In July, a Douglas DC-9-31 is received under lease from South Africa's **Sun Air (Pty.), Ltd.** During the fall, the company enters into strategic arrangements with **Virgin Express Airlines, Ltd.** and **KLM (Royal Dutch Airlines, N.V.)**.

Early in **1998**, a code-sharing agreement is entered into with **Sun Air (Pty.), Ltd.** that opens connections to Durban and Cape Town. A cooperative agreement is also entered into with the new Harare-based independent **Air Zambezi, Ltd.** that begins flying on July 16.

On December 11, the company launches a homepage on the Internet's World Wide Web.

Service continues in **1999** and the arrangement with **Sun Air (Pty.), Ltd.** leads to the acquisition of a second DC-9-31.

Financial problems cause **Sun Air (Pty.), Ltd.** to shut down on August 13. Zimbabwe is also endangered because it will be required to return the Douglas jetliners. Without aircraft, the company is forced to suspend operations. Although often petitioned, the company's management refuses to meet with its 250 workers to discuss their fate. Payment of employee salaries stops at the end of October.

Negotiations are entered into with **South African Airways (Pty.), Ltd.** in November seeking assistance. It is hoped that the company can be reformed into a new entity with the SAA taking a 40% minority stake.

These talks, pursued aggressively by Zimbabwe CEO Evans Ndebele, continue into **2000**. Key issues all revolve around the airline's substantial (but undisclosed) debt, which has forced impatient creditors to attach its remaining assets. *The Financial Gazette* (Harare) on June 29 quotes SAA Chief Financial Officer Andre Viljoen, who has indicated that his company's investment in Zimbabwe Express depends entirely upon whether or not the troubled carrier can reach an appropriate compromise with its creditors, one that will be approved by the courts.

As this condition is met, SAA insists on six different, specific, and undisclosed agreements before it will help. On July 1, the Zimbabweans sign four and anticipate agreement to the remaining two before the end of summer.

ZIMEX AVIATION, LTD.: P.O. Box 162, Alte Landstrasse 106, Zollikon, CH-8702, Switzerland; Phone 41 (1) 391-4466; Fax 41 (1) 391-3277; Code C4; Year Founded 1969. A division of Xiegler Holding, Ltd., Zimex is established at Zollikon in early 1969 to offer a variety of specialized charter services. These include survey, air taxi, air ambulance, passenger and cargo flights, as well as pilot training. Founder Hannes Ziegler is president. Revenue services begin on June 20 and are maintained with little change over the next decade.

During the early 1980s, the company's emphasis on support of oil exploration, particularly in North Africa, continues. In 1984–1985, the fleet comprises 13 Pilatus Porters, 3 Fokker F.27s, 3 de Havilland Canada DHC-6-300 Twin Otters, and 1 Beech Volpar Turboliner.

Two Boeing 707Fs and a Lockheed L-100-30 Hercules are acquired in 1986.

Just after takeoff from Cutato, Angola, for Benguela on October 14, 1987, an L-100-30 with four crew and two passengers suffers the explosion of its No. 3 engine. While attempting to return to its point of origin, the Hercules rapidly descends and collides with 8 houses in Cancao village, 40 km. W of Kuito; there are no survivors from the aircraft and 2 people are killed on the ground.

Although no person or group admits to the deed, all indications are that the tragedy has been caused by a heat-seeking surface-to-air missile.

Operations continue apace in 1988, although the jet freighters are removed. The fleet in 1989 includes 5 DHC-6-300s, 2 Cessna 208 Caravan I, and 1 each British Aerospace BAe Jetstream 31, Volpar Turboliner, and Super King Air 200. A Lockheed L-382G is acquired, but leased to **Intercargo Service** of France.

Another Super King Air 200 is acquired in 1990, along with a second Caravan I. One Twin Otter is leased to **Flugfelag Nordurlands, H.F.** in Iceland and **Gronlandsfly, A.S./Greenlandair**. The number of DHC-6-300s is increased to 11 in 1991 and a Turbo-Conversion Douglas DC-3 is also acquired.

The latter plane is removed in 1992 as unsuitable while, as a result of the recession, one Cessna 208 and one King Air are also sold. A Twin Otter is withdrawn in 1993 so that the fleet in 1994 totals 2 Beech Super King Air 200s, 10 DHC-6-300s, 13 Pilatus PC-6s, and 1 Jetstream 31.

Flights continue in 1995–1998, during which years the fleet is increased by the addition of a Cessna 208 Caravan I and two Fokker F.27-200 Friendships.

Airline employment at the beginning of 1999 stands at 180. In July, the company is sold to a Swiss investment group. Emphasis on air taxi flights, as well as energy industry and humanitarian charters, continues into the new millennium.

During 2000, a de Havilland Canada DHC-6-300 is acquired and dry-leased to **Loganair, Ltd.**, which employs it while its own Twin Otter is busy on a contract in Scotland. Upon the completion of the arrangement, the Zimex DHC is returned on November 27.

ZIMMERLY AIR LINES. See **EMPIRE AIRLINES** (2)

ZONDA (ZONAS OESTE Y NORTE DE AEROLINEAS ARGENTINAS, S.A.): Argentina (1946–1949). In order to insure state participation in the postwar development of the nation's air transport industry, in 1945 the government of Argentina decrees the establishment of several joint-stock carriers in which it would hold some interest. In addition, the map of Argentina is divided into six regional zones of influence that would be allocated to the new operators.

On February 23, 1946, **LAAN (Lineas Aereas Argentinas Noroeste, S.A.)** is formed to take over zones III and V in the northwest. Important destinations included were once flown as part of the cabotage arrangement by **Pan American-Grace Airways (PANAGRA)** and feature such cities as Cordoba and Tucuman.

Given the geographical location of LAAN's district up against the Chilean border and the initials of that country's airline (**LAN Chilean Airlines, S.A.**), it is decided to change the name of the Argentine operation in June to ZONDA. The remainder of the year is primarily devoted to assembling a fleet that comes to comprise 17 Douglas DC-3s, 10 de Havilland DH 89A Dragon Rapides, 2 Avro Ansons, and several miscellaneous types. In August, unscheduled proving flights are started and the first revenue flight is completed in mid-November, Buenos Aires–Salto.

Regularly scheduled domestic services are inaugurated on January 2, 1947. Among them are two nonstop direct ex-**Pan American-Grace Airways (PANAGRA)** flights out of Buenos Aires: Expreso El Tucumano and Expreso El Cordobes. The first international flight occurs in October when the Mendoza route is pushed to Santiago de Chile. Night service is simultaneously opened from Buenos Aires to Cordoba.

ZONDA's domestic and regional services are maintained throughout the remainder of the year and 1948. During the latter year, Convair CV-240s are ordered to replace the DC-3s; however, they will not be delivered in the lifetime of the airline. On May 3, 1949, ZONDA is one of four companies merged to form the new state company **Aerolineas Argentinas, S.A.**

ZULIANA DE AVIACION, S.A.: United States (1985–1997). With its name taken from the state of Zulia, Zuliana is established by Edgar J. Valles at Caracas, Venezuela, in 1985 as an all-cargo charter airline. A Douglas DC-8-54F is obtained with which to begin scheduled passenger charter operations and permission is requested of the U.S. DOT for authority to serve New York, Houston, Miami, and San Juan. Operations commence in 1991 to Miami, Maracaibo, Medellin, and Bogota, with the company's main hub transferred to Miami.

Flights continue in 1992–1993 as two DC-9-31Fs are acquired. As the economy improves in 1994, additional passenger charter business is acquired and the fleet is expanded by the addition of one each Boeing 727-227 and B-727-295.

The latter aircraft is put out of service in 1995. Enplanements through August total 274,963. In 1996, the fleet includes 3 DC-9-32s, 2 DC-9-31Fs, the leased B-727-227, and 2 newly acquired Douglas DC-8-54Fs. Traffic is mixed. Customer bookings for the first 8 months plunge 26.8% to 216,848, but 6.31 million FTKs are operated, a 19.5% increase.

Services cease in 1997.

Postscript

Proofreading and indexing of these three volumes was completed on a staggered schedule: Volume I (November 10, 2000), Volume II (March 10, 2001), and Volume III (June 10, 2001). During those seven months, and several extra tacked on afterwards, the following airlines failed, were taken over and merged, or changed their names. The author was given the opportunity to add last-minute information concerning these failures and other late details during the indexing/proofing phases of the project. Consequently, information on the demise of carriers, traffic and financial figures, personnel changes, alliance upgrades, and disasters is included, but on a gradually shrinking scale based on volume cut-off dates. For an overall review of the year 2000 and specific figures, readers are directed to the "2000 World Airline Report" issue of *Air Transport World* (July 2001).

LIST OF FAILED, ACQUIRED/MERGED, OR RENAMED CARRIERS

AccessAir closes down on February 27, 2001.
Aero Kuznetsk Novokuznetsk Airline is renamed Aerokuzbass.
AeroContinente, S.A. is ordered shut down by the Chilean courts on July 19, 2001 after its owners and three executives are charged with money laundering and drug trafficking.
Aeropostale (2) becomes Europe Air Post, S.A. in October 2000.
Air China International Corporation, Ltd., effective May 1, 2001, enlarges its group to include China Southwest Airlines Company, Ltd. and Zhejiang Airlines Company, Ltd.
Air Engiadina, A.G./KLMalps becomes Swisswings Airlines, A.G. on March 28, 2001.
Air Normandie, S.A. is reported to have ceased operations on August 31, 2001.
Air Nova becomes part of Air Canada Regional, Inc. on January 1, 2001; it will continue to operate under its previous name until the physical amalgamation into the larger entity is completed later in the year.
Air Ontario, Inc. becomes part of Air Canada Regional, Inc. on January 1, 2001; it will continue to operate under its previous name until the physical amalgamation into the larger entity is completed later in the year.
Air Open Sky, S.A. fails on November 13, 2000.
Air Venezuela, S.A. ceases operations on April 23, 2001.
Air BC becomes part of Air Canada Regional, Inc. on January 1, 2001; it will continue to operate under its previous name until the physical amalgamation into the larger entity is completed later in the year.
Alberta Citylink, Inc., following the loss of its Air Canada affiliation, ceases scheduled operations in April 2001, flying charters under the name Bar-XH Air.
Alcon Services Aereos, S.A. de C.V. ceases operations on September 3, 2001.
ALM Antillean Airlines, N.V. is taken over mid-June 2001 and merged into the new Dutch Caribbean Airlines, N.V.
Ansett Australia (Pty.), Ltd., Australia's second largest airline, enters administration (bankruptcy) on September 12, 2001, and ceases all op-

erations and shuts down on September 14. It resumes limited operations on September 30.

AOM French Airlines, S.A. is merged into Air Liberte, S.A. at the end of April 2001.

Arrow Air is merged into Fine Air Services on February 23, 2001.

Australian Airlink (Pty.), Ltd. becomes part of Qantas Link in June 2001.

Avant Airlines, S.A. ceases operations on March 10, 2001.

Balkan Bulgarian Airlines is declared insolvent on March 12, 2001.

Binter Mediterraneo, S.A. is taken over by Air Nostrum, S.A. on May 11, 2001.

Braathens, A.S. owners, on May 22, 2001, elect to end independent airline operations and sell out to rival SAS (Scandinavian Airlines System); as in the American/TWA merger, SAS will continue, at least initially, to operate the Norwegian carrier as a separate brand. Subsidiary Malmo Aviation, A.B. is divested by Braathens prior to the sale.

Britannica Airways Germany, gmbH, is shut down on April 2001.

British Midland Airways, Ltd. is rebranded bmi british midland (lower case for emphasis) in mid-April 2001.

British Regional Airlines, Ltd., of the British Regional Airlines Group, is purchased by British Airways, Ltd. (2) in April. It is merged into Brymon Airways, Ltd.; the enlarged company is rebranded British Airways Cityexpress, Ltd.

Brymon Airways, Ltd. is merged with British Regional Airlines, Ltd., of the British Regional Airlines Group, after its purchase by British Airways, Ltd. (2) in April; the enlarged company is rebranded British Airways Cityexpress, Ltd.

Braathens's Malmo Aviation becomes Malmo Aviation in October 2000.

Canadian Airlines, Ltd. disappears into Air Canada on January 1, 2001.

Canadian Regional Airlines, Ltd. disappears into Air Canada Regional, Inc. on January 1, 2001; it will continue to operate under its previous name until the physical amalgamation into the larger entity is completed later in the year.

Canjet Airlines, Ltd. purchased into Canada 3000 Airlines, Ltd. on March 28, 2001.

Capital City Airlines, Ltd. ceases all operations on February 23.

Centennial Air ceases operations in June 2001.

China Eastern Airlines Company, Ltd., effective May 1, 2001, enlarges its group to include not only China Great Wall Airlines Company, Ltd., but China Northwest Airlines Company, Ltd. and Yunnan Airlines Company, Ltd. as well.

China Northern Airlines Company, Ltd., effective May 1, 2001, merges into the group led by China Southern Airlines Company, Ltd.

China Northwest Airlines Company, Ltd., effective May 1, 2001, merges into the group led by China Eastern Airlines Company, Ltd.

China Southern Airlines Company, Ltd., effective May 1, 2001, enlarges its group to include China Northern Airlines Company, Ltd. and Xinjiang Airlines Company, Ltd.

China Southwest Airlines Company, Ltd., effective May 1, 2001, merges into the group led by Air China International Corporation, Ltd.

City Bird, S.A. ceases all operations on October 5, 2001.

City Connexion Airlines, S.A. ceases all operations on March 2, 2001.

Comed Aviation, Ltd. ceases operations on February 19, 2001.

Country Connection Airlines (Pty.), Ltd. is shut down on May 20, 2001.

Dalavia is expanded on April 1, 2001, by the inclusion of Nikolaevsk-na-Amur Air Enterprise and Vostok Airlines; on May 4, the three are combined, effective August 1, into Khabarovskavia.

Eastern Australia Airlines (Pty.), Ltd. becomes part of Qantas Link in June 2001.

Eastern Caribbean Express, Ltd. (EC Express) ceases operations on April 16, 2001.

Emery Worldwide, in light of FAA safety concerns, voluntarily grounds its fleet on August 13, 2001; it will henceforth rely on its contract partners for air services. On September 24, a settlement is reached which will allow the airline operation to resume in 2002.

Flandre Air, S.A. merged into the new Region, S.A. on April 1, 2001.

FTi Flugesellschaft, GmbH., per a May 23, 2001 announcement, ceases operations at the end of October, its parent having contracted other German charter operators to provide lift thereafter.

Galaxy Airlines, S.A. reported closed on March 12, 2001.

Gill Air, Ltd. ceases operations on September 20, 2001.

Goldwing Airlines, S.p.A. ceases all operations at the end of February, 2001.

Guyana Airways 2000, Inc. ceases operations on August 2, 2001.

Harbor Airlines ceases scheduled operations on May 9, 2001.

Impulse Airlines (Pty.), Ltd. ceases is acquired by Qantas Airways (Pty.), Ltd. on May 14, 2001, and adopts the Qantas Link brand.

Legend Airlines liquidates its assets under Chapter VII in early May 2001.

Kendell Airlines (Pty.), Ltd., like its Ansett Australia (Pty.), Ltd. parent, enters administration (bankruptcy) on September 12, 2001, and ceases all operations and shuts down on September 14.

LADECO Chilean Airlines: Linea Aerea del Cobre, S.A. is shut down on September 1.

Legend Airlines liquidates its assets under Chpt. VII in early May 2001.

Manx Airlines, Ltd. (2), a partner with British Regional Airlines, Ltd. in British Regional Airline Group, is purchased by British Airways, Ltd. (2) in April, 2001; unlike BRA, its services to the Isle of Man continue to be operated under the Manx Airlines, Ltd. (2) name.

Maxair, A.B. ceases operations on March 31, 2001 and is liquidated.

Med Airlines, S.p.A. ceases all operations at the end of February 2001.

Midway Airlines (2), already bankrupt, is grounded with other U.S. airlines in the wake of the September 11, 2001 terrorist strikes on New York and Washington, D.C., anticipates an air travel demand slowdown when domestic operations are permitted to restart and does not have the resources to resume flights; on September 12, it announces that it is shutting down permanently.

Nagasaki Airways Company, Ltd., following delivery of its premier Dash 8-Q200 in early 2001, is renamed Oriental Air Bridge Company, Ltd.

Nikolaevsk-na-Amur Air Enterprise is merged into Dalavia on April 1, 2001; on May 4, the two are joined with Vostok Airlines, effective August 1, to form Khabarovskavia.

Ozark Air Lines (2) halts operations on March 29, 2001; it is sold and resumes operations on April 6 as Great Plains Airlines.

Polar Air is acquired by Atlas Air on July 13, 2001; the process of amalgamation is expected to take a year.

Proteus Air System, S.A. merged into a new Region, S.A. on April 1, 2001.

Qantas New Zealand, Ltd. collapses on April 20, 2001 and is liquidated.

Reeve Aleutian Airways ceases operations on March 31, 2001.

Regional Airlines, S.A. is merged into a new Region, S.A. on April 1, 2001.

Royal Airlines, Ltd. is merged into Canada 3000, Ltd. on May 1, 2001.

Southern Australia Airlines (Pty.), Ltd. becomes part of Qantas Link in June 2001.

Trans World Airlines (TWA) declares bankruptcy on January 10, 2001, and its assets are purchased by American Airlines, effective April 9. During a yearlong integration, the new AA subsidiary is known as TWA Airlines LLC.

USAirways announces on September 24 that it will shut down its low-cost Metrojet division by December.

Virgin Express (Ireland), Ltd. is shut down on March 16, 2001.

Vnukovo Airlines is officially merged into Siberia Airlines (Sibir) on April 27, 2001.

Vostok Airlines is merged into Dalavia on April 1, 2001; on May 4, the two are combined with Nikolaevsk-na-Amur Air Enterprise, effective August 1, to form Khabarovskavia.

Xinjiang Airlines Company, Ltd., effective May 1, 2001, merges into the group led by China Southern Airlines Company, Ltd.

Yunnan Airlines Company, Ltd., effective May 1, 2001, merges into the group led by China Eastern Airlines Company, Ltd.

Zhenjiang Airlines Company, Ltd., effective May 1, 2001, merges into the group led by Air China International Corporation, Ltd.

A FINAL NOTE

As this review list indicates, the year 2001 has (as of October 1) developed into one of the worst for the world airline industry since the end of the last cyclical downturn in 1994–1995. High fuel prices and sluggish economies in many parts of the world have been accompanied by a sharp decline in the number of boardings, particularly by the most lucrative customer, the business passenger. In the U.S. as elsewhere, record amounts of red ink spilled over airline balance sheets during the first and second quarters, and that before Black Tuesday, September 11.

On that infamous day, two American Airlines aircraft and two United Airlines Boeing jetliners were taken over by 19 hijackers and employed as guided bombs to attack New York City's World Trade Center and the Pentagon in Washington, D.C., completely destroying the former. One of the United aircraft crashed south of Pittsburgh, apparently as the heroic last act of alerted passengers engaged in combat with their captors and determined to prevent further murder on the ground. The horrendous acts, which claimed more than 3,000 lives, caused the FAA to ground all commercial air traffic in the U.S. for much of a week, further diminishing any hope of financial recovery this year for the American airline industry, which now faces its most severe challenges since World War II.

The ripple impact of fear—caused by the terrorism on top of an already bleak economic picture confronting many of the world's carriers—has brought unprecedented numbers of layoffs and bankruptcies by even some of the best known airlines, including Swissair, Sabena, and Ansett Australia. A few more, like City Bird of Belgium, have collapsed without restarting (or teeter on the brink), joining the list of others to fail earlier in the year. Time will tell what other names will pass into history.

Appendix A

Acronyms and Abbreviations

ORGANIZATIONS/CORPORATIONS

AACO	Arab Air Carriers Organization
AAPA	Association of Asia-Pacific Airlines
ACPA	Air Canada Pilots Association
AEEU	Amalgamated Engineering and Electrical Union
AFA	Association of Flight Attendants
AFAP	Australian Federation of Air Pilots
AFL	Australian Football League
AHS	American Helicopter Society
AID	Agency for International Development (U.S.)
AMFA	Aircraft Mechanics Fraternal Association
ALPA	Air Line Pilots Association
APA	Allied Pilots Association
ATA	Air Transport Association of America
ATGU	Amalgamated Transport and General Workers Union
ATLB	Air Transport Licensing Board (U.K.)
BALPA	British Air Line Pilots Association
CAA	Civil Aeronautics Administration (U.S.)
CAA	Civil Aeronautics Authority (U.K.)
CAB	Civil Aeronautics Board (U.S.)
CADF	China Aviation Development Federation

USFU	U.S. Forest Service
USMC	U.S. Marine Corps
USN	U.S. Navy

AIRPORTS

Most of the world's airports are named for someone or some thing and the official names are often quite long. Many cities, such as Paris, have more than one airport, each with a different name. Years ago, the airlines and international civil aviation organizations began the practice of employing abbreviations for airports, just as they had for airlines themselves.

The IATA codes for those airports most commonly mentioned in this work include:

Chicago

MDW	Midway Airport
ORD	O'Hare International Airport

Dallas

DFW	Dallas/Fort Worth International Airport
DAL	Love Field

Detroit

DET	City Airport
DTW	Metropolitan Airport
YIP	Willow Run

Houston

HOU	Hobby Airport
IAH	George Bush International Airport

London

LGW	Gatwick Airport
LHR	Heathrow Airport
LCY	London City Airport
CTN	Luton Airport
STN	Stansted Airport

Los Angeles

LAX	Los Angeles International Airport
-----	-----------------------------------

Miami

MIA	Miami International Airport
-----	-----------------------------

Minneapolis/St. Paul

MSP	Minneapolis/St. Paul International Airport
-----	--

Montreal

YUL	Dorval International Airport
-----	------------------------------

New York

IDL	Idlewild International Airport
JFK	John F. Kennedy International Airport
LGA	LaGuardia Airport
EWK	Newark International Airport

Osaka

KIX	Kansai International Airport
-----	------------------------------

Paris

BVA	Beauvais-Tille
CDG	Charles de Gaulle International Airport
LBG	La Bourget
ORY	Orly Airport

Tokyo

HAD	Haneda Airport
NRT	Narita Airport

Washington, D.C.

BWI	Baltimore/Washington International Airport
IAD	Dulles International Airport
DCA	Ronald Reagan National Airport

CORPORATE AND INSTITUTIONAL TITLES

AC	Air Commodore
ACM	Air Chief Marshal
AM	Air Marshal
AS	Air Superintendent
AVM	Air Vice Marshal
CEO	Chief Executive Officer
CAM	Civil Aviation Minister
CFO	Chief Financial Officer
COO	Chief Operating Officer
DG	Director General
EVP	Executive Vice President
GM	General Manager
HH	His/Her Highness
HRH	His/Her Royal Highness
MD	Managing Director
Pres.	President
SSA	Secretary of State for Air
SVP	Senior Vice President
VP	Vice President
VPC	Vice President Cargo
VPF	Vice President Finance
VPM	Vice President Marketing
VPO	Vice President Operations

COUNTRIES

CIS	Commonwealth of Independent States
PRC	People's Republic of China
U.A.E.	United Arab Emirates

U.K.	United Kingdom
U.S.	United States
U.S.S.R.	Union of Soviet Socialist Republics

GENERAL TERMS

A	advanced (when employed with aircraft, e.g., Boeing A-727s)
A&P	airframe and power plant
ABC	advanced booking charter
ACAS	airborne collision avoidance system
ACMI	aircraft, crew, management, and insurance
AOC	air operator's certificate
APU	auxiliary power unit
ATC	air traffic control
C	combi
CRS	computerized reservations system
DEW	Distant Early Warning
EAS	Essential Air Service
EDI	electronic data interchange
EFIS	electronic flight information system
EGPWS	enhanced ground proximity warning system
EMS	emergency medical service
EROPS	extended range permission
ESOP	employee stock ownership plan
ETOPS	extended range twin-engine operations
FAR	Federal Aviation Regulation
FBO	fixed base operator
FDR	flight data recorder
FLIR	forward-looking infrared
FP	final point
FTK	freight ton kilometer
GPS	global positioning system
HGS	head-up guidance system
IFR	instrument flight rules
ILS	instrument landing system
IPO	initial public offering
JATO	jet-assisted takeoff
LCD	large cargo door
MLS	microwave landing system
MRO	maintenance, repair, overhaul
OPS	operations
R-NAV	three-dimensional area navigation
RPK	revenue passenger kilometer
SAFE	system for automated flight efficiency
SAR	search and rescue
STC	supplemental type certificate
STOL	short takeoff and landing
TCAS	traffic alert and collision avoidance system
VFR	visual flight rules
VOR	visual omnidirectional range

MEASUREMENTS

ft.	foot
hr.	hour
kg.	kilogram
km.	kilometer
kn.	knot
m.	meter
mi.	mile
nm.	nautical mile
sec.	second
sq. ft.	square foot

Appendix B

Research Sources

Company reviews are based on a wide variety of sources, including the aviation press; commercial monographs; company, government, association, and international reports and studies; the general news media, including newspapers files; and the increasingly large body of data being reported over the Internet. Some of the more interesting memoirs or incident accounts are noted within the profiles.

PRINT SOURCES

Much of the non-newspaper, printed information through the mid-1980s is reported in the two volumes of my *Airline Bibliography: The Salem College Guide to Sources in English* (Westport, Conn.: Locust Hill Press, 1986–1988). Uncited 1980s–1990s data employed in the compilation of this encyclopedia, from individual periodical articles to airline-oriented resources on the Internet, will be included in *The Airline Bibliography 2* (TAB-2), which is scheduled for publication by Scarecrow Press.

Three other important bibliographic sources are those from Christopher H. Sterling, Kenneth G. Madden, and ICAO. Dr. Sterling's *Commercial Air Transport Books: An Annotated Bibliography of Airlines, Airliners, and the Air Transport Industry* (McLean, Va.: Paladwr Press, 1996), should prove a handy listing for post-1985 book titles until TAB-2 appears. Kenneth Madden, who contributed significantly to Sterling's title, has published his own bibliography of continuously revised air safety related items on the University of North Texas World Wide Web server, which is noted in the Internet resources section below. The *Library Bulletin* from the Library of the International Civil Aviation Organization (ICAO) provides a monthly listing of new titles, including aviation periodical articles not commonly available, and is available over the World Wide Web (also noted below). Unfortunately, ICAO halted online publication of this valuable tool with the December 2000 issue.

The International Air Transport Association (IATA) has produced a handy guide to airline coding, both its own (two/three letter) and that for ICAO (three letter), in its *Airline Coding Directory*, which is published in April, August, and December. Although free sources for both codes are available, the IATA Web site, noted in the Internet section, is the most direct method to receive the latest edition available.

The best printed source for tracking detailed world airline developments since the early 1960s continues to be the annual "World Airline Reports" provided in the July (previously May or June) issues of *Air Transport World*. This is supplemented by the "News Briefs" in each monthly issue, along with "Facts & Figures" pages at the end of each number.

Later information is weekly available from the "Airline Observer" column in *Aviation Week and Space Technology*. David Field's column "Business Travel Today" in the newspaper *USA Today* is a helpful print method of quickly determining new airline routes and services, albeit with a North American or transatlantic emphasis.

Over the years, numerous airline history books have been published. Any review of these always begins with R. E. G. Davies' definitive *A*

History of the World's Airlines originally authored in 1960 and reprinted (New York: AMS Press, 1983). Davies has also penned histories of airlines in the U.S., Asia, and South America, as well as pictorial reviews of a number of noted companies.

Of particular value as a complement for Davies covering another geographical region is Ben R. Guttery's *Encyclopedia of African Airlines* (Jefferson, N.C.: McFarland & Co., 1998) and the volume that Bill Leary edited in the *Encyclopedia of American Business History and Biography* series, *The Airline Industry* (New York: Facts on File, Inc., 1992). Six of the profiles that appear in this work were offered, in earlier version, in that work. Finally, of course, no airline encyclopedia would be complete without a nod toward John Stroud's classic *Annals of British and Commonwealth Air Transport, 1919-1960* (London: Putnam, 1960).

If one can find a copy, Paul R. Martin's *Airline Hand Book* (9th ed., Cranston, R.I.: Aero Research, 1985) is invaluable for the identification of many defunct airlines. Additionally, the U.K.-based Shepard Press has been publishing *Helicopter Operators' & Buyers' Handbook* and the *Regional Airline Handbook* since 1986, well supplementing Martin. The *Regional Airline Handbook* began as an annual feature in *Commuter World* magazine, while the *Helicopter Operators' & Buyers' Handbook* has been published in association with *Helicopter World*. Gerry Manning's *1000 Airlines in Colour* (London: Airline Publishing, Ltd./Stillwater, Minn.: Voyageur Press, 1998) is useful not only for liveries but for brief profiles (and ending dates) of numerous little-known operators. *The World Aviation Directory*, published in the spring and fall by McGraw Hill, has been a standard reference aid since 1958. That publisher now also offers the most helpful book-length print source to the new electronic sources: John Allen Merry's *300 Best Aviation Web Sites: . . . and 100 More Worth Bookmarking*, which was update and expanded in June 1999.

German airline historian B.I. Hengi, beginning in 1997, has offered a semi-annual compact review of world airlines in his *Airliners Worldwide* (London/Stillwater, MN: Airline Publishing, Ltd./Voyageur Press). Each airline profiled features a color airliner photograph. Employing the same format, Hengi, in 2000, also published a valuable retrospective review, *Airlines Remembered: Over 200 Airlines of the Past, Described and Illustrated in Colour*.

JP Airline-Fleets International remains an invaluable listing of fleets by country and airline. It has come from Bucher & Co. at Zurich since 1966. Great insight has also been had through a regular consultation with the annual *Exxon Survey of the Turbine-Engined Fleets of the World's Airlines* previously published as a special supplement to the magazine *Exxon Air World* but with the demise of that journal, free-standing. Although many hundreds of titles have been printed concerning the aircraft of various manufacturers by group or individually, for a review of the work by airplane builders one should consult Rod Simpson's *Airline's Commercial Aircraft and Airliners: A Guide to Postwar Commercial Aircraft Manufacturers and Their Aircraft* (London: Airline Publishing, Ltd., 1999).

INTERNET SOURCES

For instant facts and figures, including some histories, the Internet is now a vital research component. Every available World Wide Web address of airlines covered in this book is provided herein. Sites are listed, where known, with each of the entries. It is recommended that these sites be adopted by users of this work as a primary source for profile updates. Current operators, especially the larger ones, are very good about posting their news releases. Parts of this section also appear in "Essay on Web Sources" on the "Links" page of the *Air Transport World* Web site located at www.atwonline.com as.

Associations and Guides

To provide assistance in ascertaining current and future Web sites, a number of airline and air transport association guides, most with links to other online sources, are available on the Web. A few of these, with their URLs, include:

Air Charter Guide

<http://www.guides.com/acq>

Aircraft Charter Companies

<http://www.flightnet.co.za/aircraftchartercomps.html>

Specifically designed with a search engine to allow users to find charter carriers in southern Africa.

Airlines.Com

<http://www.airlines.com>

Airlines of the Web, by Karl L. Swartz

<http://www.chicago.com/air/carriers>

Air Transport Association On-Line

<http://www.air-transport.org>

Home to the U.S. airline industry trade organization.

Air Transport Association of Canada

<http://www.atac.ca>

The site of the Canadian airline industry trade organization.

The Aviation Marketplace

<http://www.bird.ch>

Provides links to airlines, events/air shows, museums, photographs, and a database library that connects to fleet, order, and register sites.

Center for Asia Pacific Aviation

<http://www.airportasiapac.com.au>

An Australian site.

EasySabre: The Original Travel Planner

<http://www.easysabre.com/ezsabre/airline.htm>

Provides a list of IATA two-letter codes arranged by airline—free and very helpful.

A Handy Guide—Airlines

<http://www.ahandyguide.com/cat1/a/a89.htm>

International Air Transport Association On-Line

<http://www.iata.org>

International Airline Passengers Association

<http://www.iapa.com>

International Civil Aviation Organization

<http://www.icao.org>

MTA-IC: The Air Cargo Newsgroup

<http://www.mta-ic.com>

This site is gateway to the "Air Cargo Resource List," the largest collection of air cargo links on the Internet.

Regional Airline Association

<http://www.raa.org>

European Regional Airline Association

<http://www.eraa.org>

Top Recommendations

Mention should be given to Thomas Becher's "Flying the Web" column in the print numbers of *Airliners*. This recently concluded work was of great assistance in determining the most helpful web sites, current and retrospective (including significant attention paid to civil aircraft sites). It is hoped that someone else will step up to resume the bimonthly essays.

The first and foremost resource is *AIR: Aviation Internet Resources* located at <http://www.air-online.com>. This is the premier civil aviation site on the Web, updated weekly. A number of searchable databases are included with links for such topics as aviation, photographs, and aviation resources (magazines, museums, FBOs, etc.) The primary database of interest is the "Airline Website Database" that provides both official and unofficial listings of every airline homepage available.

AIR is particularly helpful in the provision of a listing, every few weeks, of new Web sites and in the provision of a strong news service, with links to the outstanding Yahoo recaps. Also covered are all sorts of Aviation resources, including online magazines and sites to magazines, such as *Australian Aviation*, offering online articles or news reports.

Unfortunately, just as this encyclopedia was nearing completion, this site disappeared—another example of a first-rate resource to leave cyberspace without warning.

In the summer of 1999, Malcolm Ginsberg introduced the free, weekly "Air and Business Travel News" by e-mail or at the online site of *Aviation Directories* located at <http://www.abtn.co.uk>, which has, within the past month, been taken over by publishers of *Flight International*. Written in an engaging, personal style, news stories contain links to carriers and other sites mentioned as well as notes on aviation topics or events of interest to the title's author. The *Directory of British Aviation, 1999–2000* was available at the same site. The ultimate fate of Ginsburg's online contribution is not known at this writing.

There are a dozen individual online guides recommended for keeping up-to-date on airline and airliner news. Others, as noted, are similarly useful.

Moving up in line to replace AIR as one of the most-helpful sites is *Landings*, which bills itself as "*The Busiest Aviation Hub*." Created in 1984 and located at <http://www.landings.com>, it deserves its crown, receiving over 11 million "hits" each month. Offering a complete range of professional databases (including weather and flight planning information for pilots) and powerful search engines, *Landings* is updated daily with news, expert mediated forums, links, and even a personal Web site service. There is even a registration link where you can type in an aircraft registration number and learn details of its construction and service.

Aviation Safety Network has two listings, with the second being the most preferred: <http://www.aviation-safety.net> and <http://www.web.inter.NL.net/users/H.Ranter>. Harro Ranter's site provides frequent (usually weekly) updates and links to news sources about airline incidents and accidents around the world, as well as links to government safety agencies and various safety studies. Invaluable is its database containing details on every "airliner hull loss" since 1945.

Two newer sites are *AirlineSafety.Com* located at <http://www.airline-safety.com>, which includes links, book reviews, and other helpful data accessible via a menu. *Crashsite.Com* at <http://www.crashsite.com> offers photographs, links, and a database that covers over 1,000 crashes.

The monthly National Transportation Safety Board *NTSB—Accident Synopses* located at <http://www.nts.gov/Aviation/months.htm> provides details on every accident/incident involving a U.S. registered aircraft since 1983. A similar resource is the *Air Safety Investigation Resource* at <http://www.startext.net/homes/mikem>, which provides links to daily accident reports from both the FAA and NTSB.

Just Plane Videos located at <http://www.justplanes.com> not only offers purchasers its high-quality airliner VHS productions, but more im-

portantly here, provides readers with twice-weekly airline and airliner news updates. This resource also contains perhaps the most up-to-date list of airline links.

The Web sites of *Airliners* and *Air Transport World* (see Journal Publishers, below) also offer extremely helpful daily news roundups.

Also available by e-mail subscription is the twice-weekly *AVFlash*, a service from *AVWeb, the Magazine for Aviators on the World Wide Web* located at <http://www.avweb.com>. *AVFlash* summarizes the latest aviation news, articles, products, features and events featured on *AVWeb*. Many of the selections available at this site are written by well-known names in aviation journalism.

Airjet Airline World News at <http://www.airlinebiz.com> provides a free daily compendium of world airliner and airline news and is also available by e-mail subscription.

Another recommended site is *PlaneBusiness: The Airline Industry Business and Financial Site* at <http://www.planebusiness.com>. As its title indicates, this site concentrates on fiscal matters. Important subdivisions include "Quotes and Charts," "Earnings," and "Financials." If you have missed the company press release and want to know, for example, the latest quarterly earnings of a given carrier, *PlaneBusiness* might be your first stop.

Another helpful resource is *AeroWorldNet: A Weekly Aerospace Magazine on the Internet* located at <http://www.aeroworldnet.com>, containing numerous topical sections upgraded every Monday. News briefs, aerospace jobs, people and places, industry literature, industry products, aerospace events, companies, products and services, and careers, and industry associations are covered, with links. The site's most valuable feature, however, is a search engine that allows entry into a three-year full-text article archive. Two continuing series are particularly helpful: "This Week in Russian Aerospace," and "This Week in CIS Aerospace."

Another helpful source is *The Air Bulletin* at <http://www.airconnex.com/bulletin> from *ConnexWorks*, which has been published weekly since March 28, 1997 as the Internet's sole free weekly bulletin dedicated to civil aviation on a global scale and has a full archive. Included on the site are airline news reports and analysis, cargo trends, aircraft orders, and the latest in cyber-traveling under its many forms.

Equally useful is the weekly *Airwise Airline News* at <http://www.airwise.com> from *Airwise: The Airport and Air Travel Guide*. In addition to a news index, the site provides links to news stories from the major airlines and airline alliances.

Aeroseek: Aviation Search Engine and Directory located at <http://www.aeroseek.com> allows keyword searching or selection via a list of categories. This site may reveal links not previously uncovered.

The most difficult region from which to obtain consistent doses of airline news is Russia and the CIS. There are several choices to help to address this problem. The free *Avia.Ru: Russian News & Information Server* at <http://www.avia.ru> includes news, articles and interviews, reviews, and a listing of regulations and can be searched. *Concise Aerospace Business to Business Information: Russian Aerospace Issues* located at <http://www.concise2b.com/aerospace> is a subscription service that offers a daily news update and a two-year back file. A taste of what is available may be found by checking the first lines of available stories. Interestingly, many of the same stories are freely available by employing the search box at its sister site, *Russia Today*, located at <http://www.russiatoday.com>.

Concise 2B2 Information is starting the construction of a Web-based database containing information on all Russian and CIS airlines at <http://www.concise.corduroy.co.uk>.

The Lausanne, Switzerland-based law firm of Ziegler & Partner has posted its *Links to Russian Airlines and Aviation Organization* at <http://www.studyru.com/links>. In addition to a group of airport, ATC, regulatory, and educational organizations, the site provides links to recommended Russian airlines. Among these leads are the only known links to Russian-language-only carriers, e.g., *Saratov Airlines. Turkish World Aviation* at <http://havayollari.webjump.com> is particularly valuable for keeping up with the airlines of Central Asia.

The Airline Data Website located at <http://www.airline-data.com> is sponsored by Data Base Products and provides links to air carriers, airports, and news. It also provides name and code information for the airlines of the U.S., Middle America, the Caribbean, South America, Europe, Africa, Eastern Europe, Russia, Canada & Greenland, Australasia & Oceania, and the Far East.

Other sites worth visiting include Gabriele Re Ceccni's *Italian Airlines* at <http://www.digilander.iol.it/flymvp/Pia.html>, which is dedicated to a review of information on past and present carriers. *AirTransport.Com: El Portal Latino Para el Profesional de la Aviacion* at <http://www.latintraveler.com/default.atcom.pincipal.asp> is a Spanish language site with up-to-the-minute news reports on the activities of Latin American airlines. Finally *The Airline History Website* at <http://www.airlines.freeuk.com> by Sarah Ward profiles several hundred air transport concerns, with photos, from the 1920s to date. Some entries are more complete than others.

General Search Engines and Databases

In addition to the aviation-specific Web sites noted above, there are two general search engines that cover news reports. Oldest and long the most helpful is the *Business News Reports*, specifically the "Airline/Aviation News" daily compilation from *Yahoo Finance* located at <http://biz.yahoo.com/news/airlines.html>. With a U.S. emphasis, these reports come from a variety of sources such as *Business Wire*, *PR Newswire*, *AP*, and *Standard & Poor's*.

Next in importance, primarily because of its international scope, is the "Business News" search feature available from the multi-search engine *Dogpile* at <http://www.dogpile.com>. Although many of the same sources, e.g., *PR Newswire* are tapped as at the Yahoo site, so too are many others not examined there, including *Africa News*, *Agence France*, *Asiainfo*, *Inter Press*, *Itar-TASS*, *Reuters*, *UPI*, and *Xinhua*.

A large number of commercial databases that can provide periodical articles for free or a fee are available at public and academic libraries. Among these are such well-known titles as *First Search*, *EBSCO Host*, *ABI Inform*, *JSTORs*, and various Gale Group components of *Infotrac*. Employing the free search box, a review of the subject contents held by *Northern Light* at <http://www.northernlight.com> and *Carl Uncover* at <http://uncweb.carl.org>, the latter recently purchased by the British online document supplier *Ingentra*, can be profitable for those seeking to build a bibliography of titles.

Journal Publishers

Various publishing groups, noted for their aviation or defense industry print journals, now also offer frequently updated news sections on their Web sites:

"Airline News from Around the World" from *ATW Media Group*, parent of *Air Transport World*, at <http://www.atwonline.com>.

Begun in 1987, *Airliners: The World's Airline Magazine* at <http://www.airlinersonline.com> remains a valuable, illustrated source of current and historical airline information. The site includes articles, photographs, an online shop, and a recently added free "Airliners Daily News" section.

Now in its seventh volume, *Airways: A Global Review of Commercial Flight* at <http://www.airwaysmag.com> includes articles, photographs, book reviews, an online shop, and various other items from the monthly magazine. A weekly, subscription-only, news service, "Airways News Online," has recently begun <http://www.airwaysnews.com>, which is similar in many ways to *Airliners*, founded by the same publisher.

"Aviation Now.com" is the online home of *Aviation Week and Space Technology*, *Business & Commercial Aviation*, and *Airports Today*. The site also contains a buyer's guide, an aerospace source book, technical and regulatory data, and links to government, industry and academic Web sites.

AWST's older British counterpart, *Flight International*, has recently opened a Web site at <http://www.flightinternational.com> that provides news and headlines from current issues. Topical previews and commentary are also provided.

The German magazine *Flug Revue* at <http://www.flugrevue.de>, now in its 40th year, also maintains a Web site where it offers English-language translations of certain of its articles. Several years worth of selective archives are also maintained.

The well-regarded European *Interavia* also maintains a Web presence at <http://www.aerospacemedia.com> where selected full-text articles of interest may be read on a monthly basis.

Aviation International News located at <http://www.ainonline.com> is the online version of an in-depth print news source, with the "Top Story" a major feature covering several pages.

Links to these and other journals, including *Air Line Pilot*, *Airline Business*, *Professional Pilot*, *Plane & Pilot*, and *Smithsonian Air & Space*, may be found on the aviation page of *NewsDirectory.com* located at <http://www.ecola.com/news/magazine/science/aviation>.

Key Publishing, one of the U.K.'s foremost independent publishers of specialist consumer magazines, has opened a Web site for the journals in its aviation division: *FlyPast*, *Air Forces*, *Air Enthusiast*, *Air International*, and *Air International*. Title pages for articles stretching back three years are provided and these, like the current ones, provide links to key articles, many of interest to users of this work.

"Latest News" from *Helicopter World* or *Commuter World* (now *Regional Airline World*) from Shepard Press in the United Kingdom is located at <http://www.shepard.co.uk>.

"Newsdesk" items, released two weeks prior to paper publication, are available at the Web site of *Australian Aviation* at <http://www.ausaviation.com.au> and is valuable for keeping up with airline developments in Australia, New Zealand, and the South Pacific.

American City Business Journals located at <http://www.americancity.com> contains full-text archives for up to five years of its newspaper-type journals issued out of most major U.S. cities.

Employing the search engine of the journal *Canadian Business* at <http://www.canadianbusiness.ca> can yield important airline-oriented articles for the last three years.

Air Cargo World Online located at <http://www.aircargoworld.com>, from the *Journal of Commerce*, is an invaluable resource that makes available not only news updates, but copies of both current and archived articles since 1997. Another important inclusion is a directory of cargo airlines, with fleet lists, route networks, and, in a few cases, operational statistics given in addition to the normal names and addresses.

"World Airline News" from *Jane's*, the noted British publisher of defense and transport reference works, has added a helpful online news service that is updated monthly at its Web site <http://www.jane's.com/transport/transet.html>.

It is also possible to receive trial access to the online version of *Aviation Today* by registering at its site <http://www.aviationtoday.com>. The location is home to several leading aviation business publications, including *World Airline News*, *Airline Financial News*, *Commuter/Regional Airlines News*, and *Air Safety Week*.

Aviation History, located at <http://www.thehistorynet.com/AviationHistory>, from Cowles History Group, is now in its 10th year and offers online, with an archive, many of the articles from the print journal. Both civil and military topics are covered, along with information on museums, biography, art, and aerial oddities.

Newspapers and Electronic Media

It should be noted that newspapers have increasingly been placing two years or more of their archives on the Internet; some can even be accessed for free. Those that can be searched are a gold mine of airline information.

Located at <http://www.southamerica-business.com/newspapers>, the Brazilian firm of Messing & Asociados has built the most helpful Internet guide to online international newspapers, *Newspapers of the World on the Internet*. The index is divided by regions, e.g., Africa, Europe, South America, and further by nations. Newspapers are cited regardless of language and whether or not they offer an archive or, better yet, an archive with a search engine.

Internet access to the back files of the following newspapers are particularly helpful: *The Irish Times*, *The Namibian*, the Aberdeen (Scotland) *Press and Journal*, *The St. Petersburg Times*, the American city business journals (e.g., *The South Florida Business Journal*, *The Business Journal of Phoenix*), *The Financial Times*, *The Times of India*, *The Hindustan Times*, and others cited from time to time in the text of airline profiles.

Two other online newspaper indexes are also helpful. *American Journalism Review* offers *AJR NewsLink: U.S. Newspapers by State*. This site, located at <http://ajr.newslink.org>, is devoted only to U.S. coverage and picks up a number of newspapers not included in the Messing & Asociados titles. For example, while attempting to discover the ultimate fate of Southern Air Transport, this site led to *The Columbus Dispatch* Internet site, with its archive of stories available via its search engine. Typing in the name of the company, as well as the subject "airlines," resulted in the retrieval of relevant data. It should be noted that *AJR NewsLink* also reaches out to various magazines that maintain an Internet presence. The "Regional" subdivision is particularly helpful, leading as it does to journals as diverse as *Texas Monthly* and *Paris Match*.

NewsCentral: The Largest Newspaper Index on the Web located at <http://www.all-links.com/newscentral> contains 3,500 links (some of which are dead) and which, like the AJR site, can be used as a check on the Messing & Asociados service. The site is arranged by geographical location (North America, South America, Asia, Africa, Europe, and Australia), as well as College/K-12, Singapore, and the extremely useful *Shipping Times*, can be found under "Asia," and can be reviewed for several years via its search engine.

Canoe Online Explorer at <http://www.canoe.ca> allows users to review all aspects of Canadian business and finance, with useful coverage of airline and aircraft manufacturing topics. Using the search engine, one can visit the topic "Airline Mergers," where a large and valuable archive of newspaper articles concerning Canadian airline restructuring will be found.

Several organizations specialize in publishing news releases. The following from the U.K. and Canada are the most helpful:

Two-Ten News Network at <http://www.twoten.press.net> provides Internet access to stories on the U.K.'s only full-text commercial newswire and includes a two-year archive.

Canada NewsWire at <http://www.newswire.ca> is available in English and French and allows one to search by category, organization, date, industry, keyword, stock symbol, or subject.

Caribbean AirNews located at <http://www.candoo.com/airnews> is a very current, extremely helpful full-text archive of newspaper articles concerning airlines of and airline activity in the Eastern Caribbean since September 1997. Though not a newspaper site, Roger Chung-Wee's *Caribbean Airlines* located at <http://www.caribbeanaviation.com>, is a similarly helpful, updated guide.

Finally, the sites of the *British Broadcasting Corporation* at <http://www.bbc.co.uk>, the *Cable News Network* at <http://www.cnn.com>, and the *Australian Broadcasting Corporation* at <http://www.abc.net.au> are searchable and helpful.

Those wishing to keep up with airline developments can do so by regularly searching these special sites and following such aviation and airline print journals as *Air Transport World*, *Aviation Week and Space Technology*, *Flight International*, *Rotor & Wing International*, *Regional Airline World*, *Airliners*, and *Airways*.

Bibliographies and Library Catalogs

For the last half of the 1990s, Bill and Barbara Byrd have operated the Williamsburg, Virginia-based *Aeroplane Books* at <http://www.aeroplanebooks.com>. Their online book catalog presents the latest in new titles, with complete bibliographic information.

Kenneth G. Madden's *Air Transportation Safety Resources*, particularly helpful for its updated bibliography, should be seen regularly at <http://people.unt.edu/~kgm0001>.

Those wishing to find a complete listing of currently available airline-oriented books should check either the print or online versions of *Books in Print*. On the other hand, if you wish the same service without cost, type in author, title, or subjects in the search box at <http://www.amazon.com>.

Since the original edition of *The Airline Bibliography* was published in 1985-1986, dozens of library catalogs have become more easily available to researchers via the World Wide Web. One can access via a one-stop consultation with Peter Scott's *Library Web-Based OPACS* at <http://www.lights.com/webcats>, originally begun as a project at a Canadian university library, but now hosted by Northern Lights Internet Solutions. Employing the "Geographical Index" of this tool, the following library catalogs are recommended for those needing to keep abreast of newly accessioned published and unpublished studies.

Australia

The Australian National University Library Catalogue
<http://anu.edu.au>

The National Library of Australia Catalogue
<http://ilms.nla.gov.au/webpac>

Canada

Concordia University Libraries CLUES, the Library Catalogue
<http://mercury.concordia.ca>
Concordia offers the only aviation-oriented MBA program and has the library to support it.

International Civil Aviation Organization Library
<http://www.icao.org>

All sites should be supplemented by services available from this resource located in Montreal. The *Library Bulletin* provides a monthly listing of new titles, including aviation periodical articles not commonly available. The ICAO Library catalog, which is also online, includes books, articles, and documents.

McGill University Libraries Catalogue (MUSE)
<http://muse.mcgill.ca>

Allows access to the collection employed to support another well-known aviation program.

National Library of Canada resNet/NLC Catalogue
<http://www.amicus.nlc-bnc.ca>

A gateway to another vital source for little-known studies, including those from other Canadian libraries and the federal and provincial governments.

United Kingdom

The British Library catalog
<http://www.bl.uk>

Provides the same national access as the national repositories noted in Australia, Canada, and the U.S. Additionally, the library has introduced a new, fee-based service, *Inside* (<http://www.bl.uk/online/inside>) that allows users to search the BL's article collection from 20,000 worldwide research journals and 70,000 conference proceedings. Much of the same information is freely searchable via *Carl Uncover* noted above and *TRANweb* noted below.

COPAC, University Research Library Catalogue
<http://copac.ac.uk/copac>

A shared online public access catalog (OPAC), allows entry into the collections of various U.K. university libraries. If you elect to use the Geographical Index of Scott's OPAC guide, you can go to Europe, England and find a number of British colleges with relevant universities. Cranfield University is one and the Pilkington Library *Talisweb* OPAC of Loughborough University is another.

United States

The Air University Library GeoWeb
<http://132.60.133.8002>

Allows entry into the collections of the U.S. Air Force postgraduate school. Here one will find a surprising number of titles relative to civilian aviation, including the CRAF program;

Embry-Riddle Aeronautical University
<http://voyage.db.erau.edu>

The commercial multi-library Endeavor OPAC permits review of the collection of the Hunt Memorial Library, the world's premier aviation college. Many little-known unpublished papers are available to users.

The Library of Congress
<http://www.loc.gov>

The main catalog is particularly helpful for older book titles.

Middle Tennessee State University
<http://voyager.mtsu.edu>

The commercial multi-library Voyager OPAC allows access to the library collection of another well-known university with an aeronautical program.

National Transportation Library
<http://www.bts.gov/smart>

Allows the user to search the library's collection, check reference services, and for the airline student, review certain publications of DOT's Office of Airline Information;

Northwestern University
<http://www.nwu.edu>

The main library is home to a world-renown Transportation Library that houses many special studies from the institution's curriculum and those of many other universities and government agencies. Additionally, the single most important source for citations to older periodical articles and conference papers, also from the NWU Transportation Library, is *TRANweb* located at <http://trans.library.nwu.edu/webvoy.htm>.

Ohio State University OSCAR OPAC
<http://library.ohio-state.edu/search>

Permits entry into another excellent aviation collection.

SIRIS, The Smithsonian Institution Research Information System
www.siris.si.edu

Permits entry, via the commercial Horizon system, into the oldest and most prestigious aviation book and document collections anywhere. Materials here are especially helpful for students of early airline history.

Western Michigan University Westcat
<http://www.wmich.edu/library>

Permits review of the collection of a Midwestern university with a growing aviation program.

Aircraft Orders and Registers

All airline enthusiasts continuously seek updated fleet news and aircraft registers. Several sites of value are now available but as most are private, they may go the way of *AIR: Aviation Internet Resources*. These include:

Aeromoe's U.S. Airline Fleets
<http://www.geocities.com/~aeromoe/airlines.html>

The site comprises computerized fleet lists, assembled since 1989, for American carriers operating jet equipment. Most operators are passenger airlines; the author freely admits difficulty obtaining information from freight airlines. Not currently updated.

Aircraft C/N Lists, by Nicolai Musante Larsen's
<http://www.image.dk/~lai/lai.html>

Provides production/fleet information not only on large jet airliners but smaller aircraft, such as the Vickers Viscount and commuters like the Beech 99.

Airliner Orders Site, by Marc Shaeffer

<http://www.geocities.com/CapeCanaveral/Lab/8803/orders.htm>

To find out what has been requested from Boeing or Airbus, Shaeffer has put up order cancellations; leasing arrangements are also noted.

Airliner Production List, by David Greg

<http://www.intercept.demon.co.uk/prodlist.html>

Arranged by type and updated monthly.

Commercial Aircraft Registers

<http://www.blackjet.demon.co.uk/registers.html>

Links pages to official government-created databases, including those of Canada, the U.S., the U.K., Ireland, Italy, and New Zealand.

Commercial Jet Aircraft Census, by Bill Harms

<http://www.bird.ch/bharms/asrstart.htm>

A very large and impressive Swiss-based site. Covers nearly every jet airliner from Boeing, McDonnell Douglas, Airbus, plus L-1011s

in service with any carrier anywhere in the world, accessible by type, operator, country code, and registration. If, for example, one wants to know what the new JetBlue Airlines is flying, here is a place to check.

Rotorhub Online Registers, by Jeremy Parkin

<http://www.parkin.co.uk/rotorhub>

Includes links to English-language fixed- and rotary-wing aircraft registers around the world, both official and unofficial. Parkin also links to two other privately maintained collections, Pascal Brugier's *Register of the World* in France and Kenneth Rijock's *Aircraft Registry Database Collections* in the U.S.

World Airline Fleets

<http://www.demon.co.uk/fleets.htm>

Arranged by nation and airline and updated monthly.

Regional Indexes of Carriers

This index arranges the 6,442 airlines within this title by region and then by nation. The five areas are Africa/Middle East, Asia/Pacific, Europe, Latin America, Canada/United States.

About the Author

A professional librarian and historian since 1966, Myron J. “Jack” Smith, Jr., has been Professor of Library Science and History and Library Director at Tusculum College in Greeneville, Tennessee, since 1990. Prior to Tusculum, he held a fifteen-year tenure as Library Director, Professor of Library Science and History, and Associate Director, sometimes Director, of Aviation at Salem College (now Salem-International University) in West Virginia.

Prof. Smith is also a producer of histories and information resources on subjects ranging in topic from airlines to Watergate and from baseball to World War II. The author of seventy volumes of bibliography and history, he has been the recipient of a variety of honors and awards for his work. In 1993, he received the Nelson Ross Award from the Professional Football Writers Association and twenty-one years later, Smith remains the only American to have received the Richard Franck Preis for historical bibliography from the German government.

The author and his wife Dennie reside north of Greeneville on a small farm with a dog and six cats.

Delivered on March 18, 1971, the St. Colmcille was the second Boeing 747-148 of Aer Lingus Irish Airlines, Ltd. Aer Lingus photo 12349. *Courtesy Aer Lingus Irish Airlines, Ltd.*

The Ilyushin Il-86 is a mainstay of the Aeroflot Russian International Airlines (ARIA) fleet. *Courtesy ARIA.*

Air Canada placed its first Airbus Industrie A319-114 into service on January 1, 1997, over its routes from Toronto to New York (LGA) and Boston. A319ACA. *Courtesy Airbus Industrie, via British Aerospace.*

Air Canada operated a fleet of Vickers Vanguard 952s between 1961 and 1972. *Courtesy Air Canada.*

This 185-seat Airbus Industrie A321-111 has served both Air France and its former subsidiary, Air Inter. A32 IAFR. *Courtesy Airbus Industrie, via British Aerospace.*

Christened *Aotearoa*, Air New Zealand's first B-767-28QER was employed on the trans-Tasman Sea route from Christchurch to Hobart, beginning in October 1985. *Courtesy Air New Zealand, Ltd.*

The famous Harry Gann photo of an American Airlines DC-3. McDonnell Douglas HG84056C.
Courtesy McDonnell Douglas Corporation.

One of American's first sleeper T-32s, NC 12354, was destroyed in a fatal crash near Liberty, New York, in 1934.

C. R. Smith (at far right of group of men to left of plane) and other dignitaries, as well as the flight crew, prepare to send off the *Flagship Illinois*, the first dayplane DC-3. Introduced as the Douglas Sleeper Transport (DST), the fast, roomy airliner became known as "the plane that changed the world." *Courtesy American Airlines.*

Two American Overseas Airlines Boeing 377s at West Germany's Rhein-Main Airport ca. 1949. The Stratocruiser, employing the wings, engines, landing gear, and tail unit of the B-29 bomber, was the ultimate in airliner luxury in its day, but is now remembered primarily for its lower deck cocktail bar. *Courtesy American Overseas Airlines.*

Commuter birds of Atlantic Southeast Airlines nestled on the company's Atlanta ramp in July 1986. *Courtesy Walter C. White.*

Some twenty-one months after the bankruptcy of Braniff International Airways, a revitalized Braniff, Inc., was launched on March 1, 1984, operating a fleet of Boeing 727-227As, one of which is shown here. The second Braniff was liquidated on April 28, 1990. *Courtesy Braniff, Inc.*

A British Airways Concorde takes off as an Air France Boeing 747 Jumbojet taxis. The French major is the only other operator of this SST. *Courtesy British Aerospace.*

A British Overseas Airways Corporation (BOAC) Bristol Britannia. *Courtesy British Aerospace.*

China Southern took delivery of its first Airbus A320-200 at Baiyun International Airport in Guangzhou, on June 24, 1997. The premier aircraft was placed on routes from Guangzhou to Chengdu, the capital of southwest China's Sichuan Province, and to Xi'an, the capital of northwest China's Shaanxi Province. A320CSN. *Courtesy Airbus Industrie, via British Aerospace.*

One of the first carriers to order the type, Continental Airlines began Douglas DC-9-10 service in 1966. *Courtesy Continental Airlines.*

Columbia Helicopters operates all of the world's Boeing 234 Civil Chinooks. *Courtesy Columbia Helicopters.*

Fokker and Stinson Trimotors in Ohio. A Fokker F-10A of Trans-America Airlines Corp. at Columbus Airport, ca. early 1931, with a Stinson SM-6000B of Pennsylvania Air Lines in the background. The crash of a wooden-winged TWA F-10 in 1931, resulting in the death of coach Knute Rockne, resulted in the first airliner grounding ordered by the U.S. government and the demise of Fokker manufacturing in America until the 1960s. Only 55 of the little-remembered Stinson SM-6000s were built, with the first entering service with the Ludington Line on September 1, 1930. *Courtesy of American Airlines.*

Delta Air Lines placed its first Douglas DC-7 into service between Miami and Chicago on April 1, 1954. 570706/8557. *Courtesy Delta Air Lines.*

Acquired in the U.S. for the re-enactment of historical flights in Germany, this Junkers Ju-52/3m, wearing the livery of the original Deutsche Lufthansa, is seen passing over a modern Boeing 737-230 in 1986. CH310-6-21. *Courtesy Deutsche Lufthansa, A.G.*

The joint airline Deruluft, founded in 1921, was the most visible sign of Inter-War Russo-German co-operation. On April 30, 1922, the Fokker FIII RR-1 was the first company aircraft to land at Moscow's Chodynka airport. The RR-3 arrived the next day. DLH 6011-1-13. *Courtesy Deutsche Lufthansa, A.G.*

As launch customer, Eastern Air Lines started Lockheed L-1011 TriStar 1 service on April 26, 1972. *Courtesy Eastern Airlines, via James P. Woolsey.*

During the third week of November 1997, EgyptAir became one of four launch customers for the new A340-622R, placing an order for two. *Courtesy Airbus Industrie, via British Aerospace.*

Florida Airways launched passenger service with these three Stout 2-ATs (the closest named *Miss Miami*, the one in the center *Miss St. Petersburg*, and the farthest unknown) on June 1, 1926; the pioneer airline was, however, soon thereafter forced to discontinue service when two of the three aircraft were lost.
