 1990 to provide domestic Swiss commuter passenger and cargo services, both scheduled and charter. Frank Fassbind is chairman/president, with Tom Gyger as deputy president. Operations begin and continue with a fleet made up of 1 each Fokker F.27-200 and Shorts 360.

Flights continue in 1991–1999, during which years the Friendship is replaced with 1 F.28-4000 Fellowship.

Having been leased to the Sirte Oil Company in Libya some years earlier, the company's Shorts 360-300 has continued to transport workers between headquarters and various oil fields. En route from Tripoli to an energy area landing strip near Marsa el-Brega on January 13, 2000, the aircraft, with 3 crew and 41 passengers, loses both engines and ditches 3 miles off the coast. A total of 22 passengers are killed.

AVITAT: Westmoreland County Airport, 200 Pleasant Unity Rd., Suite 109, Latrobe, Pennsylvania 15650, United States; Phone (412) 539-4533; Fax (412) 539-5501; Year Founded 1967. Aviat is the charter arm of the FBO Vee Neal Aviation, originally established at Latrobe in 1967. During the next 30 years, a variety of executive, small group, and other public nonscheduled charters are performed throughout the Eastern U.S. In 2000, the company flies 2 British Aerospace BAe Jetstream 31s.

AVJET CORPORATION: 4531 Empire Ave., Hangar 3, Burbank–Glendale-Pasadena Airport, Burbank, California 91505, United States; Phone (818) 841-6190; Fax (818) 841-6209; Year Founded 1995. AvJet Corporation is set up at Burbank in 1995 to serve as an FBO and charter operation, as well as an aircraft management, sales, and leasing concern. Within five years, the company operates 6 Grumman G-1159 Gulfstreams, 1 Canadair 601 Challenger, 1 Cessna 560 Citation V, and 2 IAI Westwinds.

AVL ARKHANGELSKIE VOZDUSHNYE IINIE: Arkhangelsk Airport, Arkhangelsk, 163053, Russia; Phone 7 (81822) 68316; Fax 7 (81822) 31425; Code AUL; Year Founded 1995. Founded just the year before, **Arkhangelsk Airlines** is renamed in 1995. Viktor S. Andropov is general director and he provides regional and domestic charters with a fleet that comprises 12 Antonov An-24s, 14 An-26s, 14 Tupolev Tu-134s, and 5 Tu-154B/Ms.

It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

AVNA AIRWAYS (PTY.), LTD. See MAGNUM AIRLINES (PTY.), LTD.

AVO (AEROVIAS OCCIDENTALES, S.A.): Costa Rica (1947–1951). Founded at San Jose by two U.S. citizens on July 24,

1947, this small carrier is one of the last in the hemisphere to operate the Boeing 247D. Employing these twin-engine machines, along with a Noorduyn Norseman, the company initiates services to Parrita and Puerto Jimenez.

Unable to maintain the level of finances required, the operation ends in 1951.

AVRO CIVIL AVIATION SERVICE: United Kingdom (1919). Employing company model 504K/Ms and 536s, the Avro aircraft manufacturing company of pioneer aviator A.V. Roe operates the first daily British domestic air passenger service between May 24 and September 30, 1919. A total of 194 unsubsidized flights (out of 222 laid on) are completed between Manchester's Alexander Park and Blackpool via Southport. Each one-way flight costs passengers four guineas a head.

Flying an Avro 504L floatplane, pilot C. Howard Pixton, on August 4, begins a month of daily newspaper flights from Windermere to the Isle of Man.

AVSAT AVIATION: 557 Sandau, San Antonio, Texas 78216, United States; Phone (210) 828-0551; Fax (210) 340-3711; Year Founded 1981. Initially established as an FBO at San Antonio in 1981, Avsat also undertakes charter work, including executive and small group passenger flights to destinations in Mexico, Texas, and other points in the U.S. By 2000, the company employs 3 pilots and operates 1 each Learjet 24B, Learjet 25B, Beech 58 Baron, Cessna 414 Chancellor, and Beech 35 Bonanza.

AVTECH EXECUTIVE FLIGHT CENTER: 1800 Airport Road, Kenneshaw, Georgia 30144, United States; Phone (770) 422-2345; Fax (770) 423-1544; Year Founded 1987. This company is established at Kenneshaw, Georgia, in 1987 to offer executive and small group passenger charters throughout the southeast and other points in the U.S. Scott A. Beale is general manager and, within 12 years, he employs eight pilots and has aircraft stationed at three different airports. One Cessna 550 Citation II is at Dekalb-Peachtree Airport at Atlanta and 1 Cessna 182 Skylane is at Washington-Wilkes County Airport at Washington, Georgia. The largest part of the fleet is stationed at Cobb County-McCollum Field at Marietta, Georgia. Located here are 2 Cessna 500 Citation executive jets, 2 Piper PA-31-350 Navajo Chieftains, 2 Cessna Skylanes, 1 Beech Super King Air 200, and 1 Beech 58 Baron.

AVWEST CHARTERS, LTD.: P.O. Box 102, Victoria, British Columbia V8W 2M1, Canada; Phone (604) 655-3620; Fax (604) 655-0488; Year Founded 1992. Originally established as Laughing Sky Air Charters, Ltd. in 1992, Managing Director Raymond Rosenkranz's company is soon renamed. The concern offers passenger and cargo charters, as well as aerial photography and aerial surveillance flights.

Revenues total C\$140,000 in 1997 and by 2000 the fleet includes 1 each Cessna 182 and C-401.

AWAIR (AIR WAGON AIRLINES): Jakarta, Indonesia; http://www.awairlines.com; Year Founded 2000. Air Wagon is the first of 12 new airlines authorized by the Indonesian government in the spring of 2000 to actually be launched. Rachmat Soebakir is named managing director and he quickly recruits a workforce and leases a pair of Airbus Industrie A310-221s previously flown by Swissair, A.G. By early June, tentative licenses are received for 27 domestic and 28 international routes.

Revenue flights commence on June 22 with two daily roundtrips from Jakarta to Surabaya and one daily from Jakarta to Medan, Balikpapan, and Denpasar.

It is reported in early July that the company also wishes to serve Taipei, Singapore, and Seoul. The fleet is increased on October 1 by the addition of an A300-600R. On October 18, that aircraft suffers the company's first major incident when, shortly after landing at Balikpapan, it

catches fire. Although the plane is damaged, the blaze is quickly extinguished by firemen practicing at the airport when it broke out.

AWOOD AIR, LTD.: P.O. Box 2280, Victoria, British Columbia V8L 3S8, Canada; Phone (604) 656-5521; Fax (604) 655-3766; Code 8D; Year Founded 1983. Alex Wood establishes Awood Air at Victoria, British Columbia, in 1983 to provide air tanker and fire fighting services throughout Western Canada. Nonscheduled freight and passenger flights begin during the late 1980s, especially during the summer, to points throughout British Columbia, the Queen Charlotte Islands, and numerous points along the coast.

In 1995, Awood begins scheduled services to Vancouver four times daily. Equipment includes 2 each British Aerospace (HS) 748-B2s received in June, 3 Beech King Air 90s, and 2 Piper PA-31-310 Navajos.

Airline employment snags at 25 in 1996 as one Navajo is removed. It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

AXON AIRLINES, S.A.: 4 Kifissias Ave., 151 25 Marousi, Athens, Greece; Phone 00995 (32) 94 75 37; Fax 00995 (32) 99 07 98; http://www.axon-air.gr; Code A9; Year Founded 1999. Axon is established as a subsidiary of the Axon Group at Athens in the spring of 1999 to provide scheduled roundtrip service to points in Western Europe. Employing a pair of leased Next Generation Boeing 737-7K9s, President Thomas Liakounakos's company inaugurates service on June 11 to Milan, Paris, and Brussels.

Orders are placed for 2 Boeing 717-200s that are to arrive under lease from the factory in April.

Daily B-737-7K9 roundtrips are inaugurated on April 12, 2000 between Athens and Rome. When the deal to obtain B-717s falls through, requests are completed on October 1 for 4 Embraer ERJ-145s, the first of which will be delivered in the spring.

AYAKS AIRLINES: Timiryazevskaya Str. 4-12, Moscow, 127422, Russia; Phone 7 (095) 150-4592; Fax 7 (095) 150-4592; Year Founded 1996. Ayaks is established at Moscow in 1996 to provide on-demand passenger and cargo services to points throughout the country, the CIS, and worldwide. Revenue flights begin with a pair of giant Antonov An-124-100s and a single Tupolev Tu-154M.

AZERBAIJAN AIRLINES (AZERBAIJAN HAVA YOLLARI): Prospect Azadlig 11, Baku, 700000, Azerbaijan; Phone 994 (8922) 93 44 34; Fax 94 (8922) 96 52 37; http://www.ipi.co.uk/dics/azerbaij; http://www.rz.uni-frankfurt.de/~puersuen/twaahy.htm; Code J2; Year Founded 1992. The former Aeroflot Soviet Airlines Azerbaijan directorate is reformed at its Baku base in 1992 and transformed into the new state airline of Azerbaijan. Vagif Sadykhly is general director and operations are undertaken with a fleet taken over from the former Soviet carrier that includes 11 Yakovlev Yak-40s, 6 Tupolev Tu-154Bs, 5 each Tu-134As and Tu-134B-3s, 4 each Tu-154B-2s and Antonov An-26s, and 2 Tu-154Ms.

Each aircraft is painted in a new livery with the Azerbaijan Airlines titles in English on the forward fuselage and the letters "AHY" at the rear for the airline's Turkic name, Azerbaijan Hava Yollari. Orders are placed for a pair of hush-kitted Boeing 727-235s, once flown by Pan American World Airways (1). The first leased unit arrives in late December.

Beginning on January 2, 1993, the Boeing trijet undertakes scheduled service to Budapest. The second B-727-230 is delivered in March. Also in the first quarter, frequencies to the Turkish cities of Ankara and Istanbul are stepped up. The trijets also fly to Dubai, London (LGW) via Istanbul, Athens via Ankara, and to Frankfurt.

The first four-engine western aircraft joins the fleet in June 1994—a B-707-341C that had first been delivered to VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)—chartered from Texas-based Buffalo Airways. Consequently, 1 Yak 40 and the 4 An-24s are retired.

Enplanements total 1,527,000 and 32.34 million FTKs are operated.

One each B-707-323C and B-707-399C are received from **Buffalo Airways** early in 1995. In September, the B-707-399C completes a 4,000-km. nonstop freighter flight from Baku to Ostend, Belgium. Having arrived at Baku after a November 30 all-cargo service from Urumqi, the B-707-323C with six crew encounters difficulty in lowering its left main landing gear. Passing low over the airport runway, the plane turns to make another approach, but instead strikes light stanchions on a road bridge and crashes (two dead).

Just after takeoff from Nakhichevan on a December 5 service to Baku, a Tu-134B-3 with 6 crew and 76 passengers, suffers the loss of both engines; while making a forced landing 3,400 m. from the runway the jetliner crashes (44 dead).

Passenger boardings fall 32.3% to 912,000 while cargo increases to 40.95 million FTKs.

A B-707-321C, originally operated by **Pan American World Airways (1)**, is purchased in the U.K. during January 1996; repainted, it arrives by spring. In September, the carrier receives a grant from ICAO. It will be employed to assist in the improvement of cargo handling, establishment of quality control systems for passenger services, flight safety and security control systems, and technical assistance to improve internal management.

Passenger traffic recovers, moving skyward by 5.2% to 1,251,200. On the other hand, only 32.23 million FTKs are operated, a 17.3% decline.

The fleet in 1997 includes 1 each B-707-399C, B-707-341C, and B-707-321C, 2 B-727Fs, 9 An-26/32s, 8 Tu-134Bs, 15 Tu-154B/Ms, and 13 Yak 40s.

While returning to Gyandzha airport after a May 15 training flight, a Yak 40 with 6 crew is hit by stray bullets from the rifles of Azerbaijani soldiers firing at a road side. One of the missiles hits an oxygen tank that catches fire and causes the aircraft to crash 5,160 m. short of the runway; although the aircraft is a total loss, there are no fatalities.

Having come off lease with **Buffalo Airways** in the U.S. during early spring, the world's last operational Canadair CL-44 Conroy is acquired and placed into service hauling outsized-cargo throughout west Asia.

During the spring, with support from ICAO, the carrier establishes a security division. It will provide security measures at the airline's major locations and help to prevent acts of terrorism on its flights.

In May, plans are announced for aircraft renovation and restoration. While the search for financing is undertaken, the company acquires 3 used Tu-154s from Latvia for \$850,000.

Customer bookings plunge 37% to 590,900. Cargo traffic, on the other hand, inches up 1.2% to 28.7 million freight FTKs.

Service is maintained in 1998. During the summer, Ogden, the U.S. concern, England's International Handling Company, and Azerbaijan establish a Joint Venture Ground Handling Company, which begins to provide ground service for passengers and airplanes at Baku Airport on November 1.

Having secured an 80% loan guarantee from the U.S. Export-Import Bank and credit from two banks for the remaining 20%, the carrier, in December 1999 is able to request 2 Boeing aircraft valued at \$105 million. Azerbaijan President Haydar Aliyev personally signs for the airline.

With over 600 chartered flights having been made between Baku and Urumqi, capital of northwest China's Xinjiang province since 1994, scheduled services are now ready to be initiated and weekly Tu-154M roundtrips are subsequently launched on May 5, 2000.

While en route from Nakchivan to Baku on August 18, a Tu-154B with 118 passengers is hijacked in midair by terminally ill—but drunk—Mehdi Husseinli, who displays a hand grenade. The pirate demands to be flown to Ankara, Turkey, where he hopes to receive the same medical treatment news reports indicate is being provided to former Azerbaijan President Heydar Aliyev. Two security agents successfully talk the man into surrendering, after which he is disarmed and restrained.

On August 22, security police detain Rauf Arifoglu Abbasov, editor-in-chief of the influential opposition newspaper *Yeni Musavat*. Authorities claim to have found documents and an unregistered gun in his home and link them to the recent hijack attempt. Three days

later, leading opposition and independent newspapers halt publication in protest of the arrest.

The first of the 2 B-757-222LRs to be delivered arrives at Baku on October 9; the second is expected in January.

AZTEC AIRLINES: United States (1966–1967). Aztec is set up at El Paso, Texas, in the summer 1966 to provide daily scheduled passenger and cargo flights. Employing Piper 23 Aztecs, the commuter inaugurates daily roundtrips on September 7, linking its base with Las Cruces, Silver City, and Douglas. Unable to achieve viability, Aztec ceases operations in 1967.

AZTECA CARGO, S.A. de C.V.: Mexico (1994–1995). AC is established at Mexico City in the summer of 1994 to operate all-cargo charter flights to destinations throughout the country, and to the U.S. and Central America. Revenue services commence with a pair of Boeing 727-100F freighters.

Unable to achieve economic viability, the company shuts down within a year.

AZZA TRANSPORT COMPANY, LTD.: P.O. Box 11586, Mak Nimir Street-KRT, Khartoum, Sudan; Phone 249 (11) 70 408; Fax 249 (11) 770 408; Year Founded 1993. This all-cargo carrier is established at Khartoum in the summer of 1993; shareholding is divided between the government of Sudan, Omdurmon National Bank, and Shikan Insurances. Dr. Gibril Mohd is appointed managing director and he recruits a workforce of 100. International and regional freight services commence in September and continue with a fleet, which, by 2000, includes 1 each Boeing 707-330C, B-707-368C, and Lockheed C-130E Hercules.

AZZURRA AIR, S.p.A.: Viale Pap Giovanni XXIII, Bergamo, 48 24121, Italy; Phone 39 (35) 416 0343; Fax 39 (35) 416 0300; <http://www.greenwichinfo.com/lcy/azzurra.htm>; Code Z5; Year Founded 1995. Azzurra is established at Milan's Bergamo Airport on December 20, 1995. With £10 million in fully subscribed shareholding, ownership is divided between **Air Malta, Ltd.** (49%), IMS International (26%), and several other financial and private investors, including SO.FI.PA. Mediocredito Centrale, Banca Popolare Di Bergamo, and Credito Varesino.

Air Malta, Ltd. Chairman Joseph Tabone signs an agreement for AM management input, as well as pooled maintenance, components, and spare parts. He joins the IMS president and former **Alitalia, S.p.A.** official, Alberto Denzler, as joint vice chairman under 23-year **Air Malta, Ltd.** veteran Dominic Attard, who is elected chairman. During this start-up period, Tabone consults with and receives blessing for the new entrant from **Alitalia, S.p.A.** CEO Domenico Cempella.

Gianfranco Imperatori is appointed president and recruits a workforce of 60 at Milan's Bergamo–Orio Airport. Three Avro RJ85s are acquired via **Air Malta, Ltd.** and once the first two are in hand and have been route proven, an operating certificate is received. Four days later on December 10, 1996, scheduled regional services commence.

Destinations initially visited include Turin, Rome, Munich, Paris (CDG), and London (LCY). Espresso and cappuccino are offered as part of in-flight services and customers are given a chance to purchase pre-season Italian fashions.

In January 1997, weekend flights begin to London (STN). The third RJ85 arrives from **Air Malta, Ltd.** in April and, during the month, a code-sharing agreement is initiated with **Swissair, A.G.** Discussions commence with **Alitalia, S.p.A.** concerning a possible franchise affiliation. When **Air Malta, Ltd.** in September decides to move away from the hub concept, it puts its RJ70 up for lease.

In late October, a strategic alliance is entered into with the U.K. discount carrier **Debonair Airways, Ltd.** Under its terms, the two agree to share codes on routes between Britain and Italy, with Debonair providing services to its partner at London (CTN).

Daily dual-designator roundtrips performed by an Azzurra RJ85 begin during the second week of November from London to Milan's Bergamo Airport, with a through service available to Ciampino Airport at Rome. The first two former **Air Malta, Ltd.** RJ70s arrive under lease from Fortis Aviation at month's end. The company celebrates its first anniversary on December 10. Enplanements for the year total 73,000.

In January 1998, the company transfers its base of operations from Ciampino Airport to Leonardo da Vinci Fiumicino Airport.

With the arrival of the remaining RJ70s in March, the company is able to expand its code-share with **Alitalia, S.p.A.** Dual-designator routes offered include Milan and Turin to London (LCY) and London (LGW) to Turin. Additionally, international frequencies are operated to Zurich and domestic flights are made to and between Rome, Alghero, Milan, and Turin.

The marketing agreement with **Alitalia, S.p.A.** is completed and Azzurra prepares to become the Italian major's first independently owned franchise partner.

In April, Azzurra ends its code-sharing pact with **Debonair, Ltd.** and, under a five-year contract, becomes a full franchise partner of **Alitalia, S.p.A.**, reporting to **Alitalia Express, S.p.A. Minerva Airlines, S.p.A.**, operating its seven Dornier 328-100s on Italian domestic routes, also becomes a franchise partner.

Both airlines, in the manner of "British Airways Express," paint their aircraft in Alitalia colors, with Alitalia interiors. Alitalia uniforms are provided and check-in and ticket counters receive Alitalia branding; indeed, even the supplies used in in-flight meal services come from the Italian major. Still, in Azzurra's case, there are corporate reminders, with company insignia on the nose and engines of the aircraft, as well as ground and cabin uniforms; cockpit crews wear full Azzurra uniforms.

A total of 170,000 passengers are transported on the year.

Airline employment at the beginning of 1999 stands at 60.

Azzurra becomes the first NG B-737 operator in Italy during the spring when it takes delivery of a pair of leased Next Generation B-737-73S aircraft. The new planes are committed to charter work from Milan, but are occasionally also employed on Alitalia replacement service.

Weekday B-737 service between Bergamo and Rome is resumed on November 8.

Annual traffic figures are reported as part of the **Alitalia, S.p.A.** total. However, during the year and into 2000, airline employment is increased to 200.

B AIRWAYS: United States (1988–1990). Possessing possibly the shortest name of any airline, B is established at Miami in 1988 to offer nonscheduled cargo services throughout the state of Florida and the Caribbean. Revenue operations commence with a single Douglas DC-3, but are suspended early in 1990.

BAC AIRCRAFT, LTD.: United Kingdom (1991–1994). **BAC Charter, Ltd.** is founded at Horley in Surrey in 1991 to offer regional ad hoc nonscheduled passenger and cargo services. Ownership is held by the BAC Group, Ltd., established in 1982, with Neil Dickson as chairman. In addition, a contract is obtained to fly the Royal Mail at night and between Belfast, Bristol, Leeds, East Midlands, Bournemouth, Edinburgh, and London (STN and LGW). Revenue flights commence with a fleet of 1 de Havilland Canada DHC-6-200, 2 leased DHC-6-300s, 3 Embraer EMB-110P1 Bandeirantes, and 1 chartered Shorts 330.

Despite a name change in September 1992, the privately owned company, which releases neither traffic nor financial information, must reduce its fleet size. A Bandeirante and the Shorts are withdrawn and a DHC-6-300 is leased to **Abu Dhabi Aviation, Ltd.**

The DHC-6-200 is withdrawn in 1993 and the Dash-300 is also leased to **Abu Dhabi Aviation, Ltd.** Operations are maintained with a new Shorts 360-200 and Managing Director David Robinson oversees a workforce of 35. The company is renamed **BAC Express Airlines, Ltd.** in 1994.

BAC EXPRESS AIRLINES, LTD.: BAC House, Bonehurt Road, Horley, Surrey, England, RH6 8QB, United Kingdom; Phone 44 (1293) 821 621; Fax 44 (1293) 821 204; http://www.bacexpress.com; Code RPX; Year Founded 1994. **BAC Aircraft, Ltd.**, owned by BAC Group, Ltd. and based at Horley in Surrey, undergoes a corporate restructuring in 1994 that results in a name change. David Robinson continues as managing director; however, renewed emphasis is placed upon the company's nighttime Royal Mail contract with passenger flights during the day strictly ad hoc charter. The fleet is enhanced by the addition of 1 Shorts 360-200, 4 Bandeirantes, 2 Shorts 330s, and 2 Handley Page Dart Herald.

The route system extends to Belfast, Bristol, Cardiff, East Midlands, Exeter, and London (LGW and STN). Passenger traffic figures are reported through August and show a total of 3,035 passengers flown.

Flights continue in 1995–1998, during which years Mike Forsyth becomes managing director and airline employment reaches 60. The fleet now includes 3 Shorts 360-200s, 1 Shorts 360-100, 1 Shorts 360-300, 2 Shorts 330-200s, and 1 each Fokker F.27-500 and F.27-600.

Replacement scheduled services on behalf of **British Regional Airlines, Ltd.** and **Manx Airlines, Ltd.** (2) are enhanced while the night mail service continues. Destinations visited include Belfast, Bristol, Cardiff, East Midlands, Edinburgh, Exeter, Isle of Man, Liverpool, London (STN), and Newcastle. The company also offers charters to the 1997 Ryder Cup tournament in Spain.

Traffic figures are available in the latter year and show a total of 3,000 enplanements and 48.23 million FTKs operated through October. Profits average £700,000 per year.

Customer bookings plunge 66.7% to only 1,000. Airline employment is cut 20% and, at the beginning of 2000, totals 3,155.

BADER EXPRESS: United States (1985–1986). Bader Express is established at Atlantic City, New Jersey, in 1985 to provide daily CASA C-212-200 Aviocar air taxi flights for gamblers traveling to and from Washington, D.C. (DCA).

Traffic is insufficient to allow continuance of the service beyond 1986.

BAHAMAS AIRWAYS, LTD.: Bahamas (1936–1973). Sir Harry Oakes and the Hon. H. C. Christie incorporate this carrier at Nassau in 1936 as an outgrowth of the latter's outer island charter service begun in 1933. Having obtained a colonial government contract, Christie inaugurates scheduled passenger, mail, and cargo flights in 1937 over the outer island routes followed earlier on an ad hoc basis. A weekly Nassau–Eleuthera Island frequency is provided with a Douglas Dolphin flying boat between January 1 and April 10, 1941.

Pan American Airways (PAA) acquires a 43% interest in Christie's company on December 10, 1943; Juan Trippe's enterprise begins to implement a management contract in January 1944. Employing a Consolidated Commodore flying boat transferred from its American partner, the carrier begins monthly multistop service on December 1, 1945 from Nassau to Rock Sound and Clarence Town and weekly flights, again multistop, from Nassau to West End.

Pan American Airways (PAA) adds a Consolidated PBY-5A to the carrier's fleet in the spring of 1947 and, on May 27, the U.S. CAB grants a Foreign Air Carrier permit, allowing operations to Florida.

In February 1948, scheduled DC-3 service is opened Nassau to Miami and West Palm Beach as West End becomes the second Bahamian terminus. On October 23 the airline is purchased by the **British South American Airways Corporation**. The fleet now comprises 2 DC-3s, 1 Catalina, 1 Commodore, and 2 Grumman G-44s; the local unduplicated route network stretches for 761 miles.

International service is started to Havana early in 1949 and the Commodore is retired. On July 30, **British Overseas Airways Corporation (BOAC)** acquires the shares of BSAA when the latter is merged into the British state carrier. When **British West Indies Airways, Ltd.** (2) (**BWIA**) acquires **British Caribbean Airways, Ltd.** in October, the latter airline's two DC-3s are passed to **Bahamas Airways, Ltd.**

Service is maintained in **1950–1951**; however, in **1952** the Miami, West Palm Beach, and Havana routes are transferred to **British West Indies Airways, Ltd. (2) (BWIA)**, the DC-3s are all sold, and the carrier becomes a flying boat operator. Flights continue in **1953–1954**. DC-3s are reintroduced in **1955** to supplement the G-44s; in August, a de Havilland DH 114 Heron is delivered and placed in service.

BOAC Associated Companies in November **1958** sells its 80% shareholding in Bahamas Airways, Ltd. to Eric Ryland's Skyways Bahamas Holding Co., Ltd. The Skyways acquisition becomes effective on April 1, **1959**. The U.S. CAB now raises doubts about traffic rights for the new concern; service flown by **British West Indies Airways, Ltd. (2) (BWIA)** on the carrier's behalf to Havana now ends. Following the U.K.'s barring of **Pan American World Airways (1)** jet services to Jamaica the previous day, the U.S. halts this carrier's Nassau–Miami tourist flights on December 18. The matter is resolved by year's end.

In February **1960**, two Handley Page HP-70 Hermes 4s are placed on the Nassau to Miami, West Palm Beach, and Ft. Lauderdale routes. The U.S. government concern and the decline in traffic caused by the unreliable Hermes 4s forces BOAC Associated Companies to repossess the airline in December. Once again under **British Overseas Airways Corporation (BOAC)** control in **1961**, the carrier receives Vickers Viscount 805s with which to replace the Hermes 4s on the Florida services.

Fortunes decline in **1962–1967** as the British flag carrier shows little interest in improvement and Bahamas Airways routes fail to generate sufficient traffic for an economical return. The search begins anew for a purchaser.

In October **1968**, the Hong Kong-base Swire Group purchases 60% control and a new management team is installed. In September, the company orders 2 BAC 1-11-517s, taking an option on a third. Two BAC 1-11-423s are leased from their manufacturer; the first arrives on November 11 and the second on December 4. The two begin jetliner services from Miami to Nassau and Freeport.

Operations continue apace in **1969**. The DASH-517s requested the previous year are delivered on July 23 and 29, respectively. They immediately enter service over a route from Nassau to Miami via Freeport and between Freeport and Nassau. They also fly "Casino Special" late night flights between Miami and Freeport, especially for U.S. gamblers.

In April **1970**, BAC 1-11-423 service is introduced from Nassau to Freeport. On October 7, the company halts its flights and two days later it goes into liquidation. The two leased BACs are returned to the U.K.; they will be passed to **Gulf Air, Ltd.** in Bahrain. Within 48 hours the nation's prime minister reports that all routes abandoned by the line have been reopened, claiming credit for averting a transportation crisis.

Unable to make a profit in these years, the Swire Group, upon Bahamian independence in **1973**, elects to close the carrier down, 40 years after H. C. Christie started his pioneer charter service that led to its birth.

BAHAMAS INTERNATIONAL AIRLINES: United States (1981–1982). BIA is organized at Homestead, Florida, in **1981** to offer scheduled services to Freeport in the Bahamas. Operations commence with 1 Beech 18 and 1 Piper PA-34 Seneca and are gradually expanded to include stops at Ft. Lauderdale, Ft. Pierce, Orlando, Tampa, and Titusville. In late **1982** the company is renamed **Aero International Airlines**.

BAHAMASAIR, LTD.: Bahamasair House, P.O. Box N-4881, Nassau, Bahamas; Phone (809) 377-8451; Fax (809) 377-7409; <http://www.bahamasair.com>; <http://www.successfx.com/bahamasair>; Code UP; Year Founded 1973. To replace disbanded **Bahamas Airways, Ltd.**, the government of the newly independent Bahamas amalgamates two small independents, **Flamingo Airways, Ltd.** and **Out Island Airways, Ltd.**, into a new national carrier at Nassau's Windsor Field on June 18, **1973**. Shareholding is split between the government and private interests.

The initial fleet, which is primarily that of the two merger partners, comprises 2 Fairchild Hiller FH-227Bs formerly flown by **Allegheny**

Airlines, 2 Aero Commander 500s, and 1 de Havilland Canada DHC-6 Twin Otter. Interisland and regional services are now started, many flown over the old routes of **Bahamas Airways, Ltd.** The first of 4 BAC 1-11-401 Astrojets purchased from **American Airlines** is received late in the year.

A second BAC 1-11-401 is received in early **1974** and employed to operate between Nassau, Freeport, and Miami. It will be joined by 2 more by the end of the first quarter.

On July 31, an FH-227B fails its takeoff from Chub Cay, Berry Island. The aircraft returns to the runway where its gear fails, forcing it to slide 1,385 ft. down the strip, going beyond the coral rock and into a mangrove swamp. Although no injuries are reported, the aircraft is a total loss.

A maintenance man finds a bomb in the restroom of the BAC 1-11-401 at Miami International Airport on November 28, **1975**. An anonymous telephone caller says it was placed aboard to protest the banning of Cuban exile fishermen from Bahamian waters.

Significant fiscal losses incurred as the result of start-up and fuel costs, force retrenchment in **1976–1977**. In December of the latter year, a management contract is signed with **Aer Lingus Irish Airlines**. Meanwhile, a Curtiss C-46 Commando is leased and stationed at Miami International Airport, from whence it provides regular charter-cargo services.

New services to the islands are started from Florida in the fall of **1978**, including Ft. Lauderdale departures; Miami–Nassau frequencies are boosted. Airline employment is now 450 and a Boeing 737-200 is leased on December 15, allowing the BACs to be placed on lesser regional services. Enplanements for the year total 528,436.

In the spring of **1979**, BAC supplies 4 Hawker Siddeley HS 748-2As to replace the remaining FH-227B. An order is placed for an owned B-737-2V5, which is employed to inaugurate Nassau–Atlanta direct flights on December 13. Late in the year, the government assumes complete shareholding. Customer bookings jump 19.8% to 658,897 while operating income is boosted 26.6% to \$26.3 million.

The workforce is increased by 12.2% in **1980** to 550 and a second B-737, a chartered Dash-2L9, is received. Enplanements climb 12.5% to 720,000.

Passenger boardings decline 3% in **1981** to 684,039. The BACs are withdrawn in **1982** and replaced by 2 more B-737-2L9s under charter. Airline employment is 600. Daily Nassau and Freeport to Newark flights begin in **1983**.

Additional international destinations in **1984** include Tampa and South Caicos in the Turks and Caicos Islands. The domestic route network includes turboprop stops at 13 destinations, with the principal internal link Nassau to Freeport. Enplanements in **1985** total 852,815.

Airline employment in **1986** remains at 600. Passenger boardings jump 11% to 958,219. Operations continue apace in **1987–1988**.

In **1989**, the fleet includes 3 British Aerospace BAe (HS) 748-2A, 1 BAe (HS) 748-2AF, 3 leased B-737-2L9s, and 1 B-737-275A. Orders are placed for 2 B-737-4YOs and daily nonstop B-737-275A service is started in February from Washington, D.C. (IAD) to Nassau, with continuation to Freeport. In October, the board of directors votes to acquire 4 de Havilland Canada DHC-8-301s. It is later alleged that over \$1 million in bribes were paid to complete the \$64-million transaction.

A B-727-225 is leased from **Eastern Air Lines** in **1990** as 4 chartered de Havilland Canada DHC-8-301s are acquired, including the ex-**Presidential Airways/United Express John Adams**. The Eastern aircraft is returned in **1991** as 3 DHC-8-311s arrive. The 3 chartered B-737-2L9s are returned in **1992**.

In **1993**, Chairman Macgregor Robertson's 600-employee carrier has a fleet comprising 7 DHC-8-300s, 3 Cessna 402s, and 1 Beech Super King Air 200. Destinations visited from Nassau include West Palm Beach and Miami. Responding to the challenge posed by the inauguration of service by **Trinity Air Bahamas, Ltd.**, Bahamasair, Ltd. wet-leases an Airbus A320-231 from **Air 2000, Ltd.** Enplanements total 647,102.

Airline employment is increased by 0.2% in **1994** to 608 and 2 Shorts 360-300s are briefly leased. At year's end, the King Air is retired. Passenger boardings inch up 0.7% to 651,663.

The workforce grows again in **1995**, up 6.9% to 650. The company's 11 aircraft transport a total of 678,198 customers during the year, a 4% increase.

There is no change in company employment during **1996**. It is announced on February 12 that several officials of Boeing's Canadian subsidiary are under investigation by the Royal Canadian Mounted Police (RCMP) and Bahamas Commission of Inquiry for paying more than \$1 million in bribes and fees to sell DHC-8-311s to the carrier in 1990. The investigators focus attention on Philip Bethel and Darrell Rolle, two former chairmen of the airline.

Traffic figures are available through October and show passenger bookings up 9% to 547,000.

Lester Tumcuest is chairman in **1997–1998** with William R. Curtis as general manager. Two B-737-201As are leased from **USAirways** during the former year. Destinations visited from Freeport and Nassau include Ft. Lauderdale, Miami, New York (JFK), Orlando, and West Palm Beach, as well as interisland markets.

Twice-weekly B-737-201A roundtrips are inaugurated on February 8, **1999** from Miami to Grand Turk, capital of the Turks and Caicos Islands.

Although traffic figures are not available, reports indicate that an operating loss of \$10 million has been suffered.

On January 4, **2000**, the government's cabinet is reshuffled and Prime Minister Hubert Ingraham appoints Sir William Allen to be Transport Minister. The new minister immediately appoints a new airline board chairman, Frederick Gottlieb, and a new managing director, Paul D. Major. They ordered to begin downsizing operations in an effort to save costs.

In protest of the downsizing, unionized company employees stage a coordinated sick-out on March 6–7 that effectively shuts the carrier down, but has no visible impact on the new financial policy.

Although traffic figures are not available, reports indicate that an operating loss of \$10 million has been suffered.

BAIE CAMEAU AIR SERVICE, LTD. See GOLFE AIR QUEBEC, LTD.

BAIKAL AIR COMPANY (BAIKAL AVIAKOMPANIYA): Russia (1993–1996). Baikal Air Company, often known as Baikal Airlines, is founded at Irkutsk in **1993** as a sister airline to the former **Aeroflot Soviet Airlines** directorate **Baikal Avia (Baikal Airlines)** Gennady P. Guchek is general manager and Soviet-made aircraft are leased, as required, from Baikal Avia. Scheduled passenger and charter cargo services are inaugurated and continued.

The fleet situation is completely reversed in **1994** as Baikal Avia becomes the smaller carrier. The Baikal Air Company fleet grows to include 30 Tu-154B/Ms, 40 Antonov An-24/26s, 20 Yakovlev Yak-40s, and 20 Ilyushin Il-76TDs. Scheduled and charter passenger and cargo services continue and enplanements reach 875,292. Flights continue in **1995**, but the concern fails and its assets and Baikal Airlines marketing title are taken over by Baikal Avia in **1996**.

BAIKAL AVIA (BAIKAL AIRLINES): Russia (1992–2000). This former **Aeroflot Soviet Airlines** directorate is reformed at its Irkutsk base in **1992**, but otherwise continues its regional and trunk services as before. V. F. Sokolnikov is general manager. Enplanements for the year total 2,484,076.

In cooperation with its new sister carrier **Baikal Air Company**, Baikal Avia in **1993** begins to offer both passenger charters and scheduled passenger and cargo services to Europe, China, and Africa, in addition to frequencies about Russia.

Still, passenger boardings decline 40% to 1,774,340 while freight is off an equal 40% to 418.3 million FTKs.

Just after takeoff from Irkutsk on a January 3, **1994** service to Moscow's Domodedovo Airport, a Tu-154M with 9 crew and 116 passengers, suffers problems with its No. 2 engine and is directed to returned to its point of origin. A fuel-fed fire now erupts in the area of the No. 2

engine, damaging hydraulic lines and control surfaces; the jetliner crashes among farm buildings near the village of Mamony, 7 mi. S of the runway. All aboard the Tupolev are killed, along with one person on the ground. As the jetliner still wears its Aeroflot livery, many press accounts identify the state carrier as the victim.

The fleet situation vis-à-vis its sister company is now reversed, with Baikal Air Company operating the lion's share of aircraft out of Irkutsk. Baikal Avia operates only 10 Tu-154Bs, 9 Tu-154Ms, and 9 Il-76TDs. A Boeing 757-2Q8 is chartered from International Lease Finance Corporation during the first quarter; it will become the first new Boeing aircraft to be operated by a Russian carrier east of the Ural Mountains.

Delivered at the end of June, the American-made jetliner undertakes regularly scheduled regional service in early July, initially between Irkutsk and Moscow. Later, the aircraft is placed on routes to Moscow, Pakistan, and India.

Passenger boardings, nevertheless, decline by 19.3% on the year to 1,432,000.

Traffic results are mixed in **1995**. Customer bookings fall another 14% to 767,800, but cargo rises 2.1% to 29.3 million FTKs.

When **Baikal Air Company** goes out of business in **1996**, Baikal Avia takes over its assets and assumes its Baikal Airlines marketing title. The move does not help very much as enplanements drop to 599,490.

Flights continue in **1997**. While landing at Verkhneviluisk, Russia, on April 13, an An-12V, with five crew and nine passengers, bounces twice heavily and overruns the runway, where its nose and right main landing gear collapse. Although the aircraft is badly damaged, there are no fatalities.

Customer bookings for the year slide another 9.8% to 505,000.

Service continues without fanfare into early **1998**. In April, as part of a three-year social and economic pact between the Irkutsk and Chita regions, it is agreed that Baikal Airlines and Chita Avia will be merged. The plan must be shelved in September when Baikal, largely as a result of the Russian currency situation, is forced to declare bankruptcy.

The company soldiers on into **1999** and unsuccessfully attempts to fly its way toward the light of fiscal viability.

It is revealed on August 11 that company executives have allegedly conducted an unauthorized sale of three aircraft in an effort to raise funds. A great dispute erupts between the directors and the current owners of the planes; the feud forces the state to be drawn into the matter on September 22.

The company's board of directors, on November 16, vote to accept external management.

In a strange twist and despite its pressing financial problems, Baikal settles a ticketing dispute on November 23 for a lower figure than it had been awarded by a court.

Unfortunately, a boost in fuel prices prevents Baikal from achieving success and, on February 22, **2000**, it is placed into administration. On June 2, it is once again declared bankrupt.

BAJA AIRLINES: United States (1972–1976). Initially set up at Long Beach, California, to fly charters into Baja California, Mexico, under the name **Club Baja Airlines**, this company assumes a new corporate identity on January 31, **1975**, announcing its intention to inaugurate scheduled passenger services.

Employing the previous Beech 18 and Cessna 402 fleet, Baja launches frequencies on May 2, maintaining them until the company goes out of business in late **1976**.

BAJA CORTEZ AIRLINES: United States (1977–1980). BCA is created at Los Angeles International Airport late in **1977** to provide de Havilland DH 104 Dove scheduled passenger and cargo to points in Baja California, Mexico.

Operations continue apace until mid-**1980**.

BAKER AVIATION: P.O. Box 708, Kotzebue, Alaska 99752, United States; Phone (907) 442-3108; Fax (907) 442-3018 ; Code 8Q; Year

Founded 1964. John and Marjorie Baker establish this bush operation at Kotzebue, Alaska, in 1964. Two decades later, surviving partner Marge Baker elects to begin scheduled services to many of the local communities and bush destinations previously reached by charter.

Continuing to employ Cessna 207As and 402Cs, plus de Havilland Canada DHC-6 Twin Otters, Baker inaugurates the new regional operations in July 1984. Caught by 35 kn. winds and blowing snow while taking off from Point Hope on December 17, a Cessna 207A, with one pilot and five passengers, crashes; amazingly, no one aboard is injured.

Flights continue apace over the next five years (although the Twin Otters are removed) and, by 1990, the workforce stands at 12 and the fleet includes 2 Cessna 207As and 2 Cessna 402Cs. Scheduled flights are undertaken to Kivalina, Noorvik, Point Hope, and Selawik and a total of 15,161 passengers are flown on the year.

A Cessna 206 is added to the fleet in 1991 as enplanements are cut nearly in half, down to 8,275. A total of 1,586,775 pounds of mail are flown.

Airline employment stands at 12 in 1992 and the fleet now features 3 Cessna 207As, 3 Cessna 402Cs, and 1 Cessna 206. Passenger boardings recover and increase 79% to 14,815.

In 1993, President Marjorie Baker's company employs 38 workers and operates 4 Cessna 407As, 2 Cessna 402Cs, 1 Cessna 206, and 1 Beech 99. Customer bookings climb another 16% to 17,097. Schedules are maintained in 1994, but passenger boardings slide 19% to 13,845. A total of 219,000 FTKs are also flown.

The company employs 12 workers in 1995 and 1 Cessna 407A is withdrawn.

Having heard an unusual noise while taking off from Selawik on December 10, the pilot of a Cessna 206 elects to abort takeoff; unhappily, he is unable to stop before the end of the runway and runs off it into a large snowbank. Neither the pilot nor passenger is hurt.

Traffic more than recovers this year, accelerating a huge 49% to 20,598 passengers carried.

The on-going roller coaster ride for traffic figures continues in 1996 as customer bookings plunge 24% to 15,656.

Marjorie Baker is president in 1997 with son Andy as vice president. The fleet now includes 2 each Cessna 402s, C-207As, C-208 Caravans, Beech King Airs, and 1 Cessna 206.

Scheduled passenger boardings fall 19.1% to 12,666, although another 11,150 charter customers are also accommodated, along with 1.7 million pounds of mail and freight.

Flights continue in 1998. While on approach to Nome after a May 14 service from Kotzebue, a Cessna 208 with one crew and nine passengers, encounters whiteout conditions and collides with snow-covered terrain some 5 1/2 mi. NE of the runway. All aboard are injured, one seriously.

Enplanements this year climb to 15,000. Freight traffic figures are not available.

The fleet in 1999–2000 includes 2 Cessna 207As, 2 PS-31-310 Navajos, and 1 C-206. Customer bookings during 1999 plunge 50.9% to 7,000.

BAKHTAR AFGHAN AIRLINES COMPANY, LTD.: Afghanistan (1968–1988). Bakhtar Afghan Airlines is formed in late 1967 as a state-owned local service carrier to begin taking over the domestic services of **Ariana Afghan Airlines Company, Ltd.** Initial equipment consists of DC-3s, and later, de Havilland Canada DHC-6 Twin Otters. Revenue services commence on February 8, 1968. Ariana transfers its last domestic route to Bakhtar, together with complete responsibility for domestic operations, on January 1, 1971.

Major destinations for the next eight years include Bamian, Chakcharan, Darwaz, Faizabad, Herat, Kabul, Kandahar, Khost, Khwahan, Kunduz, Maimana, Mazar-e Sharif, Qala-e-Naw, Sheghnan, Tirin, and Uruzghan.

While landing at Khost on January 25, 1972, a Yak-40 hits a line of trees and crashes 154 m. short of the runway; although the aircraft must be written off, there are no fatalities.

The fleet grows to include 3 de Havilland Canada DHC-6 Twin Otters and, following a change in national political climate in 1973, first 2 and then 3 Soviet-made Yakovlev Yak-40 jetliners are acquired during the spring.

A DHC-6-100 with 3 crew and 16 passengers fails its takeoff from Bamian on April 18 and crashes (4 dead).

Following the Soviet invasion of Afghanistan in 1979, information on the carrier largely evaporates in the West. The fleet is known, however, to have been expanded around 1980–1981; 2 Antonov An-12 turboprops replace the extremely vulnerable jets. Domestic flights are continued in 1982–1985, with losses.

En route to Kabul during a period of showers and thunderstorms on March 10, 1983, a DHC-6-300 with 2 crew and 17 passengers crashes near Shashgow Ghazni; there are no survivors.

En route from Kandahar to Farah province on September 4, 1984, an Antonov An-24 with 5 crew and 48 passengers crashes in the mountains 20 km. E of its point of origin; there are no survivors. Government radio claims Afghan guerrillas firing surface-to-air missiles, a charge that is verified, have downed the aircraft.

On October 23, the government integrates into the carrier the operations of **Ariana Afghan Airlines**. Enplanements for the year reach 169,327.

A DHC-6-300 with 3 crew and 17 passengers crashes while on final approach to Bamyan on January 8, 1985; there are no fatalities.

The fleet in 1986 includes 2 B-727-113Cs, 2 Antonov An-24s, 4 An-26s, and 1 Yak 40. Orders remain outstanding for 2 Tupolev Tu-154Ms. For the 10 months prior to integration with **Ariana Afghan Airlines**, passenger boardings ascend to 190,469 and 10.07 million FTKs are hauled.

The employee population jumps 36.5% in 1987 to 1,543.

An An-26 with 55 passengers is shot down near Khost by an Afghan guerrilla ground-to-air missile (53 dead). The guerrillas believe they have shot down an Afghan Republican Air Force Il-14.

Passenger boardings accelerate 41% to 62,856, despite the national turmoil, although freight is down 8.9% to 8.76 million FTKs.

In February 1988, during the Soviet occupation, Bakhtar is merged back into Ariana, to be once again operated as a subsidiary.

BAL BASHKIRI AIRLINES (BASHKIRSKIE AVIALINII AVIAKOMPANIYA): Matksstr. 26, Ufa Airport, Privolzhskaya Zone, Bashkortostan, 450025, Russia; Phone 7 (3472) 2305 89; Fax 7 (3472) 52 97 52; <http://www.rz.uni-frankfurt.de/~puersuen/twabc.htm>; **Code V9; Year Founded 1992.** Aerovolga, the **Aeroflot Soviet Airlines** division based at Samara, becomes the parent company for new airlines established in the area during the last days of the U.S.S.R. When Aeroflot is transformed in 1992, BAL, the section at Ufa, becomes a separate entity, which maintains its ties to the new state organization. It also oversees a pair of subsidiaries: the passenger carrier **Sterlitamak Airlines** and the cargo operation **Shonker Airlines**, which is renamed **Cargoservice of Berkshire Airlines**.

V. P. Burnaev is appointed director general, with Vladimir N. Sarantsev as managing director. Their 20 Tupolev Tu-154B/Ms continue to operate regional and trunk routes from Ufa Airport. Enplanements total 1,633,289.

The fleet in 1993 includes not only the Tu-154s, but 5 Tu-134s, 1 each Yakovlev Yak-40 and Yak-42, 1 Antonov An-12, 10 An-24s, and 6 An-26s, plus 1 Ilyushin Il-76TD. There is also a large rotary-wing component comprising 26 Kaman Ka-26s and 12 Mil Mi-8s.

During the year, the company is reformed into a joint stock company. Passenger boardings decline 10.1% to 1,483,460 while freight traffic falls 8.6% to 184.5 million FTKs.

Scheduled and charter passenger and charter services continue in 1994 much as before, with new nonscheduled destinations added in Asia and North America. Managing Director Sarantsev's fleet includes 10 Antonov An-24s, 6 An-28s, 26 Kamov Ka-26 helicopters, 12 Mil-8 helicopters, 5 Tupolev Tu-134s, 3 Tu-154Bs, 3 Tu-154Ms, and several Yakovlev Yak-40s/-42s. Customer bookings decline another 18.4% to 1,209,000.

Radik Sh. Galiamov now becomes director general of the independent concern, which continues to provide scheduled and charter passenger services over the same trunk and regional routes previously flown. During these years, the fleet comprises 49 Antonov An-2s, 10 An-24s, 6 An-28s, 5 Tupolev Tu-134As, 12 Tu-154B/Ms, 24 Kamov Ka-26s, and 14 Mil Mi-8s. Enplanements in 1995 total 990,042.

Biweekly roundtrip service is inaugurated from Ufa to Frankfurt on October 14, 1996. Still, the private concern's large fleet and occasional out-of-country charters are insufficient to maintain the traffic levels previously enjoyed. Passenger boardings drop 9.7% to 902,500.

Destinations visited in 1997 include Adler, Beloreck, Ekaterinburg, Krasnodar, Irkutsk, Mineralnye Vody, Moscow, Nadym, Neftekamsk, Neftuyansk, Nizhnevartovsk, Nojabrask, Novyj Urengoj, Perm, St. Petersburg, Sochi, Strzhewoi, Surgut, Tashkent, Ufa, Uraj, and Vladivostok. Customer bookings plunge another 18.5% to 736,000.

By 1998, Director General Galiamov employs 4,000 workers and operates a fleet that includes 1 Antonov An-24RV, 1 Tupolev Tu-134A, 1 Tu-154B, and 1 Tu-154B2. On May 8, **Aeroflot Russian International Airlines (ARIA)** announces that it is removing BAL from its computerized reservations system for failure to pay assessed fees. During the summer, the company operates six weekly roundtrip flights into Turkey, four to Istanbul and one each to Antalya and Izmir. Enplanements recover, climbing to almost a million; 5,000 tons of freight is also flown. The airline suffers another dismal traffic year, with passenger boardings down to just 406,000.

During the spring of 1999, great floods occur in the Republic Bashkiria, southwest of the Ural Mountains. While en route on April 18 to participate in anti-flood work, one of the company's MI-8s, with two crew and six explosives experts who will blow up ice jams, is hit by an ice floe and crashes near the village of Azovo. Two people are unable to escape and drown when the helicopter sinks in Arkhangelsk district's river, 75 km. SE of the Bashkiria capital of Ufa.

The Moscow media reports on October 4 that the Bashkortan regional budget has set aside funds with which to purchase new aircraft for the carrier. In cooperation with **Vladivostok United Air Detachment**, a new joint air service is opened in the Russian Far East on October 26. Two former **CSA Czech Airlines** Tu-154Ms are acquired on December 12.

The fleet in 2000 comprises 49 An-2s, 11 An-24s, 1 An-72, 1 An-74-200, 6 Tu-134As, 2 Tu-154Ms, 12 Tu-154Bs, and assorted helicopters. A strategic agreement is signed with **Aeroflot Russian International Airlines (ARIA)** on February 25 covering joint flights and services.

BALAIR (BASLE AIR TRANSPORT, LTD.) See **BASLER LUFT-VERKEHRS, A.G.**

BALAIR AIR CHARTER COMPANY OF SWITZERLAND, A.G.: Switzerland (1953-1993). The flying school Balair is organized at Basel in 1953, taking the name of one of the original 1931 merger partners that formed **Swissair, A.G.** With 36% financial backing and technical support from **Swissair, A.G.**, Balair enters the charter market in 1957, inaugurating Vickers Viking tour flights to the Mediterranean.

Swissair, A.G. provides a Douglas DC-4 in 1959. It is the parent's first four-engine Douglas, the *Geneva*, first received in 1946 and now rechristened *Uri*.

Unhappily, while en route from Khartoum to Niamey with 12 crew aboard on March 16, 1960, it crashes into Mt. Marra in the Sudan near Toli, Jebel Marra; there are no survivors. The last **Swissair, A.G.** DC-4 is turned over as a replacement. A DC-6 arrives from **Swissair, A.G.** in December 1961.

Between 1962-1976, charter and inclusive-tour flights are organized and run on behalf of **Swissair, A.G.** to points in North Africa, southern Europe, the Mediterranean, and the Middle East. **Swiss Air** gains 57% controlling interest and makes the charter airline a partially owned subsidiary to which it leases aircraft.

A Fokker F.27-200 is destroyed as the result of a bad landing at Malaga, Spain, on September 13, 1964; there are no fatalities.

The DC-6 is often chartered by the International Red Cross to fly mercy airlifts to such underdeveloped nations as Biafra.

A Convair CV-990A is transferred to the charter carrier on March 28, 1968; the first DC-9-34 is turned over on April 17, 1970, and a DC-8-62 arrives in 1976. Meanwhile, the DC-4 makes a promotional flight to New York in the spring of 1968.

Enplanements total 497,768 in 1977. The first DC-10-30 is acquired from **Swissair, A.G.** on January 30, 1978. The aircraft is unusual in that it has an underfloor galley, fitted by the manufacturer before delivery. Airline employment at President O. Niederhauser's carrier is now 386.

The Balair fleet at this point also comprises 3 DC-8-62s, 1 DC-9-34, 1 DC-6B, and 1 Fokker F.27. Passenger boardings jump 16.9% to 599,000.

The workforce in 1979 is 404. The first DC-10-30 is delivered on January 30. Bookings accelerate 19.2% to 713,000. Freight traffic, on the other hand, collapses, falling 97.2% to 336,000 FTKs. Still, a \$2.3-million profit is earned.

The workforce is increased by 8.2% in 1980 to 437. One DC-8-62 is replaced by a DC-9-32.

Cargo traffic skyrockets 73.2% to 582,000 FTKs, but boardings dip 9.2% to 646,000. On revenues of \$105.2 million (down 9.8%), an operating profit of \$1.1 million is generated.

World economic woes impact upon the **Swissair, A.G.** subsidiary in 1981 and during the year, the F.27 and another DC-8-62 are sold. Orders are placed for 3 McDonnell Douglas MD-82s. Additionally, the employee population is downsized 11.4% to 387.

Boardings fall 10.3% to 579,000 and freight is off 34.2% to 383,000 FTKs.

As bookings rise a slight 0.7% to 583,000 in 1982, **Swissair, A.G.** provides another DC-8-62 and the first MD-82 is placed into service; employment is increased by 8.8% to 421.

The number of employees is cut by 10.9% in 1983 to 375 and the newly provided jetliner is withdrawn as the year's enplanements fall 0.2% to 582,000.

Charter service enjoys a resurgence in 1984. An F.27 and a second MD-82 are transferred over from the parent to help handle a rise in boardings, up 12% to 652,000. An A310-332 is ordered in 1985 to replace the last DC-8-62 and a DC-9-32 as bookings surge 10.2% to 719,000.

The DC-8 and DC-9 are both sold in 1986 (the latter at a profit), as the A310-332 is placed into service.

Passenger traffic slows for the 400-employee charter operator, climbing only 2.1% to 733,688 passengers flown. Still, a \$5.3-million net profit is generated.

Airline employment grows 3.7% in 1987 to 418 and the fleet now includes 1 DC-10-30, 1 A310-322, and 3 MD-82s. The final unit of the MD-82s is delivered later in the year and partially paid for with the proceeds from the previous year's DC-9 sale. An MD-83 is ordered. On November 6, the A310-322 commences South Atlantic charters from Las Palmas to Recife under the 120-min. over-water rule for twinjets.

Passenger boardings jump 14.7% to 817,000 and revenues rise 2.7% to \$150 million. Net gain is level with the previous year.

The workforce is cut by 2.2% in 1988 to 407 and the fleet is increased by the addition of the government's Fokker F.27-400. The Fokker, with its Balair crew, marks the fortieth anniversary of the United Nations Truce Supervision Organization at Jerusalem by flying 658 hours in the area. Under charter to the International Committee of the Red Cross, a company MD-82, from a base at Tehran, completes three Iran-Iraq POW exchange flights.

In the aftermath of the December earthquake, six mercy missions are flown to Armenia.

Customer bookings continue upward, by a slight 1.5%, to 780,437. Profits total \$21.14 million (operating) and \$5.15 million (net).

Passenger boardings tail off by 3.3% in 1989 to 649,172 and revenues are down 1.6% to \$157 million. Expenses are \$137.05 million and cause the operating profit to dip to \$19.87 million. Net gain, however, climbs to \$5.9 million.

Airline employment stands at 435 in **1990**. Recession and the Mideast situation after August contribute to an 8.8% decline in customer bookings to 591,900.

The fleet in **1991** includes 1 A310-322, 3 MD-82s, and 1 each MD-83, DC-10-30, and F.27-400. In July, an agreement is signed with **Martinair Holland, N.V.** allowing combined travel from the New York area to Amsterdam and Basel for one \$509 roundtrip fare; this "mix or match" program allows passengers to fly one airline on each leg of their trips. The fare falls to \$484 in September.

The workforce totals 422 in **1992** as 2 A310-325s, 1 MD-83, and 4 MD-88s are delivered. A new corporate identity, including logo and livery, is introduced in July. The livery is a mix of red tail, white fuselage, blue belly, and canary yellow wings and tail planes. Enplanements increase to 646,400.

In **1993**, President Erich Geitlinger oversees a workforce of 520. In January, the company is merged with another Swissair subsidiary, **Compagnie de Transport Aerien, S.A. (CTA Geneve)**, to form **Balair-CTA**. The merger requires yet another change in company colors. Replaced by 3 A310-325s, the A310-322 is leased to **Swissair, A.G.** along with an MD-82. The DC-10-30 is chartered to **Martinair Holland, N.V.** On the other hand, regular flights are now undertaken, on behalf of **Swissair, A.G.**, to Palma de Mallorca and Valencia.

Although passenger boardings increase to 700,000, a \$13.8-million loss is suffered.

BALAIR-CTA, LTD.: Swissair, A.G., Zurich-Flughafen, Zurich, CH-8058, Switzerland; Phone 41 (1) 812-3070; Fax 41 (1) 812-9212; http://www.balair.ch; Code BB; Year Founded 1954. In January **1993**, **Balair Air Charter Company of Switzerland, A.G.** is merged with another Swissair subsidiary, **Compagnie de Transport Aerien, S.A. (CTA-Geneve)**, to form **Balair-CTA**. Balair President Erich Geitlinger becomes president/CEO and oversees a workforce of 520. The merger requires yet another change in company colors. Replaced by 3 A310-325s, the A310-322 is leased to **Swissair, A.G.** along with an MD-82. The DC-10-30 is leased to **Martinair Holland, N.V.**, as charter flights are maintained to the U.S., Africa, the Far East, and Mediterranean. **Swissair, A.G.** transfers over its regular flights to Palma de Mallorca and Valencia. Although passenger boardings increase to 700,000, a \$13.8-million loss is suffered.

Under the leadership of new President/Managing Director Peter Haslebather, Balair-CTA continues charter service to holiday destinations in Europe and the Mediterranean in **1994**. The fleet that includes 2 Airbus Industrie A310-325s, 1 leased A310-322, 1 chartered Fokker F.27-400, 4 McDonnell Douglas MD-87s, 1 MD-83, and 3 MD-82s, one of which is leased to **Swissair, A.G.** Enplanements for the year total 943,700 and a loss of \$14 million is reported.

Early in **1995**, the Swissair charter subsidiary is folded into its parent group. Despite its loss of administrative independence, the wholly owned subsidiary retains its codes and continues its charter role, occasionally adding new destinations or changing or upgrading its aircraft.

Operations Director Klaus Lichtenstein becomes CEO on July 1, **1999**.

Just in time for the winter season, his carrier replaces a pair of A310-325s with a B-767-35H and in honor of the new millennium, the "CTA" portion of the company name is dropped in the titles. Enplanements during the 12 months total 285,000, or 10,000 more than the previous year.

Due the Boeing strike, 2 B-757-2G5s, destined to operate on behalf of the tour operator Hotelpian, arrive three weeks late in April **2000**. When the second makes its maiden revenue flight on May 5, the company proudly announces that it has completed its fleet expansion. Long-haul holiday flights are maintained from Zurich to Antalya, Arrecife, Catania, Djerba, Faro, Heraklion, Hurghada, Ibiza, Kos, Larnaca, Las Palmas, Mahon, Monastir, Palma, Reus, Rhodos, Samos, Sharm al-Sheikh, Tenerife, and Zakynthos.

At his own request, CEO Lichtenstein returns to his previous post on June 1; he is succeeded by Flightlease, A.G. Executive Vice President Catherine Stalker, who becomes the first woman to head an SAirGroup company.

A second new B-767-35HER is received on September 27.

BALAKOVO AIR ENTERPRISE: Balakovo Airport, Saratov Region, 413800, Russia; Phone 7 (84570) 20119; Year Founded 1996. Balakovo United Air Detachment is reformed in **1996**. Under the leadership of Commander Vlachoslav M. Korev, the carrier continues to provide regional scheduled and charter passenger services. The fleet in **1999** includes 54 Antonov An-2s and 3 An-24s.

BALAKOVO UNITED AIR DETACHMENT (BALAKOVSKY OAO): Russia (1994-1996). Established at Balakovo Airport in the Saratov Region in **1994** to offer regional passenger and cargo charters, General Director Vlachoslav M. Khorev's BUAD undertakes revenue flights with an undisclosed number of Antonov An-24s, An-26s, An-32s, and Yakovlev Yak-40s.

Flights cease early in **1996** as the concern is reformed into **Balakovo Air Enterprise**.

BALBOA AIRLINES (AEROVIAS INTERNACIONAL BALBOA, S.A.): Panama (1960-1971). Balboa is established at Panama City in **1962** from the assets of Aerovias Transcribe, S.A. Revenue operations are inaugurated, and continued, with one each Curtiss C-46 Commando and one civil B-26 bomber. All-cargo flights are made throughout Central and South America and to Miami during the remainder of the decade, during which years the fleet is increased by the addition of one each Commando and Douglas DC-4. Flights cease in **1971**.

BALI AIR (BALI INTERNATIONAL AIR SERVICE): Jalan Angkasa 1-3, P.O. Box 2965, Jakarta, 10720, Indonesia; Phone 62 (21) 628 8815; Fax 62 (21) 624 9183; Code BL; Year Founded 1973. Initially known as **Nusantara Air Service**, this company is purchased by Aviation Developments Operations, Ltd., a subsidiary of Porodisa Industrial Group, Ltd., in **1973** to continue its smallplane charter services from Denpasar, the nation's tourist capital. The company operates as a sister of **Bouraq Indonesia Airlines** and its president, J. A. "Gerry" Sumendap serves it in the same post. Later in the year, the operator is purchased outright by Bouraq and is renamed.

Nusantara Air Service is reformed in January **1974** and renamed **Bali International Air Service**. The Twin Otter is withdrawn and replaced with 5 Britten-Norman BN-2 Islanders. Flights around the Nusantara archipelago continue in **1975** and, beginning in February **1976**, the company, by now known as Bali Air, starts to take delivery of 5 BN-2A Trislanders.

Two Cessna 404 Titans are received in May **1977**, but both are lost in accidents before the end of the year.

President Sumendap's fleet in **1978** comprises 1 Fokker F.27, 5 Britten-Norman BN-2 Islanders, and 5 BN-2A Trislanders.

During the next 15 years, Sumendap's airline flies nonscheduled and charter operations (both passenger and cargo) throughout the nation's islands. The fleet is upgraded during the early **1980s** by the addition of several DC-3s and Cessna 404s. The first of 3 IPTN-CASA C-212-200 Aviocars is delivered in **1981** and christened *Frangewan Sola*.

Most of these are withdrawn at the end of the decade and in **1993** the fleet is comprised of 1 British Aerospace (HS) BAe 748-B2, 2 Islanders, and 4 Trislanders. The BAe is retired in **1994**.

Despite the national economic and political upheaval, flights continue in **1995-1997**.

With the rupiah now valued at 17,000 to the U.S. dollar, the nation's airlines are, in May **1998**, granted permission to increase fares by 37.5%.

By the beginning of August, a cost-cutting plan that would have combined the domestic operations of Garuda, Bouraq, Merpati, and Mandala

collapses; despite load factors as low as 30%, the smaller airlines refuse to join with the flag carrier.

The effects of the Asian currency crisis and the national economic downturn continue; at this point, the four companies are losing significant funds, as 80% of their costs are in U.S. dollars, but only 20% of their income is in the same currency.

During the last week of August, the Indonesian parliament does grant a long-desired fare increase. Domestic tickets increase in price by 40% on September 1; they rise again another 14% on December 1.

Flights continue in **1999**. During the first six months of the year, the rupiah regains some 50% of its strength. The balance of the parliamentary-approved fare increase is postponed.

BALKAN BULGARIAN AIRLINES (TABSO): Sofia Airport, Sofia, 1540, Bulgaria; Phone 359 (2) 881800; Fax 359 (2) 791206; <http://www.balkan.com>; Code LZ; Year Founded 1947. In the spring of **1947**, the Bulgarian government forms the carrier Bulgarske Vazdushne Sobstvenie (BVS) to provide service between the country's major cities. Employing Soviet-made Lisunov Li-2s (Russian license-built Douglas DC-3s) and former Luftwaffe Junkers Ju-52/3ms, services are started over domestic routes on June 29.

On the very next day, while en route from Varna to Sofia, a Ju-52/3m with 21 passengers is taken over by 6 armed pirates. The pilot is killed and 2 other crew members are shot and wounded before the former German Air Force transport makes a safe emergency landing at Istanbul.

In September 12, **1949**, the airline is taken over by a new fifty-fifty partnership, the Bulgarian-Soviet Joint Stock Company for Civil Aviation (TABSO). Services over domestic routes are maintained by an additional number of Soviet-supplied Li-2s.

Operations continue apace during **1950–1953** and Ilyushin Il-14s arrive to open international services from Budapest to Paris, Frankfurt, and Moscow. There are occasional operational problems and, on December 6, 1952 an Li-2, with 18 aboard crashes into an uninhabited area between Sofia and Varna.

In **1954**, the Soviet interest is withdrawn and TABSO becomes a wholly owned Bulgarian government enterprise.

Service remains domestic; however, the carrier also assumes responsibility for agricultural aviation. In **1955–1961**, an 8-point domestic network is developed as new services are initiated to the capitals of other Warsaw Pact nations.

The first Ilyushin Il-18 enters service on May 5, **1962** on a Sofia-Moscow route and on September 24 one crashes near Bratislava, Czechoslovakia (82 dead). Operations continue with little change in **1963–1965**, although the number of holiday charters to the Black Sea holiday areas is increased.

The first Antonov An-24 enters service in early **1966**. A female pilot inaugurates the company's new Sofia to Casablanca via Tunis service on November 17.

While en route from Sofia to Prague, an Il-18B with 8 crew and 74 passengers crashes near Bratislava on November 24; there are no survivors.

The name "TABSO" is shelved in **1968** in favor of Balkan Bulgarian Airlines. A Convair CV-990A Coronado is leased from **Lebanese International Airways, S.A.L.** between June 1 and December 1.

On September 3, an Il-18D with 7 crew and 82 passengers en route from Dresden to Burgas, crashes in bad weather near Karnobat (47 dead).

The carrier's first jetliner, a Tupolev Tu-134, is placed in service, as is an An-12B. Hardly has the Coronado returned to Beirut when it is destroyed in an Israeli commando raid on December 28.

During the next decade, services are launched to some 18 domestic destinations and 44 additional cities in Europe, Asia, and Africa with a fleet that comprises 6 Ilyushin Il-18s, 1 Antonov An-12B, 10 Tu-154/154A/154B, 11 Tu-134/134A, 8 An-24Bs, 5 Yakovlev Yak-40s, and 3 Mil-8 helicopters. Equipped with An-12s and Il-18s, the charter subsidiary Bulair is formed and based in Sofia. Six major air disasters and a hijacking are reported during these years.

On final approach to Zurich on a January 18, **1971** service from Paris, an Il-18D with 8 crew and 39 passengers dips below its glide path and crashes (45 dead).

A Bulair Il-18 charter, with 11 crew and 62 passengers en route to Algeria, crashes shortly after takeoff from Sofia on December 21 (28 dead).

Having diverted from Sofia because of fog during a service from Burgas on November 4, **1972**, an Il-14P with 4 crew and 31 passengers crashes in the Rila Mountains while on initial approach to the airport at Plovdiv; there are no survivors.

During its second approach to Moscow's Sheremetyevo Airport on March 3 following a scheduled service from Sofia, Flight 307, an Il-18V with 8 crew and 17 passengers, slips below its glide path and crashes; there are no survivors.

Service is normal and there are only two accidents or incidents in **1974–1976**.

En route from Varna to Sofia on June 28, **1975**, an An-24 is hijacked by a lone gunman, who forces the aircraft to divert to Thessaloniki, Greece. There the pirate obtains political asylum.

An An-24B with 3 crew and 42 passengers crashes just after takeoff from Sofia for a service to Varna on November 22 (3 dead). In **1976**, an Il-18D is received from **LOT Polish Airlines**.

Tsankov Dimitrov, a 22-year-old auto mechanic, hijacks an An-24B with 49 aboard during a domestic flight from Vidin to Sofia on June 18, **1977**, and forces it to fly to Belgrade, where he is overwhelmed by police and arrested.

On December 2, a Tu-154A with 6 crew and 159 passengers is unable to land at the foggy airport in Benghazi and attempts to find an alternative airport. Unsuccessful and out of fuel, the crew carries out a forced landing (59 dead).

Just after takeoff from Sofia on January 16, **1978**, a Tu-134A with 73 aboard crashes; all of the passengers and crew are killed, including Polish Deputy Culture Minister Janusz Wilhelmi and film industry officials Halina Micikowska and Jerzy Tabor.

En route from Sofia to Warsaw on March 16, a Tu-134A with 7 crew and 66 passengers crashes near Gabare, Bulgaria; there are no survivors.

A Tu-154A with four crew crashes near Damascus, Syria, on March 23; there are no survivors.

Service continues steadily during the remainder of the decade and into the **1980s**.

The company's first marketing alliance with a Western European airline is signed with **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)** in April **1982**; it provides for code-sharing on flights between Sofia and Madrid.

On October 14 a married couple seizes a Tu-134 flying between Burgas and Warsaw and orders it diverted to Vienna. There the couple is taken in hand by police, tried, and sentenced. The husband receives two years in jail while the wife receives a suspended sentence.

En route from Sofia to Varna on the night of March 7, **1983**, an An-24 is captured by four armed terrorists demanding to be flown to Turkey. In the dark, the pilot lands at his scheduled destination, where police, alerted in advance, kill one pirate and capture the other three.

While on final approach to Sofia on a January 10, **1984** service from Berlin's Schoenefeld Airport, a Tu-134A with 5 crew and 45 passengers strikes a power line during a snowstorm and crashes into a forest, 4 km. short of the runway; there are no survivors.

An Il-18D freighter with 6 crew and 12 passengers is destroyed as the result of a bad landing at Sana'a, Yemen, on June 16; there are no fatalities.

An An-12V freighter with seven crew and two passengers is lost as the result of a bad landing at Addis Ababa on August 24; there are no fatalities.

By **1985**, the state airline is operating an 8-point domestic network and providing international services to 44 cities in Asia, Africa, and Europe.

Unheralded service continues in **1986** and, in **1987**, the company adopts a new corporate image, including logo and color scheme. It is

applied to an An-12B received from the Soviet Air Force in May, as well as to a variety of other aircraft.

An An-24 with 4 crew and 33 passengers crashes just after takeoff from Sofia on August 2, **1988** (23 dead). Later in the month, the airline joins IATA.

The fleet in **1989** includes 5 An-12Bs, 8 An-24RVs, 3 Il-18Ds, 5 Il-18Vs, 5 Tu-134s, 8 Tu-134As, 3 Tu-134A-3s, 9 Tu-154Bs, 2 Tu-154B-1s (1 leased from **Aeroflot Soviet Airlines**), 6 Tu-154B-2s, 5 Tu-154Ms, and 11 Yak 40s.

Significant fleet alteration begins in **1990**. Removed are 2 An-12Bs, 1 Il-18D, 3 Il-18Vs, 5 Tu-134s, 1 Tu-134A, 1 Tu-154B-2, and 2 Yak-40s. Nine of 11 Mil Mi-8 helicopters are withdrawn and passed to Heli Air Services. Added are 7 An-24RVs and 3 Tu-154Ms. Requests are made to Japan's Orix Aviation Systems, Ltd. for the charter of 4 Airbus narrow-bodies.

After removing its non-airline duties and subsidiaries, BBA, now under a new managing director, Kostadin Botev, becomes an autonomous unit within the Bulgarian Civil Aviation Corporation. Services are maintained to 55 cities in Africa, Asia, and Europe.

Enplanements total 1,074,667 and revenues are \$220 million; a net \$11.2-million gain is reported.

In **1991**, 8 Yak-40s are retired. One of 4 Airbus Industrie A320-231s is delivered. A Boeing 767-27EER is leased from **Air France** while 3 B-737-53As are chartered from Ansett Worldwide, the Australian leasing firm. In January, the restructuring announced the previous year takes effect. BBA is the only airline able to fly from Lagos and Harare in Africa.

Unhappily, recession and political upheaval causes passenger boardings to plunge 66.1% to 647,000. Freight, however, rises 25.8% to 5.92 million FTKs. Revenues total \$170 million and there is a \$1.9-million loss.

The last 3 A320-231s arrive in **1992** along with another **Air France** B-767-27EER. During the spring, a Yak 40 is leased to the new Nigerian operator **Bellview Airlines, Ltd.**

A chartered Tu-154A with 3 crew and 127 passengers overruns the runway after landing at Varna on June 5; although the aircraft is damaged beyond repair when its landing gear collapses, there are no fatalities.

On July 28, an An-24V is struck by a crane while being positioned on the ramp at Sofia Airport; no injuries are reported. Two An-24Vs, including the damaged unit, are later withdrawn. In December, the government's Privatization Agency (PA) officially authorizes airline executives to seek investors in the event the airline is privatized. Twice-weekly B-767-27EER roundtrips simultaneously commence to New York and once weekly to Taipei.

In January **1993**, Managing Director Botev oversees a workforce of 4,053. Two Tu-154B-2s are leased to **Palair Macedonia** and, in March, a block-space agreement is initiated with **LOT Polish Airlines, S.A.** covering service from Sofia to Warsaw. In April, the B-767-27EERs are placed on the long-haul routes to Bangkok, Male, Kuala Lumpur, and Jakarta.

In addition to those stops and a three-point domestic network, the company undertakes regularly scheduled international flights to Abu Dhabi, Accra, Algiers, Amsterdam, Athens, Bahrain, Barcelona, Beirut, Berlin, Brussels, Budapest, Cairo, Calcutta, Casablanca, Colombo, Copenhagen, Damascus, Doha, Dubai, Frankfurt, Harare, Helsinki, Istanbul, Johannesburg, Khartoum, Kuwait, Lagos, Larnaca, London, Madrid, Malta, Milan, Moscow, Munich, Muscat, Nairobi, New York, Paris, Prague, Rome, Stockholm, Tel Aviv, Tunis, Vienna, Warsaw, and Zurich. Toronto joins the route network late in the year, along with St. Petersburg, Kiev, Manchester and Lisbon.

With financial support from the British government's Know How Fund, a plan is put forward and approved to sell 11% shareholding to company employees and 49% to foreign investors; the government will retain 40%. At the same time, the carrier drops all of its non-airline activities, becoming an autonomous unit under the Bulgarian Civil Aviation Corporation.

Enplanements this year total 672,917.

Operations continue apace in **1994** to a total of 52 destinations in Europe, Africa, Asia, and North America, plus three domestic locations. Western units in the previously Soviet-made fleet include 4 leased A320-321s, 3 chartered B-737-53As, and 2 leased B-767-27EERs, the latter from **Air France**.

Joint services begin in March from Sofia to Istanbul in cooperation with **THY (Turkish Airlines, A.O.)**. The previous year's privatization plan fails when a foreign buyer cannot be found. Meanwhile, most of the carrier's charter services are cancelled on short notice to tour companies, including the old partner Balkan Holidays. The move will leave the airline without a charter program for three years.

Managing Director Botev voluntarily steps aside in late November to allow the efforts at privatization to continue under new management. Valeri Doganov is appointed his successor.

Passenger boardings decline 14.3% on the year to 785,200, although freight is up by 13.8% to 364 million FTKs. Revenues for the year are \$203.91 million, while expenses are \$215.19 million. Still, there is an operating loss of \$11.27 million and a net downturn of \$20.14 million. It is reported that, since 1991, the carrier has lost \$20 million per year.

Early in January **1995**, the Austrian-Swiss company Avicon offers to take a 49% stake in exchange for its know-how and services. The government rejects the tender as unreasonable, knowing that it will neither bring in budget revenue nor contribute to a fast financial stabilization of the floundering operation. The entire privatization process, begun in 1992, is ended by the government during the last week of the month. Citing a lack of proper investors, Managing Director Doganov indicates that the company must first be restructured.

A stabilization program is presented to the Ministry of Transport early in the spring and wins approval; under its terms, the company will be required to purchase eight new aircraft over the next four years. It will also receive a long-term government loan and some international routes will be temporarily suspended. In May, the government's former deputy minister of industry, Nikola Dotsov, is appointed chief executive, succeeding Managing Director Doganov.

Under terms of an agreement between the government and the government of the Russian Republic, the latter will repay in goods \$100 million owed to Bulgaria. As part of the arrangement, 5 new Tu-154Ms will join 7 others of that type in the fleet of Balkan flag carrier and replace all 12 of its Tu-154Bs.

During late summer, a government commission begins an examination of the carrier's expensive foreign aircraft leases.

In early November, **Air Malta, Ltd.** begins to cooperate with Balkan on a weekly service from Sofia to New York (JFK) via Malta. On November 11, the Bulgarian government approves a \$20-million bailout plan to save the continuously troubled airline. It also agrees to approve up to \$45 million from the State Fund for Reconstruction and Development.

During the year, customer bookings fall another 15.8% to 1,271,400 while cargo dips 1.7% to 44.97 million FTKs.

Many of the company's unprofitable international routes are discontinued in **1996**; however, several Yak-42s and Il-114s are acquired for regional services.

Due to its continuing heavy losses and requirements from the International Monetary Fund, the airline in June is included in a list of state-owned companies to be isolated from further bank loans and that are required to carry out restructuring programs before their future fate is decided.

The U.K. consultants KPMG assist the Ministries of Transport and of Finance in preparing a draft recovery plan for the airline. Unprofitable routes are dropped with the start of the winter schedule in October; service is discontinued to Stockholm, Brussels, Helsinki, and Harare in Western Europe and Africa.

Additionally, six hotels and restaurants in the Black Sea resorts of Zlatni Pyasatsi and Slanchev Bryag are sold and permission is received to sell up to 75% of the airline's debt-ridden Palma oil refinery.

Still, reports put the year's loss at \$50 million.

Bulgarian Finance Minister Dimitar Kostov appoints a new seven-member board for the airline in January 1997. The board, led by the new president, Valeri Doganov, will make adjustments to the KPMG-submitted recovery plan. When submitted at month's end, it leads, in February, to a rescheduling of debt payments and downsizing of staff. The Pliska Hotel in Sofia and the Cosmos in Bourgas, on the Black Sea, are added to the list of resorts sold, reportedly for \$2 million.

Finishing touches are completed during the first quarter on efforts, begun the previous year, to win back domestic and tour operators. A new program of charter flights begins at the end of March.

On April 7, Managing Director Doganov tells a news conference that debt restructuring will be the airline's first step towards privatization. Accomplishment of that goal will make the carrier more attractive to potential investors.

In April, code-sharing flights begin with **Olympic Airways, S.A.** over a route from Sofia to Athens. The airline continues to suffer from poor traffic and financial downturn. On April 25, the company enters into discussions with Bayerische Vereinsbank on the consolidation of its foreign debt in preparation for privatization. Bayerische Vereinsbank holds a 51% stake in a joint banking institution, Bayerische Bulgarische Handelsbank, set up in 1995 with state-owned Bulbank.

In June, 3 A320-231s must be returned to Japan and their routes taken over by old Soviet-made equipment. There is also concern over whether leases on the French B-767-27EERs can be paid.

It is reported on July 1 that the airline is seeking an equity partner from among financial institutions rather than airlines. Representatives from Airbus, Boeing, and Tupolev arrive in Sofia during the first half of the month to submit their offers for renewal of the carrier's fleet. All have been informed that financing will play as large a part in aircraft choice as technology.

The Association of European Airlines learns at year's end that the company has flown a total of 667.2 million RPKs during the year, a 6% decline. Enplanements are approximately 500,000.

Plans for full privatization push ahead in 1998. The government announces the sale of 100% of the indebted airline, with 20% to be offered to its staff at a preferential price.

The privatization consultants Treuhand Osteuropa Beratungsgesellschaft, mbH. (TOB) and the **British Airways, Ltd. (2)** affiliate Speedwing, Ltd. are retained to assist in the government's efforts. In April, 10 firms and consortiums send letters of intent seeking to participate in the airline's privatization. In May, five bidders are invited to make concrete proposals.

By July 13, three potential investors have deposited their bids to purchase a stake and these are closely studied with an aim of completing an arrangement by the end of August.

Reuters, Ltd. reports on September 2 that the carrier will return one B-767-27EER to **Air France** at the end of January and the other in March as their leases expire. Negotiations have opened with Airbus Industrie for the charter of 2 A300-600Rs. At the same time, it is noted that the company's agents have not yet selected a buyer, but should by month's end.

The French wide-bodies are, however, employed to initiate long-haul flights to Beijing, New Delhi, and Riyadh in October.

During the month, members of the airline's management, together with local financiers, establish a homegrown holding company, **Balkan Air**, to bid on the airline. Finding itself somewhat short of cash, the investor group allows an unnamed U.S. institutional investor to purchase a 75% stake. Ivan Sokolov is appointed the group's CEO.

With its organization and backing sorted out, **Balkan Air** approaches the government and makes a \$450-million offer to takeover the government's stake in **Balkan Bulgarian**. As negotiations continue, the government insists that **Balkan Air** also include guarantees concerning job security, company debt, and investment procedures. These points are agreed to and CEO Sokolov further indicates that, if the arrangement is successful, the airline will undergo a significant reshuffle, with a large fleet renewal program added and unprofitable routes and units spun off or dropped.

Having examined the package, the airline's advisors indicate that it is in order and await a government decision.

The British Broadcasting Corporation reports on October 24 that a group of nine illegal immigrants from Nigeria, involved in riots on Cyprus the previous evening, have been refused passage by **Balkan**, the airline assigned to deport them to Lagos via Bulgaria. The pilot of the **Balkan** aircraft refuses to allow them aboard because they are unaccompanied by security personnel and he refuses to let them sit with other passengers unattended.

It is announced on October 28 that, in order to secure more positive financial guarantees, the procedure for partial privatization had been cancelled the previous day. The government will launch a new procedure for submitting offers for a 75% stake because some conditions listed in the initial invitation have been "insufficiently clear." The mediation services of TOB and Speedwing are dropped as the government moves to handle the process directly.

On November 1, it is triumphantly announced that the company has earned a third-quarter profit of 12 billion leva (US\$1=1,664 leva).

While **Balkan** continues to operate, the entire privatization process is back at square one.

At a joint meeting of the Finance Ministry and the Transport Ministry on December 18, it is decided to open negotiations with Airbus and Boeing for the acquisition of two Next Generation aircraft in 1999 under a lease-purchase arrangement. Planning remains for the return of two **Air France** wide-bodies during the upcoming first quarter.

Passenger boardings during the 12 months increase by 14.7% to 828,000. Cargo traffic, on the other hand, slides 3.7% to 19.55 million FTKs. It will be reported the following May that, for the year, **Balkan** has been able to slash its losses to 9.4 billion leva (\$5.1 million). **Balkan's** long-term assets are valued at \$133 million, including offices abroad and other foreign holdings.

Following the return of the first **Air France** B-767-27EER at the end of January 1999, the company long-haul schedule begins to feel an impact.

At the beginning of March, the government opens a new procedure for the sale of a 75% stake in the carrier and establishes April 26 as the deadline for the submission of bids from interested parties.

At the same time, the second French wide-body is returned, creating a serious disruption. In their absence, smaller **Balkan** jetliners must be taken off their regular routes and employed for long-distance flights. Consequently, a number of passengers are stranded for up to 30 hours, waiting for their departures. Plans are made to replace other aircraft by May 10.

On March 16, Finance Minister Muravei Radev, indicates that **Balkan** has been authorized to enter into a long-term lease for a pair of Airbus Industrie A310s. It is also noted that 3 renovated Tupolev Tu-154Ms will be chartered from the Vnukovo aviation concern in Russia to service 30 monthly flights during the upcoming summer tourist season.

Having proven unable to change the policy of the Belgrade government toward the ethnic Albanians in Kosovo province, NATO, on March 24, closes the airspace over the federal republic of Yugoslavia (Serbia and Macedonia) plus Croatia, Bosnia, and Albania and launches the bombing campaign, Operation Allied Force. **Balkan** is prohibited from flying into those nations and, like other European airlines, finds itself confronted with cancellations and delays on services throughout south-eastern Europe.

Efforts to improve the airline's bottom line are seen at the end of the first quarter. The loss since January is down to 5.5 billion leva (\$3 million) from 18 billion leva during the same period in 1998.

As aircraft from the NATO nations continue to pound Yugoslavian targets, hundreds of thousands of Kosovo refugees cross borders into Albania and Macedonia. As aid workers struggle to provide relief, several governments step forward to provide sanctuary for some of the displaced persons. **Balkan's** Tu-154s are contracted by the UN High Commission on Refugees to undertake a number of mercy flights to transport displaced persons willing to accept temporary housing in European nations. By April 24, the company has operated at least 12 refugee flights.

Balkan is the airline chosen to transport the first group of 161 ethnic Albanians to Great Britain on April 25. Following a 3½-hr. flight from Skopje in Macedonia, the party lands at Leeds (Bradford Airport), where it is greeted by a huge banner reading "Welcome Kosovans." Ventislav Shipkaliev, chief steward on the flight, speaks with reporters after the passengers deplane, reviewing the contrast between the first hastily organized flights and the growing sophistication of the airlift.

The next morning, 4-year-old Gentiana Zogjani is pictured on the front page of many British newspapers waving to cameras as she steps off the Tupolev. Balkan will bring another two loads of Kosovo refugees (170 total) to Leeds over the next two weeks. Simultaneously, officials from the British Home Office travel to Macedonia to organize the refugee airlift to Great Britain.

Back in Sofia on April 26, only one equity offer is received for acquisition of the 75% stake; it is submitted by the Luxembourg-registered Data Control Holdings. The company simultaneously announces that its efforts to replace the French A310s have been delayed.

After mulling over developments and receiving indications of interest from other potential bidders, the nation's Privatization Agency extends until May 10 the deadline for submitting offers for the purchase of 75% shareholdings.

For political and economic reasons, Balkan Bulgarian is the only airline willing to accept for transport a growing number of deportees from Austria. Critics will see this situation as contributing to a tragedy on May 2. After Nigerian Marcus O, who is being transported from Vienna to Lagos via Sofia attacks his escort 20 min. before landing in Bulgaria, he is restrained, bound, and gagged with adhesive tape. The gagged prisoner dies of asphyxiation.

When news of the event gets back to Vienna the next day, members of the Green and Liberal parties, with some Black protesters wearing gags, stage a demonstration outside the Interior Ministry, calling upon Minister Karl Schloegl to resign. With government support, Schloegl will stay on.

Interviewed by the *Standard* newspaper of Sofia on May 4, Managing Director Philip Mustakov indicates that the airline can only avoid liquidation if it is sold quickly. If it is not purchased, it may be closed out and its assets passed to **Hemus Air, Ltd.**

On May 5, British Home Secretary Jack Straw informs the House of Commons that one plane will arrive in England or Scotland every day for the next month bringing in Kosovo refugees, who will be accorded housing on a temporary basis. After "clarification," the Home Office announces that the daily airlift will be built up gradually.

As a result of the delay in replacing the French A310s, flights to Johannesburg and New York (JFK) from Sofia are suspended on May 8.

Balkan continues to operate refugee services around Europe. On May 9, for example, two additional Tu-154 flights transport another 320 passengers to Prestwick, Scotland.

Two additional services to the U.K. are operated during the week of May 10. When bids for an equity stake are examined during the day, five are found; these include Data Control Holding; Luxembourg-registered Air Rent; the ZEEVI Group from Israel; Germany's Ulrich Bentelep; and RAK of Russia.

On June 29, after a month-and-a-half of deliberation—not including four failed attempts to sell the airline since 1993—the Privatization Agency approves the sale of a 75% stake to the ZEEVI Group, which consists of Zeevi Holding, Ltd. and Knafaim-Arkia Holdings, Ltd., parent of **Arkia Israel Airlines, Ltd.** The Israeli partners obtain 2,258,946 shares for an up-front \$150,000 payment and agree to invest \$100 million in the airline over the next five years (including \$20 million during the first year). They will also cover its 208 billion leva (\$110 million) debt in \$2.4-million annual payments over the next decade.

Given the Israeli involvement in the state carrier, Syria, on July 8, bans Balkan Bulgarian from flying to Damascus. On July 15, the day on which the sale is completed, Lebanon demands that Balkan stop its service to Beirut. Bulgarian sources inform Reuters, Ltd. that even though the Sofia-Beirut-Damascus destination has an annual value of \$1.8 million, the banned flights will be replaced by other Bulgarian carriers.

The Moscow media reports on September 3 that newly privatized Balkan has lost its breaks on airport taxes in Bulgaria.

Amidst a flurry of Arab protests, the ZEEVI Group, in October, announces its intention to eventually sell back its 75% stake in Balkan.

Passenger boardings this year fall 16.1% to 695,000 and freight traffic plunges 59.2% to 12,390,000 FTKs.

Wearing new colors that reflect the carrier's newly unveiled revised corporate identity, a pair of leased Boeing 737-3Y0s arrive in January **2000**; in a public ceremony, the first is christened *City of Rouse*.

Company officials announce on February 1 that the suspended service to New York (JFK) will soon be resumed; employing a B-767-300ER in code-share with **Uzbekistan Airways**, the new flights will route from Tashkent to New York via Sofia.

Due to its fiscal situation, the company is now behind on its fuel bills. On March 8, the carrier's accounts are blocked and a furious dispute erupts with creditors over the debt until new arrangements can be hammered out.

The ZEEVI Group now institutes a new reorganization program designed to attain airline profitability within a year. Among the first steps is the creation of Balkan Technique, a new joint venture maintenance operation between the airline and Israel Aircraft Industries, closure of certain foreign offices, a cut in the flight schedule, and a freeze on wage increases. Domestic fares are raised on March 23.

Beginning on May 2, pilots strike the airline demanding better wages and safety conditions. After the carrier is practically shut down, labor and management reach a satisfactory agreement nine days later and flights resume.

Service to Tripoli is suspended on June 2 following receipt of a fax from the Libyan government withdrawing the company's landing rights and ordering its in-country business activities to cease.

As Balkan Technique gets up and running in June, the carrier is able to lay off 600 of its 1,000 mechanics. At the same time, Zvi Frank is named CEO and the fleet is revised by the addition of 3 B-737-3Y0s, which replace the smaller Dash-53As. In July, the company begins to replace its 4 old An-24s, which fly on regional routes, with 2 ATR42-520s.

BALKH AIRLINES: Peshawar, Afghanistan; Year Founded 1997.

As a result of the Pakistani Pathan community's boycott of **Pakistan International Airlines Corporation**, Balkh is established at Peshawar in January **1997** to provide them with transportation. Ownership is uncertain; however, the company is equipped with a single Boeing 727-200.

Revenue services commence on April 1 from Peshawar to New Delhi, Tashkent, and Mashad. In early May, an agreement is signed with the Abu Dhabi Department of Civil Aviation and, during the third week of the month, twice-weekly roundtrips are inaugurated via Mazar-e Sharif in northern Afghanistan. A third service to Abu Dhabi is initiated in June.

The enterprise does not make it into the established airline directories and information on its subsequent activities, particularly in light of the UN sanctions imposed on Afghanistan in late **1999**, is unknown.

BALL: United States (1927-1930).

McKeesport, Pennsylvania automobile dealer and aviation buff, Clifford Ball, who, together with friends has purchased Pittsburgh-McKeesport Airport (Bettis Field), bid on U.S. Post Office Contract Airmail Route No. 11 (CAM-11) from Pittsburgh to Cleveland. After winning the contract late in **1926**, Ball establishes an airline bearing his name, hires two pilots and a mechanic, and purchases three WACO 9 biplanes, which he christens *Miss McKeesport*, *Miss Pittsburgh*, and *Miss Youngstown*.

After waiting out a miserable Ohio Valley winter, pilot Dewey Noyes, flying the *Miss Pittsburgh*, inaugurates CAM-11 via Youngstown and Akron on April 21, **1927**. Carrying relatively small sacks, the three aircraft maintain services without serious accident during the next eight months. By December 31, they have transported 2,740 pounds of mail.

Two Pitcairn PA-5 Mailwings are purchased from their Philadelphia area manufacturer in January **1928**. Later in the spring, two new

Fairchild FC-2 cabin monoplanes are acquired and, on May 1, are employed to inaugurate passenger service between Pittsburgh and Cleveland. A third FC-2 is received new in August and assigned to the Pennsylvania–Ohio service.

The company is reequipped with speedy Travel Air 4000 biplanes later in the fall, along with a Ryan B-1 Brougham employed exclusively for mail. For the year, a total of 725 passengers are carried along with 54,582 pounds of mail over 84,850 miles.

En route to Pittsburgh from Cleveland, a Travel Air 4000, out of fuel, attempts to land on a mountaintop field at Morgantown, West Virginia, on January 31, **1929**, and crashes (one dead). Three Fairchild 71s and four New Standard D-27 mailplanes are purchased in April. In May, the former are employed to inaugurate regularly scheduled passenger services over the Allegheny mountains to Washington, D.C. Running into bad weather over Beaver Falls, Pennsylvania, on October 21, pilot Harry Sievers tucks his mail bag under his arm and parachutes from his New Standard D-27; the plane crashes.

Operations continue for 10 months in **1930**. On November 1, Ball is purchased by Pittsburgh Aviation Industries Corporation and renamed **Pennsylvania Air Lines**. Previous routes and operations are maintained.

BALL BROTHERS AVIATION. See **NORTHERN PACIFIC TRANSPORT**

BALSAM'S AIR SERVICE: United States (1922). In order that wealthy patrons in Dixville Notch, New Hampshire, and surrounding communities might receive their New York newspapers more quickly than the three-day delivery by train, a gentleman named Balsam has the idea to fly them in by air.

Employing 3 Curtiss Oriole biplanes, papers are daily flown the 350 miles from the Long Island town of Garden City. The pioneering express service continues throughout the summer of **1922**, ceasing with the onset of winter.

BALT AERO (BALT AERO AIR COMPANY): Russia (1994–1995). Balt Aero is established at Kaliningrad in **1994** to offer ad hoc cargo charters to destinations throughout the CIS. V. I. Khmelevskikh is appointed general director and he begins revenue operations with an unspecified number of Antonov An-12s, Ilyushin Il-76s, and Let 410s. The company folds within a year.

BALTIC AIRLINES, LTD. See **BALTIC AIRWAYS, LTD.**

BALTIC AIRWAYS, A.B.: Sweden (1986–1989). Established at Malmo–Sturup Airport in **1986** Managing Director Karl-Gustav Sjoestedt's new carrier assembles a fleet of 2 Aerospatiale SN-601 Corvettes and 1 Swearingen Merlin III. Air ambulance, air taxi, charter, and cargo operations are undertaken.

Early in **1987**, a single Vickers Viscount 814 is purchased from **British Air Ferries, Ltd.** and operations continue apace.

Early in **1988**, the Viscount is leased to **Baltic Airways, Ltd.** in the U.K. and is replaced with a single BAC 1-11-200 that is employed to operate a single roundtrip route from Southend Airport to Stockholm. Traffic rights to the British airport are cancelled in July.

At this point, the owners, now without a scheduled route, take over the authority of **Baltic Airways, Ltd.** The new arrangement continues service to Malmo and Stockholm under the British company's certificate. The company is merged into **British Air Ferries, Ltd.** in May **1989**, at which point the Baltic-named carriers of both Sweden and the U.K. pass into history.

BALTIC AIRWAYS, LTD.: United Kingdom (1987–1989). STH Sales, Ltd., a U.K. aircraft spare parts business owned by Coggeshall Holdings, Ltd., acquires 3 Viscounts for cannibalization in late **1987** from **British Midland Airways, Ltd.**

In January **1988**, the decision is taken by the airframe owner to operate services. With £8.5-million capitalization from various London in-

vestors, including major shareholder David Salmon, **Baltic Airways, Ltd.** is registered and forms two separate air transport divisions.

The charter arm will be known as **Hot Air, Ltd.** and the scheduled as **Baltic Airlines, Ltd.** In late spring, the Vickers Viscount 815 owned by Swedish-based **Baltic Airways, A.B.** is leased as the company begins to operate ad hoc Viscount passenger and cargo charters under the label "Hot Air" flights.

Baltic Airlines, Ltd. scheduled flights commence in June from Southend Airport to Malmo in Sweden. When **Baltic Airways, A.B.** loses its traffic rights to London in July, it purchases the authority of **Baltic Airways, Ltd.** and takes over its Malmo and Stockholm services using the British line's certificate.

The company is merged into **British Air Ferries, Ltd.** in May **1989**, at which point the Baltic-named carriers of both Sweden and the U.K. pass into history.

BALTIC EXPRESS LINE. See **BEL (BALTIC EXPRESS LINE, A.S.)**

BALTIC INTERNATIONAL AIRLINES, A.S.: Latvia (1992–1995). BIA is formed at Riga in the first quarter of **1992** as an autonomous subsidiary of **Latvian Airlines, A.S.**, the former Latvian division of **Aeroflot Soviet Airlines**, which holds 66.66% of the company's shares. Houston-based **Baltic International USA**, under the leadership of Homi Davier, who had helped found **Gulf Air**, owns the remaining third.

Peter Ozolins is appointed president and he inaugurates thrice-weekly scheduled return services in mid-April linking Riga and Frankfurt with 2 Tupolev Tu-134B-3s and 1 Tu-154 leased from the parent. On April 15, IATA grants its newest member permission to change its old Aeroflot "SU" code to "TI."

Previously granted permission to inaugurate service over a route from New York (JFK) to Riga via Belfast is withdrawn by the U.S. DOT in January **1993**. The route will be given to **American Trans Air** instead. Two chartered Douglas DC-9-15RCs enter service as plans are made to inaugurate flights to three more German cities, Hamburg, Dusseldorf, and Munich.

The aircraft do not work out and they are returned in early **1994**. In their place, two Boeing 727-23s, originally delivered to **American Airlines**, are purchased. Destinations now visited include Frankfurt, Hamburg, London (LGW), and Dusseldorf. Plans are announced to form a new Latvian flag carrier in a joint venture partnership between **Baltic International**, the Latvian government, and **SAS (Scandinavian Airline System)**.

Enplanements are reported for the first half-year and total just 20,707.

In **1995**, traffic figures are also reported for the period through June and show customer bookings of just 19,756. In July, the government elects to disband the carrier, transferring national airline status to **Air Baltic**, which will be set up on August 29.

BANCONE SERVICES CORPORATION: P.O. Box 71, Phoenix, Arizona 85001, United States; Phone (602) 589-3977; Fax (602) 589-3365; Year Founded **1996**. BancOne is set up by Thomas D. Janes at Phoenix in **1996** to provide local FAR Part 135 all-cargo and express services. Flights begin and continue with 5 Cessna 402Cs.

BANGKOK AIRWAYS COMPANY, LTD.: 140 Pacific Place Building, Sukhumvit Road, Bangkok, 10110, Thailand; Phone 66 (2) 253-8352; Fax 62 (2) 253-4005; <http://www.bkkair.co.th>; Code PG; Year Founded **1968**. Originally formed as an air taxi operation, **Sahakol Air (Sahakol Air Company, Ltd.)** in **1968** to operate between the national capital and the resorts on Ko Sumai (Samui Island), this company is reformed into **Bangkok Airways** during the first week of January **1986**, with Dr. Prasert Prasarttong-Osoth as president/CEO.

Scheduled services are started late in the month from Bangkok's Don Muang Domestic Airport to Ko Samui with a fleet initially comprising 1 Piper PA-23 Aztec and 1 Piper PA-31-350 Navajo Chieftain. The latter is **Sahakol's** original aircraft, the *Trade Wind*.

An order is placed for a SAAB 340A. Unable to establish viability, BA goes bankrupt and operations are suspended in December 1987. The SAAB order is cancelled.

Having reorganized the company and acquired an Embraer EMB-110P Bandeirante, Dr Prasarttong-Osoth resumes services from Bangkok to Ko Samui in 1988. Again, no traffic or financial data is released.

Operations continue apace in 1989 and orders are placed for both Irish and Canadian turboprops. Scheduled service is permitted from Bangkok to Ko Samui and Hua Hin and from Ko Samui to Phuket. Beginning in April, service to Ko Samui lands at the company's newly opened private airport. Orders are placed for 4 de Havilland Canada DHC-8-102s, which begin delivery in the fall.

Bad weather and pilot disorientation cause Flight 125, a DHC-8-102 with 5 crew and 33 passengers en route from Bangkok, to fly into the ground at a coconut plantation 5 km. SW of the runway at Ko Samui on November 21, 1990; there are no survivors.

Service to Phnom Penh begins at the year's end as enplanements between January and December total 153,557.

Airline employment totals 250 in 1991 and the fleet is made up of 4 de Havilland Canada DHC-8-100s/300s, 4 Shorts 330s, 1 Embraer EMB-110P2 Bandeirante, and 2 Shorts 360s. A variety of local destinations form a new network, including Ko Samui, Hua Hin, Trang, Mae Hong Son, Phnom Penh, Utaphao, Samui-Phuket, Utaphao-Phuket, and Chiang Mai. Charters are also undertaken to Mandalay, Pagan, and Phnom Penh.

In 1992, another Shorts 360 is added while 3 of the Shorts 330s are put into storage. A leased Fokker 100 is placed into service in May flying tourists and UN officials daily between the company's base and Phnom Penh.

In the face of competition from **Thai Airways International, Ltd.**, the Cambodian route is abandoned and 2 British Aerospace BAe 146-100s replace the Fokker jetliner.

Airline employment stands at 572 in 1993 and new tourist destinations include Loei and Sukhothai. In November, scheduled flights are initiated from the company's private airport at Sukhothai near Bangkok to Mandalay via Chiangmai. Profits over the past 5 years total only \$1.4 million on revenues of \$81 million.

Former **Air Siam, Ltd.** Managing Director Virachai Vannukul becomes CEO in January 1994 and is given a mandate to upgrade the airline. To cut costs, he cancels service to Loei province and the Burmese city of Mandalay, closes the Paris office on the Champs Elysees, discontinues hot meals on the 50-min. route to Samui, closes another office in Bangkok, and generally reduces waste and free flights. In August, an arrangement is made to lease 5 Avions de Transport Regional ATR72-201s for 5 years. The first 2 ATRs are delivered by the end of October.

Although permission is sought to operate on Thai domestic routes, it is not obtained. Services now provided link Bangkok with Samui, Bangkok and Hua Hin, and Samui and Phuket.

Three ATR72-201s, under charter from their manufacturer, enter service in 1995. Early in 1996, a sixth ATR72-210 is requested. It is delivered in December and, like the earlier units, is employed to help expand the company's domestic network.

Destinations visited in 1997-1999 include Bangkok, Chiangmai, Hua Hin, Loei, Mandalay, Phnom Penh, and Phuket. The fleet now includes 7 ATR72-201s and 1 ATR42-320. The *Bangkok Post* reveals on October 12 of the latter year the company now has two female pilots, Rungrana Unhasuwan and Muttika Limpisawat.

Flights between the south Thailand beach destinations of Koh Samui and Krabi commence on January 27, 2000. On April 1, Bangkok signs a seven-year lease agreement with Pembroke Capital. Under its terms, the airline will become the premier Boeing 717-200 operator in Asia.

The next day, thrice-weekly ATR72-201 roundtrips are started from Sukhothai to Siem Reap, along with four-times-a-week return service from Phnom Penh to the coastal resort of Pattaya.

Thrice-weekly roundtrips commence on July 27 from Bangkok to Krabi and to Siem Reap and from Phnom Penh to Koh Samui. Fleet renewal continues as the airline signs an agreement with ATR on Septem-

ber 7 to replace its current leased fleet with 12 new ATR72-520s by 2003. Simultaneously, 2 more B-717-200s are chartered from Pembroke.

The carrier, on October 11, announces the formation of a Cambodian subsidiary, **Siem Reap Airways**, which comes into existence on October 29. Employing 3 ATR72-201s leased from the parent, the new regional flies from Siem Reap to Bangkok, Phuket, and Sukhothai and from Phnom Penh to Bangkok and Pattaya.

Plans continue apace during the fall for receipt of the first B-717-235 on November 15. It will enter service from Bangkok to Siem Reap and Phnom Penh, Cambodia, in December on lease to **Siem Reap Airways**. The second unit, expected in March 2001, will fly from Singapore to the Thai holiday island of Koh Samui. The process of painting the Bangkok 717s is described in the December 2000 issue of *Airways*.

BANGLADESH BIMAN AIRLINES, LTD. See BIMAN BANGLADESH AIRLINES, LTD.

BANGOR INTERNATIONAL AIRLINE: United States (1983-1987). BIA is established at Bangor, Maine, in 1983 to provide scheduled intrastate passenger and cargo services. Employing 1 Piper PA-23 Aztec and 2 PA-28 Cherokees, the company inaugurates daily roundtrips linking its base with Bar Harbor, Houlton, and Portland.

Operations continue apace until the fall of 1987.

BANK AIR: United States (1965-1971). Bank Air is set up at San Diego, California, in early 1965 to provide scheduled roundtrip passenger and cargo services to Las Vegas.

Employing a Beech 18, the company inaugurates revenue flights on March 10; these continue until the company goes out of business in 1971.

BANKAIR COMMUTER AIRLINES: 2406 Edmond Road, West Columbia, South Carolina 29170, United States; Phone (803) 822-8832; Fax (803) 822-8775; Code B7; Year Founded 1973. Bankair is established by the Dickerson family at Columbia Municipal Airport in 1973 to offer scheduled passenger and cargo flights within South Carolina. Employing a fleet of 5 Piper PA-28 Cherokees, 2 PA-34 Senecas and 1 Cessna 402, the third-level company initiates services to Greenville, Hilton Head Island, Charleston, and Myrtle Beach. Extended frequencies are also available to Winston-Salem, North Carolina.

Operations continue throughout the remainder of the decade and new markets are entered at Charlotte and Lumberton. The fleet in 1981 is not significantly changed from that of 1973. Nettie D. Dickerson remains president, with Charles W. Dickerson as vice president-operations and John E. Dickerson as vice president-sales.

The company expands further in 1982-1984; new services are opened to Anderson, Beaufort, Bennettsville, Cheraw, Clemson, Dillon, Florence, Spartanburg, Pickens, Rock Hill, Sumter, Atlanta, and Birmingham. Several Rockwell Aero Commander 690s are acquired.

Two more Cessna 402s and another Seneca are added. With passenger traffic declining throughout 1985, the company abandons passenger service in 1986, electing to concentrate on cargo, express, and mail.

Just after takeoff from Hilliard, Florida, on June 24, 1987, an Aero Commander 690 with two passengers rolls and dives from an altitude of 9,200 ft.; upon impact, both aboard are killed and the aircraft is destroyed.

Charles Dickerson assumes the presidency in 1988, by which time his fleet has been significantly increased by the acquisition of 4 Aero Commanders 500s, 1 Cessna 402, 3 Cessna 404 Titans, 3 Mitsubishi Mu-2s, and 1 Seneca.

On a return service from Atlanta to Little Rock via Memphis on May 17, an Aero Commander 690A crashes 4 mi. W of its destination in the Arkansas River, killing its pilot.

In 1989, flight equipment is altered again; gone are a Seneca, the Titans, the C-402s, although two more Mu-2s are purchased.

Operations continue apace during the next three years. Enplanements in 1991 are 400 and that figure increases to 500 in 1992. During those two years, 15.2 and 16 million pounds of cargo, respectively, are flown.

The fleet in **1993–1994** comprises 3 Learjets, 8 Mu-2s, 7 C402/404s, and 3 Senecas. The workforce stands at 100.

Services continue in **1995–2000**; during the latter year, President Dickerson's fleet includes 12 Mu-2s, 10 Learjets, 7 Cessna 402s, 5 Piper Senecas, and 1 Cherokee Six.

BANNERT AIR, GmbH.: Wagramerstrasse 56, Vienna 1220, Austria; Phone 43 (1) 203 5589; Fax 43 (1) 203 5589 26; <http://www.bannert.com>; Year Founded 1995. Chief pilot Rene Popp establishes Bannert at Vienna Airport in **1995** to offer executive and small group passenger connections between the larger European airports and smaller communities, as well as to worldwide destinations. Flights begin and continue with 1 each Cessna 650 Citation III, C-501 Citation, C-550 Citation II, and Piper PA-31-350 Navajo Chieftain.

BAR HARBOR AIRLINES: United States (1946–1991). Thomas and Joseph Caruso establish Bar Harbor as an FBO at Ellsworth, Maine, in **1946**. Although providing charter flights for over 15 years, the company does not establish an airline division nor begin to offer scheduled service until **1968**. Daily scheduled Cessna 310 and Cessna 402 roundtrips are initiated to Bangor, Boston, Portland, and other New England destinations. These continue on a low-key basis for the remainder of the decade and into the early **1970s**.

By **1975**, enplanements for the small regional have grown to 47,343. The fleet now includes 5 Beech 99s, 2 Cessna 402s, and 1 Cessna 310.

Airline employment in **1976** grows 30.8% to 85. A Beech 99 freighter crashes near Bar Harbor on August 16; although the aircraft must be written off, the pilot escapes injury.

Two more Beech 99s are purchased and employed to increase frequencies and, in November, to inaugurate nonstop service from Boston to Quebec City.

Passenger boardings jump 34.6% to 72,389 while freight skyrockets 72.1% to 176,642.

Two more Beech 99s are purchased in **1977**. Enplanements total 93,955. Four persons die in the crash of a Beech 99 in rain and fog near Trenton, Maine, on May 17, **1978**. Passenger boardings jump 15.7% for the year to 111,453 while freight increases 63.6% to 381,093 pounds.

The workforce is increased by 88.4% in **1979** to 243. Customer bookings increase by 52.2% to 169,715 as the fleet is increased by 3 Convair CV-600s.

Bar Harbor's fleet in **1980** includes 12 Beech 99s, 1 Cessna 402, 1 Cessna 310, and 4 Convair CV-600s, 1 of the latter being received during the year. These aircraft fly into a growing list of markets in Maine, New Hampshire, Connecticut, Massachusetts, and New York, including Presque Isle, Waterville, Bangor, Bar Harbor, Rockland, Augusta, Portland, Manchester, Hartford, Springfield, Worcester, and Albany.

The service between Manchester and New York (LGA) is a replacement service for **Delta Air Lines**. Meanwhile, the route from Presque Isle in Maine to Quebec City is suspended. In May, Rockland, Maine-based **Downeast Airlines** is purchased and merged. Passenger boardings rise 38.3% to 234,591 and result in orders being placed for 3 CASA C-212 Aviocars.

The 320-employee large regional opens a new Boston–New York (JFK) route and adds one CV-600 and two CASA C-212 Aviocars during the first half of **1981**. President Joseph Caruso and his executive vice president, Allyn J. Caruso now possess a fleet comprising 5 Convair CV-600s, 11 Beech 99s, 2 CASAs, and 1 Cessna 402. Flights are initiated to the Maine towns of Lewiston and Auburn in October, replacing those earlier provided by the failed **Air New England**.

The carrier also signs a System-One reservations, marketing, and service agreement with **Eastern Air Lines**, which will make Bar Harbor basically a commuter affiliate complete with aircraft in modified EAL livery.

As a result of the PATCO air traffic controllers' strike and subsequent ATC difficulties, enplanements are off 3.8% to 225,666.

The workforce in **1982** totals 326. The new marketing/service arrangement with **Eastern Air Lines** comes into effect on January 1 and the

commuter begins to feed its passengers, as Eastern Express, to the major's hubs at Boston and New York. The final Aviocar joins the fleet and Eastern Express service spreads to Florida.

Enplanements jump 19.7% to 270,059, while cargo drops 8.2% to 704,000 pounds.

Beginning in **1983**, supplemental cargo charters are undertaken for **Federal Express**. Passenger boardings grow only a slight 0.2% to 269,618.

Additional Aviocars are acquired in **1984** allowing the privately held New England regional to resume upward growth. Twice-daily roundtrip service is inaugurated on June 1 from Bar Harbor to Philadelphia via Portland.

Passenger bookings swell with a 10.5% to 297,876.

The payroll is increased by 5% in **1985** to 379 and the fleet includes 10 Beech 1900s, 11 Beech 99s, and 5 CV-600s. Orders remain outstanding for 4 SAAB SF340s.

Tragedy strikes on August 25 when Flight 1808, a Beech 99 with two crew and six passengers, crashes on approach in a thunderstorm to Maine's Auburn–Lewiston Municipal Airport after a service from Boston; all are killed, including young peace advocate-actress Samantha Smith and her father.

Customer bookings for the year increase 20.4% to 357,714.

Fifty-nine employees or 15.6% of the workforce is laid off in **1986**. The fleet now includes 16 Beech 99s, 11 Beech 1900s, and 6 SF340As; the CV-600s are withdrawn and sold. **Valley Airlines** is purchased in early spring and operated as a subsidiary.

When the first SAAB enters service in July, the company introduces a new Eastern Express aircraft livery. Late in the year, 10 Beech 99s are purchased and dedicated to Eastern Express operations in the Sunshine State.

Passenger boardings climb another 26.3%, to 453,105.

In February **1987**, the Texas Air Corporation (TAC) acquires financially troubled **PEOPLExpress** and its subsidiaries. At the same time, TAC, acting through **Continental Airlines**, takes over Bar Harbor. Given the potential benefit to **Eastern Air Lines** of the new acquisition's Miami operations, that major contributes to the arrangement and ownership is established at 59% Continental and 41% Eastern.

A significant percentage of Bar Harbor's income is now "prorated" to the two majors to a point where they will have to provide monthly operational loans and the large regional will never again make a profit.

In April, Bar Harbor is assigned to take over management responsibilities and many of the routes of the one-time People subsidiary **Provincetown-Boston Airline (PBA)**, which is designated a Continental Express carrier. Bar Harbor's own northern network is expanded and PBA's Florida division (**Naples Airlines**) is closed in favor of Bar Harbor's Eastern Express service in the Sunshine State. PBA's services to Cape Cod and the Massachusetts islands are also taken over and Bar Harbor's annual customer bookings increase to 784,220.

Enplanements in **1988** total 1,042,288 as the fleet is expanded by the addition of Avions de Transport Regional ATR42-300s and Beech 1900s. A Philadelphia hub is opened on December 15, where the carrier replaces **Britt Airways** as the **Eastern Air Lines** commuter partner.

The 1,030-employee large regional continues to operate as both a Continental Express and Eastern Express service provider in **1989**, hubbing on three cities. Under both monikers, Bar Harbor flies 7 Beech 99s and 6 SAAB 340As to 11 small markets surrounding Miami. Up north, the airline serves strictly as Continental Express. From Boston's Logan Airport and New York (LGA), Bar Harbor flies to 7 cities with 7 Beech 99s and 1 Beech 1900.

By far, the company's largest hub is Newark, from whence it operates to 23 communities with 9 Beech 1900s and 16 ATR42-300s. In March following the shutdown and bankruptcy of **Eastern Air Lines** by strike, Bar Harbor also declares Chapter XI bankruptcy. In the two years since its takeover by TAC, it has received \$43 million in loans from its two parents: \$25 million from **Eastern Air Lines** and \$18 million from **Continental Airlines**.

The figures are almost opposite the ownership percentages. **Continental Airlines** now takes over the funding of Bar Harbor completely and orders its Florida operations to be cut substantially. Passenger boardings increase by 5% to 1,097,145.

The fleet is altered in 1990 to include 8 ATR42-300s, 6 SAAB 340As, 16 Beech 1900s, and 15 Beech 99s. By May, when **Continental Airlines** decides to eliminate Bar Harbor's Florida operation completely, the major has loaned the large regional \$40 million since the latter's bankruptcy the previous March. Negotiations to sell the Miami-based portion of the carrier to private investors fail and it is shut down in July.

The same private investors continue to seek an arrangement to purchase the carrier's northern Continental Express remainder. Talks continue throughout the year, appearing several times on the verge of success, each time to fade. Meanwhile, as part of these proceedings, Bar Harbor's ownership is acquired by **Eastern Air Lines** as a TAC stragem to make its sale easier. Despite this change of ownership late in the year, the carrier continues to operate in the red. Customer bookings decline 2.2% to 1,072,843.

Eastern Air Lines and Bar Harbor Airlines cease operations on January 19, 1991. Both will soon be liquidated.

BARBADOS INTERCONTINENTAL AIRWAYS, LTD. See **AIR CALYPSO, LTD.**

BARD AIRLINES: United States (1980–1981). Bard Airlines is set up at Cortland, New York, in 1980 to provide scheduled passenger and cargo services. Employing Piper lightplanes, daily roundtrips are duly inaugurated to Erie, Ithaca, and Newark International Airport.

When the PATCO air traffic controllers' strike of summer 1981 brings ATC restrictions at the New Jersey airfield, Bard is unable to earn sufficient income to last out the year.

BARKEN INTERNATIONAL AIRLINES: Salt Lake City International Airport, Salt Lake City, Utah 84122, United States; Phone (801) 539-7700; Fax (801) 596-8741; Year Founded 1980. Established at Salt Lake City in 1980, BIA undertakes contract service as well as passenger and cargo charter flights to various western U.S. destinations with a fleet of Gates Learjet 35As and Mitsubishi Mu-2s.

Operations continue apace for the next 13 years and in 1993–1994, President Barbara Heptner employs 40. A fleet of 6 Learjets, 5 Mitsubishi Mu-2s, and 4 Pipers are operated to destinations in both North and South America.

Flights continue in 1995–1999, during which years 29 pilots are employed and the fleet is broken into 2 divisions, 1 based at Salt Lake City and the other at Hailey, Idaho. At Utah's capital, Barken stations 2 each Grumman G-1159 Gulfstreams, IAI-1124 Westwinds, Learjet 25s, and Mu-2s, and 1 each Learjet 35A, Piper PA-31-350 Navajo Chieftain, and Cessna 182 Skylane. A second Chieftain is stationed at Friedman Memorial Airport at Hailey.

While on final approach into Lewiston on a February 11, 2000 service from Boise, a Mitsubishi Mu-2B with one pilot and a cargo of banking papers for American Check Transport, suffers a dual engine flameout and crashes two miles east of the runway. The pilot is fatally injured.

BARNAUL STATE AVIATION ENTERPRISE: Russia (1993–1997). BSAE is established at Barnaul Airport in 1993 to offer domestic passenger and cargo flights on both a scheduled and charter basis. Andrei A. Frolov is appointed general director and he begins services with an unspecified number of Antonov An-2s and An-26s, Tupolev Tu-154A/Bs, Yakovlev Yak-40s, Ilyushin Il-76TDs, and Let 410s, plus Mil Mi-2 and Mi-8 helicopters.

Flights continue in 1995–1997. During the latter year the carrier is renamed **Altai Airlines**.

BARNAX AIRLINES, LTD.: Nigeria (1991–1992). Barnax Airlines, Ltd. is established at Port Harcourt in the spring of 1991 to offer pas-

senger charter and inclusive-tour flights to African regional destinations. Two Boeing 737-222s, including one christened *Sagittarius*, are leased and allow the company to inaugurate revenue operations in June.

Recession and high costs prevent the airline from achieving profitability and it is forced to close down a year later in 1992.

BARON AVIATION SERVICES: P.O. Box 518, Rolla National Airport, Vichy, Missouri 65580, United States; Phone (314) 299-4744; Fax (314) 299-4744; Code BVN; Year Founded 1978. Baron is founded by C. E. Schmidt at Rolla National Airport, Vichy, Missouri, in 1978 to offer charter and contract freighter services throughout the U.S. middle west with a fleet of 4 Douglas DC-4s.

Operations continue apace with little change for the next decade as the company becomes a subcontractor to **Federal Express**. In 1989, the fleet includes 5 Cessna 208A Caravan Is, all operated exclusively for **Federal Express**.

In 1990, a C-208A is replaced by a new C-208B. With the national recession deepening in 1991, the fleet includes just 1 C-208As and 2 C-208Bs. With the change in national administrations in November 1992, Baron sees its business expand and, with it, its fleet, which now includes the 1 C-208A and 23 C-208Bs. Sixteen more C-208Bs are acquired in 1993–1996 as the FedEx contract is expanded.

Flights continue apace during the next two years, but at some cost. While on final approach to Cincinnati after a February 14, 1997 FedEx charter from Memphis, a Cessna 208B with one pilot strikes a utility pole and crashes. Although the aircraft is badly damaged, the flyer is unhurt.

Another Cessna 208B flown on behalf of FedEx, makes a hard landing at Grand Island, Nebraska, on January 20, 1998; the aircraft veers to the left, departs the runway, and makes a 180-degree-turn into a field before coming to a stop. The pilot is not injured.

Flights continue apace during the remainder of the year and into 1999. By this time, the fleet has been expanded to comprise 41 C-208Bs. Two are removed in 2000.

BARRIE FLIGHT CENTRE, LTD.: P.O. Box 626, Barrie, Ontario L4M 4V1, Canada; Phone (705) 721-3322; Fax (705) 721-9897; http://www.barint.on.ca/flight/index.html; Year Founded 1989. Donald and Catharine Earles set up BFC at Barrie Executive Airpark, located on the northern outskirts of Barrie, Ontario, near Toronto, in December 1989. One other person is hired and the initial fleet comprises just 2 Cessna 172s and 1 Cessna 150, which are on strength for Seneca Flight Centre.

The first graduates of SFC begin instructor training at Barrie in May 1990 and, in November, the company begins traffic reporting for the local area.

A domestic charter department is established in January 1991. A float-plane base is set up on Little Lake in March, while a series of company-sponsored charity fundraisers starts in July.

An international charter department is founded in March 1992. Aerobatic flying with Zlin aircraft begins in June and, in July, the company starts towing banners for various advertising activities. "Thrill of a Lifetime" aerobatic rides for the public begin in September.

Company enhancement continues in 1993 and, in 1994 the company begins to market its new Beech King Air.

Gary and Margaret Mann take over the company in April 1995, with the former as CEO. In June, a general refurbishment of the grounds and interior of BFC is undertaken. A month later, maintenance is outsourced to Keith Groves Aerospace, Ltd.

Operations continue in 1996–2000. New concepts introduced include overseas training schools, weekend getaway charters, and mystery flights. The fleet now includes 2 Cessna 172s, 1 Cessna 150, 1 Beech King Air 90, 1 Piper PA-34 Seneca, and 1 PA-30.

BARRIER REEFS AIRWAYS (PTY.), LTD.: Australia (1957–1952). Ansett Airways (Pty.), Ltd. forms the subsidiary Barrier Reefs Airways in mid-1947. Employing PBV Catalinas, the company begins service on

October 8 to the resort Daydream Islands, off Mackay. Ansett Transport Industries, holding company for Ansett Airways and BRA, opens Hayman Island resort in **1950**, which BRA's Catalinas now serve. In **1952**, BRA is merged back into its parent, which takes over the PBY holiday flights.

BARROW AIR: United States (1981–1994). Jim Pederson forms Barrow at that Alaskan city in **1981** to undertake charter and contract flights to the surrounding region. Operations continue apace and, in **1986**, regularly scheduled commuter flights are initiated to Wainwright, Point Lay, and Atkasuk.

By **1990**, Pederson employs 6 workers and owns a fleet of 3 Cessna 207s. A total of 3,244 passengers are flown on the year. Enplanements fall in **1991** to 2,231.

Operations continue until the carrier fails in **1994**.

B.A.S. AIRLINES: United States (1978–1987). A division of the charter operator Beaver Aviation Service, based at Beaver County Airport in Pennsylvania, three-year-old **Skyline Motors Aviation Services** is purchased by Dale Rabassi in June **1981**, reformed, and renamed. The carrier's two Piper PA-31-310 Navajos maintain scheduled passenger and cargo services to Detroit via Youngstown and Cleveland and the fleet is increased by the addition of 2 Cessna 404 Titans and 1 C-402. Enplanements for the year total 8,107.

The fleet is altered in **1982**; gone are the Pipers, replaced by 2 more Titans. Passenger boardings climb 6% to reach 8,625.

Enplanements increase 41.3% in **1983** to 12,191.

The fleet is altered in **1984** to include 1 Titan and 2 Piper PA-31-350 Navajo Chieftains. The workforce is increased by 150% to 20 and corporate headquarters are transferred to the municipal airport at Youngstown, Ohio. Enplanements fall 4.7% to 11,622.

The Buckeye airline suffers an unfortunate **1985**. Passenger boardings plunge 33.3% to 8,085 and cargo is off an equal amount to 4,000 pounds.

If anything, **1986** is an even more disappointing year for enplanements, as customer bookings fall another 61.7% to 3,096. The carrier is momentarily saved by a spectacular growth in freight traffic, up 471% to 23,783 pounds. Operations cease in **1987**.

BASCO FLYING SERVICES: Pottstown Municipal Airport, Glasgow Street, Pottstown, Pennsylvania 19464, United States; Phone (215) 327-0200; Year Founded 1990. Jim Basco forms Basco Flying Services at the Pottstown Municipal Airport in Pennsylvania in **1990** to provide charter and contract service flights.

By **1994**, employment grows to 32 and the fleet totals 7 Piper PA-28 Cherokees, 1 PA-32 Cherokee Six, 2 PA-34 Senecas, and 2 PA-31-350 Navajo Chieftains.

Flights continue in **1995–2000**. The fleet of President Jerry Basco is reconfigured to include 8 Cherokees, 1 Cherokee Lance, 2 Senecas, 1 Cheyenne, and 2 Navajo Chieftains.

BASE BUSINESS AIRLINES, B.V.: The Netherlands (1989–1994). Hans Noorlander, a former executive with Business Air Services and Holland Aero Leasing at Rotterdam, establishes Business Aviation Services Eindhoven (BASE) at the Dutch community's new airport in **1985**. At the same time, the aircraft broker also introduces Piper PA-31T Cheyenne air taxi charters on behalf of local businesses. Extra capacity is acquired through the lease of additional Cheyennes from a local air and ground ambulance service, Air Transport Schiphol.

Operations continue apace in **1986–1988** and, in **1989**, the first regular charter contract is signed to provide "quasi-scheduled" passenger flights for employees of Leyland Daf needing to reach Coventry and Blackpool in the U.K., where both airports are adjacent to company plants. Charters are also flown on behalf of Philips, the multinational electronics concern.

Early in **1990**, Noorlander takes over Air Transport Schiphol and changes its name to BASE Business Airlines. The company acquires

2 Cheyennes and 1 Beech Super King Air 200 in the transaction and, after licenses are received, employs them, along with its own Cheyenne, to begin scheduled twice-daily revenue flights linking the company's base and Rotterdam with Manchester and Birmingham.

A fourth Piper Cheyenne is acquired in **1991**. Recession puts Leyland Daf out of business and cuts into company traffic; operations are consolidated at a single Eindhoven hub. Cheyenne service to Frankfurt begins in November; however, when the lease of two British Aerospace BAe Jetstream 31s is taken over from **Netherlines, B.V.** (absorbed into **KLM Cityhopper, B.V.**) in December, the new aircraft are assigned to the German service. Revenues for the year total five million guilders.

In March **1992**, Noorlander's company purchases Enschede-based **Twente Airlines, B.V. KLM (Royal Dutch Airlines, N.V.)**, which has been subsidizing Twente's scheduled service between that city and Amsterdam's Schiphol Airport, and agrees to continue to subsidize the fares for those passengers connecting to the major. The weekday-only frequency is maintained with BASE's Beech Super King Air 200.

An extensive marketing campaign is launched to cover the new acquisition and a contract is signed with the French company Thomson-CSF—which has an interest in Hollandse Signaalapparaten BV—under which the electronics concern promises to place its passengers on BASE flights over a new Enschede–Paris route.

In April, twice-daily roundtrips are inaugurated from Groningen to London (STN). Jetstream 31 flights from Eindhoven to Stansted are started during the summer.

In December, the fleet is increased by the addition of 1 Fokker 50 and 1 BAe Jetstream 31. Income advances to 14 million guilders.

On January 18, **1993**, the twice-daily, weekday Eindhoven–Hamburg service dropped a week earlier by **KLM Cityhopper, B.V.** is assumed; it is operated by a Jetstream 31. On March 29, routes are added linking Rotterdam with Manchester and Maastricht with Manchester and Birmingham. On April 1, the Eindhoven–Hamburg frequencies are transferred under the company's own designator and a third Jetstream 31 is leased to cover the route. Revenues reach the 20-million guilder mark.

In May **1994** the company name is changed to **BASE Regional Airlines, B.V.**

BASE REGIONAL AIRLINES, B.V.: P.O. Box 7165, Eindhoven, 5605, The Netherlands; Phone 31 (40) 523 245; Fax 31 (40) 525 544; Code 5E; Year Founded 1994. Eindhoven-based **Base Business Airlines, B.V.** is renamed in May **1994**; however, the company continues to provide commercial scheduled and charter services much as it had earlier. Managing Director Hans Noorlander's fleet comprises 3 British Aerospace BAe Jetstream 31s leased from their manufacturer.

A fourth Jetstream 31 is acquired during the summer and employed to inaugurate flights linking Eindhoven and Maastricht with London (LGW). The fleet is revised by the elimination of the Twente equipment and the addition of a Fokker 50, which launches services to Groningen.

In September **1995**, a Shorts 360-300 is leased from **Titan Airways, Ltd.** for six months. It enters service twice daily from Maastricht to London (LGW) via Eindhoven.

Flights continue in **1996–1997**. During these years, a marketing alliance is entered into with **Eurowings Luftverkehrs, A.G.** Destinations visited include Birmingham, Hamburg, Manchester, and London (LGW and STN).

Early in **1998**, Base allows one of its BAe Jetstream 31s to be painted bright red and given *The Economist* titles; the newspaper thus sponsors the company's first "logoprop."

British Airways, Ltd. (2) gains its first toehold in The Netherlands on March 31, **1999**, when Base becomes its 10th franchise partner. Under terms of the agreement, BA will provide support while Base repaints its aircraft in the modified colors of the U.K. major.

During the first quarter of **2000**, the carrier's 105% increase to 15,054 passengers carried is the highest increase of any member of the European Regions Airline Association in this category during the period.

BASLER AIRLINES: P.O. Box 2305, Wittman Regional Airport, 20th St., Oshkosh, Wisconsin 54903, United States; Phone (424) 236-7820; Fax (424) 235-0381; Code BFC; Year Founded 1957. Basler Airlines is organized in the spring of 1957 as a division of Warren Basler's two-year-old FBO Basler Flight Services, a charter operation and flight school. With a northern hub at the company's main Oshkosh facility at Wittman Regional Airport and another at Sebring, Florida, the company operates charter and contract passenger and freight services in the U.S. and Caribbean.

In 1960, Basler moves into the refurbishment of DC-3s in a big way, acquiring them from airline and government sources for upgrade into modern commuter aircraft. As a result of the first great oil crisis in 1973, Basler switches from the transport of people to an exclusive emphasis on hauling cargo.

In the mid-1980s, a workforce of 30 and as many as 12 DC-3s are engaged in providing flights. Operations continue into the 1990s. A DC-3 Turbo 67, a standard Douglas transport modified with two Pratt & Whitney of Canada PT-6A-67A turboprop engines, begins contract freight flights for **Federal Express** in December 1990.

In 1994, President/General Manager Basler employs 100 workers and has altered his charter fleet to comprise 1 Beech 58 Baron, 2 Beech 18s, and 3 DC-3s, 1 of them the turboprop.

Operations continue apace in 1995-1996. The company, also known as Basler Turbo Conversions, now flies 5 DC-3s and 1 Turbo DC-3.

Founder Basler and three other company officials are killed on March 16, 1997 in a midair collision over Manitowoc, Wisconsin. The tragedy occurs during a routine photo shoot when Basler's Beech Bonanza crashes into the company's Turbo DC-3 piloted by Stephen W. Yantz. In the wake of the disaster, Tom Weigt becomes president.

Cargo flights continue in 1998-2000. During these years, Rod McNeil becomes president, with Patricia Basler as vice president. The active fleet shrinks to 2 DC-3s and 1 Turbo DC-3.

BASLER LUFTVERKEHRS A.G. (BALAIR): Switzerland (1925-1931). Nicknamed Balair, Basler Luftverkehrs, A.G., the nation's second largest air transport company, is formed at Basel in September 1925 to compete with the established carrier **Ad Astra Aero, A.G.** Capitalized at SFr 100,000 and with Balz Zimmerman as general manager, the company acquires a fleet of 5 ex-**KLM Royal Dutch Airlines, N.V.** Fokker IIIs.

These are delivered in a flight from Rotterdam to Basel and are employed in the summer of 1926 to inaugurate scheduled services linking the carrier's base with Stuttgart, and between Frankfurt, Karlsruhe, Basel, and La Chaux-de-Fonds.

During the remainder of the decade, 1 Fokker F-VIIa and 6 Fokker F-VIib/3ms are added. Competition is maintained with **Ad Astra Aero, A.G.** stressing acquisition of an international network. Both companies harmonize their timetables, jointly deal with the government, and occasionally exchange equipment. After two years of negative earnings in 1926-1927, Basler begins earning profits regularly in 1928.

Late in the decade in cooperation with **Deutsche Luft Hansa, A.G. (DLH)**, joint operations are undertaken from Zurich to Geneva and from Geneva to Vienna; other pooled arrangements allow flights as far as Marseilles and Amsterdam.

In 1930, the final full year of operation, approximately 5,000 passengers are carried. In order to improve service, increase funding, and create a national airline, Zimmerman and **Ad Astra Aero, A.G.** General Manager Walter Mittelholzer negotiate a merger on March 21, 1931. With the approval of both boards, the two airlines join forces on March 26 as **Swiss Air Transport, Ltd.**, known hereafter as **Swissair, A.G.**

BASLER TURBO CONVERSIONS. See **BASLER AIRLINES**

BASS AIR CORPORATION: United States (1980). Bass Air is set up at Pine Bluff, Arkansas, in the spring of 1980 to provide scheduled air taxi roundtrips across the Mississippi River to Memphis and other

points in west Tennessee. Employing a Cessna 402, the company inaugurates daily revenue flights, but these cannot be maintained beyond September.

BASS AIRWAYS (PTY.), LTD. See **BASS AVIATION (PTY.), LTD.**

BASS AVIATION (PTY.), LTD.: South Africa (1992-1996). Owner and Managing Director Mike Basson forms this new South African commuter at Durban in mid-February 1992 to provide scheduled commuter services between South Africa's major cities. It is an outgrowth of the founder's previous charter, aircraft brokerage, and pilot training business. The initial fleet comprises 2 de Havilland Canada DHC-8-100s.

In 1993-1994, Basson applies for and receives a scheduled route from Johannesburg (Midrand Grand Central Airport) to Durban, which he plans to fly in competition with **South African Airways (Pty.), Ltd.** and **Flitestar, Ltd.**

The service is launched, but halted after a year. In 1996, Basson resumes flying with a reformed **Bass Airways (Pty.), Ltd.**, but this service does not finish 12 months.

BASUTAIR, LTD.: Basutoland/Lesotho (1964-1967). Basutair is established at Maseru by Richard Southworth in 1964. Employing 3 Cessna 180s, 2 Aeromacchi AL-60s, and 1 each Dornier Do-27 and Piper PA-18 Super Cub, revenue flights are undertaken to various points around Basutoland.

Basutoland receives its independence from the U.K. on October 4, 1966 and adopts the name Lesotho. The following year, the company is purchased by interests supported by **Comair (Commercial Airways [Pty.], Ltd.)** of South Africa and is reformed into **Lesotho Airways, Ltd.**

BATAGAI AVIATION ENTERPRISE: Batagai Airport, Batagai, Verkhoyski Region, 678500, Russia; Phone 7 (424) 20644; Year Founded 1994. BAE is set up at Batagai in 1994 to operate domestic passenger and cargo services. Lev B. Rozin is named commander, but the inauguration of services takes almost a year. In the interim, a fleet is acquired, comprising 11 Antonov An-2s, 1 An-26, 5 Let L-410UVPs, and 12 Mil Mi-8 helicopters.

Flights commence in September 1995. Although it is understood the service continues without change during the remainder of the decade, exact information is unavailable.

BAVARIA AIRWAYS. See **BAVARIA-GERMANAIR FLUGGESELLSCHAFT, mbH.**

BAVARIA FLUGGESELLSCHAFT, mbH. & Co.: Denningerstrasse 169, Munich, D-81925, Germany; Phone 89-923-8207; Fax 89-923-8380; Year Founded 1979. Following the 1978 absorption of **Bavaria-Germanair Fluggesellschaft, mbH.** into **Hapag-Lloyd Fluggesellschaft, mbH.**, former Bavaria-Germanair owner Josef Schorghuber, who had retained the rights to Bavaria's name, joins with dismissed executives of the former carrier to establish a new Bavaria at Munich in early 1979. Plans are made to offer inclusive-tour flights and orders are placed for 2 Boeing 737-2K9s and 1 Learjet.

Seasonal holiday flights begin to south European and Mediterranean destinations in 1980 and continue apace during the next decade plus. During this period and later, the charter operator becomes a major lessor of aircraft to other airlines.

Among the carriers leasing from Bavaria after its start-up are **Air Atlantis, Midway Airlines (1), VARIG Brazilian Airlines, S.A., Viva, S.A., TAP Air Portugal, S.A., THY Turkish Airlines, A.O., Shenzhen Airlines, Malev Hungarian Airlines, and Damania Airways, Ltd.**

Traffic and financial figures are not released by the company, which comes to concentrate almost exclusively on its aircraft leasing business. Four B-737-7K9s are ordered during the first quarter of 1995.

In 1996-1997, Robert Salzi is managing director of the company with six employees. The fleet includes 2 Airbus Industrie A320-211s,

3 B-737-2K9s, 12 B-737-3K9s, and 2 B-737-341s. Orders are outstanding for B-737-7K9s.

The company becomes European launch customer on May 4, 1998 for the Boeing 717-200, formerly known as the McDonnell Douglas MD-95. Deliveries are expected two years hence and, in early May 1999, it is announced that these will be leased to **Olympic Aviation, S.A.**

BAVARIA-GERMANAIR FLUGGESELLSCHAFT, mbH.: Germany (1957-1978). This noted German passenger and cargo charter carrier is formed at Munich in 1957 as the air taxi operator Bavaria Airways, otherwise known as Bavaria Gessellschaft Schwabe & Co., K.G. Lightplane tourist charters into the Alps and Black Forest are first offered in 1964-1965.

In the summer of 1966, the company is now reformed into Bavaria Airways: Bavaria Fluggesellschaft, mbH. & Co., K.G. On November 30, it becomes the first European charter operator to order the Dash-400 series of the BAC 1-11. Requests are sent to the U.K. for two 414s, plus a third on option.

Prior to its delivery to **Philippine Air Lines (PAL)**, a new BAC 1-11-402 is leased for eight months on February 23, 1967. On April 1, the jetliner is subleased to **Deutsche Lufthansa, A.G.** for six weeks and is employed to link Munich and Frankfurt to Geneva, Vienna, and Hamburg eight times daily.

Employing its own newly delivered DASH-413 and the Philippine BAC, Bavaria, in May 1968, inaugurates its summer inclusive tour season. Jet passenger charters are offered from Munich, Nuremberg, Dusseldorf, Frankfurt, and Stuttgart to Malaga, Barcelona, Palma, Bastia, Tunis, Rimini, Naples, Dubrovnik, Athens, Constanta, Manchester, Newcastle, Glasgow, and London (LGW and CTN).

On June 25, a BAC 1-11-413, originally configured as a DASH-409 for **Channel Airways, Ltd.**, is chartered from its manufacturer for six months. It is not delivered to the British carrier but is, instead, sold to Bavaria in February 1969.

Operations continue apace for the remainder of the decade and by 1970 the fleet owns 4 BAC 1-11-414s (delivered on February 26, April 22, and December 22) and 3 BAC 1-11-515s. Orders are outstanding for 2 BAC 1-11-528s. In August, a former PAL BAC 1-11-402 is chartered for six months.

The first BAC 1-11-528 is delivered on February 26, 1971 and is christened *Jakob Fugger*. During the first quarter, **Germanair Bedarfs-luffahrt, GmbH. & Co., K.G.** owner Josef Schorghuber becomes majority shareholder and, at this point, the two charter operations begin to coordinate their concerns. With the BAC 1-11-515s available, the company elects to sell a DASH-414 to **Dan Air/Dan Air Services, Ltd.** on December 21. Enplanements for the year total 403,970.

In 1972, the workforce totals 354 and the second BAC 1-11-528 *Albrecht Durer* arrives on March 15. In May, 2 BAC 1-11-515s previously operated by **Paninternational, mbH.** prior to its failure the previous December, are purchased. Passenger boardings increase 29.5% to 573,000. Cargo is also up. Charter and inclusive tour flights, booked by 18 German travel firms, continue in 1973.

In 1974, Herr Schorghuber purchases full ownership. On June 6, 1975, Germanair introduces the world's first Airbus Industrie A300B4-100s into service over its routes from Frankfurt and Dusseldorf to Palma. In early 1976, a BAC 1-11-414 is sold to **Gulf Air, Ltd.**, while all of the other remaining DASH-414s are purchased by private corporations as executive transports.

On January 1, 1977, Bavaria Airways and Germanair, are merged into Bavaria-Germanair and Ernst Uhl is named managing director. Two Airbus Industrie A300B4s and 7 BAC 1-11s are acquired and charter and inclusive-tour services are offered to points in North Africa, the Mediterranean, and Europe.

In April, **Hapag-Lloyd Fluggesellschaft mbH.** announces its intention to acquire Bavaria-Germanair and on December 31, 1978, after objections by the Federal Cartel Office are satisfied, the amalgamation begins.

BAVARIA LUFT LLOYD, A.G. See DEUTSCHER AERO LLOYD A.G.

BAX GLOBAL: 16808 Armstrong, Irvine, California 92714, United States; Phone (714) 752-4000; Fax (714) 852-1488; http://www.baxglobal.com; Code 8W; Year Founded 1997. Burlington Air Express is renamed in October 1997. Joseph Farrell remains chairman/CEO and the company continues to operate worldwide cargo express and contract service flights. The fleet comprises 1 Boeing 737F, 14 B-727Fs, and 17 Douglas DC-8Fs.

During the month, the company receives a contract from Bombardier Business Aircraft Division to provide logistical support for the manufacturer's European and Asian distribution centers. It also wins a three-year air freight contract for heavy lift flights from GKN Westland.

Service problems begin at **Air Transport International**, the carrier's principal domestic air service provider, late in the year.

For the year as a whole, net income of \$32.3 million is reported, down slightly from 1996.

Air Transport International is purchased by BAX during the first quarter of 1998. In early April, the company hauls a mining drill rig, weighing 38,830 pounds, from Sweden to Hong Kong in five days. It is the largest one-item shipment yet delivered by the airline.

On May 12, the carrier acquires controlling interest in its South Korean agent, Borim Express, Ltd., which is renamed BAX Global Korea Co., Ltd.

In early June, the company's parent, The Pittston Company, determines that it is time for BAX to have a president/CEO with full authority over the carrier's domestic integrated operations and its international freight forwarding activities. To that end, Alliant Food Service executive C. Robert Campbell is appointed to the post.

Santa Ana, California-based Ingram Micro Inc., a leading wholesale distributor of technology products and services, contracts with BAX Global on June 15 to handle its heavyweight shipments from its distribution centers at Memphis, Tennessee, Fullerton, California, Carrollton, Texas, and Carol Stream, Illinois.

On August 5, Irvine, California-based Ingram Micro contracts with BAX Global to handle its heavyweight import shipments from Asian manufacturers, mainly in China and Taiwan, for delivery to the company's Frameworks facilities, where computers are built from components.

After a lengthy search, Frito-Lay's vice president-planning, Daniel Crowley, is named the carrier's new chief financial officer on November 16. The appointment takes effect on the last day of the month.

The year's new products are Guaranteed First Arrival, Guaranteed Overnight, and Guaranteed Airport-to-Airport. All are part of an "Emergency Response" shipping program, with time-definite scheduling for heavier freight shippers in the U.S.

On December 10, BAX Global is awarded a multimillion contract by Air New Zealand Engineering Business Services to handle its air freight needs for an open-ended period based on service performance.

The company's two-year-old agreement with Xerox Corporation is renewed on January 11, 1999. The agreement calls for BAX to continue handling Xerox's heavyweight shipments throughout the U.S. and Canada.

BAX increases its ownership position in BAX Global (Taiwan), Ltd., on March 11 and assumes greater control of its multimodal freight forwarding operations. Once government regulations limiting foreign ownership of Taiwanese companies is changed, BAX intends to acquire the remaining shares.

Guaranteed Second Day delivery service is added on April 28.

Twice-weekly nonstop B-747F all-cargo roundtrips commence on July 14 between Toledo and São Paulo, Brazil.

Service continues apace during the remainder of the year. Record profits are earned during the 12 months.

Hurt by its own high costs and competition from domestic trucking concerns, the carrier loses \$16.4 million during the first two quarters. The loss brings a 10% cut in the workforce and rumors that the company's parent, Pittston, may elect to sell it.

The company takes its first steps into a full wide-body commitment in July 2000 when it leases a DC-10-30F to operate between its Toledo hub and Los Angeles (LAX). After almost a year of unsuccessful mediated contract talks, the Teamsters Union suggests a possible fourth quarter strike.

In September, the company occupies a new terminal at Richmond International Airport.

BAXTER AIR (BAXTER AVIATION, LTD.): P.O. Box 1110, 50 Anchor Way, Nanaimo, British Columbia V9R 6E7, Canada; Phone (604) 754-1086; Fax (604) 754-1075; <http://www.baxterair.com>; Code 6B; Year Founded 1985. Tom and Linda Baxter establish this small passenger transport operation at Nanaimo in 1985. Following receipt of a Class 3 license from the Canadian government, the CEO and vice president launch daily return flights to downtown Vancouver with a Cessna 185.

Flights continue apace for the remainder of the decade and into the next. In 1992, Tom's son establishes a scenic trip subsidiary, Plane Adventure Tours, operating nine different types of floatplane charters around the Vancouver area. Celebrities who will experience Plane Adventure Tours include John Travolta, Robert De Niro, and Tom Selleck.

By 2000, President Baxter oversees a workforce of 20 and a fleet of 2 C-185s and 8 de Havilland Canada DHC-2 Beavers. A total of 22 daily flights are made over the company's single route.

BAY AIR: United States (1985–1986). Monte R. Handy establishes Bay Air at Naknek, Alaska, in January 1985 to undertake scheduled passenger and cargo services to local communities and bush destinations. Employing Cessna and Piper lightplanes, revenue flights are launched linking the company's base with King Salmon, South Naknek, Egegik, and Levelock.

Viability cannot be achieved and the company stops flying in September 1986.

BAY AIR EXECUTIVE JET CHARTER, A.O.: Ataturk Airport, Istanbul, Turkey; Phone 90 (212) 272-5046; Fax 90 (212) 288-1122; Year Founded 1995. BAE is established at Istanbul in 1995 to offer worldwide executive and small group passenger charters. Flights begin with a single Dassault Falcon 20.

BAYERISCHE LUFT LLOYD, A.G.: Germany (1919–1923). On June 16, 1919, the Bavarian state government and the aircraft manufacturer Rumpler Luftverkehr, GmbH, form this carrier to provide service between its Munich base and the Lake Constance area.

In April 1920 in accordance with terms of the Treaty of Versailles, the airline's fleet of ex-military aircraft is confiscated by the Allies and the company is forced to cease operations.

In early 1921, the partners again elect to mount airline operations. Provision is made for the purchase of two Junkers F-13s, which are christened *Nachtigall* and *Schwalbe*. These are employed to launch service on April 21. During the summer, two war-surplus DFW-CVs are employed on the Munich to Constance service.

As competition stiffens with the **Lloyd Luftdienst, GmbH**. In late 1921 and into 1922, **Junkers Luftverkehr, A.G.** reaches out to locate members for a countering confederation. On May 14, 1923, the **Trans-Europa Union** is formed; simultaneously, Junkers assumes 50% interest in Bayerische Luft Lloyd, bringing it into the group.

BAYERISCHE LUFTVERKEHRS, A.G.: Germany (1925–1926). Bayerische Luftverkehrs is established at Munich on May 22, 1925, with most of its DM 1.5-million capitalization provided by Junkers Flugzeugwerke, A.G. Revenue operations commence during the summer with a sizeable fleet that includes 4 F-13s and 3 G.24s.

When **Deutsche Luft Hansa, A.G. (DLH)** is established in January 1926, Bayerische Luftverkehrs transfers its operations to the new state carrier in exchange for shares. The little Munich company will remain a paper airline until it is formally liquidated on June 25, 1928.

BAYLEE AIR CHARTER, LTD.: United Kingdom (1971–1980). A. W. Baylee forms his charter company at States Airport on Jersey in April 1971. Barry Collins becomes chairman with Baylee preferring to serve as managing director. Employing Piper PA-23 Aztecs, revenue passenger and cargo charters are initiated between the company base and Guernsey, Aberdeen, and Exeter.

During the remainder of the decade, the fleet is increased to 6 Aztecs, 1 de Havilland Canada DHC-6 Twin Otter, and 2 Beech B80 Queen Airc. Unable to maintain viability in the face of declining traffic and huge expenses, led by energy costs, the carrier ceases trading in 1980.

BBA CARGO (PTY.), LTD.: Australia (1949–1976). Z. A. Brain and W. L. Brown form **Brain and Brown Airfreighters (Pty.), Ltd.** at Cheltenham, Victoria, in 1949 to provide domestic, all-cargo charter and contract service flights. The company also serves as freight forwarding operation. Operations continue apace for the next quarter century.

In 1973, the carrier and its 3 Douglas DC-3Fs are purchased by Signet Insurance Holdings, Ltd., Linfox Transport, Ltd., and Donlin Investments, Ltd. The freighter's name is changed to BBA Cargo (Pty.), Ltd. in early 1976. However, as the result of serious financial losses, a pilot's pay dispute, and a dispute between the owners and managers over reequipment plans, the company shuts its doors in April.

BC AIRLINES, LTD.: Canada (1943–1970). This carrier is incorporated at Vancouver in 1943, but cannot begin operations due to a wartime lack of planes and crews. With two float-equipped Luscombes, local services are inaugurated in 1946 over routes transferred from **Queen Charlotte Airways, Ltd.**

In 1947–1958, the carrier establishes 10 bases at points between Vancouver and Prince Rupert and assembles a route network featuring more than 600 small stops.

The fleet progresses from 1 Globe Swift, 1 Fairchild Model 71, 1 Stinson 108, 1 WACO, 4 Luscombe Model 8 Silveraers, 6 Republic RC-3 SeaBees, and 2 de Havilland Canada DHC-2 Beavers to Cessna 170s/180s and Grumman G-21 Gooses; with each type, complete capability is the key.

As a result of a major Canadian route realignment, the company, on May 26, 1959, acquires the British Columbia routes of **Pacific Western Airlines, Ltd.**, together with that line's 2 Grumman G-73 Mallards. During the summer, one of the newly painted Mallards flies Queen Elizabeth II and Prince Philip from Kamloops to Pennash Lack, British Columbia, during the royal visit to Canada.

A third Mallard joins the fleet in 1960 and operations continue apace in 1961–1962. Enplanements in 1963 reach 77,905.

Airline employment in 1964 stands at 120 and the fleet includes 29 aircraft. The Air Transport Board upgrades the company's routes linking Prince Rupert and Queen Charlotte Islands from Class 3 to Class 2, making them regularly scheduled instead of irregular. Two more DHC-2s and 2 more Cessna 180s are acquired. Passenger boardings climb 16% to 92,744 and freight traffic rises 46.5%.

Twenty-eight employees are hired in 1965 and 4 more aircraft are acquired, including several FBA2Cs. Passenger boardings accelerate to 90,000. The first wheels-only aircraft, a DHC-6-100 Twin Otter, is purchased in 1967.

The small floatplanes are sold in 1968–1969 and 4 ex-**Allegheny Airlines** Nord 262s added as carriers begin to emphasize scheduled commuter services over routes from Vancouver to Tofino, Tahais, Bella Bella, Namu, Ocean Falls, Bella Coola, Penticton, Castlegar, Cranbrook, Kelowna, Kamloops, William Lake, Quesnel, Prince George, Smithers and Terrace.

BC Airlines, Ltd. is purchased by **Pacific Western Airlines, Ltd.** in 1970 and absorbed.

BCA (BRITISH CARIBBEAN AIRWAYS, LTD.) (1): Jamaica (1946–1950). BCA-1 is set up at Kingston on December 18, 1946.

Shareholding is divided between local interests (79%) and U.S. investors (21%). Employing a single Douglas DC-3, the company begins nonscheduled passenger charters in the spring of 1947.

Another Douglas transport is acquired and, in July 1948, a scheduled route is inaugurated from Kingston to Nassau via Montego Bay. Permission is now sought from the CAB for the start of scheduled flights to the United States.

With authority from Washington as of July 14, 1949, BCA is able to begin flying regularly scheduled return services from Kingston to Miami. In October, the company's stock is purchased by **British Overseas Airways Corporation (BOAC)**, which begins to integrate it into **British West Indies Airways, Ltd. (BWIA)**. The company loses its identity on March 31, 1950.

BCA (BRITISH CARIBBEAN AIRWAYS, LTD.) (2): British Virgin Islands (1981–1986). This small all-cargo operation is established at Tortola in April 1981. Equipped with 1 Douglas DC-7C and 1 DC-3F, the 18-person airline begins scheduled and charter services in May. Destinations include Antigua, Dominica, Montserrat, Nevis, Puerto Rico, St. Barthelmy, St. Kitts, St. Lucia, St. Martin, St. Vincent, and Miami. A Beech 18 is added in 1982.

In the spring of 1986, the carrier, employing the first of two British Aerospace BAe 146-100s, begins scheduled Tortola to Miami passenger service. Unable to maintain viability in a crowded market, the company stops flying on October 12 even before the second BAe can be acquired. The first one is returned to the U.K.

BCA (BRITISH COLONIAL AIRWAYS, LTD.): British Honduras (1952–1956). The charter carrier British Colonial Airways, Ltd. is formed at Belize, British Honduras, on March 1, 1952. The new entrant is a subsidiary of the American-owned Freiberg Mahogany Co.; John L. Freiberg is president and T. S. Baker, managing director. The operator's single Cessna 170 begins ad hoc revenue flights on the same day. A second Cessna 170 is purchased in late spring and on August 4, BCA inaugurates scheduled flights about the colony and to Chetumal, Mexico. These low-key operations continue in 1953–1955.

On October 24, 1956, the carrier is purchased by **British West Indies Airways, Ltd. (2) (BWIA)**, becoming a wholly owned subsidiary.

BCF AVIATION, S.A.: Zaire (1984–1991). BCF is established at Kinshasa in 1984 to operate international passenger charters with a Bristol Britannia 312. Dr. T. Mayani's company is grounded in 1991. Although the owner promises to resume operations, he actually begins a new carrier, **Blue Airlines, S.A.**, instead.

BCM AIRLINES, S.A.: Spain (1996–1999). BCM is set up at Palma de Mallorca in the late fall of 1996 to offer charter operations to Spain, Europe, and Mediterranean destinations. Bartolome Cursach is named president and he recruits an 85-person workforce. Painted in a blue and white livery with red, yellow, and blue titles, an Airbus Industrie A320-231 is subleased from the British nonscheduled operator **Airworld Aviation, Ltd.** on November 13. It enters service three days later.

Orders are placed early in 1997 for two more small, Airbus narrowbodies, which will begin flying in a red and green color scheme upon their receipt in the spring.

Although service is maintained in 1998, rising costs, led by fuel expenses, force the carrier to shut down its website and close its doors at the end of 1999.

BEARSKIN AIRLINES, LTD.: P.O. Box 1447, Sioux Lookout, Ontario P8T 1C1, Canada; Phone (807) 737-3473; Fax (807) 737-3093; <http://www.bearskin-airlines.com>; Code JV; Year Founded 1963. Established as Bearskin Lake Air Services, Ltd. at Sioux Lookout, Ontario, in July 1963, this operator initially provides charter and contract service flights to destinations in Ontario and Manitoba.

During the late 1970s, the company upgrades its lightplane fleet by assembling a fleet of multipassenger transports: 1 Beech 99, 1 DC-3,

and 1 Saunders ST-27, plus lightplanes. These are employed to inaugurate scheduled passenger flights to Winnipeg, Manitoba, and the Ontario destinations of Big Trout Lake, Dryden, Fort Severn, Kasabonika, Kenora, Minaki, Round Lake, and Thunder Bay. Airline employment is now 70.

In 1982–1983, more flight equipment is purchased: 1 Beech 99, 3 Piper PA-31-350 Navajo Chieftains, 3 Piper PA-34 Aztecs, 2 de Havilland Canada DHC-3 Otters, 1 DHC-2 Beaver, and 2 Cessna 185s. The company name is now changed to **Bearskin Airlines, Ltd.**

Early in 1984, President Harvey Ericson's company purchases and merges Thunder Bay-based **On Air, Ltd.** As a result, it takes over its acquisition's obligation to provide flight equipment and support under contract to the provincial carrier **NorOntair, Ltd.** Three DHC-6s are obtained.

By decade's end, the fleet comprises 9 Beech 99s, 5 Beech King Air 100s, 2 DHC-6-300s, and 2 Navajo Chieftains.

Passenger boardings in 1991 total 140,000. During takeoff from Red Lake on March 19, 1992, a DHC-6-300 with two crew stalls and crashes half way down the runway; there are no survivors. Enplanements for the year fall to 126,000.

Airline employment in 1993 stands at 225 and President Harvey Ericson's fleet includes 9 Beech 99s, 5 each Fairchild Metro IIIs and Beech King Air 100s, 2 DHC-6-300s, 2 Piper PA-31T Cheyennes, and 4 PA-31-310 Navajos.

Just after their July type certification by Transport Canada, 2 Fairchild 23s are delivered. Late in the year, the company begins to expand its route network once more.

The Cheyennes and 2 Navajos are replaced in 1994 with 2 Piper T-1040s.

Three risk-of-collision incidents involving 4 aircraft occur near Sioux Lookout in a two-minute period on November 2. A Bearskin Metro III arriving from the southwest on instruments passes within .7 mi. horizontal and 500 ft. vertical separation behind a **Canadian Regional Airlines, Ltd.** Fokker F.28-1000, also approaching for a landing. A minute later, the same Metro passes within .4 mi. horizontal and no vertical separation to the left of a private Cessna 152, which is conducting traffic observations. Discovering a Cessna 414 in a holding position for takeoff on the runway upon which it is preparing to land, the F.28-1000 initiates a missed approach. Although tragedy is averted, Canadian government investigators will fault the Bearskin pilot for not maintaining proper distance and ATC for not sorting out the risk incidents.

In 1995, one Beech 99 is withdrawn and replaced with a third Metro 23. The year will be a tragic one.

Just after takeoff from Sandy Bay, Saskatchewan, on a February 21 chartered flight to La Ronge, a King Air 100 with four passengers crashes onto the rocky shoreline of the Churchill River; there are no survivors.

A midair collision 4,500-ft. above sea level, 12 mi. NW of Sioux Lookout, occurs on May 1. Flight 3101, an Air Sandy Piper PA-31-350 Navajo Chieftain with five passengers, having just departed Sioux Lookout en route to Red Lake, collides with Flight 362, a company Metro 23 inbound from Red Lake with two crew and one passenger. As with the February disaster, there are no survivors.

Harvey Friesen is president in 1996–1997 and his fleet now includes 8 Beech 99s, 4 King Air 100s, 5 Metro IIIs, and 3 Metro 23s. A total of 37 destinations in Manitoba and Ontario are visited.

Services to Marathon and Manitouwadge, in northern Ontario, cease in March 1998. Later in the year, a Pilatus PC-12 is acquired.

Following a strike call, the company's pilots and management are able to settle on a new contract on June 20, 2000.

BECHUANALAND NATIONAL AIRWAYS (PTY.), LTD.: Botswana (1965–1966). BNA is established at Francistown on October 1, 1965 to provide regional scheduled passenger and cargo services. A management contract is signed with **Autair International Airlines, Ltd.** and the U.K. airline provides the new entrant with a pair of Douglas DC-3s with which to commence operations.

Revenue flights commence on November 15, linking the carrier's base with Bulawayo and Livingstone; another route is also started from Lobatse to Johannesburg. Additional destinations visited before the end of the year include Serowe, Gaborones, Ghansi, Serondellas, and Maun.

BNA takes over the services of **Bechuanaland Safaris, Ltd.** at the end of the year.

Twice-weekly roundtrip service is inaugurated at the beginning of **1966** between Francistown and Johannesburg. Operations continue throughout the first three quarters, with gradually diminishing traffic and fiscal return. The operation is closed down in the fourth quarter and enters receivership. The services are taken over by **Botswana National Airways, Ltd.**

BECHUANALAND PROTECTORATE AIR SERVICE, LTD. See **AIR CARRIERS, LTD.**

BECHUANALAND SAFARIS (PTY.), LTD.: Botswana (1964–1965). Capt. Bertie Bartuane is established at Francistown in **1964** to provide passenger charters throughout the region. Revenue flights commence with 1 each Piper PA-23-235 Aztec and PA-23 Apache.

Early in **1965**, Bartuane is bought out by the National Airways Corporation of South Africa, which operates his carrier as a commuter subsidiary. Scheduled flights are undertaken linking the company's base with Gaborones, Maun, and Ghansi.

When the concern stops flying during the fourth quarter, its services are taken over by **Bechuanaland National Airways, Ltd.**

THE BEE LINE. See **COLONIAL AIR TRANSPORT; EASTWIND AIRLINES**

BEECH AVIATION CENTER: United States (1965–1967). Employing a Beech 18, this Imperial, California-based service center inaugurates scheduled passenger and cargo flights on local routes out of El Centro on December 15, **1965**. Services are maintained until **1967**.

BEESON AVIATION: United States (1965–1967). Beeson is organized at Topeka, Kansas, in the fall of **1965** as the airline division of an FBO. Employing Cessna 172s and 207s, the company begins scheduled commuter flights to Concordia on October 31.

With Kansas City joining the route network, operations continue apace until the summer of **1968** when it is purchased by and merged into **Trans-Missouri Airlines**.

BEEWEE EXPRESS: P.O. Box 604, Piarco International Airport, Port of Spain, Trinidad and Tobago; Phone (809) 669-3000; Fax (809) 669-186; <http://www.bee wee.com>; Code BW; Year Founded 1999. Having been delivered in January–February, the 2 new de Havilland Canada DHC-8Q-300s, for which **British West Indies Airways, Ltd. (2) (BWIA)** has paid \$12.5 million apiece, enter service under the subsidiary name BeeWee Express, Ltd. on March 1, **1999**. The turbo-props fly thrice daily to Grenada, and twice daily to Barbados, St. Lucia, and Tobago, and daily to Caracas.

Arrival of a third Dash-8 allows flights to begin to St. Vincent at the end of June.

The company's parent, **British West Indies Airways, Ltd. (2) (BWIA)** is renamed **BWIA West Indies Airways, Ltd.** on December 2.

A tentative agreement is reached with **Helen Air, Ltd.** on February 7, **2000**, under which the St. Lucia-based commuter will operate for BWIA as a BeeWee Express franchise carrier. With its license due to expire on March 8, BWIA is recertified by the government on February 26 to operate air bridge services between Trinidad and Tobago; for the next four months, it will be permitted to add another daily roundtrip to the two that BeeWee currently operates.

The **Helen Air, Ltd.**'s BeeWee Express contract begins on April 2.

1478. BEL (BALTIC EXPRESS LINE, A.S.): Latvia (1994–2000). BEL is established at Riga late in **1994** to undertake passenger charters

to regional and European destinations. Revenue operations commence with a single Tupolev Tu-154M leased from A/S Elk.

Vladimir Litovar is general director in **1998–1999** and he oversees a workforce of 37. The fleet is enhanced by the acquisition of a Tu-134B and a large number of destinations are now visited, including Abu Dhabi, Agadir, Alicante, Almeria, Antalya, Bangkok, Barbados, Berlin, Cancun, Capetown, Catania, Chiang Mai, Ciego de Avila, Cologne, Colombo, Djerba, Dusseldorf, Erfurt, Faro, Ft. Myers, Frankfurt, Fuerteventura, Funchai, Hamburg, Hanover, Holguin, Hurgada, Ibiza, Kathmandu, Larnaca, Lanzarote, Los Angeles, Luxor, Maie, Malaga, Miami, Monastir, Montego Bay, Munich, Munster, New York (JFK), Nuremberg, Orlando, Palma de Mallorca, Phoenix, Phuket, Poriamar, Puerto Plata, Puerto Vallarta, Punta Cana, Saarbrücken, Salzburg, San Jose, Santa Cruz de la Palma, Santo Domingo, Seville, Stuttgart, Tenerife, Utapao, Varadero, Westerland, and Windhoek.

Higher fuel costs and intense competition forces the carrier into insolvency and it ceases operations on September 28, **2000**.

BELAIR, LTD.: Nigeria (1991–1992). Bel Air is established by former Nigeria Airways Chairman/CEO A. D. Bello at Lagos in December **1991** to offer domestic scheduled passenger and cargo commuter services with a pair of Dornier 228-202s.

Unable to maintain viability in a time of recession, the carrier folds in **1992**. The new entrant, Afrimex, Ltd., will assume operations.

BELAIR (AIR BELARUS): Korotkevicha Str. 5, Minsk, 222039, Belarus; Phone 375 (0172) 250 702; Fax 375 (0172) 253 045; Code BL; Year Founded 1991. Privately owned Belair is established at Minsk in **1991** and is entirely independent of the Aeroflot division and soon-to-be independent **Belavia**. The company is outfitted with a fleet that includes 2 Ilyushin Il-76MDs, 1 Tupolev Tu-134A, and 6 Yakovlev Yak-40s. These undertake all-cargo services on regional routes in **1992–1994** and, in addition, fly charters for other carriers, including some western operators.

While landing at Sarajevo after an all-cargo service from Luxembourg on December 3 of the latter year, an Il-76TD overruns the runway and strikes a ditch, causing its nosegear to collapse; there are no fatalities.

Operations continue apace in **1995–2000**, during which years the fleet is altered to comprise 3 Il-76TDs, 2 Tu-134As, and 1 Yak 40. Emphasis is placed on nonscheduled service to the Far East and among destinations visited are Da Nang, Hanoi, Ho Chi Minh City, Kaoshung, Macau, and Taipei.

BELAIR (ILE DE FRANCE, S.A.): France (1994–2000). Belair (Ile de France) is set up at Paris (ORY) in late **1994** to fly public passenger charters and operate promotional flights. Revenue services commence in September **1995** with a single Boeing 727-200A.

Flights continue in **1996–1998**. On January 18 of the latter year, a Douglas DC-10-30 is chartered from **Condor Flugdienst, GmbH**. The wide-body enters service at the end of March **1999**.

Due to rising fuel prices and declining income during the summer and fall holiday seasons, this charter airline ceases operations on January 21, **2000**. The German transport is returned.

BELAVIA (BELORUSSIAN AIRLINES): Minsk Aerodromnaya, Sr 4, Minsk, 220065, Belarus; Phone 375 (0172) 25 59 02; Fax 375 (0172) 25 15 66; Code B2; Year Founded 1993. The Aeroflot Soviet Airlines/Aeroflot Russian International Airlines (ARIA) directorate of Belarus CAD is reorganized at its Minsk Aerodromnaya base in November **1993**, being transformed into the flag carrier of the new republic. Oleg V. Ryzhikov is director general and his company assumes ownership of the former directorate's fleet of 19 Antonov An-24s, 7 An-26s, 21 Tupolev Tu-154BMs, 19 Tu-134As, and 8 Yakovlev Yak-40s. Scheduled services are undertaken to Berlin, Frankfurt, Shannon, Tel Aviv, Vienna, Warsaw, and Zurich. Charter flights are made to China, India, Cyprus, Turkey, Cyprus, and UAE.

The close cooperation maintained with **Aeroflot Russian International Airlines (ARIA)** begins to subside in **1994** as the new state airline starts to establish its own marketing approaches and operational strategies. Plans are made to launch flights to communities in Spain, Italy, and the U.K.

A cooperative pact is signed between Belavia and **Aeroflot Russian International Airlines (ARIA)** at the beginning of June **1995**. It is designed to allow the establishment of common rates for air transport services and the use of tickets for transit flights acquired in either Russia or Belarus. Within a month, Aeroflot offices in Russia will act as Belavia agents, selling tickets on services of the new partner.

Flights continue in **1996–1998**, during which years the fleet is reduced by one An-24. Scheduled destinations visited include Anapa, Berlin, Frankfurt, Moscow, Shannon, St. Petersburg, Tel Aviv, Vienna, Warsaw, Zurich, and other CIS points; charter flights are also made to markets in China, Cyprus, India, Turkey, and the U.A.E.

Regularly scheduled, weekly Tu-154BM roundtrips commence on July 26, 1997, from Minsk to Beijing via Novosibirsk.

Also, the regional subsidiary **Brest United Aviation Detachment** is set up at Brest Airport to operate domestic and regional passenger services. Under the direction of Gennadi V. Borisevich, Brest flies 4 Yak 40s and 20 An-2s.

Another regional, **Gomel Air Detachment**, is set up at the city of that name to operate scheduled flights to Russia and charters elsewhere. It will later be renamed Gomelavia.

During the first quarter of **1999**, a bilateral agreement is signed between the governments of Belarus and Egypt. Weekly Tu-154BM scheduled roundtrips between Minsk and Cairo begin on April 29.

On August 23, the carrier reports that its traffic has fallen by 39% in the first half year.

A comprehensive agreement is signed with **Aeroflot Russian International Airlines (ARIA)** on January 26, **2000**. Under its terms, the two carriers will undertake return code-sharing passenger flights from Russia to Belarus and from Belarus to Siberia, the Mideast, and Southeast Asia via Moscow, as well as on Aeroflot cargo services to Belorussian cities. The two also plan to establish joint hubs at Moscow and Minsk.

Between January and August, enplanements of 150,000 are reported, including 87,000 on international routes. In early September, weekly scheduled roundtrips are initiated between Minsk and Tallin and plans are announced for a new route to Paris in early 2001.

BELFAST AND WEST COAST AIR SERVICES, LTD. *See* **AERLINGUS IRISH AIRLINES**

BELGOROD STATE AIR ENTERPRISE: 166 Bogdan Khmelnitski St., Belgorod, Central Regions, 308209, Russia; Phone 7 (07222) 40205; Fax 7 (07222) 41300; Code BED; Year Founded 1995. BSAE is set up at Belgorod in **1995** to offer domestic and regional charter and scheduled passenger services. Petr I. Nuzhni is commander and he begins operations with a fleet that comprises 10 Yakovlev Yak-40s, 28 Antonov An-2 biplanes, and 13 Kamov Ka-26 helicopters.

BELL AIR, LTD.: New Zealand (1968–1997). A division of **Bell Air Executive Air Travel, Ltd.**, Bell Air is formed at Whakatane, on the North Island's Bay of Plenty, in **1968** to provide air taxi and charter services. Equipped with a Cessna 185, Chairman/Managing Director Graham R. Bell's company also undertakes marine surveys of fish stocks in the South Pacific. Nonscheduled but regular services to Auckland commence in October **1979** followed by licensed scheduled flights in **1980**.

In **1981**, Bell's 6-employee airline, which is now renamed **Bell Air Intercity Commuter Airlines, Ltd.**, possesses a fleet comprising 1 Beech 99, 3 Cessna 172s, and an Aero Commander 500. Neither service nor fleet changes during the next decade.

Airline employment stands at 10 in **1992** and the fleet includes 1 Beech 99 and 1 Aero Commander 500.

Operations continue in **1993–1995** and, in **1996**, the commuter division is merged back into **Bell Air Executive Air Travel, Ltd.**, which name is now painted on the carrier's lone scheduled Beech 99.

Scheduled services cease in **1997**.

BELL AIR EXECUTIVE AIR TRAVEL, LTD. *See* **BELL AIR, LTD.**

BELL AIR INTERCITY COMMUTER AIRLINES, LTD. *See* **BELL AIR, LTD.**

BELLAIR: United States (1978–1996). Sitka-based Bellair is established in **1978** by Kenneth Bellows to provide passenger and cargo air taxi flights to the southeast Alaskan destinations of Angoon and Kake. A large number of charter operations into the bush are also initiated. The fleet includes 1 each de Havilland Canada DHC-2 Beaver and Cessna 185.

In **1982**, the company seeks CAB authority to provide scheduled C-185 services connecting its base with Port Alexander, Little Port Walter, and Baranof. Permission is received in **1983** and flights commence in March **1984**. Operations continue apace, almost without incident, during the remainder of the decade; Sitka, Angoon, Kake, and 10 other small previously nonscheduled communities join the scheduled route network.

While en route from Sitka to Rowan Bay on August 18, **1988**, a DHC-2 encounters clouds while passing through a valley and crashes, killing its pilot.

In **1990**, the small regional employs 10 workers and operates a fleet of 2 Beavers and 1 Cessna 185. A total of 5,457 passengers are flown on the year.

Enplanements decline to 5,012 in **1991** and a total of 555,557 pounds of mail are flown. President Bellows' fleet in **1993** is down to 1 Beaver and 1 Cessna 185. Enplanements total 4,810.

Operations continue apace in **1994**, but passenger boardings slip 1% to 4,762. A total of 15,000 FTKs are also flown.

Ten workers employed in **1995** and President Bellows's fleet includes 1 Beaver, 2 Cherokee Sixes, and 1 Cessna 172, but traffic falls even further. Enplanements drop 37% to 3,007.

By the spring of **1996**, the company has become economically unviable. As a result, the facilities, routes, and aircraft are sold to **Taquan Air Services** in June.

BELLE FOURCHE AIR LINES. *See* **AIR CRUISES**

1486. BELLINGHAM-SEATTLE AIRWAYS: United States (1964–1967). Named after its route, B-SA is organized by Dick Mallberg at Bellingham, Washington, in the summer of **1964** to offer scheduled service to Seattle. Employing a Beech 18, the commuter inaugurates scheduled service on September 24.

Operations continue until the carrier is purchased by and merged into **Puget Sound Airlines** on August 28, **1967**.

BELLVIEW AIRLINES, LTD.: Bellview Plaza, P.O. Box 6571, 66 Opebi Road, Ikeja, Lagos, Nigeria; Phone 234 (1) 497-7715; Fax 234 (1) 493-4750; <http://www.bellviewairlines.com>; Code B3; Year Founded 1992. Bellview is set up at Lagos, Nigeria, in **1992** to operate charter domestic flights on behalf of its parent, Bellview Travels, Ltd. Kayode Odukoya, managing director of the tour company, is CEO with Tunde Yusuf as chairman of the board of directors. A Yakovlev Yak-40 is chartered from **Balkan Bulgarian Airlines** and is employed to launch revenue services. Mrs. Funmi Akano becomes service manager in November.

The decision to operate domestic and regional scheduled services is taken during the summer of **1993**. The company begins to recruit a workforce that will reach 165; Capt. Roy Ilegbodu arrives as head of operations in November, along with Capt. C. Imediegwu, chief pilot, and Alex Iheuwu, chief engineer.

A Douglas DC-9-32 christened the *Peace* is acquired from Boeing under charter. Scheduled services commence to Abuja and Port Harcourt, with nonscheduled flights offered to a variety of destinations all over Africa.

Operations continue in **1994–1996**, during which years Bellview begins to visit Abidjan, Abuja, Banjul, Conakry, Freetown, Kano, Nairobi, Port Harcourt. Another DC-9-32, first flown by **Delta Air Lines**, is received in June 1995. Late in 1996, the company becomes a member of IATA. Offices are opened in Gambia, Ghana, and Sierra Leone.

In January **1997**, company executives join those from ADC (Aviation Development Corporation, Ltd.) in a plan for unilateral fare hike of 200% on domestic routes. They are forced to abandon this plan after the Aviation Ministry threatens to ground their aircraft if they implement the tariff increases.

In February, officials from Bellview and ADC again propose a gigantic fare increase; the 100% increase is approved by the government and instituted on March 17.

A service dispute with Nigeria erupts on May 15 when the U.K. Department of Transport bars **Nigeria Airways, Ltd.** aircraft from landing in Britain due to safety concerns. In retaliation, Nigeria requires that **British Airways, Ltd. (2)** halt its daily B-747-136 flights to Lagos and its thrice-weekly DC-10-30 service to Kano. The British line flies Nigeria-bound passengers to Accra in Ghana, from which they are able to make arrangement for air charter or ground transport into Nigeria.

Nigeria Airways, Ltd. has other problems, particularly a lack of capacity. As a result, Bellview begins twice-weekly contract replacement services on its behalf on June 20 from Lagos to Nairobi. Also on behalf of **Nigeria Airways, Ltd.**, a DC-10-30 is briefly chartered to operate weekly roundtrip flights to Rio de Janeiro.

Simon Tumba reports in the November issue of *Airline Business* that the airline industry in Nigeria is on the verge of collapse, with only 10 aircraft from 8 carriers left to provide domestic services for 90 million people.

By October, **ADC Airlines, Ltd.** has only one operational B-727, while **Kabo Air, Ltd.** has two. Bellview, which has returned its Douglas wide-body, can fly only one DC-9-32. **Nigeria Airways, Ltd.** and several small operators fly the remaining six. All call upon the government to politically and financially guarantee a restructuring of the industry.

The government promises to end Nigeria Airways' international monopoly and accept applications from those wishing to fly to foreign points as a way of gaining hard currency. Bellview, which has returned the Douglas wide-body, is granted rights to Nairobi, Rio de Janeiro, and Bombay—but has no aircraft.

In November, the carrier becomes the second Airbus operator in Nigeria after the flag carrier. A chartered A300-600R enters service on November 21 on international replacement routes to Brazil, India, and Kenya.

Having concluded a code-sharing agreement with **Nigeria Airways, Ltd.**, dual-designator service commences to Amsterdam on April 10, **1998** employing the Nigeria Airways Airbus Bellview has been flying for the past six months. A dual-designator pact is also signed with **Air India, Ltd.** Offices are opened at Nairobi, Mumbai, and London, England.

An affiliate airline, Bellview Airlines (Sierra Leone), Ltd., is now set up and it provides services from Freetown to Lagos with a wet-leased DC-9-32.

Early in the first quarter of **1999**, two DC-9-32s are wet-leased from **JAT Yugoslav Airlines** for a year. Upon their arrival, wearing all white fuselages and blue tails, they begin operation of the Lagos Express.

With the outbreak of the civil war in Sierra Leone, Bellview and its local affiliate, Bellview Airlines (Sierra Leone), Ltd., are forced to halt Freetown flights.

At the beginning of **2000**, the company operates weekly A300-600R roundtrips to Amsterdam, Nairobi, and Bombay, while the Douglas transports maintain the domestic network with stops at Abuja, Port Harcourt, and Lagos. A regional service to Banjul is also flown.

With the reinstallation of the Sierra Leone government of President Tejan Ahmed Kabbah by the ECOWAS Intervention forces during the summer, Bellview is able to resume its service to Freetown.

BELLVIEW AIRLINES (SIERRA LEONE), LTD. See **BELLVIEW AIRLINES**

BELORUSSIAN AIRLINES. See **BELAVIA (BELORUSSIAN AIRLINES)**

BELUKHA CLOSED KOMPANIYA: Ulitsa Bolshaya Polyanka 11/14, Moscow, 109180, Russia; Phone 7 (0950) 971-6101. BAK is established at Moscow in **1994** to offer nonscheduled domestic passenger services. S. G. Nedorslev is general director and he begins nonscheduled flights with a mix of Tupolev Tu-154s and Kamov Ka-32s.

In addition to the helicopters, the fleet in **1999** includes just one Tu-154.

It is uncertain if the carrier has survived into the new millennium.

BELYA AIRLINES: Belya Office Building, Sanya International Airport, Sanya City, Hainan Province, 572000, China; Phone 899-289925; Fax 899-289925; Code 2B; Year Founded 1995. Belya is established at Sanya City in **1995** as a subsidiary of **China Northern Airlines Company, Ltd.** Revenue operations at President Jia Zhenxiao's company begin with a single McDonnell Douglas MD-80 leased from the parent.

Flights continue in **1996–2000**, during which years 3 MD-82s, leased from the parent, replace the earlier MD-80. It is anticipated that the company will be folded back into its parent.

BEMIDJI AIRLINES: P.O. Box 624, Bemidji, Minnesota 56619, United States; Phone (218) 751-1880; Fax (218) 759-3552; Code CH; Year Founded 1981. Privately owned Bemidji Airlines is established by Larry Diffley and Mark Shough at the Minnesota town of Bemidji in **1981** to offer scheduled passenger flights to regional destinations, especially Minneapolis (MSP). President Diffley's initial fleet comprises 7 Beech B-80 Queenairs, 2 Beech 99s, and 5 Piper PA-23 Aztecs.

Operations continue quietly apace, briefly under the marketing name Great Lakes Link, over the next 7 years and by **1988**, enplanements total 13,894.

Airline employment stands at 80 in **1989** and the fleet includes 5 Aztecs, 4 Queenairs, 2 Beech Barons, and 1 Beech 99. Destinations visited include Minneapolis (MSP), Thief River Falls, Mankato, and Worthington. Passenger boardings decline a huge 41% to 9,854.

Although there is no change in the workforce in **1990**, the fleet is increased by the addition of 5 Queenairs, 1 Beech 99, 3 Cessna 172s, and 1 Cessna 150. Customer bookings fall another 7.5% to 9,115 and freight drops 26.4% to 7,945 pounds.

Twice daily Bemidji–Minneapolis roundtrip flights continue in **1991**; however, the small regional faces toughening competition from Northwest Airlink partners. Consequently, enplanements are cut to 3,034. Another Queenair is acquired in **1992**.

In **1993–1994**, the workforce has 60 employees and President Diffley's fleet includes 2 Beech 99s, 10 Queenairs, 2 Beech 58 Barons, and 4 Piper Aztecs. Over the next 6 years, 5 more Beech 99s and 2 Queenairs are added as the Aztecs and Barons are retired.

BEMOAIR, A.S.: Czech Republic, 1994–1996. Bemoair is established at Prague in **1994** to offer domestic commuter services. Revenue flights commence with 3 Let L-410UVPs.

In **1995**, two Ilyushin Il-62s are leased from **CSA Czech Airlines** and are employed to inaugurate long-haul inclusive-tour charters to Mediterranean and Mideast destinations. Flights cease in **1996**.

BERGEN AIR TRANSPORT, A.S.: Norway (1961–1977). This company is originally formed in **1961** not to offer cargo services, but to

operate ice reconnaissance flights to, in, and from Greenland and to undertake oil industry support services.

In **1971**, the company, having acquired a pair of Douglas DC-4s, undertakes worldwide ad hoc charters to a variety of destinations. The operator ceases in **1977** after it is forced by hard times to sell its DC-4s to Zaire.

BERING AIR: P.O. Box 1650, Nome Airport, Nome, Alaska 99762, United States; Phone (907) 443-5422; Fax (907) 443-5919; <http://www.beringair.com>; Code 8E; Year Founded 1979. Taking its name from the nearby body of water, Bering is organized at Nome by James D. and Christine Rowe in September **1979** to offer nonscheduled passenger and cargo services to western Alaskan destinations from that city and Kotzebue. Equipped with Beech 18s, Piper PA-34 Senecas, Cessna 206s, and de Havilland Canada DHC-2 Beavers and DHC-3 Otters, Bering inaugurates revenue flights on October 3.

After several years of charter work, U.S. government certification is received and regular scheduled service begins on November 15, **1982**.

In June **1983**, the company enters into an agreement with **Alaska Airlines**, becoming an Alaskan Airlines Commuter affiliate. The original Cessna 206/207A fleet is increased by the addition of a Piper T-1020 and a PA-31 Navajo, as the Seneca, Beavers, and Otters are removed. Points served include Ambler, Brevig Mission, Buckland, Cape Lisburne, Der- ing, Elim, Gambell, Golovin, Kiana, Kivalina, Kobuk, Royuk, Nostak, Noorvik, Point Hope, Port Clarence, St. Michael, Savoonga, Selawik, Shaktoolik, Shismaref, Shungnak, Stebbins, Teller, Tin City, Wales, and White Mountain.

Operations continue apace in **1984** and the arrangement with Alaska Airlines is expanded into a full-blown code-sharing affiliation in **1985**. Traffic increases steadily through **1986**.

While en route on an air taxi cargo flight on the night of December 10, **1987**, a Cessna 207A strays some 15 mi. off course and crashes into the south side of Bismarck Mountain, near Ambler, Alaska; the pilot is killed and the aircraft is destroyed.

Enplanements for the year total 29,628.

In **1988**, airline employment stands at 48 and the fleet includes 5 PA-31-310 Navajos, 3 Beech 18s, 1 de Havilland Canada DHC-6-300 Twin Otter, 6 Cessna 206/207As, and 2 T-1020s. The company provides technical support for the Bering Land Bridge expedition of **Alaska Airlines** to Anadyr in the U.S.S.R. Meanwhile, the small regional's enplanements are up 7% over the previous year to 31,858.

The workforce is increased by 6.3% in **1989** to 51 and orders are placed for two Mitsubishi Mu-2s. The success of its previous year's work with **Alaska Airlines** allows the company to make history. It now becomes the first FAR 135 carrier to be authorized by both the FAA and Civil Aviation Ministry of the U.S.S.R. to operate charters to the Soviet Far East from Nome. These begin on July 12.

Passenger boardings ascend a further 6.3% to 34,000. Freight traffic rises 11.1% to 730,000 FTKs.

The number of employees increases 66.7% in **1990** to 85 as President Rowe obtains 3 Beech 18Ss. Additional cities now visited include Fairbanks, Anchorage, Council, and Unalakleet.

Customer bookings plunge to 26,313.

The fleet in **1991** includes 3 Piper PA-31-350 Navajo Chieftains, 4 Beech 18s, 4 Cessna 207As, 3 T-1020s, and 1 Cessna 206.

Enplanements inch up to 27,114 and a total of 3,959,381 pounds of mail are flown.

In **1992**, another T-1020 and a Mitsubishi Mu-2 are acquired. Passenger boardings decline 10% to 24,357. Airline employment in **1993** stands at 90 and the Rowe's fleet includes 6 Navajo Chieftains, 4 Beech 18s, 4 Cessna 207As, and 1 Mu-2.

Customer bookings stop their freefall and register a 12% gain to 27,346.

Operations continue apace in **1994**. During the fall, a Commuter Air Technology CATPASS 250 (modified Beech King Air) is delivered; it is specially equipped for severe climate operations. The new aircraft is dedicated to providing Alaska-Russia linkage with service to the Anadyr, Magadan, and Cape Schmidt areas.

Passenger boardings leap ahead by 18% to 32,213 and 322,508 FTKs are also operated.

The company employs 65 during **1995** and the fleet now includes 4 Cessna 207As, 7 Chieftains, 1 Grand Caravan, 1 CATPASS 250, and 4 Beech 18s.

Overloaded with Christmas mail, a Beech 18 fails its takeoff from Nome for a December 18 service to Gambell; the aircraft rolls left and crashes. Although the plane must be written off, the pilot is not injured.

Enplanements for the year jump 30% to 41,945.

There is no change in the employee population during **1996** and the company's 17 aircraft transport a total of 47,684 passengers, a 13.7% increase.

The workforce is increased a dramatic 30.8% in **1997** to 85.

While beginning to taxi from the ramp at Buckland for a September 8 service to Noorvik, a **Hageland Air** Cessna 402C, with one pilot and six passengers, collides with a parked Bering Cessna 208B, with one pilot and nine passengers; no injuries are reported and damages are slight.

Customer bookings decline by 5.8% to 44,924. A total of 4.3 million pounds of freight and mail are also operated.

Flights continue in **1998**. While en route from Memphis to Bowling Green, Kentucky, on March 5, a Cessna 208B, with one crew and under contract to FedEx, crashes 5 mi. SE of Clarksville, Tennessee; the pilot is killed.

Passenger boardings inch up 1% to 45,000.

By the beginning of **1999**, airline employment has been reduced by 23.5% to 65.

Customer bookings accelerate 7.7% to 49,000.

BERJAYA AIR SDN. BHD.: Suite 2.05 Officer Tower, Plaza Berjaya, 12 Jalan Imbi, Kuala Lumpur, 55100, Malaysia; Phone 60 (3) 245-2828; Fax 60 (3) 245-8689; Code J8; Year Founded 1994. Tengku Adrian Tengku Mansor, on behalf of Berjaya Land, establishes a new third-level operation at Kuala Lumpur in **1994**. Regional scheduled revenue services commence with 3 Pilatus-Britten-Norman PBN-2 Islanders and 2 Chinese-made Harbin YS-12s.

Flights continue apace in **1995-1999**, during which years the fleet is enlarged by the addition of 2 de Havilland DHC-7-102s, 1 Canadair 601 Challenger executive jet, and 1 each Bell 206L LongRanger and Eurocopter SA-361N Dauphin. Airline employment grows to 63.

Thrice-daily return charters are inaugurated on August 11, **2000** from Kuala Lumpur to Tioman Island.

BERLIN EUROPEAN U.K., LTD.: Germany (1987-1991). Retired **British Airways, Ltd.** (2) German director Capt. Richard A. Twomey organizes this commuter at Cardiff in April **1987**, where it is registered. Offices are opened at West Berlin's Tegel Airport, where Twomey assumes the post of managing director and recruits a staff of 40.

Two British Aerospace Jetstream 31s are acquired and international route authority is sought and allowed by Berlin's controllers. Scheduled, revenue services commence in July linking the divided former German capital with Basel, Copenhagen, Geneva, Friedrichshaven, and Zurich.

Services proceed smoothly until October when a competing service is launched by **Pan American World Airways (1)'s Pan Am Express** using larger Avions de Transport Regional ATR42s. Unable to fight back, the B.R. staff is cut back, one Jetstream 31 is sold, and an order is placed for a B-737-3L9, which will be employed to reorient operations. A total of 5,400 passengers are flown on the year and revenues of \$1.24 million are earned.

In **1989**, the company name is changed to **Berlin European U.K., Ltd.** and the carrier is reoriented as a travel-holiday charter operation. Flights commence with a Boeing 737-3L9 leased from **Germania Fluggesellschaft, GmbH**. Enplanements for the year total 105,208.

Company employment is increased a whopping 77.8% in **1990** to 48 as a second B-737-3L9 is leased from **Germania Fluggesellschaft, GmbH**. In March, flight planning, air crew management, and financial management computer packages are purchased from the

British company AirData, Ltd. Passenger boardings surge 47.6% to 200,778 and revenues reach \$19.3 million.

In April 1991, Berlin European is merged into **Germania Fluggesellschaft, GmbH**.

BERLIN REGIONAL U.K., LTD. See **BERLIN EUROPEAN U.K., LTD.**

THE BERLINE (BERLIN-BRANDENBURGISCHES LUFT-FAHRTUNTERNEHMEN, GmbH): Germany (1991–1994). The Berline is founded at Berlin on November 1, 1991 by a group of former **Interflug DDR Airlines** pilots who wish to launch nonscheduled charter flights to destinations in western Germany, southern Europe and North Africa. Employing five Ilyushin Il-18s (two of which are modified into freighters with side cargo doors) acquired from the assets of the former East German flag carrier, the new entrant begins flying to Tunisia, Greece, and Turkey.

Destinations visited in 1992–1993 include Palma de Mallorca, Saloniki, Ibiza, Athens, Erfurt, Dusseldorf, Nuremberg, Paris, and London. A total of 60,000 passengers are flown during the latter year.

Unable to achieve economic viability or the raise the capital necessary to launch its fall schedule, the carrier must stop flying at the end of October 1994.

BERLINER SPEZIAL FLUGGESELLSCHAFT, A.G. (BSF): Flughafen Tempelhof, Berlin, D-12101, Germany; Phone 49 (30) 6951 3355; Fax 49 (30) 6951 3856; Code FC; Year Founded 1991. Formed at Berlin in 1991, President Horst Huth's German commuter names Wilfried Otto as managing director. With an initial fleet of 6 Let L-410UVPs and 5 Mil Mi-8s acquired from the one-time East German state carrier **Interflug DDR Airlines**, revenue services are inaugurated from Tempelhof Airport to Dresden, Erfurt, and Braunschweig.

In 1992, the fixed-wing fleet includes 5 Lets and 1 Beech 1900C. A year later, in 1993, 4 Lets are withdrawn and replaced by 2 leased Beech 1900Cs and 5 Cessna 206s. A third Beech 1900C is acquired in 1994.

Managing Director Otto also establishes a rotary-wing subsidiary, **BSF Hubschrauberdienste, GmbH**, at Schoenfeld Airport, and adds one each Bell 206B JetRanger and 206L LongRanger.

Flights continue in 1995–2000, during which time 3 Cessna 206s are replaced with 2 C-207A and the fleet of the helicopter airline is increased by the addition of 5 Russian-made Mil Mi-8s.

BERNER OBERLAENDER HELICOPTER, A.G.: Postfach 1, Gsteigwiler, CH-8172, Switzerland; Phone 41 (36) 229 230; Fax 41 (36) 220 972; Year Founded 1990. Berner Oberlaender is established at Gsteigwiler in 1990 to undertake regional charter services of both passengers and cargo. Daniel Hofer is appointed manager and Guenther Amann chief pilot, who launch revenue flights with 3 Eurocopter SA-315Bs, 2 AS-319Bs, and 1 AS-350B.

Flights continue for the remainder of the decade, during which time 1 Eurocopter SA-315B is replaced with an Augusta A109C.

BERRY AVIATION: 1807 Airport Drive, San Marcos, Texas 78666, United States; Phone (512) 353-2379; Fax (512) 353-2593; Year Founded 1983. Berry is set up at San Marcos in 1983 to provide executive and small group passenger charters to Central and South America and the Caribbean. Over the next 17 years, President Harry M. Berry III establishes five additional bases at Austin, Las Vegas, Dallas (DFW), and San Antonio, from which to fly its 15 Fairchild Metros and 1 Merlin.

BEST AIRLINES: United States (1981–1985). The Fort Mitchell, Kentucky-based hotel and restaurant concern Columbia Sussex Corporation establishes this subsidiary in December 1981. Application is made to the CAB in January for scheduled certification, which is received in April. Two former **Ozark Air Lines** Douglas DC-9-15s are

now acquired and are employed to inaugurate revenue flights on June 24, 1982 from Buffalo to Tampa via Albany. Enplanements for the remainder of the year are 19,737.

During 1983, Best initiates markets in two phases; first are Cleveland, Detroit, Hartford, Philadelphia, Rochester, and Syracuse. The second phase brings service to Alexandria, Atlanta, Dallas, Gulfport-Biloxi, Pittsburgh, Providence, and Roanoke. Charters are also undertaken, largely from the northeast to Florida. Passenger boardings skyrocket 180% to 56,000.

Airline employment in 1984 is 102. Recessionary and start-up costs continue to cause significant losses. Early in the year, the company stops flying to all of the cities opened during its second phase of expansion in 1983. Still, the two Douglas transports ferry 92,346 passengers, an awesome 89.1% increase.

Operations cease on October 27, 1985, at which point the operator's jetliners and certificate are purchased by **Jet America Airlines**.

BETA AIR: Russia (1994–1996). Beta is set up at Taganrog in 1994 to offer regional passenger charters. V. S. Kobzev is appointed general director and he begins revenue flights with a pair of Antonov An-32s. Flights cease in 1996.

BETA CARGO, S.A.: Rua Ministro Nelson Hungria 239 CJ, 14, Morumbi, São Paulo 05690-050, Brazil; Phone 55 (1) 184-46000; Fax 55 (1) 184-20636; Code BS; Year Founded 1998. Originally established by Ioannis Ammeronis at São Paulo in March 1994 to undertake ad hoc cargo services to a variety of South American destinations, **Brasair Transportes Aereos, S.A.** is reformed late in 1998. Roberto Klouri becomes president and operations continue with an owned B-707-351C and two leased Stratofreighters, a Dash-336C and a Dash-330C. The alliance with **VASP Brazilian Airlines, S.A.** is maintained.

BGA (BRITISH GUIANA AIRWAYS, LTD.): British Guiana/Guyana (1939–1963). Employing an Ireland amphibian, A. J. Williams undertakes charter flights for the British Guiana-Brazil Boundary Commission in 1935. Four years later, on June 30, 1939, the colony's government signs a contract with Williams for operation of a subsidized air service. The fleet of the proprietor's new British Guiana Airways, Ltd. consists of two Ireland amphibians. Experiments are undertaken with the transport of meat from country slaughtering sights to Georgetown.

In June 1944, BGA and the government agree upon the inauguration of scheduled services. These flights run every two weeks from Georgetown to Tumereng and monthly from Georgetown to Lethem and Janari. Later in the year, the Tumereng service is extended to Imbaimadai and the Lethem route is stretched to Wichabai and Lumid Pau.

The Ireland amphibians in 1945 undertake monthly flights from Georgetown to Bon Success via Kurupukari and Apotari and twice monthly from the capital to Partang via Banana Landing, Kamakusa, and Tumereng.

On September 1, a newly acquired Grumman G-21 Goose begins twice-weekly contract shuttle flights on behalf of **British West Indies Airways (1) (BWIA)** from Georgetown to Mackenzie (now Linden), where passengers can connect with BWIA frequencies.

A second Goose is added to the fleet early in 1946; however, the Mackenzie shuttle is shut down in September. In November, the first Douglas DC-3 is placed in service, followed by a second in December.

A Georgetown to St. Vincent via Port of Spain, G-21 feeder frequency is initiated on behalf of BWIA in 1948. The "air beef" meat transport service is resumed in September. In 1949, flights are undertaken to Kaieteur Falls for tourists. This route is extended to Dominica in 1950.

BGA links St. Vincent with Barbados and Grenada in 1951. Passenger traffic is thin in 1952–1954; in the latter year, enplanements total 7,500. President Williams's shareholding is purchased by the government for £170,000 in July 1955 and a management contract is signed with **British West Indies Airways, Ltd. (2) (BWIA)** for operation of the colony's carrier.

In **1963**, three years prior to independence, the airline is renamed **Guyana Airways, Ltd.**

BHARAT AIRWAYS, LTD.: India (1945–1953). On August 11, **1945** Bharat Airways, Ltd., calling itself “The Biria Line,” is incorporated as a division of the Birla industrial group. Thrice weekly Calcutta to Lucknow via Gaya scheduled Douglas DC-3 services commence on June 30, **1947**. On October 21, four-times-per-week Calcutta to Delhi via Allahabad and Kanpur flights begin. Five days later, Delhi to Amritsar and Lucknow frequencies are initiated. The Delhi–Lucknow run is ended in January **1948** and that to Amritsar in March. Flights from Calcutta to Chittagong, in the new East Pakistan, begin in June.

On May 25, **1949**, fortnightly Douglas DC-4 services are inaugurated from Calcutta to Hong Kong via Bangkok and Saigon. The Chinese civil war prevents extension to Tokyo and poor traffic soon causes the Hong Kong stop to be withdrawn.

In the summer, the company begins flying from Agartala to Calcutta and Gauhati. The Bangkok end of the service from Calcutta is extended to Singapore in October **1950**.

In September **1952**, Douglas DC-4s begin flying to Djakarta from Singapore on a weekly schedule. Following parliamentary study and debate, the decision is taken to nationalize the Indian air transport industry. An Air Corporation Bill receives presidential assent on May 28, **1953**, resulting in the creation of **Indian Airlines Corporation** on August 1; the new state enterprise now takes over Bharat Airways, Ltd. and many of its competitors.

BHOJA AIRLINES (PTY.), LTD.: Bhoja Terrace, Shahrane-Liaquat, Karachi, 74200, Pakistan; Phone 92 (21) 2410 2001; Fax 92 (21) 262 5995; <http://www.jamals.com/bhoja>; Code B4; Year Founded 1993. Bhoja Airlines (Pty.), Ltd. is established by the Bhoja Group at Karachi in the summer of **1993** to provide scheduled passenger and cargo services. M. Farouk is named chairman, a single leased Boeing 737-2S3A is acquired, and revenue flights begin on November 7 linking the company's base with Lahore and Quetta.

Operations continue for the first two quarters of **1994** at Managing Director Capt. Aijaz Ali Faizi's airline as two Yakovlev Yak-42Ds are chartered from **Lithuanian Airlines** to replace the Boeing. After a shutdown that lasts 11 months, the Russian-made planes, with Lithuanian cockpit crews and Pakistani cabin crews, begin flying twice-daily roundtrips to Islamabad and thrice-daily returns to Lahore on June 5, **1995**.

Two more Lithuanian Yak Yak-42Ds are delivered under charter in **1996** and routes are extended to Faisalabad, Multan, Peshawar, and Sukkur. Airline employment reaches 400.

Flights continue in **1997–2000**. During these years, the company operates thrice daily from Karachi to Lahore and daily to Islamabad and Multan. From Lahore, the company operates thrice daily to Karachi and daily to Multan, while daily flights are offered from Multan to Karachi and Lahore and from Islamabad to Karachi.

An international schedule is also offered with daily roundtrips from Karachi, Multan, and Lahore to Dubai.

BHY BURSA AIR LINES (BURSA HAVA YOLLARI A.O.): Turkey (1977–1981). Formed at Bursa in northwest Turkey in early **1977**, Bursa initiates scheduled passenger service to Istanbul in June using a leased Vickers Viscount. Chairman Ali Osman Sonmez and General Manager Suphi Iscen elect to return the large turboprop in August, replacing it with two CASA C-212-CB Aviocars, of which the first is named *Sonmez II* upon delivery.

Airline employment in **1978** stands at 35. Enplanements for the first full year total 39,239. In **1979**, the schedule between the company's two markets is increased to four times daily. Passenger boardings accelerate 18.4% to 48,087.

Early in **1980**, a Douglas DC-8-20 is acquired and employed to inaugurate thrice-weekly flights between Istanbul and Dusseldorf. Although plans are made for services to other gateways, some of which are actu-

ally started with three leased DC-8-50s, higher expenses, led by surging fuel prices, lead to the company's demise. Operations cease in **1981** and efforts to resume service in **1982** fail.

BIEGERT AVIATION: 22022 S. Price Road, Chandler, Arizona 85248, United States; Phone (520) 796-2400; Fax (520) 796-5895; Year Founded 1970. From a base at Chandler, Arizona, Biegert operates aerial spraying applications (crops and oil spills) in addition to contract service and cargo charter flights with a fleet of 4 Douglas DC-4s and 1 Cessna 414. James C. Jefferies is president/CEO in **1998–2000** and enjoys income of \$1.5 million.

BIG BEND AIRWAYS: United States (1977–1978). BBA is set up at Alpine, Texas, late in **1977** to provide scheduled Beech 18 passenger and cargo services to Lubbock via Midland. Although daily roundtrip revenue flights are duly inaugurated, they can only be maintained for a year.

BIG HORN AIRWAYS: P.O. Box 4037, Sheridan, Wyoming 83801, United States; Phone (307) 672-3421; Fax (307) 674-4468; Code BH; Year Founded 1979. Organized as a subsidiary of Hawkins and Powers Aviation in **1979**, Big Horn undertakes regular and charter cargo flights between its Sheridan, Wyoming, base and Casper, Gillette, and Rock Springs. The company's Piper PA-31-310 Navajos also fly to Denver and to the Utah communities of Vernal and Salt Lake City.

Operations continue apace throughout the **1980s** and into the **1990s**. During these years Robert Eisele and P & G Inc. acquire the company. By **1994**, the fleet includes 1 CASA C-212 Aviocar, 1 Cessna 340, and 1 PA-31-350 Navajo Chieftain.

In **1995–1999**, a contract is accepted to fly on-demand cargo shipments for **UPS (United Parcel Service)** and the fleet is increased by the addition of 1 each Aviocar and Chieftain.

Destinations visited include Burketown, Cairns, Cooktown, Doomadgee Mission, Edward River, Karumba, Kowanyama, Mount Isa, Mornington Island, and Normanton.

In **2000**, the company operates 2 each Aviocar and Navajo Chieftain freighters.

BIG ISLAND AIR: P.O. Box 1476, Kailua-Kona, Hawaii 96745, United States; Phone (406) 329-0991; <http://www.ilhawaii.net:80/pt/bigair.html>; Code 2L; Year Founded 1985. Organized by Lew and Shay Mims at Kailua-Kona during the summer of **1985**, this small carrier undertakes, beginning in November, scheduled and nonscheduled flights to all Hawaiian cities with a pair of Cessna 402s. Late in the decade, orders are placed for a Piper PA-31-350 Navajo Chieftain. Operations continue apace until July 1, **1989** when the company reverts to charter flights.

Scheduled flights are resumed in **1991** and enplanements total 1,650, growing to 4,800 in **1992**.

Scheduled and nonscheduled services continue to be operated in **1993–1994**, including flight-seeing charters from Kona to Hawaii Volcanoes National Park. In October of the latter year, the FAA rules that air tour operators may not fly below a minimum of 1,500 feet. The following month, Big Island is one of three state concerns to obtain a waiver, which allows them to show tourists the glories of the volcanoes from 1,000 feet.

The **1995–1999** workforce includes President Gueary Buchman, Vice President-Operations Tom Beard, and two others. On September 25 of the latter year, Flight 58, a Piper PA-31-350, with one pilot and nine passengers on a VFR sight-seeing excursion from Keahole–Kona International Airport, crashes into the NE slope of Mauna Loa volcano on the island of Hawaii. There are no survivors.

Flight-seeing tours continue in **2000**. When the right engine of a PA-31-350 with a pilot and nine passengers catches fire during an August 26 VFR excursion, the Navajo Chieftain ditches at sea 200 yards off Honoli'i Point, on the east side of Hawaii (one dead).

BIG RIVER AIR: Box 688, Fort Smith, Northwest Territories X0E 0P0, Canada; Phone (867) 872-3030; Fax (867) 872-5202; <http://www.216.123.70.312>, Year Founded 1997. Big River is established at Fort Smith in 1997 to provide year round charter service into bush locations in the Northwest Territories and to Wood Buffalo National Park and other points on the border with Alberta.

Operations begin and continue with a mixed fleet that includes 1 float-equipped de Havilland Canada DHC-3 Otter, 1 each wheel-only Cessna 172 and C-210, and 1 each wheel-or-float convertible C-180, C-185, C-206, and DHC-2 Beaver.

BIG SKY AIRLINES: P.O. Box 31397, 1601 Aviation Place, Billings, Montana 59105, United States; Phone (406) 245-9449; Fax (406) 259-8750; <http://www.bigskyair.com>; Code GQ; Year Founded 1979. Incorporated at Billings, Montana, on August 2, 1979, Big Sky Airlines, employing the purchased certificate of the former **Hensley Flying Service**, is the marketing title for the air transport division of Big Sky Transportation Company. A million shares of common stock is issued on August 13 to acquire the assets and liabilities of the previous Big Sky Airlines, which Hensley had operated between June 1978 and July 30. Dale Norby is named president and the fleet is equipped with two British Aerospace BAe Jetstream 31s and a Cessna 402C.

The 96-employee company inaugurates scheduled services to destinations in Montana, Wyoming, Idaho, and Minnesota, primarily in support of the traffic generated by the intense energy development within their borders. Enplanements for the year total 20,611. Expenses significantly exceed income and investors suffer a \$296,000 net loss.

During 1980, the commuter's fleet is increased by the addition of 2 more Cessna 402Cs and 2 Swearingen Metro IIs. The route network is expanded to provide Essential Air Service (EAS) to eight small communities in western North Dakota and eastern Montana. Simultaneously, other low-yield routes to Idaho and western Montana are discontinued.

Passenger boardings skyrocket 106% to 41,574 and revenues do even better, ascending a spectacular 600.37% to \$3.88 million. The latter achievement, however, is dwarfed by a 449.23% boost in expenses (led by fuel bills) to \$4.58 million. As a result, losses for the year increase to \$787,414 (operating) and \$976,533 (net).

The company's first major connecting hub is added in 1981 as service is extended linking Minneapolis (MSP) with the North Dakota communities of Bismarck and Jamestown and Devil's Lake. The workforce grows by 69 and 5 new aircraft are added: 2 Metro IIs, 1 Jetstream 31, and 2 Cessna 402Cs. The company also aligns with the **Braniff International Airways** computerized reservations system, which it will be forced to abandon within a year.

Bookings skyrocket 104% to 60,058 and freight is up by 200% to 984,000 FTKs. Despite these positive developments, increased fuel costs and other recessionary difficulties result in further net loss. On revenues of \$7.7 million, a whopping 98.1% boost, expenses climb 63.4% to \$7.6 million. As a result, there is an operating profit of \$137,395. The net downturn "improves" to \$495,913.

The workforce is reduced 28.6% in 1982 to 125. In March, Big Sky becomes an international carrier when it steps in to replace **Western Airline's** service from Great Falls to Calgary. Twice-daily service is extended from the company's base.

Enplanements in this recession year drop to 26.3% to 48,952. Cargo traffic plunges 57.6% to 418,000 pounds. Operating income dips 1.3% to \$7.6 million as expenses jump 8.7% to \$8.2 million. The operating loss swells to \$617,321 as another huge net loss of \$954,741 is taken.

Eighteen additional employees are laid off in 1983 and the fleet now includes 7 aircraft: 3 Metro IIs and 4 Cessna 402Cs. Much of the route network is reorganized.

Bookings decline yet again, down 20.8% to 38,791. Freight falls 17.6% to 344,000 pounds. Revenues decline 13.4% to \$6.91 million and the net loss is lowered to \$369,000.

The workforce in 1984 totals 165 and the fleet comprises 3 Fairchild-Swearingen Metro IIs and 4 Cessna 402Cs.

Customer boardings accelerate 32.9% to 51,536 and cargo climbs a healthy 13.8% to 392,000. Growth is also shown in finances. Although revenues fall 4.7% to \$6.6 million, costs drop more, down 12.1% to \$6.26 million. Consequently, the airline records profits: \$338,893 (operating) and \$20,960 (net).

Employment declines to 117 in 1985 as the company enters into a brief code-sharing feeder arrangement signed with doomed **Frontier Airlines (1)**.

Enplanements swell 5.7% to 59,572, but freight is off by 17.1% to 325,000 pounds. Revenues ascend 3.9% to \$6.85 million; however, costs accelerate 6.6% and drop the operating profit to \$178,218. There is a net loss of \$132,171.

The payroll grows 61.7% in 1986 to 186 and the fleet includes 8 Fairchild-Swearingen Metro IIs (including 5 newly leased units) and 4 Cessna 402Cs. The failure of **Frontier Airlines (1)** and the purchase of **Republic Airlines** by **Northwest Airlines** gives the small regional a golden opportunity, beginning in June, to realign its route network as one of the latest members of the Northwest Airlink code-sharing partnership. Major emphasis will be on Airlink feeder service to Billings and Bismarck in support of the major.

By year's end, the company flies to 16 cities in North Dakota, eastern Washington, and Montana, linking them with the major's services into Bismarck, Spokane, and Billings.

Passenger boardings climb 50.8% to 90,179; however, cargo is down again, by 9.1% to 296,000 pounds. Revenues increase 32% to \$8.83 million, expenses grow by 29.2% to \$8.4 million, and the operating profit is \$432,098. The net figure is a complete turnaround into a \$112,559 profit.

One more employee is hired in 1987 as one Cessna 402C is withdrawn. Most aspects of the carrier's five-year Airlink agreement are completed in January, including a new aircraft livery, the introduction of new signs, coordination of flight schedules, and the regional's adoption of Northwest's CRS code.

Big Sky's cash flow situation is significantly improved by initiation of a weekly revenue settlement procedure with its major partner.

Customer bookings accelerate an additional 47.8% to 128,308 and freight jumps 18.4% to 356,000 pounds. Revenues advance 32.7% to \$11.7 million. Costs, however, grow 38.1% to \$11.6 million, forcing the operating profit down to \$104,286 and net gain down to \$61,112.

The workforce is increased by 16.3% in 1988 to 200 and the fleet now includes 6 Metro IIs and 3 Cessna 402Cs. Orders and options are outstanding for 12 British Aerospace Jetstream Super 32s.

Northwest Airlink service is initiated in January to Kalispell, Montana. In early May, President/CEO Terry D. Marshall announces that \$500,000 capitalization has been realized by the sale of half a million shares of redeemable preferred stock to a private, anonymous investor.

The first three Jetstream Super 32s enter service during the fourth quarter, too late to have much of an impact on the heavy competition being mounted against the airline by rivals **Horizon Air** and **SkyWest Airlines**.

Still, overall passenger boardings are up 3.9% to 133,327. Competition, bad weather, and Jetstream start-up costs impact the financial picture. Revenues grow by 6.8% to \$12.51 million, but costs climb 12.7% to \$13.08 million, leaving a \$570,487 operating loss. The net loss increases to \$740,261.

Financial and contractual difficulties force the carrier to seek Chapter XI bankruptcy protection on March 14, 1989. Despite \$2 million in assets, the airline faces a long-term \$2-million debt. This development, plus falling traffic, requires that the workforce be cut 57.5% to 85 and the fleet be reduced to 3 Metro IIs and 5 Cessna 402Cs.

In May, the Montana Legislature passes a bill that allows the Billings-based regional to seek relief from delinquent property tax payments for up to three years. A reorganization plan is filed with the bankruptcy court on November 14.

Customer bookings fall 24.6% to 100,098 and cargo declines by 41.9% to 48,000 FTKs. Revenues drop 19.2% to \$10 million and losses deepen to \$1.1 million (operating) and \$1.9 million (net).

The number of employees is reduced again in **1990**, by 11.6%, to 61. In January, Big Sky files its reorganization plan with the U.S. bankruptcy court. The document provides for a decade-long payoff of secured creditors, with unsecured creditors being given the option of two shares of common stock for every \$1 of debt obligated or a 5% cash allocation. At the same time, the annual Essential Air Service (EAS) allocation is increased from \$1.6 million to \$2.5 million.

The carrier loses its Northwest Airlink affiliation on July 15 and is forced to become, once again, an independent EAS carrier. This bad fortune, plus increased fuel prices in a recessionary period, lead to worsening traffic and fiscal difficulties.

Passenger boardings plunge 77.8% to 22,213 while freight drops by 74.4% to 88,000 pounds. Revenues decline 44.3% to \$6.72 million, expenses are down 50.8% to \$6.67 million, and a \$47,506 operating profit is realized. There is also a \$1.18-million net profit.

The payroll is increased a slight 1.3% in **1991** to 76 and the fleet now includes 3 each Metro IIs and Cessna 402Cs. Downsized, the Montana carrier emerges from Chapter XI in July, becoming one of the few regionals to successfully stage such a comeback.

Customer bookings climb 4.2% to 23,124 and revenues surge 32% to \$4.57 million. Operating profit balloons to \$242,441 and net gain reaches \$557,221.

The fleet is altered in **1992** to include 6 Metroliners. Passenger boardings accelerate 14.5% to 26,466 and freight climbs 10.8% to 98,863 pounds. Revenues ascend 3.9% to \$4.75 million, expenses are up only 3.2% to \$4.47 million, and operating income is \$282,000. Net profit doubles to \$1.12 million.

Airline employment at Chairman/CEO Marshall's regional in **1993** stands at 75 and the fleet comprises 5 Metro IIs and 2 Cessna 402Cs. Cities served from hubs at Billings and Bismarck are Havre, Lewistown, Glasgow, Wolf Point, Sidney, Miles City, as well as Glendive, Montana, and Williston, South Dakota. Service to Bismarck and Williston are terminated in May, along with the hub at the former city. Consequently, customer bookings slide 14% to 22,759.

A marketing agreement is signed with **Frontier Airlines (2)** in October **1994**; under its terms, the two offer joint fares, ticketing, and baggage transfer services.

On the year, passenger boardings fall another 7.8% to 20,890 and freight drops 22.5% to 72,000 pounds. Revenues are \$5.14 million and expenses are \$5.03 million. As a result, there are profits: \$113,000 (operating) and \$28,000 (net).

There is no change in the workforce in **1995** from what it had been two years earlier. What is different is a traffic turnaround. Enplanements jump 19.6% to 24,982 while 92,016 pounds of cargo are transported. A fiscal report is not made available.

The fleet in **1996** includes 5 Metro IIs and 1 Cessna 402C.

Customer bookings accelerate another 5.9% to 26,563, but freight figures are not released. Second-half financial figures are released and show revenues of \$2.41 million and expenses of \$2.25 million. There are profits: \$143,000 (operating) and \$87,000 (net).

Early in **1997**, a new EAS contract is signed for service to seven eastern Montana communities. Destinations now visited include Billings, Glasgow, Glendive, Great Falls, Havre, Helena, Lewistown, Miles City, Missoula, Sidney, and Wolf Point. The last Cessnas and Metro IIs are removed, leaving the fleet at 6 Metro IIIs.

Passenger boardings accelerate 13.4% to 30,204. Operating revenues jump 22.3% to \$5.89 million, while expenses climb 18.2% to \$5.53 million. The operating gain doubles to \$367,000 and net profit reaches \$285,000.

During late spring **1998**, new service is inaugurated to Kalispell and Spokane.

During the last week of October, the DOT selects Big Sky, in preference to three other applicants, to take over the EAS routes of bankrupt **Aspen Mountain Air** from DFW. Aspen begins to hand over the routes in mid-November, along with the two wet-leased **Merlin Express** Fairchild 23s it has been operating. Big Sky adds two aircraft of its own

and makes arrangements to dedicate a fifth turboprop. The transfer is completed on December 15 without loss of service.

Customer bookings during the 12 months skyrocket 107.5% to 63,000.

At the beginning of **1999**, Big Sky employs 214 people and operates a fleet of 13 Metro III and Metro 23 series turboprop aircraft. It offers services to 24 cities in Montana, Washington, North Dakota, Texas, Oklahoma, Arkansas, and Missouri.

During the first quarter, 3 Metro 23s are leased from CIT Group for a five-year period.

A code-sharing agreement is signed between **Northwest Airlines** and Big Sky on May 13. Two days later, Northwest begins to publish its code on select Big Sky flights between Billings and 11 other in-state markets, including Glasgow, Havre, Lewistown, Glendive, Miles City, Sidney, Missoula, Helena, Kalispell, Great Falls, and Wolf Point.

Dual-designator services are also offered on Big Sky flights between Billings and Spokane and between Bismarck and Sidney. Passengers traveling on Big Sky with Northwest-connect itineraries also benefit from one-stop passenger and baggage check-in and WorldPerks frequent flyer miles.

Customer bookings increase 87.9% to 118,000.

Metro flights commence on February 14, **2000** between Billings and Denver via Bozeman and from Denver to Dallas (DFW) via Enid and Ponca City.

Nonstop Metro service is introduced from Dallas (DFW) to Roswell, New Mexico, on October 11; it is followed by new flights from Dallas (DFW) to both Carlsbad and Hobbs on October 21.

BIMAN BANGLADESH AIRLINES/BANGLADESH BIMAN, LTD.: Biman Bhaban, 100 Motijheel Commercial Area, Dhaka, 1000, Bangladesh; Phone 880 (2) 956 0151-89; Fax 880 (2) 863 005; <http://www.bangladeshonline.com/biman>; Code BG; Year Founded 1972. Following the independence of the former East Pakistan and the cessation of operations into the area by **Pakistan International Airlines Corporation (PIA)**, this new state carrier is set up on January 4, 1972. With a Douglas DC-3 donated by India and the 2,500-member former local PIA staff, domestic services are launched from Dhaka to Chittagong, Sylhet, and Jessore, on February 4.

The new DC-3 with five crew crashes near Dhaka on February 10 during a training flight. There are no survivors and service must be halted. On March 1, 2 Fokker F.27-200s, also donated by India, replace the wrecked DC-3.

Beginning on March 4, and under contract, **British Caledonian Airways, Ltd.** B-707-320C Stratoliners handle the carrier's weekly Dhaka-London charter route as the carrier awaits its first owned jetliner. The British government waives the strict rules applied to charter operations, in this case on humanitarian grounds, and the service more or less becomes a scheduled one. The Fokkers resume flights to the carrier's inaugural destinations on March 9. The first scheduled international service is flown twice-daily with a leased DC-6B between Dhaka and Calcutta, beginning on April 28.

The governments of Australia and the Netherlands, beginning in May, provide Bangladesh's new carrier with 4 F.27-400s and 4 F.27-600s. Under Presidential Order No. 125, Biman Bangladesh is officially formed on October 27, with Musleh Uddin Ahmed as the first of many chairmen.

With a leased **Donaldson International Airways, Ltd.** Boeing 707-321C, twice weekly Dhaka to London scheduled service is inaugurated on January 1, 1973. The last of the donated Fokkers enters service by June. During the remainder of the year, the domestic network is increased to seven cities, including Comilla, Ishurdi, and Cox's Bazaar. Meanwhile, on June 18, a B-707-321 leased from **Pan American World Airways (1)** is employed to take over the London service previously flown with the Donaldson aircraft. On December 30, a B-707-331C is purchased from the American carrier **Northwest Airlines**. It replaces the Pan Am aircraft next day, with Dubai simultaneously added as a stop on the London service.

In early 1974, a route is opened with the ex-American jetliner to Bangkok. Freight traffic for the year grows 14% and a total of 431,753 passengers are flown.

Two Boeing 727-100Cs are delivered in 1975, allowing the opening of service to Frankfurt by the larger B-707-331C. Requests are made for additional Stratoliners and one, a Dash-340C, arrives from **Pakistan International Airlines Corporation** on November 6. Cargo skyrockets 83% and passenger boardings increase 5% to 453,000.

The workforce stands at 3,124 in 1976. The two B-727-100Cs are replaced after April, following delivery of the former **Transair Canada, Ltd.** B-707-351C *Fort Garry*, purchased on February 8. New service is extended to Dubai, Karachi, Bombay, and Abu Dhabi.

Passenger boardings accelerate a modest 2% to 459,565 and cargo soars again, up by a surprising 68%. International routes are started to Singapore, Jeddah, and Amsterdam in 1977. Two more F.27-600s are acquired and Thakurgaon joins the domestic network.

Chairman A. G. Mahmood and Managing Director Azimuddin Ahmed oversee a workforce of 3,200 in 1978 and a fleet that includes 3 B-707-331Cs and 6 F.27-600s. Under an Australian government aid program, 60 Bangladeshi engineering staff are trained at Sydney by **Qantas Airways (Pty.), Ltd.** Enplanements total 548,007.

The number of employees is increased by 5.2% in 1979 to 3,558. Routes are extended to Athens, Kuala Lumpur, Tripoli, and Muscat.

A Bengali-speaking hijacker commandeers an F.27 with 43 passengers en route from Jessore to Dhaka on July 24, and forces it to land in Calcutta, where he demands a \$1 million ransom. Authorities seize the pirate several hours after his arrival and all of the hostages are freed unharmed. The perpetrator will be extradited back to Bangladesh later in the year.

While on a training flight with four crew near Savar Bazar on November 18, both engines of an F.27-600 flame out, requiring a forced landing in a field; there are no fatalities.

Freight climbs by 26.4% and passenger boardings are up 12.2% to 624,154. On total revenues of \$51.9 million, a \$2.6-million net profit is earned.

Tokyo, Jakarta, Dhahran, and several local communities join the route network in 1980.

Just after takeoff from Singapore on April 4, all four engines of the B-707-373C, *The City of Bayezed Bostami*, with nine crew and 65 passengers, lose power. The Boeing sinks back onto the runway and skids 2,000 ft. stopping off the runway; although the aircraft must be written off due to its damages, there are no fatalities.

On June 13, an order is placed for 2 Fokker F.28-4000s. Customer bookings dip 1% to 558,000, but cargo is up 3% to 18.14 million FTKs.

The workforce in 1981 totals 4,450 and the fleet includes 11 aircraft. In April, Manzoor-ul-Karim is appointed managing director and service is started to Kuwait and Rome. To assist on domestic and regional routes, the 2 F.28-4000s are delivered in the autumn, replacing 2 F.27-600s on the main trunk route from Dhaka to Chittagong. They also fly to Kathmandu, Calcutta, and Rangoon.

Cargo is up 3.3%, but passenger boardings decline 3.5% to 592,000. Expenses are \$96.4 million on revenues of \$89.9 million, leaving an operating loss of \$6.5 million and a net loss of \$8.5 million.

An ICAO grant continues in 1982 to allow personnel training, which is provided under contract by **American Airlines, Pan American World Airways (1), Qantas Airways (Pty.), Ltd., KLM (Royal Dutch Airlines, N.V.), Linjeflyg, A.B., and Philippine Air Lines**. In the summer, an ICAO visiting team recommends a \$15-million aid program for the period through 1986. Operating and net losses mount.

As losses deepen in 1983, domestic service drops to six destinations. Three DC-10-30s are purchased from **Singapore Airlines, Ltd.**; led in by the *City of Dhaka*, all are delivered in August and allow retirement of the three oldest B-707 Stratoliners, which have spent most of the last decade ferrying primarily Bangladeshis to and from Europe. With a maintenance contract signed with **KLM (Royal Dutch Airlines, N.V.)**, the new Douglas wide-bodies are employed to inaugurate Royal Bengal service over the old Stratoliner routes.

Chief Engineer James McLachlan is the first of 12 ICAO expatriate experts joining the carrier in 1984 to provide assistance in key areas.

In the worst air disaster in the young country's history to date, an F.27-600 with 4 crew and 45 passengers and en route from Dhaka to Chittagong on August 5, lands 550 m. short of the runway in a driving rainstorm at the first named city; there are no survivors.

In November, Faizur Razzaque is named managing director, the 11th CEO in 12 years. A total of 563,734 passengers are carried on the year and a net gain of \$5.2 million is celebrated.

Business-class service is introduced in the summer of 1985. Heavy interest payments to Bangladeshi banks for the DC-10s eats up so much revenue that the airline turns itself from being profitable to a money loser. The carrier now becomes one of the few in the world to receive direct financial assistance from the United Nations. Funds from the UN Development Program, administered by ICAO, begin to come into the country and makes up about 10% of the annual UNDP allocation to the nation.

Passenger boardings are up 24% to 741,755, while freight skyrockets 57% and revenues advance to \$125 million. An operating profit of \$6.6 million is reported; however, there is a \$719,000 net loss.

In 1986, a ticket and reservations office is opened in Dhaka on a 24 hours-a-day basis and a B-707-351C, first operated by **Northwest Airlines**, is acquired. Traffic figures are not provided and the previous year's operating profit becomes a \$4.6-million operating loss and the net loss grows to \$1.8 million.

Enplanements total 878,392 in 1987 and the company continues to suffer significant financial losses: \$5.9 million (operating) and \$11.7 million (net).

Airline employment is increased by 2.7% in 1988 to 5,187 and the fleet now includes 3 F.27s, 2 F.28-4000s, 3 B-707-331Cs, 1 B-707-351C, and 3 DC-10-30s. In an effort to attract business travelers, the company eliminates first-class service aboard its DC-10-30s, replacing it with business-class.

A B-707-351C is leased to the Nigerian freight operator **GAS Air Cargo, Ltd.** in June. Coming in from Dar es Salaam on December 13, the Stratofreighter, with eight passengers, misses two approaches to Cairo and is diverted to Luxor. Running out of fuel, the plane crashes into a housing area near Kom-Omran, killing all aboard, plus one person on the ground.

Passenger boardings accelerate 12.1% to 999,308 (384,276 domestic) and freight grows a slight 1.5% to 74.26 million FTKs. Revenues increase by 4.3% to \$134.2 million and losses decline to \$3.3 million (operating) and \$8.47 million (net).

The payroll is cut by 5.2% in 1989 to 4,917. A fourth DC-10-30—the last manufactured at Long Beach—enters service early in the year as the last 3 B-707 Stratoliners are sold. In July, the government allows a 40% increase in domestic fares, the first such raise in two years, which still do not break even.

Customer bookings inch up to pass the million mark in annual boardings for the first time (1,007,000) and cargo surges 13% to 83.77 million FTKs. Profits enter the black for the first time in four years as a net gain of \$1.03 million is reported on revenues of \$154.7 million.

Company employment declines another 8.5% in 1990 to 4,500, but otherwise, this is a good year, highlighted by the September delivery of the first of 3 (later reduced to 2) ordered British Aerospace BAe ATPs (later known as the Jetstream 61). The aircraft, the first of their type in Asia, are flown from the U.K. over a route that avoids the Persian Gulf region, now in crisis.

The second ATP arrives on December 17, at which time it is revealed that part of the financing for the new turboprops has come from the governments of Canada and the U.S. All are employed on domestic service, with occasional regional flights to Calcutta, Katmandu, and Rangoon.

Passenger boardings swell 3% to 1,034,000 and freight climbs 9% to 93.9 million FTKs. Revenues total \$164.9 million and the net gain reaches \$4 million.

The fleet in 1991 includes the 2 BAe ATPs, 4 Douglas DC-10-30s, and 2 Fokker F.28-4000s. The 3 withdrawn Fokker F.27s are sold to **Satair**,

A.S. of Denmark for \$6 million per aircraft. In November, senior civil service official Abdul-Muyeed Chowdhury becomes president/CEO.

The workforce is increased to 5,280 in **1992** and a total of 1,081,322 passengers are transported. Additionally, the carrier flies 84.48 million FTKs.

In **1993**, President Chowdhury oversees a workforce of 3,280 and a fleet comprising 2 ATPs (now relabeled Jetstream 61s), 6 DC-10-30s, and 2 F.28-4000s. Domestic destinations visited include Chittagong, Cox's Bazaar, Sylhet, Jessore, Ishurdi, Saidpur, and Rajshahi. International markets are Abu Dhabi, Calcutta, Delhi, Dhaka, Dubai, Doha, Frankfurt, Jeddah, Karachi, Kuala Lumpur, Kuwait, London, Muscat, Nagoya, Narita, New York, Paris, Rangoon, Rome, Riyadh, Singapore, and Sharjah. One of the DC-10-30s is damaged in an accident, requiring a six-month lease of a replacement from McDonnell Douglas.

In March, twice-weekly DC-10-30 roundtrips commence between Dhaka and Jakarta via Singapore.

In **1994**, construction begins on a new six-story headquarters building near Zia International Airport, as well as a 72-building housing complex for Biman staff.

Destinations visited in **1995-1996** include Abu Dhabi, Bangkok, Bombay, Brussels, Calcutta, Delhi, Dubai, Doha, Frankfurt, Hong Kong, Jeddah, Karachi, Kathmandu, Kuala Lumpur, Kuwait, London, Muscat, New York, Paris, Rome, Riyadh, Singapore, Tokyo, and Yangon. During the latter year, 2 A310-324s are acquired and placed on the Asian routes.

A block-space code-sharing agreement is signed with **Korean Airlines/Korean Air (KAL)** in August **1997**. Under its terms, Biman purchases space on a weekly Korean B-747-2B5F service to transport locally made ready-to-wear garments to the U.S. via Bangkok and Seoul.

During October, the government of Saudi Arabia demands that thousands of illegal Bangladeshis leave the country. Many of these flock to Jeddah and Riyadh Airports, where they become stranded. On October 16, Biman, which operates four weekly flights to Jeddah and Riyadh, agrees to reroute two weekly return flights from New York via Jeddah to fly the Bangladeshis home. The airlift begins on October 21.

While on final approach to Sylhet in heavy fog on a December 3 service from Dhaka, Flight 609, an F.28-4000 with 4 crew and 85 passengers, makes a belly landing into a rice paddy field 3 km. N and short of the runway following several aborted landing attempts. The aircraft is badly damaged, and although 17 aboard are injured, there are no fatalities.

Enplanements total 1.2 million and operating revenues of \$263 million are generated. The net loss is estimated at \$6 million, despite the carrier's annual subsidy.

In a Dhaka interview with Reuters, Ltd. on June 26, **1998**, Managing Director Mohammad Rafiqul Islam confirms that his airline is seeking alliances with major foreign carriers to boost its passenger and cargo capacity. He also announces that, in the new fiscal year beginning on July 1, the company will add one new weekly flight each to Jeddah, Rome, and London and open a new service to Manchester in the U.K.

Having decided that it can no longer support the state airline's loss-generating domestic routes, State Minister for Civil Aviation and Tourism Mosharraf Hossain announces, on June 30, a program of privatization and diversification. Over the next six months, the government will divest itself of control over 49% of the carrier's shares, placing them up for sale by December. In addition, plans are made to turn domestic services over to the new domestic independent airlines, **Air Parabat, Ltd.** and **GMG Airlines, Ltd.**, leaving Biman to concentrate on international operations.

Asked if the closure of **Philippine Airlines (PAL)** the previous day has had any impact on privatization plans for Biman, Minister Hossain reassures reporters from Reuters, Ltd. and other media outlets on September 24 that it has not. The decision to sell 40% equity shareholding to the public and 9% to employees is firm.

Hossain also indicates that the World Bank will provide \$2 million to help the airline restructure its management and to appoint consultants.

The government, which has voted to allow Biman to seek a strategic airline partner, will purchase an F.28-4000 to replace the one lost in December and will sell 2 ATPs to a Nepalese operator for \$5.5 million.

It is announced on October 18 that the carrier is seeking to lease a fifth DC-10-30 as soon as possible. Capacity will be needed for next year's Hady flights.

A total of 1.26 million passengers and 31,490 tons of cargo are transported during the year. Its assets and properties are valued at 11.25 billion taka (\$231 million) and liabilities are 6.60 billion taka. Revenues reach 12 billion taka, but there is a 370-million taka operational loss.

The fleet at the beginning of **1999** includes 2 A310-324s, 4 DC-10-30s, 2 BAe ATPs, and 2 F.28-4000s. Airline employment stands at 5,500 and 25 international destinations are served.

During the first quarter, the government determines the details for the airline's privatization. A total of 49% will be sold in the private sector (40% to a foreign partner and 9% to employees) by the second half of the year 2000, with the remaining majority held by the government. As the process unfolds, the airline will employ a \$2-million grant from the World Bank to restructure its management and appoint consultants.

Also during these months, another purchased F.28-4000 is delivered by Fortis Jet Prop, acting as agent for Jakarta, Indonesia-based Tridaya Arta Mulia.

The fifth DC-10-30 enters service on April 25, immediately operating Hady flights to Saudi Arabia.

Invitations are let for bids and, on May 4, Corporate Affairs Manager Anwar Hossain Khan tells reporters that 44 airline specialist companies, consulting firms, and consortiums have submitted proposals. Khan indicates that the government will appoint a special consultant to select the equity partner.

On December 19, a DC-10-30 is chartered for 36 months for use on the London, New York, and Hong Kong routes.

Enplanements for the year total 1.11 million and 130.94 million FTKs are operated. Financial results are not released; however, it is commonly known that annual losses in the millions of dollars continue to be suffered.

Airline employment stands at 7,924 at the start of **2000**, a 3% increase over the previous year.

On February 1, 2 B-777-21Bs are wet-leased for two months from **China Southern Airlines Company, Ltd.** The wide-bodies operate 128 flights between Dacca and Jeddah transporting Muslim Hady pilgrims.

The government of Bangladesh shows renewed interest in privatization of the airline. During the summer, the World Bank, which has been involved with the airline on a financial basis, appoints a group of consultants to help find a foreign investor willing to take upwards of a 40% stake.

A third weekly DC-10-30 roundtrip from Dhaka to New York (JFK), this one routed via London (GTW) rather than Brussels, begins on June 3.

In response to a government privatization plan announced on August 1, heavily unionized company employees hold protest rallies on August 3-4 and threaten massive strikes if the privatization occurs.

On October 27, an ACMI contract is signed with **Corsair, S.A.** for use of a B-747-312 during the next Hady season. A sixth DC-10-30, leased from Pegasus Aviation, arrives at the end of the month and is assigned to the routes from Dhaka to Western Europe. The carrier now offers 16 domestic and 102 international frequencies.

BIMINI ISLAND AIR: 1625 West Commercial Blvd., Ft. Lauderdale, Florida 33309, United States; Phone (954) 938-8991; Fax (954) 938-9524; Year Founded 1992. Mike O'Brien sets up BIA at Ft. Lauderdale, Florida, in **1992** to offer executive and small group passenger charters to Bimini and other Caribbean destinations. Within eight years, the company employs eight pilots. From Ft. Lauderdale, the carrier flies 4 Cessna 402s and 2 Swearingen Metro IIs. One each C-402 and Metro II are also stationed at West Palm Beach.

BINTER CANARIAS, S.A.: Apto Gando, Apto So Gran Canaria, Apto Los Nonson 38.297, Tenerife, Canary Islands, 35071, Spain;

Phone 34 (28) 579 601; Fax 34 (28) 264 822; <http://www.bintercanarias.com>; Code NT; Year Founded 1988. Binter Canarias is formed by **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** at Las Palmas in January 1988. The parent provides \$54 million capitalization, with another large grant also made available by the European Commission. It is one of several regional or feeder airlines which the state carrier has planned to use as replacements for **Aviacion y Comercio, S.A. (Aviaco)** on flights to the Canary Islands and in which it takes substantial ownership; it is also the first to inaugurate flights.

Manuel Barreto is named president and a fleet is assembled comprising 3 Avions de Transport Regional ATR72-210s and 4 Airtech (CASA/Nurtanio) CN-235s. The latter are the only ones operated in Europe by a commercial airline.

Scheduled return revenue services to various destinations in Spain and the Canary Islands commence in March 1989 with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** flight crews lent to the regional to help get it started. In May, the flag carrier's pilots, under union orders, go out on strike over the number of hours flown and shut the new entrant down for two days.

In July, Luis Dans Ricoy, the parent's commercial director, is named president with the general manager-engineering, Jose Manuel Chicot, as acting managing director. The schedule is reduced to just one route, Tenerife to Gran Canaria.

Passenger boardings total 219,817 and revenues of \$5.7 million are generated. Start-up costs force an operating loss of \$2.87 million and a net loss of \$6 million.

Company employment skyrockets 87.3% in 1990 to 281. During the winter season, the number of flights between the two islands increases to 10 rotations-per-day. Customer bookings double to 575,000.

The payroll is cut to 150 in 1991 as Joaquin Martinez-Vilanova becomes president, with Rodolfo Nunez as managing director. The fleet now includes 5 ATR72-210s and 4 Airtech CN-235s. Passenger boardings shoot up 66.3% to 868,182 and freight skyrockets 126% to 330,000 FTKs.

The workforce grows by 34% in 1992 to 201 as 2 additional ATR72-210s and 1 CN-235 join the fleet. Customer bookings balloon 91.4% to 1,661,745 and cargo is up an almost unbelievable 275.8% to 1.24 million FTKs.

Airline employment is increased in 1993 to 230 and the fleet now includes 6 ATR72-210s and 5 CN-235s. Scheduled departures total 36,900, passenger boardings climb another 12.8% to 1,873,863 while freight rises 41.4% to 1.75 million FTKs.

In 1994, Javier Alvarez Gonzales becomes president, with Luis Fonzelez Mantana as managing director. The Canary Island destinations visited include Lanzarote, Tenerife, Gran Canaria, Fuerteventura, and Las Palmas.

The number of scheduled departures ascends to 37,900 and customer bookings increase 2% to 1,910,680, but cargo drops 15.6% to 1.47 million FTKs.

While taxiing out for takeoff from Arrecife on an October 16, 1995 service to Las Palmas, Flight 585, a DC-9-32 with 5 crew and 26 passengers, misses the correct turn onto the ramp and goes over a 5-ft. high embankment onto rough ground, breaking its nose landing gear. There are no injuries reported.

Enplanements decline to 1,828,620 during the year and freight drops to 1.35 million FTKs.

Airline employment is increased by 34.8% in 1996 to 310. The company's 14 aircraft transport a total of 1,807,112 passengers, a 1.2% dip; cargo also falls, as freight FTKs operated drop 12.7% to 1.18 million.

Destinations visited in 1997 include El Hierro, Fuerteventura, Funchal, Lanzarote, Las Palmas, Santa Cruz de La Palma, and Tenerife.

Traffic is reported through October and show customer bookings down 11.5% to 1,341,278. Freight falls 8.4% during the same period to 881,000 freight FTKs.

Flights continue in 1998. Passenger boardings for the full 12 months rise 16.5% to 1.87 million, but cargo is down 9.2% to 19.55 million FTKs.

Airline employment at the beginning of 1999 stands at 310.

The company is sold on May 17 to a group of local banks and businesses for \$35 million.

The new ownership is divided between Hesperia, a tourism concern (51%), two banks (40%), and Mapfre Guanarteme, an insurance company (9%).

Passenger boardings rise 2.1% to 1,913,000 and 2,997,000 FTKs are operated. This year the workforce is cut 1.3% and totals 306 at the start of the new millennium.

BINTER MEDITERRANEA, S.A.: Aeropuerto de Malaga, Salidas Nacionales, Oficinas 36-37, Malaga, E-29004, Spain; Phone 34 (22) 264 822; Fax 34 (22) 224 5084; Code AX; Year Founded 1989. Binter Mediterraneo is formed at Madrid by **Iberia Spanish Airlines (2) (Lineas Areas de Espana, S.A.)** in late 1989. It is one of several regional or feeder airlines that the state carrier has planned and in which it takes substantial ownership; it is the second to inaugurate flights. Jose Maria Marin-Domenech is named president and a fleet is assembled during 1990 comprising one CASA/Nurtanio CN-235-100 and an Avions de Transport Regional ATR72-210. Operations, scheduled to commence in December, are delayed.

In 1991, Joaquin Martinez-Vilanova, president of **Binter Canarias, S.A.**, is named president of this carrier as well, with Marin-Domenech now managing director. Four more CN-235s are delivered and scheduled revenue services are initiated in June to Alicante, Almeria, Malaga, Barcelona, Seville, Zaragoza, and Valencia. Enplanements total 17,000.

Operations continue apace in 1992 as flights are inaugurated to the Eastern Levant, France, Italy, Malaga, and North Africa. Enplanements total 303,429.

Airline employment in 1993 stands at 170. Passenger boardings decline 23.6% to 245,493 while freight traffic is off by 57.1% to 151,000 FTKs.

The workforce is cut to 120 in 1994 as Javier Alvarez Gonzalez, CEO of sister **Binter Canarias, S.A.**, becomes president. The fleet now includes 4 CN-235-100s, 1 of which is leased back to its manufacturer.

Traffic figures are reported through September and show customer bookings up 2.9% to 198,042. Cargo, on the other hand, plunges another 59.4% to 52,000 FTKs.

The fifth CN-235-100 enters service in 1995 and enplanements total 229,797. The 5 aircraft haul a total of 189,446 passengers in 1996, a large 21.3% decline.

Destinations visited in 1997 include Almeria, Melilla, and Valencia. Traffic figures are provided through September and show customer bookings slipping 0.3% to 141,380.

Flights continue in 1998. Passenger boardings accelerate 13% to 223,000.

Airline employment at the beginning of 1999 stands at 70. Customer bookings rise 40.3% to 313,000. Weekly roundtrips between Granada and Marrakech are started on April 1, 2000.

BIRA AIR TRANSPORT, LTD.: Thailand, (1968-1975). In April 1968, **Continental Air Service**, the Southeast Asian subsidiary of **Continental Airlines**, provides support to Bangkok businessmen who form the air taxi operation Bira Air Transport, Ltd. to provide passenger and cargo flights about Thailand.

Operations continue apace until C.A.S. shuts down in 1975.

BIRD AIR FLEET: P.O. Box 373, 19 Upland Road, Atkinson, New Hampshire 03811, United States; Phone (207) 762-3150; Fax (603) 382-1697; Year Founded 1972. Peter E. Torosian establishes Bird at Atkinson, New Hampshire, in 1972, to provide executive and small group passenger charters to and between airports in the Boston region, as well as throughout the Northeast U.S. Flights operated by the company's seven pilots begin and continue from five locations.

Additionally, the company undertakes cargo services, air ambulance flights, aircraft repair and maintenance, and aircraft maintenance.

A Piper PA-31-350 Navajo is flown from Bangor as is another from Albany County Airport in New York. A PA-31-310 is based at Burlington,

Vermont, while 1 each PA-42 Cheyenne 400LS and PA-23 Aztec are based at Manchester, New Hampshire. Another Navajo is kept at Northern Maine Regional Airport at Presque Isle.

By 2000, the workforce totals 16 and annual revenues each \$2 million.

BIRGENAIR, A.O.: Turkey (1988–1996). Birgenair, A.O. is established at Istanbul in 1988 to provide ad hoc all-cargo and passenger charter flights into Europe, the Mideast, and North Africa on behalf of the Turkish travel company Oger Tours. Founder Cetin Birgen also becomes managing director and a leased fleet comprising 1 Boeing 757-200 and 1 ex-Spantax S.A. Transportes Aereos Douglas DC-8-61F is assembled.

Revenue services begin in early 1989 and the B-757 is withdrawn in 1991 in favor of a B-737-3M8. Operations continue apace in 1992. Airline employment in 1993 stands at 94, and as recovery from the recent economic downturn gathers momentum two B-757-225s are chartered.

Mohib Ishmal is appointed chairman/president in 1994 and the fleet now includes 2 B-737-3M8s and 1 leased B-757-225. The workforce now stands at 151 as the company begins to concentrate solely upon passenger lift.

By 1995, Birgenair has a full charter schedule that includes October–April winter flights to points in southern Europe and the Caribbean and April–September summer services in northern Europe. Also during the spring, the carrier is involved in the airlift of Muslim Hadj pilgrims to the holy sites in Saudi Arabia.

The fleet at the beginning of 1996 includes 1 owned B-737-2M8A, 1 B-737-2N8A leased from Yemenia (Yemen Airways), 1 owned B-757-225, and 1 B-767-269ER leased from Kuwait Airways Corporation.

After the B-767 scheduled to provide transatlantic service has hydraulic problems that force its grounding, the B-757-225 owned by Birgenair is wet-leased at the last moment to the Dominican Republic airline Alas de Transporte Internacional, S.A. It is used to transport European tourists to and from the Dominican Republic, largely on behalf of the German tour operator Oger Tours.

On February 6, just after takeoff from Puerto Plata's General Gregorio Luperon International Airport as Flight 301 for Gander, Berlin, and Frankfurt with 13 crew and 176 mostly German nationals aboard, the jetliner turns from an altitude of 7,000 ft. and crashes into the Atlantic Ocean; there are no survivors. The USN and NTSB assist and investigate, although their involvement is initially hobbled by a shortage of salvageable wreckage and dozens of missing bodies.

USN divers locate the black box flight recorders beneath the sea on February 15 and recover them on February 28. Dominican government officials announce the cause of the crash as a faulty airspeed indicator, which had misled the crew into believing the aircraft had sufficient speed to maintain its altitude.

Birgenair suspends operations right after the crash and although cleared of any role in the disaster, it never restarts.

BIRKETT AIR SERVICE, LTD.: United Kingdom (1932–1953). George Birkett forms his air charter operation at London (Heston) in 1932. Flights are started in February 1935 with a de Havilland DH 85 Leopard Moth and a Miles M.4 Merlin, the former aircraft being lost in a Heston crash on July 10.

Two more DH 85s are received in 1936 and these fly long-distance, on-demand services to the Middle East and Africa, as well as press and cargo flights about the U.K. Another Leopard Moth is received in June 1937.

All operations are suspended upon the outbreak of war on September 3, 1939; a DH 90 Dragonfly on order is accepted in December and sold in March 1940.

In January and March 1947, a DH 89A and an Airspeed AS.65 Consul are, respectively, accepted. These are employed to resume company business from London (Croydon) in May. Another Dragon Rapide is taken in April, followed by a third in May 1948, the same month in which a Percival Proctor 4 is acquired.

Under a British European Airways Corporation (BEA) associate agreement, scheduled flights Shoreham–Deauville are inaugurated on July 1, 1950. Summer pleasure charters are flown in 1951 and 1952, with sufficient demand in the latter year for some flights to be offered from London (Northolt).

Unable to begin two scheduled routes to Alderney in summer 1953 and without the previous year's pleasure charters, the carrier stops flying on July 31.

BIRMINGHAM EUROPEAN AIRWAYS, LTD.: United Kingdom (1989–1992). Maersk Air, A.S., Brymon Airways, Ltd., and British Airways, Ltd. (2) jointly acquire ownership of Birmingham Executive Airways, Ltd. in the spring of 1989 and rename it Birmingham European Airways, Ltd. The three begin to remodel their subsidiary into an important European regional and increase its employee population by 47.9% to 247.

During the summer, the old fleet of 3 Grumman G-159 Gulfstream 1As and 3 British Aerospace BAe Jetstream 31s is upgraded by the delivery of 2 leased BAe (BAC) 1-11-408EFs and 1 BAC 1-11-500 from British Airways, Ltd. (2) and 2 Fokker 50s from Maersk Air, A.S. The BACs inaugurate twice-daily scheduled passenger flights from Birmingham to Copenhagen while the Fokker 50s initiate services from the same British city to Amsterdam, Paris, and Stuttgart. The company's first domestic route, from Birmingham to Newcastle, is also started.

Enplanements skyrocket 90.7% for the renamed enterprise, climbing to 92,300. Revenues also increase an impressive 132.1% to \$30.7 million.

Company employment is increased by 39.7% in 1990 to 346. Five more BAC 1-11s enter service and they, together with the older aircraft, receive the new livery indicative of the company's new corporate identity. The Jetstreams are put up for sale as new jet routes to Belfast, Stockholm, and Cork are added to the system. Passenger boardings increase 170% to 215,000.

The fleet in 1991 includes 3 Jetstream 31s, 1 BAe (BAC) 1-11-401AK, 2 1-11-408EFs, 1 1-11-416EK, and 2 G-159 Gulfstream 1As. BAC service to Copenhagen is launched in January. Enplanements this year climb to 250,491 and freight reaches 433,000 FTKs.

One Jetstream 31 is taken out of service in 1992; otherwise, operations continue apace. In March, frequencies on the Belfast route are increased to five per day. On April 1, weekly BAC Saturday roundtrips to Rome and Milan are introduced. The new frequencies complement the twice-daily weekday and single Sunday return services already offered. On May 1, daily BAC return service is launched to Dublin, along with a Saturday roundtrip from Birmingham to Cork.

Later in May, it is announced that the carrier will be merged with Brymon Airways, Ltd., becoming Brymon European Airways, Ltd. The union is completed on October 25.

BIRMINGHAM EXECUTIVE AIRWAYS, LTD.: United Kingdom (1982–1989). To exploit several thin, long-haul routes abandoned by British Airways, Ltd. (2), Trevor G. Jones forms this regional at Birmingham Airport in November 1982. A pair of BAe Jetstream 31s are delivered in late April–early May 1983, allowing Birmingham Executive, with a staff of 47, to begin third-level passenger services over a Birmingham–Zurich route on June 8. To attract a desired clientele of business travelers, hot meals and complimentary beverages are offered on all flights. Enplanements through December total 7,000.

By 1984, the fleet has grown to include 3 Jetstream 31s and additional international regional routes are started to Amsterdam, Copenhagen, Geneva, Milan, and Stuttgart.

The carrier becomes the first U.K. operator of the SAAB-Fairchild SF340 early in 1985, placing the Swedish-American turboprop into business-class service to Switzerland, Denmark, and other European markets in March. Boardings for the year are 27,276.

Airline employment stands at 97 in 1986, as Geoffrey Simmonds becomes chairman. Unhappy with the SAAB 340A, it is returned to its manufacturer and the fleet reverts to 4 Jetstream 31s (1 leased) in the

spring. The first 2 of 3 ex-Philip Morris corporate Grumman G-159 Gulfstream 1Cs, refurbished and leased long-term, arrive in late fall. When the British government makes available a series of \$450,000 grants for new services out of provincial cities, BEA commences Birmingham–Dusseldorf and Frankfurt flights in September. Service to previous destinations is also so financed.

The workforce is increased to 130 in 1987; however, the leased Jetstream is returned. The third G-159 arrives in April. A total of 52,000 passengers are flown on the company's 9 routes. That figure increases to 50,000 in 1988. In the spring of 1989, **Maersk Air, A.S., British Airways, Ltd. (2), and Brymon Airways, Ltd.** jointly acquire the airline and rename it **Birmingham European Airways, Ltd.**

BISCAYNE HELICOPTERS: 13955 SW 127th St., Building. 121, Tamiami Airport, Miami, Florida 33186, United States; Phone (305) 252-3883; Fax (305) 378-4407; Year Founded 1970. BH is set up at Miami in 1970 to provide executive and public passenger charters in the South Florida area. In 1988, the company receives its first support contract from Channel 7, a local television station. An Aerospatiale AS-350B AStar is dedicated to the search for news; however, it is soon replaced with a Bell 206B JetRanger. The following year, the company begins flying a JetRanger on behalf of Channel 6.

In 1990, President Paul Barth's company enters the EMS medical helicopter field, employing a Bell 206L LongRanger on behalf of Lower Florida Keys hospital at Key West. The Bell is soon replaced with an Agusta A-109. Over the next three years, another Agusta A-109 enters service as the company begins flying on behalf of Fisherman's Hospital at Marathon Key and Mariner's Hospital at Taverner, as well as Baptist Hospital at Tamiami, near Miami.

When Hurricane Andrew slashes through South Florida in 1992, Biscayne is fortunate in that it has been able to relocate most of its aircraft to Kissimmee, outside Orlando, a day or so before the storm strikes. Still, all of the company's facilities, including its hangar, are destroyed. It will take several years before all of the facilities are replaced; however, the company is back flying within days of the disaster.

On August 1, 1995, the fleet is doubled at the stroke of a pen when Biscayne purchases Pompano-based Suncoast Helicopters from Huizenga Holdings and merges it under the Biscayne name. Company pilots now operate 9 JetRangers, 2 LongRangers, 2 AStars, and 2 A109s. During the year, the company begins flying a LongRanger on behalf of Channel 10.

Flights continue in 1996–2000. Daryl Martin is president and he employs 13 pilots at three bases. At Kendall–Tamiami Executive Airport, Biscayne stations 4 Bell 206B JetRangers, 2 Bell 206L LongRangers, 2 Agusta A-109s, and 1 Aerospatiale AS-350B AStar.

Two AStars and 3 JetRangers are based at Pompano Beach Airpark while another JetRanger flies from Tampa International Airport.

BISHOP-BARKER AEROPLANES, LTD.: Canada (1920). Famed Canadian World War I aces William A. "Billy" Bishop and W. G. Barker establish this pioneer charter service at Toronto Island in late spring 1920 for the purpose of flying customers to the Muskoka Lakes district resort area 110 miles to the north. Employing a single Curtiss HS-2L flying boat, weekend roundtrips are inaugurated in early June.

With four aboard, the American-made aircraft, piloted by R. F. McRae, suffers engine failure and makes a hard forced landing on September 10. Although no serious injuries occur, the plane must be written off. Although a replacement HS-2L is purchased in October, the year is too late for its delivery and the line closes.

BISMILLAH AIRLINES, LTD.: Arafat Tower, 94 Dit Road, Mailbag, Dhaka, 1217, Bangladesh; Phone 880 (2) 835-222; Year Founded 1995. With majority ownership by the Molah Group (80%), Bismillah is established at Dhaka in 1995. M. A. Mannan is appointed managing director and he negotiates provisional operating authority in 1996. Final approval is received from the government in December

1998 and scheduled Antonov An-26 all-cargo services are inaugurated to Bangkok in January 1999. The workforce in 2000 stands at 21.

BISON AIR LINES: United States (1962–1964). Established at Albuquerque, New Mexico, in 1962, Bison undertakes scheduled Aero Commander 500 passenger flights linking its base with Roswell, Artesia, and Carlsbad. Operations are maintained for two more years.

BIZJET CHARTER GROUP: Palm Beach International Airport, Building C, 1500 Perimeter Road, West Palm Beach, Florida 33406, United States; Phone (561) 478-5055; Fax (561) 233-8561; Year Founded 1967. BCG is set up at West Palm Beach in 1967 to provide executive and small group passenger charters throughout South Florida and the Caribbean. Operations continue apace over the next 30 years and, by 2000, the fleet includes 1 each Cessna 500 Citation I, Piper PA-31T Cheyenne II, and PA-23-250 Aztec F.

BKS AERO CHARTER, LTD. See **BKS AIR TRANSPORT, LTD.**

BKS AIR TRANSPORT, LTD.: United Kingdom (1951–1970). Four ex-Crewsair, Ltd. directors form **Aero Charters, Ltd.** on October 12, 1951 to provide contract services and charter flights. Crewsair's Douglas DC-3, accepted in lieu of severance, is provided a base at Southend Airport, but is immediately leased to **Skyways, Ltd.** for a nine-week charter in Kuwait. Upon its return, it is overhauled.

One of the original owners, J. P. Falconer, drops out in January 1952 and on February 7, the remaining three directors, James W. Barnby, Thomas D. Keegan, and Cyril Stevens, reregister their company as **BKS Aero Charter, Ltd.**, capitalizing it at £3,000. Revenue services commence the same day as the refurbished DC-3 transports livestock from Southend to Florence and Milan. Two more DC-3s are purchased in April and May and are christened *Whitten Brown* and *John Alcock*, joining a former Crewsair, Ltd. Avro Anson I purchased at the same time.

A variety of ad hoc charters are undertaken and destinations flown include Paris (LBG), Basel, Nicosia, Nantes, Luxembourg, Athens, Copenhagen, Amsterdam, Lisbon, Karachi, Oslo, Helsinki, Hamburg, Ankara, Calais, and Johannesburg, the latter as subcharters for Tropic Airways. The Anson is sold in July and 2 more DC-3s, the *Charles Lindbergh* and *Kingsford Smith*, are added in October. Enplanements for the year total 3,700.

Mediterranean charter flights commence in February 1953 and in March two of its DC-3s are leased to **Air Charter, Ltd.** for a month. During these months, the company receives government permission to open a number of internal scheduled routes as well as additional inclusive-tour destinations. A DC-3 undertakes the first scheduled flight on May 18, West Hartlepool–London (Northolt).

Other scheduled frequencies opened at this time include Newcastle–Jersey, Isle of Man, and West Hartlepool. Inclusive-tours are also flown and in June, a fifth DC-3 is acquired and named *Jean Batten*. Two more Ansons are added in August. Airline employment climbs to 50 and passenger boardings more than double to 7,717. At year's end, the company name is changed to **BKS Air Transport, Ltd.**, signifying a commitment to scheduled operations.

The *Jean Batten* enters service in February 1954. Two more Ansons are purchased in April, although one will be sold in August; four Austers are also brought in. During the summer, scheduled Isle of Wight–Newcastle and West Hartlepool flights begin while all previous inclusive-tour and scheduled services are maintained. Bookings for the year are 11,235. A Vickers Viking is purchased in December and christened *Jim Mollison*. In 1955 it will be followed by three more: in January (unnamed), February (*Amy Johnson*), and October (*Bert Hinkler*).

The carrier's first year-round international scheduled service is inaugurated in May as DC-3s fly Leeds/Southend to Belfast, Dusseldorf, and Paris (LBG); frequencies run as high as 10 per week during the summer. Also during the summer, services are begun from Leeds to Ostend, Jersey, and the Isle of Wight and to Paris (LBG) via Southend.

Both inclusive-tour and ad hoc charters are also flown and the year's passenger boardings advance to 28,142. To assist with the short-range services, two Airspeed AS.65 Consuls are acquired. One Anson is sold and the unnamed Viking purchased in January is withdrawn.

The Consuls and DC-3s maintain the previously opened scheduled services in 1956 while also opening a new one from Newcastle to the Isle of Wight via West Hartlepool, Leeds, and Bournemouth, plus direct services from Belfast to Edinburgh. Between November 16 and December 14, company Vikings participate in the delivery of Hungarian refugees from Austria to the U.K., bringing in 500 people in 13 flights. Bookings for the year accelerate to 45,007.

The Viking *Amy Johnson* is sold in January 1957. Direct Newcastle-Dublin service is initiated on April 1, the first flown under terms of the new Anglo-Irish air treaty. The associated company **BKS Air Survey, Ltd.** is now established. On July 27, an Airspeed AS.57 Ambassador is purchased from **British European Airways Corporation (BEA)** and placed in service on the Newcastle-Dublin route in August. Also in August, the *Charles Lindberg* is sold; the Viking *Jim Mollison* is sold in December.

Two more Ambassadors are purchased from **British European Airways Corporation (BEA)** in May 1958 and, at month's end, join the first in regularly scheduled services from Newcastle to Basel and Belfast via Edinburgh, Dublin, and Jersey; Newcastle to Belfast; and Newcastle via Heathrow to Bilbao and Santander. On June 4, weekly Newcastle-Bergen scheduled flights begin. A full schedule of summer tour flights is also flown.

During the year, the DC-3 *Jean Batten*, 1 Anson, 1 Auster, and the Viking *Bert Hinkler* are sold and, in October, 1 Bristol 170 Mk. 31 Freighter is purchased.

BKS Air Transport, Ltd. sells its first DC-3, the *Whitten Brown*, in January 1959. It next opens a thrice-weekly Newcastle-London (LHR) Ambassador service on April 6. Belfast-Newcastle Ambassador service begins on May 23 and Leeds to Dublin flights commence on July 31. Later in the year, frequencies are commenced Leeds and Bradford to Dusseldorf and Rotterdam. Meanwhile, ad hoc and inclusive-tour charter flights continue. A total of 83,877 passengers are carried on the year.

With the Bristol 170 Mk. 31 purchased in 1958 and a Mk. 21 leased from **Keegan Aviation, Ltd.** in April, the company inaugurates a Liverpool-Dublin car ferry service on April 25, 1960. An unnamed DC-3 is added to the fleet in May, followed by an Avro 19 in August. Another Mk.21 Freighter is leased from **North-South Airlines, Ltd.** in September. Five-times-per-week London to Belfast and Leeds to Belfast flights start on October 3. Five (later three) Hawker Siddeley HS 748s are now ordered as DC-3 replacements. In December, a license swap is made with **British European Airways Corporation (BEA)**; the state carrier receives the BKS ticket for scheduled London and Southend to Oporto service while the independent receives BEA's grant of London to Bordeaux and Biarritz. The number of scheduled passengers flown during the year climbs to 141,175.

The first of three Vickers Viscount 708s leased from **Maitland Drewery Aviation, Ltd.** is delivered on May 29, 1961 and enters service London-Newcastle on June 6. The second Viscount 708 starts flying on June 14. A Southend-Lille car ferry route is opened in the summer. All of the previous scheduled and tour services are maintained.

While completing a positioning flight and on approach to Carlisle Airport, the C-47B *Kingsford Smith* with four crew crashes at Groglin Fell on October 17; there are no survivors.

The Viscounts are returned at year's end. In the spring of 1962, the scheduled routes from Newcastle-Bergen, Guernsey, and Stavanger are suspended as are those from Leeds to Dusseldorf and Rotterdam. In March, however, frequency on the popular Newcastle-London route is increased. Various ad hoc and inclusive-tour charters are again flown during the summer. On September 30, an HS 748 is leased from **Skyways Coach-Air, Ltd.** and is placed on the Leeds to London route next day. The **North-South Airlines, Ltd.** Bristol Freighter is returned late in the year.

In 1963, the fleet comprises 4 AS-57s, 3 DC-3s, and 1 Bristol 170. Orders are placed for HS 748s and Bristol Britannia 102s and an Avro Anson I is destroyed in a nonfatal crash at Guiseley, Yorkshire, on April 9. The company's first owned HS 748 is delivered on April 20, allowing return of the **Skyways, Ltd.** machine.

The summer scheduled and tour services are maintained and scheduled twice-weekly London (LHR)-Newcastle all-cargo DC-3 flights commence on November 5. On November 26, an Ambassador, converted to freighter standard, begins a month of racehorse transport work. A total of 261,098 passengers are flown on the year.

BKS Air Transport, Ltd. in 1964 launches Hawker Siddeley HS 748 inclusive-tour flights to northern Spain and Portugal. The company's first Bristol Britannia 102, purchased in March, enters service on April 24 over the London (LHR)-Newcastle route. On June 10, **British European Airways Corporation (BEA)** purchases a 30% interest, later increased to 50%, in BKS Air Transport, Ltd. The last of the original founders still affiliated, Cyril Stevens remains as chairman/managing director.

A London-Teesside route is opened on November 2. It is seen as a forerunner of a planned network of routes that will be established to serve this north of England point from Ireland and the Continent. Bookings exceed 300,000 for the year.

With a fleet of 3 HS 748s, 4 Britannias 102s and 3 DC-3s, the carrier flies a total of 450,859 passengers in 1965. Airline employment is 424. Heavy losses are suffered as the result of a poor winter season.

The company's Bristol 170 Mk. 31 Freighter is sold in March 1966 and a Viscount 745 is purchased from **United Airlines** in April. Arrangements are now completed with **Channel Airways, Ltd.** for the lease of 6 Viscount 700s; 4 are added during the year with 3 returned at season's end. An unnamed DC-3 is sold in May, followed by the *John Alcock* in June. Scheduled Ambassador service is introduced on July 1 from Newcastle to Paris (LBG) via Leeds.

British Air Services, Ltd. (Britavia), is formed as a wholly owned subsidiary of **British European Airways Corporation (BEA)** in February 1967 to administer the affairs of associated carriers, including BKS Air Transport, Ltd. An Ambassador is withdrawn on February 13 and, in March, two HS 748s are sold to **Skyways Coach-Air, Ltd.** while the third is returned to its manufacturer on July 11. Three more Viscount 700s, leased from **Channel Airways, Ltd.**, are added during the first quarter.

On May 1, a new Bloodstock and Contract Cargo Division is formed to oversee the increasingly lucrative transport of racehorses. The company becomes a wholly owned subsidiary of the state airline on October 1. Allowed by **British European Airways Corporation (BEA)** to operate under its own name, the carrier continues to concentrate on its regional services to the northern part of Great Britain. The last Ambassador passenger service is flown on October 31, Belfast-Newcastle. Twice-weekly all-cargo Belfast to Leeds and Newcastle Ambassador flights are initiated on November 2. On December 31, the **Channel Airways, Ltd.** Viscounts are returned; however, two HS 748s are leased from **Skyways Coach-Air, Ltd.** Over 500,000 passengers are transported during the year.

The **Skyways Coach-Air, Ltd.** HS 748s are returned in March 1968, preparatory to the transfer of three ex-BEA Viscount 806s to BKS Air Transport, Ltd. in April followed by a fourth in July.

While putting down at London (LHR) with a cargo of eight horses on a service from Deauville on July 3, an Airspeed AS.57 Ambassador 2 with eight crew lands badly. It smashes into a pair of parked aircraft, catching fire and flipping onto its back; six aboard are killed, along with all of the horses.

The last remaining Ambassador is now transferred to the Bloodstock and Contract Cargo Division. On October 31, the last Belfast-Edinburgh service is flown; the route is now transferred to **Cambrian Airways, Ltd.** in exchange for a frequency from Belfast to Liverpool. Two Ambassadors and a Britannia 102 are withdrawn during the year.

The company's lone Avro 19 is sold in January 1969. The first of two HS 121 Trident 1Es to be delivered on the year arrives at the company's

Newcastle base on February 4, followed by the second on March 5. Another Britannia 102 is withdrawn in February 21, after completing its final service, Newcastle to London (LHR). The first Trident 1E begins commercial flying on April 1, London (LHR)–Newcastle while the second begins service with a Newcastle–Palma inclusive-tour flight on April 9. Viscount tour flights from Leeds to the Mediterranean begin on May 1.

Arriving from Paris (Orly) on July 26, an Airspeed As.57 Ambassador 2 freighter, with three crew and five passengers, suffers the failure of its nosewheel upon landing at London (LGW); there are no fatalities. The last Ambassador is withdrawn in October.

A Britannia 102 and the Viscount 745 are withdrawn in January 1970, followed by the last 3 Viscount 700s in March. The fleet now comprises 2 Trident 1Es and 6 Viscount 806s. Scheduled and inclusive ad hoc tour operations continue as before. On November 1, BKS Air Transport, Ltd. is renamed **Northeast Airlines, Ltd.**

Years later Arthur Whitlock will publish his memoirs of BKS as *Behind the Cockpit Door: The Illustrated Memoirs of an Airline Pilot* (Braunton, Eng.: Merlin Books, 1991).

BLACK SEA AIRLINES (CHERNOMORSKIE AVIALINII): Ulitsa Golbubye Dali 58/48, Ulitsa Lenina 204, Sochi, Southern Zone, 354000, Russia; Phone 7 (8622) 454308; Fax 7 (8622) 455614; **Year Founded 1996.** This Russo-Armenian joint venture company is established in 1996 to offer domestic and regional passenger charter services. V. E. Zumadzhyan is general director and he begins, and continues, flights with a pair of Tupolev Tu-134As.

BLACK SWAN JET CHARTER: 7930 Airport Blvd., Houston, Texas 77061, United States; Phone (713) 644-4359; Fax (713) 640-2752; Year Founded 1983. Black Swan is set up at Houston in 1983 to offer executive and small group passenger charters, many in support of oil barons and others in the energy industry. By 2000, the company's 8 pilots operate 1 each Cessna 650 Citation III, British Aerospace BAe (HS) 125-400 Hawker, Beech King Air 90, and King Air 100 from Hobby Airport.

BLACKHAWK AIRWAYS: United States (1970–1995). Mark T. Jacobsen establishes the Gail Force Corporation as an FBO at Rockford, Illinois, in 1970. Later, as part of the company enterprise, Jacobson establishes an airline division to operate FAA Part 135 all-cargo services. Revenue flights commence under the name Gail Force Air Charters.

Services continue during the next five years; however, during this time, the company moves to Rock County Airport at Janesville–Beloit, Wisconsin, and is renamed. Flights continue to link the carrier's base with various Midwest destinations, including Chicago (MDW), Columbus, Dayton, St. Louis, Springfield, and Minneapolis (MSP).

Six Beech 18s constitute the fleet until 1977, when the total is increased to 10. Freight poundage flown this year, the first for which there are figures, is 3.4 million. Cargo accelerates by 16.9% in 1978 to 4.09 million pounds. In 1979, the company's 10 Beech 18s haul 4.52 pounds of freight, an increase of 10.5%.

The fleet is increased in 1980 by the addition of 2 more Beech 18s, plus 1 Beech B-50 Twin Bonanza and a Beech B-80 Queenair. Still, cargo for the scheduled freight commuter plunges by 52.4% to 2.15 million-ton kilometers.

The number of pounds of freight operated falls 49.3% in 1981 to 1.09 million, forcing the withdrawal of two Beech 18s.

Following two years of traffic declines, Blackhawk's 10 Beech 18s reverse that trend in 1982, transporting a total of 1.94-million pounds of cargo, a 77.9% boost.

In 1983, 1 each: Beech Bonanza, Beech B-80 Queen Air, Cessna 140, Cessna 180F, and North American AT-6G are acquired. They join the Beech 18s in boosting cargo 18.4% to 2.3 million pounds hauled.

A total of 3,112,000 pounds of cargo are transported in 1984, a 35.5% boost. Blackhawk suspends its scheduled operations in February 1985 and becomes a full-time charter operator. Regular, if nonscheduled, flights continue apace for the remainder of the decade and into the next.

Chairman Jacobsen and President Richard Wixon oversees 22 employees in 1993–1994 and his services are offered essentially without change from the start-up years. The fleet now consists of 5 Beech 18s, 2 Beech 58 Barons, 1 Piper PA-31-310 Navajo, 1 Beech King Air, and 1 Cessna 182. In 1995, Blackhawk is renamed **Gail Force Express**.

BLACKPOOL AND WEST COAST AIR SERVICES, LTD.: United Kingdom (1933–1937). Supported by **Olley Air Services, Ltd.**, Blackpool and West Coast Air Services, Ltd., is registered on April 3, 1933. The fleet comprises 1 de Havilland DH 84 Dragon and 2 DH 83 Fox Moths, christened *Progress I* and *Progress II*. Regularly scheduled Blackpool–Liverpool daily flights begin on June 22, along with Blackpool–Isle of Man via Liverpool services, which are flown twice daily during the summer.

A British Post Office mail contract is received in early 1935 for the Liverpool–Isle of Man route; flying in opposite directions, two new DH 84s initiate the service on February 3. Two new direct services are offered from the Isle of Man, one to Belfast and one to Carlisle, beginning on June 1. The company is now a wholly owned subsidiary of **Olley Air Services, Ltd.**

The carrier puts up initial capitalization to allow registration of **Aer Lingus Irish Airlines** on May 22, 1936. The company's original DH 84 is transferred to Dublin, where it is christened *Iolar* (*Eagle*). Five days later the two companies, acting under the joint marketing title **Irish Sea Airways, Ltd.**, initiate service from Bristol–Dublin. Thrice-weekly **Irish Sea Airways, Ltd.** summer service Dublin–Isle of Man is started on May 30. On September 14, the partners commence weekday Dublin–Liverpool DH 84 service and simultaneously extend the Bristol route once per weekday to London (Croydon).

In January 1937, the carrier receives its first DH 86, which is assigned to the **Irish Sea Airways, Ltd.** operation. In February, the Isle of Man–Liverpool mail contract is reconfirmed. The Irish government holding company **Aer Rianta** takes over the capital shareholding of **Aer Lingus Irish Airlines** on April 5; however, the Anglo–Irish airline partnership continues.

Outside the partnership, the carrier begins a route Manchester–Isle of Man via Liverpool and Blackpool on May 14. The Dublin–Isle of Man summer season of Irish Seas Airways begins the same day and continues until September 4. The carrier is merged with **Isle of Man Air Services, Ltd.** in September, but is briefly allowed to continue under its previous identity. On November 2, the carrier is fully amalgamated into **Isle of Man Air Services, Ltd.** when the latter receives the Liverpool–Isle of Man–Belfast mail contract; the **Irish Sea Airways, Ltd.** operation is renamed **West Coast Air Services, Ltd.**

BLATZ AIRLINES. See NEVADA AIRLINES

BLOODSTOCK AIR SERVICES, LTD.: Australia (1981–1985). Privately owned Bloodstock is established at Perth on October 6, 1981 as an all-cargo airline specializing in the transport of livestock, mainly race horses. The company does not immediately launch services; however, a Boeing 727-77, leased from **Ansett Airlines of Australia (Pty.), Ltd.** is acquired in spring 1983 and flights begin to Melbourne on June 8. Airline employment is 13.

Unable to retain viability, the operation is shut down in 1985.

BLUE AIRLINES, S.A.: BP 1115, Kinshasa 1, Zaire/Democratic Republic of the Congo; Phone 243 (1) 220-455; Fax 243 (1) 220-455; Code BUL; Year Founded 1992. Blue Airlines is founded by Dr. T. Mayani at Kinshasa, Zaire, in 1992 to offer nonscheduled passenger and cargo flights to regional African destinations. The new entrant is actually a replacement for an earlier enterprise, **BCF Aviation, S.A.**, which had been grounded.

Revenue operations commence with one each Boeing 707-441 and B-727-81. Four Lockheed L-188As are acquired in 1993 and allow an expansion of service in 1994.

On March 13, **1995**, one of the L-188As is damaged in a landing accident at Kinshasa; no injuries are reported. Dr. Mayani's fleet is enhanced by the addition of 3 Polish-made PZL-Mielec (Antonov) An-28s, which replace the B-707-441.

Operations continue apace in **1996–1998**. In the wake of civil war, the country's name is changed from Zaire to the Democratic Republic of the Congo, or simply, Congo, in **1997**.

Just after takeoff from Kinshasa on a February 8, **1999** service to Mbandaka, an L-188A with seven crew crashes onto the premises of the Congolese Electric Company. The aircraft, which had been chartered by the Congolese armed forces, was on a mission to deliver fuel. Later in the year, the destroyed Electra is replaced with an Antonov An-26.

Domestic flights continue in **2000**.

BLUE DART AVIATION, LTD.: Lumbini Palace, 4 Tejpal Road, Vile Parie (East), Bombay 400057, India; Phone 92 (22) 832-8030; Fax 92 (22) 837-7439; <http://www.bluedart.com>; Code DXP1; Year Founded **1983**. With initial capitalization of Rs 30,000, Tushar Jani, Clyde Cooper, and Khushroo Dubash found Blue Dart Courier Services in the summer of **1983**. Jani becomes chairman, with Cooper as managing director and Dubash as the director charged with strategic planning. Suresh G. Sheth becomes chief financial officer. To gain access to a larger market, the company becomes affiliated with London-based Gelco Express International, Ltd. in October. When **Federal Express (FedEx)** purchases Gelco in **1984**, it also assumes the Blue Dart relationship.

In **1985**, Blue Dart pioneers the "hub and spoke" concept in India, while also introducing "10 a.m. delivery" throughout India. The company is restructured in **1986** to meet the challenges ahead.

Blue Dart Courier Services becomes Blue Dart Express on October 1, **1990**. The company is incorporated as a private limited company on April 5, **1991**. Later in the year, it introduces a door-to-door surface product called Dart Surfacerline.

A domestic tracking service is started in **1992**. A decade of service is celebrated in **1993**. The company also becomes the FedEx general sales agent in India.

On June 17, **1994**, Blue Dart is converted into a public limited company and goes public in September with an equity offer of 2.55 million shares valued at \$12.24 million.

On December 15, one each B-737-2A8 and B-737-2A8A are purchased from **Indian Airlines, Ltd.** and are sent to Stamborough Aviation in the U.S. for a \$2-million conversion into freighters.

Upon their return from the U.S. in November **1995**, the premier Boeing cargo planes are christened *Vision I*. The global service contract with **Federal Express (FedEx)** is renewed for another two years.

Company employment stands at 2,900 in **1996**. With the launching in April of the Blue Dart Aviation, Ltd. flying subsidiary under the personal direction of Managing Director Cooper, Blue Dart claims to be the first carrier to deploy an all-jet fleet on scheduled domestic routes in India. It is also achieves several other firsts in India: the first express company, the first to own and operate an all-jet express freighter system, and the first to open a homepage on the World Wide Web.

Nightly all-cargo services, flown in opposite directions, link Calcutta with Madras via Delhi, Bombay, and Bangalore beginning on June 17. Plans are made to establish a feeder network that will serve the company's 462 destinations, including 90 commercially important locations, linked to the airports by a fleet of over 1,500 ground vehicles.

In addition, the company negotiates two other interesting arrangements. One is with the Tatas to transport their Mercedes automobiles by air from the factory to the door of purchasers. The other is with the Karnataka Racehorse Owners Association to move race horses from Bangalore to cities like Madras, Calcutta, and Bombay during the racing season.

At the end of the year, the second B-737-2A8AF, *Vision II*, enters service. Blue Dart also becomes the first express company in India to receive ISO 9001 certification.

Revenues for the year total Rs14,865 lakhs and there is an Rs1,088 lakhs operating profit.

The marketing agreement with **Federal Express** is renewed in July **1997** for another five years. A Smart Box product is inaugurated and the number of domestic delivery locations reaches 1,000. The new FedEx contract takes effect on October 1.

On December 2, service is expanded to Sangli, Satara, and Karad in the western Maharashtra region of India. Fifteen days later, interline agreements are signed with **Air India, Ltd., Air France, Air Canada, Ltd., British Airways, Ltd. (2), Emirates Airlines, Singapore Airlines, Ltd., and Swissair, A.G.**

Revenues accelerate 8% to Rs 16,085 lakhs, but operating gain falls to Rs 805 lakhs.

Blue Dart opens a new service center in New Delhi on February 16, **1998**. Three days later, service is expanded to Warangal and Rajahmundry. An interline agreement is inked with **Cargolux Airlines International, S.A.** on March 26.

The company expands its B-737-2A8AF services on May 1 to provide charter flights on behalf of its interline partners, as well as freight forwarders and other Indian corporations. During the first three weeks of this activity, 127 tons of cargo will be flown on 12 charter flights. On May 13, service is expanded to the four southern locales of Pollachi, Namakkal, Ooty, and Palghat.

Interline agreements are signed with **Alitalia, S.p.A.** and **Asiana Airlines, Ltd.** on July 27.

When flooding devastates the area around Guwahati in August, all surface transport is cut off until the government can open a single emergency route. Except for Blue Dart, all Indian carriers suspend their services. Through September 17, the express company completes seven charter flights into the area to deliver goods into the flood-hit region.

Profits continue to be generated by the two "Baby Boeings" and by year's end the company has taken over 36% of the nation's domestic market share for express services.

Flights continue in **1999**. The company now provides interline cargo services on behalf of ten international airlines.

Headquarters are moved into a new administrative super-hub, Blue Dart Centre, at Mumbai. It also launches Power Dart 2000+, public package-tracking software.

After a cyclone strikes Orissa, 3,400 company employees from all over India collect 8 tons of relief supplies. On December 14, two containerized vehicles transport the goods to Kendrapara. Earlier, company vehicles had also taken relief supplies, on behalf of international air organizations, from Delhi to Calcutta.

For the year as a whole, operating income increases to Rs 2054.6 million and net profit doubles to Rs 123.1 million.

A third B-737-2K9AF is chartered during the first quarter of **2000** and is placed into scheduled return service from Bangalore to Delhi. The company website is revised during the summer to support interactive e-commerce.

The chartered B-737F is purchased (from **Air Sahara, Ltd.**) in early October.

BLUE LINE AIR EXPRESS: United States (1982). BLAE is set up at Dallas, Wisconsin, in early **1982** to provide scheduled passenger and cargo services with a fleet of Cessna lightplanes. Daily roundtrip and connecting flights are duly inaugurated to New Richmond, Rice Lake, Eau Claire, Duluth, Hayward, Madison, Milwaukee, and down to Chicago, Rockford, Springfield, and Indianapolis. Significantly overextended, the new commuter fails by midyear.

BLUE-LINE AIRWAYS, LTD.: United Kingdom (1946–1949). Businessman Leslie Cooper forms this independent charter carrier at Nottingham's Tollerton Airport during July **1946**, equipping it with two Percival Proctor 5s. After developing local travel agencies and acquiring an Auster J/1 Autocrat and an Avro 652 Anson I in February **1947**, Blue-Line, Ltd. inaugurates summer holiday flights to Guernsey and Jersey.

Success leads to the company's registration as an airline on June 30, **1948**, by which time the fleet includes the above named aircraft, plus

four more Ansons and a Miles M.65 Geminia 1A. At the end of the summer season in September, two months of charters are flown London (Croydon)–Paris (LBG).

In January 1949, an ex-British Overseas Airways Corporation (BOAC) Douglas DC-3 is purchased. This machine is employed to operate passenger and cargo charters from London's smaller airports while the Anson's continue to work the Channel Islands routes with summer traffic. During July–August, the DC-3 makes flights to Syria and Iraq on behalf of the Iraq Petroleum Company.

So far, all services during the year have been operated at a loss and on August 15, the company suddenly ceases operations—leaving 20 passengers stranded in Jersey and 200 passengers booked for future flights holding worthless tickets.

BLUE PANORAMA AIRLINES, S.p.A.: Astra Travel, Via L. Bisso-lai 76, Rome, 00187, Italy; Phone 39 (06) 4201 1513; Fax 39 (06) 4200 0757; Code BPA; Year Founded 1998. Blue Panorama is established by Astra Travel and the ITR Group at Rome's Fiumicino Airport in August 1998 to provide lift for customers on their holiday charter flights to regional destinations. Revenue services by President Franco Poggi's new airline are inaugurated in December with a Boeing 737-4K5 leased from Hapag-Lloyd Fluggesellschaft mbH.

Flights continue in 1999 as a second B-737-4K5 is also chartered, arriving in time for the beginning of the summer schedule at the end of March. Service to points in North Africa and Europe continue thereafter.

BLUE SCANDINAVIA, A.B. (SVENSKA FLYGBOLAG): Sweden (1997–1998). When Transwede, A.B. is restructured at Stockholm in 1996, the independent Transwede Leisure, A.B. is created to operate charter and inclusive-tour services from northern Europe to the Mediterranean and overseas destinations. On January 1, 1997, the concern is renamed Blue Scandinavia; ownership is divided between the carrier's management (4%) and the Fritidsresor group of companies KF Invest (38%), Nordic Capital (29%), and Electra (29%). Kjell Fredheim is president/CEO and a long list of charter clients is assembled, including the Fritidsresor concerns Star Tour, Royal Tours, Tema Resor, and Hasses, plus Ving, Always, and Spies from the Scandinavian Leisure Group.

Revenue services continue with a chartered fleet (painted in a new color scheme) that includes 3 McDonnell Douglas MD-83s; 2 Lockheed L-1011 TriStar 1s, including 1 leased from Air Atlanta Icelandic, H.F., and 1 each Boeing 757-225, B-757-2Y0ER, and B-757-236ER.

Destinations visited from Stockholm, Gothenburg, Malmo, Jonkoping, and Orebro include Oslo, Larnaca, Hurghada, London, Nice, Banjul, Athens, Chania, Heraklion, Santorini, Kos, Rhodes, Samos, Onda, Alghero, Rome, Catania, Agadir, Faro, Funchal, Porto Santo, Antalya, Dalaman, Bodrum, Izmir, Arrecife, Malaga, Alicante, Fuerteventura, Las Palmas, Palma, and Tenerife.

Painted in Blue Scandinavia colors, a B-727-2J4A is wet-leased from Sterling European Airways, A.S. of Denmark for the summer. The last TriStar charter is operated on October 31 and the aircraft are returned to their lessors.

While en route from Hurghada, Egypt, to Malmo on November 20, an MD-83 suffers an engine shutdown due to low oil pressure; the aircraft is diverted to Warsaw, Poland. No injuries are reported.

Enplanements for the year total 1,302,800.

Early in 1998, the Fritidsresor group is purchased by Thomson International, Ltd., parent of Britannia Airways, Ltd. The company is renamed Britannia Airways, A.B.

BLUE SKY CARRIER COMPANY, S.A.: Ul. Wojska Polskiego 9/2, Goleniow Airport, Szczecin, PL-70-952, Poland; Phone 48 (91) 883 266; Fax 48 (91) 340 325; Code YM; Year Founded 1992. Blue Sky Carrier Company, S.A. is established at Goleniow Airport at Szczecin on July 6, 1992 by officers of the Polish Steamship Company and Zegluga Polska, S.A. Zbigniew Jankowski is appointed president and a fleet of three Let 410UVPs is assembled.

Revenue flights commence on July 23, 1993 over domestic routes to Krakow and Wroclaw and international routes to Hamburg and Malmo. Charters are also undertaken to Tanzania.

The workforce stands at 17 in 1994 as Stanislaw Markowski is appointed managing director and a British Aerospace BAe Jetstream 31 is acquired.

Flights continue in 1995–2000, during which years the fleet is reduced to the Jetstream 31 and one L-410UVP.

BOCA AVIATION: 3700 Airport Road, Boca Raton, Florida 33431, United States; Phone (561) 368-1110; Fax (561) 394-3299; Year Founded 1989. BA is set up at Boca Raton in 1989 to offer executive and small group passenger charters throughout South Florida and to the Caribbean. It also provides executive management and pilots for a variety of aircraft owned by various corporations.

In 1998–2000, the company employs four pilots and flies a Piper PA-31-350 Navajo Chieftain from Boca Raton and a Beech A36 Bonanza from Palm Beach International Airport.

BODAIBO AIR ENTERPRISE: Aeroportovaya Str. 5, Bodaibo, Irkutsk Region, Southern Zone, 666910, Russia; Phone 7 (39513) 91470; Fax 7 (39513) 92331; Code BODA; Year Founded 1995. BAE is set up at Bodaibo in 1995 to offer domestic all-cargo charter services. Viktor Pankin is CEO and he begins, and continues, revenue flights with a fleet of 2 Antonov An-24s, 1 An-26, 7 An-2 biplanes, and 8 Mil Mi-8 helicopters.

BODE AVIATION: Albuquerque International Airport, 2501 San Pedro NE Suite 215, Albuquerque, New Mexico 87110, United States; Phone (505) 884-4530; Fax (505) 884-4551; Year Founded 1995. Diane Bode establishes this executive and small group passenger charter operation at Albuquerque International Airport in 1995. Flights throughout the Southwest are provided with 1 each Cessna 414 Chancellor, C-182 Skylane, and C-172P Skyhawk.

BODRUM IMSIK HAVA YOLLARI, A.O.: Bodrum Imsik Airport, Bodrum, Turkey; Phone 90 (6141) 1763; Fax 90 (6141) 2967; Year Founded 1989. Formed at Bodrum by President Ibrahim Fuat Imsik in 1989, this Turkish commuter carrier offers scheduled passenger and cargo services from its base to Istanbul and other major Turkish cities. The initial fleet comprises 2 Dornier 228-202s and 3 Pilatus-Britten-Norman PBN-2 Islanders.

A third Dornier is acquired in 1990, followed by a third Islander in 1992. It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

BOEING AIR TRANSPORT (BAT): United States (1927–1931). On January 15, 1927, the U.S. Post Office collects bids for operation of the country's transcontinental airmail route. Offered in two sections Contract Airmail Route No. 18 (CAM-18), the Chicago–San Francisco western half, has bids from Western Air Express, Stout Air Services, and timber magnate and aircraft builder William "Bill" Boeing, who has been encouraged by Edward Hubbard and Clairmont "Claire" L. Egrvedt. Having banked on the superior ability of his new Boeing Model 40A mailplane, designed by Egrvedt, Boeing underbids the competition and wins the contract on January 29 with an unprecedented low offer of \$2.88 per pound.

Departing his Seattle-Victoria Air Mail Line, Hubbard moves to Salt Lake City to organize and operate Boeing Air Transport. Philip G. Johnson is named president and he, in turn, appoints former second assistant Postmaster General Duard B. Colyer as vice president-operations. Meanwhile, engineer Egrvedt completes production of the necessary 24 aircraft.

In May–June, 21 former U.S. Air Mail Service pilots are hired, 4 of whom possess over 4,000 hours of flight time: James P. Murray (4,380), James H. Knight (4,282), E. Hamilton Lee (4,220), and Frank R. Yager (4,009). All of the Model 40As are prepositioned to their various stations by the end of June.

A pair of Air Mail Service DH 4Bs land at Omaha from Chicago at midnight on June 30/July 1; the mail sacks are loaded aboard a pair of new BAT 40As and the commercial carrier inaugurates CAM-18 in the dark.

During its first six months of operation, BAT's Boeing 40As undertake 2,300 flights, with a total of 8,282 flying hours over 815,256 miles. Altogether, 525 passengers are flown and, more importantly for income, 298,372 pounds of mail.

On January 1, 1928, after several months of discussions, the company pays Chairman Vern C. Gorst \$94,000 (\$200 per share) to acquire a controlling interest in his **Pacific Air Transport (PAT)**. The company is allowed to operate as a subsidiary under its previous name and with all of its employees. The acquisition gives BAT a direct route from Seattle to Los Angeles.

On February 26, a Boeing 40A en route to Cheyenne from Omaha crashes near Marquette, Nebraska (one dead). Near Federal, Wyoming, on March 17, a Boeing 40A crashes in a snowstorm (one dead). Designated as successor to the Model 40A, the trimotored Boeing Model 80 unequal-span biplane makes its maiden flight during August.

On October 30, Boeing Airplane and Transport Corporation is formed as the holding company for both BAT and PAT (the Boeing System). On December 17, PAT is merged completely, becoming a BAT division. Six days later, a Boeing 40B, caught in a snowstorm and seeking Omaha's airport, crashes.

An ungraded version of the Model 40, the Boeing Model 95 makes its inaugural flight on December 29.

During the year, airline employment grows to 120, including 35 pilots. BAT transports 1,863 passengers, 418.5 tons of mail, and 74.5 tons of express over 2.17 million miles.

The first three of six new Boeing 95 mail planes are delivered in January 1929.

While landing at Fort Crook, Nebraska, on January 6, a Boeing 40B, the pilot of which is blinded by floodlights, crashes.

On February 1, William E. Boeing and Frederick B. Rentschler of Pratt & Whitney Aircraft Company merge their operations and holdings to form United Aircraft and Transport Corporation. Combined capitalization is \$146 million. The Boeing System remains the airline operating subsidiary.

Twelve days later on February 13, a Boeing 95 strikes a tree while landing at Omaha; the pilot escapes injury. On March 11, an iced-up Boeing 40B crash-lands near Park City, Utah; no one aboard is hurt.

Later in the spring, BAT aircraft are equipped with the first U.S. airline aerial radiophone s, which allows direct ground-to-air voice contact with a series of ground stations, built under government supervision, between Oakland, California and Chicago. On May 1–2, three newly received 12-passenger Boeing 80s are employed to inaugurate regularly scheduled, nine-hour, night passenger service on the San Francisco to Salt Lake City route; BAT thus becomes the first U.S. airline to have regularly scheduled night frequencies.

On May 22, a Boeing 80 makes a forced landing while taking off from Elko, Nevada; none of the nine people aboard are injured.

With the delivery of seven additional Boeing 95s on June 30, the day United Aircraft and Transport Corporation gains control of **Stout Air Services**, BAT has significantly enhanced the speed with which its mail shipments can be delivered.

A Boeing 95 crash lands at Elm Creek, Nebraska, on October 18 and burns out; the pilot is not hurt.

Also in October, the success of the Model 80 leads Boeing to upgrade his transports into Model 80As, the first of which is placed into service between San Francisco and Salt Lake City in mid-month. On December 18–19, a Boeing 80 hits a hill and crashes near Loomis, California; a pi-

lot and passenger are hurt. A total of 2,850 passengers and 1.8 million pounds of mail are carried over 2.78 miles for the year.

On January 10, 1930, a Boeing 95 crashes near Sidney, Nebraska (one dead). In the spring, new Model 80A pilots are recruited and complete their orientation, primarily with Model 80s, on the California–Utah run. On April 29, Congress passes the McNary–Watres Act. During the spring, nurse Ellen Church proposes to airline official S. A. “Steve” Simpson that BAT add registered nurses to assist nervous and sometimes airsick passengers. When Simpson proposes the idea to President Johnson, he receives a one word answer: “No!” After reconsideration, Johnson authorizes Simpson to employ Church to recruit several single nurses under the age of 25.

On May 1, daily San Francisco–Chicago Model 80A flights begin via Salt Lake City, North Platte, Lincoln, Omaha, Des Moines, and Cedar Rapids. The western end of the route is flown in darkness. As a result of the acquisition of **National Air Transport (NAT)**, United Aircraft and Transport is able to inaugurate the first transcontinental airline system on May 7.

On May 15, eight female nurse flight attendants (Ellen Church, the world's first stewardess, plus her colleagues Alva Johnson, Margaret Arnott, Inez Keller, Cornelia Pederman, Harriet Fry, Jessie Carter, and Elis Crawford), clothed in special dark green uniforms, begin serving on BAT return flights San Francisco–Chicago. The initial duties of these pioneers are unglamorous. They provide cotton to passengers to muffle noise and aid them if they become ill and point travelers to the toilet door and not the similar emergency exit. They bolt seats to the floor before every flight and to oversee smoking and butt disposal. They take charge of any lunches provided, provide route information to the curious, and, in the event of forced landings, carry a railway timetable.

Between May 15–June 9, company officials participate in the so-called “Spoils Conference” held in Washington, D.C. between Postmaster General Walter Fogler Brown and representatives of major air transport concerns. Although President Johnson preserves the BAT routes, he obtains no new ones. A Boeing 80A crash-lands (without injury to its occupants) at Dix, Nebraska, on June 22.

On June 30, United purchases **Varney Air Lines**, expanding its services to the northwestern city of Seattle. On August 31, Stout Air Services is merged into NAT, disappearing as an independent entity but giving NAT the equipment necessary to carry passengers. Also in August, the first eight stewardesses complete their probationary period and Ellen Church is directed to recruit 20 more. United Aircraft now operates four airline divisions: BAT, PAT, NAT, and VAL.

On March 2, 1931, a Boeing 40B-4 catches fire while en route south of Glide, Oregon. The pilot puts the ship down in a clearing and is joined by his passenger in putting out the blaze, saving the express and mail aboard.

Meanwhile, each corporate division continues to operate under its own name until April 1, when BAT and NAT begin using the marketing name **United Air Lines**. On that day, the two divisions integrate their transcontinental operation, offering the first day and night airmail and passenger service. The westward flights require 31 hrs. 18 min. and the eastbound, 27 hrs. 39 min. A total of 18 stewardesses are available for the assigned airliners. On July 1, the **United Air Lines** title becomes official as the four operating airlines are organized into “The World's Largest Air Transport System.”

BOGAZICI HAVA TASIMACIGLI, A.O.: Turkey (1988–1990). Bogazici Air Transport, A.O. is established at Istanbul in 1988 to fly weekly all-cargo services to New York via Frankfurt. The fleet consists of 1 Douglas DC-8-61F freighter. In 1989, the fleet is substantially increased as service begins to additional destinations. Added are 2 owned Douglas DC-10-10s, 2 leased Boeing 707-321Cs, and 2 chartered B-727-264s.

Overextended and deprived of its Iraqi market after August 1990, the carrier stops flying in early fall. The government transfers its activities to THY Turkish Airlines (Turk Hava Yollari, A.O.).

BOHLKE INTERNATIONAL AIRWAYS: RR 2, Henry E. Rohlsen Airport, St. Croix, Virgin Islands 00850, United States; Phone (340) 778-9177; Fax (340) 772-5932; Year Founded 1959. Teddy Bohlke originally establishes this concern as an FBO on St. Croix in 1959. Over the next 40 years, the carrier also begins to undertake sight-seeing trips to other islands, as well as air ambulance, executive, and small group charters.

By 2000, the company employs two full-time pilots and operates 1 Grumman G-690 Turbo Commander and 1 Piper PA-34 Seneca from St. Croix and 1 Cessna 402C and 1 PA-31-310 Navajo from St. Thomas.

BOISE AIR SERVICE: United States (1967–1968). BAS is established as a division of the FBO Boise Aviation at the Boise, Idaho, airport in the late fall of 1967 to provide scheduled passenger and cargo flights to local communities. Aero Commander 680 flights commence on December 13.

Due to insufficient traffic, the company is unable to achieve viability and disbands in 1968.

BOLIVIAN AIR SYSTEM, S.A.: Bolivia (1965–1971). BAS is set up at La Paz in 1965 to operate all-cargo services with a pair of Curtiss C-46 Commandos. Flights cease in 1971.

BOLIVIAN AIRWAYS. See **TABSA (TRANSPORTES AEREOS BENIANOS, S.A.)**

BON ACCORD AIRWAYS, LTD.: United Kingdom (1992–1995). Bon Accord is set up at Aberdeen by John M. W. Begg and Brian W. Davis in September 1992. With Begg as president and Davis as CEO, 10 other employees are hired and 1 Shorts 360-100 is acquired. Revenue passenger and cargo flights commence on November 7 in support of the North Sea oil industry.

Operations continue apace in 1993–1994, with ad hoc charters provided to a variety of destinations in northern Europe, occasionally on behalf of major airlines.

Although a second Shorts 360-100 is ordered, the company encounters financial difficulties and is forced to shut its doors in December 1995 before it can be delivered.

BON AIR (BONAIR HAVACILIK, A.O.): Orman Sokak 10, TR-34810, Florya Istanbul, Turkey; Phone 90 (212) 663-1829; Fax 90 (212) 574-0147; <http://www.bonair.com.tr>; Year Founded 1996. Part of Airgroup Havacilik, Bon Air is set up at Istanbul in 1996 to offer passenger charter services to domestic and regional destinations. Operations begin and continue with a fleet that includes 1 each Cessna Citation I, C-421, C-172 Skyhawk, and Beech King Air 90.

BONANZA AEROLINEAS, S.A. de C.V.: Merida Mexico; Year Founded 1997. BA is established at Merida during the summer of 1997. A British Aerospace BAe Jetstream 31 is purchased from BAe Asset Management Turboprop and is employed to inaugurate and continue scheduled passenger services to Chetumal, Palenque, Tuxla, Villahermosa, and Belize City.

BONANZA AIR LINES: United States (1945–1968). Former USN officer Edmund Converse, one-time charter operator Charles Keene, and June Simon establish Bonanza Air Services at Sky Haven Airport at Las Vegas early in June 1945. Selling tickets from a counter in the lobby of the El Rancho Vegas Hotel and Casino, the small carrier is able to attract customers, which are flown to neighboring Nevada towns in the company's single Cessna Skymaster, piloted by Vice President/Chief Pilot Richard Hall. The firm is reformed and incorporated as the nonscheduled carrier Bonanza Air Lines on December 31.

Early in 1946, the new airline is awarded a contract to ferry merchant marine sailors from California to New Jersey. To operate this significantly-larger enterprise, Bonanza leases a Douglas C-47 (military DC-

3) from the War Assets Administration in March; it also relocates to Alamo Field. The first merchant marine C-47 service is flown by Vice President Hall at the beginning of April. During the month, he is also kept busy hauling items for merchants who might ordinarily ship via the railroads, which are out on strike. Much of this extra flying is concentrated on charters from Las Vegas to Reno.

Following the conclusion of the railroad strike, a decision is taken to further enhance company business by flying as a scheduled intrastate carrier. The C-47 is reconfigured to civil DC-3 standard and, on August 6, thrice-daily Las Vegas–Reno return service is inaugurated. Also during the summer, the fleet is enhanced by the addition of 2 Piper Cubs and 3 Cessna T-50 Bobcats. Several additional staff, flyers, and mechanics are hired, including Vice President/Secretary Florence Murphy, who is the first female commercial pilot certified by the State of Nevada.

During the fall, the airline moves to the inactive McCarran Field, now Nellis AFB. It is at this time that Keene and Simon sell out to Hall, who becomes president under Chairman Converse, and begins to emphasize scheduled service over the Reno route.

Because passenger load-levels have not been impressive, Bonanza is forced to announce, during the spring of 1947, that it is curtailing the number of flights offered. The Las Vegas Chamber of Commerce provides the funds needed for a new marketing campaign, "Route of the Gold Strikes," and ridership improves. During the summer and fall, new stops are added at Hawthorne and Tonopah.

Alamo Field again becomes company headquarters in 1948. The airport there is renamed McCarran Field (later McCarran International Airport), while the previous McCarran Field is activated as Nellis AFB. During the year, a DC-3 is purchased from **Western Air Lines** and the workforce is increased.

Certified a "feeder airline" by the Civil Aeronautics Board on June 15, 1949, the local service company launches scheduled Douglas DC-3 operations on December 19 over a Reno–Phoenix route transferred from **Trans-Continental and Western Airlines (TWA)**. Stops are made at Carson City, Hawthorne, Tonopah, Las Vegas, Boulder City, Kingman, and Prescott.

During the first half of 1950, the company's staff puts up a hangar at the McCarran base; the war-surplus edifice is ready to house the fleet by June. The CAB now also approves the company's application to fly mail over its multistop route. Plans for expansion are made in 1951 and arrangements made to take on new routes.

The first of several new Western routes is awarded by the CAB to Bonanza in July 1952. DC-3s begin flying from Phoenix to Los Angeles via Ajo, Yuma, Blythe, El Centro, San Diego, Oceanside, and Santa Ana-Laguna Beach. Service is maintained over these extended segments in 1953–1954.

President Dwight Eisenhower approves a measure in May 1955 that grants permanent certification to the 13 nonscheduled feeder carriers, including Bonanza, which are now renamed "local service airlines." During the year, scheduled roundtrips are initiated from Phoenix to Los Angeles via Blythe, Palm Springs-Indio, Riverside, and Ontario. Another route is also soon awarded, from Phoenix to Los Angeles via Apple Valley, Riverside, and Ontario.

During these middle years of the 1950s, several more DC-3s are acquired, including one from **United Air Lines** on December 18, 1956. In 1957 the CAB supports legislation that results in the Government Guaranty Loan Act. Bonanza is the first to seek and receive equipment financing support under the new law and quickly places orders for 6 Fokker F-27As, built by Fairchild under license to the Dutch manufacturer Fokker. Direct Phoenix–Salt Lake City authority is received early in 1958, along with a multistop Las Vegas–Los Angeles route.

Branding them "Silver Darts" (rather than the Fokker name Friendship) the company takes delivery of its first two F-27As on January 16 and February 25, 1959, respectively. These enter revenue service on March 29 over the Las Vegas–Los Angeles route.

A third F-27A arrives on August 17, as does a fourth on September 17, and a fifth on October 14. With the retirement of the carrier's last

DC-3, the company, on November 1, **1960**, becomes the first all turbine-powered airline in the Western Hemisphere.

With CAB approval, Bonanza, in **1961**, takes over the lucrative non-stop Los Angeles–Las Vegas route previously flown by **Western Airlines, United Air Lines, and Trans World Airlines (TWA)**. Another F-27A arrives on June 2, with another delivered shortly thereafter.

The eighth Fairchild is received on May 29, **1962**. In October, the company orders 3 1-11-206s from British Aircraft Corporation. Reacting to the foreign request, the CAB, in March **1963**, refuses to guarantee a U.S. government loan to cover the purchase. Particularly since it is already spending \$5.4 million to underwrite acquisition of the Fairchild F-27As.

Bowing to the regulator's demand, the company cancels the British order. On July 10, with CAB blessing, Bonanza places orders for 3 Douglas DC-9-11s.

By **1964**, airline employment has risen to 760 and the fleet includes 13 aircraft. Orders are placed for 2 additional Fokker F-27As and financing of \$10 million is arranged, allowing completion of the outstanding orders for 3 DC-9-11s.

On February 12, an F-27A with 34 aboard overshoots its landing at Las Vegas and crashes; injuries are slight. The CAB grants the company authority to initiate direct Santa Ana to Las Vegas service. In addition, an application is made for nonstop Las Vegas–Grand Canyon flights.

Flight 114, an F-27A with 29 aboard, disappears in a snowstorm on November 15 during a flight from Phoenix to Las Vegas; the wreckage is found on a mountain 9 mi. S of McCarran Field the next day and there are no survivors. It will later be determined that the navigation charts in use that fatal day were faulty.

Enplanements climb 16% to 620,497. Revenues jump 10% to \$14 million and net profits of \$677,166 are announced.

The workforce in **1965** is 837 and the fleet includes 14 Fokker F-27As. Orders are outstanding for 3 DC-9-11s. Although Bonanza has the fewest number of airliners of any local service carrier, it owns the most turboprops. Two of these are damaged in turbulence incidents on March 28 and April 1 respectively, the first over Prescott, Arizona, and the second southeast of Julian, California. Another F-27F, with two crew, groundloops during takeoff from McCarran Field, Las Vegas, on April 16 for a training flight and crashes; there are no fatalities, but the turboprop is badly damaged.

Nonstop Santa Ana to Las Vegas service is inaugurated. Flights operated to the Grand Canyon from Phoenix and Salt Lake City are transferred to the new Grand Canyon National Park Airport. With an average of 150.3 miles, the company's stages are the longest in its classification.

An F-27A with 17 aboard suffers a landing gear collapse and is damaged during landing at Yuma, Arizona, on December 8. The first DC-9-10 is delivered on December 9; it will spend the next two months in practice service. A shift of personnel and equipment to a new \$3-million administrative and maintenance facility at Phoenix is 50% complete by December 31.

Passenger boardings for the year jump 8% to 668,662. Revenues increase by 3% to \$14.51 million.

The second DC-9-11 is delivered in January **1966**. Bonanza is the first local service airline to launch DC-9 service when its premier machine begins flying the Los Angeles–Las Vegas route on March 1. Three more jetliners join the fleet before year's end.

With CAB Chairman Charles Murphy officiating, a new headquarters and maintenance facility, supported by the city of Phoenix, is opened at Sky Harbor Airport on June 25.

Enplanements for the year total 859,275. Revenues total \$18,011,800.

The workforce in **1967** totals 1,043 and the fleet includes 5 DC-9-11s, now nicknamed "Fun Jets," and 12 F-27As. Orders are placed for 2 DC-9-30s. Late in the year, the company agrees to a three-way merger with **Pacific Air Lines** and **West Coast Airlines**; the three file a joint application with the CAB seeking approval.

Customer bookings advance 14.5% to pass the million mark in annual boardings for the first time (1,005,000) and cargo traffic is up 10.15%.

Revenues are up by 15.7% to \$20,839,600 and a net profit of \$529,700 is posted.

Early in **1968** a sixth DC-9-11 is acquired, along with CAB approval to operate to Tucson and several destinations in Mexico. On April 17, the company loses its identity as it is merged with **West Coast Airlines** and **Pacific Air Lines** to form **Air West**, a predecessor of **Republic Airlines**.

BONANZA AIR SERVICES. See BONANZA AIR LINES

BONANZA AIRLINES: United States (1985). Jim Perry, founder-owner-president of **Mountain West Airlines (1)**, changes the name of his Aspen, Colorado-based commuter operation early in **1985**. Revenue flights continue to be provided with a Cessna 206 and Cessna 340, plus a Douglas DC-3, between the company's base and Grand Junction via Vail. Unable to maintain viability, the company shuts down on October 23.

BOND AIR SERVICES, LTD.: United Kingdom (1946–1951). Equipped with 1 Auster J/1 Autocrat and 1 Percival Proctor 1, Bond Air Services, named for its founder D. E. Bond, is formed at London (LGW) in June **1946**. Summer holiday flights are conducted.

In March **1947**, 1 Handley Page Halifax 8 is purchased, followed by a second in May; these 2 ex-RAF bombers are employed to haul fruit to London from towns in Spain, France, and Italy. On May 14, the Proctor is lost in a crash at Tonnere, France while on May 30, a Halifax is destroyed in a Barcelona crash. In July and October, the company receives 2 de Havilland DH 86s and another Halifax.

The produce charters continue in early **1948** as the fleet is upgraded by the addition of another Halifax in March and 5 Handley Page Haltons, leased from Freddie Laker's Aviation Traders. Bond becomes a major civil participant in the Berlin Airlift, beginning on August 4. Twelve company aircraft will eventually be involved over the next year. Meanwhile, between August 31 and October 31, a Halifax is released from the German operation to fly milk from Belfast to Liverpool and Blackpool.

A Halifax 8 is lost in a crash at Tegel Airport (Berlin) on February 15, **1949** while a Halton is destroyed at Schleswigland on April 9. Two Halifax 9s are purchased in June to replace 3 Haltons returned to Aviation Traders. Bond's participation in the Berlin Airlift ends on August 15; since the previous August, its transports have flown 2,577 sorties.

The general depression in the air cargo field that follows the end of the German success leads Bond to downsize its operation so that by summer **1950**, all of the Halifax es are withdrawn, leaving the company to offer DH 86 charters from London (LGW/Rearsby).

Demand for the company's services continues to fall and by February **1951**, Bond is an air taxi operator with aircraft that are too large. Consequently, the 2 DH 86s are sold and replaced by 1 DH 89A Dragon Rapide and 1 Fairchild Argus 3. Flight operations continue through the summer, but cease in late fall.

BOND HELICOPTERS, LTD.: United Kingdom (1984–1999). **Management Aviation and North Scottish Helicopters, Ltd.** is reformed in April **1984** and renamed; Stephen Bond remains managing director. Previous rotary-wing support services to North Sea oil explorers are continued from the company's bases at Cambridge and Aberdeen, employing a fleet of 5 Sikorsky S-76s, 6 Aerospatiale AS-332 Super Pumas, 14 Aerospatiale AS-365 Dauphins, 11 Bolkow Bo-105Ds, 4 Hiller 12Es, and 6 Hughes 500Ds. Orders remain outstanding for 4 Super Pumas and 4 Dauphins. Among the larger contracts serviced, with Dauphins, is British Gas' exploration, production, and development activity on the eastern fringe of Morecambe Bay, on the Irish Sea near Blackpool.

During the spring, the company purchases the North Denes heliport, just north of Great Yarmouth, and the subsidiary, North Denes Aerodrome, Ltd., is established to operate it. Employing S-76s, the company uses the base to fulfill contracts in support of the oil industry in the southern North Sea off East Anglia.

BP Petroleum contracts with the company to operate search and rescue missions on its behalf in the North Sea. In November, a SAR-equipped company SA-365N Dauphin 2 saves six fishermen from a life raft off the Forties Field. By year's end, support of the Blackpool operation involves two additional Dauphins.

The 4 Super Pumas and 4 Dauphins are delivered in **1985** and, during the first quarter of **1986**, the carrier succeeds in underbidding **British Airways Helicopters, Ltd.** for a £9-million contract from Total Oil Marine Engineering and Construction, Ltd. Beginning in April, 4 Super Pumas are dedicated to supporting Total's efforts in the North Alwyn Field off Aberdeen.

Meanwhile, falling oil prices drive down exploration work and, during the summer, the company is forced to lay 17 off from its staff at Aberdeen and another 12 at company headquarters at Cambridge. Managing Director Bond and his finance director prepare a company forecast that shows it going bankrupt the following April.

As of September 1, the company is able to begin flying support missions on behalf of British Gas; SA-365N Dauphin 2s are employed to fulfill the three Rough Field (North Sea) contracts, which are valued at £17 million. Late in the year, headquarters are transferred up to Aberdeen in order to consolidate control of offshore operations.

Operations continue apace in **1987**, with 34 aircraft active in offshore support roles. In April, the company pioneers the concept of helicopter air ambulance operations in the U.K. The initial service, Helimed 1, begins MBB BO-105 flights in the Cornwall and Isles of Scilly area. With support from its long-time venture capital backer 3i, Bond is able to get its creditors to repack the carrier's debt. Although cash flow dips to a trickle during the summer, Bond is able to scrape through until the oil support business starts to pick up in the fall.

Late in the year, a Dauphin, piloted by Capt. David Kinnell, rescues six fishermen shipwrecked in the North Sea. Kinnell will receive the Queen's Commendation for Valuable Service in the Air. Turnover for the year totals £26 million.

During the first quarter of **1988**, the company receives a renewed five-year support contract from Conoco. Employing an Aerospatiale AS Dauphin 2, the company flies to the V field from North Denes. In March-April, the BP offshore contract is extended for two years. The Northern Lighthouse Board approves a contract that will have the company's MBB BO-105s support remote lighthouses on the Scottish coast and Isle of Man through 1991. A five-year contract is received to provide Super Puma service on behalf of Total Oil Marine.

In May, the company purchases a Sikorsky S-76B from **KLM Helicopters, B.V.**, placing it into service in June. Also, a six-month extension of the AS-332L Super Puma contract with Phillips is received.

On June 1, the 17-year link between **British International Helicopters, Ltd.** and Total Oil Marine Engineering and Construction, Ltd. comes to an end. Total gives Bond a 5-year, £25-million award to not only support Total's Alwyn North platform, but the MCP01 pipeline pumping station and its exploration rigs as well. To handle what is thought to be the second largest contract in the U.K.'s North Sea oil business, Bond will continue to commit a minimum of three AS-332L Super Pumas.

The oil rig *Ocean Odyssey*, 138 nm. E of Aberdeen, takes fire on September 22 following a gas blowout. All but 1 of the 67 men aboard are able to escape by lifeboats to nearby work and supply boats. Military helicopters join a Bell 212 from **Helikopter Service, A.S.** and Bond's SA-365N Dauphin in evacuating these survivors to another rig, from which Bond aircraft fly them on to Scotland. At month's end, the carrier receives a two-year renewal of a Phillips Petroleum contract for the North Sea's Maureen Field, which it services with a single Super Puma. Income advances to £32 million.

The company diversifies its operation in January **1989** by creating Bond Holdings and a Heavy-Lift Division. Services will be provided by the company's 7 Super Pumas. The company's 6 Allison-powered S-76As are reengineered with Turbomeca Arriels during the spring, with

another S-76A, equipped with the French engines, purchased. At the same time, the number of MBB BO-105Ds is increased to nine.

Scotland's first dedicated air ambulance helicopter program begins operations on April 5 as a six-month experimental emergency medical service (EMS) contract with Bond, underwritten by a £110,000 (\$220,000) British Telecom grant, and employing an MBB BO-105 flying from Dundee's Ninewells Hospital. The Dundee BO-105 is the second Bond helicopter placed on medevac missions in two years. Meanwhile, the West Midlands Ambulance Service is established and planning begins with Bond for creation of an organization that will provide coverage to a five-county area of the central U.K. MBB BO-105s begin flying a pollution control operation in Sullom Voe in the Shetland Islands.

On April 25, a BO-105 experiences engine failure and is forced to ditch in Yell Sound in the Shetlands; both men aboard are rescued by a passing vessel and the helicopter, which remains afloat, is towed to shore for repairs.

The last significant event of the year is the acceptance, in mid-December, of the company's first Turbomeca Arriel-powered S-76A+. The aircraft represents the fruit of a \$6-million arrangement with Sikorsky Aircraft and Turbomeca for the introduction of new type to the North Sea. Plans are made to reengine the company's 6 other S-76s.

Airline employment stands at 670 in **1990** and a total of 43 aircraft are now active in offshore support roles. Noticing an upturn in North Sea support activity, Managing Director Bond, in January, places an order for up to 12 SA-365 Dauphin 2s. The experimental Dundee medevac service, extended into a 10-month test, ends in February after 412 missions. With renewed funding from various sources, the service becomes permanent.

At the same time, another BO-105 service is begun from Inverness. On May 6, an AS-332L Super Puma is badly damaged in a fire just after its main engine is started at the Aberdeen base. In June, a \$35-million order is placed for 7 S-76Cs. The Duke of Edinburgh officially opens the company's new Aberdeen passenger terminal on December 13. Turnover this year reaches £50 million.

Employing an MBB BO-105 leased from Bond, the West Midlands Ambulance Service begins operations in May **1991**. An ex-Australian MBB BO-105 is leased from Nash Helicopter Associates in June. The following month, the contract to provide Scottish Ambulance Service with an Inverness-based BO-105 is renewed. During the year, 3 AS-332L Super Pumas are leased from **Helikopter Service, A.S.** and a closer relationship with the Norwegian operator begins to develop.

During the first quarter of **1992**, a bid is made to purchase **British International Helicopters, Ltd. (BIH)**, on the market since the death of owner Robert Maxwell the previous fall. In July, a similar bid from **Bristow Helicopters, Ltd.** is withdrawn as the Bond move is referred to the U.K.'s Monopolies and Mergers Commission. Meanwhile, a fourth air ambulance contract is secured to provide medevac services in the Devon area. In December, the Scottish Ambulance Service awards the company a five-year contract worth £1.8 million (\$2.8 million) per year, to provide helicopter EMS service for all of Scotland. The flights will be coordinated with the fixed-wing air ambulance services that will be operated by Glasgow-based **Loganair, Ltd.**

In early January **1993**, two spray-fitted BO-105s participate in the control of oil pollution from the Liberian supertanker *Braer*, grounded at the south end of the Shetland Islands. In March, the long-standing Conoco contract is renewed for five more years.

Scotland-wide EMS services commence in April. Employed in conjunction with **Loganair, Ltd.**, the first integrated aeromedical service in the U.K. has one BO-105 based at Inverness for the north, one at Prestwick for the south, and a Eurocopter SA-365C Dauphin at Plockton for the central.

On May 4, Bond purchases Adelaide, South Australia-based **Lloyd Helicopters (Pty.), Ltd.** The new autonomous company becomes a member of the Bond Group and is allowed to retain its present management. Operations continue apace during the remainder of the year.

On July 1, 1994, the company's ownership sells the carrier to **Helikopter Service, A.S.** for \$112 million (\$75 million in cash and \$37 million in stock options). Leaving the carrier's previous owners Stephen (managing director) and Peter Bond holding a 12% stake, the Norwegian operator takes an immediate 49% interest, which will increase over the next three years to 100% control.

As part of the arrangement, the venture capital group 3i withdraws as do the carrier's other minority shareholders. The Bond trading name will be retained and the companies, now part of the world's largest civilian helicopter operation, will refrain from bidding against one another in the North Sea.

At the beginning of July, a review of working practices and manning levels is undertaken with an eye toward restructuring. In mid-July, a meeting of oil-industry officials is hosted at a Rotorcraft conference where Bond executives demonstrate its new AS-332L Helicopter External Liferaft Module (HELM).

Although the accounts of the Bond and HS are consolidated in October, officials of both emphasize that they will continue to operate as independent national entities. A long-term (11-year option) offshore support contract is signed with Hamilton Oil Company, Ltd., also in October.

A new base is established at Liverpool Airport where, beginning in November, an AS-365N Dauphin begins to serve the new \$1.5-billion Liverpool Bay development. While en route to Mablethorpe, Lincolnshire, on November 11, an S-76 is engaged in a near collision with a RAF Tornado fighter-bomber.

At month's end, it is announced that the company will reduce its 562-person workforce by 30 engineering and support staff positions.

Income of £87 million is reported for the year.

On January 19, 1995 a **Bristow Helicopters, Ltd.** AS-332L.1 is hit by lightning in the North Sea and ditched. Bond, after consultation with the Civil Aviation Agency in March, joins with Bristow, as well as **British International Helicopters, Ltd.** in a voluntary agreement to prohibit flights in actual lightning conditions. Aircraft will either be diverted around such areas or not allowed to depart.

The company is profiled in the lengthy article "Enterprise in the Skies," by Anita van de Vliet, which appears in the April issue of *Management Today*.

During July, plans by Helikopter Services and Bond to establish a holding company, Helikopter Services Group, are delayed. Also during the month, Bond hosts oil industry executives at a Rotortech gathering to show off a number of new technical developments it has been working on, including a Helicopter External Liferaft Module designed for use with Super Pumas.

Two important contracts worth \$18 million are received from British Gas on September 1, both of which will be fulfilled with Eurocopter AS-365N Dauphins. The first calls for support for production and drilling activities in the Morecambe Bay area while the second covers the Rough and Amethyst gas fields in the southern sector of the U.K. continental shelf.

At the beginning of 1996, Bond has 5 MBB BO-105s on lease to ambulance authorities throughout the U.K., with 2 others on permanent standby. On February 19, the delayed Helikopter Services Group holding company is formally established as an umbrella organization for itself, its subsidiaries, and Bond. Helikopter Services Chairman Christian Brinch is group chairman, with Bond briefly remaining as CEO of the Bond Group of companies and managing director of Bond Helicopters.

Managing Director Bond stands aside in April from the day-to-day operation of his concern and is succeeded as managing director by operations director Trevor Larman. Bond remains on the board of Helicopter Services Group.

Also during the spring, the company acquires the only short-term oil support contract of **Irish Helicopters, Ltd.** On July 1, in a move that surprises many, Irish Helicopters also loses to Bond the Irish Department of Marine's contract for its Irish Marine Emergency Service (IMES) station at Shannon. Bond establishes a new subsidiary, Bond

Helicopters (Ireland), Ltd. to operate the new Ir£14-million contract at the beginning of the following year. The Irish government agrees to provide pilots and winch crew from its Air Corps.

Also on July 1, the company wins away from **Bristow Helicopters, Ltd.** a three-year contract to provide support flights from Aberdeen to the Gryphon offshore field of Kerr-McGee; Bond places a Super Puma on the route.

On October 22, Trade Secretary Michael Heseltine, acting on the recommendation of the Monopolies and Mergers Commission, informs Bond Helicopter executives that it is not in the public interest for Bond to acquire **British International Helicopters, Ltd.** Both Bond and BIH indicate displeasure and Bond joins **Bristow Helicopters, Ltd.** as a former suitor.

In December, the company loses the Talisman offshore support contract to provide flight services to the former British Petroleum-owned North Sea fields at Beatrice, Buchan, and Clyde. The bid by **British International Helicopters, Ltd.** for the two-year deal is lower than Bond's.

In reaction, Bond, on behalf of Helikopter Services Group, challenges **British International Helicopters, Ltd.**'s right to a U.K. operating license. The High Court in London grants a judicial review.

The Shannon search and rescue (SAR) mission of **Irish Helicopters, Ltd.**, out of Cork and Dublin on the east coast and from Shannon on the west coast, is handed over to Bond Helicopters (Ireland), Ltd. on January 1, 1997. In an example of industry consolidation, execution of the contract is arranged by Norway's Helikopter Service Group employing a Sikorsky S-61N leased from **Court Helicopters (Pty.), Ltd.** of South Africa, in which Helikopter Service Group owns shareholding.

On January 30, an S-76A+ is leased to Scheiner Aviation Group in the Netherlands for a year.

On March 1, the Bond Helicopters (Ireland), Ltd. S-61N flying from Shannon endures a 5-hour mission some 150 nm. off the nation's southwest coast to rescue 13 crewmen from a burning British trawler. The lift is made against storm-force winds and 33-ft. seas.

In March, a 7-month, Nkr 6-million contract is received from Statoil for offshore support in Ireland's Connemara oil field. The contract may be renewed thereafter on an annual basis.

As the result of the \$35-million renewal contract with the Northern Lighthouse Board signed earlier, the carrier, beginning on April 1, is able to reaffirm for the next three years the use of a Eurocopter BO-105 in support of installations and vessels around the Scottish coast.

Also before the end of the second quarter, a second S-61N is posted to Shannon to assist in Bond Helicopter (Ireland), Ltd.'s SAR work.

On July 1, Bond challenges a 1993 determination by the Civil Aviation Authority that **British International Helicopters, Ltd.** complies with applicable U.K. and European licensing regulations with respect to ownership nationality.

Following the deaths of 12 people when a Norwegian Super Puma crashes during a routine flight over the North Sea, all 37 British Super Pumas, including the 9 flown by Bond, are grounded indefinitely on September 12. Spokesmen for the three helicopter companies that fly Super Pumas from Aberdeen issue a joint statement that the aircraft will not restart until appropriate safety inspections have taken place. Five days later, the Super Pumas are back in the air.

It is reported in *The Irish Times* on November 18 that, because of a shortage of Irish Air Corps pilots, the minister of marine is forced to renege on his previous year's commitment to employ only military crew for extended east coast search and rescue. Bond is asked, via a slight contract revision, to provide two of the seven pilots and one of the eight winch crewmen.

In late December, Bond receives a 5-year, \$57 million contract from British Petroleum to provide offshore support from Aberdeen to its Bruce and Foinavon/Schehallion oil fields.

To fulfill its new BP contract, Bond, on January 16, 1998, orders two new AS-355L.2 Super Puma Mk.IIs. It is anticipated that Bond will be the first firm to introduce the Mk.2 to the U.K. Continental Shelf.

In late February, the Bond Helicopters (Ireland), Ltd. Sikorsky S-61N from Shannon develops gearbox problems while engaged in picking up a casualty from a Norwegian fishing vessel off Mayo. In 50-kn. winds and 20-ft. swells, an Irish Air Corps Dauphin comes to the aid of its civilian colleagues, escorting the Bond helicopter into the Blacksod refueling pad and then flying back to assist the sick crewman and the IMES winchman left behind.

To support Total's oil and gas production and exploration on the U.K. continental shelf, a 3-year, £18-million contract is signed with Bond on March 2. Two AS-332L Super Pumas will fly supply and personnel transport missions. The deal contains a provision for two further one-year options.

On March 19, the Conoco contract is renewed, although this time it is put on the books as an alliance. Under its terms, the company will continue to provide support in the southern North Sea utilizing two AS-365Ns and, periodically, Sikorsky S-76A+s. The five-year arrangement, effective on April 1, has options on two one-year extensions.

On June 13, the Aberdeen (Scotland) *Press and Journal* reports that **Canadian Helicopter Corporation, Ltd. (CHC)** is targeting either Norway's **Helikopter Services, A.S.** or one of its subsidiaries (most likely U.K.-based Bond Helicopters, Ltd.) as a possible takeover target.

On June 29, a Sikorsky S-61N is based in Dublin in support of air-sea SAR missions of Bond Helicopters (Ireland), Ltd. on the east coast of Ireland. The new IMES is the last link in the government's chain of improved air-sea rescue cover and is kicked off by a ceremony at Howth, County Dublin, in which speeches are given and the Sikorsky makes a flyby for those gathered.

The new five-year contract with Bond for coverage of the east coast comes into effect on July 1, two-and-a-half years to the day after the death of a Wexford fisherman, Timmy Currid, that prompted the government to review its rescue cover. At this point, two-thirds of the IMES pilots are retired Irish Air Corps and Royal Navy personnel, and one-third are commercial pilots; half of the helicopter crewmen are former Air Corps.

Three safety problems are alleged during the month by the OILC, an offshore union. On two separate occasions, a loose pylon cover is found and a life raft cover not properly fitted in two Super Pumas. On July 20, an engine goes too fast and automatically shuts itself off during a Super Puma inspection test flight.

During the Tall Ships Race on August 24, nine naval divers are hurt while making a routine air-sea rescue demonstration jump from the Dublin-based Bond Helicopter (Ireland), Ltd. IMES S-61N on the River Liffey at Dublin Port. The men are all rescued by rigid inflatables and hospitalized. Bond quickly files a report of the incident with the marine ministry which, according to *The Irish Times* on August 25, will be further reviewed by the air accident investigation unit of the Irish department of public enterprise and employment.

The Super Puma Mk.2s arrive in September, allowing service to begin with them in mid-October from Aberdeen to the BP Bruce and Foinavon/Scheghallion fields. The aircraft are the first of their kind dedicated for use in the continental shelf of the U.K.

Also during the month, Bond undergoes a safety inspection by the Civil Aviation Authority. The OILC claims that the review, which has taken three weeks, is not routine, but has been triggered by the July Super Puma incidents and a concern that cost cutting has led to maintenance cutbacks. The company denies the union's charge; the CAA indicates that it carries out inspections on a regular basis and occasionally at random, but will not confirm a visit to Bond.

On October 14, the company acquires the £35-million contract previously held by its rival, **Bristow Helicopters, Ltd.**, for offshore support work out of Aberdeen on behalf of British Petroleum. The new contract will give BP additional access to Bond's Super Puma Mk.2s and will operate them to BP's Atlantic Margin, Bruce, Harding, and Miller fields.

The contract with Phillips and Mobil for helicopter support in the southern North Sea area is renewed for three years and takes effect on December 1. Signed on December 4 and effective January 1 is a seven-year contract with the Scottish Ambulance Service.

The Aberdeen (Scotland) *Press and Journal* reports on January 12, 1999, that the **Canadian Helicopter Corporation, Ltd.** has purchased a package of 5.1 million shares in **Helikopter Services, A.S.** The 25% stake in the Norwegian operator, valued at a "knock-down price" of £16 million (Nkr 40 per share), is acquired from an institutional investor via the CHC Norwegian subsidiary Vinland Helicopters. The purchase makes CHC the largest shareholder in HAS, as well as its subsidiaries, Bond and Australia's **Lloyd Helicopters (Pty.), Ltd.**

Shortly after departure from Conoco's McCulloch field after a January 21 scheduled freight service, a Super Puma, with 2 crew and 12 passengers and en route to Aberdeen, suffers severe in-flight vibration. The helicopter radios ahead and two lifeboats from Aberdeen and Peterhead are launched as a precaution. The aircraft is able to make a safe landing at Aberdeen Airport, with no injuries reported.

While 30 mi. out from Aberdeen en route to Agip (UK), Ltd.'s Tiffany platform on January 22, another Super Puma, with 2 crew and 14 passengers, is forced to return to its point of origin when a warning light in the cockpit begins to flash. A replacement helicopter is immediately available and the crew and passengers depart and complete their flight, slightly delayed.

An additional 5% stake in Helikopter Services Group is acquired on March 24, together with controlling interest. Interviewed by the *Press and Journal*, Helikopter Services Group Chairman Reidar Lund indicates that the action is regarded as an "unfriendly takeover" attempt. Canadian Helicopter Corporation's chief financial officer, Jo Mark Zurel, discourages "takeover speculation" and claims the share purchase is a moneymaking exercise.

The Norway Post reports on March 30 that Bond has extended its contract with British Petroleum for an offshore-based helicopter in the Forties field in the U.K. North Sea for another year, with options on two more. The contract is valued at Nkr 12-13 million.

On April 14, Reuters, Ltd. publishes news that the **Canadian Helicopter Corporation, Ltd.** will bid 45 crowns per share for the remaining shares in Helikopter Services Group and that the official offer will be released within a week, again through its Norwegian subsidiary, Vinland Helicopters. After a preliminary discussion, the Norwegian operator indicates that the offer, compared to booked capital, is too low.

Canadian Helicopter counters on April 26 with an offer, via Vinland, of Nkr 45 per share for the remaining shares. The purchase would be subject to successful completion of a due diligence review and government approvals. A statement from Canadian Helicopter also indicates that the offer is conditional upon Vinland gaining a minimum of 90% of Helikopter Services Group stock.

Rebuffed, Canadian Helicopter will raise its offer to Nkr 60 per share by early June.

On May 5, a 5-year, \$39.2-million contract is signed with Mobil North Sea, Ltd. for helicopter support to the energy provider's offshore activities on the U.K. continental shelf. With an option to extend the agreement for five years upon its conclusion, the new pact will take effect on August 1.

Canadian Helicopter obtains 90.2% of the shares in Helikopter Services Group on June 25. The takeover brings concern to workers at Bond that many may lose their jobs if the new owners elect to merge their concern with **British International Helicopters, Ltd.**, which Canadian Helicopters already owns.

Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** is able to announce on August 2 that all of the remaining conditions to its offer to purchase all shares in **Helikopter Services Group, A.S. (HSG)** have been satisfied or waived and that the acquisition is completed. In a move that foreshadows a corporation-wide integration a year later, Bond, the HSG U.K. subsidiary also acquired, is now renamed **CHC Scotia, Ltd.**

BOND HELICOPTERS (IRELAND), LTD. See **BOND HELICOPTERS, LTD.**

BOP AIR (PTY.), LTD. (BOPHUTHATSWANA NATIONAL AIR SERVICES [PTY.], LTD.): South Africa (1985–1994). In 1985, **Mmabatho Air Service, Ltd.**, which had been formed at the national capital on July 20, 1979, is redesignated the national airline of the South African black “homeland” Bophuthatswana. Operations are undertaken linking Johannesburg’s Jan Smuts International Airport with Pilanesberg Airport, near the resort community of Sun City.

In 1986, the carrier is renamed **Bophuthatswana National Air Services (Pty.), Ltd.**—or Bop Air. Within a year, Managing Director Ian J. Bond’s carrier establishes routes to all of the major airports in southern Africa.

The fleet in 1987 comprises 1 British Aerospace BAe (HS) 748-B2, 1 Cessna 550 Citation II, 3 Embraer EMB-110P1 Bandeirantes, 1 Piper PA-31-310 Navajo, and 2 Piper PA-34 Senecas. Orders are outstanding for 2 EMB-120 Brasilas. Enplanements for the year total 45,000. Operations continue apace in 1988–1989.

One Bandeirante is withdrawn in 1990 as 2 new EMB-120 Brasilas are acquired. J. Borstlap succeeds Managing Director Bond in 1991 and is followed, in turn, by J. L. Borstlap in 1992. During the latter year a Gulfstream G-3 is purchased. Services are maintained from Johannesburg to Mmabatho and Sun City and return flights are made from Thaba’Nchu to Mmabatho. Contract service and passenger and cargo charters are also undertaken.

In 1993, Managing Director Borstlap oversees a workforce of 132 and a fleet that includes 2 each EMB 110P1s and EMB-120s and 1 each Cessna 550 Citation II and BAe (HS) 748-B2. Cape Town joins the route network.

Flights continue; however, on May 1, 1994, the company is renamed **Sun Air (Pty.), Ltd.** as Bophuthatswana is integrated into South Africa.

BORDER AIR (PTY.), LTD.: South Africa (1972–1990). Formed at East London in 1972, **Border Air (Pty.), Ltd.** undertakes scheduled commuter services linking its base with Queenstown, Umtata, Butterworth, Durban, Grahamstown, and Port Elizabeth. Charters are also undertaken to Wild Coast resorts. For a decade, the fleet comprises 1 Piper PA-31-310 Navajo, 1 Cessna 402, and 2 Beech B-55 Barons.

In 1983, the fleet is enlarged by the addition of another Cessna 402, 2 Britten-Norman BN-2 Islanders, 1 Shorts SC-7 Skyvan, and 1 Piper PA-34 Seneca. In 1988, General Manager A. Barski adds another Skyvan and services are initiated to Bisho and Wild Coast. Bloemfontein becomes a destination in 1989.

Unable to continue in the face of significant economic difficulties, the carrier is forced to seek a partner or cease operations. Early in 1990, it is combined with **Magnum Airlines (Pty.), Ltd.** of Johannesburg and Durban-based **Citi Air (Pty.), Ltd.** to form **Link Airways (Pty.), Ltd.**

BORDER AIRLINES. See **TEXAS NATIONAL AIRLINES**

BOREAL AIRWAYS, LTD. See **NORDAIR, LTD.**

BORINQUEN AIR/AIR PUERTO RICO: P.O. Box 37309, Airport Station, San Juan, Puerto Rico 00937, United States; Phone (787) 791-5060; Fax (787) 681-8600; Code 3B; Year Founded 1961. Sixto Diaz Saldana establishes Borinquen Air at Luix Munoz Marin International Airport, Isla Verde, Puerto Rico, in 1961 to offer charter and contract service flights. Revenue services begin with a fleet of 3 Douglas DC-3s.

Often employing the marketing title “Air Puerto Rico,” Borinquen continues to fly Caribbean cargo charters over the next 37 years. Two of the Douglas transports are lost in accidents during the 1980s. The third is sold to **Delta Air Lines** for restoration to its original condition.

Just after takeoff from San Juan on a freight service to Basseterre on July 22, 1986, a C-54D with two crew suffers engine failure and crashes into a lagoon (one dead).

Early in the 1990s, the last Douglas is replaced with 1 de Havilland Canada DHC-6-200 Twin Otter. At mid-decade, it is replaced with 2 Beech 18s.

It is understood that operations continue for several years thereafter, but exact information is unavailable.

BORNEO AIRWAYS: Indonesia (1997–1999). Despite the Asian economic downturn, Borneo Airways is set up at Sarawak in late 1997 to offer domestic passenger charters, as well as scheduled regional feeder services for **Royal Brunei Airlines**. Shareholding is divided between Royal Brunei and the state government of Sarawak.

With management support provided by the Brunei airline, along with a single Fairchild Dornier 228-212, revenue flights begin on February 8, 1998.

Service is maintained with few charters and less profit until the company is shut down on October 4, 1999. The leased Fokker 50 and Fokker 100 are returned.

BORNEO AIRWAYS, LTD.: Malaya (1958–1965). To provide feeder services for **Malayan Airways, Ltd.**, the local British government (51% shareholding) and the **British Overseas Airways Corporation (BOAC)** (49% shareholding) reform the carrier Sabah Airways, Ltd. (formed as a Malayan Airways subsidiary the previous year) on March 1, 1958. Equipped with 3 Scottish Aviation Twin Pioneers and 2 old de Havilland DH 89A Dragon Rapides, it continues services to bush destinations in the states of Sabah and Sarawak as well as to Singapore.

Borneo Airways, Ltd. assumes responsibilities for domestic operations in 1960 as **Malayan Airways, Ltd.** concentrates on long-haul flights. Four Douglas DC-3s are transferred over from the parent. The fleet is upgraded in 1961–1963 by the addition of 8 Fokker F.27-100s, which allow removal of the de Havillands. Merger discussions begin between Borneo Airways and **Malaysian Airways, Ltd.** (successor to **Malayan Airways, Ltd.**) in 1964.

On April 1, 1965, Borneo Airways, Ltd. is acquired by Malaysian and merged. Borneo’s base at Kesseton is enlarged and its Sabah/Sarawak routes and fleet, comprising 1 Cessna 310, 4 DC-3s, 8 Fokker F.27-100s, and 3 Twin Pioneers, are likewise turned over. The Twin Pioneers will be replaced with additional C-310s.

BORONEZH AVIA: Ukraine (1993–1996). BA is established at Dnepropetrovsk Airport in the Ukraine during 1993 to offer regional third-level services. Comdr. Mikhail Demidenko is CEO and he begins revenue services with 1 each Antonov An-2, Yakovlev Yak-40 and Yak-42. Flights continue in 1994–1995, but cease in 1996.

BOSPHORUS AIRWAYS, A.O.: Abdullah Sk 4/4, Gumusuyu, Taksim, Istanbul, Turkey; Phone 90 (1) 249-3844; Fax 90 (1) 245-8348, Year Founded 1994. Bosphorus is established at Istanbul in late 1994 to offer domestic passenger services. Revenue flights commence and continue with 2 each Boeing 737-300s and B-727-200s.

BOSTON-MAINE AIRWAYS (1): United States (1930–1931). Boston-Maine Airways is jointly organized by officials of the Boston and Maine and Maine Central Railroads, led by Laurence Whittemore, on July 20, 1930. A management contract is signed with **Pan American Airways (PAA)**. The entire operation is now carried out by Juan Trippe’s airline, which flies a Fokker F-10A on Boston-Maine’s behalf over a Portland-Rockland-Bangor route, beginning on August 1, 1931.

A contract is also taken with **Pan American Airways (PAA)** for operations of its S-41Bs from Bangor to Halifax, Nova Scotia, via Calais and St. John, beginning the same day. One of these contracted Sikorsky crashes into Massachusetts Bay on August 27. BMA pilots take over the F-10 service on September 30 and the Sikorsky extension north of Bangor is discontinued.

The **Pan American Airways (PAA)** association is now concluded and without aircraft, the carrier enters a dormant stage.

BOSTON-MAINE AIRWAYS (2). See **PAN AMERICAN WORLD AIRWAYS (2)**

BOSTON-MAINE/CENTRAL VERMONT AIRWAYS: United States (1933–1940). With initial capitalization of \$10,000, **National Airways** is formed in early 1933 at New York by ex-New York, Philadelphia and Washington Airway (Ludington Airlines) employees Paul Collins and Eugene Vidal. Support is obtained from New York businessman Sam Solomon, famed aviatrix Amelia Earhart is signed on as spokesperson, and two Stinson SM-6000B Tri-Motors are purchased from Ludington.

A contract is arranged with Boston and Maine Railroad official Laurence Whittemore, responsible for the then-dormant **Boston-Maine Airways**, to operate his former route to Bangor, Maine, via Portland and Waterville. Revenue flight services commence on August 11.

Additionally, Collins contracts with newly formed **Central Vermont Airways**, owned by the Canadian National Railroad, to fly its routes as a feeder service from Boston to Montpelier, beginning on October 27. Soon the two airlines are operated as one coordinated enterprise, Boston-Maine/Central Vermont Airways.

Two extensions are added on February 7, 1934: Manchester is added as a stop and the Montpelier destination is stretched to Burlington. Service to Montreal, which makes the company an international airline, is launched on March 20. Since start-up, the New England entrant has flown less than 2,000 passengers. In the wake of the airmail scandal of February–March, the company bids for and receives a June 5 Post Office contract to fly mail between Boston and Burlington via Bangor. The Montreal service must be halted for winter as of October 22.

Beginning in summer 1935, flights are offered between Bangor and Bar Harbor. This railroad-sponsored aerial arrangement is continued with little change over the next three years. On April 8, 1936, a Stinson crashes at Burlington. Having determined that newer flight equipment is essential, the owners order two new Lockheed Model 10As for **National Airways**, which are delivered in October.

On March 1, 1937, the railroad interests buy out Collins and his associates when they are unable to come up with the money to pay for the Electras. **Boston-Maine/Central Vermont Airways** continues operations as before with the ex-**National Airways** Stinsons confined to a new Bangor–Caribou via Millinocket, Houlton, and Presque Isle route started on August 5. Lewiston–Auburn becomes a destination on December 1.

By 1938–1939, the carrier virtually controls the northeast corner of America's growing commercial air space. On November 19, 1940, the company is reorganized and renamed **Northeast Airlines**, a more geographically correct title free of railroad connotation.

BOTSWANA AIRWAYS CORPORATION (PTY.), LTD.: Botswana (1969–1972). Formed as official successor to **Botswana National Airways (Pty.), Ltd.**, BAC is formed at Gaborone in 1969 to operate scheduled passenger and cargo services between the capital and regional destinations. The fleet comprises 1 Vickers Viscount 754 and 1 Douglas DC-3. The company is succeeded by **Air Botswana (Pty.), Ltd.** in 1972.

BOTSWANA NATIONAL AIRWAYS (PTY.), LTD.: Botswana (1966–1969). The first of three national airlines to be formed at Gaborone within six years, BNA is established under the leadership of D. Morgan in summer 1966 to serve as the successor to **Bechuanaland National Airways, Ltd.** Outfitted with 1 Fokker F.27 Friendship and 1 Vickers Viscount 754, the company undertakes regional scheduled services from Gaborone to Johannesburg, Livingstone, and Lusaka. Simultaneously, 1 Britten-Norman BN2 Islander and 1 Beech 58 Baron are employed to operate a domestic network.

In October, the carrier launches a joint venture route to Bulawayo with **South African Airways (Pty.), Ltd.**

The fleet is increased in 1967–1968 with the addition of 1 Douglas DC-4 and 2 DC-3s, the former purchased from **Philippine Airlines (PAL)**. The four-engine Douglas is employed to fly fuel from Francistown to Livingstone each day, where it is off-loaded and sent by rail to the Roan Selection Trust Copper mines.

After three years service with diminishing returns, the company is forced to shut down in late 1969. It will be succeeded by **Botswana Airways Corporation (Pty.), Ltd.**

BOUGAIR (PTY.), LTD.: Papua New Guinea (1967–1986). Formed at Kieta in the North Solomons province of Papua New Guinea in 1967, Bougair (Pty.), Ltd. is initially employed as a charter carrier in support of its owners, Bougainville Copper. Scheduled services are initiated in 1973 linking Kieta with Wakunai, Buka, Nissan Island, Torokina, Inus, and Sabah.

The fleet in 1981 comprises 1 Shorts SC-7 Skyvan, 2 Britten-Norman BN-2 Islanders, and 2 Cessna 185s. During the next four years, another Islander is acquired, replacing the Shorts and Cessnas. In 1986, Managing Director P. Nerau's company is renamed **North Solomons Air Services (Pty.), Ltd.**

BOUNAVAD: Bulgaria (1928). This short-lived airline is founded at Sofia in 1928 and, with a Junkers F-13, runs scheduled service from Sofia to Ruschuk and Varna. Unsupported and unable to achieve economic viability, the enterprise quickly folds.

BOURAQ INDONESIA AIRLINES: PB 2965, 1-3 Jalan Angkasa, Kemayoran, Jakarta Pusat, 10720, Indonesia; Phone 62 (21) 629-5289; Fax 62 (21) 629-8651; http://www.bouraq.com; Code BO; Year Founded 1970. Private interests, led by J. A. "Gerry" Sumendap, form this nonscheduled passenger and cargo airline at Balikpapan, in eastern Kalimantan, on April 1 1970. The new entrant is a subsidiary of Sumendap's Porodisa Industrial Group, Ltd.. Employing 4 Douglas DC-3s, Bouraq begins ad hoc services toward the end of the month, linking its base with Jakarta, Surabaya, and Palu.

Finding a measure of success, the company now elects to commence scheduled operations and, beginning in June, Douglas frequencies are initiated from the previous points to Banjarmasin, Tarakan, Ujungpandang, and on to Tawau, in Malaysia. For the next 11 years, Sumendap will second executives from Porodisa to operate the airline.

A Nihon YS-11A is acquired from Japan in May 1971 and orders are placed for Fokker F.27s and Hawker Siddeley HS 748s. The Dutch-made Fokkers arrive in June 1972, the same month scheduled flights begin from Menado to Davao in the Philippines. The first HS-748 arrives in January 1973.

During this year, as in the last two, Bouraq is providing domestic scheduled flights from Jakarta and Balikpapan to many of the larger Indonesian islands. International routes are undertaken as well, including Pontianak to Singapore and Tarakan to Tawau in Malaysia and Zamboanga in the Philippines.

The charter carrier **Nusantara Air Service** is acquired by Porodisa Industrial Group to serve as a Bouraq sister carrier. Outfitted with a pair of F.27s leased from Garuda Indonesian Airways, the company operates the large turboprops for the remainder of the year.

In January 1974, **Nusantara Air Service** is reformed and renamed **Bali Air (Bali International Air Services)**. The Fokkers are withdrawn and replaced with a fleet of Britten-Norman BN-2 Islanders and BN-2A Trislanders. When Philippines President Ferdinand Marcos declares martial law for his nation in 1975, Bouraq is forced to suspend its Davao route.

An HS 748-2A with 5 crew and 27 passengers is destroyed as the result of a bad landing at Palu Airport on January 23, 1976; there are no fatalities.

Services otherwise continue apace for the remainder of the year.

Bouraq's various trunk line services to southern Sulawesi are rationalized in early January 1977 and on January 24, through services are initiated from Jakarta and Surabaya to Tarakan, Menado, and Ujungpandang. The company, through its parent, now takes a stake in the production of the Nurtanio-CASA 212-100 Aviocar, a Spanish turbo-prop manufactured in Indonesia, and orders three.

Another HS 748-2A with 5 crew and 46 passengers is destroyed as the result of a bad landing at Ujung Pandang on February 9; again, there are no fatalities.

The fleet of President Sumendar's 390-employee carrier in **1978** comprises 1 Nihon YS-11A, 7 Hawker Siddeley HS 748s, and 3 DC-3s. The fleet also includes 3 Islanders and 3 Trislanders, which are leased to Bali Air. The first two Aviocars arrive at the beginning of November and enter service early in the month on routes in and through Java.

Services expand during **1979** and into the **1980s**; additional domestic destinations include Maluku, Bali, and the Nusa Tenggara Islands.

In early August **1980**, 2 Vickers Viscount 748s and 1 V 812 are leased from **Far Eastern Air Transport, Ltd.** of Taiwan.

En route from Banjarmasin on August 26, the Vickers Viscount 812, with 6 crew and 31 passengers, suffers the separation of a part of its tail, causing it to crash into a swamp 26 km. NE of Jakarta; there are no survivors.

Flights continue without incident in **1981**, but, in **1982** Bouraq gains its independence from the Porodisa Industrial Group and employs its own group of executives and managers.

An HS 748-2A with 3 crew and 42 passengers is destroyed as the result of a bad landing at Manado on December 10; there are no fatalities.

By **1983**, the Hawker fleet has grown to 13 aircraft, but a larger aircraft is now required to keep up with demand for the airline's services. In September, 4 Viscount 843s are purchased from **CAAC (General Administration of Civil Aviation of China)**. All enter service in **1984**.

In **1985**, international return flights are offered from Tarakan in Indonesia and Tawau in Sabah, Malaysia. Additional frequencies are initiated during the remainder of the decade and the fleet grows to comprise 16 BAe 748s, 4 Vickers Viscount 843s, 3 Britten-Norman BN-2 Islanders, 3 Britten-Norman BN-2A Trislanders, 3 IPTN (CASA) NC-212-100 Aviocars, 1 Douglas DC-3, and 1 Cessna 404.

Operations continue apace in **1986–1987**. The 852-employee company enjoys an upturn in passenger traffic during **1988**, flying 449,483 passengers during the first three quarters, a 9.9% increase over the previous year. Freight is, however, down by 15.4% to 2.34 million FTKs.

An HS 748-2A with 5 crew and 47 passengers makes a wheels-up landing at Banjarmasin on January 4, **1989**; although the aircraft is destroyed, there are no fatalities.

As **Garuda Indonesian Airlines** withdraws from domestic operations later in the year and in **1990**, this 794-employee carrier fills the resultant niche. Passenger boardings increase 68% to 425,631. Freight climbs 81.5% to 2.8 million-ton kilometers. Operations continue apace in **1991** and enplanements total 180,245.

The fleet in **1992** includes 9 BAe (HS) 748-A2s, including 3 out of service; 5 BAe-B2s; 1 BAe-B2F; 3 out of service IPTN (CASA) NC-212-100 Aviocars; and 3 Viscount 843s, 1 of which is out of service.

An engine fire forces a Viscount 843 with 6 crew and 64 passengers to abort its takeoff from Banjarmasin on August 28; although the aircraft is damaged beyond repair, there are no fatalities.

In December, a Boeing 737-291A and B-737-205C are wet-leased for six months from **Air Atlanta Icelandic, H.F.**

Passenger boardings decline 13.5% to 158,807 and freight traffic plunges 70.5% to 419,000 FTKs.

By **1993**, General Manager V. P. Rungkat oversees a workforce of 731 and the Douglas transport, the Cessna, and the BN-2s/2As are withdrawn. One of the remaining 3 ViscounTs is out of service as are 3 of the 9 BAe 748-2As.

On January 9 just after takeoff on a service to Banjarmasin, a BAe (HS) 748-2A with 5 crew and 30 passengers returns to Surabaya due to problems with the Nos. 2 engine. The aircraft crashes in a swamp, breaks in two, and catches fire (15 dead).

Scheduled passenger and cargo services continue throughout the central and eastern parts of the archipelago. In October, a marketing agreement is signed with **Philippine Airlines (PAL)** calling for joint service on a route from Manado to Davao using Bouraq aircraft and crew.

A Viscount is restored to service in **1994**, but, more importantly, the company, under Operations Manager Aan Husdiana, begins jetliner frequencies with a new fleet of "Baby Boeings." Chartered and placed on

the route network are 4 B-737-2H6As, 3 B-737-230As, and 1 B-737-2K2A, the latter leased from the Dutch carrier **Transavia Airlines, N.V.**

The Vickers Viscount 843 is destroyed as the result of a bad landing at Pontianak on November 27; there are no fatalities.

Enplanements average 65,000 per month and reach a total of 780,000 for the year.

On May 29, **1995**, the government allows Bouraq Indonesia to add 17 new domestic and international routes. Five-times-a-week B-737-200 service is inaugurated on June 22 between Surabaya and Singapore. Other new routes started at this time include Ujungpandang, in south Sulawesi, with Singapore, and Manado, in north Sulawesi, with Singapore.

While en route from Tual to Kaimana on August 9, a BAe (HS) 748-2A with six crew and four passengers crashes into Mt. Komawa; there are no survivors.

In cooperation with **EVA Air, Ltd.**, frequencies are initiated in October between Surabaya and Taipei and between Surabaya and Perth, Australia. Customer bookings this year total 838,964.

The workforce is decreased 8.6% in **1996** to 731.

Engine failure forces an HS 748-2B, with 43 passengers, to abort its takeoff from Ambo on July 11; the turboprop overruns the runway and rams into a dyke. Although the plane must be written off, there are no fatalities.

Passenger boardings for the year soar 35.3% to 1,296,698, but cargo traffic plunges downward 73.5% to 8.27 million FTKs.

The South East Asian and national currency problems of late **1997** have a devastating impact upon the carrier's ability to function. Traffic declines, personnel are laid off, and aircraft are withdrawn.

With the rupiah now valued at 17,000 to the U.S. dollar, the nation's airlines are, in May **1998**, granted permission to increase fares by 37.5%. By late May, when President Suharto resigns, Bouraq is reported to be near collapse.

By the beginning of August, a cost-cutting plan that would have combined the domestic operations of Garuda, Bouraq, Merpati, and Mandala collapses; despite load factors as low as 30%, the smaller airlines refuse to join with the flag carrier.

The effects of the Asian currency crisis and the national economic downturn continue; at this point, the four companies are losing significant funds as 80% of their costs are in U.S. dollars, but only 20% of their income is in the same currency.

During the last week of August, the Indonesian parliament does grant a long-desired fare increase. Domestic tickets increase in price by 40% on September 1; they rise again another 14% on December 1.

Flights continue in **1999**. During the first six months of the year, the rupiah regains some 50% of its strength. The balance of the parliamentary-approved fare increase is postponed.

Enplanements for the year total 388,000 and 3.63 million FTKs are operated. Airline employment at the beginning of **2000** stands at 731.

BOWEN AIR LINES: United States (1930–1936). Two years after selling **Texas Air Transport**, Temple Bowen forms a new airline using his name in the fall of **1930**. Employing three Lockheed Model 5 Vegas, Bowen inaugurates scheduled passenger services linking Dallas (DFW) and Houston on October 1. Later in the month, this service is extended to Oklahoma City from Dallas. In November, a pair of Lockheed DL-1 Metal Vegas are acquired and employed to stretch a route down to Tulsa from Fort Worth.

In association with **Braniff Airways**, the company's Fort Worth terminus is extended to Oklahoma City in **1931**. In May, the company becomes the first to operate the ultrafast, 175-mph Lockheed Model 9 Orion, placing two into service with the five Vegas and increasing flights out of Fort Worth and Dallas to 18 per day. Operations continue apace in **1932–1933**. On June 2 of the latter year, one of the Orions crash-lands at Tulsa; the pilot and two passengers are injured.

As a result of investigations into the airmail scandal, the government cancels all existing mail contracts on February 9, **1934** (effective February 19) and orders the U.S. Army Air Corps to fly the mail.

As a result, Bowen now closes its services from St. Louis to Chicago, Springfield, and Tulsa. At the end of March, the Post Office, following the failure of the military operation, takes new bids on the mail routes. As a result, the company begins flying to Brownsville and a multistop to St. Louis.

Despite the lease of two Vultee V-1As from **American Airlines** in 1935, the company cannot effectively compete with **Braniff Airlines**. As a result, operations cease in February 1936 and the Vultees are returned to American.

BOWMAN AVIATION: 10811 West Perimeter Road, Fort Wayne, Indiana 46706, United States; Phone (219) 927-4040; Fax (219) 927-4048; Year Founded 1976. Bowman is originally established at Fort Wayne International Airport in 1976 to provide the services of an FBO. Over the next two decades, the company also undertakes executive and small group passenger charters. In 1998–2000, the company employs 11 pilots and operates aircraft from 2 major bases.

From Fort Wayne, Bowman flies 1 each Cessna 550 Citation II and 3 C-310s, while from De Kalb County Airport at Auburn, Indiana, it operates 3 C-310s and 1 each C-402, C-404 Titan, C-414 Chancellor, and C-421.

BRAATHENS, A.S.: P.O. Box 55, 1330 Oslo Airport, Oslo, 1330, Norway; Phone 47 (67) 59 70 00; Fax 47 (67) 59 13 09; <http://www.braathens.no>; Code BU; Year Founded 1998. Having initiated a program the previous October to change its corporate image, 3,290-employee **Braathens SAFE, A.S.** is renamed in January 1998. Work continues on the redesign of company publications, vehicles, signage, lounges, and aircraft livery.

Transwede Airways, A.B. is renamed **Braathens Sverige, A.B.** and continues to operate domestic flights from Stockholm to Lulea, Umea, Jonkoping, and Halmstad plus an international service to Oslo.

In April, the carrier's U.K. operations are transferred from London's Gatwick Airport to Stansted Airport. Plans are made to move into Oslo's new Gardermoen Airport, north of the capital.

In honor of the Norges Fotballforbund and its upcoming participation in the World Cup soccer matches to be held in France, the company paints "Vi Flyr Drill's" titles (Drill is the team nickname) on a B-737-405; the image of a player adorns the plane's tail.

On April 14, the first of the company's 3 B-737-7Q8s chartered from International Lease Finance Corporation is delivered, unveiling the airline's new aircraft color scheme. In addition to a stylized wing, an aurora borealis decal is worn on the sky blue tail.

The Dash-700s will be named for Norwegian royalty. The premier plane is christened *Ingeborg Eriksdotter*, followed by *Magnus Logoboter* (a Braathens B-737-505), *Erik Magnusson* (a B-737-505) and *Haakon Magnusson* (a B-737-405).

Following several months of negotiation, it is announced on August 17 that, effective in September, the Crafoord-Wiklund family, which owns Sweden's **Malmo Aviation Schedule, A.B.**, has sold its shares to Braathens for SKr 600 million (\$73.2 million). The Norwegian carrier offers to purchase the shares of the remaining minority shareholders, which includes board members and employees of Malmo.

Braathens Vice President Geir Olsen is placed in charge when, upon implementation of the sale, Malmo Chairman Stefan Wiklund steps down. The 450-employee Malmo continues operations, now as a member of the **KLM (Royal Dutch Airlines, N.V.)** alliance that includes Braathens as a major partner. Indeed, it will be revealed that the Dutch flag carrier has contributed \$19.5 million of the Malmo purchase price. The acquisition strengthens the Nordic leg of the **KLM-Northwest Airlines** alliance in its contest with **SAS (Scandinavian Airlines System)** for dominance of the Arctic market.

Plans continue to be made for the receipt of six purchased B-737-705s over the next three years.

A new route is inaugurated in October between Oslo and Haugesund, five times a day.

Passenger boardings for the year inch up 2.2% to 5.42 million, but cargo traffic is down by 5.5% to 5.73 million FTKs. Revenues jump 18.2% to \$823 million while expenses rise 25.5% to \$757 million. Although there is a \$66-million operating profit, there is also a \$2.9-million net loss.

It is announced on February 26, 1999 that the carrier will inaugurate B-737-7Q8 service in May from Bergen and Stavanger to Sandefjord Airport at Torp.

At the beginning of March, **Malmo Aviation Schedule, A.B.** is renamed **Braathens Malmo Aviation, A.B.** and its operations begin integration with those of **Braathens Sverige, A.B.** Its fleet of 11 BAe 146-200s is repainted to reflect the change.

The continuing political problems in the Yugoslav province of Kosovo boil over into a conflict between Belgrade and NATO on March 24. As aircraft from the NATO nations pound Yugoslavian targets in Operation Allied Force, hundreds of thousands of Kosovo refugees cross the borders into Albania and Macedonia. As aid workers struggle to provide relief, several governments step forward to provide sanctuary, agreeing to take some of the displaced persons.

Among the earliest nations to respond to the sanctuary plan is Norway. Prime Minister Kjell Magne Bondevik indicates that it will take in 6,000 refugees. As they arrive, return flights to the region will bring supplies obtained by the Norwegian People's Aid group. On April 5, the first group of 91 refugees bound for Norway is flown by a Norwegian military plane to Naples, Italy, where they are transferred to a Braathens B-737-405. Upon their arrival at Gardermoen Airport, Oslo, the passengers are taken by bus to a transit center, from which they are to be sent to communities throughout the country. Additional flights will follow.

When the situation in the Balkans changes, Soren Jessen-Petersen, deputy head of the UN's refugee agency, urges Norway and other countries to stop receiving refugees and instead help Kosovo Albanians in the area. Norway, which has received about 700 refugees and had committed to receiving up to 6,000, halts the organized contract transport after a last flight is completed on April 16. In announcing the cutback in parliament the previous day, Justice Minister Odd Einar Doerum notes that 1,100 refugees have thus far been flown into Norway by Braathens aircraft.

Daily nonstop B-747-451 roundtrips are started by **Northwest Airlines** on May 1, between Minneapolis (MSP) and Oslo. Simultaneously, the U.S. major and KLM partner begins to code-share with Braathens from Oslo to over 12 cities in Norway and Sweden.

In early May, the UN High Commission for Refugees asks Western nations to accept additional displaced Kosovans on a temporary basis. By May 11, Braathens and several Balkan-region carriers, also flying under contract, have delivered 2,783 ethnic Albanians to Oslo.

As a result of competition and problems at the new Gardermoen Airport, Braathens, on May 20, reports a growth in pretax losses from NKr 9 million to NKr 4,412 million, as well as an increase in the operating loss from NKr 2 million to NKr 379 million.

A total of 5,202 Kosovo refugees have been brought to Norway by May 27.

Widening competition and Nordic fare wars play havoc with the carrier. Overall passenger boardings are up 4.5% to 6,096,000 and cargo rises 3.2% to 5,917,000 FTKs. Even though operating income climbs 4.4% to \$827,838,000, expenses jump 10.5% to \$878,925. The previous year's small operating loss deepens to \$51,087,000 while the net downturn increases to \$76,072,000.

Airline employment stands at 3,978 at the beginning of 2000, an 11.1% decline. Two company B-737-505s make almost simultaneous emergency landings within 25 min. of each other, at two different airports—Oslo and Stockholm—in two countries—Norway and Sweden—on January 9 with identical faults. No injuries are reported from either incident.

A chartered B-737-3Y0 is returned during the first quarter; it will be repainted and leased to **Aeris, S.A.**

The company on April 27 enters into a sales and leaseback agreement with its largest shareholder, Braganza, A.S., for its Stavanger office

facilities and hangar. The Nkr 240 million price allows the airline a Nkr 160 million gain.

After two years at London (STN), the company shifts back to London (LGW) on May 3 for its Oslo–Bergen service.

As a result of the growing uncertainty at **KLM (Royal Dutch Airlines, N.V.)** caused by the April “demerger” with **Alitalia, S.p.A.** and the new merger talks with **British Airways, Ltd. (2)**, the joint venture planned by the Dutch carrier with Braathens is shelved on July 1.

BRAATHENS HELIKOPTER, A.S.: Norway (1989–1994). In 1983, the pioneer Norwegian airline **Braathens SAFE, A.S.** makes plans to enter the offshore helicopter market using Boeing Vertol 234LR Commercial Chinooks from Stavanger to Ekofisk for Phillips Petroleum (Norway). Discussions are held with Boeing Vertol later in the year toward acquisition of two helicopters.

When, in 1984, Phillips Petroleum (Norway) elects to retain its contract with **Helikopter Service, A.S.**, Braathens ends discussions with Boeing and makes no further effort to enter the offshore market for the remainder of the decade.

In September 1989, the company announces that it will, in fact, begin helicopter offshore support operations in the North Sea in the new decade. **Braathens Helikopter, A.S.** is established at a base at Stavanger’s Sola International Airport where company officials, led by President Bjorn Braathen and Managing Director Bjarne Sortland, sign several long-term contracts, worth between 800 and 900 million Krone (\$123.8 million to \$139.3 million) with Phillips Petroleum (Norway), Statoil, and Norsk Hydro. Work begins on another offshore support base, at Bergen’s Flesland Airport, and a \$50-million order is placed for 4 Aerospatiale AS-332L Super Pumas.

Airline employment in 1990 stands at 70 and the first Super Puma is delivered on May 21. Revenue operations commence on September 1. During the remainder of the year and into 1991, the 3 remaining Super Pumas are acquired. Braathens services contracts for Statoil and Norsk Hydro from Bergen and for Phillips from Stavanger and Sola. Late in the year, a fifth AS-332L is purchased.

Airline employment stands at 90 in 1992 and the investment in the helicopter line by parent **Braathens SAFE** totals 350-million Krone (\$54.2 million). A three-year contract with Amoco begins on February 1 and a sixth Eurocopter (formerly Aerospatiale) Super Puma arrives in May, followed by a seventh in September.

In November, the company begins to support a BP Oil contract from Sola. This contract, together with the Amoco arrangement, is worth 400–500 million Krone (\$62–\$77.4 million). Also during the month, the company makes a \$13.2-million order for two Sikorsky S-76Cs.

Services continue throughout the first three quarters of 1993. When Ludv. G. Braathens Rederi, A.S. elects to concentrate on the parent, the decision is taken to sell the company to **Helikopter Service, A.S.** The arrangement is completed in February 1994.

BRAATHENS MALMO AVIATION, A.B.: P.O. Box 37, Malmö-Sturup, S-20120, Sweden; Phone 040 (660) 29 00; Fax 040 (660) 28 49; <http://www.maviation.se>; Code 6E; Year Founded 1999. During late March 1999, **Malmö Aviation Schedule, A.B.** is renamed Braathens Malmö Aviation, A.B. to reflect its place in the airline group being established by **Braathens, A.S.**, its new owners. Malmö’s 11 BAe 146-200s are now repainted to reflect the new identity as its operations are integrated with **Braathens Sverige, A.B.** The new color scheme combines a red and blue cheatline similar to that employed in the parent’s new branding. Two of the BAes are introduced as “logojets.” The sponsors are the Swedish electric utility company Sydkraft and NetSys Technology Group’s “WebWare.”

Two Fokker 100s join the fleet in late summer. Arrangements are now concluded for the acquisition of 9 Avro RJ100s previously operated by **SAM Colombian Airlines, S.A.** Discovery of widespread fuel tank contamination in the SAM aircraft forces a postponement of the initial Malmö delivery scheduled for November 5. That confusion causes a delay in the trade-in to BAe-AMJ of several Malmö BAe 146-200s.

Having already lost SKr 300 million on unprofitable routes, company officials in mid-November institute a review of the route network. Only the profitable routes from Bromma to Malmö and Gothenburg are exempted as all others north of Sweden are closed on November 29, including those from Bromma to Lulea and Arlanda to Lulea.

It is learned in December that the first of the former SAM RJ100s will not be available before April. Customer bookings during the 12 months total 1,560,000.

Concerned with the adverse publicity generated by the route review, Managing Director Fons Brusselmans indicates in late January 2000 that the Malmö to London (LCY) route, slated to have been closed on January 10, is profitable and will be retained.

Flights between Oslo and Stockholm cease on June 25. On October 2, service is also discontinued between Malmö and London (LCY) and from Stockholm to Halmstad, in southwestern Sweden.

It is widely reported on October 8 that the carrier will probably revert to its old Malmö Aviation name.

BRAATHENS SAFE (BRAATHENS SOUTH AMERICAN AND FAR EAST AIR TRANSPORT, A.S.): Norway (1946–1998). Norwegian shipping magnate Ludvig G. Braathen forms his own charter airline on March 26, 1946. An order is placed for a fleet of 3 Douglas DC-4s, the first of which is received on February 11, 1947, and is christened *Norse Skyfarer*.

Revenue flight operations, initially on a monthly basis, but then weekly, are inaugurated; charters and inclusive-tour flights work the main shipping routes to northern South America and to Hong Kong that year and the next.

A Norwegian government license is acquired in 1949 to operate a scheduled Oslo–Hong Kong route. DC-4 service to the Far East begins on August 5, as the Douglas flies the longest overland service originating in Western Europe, from Oslo to Hong Kong via Amsterdam, Cairo, Basra, Karachi, Bombay, Calcutta, and Bangkok.

In 1950 and in cooperation with **Lofthedir/Icelandic Airlines, H.F.**, a connection is made to New York via Iceland.

Employing de Havilland DH 114 Herons, the airline opens scheduled domestic service in August 1952 over an Oslo–Stavanger via Tonsberg route; charter flights are also increased. Enplanements for the year total just 2,800.

A scheduled Oslo–Trondheim frequency begins in 1953. In anticipation of renewal of Far Eastern certification, orders are placed for 2 Lockheed L-1049E Super Constellations.

In July 1954, the Oslo–Hong Kong scheduled concession is acquired by **SAS (Scandinavian Airlines System)**, forcing Braathens to discontinue its flights on this route. Its external route concessions gone, the carrier is forced to cancel its Lockheed order and look to charters and inland Norwegian routes for its salvation; only 2,800 passengers are flown in 1955.

In 1956–1957, frequencies are initiated from Oslo to Stavanger, Alesund, Kristianstad, Molde, Roros, Kristiansund, Trondheim, and Farsund and from Bergen, Stavanger, and Alesund to Evenes, Bodo, and Tromsø.

On November 7 of the former year, the DH-114 Heron 2 B *Lars*, with 2 crew and 10 passengers, fails its climb away from Hommelfjell, Norway, and makes a forced landing near Tolga (2 dead). Parts of the wreckage will be employed to repair another Heron that is damaged on January 26, 1957.

In 1958, Braathens SAFE becomes Europe’s second Fokker Friendship operator when the first of several F.27s are delivered on December 20. Late in the year, the small carrier **Vestlandske Luftfartsselskap, A.S.** is acquired and merged, its equipment being employed to launch Bergen–Oslo operations.

The first Vickers Viscounts join the fleet in 1959. On April 2, the islands of Svalbard become accessible by air as a Braathens DC-4 from Bardufoss on the mainland, the *Norse Commander*, lands on a snow-covered tundra airstrip at Advent Valley (Adventdalen), Spitsbergen. In 1960, long-range Douglas DC-6Bs are placed in service for overseas charters.

Between 1961 and 1965, domestic Norwegian frequencies are improved and stepped up while overseas charter bookings for both cargo and passengers increase. On January 20 of the former year, a DC-6A is purchased from **Northwest Airlines**. During 1964, the new Tromsø Airport is opened; it will become the company's hub for flights to Spitsbergen.

In 1966, **Busy Bee Air Services, A.S.** is formed as a charter subsidiary. On April 18, DC-6Bs are introduced on the route from Bardufoss to Spitsbergen. A final DC-6B is acquired from the U.S.-based Boreas Corporation in June. As a result of Norway's discontent with **SAS (Scandinavian Airlines System)**, the country's new conservative government ends the conglomerate's privileged status over its domestic routes, turning them over to Braathens SAFE on May 15.

Operations continue apace in 1967-1968. The first Boeing B-737-205s and Fokker F.28-1000s are delivered in 1969; Braathens is launch customer for the Fokker jetliner, which begins its first scheduled service with the airline on March 28. The one-time Boreas Corporation DC-6B is withdrawn late in the year.

From 1970-1973, the route system increases to approximately 2,200 unduplicated miles and the fleet includes 2 B-737-205Cs, 5 F.28-1000s, 6 F.27s, and 6 DC-6Bs. Boardings average just under 1 million per year.

In 1972, **Busy Bee Air Services, A.S.** is rechristened **Air Executive Norway-Busy Bee, A.S.** in an effort to gain business traffic.

An F.28-1000 with 3 crew and 42 passengers crashes into a forest near Asker while on approach to Oslo on December 23 (40 dead).

In December 1973, the last of 121 DC-6B services flown to Spitsbergen over seven years is completed.

Jetliner service to Spitsbergen begins on January 17, 1974, when the B-737-205C *Halvdan Svarte* arrives at the tundra field at Advent Valley. The F.28-1000 *Olav Kyrre* is the first scheduled passenger liner to land at the city's new Svalbard Airport, on September 14. Enplanements for the year reach the 1-million mark, climbing to 1,381,680. The employee population is 1,181.

A sixth B-737-205 is acquired in 1975 and the 10 millionth domestic passenger is boarded on December 12. During the year, **SAS (Scandinavian Airlines System)** wins exclusive rights to operate the route from Tromsø to Spitsbergen. A total of 1,472,000 passengers are carried on the year while freight traffic climbs 6.6% above 1974.

The thirtieth anniversary is celebrated on March 26, 1976. A seventh B-737-205 is delivered in May and the fleet now also includes 4 F.28-1000s and 1 F.27s. The domestic community of Evenes joins the route network while inclusive-tour charter flights are inaugurated to Athens, Sicily, and Dubrovnik.

Passenger boardings jump 11.4% to 1.64 million while cargo accelerates 14.6%. Airline employment grows 3.6% to 1,223. The year ends on a sad note with the December 27 death of founder Ludvig G. Braathen.

Bjorn G. Braathen becomes president/CEO in January 1977, with his son, Erik G. Braathen, as executive vice president/chief operating officer. The last two F.27s are turned over to **Air Executive Norway-Busy Bee, A.S.** as yet another B-737-205 is added. Enplanements rise to 1,756,575.

Freight traffic rises 18.7% in 1978 and passenger boardings increase 7.5% to 1,899,000. Airline employment stands at 1,350 and the company now provides charters to 105 destinations in Africa, Europe, and the Middle East.

Three B-737-205As are delivered in 1979. Freight grows 10.2% and passenger boardings move ahead 9.5% to 2.04 million.

The workforce is increased by 5.4% in 1980 to 1,631. **Air Executive Norway-Busy Bee, A.S.** is renamed **Busy Bee of Norway, A.S.** in early spring and begins concentrating on military charters. Orders are placed for two high-tech Boeing 767-200s.

Passenger traffic jumps 9.3% to 2.2 million passengers flown and freight is up 11.8%. Revenue figures are released: on revenues of \$198.8 million, expenses are \$188.1 million, producing an operating profit of \$10.6 million, up 12.8%.

The employee population grows by 4.2% in 1981 to 1,700. Enplanements inch up 0.8% to 2,191,000 and freight grows 3.5% to 4.55 million

FTKs. Airline employees total 1,700 in 1982. Freight climbs 1.6% to 4.63 million FTKs and passenger boardings ascend 4.6% to 2,291,000.

One hundred new workers are hired in 1983. Braathens now makes plans to enter the offshore helicopter market using Boeing Vertol 234LR Commercial Chinooks from Stavanger to Ekofisk for Phillips Petroleum (Norway). Discussions are held with Boeing Vertol later in the year toward acquisition of two helicopters. In a joint venture with **Britannia Airways, Ltd.**, a rediffusion B-767 simulator is installed at the U.K. carrier's London (CTN) base.

Passenger traffic only increases 0.3% (2,298,000 passengers carried) and freight dips 0.8% to 4.59 million FTKs. An operating profit of \$13.2 million is, nevertheless, recorded.

Two new B-767-205s are received in 1984 and are placed in service flying inclusive-tours from Norway and Sweden to the Mediterranean and Canary Islands. When Phillips Petroleum (Norway) elects to retain its contract with **Helikopter Services, A.S.**, Braathens ends discussions with Boeing and makes no further immediate effort to enter the offshore market.

Passenger boardings rebound upward 8.7% to 2,572,824 and freight advances 7.5% to 3.18 million FTKs. Revenues are up 15.5% to \$168.7 million, but expenses rise 19.9%, forcing the operating profit down to \$8.9 million and the net profit to \$4 million.

The employee population numbers 7,628 (168 of them Busy Bee) in 1985. The fleet now comprises 10 B-737-205As, 2 B-767-205ERs, and 4 F.28-1000s, plus 1 B-737-205 and 8 F.27-100s dedicated to **Busy Bee of Norway, A.S.** As the result of a corporate decision taken during the summer to rationalize on the type, orders worth \$110 million are placed for 6 new B-737-205s.

An armed man, who wants to see Prime Minister Kare Willoch of Norway, hijacks Flight 139, Busy Bee's B-737-205, with 121 passengers en route from Trondheim to Oslo on June 21, but later surrenders at the plane's destination in exchange for some beer.

One B-767-205ER is sold back to Boeing in October for \$9.6 million, while 2 B-737-205As are now based in Sweden to operate inclusive-tour flights. **Busy Bee of Norway, A.S.** celebrates its twentieth anniversary late in the year and at year's end, corporate headquarters are moved from downtown Oslo to a new site at Fornebu. The route network now includes 14 airports from Kristianstad in the south to Tromsø in the north.

The parent's enplanements jump 11.4% to 2.87 million and freight skyrockets 69% to 5.39 million FTKs; **Busy Bee of Norway, A.S.** hauls 630,000 passengers. Revenues at Braathens jump 20.4% to \$240.7 million (not including \$3.18 million earned by Busy Bee) and expenses are up 12.5% to \$214.9 million. As a result, profits are \$25.8 million (operating) and \$22.5 million (net).

The payroll grows by 2.4% in 1986 to 2,400. Braathen's fortieth anniversary is celebrated on March 26. The F.28-1000s are taken out of service during spring and summer and sold, while in May, Erik Braathen becomes executive vice president/chief operating officer. The second B-767-205ER is also sold during the summer as the 6 B-737-205As ordered in 1985 arrive during the second and third quarters. Four F.27-100s are also leased for the **Busy Bee of Norway, A.S.** subsidiary.

Application is made for an Oslo-Spitzbergen via Trondheim and Tromsø route. Should Norwegian liberalization occur, services are also planned for Oslo-Brussels, Bergen and Stavanger-Paris, Bergen-Newcastle, and Stavanger-Manchester.

Passenger boardings accelerate 4.4% to 3,023,000 and cargo increases 22.4% to 5.96 million FTKs. Profits of \$31.97 million (operating) and \$21.6 million (net) are achieved.

Airline employment is increased by 11.4% in 1987 to 2,541. Several new Norwegian routes are inaugurated during the year and a hotel subsidiary is formed to operate two airport hotels on the outskirts of Stavanger and Oslo. On April 1, Braathens is once again granted certification for the Tromsø to Spitsbergen service; weekly flights over the route are started by the B-737-205A *Magnus Lagaboter* on August 14.

The company's leasing subsidiary orders 5 B-737-505s in a launch order bettered by the parent's request for 20. Braathens also orders 5 B-737-405s.

Passenger bookings jump 7.6% to 3,451,000 while freight dips 6.5% to 3.85 million-ton kilometers. Revenues advance 15.8% to \$340.3 million and costs are held low enough to generate an operating profit of \$43.15 million. Net gain totals \$54.6 million.

The employee population grows 10.9% in 1988 to 2,817 and the fleet includes 19 B-737-205s. Orders are outstanding for 20 B-737-505s and 5 B-737-405s. In December, the carrier appoints Manufacturers Hanover Trust to arrange with the Long Term Credit Bank of Japan a \$260 financing facility for the aircraft purchase, with both banks doing the underwriting.

Customer bookings increase a respectable 7.2% to 3,698,817, but cargo declines by 1.9% to 3.78 million FTKs. Revenues jump 8.7% to \$388.5 million, expenses climb 15.4% to \$360.3 million, and the operating income drops to \$28 million. Net profit is also down, to \$22.6 million.

The payroll inches up 2.9% in 1989 to 2,900. Erik Braathen, son of President/CEO Bjorn G. Braathen, succeeds his father as head of the company.

A B-737-205A carrying 55 shipping company officials to a ship christening in West Germany, crashes in the Skagerrak, the eastern arm of the North Sea on September 8, while en route from Oslo to Hamburg; there are no survivors.

Also in September, the carrier reenters the rotary-wing market, establishing **Braathens Helikopter, A.S.**, which will participate in the support of the offshore energy industry.

Passenger boardings dip 0.9% to 3,071,125, but freight moves ahead a slow 1.7% to 3.76 million FTKs. An operating profit of \$39.5 million is generated, along with net gain of \$3.3 million.

Company employment grows 3.1% in 1990 to 2,754 and fleet orders are outstanding for 1 B-737-405 and 15 B-737-505s, the first of which is delivered to the European launch customer in March. Passenger boardings jump 9.7% to 3,838,000 while freight inches up 1% to 3.8 million-ton kilometers. Revenues swell 25.1% to \$451.1 million and allow profits: \$59.7 million (operating) and \$4.7 million (net).

The workforce is cut 0.8% in 1991 to 2,733 and the fleet now includes 1 leased B-737-2E1, 4 owned and 6 chartered B-737-205As, 1 B-737-296A, 3 owned and three chartered B-737-405s, and 5 owned and 2 leased B-737-505s. Three B-737-205As are leased to **VASP Brazilian Airline (Viacao Aerea Sao Paulo, S.A.)** and orders are outstanding for 15 B-737-505s.

New routes are inaugurated to Newcastle, Manchester, and Malmo. Recession and the Gulf crisis limit growth in customer bookings to 0.9%, or 3,871,000. Cargo inches up a very slight 0.6% to 3.82 million FTKs. Revenues incline upward by 3.4% to \$466.5 million and operating income reaches \$66.3 million. Net profit slides to \$1.8 million.

Another 0.5% of the payroll is trimmed in 1992, reducing employee numbers to 2,719. Two of the 4 owned B-737-205As are withdrawn as 11 owned B-737-505s are added, one of which is chartered to **Xiamen Airlines**. The second, *Erik Magnusson*, is painted for the summer with a grey belly, white fuselage, and white tail with the Norwegian flag; additionally, different figures from author Tobjorn Egner's *Kardemomme by (Town of Kardemomme)* are painted on each side below the window-line forward of the wing.

Additionally, two B-737-405s are leased to **Malaysian Airlines, Ltd.** In November, a new route is inaugurated between Oslo and London (LGW).

Passenger boardings increased by 7.4% to 4,156,131 while freight swells 18.9% to 4.58 million FTKs. Revenues, of which a sixth comes from charter operations, advance 15% to \$536.4 million and expenses grow only 8.3% to \$433.4 million. As a result, the operating surplus jumps to \$103 million and net gain hits \$3.4 million.

In 1993, Chairman Ave Johnsen and President/CEO Erik G. Braathen oversee a workforce of 2,900, up 6.7% over the previous year. The fleet now includes 4 owned and 2 chartered B-737-405s, 1 B-737-296A, 1 leased B-737-205A, and 19 B-737-505s. The **Xiamen Airlines** lease is increased to include 2 of the latter type while 1 B-737-505 is chartered to **Deutsche Lufthansa, A.G.**

In January, service is initiated from Tromso to Murmansk. In addition to this new service, a multistop coastal return service is run from Tromso to Stavanger. Before the start of the summer schedule at the end of March, one of the B-737-505s is painted in a special "Sommerflyet" scheme, with markings designed by children. The name and age of the child who created it identify each individual piece of artwork on the fuselage of the plane. Per custom, the standard livery will be returned in early October.

The main network is, however, that operated from Oslo to Alesund, Bergen, Billund, Bodo, Evens, Haugesund, Kristianstad, Malmo, Molde, Roros, Stavanger, Svalbard, Tromso, Trondheim, and Newcastle, U.K. The company is listed on the Oslo Stock Exchange in December.

Customer bookings for the year rise 3.4% to 4,298,178 while cargo moves ahead by 6.1% to 7.7 million FTKs. A \$50.21-million operating surplus is reported, along with net gain of \$3.41 million.

Airline employment remains the same in 1994 as the fleet is increased by 1 B-737-505. Of the 20 machines of the type now on hand, 3 are leased out to **Xiamen Airlines**.

On January 10, the carrier's shares commence trading on the Oslo Stock Exchange. The largest shareholder is Ludvig G. Braathens Rederi, A.S., with approximately 1,000 other shareholders also providing equity. Arve Johnsen becomes board chairman.

The **Braathens Helikopter, A.S.** subsidiary is sold to **Helikopter Service, A.S.** in February, and in March the company enters into a marketing alliance with **Finnair, O/Y**. The arrangement calls for joint handling at Oslo, shared frequent flyer programs, and planning for joint flights with code-sharing. This year's "Sommerflyet" paint scheme honors the Olympic Games; the "Olympiaflyet" markings will be retained until the following January.

The B-737-296A is retired in September and is sold in October. In November–December, one B-737-505 is sold to Japanese investors and a purchase agreement is signed with Boeing for two more to be delivered in 1996–1997.

Passenger boardings during these 12 months swell 8.4% to 4,657,000 and operating revenues advance by 8.6% to \$522.22 million. With expenses at \$466.38 million, there is an operating profit of \$104.84 million and a net surplus of \$29.06 million.

The workforce grows by 6.8% in 1995 to 3,108. The big event of the year is integration of the carrier's BRA Card frequent flyer program into the Air Miles plan of **British Airways, Ltd. (2)**.

Customer bookings jump 7.1% to 4,991,023 while cargo moves upward 17.8% to 7.5 million FTKs. Most of the passengers flown are conducted over the company's scheduled domestic route network, one of the largest in Europe. At 5%, charter traffic is now just half of what it had been only four years earlier.

Operating revenues swell 9.6% to \$632.34 million but expenses climb just 8.4% to \$511.56 million. As a result, operating gain swells to 120.78 million and a net gain of \$37.81 million is posted.

Airline employment rises 5.9% to 3,290 in 1996 and the owned fleet includes 2 B-737-205A, which are leased out, 2 B-737-405, and 16 B-737-505s. Also operated under charter are 1 B-737-4Q8, 4 B-737-405s, and 4 B-737-505s, of which 3 are subleased to **Xiamen Airlines**.

The company celebrates its fiftieth anniversary and scheduled services are inaugurated to Nice, Rome, and Jersey from Oslo. In late June, a 50% stake is taken in **Transwede Airways, A.B.**, with the option of taking over the remainder at the end of the following year. In return for taking over a Sfr 35 million subordinated loan, Braathens receives significant benefits. These include 60 slots at Stockholm's Arlanda Airport, facilities, staff, and leased Fokker 100s.

The Transwede arrangement also gives Braathens a turnkey domestic scheduled network in Sweden; connection to this network is made in October when Braathens launches five-times-per-day return frequencies between Oslo and Stockholm.

Enplanements accelerate 8.6% to 5,420,644, but freight traffic declines 5.1% as 7.11 million FTKs are operated. A net profit of \$12 million is reported on operating revenues of \$350 million. Equity amounts to 33% of total assets at the end of the year and the net-debt-to-equity ratio is 58%.

A \$255-million order is placed with Boeing during the second week of February 1997 for the purchase of 6 Next Generation B-737-700s; deliveries will commence in 1998.

During the first quarter, a B-737-505 receives a special new livery to promote the one-thousandth birthday of the city of Trondheim. It is also renamed *Olav Trygvason*, after the Haarfagre clan king of Norway who established the city. Simultaneously, two former **SAS (Scandinavian Airlines System)** executives are hired; Geir Olsen becomes executive vice president and Vidar Meum is appointed vice president-commercial.

On the morning of August 17, a letter of intent signifying a new strategic relationship is signed in Oslo by the president/CEO of Braathens SAFE, Erik G. Braathen, and the managing director/CFO of **KLM (Royal Dutch Airlines, N.V.)**, Rob J. N. Abrahamsen. The Dutch flag carrier acquires a 30% holding in the Norwegian airline from its current major (68.8%) shareholder, the shipping company Ludv. G. Braathens Rederi. The acquisition price is Nkr200 million (\$95 million).

Simultaneously, spurred on by the pending alliance between **American Airlines** and **British Airways, Ltd. (2)**, the two negotiate a new working relationship in several areas. Among these will be greater coordination of connecting services, offering Braathens' customers the wide selection of connecting services through Amsterdam's Schiphol Airport using the KLM and partner global route network. The two airlines also consider increasing the frequency of service between Norway and Schiphol and intensifying cooperation between Braathens and **Air UK, Ltd.** on Norway-United Kingdom routes. KLM and its alliance partner **Northwest Airlines** will focus also on creating optimal connections between Scandinavian and U.S. markets.

Braathens and KLM will also join forces in marketing and sales and examine potential for cooperation in areas including equipment maintenance and purchasing and airport services. Braathens' frequent flyer program, BRACard, and KLM's Flying Dutchman program will be linked; points earned at the respective carriers' flights will be interchangeable.

A code-sharing agreement is entered into with **Finnair O/Y** during September for a total of six daily return frequencies between Stockholm and Oslo. Under its terms, the two carriers will book seats for sale on each other's flights, with Finnair operating one flight and Braathens the rest.

Details for the KLM equity purchase are finalized in October. At the same time, the Scandinavian Design Group is asked to come up with a new corporate identity for the carrier. Ten employees are assigned full-time to the account.

In addition to the KLM pact, which is seen as a way to contest **SAS (Scandinavian Airlines System)** domination of the Norwegian domestic and European regional markets, Braathens, according to the plan worked out with KLM on December 1, also initials a strategic, but non-equity, alliance with **Northwest Airlines**. Under its terms, the carrier will code-share on NWA flights between the U.S. and London (LGW) and Amsterdam and NWA is accorded dual-designator status on Braathens routes from London (LGW) and Amsterdam to Norway.

The final acquisition of **Transwede Airways, A.B.** is completed at the end of the year.

On the year, customer bookings jump 15% to 6,510,000 and operating revenues surge 20.8% to \$720 million. Costs climb 24.2% to \$683 million. Although the operating profit falls to \$37 million, a \$26-million net gain is celebrated.

Airline employment in 1998 stands at 3,290; it will be increased 7.4% to 3,534. In January, the carrier is reborn as **Braathens, A.S.**

BRAATHENS SVERIGE, A.B.: Sweden (1998-1999). Having acquired 100% ownership of **Transwede Airways, A.B.** at the end of 1997, **Braathens, A.S.** renames its acquisition early in 1998. Employing four, leased Fokker 100s, the carrier continues to operate domestic services from Stockholm to Lulea, Umea, Jonkoping, and Halmstad, plus an international route to Oslo, home of its parent.

In March 1999, **Malmo Aviation Schedule, A.B.**, a recent Braathens acquisition, is renamed **Braathens Malmo Aviation, A.B.** At this point, Braathens Sverige operations are taken over by and integrated into Braathens Malmo.

BRADFORD AIR TRANSPORT: United States (1985-1986). Mike Cardimone and Leo Angevine establish Bradford Air Transport at St. Mary's, Pennsylvania, during February 1985 to provide scheduled passenger and cargo flights to Pittsburgh. Employing a Piper PA-32 Cherokee Six, Bradford inaugurates daily roundtrips in March.

Operations continue apace until the following March when the company is renamed **West Penn Commuter**.

BRADLEY AIR SERVICE, LTD.: Canada (1946-1978). This pioneering Ontario operator is formed at Carp, Ontario, by Robert Bradley in 1946 as the small Frobisher Bay-based FBO and flight training operator Bradley Air Service, Ltd. A charter division is formed in 1954 to obtain aircraft and participate in the construction supply contracts being awarded for the Canadian DEW line. Operations become quite extensive and contract services, together with charters, are flown from bases at Eureka, Frobisher Bay, and Resolute Bay in the Northwest Territories.

The company is bought by pilot John G. Jamieson upon Bradley's death in 1970.

During the 1970s, operations are conducted with a fleet of 4 Douglas DC-3s, 2 Beech 18s, 3 de Havilland Canada DHC-2 Beavers, and 2 DHC-6-300s.

A DHC-6-300 and a DC-3 are destroyed in a hangar fire at Carp on January 28, 1974.

The operation remains largely unchanged until October 1978, when owner Jamieson is able to acquire the former *Nordair Arctic* service and two de Havilland Canada DHC-6-300 Twin Otters from **Survair, Ltd.**

At this point, Bradley Air Service, Ltd. is reformed and the scheduled commuter airline division **First Air, Ltd.** is established at Ottawa. Its fleet now comprises 6 DHC-6s and 7 Douglas DC-3s. Bradley continues charter and contract service flights into the Arctic under its own name.

A DHC-6-300, with two crew and four passengers, is 40 feet over the runway on final approach to Frobisher Bay on August 23 when it rolls left and hits the ground (one dead).

One of the DC-3s is withdrawn in September and another in November. A Hawker Siddeley HS 748-A2 is acquired in December.

BRAIN & BRAUN AIRFREIGHTERS (PTY.), LTD. See BBA CARGO (PTY.), LTD.

BRANIFF, INC.: United States (1983-1989). Chicago financier and Hyatt Hotel owner Jay Pritzker forms the Dalfort Corporation as a holding company in early 1983. This company now launches Braniff, Inc. as a national carrier and successor to the pioneer that had failed on May 12, 1982. Former **Trans World Airlines (TWA)** Vice President William Slattery is appointed president.

On June 23, Hyatt Air, an affiliate of the Hyatt Corporation, and the creditors of the old airline initial the "Hyatt Agreement," which will see Hyatt make equity investments in, and arrange for loans to, the new carrier. The agreement, the basis for a reworked reorganization plan filed on July 15, is confirmed by the U.S. Bankruptcy Court for the Northern District of Texas on September 1.

The new operation is incorporated in Nevada on November 29. Pritzker and other members of his family-owned company take the carrier out of bankruptcy on December 15, after raising \$21.4 million in a public offering and investing another \$100 million.

On February 10, 1984, the new entrant announces a promotional campaign in cooperation with the March of Dimes, in which the airline will distribute discount coupons to passengers and donate part of their ticket price to the charity.

Employing a fleet of 30 leased Boeing 727-227As leased from a trust established to benefit the secured creditors of the old **Braniff International Airways**, scheduled service, with the emphasis on business class, is inaugurated by the 2,200-employee airline between Dallas (DFW) and 19 other U.S. cities on March 1. The event is the largest one-day start-up in commercial aviation history. A total of 170 daily departures are now offered.

Losses during late spring and summer are heavy; Vice Chairman Patrick Foley, who is also president of Hyatt Hotels, now spends several days a week assisting President Slattery at Braniff HQ. A former local Teamsters official, Marvin Schlinke, is appointed vice president-customer services.

Unable to compete effectively at Dallas (DFW) against **American Airlines**, it is decided in September to shift away from corporate traffic in favor of low-fare tactics. The move to discount fares, which will prove unsuccessful, is accompanied by a 25% reduction in staff. On October 1, the number of flight frequencies in several markets is reduced; overall departures decline to 145 daily.

Two months later, in November, Ronald Ridgeway replaces President Slattery and a total restructuring of the carrier begins. Leases on 10 aircraft are ended, service is slashed, the workforce is cut, and the route system is downsized. Despite high hopes, the results of the first three-quarters of the reincarnation are initially bad.

Enplanements total 2,362,000 and 3.33 million FTKs of freight are hauled. Revenues total \$205.4 million, but expenses are \$300.9 million. The operating loss is \$95.5 million and the company suffers a net loss of \$86.5 million.

By the end of January 1985, airline employment is down to 1,200 and the fleet includes 20 leased Boeing 727-227As. In February, the carrier's creditors reject an offer of \$160 million for its remaining assets. A mini-hub is opened at Kansas City on April 28, as the Dallas (DFW) center is de-emphasized.

Enplanements for the year total 2,402,000 and a total of 9.41 million FTKs are flown. Revenues advance 18.9% to \$244.31 million, costs fall (largely as a result of restructuring) by 25.1% to \$225.19 million, and a \$19.11-million operating profit is achieved. The first net profit is \$23.04 million.

Airline employment jumps 32.6% in 1986 to 1,940, as Kansas City becomes the company's primary hub. Services are started to nine new markets from the Missouri hub, but in the process Braniff is caught up in the fare wars triggered by **Frontier Airlines (1)** and **PEOPLExpress**. Manhattan, Kansas-based **Capitol Airlines** becomes a "Braniff Express" code-sharing partner in December over three routes within the Sunflower State.

The year's passenger boardings jump 6.5% to 2,556,851 and cargo increases 121.3% to 21.39 million FTKs. Total revenues decline 2.2% to \$234.35 million, expenses incline upward by 9.6% to \$246.65 million, and the operating loss is \$12.29 million. The previous year's net gain now becomes an \$8.98-million loss.

The workforce is cut 22.7% in 1987 to 1,500. In February, twice-daily nonstop service is begun to Ft. Lauderdale from Washington, D.C., as are daily Dallas (DFW) to Ft. Lauderdale via Miami frequencies. Effects of the previous year's fare wars and the costs of the major expansion into Florida now hurt the carrier finances. In May, Hyatt Hotels Corporation chairman Patrick Foley becomes president/CEO, with the mission of making the company attractive to a prospective buyer.

During the fall, a new Encore frequent flyer program is introduced. In October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

Beginning in November, 10 former **American Airlines** B-737-223s are leased along with 5 more B-727-227As. Late in December, negotiations are undertaken and completed for the purchase of the financially troubled large regional **Florida Express**.

Ironically, the takeover will bring Braniff, under lease, 9 BAC 1-11-203AEs originally sold by **Braniff International Airways** to **Allegheny Airlines** years earlier and then passed on to Florida Express by **USAir**. At the same time, owner Pritzker approaches **Pan American World Airways (1)** seeking a merger. Although the major's chairman, C. Edward Acker, favors the move, his vice chairman, Martin R. Shugrue Jr., publicly opposes such a deal. In the face of these mixed signals, Pritzker retreats from his offer and seeks other buyers.

Despite these maneuvers, customer bookings still jump 38.7% to 3,546,000 while freight balloons 42.5% to 30.48 million FTKs. Although revenues rise 24.2% to \$297.4 million, expenses shoot up 24.8% to \$315.78 million. As a result, the operating loss increases to \$18.37 million and net loss falls to \$12.21 million.

Airline employment skyrockets 173.9% in 1988 to 4,108. On January 15, **Florida Express** begins "Braniff Express" BAC 1-11-203AE services throughout the Sunshine State; 3 more of the British-made jetliners will be delivered through the year as 12 are sold to Guinness Peat for \$30 million and then leased-back. Simultaneously, the parent initiates twice-daily B-727-227A flights from Orlando to Chicago, Detroit, New York, and Washington, D.C., and daily frequencies from Orlando to Dallas (DFW).

In February, daily nonstops commence from Cleveland and Atlanta to Orlando. **Florida Express** flights are fully incorporated into the Braniff system in March, the same month in which the last chartered B-737-200 is received. Fares are raised in the early spring and the **Florida Express** purchase is completed on April 19. Later in the month, daily nonstop "Braniff Express" flights begin from Atlanta to Orlando, St. Petersburg, and Clearwater, while B-727-200 daily service from Cleveland to Orlando becomes twice daily.

On June 9, the wealthy developers Jeffrey Chodorow of Philadelphia and New Yorker Arthur Cohen, having established the holding company BIA-COR Holdings in association with PaineWebber Group, purchases 80% control of the airline from the Pritzker family in a \$117-million leveraged buyout (LBO) completed six days later. Each partner contributes \$5 million and the rest comes from funds borrowed from PaineWebber (\$33 million), European American Bank (\$20 million), and **American Airlines** (\$21 million), plus assets sales.

The new owners bring in a new, mostly ex-**Piedmont Airlines** management team on June 25, led by the **USAir** subsidiary's former president/CEO William G. McGee. The company, also in June, begins daily B-727-227A frequencies from Kansas City to Cleveland and Seattle in June, plus twice-daily flights from Kansas City to Albuquerque, Denver, and Indianapolis.

On July 1, daily nonstop flights begin from Kansas City to Milwaukee, Omaha, and Wichita. On August 31, **Eastern Air Lines** pulls out of Kansas City, leaving it to Braniff. On September 12, the carrier is rescheduled on its new Kansas City hub (formerly operated by Eastern); daily departures from that point increase from 50 to 76. Frequencies are increased to 18 destinations and new service is opened to Boston, Philadelphia, Oklahoma City, and Houston.

The **Eastern Air Lines** commuter affiliate, **Air Midwest**, now becomes a "Braniff Express" carrier the same day; however, "Braniff Express" partner **Capitol Airlines** is served notice that its code-sharing agreement will be cancelled at the end of the fourth quarter. Simultaneously, Braniff sells four gates at Dallas (DFW), a hangar at Chicago (ORD), the **Florida Express** assets at Orlando, and slots at a few other airports to **American Airlines** for \$41 million.

Additionally, \$50 million in orders are placed with the BAC lessor for 24 Fokker 100s to replace the BAC 1-11s flown by subsidiary **Florida Express** and takes over the order for 50 Airbus Industry A320-200s abandoned by **Pan American World Airways (1)**.

A deal is made to obtain 7 B-737-293s, 3 B-737-2Q9s, 2 B-737-210Cs, and 1 each B-737-219, B-737-244, and B-737-247, plus eight B-737-3A4s from partner **American Airlines**. Departures from Kansas City increase to 82 per day on October 1, the most ever offered by a single airline from that city. Markets are entered at Tucson and Tulsa, and the new Kansas City hub is linked to the carrier's secondary hub at Orlando.

Braniff stockholders vote to approve the transfer of their carrier to BIA-COR Holdings on October 24, at which point long-term debt rises from \$22 million to \$53.5 million. These various changes and positive public moves result in traffic gains, even as the airline finds itself in the red.

Passenger boardings increase 40.4% to 4,977,000. Cargo, however, falls by 33.1% to 30.32 million FTKs. Revenues balloon 61.2% to \$479.4 million, but are exceeded by costs, which jump 62.9% to \$514.5 million. The operating loss deepens almost by half to \$35 million and net loss doubles to \$24.6 million.

Already in court over the matter, the cancellation of the code-sharing agreement with Manhattan, Kansas-based **Capitol Airlines** comes into effect on January 2, 1989. Later in the month, a sixth daily roundtrip is added between Dallas (DFW) and Kansas City. The integration of **Florida Express** is completed on January 31. In early spring, the company announces plans to relocate its corporate headquarters to Orlando, site of the carrier's secondary hub.

It will also build new maintenance facilities at both locations and reopen the Kansas City reservations center. In March, services are initiated to Washington, D.C. (IAD) and Seattle and Tacoma from most network destinations. Daily roundtrip nonstop flights are added in April from Kansas City to Newark and Ontario, California.

In May, Drexel Burnham Lambert and PaineWebber sell \$100 million in 10-year senior reset notes with warrants to purchase Braniff common stock.

On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. Braniff, with six security breaches, is faced with \$24,000 in punishment.

Also during the spring, a new "Reebok" livery is unveiled upon 2 B-737-293s and 2 SAAB 340As; however, company officials determine that the new colors are a mistake and order a new livery developed, reminiscent of the predecessor's "Flying Colors."

Twice-daily Newark-Orlando operations commence in July, the same month that the (first in the U.S.) Airbus Industrie A320s powered by V2500 engines are accepted. The new livery ordered earlier is first displayed on two new Airbuses: light blue undersurfaces, white top and tail, and large red "billboard" titles on one and, on the other, forest green undersurfaces, white top and tail, and large purple titles. At the same time, a B-737-293 is given a scheme with white undersurfaces, navy blue top and tail, and black titles and tail outline in robin's egg blue.

As of July 31, the carrier has \$177 million in long-term liabilities and a shareholder's deficiency of \$23 million; only \$3.6 million in cash is available and there is a working capital deficit of \$117 million.

Airbus flights commence in mid-August. The same month, the carrier agrees to pay the lessor, GPA Group, \$12 million for the early return of its 12 BAC 1-11s as well as \$31 million to switch its Fokker 100 order to one for 20 B-737-300s. Costs associated with the previous year's ownership change and huge aircraft order amendments cannot be covered. On September 28, the company files for Chapter XI bankruptcy; major creditors include **American Airlines**, which is owed \$21.3 million. The move forces the layoff of half the 4,700-person workforce. With only \$5 million on hand after the summer season, operations are continued until the cash runs out on November 7 and all services cease.

Employees are laid off over the next three weeks and on November 24 the national closes its doors. Through the year's first 11 months, Braniff flies a total of 4,868,000 passengers, a 6.5% increase over the same period a year earlier.

The company, which has retained a skeleton crew of 150 to operate charters, agrees in January 1990 to return 5 A320s that it has been leasing from GPA Group and for which it cannot make rental payments. During the first quarter, several B-727-227A charters are operated, but the airline cannot be reorganized and must enter Chapter VII liquidation.

On April 23, a bankruptcy judge authorizes the sale of the carrier's trademarks, flight certificates, and operating manuals, for \$313,000, to former owner Jeffrey Chodorow, who wants to begin his own airline, **BN Air**.

PAUL R. BRANIFF, INC.: United States (1928–1929). The pioneer passenger airline of the southwest initially joins the industry in May 1928 when insurance man Thomas E. Braniff and his younger brother, Paul, a World War I flyer and veteran of the 16th Aero Squadron, organize the company Paul R. Braniff, Inc. A significant financial backing is obtained from two Oklahoma oil concerns.

Employing 4 Stinson SB-1 Detroiters, the brothers' infant firm commences passenger-only operations on June 20 over a 116-mile route between Tulsa and Oklahoma City, and later Wichita Falls.

En route over Arcadia, Oklahoma, the plane is fired upon by moonshiners, who believe there are "revenuers" aboard.

Following the inaugural, thrice-daily roundtrips are continued between Oklahoma City and Tulsa. A total of 3,000 passengers are flown in the first six months.

With insufficient income caused by lack of a subsidized mail contract, the company is only able to continue flying until spring of 1929. On April 1, Paul R. Braniff, Inc. is purchased by the Universal Aviation Corporation, a forerunner of today's **American Airlines**, which will operate it as a subsidiary division of its **Universal Air Lines System**. Paul Braniff now heads off to Mexico where he will fly as a pilot for Theodore Hull's **CAT (Corporacion de Aeronautica de Transportes, S.A.)**.

BRANIFF AIRWAYS: United States (1930–1948). Braniff Airways is incorporated at Oklahoma City by the brothers Thomas E. (president) and Paul R. (secretary-treasurer-chief pilot) Braniff on November 3, 1930. A clause in the incorporation documents states that, as long as an airline operation is maintained under its terms, the concern must keep the name Braniff and it cannot be changed.

Ten days later, the new southwestern entrant commences passenger, cargo, and express revenue operations with two Lockheed Model 5 Vegas over the previous routes of **Paul R. Braniff, Inc.** to Tulsa and Wichita Falls. On December 5, the system is stretched from Tulsa to Kansas City.

A total of 54,944 miles are flown in 2 months and 1,181 passengers are transported.

On February 25, 1931, a Kansas City–Chicago segment is opened via St. Louis. Capitalization is now increased to \$100,000, half of it contributed by Windy City businessman Benjamin Clayton. Hoping to participate in a successful Midwest network of combined independents, the company instigates the formation of the Independent Scheduled Air Transport Operators' Association.

It now enters into agreements in April with **Reed Airline**, **Rapid Air Transport**, **Hanford Tri-State Air Lines**, **Wyoming Air Service**, **U.S. Airways**, **Midland Air Express**, **The Oklahoma-Texas Air Line**, **Transamerican Airlines Corporation** a.k.a. **Thompson Aeronautical Corporation**, and with Errett L. Cord, president and CEO of **Century Air Lines**.

On December 5, a Lockheed Model 5 Vega, piloted by Jack Ayres with five passengers en route to Chicago from Kansas City, is caught in a sleet storm and crashes while making an emergency landing at Kewanee, Illinois (two dead).

Assisted by a strong tailwind, pilot R. V. Carleton, flying a Lockheed Model 5 Vega with six passengers establishes a record for the Oklahoma City–Tulsa run on August 1, 1932: 244 mph.

As the result of investigations into an airmail scandal, the government cancels all airmail contracts on February 9, 1934 (effective February 19) and calls upon the U.S. Army Air Corps to fly the mail. Loss of business leads Braniff to close its Tulsa–St. Louis route.

When the military option fails, the Post Office takes new bids on the routes at the end of March. As a successful applicant, the Braniff brothers acquire in May the Chicago–Dallas via Kansas City, Wichita, Tulsa, Oklahoma City, and Fort Worth, route previously flown by **United Airlines**. Operated via Kansas City, Wichita, Ponca City, and Oklahoma City, the service becomes the source of the carrier's principal income in June.

Following passage of the new Air Mail Act in midyear, the carrier expands dramatically; in addition to new mail-subsidized flights over

CAM-8 from Dallas to Chicago, markets such as Wichita and Fort Worth begin to receive visits from the company's Lockheeds. Mail service is inaugurated on May 17 and passenger flights begin 13 days later.

Although mail continues to be flown, passenger service is suspended for the winter in November between Kansas City and Chicago. En route to Chicago from Dallas on December 8, a Lockheed Vega mailplane ices up over Columbia, Missouri, and crashes (one dead).

On January 1, 1935, the Braniff brothers acquire **Long and Harmon Airlines**, which holds AM-15 mail contracts for 10 Texas cities, including Dallas–Amarillo and Amarillo–Brownsville, plus other assets, including 2 Ford Tri-Motors, 5-AT-70 and 5-AT-86. At the same time, the company places an order for its first purchased twin-engine airliners, 7 Lockheed Model 10 Electra.

With the failure of **Bowen Airlines** in March, Braniff acquires its routes to Houston, Brownsville, and other south Texas destinations. The first Lockheed is delivered in March and enters service in April.

Because of the late delivery of an Electra, the company is unable to begin service to Tulsa on the specified July 1 date; as a result, the concession is withdrawn. Braniff now flies 13,000 miles per day over 3,000 route miles. Among the company's 50 employees is Charles E. Beard, the new general traffic manager who will one day become the company president.

En route to Waco from Dallas on November 9, a Vega encounters 75-foot visibility over Fort Worth and crashes, killing pilot William Maus. Late in the year, 2 Lockheed Model DL-1 metal fuselage Vegas join the fleet. On December 23, while one of these is being tested at the central maintenance operation in Dallas, it crashes (six dead).

By early 1936, the Fords are retired and 7 Electras are plying the firm's "Great Lakes to the Gulf" routes. In February, the company loses all competition to its Texas services when competing **Bowen Air Lines** folds. This year, future newsman Walter Cronkite serves as a ticket agent at Oklahoma City. A Lockheed Model 10A must be written off following a crash at Dallas' Love Field on December 23.

In March 1937, Braniff demonstrates its growing maturity through an order for 5 Douglas DC-2s. The Ford Tri-Motor 5-AT-86 is sold to the Ohio-based operator **Akron Airways** on April 30. The first of the new Douglas transports is placed into service on the Dallas–Brownsville run on June 12, the same day the airline's first air hostess service is inaugurated. The Ford 5-AT-70 is sold out of service on June 25.

Late in the month, the last of 10 Lockheed Vegas is withdrawn. During the summer, DC-2 service is started to Chicago. Late in the year, the company raises charges of unfair competition against **Trans-Continental and Western Air Lines (TWA)**. The charges against TWA are withdrawn in 1938. During the same year, the last DL-1 Vega is sold and the carrier posts its first profit: \$28,000.

A DC-2 fails its takeoff from Oklahoma City on March 26, 1939 and crashes (eight dead). In July, the company files a complaint with the CAB seeking to halt the start-up of the nation's premier "feeder" carrier, **Essair Line**, which would prove a competitor on trans-Texas routes.

An order is placed for four 21-passenger DC-3s "Super-B-Lines" in August, with the first of the \$100,000 acquisitions appearing on the Dallas–Amarillo run on February 3, 1940. Before the company retires its Douglas transports in April 1960, 34 will have been acquired. Four additional DC-3s are acquired in March, allowing retirement of the last two L-10s in June and an increase in the number of Douglas flights to 30-per-day. Flights to the new Love Field at Dallas, opened on October 6, begin.

Braniff acquires 3 more DC-3s in May 1941, bringing the fleet total to 11, plus 6 DC-2s. The company now serves all Texas cities (except El Paso) and operates to Chicago via Oklahoma City and Kansas City. On December 5, a connection is opened at Nuevo Laredo with the **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**. Enplanements for the year are 152,001.

The U.S. government takes about half of Braniff's fleet for service in World War II and during the conflict, the carrier employs its remaining transports to fly contract routes to Panama and domestic runs on behalf of the Army.

In 1942, the fleet numbers 5 Douglas DC-2s and 10 DC-3s.

At the request of Air Transport Association of America (ATA) President Edgar Gorrell and the War Department, **American Airlines** executive M. P. "Rosie" Stallter is sent in January on a week-long inspection tour of the U.S. Army Air Forces' Air Service Command bases in Pennsylvania, Ohio, Alabama, Utah, and California.

From this trip, Stallter and Gorrell devise and present the Army with a domestic military-cargo service plan to be operated by the airlines under government contract. Under the plan, five geographical segments are created, each assigned to a specific carrier: **American Airlines** the East Coast; **Northeast Airlines** the Northeast; **Eastern Air Lines** the Southeast; **Northwest Airlines** the Pacific Northwest; and Braniff the Southwest.

In addition to its domestic responsibilities, Braniff is assigned by the Air Transport Command to fly contract services from San Antonio to Albrook Field in the Panama Canal Zone, as well as to destinations in Guatemala and Mexico. The first roundtrip under this program begins on April 13.

Corporate headquarters are transferred to Love Field in Dallas.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at the underdefended Dutch Harbor. In a textbook example of the mobilization foreseen by ATA President Gorrell, the U.S. Army orders 11 airlines to halt their normal activities and dispatch aircraft to Edmonton, Alberta, for participation in a massive contract airlift which is quickly organized for the defense of Alaska.

Over 100 aircraft from Braniff and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Beginning in mid-July, the company contributes aircraft to a 50-transport group from 6 other contract carriers (**American Airlines, Northeast Airlines, Chicago & Southern Air Lines, Pennsylvania Central Air Lines, Transcontinental and Western Air Lines, and United Airlines**), which are rushed to Presque Isle. From here, the planes, joined by 110 Air Transport Command C-47s, will transport the supplies and men required to set up and man the bases at Newfoundland, Labrador, Greenland, and Iceland for "Operation Bolero," a mass ferry of bombers from the U.S. to England.

In 1943, Washington turns aside the company's complaint against the **Essair Line**. Late in the year, experimental Mexican permits (not permanent route concessions) held by Jose Navarro Elizondo are acquired and the Aerovias Braniff, S.A. subsidiary is established.

The Air Transport Command contract for flights to Central America and the Panama Canal Zone is completed in the spring of 1944. In just 2 years, the carrier has completed 2,300 accident-free flights south from San Antonio, transporting 17,000 passengers and 6.5 million pounds of cargo. A new airmail and freight division is formed on October 28 and Chicago–Mexico City air express flights commence on December 3.

On April 4, 1945, Aerovias Braniff, S.A., equipped with a Douglas DC-3 from its parent, inaugurates scheduled flights from Nuevo Laredo to Mexico City via Ciudad Victoria. The subsidiary receives some 7,000 miles of route awards from the Mexican government for routes out of the capital city to Cuba and Central America.

In late spring, two more Douglas transports are added and spurs are extended to Puebla and Veracruz while, on July 1, Mexico City–Merida services begin. Ordered by the Mexican government to halt services, Braniff goes to court to overturn suspension of the permit and continues to fly.

Braniff Airways renews its expansion at the close of World War II and into 1946, adding additional cities throughout the Midwest, including Wichita, Oklahoma City, Dallas, Fort Worth, Austin, Houston, San Antonio, Laredo, Brownsville, Denver, Memphis, and Kansas City. As its route network grows to some 3,600 unduplicated miles, the company obtains surplus C-54s for conversion to civil-standard DC-4s; the first of these is placed into service between Dallas, Kansas City, and Chicago in May.

Although owner of a contested inroad into Mexico, the carrier begins a far more vast leap southward during the month when the CAB and President Truman award the airline 7,719 miles of routes in Latin America. Also granted is the right to provide service to such nations as Panama, Colombia, Ecuador, Cuba, Peru, Bolivia, Paraguay, Brazil, Argentina, and Mexico.

To cope with the demands such service will entail, Braniff constructs new facilities and in June orders 6 Douglas DC-6s. On October 26, Mexico refuses to grant Aerovias Braniff, S.A. concessions and formally revokes its permit. With the failure of the Latin subsidiary, Braniff is reduced to flying charters to Mexico. The first 52-seater DC-6 begins service over the Texas–Chicago route in November.

To help finance all of this expansion, the company arranges for a \$10-million loan on February 3, 1947.

On June 4, 1948, scheduled DC-6 flights to South America are inaugurated from Houston to Lima; the same day, back in Dallas, company officials change the corporate identity to **Braniff International Airways**.

BRANIFF INTERNATIONAL AIRLINES: United States (1991–1992). Following the bankruptcy of **Braniff, Inc.** on September 28, 1989 and its cessation of operations on November 24, the carrier goes into liquidation under Chapter VII. On April 23, 1990, the bankruptcy judge authorizes the sale of the company's trademarks, flight certificates, and operating manuals to former investor Jeffrey Chodorow, who wants to begin his own airline, under the auspices of his holding company, the Dallas (DFW)-based **BN Air**.

Following acquisition of the Braniff assets in the spring of 1991, another small carrier, **Emerald Air**, is purchased and merged and a fleet of 4 Boeing 727-200s (2 Dash-25s chartered from **Express One International** and 1 each Dash-214 and Dash-291) and 3 Douglas DC-9-15s is assembled. These inaugurate scheduled passenger flights in July linking the company's base with Los Angeles, Orlando, Ft. Lauderdale, and Islip, New York.

Necessary facilities are not available at Los Angeles and force immediate cancellation of service into that market. Short on cash, the new entrant quickly files for Chapter XI bankruptcy protection on August 7, just 37 days after start-up.

A total of 170,000 passengers are flown on the year and revenues total \$4.75 million. Although costs force an operating loss of \$2.2 million, a net profit of \$3.9 million is generated.

Operations continue to limp along during the first half of 1992. The fleet is altered to include 12 B-727-277As and 1 DC-9-15. The last in a long line of colorful liveries is introduced in May, when one Boeing is painted chartreuse. Catering primarily to leisure passengers interested in low fares, Braniff makes one daily departure from each of its scheduled 16 East Coast markets and also undertakes charters to holiday destinations.

Unable to achieve economic viability with such a reduced schedule and in competition with the majors' half-price fares, the company stops flying on July 3. An estimated 3,500 passengers are stranded, with only three airlines (**America West Airlines**, **Continental Airlines**, and **United Airlines**) giving the unlucky any kind of break on their now-worthless tickets.

Unofficial websites for this defunct airlines are www.pwl.net.com/~billjl/bnf.html, and www.Ulink.net/~rudolfo/htryintro.html.

BRANIFF INTERNATIONAL AIRWAYS (BIA): United States (1948–1982). The only American air carrier ever to fly a supersonic transport (if only subsonically) is born in a flush of new expansion on June 4, 1948 when company officials, led by the brothers Thomas E. and Paul R. Braniff, change the carrier's identity from **Braniff Airways**. On this day, BIA's first scheduled Douglas DC-6 service to South America departs Houston for Peru (Lima) via Cuba, Panama, and Ecuador.

This premier Latin operation is followed by additional kick-off dates for flights to several more cities south of the border, including La Paz in February 1949. In order to take off with high gross weights from such a

high-altitude airport (11,800 ft.) and still comply with FAR regulations, the DC-4 on this service uses JATO (Jet Assisted Take Off) for the next year. The company now employs 210 pilots and is the seventh largest U.S. airline.

Services begin in March 1949 to Rio de Janeiro, in March 1950 to Asuncion, and in May 1950 to Buenos Aires, where Juan and Eva Peron personally welcome Tom Braniff. São Paulo is added in October 1951, and late in the year 3 more DC-6s join the fleet, including the 175th and last unit to come off the production line, arriving on November 2.

Not forgetting its domestic desires or responsibilities, Braniff International continues to maintain the domestic routes begun in the 1930s. Airline employment in 1952 is 2,857. Service is provided to 29 U.S. and 9 Latin American cities.

Flight 65, a C-54A with 4 crew and 45 passengers, is lost at Hugoton, Kansas, on March 26; although the plane must be written off, there are no fatalities.

The first of 25 Convair CV-340s is delivered in July. On August 15, **Mid-Continent Airlines** is acquired, together with its fleet of DC-3s and CV-240s. Twenty-six previously unserved cities are added to the route network, including New Orleans and St. Louis. On November 1, the enlarged company becomes the first in the world to offer scheduled flights employing the Convair CV-340.

On April 1, 1953, the carrier's mechanics' union undertakes a 44-day job action, but it fails to shut down Braniff operations. The company's twenty-fifth anniversary is celebrated on June 20.

On September 27, the carrier joins with **United Air Lines** in operating an interchange route from Dallas (DFW) to Seattle via Denver. The last DC-4 is retired in October.

Tragedy strikes the Dallas-based carrier on January 10, 1954 when CEO Thomas E. Braniff is killed with 10 others in the crash of a private Grumman Mallard near Shreveport, Louisiana. Three days later, he is replaced as board chairman by Fred Jones and as president by Executive Vice President Charles E. Beard, who had joined the company in 1935.

After an eight-year illness, Paul R. Braniff succumbs to bone cancer on June 1, survived by his wife and son, John Paul Braniff.

En route from Memphis to Minneapolis on August 22, a DC-3 with 3 crew and 16 passengers is caught by windshear during a storm near Mason City, Iowa, and is destroyed in the carrier's first fatal accident since 1939 (12 dead).

In cooperation with **Trans World Airlines (TWA)**, an interchange service is inaugurated on January 14, 1955, from Dallas to Las Vegas via Amarillo using TWA L-749As.

While on final ILS approach to Chicago (MDW) in dense fog on July 17, Flight 560 from Dallas (DAL), a CV-340 with 3 crew and 40 passengers, strikes a commercial sign outside the field and crashes through the boundary fence; 2 crew and 22 passengers are killed.

As the result of the CAB's finding in its New York–Balboa Case, Braniff is able to launch one-plane service between New York and Washington, D.C. in August. Together with **Eastern Air Lines** the company opens an equipment exchange at Miami, allowing continuing flights to Panama and key cities on both coasts of South America.

In September, 2 Lockheed L-049s are acquired from **LAV (Linea Aeropostal Venezolana, S.A.)** to increase capacity on domestic services. Orders are placed for DC-7Cs, 5 CV-440s, and 5 Boeing 707-227s. The 707s are equipped with Pratt & Whitney JT4A-3/4 engines, and will be the only ones of their model produced.

In November, the company begins all-cargo flights from Dallas with a pair of Curtiss C-46 Commandos. A letter of intent is signed with Lockheed on December 16 for 9 L-188s.

The carrier begins service on February 15, 1956 over a 1,050-mile route between Dallas and New York via Memphis, Nashville, and Washington, D.C. The actual L-188 Electra turboprop order is signed on February 25.

The interchange agreement with TWA ends on March 1.

In October, new DC-7Cs join the fleet and are integrated into the Dallas–New York operation on November 27.

Construction on a new maintenance base is started at Love Field in March 1957. The 5 CV-440 Metropolitans are placed in service in the spring. After diplomacy-caused delays, DC-6 El Conquistador service is inaugurated to Bogota on May 15, followed next day by DC-7C El Dorado flights.

Open house ceremonies for a new Love Field terminal are held on October 10. The company will complete its move into the new facility early the following year.

A new corporate headquarters building at Exchange Park in downtown Dallas is occupied on February 14, 1958. Simultaneously, the company introduces the world's first systemwide computerized reservations system. The fleet now comprises 75 aircraft, including 22 DC-3s, 10 DC-6Bs, 6 DC-7Cs, 2 Lockheed L-049s, 31 Convairs, and 2 Curtiss C-46 freighters.

A DC-7C with 5 crew and 19 passengers crashes 13 kilometers from Miami during its initial approach on March 25 (9 dead).

The new Love Field maintenance facility is completed in the fall; a new maintenance base is opened in Dallas.

The first turboprop airliner in company service, the Lockheed L-188A Electra, is delivered on April 29, 1959; delivery ceremonies at Dallas (DAL), include the appearance of an original Model 10 Electra from the 1930s.

The first Boeing 707-227 Stratoliner destined for the company makes its maiden flight on June 11. The new Electras are placed into service from San Antonio to New York via Dallas on June 15, as well as from Houston to Chicago via Dallas.

The two Constellations are retired in September.

On September 29, Flight 542, a Lockheed L-188A Electra with 6 crew and 28 passengers en route from Houston to Dallas on a late night air coach service to Washington, D.C. and New York, develops propeller problems. The turboprop breaks up in midair and smashes into the ground 3.2 nm ESE of Buffalo, Texas; there are no survivors. Accident investigators will never determine the disaster's exact cause, although the CAB reports on October 28 that the wings had snapped off the liner.

Electra service is inaugurated in November to Washington, D.C. (DCA), Denver, and Colorado Springs.

With Executive Vice President R. V. Carleton as pilot, the first of 4 new B-707-227s (the fifth having been lost on a test operation on October 19) is delivered from Seattle to Dallas (Love Field) on December 3 in 2 hrs. 52 min.

On December 19, Braniff International begins El Dorado Super Jet service employing the first B-707-227, piloted by Capt. Gordon Darnell, on Flight 6 from Dallas to New York. Dallas to Chicago B-707-227 service is inaugurated next day.

Dallas to Bogota DC-7C El Dorado service begins in January 1960 at the same time Dallas to Panama nonstop flights are initiated.

A nine-day El Dorado Super Jet preview service is conducted in South America during February; the itinerary runs from Dallas to Houston, Lima, Rio de Janeiro, São Paulo, then back to Rio, on to Buenos Aires, Asuncion, Panama, New York, and back to Dallas.

The first jet service to San Antonio is launched by BIA on March 1 when its new B-707-227s begin flying from that Texas city to Chicago. Chicago to Houston frequencies begin nine days later. Also in March, a \$15.5-million order is placed for 3 B-720-027s, plus 1 option.

L-188A service to Kansas City and Minneapolis (MSP) is also inaugurated at this time.

B-707-227 frequencies are inaugurated over the Braniff-Eastern interchange from Dallas and Miami to Panama, Lima, and Buenos Aires on April 1. Routes are also extended over the interchange to São Paulo on April 27, Bogota on July 18, and Rio de Janeiro on August 2.

A major Latin American destination is finally achieved on November 9, when company Electras begin landing at Mexico City from Minneapolis (MSP) via Kansas City, Dallas, and San Antonio. Airline employment is 5,800 and the 18,432-mile route system covers 16 states in the U.S. and 10 Latin American countries. During the year, the last DC-3 is retired.

The 3 B-720-027s join the fleet in 1961, one each on February 11, late March 22, and in August; all are painted in a subtle red, white, and blue color scheme. B-720-027 El Dorado Super Jet service is inaugurated on February 20 from Chicago to Dallas and Houston.

On February 25, the pilot of the first B-720-027 received makes a hard landing at Houston, causing minor injuries to all 31 aboard the new plane. In April, a fourth B-720 is requested. Senator William Blakley and the Blakley-Braniff Foundation, owners of over one million company shares, are bought out in May by four Dallas businessmen.

On August 2, an L-049, sold to the "non-sked" Lloyd Airlines the previous year, is impounded at Santa Cruz de la Sierra, Bolivia, by officials who suspect the plane of smuggling while on a charter flight from Miami to Uruguay.

A CV-340 makes a hard landing at Des Moines, Iowa, on October 10, causing minor injuries to all aboard. Five days later, an L-188 crashes at Fort Worth when its landing gear collapses. On October 20, the company announces its intention to acquire the new British Aircraft Corporation 1-11 for its domestic routes; the press release is significant in that it marks the first time a U.S. airline had ordered a new foreign jetliner "off the drawing board," so to speak.

A DC-7C is lost in a ground accident at Dallas on November 19.

The fourth B-720-027 joins the fleet in May 1962. Originally ordered by Capital Airlines, a 10th Electra is acquired on May 10.

Orders are officially placed on July 26 for 6 British-made BAC 1-11-203AE jetliners. C-46 Commando all-cargo flights from Dallas cease at year's end.

A B-707-227 with 57 aboard crashes near Panama City, Panama, on March 25, 1963; one stewardess is seriously hurt. A DC-7C with 52 aboard comes down in the same area on August 15, but no injuries are reported.

An attempt is made to acquire Pan American-Grace Airways (PANAGRA), and the board authorizes BIA to make a purchase offer on April 29. Officials of the jointly owned airline cannot agree upon the sale. The company's thirty-fifth birthday is celebrated on June 20.

Enplanements total 2,617,132. A net profit of \$1.25 million is reported.

Airline employment in 1964 stands at 5,404 and the fleet includes 54 aircraft. Nonstop Bogota to Miami B-720-027 flights are inaugurated in January. In the spring, the Greatamerica Corporation purchases controlling interest. With temporary British registration, Braniff's first new BAC 1-11-203AE is employed on July 6 to transport U.K. Minister of Aviation Julian Amery and his group to Melun Villaroche, France, for a meeting with Sud Est Aviation officials concerning the new Concorde supersonic transport.

Passenger boardings climb 9% to 2,875,969 and freight ton-miles flown are 32.1 million. Revenues advance 11.4% to \$109.7 million and a record net profit of \$5.97 million is posted.

The workforce in 1965 is up to 6,206. In January, B-720-027s replace DC-6Bs on the Texas-Seattle interchange. Greatamerica Corporation acquires a 57.5% stake in the company on January 11.

The first of 14 BAC 1-11-203AEs arrives at Newark on March 13 following a two-day flight from Prestwick, Scotland via Keflavik, Sondrestrom, Goose Bay, and Montreal. The same day it is flown on to Dallas where new crews begin the aircraft's workup.

A B-720-027 with 61 aboard is badly damaged as the result of a hard landing at Houston on March 19. The new BAC 1-11-203AE is the first aircraft to take off from the new 8,000-ft. Love Field runway after it is dedicated on April 2.

The first true short-haul jetliner service in the U.S. is inaugurated on April 25 as the company's new BAC 1-11-103AE Fastback Jet begins a flight on the multistop route from Corpus Christi to Minneapolis (MSP).

Introduction of the U.K. product marks the second most important penetration of the U.S. airline market by a British aircraft manufacturer to date, following the initial breakthrough of the Viscount with Capital Airlines some years earlier.

Begun during the previous year, negotiations continue with Pan American-Grace Airways (PANAGRA) for purchase of the airline.

The **Pan American World Airways (1)** share of the arrangement would be \$22 million, while Braniff reaches a similar agreement with W.R. Grace for ownership of the other half interest. Just as the contract is being drawn up for an August transfer, Braniff management changes.

On August 6, with stock shares worth only \$25 apiece, Troy V. Post is elected chairman and President Beard is succeeded by **Continental Airlines** Vice President Harding Lawrence. Greatamerica official C. Edward Acker becomes a senior vice president for finance and the carrier is now realigned into three major divisions.

The company renews negotiations for an agreement, subject to CAB approval, to purchase **Pan American-Grace Airways (PANAGRA)** and orders are placed for 12 Boeing 727-27s and 5 B-707-327Cs.

The B-720-048 *St. Brendan* is leased for a year from **Aer Lingus Irish Airlines, Ltd.**; in Braniff service, it will wear a lemon yellow upper fuselage color scheme, with its horizontals, wing, and engines left in bare metal finish.

The nose gear strut of a B-720-027, with 127 aboard, fails at Mexico City on September 11.

In the first week of November, the company begins an overt effort to change its public image by introducing a Pucci-designed BAC 1-11-203AE as the first in a long line of variously painted "Flying Colors" jetliners. This "new look," credited to Mary Wells of the New York advertising firm of Jack Tinker and Partners, will see the fuselages of Braniff airliners painted a variety of bright colors, e.g., yellow, green, orange, beige, blue, with new colors and a new logo. While this ploy is satirized in some quarters, it will prove effective in helping to generate increased traffic and is officially known as "The End of the Plain Plane" concept.

Seeking to end a perceived "plain" appearance in its stewardesses, enterprising junior officials make plans to introduce the "Air Strip" hostesses, who will remove layers of clothing during a flight. Wiser heads stifle the idea.

Service to Acapulco, Mexico, begins on December 1.

Passenger boardings for the year increase 18% to 3,371,985. On revenues of \$134.8 million, the operating gain is \$13.76 million and net profit skyrockets 58% to \$9.44 million.

Following a decade of steady domestic and Latin American progress, Braniff reaches out dramatically once more in the mid-to-late 1960s. In 1966, it joins other majors in submitting applications to the CAB, then examining the opening of new westward routes in its memorable Trans-Pacific Case. In addition, a new around-the-clock maintenance program is started, utilization of the jet fleet is increased by 50%, and the long-term debt is refinanced.

Additional Pucci-painted aircraft (labeled "Easter Eggs") are unveiled, each one different from the last, while female flight attendants are given new wardrobes with up to seven different iridescent-colored Pucci uniform combinations.

The first of 12 B-727-27QCs and 5 B-707-327Cs to join the fleet during the year begin to arrive in May; one of the first two units is painted yellow while the other displays an ochre color scheme. All 14 BAC 1-11-203AEs are in service by June, operating to 28 destinations in 13 states.

The Boeing trijets enter service on August 1 over the daytime passenger route from San Antonio to Washington, D.C. (DCA) via Austin and Dallas and, on August 1-2 on a freighter route from San Antonio to Chicago via Dallas.

Meanwhile, the long range Boeings based at Travis AFB, California, are employed to satisfy a large U.S. Military Airlift Command (MAC) contract which will stretch over six years for the support of American efforts in Southeast Asia.

Flight 250, a BAC 1-11-203AE with 4 crew and 38 passengers, crashes outside of Falls City, Nebraska, on August 6; there are no survivors.

Enplanements for the year are 4,515,487. Common stock rises to \$124 per share. The operating profit swells to \$24.42 million and net profit is up to \$17.8 million on total revenues of \$194.58 million.

Following a year of negotiations, the carrier reaches another milestone in its history in early 1967. On January 8, it finally acquires a ma-

jor, longtime Latin American competitor, **Pan American-Grace Airways (PANAGRA)**, an airline whose history is at least as illustrious as its own and that gives Braniff firm control of half the U.S. international routes to and within Latin America. The cost is \$15 million to each co-owner; however, the sale of surplus **Pan American-Grace Airways (PANAGRA)** aircraft and the consolidation of tax benefits quickly bring in revenues equal to the \$30-million purchase price. The merger, technically finished on January 16, is completed on January 31.

To celebrate the merger, a B-707-227 is given a solid paint scheme with PANAGRA yellow colors. The livery is created by the carrier's advertising department and Alexander Girard, a New Mexico architect; titles and logo are designed by Jack Tinker and Partners. Under terms of an interchange agreement with **Pan American World Airways (1)**, a Pan Am B-707-321B is able to fly over Braniff routes from Houston and Dallas to Chicago and then on to London and Frankfurt.

By spring, the fleet includes 69 aircraft, including 7 DC-8-62s, 4 DC-8-31s, and 1 DC-8-55F retained from its longtime competitor. Braniff now assumes the PANAGRA interchange agreement with **National Airlines** and **Pan American World Airways (1)**. Consequently, the company is able to provide one-plane through service from New York to Miami over National's routes, from Miami to Panama with Pan Am's, and over the old PANAGRA routes to Lima. To operate the Miami to Panama segment, Braniff leases a DC-8-62 to Pan Am, painting it in PAWA-1 livery.

The Pacific Northwest to Texas interchange agreement with **United Air Lines**, initiated back in 1953, ends on June 12. In early fall, the carrier and its Greatamerica owner are purchased (through a stock exchange) with Ling-Temco-Vought (LTV). A reorganization of the company's management structure is now begun. Harding Lawrence becomes both board chairman and CEO; C. Edward Acker is elected president, and Vice President-Operations John Casey also takes on the vice presidency for sales.

Twenty-two new jetliners are acquired during the year as all piston engine equipment is phased out. Meanwhile, the workforce climbs to 10,743. Passenger enplanements advance 19.3% to 5,595,398 and cargo traffic accelerates by 43.9%. On record total revenues of \$266.18 million, the operating profit is \$14,461,404 and net income drops to \$4,701,672.

On January 5, 1968, the \$2 million Braniff International Hostess College opens at Wycliff in Dallas. The wisdom of the **Pan American-Grace Airways (PANAGRA)** acquisition pays off when the CAB awards Braniff additional nonstop routes southward.

The entire Lockheed Electra fleet is sold to Citizens National Bank on March 28 and leased back for a year.

On April 1, a new "Fast Bucks" public relations campaign is begun, returning fare portions on late flights.

On May 3, a Lockheed Electra, with 88 aboard, crashes at Dawson, Texas, in a storm, while coming in to land at Dallas' Love Field (85 dead).

An \$8.5 million "Terminal of the Future" is opened at Love Field on December 4. The new concourse has 13 gates with jetways—the first available to the airline at its "home" airport. In downtown Dallas, a new \$2 million computer center is occupied.

In December, as the result of actions taken in the Trans-Pacific Case, Braniff is allowed to expand once more, receiving several routes to Hawaii from the southeast via Mexico. Late in the year, the CAB grants a number of nonstop, long-haul routes from U.S. gateways to South American capitals.

The employee population numbers 11,500 and the fleet comprises 71 aircraft. Customer bookings advance 9.6% on the year to 6,135,269 while freight traffic is up by 30%. The operating profit jumps to \$25.36 million and the net profit climbs to \$10.41 million on a record income of \$301.06 million.

The company's fleet in 1969 consists of 4 B-707-227s, 8 B-707-327Cs, 34 B-727-27s, and 7 DC-8-63s. Orders are placed for 2 Boeing 747-127s and 4 B-707-138Bs are acquired from **Qantas Airways (Pty.), Ltd.** of Australia. The airline sells time on its new computer system to the regional **Air West**.

On March 27, the leased Electra fleet is retired and turned over to its owners, Citizens National Bank.

At midyear, a "Fastpark Jet Rail" system begins to transport passengers between parking areas at Love Field. Employing a bright orange B-707-327C, the company begins Honolulu operations on August 14 as an extension of its Chicago-Los Angeles run. Passengers from New York and Atlanta are able to connect at O'Hare International Airport for the trip to Hawaii.

During the year, the South American division begins to suffer significant losses as Latin American carriers conspire to force Braniff off the continent. Texas millionaire H. Ross Perot in December organizes a "Mission of Hope Flight" to Vietnam.

Just before Christmas, a Braniff B-707-327C, wearing a Christmas bow decal that had been applied to its light green fuselage, carries Red Cross representatives, media personnel, and a cargo of food and gifts for POWs to Southeast Asia. North Vietnam refuses the aircraft permission to land; however, the Pathet Lao does allow the plane to put down at Vientiane and its occupants to visit POWs at a Laos camp.

Enplanements are 5,933,700. Revenues accelerate to \$332.98 million, but expenses insure that the operating gain dips to \$17.76 million and the net profit falls to \$6.24 million.

The employee population in 1970 is 9,586 and the fleet includes 74 aircraft. In the summer, the Security and Exchange Commission requires financially distressed LTV to divest itself of Braniff. Late in the year, an equipment swap is engineered with **British West Indies Airways, Ltd. (2) (BWIA)**. In exchange for its 4 B-707-227s, Braniff will receive the Caribbean carrier's 3 B-727-78s and an undisclosed amount of cash.

Passenger boardings decline 4.1% to 5.7 million while cargo traffic is off by 4.2%. As a result of these corporate maneuvers and traffic returns, a net loss of \$3.05 million is suffered atop a declined operating profit of \$8.17 million on total revenues of \$331.2 million.

The first and only operational B-747-127 is received on January 15, 1971; painted in a colorful orange livery, this "Big Orange" is placed into service on the Dallas to Hawaii run. The second, an all-green machine, is traded back to its manufacturer before delivery of 2 B-727QCs. At this point, the 3 B-727-78s arrive from Trinidad and the company begins to remove its B-720-027s.

The first of 4 DC-8-51s are acquired from **National Airlines**. Anxious to replace its two-decade old red, white and blue "Pepsi-Cola" livery, the airline adopts three two-tone color schemes: two-tone blue and green; orange and ochre; and red and an orange known as "Aztec Gold."

Despite all of these new color schemes, the carrier, needing still more capacity, leases a B-727-155C from **Executive Jet Aviation** in May for a year; its color scheme is all white, with black titles. This year, on its old southwestern turf, Braniff comes up against competition it cannot best. On June 18, upstart **Southwest Airlines** begins low-fare Houston-San Antonio Boeing 737-2H4 service, beginning a tariff battle that will become known as the "Texas Airline Fare War."

Carrying a pistol and a suitcase of explosives, U.S. Navy deserter R. L. Jackson and a female Guatemalan accomplice, L. Sanchez-Archilla, hijack Flight 14, a B-707-327C with 110 passengers en route from Acapulco to San Antonio, on July 2. They force it to land at Lima after first diverting it to Monterrey where a \$100,000 ransom is collected in exchange for a female hostage. The next day the Stratoliner is forced to fly on to Buenos Aires, following a stop at Rio de Janeiro where the hijackers evade a trap set for them. At Buenos Aires, the pirates demand that the airliner be refueled and cleared for a flight to Algeria. The Argentine government refuses both demands, whereupon the hijackers simply surrender. The pair will be put on trial in Argentina and sentenced to prison; in 1975, they will be extradited to Mexico, where they had been tried in absentia, and sentenced to Mexican prisons.

On December 12, FBI agents arrest one M. Petrovic at New York (JFK) for threatening to hijack a B-727-27 and for threatening a stewardess while en route from Washington, D.C.

Enplanements for the year increase to 6,096,744. Income rises to \$341.36 million and operating income triples to \$21.1 million; net profit also rebounds, increasing to \$8.61 million.

B. E. Hurst, a 22-year-old former mental patient, attempts to hijack Flight 38, a B-727-227 with 101 passengers en route from Houston to Kansas City on January 12, 1972. After threatening to blow up the craft with dynamite if he is not granted \$1 million in ransom, 10 parachutes, and safe passage to South America, he chooses not to jump and surrenders to police at Love Field in Dallas.

On March 15, the company's ads begin to refer to its trimotors as 727 Braniff Place while its B-747-127 is called 747 Braniff Place, in honor of its multi-lounge configuration.

In April, the carrier's top officers make a \$50,000 contribution to the Committee to Re-Elect the President (CREEP); \$40,000 of the money given Nixon's people is laundered via the company's South American operation.

Shortly before **Mohawk Airlines** is merged into **Allegheny Airlines** on April 12, the latter purchases 8 of Braniff's BAC 111-203AEs. The workforce is now 10,033. Passenger boardings jump 12.1% to 6,936,000 and cargo climbs 25.8%. Revenues rise 10.3% to \$383.89 million and the operating profit reaches \$29.32 million; net profit jumps an impressive 99% to \$17.15 million. Fiscally, the year is the best in the company's 45-year history.

The workforce in 1973 is 10,661. The carrier's fleet standardization program is completed as 20 new B-727-227s join the fleet and 12 older aircraft are withdrawn, including the 4 ex-**Qantas Airways (Pty.), Ltd.** B-707-138Bs and several of the B-707-327Cs. In February, Braniff begins the most determined effort of any major competitor to overcome LaMar Muse's **Southwest Airlines** by offering \$13 one-way daytime flights between Dallas (DFW) and Houston. Muse chooses to match the fare or, for those passengers wishing to pay full cost, provide a "valuable gift."

As many of the newcomer's passengers are commuting businessmen, the "gifts" turn out to be fifths of expensive spirits which the recipients can take home duty free by placing their fares on their expense accounts. For two months, until Braniff surrenders by withdrawing its \$13 offer, **Southwest Airlines** is the largest distributor of Chivas, Crown Royal, and Smirnoff in the entire state of Texas. Skirmishes with **Southwest Airlines** will continue for three more years.

On June 4, it is announced that artist Alexander Calder has been commissioned to paint the exterior of the airline's South American-bound DC-8-51s. Meanwhile, hourly service is introduced between Dallas (DFW) and Denver. Other frequencies are added from DFW to Nashville, New Orleans, Newark, Miami, and Chicago.

In the transatlantic route case being heard before the CAB, Braniff seeks nonstop authority from DFW to London, Paris, Amsterdam, Zurich, Rome, and Frankfurt. Other route requests made of the regulators include Houston to Fairbanks via Dallas (DFW), Calgary, Edmonton, and Anchorage; Houston to Cancun via Merida and Cozumel; and Dallas (DFW) to La Paz via Guadalajara, Puerto Vallarta, Mazatlan, and San Jose del Cabo. A DC-8-51, *Flying Colors of South America*, painted by Alexander Calder, makes its first flight over the Dallas (DFW) area on October 30.

Also in October, Braniff becomes the first airline to become fully converted to the wide-body interior in its non-wide-body B-727-27s.

Customer bookings accelerate 11.5% to 7,732,000, but freight is off by 0.9%. Still, overall revenues shoot up to a record \$445.63 million and profits are \$42.59 million (operating) and \$23.15 million (net). In fact, the pioneer has outscored the other U.S. trunk lines in percentage growth.

Only 23 new employees are hired in 1974. On January 13, Braniff relocates from Love Field to its new \$52-million complex at the recently opened Dallas (DFW). The company becomes the largest operator from the modern complex with 304 daily arrivals and departures. It also introduces the Docutel Automated Baggage Handling System.

On January 30, Ralph Nader's Aviation Consumers Action Project files a complaint with the CAB concerning Braniff's contribution to the Nixon campaign.

At the same time, the carrier announces an expanded sales program placing increased reliance upon field sales and tie-ins with travel agencies. As a result, a number of walk-in street-level ticket offices are closed and replaced with a nationwide toll-free telephone number.

Pilot members of Air Line Pilots Association (ALPA) strike the company between September 21–23; after the flyers return to work, negotiations continue and a mediated agreement is worked out on November 6.

Later in the year, an application is filed with the CAB seeking authority for a transatlantic route to London, continuing on to Paris, Frankfurt, and Rome.

Twenty more B-727-227s are delivered throughout the year and tour sales to South America increase by 80%.

Enplanements accelerate 9.3% to 8,459,000 and the number of FTKs flown rises by 2.8% to 126.5 million. The net profit climbs again, up to \$26.13 million, atop an operating profit of \$55.75 million on revenues of \$552.39 million. All of these statistics are record highs for the company.

The workforce in 1975 is 10,690. In an effort to increase bookings for newly formed **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)**, the Peruvian military government on February 1 orders Braniff to reduce its Lima to Miami frequencies by 50%. On February 14, the company is indicted in Federal court, along with **Texas International Airlines**, under the Sherman Antitrust Act for conspiring to put **Southwest Airlines** out of business. The case is eventually resolved and those in favor of deregulation of the airline industry frequently cite the Southwest-Braniff battles.

Heavy emphasis is now placed upon the generation of additional pleasure travel to Mexico and South America. However, on March 12 the CAB Enforcement Division files a major action against Braniff. The suit involves not only Braniff's illegal campaign contribution, but also its operation of an understandable if illegal "anticompetitive practice campaign," or kickback operation, involving off-the-book tickets in South America since the **Pan American-Grace Airways (PANAGRA)** buyout.

A new holding company is now established, Braniff International, Inc., with the airline as its major subsidiary. C. Edward Acker, who becomes president of both, surprisingly resigns on September 30 and Harding Lawrence resumes the presidency. Plans are announced for a new campus-like headquarters complex at Dallas (DFW).

During the year, 5 B-727-27s are withdrawn and replaced by 7 new B-727-227s. One of these, *Flying Colors of the United States*, is the second commissioned art plane of Alexander Calder and is presented to the public on November 16. The plane is christened at Washington, D.C. (IAD) by the first lady, Betty Ford.

Passenger boardings grow a modest 2.5% to 8,669,000, but cargo is down by an almost equal amount, 2.8%. Revenues of \$598.85 million are earned, but costs force the operating profit down to \$47.38 million. The net profit falls to \$16.02 million, although this figure was \$20.38 million before the cumulative effect of an accounting change for vacation pay.

Fifty-four employees are laid off in 1976 or not replaced. On March 24, the CAB announces that Braniff has agreed to sign a consent decree. The company will pay a record civil penalty of \$300,000 for its failure to report an illegal \$40,000 contribution to President Nixon's 1972 reelection campaign and for a \$1-million scheme to hide ticket discounts.

Four days later, on March 28, it is announced that the lone Jumbojet, "Big Orange" or "747 Braniff Place," flies 14 hours per day and has the highest utilization rate of any aircraft operated by a U.S. airline. The craft has been aloft for 25,000 hours and has logged 13 million miles, operating at an average of 55% of passenger capacity and remained profitable since the day it began service in 1971.

The Dallas-based airline markets the Bicentennial spirit in all 40 of its domestic markets in the form of the B-727-227 sporting an Alexander Calder-designed red, white and blue abstract livery and christened *The Flying Colors of the United States* in late 1975. Now, an extensive new

Flying Colors marketing campaign is undertaken that is designed to promote patriotism, pride—and company success.

During June hearings before the Senate Commerce Committee's Aviation Subcommittee, President Lawrence opposes deregulation of the airline industry. Five more B-727-27s are withdrawn as 8 more B-727-227s arrive during the summer and fall. On October 23, African-American and Hispanic employees agree to a \$1.1-million out-of-court settlement of a class-action discrimination suit.

Customer bookings advance 7.4% on the year to 9,307,000 while freight increases 3.1% to 126.8 million FTKs. Revenues advance to \$679.71 million and expenses are \$622.98 million. The operating profit is \$52.07 million while net profits climb to \$26.36 million.

In 1977, Russell Thayer becomes CEO/president as Lawrence returns to the chairmanship. The number of B-727-27s in the fleet is now only 25, as more of the 18 B-727-227s on order are delivered. Halston-designed uniforms are provided to flight attendants during the summer and leather seats are installed aboard aircraft, many of which now begin to receive attractive solid-color livery, with the name Braniff prominently displayed in script along with modernized striping.

In July, service is inaugurated from Denver to Atlanta, Oklahoma City, and Miami. When the CAB awards the anticipated London route to **Pan American World Airways (1)**, an effort is made to have President Carter overturn the award, which he does. In the fall, the last work commissioned from artist Alexander Calder is introduced; painted on a new B-727-227 is an abstract artwork entitled "Salute to Mexico."

The company and U.S. Post Office at Dallas begin a controversial and experimental arrangement on December 18: airline tickets are issued by a computerized printer at the local post office, then sorted by postal clerks and mailed to travelers.

More than a dozen persons aboard a DC-8-62 are injured by heavy turbulence on December 25 during a flight from New York to Panama; an emergency landing is made at Miami to obtain assistance for the injured.

Enplanements reach 9,667,000. Net profits for the year are \$36.62 million, atop an operating profit of \$69.02 million on revenues of \$791.15 million.

Airline employment is increased 12.5% in 1978 to 13,500. After an initial delay, Dallas (DFW) to London (LGW) flights are inaugurated by the company's original B-747-127, now known as the *Great Pumpkin*, on March 18. It is joined within days by a B-747-123 leased from **American Airlines**.

During the spring, an interline agreement begins with **Western Airlines**. It links Dallas (DFW) with Calgary and Edmonton via Denver. On May 28, a \$97.5-million order is placed with Boeing for 2 B-747SP-27s.

The carrier's fiftieth anniversary is celebrated on June 20.

Corporate headquarters is transferred to a new facility on the west side of the Dallas-Fort Worth Airport on October 1; considered a study in opulence by many, it is known as Delta Place.

On October 19 the Airline Deregulation Act is enacted. Braniff leads all U.S. trunk and local service airlines in expansion as it seeks to battle its rivals in the intensive competition spawned by the legislation.

Braniff's fleet rises to 103 jetliners in the year of deregulation, all of which have by now been repainted in new shades of terra cotta, green, blue, chocolate, and burgundy. Among the deliveries are 10 B-727-227s, 1 DC-8-62, and the leased Jumbojet.

On October 31, the last of 588 pilots hired since 1974 is employed and the company now seeks 300 more plus 300 flight attendants for slots anticipated for the following spring.

On November 1, B-747-127 flights commence from Seattle and Portland to Honolulu. Later in the month, the CAB grants Braniff 67 new routes and, on November 29, a B-747-130, formerly flown by **Deutsche Lufthansa, A.G.**, is leased for the transatlantic service.

On one day, December 15—the day on which the Airline Deregulation Act takes effect—Harding Lawrence adds 17 new cities and 49 new nonstop segments to his domestic route network while opening a new line between the central U.S. and South American markets via Mexico

City. In almost a single stroke, unduplicated route mileage is increased by 50% to 60,000. Three days later, a third B-747SP-27 is requested.

On December 22, it is announced that, in a cooperative venture with **Air France** and **British Airways, Ltd. (2)**, Braniff will begin Concorde service between Dallas and London and Paris via Washington, D.C. in January.

On December 28, the carrier declines to contest charges of violating federal antitrust laws and is fined \$100,000 for using unfair tactics in squeezing rival **Texas International Airlines** out of the commuter business. A total of 238 new pilots are hired by year's end. All of this activity gives the company record traffic and profits.

Passenger boardings accelerate 17.7% to 11,745,000 while freight is also up, by 11.4%, to 150.74 million FTKs. Operating revenues jump 22.9% to \$972.1 million while expenses are \$889.89 million. The operating profit is \$80.15 million and net income climbs 33.9% to \$45.23 million, the highest in company history.

The workforce is reduced by 15.3% in 1979 to 12,700. In one of the most heavily publicized and costly experiments conducted by any U.S. air transport firm in decades, Braniff, in cooperation with **Air France** and **British Airways, Ltd. (2)**, begins supersonic service from Texas to London and Paris. Employing Concorde leased from the Europeans, Braniff flies the roundtrip Dallas (DFW) to Washington, D.C. subsonic leg, becoming the only American carrier ever to fly an SST. The inaugural flights into the new airport at Dallas-Fort Worth are landed at the airport's parallel runways within 2 seconds of one another on the morning of January 12 after coming in from Washington, D.C. (IAD) in 2 hrs. 27 min. at Mach 0.95. Concorde return service is inaugurated from Dallas to London and Paris later in the afternoon, after ceremonies.

A B-747-273C is leased from **World Airways** on April 20 and is followed by the arrival of a second chartered former German Jumbojet, a Dash-230B, on May 5 and a new B-747-227B on May 29.

Twenty new destinations are added to Braniff International's route system as it becomes a major transatlantic carrier by adding orange-painted Boeing 747 service from Dallas on July 1 to Amsterdam, Frankfurt, Paris, and Brussels. Perhaps surprisingly, Midland and Odessa, Texas, and Hartford, Connecticut, are the only two U.S. cities added. However, while **United Airlines** is on strike in early summer, a temporary service is undertaken from Los Angeles to Honolulu. Its western routes are pushed beyond Hawaii as company Jumbojets fly into Hong Kong and Guam on July 3, Seoul on September 15, and Singapore on October 31.

Meanwhile, on September 13, it is announced that the artwork done by the late Alexander Calder on two of the DC-8-62s will be erased due to a need for corrosion inspection. The first of 4 ordered B-747SP-27s arrives on October 30 to join in the Oriental operations.

Traffic for the year, meanwhile, increases 23.5% to 14,508,000 passengers carried while the number of freight FTKs operated rises 36.6% to 205.9 million.

The costs of experimentation and rapid expansion begin to mount. Although revenues accelerate 38.42% to reach a record high of \$1.34 billion, expenses (led by fuel cost increases of 94.2%) skyrocket 54.7% to \$1.38 billion. The result is a \$38.43-million operating failure and a net loss of \$44.33 million, an \$83.3-million downturn from the previous year's profit.

Financially, 1980 is the second straight disastrous year for Harding Lawrence's company and can, in retrospect, be seen as the beginning of the company's eventual failure. The second B-747SP-27 arrives on April 23.

With load factors too low, the Singapore route is closed on May 15. The third B-747SP-27 is delivered on May 20. Also in May, the leased **American Airlines** B-747-123 is returned.

A symbol of Braniff's difficulties is the cessation, on May 31, of the Concorde flights between Washington, D.C. and New York and Dallas-Fort Worth. Although a prestigious endeavor, the fuel costs of the flights are economically draining. The company is unable to afford a request by **British Airways, Ltd. (2)** to increase the number of weekly frequencies

by 2 to 14 to and from New York and from 1 to 4 to and from Washington, D.C. during the upcoming summer. As of July, the company halts payment of either interest or principal on its debts.

Over 165 Cuban refugees force their way onto California-bound Flight 920, a DC-8-2 at Lima, Peru, on August 29, and demand to be flown to the U.S.; the group surrenders about 9 hours later, freeing 15 hostages.

On September 1, Kansas City becomes a secondary hub and nonstop Dallas to continental Europe flights are discontinued and service to Paris and Amsterdam ceases. On October 1, the B-747SP-27 delivered just six months earlier is sold, via its manufacturer, to **Aerolineas Argentinas, S.A.**

A strong gust of wind blows a B-727-227 from a taxiway at Newark International Airport on November 11 and seven persons are injured in the evacuation that follows.

B-747-127 service on the South American routes is cut back and service into the Pacific is suspended. Consequently, the workforce is cut by 23.3% to 11,500. Although new services are launched from Texas to Toronto and Montreal in November, in mid-December serious merger discussions begin with **Eastern Air Lines**. On December 31, Harding Lawrence's error in quickly expanding Braniff's routes in the wake of deregulation leads the board to request his early retirement.

Passenger boardings for the year fall 15.3% to 12,153,000 as freight falls 5.2% to 182.63 million FTKs. The pioneer's revenues continue upward 7.9% to \$1.45 billion, but costs (led by fuel bills) increase 12.6% to \$1.56 billion, leaving a net loss of \$128.51 million atop an operating loss of \$107.49 million.

The workforce is reduced by 13% in 1981 to 10,000. On January 8, Lawrence is succeeded by Vice President-Operations John J. Casey, older brother of the **American Airlines** chairman. **Eastern Air Lines** Chairman Frank Borman notifies Braniff on January 27 that merger discussions are broken off and, on February 28, the line asks its employees to take pay cuts of up to 10% to help it recover from its losses.

A formal consent postponing payments on loans is signed by 39 Braniff creditors on March 5 and, on March 13, employees agree to contribute 10% of their salaries to help the company ease its severe cash shortage and approve a profit-sharing plan that runs through 1983.

On April 12, Braniff raises the salaries of approximately 1,000 management officials by an average of 11.4%; leaders of the unions, whose members had accepted pay cuts a month earlier, roundly criticize Chairman Casey. A Federal employment discrimination lawsuit is settled out of court on April 15. The airline agrees to give preferential treatment to African-Americans rejected as flight attendants between 1971 and 1975 and to pay each \$1,000. The original suit had been filed by Beverly J. Quigley on behalf of all African-American flight attendants.

On June 21, a B-727-227 narrowly misses a midair collision with a Bolivian Air Force jet fighter over Brownsville International Airport in Texas; traffic controllers blame the pilot of the Bolivian plane for the incident. During the summer, the two leased former **Deutsche Lufthansa, A.G.** Jumbojets are returned to their lessor, along with the **World Airways** unit. The domestic network is more fully centered upon the Dallas (DFW) hub.

On September 5, in an unrelated incident, 11 Texans, including 10 Braniff pilots, are indicted at Washington, D.C., for Federal tax fraud. Their leader, Jerome Daly, allegedly gained control of the tax-exempt Basic Bible Church in 1978. Also in September, President/CEO Russell Thayer is replaced by a new management team led by **Southwest Airlines** President Howard D. Putnam. This group immediately moves to trim costs while holding on in the tough competitive arena of the U.S. Sunbelt. A spirited marketing blitz is undertaken focusing on the company's traditional route strengths and all unprofitable foreign and domestic slots in the network are eliminated.

On November 1, a B-727-227 is tasked to become the team plane of the Dallas Cowboys professional football team. The aircraft wears a helmet with the team's star logo on its tail and "Dallas Cowboys" titles on the mercury blue fuselage forward of the wings. The Cowboys will only

fly the trijet twice, losing late season contests to the San Francisco 49ers and New York Giants.

Largely due to retrenchment and effects of the PATCO air traffic controllers' strike and ATC restrictions, traffic drops 14.2% to 10,494,000 while cargo plunges down by 43.2% to 127.39 million FTKs. Simultaneously, revenues decline 17.9% to \$1.18 billion and although the new management's activities cut costs 17.43%, expenses still total \$1.29 billion. A \$94.8-million operating loss is posted and a monstrous \$156.49 million loss is sustained.

Humor precedes corporate disaster in 1982. On February 1, President Putnam covertly tape records a conversation with **American Airlines** President Robert L. Crandall in which the latter suggests coordinating fares out of Dallas (DFW). Putnam turns the tape over to the Justice Department, which begins an embarrassing investigation of the rival.

A man wanting to hijack a Braniff jetliner, but who does not know how to fly, boards an empty B-727-227 on February 13 at Amarillo, Texas, and, after discovering his error, locks himself inside the cockpit where he remains until Federal agents can talk him into surrendering some hours later. Upon examination, the man will be found to be mentally unstable and sent to a psychiatric institution.

In March, the CAB begins an investigation into Braniff charges that **American Airlines** has been employing "dirty tricks" against it in Dallas; Braniff brings its own civil suit on similar charges.

During the first week of May, a deal is made to lease the company's South American routes to **Eastern Air Lines**, but by this time the company is out of cash and can neither complete the deal or operate. Unable to pay either principal or interest on its debts since mid-1980 and following two successive \$100 million-plus loss years, Braniff International Airways, \$733 million in debt, files for Chapter XI bankruptcy on May 12.

The next day, all aircraft are ordered back to Dallas from wherever they might be in order to prevent their seizure. By the day it closes its doors, the carrier—first to fail under deregulation—has flown 3,918,000 passengers (down 62.7%) and 34.74 million FTKs (off 72.7%) for the year. It has generated \$380.22 million in revenues and has \$427.58 million in expenses. The final bottom lines read: minus \$67.35 million (operating) and minus \$65.1 million (net). More important for the travelers who have been caught by surprise, hundreds of consumers are left with worthless tickets that no other airline will honor.

Once out of business, almost all of the company's South American routes are acquired on June 1 by **Eastern Air Lines**, while its domestic slots are divided up by other air transport companies. Among the latter is **Pacific Southwest Airlines (PSA)**, which files a plan to use its slots plus aircraft leased from Braniff's assets to start a joint venture Texas division at the ex-major's Dallas (DFW) base. The move is opposed by **American Airlines**, which now declares the Texas airport its principal hub.

In the spring of 1983, a U.S. Court of Appeals judge rules against the **Pacific Southwest Airlines (PSA)** initiative. At this point, 20 B-727-227s are sold and a B-747-127 is leased to **PEOPLExpress**. In July, the "dirty tricks" suit initiated against **American Airlines** is settled out-of-court when the surviving major pays \$20 million to takeover Braniff's Dallas (DFW) gate leases in exchange for a dropping of all charges.

The story of the airline's last years is covered from two different perspectives in books written after its failure. Former Chairman Putnam, with Gene Busnar, recalls the period in *The Wings of Turbulence: A CEO's Reflections on Surviving and Thriving on the Cutting Edge of Corporate Crisis* (New York: HarperBusiness, 1991). Earlier, an ex-Braniff pilot, now ABC News consultant, John J. Nance, had written *Splash of Colors: The Self-Destruction of Braniff International* (New York: William Morrow, 1984).

There is an unofficial website on Braniff that is maintained by Bill Jackson located at <http://users.acl.com.dispatcher/private/bnf.html>.

BRANSON AIRLINES: United States (1993–1994). Branson Airlines is established by Nick Herbst at Branson, Missouri, during the summer of 1993 to serve the country music and tour group attractions of the city.

Daily lightplane roundtrips are initiated to Kansas City, St. Louis, Little Rock, and Memphis.

As the result of low demand, the service to St. Louis and Kansas City is cancelled on November 15. Unable to survive until the following tourist season, the company goes out of business in early 1994.

BRASAIR TRANSPORTES AEREOS, S.A.: Brazil (1994–1998). BTA is established by Ioannis Ammeronis at São Paulo in March 1994 to undertake ad hoc cargo services to a variety of South American destinations. With himself as president and Sergio R. C. Siquera as director general, Ammeronis begins operations with a single leased Boeing 707-336C. An owned B-707-351C joins the fleet later in the year.

Business is expanded in 1995 as a B-707-330C is acquired. During 1996–1997, a marketing agreement is signed with **VASP Brazilian Airlines, S.A.** The company is reformed in late 1998, becoming **Beta Cargo, S.A.**

BRATSK AIR ENTERPRISE: Bratsk II Airport, Bratsk, Irkutsk Region, 665711 Russia; Phone 7 (39531) 71325; Fax 7 (39531) 71325; Code BRAT; Year Founded 1994. Bratsk, named for the city in the Irkutsk region of the CIS, is established in 1994 at Bratsk Airport to provide scheduled and charter passenger and cargo flights to destinations in Siberia, China, Mongolia, Turkey, and European Russia. Shareholding is divided between the state (51%) and company employees (49%).

Vladimir D. Odnostorontsev is appointed general director and he commences revenue services with a fleet containing an unspecified number of Antonov An-2 and Yakovlev Yak-40s, plus one Tupolev Tu-154 and several Mil Mi-2 helicopters. Enplanements for the year total 163,227.

The 35 aircraft in the fleet haul a total of 141,200 passengers in 1995, a 15.6% decline while freight carriage falls 26.5% to 3.96 million FTKs.

Flights continue in 1996–1999, during which years the fleet comprises 4 Tu-154Ms, 1 Tu-154B, 11 Yak-40s, 12 An-2s, and 7 Mi-8 helicopters.

On August 6, 2000, the carrier launches twice-weekly Tu-154M direct return service from Bratsk to Domodedov Airport at Moscow; one flight is direct while the other stops at Yekaterinburg.

BRAVIA: Bryansk Airport, Central Region, 341036, Russia; Phone 7 (08322) 48524; Fax 7 (08322) 40016; Code BYK1; Year Founded 1999. Bryansk Air Enterprise is reformed in the summer of 1999 and renamed in honor of a now-defunct U.K.–Russian joint enterprise set up to sell Rolls Royce-powered Tupolev Tu-204s.

Domestic and regional cargo services, both scheduled and cargo, continue to be offered during the remainder of the year and into 2000 with a fleet of 8 Yakovlev Yak-40s, 5 Antonov An-24s, 36 An-2 biplanes, and 15 Mil Mi-2 helicopters.

The media reports an aluminum theft at Bryansk on May 18—two propellers have been stolen from an An-2.

BRAZIL CENTRAL (LINHA AEREA REGIONAL BRAZIL CENTRAL, LTDA.): Brazil (1986–1996). To save it from collapse, the Brazilian government's Departamento de Aviação Civil (DAC) on July 31, 1986 authorizes the purchase of Rio de Janeiro-based **Votec (Serviços Aéreos Regionais, S.A.)**, operated by the nation's largest helicopter operator, **TAM (Taxi Aéreo Marília, S.A.)**.

Given government subsidy and having designed a marketing strategy to integrate the two carrier's sales and schedules, TAM officials act within five months to consolidate the fleets and maintenance divisions of the two airlines. Led by Jose Rebelo de Meira Vasconcelos, the new CEO, the company reeducates newly acquired personnel and launches Brazil Central, S.A. as a wholly owned subsidiary. **Votec (Serviços Aéreos Regionais, S.A.)** returns to the operation of helicopter services only.

With 8 former Votec Embraer EMB-110C/P Bandeirantes and 1 Fokker F.27-600 repainted in yellow and green, scheduled services are

undertaken, beginning in January 1987, to Berra do Garcas, Belem, Belo Horizonte, Cuiba, Pamphula, Brasilia, Golani, Minacu, Niquelandia, Palmas, Redencao, Ribeirao, Santana do Araguaia, Sao Felix de Araguaia, São Paulo, Uberaba, and Uberlandia. At the end of the year, the fleet is altered somewhat: 2 Bandeirantes are withdrawn from service and replaced by 1 F.27-200.

In 1988, services are inaugurated to Porto Nacional, Gurupi, Santa Terezinha, Confresa, Miracema do Norte, and Balsas with 3 Bandeirantes leased from TAM (Taxi Aereo Marilia, S.A.). Hubs are established at Belem, Brasilia, and Miracema do Norte and a new 2,000-sq.-ft. hangar is completed at the former point. Enplanements for the year reach 132,869.

Airline employment stands at 400 in 1989 and the fleet now includes 2 Friendships, 3 DC-3s, 6 Bandeirantes, and 1 Britten-Norman BN-2 Islander.

Passenger boardings accelerate 12.5% to 151,850 and freight traffic moves ahead by 9% to 314,000 FTKs.

As a result of national economic reversals, passenger boardings drop 11.6% in 1990 to 177,122 and freight falls by 31.4% to 393,000 FTKs.

Airline employment stands at 171 in 1991 and the fleet includes 3 EMB-110Cs, 4 EMB-110Ps, and 1 each leased EMB-110P1, F.27-200, and F.27-600. Statistics are reported only through September, but show customer bookings down 6.2% to 199,893 and cargo off 14.1% to 244,000 FTKs. Expenses exceed income and there is an operating loss of \$1.01 million. There is, however, a net gain of \$411,363.

The employee population is increased by 24.1% in 1992 to 283. The decision is taken by the government to end six years of subsidy, forcing the carrier to be operated purely on a commercial basis. For the year as a whole, traffic declines once again.

Passenger boardings are off 20.5% to 212,981 while freight declines 19% to 6.94 million FTKs. Revenues jump 10.5% to \$30.34 million while expenses are up only 2.6% to \$29.22 million. As a result, there is an operating surplus of \$1.12 million and a net profit of \$1.28 million.

In 1993, CEO Vasconcelos oversees a workforce of 275, down 3% from the previous year, and a fleet that includes 1 each leased F.27-200 and F.27-600 and 8 EMB-110 Bandeirantes, 3 of which are out of service. The Fokkers are phased out as 20 Cessna 208 Caravan Is are acquired.

Destinations outside the main urban centers continue to be visited, many lacking infrastructure support such as paved runways. Markets served include Barras do Garcas, Belem, Belo Horizonte, Confresa, Cuiba, Pamphula, Brasilia, Golania, Guropt, Minacu, Niquerlandia, Palmas, Redencao, Ribeirao, Santa Terezinha, Santana do Araguaia, Sao Felix de Araguaia, São Paulo, Uberaba, and Uberlandia.

Customer bookings fall another 19.9% to 168,759, but cargo, thanks to the new Caravans, skyrockets 101% to 14.7 million FTKs. Revenues, on the other hand, decline 14.5% to \$27.1 million as expenses plunge 25.9% to \$24.63 million. The operating surplus is \$8.53 million while a net \$2.74-million profit is generated.

The workforce is cut another 40.7% in 1994 to 163 as the Caravan I fleet is expanded to 41. Of the 8 Bandeirantes, 1 is taken out of service and 2 are leased to Pena Taxi, S.A. Toward year's end, consideration is given to the charter of a Fokker 50 to be placed on certain growing routes.

Passenger bookings recover and climb 6% to 178,919; cargo increases 82.6% to 862,131 FTKs. Revenues swell 5.8% to \$39.58 million while expenses are down 12.4% to \$25.45 million. Pretax income advances to \$14.3 million while net gain slips to \$2.38 million.

Twelve workers are hired in 1995, a 4.9% increase. Traffic figures are only available for the first quarter and show an increase in enplanements of 48.7% to 52,564.

Airline employment grows a major 59.6% in 1996 to 273. Five Bandeirantes are out of service, 1 remains out on lease to Pena Taxi, S.A., and only 1 Bandeirante is employed by the company. Meanwhile, the number of Caravan Is in operation grows to 48, all but 2 of which are chartered, with 2 subleased to Pena Taxi, S.A. The rotary wing fleet includes 1 Bell 206A, 7 Bell 206Bs, and 4 AS350Bs.

Destinations visited include Asuncion, Belem, Belo Horizonte, Brasilia, Campo Grande, Ciudad del Este, Cuiaba, Curitiba, Florianopolis, Fortaleza, Goliaia, Macapa, Maceio, Manaus, Natal, Palmas, Porto Alegre, Porto Velho, Recife, Rio de Janeiro, Salvador, São Paulo, and Vitoria.

To supplement its domestic feeder routes, the rapidly expanding TAM (Transportes Aereos Regionais, Ltda.) purchases Helisul Taxi Aereo, Ltda. in August for two million reais (\$2 million). The company, which is allowed to retain its independent identity, is assigned to this TAM subsidiary and continues to operate from its Foz do Iguaco base in Parana State.

In October, the company is granted long-haul authority by the Brazilian government. In recognition of this achievement, the carrier is renamed TAM (Transportes Aereos Meridionais, S.A.) in December.

This is an outstanding traffic year as customer bookings increase 50.3% to 643,102 and cargo skyrockets 111.6% as 2.59 million FTKs are operated.

BRAZILIAN INTERNATIONAL AIRLINES. See EMPRESA DE TRANSPORTES AEROVIAS BRAZIL, S.A.

BREMERTON AIR TAXI: United States (1964–1967). Robert Crowther established BAT at Bremerton, Washington, in early 1964 as a division of his Crowther Flying Center. Employing a Beech 18, he inaugurates scheduled roundtrip passenger and cargo services to Seattle on February 2.

When Puget Sound Airlines is created in mid-1967, Bremerton Air Taxi is one of the merger partners.

BREST UNITED AVIATION DETACHMENT. See BELAVIA (BELARUSSIAN AIRLINES)

BRINTEL HELICOPTERS, LTD. See BRITISH INTERNATIONAL HELICOPTERS, LTD.

BRISTOL BAY AIR SERVICES. See NORTHERN CONSOLIDATED AIRLINES

BRISTOW HELICOPTERS, LTD.: Redhill Aerodrome, Redhill, Surrey, England, RH1 5JZ, United Kingdom; Phone 44 (1737) 822353; Fax 44(1737) 822694; http://www.townpages.co.uk/html/client/bristow_helicopters; Year Founded 1951. Alan E. Bristow, formerly chief helicopter test pilot of Westland Aircraft and a pilot for Helicopair during French military operations in Indochina, forms this rotary-wing operator in 1951 as Air Whaling, Ltd.. The company, which provides FBO helicopter support for whaling fleets in the Antarctic, is reorganized in August 1953 to provide charter and contract service flights within the U.K. and receives its present name.

Flights continue through the remainder of the decade with both helicopters and a small fleet of fixed-wing Scottish Aviation Twin Pioneer 1s.

On July 1, 1960, Bristow is one of the small carriers acquired and merged into the Air Holdings Group (now British Air Transport Holdings, Ltd.) subsidiary British United Airways, Ltd., which now fields a large helicopter division.

Operations continue apace during the remainder of the decade, albeit under the BUA label.

A Scottish Aviation Twin Pioneer 1 with three crew crashes 12 nm off Chepbeica, Morocco, on January 17, 1963, during a ferry flight; all aboard are rescued.

Bristow Helicopters Nigeria, Ltd. is established at Lagos in early 1967 to offer support to Nigeria's growing energy industry. This subsidiary will operate more fixed-wing aircraft than all of the other units of the company combined, beginning with the Scottish Aviation Twin Pioneer 1 fleet transferred from the U.K.

While on a training flight near Ughelli Aerodrome in Nigeria on April 4, a Twin Pioneer 1 with two crew strikes a tree and crash-lands; although the plane catches fire, the crew scrambles to safety.

In the U.K., orders are placed for 20 Agusta/Bell 206B JetRangers. On July 26, Capt. Ernie Perrin ferries a Westland WS-55 Whirlwind from company headquarters at Redhill to Dyce Airport at Aberdeen, Scotland. The next day, having boarded passengers from a chartered Douglas DC-3, he pilots the first offshore-support helicopter flight, flying the Hamilton Brothers workers to a drill ship which has just begun work in the Moray Firth.

Service continues without further incident through the end of the decade and into the next.

On November 30, 1970, **British United Airways, Ltd.** is purchased by **Caledonia Airways, Ltd.** When the newly amalgamated carrier elects to sell its helicopter operations, Bristow is reborn. British Air Transport Holdings, Ltd., a subsidiary of British & Commonwealth, Ltd., and Eagle Star Insurance are principal owners (76%) with Alan Bristow and his associates holding the minority interest. With Bristow as chairman and G. Russell Fry as managing director, the carrier begins to develop into one of the world's largest rotary-wing operators.

Various activities are undertaken, including energy rig support operations, surveying, executive charter, search and rescue, pilot training, and aerial crane activities. By the end of the decade, airline employment stands at 1,400 and the fleet comprises 21 Sikorsky S-61Ns, 5 Aerospatiale AS-332 Pumas, 12 Wessex 60s, 6 Sikorsky S-58Ts, 6 Westland Whirlwinds (license-built S-55Ts), 32 Bell 212s, 2 Bell 204Bs, 12 Bell 205A, 22 Bell 206 JetRangers, 1 Bolkow 105, 6 Alouette IIIs, 27 Bell 47Gs, 18 Hiller UH-12s, and 4 Britten-Norman BN-2 Islanders, the company's only fixed-wing aircraft.

In April 1971, government coast guard contracts with Bristow to provide search and rescue (SAR) coverage along the southeast English Channel coast where it narrows before entering the North Sea. Based at RAF Manston in Kent and given coast guard livery, the Bristow Westland Whirlwind 3 will make 668 flights before the three-year contract ends in October 1974.

During the middle years of the 1970s, the company begins to operate Westland Whirlwinds and Wessex 60s into the southern North Sea area from a grass heliport at North Denes, above Great Yarmouth. The operations from this point will grow during the next two decades and the company will operate air traffic control from this base on behalf of all carriers.

In October 1977, major shareholding is taken in **British Executive Air Services, Ltd.** Early in 1978, the new purchase is integrated, minus its agricultural division, which is sold to David Dollar and becomes **Dollar Helicopters, Ltd.** Operations continue apace in 1979, during which year the company enters into a \$55-million arrangement with Boeing Vertol for the purchase of 5 Model 234 Civil Chinooks. In June, a contract is signed with Shell U.K. Exploration and Production (Shell Expro) and 2 Bell 212s are stationed on that company's "flotel" *Safe Gothia*, in the Brent field, for interstructure shuttle and day and night SAR.

As a result of the energy crisis, the Chinook deal is terminated in June 1980. The company makes the world's largest civil helicopter purchase in April 1981, ordering 35 Aerospatiale AS-332L Super Pumas, modified into Tigers, for \$200 million. During the same month, the company opens a base at Houma, Louisiana, and begins operations in the Gulf of Mexico. The venture is unsuccessful and almost all flight operations in the area cease on July 19.

Multifaceted operations continue in 1982 as the first Aerospatiale Tigers join the fleet. At the conclusion of the Falklands war, the company wins a contract from the Ministry of Defence to provide helicopter support to the Falklands Island garrison. Several Bells are sent to the South Atlantic to move passengers, freight, and underslung loads around the islands.

Meanwhile, charter flights increase significantly during the 1980s; in 1983, for example, a total of 1.9 million passengers are transported worldwide. The fleet is increased to include additional fixed-wing aircraft and the carrier offers domestic and overseas passenger, cargo, and charter services, particularly in support of oil resource development, from branches in nine nations.

Later in the year, the company is able to win the East Anglia S-61N support contract with Shell Exploration, Ltd. (Expro) away from **British Airways Helicopters, Ltd. (BAH)**. In December, BAH also loses to Bristow the long-time government coast guard contract centered on Sumburgh in the Shetland Islands. Employing a specially equipped S-61N, Bristow pilots inaugurate SAR flights at year's end.

Operations continue apace in 1984, by which time the workforce totals 2,000 and the fleet includes 150 helicopters. When **Bond Helicopters, Ltd.** purchases North Denes Airport in April, Bristow, the senior operator from this base, becomes a renter. An S-61N is outfitted for SAR duties, which are begun under a contract with the British Coast Guard.

Outbound to an Amoco jackup rig 30 miles off the Yorkshire coast on November 20, a Bell 212 disappears into the sea (two dead). At year's end, the **United Helicopters, Ltd.** subsidiary purchases 49% shareholding in **Okanagan Helicopters, Ltd.** of Canada for C\$22 million.

The fleet assigned to the North Sea in January 1985 includes 19 Aerospatiale AS-332L Tigers, 13 Sikorsky S-61Ns, 8 Sikorsky S-76s, and 8 Bell 212s. During the spring, 4 Bell 212s are modified and begin operating under control of the automatic helicopter position recording system installed by Offshore Navigation, Inc. at Shell's Cormorant Alpha platform in the North Sea.

Founder Alan Bristow retires on June 30, selling his last 13.4% shareholding to British & Commonwealth, Ltd.'s designated holding company, United Helicopters, Ltd. His son, Lawrence, departs as North Sea regional manager in September. Flying on behalf of the British Coast Guard on a new three-year contract, an SAR-equipped S-61N assists in the rescue on November 5 of 140 men from the storm-damaged BP oil rig support vessel *Tharos* in the North Sea. During the year, this helicopter increases the number of its rescue missions by 100% to a total of 73.

During February 1986 the BP Forties and Buchan Field support contracts are renewed for three years. In April, BAH regains the Shell Expro account. With falling oil prices, the demand for exploration in the North Sea declines and a substantial number of employees (between 60 and 90) are dismissed at Aberdeen during the summer.

At the same time, a new passenger terminal is opened at the North Denes Airfield; since the company began operations from this base in 1965, 1.5 million passengers and 60 million pounds of cargo have been transported. On July 11, an S-61N transporting oil workers is nearly involved in a midair collision over the North Sea with a Danish Air Force F-16 fighter plane en route to an air show at Lossiemouth, Scotland.

In August, it is reported that, since its founding 33 years earlier, the company has transported a total of 21.4 million passengers and 1.18 billion pounds of freight in 2.2 billion flight hours. When Shell Expro, in response to the oil exploration slowdown, withdraws its floating hotel, the *Treasure Hunter*, from its Brent Field in the Shetlands in September, the company must relocate 3 Bell 212s to Unst. The S-61N, under contract to the coast guard at Sumburgh, participates in the attempt to save survivors from the crash site of a **British International Airways, Ltd. (BIH)** Boeing Model 234 Civil Chinook in November. At year's end, the company has a total of 52 aircraft active in offshore support roles.

The company begins an "SAR War" in February 1987 when it proposes that private companies assume all U.K. helicopter search and rescue operations from the military. In May, it secures a coast guard contract to initiate SAR service from Stornoway, on the Outer Hebrides. In addition, medevac flights are also provided within and between those islands and the mainland. United Helicopters, Ltd., the holding company parent, purchases 1.7-million common shares in the new **CHC Canadian Helicopters Corporation, Ltd.** when it is formed during the summer.

During October, the company receives two offshore contracts from Fina Petroleum Development, Ltd. One calls for the use of an S-76 to support drilling in the Morecambe Bay area, and the other calls for another S-76 to support similar operations in the southern North Sea.

Following the takeover of **British Caledonian Airways, Ltd. (BCAL)** by **British Airways, Ltd. (2)** on November 11, the former independent's subsidiary, **British Caledonian Helicopters, Ltd. (BCHL)** is purchased by Bristow in December and merged. The

arrangement strengthens the Bristow fleet through the addition of 4 Bell 214STs, 3 S-61Ns, and 1 S-76.

An Aerospatiale AS 332L Tiger records the carrier's five-millionth flight on January 6, 1988 when it transports a crew from Marathon Oil's Brae Field. To celebrate the event, all of the passengers are presented with a bottle of Scotch whisky as they disembark. Since its introduction, the Tiger variation of the Aerospatiale Super Puma has recorded 2.5 million flight hours.

An SAR-equipped S-61N based at Stornoway rescues an injured seaman from a fishing vessel in Gale Force 9 winds later in the day; the dangerous extraction is effected by Bristow winchman Jeffrey Todd, who is lowered to the ship's deck. A year later, he will receive the "Prince Philip Helicopter Rescue Award" from the Guild of Air Pilots and Air Navigators. Additionally, the other S-61N crew on the flight, Capt. John Bleadon and First Officer Andy Hudson will join Todd in receipt of the "Edward and Maisie Lewis Award" from Queen Elizabeth for the country's most outstanding air-sea rescue.

On February 11, the Minister of State for Armed Forces rejects the Bristow proposal that civilian operators take over all U.K. SAR activities; however, he states that civil operators may continue to seek supplemental contracts via the Secretary of State for Transport.

Inbound at 3,000 ft. to the Scottish coast, 22 nm. from a Shell Expro rig on February 22, an AS-332L Tiger, with 13 aboard, is able, via ATC guidance, to avoid a collision with an RAF F-4K Phantom.

Also in the first quarter, it is announced that the company will replace its Bell 47 training fleet in May with 5 Robinson piston-powered R22 Betas. At the same time, a nine-month support contract is received from Mobil to employ a Bell 212 in support of the energy company's platform development in the Daryl field.

Three new North Sea support contracts are received in April; AS-332L flights will be provided for Ranger Oil, while Bell 214STs will fly for Kerr-McGee Oil and S-76s for Lasmo North Sea. In May, the Secretary of State for Transport awards Bristow a third coast guard rescue helicopter contract; worth \$12.1 million, the arrangement will provide a specially equipped S-61N around-the-clock in the Lee-on-Solent area of the English Channel coast.

The new unit's first call comes on May 24 when it joins a pair of RAF Wessex helicopters in delivering medical teams and provides passenger evacuation to a ferry afire in the English channel.

In June, company experts are sent to the U.S.S.R. to examine the possibilities of acquiring Mil Mi-26 helicopters for heavy-lift work; aware that U.K. certification will be difficult if not impossible to obtain, no deal is struck. An SAR crew from rescues several climbers from a mountain ledge.

On July 13, an SAR S-61N crew saves all 21 evacuees from a **British International Helicopters, Ltd. (BIH)** S-61N that has been forced down in the North Sea with a burning engine; the stricken machine sinks just after the rescue.

When the oil rig *Piper Alpha* takes fire later in the month following a gas blowout, an SAR-equipped S-61N provides rescue assistance for survivors. In August, the long-time Bell 214ST contract with Sun Oil for support of its Balmoral Field in the North Sea is lost to competing BIH. The company begins to seek replacements for its Bell 212 fleet. At the Farnborough Air Show in September, a Bell 412 is exhibited in the company's livery as pilots evaluate the four-bladed ship. The same month, a pair of AS-332L Tigers and a Bell 212 are dispatched to Dhaka, Bangladesh, to provide flood relief services.

The company's 25-millionth passenger is transported on November 30; however, with 750 flights daily company-wide, it proves impossible to identify the exact flight. Publicly owned since 1960, Bristow is a component of the Bricom Group management buyout.

In April 1989, Bristow places the most valuable civil helicopter order to date when it becomes launch customer for the new Aerospatiale AS-332 Super Puma Mk.2, placing an order for 20 to begin delivery in 1992. Later in the month, a baby girl is born aboard the S-61N based at Stornoway as it flies to the local hospital; she will be named Kirsty Macleod.

Bristow Helicopters Nigeria, Ltd. begins flying a pair of de Havilland Canada DHC-6-300s during the year while an AS-332L Super Puma is leased to the Norwegian domestic helicopter carrier **A.S. Morefly**, which has won a government contract to offer SAR services.

Flying from North Denes on November 8 under guidance of a circling RAF Nimrod reconnaissance aircraft, two company S-76As rescue a total of 51 oilmen from the *Introcean II*, a jackup rig drifting in heavy North Seas swells. The rig capsizes minutes after the last men are lifted off. In December, an AS-332L Tiger suffers serious damage in a fire while making ground turns at Aberdeen Airport.

Airline employment stands at 2,000 in 1990 and the company has a total of 60 aircraft active in offshore support roles. On January 9, two of eight mooring cables from the East Shetland Basin accommodation rig *Safe Gothia* are lost. A company Bell 412ST and 2 Bell 212s assist 11 **British International Helicopters, Ltd. (BIH)** helicopters in airlifting some 400 oilmen, in storm-force winds and darkness, to nearby platforms and Sumburgh. The thirtieth anniversary of the pilot training school is celebrated in April. Three Scandinavian companies formed under the general control of Nobel Industries and known as Rochfield, Ltd. purchase Bricom and Bristow Helicopters, Ltd. A consolidated pretax operating profit of £24.7 million (\$43.7 million) is reported.

A total of 3 S-61Ns are contracted to the coast guard in January 1991 and are based at the English base of Lee on Solent and at Scottish facilities at Stornoway and Sumburgh. Since the former was placed into service, it has made 540 calls; the Stornoway machine has flown SAR 417 times while the one at Sumburgh has been out on 363 occasions.

Several AS-332L Super Pumas on contract with a Chinese offshore firm participate in the August 16 rescue of 158 survivors from an oil exploration rig that capsizes during a typhoon in the South China Sea. The majority of those saved are lifted out by Sikorsky S-76A+s of the Royal Hong Kong Auxiliary Air Force.

As the result of another downturn in the demand for offshore oil support during the fall, contract rates remain flat and activity is sluggish. At the request of BP Exploration, the company's 3 S-61Ns on North Sea contract are replaced by 2 AS-332L Tigers. Meanwhile, 1 each Tiger and Bell 214ST are dispatched to Australia, where the subsidiary Bristow Helicopters Australia (Pty.), Ltd. will employ them in expanded offshore work "down under."

Led by the helicopter airline's Managing Director Bryan Collins, Caledonia Investments Plc and Morgan Grenfell Development Capital, Ltd. subscribe 45% equity in November and join Collins in Bristow management's successful buyout scheme. The carrier's 2,000 personnel are allowed the opportunity to acquire stock from the 10% stake held by management. The £200-million (\$354-million) financing package covers both the acquisition of Bristow Helicopters, Ltd. for £155 million (\$274 million) and the flight school Air Services Training, Ltd. In December, a contract is signed with the Maldives-based operator **Hummingbird Helicopters, Ltd.** for the lease of 2 S-61Ns.

The first S-61N is delivered to **Hummingbird Helicopters, Ltd.** during January 1992. Just after lifting off from the Cormorant Alpha oil platform off the Shetland Islands on March 14, an AS-332L Tiger with 17 aboard loses lift and crashes (11 dead). Also during the first quarter, a bid is made for BIH; however, it is withdrawn at the end of June.

In the April 8 issue of *The North Sea Letter* it is pointed out that since 1979, the Bristol Bell 212 SAR unit based on the Shell Expro accommodation vessels *Safe Gothia* and *Treasure Finder* have carried out over 450 search and rescue missions.

Bristow Helicopters Nigeria, Ltd., under the leadership of J. T. Black, now employs 300 and operates a fixed-wing fleet that includes 2 Twin Otters, 1 Scottish Aviation Twin Pioneer, and 1 de Havilland DH 104 Dove 6, as well as helicopters.

By July, 5 additional AS-332Ls have been supplied to Bristow Helicopters Australia (Pty.), Ltd. **Hummingbird Helicopters, Ltd.** places a second Bristow S-61N into service during November.

In early January 1993, the Liberian supertanker *Braer* grounds at the south end of the Shetland Islands. In heavy rain and turbulence, the

S-61N from Sumburgh participates in the rescue of 34 crewmen. In addition, when the ship goes on the rocks, spilling much of its 25-million-gallon cargo of oil, the Sikorsky rescues an unsuccessful salvage team and then flies numerous surveillance missions to monitor the tanker's condition and the extent of oil pollution.

On April 6, Scottish judge Alexander Jessop rules, in a 76-page document, that the March 14, 1992 accident in the Shetland Islands was caused by pilot error.

The SAR unit based at Lee on Solent completes its 1,000th mission on June 15 when its S-61N investigates a report of a fire.

In September, a pair of USAF Boeing B-52 Stratofortresses nearly collide with a company S-61N. On October 1, Bristow cancels an order for 6 AS-332L-2 Super Puma Mk. 2s.

On November 9, the company performs its most spectacular SAR rescue to date. A coast guard-contracted S-61N rescues 56 of 60 crewmen from the Latvian fishing vessel *Lunokhod*, which has run aground at the base of 100-ft. cliffs below the lighthouse on Bressay, in the Shetland Islands, during a storm. With four men escaping by lifeboat, the Sikorsky completes its mission in just two lifts, transporting 25 people to Lerwick in the first and 31 in the second. The mission establishes a world record for the number of persons rescued by a civil SAR helicopter winching operation.

In December, the company, with a 32% stake, joins with the shipping companies Leifhoegh and Andreas Ugland to establish a Norwegian joint venture subsidiary, **United Helicopter, A.S.**, which will operate as **Norsk Helicopter, A.S.** in competition with the giant **Helikopter Service, A.S. (HS)**. United purchases a hangar in Stavanger at year's end.

In February 1994, a \$25-million, five-year extension of the company's long-running North Sea support contract with Mobil Oil is signed. A pair of AS-332L Tigers will continue to be dedicated to servicing the Beryl Field, which is located approximately 180 nm. NE of Aberdeen. Also during the first quarter, one each Super Puma and S-61N are dispatched to Stavanger as the fleet of **Norsk Helicopter, A.S.**; unhappily, the subsidiary will be unable to win any of the major North Sea contracts awarded during much of the remainder of the year.

As the result of a Department of Transport decision in early May, the company's contract for government coast guard service from Sumburgh is renewed on June 1. Since that operation began, Bristow's S-61Ns have flown 600 missions. During the summer, the Italian associate company, **Helitalia, S.p.A.**, is established at Florence and in October, a Super Puma based at Aberdeen conducts a successful trial with a satellite tracking system manufactured by the Danish firm of Thrane & Thrane.

In December, subsidiary **Norsk Helicopter, A.S.** is finally able to outmaneuver HS, winning the lion's share of two Phillips Petroleum contracts for shuttle services to and from the Ekofisk oil field in the southern North Sea. At the same time, Bristow retains its Conoco support contract for another three years and will continue to utilize its Unst-based S-61N and Aberdeen based Super Puma on it.

Meanwhile, Shell Expro reverses an earlier decision and contracts to retain a second offshore Bell 212 in its Brent field. Late in the year, Aer Lingus Group indicates that it will privatize its **Irish Helicopters, Ltd.** subsidiary via its sale.

A total of 429 SAR missions are flown during the year on behalf of the U.K. Department of Transport.

Bristow in 1995 continues to operate offshore and coast guard activities in the U.K. from bases at Aberdeen, Great Yarmouth, and Sumburgh and sponsor subsidiaries and activities in Australia, Indonesia, Malaysia, Singapore, and Trinidad.

While flying at a point 140 nm NE of Aberdeen on January 19, a company Super Puma's tail rotor is hit by lightning; the helicopter is able to make a controlled ditching and all 16 aboard are rescued, although the machine is lost.

At month's end, the Conoco support contract is renewed for three years; it will continue to utilize an Aberdeen-based AS-332L Super Puma and an S-61N out of Unst. Simultaneously, an earlier decision by Shell Expro to cancel services for a Bell 212 at its Brent field is reversed.

A worldwide staffing review is completed at the beginning of February. As a result, 50 positions are cut at the Aberdeen base, including 15 voluntary retirements.

Following the January 19, ditching of a company AS-332L.1 in the North Sea because of a lightning strike, Bristow, after consultation with the Civil Aviation Agency in March, joins with its rivals **Bond Helicopters, Ltd.** and **British International Helicopters, Ltd.** in a voluntary agreement to prohibit flights in actual lightning conditions. Aircraft will either be diverted around such areas or not allowed to depart.

At the beginning of April, an S-61N is dry-leased to the Brazilian operator Aeroleo Taxi Aero, Ltda.

While landing at Lagos after an April 23 charter from Port Harcourt, a **Bristow Helicopters Nigeria, Ltd.** DHC-6-300 with two crew and seven passengers is caught in a microburst that causes the Twin Otter to hit the runway nosegear first. The turboprop bounces and attempts to go around, but collides with a parked Nigerian Air Force Fokker F.27-200MP. The civilian pilot is killed.

On July 28, Bristow takes a 51% stake in **Irish Helicopters, Ltd.** while **Petroleum Helicopters** of Louisiana purchases the remaining 49% interest, the maximum allowed for foreign ownership under European Commission rules. The combined price is \$8 million. The Dublin-based rotary-wing operator is allowed to retain its current identity and management.

Having won a short-term contract for offshore support in the Black Sea, a Bell 214ST, with a team of five pilots and engineers, departs from Aberdeen on August 8 for a 1,500-nm. flight to Varna, Bulgaria. Upon its arrival, the American-made helicopter begins transporting workers to and from *Ocean Liberator*, a platform located 150 nm offshore.

When the Royal Navy pulls the Westland Sea Kings of No. 848 Squadron out of Portland in September, the Department of Transport contracts with Bristow to station its coast guard S-61Ns at that point in Dorset.

A coast guard S-61N from Lee on Solent is called to an emergency 30 miles from its base on December 16. There a man is seen trapped under ice. Using a short-term air supply, aircrewman John Spencer dives under the ice several times to retrieve the casualty, who is brought up and revived by CPR administered by aircrewman Don Sowden.

During the year, the company operates a total of 550 SAR missions on behalf of the U.K. Department of Transport; in comparison, the RAF flies on 1,287 calls.

While taxiing away just after its passengers depart at Aberdeen Airport on January 4, 1996, a Super Puma is hit by a 29-kn. gust of wind that blows it over; flying main-rotor debris causes some property damage, but no injuries are reported. Having won a competitive bid, the company, in early March, dispatches five pilots to Brindisi, Italy, where they will begin flight-testing the new EH Industries EH-101 helicopter. The test program will continue through October 1997.

On March 26, a letter of intent for purchase of up to a 49.9% stake in the helicopter carrier is signed by Offshore Logistics. The arrangement, to be completed by June 30, will include a strategic alliance. Long-time Bristow Managing Director Collins, who is due to retire on April 1, agrees to stay on in an advisory capacity for the next two years. Until a new CEO is appointed, Chief Financial Officer Stephen Palframan is named deputy managing director.

On July 1, the company loses the Kerr-McGee contract to provide Bell 214ST support service from Aberdeen to the Gryphon offshore field. The company flies one of its most northerly SAR missions on July 6 when one of its S-61Ns from Sumburgh evacuates a sick seaman from a U.S. Navy survey vessel almost 200 nm. NW of Shetland. The 4 hr. 35 min. sortie is flown via an exploration rig used for refueling on the out-bound and inbound legs and is given communications and weather support by an RAF Nimrod during the extreme fog, mist, and wind conditions encountered. The U.S. vessel lacks a helideck and it takes nearly 24 min. to winch the sailor from the ship.

Late in the third quarter, the company, despite fierce competition, is able to achieve a three-year renewal of its offshore Texaco support

contract. The company will continue to support the energy concern with S-61N flights from Aberdeen.

Aircrewmembers John Spencer and Don Sowden receive the British Chief Coast Guard's Commendation on October 1 for their rescue the previous December.

Also on October 1, Bristow, FR Aviation, Ltd., and Serco, Ltd. are awarded a £400-million, 15-year contract to provide support for the Joint Service Defence Helicopter Flying School at RAF Shawbury, Shropshire, and the School of Army Aviation at Middle Wallop, Hampshire.

While on an October 6 offshore passenger transfer, the S-61N leased to Aeroleo Taxi Aero, Ltda. with 17 passengers crashes off the Brazilian coast (two dead).

The Offshore acquisition is completed in November and marks the end of independent period enjoyed by the U.K.'s major helicopter operators (both **Bond Helicopters, Ltd.** and **British International Helicopters, Ltd.** being owned by foreign interests). Their combined annual revenues will now be second only to those of Helikopter Services Group.

In December, the company loses the Talisman offshore support contract to provide flight services to the former British Petroleum-owned North Sea fields at Beatrice, Buchan, and Clyde. The two-year deal is bid lower by **British International Helicopters, Ltd.**

Toward Christmas, the Department of Transport announces that it will retain coast guard S-61Ns at Portland, Dorset, and Lee on Solent, Hampshire. The possible provision of a Manston-based unit for the eastern Channel is cancelled.

In 1997, the company continues to operate a large fleet of aircraft both from Redhill, Surrey, and from overseas destinations. One each AS-355 Twin Squirrel, Bell 106B JetRanger, and Sikorsky S-76 Spirit II fly from the British base while from Aberdeen Scotland, the company provides service with two Bell 212s and one each Super Puma, Spirit II, Sikorsky S-61N, and Bell 214ST.

At the same time, a JetRanger, Bell 212, and Spirit II are stationed at Perth in Western Australia and two Beech Super King Air 200s are flown from Lagos, Nigeria. Capt. T. H. Collins is area manager for Bristow Helicopters Singapore, Ltd. and he operates one each AS-332L Super Puma and SA-330J Puma.

During March, the company purchases controlling interest in Andover, U.K.-based Lindair (Europe), Ltd., a helicopter parts, components, and trading concern. The minority stake in **Irish Helicopters, Ltd.** held by **Petroleum Helicopters, Inc.** is sold to Bristow in March for an unannounced amount.

On April 1, the long-held Marathon contract for supply of Aberdeen-based Eurocopter AS-332Ls to support the Brae field and other installations is renewed; the five-year contract is valued at some \$23 million.

Following a corporate hospitality incident at the British Open golf championship at Toon during the summer, Tony Jones, regional director for the U.K. and Europe, resigns.

In August, the British coast guard renews its contract for a Stornoway-based S-61N for five years.

On August 24, two climbers on 2,009-ft. Stac Pollaidh Mountain, 10 mi. N of Ullapool in Wester Ross, fall and sustain injuries. While attempting to complete the rescue of the second climber, a main rotor blade of the Stornoway S-61N, piloted by Capt. Allan Elphinstone, strikes a rock, forcing the Sikorsky to crash-land upright in a peat bog. A second helicopter, from RAF Lossiemouth, completes the mission. Beyond scrapes and bruises, none of the helicopter crew or survivors is hurt further in the incident.

On August 27, a team from the Joint Air Transport Establishment at RAF Brize Norton, in Oxfordshire, flies to Scotland to prepare for the salvage of the £8-million Stac Pollaidh S-61N. The next day, an RAF CH-47 Chinook hoists the Sikorsky and, suspended underneath on three hooks, airlifts the machine across Scotland to Aberdeen in a 7-hr. flight. The operation costs Bristow £100,000; the S-61N's retrofit will require another £500,000 expenditure. Capt. Elphinstone and his crew will be cleared of blame when the U.K. Air Accident Investigation Branch issues its report in February.

Following the deaths of 12 people when a Norwegian Super Puma crashes during a routine flight over the North Sea, all 37 British Super Pumas, including the 19 flown by Bristow, are grounded indefinitely on September 12. Spokesmen for the three helicopter companies that fly Super Pumas from Aberdeen issue a joint statement to the media that the aircraft will not restart until appropriate safety inspections have taken place. Five days later, the Super Pumas are back in the air.

A memorandum of understanding is signed with the Scottish Customs and Excise Office on November 18 for the use of a helicopter to fly fast-response officers to remote areas on an hour's notice. The move is designed to enhance law enforcement's antidrug and smuggling activities in Scotland.

While attempting to rescue a crew from the stranded cargo ship *Green Lily* in 30-ft. seas off Brassy, Shetland, on November 19, a Bristow helicopter winchman is lost. Bill Deacon is swept into the sea from the deck of the ship and lost after ensuring that the last two survivors have been winched to safety.

As storms continue to pound the Orkney Islands on November 20, a second ship, the *Minoan Bay*, en route to Aberdeen from Mexico, is caught in high seas and Gale Force 8 to 9 winds. The standby coast guard helicopter at Sumburgh is alerted, but is, in the end, not required.

It is reported on December 5 that the company's Super Puma fleet has clocked up one million flying hours with their Turbomeca Makila engines. That figure represents a third of the French-built engine's three million worldwide flying hours by all operators.

Flights continue apace in 1998. In February, former Bristow Managing Director Tony Jones takes a job as a line pilot with **British International Helicopters, Ltd. (BIH)**. On March 27, the company wins a £175-million, seven-year contract from Shell Expro for operations in the central and northern North Sea, effective July 1, with support flights from Aberdeen and Shetland. The contract had previously been held for 31 years by BIH (and its predecessors) and, in fact, made up more than half of that operator's business. Bristow also wins a £50-million, five-year contract from Shell Expro to work on that oil company's southern North Sea fields, flying to them from Norwich and Den Helder in the Netherlands.

Many of the 350 workers employed by British International fear for their jobs during the next month until an unexpected turn of fate brings some relief. On April 27, the Ministry of Defence transfers the contract for helicopter support to the Falklands Island garrison from Bristow—which has operated it since the end of the Falklands war in 1982—to BIH. The deal will not make up for the Shell Expro shortfall at BIH and many employee jobs remain in jeopardy.

Under a deal signed on April 23, **Helikopter Air Service, A.S.** begins to operate a support contract for Norsk Hydro's Visund oil field from Florø, Norway, on June 15 employing an S-76C provided by sister company Bond. HAS already supports Saga Petroleum's Snorre field out of the Florø base.

Two BIH Sikorsky S-61Ns replace Bristow's rotary-wing assets in the Falkland Islands on July 1. Simultaneously, Bristow begins to satisfy the Shell Expro contracts in the North Sea. For the contract based out of Aberdeen, the company hires 30 more engineering and administrative staff and 30 pilots, while another 20 ground staff and 20 pilots are taken on by Bristow for the southern contract. Many of the new pilots had previously flown for BIH, but had lost their positions in the wake of the Shell contract loss. Bristow must also bring 6 more helicopters to Scotland from elsewhere in its worldwide empire.

On July 2, a Bristow Helicopters Nigeria, Ltd. Bell 212 returning from an offshore rig with six passengers, crashes into a river in the southeastern part of the country (four dead). The workers had been employed by the U.S. oil service company Western Atlas.

A one-year contract with the UN's World Food Program begins on August 1.

Just after landing at Lagos following an August 5 service from Warri, a Bristow Helicopters Nigeria, Ltd. Beech Super King Air 200, with one pilot and eight passengers, suffers the collapse of its landing gear; the aircraft slides to a stop, but all nine aboard are injured.

Late in the month, the company hosts, at its Aberdeen base, an industry briefing and local media preview of Bell Augusta's BA-609 tilt-rotor mockup. Long-awaited by North Sea oil companies, crews, and helicopter pilots, the civil version of the Osprey is due to enter U.K. service in 2002. At the conclusion of the briefing, the mock-up is transferred to Farnborough.

At the beginning of October, a newly established consortium of oil companies (including Amoco, British Gas, and Phillips Petroleum) awards Bristow a \$35-million, three-year contract, with two 12-month options. The support agreement will require the employment of two or three of Bristow's Aberdeen-based AS-332L Tigers to serve installations in the northern and central North Sea area.

On October 14, the company loses the £35-million contract for offshore support work out of Aberdeen on behalf of British Petroleum to its rival **Bond Helicopters, Ltd.** The new contract will give BP additional access to Bond's Super Puma Mk. 2s, which will operate them to BP's Atlantic Margin, Bruce, Harding, and Miller fields.

On November 15, the Shipwrecked Fishermen and Mariners' Royal Benevolent Society, in a ceremony at the Fishmongers' Hall in London, posthumously honors Bristow winchman Bill Deacon with the "Edward and Maisie Lewis Award" for his heroic efforts a year earlier in the *Green Lily* rescue. Bristow operations director Capt. John Follis receives the award from Lord Lewin on behalf of Mrs. Deacon.

In December, Scotland's Court of Sessions rules that post-traumatic stress as part of a helicopter accident is not an injury. It dismisses two claims made against Bristow Helicopters by offshore employees who had not worked since allegedly developing a fear of flying.

A joint venture is formed on February 22, 1999 with the civil aviation authority of Turkmenistan. Under its terms, Bristow will provide helicopter support services to the oil and gas industry throughout Turkmenistan and the surrounding areas.

A coast guard helicopter rescues six sailors from the fishing boats *Kestrel* and *Falcon*, 100 mi. SE of Shetland, on February 25.

On March 12, the company contract to operate the Sumburgh coast guard helicopter service is renewed for another five years. During the past year, the dedicated S-61N has been involved in 86 incidents in which 1,089 people are rescued or assisted.

A second one-year contract with the World Food Program is signed in July. The UN effort will continue to be centered in Kosovo, where company helicopters provide a wide range of activities, including medevac, police support, VIP transport, and logistical resupply. Flights are operated from a base at Skopje, Macedonia.

In January 2000, ARCO British, Ltd., as a result of its pending merger with BP/Amoco, drops its longtime contract with Bristow in favor of a one-year, \$2.75-million support deal with **Bond Helicopters, Ltd.**

With the demand for North Sea offshore operations having fallen 35% in the past year, Bristow announces on July 3 that it must cut costs by laying off between 60 and 80 nonflight crew at its Shetland and Aberdeen bases. Discussions with union members and staff concerning the reduction in force will be held throughout the month.

The company joins with **Air Logistics** in July to form the joint venture United Helicopter Maintenance to offer technical services for rotary- and fixed-wing operators worldwide. UHM branches will be housed at the main bases of both companies.

BRISTOW HELICOPTERS NIGERIA, LTD. See **BRISTOW HELICOPTERS, LTD.**

BRIT AIR (BRITTANY AIR INTERNATIONAL, S.A.): *Aerodrome de Ploujean, BP 156, Morlaix, F-29204, France; Phone 33 (2) 98 62 10 22; Fax 33 (2) 98 88 20 47; Code DB; Year Founded 1973.* With FFr 40,000 capitalization, local Breton interests found Brit Air at Morlaix in 1973; the city of Morlaix's chamber of commerce and industry, a

principal organizer, becomes majority owner (52%). Xavier Leclercq is named chairman with Jacques Pellerin as general manager.

Late in 1974, the enterprise is certified as a public transport company, which allows Piper PA-23 Aztec air taxi services to begin from Morlaix Airport throughout France and the rest of Europe on behalf of local businesses. A total of 590 passengers are carried in the inaugural year. A second Aztec is acquired in 1975 and bookings increase to 1,300. Flights continue in 1976.

The company goes public in 1977 and Chairman Leclercq also assumes the post of managing director. He is also named president of Morlaix's chamber of commerce. Plans are laid in 1978 for the inauguration of scheduled services as flights are inaugurated to London (LGW). Income reaches FFr 29.5 million.

Capitalization is increased and commuter liner orders are placed. Scheduled services begin on April 2, 1979 with a fleet comprising 4 Embraer EMB-110P1 Bandeirantes and 2 Piper Aztecs. These link Morlaix, Quimper (near Brest), Le Havre, Caen, and Rennes with London (LGW). Summer season schedules are initiated in 1980 from Morlaix to Jersey Island and Cork, Ireland.

In 1981, airline employment reaches 84 and the fleet is increased by the addition of a Beech Super King Air 200. The first domestic route is opened during the latter year, from Rennes to Lyons, and enplanements total 32,312.

Two Fokker F27s are wet-leased from **Air Inter, S.A.** in 1982 and are employed to begin replacement services from Quimper and Rennes to Paris under contract to **Air Inter, S.A.**

Traffic increases slightly, rising to 34,315 passengers flown.

In 1983, the company begins another new domestic route from Caen and Le Havre to Lyons. The fleet at year's end includes 2 Friendships, 1 Aztec, 2 Super King Air 200s, 2 Piper Cheyennes, and 4 Bandeirantes.

Bookings this year skyrocket to 140,428 and revenues total FFr 72 million.

In 1984, Cork and Jersey are added to the route network. The company also provides contract feeder services for **Air Inter, S.A.** between additional cities in Bretagne and Normandy to Paris. In addition, it participates with Bretagne Province's "Golden Years" promotional campaign, designed to recapture the spirit of its 16th-century past.

In 1985-1986, a pair of Avions de Transport Regional ATR42-320s is acquired. A 6-year contract signed with **Air France** for 6,500 hours of replacement services per year, from Lyons to Vienna. The state carrier agrees to link the regional with the ALPHA 3 computerized reservations system to provide passenger handling at Paris and share 50% of the profits generated over costs of operation. Brit agrees to maintain the two Fokkers, but this work is sub-contracted back to the **Air Inter, S.A.** maintenance shops at Paris.

Enplanements in the latter year total 232,000.

On March 29, 1987, the French terminus of the Morlaix to London (LGW) route is switched to Brest. Later in the year, Rennes to Toulouse flights begin. Passenger boardings increase to 280,000.

Two more ATR42-320s and a SAAB-Fairchild SF340A join the fleet in 1988. Service is inaugurated from Brest to Lyons and Toulouse and seasonal summer routes are opened from Brest and Rennes to Cork in Ireland and from Deauville to Nice. Profits are \$2.77 million (operating) and \$237,000 (net).

The workforce is increased by 18% in 1989 to 314 as 1 ATR42-320 and 5 SF340As are delivered. Destinations now visited from Brest, Caen, Le Havre, Quimper, and Rennes include Cok, London, Lyon, Caen, Nice, Toulouse, Nantes, Dusseldorf, Brussels, and Deauville.

Enplanements rise 32.1% over the previous year to 436,361 and revenues ascend to \$50.8 million, a 30.7% boost. Profits are made: \$363,636 (operating) and \$1.1 million (net).

Company employment grows 24.2% in 1990 to 395. Fleet expansion continues as a new ATR72-210 is purchased, along with 3 ATR42-320s. A marketing arrangement is made with the French charter operator **Euralair, S.A.** and Brit Air is now the third largest regional airline in France.

Passenger boardings shoot up 18.1% to 492,000 and freight rises a spectacular 52.6% to 29.15 million FTKs. Revenues jump 29.9% to \$64.3 million and the operating profit is \$990,000. Net gain falls to \$236,363.

The employee population slides 1.3% in **1991** to 50,000.

As the result of the conditions placed upon **Air France** for its takeover of **Air Inter, S.A.** and **UTA French Airlines, S.A.**, the flag carrier is required to relinquish a number of regional routes to the smaller independent airlines.

In January, the company receives a license to fly from Nantes to Dusseldorf and Milan and from Toulouse and Brussels. A newly delivered ATR42-320 begins flying from Paris to Limoges at the end of March on behalf of **Air Inter, S.A.** The company's second ATR72-210 arrives in May and is leased to **Corse Mediterranee, S.A.** for seven months.

Customer bookings climb 8.7% to 535,000, of which 345,000 are flown on **Air Inter, S.A.** replacement services. Revenues ascend to \$69.4 million, but the net profit plunges to only \$267,000.

The fleet in **1992** includes 4 owned and 7 leased ATR42-320s, 2 of which are newly delivered, 2 leased ATR72-210s, 1 chartered Piper PA-31T Cheyenne II, and 2 owned and 4 leased SAAB 340As, 1 of which is subleased to the British carrier **Business Air, Ltd.**

Replacement flights continue to assist in traffic development as passenger boardings slide up 2.8% to 550,000. Revenues increase 7% to \$77.9 million.

In **1993**, Chairman/President Xavier Leclercq oversees a workforce of 470. His fleet is increased by the addition of 1 owned and 1 leased ATR42-320s. From Brest, Caen, Le Havre, Quimper, and Rennes flights are operated to Cork, London, and Lyon; from Rennes to Caen, Le Havre, Nice, and Toulouse; from Nantes to Cork and Dusseldorf; from Caen to London, Lyon, Nice, Toulouse, and Rennes; from Le Havre to London and Lyon; from Toulouse to Brussels; and from Deauville to Nice.

Enplanements total 760,000 and revenues are \$113.7 million.

Thirty employees are hired in **1994** and the fleet now includes 14 ATR42-320s, 6 SAAB 340As, and 2 leased ATR72-210s. A third chartered ATR72-210 arrives later in the year as \$60 million in orders are placed with Bombardier Regional Aircraft at the beginning of October for 6 Canadair CRJ200 Regional Jets.

Revenues jump 8.6% to \$126 million and allow a net gain of \$1.3 million. This is the last year in which independent figures will be available.

In January **1995**, Brit receives the 1994 "Regional Airline of the Year" award from *Air Transport World* magazine. The first CRJ200ER is delivered in June. On December 1, the carrier signs an "Air France Express" franchise agreement with **Air France**. Under its terms, the company will offer feeder services coordinated with the flights of **Air France** and **Air Inter, S.A.** The second and third CRJ200ERs arrive in November and December.

As is the case with other commuter alliances, the carrier's aircraft are painted, early in **1996**, in a modified version of its partners' colors. CRJ200ER roundtrips between Paris (CDG) and Southampton commence in June.

The French flag carrier, for its part, now begins to turn over some 23 routes to its new affiliate, some of which are flown by the newly received CRJ200ERs, four more of which will arrive before December.

A total of 1,007,000 passengers are flown and a \$4.3-million net profit is earned on operating revenues of \$130 million.

Airline employment is increased by 9.7% in **1997** to 600. The fleet now includes 9 CRJ200ERs, 9 ATR42-320s, 4 SAAB 340As, and 2 leased ATR72-210s. During the third week of February, Brit Air becomes launch customer for the Canadair CRJ-700, ordering 4 from Bombardier of Canada for delivery during the first quarter of 2000.

In April, the franchise arrangement with **Air France** is deepened. When the revised arrangement takes effect in October, the company will, in effect, be the major's regional feeder arm at Paris (CDG). During the second quarter, a cost-cutting plan is completed for implementation over the next three years; it is designed to cut costs by 15% and provide a 20% boost in load factor.

A \$43-million order is placed with Bombardier Regional Aircraft on August 1 for 2 more Canadair CRJ200ERs to be delivered in October and January.

The franchise agreement takes effect in October as planned. Beginning on October 1, Brit Air begins ticketless travel and offers 150 daily flights per day linking Paris (CDG) with regional airports. **Air France** and its newest partner link their frequent flyer programs, share codes, and Brit Air is authorized to provide point-to-point replacement flights for the major as necessary.

By November, the company is flying 9 Canadair CRJ200ERs; a 10th is delivered later in the month.

For the year as a whole, customer bookings move up 2.8% to 1,157,000. Operating revenues climb 15.3% to \$152.5 million, while costs go up 16% to \$146.5 million. This year's \$6-million operating gain is the same as last year's; however, the \$5.1-million net profit is higher.

One of the Canadairs ordered in August is delivered toward the end of January **1998**. To assist with the costs of expansion and the **Air France** franchise, the company, during the first week of February, floats 37% of its shares in a public stock offering.

In May, requests are placed with Bombardier for 6 more CRJ200ERs and 2 of the stretched CRJ-700s.

The fleet at the end of the year includes 9 ATR42-320s, 2 ATR72-210s, 14 Canadairs, and 1 Fokker 100.

Passenger boardings during the 12 months accelerate 25.1% to 1.39 million.

Airline employment at the beginning of **1999** stands at 880.

On October 25, "Air France Express" flights between Paris (CDG) and London (LCY) are increased from four each day to six. At the same time, new ATR42-320 service is launched from Paris (CDG) to Rennes and Le Havre.

The year's enplanements climb 48.4% to 2,062,000. Net income of 8.2 million euros is earned on revenues of 257 million euros.

Airline employment stands at 701 as **2000** begins, a 3.1% increase.

On June 19, **Air France** purchases 100% majority control of the regional for \$90 million. Brit Air is allowed to retain CEO Xavier Leclercq and his management team, together with its bases at Morlaix and Lyon Satolas.

Wearing Brit Air colors, a Bombardier Aerospace CRJ700 is displayed at the Farnborough Air Show in July.

"Air France Express" CRJ twice-daily roundtrips are started on October 29 from Toulouse to Nantes while those from Toulouse to Rennes and Lyon become thrice daily.

BRITANNIA AIRWAYS, A.B.: P.O. Box 135, Arlanda Airport, Stockholm, S-19426, Sweden; Phone 46 (8) 5936 5000; Fax 46 (8) 5936 0705; <http://www.britanniaairways.se>; Code TW; Year Founded 1998. Having been formed in 1997 from the charter department of **Transwede Airways, A.B.**, **Blue Scandinavia, A.B.** and its tour agency owner, **Fritidsresor, A.B.**, are purchased by the Thomson Travel Group, parent of **Britannia Airways, Ltd.** in early 1998 for \$427 million.

Jan Carizon, one-time chairman of **SAS (Scandinavian Airlines System)**, is chairman. Kjell Fredheim, formerly executive vice president/chief operating officer of SAS and currently managing director of **Air Baltic, A.S.**, is appointed to the same post with this charter operation. The two former SAS leaders oversee the carrier's establishment in Sweden and the operation of 1 each leased Boeing 757-225, B-757-2Y0ER, and B-757-236ER, which fly from airports in Sweden and Norway to the Canaries, the Mediterranean, and Israel. Charters continue to be operated mainly for the new Fritidsresor Group (Fritidsresor, Thomson, Star Tour, Royal Tours, Tema Resor, and Hasses).

Managing Director Fredheim departs on October 15 to become president/CEO of **Air Botnia, O/Y**, the fully owned Finnish subsidiary of SAS. He is succeeded by Goran Gardo. Two more B-757-236s are chartered from the parent in November.

Passenger boardings this year total 1.25 million.

By the beginning of 1999, airline employment has been increased by 23.4% to 475. During the first quarter, a Next Generation B-737-8Q8 is subleased from the Danish carrier **Sterling European Airways, A.S.**

BRITANNIA AIRWAYS, LTD.: London Luton Airport, Luton, Bedfordshire, England, LU2 9ND, United Kingdom; Phone 44 (1582) 424 155; Fax 44 (1582) 458 594; <http://www.britanniaairways.com>; Code BY; Year Founded 1962. Formed on May 5, 1962, **Euravia, Ltd.**, a major British inclusive-tour operator controlled by Universal Sky Tours, Ltd. makes an arrangement in summer 1964 to purchase the recently retired Bristol Britannia 102 fleet of **British Overseas Airways Corporation (BOAC)**. In celebration, the company, based at London's Luton Airport with a fleet of 8 Lockheed Constellations, changes its name to **Britannia Airways, Ltd.** on August 16.

The first Britannia, dressed in a white livery with blue lines and markings and the seated image of Britannia in a blue circle on the tail, is delivered to London (CTN) in November. It begins inclusive-tour revenue services on December 6, flying from London (CTN) to Tenerife. The first L-049 is retired late in the month.

Two more Britannia 102s are delivered in January 1965 followed by the fourth in June. Meanwhile, Britannia Airways, along with previous owner Universal Sky Tours, becomes a wholly owned subsidiary of the International Thomson Organization, better known as Thomson Holidays, on April 26. Implementation of the new parent's total commitment to inclusive-tour group charters is begun with flights to Kuala Lumpur and Hong Kong.

Six more Constellations are retired during the year, including two sold and one leased to **ACE Freighters, Ltd.** Enplanements for the year are up to 184,630 and the workforce is 230.

In February, April, and May 1966, 3 more Britannia 102s join the fleet. During the latter month, a new terminal is opened at London (CTN). The year's charter work proceeds normally until September 1.

Coming into Ljubljana Airport from London (CTN) on September 1, the first Bristol 175 Britannia 102 to enter company service back in 1964, with 7 crew and 110 passengers, is below minimum altitude and crashes into a line of trees (98 dead). This is the worst accident to befall a British transport aircraft to date.

When **ACE Freighters, Ltd.** ceases operations on September 14, the leased L-749 is returned; when sold in March 1967, the company becomes strictly a turboprop operator. Orders are placed for 4 Boeing 737-204s. During that year, the airline's 7 Britannias fly 322,680 passengers to a variety of destinations outside of the U.K.

In 1968, Britannia Airways' business increases steadily and, as delivery of the "Baby Boeings" have been delayed, requires the company to add capacity by leasing Britannias from **BKS Air Transport, Ltd.** and **Laker Airways, Ltd.** Airline employment is 430 and charters are flown on behalf of at least 7 other travel agencies.

Wearing a new livery that will be applied throughout the fleet, the first B-737-204 is delivered to Luton on July 8. Following several workup and public relations flights, the aircraft enters revenue service on August 16 with a roundtrip Bristol-Venice tour. The carrier is the second in Europe after **Deutsche Lufthansa, A.G.** to operate the Boeing short-haul jetliner and the first charter operator.

Following receipt of the 737, the 2 leased Britannia 102s are returned to their owners in October.

In 1969, the fleet includes 4 Britannia 102s, 6 B-737-204s, and 4 B-737-204Cs. A £1.5-million Ministry of Defense contract is received in the spring for the continuing transport of military personnel and dependents to and from West Germany. A supplemental MOD arrangement is concluded that sees the airline transport troops to Belfast, Northern Ireland, to help deal with the disturbances that will soon be known as "the troubles."

The carrier's unduplicated route mileage for the year totals 35,000, principally between the U.K. and the Mediterranean.

Airline employment is 623 and bookings for the year total 817,800.

In 1970, the Britannia workforce climbs 14% to 724. During their final year, the remaining Bristols undertake both passenger and cargo charters to destinations in Africa. Additional Britannia flights are undertaken for tourists visiting Rotterdam and Beauvais while the MOD contracts for German and Irish frequencies continue.

On December 29, the last Britannia 102 charter is flown to London (CTN) from Gerona, Spain. The plane is now retired and the company becomes an all-jet operation.

Enplanements during the 12 months reach upward 6% to 870,000.

In February 1971, a B-707-373C lease held by **World Airways** is acquired and the Stratoliner is employed, beginning in April, to initiate transatlantic flights to the Caribbean and to Los Angeles via Keflavik. A second combi, a B-707-355C, is leased from Executive Jet Aviation in October.

The new Boeings now provide an immediate increase in capacity and support for the year's winter schedule. During the year, a blue and red livery is adopted.

The second long-haul jetliner joins the first in transatlantic charters in the spring of 1972 with both aircraft occasionally employed on all-cargo flights to East Africa in support of the **East African Airways Corporation** subsidiary **Simbair, Ltd.** The first British inclusive-tour to Moscow is flown by the B-707-373C on November 2.

Unwilling to open North American offices under new charter rules announced late in the year, Britannia returns the leased B-707s in April and May 1973, choosing to become an all B-737-204 operator. During the year two more short-haul jets are acquired, bringing the fleet total to 11. One aircraft is leased out to **Yemen Airlines Corporation**.

The world financial situation, especially the fuel crisis, places a hardship on the tour industry in 1974; as bookings and revenues fall, Britannia leases out several of its jetliners, including two to **Transavia Holland, N.V.** With the failure of competing **CourtLine, Ltd.** and **Donaldson International Airways, Ltd.**, the carrier finishes the year as the nation's number one charter carrier.

Enplanements for the year are 1,809,720.

Airline employment in 1975 stands at 1,075. In need of the two aircraft leased to **Transavia Holland, N.V.**, the carrier in early spring leases two B-737-222s from **United Airlines** and then subleases these American planes to the Dutch carrier in exchange. The fleet is thus brought up to strength at 13 B-737s. In addition to the MOD West German contract, charters are initiated to the Mediterranean, Greece, Russia, the Canary Islands and North Africa. Due largely to an increase in this inclusive-tour traffic, passenger boardings accelerate 20.8% to 2,285,000.

During 1976-1977, the number of inclusive tours increases significantly and another B-737-204 is acquired. Enplanements in the latter year total 2,344,672.

Passenger boardings jump 12% in 1978 to 2,664,400. As the decade ends, Chairman Lord Thomas of Remenham and Managing Director Derek Davison employ 1,300 workers. Enplanements in 1979 total 3,321,030.

The workforce in 1980 totals 2,100, including former Horizon Holidays Managing Director Steven Allen, who becomes the airline's first marketing and sales director.

Britannia Airways books 3,571,000 travelers for its fleet of 14 B-737-204s, a 7% boost.

Still, profits are down and thus the employee population drops 2.5% in 1981 to 1,961.

Passenger boardings jump 13.3% to 3,942,000; these figures, in terms of passenger volume, make the carrier the second largest British airline after **British Airways, Ltd. (2)**. Cargo accelerates 37.9% to 630,000 FTKs.

In 1982, tour charters are extended to Cyprus and Yugoslavia. To help meet capacity requirements, a B-737-296 is leased for six months from **Quebecair, Ltd.**

Enplanements pass the 4-million mark in annual bookings for the first time, up 5.1% to 4,156,607. Recovery allows a workforce increase of 4.9% to 2,074.

The number of employees is further increased in **1983**, up 1.7% to 2,244. In cooperation with **Braathens SAFE, A.S.**, a rediffusion B-767 simulator is installed at Britannia's London (CTN) base. Two new Boeing 767-204As join the 29 B-737-204s already in the fleet late in the year; part of the increased capacity in small Boeings is dedicated to the provision of charter flights to the Greek islands.

Passenger boardings rise 7.8% to 4.4 million and in terms of enplanements, Britannia is now the largest independent airline in Europe.

Britannia becomes the first airline in Europe to operate the type when Boeing 767-204A service is inaugurated on February 18, **1984**; on the year, the two Boeings, sporting a new livery, carry over 500,000 passengers between the U.K. and Mediterranean points.

Britannia's B-737-204s now have a 99% dispatch reliability, one of the highest in the world. Also during the year, Britannia becomes the first U.K. holiday airline to offer passengers free in-flight radio and video entertainment.

Overall passenger bookings accelerate 1.1% to 4,473,568.

Employment climbs 1.3% in **1985** to 2,177. When Harry Goodman, head of the new rival International Leisure Group (ILG), declares that he will overtake the company and become the U.K.'s top package holiday company within a year, Thomson launches a price war designed to make certain ILG is not successful. The contest between the two will continue for six years.

Captain Roy McDougall, Britannia's senior employee, retires on July 31. Scheduled services are started from Manchester to Palma and Malaga. During the year, 2 more B-767-204As are placed in service, replacing 2 B-737-204s, which are sold.

Enplanements dip 4.8% to 4.26 million. Financial figures become available; on total revenues of \$358.1 million, an operating profit of \$37.5 million is earned, the 23rd highest among the world's airlines. By year's end, the carrier is originating daily flights from 20 British airports to over 70 destinations in Europe, the Mediterranean, the Canary Islands, West Africa, East Africa, and North Africa.

The payroll is upped 8.4% in **1986** to 2,360 and the fleet now includes 25 B-737-204As and 5 B-767-204As, with 1 more of the latter type on order.

During the busiest year in company history to date, David Hopkins is appointed managing director and passenger boardings shoot up by 27.9% to 5,500,000 and revenues climb by 20.3% to \$467.3 million. With costs low, the operating profit ascends to \$55 million. Net gain is even higher at \$61.9 million.

Airline employment at the world's largest charter carrier is increased by 3.8% in **1987** to 2,700 as orders are placed for 2 more B-767-204ERs and a number of B-737-304s to supplement the company fleet of 5 B-767-204As and 27 B-737-204As.

With the arrival of several B-767-304ERs, long-haul service to the U.S. is resumed, along with flights to Mexico, the Maldives, India, and Sri Lanka.

This year is even more productive than the record previous period as customer bookings shoot up 12.7% to 6.2 million. Revenues swell 16.9% to \$614.5 million and with costs kept down, a pretax profit of \$66.6 million is achieved.

The workforce grows another 26% in **1988** to 3,150 and the fleet includes 7 B-767-204ERs, 27 B-737-204As, and 7 B-737-304s. Orders are placed in January for 8 additional of the former, with 8 options.

In August, the carrier's parent, Thomson Travel Group, receives permission from the government's Monopolies and Mergers Commission to complete its purchase of rival Horizon Travel, Ltd. and its airline, **Orion Airways, Ltd.** The new East Midlands Airport-based prize adds 6 B-737-3T5s, 2 B-737-2T5s, and 2 Airbus Industrie A300B4s to the Luton-based charter operator's fleet. The Airbus equipment, first operated by **Deutsche Lufthansa, A.G.**, is quickly sold.

The process of integrating the two carriers begins in the fall and, in October, David Hopkins succeeds Derek Davison as chairman, with Roger Burnell named managing director. During November, a series of charters are initiated to Australia. When, in December, an eighth

B-767-204ER is delivered, it is christened in honor of the pioneer Australian aviator *Sir Ross Smith*.

Britannia's enplanements, meanwhile, decline by 1.6% on the year to 6,100,000. The year's profits are \$66 million (operating) and \$73 million (net).

The employee population jumps 18.7% in **1989** to 3,368, the fleet remains unchanged, and 2 B-737-204As are leased to the new Egyptian charter carrier **Transmed Airlines, Ltd.** The company's first scheduled service is inaugurated from London (CTN) to Belfast and charters are pioneered to New Zealand.

With the fall of the Berlin Wall, the company's long-standing MOD contracts for the transport of military personnel to German bases begin to decline in both number and value.

Passenger boardings for the company, now the world's largest charter operator and the second largest British airline, climb a slight 1.4% to seven million. Revenues, however, ascend 27.1% to \$726 million. Expenses swell 32.3% to \$668 million and force the operating profit down to \$58 million. Net gain drops to \$65 million.

A third B-737-204A is leased to **Transmed Airlines, Ltd.** in **1990**. In February, the company sends a \$2,240 bill to a passenger who, acting in a violent and unruly manner, forces a charter flight to divert from its Tenerife-East Midlands route to land at Lisbon where he is taken off. The invoice includes landing and handling charges at the Portuguese capital, along with the extra fuel required for the change in flight plan.

Boeing's 6,000th manufactured airliner, a B-767-204ER, is delivered in Seattle ceremonies on March 10. After a six-month review, Chairman Hopkins, Managing Director Burnell, and their management team publish a long-term *Flight Plan for the 1990s* later in the month. The report calls for a reduction in employment, customer service improvements, disposition of the older B-737-204As, and the acquisition of 6 B-757-204s.

A number of new services are introduced during the year, including Jet Cadet frequencies for children. High British interest rates and the rising cost of home mortgages combine to push down the British charter market. Consequently, the company tour partner is forced to cut nearly 1 million holidays from its annual program and close 8 regional offices, with the loss of 180 positions.

Customer bookings plunge 11.5% to 6.2 million, with much of the decline attributed to recession and the Mideast situation after August. Although revenues are \$769 million, operating profit declines to \$13.1 million. The net profit falls to \$19.4 million.

Company employment climbs 4.1% in **1991** to 3,183 and the fleet now includes 3 B-737-204s, 1 out of service B-737-2D6A, 1 B-737-2K2A chartered from **Transavia Airlines, N.V.**, 16 B-737-204As, 1 each leased B-737-219A and B-737-3Q8, 4 owned and 1 chartered B-737-3T5s, 1 B-757-204 leased from **Icelandair**, 1 each chartered B-757-23A and B-757-27B, 2 owned and 1 leased B-767-204s, and 3 owned and 4 chartered B-767-204ERs, with 1 of the owned machines leased to **Air Aruba**.

A traffic surge occurs during the first quarter as the result of the end of the Gulf War and the collapse of the International Leisure Group and its flagship airline, **Air Europe, Ltd.** During the second quarter, over 350 new cabin crew are recruited as an additional 2,000 flights are laid on for the summer season.

Passenger boardings climb 5.5% to 6,540,000, but revenues inch up only 1.8% to \$755.2 million. Operating profit increases to \$57.6 million and net gain reaches \$45.9 million.

Thirty-three fewer workers are employed in **1992** as 1 B-737-204A and 3 B-737-3T5s are removed in favor of 2 more B-757-204s.

At this point, the carrier upgrades both its cabin interiors and its airline meals. It also introduces an OBK (On-Board Kids) program for younger customers.

Early in the year, permission is received to inaugurate charter services to Sydney via Mombasa; the flights commence in November.

Customer bookings advance 8.9% to 6,864,601 while freight skyrockets an almost unbelievable 285.9% to 15.7 million FTKs. Revenues drop 30.3% to \$790 million, but costs are only \$727.6 million.

The operating surplus slides to \$62.4 million while net profit is down to \$47.7 million.

In 1993, Managing Director Burnell oversees a workforce of 3,300, up 4.8% over the previous year. The fleet now includes 8 B-737-204As, 2 of which are leased to the American carrier **National Airlines**, a leased B-757-2T7, 6 B-757-204s, with 4 on order, 1 chartered B-757-27B, 4 leased B-757-28As, with 2 on order, 2 owned and 1 chartered B-767-204s, 1 leased and 6 owned B-767-204ERs.

In January, the company receives the 1992 "Market Development Award" from *Air Transport World* magazine. Flights begin to Cape Town and Durban. Customer bookings increase 10.9% to 7,616,000. Profits total \$71 million (operating) and \$72 million (net).

The employee population declines to 3,004 in 1994. In January-February, the company continues the removal of its B-737-204A fleet; 6 machines are now leased to the Irish airline **Ryanair, Ltd.** Later in the year, a B-767-204ER is leased to the new Argentine charter operator **Dinar Lineas Aereas, S.A.**

Passenger boardings accelerate by 3.5% to 7,862,000 and revenues grow by 5% to \$898 million. Expenses are up only 4% to \$819 million and allow an operating profit of \$81 million and a net gain of \$76 million.

The number of workers is reduced again in 1995, falling to 2,865. During March, a B-737-204A is leased to **Air New Zealand, Ltd.** for six months; the plane, wearing dual Britannia and ANZ titles, will help provide capacity while the B-737-200 fleet of the New Zealand line is grounded for engine repairs.

At the beginning of the year, Britannia becomes deeply involved in the support of the Born Free Foundation (BFF), an animal rescue agency. The company begins a campaign to raise £80,000 in support of the group over the next three years. In March, the airline, on behalf of BFF, transports a pair of lions, Raffi and Anthena, from Tenerife, where they had lived in the rooftop cage of a local nightclub, to London (LGW) for transfer to the Big Cat Sanctuary.

Traffic and revenues are nearly flat this year. Enplanements rise only 0.6% to 7,959,347 while operating revenues increase just 0.9% to \$940 million. Expenses grow by a slight 2.7% to \$874 million and allow the posting of a \$66-million operating gain, down from the previous year.

Airline employment moves up 3.7% in 1996 to 2,945.

The leopard Rikki is rescued from the same Tenerife nightclub in May and, again on behalf of BFF, is flown gratis back to the Big Cat Sanctuary via London (LGW).

Three B-767-304ERs join the fleet during the summer and new markets are opened at Calgary, South Africa, and in the Maldives.

Customer bookings drop 6.5% to 7,494,371, but freight traffic increases 57.1% to 22.69 million FTKs.

The workforce is increased by 5.3% in 1997 to 3,100. New on-board services are now introduced, along with a new route to Nassau. Destinations visited include points in Europe, the Caribbean, the Mediterranean, North and South Africa, Australia, India, New Zealand, and the U.S.

The airline's commitment to the Born Free Foundation deepens. Following a meeting between Britannia's public relations manager, Richard Hedges, and Adrian Gardiner, owner of the Shamwari Game Reserve in South Africa, arrangements are made to fly the lions Raffi and Anthena to Johannesburg on April 28. They will be trucked to a new three-acre enclosure especially constructed for their preservation. As the new on-board services are introduced to Britannia customers, so is the BFF; envelopes are placed in seat backs seeking donations and on-board videos urge support of the foundations.

Kept in appalling conditions in Italy, the lioness Kimba is rescued in June and Britannia transports her back to London (LGW).

In cooperation with the German tour operator Frosch Touristik, the company's parent, Thomson International, sets up **Britannia Airways Germany, GmbH.** at Berlin (Schoenefeld Airport) in July. Also in midyear, the carrier signs an \$85-million, 10-year contract with Greenwich Air Services for the repair and overhaul of the carrier's aircraft engines.

In October, arrangements are made to charter a B-767-300ER from International Lease Finance Corporation (ILFC) for seven years beginning in April; the airline also contracts with ILFC for the charter of a B-757-200ER for seven years from February 1999. One of Britannia's new B-767-304ERs is wet-leased to **Britannia Airways Germany, GmbH.**, which begins revenue operations in November.

Five tigers, King, Royale, Taras, Harak, and Zeudy, are rescued in Italy in December and are returned to London (LGW) in the hold of a B-737-304ER.

Customer bookings this year inch up only 0.4% to 7,526,200.

Early in 1998, Thomson International purchases the Stockholm-based charter carrier **Blue Scandinavia, A.B.** for \$427 million. It receives a corporate makeover and begins flying as **Britannia Airways, A.B.**

In February, arrangements are completed with ILFC for the seven-year charter of a B-757-2Q8ER beginning in April.

The entire Thompson Travel Group, including the airline, is floated on the London Stock Exchange in May. The share issue is oversubscribed and nets £1.9 billion. The prospectus for the action implies that Britannia will never again, as it did in 1985, set off a price war to rid itself of rivals.

Also in May, Britannia undertakes a yearlong campaign to raise £150,000 in donations to help the Born Free Foundation build a sanctuary for elephants near Mombasa, Kenya. Martin Clunes writes, produces, and stars in a short film that encourages Britannia passengers to donate their spare currency to the cause.

While his B-767-304ER, with 255 passengers aboard, is on its take-off roll from Majorca on an August flight to Newcastle, the pilot catches his sore foot under the steering rudder. A near-disaster is avoided when the copilot steers the jetliner back on course after it veers 265 yards across the grass.

On September 7, Frosch Touristik, GmbH. announces that it will set up its own airline to operate a trio of Airbus A320s, subleased from **Airtours International Airways, Ltd.**, on routes from Germany to the major Mediterranean holiday destinations. It is noted that FTi's current contract with **Britannia Airways Germany, GmbH.** for flight services, due to end in 2001, will be progressively scaled back.

The BBC will report early the following year that according to data compiled by the Air Transport Users Council, 19.5% of the flights made by the nation's largest charter airline during the summer are more than an hour late. The number of late services is double the number recorded in the previous 12 months, with an average delay of 44 minutes.

Three B-737-3Q8s are chartered from ILFC in November for delivery in the year 2000. At the same time, 2 A320-231s are chartered to **Ryan International Airlines**; Ryan will operate the aircraft for Trans Global Tours on winter season package tour vacation flights from Minneapolis (MSP) and the upper Midwest to Florida, Mexico, the Caribbean, and Las Vegas.

Customer bookings during the 12 months accelerate 14.8% to 8.64 million.

Flights continue in 1999 as the value of the company reaches £1.5 billion. Airline employment by now has been increased 18% to 3,659.

When the Air Transport Users Council's report on on-time performance the previous summer is released on February 19, Britannia acknowledges that the information is correct. On the other hand, it is noted that strikes by air traffic controllers in Spain and Greece, Caribbean hurricanes, and internal expansion difficulties were more severe in 1998 than in earlier periods.

The 25-year reign of Thomson Travel Group as the U.K.'s top package holiday company is seriously threatened during the last week of April when Airtours, plc, which counts **Airtours International Airways, Ltd.** in its air division, makes an £800-million hostile bid to take over First Choice Holidays, Ltd., parent of **Air 2000, Ltd.** The ultimately unsuccessful gambit would have resulted in an enlarged Airtours, which would have controlled 34% of the U.K. market to the 27% held by Thomson.

Thomson CEO Paul Brett reacts to the Airtours move by pledging to keep his company on top and, as occurred in 1985, begin a campaign to

sell as many extra low-price holidays as is necessary to remain in first place. Additionally, if the Airtours ploy is successful, Thomson will refuse to sell either Airtours or First Choice holidays in its Lunn Poly outlets, an 800-store chain of travel agencies. There is even a possibility that Thomson will make a counterbid for First Choice.

Rather than bolster the resolve of company stockholders in the face of a new foe, Brett's price war threats set off a storm among shareholders. Stockbrokers Cazenove and Warburg Dillon Read make it perfectly clear that they will move to defend the previous year's prospectus. A number of other shareholders also revolt; they seek meetings with Thomson's board of directors and warn Brett that, if he carries out his threat, he may ousted. By May 2, it is clear that the company's stockholders would rather be in second place than lose large sums of money in a package holiday price war.

The fear of a price war gradually subsides and, by June, its investors have made certain that the price of shares in Britain's leading charter operator are once more on the rise.

Although service is maintained without a public hitch during the remainder of the month and through July, sales of summer holidays prove more difficult. Consequently, the huge package holiday group issues a profit warning on August 1—at which point, CEO Brett resigns.

While landing in heavy rain at Gerona, Spain, after a September 14 service from Cardiff, Flight 226A, a B-757-204 with 9 crew and 256 passengers hydroplanes 1,730 m. down the runway and ends up 90 ft. off the end in a muddy field. The aircraft splits into three sections as it skids to a stop, but the bad weather prevents the remaining 4,000 liters of avgas aboard from exploding. A total of 43 people, including 3 children, are hurt, but most injuries are slight. One of the tourists, an 84-year-old man, dies three days later just after he is released from a local hospital.

Charles Gurassa, **British Airways, Ltd.** (2) cargo and passenger director, is named Thomson Travel CEO at the beginning of November.

Overall passenger boardings drop 5.3% to 8,176,000 and cargo falls 12.6% to 44,131,000 FTKs.

Airline employment at the beginning of 2000 stands at 3,200, a 12.6% decrease.

Garuda Indonesia wet-leases 6 Britannia B-767-204ERs (with Garuda providing cabin crews) on February 17 to help it deliver Muslim pilgrims on their annual Hadj to Mecca. Supported by 50 operations and engineering personnel, 108 company pilots transport 40,000 worshipers to Jeddah on 119 flights during the month. The return trip of equal demand is completed in April.

In April, the carrier's parent, Thomson Travel Group, rejects as inadequate a £1.45-billion (\$2.3-billion) takeover bid from Germany's second largest tour operator, C&N Touristik, A.G., which is affiliated with **Deutsche Lufthansa, A.G.** and **Condor Flugdienst, GmbH**. Thomson had refused to take an earlier £1.3-billion offer from the same concern.

In less than a month, the fate of Thomson is settled when, in something of a surprise, it is acquired by Preussag, A.G. on May 19 for £1.8 billion (\$2.8 billion). To allay competition concerns, the new German owners promise to divest themselves of their 50.9% stake in Thomas Cook Group.

It is confirmed at the beginning of October that Thomson group CEO Charles Gurassa will remain with the company for the next two years; among his principal assignments will be the merger of Britannia with **Hapag-Lloyd Fluggesellschaft, mbH**.

BRITANNIA AIRWAYS GERMANY, GmbH.: Zeppelinstrasse 3, Waltersdorf, D-15732, Germany; Phone 49 (33) 7625 5900; Fax 49 (33) 7625 5977; <http://www.wide.de/html-de/britanniahome.htm>; Code BY; Year Founded 1997. In cooperation with the German tour operator Frosch Touristik International, GmbH. (FTi), Thomson Travel group, parent of **Britannia Airways, Ltd.**, establishes this subsidiary at Berlin (Schoenfeld Airport) in July 1997. Peter Steiner is named managing director and during November he is able to begin nonscheduled passenger charters to holiday destinations in the

Caribbean and Mideast with a Boeing 767-304ER wet-leased from the company's parent.

A second B-767-304ER enters service in April 1998. Charters on behalf of FTi and Thomson Travel are flown, with new attention paid to the Mediterranean destinations of Majorca and Malta. During the summer, Thomson rival, Airtours, plc, acquires a 29.03% stake in FTi.

On September 7, Dietmar Gunz, Frosch Touristik, GmbH. founder/managing director announces that Frosch will set up its own airline to operate a trio of Airbus A320s, subleased from **Airtours International Airways, Ltd.**, on routes from Germany to the major Mediterranean holiday destinations. Britannia Germany's Vice President-Operations Herbert Kracker is appointed managing director of the unnamed entity. FTi's current contract with Britannia Germany for flight services, which is due to end in 2001, will be progressively scaled back.

While these changes are afoot, Managing Director Steiner adds a third leased B-767-304ER to its fleet and begins flying to Orlando, Florida, Cancun, Mexico, and Banjul, Gambia.

Since FTi is not able to establish its short-haul airline subsidiary as quickly as anticipated during the fourth quarter, Britannia Germany continues to operate to the Mediterranean on behalf of the German travel operator.

Employing three leased German-registered A320-231s in livery similar to that of Airtours, **FTi Fluggesellschaft, GmbH.**, doing business as **Fly FTi**, begins revenue operations on May 1, 1999. The Frosch subsidiary operates to the major Mediterranean vacation destinations previously visited on its behalf by Britannia Germany.

Although the current agreement with Britannia's German arm is not due to expire until April 2001, Frosch Touristik CEO Dietmar Gunz begins renewal talks in April 2000. Gunz seeks a two-year extension, but hopes that his own in-house airline, **FTi Fluggesellschaft, GmbH.**, doing business as **Fly FTi**, will eventually be able to take over the long haul services.

Biweekly B-767-304ER roundtrips commence on May 4 between Dresden and Varadero, Cuba.

As a result of the takeover of Frosch Touristik by Airtours on July 14, **FTi Fluggesellschaft, GmbH.** informs the German Britannia that it will not renew after April 2001 since **Airtours International Airlines, Ltd.** and Britannia are now direct competitors.

The press learns at the beginning of November that Britannia Airways Germany is scheduled to be shut down in April 2001.

BRITISH AERIAL TRANSPORT, LTD.: United Kingdom, (1919–1920). This little-known company is formed at London by furniture manufacturing notable Samuel Waring during the summer of 1917; Dutch aircraft designer Frederick Koolhoven is retained to provide technical backing. Plans are made for commercial air service, the inauguration of which must be delayed until the end of World War I.

Piloted by Maj. C. Draper, a BAT Koolhoven FK-26 makes a London–Birmingham proving flight on September 29, 1919; the return flight with four passengers is made three days later. Twice-daily flights over the route reportedly begin the next day. On October 7, pilot Cyril Turner, flying an FK-26 with cargo only, inaugurates a weekly London–Amsterdam service.

Thereafter, the carrier flies only on-demand charters, which last into late fall. Once Koolhoven returns to Holland in January 1920, the enterprise folds.

BRITISH AIR FERRIES, LTD. (BAF): United Kingdom, (1967–1993). **British United Air Ferries, Ltd.**, is formed at Southend Airport by **British United Airways, Ltd.** parent Air Holdings, Ltd. on January 1, 1963 by the merger of **Air Charter, Ltd./Channel Air Bridge, Ltd.** and **Silver City Airways, Ltd.** The amalgamated carrier continues the charter flights and car ferry services of the merger partners with a fleet of 28 aircraft, all of which are either Aviation Traders ATL-98 Carvairs (heavily modified Douglas DC-4s) or Bristol 130 Freighters. Late in the year, long-haul, 2.5-hr., roundtrip cargo-passenger flights are launched from Southend to Geneva, Basel, and Strasbourg.

The most spectacular flights during the next three years occurs in **1965** when an ATL-98 Carvair is employed in January to fly the Black Knight rocket from Southend to Woomera, Australia. A failure of the on-board air conditioning, however, forces the plane to return. Later in the year, another Carvair flies from RAF Lyneham, Wiltshire, to Zambia with a huge radio mast which, when installed, will allow the British Broadcasting Corporation (BBC) to transmit into Rhodesia.

On October 1, **1967**, the airline becomes a separate division within the Air Holdings, Ltd. group and is renamed British Air Ferries, Ltd. (BAF). Faced with intense competition, the carrier abandons all of its long-haul routes to European destinations other than those just across the English Channel and begins to de-emphasize vehicle carriage in favor of passengers and cargo.

In **1968**, two Bristol 170 Mk. 32s, the *City of Winchester* and the *City of Glasgow*, are retired. The ATL-98 Carvair *Fat Albert* is acquired in **1969**; however, two more Bristol 170 Mk. 32s, the *City of Hereford* and *Quatorze Juillet*, are withdrawn.

The first all-passenger service is flown during the summer of **1970**; a Vickers Viscount 803, leased from **Aer Lingus Irish Airlines, Ltd.**, flies Southend–Ostend and Le Touquet. During the year, 4 more Bristol 170 Mk. 32s, *City of Bristol*, *City of Aberdeen*, *City of Hull*, and *Viceroy*, are withdrawn along with the ATL-98 Carvair *Chelsea Bridge*. In November, a Hawker Siddeley HS 748 is leased from **Courtline, Ltd.** for a year.

A half-year lease on a second HS 748 is taken from the same carrier in April **1971**. These, together with the Viscount, resume the 1970 route. In March–April, the Bristol 170 Mk.32s *Valiant* and *City of Edinburgh* are sold.

While landing at Le Touquet in heavy crosswinds on April 20, the nose gear of an Aviation Traders ATL-98 Carvair *Meani Bridge*, with 7 crew and 11 passengers, collapses; the aircraft is badly damaged, but there are no fatalities. The aircraft will be written off.

The Viscount is returned to the Irish state carrier in September with the HS 748s returning home in October–November. Meanwhile, T. D. Keegan's **Transmeridian (London), Ltd.** purchases the carrier from Air Holdings, Ltd. on October 27, but elects to maintain the acquisition's separate identity.

Flying on behalf of a consortium of Guernsey businessmen interested in seeing weekday roundtrips to the Channel Islands, a Carvair, on January 13, **1972**, undertakes a proving flight from Guernsey to Castle Donington, later East Midlands Airport. In March and May, respectively, two Canadair CL-44Ds are purchased. On March 19, the ATL-98 Carvair *Pont du Rhin* initiates scheduled passenger and cargo flights from Coventry to Jersey and Guernsey while a CL-44D is used to initiate flights from Southend to Ostend.

On April 1, the carrier opens passenger-cargo-vehicle service from Southend to Basel and London (STN). Late in the month, an ATL-98 Carvair, *Porky Pete*, is purchased. The second CL-44D is placed in service in May but, like the first, proves unsuitable, and is thus transferred to **Trans-Meridian (London), Ltd.** in July. During the remainder of the year, thrice-weekly roundtrips are started from Southend to Basel, Switzerland and the BAF Carvair fleet is extensively refurbished and a new livery is unveiled.

A Vickers Viscount 812 is leased from **Alidair, Ltd.** in April **1973**. In August, yet another ATL-98 Carvair is added and christened *North Sea Viking Express*. An agreement is signed with **Intra Airways, Ltd.** for pooled freight service from Jersey and Guernsey to Bournemouth. A Carvair is employed during August to create "crosswinds," which are employed in special BBC tests, code-named *Invacar*.

During the following month, the withdrawn **Eastern Provincial Airways, Ltd.** Carvair, which the Gander-based airline had earlier received from **Aer Lingus Irish Airlines, Ltd.**, where it was known as the *St. Jarlath*, is purchased for spare parts. Independent charters in support of the Scottish oil industry are also flown and the Viscount 812 is returned in October.

During **1974** a variety of charters are flown, including West Germany to Liverpool and Southend for Ford Motor Company and night cigarette

flights Belfast to Southend during an autumn Ulster dock strike. The *North Sea Viking Express* is sold in November.

In January **1975**, three Handley Page Heralds are purchased from **Eastern Provincial Airways, Ltd.** in Canada; christened *Ruper Keegan*, *Jeremy Keegan*, and *Rory Keegan*, they begin Southend–Le Touquet, Ostend, Rotterdam flights between February 20 and July 31. Meanwhile, several of the Carvairs, including the *Plain Jane* and *Fat Albert*, are now rebuilt into all-cargo configuration, although one, the *Big Joe*, is sold in February. These begin a variety of ad hoc charters, the most popular of which is the "star-trekking" of pop music personalities around Europe during the summer.

Until **1978**, the carrier flies freight charter around the globe and scheduled operations within Europe; route mileage exceeds 3,250 and passenger enplanements average 30,000 per year. The fleet is reconfigured to comprise 6 (later 4) ATL Carvairs, 2 Canadair CL-44Ds, and 3 Handley Page Heralds.

Previous BAF concentration on scheduled domestic and international services, including car ferry, is abandoned in **1978** in favor of passenger group and cargo charter. Airline employment at the Keegan family enterprise stands at 450. BAF contract charter services grow in **1979–1982**. During the latter year, a Carvair is sold to Alaska-based **Gifford Aviation**.

The London-based development company, Jadepoint, Ltd., jointly owned by barrister Robin Pesskin and real estate tycoon Nicholas Skinner, acquires the company (including 5 Viscounts, 2 Dart Heralds, a small inclusive-tour operation, and two year-round freight routes) from T. D. Keegan on March 1, **1983**. Pesskin becomes chairman, Skinner deputy chairman, and a minority shareholder, Alan Weiner, is named managing director. Charter operations are split off from commercial contracting services. Guernsey–London flights are started on April 1.

Guernsey Airlines, Ltd. is purchased in August. Pesskin, Skinner, and Weiner continue their management relationship over the new airline as well. Keegan's Southend-based aircraft engineering and overhaul business is acquired late in the year. Overall passenger boardings for the two carriers, which are allowed to continue operating under their previous identities, total 99,658 on the year.

To increase year-round business, the Jadepoint executives in **1984** extend the BAF inclusive-tour season from March through October and undertake additional freight contracts for newspaper distributors and the British Post Office. Nine more Viscounts are added to the fleet, including most of those still flown by **British Airways, Ltd. (2)** and a freighter purchased from **Aer Lingus Irish Airlines**.

A three-year contract is won from Shell U.K. Exploration & Production (Shell Expro) for the transport of its staff and oil workers year round from Aberdeen to Sumburgh, in the Shetland Islands. From there they will be flown to the company's energy platforms by helicopters from **British Airways Helicopters, Ltd.** and other concerns. Scheduled flights from 14 mainland destinations to the Channel Islands are now also undertaken as British Air Ferries/Guernsey Airlines enplanements skyrocket to 300,000.

Airline employment for the two reaches 1,200 in **1985** as BAF, with 120 departures per week, becomes the big air operator into the Channel Islands. A catering unit is opened at Jersey Airport and a \$500,000 reservations center is opened at the same location, linked to the carrier's main reservations center at East Midlands Airport.

During the spring, thrice-weekday and twice-daily weekend international Viscount service is inaugurated from London (LGW) to Rotterdam. In August, the daily roundtrip feeder route, operated on behalf of **Virgin Atlantic Airways, Ltd.** between London (LGW) and Maastricht in Holland by **British Island Airways, Ltd.**, employing a wet-leased BAC 1-11-416 in modified Virgin colors, is taken over by BAF. As with British Island Airways, although the crews are BAF, staff uniforms are Virgin Atlantic Airways. Joint bookings this year soar to 750,000.

In **1986**, with a fleet of 16 Viscount 802s/806s, 1 Viscount 808C, and 3 Handley Page Heralds, British Air Ferries, Ltd. flies Guernsey–Manchester, Jersey–Aberdeen, Edinburgh, Carlisle, Newcastle, Humber, Manchester, Gloucester, Cambridge, Southend, Manston, Zurich, and London (LGW)–Rotterdam.

The **Guernsey Airlines, Ltd.** fleet includes 1 Vickers Viscount 802, 1 Viscount 806, and 2 Shorts 330s. Scheduled services are maintained from Guernsey to Aberdeen, Edinburgh, Glasgow, Newcastle, Manchester, Humberside, Gloucester, Cambridge, Southend, London (LGW), and Manston.

The BAC 1-11-400 employed on the **Virgin Atlantic Airways, Ltd.** Holland contract is replaced in the spring with a Vickers Viscount 806, *The Maastricht Maiden*. The BAF turboprop begins flying to Maastricht from London (CTN).

Late in the year, BAF adds a Shorts 330 and, in October, sells a Viscount 815 to the Essex Company's new **Baltic Airways, Ltd.** The failure to report traffic figures is an omen of bad times ahead.

A second Viscount 806, *Dublin Lady*, is wet-leased by **Virgin Atlantic Airways, Ltd.** and is employed to launch services in June 1987 from London (CTN) to Dublin.

In financial trouble for some time, the world's largest Viscount operator encounters fatal cash flow problems, largely as the result of a policy by its owners of diverting capital into non-aviation companies. **Guernsey Airlines, Ltd.** is sold, but still the carrier is unable to meet its short-term financial commitments.

At year's end, the **Virgin Atlantic Airways, Ltd.** contract ends as the large independent signs up the new Irish airline **Club Air, Ltd.** to operate a B-727-46 over the Dublin-Luton route.

While taxiing at Southport preparatory for a flight to Biggin Hill for maintenance on January 11, 1988, a **Fairflight, Ltd.** Shorts 330-200 with two crew suffers the failure of its nose gear steering. Consequently, the aircraft makes an uncommanded left turn and crashes into a parked BAF Vickers Viscount 806. Although both aircraft are damaged beyond repair, the two pilots escape without injury.

In late January, BAF enters Administration, the equivalent of U.S. Chapter XI bankruptcy. Scheduled services to the Channel Islands are suspended, although the contract to fly Shell Expro personnel is honored and renewed. Mostjet, Ltd. is created as a holding company that will take over the company.

When **Club Air, Ltd.** goes bankrupt in June, **Virgin Atlantic Airways, Ltd.** turns once again to BAF to operate its feeder service from London (CTN) to Dublin.

Meanwhile, efforts are made to reorganize BAF and during the first nine months of the year, for which it reports figures, enplanements plunge by 53% to 20,608. Even in Administration, the company is able to earn a profit of \$1.2 million, its sixth annual profit in a row.

The 450-employee airline is able to emerge from bankruptcy in May 1989 via the process of absorbing **Baltic Airways, A.B.** and its 4 Viscounts. British Air Ferries is acquired and restructured by Mostjet, Ltd. in a deal worth a total of £10 million. The Mostjet partners now include County NatWest Ventures, Ian Herman, and Baltic's owners, Coggeshal Holdings, Ltd.

The London (LGW) to Maastricht route, operated for **Virgin Atlantic Airways, Ltd.**, is closed down in March. At the same time, VAA's Irish service arrangement with BAF is also cancelled and turned over to new entrant **Capital Airlines, Ltd.**

In August, the company wins a **Federal Express (Fed Ex)** contract and will begin operating Fokker F.27-600s provided by Fed Ex over regional routes.

Scheduled low-fare, half-hour Viscount shuttle flights between Southend and Ostend, and a variety of ad hoc charters are also offered. Additionally, overnight newspaper-distribution flights are made within the U.K. and frequencies are undertaken on behalf of Aersecuricor, a joint **Aer Lingus Irish Airlines-Securicor** delivery service. In October, an unsuccessful bid is made for **National Commuter Airways, Ltd.**, which is also in Administration.

Customer bookings accelerate 11.9% to 102,173, but cargo drops 4.1% to 3.1 million FTKs.

The number of employees plunges 57.8% in 1990 to 190 and the fleet now includes 14 Viscounts, 3 Handley Page Dart Heralds, and Baltic's

BAC 1-11-200. Three BAC 1-11-500s, formerly owned by **Braniff International Airways**, are acquired.

Daily London (CTN)-Maastricht flights, flown by BAF under contract, cease in January. During the first quarter, the Belgian regionals **Flanders Airlines, S.A.** and **Servisair, S.A.** are taken over, complete with Flanders' fleet of 1 Fokker F.27 and 3 Fairchild Metro IIs and the latter's 4 F.27s and 3 Embraer EMB-110P Bandeirantes.

The Fairchild and Embraers are put up for sale and the Fokkers are employed to inaugurate night freight services on behalf of **Federal Express (Fed Ex)**. Chairman/CEO Ian Herman resigns in August and is succeeded by Robert Sturman, a chartered accountant by profession. Passenger boardings for the year climb to 118,485.

In 1991, there are 10 Viscounts and 1 Herald remaining in the fleet. Four of the former are in passenger configuration while the remainder, plus the Handley Page, are freighters. One Viscount is flown under contract to Shell Oil, transporting 110,000 passengers per year between Aberdeen and Sumburgh in Shetland.

The Herald, meanwhile, is employed on night cargo runs between London (STN) and Dusseldorf, transporting newspapers and mail for British troops in Germany, as well as Ford Motor Company automobile parts. In September, a British Aerospace BAe 146-200QC is purchased; it had previously been leased from **Princess Air, Ltd.** and flown under contract for the Austrian Air Force.

Customer bookings accelerate to 178,356 and a total of 5.15 million FTKs are operated.

Airline employment in 1992 stands at 180. In March, BAF joins with the American carrier **Evergreen International Airlines** to form the British registered all-cargo airline Evergreen International Europe, Ltd. Based at Southend Airport, the company begins freight charter and contract service flights to European, African, and Mideast destinations with a Boeing 747-200F provided by the American partner.

In May, Managing Director Neil Hansford's company inaugurates BAC 1-11-500 courier service between Hong Kong and Singapore. An inclusive-tour operation is conducted to Mediterranean destinations with a pair of McDonnell Douglas MD-83s leased from **Adria Airways**.

In November, the company wins a Royal Mail contract to operate nightly return flights from Edinburgh to Coventry. Repainted in the colors of Parcel Force, a Viscount 800 Freightmaster undertakes these exclusive post office services in December.

Enplanements rise 38.7% to 281,237, but cargo drops 20.6% to 4.92 million FTKs. Revenues total \$45 million and grant a profit of \$3 million.

In January 1993, the company leases 8 former **Dan Air/Dan Air Services, Ltd.** BAC 1-11-500s. It is hoped that the company can employ them not only to increase its own capacity, but to charter to new entrants requiring aircraft for start-up routes or to tour operators requiring smaller-capacity lift.

During the last two weeks of March, the carrier completes the transfer of a large portion of its fleet from Southend Airport. The Herald and all of the Viscount freighters, along with 5 BAC 1-11-500s, are now based at London (STN), while 3 passenger Viscounts are sent to Aberdeen, and a leased British Aerospace BAe 146-300 is stationed at Manchester. On April 6, the carrier is renamed **British World Airlines, Ltd.**

BRITISH AIR NAVIGATION COMPANY, LTD. (BANCO): United Kingdom (1932-1935). BANCO is formed on February 10, 1932. Equipped with a Fokker F-VIIa christened *Spider*, the company offers four flights per day service from Bristol (Whitchurch) to Cardiff (Splott); between July 11-18 a total of 199 passengers are carried over 1,160 unduplicated miles.

Having obtained 2 DH 84s and 1 Ford 5-AT christened *Voyager*, the company resumes experimental service over the previous route on May 17, 1934. On June 29, pilot T. W. Morton initiates weekend Ford Heston-Berck-Dieppe flights; the *Voyager* also begins a daily London-Deauville frequency on July 12 that continues until September 3. The Dieppe ser-

vice is suspended for the winter on September 18 and the Cardiff route on September 30.

The DH 84 *Vagrant* is employed to operate ad hoc passenger and cargo flights from Heston to Saarbrücken on December 22 and 24; a daily run is made between December 27 and January 22, 1935, after which the company ceases operations.

BRITISH AIR TOURS, LTD. See BRITISH AIRWAYS, LTD. (2)

BRITISH AIRWAYS, LTD. (1): United Kingdom (1935–1939). **Allied British Airways, Ltd.**, is formed by Whitehall Securities, Ltd., on September 30, 1935, through the merger of the small independent carriers purchased earlier—**Spartan Air Lines, Ltd.** and **United Airways, Ltd.**

The Hon. Clive Pearson is named chairman, with W. D. L. Roberts as vice chairman. J. Ronald McCrindle is appointed managing director and other directors include Harold Balfour, Gerard d'Erlanger, J. R. Bryans, E. L. Granville, F. W. Jones, and W. C. Tomlinson. These officials continue discussions, begun even earlier, with the post office concerning an airmail subsidy.

The amalgamated carrier's fleet will comprise 7 de Havilland DH 84 Dragons, 6 DH 86As, 9 Spartan Cruisers, 10 DH 89A Dragon Rapides, 2 DH 83 Fox Moths, 2 DH 60G Moths, 1 Armstrong-Whitworth Argosy II, and 1 DH 80A Puss Moth.

The corporate identity is changed to **British Airways, Ltd. (1)**, on October 29. **Hillman's Airways, Ltd.** is purchased on December 11.

Services over the previous routes of the merger partners are inaugurated from Heston Airport at London on January 1, 1936. During the month, an airmail subsidy is received from the GPO.

Following a February 12–13 de Havilland DH 89A route-proving flight by Capt. W. F. Anderson, regularly scheduled DH 86 mail service is launched on February 17 from London to Malmö via Amsterdam, Hamburg, Brussels, and Copenhagen.

The next day, **Imperial Airways, Ltd.**, under pressure, agrees to turn over to the new entrant its inactive routes north of a line between London and Berlin. It is also agreed that the older company will cooperate on business and operational matters with the non-monopoly carrier. On February 18, BA-1 receives a post office mail contract to operate in this area, as well as a government subsidy.

Four Fokker F-XIIs are purchased from **Crilly Airways, Ltd.** late in the month and are employed to start London to Paris flights on March 2; two ex-KLM (**Royal Dutch Airlines, N.V.**) F-XIIs will be acquired later in the year.

With the backing provided by government subsidy, DH 86s begin the first U.K.–Scandinavia flat-rate "Viking Royal Mail Express" airmail service on March 17; Brussels passenger service is halted on March 31. Also during the month, Sir Warren Fisher, chairman of the government's Interdepartmental Committee on International Air Communications, recommends that **Imperial Airways, Ltd.** concentrate on servicing empire routes and that a second company be invited to develop an airmail service to compete with the Germans and French on the South Atlantic. After all, this year alone, the post office will pay the state carriers of those two nations £87,500 to fly British letters to Brazil.

All of **Crilly Airways, Ltd.**'s foreign routes are acquired in April, including those into southeastern Europe, through the takeover of that company. Cooperation between **Imperial Airways, Ltd.** and BA-1 now begins to disintegrate. The state carrier, as agent for **Deutsche Luft Hansa, A.G. (DLH)**, against which BA-1 is now in direct competition, refuses to carry British Airways advertisements in its publications or to book potential passengers of the partners on BA aircraft.

Headquarters and flight operations are transferred to London (LGW) on May 17 as the carrier becomes the first British independent to employ that facility as its base. Gatwick, with its railway connection to Victoria Station and its grass landing field, is meanwhile officially opened on June 6.

On July 1, the Malmö route is extended to Stockholm (summer only) and on July 26, de Havilland DH 86A night airmail service is launched to Cologne and Hanover. On July 27, DH 86As replace Fokker F-XIIs on the Paris service. The same night, and in cooperation with **ABA Swedish Air Lines, A.B.**, London–Stockholm night mail service is started via Cologne and Hanover; company DH 86s fly the London to Hanover sector.

British Continental Airways, Ltd. is purchased and merged on August 1; 1 de Havilland DH 84, 5 DH 86s, and 3 DH 89As are acquired in the process. The former London to Lille service is restarted under new livery on September 9 (having come as part of the purchase of BCA.). Fokker F-XIIs displace the DH 86s on the German night mail route from London to Cologne and Hanover on November 7.

In early December, government permission is granted to the independent allowing it to purchase foreign-made airliners. On December 8, an order for 7 Lockheed Model 10A Electras is placed.

Enplanements over the 1,200-mi. route network for the year total 15,500, but despite a government subsidy of £2,960, a huge £159,618 loss is suffered.

The former **ABA Swedish Airlines, A.B.** Junkers Ju-52/3m *Vastmanland* is acquired in January 1937; rechristened *Juno*, it is assigned to the London–Hanover night mail service. On February 7, the operations base is transferred to Croydon from Gatwick. The new London airport offers a rail service into the central city and is equipped with electronic landing aids; unfortunately, it will also have a tendency to become easily flooded.

The next day, the first of four Lockheed Model 10A Electras to be delivered during the month arrives from the United States. Also during the month, the British government announces that the carrier has been chosen to operate to Bathurst, Gambia, with the intention of extending across the Atlantic to Brazil.

The first Junkers Ju-52/3m is delivered; christened *Juno*, it is placed on the Cologne and Hanover night mail run on March 2. London–Lille flights end on March 6. One-time **Aircraft Transport and Travel, Ltd. (AT & T)** pilot, Alan Campbell Orde, most recently chief test pilot for Armstrong-Whitworth, is now appointed the carrier's operations manager.

Following familiarization and promotional flights, the speedy U.S.-built Electras are placed on the twice daily London to Paris service on April 5. They fly the route in 1½ hours, significantly faster than the planes of state-owned rival **Imperial Airways, Ltd.** L-10A operations begin to Malmö and Stockholm on April 17 and 19, respectively.

Also during April, the ex-**ABA Swedish Airlines, A.B.** Ju-52/3m *S. A. Andre* is acquired; rechristened *Jupiter*, it is also assigned to the German night airmail route.

A fifth Electra is delivered on May 29 and will later be followed by a sixth purchased from Minneapolis-based **Northwest Airlines**. A two-class Paris service is introduced on May 20—first class is flown by L-10As and second class by DH 86s.

Following a meeting at the Greyhound Hotel, near Croydon Airport, during the month, the British Airline Pilots' Association is formed, with Lord Chesham as president and Lord Amhurst as vice president. Two BA-1 pilots, together with two pilots from **Imperial Airways, Ltd.** and one each from **Olley Air Services, Ltd.** and Surrey Flying Services, Ltd. establish an organizing committee.

Unable to build a South Atlantic service alone, the company turns to the government for help in July; officials at the Air Ministry agree that the carrier will require financial assistance to establish any airmail service to Brazil. Also during the month, the London to Paris service is doubled to four times a day.

In cooperation with **Deutsche Lufthansa, A.G.**, the Cologne to Hanover night mail route is extended to Berlin on August 9. This is a direct service that transports all British first-class mail for central and eastern Europe.

On August 12, the carrier joins London Midland and Scottish Railway and David MacBrayne, Ltd., in forming the subsidiary **Scottish Airways, Ltd.** Later in the month, Air Ministry officials persuade the

Portuguese to grant BA-1 landing rights in Lisbon for the first stop on its proposed South Atlantic service.

During the fall, two ex-KLM (**Royal Dutch Airlines, N.V.**) Fokker V-IIIs are acquired and, on October 1, the Air Ministry imposes new safety requirements on the company and other British carriers. These include compulsory use of seatbelts by passengers and crew on all aircraft. For planes seating more than 10, oxygen equipment is mandatory for flights above 15,000 ft., a pair of fire extinguishers must be carried, and cockpits must include directional gyroscopes and artificial horizons.

The Malmo–Stockholm sector is closed on October 4 for the winter. Representatives from the company and the Air Ministry depart London on November 17 to survey the Bathurst–Lisbon segment of a proposed South Atlantic route. Orders are now placed for 9 Lockheed L-14s. An Electra crashes at Croydon Airport on December 13. Having been unprofitable for a second consecutive year, the company again refuses to release its traffic figures. E. H. Murrant succeeds F. W. Jones on the board of directors and is joined by the new government director, Viscount Monsell, the retiring First Lord of the Admiralty. The year's enplanements are 17,130 and the loss is £177,975.

A third Junkers trimotor, the new Ju-52/3m named *Jason*, is placed into service on January 28, 1938. In February, the Bathurst–Lisbon survey group returns and submits its report. Orders are placed for Lockheed L-14 Super Electras.

Company officials sign an agreement on March 23, with the Air Ministry assuming responsibility for surveying proposed routes from the U.K. to South America and West Africa. The Malmo to Stockholm route is reopened on April 11, and day operations are returned to Heston Airport on May 29.

In South America during June, company representatives test a possible Natal–Buenos Aires route on the ground. An Electra ditches in Copenhagen harbor on August 15. The first of 8 Lockheed L-14 Super Electras is delivered to Southampton by ship; unloaded and reassembled, it is flown to Heston the same day. It will be followed by two more on August 26 and 28; the last of these is the first in the fleet to be christened, receiving the name *Lafayette*. These are employed to inaugurate nonstop Stockholm service on September 18.

Prime Minister Neville Chamberlain is flown by one of the company's Electras roundtrip from Heston Airport to Oberwiesenthal Airport at Munich on September 15–16 and to Cologne on September 22–24. The company's first L-14 Super Electra returns the prime minister to Munich on September 29–30, where accords are signed to end the Czech crisis. The initial flight requires three hours and is a turbulent introduction to commercial flight for the British leader. The use of U.S.-made flight equipment for the diplomatic mission brings complaints from various segments of U.K. public opinion and helps the government to accelerate plans for the improvement of British air services.

The new L-14 *Livingstone* enters service on September 30 and L-14 survey flights are made over the 1,000 miles to Lisbon and Seville on October 7, 25, 27; the first is seven-hours nonstop as is the third while the second halts briefly at Bordeaux. A fourth L-14 is acquired on November 9 and is christened *Lochinvar*.

As a result of a 1937 parliamentary investigation of the British air transport industry, the government, in the person of Sir Kingsley Wood, on November 11 announces its intention to merge the independent with **Imperial Airways, Ltd.** to form a new state-owned **British Overseas Airways Corporation (BOAC)**. Company shareholders will be bought out and former BBC Chairman Lord Reith is appointed the new flag carrier's first chairman. From offices near Victoria Station, he and his chief assistant, Leslie Runciman, draft guidelines for the new state entity. The L-14 *Lothair* is received on November 16; six days later on November 22, the first L-14 to be received is the first lost when it crashes at Wiltar in Somerset.

Early in December, Air Ministry officials announce that British Airways, Ltd. (1) will commence direct London to Lisbon flights in January and that the government will subsidize the service at an annual rate of £116,000. Only proving flights and the acquisition of permission

from General Franco's government for overflights have yet to be achieved, though Franco intimates that, if Britain recognizes his government, the granting of authority will not be a problem.

Capt. V. E. Flowerday flies an unnamed L-14 from London on December 28 on a four-day route proving flight to Bathurst. He stops while en route at Lisbon, Casablanca, Agadir, Port Etienne, and Dakar. This will be the only such mission flown in connection with a possible South Atlantic airmail service. The British government will recognize that it cannot establish such an operation with war clouds on the horizon and, consequently, the post office will be forced to pay the British and French national airlines a huge £118,000 to fly U.K. mail to Brazil during the upcoming year.

Customer bookings over the carrier's 3,800-mi. route network total 22,500 this year. Despite the government's subsidies of £110,653, the loss is £80,721, although when accumulated deficits are deleted, that figure falls to minus £24,128.

The first of two Lockheed L-12A Electra Juniors to be delivered to a frontline operation is received in January 1939 and is immediately and secretly taken in hand for clandestine work. In a cooperative project between British Intelligence and the French Deuxieme Bureau, the plane is outfitted with high-resolution cameras. Piloted by Australian aerial photographer and Dufaycolor, Ltd. executive Sidney Cotton, it is flown in company or Dufaycolor, Ltd. livery on regular routes, but over military installations in Germany and Italy. Cotton recruits a former German World War I ace to serve as his Berlin sales representative for color film and thus obtains a reason to visit the German capital. The spy flights continue, with particular success over the Mannheim area.

Two more L-14s are received on February 27 and March 7, respectively; the first is unnamed while the second is christened *Leander*. A third of this type, the *Lepelaar (Spoonbill)* is purchased from **KLM (Royal Dutch Airlines, N.V.)**. Government officials are surprised when General Franco, in March, refuses BA-1 permission to overfly Spain during its proposed new service to Lisbon. Consequently, flights cannot immediately begin. The authority question will be resolved within a few weeks, but the ban on flights will remain in place due to the threat and later, the fact of war.

On April 15, the last Croydon–Paris flight is made; the next day, the route is operated jointly with **Imperial Airways, Ltd.**, using the latter's de Havilland DH 91s, as the process of merger begins in earnest.

Also on April 16, company L-14s are employed, under contract, to fly **Imperial Airways, Ltd.'s** London–Basel–Zurich service.

Twice-daily L-10A Brussels service is resumed on April 17, the same day daily L-14 flights are begun to Frankfurt and Budapest and to Berlin and Warsaw while Electras extend the Malmo weeknight mail route to Stockholm.

Beginning in May, a second camera-equipped Lockheed L-12A in company markings enters service; it is employed by Sidney Cotton and his intelligence colleagues during the next four months to repeatedly photograph Axis positions in Somaliland.

Financial arrangements for the carrier's purchase are completed in June, allowing introduction of the **British Overseas Airways Corporation (BOAC)** Bill into Parliament; BA-1 shareholders will receive £262,500 for their company.

After the BOAC Bill passes through the legislative process, it receives royal assent on August 4. On August 11, the second delivered L-14, operating an **Imperial Airways, Ltd.** replacement service, catches fire in midair and crashes at Luxeuil, France; there are no fatalities.

Four days later, on August 15, an L-10A crashes into the sea off the Zealand coast of Denmark (five dead). Following the announcement of the Russo–German nonaggression pact on August 23, Poland begins to transfer units of its airline fleet to Great Britain. Six Super Electras are ordered to serve with BA-1 in England, but only the *Lublin* escapes before the Nazi invasion of September 1, the same day on which Sydney Cotton completes his final spy flight.

Meanwhile, a midnight on August 30, the U.K. government orders the company's aircraft, along with those from **Imperial Airways, Ltd.**, to

evacuate Croydon Airport as the entire east coast of England is closed to civil aviation. Most are sent to Whitchurch, near Bristol, as war breaks out on September 3; there, officers of the two carriers will set up their headquarters at the Grand Spa Hotel.

Many of the carrier's pilots and other personnel in the RAF Reserve, now transfer to the military and, on September 9, part of the BA-1 fleet is diverted to Exeter to begin National Air Communications flights on behalf of the government. The Scandinavian service, meanwhile, is rerouted from Perth to Stockholm via Stavanger and Oslo and is flown by the 3 Ju-52/3ms and 1 L-14. **British Overseas Airways Corporation (BOAC)** is formally established on November 24 with Sir John Reith as chairman and former BA-1 Chairman Clive Pearson as his deputy. BA-1's Operations Manager Campbell Orde is given the same post with the new state carrier. The former Dutch Super Electra *Lepelaar* (*Spoonbill*) is lost in a crash at Malta on December 21.

On January 15, 1940, the unnamed Super Electra acquired the previous February is lost when it overshoots the runway at Heston and crashes. Beginning in February and continuing for two months, Sidney Cotton flies one of his BA1-registered Electra Juniors on commercial routes that just happen to take his camera-equipped aircraft over Italian airfields in North Africa. In March, Deputy Chairman Pearson succeeds Sir John Reith as chairman; the latter has been given a peerage and named U.K. Minister of Information.

On April 1 **British Overseas Airways Corporation (BOAC)** officially acquires British Airways, Ltd., along with **Imperial Airways, Ltd.**, its routes and assets, in an event totally obscured by the winds of war. Two of the three camera-equipped L-12As officially in service since the previous January are transferred to France and the third is taken over by the RAF at Heston.

BRITISH AIRWAYS, LTD. (2): Speedbird House, P.O. Box 10, London Heathrow Airport, Hounslow, Middlesex, England, TW6 2JA, United Kingdom; Phone 44 (181) 759-5511; Fax 44 (181) 562-9930; <http://www.british-airways.com>; Code BA; Year Founded 1974. The Civil Aviation Act becomes law on August 5, 1971, providing for the formation of the British Airways Board (BAB). At its inaugural meeting on January 10, 1972, the BAB prepares for ownership and control of **British Overseas Airways Corporation (BOAC)** and **British European Airways Corporation (BEA)**, which is assumed on April 1. On July 14, the first *Report on British Airways Organization* is approved by the government. On July 17 it is announced that **British Overseas Airways Corporation (BOAC)** and **British European Airways Corporation (BEA)** will be merged under unified top management in the British Airways Group, which is accomplished on September 1. The least noticed addition during the year is creation of the British Airways Band, which will travel internationally to play at promotional events.

The second and third *Reports* are approved by the British government on January 22 and November 22, 1973. A new union jack and blue speedbird color scheme is introduced for company aircraft late in the year and Chairman Keith Granville is knighted. Consolidated BOAC/BEA results on the year show a 7.5% rise in passenger boardings to 14,390,000, a 6.5% boost in freight traffic, and a group net profit of £5.2 million.

BOAC and BEA are dissolved on March 31, 1974, under the Air Corporation (Dissolution) Order of 1973 and the new entity, British Airways, Ltd. (2), or BA, appears the following day. As initially organized under Chairman Sir David Nicholson, with Sir Keith Granville as deputy chairman, the flag carrier has seven divisions. The Regional division comprises the acquired companies of **Northeast Airlines, Ltd.**, **Cambrian Airways, Ltd.**, **Channel Island Airways, Ltd.**, and **Scottish Airways, Ltd.**, and **British Airways Helicopters, Ltd. (BAH)**. The other six divisions are Overseas (ex-BOAC), European (ex-BEA), British Airways Associated Companies, British Airways Engine Overhaul, and International Aeradio.

The fleet, rapidly repainted in a new livery featuring the national colors of red, white, and blue, now comprises 16 Boeing 747-136s, 24

B-707-336s, 21 Vickers VC10s, 64 de Havilland Tridents, 25 BAC 1-11s, 35 Vickers Viscounts, 10 Merchantmen, 10 Sikorsky S-61s, 1 Bell 212, and 1 Bell 206L LongRanger. With 53,213 employees, the new carrier is the largest airline employer in the world.

Long Island, New York, businessman Leo Kaye is indicted on April 25 for obtaining 247 transatlantic airline tickets from the carrier by fraudulent means. A May 6–20 strike by cabin crews and baggage handlers forces the temporary cancellation of international flights and costs the state company \$15 million. The final flight by a Vickers Vanguard 951 is made on June 16 from Jersey to London (LHR).

The Provisional Wing of the Irish Republican Army admits to placing a bomb aboard the B-707-336 en route from Belfast to London on July 25 with 85 aboard. It is forced to make an emergency landing at Manchester in response to a warning telephoned in by an anonymous caller.

The first of 9 Lockheed L-1011 TriStar Is ordered by **British European Airways Corporation (BEA)** several years earlier is delivered in October. Also during mid-month, a Concorde makes a worldwide publicity tour. The SST is the first supersonic transport to land at Los Angeles (LAX), where it remains on exhibit October 23–24.

The flight crew of a B-747-136 at Sydney on November 3 refuses to board two Soviet diplomatic couriers who refuse to undergo routine security checks prior to a departure for London.

The first Jumbojet delivered since the corporate changeover arrives on November 6 and is christened *Portsmouth*. Three Lockheed L-1011s arrive during the fourth quarter.

On November 23, 4 PFLA terrorists seize Flight 870, a Super VC10 with 93 passengers, after it lands at Dubai from London en route to Brunei. An Indian stewardess is shot in the back during the takeover, but is released for medical aid. From Dubai, the plane is forced to fly to Tunis, where the gunmen demand the release of 13 other guerrillas, jailed in Egypt, after releasing 4 hostages. The Egyptians at first refuse, but the next day, 5 guerrillas are freed in Egypt and 2 in the Netherlands in return for 13 more people from the VC10. Later in the day, the pirates murder West German hostage Werner G. Kehl in public view, claiming the Tunisians are operating in bad faith. On November 25, after receiving assurances from Tunisia that they will receive asylum, the gunmen surrender and free their remaining prisoners.

Passenger boardings on the year dip 6% to 13.5 million, but freight traffic is up by 5%. Net income is \$38.5 million.

A total of 1,111 employees are laid off in 1975 or not replaced.

An unidentified hijacker commandeers a BAC 1-11 during a Manchester–London flight on January 7 and releases the 45 passengers at Heathrow Airport, where he threatens to blow up the plane and shoot the crew if he is not given a parachute, \$230,000, and flown to Paris (ORY). Tricked into believing he has landed in France, the man is instead flown to the U.K. and captured by British police at Stansted Airport in Essex. His weapon turns out to be a toy gun. He is later convicted of the first U.K. domestic airline skyjacking and given a seven-year prison term. BA subsequently orders improved anti-hijacking measures be implemented by its personnel.

The first of 3 new L-1011-100s received in late 1974 and christened *The Sunilk Rose* enters service on January 12, over a London–Malaga route. The same day, walk-on London (LHR)–Glasgow Airport shuttle service is introduced, modeled on that of **Eastern Air Lines** in the U.S. Hourly (except on Sundays, when flights are every two hours) no-booking, guaranteed-seat service is guaranteed by use of the carrier's nine Trident ICs.

The B-747-136 *Dundee* is delivered on March 14. Joint DC-10-40 London–Los Angeles–Auckland operations are initiated with **Air New Zealand, Ltd.** on May 7 and, on June 26, a contract is let for 4 Rolls-Royce powered B-747-236Bs. Hawker Siddeley HS 748s are introduced on internal Scottish routes on August 4. Preparation for the introduction of supersonic transport continues with the fourth production aircraft beginning on July 7.

A series of 128 proving or "shadow flights" are launched over projected revenue routes in a campaign designed to demonstrate to the

public and the airline industry the need for and desirability of the Anglo-French Concorde. With full passenger loads carried on every flight, trips are made to a variety of long-haul destinations, beginning with Hong Kong and Singapore. On August 4, the 3,852 miles from Singapore to Melbourne are covered in just 3 hrs. 37 min., while on August 11, flights are made to Bombay and Kuala Lumpur to test flying operations under monsoon conditions. The test series ends on September 13 following six roundtrips on seven consecutive days between London and Gander, Newfoundland.

An HS 121 Trident 2E with 7 crew and 110 passengers encounters a significant amount of standing water on the runway while taking off from Bilbao on September 15; the maneuver is aborted, but the aircraft runs off the runway and is badly damaged. No injuries are reported.

The Concorde receives its British airworthiness certificate on December 4 and Sir David Nicholson retires as chairman on December 31.

An HS 121 Trident 1C is destroyed in a ground accident at Heathrow Airport on December 28.

On the year, passenger boardings grow 13.8% to 13,638,000. Cargo is down to 684.15 million FTKs, a 5.5% drop.

Sir Frank McFadzean becomes chairman on January 1, 1976. In a joint operation with **Air France**, British Airways, Ltd. (2) opens the world's first regularly scheduled supersonic passenger service on January 21 with a London-Bahrain flight piloted by Capt. Norman Todd. Upon landing after a 3-hr. 37-min. flight, the British Concorde, G-BOAA, is the first of its type to complete a revenue service between two planned destinations.

The new computerized reservations system BABS is fully integrated on February 1 and, on February 4, U.S. transportation secretary William T. Coleman announces that the Concorde will be allowed landings at New York (JFK) four-times-per-day and Washington, D.C. (IAD) twice-daily for a sixteen-month trial period.

London-Edinburgh shuttle service commences on April 1. The same day, a B-747-148 is chartered from **Aer Lingus Irish Airlines, Ltd.** The 18th B-747-136 is delivered on April 8 and is christened *Aberdeen*. Marking the start of London-Washington, D.C. Concorde service on May 24, an aircraft from the British line is joined by one from **Air France** in making a spectacular joint arrival at the American facility. There, with the two SSTs parked nose-to-nose, special ceremonies are held, speeches given, and references made to the U.S. bicentennial.

A Concorde is forced to return to Washington, D.C. (IAD) on June 20 after an engine overheats. In August, the carrier becomes launch customer for the long-range Lockheed L-1011-500 TriStar, ordering six.

En route from London (LHR) to Istanbul on September 9, Flight 475, an HS 121 Trident 3B with 9 crew and 45 passengers, collides in midair with **Inex Adria Aviopromet** Flight 550 en route from Split to Bonn. The collision with the DC-9-31 carrying 5 crew and 108 passengers occurs 33,000 ft. over Vrobec, near Zagreb, Yugoslavia. Both aircraft crash and there are no survivors from the worst midair collision in civil aviation history to date. Six years later, the tragedy will be reported in Richard C. Weston and Ronald Hurst, *Zagreb One-Four—Cleared to Collide?: A Study of Human and Technological Conflict in Aviation* (London: Granada, 1982).

A joint announcement from London and Paris, made on November 2, confirms an end to the production of Concorde SSTs; at this point, the British line owns five, with two more to be delivered. The fourth *Report on British Airways Organization* is released on November 15.

Passenger traffic during the 12 months climbs 4.2% to 14.2 million, but freight grows only 1.6%.

In January 1977, the carrier and **Air France** share the 1976 "Airline of the Year" award from *Air Transport World* magazine for their introduction of Concorde. The fleet now includes 5 Concorde, 15 VC10s, 20 B-707-436s, 25 B-747-136s, 15 Viscounts, 61 Tridents, 25 BAC 1-11s, 2 HS 748s, and 9 TriStar 1s.

A British Air Tours, Ltd. B-707-436, with four crew, aborts its takeoff on a training flight from Prestwick on March 17 and crashes; the undercarriage collapses and all four engines are torn off, but there are no fatalities.

The last vestige of the old BOAC/BEA inheritance is removed on April 1 when the Overseas, European, and Regional divisions are consolidated; henceforth, there will be departments for commercial operations, flight operations, engineering, planning, catering, and personnel plus central services for public relations and finance. London-Belfast jet shuttle service opens the same day and the "Queen's Award for Export Achievement" is received on April 21.

On May 6, engine trouble forces a Concorde to return to Washington, D.C., after departing for London with 100 passengers. Pooled flights with **Gulf Air** commence late in the month between London and the Gulf States. The last two Pratt & Whitney powered Jumbojets, Dash-236Bs, are delivered on June 16 and 22, respectively, and are christened *Liverpool* and *Manchester*. The first Rolls Royce powered B-747-236B to be delivered is the *Cardiff*, which arrives on July 27.

A B-747-136 carrying 420 people makes a safe emergency landing at London (LHR) on August 1 after losing 1 of its 16 wheels upon takeoff for Bahrain. Five days later, a three-week repair program is undertaken for the fleet's 25 Trident 3Bs, nearly half of which have been grounded with hairline wing cracks. On September 16, 17 of the 25 Trident 3Bs are permanently grounded.

On September 23, President Jimmy Carter approves a U.S. Department of Transportation decision that will allow the Anglo-French Concorde to land at any U.S. airport pending local approval.

A Concorde takes Queen Elizabeth II from Barbados to London on November 1. Barbados will remain one of the few destinations in the world with regularly scheduled SST service.

After years of opposition from environmental groups, the premier London-New York roundtrip Concorde service is launched on November 22. At 8:30 a.m. on that date, a company SST arrives at New York (JFK) from London on a flight that has cost its passengers \$716 one way; ceremonies are held along with an **Air France** Concorde that arrived from Paris.

A Concorde aborts its takeoff from New York (JFK) on December 1 as its engines fail. In association with **Singapore Airlines, Ltd.**, London-Bahrain-Singapore Concorde operations begin on December 9; the service will be suspended after only three flights due to political difficulties. The 4 BAE-ordered TriStar 1s now commence revenue services from London to Malaga.

Passenger traffic for the year falls to 13.3 million passengers flown.

Standby fares on certain North Atlantic flights are introduced on March 18, 1978. Between March 27 and June 16, 4 more B-747-236Bs are received—the *Glasgow*, *Plymouth*, *York*, and *Oxford*. The fleet, on April 18, still operates 19 Vickers Viscounts, which this date are toasted in celebrations marking them as the first turboprop type to complete 25 years of regularly scheduled airline service.

The 100,000th Concorde passenger is greeted on August 10. On August 31, the company joins with **Eastern Air Lines** to become launch customer for the Boeing 757; the British firm orders 19 units. Frequencies on the New York to London Concorde route are increased from 10 to 12 per week beginning on October 29.

Late in the year, a massive reequipment order is placed with Boeing for 19 B-757-236s, 19 B-737-236s, 3 BAC 1-11-539s, and the first Vertol Model 234 Civil Chinook helicopter. A BAC 1-11-537 is chartered from **Cyprus Airways, Ltd.** on October 15.

Foote, Cone & Belding, the U.K.'s contract advertising agency since 1947, is appointed the airline's worldwide agency; the U.S. advertising campaign, built around British actor Robert Morley by the previous advertiser, Campbell Ewald, is retained intact.

A route exchange, valued at £4 million, is arranged with **British Midland Airways, Ltd.** Passenger boardings this year jump 17.7% to 15.7 million.

Sir Ross Stainton becomes the third chairman on January 1, 1979; Roy Watts becomes CEO. On January 12 and in cooperation with **Air France**, Concorde services are extended to Dallas (DFW); the Washington, D.C.-Texas subsonic leg is flown by crews from **Braniff International Airways**. The American pilots bring the two SSTs (the British

ship has 90 passengers) onto two parallel runways within 2 seconds of one another after a flight of 2 hrs. 17 min. made at Mach 0.95.

British Airways, Ltd. (2)/Singapore Airlines, Ltd. joint London-Singapore operations are restarted on January 24. A flight from London to New York makes an emergency landing at Bradley International Airport, Windsor Locks, Connecticut, on January 27 because of low fuel and bad weather. The airport manager reports minimal reaction from people living nearby to the first-time landing of a Boeing Jumbojet.

Explosive booms are heard over the U.S. East Coast between Massachusetts and Pennsylvania on February 8 and 10. The FAA investigates the possibility that a Concorde caused sonic booms; however, on both occasions, the carrier's SST had decelerated to subsonic speeds 60 miles out to sea.

The Queen and Prince Philip fly the Concorde to Kuwait on February 12, returning from their Middle East tour on March 2 aboard a VC10 boarded at Muscat. A Concorde pilot reports his aircraft and a small private plane narrowly miss each other on March 15, 23 mi. E of New York. The B-747-236B *Edinburgh* arrives on March 27.

Piloted by Capt. Brian Trubshaw, the 16th and last Concorde makes its maiden flight from Filton on April 20. When ready, it will join the BA fleet. Easily recognizable by its shortened fuselage and increased wing span, the world's first Lockheed L-1011-500 is delivered on April 30 and enters service on May 5; it is named *The Harry Wheatcroft Rose* and recognizes one of the nation's best-known rose growers.

In July, the new Conservative government of Prime Minister Margaret Thatcher announces its intention to sell shares in the airline and sends legislation to Parliament to enable this privatization plan.

A Concorde makes an emergency landing in Scotland on a flight from Toronto to London on September 2 after losing engine oil pressure. Flights to Iran are indefinitely suspended on December 2 because of the political situation there.

During the year, the company gradually retires its Vickers 953C Merchantman fleet and retrofits much of its fleet, particularly its 1-11s, with engine hush kits. Employing flight attendants as spokespersons, Foote, Cone & Belding launches a "Looking Up" advertising campaign in the U.K. stressing the patriotism citizens could display by frequenting the national flag carrier.

Enplanements rise 7.6% to 16,906,318 and freight traffic accelerates 11.2%. Total revenues reach \$3.2 billion (a 28% increase over 1978) allowing a 108% jump in operating profits to \$176 million.

Airline employment is decreased by 4.2% in 1980 to 52,600 and the first BAC 1-11-539 is delivered on February 22. It will later be christened *County of West Midlands*. It is followed by a second unit, later called *County of Stafford*, which arrives on March 3. The ninth B-747-236B, the *Cambridge*, is delivered on March 5. On March 12, the carrier introduces its new Club Class Service, a business-class service offered at regular fares. The last VC10 flight, Dar es Salaam-Heathrow, is completed on March 29.

At the end of March, BA is forced, in the name of economy, to abandon a number of domestic routes, including services from London and Manchester to the Isle of Man. London to Singapore via Bahrain Concorde service is discontinued on April 1. Fresh off a charter to **Air Malawi, Ltd.**, the BAC 1-11-530 *Isle of Raasay* is chartered from **British Caledonian Airways, Ltd. (BCAL)** on April 24, allowing the April 28 return of the leased **Cyprus Airways, Ltd.** BAC 1-11-537. The 10th B-747-236B arrives on May 2 and is christened *Birmingham*.

Unable to accommodate its British partner's request for increased services from Dallas (DFW) to New York and Washington during the upcoming summer season, **Braniff International Airways** cancels its subsonic Concorde services on May 31.

A private aircraft comes within 450 feet of colliding with a B-707-436 10 mi. E of New York (JFK) on July 10.

Beginning on August 15, the Cunard Steamship Company offers a free flight from New York to London to any of its passengers sailing the

Queen Elizabeth II from Great Britain to Manhattan. The offer will remain in effect for five years. The third and final BAC 1-11-539, later christened *County of Warwick*, is handed over on August 18.

On September 5, Gerald J. Tobias sets a speed record of 3 hrs. 33 min. for a flight between central London and downtown New York by flying the Concorde across the Atlantic and using helicopter shuttles between airports and downtown areas. BA and **SAS (Scandinavian Airlines System)** jetliners brush each other on a runway at London (LHR) on September 20; no injuries are reported. The B-747-236F *British Trader* enters service on September 30.

London-Peking service is begun on November 13 via Bahrain and Hong Kong.

A Concorde reports a near miss with a **Ransome Airlines** turboprop 25 mi. E of New York on December 1. During the year, other new routes are opened to Seattle, Manila, and Salisbury, Zimbabwe, and **Transavia Holland, N.V.** begins to fly two of its B-737-2K2s under contract to the British flag line. At this point, all Trident 1Es are withdrawn.

The Civil Aviation Act passes parliament during the year and provides for privatization of the airline.

Passenger boardings remain level at 16.09 million, while freight increases by 3.5% to 996.34 million FTKs. With the world economic situation worsening, the financial picture begins to darken as, led by fuel price increases, expenses begin to mount. Still, an operating profit of \$28.76 million is registered along with net gain of \$7.08 million.

Sir John King, later Lord King of Wartonby, a colleague of Prime Minister Margaret Thatcher, chairman of FKI Babcock International, Ltd., and a board member for a year, becomes chairman on January 1, 1981. Not only is he charged by the secretary of state for trade to take all steps necessary to prepare for privatization, but is faced by a fiscal crisis. As the result of an unresolved pay dispute, 9,000 employees stage a one-day strike on January 15.

The **Aer Lingus Irish Airlines, Ltd.** Jumbojet is returned in May and a total of 117 domestic and international flights must be cancelled on June 26 because of a strike by traffic controllers at Heathrow Airport.

During takeoff from New York (JFK) on August 9, a left-hand tire of a Concorde bursts, putting a hole in the No. 5 fuel tank and causing damage to the No.2 engine by ingestion. Departure is successfully aborted and no injuries are reported.

Meanwhile, a series of economic moves designed to regain profitability are begun on September 1. One-million-sq.-ft. of London office space is sold and staffing is reduced to 43,000 on a volunteer basis, with severance pay further contributing to financial woe. In addition, early model Tridents, VC10s, and B-707s begin retirement to make way for 24 new B-737-236s, christened *River Tamar*, *River Tweed*, *River Humbar*, and *River Tees*.

A decision is taken that all services north of Glasgow, operated by the Highlands and Islands division, be closed down and licenses for the various affected routes be distributed to private regionals. As a result of union opposition, BA gives its Scottish operation permission to operate for one year longer on an experimental basis.

Beginning on October 1, frequent travelers are offered a \$100-a-year membership package of various conveniences. On October 16, BA introduces \$249 London-New York roundtrip fares. Fare cutting against **Laker Airways, Ltd.** becomes both ruthless and reckless.

While piloting a Jumbojet, Prince Phillip reports a near miss with a lightplane shortly after takeoff from London (LHR) on December 1.

Employing the advertising agency of the Conservative Party, Saatchi & Saatchi, the company now begins a £25-million advertising campaign on the theme "The World's Favourite Airline."

The fleet now includes 7 Concorde, 15 B-707-436s, 27 Jumbojets, 9 TriStar 1s, 8 Viscounts, 52 Tridents, 26 BAC 1-11s, 6 HS 748s, and 24 B-737-236s.

Still, passenger boardings for the year dip 5% to 15,272,000 and freight falls 5.6% to 940 million FTKs. Revenues are up 5.8% to \$3.1 billion, but expenses jump 13.3% to \$3.3 billion, leaving the carrier to suffer a horrendous \$900-million loss.

Economic restructuring continues in 1982. Despite a strike by 2,000 baggage handlers and other ground staff at London (LHR) on February 15, most flights operate normally. The B-747-236F *British Trader* is sold to **Cathay Pacific Airways (Pty.), Ltd.** in March. In April, the Highlands and Islands division is replaced by a new Highlands Division, with Gerry Devine as executive in charge, who is given a mandate to change the previous year's £6-million loss into a £1-million profit. The staff is cut from 600 to 167 and the division's Vickers Viscounts are replaced with 5 British Aerospace BAe (HS) 748-B2s. Because of a slowdown in the demand for supersonic flights, the Concorde *Alpha Golf* is grounded and used for spare parts. It will later be upgraded and refurbished.

When Argentine marines invade the Falkland Islands in April, service between London and Buenos Aires is cancelled.

On June 24, Flight 009, the B-747-236B *City of Edinburgh* flying at 37,000 feet with 263 aboard en route from Kuala Lumpur to Perth, near Bandung, Indonesia, suddenly plunges five miles to 12,500 feet before the pilot, Capt. Eric Moody, can restart the engines. A cloud of volcanic ash from Indonesia's erupting volcano, Mount Galunggung, had choked them. The aircraft will later be entered into the *Guinness Book of World Records* as the "world's heaviest glider." The incident will be reported by Betty Tootell in her *"All Four Engines Have Failed": The True and Triumphant Story of BA 009 and the "Jakarta Incident"* (London: Andre Deutsch, 1985).

In an effort to contain sonic booms over the east end of Long Island during its arrivals and departures, the Concorde is rerouted out of New York (JFK) beginning on August 29.

Staff cuts now bottom out, leaving a workforce of 37,500. The last of 17 stations to be cut are closed, 33 additional routes are ended, and 65 airliners are disposed of, including all 6 L-1011-500s. Lord King, in October, ends BA's 35-year relationship with Foote, Cone & Belding and requests that the Saatchi & Saatchi advertising firm develop a worldwide advertising campaign designed to enhance the airline's image. The agency agrees and resigns its account with **British Caledonian Airways, Ltd.** In November, the liquidator of **Laker Airways, Ltd.** files suit against BA and several other carriers and manufacturers in U.S. District Court, Washington, D.C.

The year's enplanements fall another 2.9% to 13.6 million and freight declines 13.1% to 748.9 million FTKs. Concorde service to New York and Washington is a bright spot as 63,678 and 9,793 passengers are carried on the two routes, respectively. On total revenues of \$2.07 billion, the net loss is \$337 million. Even the Highlands Division misses its \$1-million profit goal, but not by enough to be eliminated.

The workforce grows to 36,700 in 1983. The first of 17 B-757-236s is delivered on January 25; christened *Dover Castle*, it begins service on the London-Belfast shuttle route on February 9. Former Avis President Colin Marshall becomes CEO during the month with a mandate to turn the company around. On March 15, the company contracts with the new U.S. commuter, **Americair**, to provide shuttle flights for its passengers between Washington, D.C. (IAD) and both Washington, D.C. (DCA) and Baltimore (BWI).

The last Trident 1C revenue flight is made over the Glasgow to London (LHR) shuttle route on April 4. A £1-million "Manhattan Landing" advertising campaign planned by Saatchi & Saatchi during the first quarter is launched in the U.K. on April 10. Actors Peter O'Toole, Joan Collins, and Omar Sharif emphasize the idea that BA is "the world's favourite airline" and "every year, flies more people across the Atlantic than the entire [1.4 million] population of Manhattan." The 90-second television commercials are also unveiled in Casablanca, India, and South Africa and "the world's favourite airline" will be the company's slogan for years to come.

The last Trident 2E service is flown between Glasgow and London (LHR) on April 24 and, by May 1, the new advertising campaign has spread to 20 countries.

On July 11, 50 senior executives are laid off and a team of younger executives (many without airline experience) is hired in their place. A

major reorganization is now initiated as the company is split into eight major market centers. Additionally, the TriStar fleet is largely retired with some units sold to the RAF for conversion into aerial tankers while most of the BAC 1-11s (except those backing up the shuttle) are retired to avoid costly modifications necessary to meet new noise regulations.

In August, the first of several major charter adventures with a dedicated Concorde takes place: an around-the-world flight from London to London via Washington, D.C., Las Vegas, San Francisco, Honolulu, Edmonton, and New York.

On September 9, in the wake of the Soviet downing of **Korean Airlines/Korean Airlines (KAL)** Flight 007, BA announces a suspension of its four weekly London-Moscow flights.

After several years of complaints concerning the uncaring attitudes of shuttle cabin crews that culminates in an open letter printed in *Flight International*, the internal U.K. shuttle is upgraded, becoming the Super Shuttle. The ability to buy a ticket on board is exchanged for the facility to purchase tickets in the departure lounge until 10 minutes before departure; limited catering is also provided. A Concorde flies subsonically from London to Glasgow in a promotional move to highlight launch of the Super Shuttle. **British Midland Airways, Ltd.**, which also flies the route, counters by briefly scheduling its Boeing 707-320C charter aircraft upon it.

On October 1, joining in the price war between **Trans World Airlines (TWA)** and **PEOPLExpress**, BA reduces its roundtrip London-New York fare to £249. The company's largest promotional contract to date is signed on November 7, an \$8.25-million renewal of the pact with Cunard Steamship Company. This arrangement provides for the Concorde, beginning next April, to fly passengers one-way over the Atlantic after they cross on the *Queen Elizabeth II*.

The shuttle arrangement with **Americair** ends when the U.S. company fails at the end of the year.

Passenger boardings overall dip 4.2% to 14,307,000 while cargo grows 13.3% to 911.35 million FTKs. A \$110-million operating profit is announced and, with 130,728 international departures, the carrier is still the largest international airline in the world.

The payroll is increased again in 1984, jumping 3.1% to 37,833. A B-747-236B, the *City of Winchester*, is leased to the company's charter subsidiary, British Air Tours, Ltd., for eight months beginning on February 9; it will operate transatlantic charters from London (LHR) and Manchester. The company withdraws an offer of a 4% pay increase on February 25 in retaliation for a one-day flight attendants' strike.

Between March 12-14, about 100 passengers and crew develop salmonella food poisoning from hors d'oeuvres served aboard 13 flights; British health officials trace the source of contamination to a powder used by a London catering service's in the food's preparation.

En route from Hong Kong to Beijing on March 22, Flight 003, a B-747-236B with 354 passengers, is taken over by a lone assailant, who claims to have a bomb and demands to be flown to Taiwan. When the perpetrator steps down onto Nationalist Chinese soil, he is quickly arrested. He will be tried and given a 1 1/2-year prison term.

Thrice-weekly roundtrip London-Miami Concorde service begins on March 27 as an extension of the Washington, D.C. run. At this time, there are insufficient terminal facilities at Washington, D.C. (IAD) to handle incoming SST traffic, so passengers are deplaned during refueling to a mobile "people-mover," there to wait for 50 minutes.

As a first step toward privatization, British Airways, on April 1, is declared a "public limited company." Pursuant to the Civil Aviation Act of 1980, the property, liabilities and obligations, and assets of the British Airways Board, formed back in 1971, are transferred to the new entity. Prior to privatization a few years later, shares will be held by the secretary of state for transport. Thereafter, press and other references to BA usually cite **British Airways, plc**, but this work will continue to refer to the company as British Airways, Ltd. (2).

The CAA issues a report recommending more competition for BA and the transfer of certain of its routes to BCAL. An alliance of officials

from the state carrier and the treasury are able to block implementation of the suggestions on the grounds that they would hinder BA's forthcoming privatization.

The dedicated SST charter service is expanded when the BA-Cunard contract takes effect late in the month. Baltimore-London flights begin on May 14. Simultaneously, regularly scheduled Concorde flights are initiated to Washington and Miami.

On December 4, the new color scheme and corporate image are revealed as a prelude to the next year's expected privatization. Designed by the San Francisco firm Landor Associates, the livery is controversial. The familiar "Speedbird" logo, despite employee petitions for retention, is discarded in favor of the company's coat of arms and a portion of the Union Jack on aircraft tails. Politically sensitive third world countries even voice disappointment.

Passenger boardings zoom upward 11.6% to 15,964,000 scheduled while another 2.2 million travelers are flown in charters; freight traffic jumps 22.9% to 1.12 billion FTKs. On total revenues of \$1.8 billion, an operating profit of \$283 million and a net profit of \$224 million are earned. Still, a £900-million debt remains on the books.

Employment is up 4.9% in 1985 to 37,955. The fleet now comprises 57 Concorde, 30 B-707-436s, 10 Jumbojets, 26 BAC 1-11s, 6 HS 748s, 9 TriStar 1s, 46 B-737-236As and 24 B-757-236s.

In January-February, implementation of the "new image" concept continues. The first repainted and upgraded Concorde, *Alpha Golf*, is rolled out of the London maintenance base to the skirling of a Scottish bagpipe. Following Iraq's warning to the world's airlines to stay out of Iranian airspace as the Persian Gulf war escalates, BA suspends flights to Tehran on March 17.

On April 1, the carrier introduces the only direct London to Orlando and Tampa weekday service, together with weekday nonstop New York to Manchester flights. The last of 43 B-737-236As is received during the month and christened *River Yslwyth*.

A Concorde, en route from London to New York on May 8, is forced by engine trouble to make an emergency landing at Boston. Next day, a B-747-2B4C is leased from **Middle East Airlines, S.A.L. (2)** and is christened *Lincoln*. Privatization does not now occur as residues of litigation in the Laker antitrust case and new Bermuda II contentions with the U.S. conspire to keep the company off the stock market.

Indeed, an out-of-court settlement in the Laker case is reached on June 12. As the result of a government white paper's recommendations, British Airways, Ltd. (2)'s Saudi Arabian routes are transferred to **British Caledonian Airways, Ltd. (BCAL)** while the latter's South American routes come to the state carrier. Employing several Lockheed L-1011-500s purchased from **Air Lanka, Ltd.**, the company, after a two-decade service gap, undertakes nonstop twice-weekly flights from London (LHR) to Caracas, Bogota, and Rio de Janeiro, continuing to São Paulo. The Concorde, which carries over 800,000 passengers on the year, is named "flagship" of the fleet.

One woman is killed and at least 27 people are wounded when a bomb destroys the carrier's downtown Madrid offices on July 1. A B-737-236 makes an emergency landing in Dinard, France, on July 5, because of a warning that a bomb is aboard. The plane, en route from London to Malaga, Spain, is evacuated by all 79 people aboard down emergency slides, but no bomb is found.

In early August, a Concorde "steals the show" at the Experimental Aircraft Association "fly-in" at Oshkosh, Wisconsin; arriving with charter passengers, the SST remains for several days offering \$400-per-head demonstrations to the Canadian border and back. The company announces on August 21 that Sir Freddie Laker has accepted the out-of-court settlement reached in June. It requires BA to pay the Laker liquidators \$32.5 million of the \$48-million agreement.

On August 22, an engine fails on British Air Tours, Ltd. Flight 328M, a B-737-236 charter with 6 crew and 131 passengers, as it roars down the runway at Manchester for takeoff on a service to Kerkira, Corfu. The plane bursts into flames and breaks into two parts (55 dead).

Three days later, on August 25, a B-737-236 with 80 aboard makes an emergency landing at London (LHR) after a faulty signal light indicates an engine failure.

A Concorde, with 105 aboard, makes a safe emergency landing at Shannon on October 12 after engine trouble develops out over the Atlantic.

A second B-747-2B4B is chartered from **Middle East Airlines, S.A.L. (2)** on November 1 and is named *Lancaster*. Also in November, the five-millionth passenger is welcomed aboard the domestic Super Shuttle service while Manchester-Hong Kong service is inaugurated via Munich and Dubai.

During takeoff from London (LHR) on November 15, a left-hand tire of a Concorde bursts and forces a section of the main landing gear door to create a 1" x 1.5" fuel tank hole. Although two engines are damaged by ingestion, the departure is successfully aborted and no injuries are reported.

A B-747-236B with 17 crew and 254 passengers loses two wing-flap sections as it approaches Boston on December 15; although the plane lands safely, a 10-ft. section of the flap strikes a car and a house, but no injuries are reported.

The last two Trident 3Bs are retired on December 31, one after completing a shuttle flight to London from Manchester and the second after a Heathrow landing from Amsterdam. In 22 years, the short-haul type has logged 1.59-million flight hours and operated over 500-million miles.

Passenger boardings rise 8.7% to 17.4 million and freight transport increases 3.4% to 1.16 billion FTKs. Total revenues for the year are \$4.65 billion, from which a \$307.5-million operating profit and a \$274.5-million net profit are made. As the year closes, the carrier ranks 11th among world airlines in terms of passenger volume, 9th in freight and fleet size, and 5th in total number of employees.

The payroll dips 0.4% in 1986 to 37,810. In January, British Airways, Ltd. (2) joins **Air France** in celebrating the 10th anniversary of Concorde supersonic operations and acquires a 14% share of **Brymon Airways, Ltd.**

A Concorde charter is flown to the famous Rio de Janeiro carnival in February. Two B-747-236Cs and a B-757-236 are ordered, also in February, with three of the latter type purchased earlier delivered in March.

Formerly flown by **SAS (Scandinavian Airlines System)** a B-747-283B is leased on March 3; christened *City of Swansea*, it is assigned to the **British Air Tours, Ltd.** subsidiary to fly transatlantic charters. In late winter, 11 Trident 3s, made obsolete by U.K. noise regulations, are sold to **CAAC (General Administration of Civil Aviation of China)**.

Following a ribbon-cutting ceremony on April 1 when Prince Charles and Princess Diana open the new \$275-million Terminal 4 at Heathrow Airport, long-haul services are started from that facility on April 12. Culminating a year of terrorist activity, the U.S. bombs Libya on April 14; in the week that follows, BA reservations fall to only 20,000—the most severe business plunge in company history.

Later in the month, a seventh Concorde is taken from storage and placed into service. Privatization set for June is again postponed, while also in June, the subsidiary **British Airways Helicopters, Ltd. (BAH)** is sold to Robert Maxwell's new **British International Helicopters, Ltd. (BIH)**.

As summer approaches, airline employment climbs 3,500 to 40,000, but fear among U.S. travelers concerning Libyan terrorism and possible reprisals dampens traffic. A massive \$6-million "Go for It America" advertising and promotional campaign is undertaken in the U.S. The initial promotion entails a drawing for of every one of the carrier's 5,000 seats over the Atlantic on one day. A few winners are promised tea with Prime Minister Thatcher at No. 10 Downing St.

In July, the cockpit of a retired Trident 3B is transferred by truck to Manchester and with the aid of a crane, is placed into the Museum of Science and Industry. Promotions of various kinds continue through the summer, including scratch-off coupons good for free Rolls-Royce automobiles and shopping sprees at London's Harrods department store.

In August, BA orders 16 B-747-436s valued at \$4.1 billion, with deliveries set for 1991–1994. The Concorde, on September 21, visits California for the first time since its stopover in summer 1984.

The inspiration of flight attendants Patricia Pearce and Derek Pereira, the first annual Dreamflight is made in October. Through funds raised by the two workers and hundreds of other people, the airline transports nearly 200 incurably ill and disabled children from London (LHR) to Disneyworld in Orlando, Florida.

In November, the flag carrier is forced to begin rerouting flights to the Far East and Australia around Syria following the U.K.'s diplomatic break with that Middle Eastern nation. Secretary of State for Transport John Moore in November announces details of the carrier's forthcoming privatization.

Simultaneously, a Concorde is employed to fly 100 financial journalists from London to Scotland and then down the east coast of the U.K. at twice the speed of sound while the privatization story is retold. On December 20, the airline begins to offer a series of short-duration Concorde charter flights from New York.

Customer bookings during the 12 months rise a slight 0.6% to 17,467,000 and freight jumps 8.2% to 1.26 billion FTKs.

Airline employment grows 5.3% in 1987 and the fleet includes 166 aircraft, exclusive of the B-747-283B, 10 B-737-236s, and six L-1011-500s operated by the **British Air Tours, Ltd.** subsidiary.

In January, the company receives the 1986 "Airline of the Year" award from *Air Transport World* magazine.

BA is officially privatized on February 1. The 341.4-million, 125-pence shares of stock (worth \$1.4 billion) offered in a flotation, beginning on February 11, quickly increase in worth on public exchanges, bringing a charge of government undervaluing by the Labour Party. Over one million applications are received for shares in the flotation and a massive oversubscription (by 11 times) occurs. This development is accommodated by a reduction in the number of shares allowed to applicants.

When 100.3% (due to rounding) of the public limited company ownership process is finished, the British public will own 35.4% of the airline; other owners will include company employees (8.6%), overseas private markets (0.7%), overseas business markets (16.5%), and others (2.7%).

A Jumbojet combi is received on February 25; the B-747-236C is christened *Derby*. The B-747-236C *Stoke on Trent* arrives on March 17, followed by the last B-747-236B, *Bath*, on April 23.

New routes are inaugurated to Luxor, San Juan, and Grenada and in July, four extra weekly Jumbojet flights are added to the daily B-747-236B service from Chicago (ORD) to London (LHR). Later in the month, the company participates with other European airlines in the unveiling of the Galileo computerized reservations system. It also announces that a merger with **British Caledonian Airways, Ltd. (BCAL)** will shortly occur.

Five tires of a Concorde, carrying 93 passengers, blow out as the plane lands at New York on August 11; no injuries are reported. The third weekly frequency from London to São Paulo, Brazil, via Rio de Janeiro is suspended late in the month as the merger with BCAL is referred to the Monopolies and Mergers Commission. Orders are placed for 11 B-767-336s.

In October, it is announced that the carrier, a member of the Galileo reservations system, will invest \$86.9 million over the next three years to upgrade its computer systems; additionally, \$60.7 million will be expended upon new equipment and \$9.8 million on extending its data centers. During the same month, the one-millionth Concorde passenger is carried on supersonic transatlantic services and the Jumbojet *City of Swansea*, operated by the **British Air Tours, Ltd.** subsidiary, is purchased by the parent.

Five months into takeover negotiations with **British Caledonian Airways, Ltd. (BCAL)**, U.K. Trade and Industry Secretary Lord Young on November 4 indicates that the acquisition's merits, as examined by the Monopolies and Mergers Commission, outweigh the disadvantages. Government approval for the merger is thus obtained.

Also in November, new baggage rules are introduced, based on the number of pieces rather than weight, on certain subsonic flights in and out of the U.K. Later in the month, improved Club Europe and Club business-class services are introduced replacing Super Club as its business travel market product; the enhancement is offered with 2,500 new "super seats" installed on Jumbojets and TriStars.

The second large event of the year occurs officially on December 1 when the carrier, after six months of negotiation and review, officially purchases its next largest U.K. rival, **British Caledonian Airways, Ltd. (BCAL)** for \$450 million. The amalgamated airline will possess almost 200 aircraft and combine BA's 500,000-kilometer route network with the largely unduplicated 110,000-kilometer system flown by BCAL.

BCAL's launch order for 3 MD-11s with 6 options is cancelled. Weekend Concorde service is inaugurated on December 12 from London (LHR) to Barbados. A worldwide marketing agreement is announced with **United Airlines** late in the month.

Hidden during the year's events is the initial appointment of Coopers & Lybrand employee Barbara Cassani to a low-visibility project to study the possibility of selling airline tickets via television home shopping shows.

Passenger boardings accelerate 11.7% to 19,504,000, to which may be added 2.7 million additional bookings on British Air Tours. Cargo is up 13.2% to 1.41 billion FTKs. BA Group earns revenues of \$5.9 billion and with costs kept low, the operating profit is \$416 million and net gain reaches \$244 million.

The employee population grows by 17.6% in 1988 to 48,700 and the fleet comes to include 34 BAC 1-11-500s, 7 Concorde, 12 BAe (HS) 748-B2s (all assigned to the Highlands Division), 8 DC-10s, 50 B-737-236s, 16 B-747-136s, 24 B-747-236s, 32 B-757-236s, and 17 L-1011s. Orders remain outstanding for 6 B-757-236s, 19 B-747-436s, and 6 A320s.

CEO Marshall receives a knighthood from Queen Elizabeth II on January 1. Also in January, the new Club World and Club Europe business-class brands are introduced; this relaunch of the carrier's business-class product requires an expenditure of £25 million.

During takeoff from London (LHR) on January 29, 10 of the 22 tie bolts that hold the wheel halves of a Concorde together burst, with one of the bolts putting a 0.5" hole in the No. 7 fuel tank. The flight continues on to New York (JFK) where the incident is discovered.

The final B-747-236C, the *Salisbury*, arrives on February 24.

A new north terminal is opened at London (LGW) in early March, to which company services are transferred. The weekend Concorde service to Barbados ends in late March. At the same time the first A320-111, originally intended for BCAL, is delivered and is christened *Isle of Jersey*; three more (*Isle of Skye*, *Isle of Mull*, and *Isle of Scilly*) will be received by year's end.

Also in March, Speedbird Insurance, an in-house captive company based in Bermuda, is established as a wholly owned subsidiary with share capital, paid in full, of £10 million.

Integration of BCAL is completed on April 14 and BCAL Charters, Ltd. is combined with **British Air Tours, Ltd.** to form a new subsidiary, **Caledonian Airways, Ltd. (2)**. A320-111 services are inaugurated in April–May and new routes are launched to Seoul and San Diego. Also in May, a new WineCellar service is introduced aboard Concorde flights between the U.K. and U.S. Following a 16-year hiatus, daily service is inaugurated to Ankara in June via Istanbul.

Plastic restraints are issued to flight crews on July 2 with instructions that they be slapped onto the wrists of drunk or violent passengers who may pose a risk to others aboard company flights.

During the peak summer period, twice-weekly Concorde flights are operated over the same Dallas (DFW) to London via Washington, D.C. route once flown by **Braniff International Airways**. When the first SST arrives in Texas from London, it is given a king-sized cowboy hat that is held in place for a photo op, along with pilot Capt. David Leney, also sporting a hat.

During the peak summer period, twice-weekly Concorde flights are operated over the same Dallas (DFW) to London via Washington, D.C. route once flown by **Braniff International Airways**. When the first SST arrives in Texas from London, it is given a king-sized cowboy hat that is held in place for a photo op, along with pilot Capt. David Leney, also sporting a hat.

During the same month, Lord King announces a £120-million order for 8 BAe ATPs (later Jetstream 61s) for the Highlands Division. New orders worth \$1.7 billion are placed for 17 B-767-336s and 24 B-737s and an 11% shareholding is taken in Covia Partnership, owner of the **United Airlines** Apollo reservations system. A costly Air Miles promotional campaign is launched as is the Four Corners chain of travel shops.

In August, a code-sharing operation is begun with **United Airlines** under which the American carrier shares BA's designator on its domestic flights from Denver to the British flag line's Chicago (ORD) and Washington, D.C. (IAD) gateways.

When a local handling agent refuses the credit card of a B-737-236 captain at Madeira on September 3, the pilot is forced to borrow \$2,000 from his passengers to buy avgas; all are reimbursed when the plane touches down at London (LGW). A survey conducted by readers of *Business Traveler Magazine* reports in September that BA has replaced **Swissair, A.G.** as their choice for the world's No. 1 airline.

On October 26, a Japanese woman identified only as Mrs. Yamamoto is the lone passenger on the 353-seat B-747-236B Tokyo-London Flight 008. She was the only 1 of 191 passengers who did not take up BA's offer of a transfer to another flight when the original flight was delayed 20 hours.

Also in October, direct Dallas (DFW) to London (LGW) daily Concorde flights begin, and, as a result, the SST service to Dallas (DFW) via Washington, D.C. is suspended. As of October 30, smoking is banned on all flights within the U.K. In addition, between Halloween and December 28, the airline offers passengers originating in five U.S. gateway cities and flying Club Class service to London and beyond a hand-tailored shirt from Hilditch & Key.

Meanwhile, twice-weekly flights are introduced in November from London (LHR) to Madras. In December, twice-weekly L-1011-500 service is resumed from London (LHR) to Tehran and, for the winter season, low cost "short stay" three- to six-night package tours are offered from London to the U.S.

Customer bookings for the year climb a combined 10.8% for BA/Caledonian to 24,600,000. Freight, flown only by the parent, moves upward by 44.1% to 2.03 billion FTKs. Overall revenues advance 25.9% to \$7.44 billion and expenditures are low enough to allow a \$507-million operating profit and net income of \$274 million.

The payroll is increased by 4.6% in 1989 to 50,959 giving the carrier the largest airline workforce in Europe. In January, the company receives the 1988 "Passenger Service" award from *Air Transport World* magazine. Twice-weekly L-1011-500 service is initiated to Madras via Kuwait and weekly TriStar flights begin from London (LHR) to Baghdad via Cairo. In addition, B-747-236B service from London to Tokyo (NRT) is stepped up to 12 weekly flights: 6 nonstop, 4 one-stops via Anchorage, and 2 one-stops via Moscow. Late in the month, a three-year program is launched, including inclusive-tours, to promote travel to the state of Texas in conjunction with that state's tourism agency.

In February, the carrier and **American Airlines** settle a dispute over their computerized reservations systems. After American removes display bias from its SABRE system against interline flights, it is allowed to issue tickets for BA flights in the U.K. In addition, much to the dismay of competitors, the two begin sharing passenger-booking information generated via their systems. During the same month, the megacarrier begins a new marketing campaign aimed at increasing its market share on the Atlantic coast of South America.

In March, it is announced by CEO Marshall that the carrier's first-class service has been redesigned at a cost of \$40 million. The move is made to cash in on what the airline believes is a billion dollar market for such a product as well as to prevent customer erosion from first-class into Club Class. A third weekly London-Rio de Janeiro-São Paul, sus-

pended in August 1987, is resumed, while four Brazilian flight attendants are assigned to every U.K.-Brazil flight and a new South American Visitors' Service is introduced at the London ticket offices. On March 31, it is announced that 100 Americans, paying between \$39,000 and \$40,500, will join William F. Buckley Jr. the next day during a Concorde's attempts to set a speed record for an around-the-world tour.

A delay in the delivery of the first B-747-436s forces a revision in the summer operating schedules. During the first week of April, Chairman King and CEO Marshall share the second "Aerospace Laureate" award in the field of commercial air transport made by *Aviation Week and Space Technology*.

While climbing through FL440 en route from Christchurch to Sydney during its speed record attempt, the Buckley Concorde suffers the separation of a 9-ft. section of its upper rudder over the South Pacific. Aircraft handling is not affected and a normal approach and landing is made in Australia. No injuries are reported, but there is no record.

The corporation joins with **Brymon Airways, Ltd.** and **Maersk Air** to acquire **Birmingham Executive Airways, Ltd.** That new regional subsidiary is renamed **Birmingham European Airways, Ltd.** and its fleet is upgraded during the summer with aircraft leased from its parents. Meanwhile, in June, it is announced that, during the remainder of the year, 100 management positions (10% of the white-collar workforce) will be cut in an effort to save \$338 million.

The first Dash-436 Jumbojet, *City of Cardiff*, enters service in July. The other new aircraft type first acquired during the year is the BAe ATP. Four of the Advanced Turbo Props (*Stratblane*, *Strathallan*, *Strathconon*, and *Strathdon*), are assigned to the Highlands Division at Glasgow, while four (*Strathiam*, *Strathfilan*, *Strathnaver*, and *Strathpeffer*) are posted to Berlin for use on the carrier's internal German service.

Following the lead of **KLM (Royal Dutch Airlines, N.V.)**, and **Sabena Belgian World Airlines, S.A.**, BA in July seeks 20% shareholding in **Sabena World Airlines, S.A.**, a move questioned by many in the British government. The subsidiary of **Sabena Belgian World Airlines, S.A.** will establish a major Eurohub at Brussels. Late-saver summer discount fares of \$459 roundtrip from London to New York are also introduced during the month for travelers booking and paying for their flights two days before departure.

Enhanced Super Shuttle services are announced in August (effective September 1) for the flights scheduled between London (LHR) and Glasgow (14 per day), Belfast (7 per day), Edinburgh (11 per day), and Manchester (12 per day). Beginning in September, a series of improvements worth \$18 million will be introduced over the next year, including reservations, self-service ticketing and check-in, and hot meals. Two versions are available, one for business-class and one for savers, the latter including a range of promotional fares. The second two of 19 B-747-436s are delivered in September and are the subject of an elaborate welcoming ceremony.

In October, the carrier selects Gulf Aircraft Maintenance Company (GAMCO) of Abu Dhabi to provide modification, overhaul, repainting and other work on many of its Lockheed TriStars. During the same month, a heavily restricted U.K. Air Pass is offered to North American travelers who may employ it—once—to fly between London and any BA U.K. point for \$66 or between any other domestic sector for \$49. Stockholders approve a 15% investment in **United Airlines**, which is a takeover target. The bid is withdrawn when the British company's other partners fail to raise sufficient capital.

On November 21, a B-747-136, approaching London (LHR) from Bahrain in thick fog must abort its landing when it is discovered that the giant aircraft is outside the airport fence and nearly parallel to a highway crammed with commuter traffic. Taking evasive action, Capt. William Glen Stewart is able to initiate a climb and return for a successful landing on his second attempt.

Later in the month, the carrier joins with **United Airlines** to offer through check-in for passengers connecting on the two airlines' flights. Final agreement between the airline partners is reached in December for creation of **Sabena World Airlines, S.A.**

Not immediately noticed is the appointment during the year of Dr. Hugh Somerville to head what will become the airline's award-winning environmental section. Somerville sets to work on designing an Environmental Management System.

The company, including its **Caledonian Airways, Ltd.** subsidiary, watches as passenger boardings inch up only 0.4% on the year to 24,700,000. Freight does better, growing by 7.5% to 2.18 billion FTKs. Revenues ascend 3.8% to \$7.72 billion, expenses swell 2.4% to \$7.09 billion, and the operating profit grows to \$628 million. Net gain is elevated to \$348 million.

Employment decreases 0.6% in 1990 to 50,658, which is still sixth highest in the world and the largest airline workforce outside of the U.S. save **Aeroflot Soviet Airlines**. Again, save for the Russians, BA leads the non-American world in fleet size, with its 227 aircraft placing it in ninth place.

En route from London to Miami with 360 aboard on January 6, a B-747-436 is forced to make an unscheduled landing at Boston after an anonymous caller warns that a bomb will explode in-flight; no bomb is found.

Having stolen a jeep at Port of Spain, Trinidad, on January 14, an American tourist rams it into the side of a B-747-436 that is preparing for departure. Although the jeep is totaled, the wounded Yank climbs out, covers his wounds with grease, and throws himself into one of the Jumbojet's engines, killing himself in a most gruesome fashion.

London to Buenos Aires flights are resumed twice weekly in February; as diplomatic relations between Argentina and the U.K. do not exist, the services are operated under temporary agreements. A new bilateral agreement between the U.K. and U.S. causes company planners to examine the possibilities of new services and arrangements in America. Taking advantage of fifth freedom rights between the U.S. and Canada, the airline, later in the month, begins to offer daily roundtrips between Philadelphia and Montreal for U.S. skiers; the flights are part of a package at Quebec's Mont Tremblant ski resort.

With **United Airline's** access to London (LHR) under the pact, its comprehensive marketing alliance with BA ends. The carrier's first B-767-336ER, christened *City of Brussels*, is delivered in March, the same month in which the airline's marketing and operations departments are merged. Upon the resignation of Operations Director Peter Owen, Marketing Director Liam Strong is appointed to oversee both units. Also at month's end, daily roundtrip service is launched from London (LHR) to Newark, the carrier's 22nd North American gateway city.

As the result of delays in the upgrading of New Delhi's ILS, the company has suffered 18 days of delays during the recently completed winter season. This is lengthy enough to require the company to provide accommodations for 5,000 passengers, the cost of which wipes out all of the carrier's India route profits for the period.

The first direct service between Glasgow's Abbotsinch Airport and New York (JFK) is inaugurated in April.

Through a commercial alliance with **Air New Zealand, Ltd.**, the British carrier is able, beginning in May, to offer around-the-world daily services in both directions. Early in the month, Sir Keith Granville, the last chairman/CEO of **British Overseas Airways Corporation (BOAC)** and the first vice chairman of British Airways, Ltd. (2) dies at his Swiss home, Speedbird.

For the peak summer season, twice-daily flights are started between London and Chicago (ORD) on May 31, every day but Tuesday. Also in May and as a result of the carrier's initiative, the world's airlines, under IATA aegis, establish an Infrastructure Action Group at Geneva to work for the elimination of restraints that may hinder growth in the air transport industry.

Beginning on June 1, the company offers a special Concorde or first-class 6-day/5-night package, in conjunction with Abercrombie & Kent, between London and Kent for those who wish to watch Prince Charles' participation in summer polo matches. The same day, in a limited pact with **United Airlines**, a joint program is unveiled. This will allow BA passengers, through August 31, to fly Concorde at no extra cost when

connecting from selected **United Airlines** U.S. gateways, after having completed a first-class trip aboard a United aircraft over a U.S. domestic route. Also during the first week, the European Commission (EC) announces its objection to the creation of **Sabena World Airlines, S.A.**

Pilot Timothy Lancaster is partly sucked out of the cabin window onto the nosecone of his jetliner after its windshield blows out at 23,000 feet on June 10. He is saved by fellow crew who cling to his ankles for 15 minutes until the copilot is able to land safely in southern England. Lancaster, alive but suffering from shock, a fractured elbow, wrist, and thumb, plus frostbite, is rushed to hospital.

The second daily London to Chicago (ORD) Tuesday flight is added on June 27. Also in June, the company begins a \$135-million transfer of its Jumbojet engineering base from London (LHR) to the airport at Cardiff, in Wales.

The government clears BA's planned investment in **Sabena World Airlines, S.A.** on July 25, following an investigation that finds the 20% intended stake in the foreign airline will not operate against the public interest. During the month, however, the carrier and its other partners receive a statement of objections to the new entity from the European Commission, a move that dooms the new entity. Thrice-weekly service is inaugurated on August 3 between Glasgow and New York (JFK).

The next day the company reports that 367 passengers on its B-747-136 Jumbojet Flight 149 are being held hostage. A number of the hostages are French nationals who were in Kuwait Airport when Iraq invaded on August 2 and seized the BA airliner. They are released two weeks later.

Also in August, a second daily London-Boston service is offered. Late in the month, the carrier temporarily grounds its B-767-336ERs after engine-pylon cracks are discovered on several aircraft. Trials are completed aboard 3 Jumbojets and lead to a \$7.6-million order for 1,500 Fieldtech Hathrow, Ltd. first-class personal video screens.

Since the beginning of the month and continuing into September as plans are made for Operation Desert Shield, services are suspended to Riyadh, Dhahran, Jidda, Abu Dhabi, Muscat, Doha, Tel Aviv, Damascus, and Amman. Service to the Ivory Coast is also suspended, but for economic reasons.

Negotiations begin with **Aeroflot Soviet Airlines** on October 12 concerning the possible creation of a joint venture international airline to be known as **Air Russia**. An "alignment of service" agreement is signed with **MGM Grand Air** in early November. In the "ultimate in luxury travel," passengers are able to fly Concorde from London to New York and first-class DC-8 service on to Los Angeles; the \$3,966 fare includes an overnight stay at the Parc Fifty One Hotel in New York.

In December, five-times-per-week courier services are started between Birmingham and Milan. Also, the **Sabena World Airlines, S.A.** project is officially dropped.

Customer bookings rise 5.2% to 25,172,000 and, in terms of enplanements, the British carrier is now the world's 9th largest airline. On the other hand, the bottom falls out of the cargo business with a total of only 765 million FTKs.

The payroll is sliced another 1.3% in 1991 to 50,000 and the fleet now includes 230 aircraft. Portions of the lower rudder separate from a Concorde while it is en route from London (LHR) to New York (JFK) on January 4; the SST lands without incident.

Concorde service to Miami is suspended on January 13 and, the next day, citing the airport's poor security against terrorism, the carrier halts all cargo flights to Athens. During the week following the January 17 outbreak of war in the Mideast, passenger bookings decline by 13%, bringing on an announcement of pending cost-cutting measures.

Also in January, the airline begins a three-year program to replace its standard coach-economy-class service with upgraded World Traveler and Euro Traveler services. The company enters into the frequent flyer program of **Alaska Airlines** and merger negotiations are undertaken with **KLM Royal Dutch Airlines, N.V.** Meanwhile, the marketing and operations divisions are integrated into a single worldwide management system based on four geographical areas. To accomplish

this aim, an overseas structure is designed with responsibility for commercial and profit assigned to management teams operating in the four geographical areas; service delivery functions are consolidated as sales and marketing.

For three months, a package of Preferred Vacations, including a flat in London, is offered to BA passengers staying in the British capital for a week.

Responding to the fuel crisis and growing world recession, the carrier, during February, announces a decision to cut 4,600 positions—13% of the workforce—and place 2,000 other employees on half-pay for the next 10 months. In addition, delivery of 5 B-767-336ERs is delayed and major fare cuts are announced for the North Atlantic route.

As Iraq pulls out of Kuwait, its military forces on February 18 blow up the B-747-136 that had been captured the previous August 2 when the little country was invaded.

Later in the month it is announced that, effective March 24, the company's service between the U.K. and the Republic of Ireland will be halted after 44 years—the first major casualty of European airline deregulation.

Beginning during the second week of March, services are gradually resumed to those Middle East destinations suspended the previous fall; Riyadh and Dhahran are the first revisited.

In an effort to regain traffic lost during the Gulf War, the company, in mid-month, announces The World's Biggest Offer. The unique six-month campaign will be launched on April 23 when the flag carrier gives away every seat on its international services in and out of Heathrow and Gatwick Airports that day.

With the start of the summer schedule on March 24, the company not only stops its service to Ireland, but also halts Concorde service to Miami and regular service from London to Nassau, Bergen, and Amsterdam.

A marketing and code-sharing agreement is signed with **Aer Lingus Irish Airlines, Ltd.** in early April, linking the services of the two carriers at London. Aer Lingus will assume some of the carrier's cancelled service across the Irish Sea. Also during the month, the Air Miles Latitudes plan is announced giving free Air Miles to the carrier's frequent travelers. In a continuing effort to cut costs, unprofitable flights to Freetown, Karachi, and Banjul are eliminated.

In a 10-2 verdict on May 8, a jury at HM Crown Court in Isleworth convicts former Capt. William Glen Stewart guilty of negligent endangerment for his near crash-landing at London (LHR) in November 1989. Stewart is the first civil pilot in British history to be found a criminal in the pursuit of duties and the verdict will lead directly to his suicide 19 months later.

For three months beginning in June, roundtrip flights from London to Miami and Washington, D.C. become twice daily; the former route will be flown by Jumbojets and the latter by L-1011-500s. At the same time, the Miami sector of the Miami-Washington-London Concorde service is dropped for lack of interest. At the same time, unprofitable services are halted between London (LHR) and Nassau and Bergen and from London (LGW) to Amsterdam.

The airline's private shareholders are, in June, introduced to the low-cost Personal Equity Plan, based on privatization stocks, and to a similarly inexpensive postal share dealing service.

Plans are announced in early July for a 31% investment in a new **Air Russia**, to be established as a partnership with the Russian Federation, the Soviet Ministry of Civil Aviation, and **Aeroflot Soviet Airlines**. In mid-July, company representatives visit travel agencies throughout the Middle Atlantic states of the U.S. promoting the company's leisure product.

Also in July, a worldwide ban on the carriage of wild birds into the U.K. is imposed and the airline asks the British government to halt the issue of import permits for birds captured in the wild.

The "London on the Town" program is extended through the end of October. Flights to Tehran resume on July 21 and also in July and August American business travelers are offered a reduced roundtrip Concorde fare of \$6,999 for travel between London (LHR) and either New York or Washington.

Early in August, the company places a £4.3-billion order with Boeing and British Aerospace. Over the next several years, the carrier will receive 15 GE-powered B-777-236s, 24 Rolls Royce powered B-747-436s, and 11 turboprop ATPs. At the same time, the business of British Airways Engine Overhaul, Ltd. is sold to General Electric for £272 million.

Out of proper radio contact, a DC-10-30 en route to Chicago (ORD) from Toronto nearly collides with a **Midway Airlines** DC-9-10, which has been assigned a wrong radio frequency, seven miles above Cleveland, Ohio, on August 29. The Midway flight crew, which can no more communicate warning than its U.K. counterpart, is able to see the danger and take effective evasive action to save the 277 aboard both jetliners from a midair catastrophe.

On a less exciting note, the company, displeased with government plans to allow Heathrow slots to **Virgin Atlantic Airways, Ltd.**, halts at month's end the £40,000 per year political contribution that it had been making for two years to the Conservative Party.

During September, a new £7-million benefits package for Club Europe passengers is unveiled, including a new lounge—the largest in Europe—at London (LHR). Express parking at that airport, improved catering, and a new seat selection process are also part of the benefits.

The first 3 B-737-436s are delivered during October and are christened *River Ballinderry*, *River Bush*, and *River Aafric*.

In preparation for upcoming U.K. general elections, the airline, in November, issues a 40-page *Manifesto for Civil Aviation in the 1990s*, designed to acquaint politicians with the flag carrier's view of major issues facing the nation's airline industry. Later in the month, the company joins in discussions with **KLM (Royal Dutch Airlines, N.V.)** concerning future cooperation. In actuality, the dialogue, code-named Project Sahara, are full-flown merger negotiations designed to create a megacarrier capable of competing on more even terms with such U.S. giants as **United Airlines**.

The carrier also announces that its European customers will soon be able to enjoy the benefits of a \$12-million service upgrade, including enhanced catering and, at London (LHR), a new Club Europe Lounge, the largest airline lounge in Europe, and express parking service. It is also made known that lounges are being built or improved at Boston, Miami, LAX, and Washington, D.C. (IAD). Simultaneously, a new marketing agreement is signed with Marriott Hotels.

A Concorde aborts its landing less than 150 feet from the end of the runway at New York (JFK) on December 5 after the pilot of the SST sees a small lightplane in an unauthorized location ahead of him.

Recession and the Gulf crisis have a significant impact on traffic as passenger boardings slide 8.8% to 23,058,779 and cargo slips 2.5% to 2.26 billion FTKs. Revenues reach \$8.6 billion and allow major profits: \$478.5 million (operating) and \$427.5 million (net).

The number of employees is cut an additional 2% in 1992 to 49,000. Following agreement the previous November, SITA acquires BA's Fare-share passenger fares and itinerary pricing system on January 1. The company's third and largest reservation center is also opened during the month and features all-digital ACD technology from Aspect Telecommunications, Ltd. At the same time, a three-year plan to restore the profitability of operations from Gatwick Airport is announced.

The property maintenance branch is sold to Drake and Scull Technical Services, Ltd. in February. The Project Sahara discussions between BA and **KLM (Royal Dutch Airlines, N.V.)** concerning a possible merger of the two pioneers are abandoned in early March as the result of a dispute over how to divide anticipated profits between the two carriers.

At the same time, the two airlines go to court to recover the BFR 1 billion (\$30 million) each invested in the stillborn **Sabena World Airways, S.A.** enterprise.

Having reported engine trouble on its flight from London, a Concorde lands at New York on March 21 with a 5-ft. by 10-ft. section of its rudder sheared away.

Also in March, **Brymon Airways, Ltd.** begins flying between London (LCY) and Paris (CDG) under a BA flight number. Flights between Florida and the U.K. are increased at the end of the month when a second

daily Jumbojet frequency is launched from Miami to London (LHR) and a fourth weekly run is made between Orlando and London (LGW). The unprofitable Tampa-London via Bermuda DC-10-30 route is eliminated. Plans are announced now for the creation of a new company, **British Airways Regional, Ltd.**, to replace the company's uneconomical operations at Birmingham, Manchester, and in Scotland.

Company officials meet with counterparts from **Air France**, as well as British Aerospace, Aerospatiale, and U.K. and French government safety officials in Paris during April to find a fix for the Concorde rudder problem. During the month, the airline's 50% share in British Caledonian Flight Training is sold to Rediffusion Simulation.

With the carrier's post-World War II rights to provide internal German service ending, the British giant gains renewed entry into the German domestic market at month's end by purchasing 49% minority shareholding in the regional **Delta Air Regionalflug-verkehr, GmbH.**, based at Friedrichshafen.

By German law, majority ownership must remain in Germany and is thus held by a consortium of local banks. The new German subsidiary, under the name **Deutsche BA Luftfahrt-gesellschaft, GmbH.**, will maintain Delta's SAAB-340 network and operate B-737-300 services over BA's former Allied-grant routes. Delta's managing director, Richard Heideker, is named managing director of the new subsidiary. A comprehensive alliance is signed with the new German subsidiary; it calls for the major to provide worldwide marketing and sales representation and for cooperation between the two on engineering, purchasing, and information technology.

Accusing it of unfair practices, **Virgin Atlantic Airways, Ltd.** now files suit against the carrier.

On May 1, a frequent flyer program is introduced for U.S. passengers and is linked into BA's Executive Club program. The Brymon service is altered in May when the small carrier merges with **Birmingham European Airways, Ltd.** to become **Brymon European Airways, Ltd.** New routes are inaugurated to Bergamo, Entebbe, Jakarta, Leipzig, Kuala Lumpur, and Mexico. Lord King resigns in July, but agrees to remain as chairman for a year.

It is announced in August that the expanding British pioneer wishes to obtain a 44%, \$750-million stake in the American carrier **USAir** and, with assumption of significant control, thereby create the world's first global airline, with a global brand name, since the demise of **Pan American World Airways (I)**. The three largest American passenger carriers, **American Airlines**, **United Airlines**, and **Delta Air Lines**, joined by **Federal Express**, immediately protest the move to the U.S. DOT demanding greater traffic rights from the U.K..

On September 28 Paris agreement, the megacarrier takes a 49.4%, £17.2-million (\$30-million) interest in **TAT (Transport Aerien Transregional, S.A.)**, effective January 1; the deal also includes a conditional option allowing BA to secure the remaining 50.1% by April 1, 1997. Also in September, the company joins with Spafax Airline Network, Ltd. to form a new company, Spafax Passenger Electronic Entertainment Development, Ltd. (SPEED) to manage and improve the airline's communication and passenger entertainment services. The airline is now given an "A" grade or credit rating by the leading investor agencies Moody's and Standard and Poors.

At the same time, it is announced that, because of continuing protests by unionized cabin crews at Manchester and Birmingham, consideration is being given to the sale or closure of the new BA Regional (BAR) division. An accord with the attendants is reached in October, allowing the BAR emergence to continue. In October, the carrier's cargo business is renamed British Airways World Cargo and its first fully integrated global advertising campaign, "Feeling Good," is launched.

Meanwhile, BA and **Singapore Airlines, Ltd.** bid for 25% shareholding in **Qantas Airways (Pty.), Ltd.**, which is being privatized by the Australian government. Following its November acquisition of domestic rival **Australian Airlines (Pty.), Ltd.**, the quarter interest in Qantas is awarded to BA in early December. The British bid is worth £296 million (\$465 million) and allows the U.K. airline three seats on the Qantas board.

Simultaneously, the DOT rejects the **USAir** arrangement, forcing BA to withdraw its bid to the former **Allegheny Airlines** until completion of the forthcoming change in presidential administrations. A late but personal appeal from Prime Minister John Major to President George Bush cannot change the situation. An agreement is reached with the Russian government for the creation of a new joint venture airline, **Air Russia**, in which the British pioneer will hold a 31% interest.

When the charter carrier **Dan Air/Dan-Air Services, Ltd.** shuts its doors in December, CEO Marshall steps in to take over its parent, Davies & Newman Holdings, plc, which includes all of the airline's assets and principal European and domestic routes out of London (LGW). The cost is a symbolic £1 sterling. The former charter carrier becomes a part of BA Regional and responsibility for its integration is assigned to BA's Gatwick Airport General Manager Barbara Cassani. The former **Dan-Air/Dan-Air Services, Ltd.** headquarters at Newman House, near Gatwick Airport, are closed and the former charter operator's 12 B-737-2Q8s/-3Q8s are repainted in BA livery. Only 450 of Dan-Air's 2,000-employee staff is retained and these are subjected to a 10% pay cut.

During the same period, the megacarrier enters into negotiations with unions representing 1,000 ground workers and 250 cabin crew based at Gatwick in an effort to avert a strike.

A yearlong and well-publicized dirty tricks campaign against rival **Virgin Atlantic Airways, Ltd.** begins to bring very bad press.

During the year, the company becomes the organizing body and chief sponsor (\$150,000 per year expenditures) of the "Tourism for Tomorrow" award, which had been established by the U.K. Federation of Tour Operators and British Tour Authority two years earlier. By choosing the winners, BA gains exposure with the travel industry and with those members of the general public concerned with environmental affairs.

Customer bookings recover and climb 8.3% to 25,373,000 and freight rises 8.5% to 2.65 billion FTKs. Revenues increase 6.6% to \$6.39 billion and expenses are \$5.88 billion. The operating surplus is increased to \$495.8 million, but net profit slides to \$328.6 million.

In 1993, the workforce is 48,960, down a minor 0.1%. Wishing to see the New Year in twice, a group of 97 "Time Tunnelers" depart a party at Shannon, Ireland, for the U.S. aboard a chartered Concorde at 12:10 a.m. on January 1. They arrive at New York (JFK) at 11:21 p.m. on December 31 the previous day, in time for a second celebration. Their flight, incidentally, is the fastest west-east transatlantic crossing yet—2 hrs. 51 min.

A few days later, company officials are notified that they will receive the 1992 "Airline of the Year" award from *Air Transport World* magazine.

On January 11, the carrier agrees to settle an estimated \$3-million libel suit filed by **Virgin Atlantic Airways, Ltd.** Chairman Richard Branson by admitting that it made improper attempts to undermine its upstart rival; it will pay £610,000 (\$945,000) in damages and court costs. Following the inauguration of U.S. President Bill Clinton on January 20, BA is again able to approach **USAir**, now in significant financial trouble. This time, an initial \$300 million is paid up front for a new series of **USAir** convertible preferred stock (19.9% voting interest) and code-sharing rights to 38 U.S. cities. Provided the U.S. DOT approves and **USAir** remains financially viable, an option to invest a further \$450 million in two phases would later be implemented, giving the British 43.7% shareholding.

The arrangement with **Qantas Airways (Pty.), Ltd.** is further solidified during the month. Plans are unveiled for scheduling designed to allow interlining, the joining of frequent flyer programs (BA now abandons its arrangement with **Ansett Australia (Pty.), Ltd.**) and, wherever possible, reciprocal ground handling and joint cargo operations, financing, engineering, and capital equipment purchasing.

Consideration is also given to code-share or utilization of each other's aircraft, particularly B-747-400s. Late in the month, a marketing alliance is inked with **TAT (Transport Aerien Transregional, S.A.)**; under its terms, BA will act to provide worldwide marketing and sales representation and the two will cooperate on engineering, purchasing, and information technology.

After a public apology, the state line's chairman, Lord King, resigns on February 5, along with Public Relations Director David Burnside, the man most mentioned in connection with the **Virgin Atlantic Airways, Ltd.** affair. The senior management structure is reorganized to allow more influence for outside directors. King is succeeded as chairman by CEO Marshall with Sir Michael Angus as his deputy and Robert Ayling as group managing director. The former becomes more deeply involved in planning and corporate strategy while the latter assumes day to day operational responsibility. Lord King is now invited by the board to become the airline's first-ever president.

Also in February, a code-sharing agreement is signed with **Korean Airlines/Korean Air (KAL)** covering joint freight flights from London to Seoul via Anchorage.

Following clearance from the U.K. Secretary of State for Trade and Industry, the **Qantas Airways (Pty.), Ltd.** shareholding takes effect on March 10. Negotiations between the two big U.K. international airlines now bring a compensation offer of £9 million (\$12.6 million) from BA and a demand that **Virgin Atlantic Airways, Ltd.** pledge not to raise past disputes in future proceedings.

In order to avoid insult to the People's Republic of China, a new airline partner, British Asia Airways, Ltd., is created for trade with Taiwan. The B-747-436 *City of Perth* is seconded to the subsidiary wearing the basic BA livery with BAA titles.

The feud between BA and **Virgin Atlantic Airways, Ltd.** reignites on March 20. VAA's Chairman Branson turns down BA's compensation plan, refuses to take the BA pledge, and calls for special inspectors to be appointed, under the Companies Act, to learn the facts behind the dirty tricks campaign. Branson's request is enlarged by members of the opposition Labour Party into a demand for an investigation into BA's "fitness to operate"; however, the call is turned aside by U.K. Transport Secretary John MacGregor. The VAA chairman threatens to take the case to court in the U.S.

First officer Barbara Harmer becomes the first woman to copilot a commercial supersonic plane on March 25 aboard a Concorde flight from London (LHR) to New York (JFK).

Branson joins with Airbus Industrie Managing Director Jean Pierson in early April to announce, at BA's home base at Heathrow Airport, a £300-million (\$445-million) order for the lease-purchase of 4 A340-311s, certain components for which are manufactured in Britain. In light of the state carrier's decision to purchase the U.S.-made Boeing 777, the rival chairman delights in pointing out that Virgin will be the first U.K. airline to acquire the A340.

During the month, additional common shares are purchased in **USAir** sufficient to maintain its 24.6% holding in the American line's equity share capital on an undiluted basis.

Fast Track service is now introduced for premium passengers at Terminal 4, Heathrow Airport.

Also in April, the 10% pay cut imposed on the 450 employees retained from **Dan-Air/Dan-Air Services, Ltd.** is lifted. Simultaneously, new twice-weekly, one-stop roundtrips are inaugurated from London (LHR) to Taiwan via Hong Kong. The services are made possible as the result of an agreement between the company's new subsidiary, British Asia Airways, Ltd., and the Taipei-based private carrier **EVA Airways, Ltd.**

On May 1, the company announces that it will begin sharing flight codes with **USAir** in a move that will give the codes of both airlines on **USAir** domestic services that connect with BA's transatlantic flights. The first code-sharing flights with **USAir** are inaugurated from New York to Rochester, Syracuse, and Cleveland via Philadelphia. At the American carrier's annual meeting, the increased shareholding by the British line is approved by stockholders.

Currently chairman of the Thames Water Authority, former BA CEO/Deputy Chairman Sir Roy Watts dies in London on May 4.

Virgin Atlantic Airways, Ltd. files suit against BA at High Court, London, on May 6, contending that BA tapped into its computerized reservations system for information.

Effective May 10, the carrier announces that it is raising £442 million, net of expenses, by way of a Rights Issue on the basis of one new share of stock for every four ordinary shares held by stake owners; each new share is valued at 245 pence.

Also in May, the company joins with **Maersk Air, A.S.** of Denmark to implement a rescue package designed to secure the future of the U.K. regional **Brymon European Airways, Ltd.** as well as the jobs of 500 employees of its parent organization, The Plimsoll Line, Ltd. (TPL). Under the joint agreement, the two airlines will each inject £6 million pounds into TPL to enable it to meet its outstanding debts and restructure its three core subsidiaries. Meanwhile, Brymon Aviation and Plymouth City Airport will both become wholly owned subsidiaries of BA while BEA becomes a wholly owned subsidiary of **Maersk Air, A.S.**

Later in the month, the company integrates its frequent flyer program with that of **Qantas Airways (Pty.), Ltd.** on those routes where the Australian airline does not fly in competition, particularly the code-shared Auckland to Los Angeles service. It also introduces its Surespeed time-definite cargo service throughout the U.K. and raises approximately £442 million in a stock split.

Daily nonstop flights from London to Pittsburgh are inaugurated in June; a USAir B-767-201ER flies the wet-lease service wearing BA livery and staffed by **USAir** crews in BA uniforms. The carrier joins with the Chase Manhattan Bank on June 20 to issue joint Visa credit cards that will earn their users frequent flyer miles on international and domestic U.S. flights.

A B-747-436, en route from New York to London on June 26, is diverted to Bangor, Maine, when Clemens Markus Stumm suggests there might be a bomb aboard; after a search, no bomb is found and Stumm is arrested.

At month's end, a new £70-million, wholly owned subsidiary, British Airways Maintenance Cardiff, is opened at Cardiff-Wales Airport. The new facility initially employs 300 workers, with the prospect for an additional 700.

The quarrel with **Virgin Atlantic Airways, Ltd.** heats up again on July 12 when Richard Branson's upstart accuses BA of hindering competition by paying kickbacks to travel agents and corporate clients.

As a Concorde is landing at London (LHR) on July 15, one of its right-hand tires bursts due to brake seizure, with fragments penetrating the lower wing skin in two places. The aircraft is able to stop and, after emergency deplaning, damage is also detected to the No. 3 engine now stuck in the reverse position, where the landing gear strut door latch is found.

An arrangement, effective August 1, is reached with **CityFlyer Express, Ltd.** for the operation of "British Airways Express" flights from London (LGW); a full transfer will take effect the following spring.

CityFlyer is the first of several franchise partners that the major will recruit under a program that, in exchange for subsidy and other assistance, has an independent regional fly routes on BA's behalf with their aircraft painted in modified BA livery.

Together with **Maersk Air, A.S.**, the carrier, on August 1, completes a restructuring, begun in May, of The Plimsoll Line, Ltd. (TPL) in which it holds 49.9% equity. Under the plan, The Plimsoll Line and its subsidiaries, **Brymon Airways, Ltd.** and Plymouth City Airport, Ltd. become wholly owned BA subsidiaries, while **Birmingham European Airways, Ltd.** becomes a subsidiary of Maersk Air Holdings.

Also in August, it is announced that, as a result of the redeployment of aircraft and the airline's drive to improve levels of utilization under the Performance Improvement plan, the last 4 B-737-436s, due for delivery through December, will, upon receipt, be placed in storage pending disposal.

Later in the month, a higher level of cooperation is jointly announced with **Qantas Airways (Pty.), Ltd.**, including the introduction of seamless service on the 35 weekly Kangaroo route flights and on the Australian carrier's network of services between Australia, Singapore, and Bangkok.

On September 16, combination of the Covia Partnership and The Galileo Company, Ltd. into the Galileo International Partnership is

completed, with the British major taking a 14.65% stake. British Airways World Cargo joins with Chicago-based Airmax, also in September, to announce creation of a new overnight, roundtrip U.S.-U.K. freight service.

The company now announces the "British Airways Dream Ticket," a sales drive designed to earn £100 million in new business-class income. The first of the B-737-436s to be stored arrives during the month.

Daily flights commence on October 1 from London (LHR) to Thessaloniki, Greece, via Turin. Taxiing at London (LHR) on October 25, the left forward inboard tire of a Concorde bursts due to brake seizure. The aircraft is immediately halted and evacuated, after which pieces of the glass water deflector are found to have punctured the No. 1 fuel tank.

On October 21, **Virgin Atlantic Airways, Ltd.** files an antitrust suit against BA in Federal District Court, Manhattan, seeking \$325 million in damages. Chairman Branson admits he wishes to block BA's efforts to extend its alliance with **USAir**.

Twenty-years-old, the British Airways Band sponsors its first mini-music festival at London, also in October. At the same time, the company announces that it will operate three World War II commemorative tour packages, in association with Travellers International, Ltd., to Europe the next year. Service highlight of the month is the introduction of a second daily wet-lease B-767-201ER service to the U.S. with **USAir** equipment, this time to Baltimore (BWI).

Given the uncertain political situation in the former U.S.S.R., Chairman Sir Colin Marshall announces in November that the start-up of **Air Russia** is indefinitely delayed. Talks with **LOT Polish Airlines, S.A.** aimed at giving the megacARRIER additional frequencies into Warsaw break down in November and direct services between the two capitals are suspended. At the same time, BA joins with **Cathay Pacific Airlines (Pty.), Ltd.**, **Malaysia Airlines, Ltd. (MAS)**, and **Singapore Airlines, Ltd.** in the new Passages frequent flyer program.

Early in December, a new £23-million avionics facility is opened at Cardiff-Wales Airport, the airline's second major investment in South Wales this year. The new workshop is designed to handle over 130,000 avionics components a year.

Late in the year, a further alliance is entered into with **Aer Lingus Irish Airlines** under which BA will provide the Irish carrier with general sales agency in the U.K., connections to its flights to and from Dublin, and worldwide cargo cooperation. With European flights increased 22% in two years, the company, by year's end, is operating 350 flights a day within Europe.

Passenger boardings for the year shoot up 11% to 28,134,000 while cargo rises 13% to 2.9 billion FTKs. Revenues advance by 13.4% to \$7.15 billion while expenses increase only 11.9% to \$6.49 billion. A decade after its troubled period, BA now shows an operating surplus of \$748.8 million and a net gain of \$438.4 million.

Airline employment inches up 1.4% in 1994 to 49,628 and a new £23-million (\$35-million) avionics facility is opened in South Wales during January. Also in January, a third wet-lease service is opened between London (LGW) and the U.S.; a **USAir** B-767-201ER in BA livery is flown to Charlotte, North Carolina. Again, the flight is staffed by **USAir** crews, wearing BA uniforms and working to BA standards.

Faced with a U.S. government March 17 deadline on provision of additional access to London (LHR), the government's position in bilateral discussions with America are strengthened when BA, in early March, upon learning that **USAir** will lose more money this year than last, freezes further investment in the Pittsburgh-hubbed major. Despite the action, Chairman Marshall, in announcing it, stresses his long-term commitment to the partnership.

Its posturing concerning Heathrow access having been found to be of no avail, the U.S. DOT approves the carrier's code-sharing pact with **USAir** for another year, but refuses to act on the U.K. line's application to extend its pact to other U.S. destinations. Also during the month, the dispute with **LOT Polish Airlines, S.A.** is settled when both agree to allow the number of weekly flights from London to Warsaw to increase to nine. Prices to 50 destinations are cut by an average of one-third as the company introduces its short-term World Offers program.

In April, the flag carrier joins with tiny **Loganair, Ltd.** in a plan to protect jobs and uneconomical Scottish services; the commuter will become a franchise partner as a result of the pact. All of the company's engineering activities are placed into a separate profit center in April in an effort designed to reduce overall maintenance costs and expand third-party services and profits.

On May 13, BA acquires the remaining 49% stake in the customer-loyalty program, Air Miles Travel Promotions, Ltd. The number of weekly frequencies between London and Warsaw are increased from 9 to 12 on May 27.

Under terms of a European Commission ruling, the French are required to open Paris (ORY) to BA flights as of June 13. Chairman Marshall reacts angrily when they limit his carrier, and its **TAT European Airlines, S.A.** partner, to just four flights per day under their common flight designator.

To improve its service pattern to the Caribbean, seats from underutilized first-class sections aboard Jumbojets are reconfigured into the World Club cabin.

Also during the summer, a 10-day World War II commemorative tour is offered to the U.K. for the purpose of visiting air bases employed by the Allies.

Peter Shaw is appointed to the new post of head of World Alliances in September. In mid-month, a \$108.5 million package of Club Europe business-class improvements is announced, centering around installation of the adjustable-width seats made by North Carolina-based Burns Aerospace Corporation and an advertising and promotional campaign.

The Scottish carrier **Loganair, Ltd.** commences "British Airways Express" services in July; its aircraft wear modified BA colors.

During August, BA and **Qantas Airways (Pty.), Ltd.** announce a greater level of cooperation on services between Europe and Australasia, including coordinated scheduling, sales, and marketing on their 35 weekly services over The Kangaroo Route. Kenneth Walker is appointed secretary/legal director on September 1.

In early fall, a nine-day World War II commemorative tour brings veterans and history buffs to Europe to visit the areas contested during the Battle of the Bulge. In October, the third round-the-world Concorde charter is flown. Originating at Gatwick Airport, London, daily B-737-436 roundtrip flights commence on October 23 to Rome via Paris.

Also in October, the company joins with several other European airlines to challenge in the European Court the European Commission's July approval of a FFr 20-billion state-aid package to **Air France**.

Manx Airlines (Europe), Ltd., a subsidiary of Manx Airlines Holdings, Ltd., which also operates **Manx Airlines, Ltd.**, signs a BA franchise agreement that will come into effect on January 9.

Beginning on November 1 and continuing for the next two months, Club World business-class and World Traveler economy-class services are gradually introduced on certain routes of BA's code-sharing partner, **USAir**. Under the airlines' global alliance licensing agreement, the two different services are available on BA/USAir flights from Charlotte to Frankfurt, Pittsburgh to Frankfurt, and Philadelphia to Paris.

Also in November, BA and **Qantas Airways (Pty.), Ltd.** petition the Australian Trades and Practices Commission for a reconsideration of its draft decision to withhold approval for the two airlines to enter into a joint services agreement on The Kangaroo Route.

It is announced on December 1 that, effective February 1, 49%-owned **GB Airways, Ltd.** will become the sixth BA franchise or regional carrier; its aircraft will be painted in a modified BA livery and the company will share the BA reservations system designator.

Concorde service between London and Washington (IAD) ends on December 4, with the available aircraft employed to increase SST charter flights from New York (JFK); a connecting service from Washington to New York is offered for those wishing to fly Concorde from the northern point. Meanwhile, capacity on the twice-daily subsonic service between the U.S. and British capitals is raised from a Jumbojet and B-767-336 to two Jumbojets.

On December 5, service to Beirut, suspended since 1983, is resumed, while the company also returns to Amman, Jordan, after an absence of four-and-a-half years.

One of the company's 7 Concorde is now based at New York (JFK) and begins a series of 12 weekly 2 hr. 10 min. charters on December 12 to Bridgetown, Barbados. At the same time, officials begin to plan for the inauguration of new services the following summer to Baku, Tampa, San Juan, Nassau, Grand Cayman, and Damascus.

Two days later, on December 14, the carrier announces the sale, effective March 31, of its charter subsidiary, **Caledonian Airways, Ltd.**, and its 5 L-1011s, to the travel concern Inspirations, plc, for \$7.65 million in cash and \$18.27 million in debt assumption.

Late in the month, the Australian Trade Practices Commission provisionally vetoes the billion-dollar revenue sharing plan with **Qantas Airways (Pty.), Ltd.**, especially noting its refusal to approve joint services over The Kangaroo Route. Both the British and Australian lines ask the TPC to reconsider.

To celebrate the 12 days of Christmas, a B-737-236A is painted and flown in a festive holiday livery designed by British school children.

Overall, passenger boardings jump 7.3% to 30,342,352 while freight rises 13.1% to 3.13 billion FTKs. In both passenger and cargo traffic, BA now ranks as the 9th largest airline in the world. With 24 million passengers—6.5 million more than its nearest rival—the airline is the world largest international passenger carrier; it is the 7th largest international cargo airline and the only airline in IATA's top 10 cargo airlines without a dedicated freighter fleet.

Revenues swell 9.3% to \$8.44 billion, while expenses grow only 6.8% to \$7.5 billion. As a result, there are increased profits: \$939.2 million (operating) and \$478.4 million (net). As the company continues to come out of the toughest recession in aviation history, its profits will exceed a billion dollars the following year.

The number of employees is reduced 3.3% in 1995 to 48,000. On January 3 in New York City, Federal District Judge Miriam Goldman Cedarbaum refuses to block the **Virgin Atlantic Airways, Ltd.** lawsuit that charges BA with monopolizing air routes between the U.K. and U.S. Noting that part of the suit charges that American laws have been broken, she also rejects BA's contention that the dispute is between the two British carriers and should not be heard in a U.S. court.

Also in early January, BA suspends flights from Birmingham to New York. The carrier had wanted to introduce smaller aircraft, but is caught in a dispute with employees over staffing levels.

The first B-777-236 powered by a GE90 engine, for which BA is launch customer, makes its maiden flight from Paine Field in Everett, Washington, on February 2. The company has 15 on order with the first scheduled for delivery in the fall.

On February 21, company officials announce the launch of scheduled service from London (LHR) to Baku in Azerbaijan.

A controller at Chicago (ORD) accidentally guides a departing company Jumbojet onto a collision course with a **United Airlines** DC-10-10 on February 25. Although the error is quickly discovered and the Douglas is advised to climb, the 2 wide-bodies, with 507 people aboard, miss one another by just 300 feet.

After a 12-year absence and under a new bilateral with Lebanon, the company resumes service to Beirut on February 27 with two weekly B-767-336ER flights which continue on to Amman.

Also in February, **GB Airways, Ltd.** becomes a BA franchise partner. The Gibraltar-based airline paints its aircraft in modified BA livery and operates flights on behalf of its partner to Spain and North Africa. The arrangement also calls for joint engineering, maintenance, frequent flyer plan, passenger handling, marketing, freight cooperation, and freight.

Caledonian Airways, Ltd., the new name for the former BA charter division sold to Inspirations, PLC, the previous December, undertakes replacement scheduled flights for its onetime parent, beginning on March 1, between London (LGW) and Tampa, San Juan, Grand Cayman, and Nassau. As the summer season gets underway a month later, 2 DC-10-30s and 3 B-757-236s are chartered to **Caledonian Airways, Ltd.**

A near-miss is registered over St. Anthony, Newfoundland, on March 8, when Flight 49, a **Delta Air Lines** L-1011 TriStar 1 en route to Cincinnati from Europe, comes within 1,800 ft. above and one mile south of the company's Flight 92X, a B-747-436 eastbound to London. The required separation is 2,000 vertical feet; the error is laid to Canadian air traffic control.

On March 26, a new code-sharing connection service is inaugurated with **Qantas Airways (Pty.), Ltd.** Passengers on any of the thrice-weekly London (LHR) to Los Angeles services are able to transfer to a Qantas Jumbojet for nonstop service on to Auckland. The new route takes three hours off the twice-weekly frequencies to New Zealand offered by BA over a route east from London.

The official turnover of the last **Caledonian Airways, Ltd.** assets to Inspirations occurs on March 31. The sale generates a £10-million profit. Also on this date, the company restructures its leases with the British Airport Authority, gaining security of tenure for its core 244 acres at Heathrow Airport for the next 150 years.

The company's new summer schedule begins on April 1 and features, as it does every year, new routes and frequencies. Markets entered initially or restarted after long absence include Damascus, Baku, and Azerbaijan. The new frequency from Heathrow to Baku via Moscow is the first company service beyond the Russian capital into the CIS.

At the same time, new daily nonstop return flights to Moscow from London (LGW) complement the nine daily nonstop roundtrips to Moscow already being flown from London (LHR). The number of flights from London to Miami is doubled as a B-747 from Gatwick joins the Jumbojet that flies to Miami from Heathrow. When coupled with the **Caledonian Airways, Ltd.** replacement services, BA offers more flights into South Florida from Europe than any other foreign operator.

Further north, a B-747 frequency replaces that flown by a B-767 from London to both Boston and Washington, D.C. (IAD), with both routes now enjoying two daily nonstop Jumbojet return flights. At the same time, B-747s are placed on all eight daily nonstop roundtrips from London into the New York/Newark area; these are offered in addition to two daily Concorde premium services from London into New York (JFK).

It is announced in London on April 6 that one of the several lawsuits with **Virgin Atlantic Airways, Ltd.** has been settled out of court.

During May, BA announces that it must take a \$200-million write-down to reflect the decline in value of its 24.6% stake in **USAir**.

The Australian Trade Practices Commission reverses its December decision during the third week of May and gives the carrier and **Qantas Airways (Pty.), Ltd.** permission to cease price competition on The Kangaroo Route from Australia to London. It also undertakes arrangements during the month with **Sempati Air** for connecting flights in Indonesia.

Services discontinued to Damascus, Amman, and Beirut long ago are resumed on June 1 in competition with the new **British Mediterranean Airways, Ltd.** New frequencies are also offered from London to Ho Chi Minh City.

Also during the month, the Civil Aviation Authority files a complaint that the carrier is overcharging business-class passengers on flights from London (LHR) to Madrid, Milan, and Munich.

At the same time, the U.K. and U.S. governments reach agreement on a new "mini-deal" annex to the Bermuda 1 bilateral air service pact; the DOT approves applications to add another 57 code-share points to the 65 already in place.

Meanwhile, BA announces that, during the following spring, it will transfer 11 weekly Central and East African services to Gatwick Airport, freeing up additional slots and terminal capacity at Heathrow Airport for the initiation of more intercontinental flights.

On August 1, the World Offers low-fare program introduced 18 months earlier is expanded; discounted holidays, hotels, and ground transport are added to a previous all-air program. Plans are made to transfer early in the new year 11 weekly flights from Heathrow Airport to Gatwick Airport; destinations affected will include Lusaka, Entebbe, Nairobi, Dar es Salaam, Harare, and Lilongwe.

Following an August 11 incident with a blade in one of its GE90 engines, the B-777-236 being test flown in company livery is forced to stand-down following another engine problem on August 18.

During the month and into the fall, BA begins its first flight crew recruitment campaign in five years. Especially sought are women and minority candidates and advertisements are placed in women's magazines and ethnic publications. Two hundred cadets are needed and will be trained not only at England's Oxford Air Training School and Cabair College of Air Training, but at the Australian Aviation College as well.

In an effort to obtain more income from the premium-priced business travel market, BA announces on September 18 a three-year £500-million improvement program for its Club World long-haul flights to the U.S. and Asia. The company's Jumbojets and DC-10-30s devoted to those services will be innovatively redesigned to feature first-class sections with individual semi-enclosed compartments with armchairs that can be converted into beds.

Due to GE90 engine problems, the September 29 delivery date for the company's first B-777-236 must be delayed. Also in September, two joint freighter services are inaugurated with **Singapore Airlines, Ltd.** between the U.K. and Singapore.

The number of dual-designator U.S. cities flown in partnership with **USAir** reaches 62 in September with the addition of 10 more communities in New Hampshire, Georgia, Florida, Georgia, Alabama, Indiana, Missouri, and South Carolina. At the same time, a specialized information management system is moved to the **USAir** computer center at Winston-Salem, North Carolina.

At the end of the month, the U.K. government rejects the CAA complaint, filed in June, concerning the airline's business-class fares to cities in Spain and Germany. At the same time, BA opens a new £6.5-million (\$9.7-million) maintenance hangar in Manchester.

On October 2, **USAir** admits that it is holding merger talks with the parent companies of **United Airlines** and **American Airlines**. The next day, the former state-owned airline announces that its is reevaluating its alliances in North America in light of the **USAir** announcement.

During the third week of the month, the carrier introduces its Executive TravelWorks product that allows potential customers to review schedules and make reservations via the Internet.

Under the May TPC ruling, the British major and **Qantas Airways (Pty.), Ltd.** are able to launch code-sharing and joint operations in October over The Kangaroo Route from London to Sydney at the beginning of Australia's tourist season on October 29.

Also during the month, the company cosponsors, with the Drusillas Children's Zoo in Alfriston, England, the International Children's Conference on the Environment. Some 750 children from around the world attend and at the end of the meeting, BA flies two young representatives to New York to present their group's 26-point charter to the director of the UN Environmental Program, Elizabeth Dowdeswell.

A French court, on November 8, orders the UK airline to pay cash damages to 61 passengers who were held hostage by Iraqi soldiers for up to three months following the destruction of their B-747 on the ground at Kuwait City Airport when Iraq invaded the emirate in August 1990. It had been alleged that the British major had made an unscheduled stop to drop off a commando unit. Each plaintiff held for 30 days is to receive \$80,000 and each held the full three months is awarded \$120,000. BA appeals the decision.

The first GE90-powered B-777-236 enters service later in the month over a route from London (LHR) to Dubai and Muscat.

In early December, the tail of the B-747-436 *City of Litchfield* is given special artwork to be worn for a month in celebration of the U.K. National Children's Conference.

Also in December, the DC-10-30 *Loch Torridon*, which is out on lease to **Caledonian Airways, Ltd. (2)**, is recalled in anticipation of the additional capacity required for the next summer season. Chairman-designate Ayling announces his new executive team, located after a wide-ranging consultation exercise.

During the year, the carrier's six commuter partners transport a combined 3.4 million passengers to 80 destinations with a fleet of 76 aircraft. They also generate over £50 million (\$77.7 million) in service fees and feed revenues for BA and more than justify the "British Airways Express" franchise concept.

Passenger boardings move ahead by 3.5% to 31,716,000 while freight rises 4.2% to 3.1 billion FTKs. During the first nine months of the financial year through December 31, the company's revenues are up 7.2% to \$9.18 billion, with expenses rising 6.1% to \$8.13 billion. Operating gain is up to \$1.04 billion and a net profit of \$637.05 million is posted.

Airline employment stands at 55,295 in 1996, a 4.2% increase. Included in this number are 1,000 personnel hired to help the company continue its expansion of activities at Gatwick Airport. At the beginning of the year, Robert Ayling succeeds Sir Colin Marshall as CEO, with Marshall elevated to the position of nonexecutive chairman.

A major winter storm cripples airline operations on the U.S. East Coast between January 7 and 11. On the first day of the weather crisis, the carrier is forced to divert seven flights inbound to New York (JFK), Washington (IAD), and Philadelphia to Detroit (DTT), Montreal (YUL), Bangor, Boston, and Chicago (ORD). Concorde service is cancelled all five days and another 16 frequencies into the Northeast are scrubbed on January 8 and 9.

BA announces on January 19 that it will not exercise two options to buy another \$450-million worth of preference shares in **USAir Group**. At month's end, a request is placed with aircraft manufacturers for bids on a proposed \$1-billion order for regional jetliners.

During the month, the carrier receives the 1995 "Public Relations Award" from *Air Transport World* magazine.

In February, Gillian MacIntosh Hernandez of New York City is accused by BA security personnel of abandoning a newborn in a trash can in a bathroom near her departure gate at Heathrow Airport in London. The lady and a detained friend are black while the baby is white, a fact initially overlooked by the arresting officers. After the two women are freed and return to the U.S., they hire a lawyer and file a \$10-million defamation suit for emotional distress in Federal District Court in Manhattan.

The twentieth anniversary of Concorde service is celebrated on January 21. Since the first flight between London and Bahrain, over 42,000 flights (120,000 hours) have been completed by the company's 7 SSTs. Plans are made to operate the supersonic planes through 2010.

Two more B-777-236s are now received and are employed for crew training on services from London (LHR) to Paris (CDG).

In remarks made during the first week of March that will come back to haunt them, company officials, led by CEO Ayling, strongly criticize the request made by **United Airlines** and **Deutsche Lufthansa, A.G.** for U.S. antitrust immunity for their strategic alliance. Also during the month, east and central Africa services begin hubbing out of Gatwick Airport.

On March 12, **Virgin Atlantic Airways, Ltd.** agrees to settle its remaining legal dispute with BA over allegations of dirty tricks and will pay \$607,800 in court costs to BA for the subsequent case in which Virgin had claimed \$44 million in damages for reported misuse of computerized passenger data.

As the result of recent BA announcements concerning its European expansion, speculation begins anew in late winter concerning the possible merger of the British airline with the Dutch pioneer **KLM (Royal Dutch Airlines, N.V.)**. On March 20, KLM stock rises more than 3% as speculators guess—wrongly, as it turns out—that a deal between the two companies is imminent.

A 10-year, \$2.3-billion repair contract is signed with GE Aircraft Engine Services on March 24. Roundtrip service is inaugurated four times per day on March 31 between London (LGW) and Edinburgh and thrice-daily roundtrips are also undertaken from the same airport to Stockholm and Zurich.

With crew training completed, the two newest B-777-236s are withdrawn from Paris service at the end of the first quarter and are

now dispatched on frequencies from London to Cairo and from London to Riyadh and Jeddah in Saudi Arabia.

A new code-sharing alliance is formed with **America West Airlines** on April 18; it will link AWA's network of U.S. routes with BA's new transatlantic service to Phoenix. The two airlines also agree on reciprocal frequent flyer programs.

Beginning on April 28 and continuing for the next three months, all British Airways flights out of Britain offer New Zealand apples to first-class passengers. The fruit is specially flown to the U.K. for the promotion.

The London-based airline confirms on April 29 that it is shelving plans to purchase over \$1 billion-worth of regional jetliners (60 aircraft) from 5 manufacturers because it has failed to trim sufficient costs from its short-haul business.

Additional bans on smoking are instituted on May 1. The routes to the U.S. and Caribbean as well as the twice-weekly London-Madras-Singapore route are affected. Indeed, as a rule, smoking is now only permitted on those long-haul routes where more than one daily roundtrip is offered. The January request for regional airliner bids is suspended during the first week of May.

A partnership involving reciprocal frequent flyer programs and code-sharing on selected routes is entered into with **Canadian Airlines International, Ltd.** on May 20.

When the company announces a new plan on May 20 to cut out \$1.52 billion in costs over the next three years, the local British Air Line Pilots Association (BALPA) chapter, which has recently rejected a 3.6% pay increase, threatens to strike. As maneuvers continue by both sides on the labor front, it is reported in the press on May 23 that BA has under active consideration the purchase of a \$100-million, 15% stake in the Spanish airline **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**. Although the pilot strike does not occur, the threat will cost the company £25 million.

Also in May, the airline introduces new print advertisements for business-class "cradle-seating" which fail badly. Harsh criticism is heard from some consumers who object to the depiction of a young mother cradling a baby, whose face has been covered with that of a businessman's head.

Thrice-daily roundtrips commence on June 2 between London (LGW) and Zurich.

In a move that will remain controversial for years, the company signs a comprehensive marketing agreement with **American Airlines** on June 11. The two profitable giants will enjoy a route network stretching from North and South America to Europe and Asia and anticipate winning government approval. AA Chairman Robert L. Crandall notes, however, that his carrier will not cede its slots at London (LHR) to gain that approval.

Unnoticed in the publicity surrounding the AA arrangement, the BA alliance with **Canadian Airlines International, Ltd.** takes effect on June 15. In addition to linking the two carriers' frequent flyer programs, the pact provides for code-sharing on CAI flights from Calgary to London (LHR) and to and between Montreal, Calgary, and Vancouver.

British regulators begin the long-running approval debate on June 21 when they find the linkage plan between BA and AA constitutes a merger, which requires further scrutiny. At this point, BA announces that it will switch its Latin American services from Heathrow Airport to Gatwick Airport in mid-March.

Daily dual-designator flights between **Virgin Atlantic Airways, Ltd.** and **Delta Air Lines** are inaugurated on June 26 between London (LHR) and Washington, D.C. (IAD). The American major purchases blocked seats upon the British line's flights to its eighth U.S. gateway city. A340-311s perform the service Monday through Thursday and Saturday while B-747-238Bs take over on Fridays and Sundays.

The inaugural flight brings VAA Chairman Richard Branson to Washington, where he spends a week lobbying U.S. lawmakers against the proposed strategic alliance of BA and **American Airlines**. Spectators at Dulles are surprised when the A340-311 taxis up to the gate wearing the slogan "No Way BA-AA" boldly painted on its fuselage. The air-

craft, however, is only the first indication that Virgin has opened a multimillion campaign in the U.S. to block the pact between its British rival and the U.S. major.

Also in June, the carrier signs a nonequity-transfer franchise agreement with **Comair (Commercial Airways [Pty.], Ltd.)**. Under the arrangement, the South African regional's fleet is repainted in the colors of the U.K.-based major, which will also cooperate in sales and marketing and make its frequent flyer program available to Comair passengers.

The number of U.S. gateways served grows to 21 on July 1 as the company begins daily DC-10-30 nonstops in cooperation with **America West Airlines** from London (LGW) to Phoenix, with continuing service to San Diego. Additional frequencies are added on routes from the British capital to New York, Tampa, Washington, D.C., Atlanta, and San Francisco. During the first week of July, **Virgin Atlantic Airways, Ltd.** code-sharing partner **Delta Air Lines** joins in the VAA lobbying effort against the BA-AA alliance.

The U.S. Justice Department begins an antimonopoly probe of the BA-AA alliance on July 8 and seeks information from **Virgin Atlantic Airways, Ltd.**, which opposes the merger, concerning its 1993 antitrust suit against the former British state carrier. Meanwhile, members of the local BALPA chapter, displeased with the company's pay increase proposals, threaten to strike.

On July 10, BA suspends its outstanding aircraft orders with Boeing, while simultaneously raising its pay offer and making other concessions to the pilots. Satisfied, the pilots call off their plans for a job action the next day.

After six months, the company has completed a major shift to Gatwick Airport from Heathrow Airport; the fleet stationed at London's second airport is increased by 4 B-747s, 3 B-737s, and 5 B-767s. As many short-haul flights are now mounted from Gatwick as from Heathrow.

Formal negotiations between the U.S. and U.K. governments concerning a new bilateral air service agreement, cut off earlier, resume on July 24. They will end almost immediately without a compact.

On July 30, **USAir Group** files suit in Federal court against BA over its marketing partner's new alliance with **American Airlines**; the brief charges antitrust violations and breach of contract and fiduciary duty on the part of BA. While the main runway at Stuttgart Airport is closed for repairs between July 31 and October 4, a BAe 146-200 is chartered from **Flightline, Ltd.** and employed to replace the major's four normal daily B-737 services to the German airport from London.

On August 1, **Sun Air of Scandinavia, A.S.** becomes a franchise partner of **British Airways, Ltd. (2)**. Sun Air is the first BA franchise carrier from outside the U.K. to begin operations; the British major does not take equity, preferring to leave the Danish carrier an independent airline. The new partner's fleet includes 9 J-31s and 7 J-41s that are repainted in "British Airways Express" livery.

The same day, "E-Ticket" electronic ticketing is introduced on the company's service from Gatwick Airport to Aberdeen; the trial, if successful, will lead to the introduction of ticketless travel over the carrier's entire domestic network by the following spring.

The defamation lawsuit with Gillian MacIntosh Hernandez is settled out-of-court on August 2 for an undisclosed amount. Negotiations aimed at recruiting **British Mediterranean Airways, Ltd.** as a franchise partner begin. Permission is now received from the European Commission for the acquisition of majority control in **TAT European Airlines, S.A.**

Also in August, BA announces that in two months it will withdraw from its unprofitable Scottish internal services, including six routes serving Orkney, Shetland, and the Western Islands. Airlines of Britain, plc. subsidiary British Regional Airlines (Holdings) in September changes the name of **Manx Airlines (Europe), Ltd.** to **British Regional Airlines, Ltd.** Plans are announced for the new BRA, which is based at Ronaldsway Airport on the Isle of Man, to take over the previous **British Airways Regional, Ltd.** services at the end of October as a BA franchise partner.

Under terms of this agreement, BRA will enjoy all of the benefits of franchise partnership, including dual-designator flights, reservations

system, frequent flyer linkage, and passenger and airport services. Meanwhile, **Loganair, Ltd.** operations are incorporated into **BRA. Manx Airlines, Ltd. (2)** continues separate operations.

On August 28, having lost millions on its Mideast services since the end of the Gulf War—especially on the routes started the previous year—BA announces that it will turn over its routes in Syria, Lebanon, and Jordan to BMA and withdraw from Amman, Beirut, and Damascus on October 26.

Company executives on September 9 deny a press report that the carrier plans to cut 10,000 positions; they do, however, admit that further cost cutting will be necessary in order for BA to remain competitive. Just nine days later, CEO Ayling, in meetings with senior managers and union leaders, announces that a new streamlining program will be put in place over the next four years designed to achieve £1 billion in savings. Although a number of points are covered, it is the leader's contention that 5,000 jobs in Britain will end as part of the \$1.56-billion reorganization that draws the most attention. Even though it is hoped that most of the lay offs will be voluntary, the figure represents approximately 10% of the company's entire workforce.

At this point, the contract handling unit, which has carried out ground handling for other airlines at Heathrow Airport, but has suffered consistent losses the past several years, is closed down.

At the Farnborough Air Show during the month, BA announces that it is placing an order for 3 more B-777s, 4 additional B-747-400s, and a further 3 B-757-200s. It is also noted that delivery schedules for 10 B-747-400s will be advanced in order to allow earlier retirement of B-747-100s.

Financially troubled **Air Liberte, S.A.** is placed into receivership on September 26 and its chartered Douglas wide-bodies are returned to Finland. Given six months by the French bankruptcy court at Creteil to develop a workable reorganization plan, its chairman promises to write a recovery program by the end of October, at which time \$120-million fiscal year losses must be reported.

On a lighter note, the company now places a multimillion pound order with the French Remy-Cointreau Group for a two-year supply of champagne; the request is for 84,000 cases, which equals over one million bottles or enough to fill an Olympic-sized swimming pool.

Comair (Commercial Airways [Pty.], Ltd.) begins to feed franchise passengers to BA from its domestic South African routes on October 1. The carrier now becomes launch customer for the Honeywell TCAS 2000 system. The avionics suit will be installed on all of the company's A320s and Boeing 737/757s.

Virgin Atlantic Airways, Ltd., beginning on October 3, becomes the first U.K. airline to break the **BA-South African Airways (Pty.), Ltd.** monopoly on services between London and Johannesburg.

Following further exploration into the finances of **Air Liberte, S.A.** during the first week of October, the bankruptcy court determines that its fiscal situation is worse than was originally reported. Even though a number of unprofitable routes are now cut, the Creteil court announces that it must have outside acquisition bids by October 14 in order to avoid ordering the company liquidated.

Suitors for the stricken airline begin to emerge late in the week. With pressure to keep it in French hands and its unions seeking acquisition, **Air France** expresses interest. Under EC restrictions against acquisition of other carriers during the time of its \$4-billion state bailout, it appears unlikely that the independent will be placed under the major's umbrella.

Other companies showing an interest include **AOM French Airlines, S.A.**, which has been seeking a merger, along with **British Airways, Ltd. (2)**, **Virgin Express-Eurobelgium Airlines, Ltd.**, **TAT European Airlines, S.A.**, and **Corsair, S.A.**, the in-house airline of France's largest tour operator, **Nouvelles Frontieres**. Seeking to protect the interest of its TAT subsidiary, BA CEO Robert Ayling complains to the European Commission that AOM should not be allowed to seek ownership. He points out that it, too, is up for sale as the result restructuring plans announced in the wake of a 1995 state aid package to its parent, **Credit Lyonnais**.

On October 7, a memorandum of understanding, effective in November, is signed between BA's German subsidiary **Deutsche BA Luftfahrtgesellschaft, GmbH.** and **Regional Airlines, S.A.** for the sale of its turboprop international and domestic operations originating from Bremen, Stuttgart, and Friedrichshafen to the French company.

With **AOM French Airlines, S.A.** and **Air France** out of the picture, two airlines, **Nouvelles Frontiers**, and a group of private investors submit offerings for **Air Liberte, S.A.** to the Creteil Court on October 14.

The weakest offering is made by an unnamed French pilot acting on behalf of a group of private investors; no details are provided. **Virgin Express-Eurobelgium Airlines, Ltd.**'s offering, for which details are also not provided, is not, as company officials put it, "fully compliant with the court's requirements."

Nouvelles Frontiers notes that it has partners in the Rivaud Bank and **Royal Air Maroc** who would be willing to take over **Air Liberte, S.A.** (including its \$300-million debt) and make it profitable within 18 months. It would also make an offer to acquire **AOM French Airlines, S.A.** The two independents would be merged with its own in-house carrier, **Corsair, S.A.**, to create a major independent airline which could then compete with **Air France**.

Working together, **British Airways, Ltd. (2)** and **TAT European Airlines, S.A.** agree on a three-year plan for **Air Liberte, S.A.** TAT Chairman/CEO Marc Rochet is asked to manage the offer on behalf of the British major.

In addition to an initial payment of \$5 million for AL's assets, the BA/TAT plan would essentially retain the present **Air Liberte, S.A.** fleet and routes, concluding a code-sharing agreement for routes now flown in competition and pledging not to begin new routes that overlap. French management would be maintained, 1,250 employees would be hired, and the British would make a major capital investment. The company would be reformed into the new French carrier **Societe Nouvelle Air Liberte, S.A.**

The BA franchise agreement with **British Mediterranean Airways, Ltd.** collapses during mid-October when the British major announces that BMA has not met the requirements for partnership. As a result, BA must continue to operate the money-losing Mideast routes it had planned to turn over on October 26.

As the dispute with **USAir Group** continues, the U.S. partner continues to evidence its displeasure. On October 24, **USAir** announces that it will end its marketing and code-sharing agreement with BA on March 29 next. At the same time, the American carrier applies to the DOT for permission to inaugurate its own services to London (LHR) from its gateways in Pittsburgh, Charlotte, Philadelphia, and Boston.

Also during the month, the South African regional **Comair (Pty.), Ltd.** becomes a franchise partner, feeding BA international flights from its South African routes. At the end of the month, senior managers Paul Giblin and Adrian Hunt are sent to Germany to assist **Deutsche BA Luftfahrtgesellschaft, GmbH.** implement its emphasis changeover from domestic to international service. It will be reported in the German press during the following June that the British major has also arranged an interest-free DM 340-million line of credit for its subsidiary in order to assist it in refinancing its debts and keeping it from bankruptcy.

During the last week of October, the Rivaud bank and **Nouvelles Frontiers** abandon their efforts to take over **Air Liberte, S.A.**; Rivaud throws its support behind BA, with the two pledging to invest \$124 million in the ailing French independent. BA would hold 70% interest with the remaining 30% stake held by Rivaud. Meanwhile, **Virgin Atlantic Express, Ltd.** is joined by a number of unnamed investors in presenting an alternative to the French bankruptcy court handling the case; the court extends the deadline for its decision from October 30 to November 5.

On November 1, a new reciprocal frequent flyer program begins with the Indian carrier **Jet Airways (Pty.), Ltd.** Since the previous October, weekly frequencies on the route from London to Johannesburg have been increased from 14 to 17.

The same day, President Ayling announces that the carrier will invest \$16 million to improve domestic services throughout the U.K.

The upgrade will include the full introduction of electronic ticketing and self-service check-in. The 7 B-757s tasked to fly the Super Shuttle routes from Heathrow to Belfast, Manchester, Glasgow, and Edinburgh will all receive new cabin interiors and seats.

Virgin Atlantic Express, Ltd. does not submit a bid and, on the fifth day of November, the Creteil Court accepts the BA-Rivaud joint offering to acquire **Air Liberte, S.A.** Under terms of the agreement, which will become final on December 15, TAT Chairman/CEO Rochet will assume the same post at **Air Liberte, S.A.**; he will be joined by other TAT officials, as well as by Warren Tucker, head of BA's investment and joint ventures division. No immediate plans to merge the carriers are announced; however, schedules will be coordinated and flight operations streamlined.

Because of a growing series of problems at London (LHR) in late October and into early November, thousands of BA passengers do not receive their baggage for up to eight days, if at all. A significant number of compensation forms are filed. Also during November, the company begins looking for 5,000 employees willing to take early retirement or voluntary severance over the next 18 months. In mid-month, a French appeals court upholds the damage award made the previous November to 61 French nationals held as human shields when Iraqi forces captured a BA Jumbojet at Kuwait City in August 1990. BA again appeals.

British regulators announce on December 6 that, in order to avoid a full scrutiny of their proposed alliance, both BA and **American Airlines** must give up some of their takeoff and landing slots at London (LHR); both companies had earlier warned that such a requirement could destroy the pact. On December 9, the European Commission issues a set of concerns about the alliance, holding that it will dominate transatlantic air travel. The EC advises that it has the legal power to block the arrangement, but BA disputes that stand.

Although the acquisition of **Air Liberte, S.A.** is scheduled for completion on December 15, paperwork complexities will force a delay into the new year.

The British carrier makes the decision on December 18 to sell off its shareholding in **USAir** and, in light of the suit filed by the American carrier during the summer, to disentangle itself from any further relationship. **USAir** is given the option to purchase the \$500 million in preferred shares or, if it becomes necessary, they can be sold privately or through a public stock offering.

During the year, the carrier begins to publish an *Annual Environmental Report* under which it rates its progress toward specific goals in relation to energy usage, water consumption, and other objectives.

Customer bookings increase by 3.4% to 32,900,126 while cargo accelerates 8% to 3.5 billion FTKs. Revenues jump 7.7% to \$13.62 billion and costs are up 11.1% to \$12.73 billion. Due largely to a \$202.5-million write-down of its **USAir** interest and a 33% increase in fuel prices, BA reports its operating gain down 25% to \$906.36 million on revenues of \$13.6 billion. Still, an all-time record net profit of \$895.86 million is posted; that figure will later be adjusted upward to \$1.06 billion.

The workforce is reduced by 4% in 1997 to 53,060. Many of the BA passengers who lost their baggage at Heathrow Airport in October and November have, as of January 4, yet to receive any compensation from the airline. On the same day, the Creteil tribunal officially approves the BA purchases of a 67% stake in **Air Liberte, S.A.** with the remainder held by Banque Rivaud. **TAT European Airlines, S.A.** Chairman Rochet is also confirmed as chairman of **Air Liberte, S.A.**'s board of directors. French government permission is simultaneously acquired by the British major to take over complete control and to integrate AL's operations into those of its other French franchise partner, **TAT European Airlines, S.A.**

Also during the year's first week, the U.K. Office of Fair Trading announces that it will approve the BA-AA alliance if the two majors agree to promote competition by relinquishing 168 weekly slots at Heathrow Airport. Meanwhile, the carrier continues to lease both of the BAe 146-200s of **Flightline, Ltd.**; they are employed on services from London (LGW) to Toulouse and Bordeaux.

On January 10, **Delta Air Lines** joins **Continental Airlines**, **United Airlines**, **USAir**, and **Trans World Airlines (TWA)** in submitting requested comments to the U.K. Office of Fair Trading (OFT) concerning the proposed strategic alliance between BA and **American Airlines**. All five protest that such a pact would make the British and American giants the dominant positions the two would enjoy in transatlantic and other markets and that the OFT's proposal to require them to relinquish 168 weekly slots at Heathrow is insufficient to counterbalance the alliance. BA replies with a 148-page response to raised questions.

On January 13 some 500 members of the British Airline Stewards and Stewardesses Association (BASSA) turn down the carrier's offer of onetime bonuses in exchange for pay cuts of as much as 40%. The rejection causes the carrier to delay a \$1-billion order for short-haul jetliners.

American Airlines, in the midst of its own labor difficulties with its pilots and also having had to delay an aircraft deal, is reassured when BA issues a statement on January 14 stating that it remains optimistic that the pact with AA will be completed by summer. This despite a new threat from the EU's Competition Commission, which is insisting that the two huge carriers turn over some slots to be employed by competitors at London (LHR). If the U.K. Board of Trade and Industry approves the BA-AA compact under its present arrangement, the EU warns, it will take the U.K. to the European Court of Justice.

It is announced on January 28 that BA will sell its ground fleet services units at Heathrow and Gatwick Airports to Ryder Systems, Inc.; the price is not disclosed.

Almost unnoticed is the appointment of Ian Gray as the first regional general manager whose job it is to manage the alliance between BA and **Qantas Airways (Pty.), Ltd.** He will work out of a new joint office at The Promenade, in Singapore, with an integrated sales, marketing, and business development team.

A new London tourist package designed for business travelers is initiated on February 4; the product includes return airfare from New York or Boston and a three-night hotel stay.

En route from London to New York, a Concorde must make an emergency landing in Halifax, Nova Scotia, on February 7 after developing engine trouble.

To celebrate the tenth anniversary of the carrier's privatization, a promotion is now offered guaranteed to attract public attention. For a few days, BA offers telephone callers the opportunity to win 10 roundtrip London-New York Concorde tickets priced at just £10 and good for 10 days. Over 30 million people respond and, surprisingly, over 300 who manage to get through do not accept their prize, either because they do not have the required credit card for payment or because they cannot travel on the dates offered. As an additional note to the anniversary, the company, promising a more complete revision soon, introduces a slight aircraft color scheme change on its new B-777-236s.

During the week of February 2, European Union officials, led by Competition Commissioner Karel Van Miert, hold closed hearings at Brussels on the BA-AA merger proposal. CEO Ayling puts forward the case for the compact while officials from **Virgin Atlantic Airways, Ltd.**, **Delta Air Lines**, **United Airlines**, and **Continental Airlines** speak in opposition.

The first B-777-236 IGW (Increased Gross Weight) arrives at London (LHR) from Seattle on February 6. Three days later, the new aircraft begins revenue service by flying a replacement service to Boston and back when the B-777-236 originally slated for the run is withdrawn for engine repairs.

Regularly scheduled Heathrow-Philadelphia B-777-236 IGW frequencies commence on February 10. Also during this period, CEO Ayling, in a speech before the Aviation Club of Great Britain, challenges the views of the other majors and indicates that, as a result of the BA-AA pact, transatlantic passenger growth should increase by 20% for all companies.

USAir Group, on February 18, refuses to exercise its option to purchase the 24.6% stake in the carrier owned by BA. At this point, CEO

Robert Ayling, CFO Derek Stevens, and Investments Director Roger Maynard all resign from the **USAir** board of directors.

After several attempts to reach agreement, the franchise agreement with **British Mediterranean Airways, Ltd.** is finally signed during the third week of February. At the same time, the company's ground fleet service division is sold to Ryder plc; the transfer will include 500 workers at Heathrow and Gatwick Airports plus 7,300 vehicles.

On February 24, Airlines of Britain, plc, the holding company which owns **British Midland Airways, Ltd.**, **British Regional Airlines, Ltd.**, **Manx Airlines, Ltd. (2)**, **Loganair, Ltd.**, and **Business Air, Ltd.** elects to split up British Regional Airlines (Holdings) and all of the carriers except BMA. The move will technically allow BRA (Holdings) to continue its BA affiliations without fear of conflict of interest decisions being made by Airlines of Britain, which is partnered with BA's competitors, **Deutsche Lufthansa, A.G.** and **SAS (Scandinavian Airlines System)**; still, Sir Michael Bishop retains ultimate ownership in both groups.

Manx Airlines, Ltd. (2), **Loganair, Ltd.**, and **Business Air, Ltd.** will continue a confederation with **British Regional Airlines, Ltd.** in a British Airlines Regional Group of BA franchise partners. Activities for each company will continue to be reported separately.

Also during the month, the company receives 3 B-777-236s, 2 B-747-436s, and 1 B-767-336ERs, the largest number aircraft ever delivered by Boeing to a single airline during a single month.

The September 1995 suit against **American Airline's** Miami (MIA) terminal project by six other international airlines receives a blow in early March when the DOT rules that Dade County's charges for the carrier's expansion are fair and just.

On March 15, transatlantic flights with the carrier's 2 B-777-236 IGWs are voluntarily suspended because the pieces of metal that help support gears of the GE 90-76B engines are breaking in flight. As a precaution, the three new aircraft are temporarily shifted to European and Mediterranean short-haul routes as company and Boeing engineers work to solve the difficulty. The three planes will be shifted back to the North Atlantic before month's end.

The next day, 24 ground personnel are taken to hospital from Heathrow Airport after their exposure to toxic chemical fumes, probably from pesticide, in the cargo bay of a company jetliner which has just arrived from Bombay.

On March 17, services to and from Latin America are shifted to Gatwick Airport from Heathrow. Three B-747-436s are transferred to the sister hub to operate BA's 13 weekly flights to Mexico, Venezuela, Colombia, Brazil, Argentina, and Chile.

On March 21, marketing officials note the outstanding success of one of their promotion campaigns. Over the past several months, a free roundtrip ticket for travel within the U.S. or Canada has been promised to any BA business-class passenger who thinks the airline's transatlantic service is not the most comfortable they have ever had. Only 0.1% of those eligible have requested their free ticket, which takes the form of 25,000 frequent flyer miles with one of the carrier's North American partners. The cheerful bragging is short-lived as rival **Virgin Atlantic Airways, Ltd.** places ads over the next month suggesting that businessmen pay closer attention to the BA boast and take up its free-ticket offer. Some do and the promotion ends.

On March 27, the New York press reports that BA will invest \$100 million to expand its terminal at JFK International Airport and to build a service road to it. The extensive marketing and code-sharing agreement with **USAir** officially ends two days later. Two separate Concorde flights are forced to return to New York (JFK) on March 31 because of mechanical problems. The same day, the contract handling unit at Heathrow Airport is closed.

As the month closes, three new Rolls Royce-powered B-757-236ERs are delivered. BA withdraws frequencies to Beirut, Amman, and Damascus on March 30 and the next day, its feed from the Mideast is facilitated by the 2 A320-231s of its newest franchise partner, **British Mediterranean Airways, Ltd.** which, in modified BA livery, commence service on its behalf to Beirut, Damascus, and Amman.

Also on April 1, summertime frequencies are reintroduced on the transatlantic routes from London to Washington, Philadelphia, and Boston; all are flown by the company's 4 new B-777-236 IGWs.

The same day, British Airways World Cargo is made nominally separate from BA under Managing Director Kevin Hatton, but is required to purchase all of its cargo belly space in BA's passenger planes. Any additional freight capacity required will be obtained from alliance partners or under lease to **Atlas Air** or **DHL Worldwide Express**. Within weeks, 6 of these outsourced freighter flights will be moved from Gatwick Airport to Stansted Airport.

The battle over the proposed alliance with **American Airlines** returns to Washington, D.C. during the second week of April. EU Competition Commissioner Karel Van Miert meets with Attorney General Janet Reno and Federal Trade Commission Chairman Robert Pitofsky to attack the plan.

On April 22, **Virgin Atlantic Airways, Ltd.** Chairman Richard Branson testifies before the U.S. Senate Judiciary Committee's Subcommittee on Antitrust, Business Rights, and Competition, chaired by Sen. Michael De Wine (R-Ohio), which is looking into the proposed alliance between BA and **American Airlines**. The lawmakers are told that higher prices and poor service would result from the union.

BA offers a strong protest on April 25 when French officials allow **Air Algerie, S.A.** to resume operations from Paris (CDG). Rather than share an adjacent check-in counter with the Algerians—who had been banned in early 1995 for harboring terrorists—BA petitions for permission to transfer to Paris (ORY) and moves its check-in operations first to curbside at a nearby hotel, and then to a facility across from airport headquarters. When French aviation authorities require the British to abandon their ad hoc security measures, BA indicates that it will have to continue flying from CDG, but will accept no hold baggage and will appeal the French order to a French high court.

Also during April, the agreement with Ryder, plc. to takeover the airline's ground fleet services is concluded; the five-year contract is worth £160 million. The company now enters the photographic services business, offering its own cameras, films, and developing.

An agreement is signed with ground service staff at London (LHR); in exchange for job security, the workers agree to a pay freeze over the next two years and lower starting salaries for new employees. At the same time, the company begins a recruiting campaign to attract 5,000 new employees by the Millennium, including 2,000 cabin crew.

Further in April, the code-sharing arrangement with **Canadian Airlines International, Ltd.** is expanded. CAI will place its codes on BA flights from London to Montreal and from London to Aberdeen, Amsterdam, Edinburgh, Glasgow, Manchester, and Prague. BA will share codes on CAI flights from Toronto on to Halifax and Quebec City.

The company's frequent flyer agreement with **American Airlines** is now also expanded. In addition to the base agreement that permits members of one program to claim awards by flying on the other airline, Executive Club and AAdvantage are strengthened to permit members of either to earn and redeem miles on all routes except transatlantic.

Previous plans to spin off the airline's aircraft maintenance division as a cost-cutting measure are shelved on May 1 until at least the year 2000. The same day, B-777-236 IGW flights commence from London (LHR) to Detroit (DTT). Fourteen days later, B-777-236 IGW service is inaugurated from London to Montreal (YUL) and New York (JFK).

On May 6, six European airlines, led by BA, launch a court challenge to **Air France's** right to receive the FFr 20 billion (£2.12 billion) in state subsidy approved by the European Commission in 1994, the last tranche of which was paid in April. The case, filed by BA, **TAT European Airlines, S.A.**, **SAS (Scandinavian Airlines System)**, **KLM (Royal Dutch Airlines, N.V.)**, **Air U.K., Ltd.**, and **Euralair, S.A.**, will be heard by the European Court of First Instance at Luxembourg. The governments of the U.K., DENMARK, Sweden, and Norway also support the plaintiffs.

On May 7, the legal battle over BA's request to move to Paris (ORY) to get away from the next-door check-in counter of **Air Algerie, S.A.** is resumed. BA continues to argue that Air Algerie's security is insufficient, while French authorities continue to refuse the airport transfer request.

Announcement of the "Star Alliance" on May 14 between **United Airlines, Deutsche Lufthansa, A.G., SAS (Scandinavian Airlines System), Thai Airways International, Ltd., and Air Canada, Ltd.** brings a surprisingly positive reaction. As its share price rises on the London Stock Exchange, BA has renewed hope that its alliance with **American Airlines** will win regulatory clearance.

A service dispute with Nigeria erupts on May 15 when the U.K. Department of Transport bars Nigerian aircraft from landing in Britain due to safety concerns. In retaliation, Nigeria requires that BA halt its daily B-747-136 flights to Lagos and its thrice-weekly DC-10-30 service to Kano. The British line flies Nigeria-bound passengers to Accra in Ghana, from which they are able to make arrangement for air charter or ground transport into Nigeria.

To help celebrate the tenth anniversary of privatization, the airline, on May 19, announces that 58,000 workers will each receive a bonus in cash and BA shares worth £1,100.

On May 21, BA sells the last of its 14.5 million 22.5% stake in **US Airways** to the public for \$499 million, or, \$34.50 per share. The sale comes about through an agreement with Goldman Sachs & Co. Work begins at the end of the month on a \$100-million upgrade and expansion of the company terminal at New York (JFK); the project is slated for completion in mid-1999.

The May general election sweeps the Labor Party into power and Tony Blair becomes prime minister. The immediate effect of the voting is to require that the BA-AA alliance question be put on hold while new government ministers are appointed. **Virgin Atlantic Airways, Ltd.** Chairman Branson, however, still finds something to complain about when, at the same time, the British Airport Authority signs a tentative agreement with BA that will provide the carrier and its alliance partners occupancy of the proposed fifth new terminal at London (LHR).

Late in the third week of May, EU Competition Commissioner Van Miert meets with Margaret Beckett, Secretary for Trade and Industry in the cabinet of the new U.K. Labour government, to once again oppose the BA-AA alliance.

As part of its new business efficiency program, the company announces that it has reached pay cut agreement with one of its two cabin crew unions; the other, the Transport and General Workers Union, demands a strike vote of its membership.

At the same time, BA World Cargo staff agree to the two-year salary freeze of January 1 and the loss of 400 positions in exchange for a promise from the airline not to outsource its freight operation.

With regard to outsourcing, the company now announces plans to sell its Heathrow flight kitchen, without job losses. It also begins to make its engineering department more efficient by selling its landing-gear, wheel, and brake overhaul divisions, outsourcing information technology systems, and investing \$32 million in a new profit center built around pneumatics and hydraulics. Plans to convert the engineering department into a free standing subsidiary company are put on hold until the Millennium.

During the same month in Philadelphia, BA becomes the first major airline to host a booth at the annual convention of the Gay & Lesbian Travel Association. There it is announced that, as part of BA Holiday's "Affordable Africa" inclusive tours this summer, two dedicated gay and lesbian safari packages to South Africa will be offered.

The carrier's U.S. general manager in New York, Barbara Cassani, is covertly asked by CEO Ayling to return to the U.K. during the month. She is to undertake a study concerning the possibility of establishing a low-cost carrier that will be able to compete with **Ryanair, Ltd.**, as well as the likes of **easyJet, Ltd.** and **Debonair, Ltd.** Like others in Europe who have travelled the deep-discount path, Cassani immediately begins her review with an examination of **Southwest Airlines (2)**.

Toward the end of the month a near tragedy occurs at Chicago (ORD). While on its takeoff roll down runway 14R, a B-747-436 with 335 passengers is ordered to abort its liftoff when wind causes a **United Airlines B-737-322**, with 58 passengers, to land long on intersecting runway 27L directly in the path of the Jumbojet. Blowing 6 tires, locking up 12 brakes, and stunning all aboard, the heavily loaded British jet screeches to a stop just 2,000 ft. from the little Boeing.

At the beginning of June, the company introduces a new line of health care products, developed by the London-based Body Shop, to its World Club business-class passengers as part of a "Well Being in the Air" program.

The U.S. Senate's Commerce Committee opens hearings on June 5 concerning the BA-AA alliance and the majors encounter significant opposition in testimony given to the lawmakers. The Government Accounting Office recommends that the two give up a number of valuable landing rights at Heathrow Airport in order to increase competition on transatlantic service into the British airport. The Department of Transportation testifies as to its desire to reach an "open skies" agreement with the U.K. which would allow carriers of both countries to fly to and beyond the two countries.

In a controversial move unveiled on June 10, the carrier abandons its previous corporate identity and livery in favor of a new "global" look. In a worldwide marketing effort that includes simultaneous satellite transmissions to 126 locations in 63 nations, the company introduces its new "World Images" livery on 15 repainted B-747-436s and several B-757-2YOs. The first Jumbojet opened to the media is dedicated to Emmly and Martha Masanabo, women of the Ndebele peoples of South Africa while the first B-757 wears a design based on the woodcarving of the Tla O Qui Aht Native Americans of northwest Canada.

Although the British Airways name is retained on aircraft fuselages (all of which, save Concorde, have pearl white tops and navy blue bottoms), the historic angular red speedbird is superseded by a red and blue ribbon-shaped three-dimensional speedmarque, designed by the London-based design firm Newell and Sorrell, Ltd. The most gripping change involves some 50 different new tail designs. Gone is the stylized Union Jack and airline crest introduced during privatization in the early 1980s, replaced by ethnic artwork from artists, sculptors, and calligraphers from around the world.

Tails will display such things as a Polish folk-art design, a geometric pattern from South Africa, a Pacific Northwest wood carving, and a Dutch stencil. The Concorde will be given a highly stylized tail image representing the British Union Flag, based on the ensign flown by Adm. Horatio Nelson at the 1805 Battle of Trafalgar. In each case, the color scheme extends below the fin to encircle the rear fuselage.

This campaign is designed to suggest that the airline is "reaching out" to travelers in every country it serves, what CEO Ayling terms "not just a British airline but a global airline based in Britain." It is noted that 12 aircraft, new or repainted, will be added in the new livery annually through the year 2000. Although the design change costs \$3.3 million and the three-year introduction will demand \$98 million more, most of these figures would have been expended on repainting costs anyway.

It is anticipated that the designs will be applied to other company assets, including ground vehicles, check-in counters, ticket wallets, and uniforms, and will lead to a number of marketing opportunities. "British Airways Express" partners will apply similar or modified versions.

The EU Competition Commission announces on June 12 that it will rule on the proposed alliance with **American Airlines** before November 30.

During the second half of the month, 9,000 ground handlers at Heathrow and Gatwick Airports are balloted concerning a job action. To prepare the manpower needed to carry on during any strike, BA dispatches 2,000 managers to airports abroad and RAF bases in the U.K. for training in a variety of skills necessary to operate the carrier.

On the last day of the month, ground staff vote to strike over company plans to transform its catering service into a separate profit center. Cabin crews also vote, 75% to 25%, in favor of a job action if their pay is not increased. The reasons for a strike expressed by the two groups only

scratch the surface of employee discontent over downsizing, outsourcing, and even the new, but expensive, corporate identity redesign.

Others, it turns out, are also displeased with the livery makeovers. *The Weekly Telegraph* reports that the BA exhibit at the Conservative Party conference of a model Boeing 747 featuring a design honoring the Ncoakhoe tribe of the Kalahari draws the ire of Lady Margaret Thatcher. The former prime minister describes the concept as "terrible" and wraps her handkerchief over the model's tail to hide it. "We fly the British flag, not these awful things," she informs BA's corporate resources director, David Holmes, asking him, as she leaves, to tape her camouflage in place. Rival **Virgin Atlantic Airways, Ltd.**, meanwhile, adopts the Union Jack as its own symbol.

On July 1, Ft. Lauderdale-based **Laker Airways** files suit against BA in U.S. District Court for the Southern District of Florida charging that the U.K. major is barring Laker from obtaining commercially viable landing and takeoff slots. He also charges that BA is refusing to enter into the same standard interline ticketing and baggage agreements that it has with 150 other competitors.

Claiming that BA is violating U.S. and Florida antitrust laws, Laker seeks treble damages, a preliminary injunction, and a permanent injunction against BA, as well as better takeoff and landing slots, and standard interline ticketing and baggage agreements. Florida Attorney General Robert Butterworth meets with both sides in his office on July 9 to resolve their difficulties.

Also by the first of July, 5 B-777-236s and 7 B-777-236 IGWs are in hand. The lease on one **Flightline, Ltd.** BAe 146-200 is renewed; the other is returned. Negotiations between the carrier and the British Airlines Stewards and Stewardesses Association (BASSA) designed to prevent a job action break down on July 6, even as a breakaway splinter group known as Cabin Crew 89 agrees to a pay deal. Union officials in rejecting a management-proposed contract announce a three-day strike and the new Labour Prime Minister Tony Blair refuses to mediate the dispute. The carrier unwisely suggests that it will break any strike with nonunion labor.

A bright note for the company is a decision made by ground workers not to strike over the carrier's decision to sell off its catering operation; both sides agree to discuss the situation. On July 7, the major increases its stake in **Deutsche BA Luftfahrtgesellschaft, GmbH.** from 49% to 65% by purchasing the 16% shareholding of Munich-based Bayerische Verinsbank, A.G.

The scheduled industrial action begins at 12:01 a.m. on July 9; the carrier is able to complete eight nonstop flights from London to New York (JFK), but cancels four others: two from JFK to Heathrow Airport; one from JFK to Gatwick Airport; and one from Newark (EWR) to Heathrow. At London (LHR), nearly 70% of all BA flights are cancelled.

BA threatens to fire the cabin crews on job action and files suit against the Transport & General Workers' Union. Acting in support of their British colleagues, **Air France** workers bring Charles de Gaulle International Airport to a standstill and words of encouragement to union leaders are received from U.S. labor unions and the civil aviation division of the Brussels-based European Transport Workers' Federation.

By July 12, the carrier's domestic and international schedules are in shambles; although BA continues to fight through the dispute, it has been forced to cancel 75% of its domestic and European flights and half of its intercontinental services.

Excluding those out on sick leave, most cabin crew begin to return to work on July 13 after the company agrees to reopen negotiations with their union. The BASSA want their proposals accepted, which are an alternative to BA's effort to effect \$70.5 million in labor savings. Meanwhile, company shareholders at their annual meeting criticize CEO Ayling not only for the airline's labor problems but for its new livery as well.

While on approach to London (LGW) on July 16, a B-737-436 nearly collides with a Russian Ilyushin Il-76 tanker and two Sukoi Su-30 fighter planes.

The code-sharing Millennium agreement with **Qantas Airways (Pty.), Ltd. (2)** is expanded during July as both carriers now begin to

sell seats on the other's services. Qantas begins dual-designator service with BA on the latter's flights from London (LHR) to Aberdeen, Amsterdam, Belfast, Edinburgh, Glasgow, Manchester, Paris, and Vienna. BA, in turn, is allowed to share its code on Qantas services from Sydney to Adelaide, Canberra, and the Gold Coast; from Melbourne to Adelaide and Hobart; and from Perth to Adelaide.

Also during the month, BA exercises options for 5 more B-777s for delivery between September 1998 and April 1999, and 3 B-767s, to be received in April-May 1998.

A wide-ranging new strategic partnership between **Iberia Spanish Airlines (2)** (**Lineas Aereas de Espana, S.A.**) and **American Airlines** is tentatively concluded at the end of July. Under its terms, AMR Corporation, American's parent, will acquire a 10% stake in Iberia's owner, SEPI, which also controls the Argentine carriers **Aerolineas Argentinas, S.A.** and **Austral, S.A.**, and lead an effort to find additional investors who will purchase up to 35% additional shareholding. In addition, Iberia and American will begin to share codes on flights from Spain to the U.S. and link their frequent flyer programs. In South America, American would establish reciprocal frequent flyer arrangements with both **Aerolineas Argentinas, S.A.** and **Austral, S.A.** and code-share on certain of their internal routes.

Meanwhile, BA and Iberia discuss a 10% equity stake for the U.K. flag carrier as well as a strategic partnership with the usual frequent flyer program linkage and code-sharing on routes between Madrid and London. Negotiations will drag on for months.

Significant opposition to the AMR-BA-Iberia arrangement quickly materializes from **Continental Airlines** and **United Airlines**, which fear not only a BA-AA linkup, but the potential domination of Latin American routes by the Dallas (DFW)-based megacARRIER.

As July ends and August begins, company cabin crew continue to call in sick at a higher than usual rate, forcing the carrier to cancel a number of short- and long-haul flights. Talks between BA and the cabin crew union continue along with the growing cost of the lingering job action. Earlier estimates of £80 million in losses are upgraded to £125 million.

During the first week of August, BA officials hire the market consultancy Howell Henry Caldecott & Lewry to investigate the possibility of establishing a low-cost, no-frills airline to compete with **easy-Jet, Ltd.** and **Debonair, Ltd.**, which have begun to cut into the major's markets.

On August 19, **Virgin Atlantic Airways, Ltd.** Chairman Branson goes before the U.S. House of Representatives' Committee on Transportation and Infrastructure to again condemn the proposed alliance between **American Airlines** and BA. Ammunition is provided in a position paper from the EU Competition Commission, which demands that BA relinquish 350 weekly Heathrow slots as a condition of EU approval.

While operating a replacement service into London (LHR) from Brussels on behalf of **Sabena Belgian World Airways, S.A.** on August 27, **Virgin Express Airlines, S.A.** Sabena Flight 603 experiences a near miss. The B-737-229A with 29 passengers and on ILS approach, comes within 200 ft. horizontally and 600 ft. vertically at 2,400 ft. with BA Flight 818, a departing B-757-236 with 29 aboard. Both aircraft, in cloud, respond to ATC instructions and avoid disaster, although the near miss is caused by initially faulty ATC.

In September, BA presses ahead with a plan to save £1 billion (\$1.59 billion) per year annually through 2000. The entire fleet of 14 B-747-100s, plus their spare engines, are sold to AMR's Aircraft and Engine Group and will be turned over beginning next year. In addition, EDS is given a \$56 million, 10-year contract to develop and install an information technology system in the carrier's new global accounting center. Once operational, the new system is expected to bring a 30% reduction in accounting costs.

BA Catering orders Systems EES, manufactured by the Swedish-based Industri-Matematik International, A.B. Installation of the system is expected to help the carrier save £400 million per year by tracking distribution. There will no longer be eight toothpicks for every passenger flying out of Nairobi, Kenya, as reported in the October issue of *Air Transport World*.

On September 12, the carrier and its cabin crew union come to terms. BA drops its sanctions against the 300 employees actively involved in the \$199-million strike while the union agrees to \$66.8 million in new cabin crew cost savings that include rescheduled hours and lower starting salaries for new cabin crew.

The stock of BE Aerospace, Inc. falls 17% after the airline confirms on September 16 that it will not purchase the manufacturer's upscale in-flight video system. To help boost bookings in the wake of its summer sale, the company, on September 19, announces that it will cut fares for travel in November by up to 35% for those purchasing tickets before October 31.

During the third week of September, EU Competition Commissioner Van Miert refuses to compromise requirements for approval of the BA-AA pact; to win approval, the two must relinquish 353 weekly departure and arrival slots to other carriers wishing to compete with the alliance. The two argue that, should they be forced to reduce any slots, they have the right to sell them, rather than just have them handed over to competitors. Meanwhile, the two continue to work together on the peripheries of the agreement, utilizing enhanced frequent flyer benefits and joint pricing on certain routes.

Another important capacity move is made during the month when the company approaches the Civil Aviation Authority for permission to lease B-747-476s from alliance partner **Qantas Airways (Pty.), Ltd.** for daytime use. The idle Jumbojets arrive at Heathrow Airport in early morning and do not return until evening.

Simultaneously, in an effort to counterprogram for the new **Ansett Australia (Pty.), Ltd.-Air New Zealand, Ltd.-Singapore Airlines, Ltd.** alliance, Qantas and BA also seek regulatory clearance to extend their code-sharing program to services on The Kangaroo Route from seven Australian cities to London via Singapore.

A collision between a company B-777-236 taking off from New York (JFK) on September 27 and an arriving **Tower Air** B-727-212B is narrowly avoided; the two wide-bodies have 200 feet of vertical separation and 1.3 miles of lateral separation.

Three days later, on September 30, BA sends shockwaves through the business and tourist industries located in the Scottish Highlands. Ian Reid, general manager for Scotland, announces at a news conference that the major will switch its Inverness to London (LHR) route to London (LGW) and franchise it to its subsidiary **British Regional Airlines, Ltd.** and operate it with BAe 146-200s. Despite the transport of 214,000 passengers over the route the previous year, BA declares that it has lost £8 million since beginning the thrice-daily service in 1992. The move, as might be expected, causes a flurry in northern Scotland and provokes a strong protest from the members of a newly established pan-Highland pressure group that includes Highland Council, Highlands and Islands Enterprise, Scottish Council Development and Industry, and the Inverness Chamber of Commerce. Chairman Stelios Haji-Ioannou of rival **easyJet, Ltd.** indicates that his carrier will launch a new daily roundtrip from London (CTN) to Inverness to help fill the gap left by BA.

On October 1, BA sells its wheel and brake repair and overhaul subsidiary to Allied Signal Aerospace; the transfer, effective January 1, includes a decade-long contract for repair and overhaul of the wheels and brakes of BA aircraft. It also transfers its short-haul and long-haul kitchens at Heathrow Airport to the Gate Gourmet unit of SAirRelations for £65 million.

During the month, work begins on a new \$143-million terminal at New York (JFK); check-in areas, lounges, and road access will all be expanded. Alliance partner **Qantas Airways (Pty.), Ltd.** joins with the company to expand dual-designator flights from London to Australia via Singapore. At the same time, an agreement is signed with Mastercard International giving cardholders airline mileage awards every time they use their card.

This year's Poppy Appeal campaign, again sponsored by the airline, is launched during the last week of October by the Spice Girls at Royal Albert Hall, with Dame Vera Lynn.

Weekly return service starts on October 28 from London (LGW) to Cancún, Mexico.

On October 28, BA announces major changes to its services linking Aberdeen with Birmingham and Manchester. From July next, the de Havilland Canada DHC-8-301s of **Brymon Airways, Ltd. (2)** will replace the **British Regional Airlines, Ltd.** ATPs currently employed. The new Brymon services are expected to create 100 new jobs within the BA organization, with 75 of them in Aberdeen. Frequencies to Manchester will increase from four to six each day, while those daily services to Birmingham will jump from two to three.

The first 100 passengers in line at the carrier's Pittsburgh check-in on October 30 are invited to pay what they weigh—pound for £—to travel roundtrip to London. The special offer tickets must be employed between November 7–December 9 or January 11–31. All of the funds collected are turned over to The Children's Hospital of Pittsburgh.

After losing \$11 million on the route over the past three years, BA, on November 1, ceases its nonstop roundtrip service from Glasgow to New York (JFK) and Boston's Logan Airport. CEO Ayling expresses his hope that, once the BA-AA alliance is approved, nonstop services between Scotland and the U.S. can be resumed.

On the other hand, on the same day it expands its pact with **America West Airlines**, adding Las Vegas and Columbus, Ohio, as connecting points on the dual-designator London service.

With a stylized poppy designed by Newell & Sorrell painted on its tail in honor of Remembrance Day, a refurbished B-737-236A begins flying from London (LGW) on November 7; the aircraft will fly U.K. routes until Christmas with the Royal British Legion motto "Pause to Remember" on its fuselage.

Company officials must admit, during the second week of November, that the hoped-for alliance with **American Airlines** will not be in place in time for the start of the 1998 summer travel season. Without government approvals, it is impossible for the two to schedule a hearing before the IATA slot committee (which sets international airport slot arrangements) when it meets in early December.

Meanwhile, diplomatic negotiations involving the U.S. and British governments and the European Commission, which has taken a hard line on competition, continue toward an EC preliminary recommendation goal of January 1, followed by a final decision on April 1. U.S.-U.K. discussions on a new "open skies" bilateral air agreement remained stalled.

The Inverness to London (LGW) route is handed over to **British Regional Airlines, Ltd.** on November 15.

On November 18, the decision to form a low-cost, no-frills airline early in 1998 is announced; it will compete against the several discount carriers taking wing in the U.K. and on the Continent. The autonomous company, tentatively named Blue Sky, will have its own employees and management team, headed by Managing Director Cassani, who has been studying start-up possibilities since May.

The start-up will fly from Stansted Airport to points in Scandinavia, France, and Germany with a fleet of leased B-737-200s. Competitors denounce the BA strategy and **easyJet, Ltd.** Chairman/CEO Stelios Haji-Ioannou threatens a lawsuit. During the last week of November, the discount airline's Managing Director Cassini consults with the London image consultancy Wolff Olins on a realistic shortlist of marketing names.

Also during November, Australia's International Air Services Commission, in a draft ruling, determines that the carrier's plans to code-share with **Qantas Airways (Pty.), Ltd.** over routes to London via Singapore, will not prove beneficial and therefore rejects the request. It defers a similar application to fly to London via Bangkok.

The first B-737-236 repainted in the carrier's new ethnic color scheme is unveiled on December 1; it sports a Chinese inscription on its tail that provides directions on how to make a cup of tea.

A large fire breaks out in Terminal One at Heathrow Airport on the morning of December 12, forcing the cancellation of numerous of the carrier's domestic and international flights. After the efforts of the

London Fire Brigade and the Heathrow Airport Fire Service, Terminal One is reopened at 1 p.m.

The first of three new B-757-236ERs is delivered in December.

The Australian International Air Services Commission, facing protest from the airlines, Australian tourism council, and the state of Queensland, reverses its November decision and grants permission for BA and **Qantas Airways (Pty.), Ltd.** to launch dual-designator return service from London to Australia via Singapore.

Also during the month, the sale of the Heathrow catering units to Gates Gourmet is completed; 1,200 employees are transferred to Gates. Meanwhile, Paul Giblin, the general manager for Germany—the company's third largest market after the U.K. and U.—transfers to **Deutsche BA Luftfahrtgesellschaft, GmbH**. BA selects Robert Kujala, general manager of operations at London Heathrow Terminal One, for the position.

At year's end, officials prepare to open a new \$403-million automated cargo center at London (LHR) in January; the new facility will allow the British major to double its mail and cargo capacity.

Customer bookings for the year inch up 1.6% to 34,159,000; cargo figures are not available. It is reported that air crews have dealt with 260 disruptive passengers during the year. Operating revenues move up 3.4% to \$14.34 billion and costs hit \$13.5 billion. The operating gain dips to \$836.64 million, while net profit falls to \$962.8 million.

At the beginning of 1998, BA is the 3rd largest airline in the world in terms of operating revenues, 4th in net profit, 5th in employee number, 6th in operating profit, 8th in fleet size, and 9th in passenger boardings.

The 248 planes in the fleet are 85.1% Stage III certified and include 7 Concorde, 65 B-737s, 69 B-747s, 49 B-757s, 25 B-767s, 15 B-777s, 10 A320s, and 8 DC-10-30s.

A report published by the London *Observer* on January 11 and transmitted worldwide via the BBC, states that a Concorde, inbound to London (LHR) from New York (JFK) on January 3, had called in a fuel "Mayday" alert that was picked up by plane enthusiasts monitoring radio communications. A BA spokesperson blames the extraordinary situation on high winds that had caused flights to stack up for up to 90 minutes; it was necessary to alert ATC concerning the SST's fuel situation in order that it might be given priority.

A new strategic alliance is entered into with **LOT Polish Airlines, S.A.** in January; dual-designator flights are planned and discussions begin concerning a possible equity agreement in the Warsaw-based flag carrier by the British giant.

Virgin Atlantic Airways, Ltd.'s application to fly from London to Las Vegas made the previous fall is turned down by the CAA in January. The regulatory body awards the last nonstop U.K.-U.S. route to BA, which had also requested permission to fly from London to Denver. Chairman Branson reacts angrily and promises to appeal the government's "anticompetitive" decision.

At the same time, the company begins moving from Speedbird House, the original **British Overseas Airways Corporation (BOAC)** headquarters opened at Heathrow Airport in the late 1940s, to a new £200-million (\$380-million) base located on 280 acres outside the airport. When dedicated in a public ceremony led by Prince Charles in late September, the new Waterside complex will have as its central feature a main street connected by bridges to levels of offices on either side.

An incident occurs at Heathrow Airport on January 25 when an unnamed foreign airliner fails to recognize a company A320-211 bound for Copenhagen as a group of planes move towards the runway. It is normal ATC procedure for controllers to give taxiing planes directions in relation to aircraft around them and the CAA concludes that the carrier's new livery makes incorrect identification possible.

On January 26, ticketless travel is introduced on all routes from the U.K. to Germany and on return from Berlin, Cologne, Dusseldorf, Frankfurt, Hamburg, Munich, and Stuttgart. On January 30, a company jetliner en route to Japan has among its passengers 50 members of the British Olympic bobsled and curling teams.

At the end of the month, the carrier announces that the name finally chosen for its low-cost unit will be GO. The new unit will be based at London (STN) and commence operations later in the spring with 8 B-737-300s leased from the parent and elsewhere. The division's new World Wide Web site is unveiled.

easyJet, Ltd. Chairman Haji-Ioannou calls for an investigation of the new entrant by the CAA, calling it a camouflaged ploy designed to drive the other British discount operators out of business before again raising ticket prices. He specifically seeks a court injunction against the new operation, pointing to BA's guarantee of leases on 8 B-737-300s and claiming that the pledge will allow the new entrant to obtain the aircraft at below market value, a move which is against European Union law.

Another case of livery confusion occurs on February 3 when a taxiing B-747 from another concern fails to identify a British Aerospace BAe 146 of **Manx Airlines, Ltd. (2)**, which is wearing one of the new color schemes. A call comes from members of the Transport Select Committee of the House of Commons for hearings on the safety aspects of the already heavily criticized livery.

In just 82 minutes on the evening of February 11, 6 million people jam BA's Valentine's Day Love Line seeking to win 100 £14-roundtrip tickets for two to New York, which will be honored on February 13-16. The prize, worth £2,500, includes three nights at a four-star hotel.

Late in the month, the company rejects **easyJet, Ltd.**'s claims that it will abuse its dominant market position by cross subsidizing GO by guaranteeing the new unit's leases for 8 B-737-300s.

At the same time, the £2-billion (\$3.2-billion) fleet renewal plan is revived as BA asks both Boeing and Airbus to recommend "creative" ways to meet such a funding goal.

At month's end, the company announces that it will equip 100 of its long-haul jetliners with a Rockwell Collins in-flight entertainment system.

Discussions continue in early March with **Iberia Spanish Airlines (2) (Lineas Aerea de Espana, S.A.)** concerning an equity stake. BA wishes to take 25% shareholding, but 5% is all the Spanish are willing to offer.

On March 4, a joint marketing pact is entered into with **Finnair O/Y**. In addition to frequent flyer program integration, the agreement allows for code-sharing on 15 daily return flights from London (LHR) and Manchester to Stockholm and on to Helsinki.

The next day, the company donates £2,000 to the London Fire Brigade and the Heathrow Airport Fire Service in appreciation for their prompt assistance with the Terminal One fire in December. Both groups donate their checks to charity.

The Commerce Committee of the U.S. Senate again holds hearings in mid-March that focus upon the proposed BA-AA alliance. Following presentations by CEO Ayling and AA Chairman Crandall, Assistant Attorney General Joel Klein indicates that, unless the two companies surrender a significant number of gates and slots at London (LHR), the U.S. Justice Department will recommend to the DOT that it disapprove the partnership.

A B-777-236 is placed on the company's long-haul service from London to Dallas (DFW) on March 25. To promote the new flight, the company announces a week earlier that the first 100 customers at the Dallas (DFW) ticket counter that day will be able to purchase a roundtrip economy-class ticket to London "paying what they weigh." All proceeds are donated to the Texas Scottish Rite Hospital for Children.

Later in the month, service is resumed to the Ivory Coast after an eight-year hiatus; twice-weekly B-777-236 roundtrips are operated between London (LGW) and Abidjan via Accra. In addition to passengers, the company hopes to increase its cargo services into the West African nations by filling the 20-ton cargo holds of the Boeings with freight.

Dual-designator service begins with **Finnair O/Y** on March 29 on 15 daily return frequencies from Heathrow Airport and Manchester to Stockholm and Helsinki. Codes are also shared on a new twice-daily BA service from London (LGW) to Helsinki.

Also on this first day of the summer season, 40 extra flights are added each week to the existing European network, with new routes stretched to Ljubljana, Trieste, and Vilnius from Gatwick Airport and to Stavanger from Heathrow.

The largest increase in capacity is on flights to South America, Central America, the Caribbean, and North America. In addition to the launch of new services to Cancún and Tobago, new frequencies are added to Buenos Aires, Santiago, Barbados, Rio de Janeiro, São Paulo, Tampa, Nassau, Grand Cayman, Seattle, Orlando, Newark, Bermuda, Toronto, San Juan, Kingston, and Montego Bay.

In the Middle East and Africa, the airline continues to grow its network with the initiation of a new daily service to Doha, Qatar, and a twice-weekly service to Abidjan. Capacity is also increased to Dubai and nonstop service to Abu Dhabi is started.

Due to a lack of traffic, the carrier's thrice-weekly flights to Seoul are suspended at the end of the month. With a new code-sharing partnership with **Asiana Airlines, Ltd.**, BA will continue to serve the South Korean capital via Tokyo and Hong Kong. At the same time, service to Colombo, Sri Lanka, from London ends and plans for a sixth weekly service from Heathrow Airport to Osaka (KIX) are shelved. The same day, smoking is banned on all company flights.

The service cuts are partially offset on April 1 when the company increases its frequencies to Singapore to twice daily, two extra weekly flights are routed to Brisbane, and an extra weekly flight is added to Jakarta, Kuala Lumpur, and Beijing.

The last 35% stake in **Deutsche BA Luftfahrtgesellschaft, GmbH** is purchased in April, making the German airline a 100% wholly owned subsidiary. Also during the month, a 2-year accord is reached with the carrier's 14,000 cabin crew members, while 6 unions representing 15,000 staff also accept an agreement. Both groups will receive an immediate 4.2% pay increase, with 0.5% above inflation in 1999.

The low-cost unit, GO, releases its inaugural schedule. Seeking to avoid direct competition with its discount rivals, GO will fly from London (STN) to Rome, Copenhagen, and Milan. Only **Debonair, Ltd.** flies a similar route, London (CTN) to Rome. One-way fares will be just £100 (\$160).

On April 21, the company introduces sales of electronic ticketing for flights operating May 11 from London (LGW) to San Diego, Phoenix, Houston (IAH), Dallas (DFW), Atlanta, Orlando, Charlotte, Baltimore (BWI), Pittsburgh, and Bermuda. It also announces that it will retire its fleet of 8 DC-10-30s now operating long-haul services from London (GTW); 2 will be returned to lessors and 6 put up for sale.

The company now announces plans to invest £20 million (\$32 million) to equip its entire fleet with Allied Signal's Enhanced Ground Proximity Warning System (EGPWS) avionics.

The carrier closes all 17 of its U.S. ticket agencies on May 1, preferring to rely on the Internet. Also in May, the **Finnair O/Y** code-share is deepened to allow an additional daily dual-designator flight on the Finnair service between Manchester, Stockholm, and Helsinki.

On May 7, the company announces that it must delay the launch of its new daily service to Denver from Gatwick Airport from June 1 to August 1 because it is still awaiting approval for the new route from the U.S. DOT.

Also on May 7, Capt. Jock Lowe, the world's longest serving Concorde pilot and commercial manager for the Concorde at BA, is installed as president of the Royal Aeronautical Society.

During the second week of May, a U.K. high court denies a request from **easyJet, Ltd.** for an immediate injunction to prevent BA from guaranteeing the leases of "Baby Boeings" that will be employed by the low-cost GO division. It does, however, promise that, within two months, it will hear easyJet's original complaint regarding the major's unfair subsidization of GO through aircraft charter guarantees. At the same time, GO, acting on its own behalf, enters into a five-year contract with FLS Aerospace to provide total maintenance of its aircraft.

As the political situation in Indonesia has disintegrated over the previous week, BA operates a special evacuation flight for 268 U.K. citi-

zens from Jakarta to Kuala Lumpur on May 19. As other airlines and many businesses desert the city's business center, the foreign ministry and Indonesian authorities hail BA's Claire Hatton. The story of her effort to help more than 2,000 people flee the country while keeping the Jakarta BA office open is related by the BBC later in the day. The next day, a regularly scheduled B-747-436 operates as scheduled, with its crew reporting the situation around Jakarta Airport as calm, even as Ms. Hatton's BA team finally shuts down the company's central city offices.

With all of the pieces in place (including £2 million in booked business), GO launches services from London (STN) to Milan and Rome on May 22 with 3 B-737-340s, which wear snow white fuselages and black "go" markings, along with the word "go" inside small green tail logos. Having "a bit of fun," **easyJet, Ltd.** Chairman Haji-Ioannou and six colleagues, all dressed in bright orange company overalls, are passengers on the first GO Rome service.

To assist its passengers, GO offers inexpensive rail tickets for train and coach travel to and from Stansted Airport and runs its own bus service from Rome's airport to the central city.

In competition with GO, **Virgin Express-Eurobelgium Airlines, S.A.**, also beginning on May 22, inaugurates deep discount service from London (STN) and Rome. It announces that, beginning on May 23, flights to Milan and Copenhagen will begin on June 5. VE does not compete directly on any routes, but offers fares from Stansted via Brussels to Rome, Milan, Copenhagen, Madrid, Barcelona, and Nice for £98 pounds return, with direct flights to Brussels priced at £78 return.

Under the leadership of Assistant Attorney General Klein, the U.S. Justice Department now issues an advisory ruling under which it recommends disapproval of the proposed BA-AA alliance to the DOT unless the pact is "significantly restructured."

An hour into its May 25 service to New York, Flight 3, a Concorde with 9 crew and 53 passengers, loses a "small section" of a control surface at the back end of the 83-ft. wing. The aircraft returns to London (LHR) where a safe emergency landing is made as emergency services stand by. All of the passengers are put up in hotels for the night as the aircraft is repaired; Flight 3 is completed next day without incident.

Also during the month, the carrier's pilots union meets with its colleagues from **American Airlines** to discuss ways in which they can cooperate. On May 31, GO's £100 introductory flat ticket fare ends, although executives note that it will continue on some seats as part of a new fare structure. It is also announced that £500,000 in bookings had been sold in just the past nine days, with every departing flight full.

It is widely expected that **British Airways, Ltd. (2)**, with which **Malev Hungarian Airlines** has been holding strategic discussions, will succeed **Alitalia, S.p.A.** in the privatization process. In May, the Malev board turns down a draft equity contract with BA because the terms offered do not allow for sufficient integration of Malev into the British carrier.

A strategic marketing and code-sharing partnership is entered into with **Malev Hungarian Airlines** on June 1. Efforts continue to persuade BA to integrate Malev more than is common in strategic alliances.

While **easyJet, Ltd.** and **Debonair, Ltd.** attempt to limit GO via legal and regulatory means, an even stronger competitor threatens to take it on head-to-head in the marketplace. In a speech before the Aviation Club at London on June 1, Michael O'Leary, CEO of Dublin-based **Ryanair, Ltd.** pledges that his concern "will compete with lower fares rather than wait for the bureaucrats in Brussels to rescue us."

To help cope with additional demand caused by the strike at **Air France**, BA, on June 2, begins to increase its capacity on some London-Paris flights for the remainder of the week by up to 50%. A mix of B-747-136s and B-767-236s are brought in to replace smaller B-757-236s on the three daily return services.

The latest expansion of the code-share partnership with **Canadian Airlines International, Ltd.** begins on June 2 with three weekly non-stop roundtrips between London (LHR) and Ottawa. BA will place its code on a CAI B-767-375ERs on Tuesdays and Saturdays and a DC-10-30ER on Sundays.

During the Norwegian ATC controller's strike from June 12–16, the carrier's flights to Norway are cancelled. An extra daily service is, however, operated to and from Goteborg, Sweden.

A number of competitors, including BA, which had brought the original complaint, rejoice on June 25. The European Commission issues a ruling that the \$3 billion in government assistance provided to **Air France** in 1994 had been illegal because it was linked to a restructuring plan and gave the flag carrier an unfair advantage over its competitors. The judgement in the French case has no bearing on any other aid given by European governments to their airlines or on the EC's state aid policy in general.

Also on June 25, the company joins with **American Airlines** in making a new proposal designed to speed acceptance of the planned alliance between the two majors. Under their new suggestion, the pact would be frozen until rival carriers are given 196 weekly takeoff and landing slots at London (LHR). The slots would not be taken from either BA or AA, but would be made newly available. Even as the proposal is filed with the DOT, competitors reject it, claiming that the two companies would still dominate the profitable U.S. to Heathrow market.

Also during the month, a long-term contract is signed with **Atlas Air**, under terms of which the American freight operator will fly a B-747-400F on behalf of the U.K. major.

Leading aviation barrister Robert Webb, who had won the **easyJet, Ltd.** High Court ruling in May and had previously represented **Virgin Atlantic Airways, Ltd.** during the 1993 dirty tricks libel action, is recruited on June 30 to serve, effective September 1, as BA's own general counsel.

In honor of the British World Cup team in its heroic June 30 contest with the Argentine national squad, CEO Ayling orders the team returned home on July 1 aboard a Concorde rather than the B-737 that had been originally scheduled.

A headline on the front page of the July 7 issue of *The Weekly Telegraph* reveals "BA Wants 'Aloof' Stewardesses To Be Less British." The accompanying story announces the new Kaleidoscope program designed to make flight attendants more "customer friendly" as part of the carrier's effort to market itself as a global airline.

EU Competition Commissioner Van Miert, also on July 7, offers tentative terms to AA and BA for the approval of their planned linkup. In order to avoid concerns of their dominance of the best positions at U.K. airports, the two majors will be required to give up 267 of their present weekly landing and takeoff slots at London (LHR and LGW). Additionally, if other carriers request it within six months after the alliance is launched, the two must also cut their frequencies from London to Dallas (DFW), Miami, and Chicago (ORD). AA and BA, simultaneously, object to the EU terms.

On July 8, the U.S. Justice Department begins an antimonopoly probe of the alliance between **British Airways, Ltd. (2)** and **American Airlines** announced on June 11 and seeks information from **Virgin Atlantic Airways, Ltd.** concerning its 1993 antitrust suit against BA.

Made by the British Broadcasting Corporation in cooperation with British airport authorities and BA three years earlier, the documentary *Airport* is first shown in the U.S. over Public Broadcasting Stations on Thursday evenings, July 9, 16, and 23.

Also on July 23, BA kicks off a new U.S. traveling exhibit "Ride the Rocket," dedicated to the supersonic Concorde, at New York City's Bryant Park. Contained in a 70-ft-long semi-truck, the vehicle provides 800-sq.-ft. for displays. In addition, a "Space Travelers" contest will be held at each city visited; the 50 best-dressed "Space Travelers" will receive a pair of free roundtrip economy-class BA tickets.

Before closing, the exhibit will be shown in Washington, D.C., Baltimore, Philadelphia, Jersey City; Pittsburgh, Detroit (DTT), Chicago (ORD), Denver, Phoenix, San Diego, Los Angeles, San Francisco, Seattle, Houston (IAH), Dallas (DFW), Orlando, Tampa, Miami, Atlanta, Charlotte, and Boston.

On July 24, the airline announces an extraordinary 23-day Concorde Grand World Tour to be operated April 5–28, 1999. Teaming up with

three of the world's most famous trains (Venice Simplon-Orient Express, Eastern & Orient Express, Great South Pacific Express), the \$64,000-per-head tour will enable 80 people to ride and fly to, through, and over 10 countries on 3 continents.

The carrier, on July 26, begins selling \$198 economy-class roundtrips on its new Denver–London route, now set to start on September 1. Within 48 hours, BA has sold 60% of the 197 economy-class seats at a discount on every flight between September 1 and November 28.

During July, reports begin to surface that, under terms of the rumored equity discussions, **Malev Hungarian Airlines** will have to forfeit its long-haul services to New York and Bangkok, and cease planning for Toronto and Beijing flights, in order for a pact to be signed with BA. Both airlines vigorously deny the allegations.

Still, the new Hungarian government steps in and puts a temporary freeze on Malev's privatization process (indeed, it stops all privatization efforts in Hungary). Still, both the airline and BA are confident that some arrangement will be completed, perhaps as early as August, with the British line acquiring a stake in Malev, or in the Hungarian state holding company APV.

A B-777-236 IGW lands at Lagos on July 29, signaling the end of a 14-month dispute between the U.K. and Nigeria over safety concerns. Five-times-a-week roundtrips are offered.

Thrice-weekly B-777-236 IGW roundtrips commence on August 9 between London (LHR) and Tehran. The service begins following safety and facility improvements at the hotel where crew members will stay while in Iran.

Dual-designator reciprocal service is launched on August 10 over the respective thrice-weekly BA and **LOT Polish Airlines, S.A.** routes between Manchester and Warsaw, as well as on LOT's two weekly return services between Gdansk and London (LGW).

Due to a 400% increase in air rage incidents during the past three years, the company, on August 19, announces a new disruptive behavior policy that will take effect on September 1.

On August 20, the company begins to code-share with **Malev Hungarian Airlines** on its six-times-a-week Fokker 70 services between Budapest and London (LGW). The carriers will not code-share on the London (LHR) to Budapest route, but discussions continue concerning the possibility of dual designator services from Birmingham and Manchester to Budapest.

In order to stem the company's losses on the route, BA announces on August 24 that it will suspend daily flights from Birmingham to New York and Toronto during the upcoming winter season.

Also on this Monday, the carrier places a £3-billion (\$5-billion) order with Airbus Industrie for 59 A321/A320/A319 aircraft for its European subsidiaries and routes, while remaining loyal to Boeing for its Jumbojet and B-777 long-haul requirements.

The next day, Prime Minister Blair, speaking at Toulouse, announces that, in fact, a \$14-billion order has been placed for 249 new Airbus Industrie aircraft to be delivered over the 7 years following September 1999.

Following several postponements caused by delays in receiving Washington approval, daily B-777-236 IGW roundtrip service is started on September 1 to Denver, the largest U.S. city not now served by a direct flight to or from London.

Based on the soccer penalty system, the company, on September 1, institutes a new program designed to cut down on air rage incidents aboard its flights. Drunk or abusive passengers will be handed a yellow-colored card that clearly warns them that its receipt is a last warning. Should miscreants fail to cease their disruptive behavior, they will be arrested upon landing and will be billed for diversion costs if their actions force pilots to land at the nearest available airport.

A deep-discount fare sale takes effect on September 7 for flights to the U.S. Through September and October, agents are able to offer one-way service from London (LHR) to Los Angeles for just £363. One-way frequencies to Boston or New York (JFK) can be had for £265.

Thrice-daily B-737-3Y0 roundtrips are inaugurated by GO on September 8 between London (CTN) and Edinburgh. The route is the first

domestic service provided by the deep-discount division, which enters direct competition over the distance with **easyJet, Ltd.** Additionally, frequencies from London (STN) to Milan and Copenhagen are increased from twice daily to thrice daily, while a new daily roundtrip is inaugurated between London (STN) and Bologna.

As the leased B-737-300s enter service, each is given highlighted "Go Today" titles atop an all-white fuselage. Each title has a different color accent (purple, red, green, etc.).

To help cut costs, the staff of **Flugfelag Islands, H.F. (2)/Icelandair, H.F.** at New York (JFK) is significantly reduced on September 15. From that date, Icelandair operations at JFK are handled under contract by BA, under the supervision of five Icelandair employees.

The carrier also competes with **Virgin Atlantic Airways, Ltd.** to win permission to launch a second weekly frequency from London to Capetown. On September 18, the CAA grants the South African frequency to BA. Virgin appeals the decision, pointing out that with 18 of the weekly services, the former state airline has become the dominant U.K. carrier on the route.

It is announced at a London news conference on September 21 that **Cathay Pacific Airways (Pty.), Ltd.** has joined its first airline alliance, the new "OneWorld" grouping established to compete with the "Star Alliance" headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by **American Airlines** and BA, which are battling to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. **Canadian Airlines International, Ltd.** and **Qantas Airways (Pty.), Ltd.**, both of which already have marketing partnerships with AA and BA, are also charter members.

Leaders of the five companies indicate that they will coordinate ticketing and flight schedules, while cooperating on frequent flyer programs. Other carriers will be invited to join and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces its membership before the day is over.

One airline that will not be invited to join, **Virgin Atlantic Airways, Ltd.**, hires a truck with a sign painted on its side proclaiming "no way" and has it parked, illegally, outside the building where the "OneWorld" news conference is held. A spokesman for Virgin indicates that his airline will gladly pay the parking ticket to get its point over.

Service to and from Miami and Orlando is cancelled on September 25 in the face of Hurricane Georges. A memorandum of understanding is signed with **Nigeria Airways, Ltd.** on September 29 that allows for the resumption of U.K.-Nigeria service.

Since very few employees are watching, the BA-TV internal television service is discontinued at the end of the month.

Oil driller-passenger Neil Whitehouse, who has refused warnings from flight attendants and the pilot of a B-737 en route to Manchester to switch off his mobile phone, is arrested when the aircraft reaches its destination.

On October 1, it is announced that GO will double its staff to 400 and that it will lease 8 B-737-300s over the next 15 months, including 6 new models from GE Capital Aviation Services.

Also on October 1, BA, in conjunction with a British newspaper, offers a 50% discount on international flights with the collection of tokens. **Virgin Atlantic Airways, Ltd.** immediately moves to reduce its fares to certain international destinations by the same amount, in most cases undercutting BA's special rates. As part of the contest, the BA low-cost division GO cuts the cost of certain fares to Rome, Bologna, Lisbon, and Milan.

A lady flight attendant and a passenger who were aboard the first transatlantic BOAC jet service join celebrations at London (LHR) on October 4 to mark the fortieth anniversary of the Comet 4 flight.

While en route from London (LHR) to New York (JFK) during the day, Flight 001, a Concorde with 9 crew and 62 passengers, experiences a partial separation (40%) of the lower rudder while in cruise flight at 47,500 ft. over the North Atlantic off the coast of Newfoundland. The SST lands at its destination without incident and no injuries are reported.

After three days of unproductive talks, U.S. negotiators in London, talking to their British counterparts concerning an "open skies" bilateral air agreement, depart the conference on October 7. Complicating the talks has been a British demand that the U.S. accept without further delay the BA-AA alliance and U.S. insistence that the pact will not be given antitrust status until the British agree to "open skies."

With no further talks scheduled on the "open skies" accord, DOT officials, on October 9, cancel planned October 26 hearings on the proposed BA-AA alliance. American simultaneously puts out a press release indicating that it is committed to the BA relationship despite the failure of government talks. AA Chairman/CEO Carty does remind the public that the new "OneWorld" alliance will prove helpful to customers of both BA and AA.

On October 10, GO reduces all of its Tuesday, Wednesday, and Thursday midweek fares for the next two months. The promotion requires a minimum stay of two nights. The ticket price cuts include a reduction on the London (STN) return routes to Rome, Lisbon, and Bologna from £100 to £60; from London (STN) to Milan and Copenhagen from £100 to £50; and from London (STN) to Edinburgh from £70 to £40. The latter rate is carefully set as to remain £2 higher than that of competing **easyJet, Ltd.**

With the dispute between the NATO allies and the government of Yugoslavia deteriorating to a point where air strikes may occur, BA, on October 12, cancels its flights into Belgrade as a precautionary measure. Military action does not happen.

At the same time, a fare war erupts on the London-Copenhagen route as the result of a ticket price reduction by GO. Two days later, a newspaper in Uganda reports that the carrier will replace DC-10-30s on the Entebbe service with larger B-747-436s as of January 22.

Following a celebrity send-off, the 12th annual Dreamflight service departs London (LHR) for Orlando and Disneyworld on October 19. This year 193 incurably sick and disabled children from the U.K. and overseas, including two from Chernobyl and four from Hong Kong, are transported. Also during the day, BA leads an effort by several European airlines to delay implementation of an Italian government decree splitting service between the airports in Milan; Italian courts will reject the legal brief.

Just after midnight on October 21, a B-747-436 en route from Washington, D.C. (IAD) to London (LHR), makes an emergency landing at St. John's, Newfoundland, after the pilot reports smoke in the cockpit. It is determined that the "smoke" is, in fact, haze from a cockpit humidifier and the aircraft is allowed to proceed.

Having failed in its efforts to block split service at Milan, BA is forced to notify its passengers on October 23 that certain flights will be operated to Linate and others to the new Malpensa facility.

With the start of the winter schedule on October 25, a 14th weekly flight is started from London to Tokyo. In addition, a third direct route to Sydney via Kuala Lumpur is initiated, with a company B-747-436 replacing a B-767-338ER of dual-designator partner **Qantas Airways (Pty.), Ltd.** on the Malaysia-Australia segment. At the same time, a sixth weekly roundtrip is started between London and Cape Town.

Because the economic situation does not support five weekly flights to Jakarta, the number is now cut to two. On days with no direct flights, BA customers will be able to obtain connections at Singapore.

In Italy this Sunday, all 12 weekly roundtrips to Milan from Manchester and the twice-daily roundtrips from London (LGW) are switched to the new Malpensa Airport. Franchise partner **Maersk Air, Ltd.** continues to operate its 17 weekly return flights from Birmingham into Linate Airport.

easyJet, Ltd. Chairman Haji-Ioannou claims that the GO £40 promotional fare on the London (STN) to Edinburgh route is designed to drive his London (CTN) to Edinburgh service out of business. On October 27, he organizes a high-profile protest flight from London (CTN) to Brussels to deliver a formal complaint against his rival's ticket price to the European Union. In a statement, the discount airline's leader indicates that he has been forced to match the GO fare, which is believed to be predatory.

The price war between BA and **Virgin Atlantic Airways, Ltd.** continues through October 28. The next day, *The Financial Times* reports that BA will scale back plans for an alliance with **American Airlines** because the demand by regulators for the exchange of hundreds of takeoff and landing slots at London (LHR) in exchange for approval is too high. The journal suggests that the U.K. major will seek ways to integrate with American in phases.

BA denies the story and the existence of any plans for a scaled-back pact. Across the Atlantic at Dallas (DFW), however, an **American Airlines** spokesman confirms that the two majors have held discussions concerning a gradual phase-in of their transatlantic partnership in order to please regulators. While remaining committed to a full-fledged alliance, the two recognize that a slower integration would allow U.S. and British officials time to solve the Heathrow slot controversy.

Also at the end of the month, the thrice-weekly return service to Osaka (KIX) is suspended as the result of lowered passenger demand and the continuing drop in the value of the Japanese yen.

In cooperation with **Nigeria Airways, Ltd.**, thrice-weekly B-747-436 flights to Nigeria from London (LHR) begin on November 3.

After 20,917 flights and 6 million passengers, the carrier's first B-747-136 is retired in a ceremony at London (LHR) on November 5. For the occasion, BOAC titles and a gold Speedbird logo are painted on the port side of the fuselage. Afterwards, the Jumbojet is piloted to Cardiff, from whence it is ferried to Roswell, New Mexico, where it is turned over to its new owners, AAR Leasing. At the same time, the company accepts its 50th B-747-436.

BA announces a drop in half-year profits on November 9 and indicates that it will continue to curb capacity in the face of what is predicted to be an economic downturn. For the six months ending September 30, pretax profits are down to £385 million (\$640.7 million), compared to £430 million (\$688.4 million) a year earlier.

Continuing tensions in the Gulf region cause the company to change its Kuwait flight schedule on November 13. Henceforth, the daily B-777-236 London-Kuwait-Bahrain service will depart Heathrow Airport two hours later and spend only one hour on the ground at Kuwait City instead of the previous three.

The carrier's November 13 service from Cairo to London is delayed for 1 hr. 15 min. after flight attendants hear a kitten frantically meowing in the passenger cabin, where animals are banned. After a search, the young cat is found in the handbag of a Romanian passenger, who had found the cat en route to the airport and did not have time to change travel plans or dispose of the animal. Rather than surrender his new companion, the customer departs the aircraft for a later flight. No interference charges are pressed.

On November 18, electronic ticketing is extended from London (LGW) to 21 U.S. routes.

The discount division GO inaugurates thrice-weekly service from London (STN) to Munich on November 23. Two days later, it increases the number of its frequencies between London (STN) and Edinburgh from three per day to five.

A significant foreign relations embarrassment occurs on November 26 and is reported in the pages of *The Times of India* four days later. Following the first-ever official visit to Bangladesh by representatives of the Indian Navy, Indian Navy chief of staff Adm. Vishnu Bhagwat is refused permission to take aboard a BA flight to New Delhi the free extra baggage granted by his VIP pass. An argument ensues, but by the time the matter is cleared up, the flight has departed. Bhagwat and his staff spend an unscheduled night in a Dhaka hotel and return home on November 27 aboard a **Biman Bangladesh Airlines, Ltd.** service. A protest is lodged with the airline by the distressed Bangladeshi government.

Alistair Cummings, the former COO/director of engineering, who had retired in June 1997, dies in Nettlesbed, England, on November 29 at the age of 64.

On November 30, subject to government approval, a conditional agreement is reached with the backers of CityFlyer Express, Ltd. for the regional's purchase. Having acquired full ownership of its first franchise

partner for £75 million, BA will allow it to continue operations under its own name, air operators certificate, fleet, board of directors, and the management team headed by Managing Director Burgess. The two airlines will, however, more fully integrate their networks and schedules.

In an effort to compete head-to-head with the GO division, **Deutsche Lufthansa, A.G.**, on December 1, inaugurates thrice-daily roundtrips from Munich to London (STN). The introductory roundtrip price is just £80.

It is reported the next day that BA has extended electronic ticketing to 21 U.S. routes and a number of European cities, including Amsterdam, Brussels, Copenhagen, Nice, Oslo, Paris, and Stockholm.

GO launches daily roundtrips on December 8 from London (STN) to Venice and adds a second daily roundtrip to Bologna. The low-cost division also begins to receive additional B-737-300s, leading to a total of 13 by the end of March, and increasing its staff to 400.

As the result of a new air service agreement between Australia and Malaysia, **Qantas Airways (Pty), Ltd.** is able to code-share, starting on December 10, aboard BA thrice-weekly B-747-436 return flights from Sydney to London (LHR) via Kuala Lumpur.

Although it has no plans to enter the "OneWorld" alliance, **Japan Air Lines Company, Ltd. (2)** indicates during the day that it is in talks with BA concerning the formation of a possible strategic marketing arrangement.

As a result of the September restoration of diplomatic relations between the U.K. and Iran, BA, which has been leery, finally lifts a nine-year travel ban on December 18 against Salman Rushdie, author of the controversial book *The Satanic Verses*. Rushdie, who has a price on his head from more extreme Islamic sects, is now free to use the carrier.

Rather than BA, the CAA, on December 23, awards authority to **Virgin Atlantic Airways, Ltd.** to be the first British airline to operate to Shanghai.

Yuletide is celebrated by the airline on December 25 as it serves turkey dinners, mince pies, and Christmas pudding on all 132 of its flights in and out of London.

It is announced on December 31 that the company is conducting a month of tests employing disposable paper luggage tags equipped with a silicon chip designed to prevent lost bags. The "smart baggage" is being handled on flights between London (LHR) to Manchester and Munich.

Passenger boardings jump 10.8% to 36,671,000, while freight traffic accelerates 4.5% to 3.88 billion FTKs. It is reported that the GO division adds another 312,000 bookings to the enplanements total.

Overall revenues during the 12 months increase by 3.2% to £8.92 billion (\$14.16 million), but the Asian economic situation and stiffer competition brings higher costs. The operating profit falls 12% to £442 million. Net gain falls 61% to £225 million (\$357 million). Still, a cost cutting program is credited with saving the company £610 million during the year. Although the pretax loss is the worst in six years, BA is still able to orchestrate a 7.8% higher payout for investors, with individual shares of common stocks rising in value from 16.6 pence to 17.9 pence.

Coming into London (LGW) from Helsinki on January 5, 1999, a B-737-436 with 91 passengers and piloted by Capt. Renny Manclark, must call for permission to make a priority landing. The request comes after the copilot had collapsed during the approach, twisting violently and moving the plane's rudder. Once the pilot has regained control, the cabin crew are, with difficulty, able to move the unconscious woman out of her seat and down into the forward galley. Upon landing, the pilot is transferred by ambulance to hospital; she will be assigned to desk/ground duties upon her discharge until medical testing is completed.

Newly appointed Secretary for Trade and Industry Stephen Byers reacts to a complaint by **Virgin Atlantic Airways, Ltd.** in early January. Executives of Richard Branson's carrier claim that, although they had been interested, they were not given a chance to bid on **CityFlyer Express, Ltd.** before its takeover by BA was arranged on November 30. Additionally, Byers indicates that the move raises competition concerns in that BA would gain control of 39% of all the takeoff and landing slots

at London (LGW). Consequently, the proposed acquisition is referred to the U.K.'s Monopolies and Mergers Commission, which will report its findings on April 26.

The B-777-236 IGW return flight from Jamaica to London (LGW) must be cancelled on the evening of January 9 because 80% of the crew rostered to take the plane back has come down with the flu. The laid up crew is unable to return the wide-body before January 12.

Also on January 12, a new corporate loyalty plan is launched; aimed at small businesses, Venture Club will allow member companies to employ accumulated mileage points to purchase office equipment or use as employee rewards.

After some months of discussion, a strategic alliance is entered into with **Japan Air Lines Company, Ltd. (2)** on January 13. The bilateral, which does not include entry of JAL into BA's "OneWorld" alliance network, provides for the linking of frequent flyer programs on June 1 and the initiation of code-sharing on JAL's daily service from London (LHR) and Osaka (KIX) and Tokyo (NRT). The latter route will not be implemented due to lack of demand.

The same day, it is announced that the carrier is equipping its long-haul jetliners with air-to-ground cardiac monitors, to complement the heart defibrillators aboard all its planes.

While en route from London (LHR) to Bangkok on January 14, Flight 009, a B-747-436 with 395 passengers, is subjected to a significant act of air rage. Seven hours into the 12-hr. flight, a Hong Kong-based electrician, Lee Thresher, who has been drinking heavily (three double whiskies) after taking a Valium tablet, begins annoying passengers near him. When flight attendants warn him, he attacks another passenger, jumps up and races down the aisle to the rear of the plane where he attempts to break the window of a door, hitting it so hard with his fist that he breaks the inner protective panel and cuts his hand. The copilot, who has left the cockpit, leads three cabin crew and three passengers in overpowering the man who is handcuffed and restrained by seatbelts in a rear seat. The aircraft is diverted to India, where the man is turned over to authorities for transport back to England.

The next day, while en route from London (LHR) to Johannesburg, crew members of another B-747-436 with 406 passengers must restrain plumber Ian Bottomley of Larch Grove, Witham, Essex, who has become aggressive and endangers operations. Bottomley, who has caused £30,000 in damages and injured 3 stewards, is turned over to police when the Jumbojet lands.

Both Thresher and Bottomley are returned to the U.K. in handcuffs by security personnel on January 17 and charged at Uxbridge Magistrates Court on January 18. Their cases have made headlines around the world and have added further fuel to the international debate over remedies for the air rage problem.

A new £250-million world cargo center is opened for business at Heathrow Airport on January 19. Twice-weekly B-747-436 roundtrips begin on January 22 between London (LGW) and Entebbe, Uganda. The Tuesday return service is direct, while the Saturday flight stops at Nairobi.

On January 25, worldwide concern over the potential Y2K computer problem brings the first test at the airline's Surrey-based reservations center of the ability of the system to print a ticket dated January 1, 2000. The test is a success. Nevertheless, and in an effort to calm passenger fears of impending disaster in the skies, it is announced on February 1 that 16 senior BA executives will be in the air at midnight on December 31. The presidents of China's airlines will also be in the air that night as will U.S. FAA Administrator Jane Garvey.

The "OneWorld" global alliance is formally implemented, also on February 1, with **American Airlines, Canadian Airlines, Ltd., Cathay Pacific Airways (Pty.), Ltd., and Qantas Airways (Pty.), Ltd.**

Also on February 1, BA creates history when two Concorde arrive at Barbados to inaugurate the winter 1998-1999 SST service. One aircraft arrives from London and the other from New York, making Barbados the only destination in the world to receive Concorde service from both sides of the Atlantic Ocean.

Forewarned of BA's dismal economic picture, CEO Ayling tours the boardrooms of important investment houses in London's "City" region during the first week of February to blunt the expected disappointment. On February 8, the CEO is forced to report the carrier's first quarterly loss in four years—£75 million for the period ending in December. Simultaneously, he notes that a company team has been appointed to review BA's European route structure, suggesting that some services may be cut.

Also during the week, it is announced that due to a recent spate of kidnappings resulting in a decline of travel to the country, the April launch of scheduled service to Yemen has been cancelled. If the situation improves, flights may be started in November.

On February 12, BA, **American Airlines, Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, and SEPI (the state holding company that presently owns Iberia) sign an important agreement in Madrid, one which has been delayed since November by management disputes. Under its terms, the Spanish flag carrier strengthens its relationship with the Anglo-Americans by selling to them, via SEPI, a combined 10% equity stake. For £226 million, BA takes the majority 9% share, with AA acquiring 1%; each of the foreign airlines receives a seat on Iberia's board of directors. SEPI will sell an additional 30% of the airline in a June flotation on the Madrid stock exchange.

Also on February 12, a memorandum of agreement is signed with **Aeroflot Russian International Airlines (ARIA)** concerning the establishment of a strategic commercial alliance. The document, reflecting negotiations carried out in secret since the fall of the previous year, paves the way for the creation of specific marketing and other cooperative measures.

In the latest episode in a war of words that never seems to end, **Virgin Atlantic Airways, Ltd.**, also on February 12, complains to the U.K. Advertising Authority concerning BA's use of the slogan "World's Favourite Airline."

Twice-weekly B-777-236 IGW roundtrips begin on February 14 between London (LGW) and San Juan, Puerto Rico.

Most of the CEOs of the "OneWorld" alliance meet in Sydney, Australia, on February 15. There, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** is formally welcomed into the group.

Found in Shetland two weeks earlier where it had been blown off course during its yearly migration from South Africa to Portugal, a cattle egret is flown to Lisbon aboard a company aircraft on February 16.

Given the uncertain state of the Kosovo peace talks, BA cancels its daily roundtrip from London (LGW) to Belgrade on February 21; it promises further cancellations if the situation warrants.

Virgin Atlantic Airways, Ltd. Chairman Richard Branson dons a rabbit costume, also on February 21, to celebrate the Chinese Year of the Rabbit—and his carrier's new route to Shanghai, which will begin twice-weekly in May. Branson indicates that he has learned that the Transport Ministry has denied BA's appeal of the route decision.

GO CEO Cassani announces on February 23 that her low-cost division will inaugurate four routes to Spain and Portugal between the end of March and July.

On February 26, U.K. Ambassador to Cuba David Ridgway announces that BA will launch direct flights from London (LGW) to Havana in April.
