Passenger boardings decline 37.6% to 4.7 million and freight traffic is off by 47%. Revenues drop 19% to \$379.10 million, but expenses are cut 15% during the year, allowing the company to enjoy smaller profits that are, at least, profits: \$51.14 million (operating) and \$46.71 million (net).

En route from Minneapolis to Washington, D.C. via Detroit on January 22, 1971, a lone gunman, who has been talked out of his original desire to fly to Algeria, hijacks Flight 433, a B-727-251 with 60 passengers, to Cuba. The man will return to the U.S. in 1978, be caught, tried, and sentenced to prison for 15 years.

The first of the B-707-351Bs is sold to **China Airlines, Ltd.** on March 5. With the Miami-Los Angeles route deleted by the government from the arrangement, the Minneapolis-based carrier withdraws its offer to acquire **Northeast Airlines** on March 10, leaving it to find its salvation with **Delta Air Lines**. The world's first production B-747-200B, a Dash-251B, is delivered on March 26. Four more will follow it into service by Thanksgiving. A B-747-151 is involved in an accident at Honolulu on May 13.

Meanwhile, on June 20, 218 aboard a San Francisco-bound B-747-151 flight escape injury as their craft veers from the runway at Tokyo (NRT) after its tires burst. Four B-707-351Bs are sold to **Cathay Pacific Airways (Pty.), Ltd.**, with the first turned over on July 1.

Operations between Minneapolis and Milwaukee and Boston are launched on September 1 and on September 3 Northwest proposes a merger to officials of **National Airlines**. Three B-720-051B are sold to **Monarch Air Lines, Ltd.** on September 15, while the last of four L-188Cs sold during the year departs on November 4.

On Thanksgiving Eve, passenger J. R. Meade boards Washington, D.C.-Seattle Flight 305, a B-727-251, at Portland, Oregon. After its takeoff, he identifies himself as Dan B. Cooper or "D. B. Cooper" and, claiming to have a bomb, takes over the aircraft. At Seattle, 36 passengers and 2 crew members are allowed to leave the Boeing while he collects a \$200,000 ransom and 4 parachutes from airline officials.

Cooper orders the pilot to fly to Mexico at a level altitude not to exceed 10,000 feet, with the undercarriage extended, the rear stairwell open, and wing flaps canted. When the Boeing makes a refueling stop at Reno, Nevada, the pirate is not found aboard. He is assumed to have donned two chutes (one of which is, in fact, a ground-training model that will not open) and calmly jumped into the cloudy night somewhere in a

500-mile corridor of the Cascade Mountains and river valleys stretching over 4 western states.

Although his death in a New York hospital will be rumored a decade later, neither D. B. Cooper nor most of his \$200,000 are ever seen again. Having pulled off the country's most successful hijacking, the robber attains legendary status and becomes a subject for song, print, and film. With speculation as to the outcome of the case, the motion picture *The Pursuit of D. B. Cooper*, starring Robert Duvall and Treat Williams, is released in 1981. Max Gunther follows it up with his book *D. B. Cooper: What Really Happened* (Chicago: Contemporary Books, 1985) while, a year later, Ralph E. Himmelsbach and Thomas K. Worcester present *Norjak: The Investigation of D. B. Cooper* (West Linn, Ore: The Norjak Project, 1986).

Interest continues into the new decade and in 1991, Bernie Rhodes presents a thorough study in his *D. B. Cooper: The Real McCoy* (Salt Lake City, Utah: University of Utah Press). Geoff Williams reminds the public of the event in "Have You Seen This Man?," *Entertainment Weekly*, no. 302 (November 24, 1995), 120+.

Although the most celebrated and the only parachuting air pirate to make what appeared to be a successful escape, Cooper is not the first to plan an escape from a jetliner using a chute. An IRA gunman named Cini, though unsuccessful, had beaten Cooper to this distinction 10 days earlier when he had tried to escape from **Air Canada, Ltd.** Flight 812.

E. L. Holt, a 25-year-old former high school honor student, commandeers Flight 734, a B-727-251 with 35 passengers en route from Minneapolis to Miami on December 24, and orders the crew to go ahead and make the scheduled stop at Chicago (ORD). At Chicago, he requests \$300,000 in ransom and two parachutes, threatening to blow up the craft with dynamite if his request is not granted. Holt holds one passenger hostage, but surrenders after the crew and remaining passengers leave the airliner and the FBI informs him that the plane will be kept on the ground. Upon examination, the pirate will be judged mentally deficient and will be committed to a psychiatric facility.

The second **Cathay Pacific Airways (Pty.), Ltd.** B-707-351B departs for Hong Kong on December 27.

Enplanements for the year total 5,751,168 and a \$21 million net profit is earned.

The workforce in 1972 totals 10,000. Early in the spring, merger discussions with **National Airlines** collapse and conversion is started on the engines of the company's Jumbojets, which are upgraded to Pratt & Whitney JT9D-7s. The Greek carrier **Olympic Airways, S.A.** purchases seven B-720-051Bs, the first two of which are turned over on February 6-7.

The last L-188C is sold on April 5, to **Nordair, Ltd.** in Canada while another B-707-351B passes to **Cathay Pacific Airways (Pty.), Ltd.** on April 29. Meanwhile, three days earlier on April 26, a B-720B is involved in a near midair collision over Front Royal, Virginia, with a CV-240 owned by the Lockheed Aircraft Corp.

In a plot broken up by police on May 2, W. J. Lewis and D. S. Murphy of Seattle are arrested for attempting to impersonate D. B. Cooper and to extort over \$30,000 from former *Newsweek* editor C. Fleming; seven months later, the two will be sentenced to prison.

A pilots' strike backed by the Air Line Pilots Association (ALPA) grounds the airline for 95 days between June 30 and October 2. During this period, Minneapolis to Fargo regional replacement flights are operated by **Flight Development, Inc.** and those to Bismarck via Jamestown and Fargo by the short-lived Executive Air Transport, Inc. subsidiary **Pro Airlines**. The fourth **Cathay Pacific Airways (Pty.), Ltd.** B-707-351B is turned over on August 28 and on November 10, Northwest takes delivery of the first of 22 ordered extended-range DC-10-40s and plans are made to activate Asian authority held for a quarter of a century. The first B-707-351C is sold on November 18 to **Cathay Pacific Airways (Pty.), Ltd.** and the new DC-10-40 is placed into service on December 13 on a domestic route from Minneapolis to Tampa via Milwaukee.

A B-747-151 with 160 aboard returns to Miami (MIA) on December 15 after running into a flock of birds during takeoff; four passengers are

injured after the Jumbojet skids on the runway during landing. A B-707-351C is sold to the new **Biman Bangladesh Airlines** on December 30.

Due almost entirely to the pilots' strike, customer bookings drop 8.8% to 5,286,000. Freight is off by 18.3%. Total income is \$392.65 million and expenses are \$377.4 million. Remaining one of the nation's strongest majors, the carrier chalks up an operating profit of \$15.2 million and net income of \$19.9 million.

A total of 1,263 new employees are hired in 1973. The last of seven B-720-051Bs is delivered to **Olympic Airways, S.A.** on January 17; the Greek flag carrier also acquires a pair of B-707-351Cs. Also in January, the company begins the first computer-generated airline ticketing procedure and first direct computer reservations service to and from Asia.

A B-707-351C is sold to **Pacific Western Airlines, Ltd.** on March 2 and the first Greek machine is delivered on March 23. **Maersk Air, A.S.** purchases five B-720-051Bs, the first three of which are delivered by the end of the year's first quarter. Coming into Tampa from Chicago on March 25 with 220 aboard, a B-747-151 blows 14 tires during its landing; no injuries are, however, reported.

Between May 26 and December 30, 4 more B-707-351Cs are sold out of service while 13 additional DC-10-40s are delivered during the rest of the year, with 7 remaining to be accepted.

Customer bookings skyrocket 56.2% to a record 8,254,000. Cargo also does well as the number of freight ton-miles flown reaches 387.26 million, a 41.3% increase. The 1969 record for income is smashed, as revenues reach a new all-time high of \$584.74 million. Expenses are just \$533.04 million. The operating profit is \$51.7 million and the net income of \$51.85 million is the third largest in the domestic trunk line industry behind **Delta Air Lines** and **United Airlines**.

Airline employment in 1974 is 11,515 and the last two **Maersk Air, A.S.** B-720-051Bs are turned over on January 16 and February 20, respectively. Meanwhile, on February 15, a B-707-351C is sold to **BWIA (British West Indies Airways, Ltd.)**. It is followed out of service by five more of its type through May 31; of these, four more go to **Cathay Pacific Airways (Pty.), Ltd.** and one to **JAT Yugoslav Airlines**.

Meanwhile, the interchange agreement with **Pan American World Airways (1)** ends at the end of the winter season. On April 9, the carrier resigns from IATA.

On June 7, following a 12-year suspension of operations, Northwest resumes flights to Edmonton, Alberta. Through November 14, six more B-707-351Cs are sold, including two more to **Cathay Pacific Airways (Pty.), Ltd.**, one to **Zambia Airways Corporation**, one to **Transair Sweden, A.B.**, one to **JAT Yugoslav Airlines**, and one to **LanChile Airlines, S.A.** The seven remaining DC-10-40s are received throughout the year.

On December 1, Flight 6231 is on a ferry flight from New York (JFK) to Buffalo to pick up the Baltimore Colts National Football League team. Just after takeoff, having reached an altitude of 24,000 ft., the B-727-251 with three crew suddenly plunges earthward out of control, dropping to 1,090 feet in 8 seconds. Unable to recover, the Boeing plunges into a forest at Bear Lake, near Stony Point; there are no survivors.

Late in the month, the last of 22 DC-10-40s is delivered.

Despite the general U.S. economic situation, passenger traffic accelerates by 10.9% as 9,153,000 passengers are carried. Freight traffic climbs 18.3%. Although expenses accelerate to \$688.79 million, overall expenses jump 29.8% to \$766.844. The operating profit is \$78.04 million and net income grows to \$64.78 million.

The workforce is reduced in 1975 by 246 employees. During the first quarter, two more B-707-351Cs are sold to **BWIA (British West Indies Airways, Ltd.)**. On May 21, another one is also sold to the same Caribbean airline. Northwest's first three B-747-251Fs, purchased for \$90 million, are placed into service, following their staggered June, July, and August deliveries. A fourth Jumbojet freighter is ordered. New support equipment is acquired for both the Pacific and domestic cargo operations and on December 29, a B-707-351C is sold to **Royal Air Maroc**.

Customer bookings fall 1.6% to 9,011,000. Although freight business on the North Atlantic is down, the company's other regions prosper, allowing an overall boost of 26.8% to 580.67 million FTKs operated. The carrier is the U.S. air transport industry profit leader for the fourth time in eight years. On revenues of \$814.86 million, expenses are \$764.94 million. The operating profit is \$49.91 million and the net is \$43.39 million.

The workforce is reduced an additional 0.5% in 1976 to 11,208 and a second B-707-351C is passed to **Royal Air Maroc** on March 17. A DC-9 and a DC-10-40 nearly collide over Spokane on April 2 and in May, **National Airlines (1)**'s two B-747-135s are purchased. On July 1, Northwest becomes the first U.S. airline approved by the FAA to install coordinated flight crew training. On October 1, Donald W. Nyrop becomes board chairman/CEO and M. Joseph Lapensky is elected to the presidency.

The fiftieth anniversary is celebrated on October 15 and on November 25, a grand jury indicts D. B. Cooper, in absentia, for his now-celebrated 1971 hijacking.

Customer bookings accelerate 10.8% to 9,989,000 and freight does even better, up 19.1% to 691.6 million FTKs. Operating income advances to \$971.06 million and expenses are \$867.68 million. A result of this happy imbalance is an operating profit of \$103.38 million and net gain of \$53.73 million.

Airline employment in 1977 stands at 11,303. The fleet now comprises 5 B-747-251Bs, 10 B-747-151s, 3 B-747-251Fs, 5 B-707-351Bs, 3 B-707-351Cs, 22 DC-10-40s, 31 B-727-251s, 20 B-727-51s, and 12 B-727-51Cs. Five of the B-727-51s are sold to **Pacific Southwest Airlines (PSA)**.

In January, the company receives the 1976 "Cargo Development Award" from *Air Transport World* magazine.

On May 8, would-be hijacker Bruce Taylor is subdued during Flight 22, a Tokyo-Hawaii DC-10-40 service with 262 passengers. Upon examination, Taylor will be found to be mentally unstable and sent to a psychiatric hospital for two years.

The domestic network is extended nonstop from Chicago to New Orleans on June 8. Also on June 8, nonstop Chicago-Tokyo flights begin. The fourth B-747-251F arrives on June 27.

Enplanements for the year total 9,082,000. Income is \$1.05 billion and the net income is \$92.71 million.

The workforce is reduced 6.7% in 1978 to 10,680. On February 22, the U.S. Supreme Court lets stand a lower court decision that the company must pay a sex discrimination award, which may run as high as \$50 million, based on past salary distinctions between male pursers and female stewardesses. A 109-day ALPA-backed pilots strike rocks the airline between April 29 and August 15, halting Pacific and many other services. Meanwhile, in June, four more B-727-51s and a B-707-351C are sold. As is the case with many U.S. passenger airlines, once the job action is over, Northwest significantly increases its schedule and markets following President Carter's signing of the Airline Deregulation Act.

Nonstop Seattle to Fairbanks DC-10-40 flights begin on October 12 and on December 31, Chairman/CEO Nyrop retires, but remains a board member.

The job action had a devastating impact on both traffic and income. Passenger boardings drop 36.8% to 6,639,000 while freight is down by 33.9% to 440.09 million FTKs. Revenues decline by 24.38% to \$794.36 million, which are still higher than overall expenses (\$726.42 million). Although a \$67.93-million operating profit is made, the net gain is diminished by 33.3% to \$61.84 million. Despite this downturn, shareholders are proud that their airline has an extremely high net worth (\$800 million) and few debts (\$100 million).

Airline employment is increased by 20% in 1979 to 12,814. President Lapensky, on January 1, is also named CEO. On January 20, the company inaugurates nonstop service to seven domestic markets: Philadelphia-Orlando, Orlando-Fort Lauderdale, Boston-Fort Lauderdale, Boston-Orlando, Boston-Cleveland, Minneapolis (MSP)-St. Louis, and New Orleans-Tampa.

Ten more routes follow on February 1: Philadelphia-Fort Lauderdale, Boston-Tampa, Boston-Philadelphia, Boston-Detroit, Boston-Washington, D.C. (IAD), Newark-Pittsburgh, New Orleans-Miami, Chicago-St. Louis, Portland-San Francisco, and San Francisco-Las Vegas. All-cargo service is launched across the Atlantic on February 9 with flights from New York to Glasgow, Scotland, via Boston; freighters begin flying to Copenhagen on March 2.

Northwest becomes a transatlantic passenger airline on March 31 when service is started from Minneapolis (MSP) to Copenhagen and Stockholm via Detroit and New York. Passenger frequencies to Glasgow and Copenhagen are added from Seattle, Minneapolis (MSP), and Boston beginning on April 29.

The company resumes taking delivery of passenger-capable Jumbos on May 25, with the delivery of a sixth Dash-251B; four more will arrive before year's end. Nonstop Los Angeles-Seattle service begins on June 8.

On July 1, nonstop Los Angeles-Seattle and Honolulu-Osaka flights commence. The following all-cargo routes are opened on September 12: Amsterdam-Manchester, Manchester-New York, and New York-Boston-Prestwick-Amsterdam. Phoenix-Minneapolis (MSP) nonstop service begins on November 15, followed by a route from Twin Cities to Fort Myers on December 18.

Customer bookings skyrocket 76.3% to 11,704,000 while cargo accelerates 67% to 734.89 million FTKs. Operating income is boosted 63.27% to \$1,296,906,000 while expenses jump 70.81% to \$1,240,797,000. Although the operating profit falls by 17.41% to \$56.1 million, net gain jumps an equal 17.20% to \$72.47 million.

The employee population declines 0.5% in 1980 to 12,748 and another B-747-251B is delivered on January 2. The FBI reports on February 13 that part of the \$200,000 ransom paid to skyjacker D. B. Cooper in 1971 has been found partially buried in a wooded area near Vancouver, Washington. Ralph Himmelsbach, the FBI agent in charge of the Cooper case for a decade, retires on March 1. Service from Boston and New York to Shannon begins on April 27, as do flights from New York to Oslo and Stockholm. During April, two more B-747-251Bs enter service.

Minneapolis (MSP) to Hamburg via London frequencies are initiated on June 2. On June 20, the company resumes the Chicago to Minneapolis (MSP) frequencies discontinued in 1975.

Glenn Kurt Trippe, age 15, is captured on July 11 after his unsuccessful attempt to hijack Flight 608, a B-727-200 on the ground at Seattle. Although he had demanded a \$100,000 ransom and a lightplane in which to escape, the FBI easily takes him in hand. Upon examination, Trippe will be found to be mentally unstable and in exchange for a dismissal of air piracy charges, will undergo psychiatric treatment.

A B-747-251B, on a nonstop flight from Chicago to Tokyo on September 18, is forced to refuel at Hokkaido after running into strong headwinds. A 2-year, 14-aircraft fleet modernization program, employing internally generated funds as opposed to outside loans, is completed as the fiftieth B-727-251 joins the fleet.

Enplanements dip 1.2% to 11,501,000 in the face of the recession; however, freight rises 5.4% to 855.36 million FTKs. Although revenues shoot up 25.1% to \$1.63 billion, expenses (led by fuel prices) jump 32.5% to \$1.66 billion. The operating loss is \$24 million, but a \$7-million net profit is gained and even though it is down significantly from the previous year, it allows the carrier to remain in the black.

The workforce is increased by 2.7% in 1981 to 13,096 and Taipei-Manila service starts on January 7. On January 31, a DC-10-40 suffers engine failure over Leesburg, Virginia, and must put down. Nonstop Boston-London flights are inaugurated on April 26, followed four days later by the introduction of Tokyo-Guam nonstops and direct flights from Guam to Seoul.

Direct Twin Cities to Oslo service begins on June 10. Capacity is augmented, beginning on August 22, when the number of seats aboard B-727-251s is increased from 128 to 146. On September 8, nonstop frequencies are launched between Los Angeles and Tokyo. New interna-

tional B-747-251F all-cargo gateways are opened at Los Angeles and Houston on September 8, which also receive Jumbojet freighters from New York (JFK).

Minneapolis (MSP)–Orlando nonstops commence on December 1. The fleet now comprises 24 Jumbojets, 5 B-747-251Fs, 22 DC-10-40s, 52 B-727-251s, and 9 B-727-51s. Passenger boardings fall again, down 2.9% to 11,213,000, as freight rallies upward a strong 15.8% to 896.3 million FTKs. Operating income climbs 13.31% to \$1.844 billion while costs accelerate 11.56% to \$1.842 billion. The operating profit is \$2.06 million and the net gain is \$10.46 million.

The payroll remains unchanged in 1982. Because of an error by a veteran air traffic controller, a company B-727-251 nearly collides with a **Trans World Airlines (TWA)** Jumbojet over Lake Michigan on March 4. On April 25, nonstop passenger service is inaugurated from Boston to Chicago. The same day, B-747-251F freighter flights link those cities with San Francisco. Omaha, Wichita, and Dallas (DFW) join the route network on May 19.

Having walked out on May 22, mechanics and other ground service personnel, members of the IAM, approve a proposed contract on June 25, ending a 34-day strike, and return to work the next day.

Minneapolis (MSP) to Denver service is opened on July 1 with San Diego added as a destination 24 days later. Grand Rapids becomes a stop on August 1. Atlanta becomes an all-cargo gateway on October 1, the same day weekly B-747-251F flights are started from that city to Oslo.

Eun Sook Kim gives birth to a daughter aboard a Jumbojet that arrives at Chicago from Tokyo on November 3. Minneapolis (MSP) to West Palm Beach frequencies begin on December 16 and from Miami, flights begin to Copenhagen and Stockholm.

Customer bookings accelerate 2.5% during the 12 months to 11,490,000, but cargo resumes its downward march, falling 2.3% to 875.53 million FTKs. Revenue advances a slight 2.3% to \$1.88 billion, as expenses swell 2.89% to \$1.89 billion. Despite a \$7.99-million operating loss, a \$5.01-million net gain is posted; Northwest is one of only two U.S. majors to achieve profitability on the year.

The employee population swells 3.1% in 1983 to 14,187. Northwest becomes the fourth U.S. airline to order the B-757-200, placing a request for 20 Dash-251s. Additionally, four new B-747-251Bs are received.

En route from Seattle to Portland on January 20, Flight 608, a B-757-251 with 41 passengers, is taken over by a man on 20-years probation for another hijacking perpetrated 3 years earlier. The pirate demands to be flown to Afghanistan, but is, instead, shot and killed by FBI agents shortly after the little Boeing arrives on the ground in Oregon.

While landing at Shannon on March 21, a new Jumbojet with 230 people aboard from Boston is hit twice by lightning; no injuries are reported.

A man with a knife tries to hijack Flight 714, a B-727-251 with 97 passengers en route from Tampa to Miami to Cuba on July 21, but three passengers and a flight attendant overpower him and he is arrested when the plane lands in Miami. The pirate will later receive a 10-year prison term for air piracy.

A low-fare thrust into the major's Minneapolis (MSP) base by **PEOPLExpress** is turned back through a combination of lower fares and increased frequencies, while a B-747-2J9F freighter is purchased from the Iranian Air Force on September 13. The carrier's October 22 Seattle to Washington, D.C. flight makes an unscheduled stop in Fargo, North Dakota, to eject passenger W. Meserve for refusing to stop smoking his pipe; Meserve leaves town on a bus after two other airlines refuse to let him board their flights.

Tucson becomes a domestic destination on December 15 and when service to Tokyo from San Francisco begins the same day, the latter city becomes Northwest's sixth Asian gateway. Three days later on December 18, the engine of a DC-10-40 catches fire as the plane is being started at Winnipeg, forcing 280 people to evacuate; no injuries are reported.

Enplanements for the year rises 11.3% to 12,794,000 and freight rebounds, increasing 39.2% to 1.21 billion FTKs. Operating income

jumps 17.3% to \$2.21 billion, while costs advance 13.14% to \$2.14 billion. An operating profit of \$69.49 million is generated and with a \$50.07 million net gain, Northwest is again one of the country's most profitable carriers.

The payroll grows a full 7% in 1984 to 16,185. On March 15, M. Joseph Lapensky is elected board chairman, at which point board member and former chairman Donald W. Nyrop retires. A bright orange B-747-227B that financially struggling **Braniff International Airways** had been unable to accept and that has languished in storage since 1980, is acquired on April 19. Two more will be purchased from the assets of the deceased major before year's end. Also in April, another new B-747-251B is delivered. Direct Minneapolis (MSP) to Frankfurt via Boston flights commence on April 30.

Seattle–Tokyo–Shanghai service is inaugurated on May 2. Company shareholders approve creation of the holding company NWA, Inc., under terms of Delaware law, on May 21; Northwest Airlines is the principal operating subsidiary. Another B-747-251B is delivered in May and nonstop Twin Cities–Frankfurt service begins on June 8, the same day direct flights from Phoenix to San Francisco and Seattle are initiated, linking the Arizona community to Asia.

Direct Boston–Dublin frequencies started on June 9 make the carrier the only U.S. flag line to serve the Irish capital. B-747-251F service from the U.S. to Singapore begins on September 5 and on September 26, Steven G Rothmeier, formerly vice president-finance, is elected president and CEO. On September 29, chunks of debris, up to 8-ft. long, fall from a Jumbojet shortly after its takeoff on a flight from Seattle to Seoul; the plane makes a safe return to Seattle.

NWA, Inc. officially takes over the carrier on November 20, in accordance with the May plan.

On December 1, an agreement is announced with **Mesaba Airlines** for the creation of a new marketing agreement and commuter network, "Northwest Airlink." Management's largest disappointment on the year is the adverse settlement of a 17-year-old lawsuit by 3,300 flight attendants; the award costs the airline \$30.9 million. On the bright side, with the losses suffered by **Pan American World Airways (1)** and despite competition from **United Airlines**, Northwest becomes the largest U.S. airline in the transpacific market.

Customer bookings rise 3.9% to 13,216,000 and cargo blossoms 15.7% to 1.41 billion FTKs. Income jumps 11.3% to \$2.44 billion and costs rise 10.4% to \$2.34 billion. Consequently, the operating gain swells to \$96.27 million and the net profit grows 12% to \$55.96 million. NWA, Inc. remains in such a solid financial position that even its interest income is \$2.9 million greater than its interest expenses; the debt to equity ratio is 1 to 85.

The payroll grows by 9.6% in 1985 to 16,641 and on January 1 Steven G. Rothmeier takes office as president and CEO. Also in January, the carrier receives the "Financial Management Award" from *Air Transport World* magazine.

On March 2, Northwest becomes the only U.S. airline to offer direct service from Dallas (DFW) to Tokyo and Hong Kong. On takeoff in snowy weather from Minneapolis (MSP) on March 31, a B-747-251B passes 50–100 ft. above another Jumbojet crossing the same runway. Also in March, the first B-757-251 is delivered.

Service from New Orleans is discontinued on April 28, along with three weekly flights to Hamburg, West Germany. The first passenger air service between Malaysia and the U.S. begins on May 1 as a B-747-251B flight, originating in Dallas (DFW) continues to San Francisco, Tokyo, and Kuala Lumpur. On May 21, the company announces a multifaceted "Northwest Airlink" marketing alliance with **America West Airlines** that will provide a direct link from the latter's cities to the former's entire domestic and international system via connections at Phoenix and Los Angeles. A week later, the large Minnetonka, Minnesota, tour operator Mainland Travel is purchased by NWA, Inc.

Also in May, the first cattle lift to China occurs when 159 head of Holsteins are flown to Beijing. Los Angeles–Seoul nonstop flights commence on June 6. A "Northwest Airlink" marketing agreement is signed

with Montana's **Big Sky Airlines** in July and at midyear Northwest is the only large U.S. combination carrier still operating dedicated freighters.

On October 1, the MLT Vacations (formerly Mainline Travel) purchase is finalized and company officials join with those from Boeing on October 22 in announcing the launch of the B-747-400. The fourth "Northwest Airlink" partner is created on December 23 when **Fischer Brothers Aviation** agrees to service Detroit. Also in December, the largest aircraft order in company history to date is placed in December: \$2 billion for 10 B-747-400s, 10 B-757s, and 3 B-747-200s.

Enplanements ascend by 10% to 14,539,000, but freight is off by 8.2% to 1.92 billion FTKs. Revenues shoot up 8.6% to \$2.65 billion, expenses are up 8.8% to \$2.57 billion, and the operating profit is down to \$76.25 million. The year's net profit, announced on December 31, is \$72.96 million.

Airline employment skyrockets 99.8% in 1986 to 33,250, largely as a result of an amalgamation. On January 24, it is announced that Northwest will acquire financially troubled **Republic Airlines** on August 12 in an \$884-million merger that will make Northwest the nation's fifth, and later, third largest carrier in terms of route miles.

Also during the first month, Northwest receives the 1985 "Technology Management Award" from *Air Transport World* magazine.

It is announced on May 22 that Brian Ingram, an eight-year-old boy who found \$5,800 of the ransom paid to hijacker D. B. Cooper buried in sand, will get to keep \$2,760 in a settlement with the airline's insurance company; Cooper's caper remains the nation's only unsolved plane hijacking. The last three B-747-251Bs are delivered between May 6 and July 18.

The sixtieth anniversary is celebrated on July 26 and despite vehement objections from the antitrust division of the Justice Department, approval for the **Republic Airlines** merger is received from the Transportation Department on July 29, which integration occurs on October 1. The marriage on the first day of the month is a disaster, as operational preparations appear not to have been made.

The merger gives Northwest two new domestic hubs, Detroit and Memphis. Detroit presents a problem, as both **Fischer Brothers Aviation**, under a "Northwest Airlink" contract and **Simmons Airlines**, under a Republic Express arrangement, serve it. With only one feeder required, a choice will need to be made between the two. Additionally, the fleet is increased by 171 aircraft to a total of 314 and service is provided to 135 cities in 18 nations. During the first week of October, one of every four Northwest flights is late and some planes takeoff without baggage having been loaded or food placed aboard. A hotel is rented in Minneapolis to accommodate stranded passengers while, in Detroit, there is so much sabotage by ex-**Republic Airlines** baggage handlers that an entire warehouse is later found containing lost passenger bags. A longtime reputation for indifference to passengers is now born and it will become worse before it can be dispelled.

John F. Horn becomes president of Northwest and NWA, Inc., with CEO Rothmeier assuming the position of chairman of both. Reflecting its new global stature, the word "Orient" is now dropped from company advertising and aircraft liveries. A new \$17-million world headquarters facility is occupied and in November six Rolls Royce-powered B-757-2S7s acquired in the Republic merger are returned to their manufacturer.

The same month, Chairman Rothmeier travels to Munich, where orders are placed for 10 Airbus Industrie A320-211s, with 90 options.

To obtain the travel agency leverage needed to compete with its rivals, the airline purchases 50% ownership of the PARS computerized reservations system of **Trans World Airlines (TWA)** for \$140 million. The action makes Northwest the last major to begin offering computer-generated reservations and advance seat selection. Late in the year, a massive new flight training subsidiary, Northwest Aerospace Training Corporation (NATCO), is established, for which Link trainers are ordered from that division of the Singer Corporation.

During the year, **USAir** begins to participate in the company's frequent flyer program in the Pacific and to share codes with Northwest on flights to San Francisco and Los Angeles.

Traffic figures for Republic are included within Northwest's after August 12 and hence the latter's are inflated. Nevertheless, combined figures for the year show enplanements of 35,402,000 and that 1.83 billion FTKs have been flown, the latter a 14% increase. Revenues balloon 35.2% to \$3.58 billion, costs increase 32.7% to \$3.42 billion, and the operating profit jumps to \$166.64 million. Net gain climbs \$2 million to \$76.94 million.

The workforce remains level in 1987. The most serious problem of the year surfaces early with labor discontent, emanating from the merger of **Republic Airlines** the previous year. A threatened strike is avoided, but difficult union contract negotiations ensue. In March, Northwest withdraws its "Northwest Airlink" contract from **Fischer Brothers Aviation** and awards it to **Simmons Airlines**. The action causes the former to briefly shut down and file a \$150-million antitrust lawsuit against the major and its new large regional partner.

A new \$20-million facility is opened for NATCO at Eagan, Minnesota, during the spring and the remainder of the year sees the installation of 21 simulators. Agreement is reached with Airbus Industrie on April 3, for the purchase of up to 20 A340s with an option for 10 A330s. Nonstop Detroit-Tokyo service begins on April 17. On April 23, Northwest becomes the only major to operate all nonsmoking flights throughout North America, making mostly positive news.

In June, twice-daily nonstop service is opened from Minneapolis (MSP) to Pittsburgh and Kalamazoo and from Denver to Detroit; daily flights begin from Philadelphia to Boston and from Seattle and Tacoma to New York. The last two B-747-251Fs are delivered on May 1 and 3, respectively.

During the summer, ex-**Republic Airlines** workers at Memphis engage in a slowdown to pressure negotiations on work conditions; the resulting lack of engines causes traffic and financial difficulties.

A B-727-251A and a single-engine private plane come within 300 ft. of each other as the airliner approaches Detroit (DTT) on August 13.

Flight 255, an MD-82 with 6 crew and 149 passengers, experiences wing flap and slat difficulties—the slats are not extended—while taking off from Detroit (DTT) on August 16 on a service to Phoenix. Although the plane lifts off the end of the runway, it fails to gain altitude; the left wing hits a light pole. The aircraft crashes into a car rental lot, rolls across the lot, over a highway, and finally strikes a railroad embankment and bursts into flame.

This is the first fatal accident involving a sizeable U.S. airliner in almost two years; there is one survivor from the MD-82 (a 4-year-old girl), however, four people are killed on the ground. Rose Weite recalls the disaster six years later in her *After the Crash: Northwest Flight 255* (Phoenix, Ariz.: Clementine Books, 1993).

A B-727-251A bound for Boston on August 26 passes within 500 feet of a private plane 30 mi. W of the city. In October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

While refusing to admit to violations, the company, in December, agrees to pay a civil penalty of \$325,000 to the DOT for violating consumer protection rules. During the year, the European tour organizer Passage Tours is purchased.

Overall passenger boardings climb 5.4% to 37,305,000 and cargo advances by 16.5% to 1.8 billion FTKs, highest among all U.S. passenger-carrying majors. Revenues rise 9.35% to \$5.07 billion, expenses grow by 10.98% to \$4.86 billion, and the operating profit is \$105.11 million. The net profit reaches \$140.71 million.

The payroll grows by 6.9% in 1988 to 35,532. The first B-747-451 is rolled out in Northwest livery at Boeing's Everett, Washington, plant on January 25, while Milwaukee is made the fourth domestic hub on January 28. Also in January, the first class begins training at the NATCO facility at Eagan and it is announced that Avis Rent-a-Car has joined the WorldPerks frequent flyer program. In response to a new **Delta Air Lines** lure for business passengers, Northwest, in February, inaugurates

its own "mileage match" program for members of its WorldPerks program.

A new product line of holiday excursions is unveiled on March 7 called Northwest Worldvacations. New domestic routes are opened to Worcester, Massachusetts, Greenville and Spartanburg, South Carolina, Harrisburg, Pennsylvania, and Norfolk, Virginia, on March 11. At month's end, an agreement is signed with **SAS (Scandinavian Airlines System)** making the Pars system the authorized ticketing system for the multinational carrier. The premier B-747-400 makes its maiden flight on April 29.

Milwaukee becomes a major hub on May 2 when the major introduces 40 daily departures from the Wisconsin city. Northwest adopts PARS as its worldwide internal computer system on May 21, assuming half the financial interest and retiring POLARIS. By the morning of May 22, a massive overnight switch that had required the training of 15,000 people is accomplished.

Nonstop four-times-per-week roundtrips begin from Boston to Amsterdam on June 1 and daily departures from Milwaukee are increased to 43 on June 11. Toronto's only nonstop service to Milwaukee is opened on June 16 and Twin Cities to Ontario and Riverside, California, flights start on June 27. During stall and low-speed drag tests conducted on the same day, an 892,450-lb. B-747-400 takes off from Moses Lake, Washington; the event marks the greatest weight yet flown off a runway.

On July 1, Northwest inaugurates nonstop frequencies from Milwaukee to Seattle, Tacoma, and San Francisco, Detroit to Birmingham and Portland, and Memphis to New York (JFK). Boston-Orlando nonstops begin on August 5 and four days later, **Mesaba Aviation** is tapped to begin "Northwest Airlink" flights to Detroit in place of the failed **Fischer Brothers Aviation**. Later in the month, Northwest launches twice-daily roundtrips from Chicago (MDW) to Memphis. The traffic statistics for the month of August is the highest in company history—4.5 billion revenue passenger miles are flown.

At about the same time, a new \$6-million training facility is placed under construction adjacent to the Center for Aerospace Sciences at the University of North Dakota, Grand Forks; an agreement is reached with the university for the training of *ab initio* pilots to airline entry standards.

A new Traffic Alert and Collision Avoidance System (TCAS) is tested on September 21 and new daily, nonstop service is introduced from Boston to Orlando on the last day of the month.

Nonstop routes are inaugurated on October 25 from Minneapolis (MSP) to Tokyo, Detroit to Seoul, Seattle to Hong Kong, and Los Angeles to Osaka. On October 30, the carrier initiates daily roundtrip Boston to Orlando services. Also in October, thrice-daily roundtrips commence from Memphis to Greenville and Spartanburg, twice-daily flights begin from Memphis to San Antonio, and thrice-daily service is opened from Detroit to Harrisburg, Worcester, and Norfolk.

In December, four new nonstop routes are inaugurated: Minneapolis (MSP) to Fort Myers and Steamboat Springs and Boston to Tampa and Milwaukee to Orlando. A schedule-coordination plan is announced with Seattle-based **Horizon Air** on December 15 and a yearlong experiment for a seatback video system over the Detroit to Tokyo route is concluded on December 31.

The year's enplanements decline by 3.6% to 35,952,000, but freight is up by 19.8% to 2.16 billion FTKs, tops among U.S. passenger airlines. Revenues jump 10.13% to \$5.58 billion and expenses are up by 10.75% to \$5.39 billion, but operating income declines to \$195.63 million. The net profit climbs to \$162.78 million.

The employee population rises again in 1989, up by 12.6% to 40,000. The carrier and **Alaska Airlines** in January become partners in each other's frequent flyer programs. Received earlier in the month as the world's largest commercial aircraft and certified on January 12, Northwest's premier Boeing 747-451 is placed into service on January 31 between Minneapolis (MSP) and Phoenix. Ten days later on February 9, NWA, Inc. orders 10 Airbus A330s. Seattle to Singapore passenger flights commence on February 10. Los Angeles-Boston-Frankfurt serv-

ice is inaugurated on March 27; simultaneously, four-times-per-day nonstop shuttle flights begin from Detroit to Chicago (MDW).

Anticipating difficulties, NWA, Inc. adopts a shareholder rights plan on March 28 designed to protect stockholders from abusive and underfunded takeover attempts. With several groups heavily courting a marriage, the board of directors establishes March 30 as the deadline for bids. At 2 p.m. on the appointed day, **Pan American World Airways (1)** representatives make an offer of \$2 billion (\$115 per share), while billionaire Marvin Davis of Denver submits an unsolicited \$90 per share cash buyout proposal, which is rejected by the board on April 7.

Meanwhile on April 4, agreement is reached with the machinists' union, giving the carrier greater flexibility in how it uses its workers so as to provide labor cost savings. The next day, flights are initiated from Tampa to Montego Bay and Cancún. Nonstop Boston to Los Angeles roundtrip service is opened on May 1, with flights originating at Los Angeles (LAX) continuing on to Frankfurt, while **Precision Airlines** announces a five-year marketing and code-sharing agreement with Northwest on May 2 for a traffic interchange at Boston. A week later, on May 9, **Pan American World Airways (1)** informs NWA, Inc. that it, too, would like the opportunity to purchase the corporation. Nonstop Dallas (DFW) to Los Angeles frequencies are begun on May 22.

On May 23, a new corporate identity is unveiled featuring a new logo with a letter "N" in a circle with a compass pointing to the northwest. Bolder colors are employed in aircraft livery and the famous all-red tails are now adorned with the "N" within the circle. International B-747-451 service is extended on May 31 from Singapore to Tokyo, Seattle to Hong Kong, Los Angeles to Osaka, Minneapolis/St. Paul to Tokyo, and Detroit to Seoul. Northwest thus becomes the first airline to operate the Dash-400 Jumbojet to Asia.

Also in May, the WorldHorizons senior travel club is expanded and new senior discounts are introduced.

The B-747-451 enters international passenger service on June 1 with a New York to Tokyo flight. One of the new Jumbojets provides lift to Tokyo for a New York City detective, portrayed by Michael Douglas, in the action motion picture *Black Rain*.

Also on June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. Northwest, with 18 security breaches, is faced with \$99,000 in punishment.

A week later, Northwest receives its first A320-211, becoming the first North American operator to obtain this model of the European Airbus.

Wings Holdings, a corporation formed by Alfred A. Checchi and his Marriott hotel associates Gary Wilson and ex-Richard Nixon aide Frederick V. Malek, acquires NWA, Inc. on June 19 for \$3.65 billion (\$121 per share). After outmaneuvering both **Pan American World Airways (1)** and Marvin Davis, Checchi's acquisition stands as one of the last significant leveraged buyouts of the 1980s; only \$700 million of the financing is equity capital, including \$400 from **KLM (Royal Dutch Airlines, N.V.)**, while the remainder is borrowed. Later in the month, the carrier inaugurates daily service between Traverse City and Detroit (DTT) under a unique program by which the state of Michigan guarantees the airline at least break-even results.

In July, a proposal is made to Martin R. Shugrue Jr., trustee of **Eastern Air Lines**, for a takeover of the failing Miami-based major. It will not be accepted by Eastern's creditors. On August 4, Northwest is taken private. On August 10, a DC-10-40 makes a safe emergency landing at Denver after its tail engine begins breaking up. On August 17, a \$2.7-billion contract is signed for the purchase of up to 30 A340s and A330s.

Former leader Rothmeier resigns, as Alfred A. Checchi becomes board chairman and a hands-on manager on September 28, with Frederick V. Malek as president. The first announced priority of the new management team is improved relations with employees. Meanwhile, under pressure from Transportation Secretary Samuel Skinner, the equity investment of **KLM (Royal Dutch Airline, N.V.)** is scaled back to \$175 million (25% formal voting power) and the Dutch flag line surrenders its presence on Northwest's board. The largest aircraft order in company

history is placed on October 12; \$5.2 billion is committed for 10 B-747-451s and 80 B-757-251s.

Seasonal service for skiers begins in December linking Minneapolis (MSP) with Steamboat Springs, Colorado, five times per week. En route from Miami to Minneapolis via Orlando on December 4, a B-727-251A with 139 passengers loses its right rear-mounted engine at 35,000 ft. over Florida; a successful emergency landing is made at Tampa and no injuries are reported.

After receiving a bomb threat to its December 30 Flight 51 from Paris to Detroit, the company allows the 130 passengers on the endangered aircraft the opportunity to change flights without penalty. Although no bomb is found, only 22 travelers elect to go aboard the DC-10-40 to Michigan.

Customer bookings jump 8.1% during the 12 months to 38,860,000, while cargo ascends 12.7% to 2.44 billion FTKs, highest among U.S. passenger-carrying airlines. Revenues climb 17.29% to \$6.55 billion, expenses are up 16.16% to \$6.26 billion, and operating income rises \$100 million to \$290.06 million. The net profit is doubled to \$355.24 million, a company record.

The Northwest fleet in 1990 includes 332 jetliners and is the 8th largest in the world; the 40,000-employee workforce enjoys the same ranking. On January 4, a B-727-251A lands safely in Tampa after one of its three engines falls off. Experts say that the cockpit crew, which flew for nearly 25 minutes unaware that one of the power plants was missing, would really have had no way of knowing what had happened. Five days later, on January 9, thrice-weekly Honolulu to Seoul service begins.

After 42 years of employment, 70-year-old Connie Walker retires on January 30 as the carrier's—and nation's—oldest flight attendant. It is estimated that since 1942, she has spent 4.5 years in the air and finished the equivalent of 700 trips around the world.

The corporation commits \$422 million on January 31 to upgrade service and build customer preference. Also during January, Westin Hotels & Resorts becomes a Worldperks frequent flyer partner and a contract is signed with UPS (United Parcel Service) for space aboard Northwest's Jumbojet cargo services between Anchorage and Tokyo (NRT).

A February rumor, circulated by Teamster airline leader William Genoise, suggests that Northwest is close to a takeover of troubled **Pan American World Airways (I)**. During the month, the company joins with **Delta Air Lines** and **Trans World Airlines (TWA)** to announce that the three have finalized an agreement to create a new and independent reservations company that merges the Pars system of Northwest and TWA with Delta's Datas II. Under the direction of **Delta Air Lines'** former Vice President-Management Calvin L. Rader, the new entity, Worldspan, brings together 12,874 Pars and Datas II-linked travel agencies and 48,910 Pars/Datas-II terminals. Following the government requirement for nonsmoking flights on all domestic routes, Northwest extends its ban on February 25 to include U.S. mainland to Hawaii service.

Daily nonstop roundtrips commence on March 1 from Boston to Abbotsinch Airport, at Glasgow, replacing the previous flights to Prestwick. After landing with 91 passengers at Minneapolis (MSP) from Fargo on March 8, the cockpit crew of a B-727-251 is arrested by state and federal officials who charge the three with violating laws against operating a commercial airliner while under the influence of alcohol. Taken into custody as the result of a tip to FAA officials the night before, the three are dismissed by the carrier on March 16.

A pilot, called in as a substitute on an April 21 Detroit to Atlanta flight, insists upon a sobriety test after a female passenger accuses him of being drunk. He refuses to fly when the test results are not immediately available and the complaining passenger leaves the plane after verbal abuse from other passengers. The test results come back three days later showing the pilot not to have been intoxicated, at which point the lady claims to have been only "kidding." Two B-727-251As and a DC-10-40 are leased to **Sun Country Airlines**.

Early in May, a second daily roundtrip is initiated between Milwaukee and Toronto and on May 15, twice-daily roundtrips link Minneapolis (MSP) with San Jose. An aircraft satellite navigation agreement is

signed with Honeywell and the Soviet government on May 30. On June 1, thrice-weekly service is initiated from Los Angeles to Taipei and from Seoul to Bangkok, along with five-times-per-week flights from Honolulu to Seoul. The same day, a nonstop San Diego to Memphis schedule is opened and daily nonstop roundtrips begin from New York to Glasgow's Abbotsinch Airport. A new nonstop Detroit to Anchorage roundtrip route is started on the first day of the month and is promoted via one-way fares of \$199. President Malek is named vice chairman on June 19 as Frederick B. Rentschler, former CEO of Beatrice, is voted president and CEO.

In July, Chairman Checchi approaches bankrupt **Eastern Air Lines** with a plan to acquire the old Rickenbacker pioneer, save its primary assets plus 5,000 jobs, and liquidate the rest to the benefit of Northwest and Eastern's creditors. Later in the month, Jumbojets, laying over at Bangkok at the end of scheduled flights from the U.S., inaugurate monthly charter flights to Ho Chi Minh City, Vietnam, on behalf of the UN's International Organization for Migration.

On August 2, Kuwait is invaded by Iraq, aviation fuel prices skyrocket, and many travelers stay home. Simultaneously, nonstop daily roundtrips begin from Louisville to New York (LGA) and twice-daily service begins from that Kentucky city to Minneapolis (MSP). Employing a brand new B-747-451 chartered before delivery and with the Northwest name painted over, Boeing retrieves 300 company and 60 USAF dependents from Saudi Arabia on August 9–10.

As the result of a July 26–August 20 trial in Minneapolis Federal Court, the three pilots dismissed in March are found guilty of flying their Boeing under the influence of alcohol—the first drunk-flying conviction of professional pilots in civil aviation history. The men are sentenced to prison terms ranging from 1 year to 16 months.

As a result of the government's August 17 request for Civil Reserve Air Fleet (CRAF) assistance, Northwest, a partner in the enterprise, contributes five passenger aircraft and three of its eight dedicated freighters for use on the upcoming airlift to Saudi Arabia, Operation Desert Shield. On September 19, the company's arrival time is guaranteed at 18 southern airports and backed by free roundtrip tickets for late flights. Late in the month, the airline begins to offer golf and tennis packages as part of its WorldVacations program; charters are undertaken to Florida, California, Arizona, Hawaii, Jamaica, and Scotland.

With no positive response from **Eastern Air Lines'** creditors, the Checchi takeover proposal is withdrawn in October. History is made on October 19 when a B-747-451, equipped with Collins satellite communications avionics en route from Detroit to Seoul, becomes the first aircraft of any airline to use both the U.S. Global Positioning System (GPS) and the Automatic Dependent Surveillance system during a regularly scheduled flight. Daily nonstop Los Angeles to Auckland B-747-451 service starts on October 28, while thrice-weekly New York–Los Angeles–Honolulu–Osaka–Shanghai B-747-451 flights commence next day.

Marriott's Lodging Group President John H. Dasburg is named president/CEO on November 9 as President Rentschler resigns for personal and family reasons. Also in November, nonstop B-757-251 service begins from Detroit to Anchorage, while thrice-daily B-727-251A flights commence from that Michigan city to Louisville and from Louisville to Memphis and Birmingham.

While taxiing in dense fog at Detroit (DTT) on December 3, Flight 1482, a DC-9-14 piloted by Capt. William Lovelace with 3 other crew and 40 passengers, misses its assigned taxiway and enters an active runway. Before the Douglas transport can exit, its crew sees Northwest Flight 299, Capt. Robert Ouelette's B-727-251A with 255 other passengers en route to Memphis, which has just received permission to take-off, coming at them at a speed over 100 kn. When the right wingtip of the Boeing strikes the right side of the DC-9's fuselage, it shears off. However, the remainder of the wing cuts through the fuselage below the window row and takes off the plane's No. 2 engine and ignites a smoky fire that guts the Douglas (eight dead). When the stricken jetliner's inflatable emergency exit slide fails to operate, at least 22 are injured as survivors are forced to jump to the ground.

Two days later, the auxiliary power unit of Flight 582, a B-727-251A en route from Seattle with 75 aboard, catches fire at Detroit; all personnel are safely evacuated.

A \$20-million agreement is signed with **Hawaiian Airlines (HAL)** on December 10 establishing a wide range of cooperative programs, including scheduling and passenger handling at Honolulu. In exchange for 25% shareholding in Hawaii's senior carrier, Northwest will take over HAL's routes from Guam and Saipan to Nagoya and Fukuoka and from Honolulu to Sydney. Later in the month, Memphis-Huntsville-Newark continuing service begins.

During the year, Northwest, for the first time, enjoys the best on-time performance among the 7 largest airlines, based on DOT consumer reports for domestic operations by 10 reporting U.S. airlines.

Passenger boardings jump 5.6% to 41,046,000, a figure that ranks the Minneapolis giant as the 6th largest airline world; that position slips 3 spots to 9th for freight, which is off a whopping 15.2% to 2.06 billion FTKs. On a list of U.S. majors, however, Northwest remains in first place among regularly scheduled passenger airlines. The effects of Chairman Checchi's 1989 leveraged buyout, combined with a dismal fourth quarter of recession and higher fuel costs, hurt the carrier financially. Although revenues swell 10.73% to \$7.25 billion, expenses jump 18.12% to \$7.39 billion. The result is an operating loss of \$141.66 million and net downturn of \$10.41 million. Parent NWA, Inc. loses \$301.2 million.

Airline employment is cut by 15% in 1991 to 34,000 and the fleet now includes 345 aircraft. As the result of the outbreak of the Mideast war on January 17, international service is cut by 17%, primarily in transatlantic markets. Still, the company's B-747-251Fs busily haul cargo and military supplies to Frankfurt and beyond.

Northwest agrees to purchase for \$35.5 million the **Eastern Air Lines** landing and takeoff slots, gates and other passenger facilities at Washington, D.C. (DCA) on January 22; Gary L. Wilson is elected cochairman on January 31. **Federal Express** Vice President Ruthie McKee, who had gotten her start years earlier as a registered nurse before moving into the air transport business, accepts a similar post with Northwest; she will become senior vice president-customer service and line maintenance in early 1995.

Meanwhile, the company wins approval from the DOT for **KLM (Royal Dutch Airlines, N.V.)** and Elders IXL, the non-U.S. investors, to retain 49% shareholding and elects not to purchase the **Trump Shuttle**. Chairman Checchi reports his interest in a merger with some other airline. Also in January, B-727-251A flights commence from Boston to Fort Lauderdale and nonstop B-747-451 service is launched from Minneapolis (MSP) to Honolulu.

In cooperation with Honeywell and the governments of the U.S. and U.S.S.R., a B-747-251B is employed in February as a test bed to determine the compatibility of the American's GPS and Soviet's GLONASS satellite navigation systems. A cease-fire in the Gulf War is announced on February 27; since the previous August, Northwest has contributed five passenger planes and three freighters to the support of U.S. forces in the Middle East.

Following the collapse of **Eastern Air Lines**, Northwest completes acquisition of 67 slots and 5 gates from the assets of Eddie Rickenbacker's pioneer at Washington, D.C. (DCA).

A major cooperative pact is signed on March 14 between Northwest and **KLM (Royal Dutch Airlines, N.V.)**. The code-sharing and marketing agreement between the two airlines also extends to frequent flyer program linkage, joint purchasing, and cooperative ground handling, sales and promotion, catering, maintenance, information, and cargo. Hundreds of destinations throughout the world will soon be visited cooperatively.

Later in the month, it is reported that the company is negotiating a management contract for operation of the **Trump Shuttle**; the arrangement will not occur. Expanded services are started from the former **Eastern Air Lines** positions at Washington National on April 1, including twice-daily flights to Miami.

Twice-weekly dual-designator services with **KLM (Royal Dutch Airlines, N.V.)** commence between Minneapolis (MSP) and Amsterdam on April 2.

On April 3, the carrier is the first from the West since World War II to fly over the western Soviet Union, as the premier satellite navigation system proving flight is made. On April 19, Northwest becomes the first U.S. airline to operate to and from Ho Chi Minh City since 1975, when it begins charter flights to the former Saigon.

Also in April, the carrier formally assumes responsibility for the **Hawaiian Airlines** routes to the far Pacific. In addition, the company now enters into a deep discount fare war with **Delta Air Lines** and **American Airlines**, which has been triggered by the latter's new four-tier tariff schedule.

Daily nonstop Boston to San Francisco service opens on May 1; daily B-727-251A roundtrips commence from Detroit to Boston on May 15, continuing to Bermuda. Reduced fares are introduced on May 29 for designees of the "Make-a-Wish Foundation of America." On May 31, NWA, Inc., the airline's parent, commits to locate maintenance bases in northern Minnesota under an incentive package that provides nearly \$800 million in assistance from the state of Minnesota under legislation signed by Governor Arne Carlson.

Government approval is received on June 20 for the inauguration of services from New York to Sydney, Australia, via Osaka. On July 4, Los Angeles to Honolulu to Sydney B-747-451 flights begin. Three aviation consulting firms report their findings on Wings Holdings on July 31 to the State of Minnesota, which is considering an aid package for the airline. According to their figures, the airline's parent has \$129.8 million in stockholders' equity, as compared with \$3.7 billion in long-term debt and capital-lease obligations. Although only \$36 million in cash and short-term investments are readily available, the holding company has access to \$600 million in lines of credit.

Micronesia to Japan service is initiated on August 1. A week later, the carrier receives an award from the Organization of Black Airline Pilots. On August 7, the Federal District Court in Atlanta converts an antitrust lawsuit against the airline and eight others into a class-action suit that could benefit many consumers and cost the carriers millions of dollars. The antitrust suit charges that this company and the others conspired to keep ticket prices high at 23 hub airports.

In exchange for a \$20-million loan and a two-year option to purchase its Honolulu-Nagoya route for \$15 million, a new marketing agreement is reached with **America West Airlines** on August 18 giving the major exposure on the West Coast and in the Southwest. The arrangement with AWA provides for code-sharing on the Las Vegas to San Francisco and Los Angeles routes and from Phoenix to San Francisco and Los Angeles. A code-sharing agreement is also inked with **StatesWest Airlines** on August 26.

On October 22, the carrier pioneers its first satellite navigation and communication link. Also in October, an arrangement is made to provide \$20 million in cash to the financially ailing national carrier **Midway Airlines (1)** and assume \$4.7 million of its costs in exchange for 21 Chicago gates. The major also agrees to take over the national by providing another \$150 million for the remainder of its assets, thereby exceeding a \$109-million offer from **Southwest Airlines (2)**.

At the same time, the Metropolitan Airports Commission at Minneapolis reports that it is unable to issue \$120 million in revenue bonds as part of a Minnesota state effort to finance two maintenance bases. The overall site-guarantee package, including another \$350 million in aid, collapses, forcing the airline to look elsewhere.

The code-sharing and marketing alliance with **America West Airlines** comes into effect on October 31. Continuing fiscal downturn forces Northwest to pull out of the **Midway Airlines (1)** deal on November 12 and a day later, Chicago-based national ceases operations, bitterly blaming Northwest for its failure. The two companies file lawsuits against each other at month's end, which are largely erased by Midway's Chapter VII liquidation.

A B-727-51 is donated to Thief River Falls Technical College on December 12 for use as a teaching tool. The same day, the Minnesota

legislature votes 11-7 in favor of an incentive financing package for Northwest to expand its maintenance operations in Minnesota. Under its terms, the major is to receive \$320 million from the state for debt reduction and operational uses, \$350 million in financing for two maintenance bases, and will receive the proceeds from \$79 million in revenue bonds.

For the second consecutive year, Northwest has the best on-time performance among the 7 largest U.S. airlines, based on DOT consumer reports for the domestic operations of 10 reporting U.S. airlines.

Customer bookings this year inch up 0.5% to 41,240,000 while cargo does much better, growing 5.1% to 2.82 billion FTKs. Revenues swell 3.8% to \$7.53 billion, but expenses jump 3.7% to \$7.59 billion and force an operating loss of \$60.11 million. The net loss is cut to \$3.09 million. NWA, Inc. does worse due largely to lease and interest costs, losing \$316.9 million.

Company employment is cut by 4.5% in 1992 to 45,455 and daily Boston-Paris flights begin early in the year. Northwest unveils new employee uniforms on February 3, with flight attendants sporting them first; all 36,000 uniformed employees will be outfitted within a month as the carrier kicks off the "Year of the Customer." Services from Guam are increased on February 27, connecting the island with Honolulu, Seoul, and Okinawa and also in February, final DOT approval is received to acquire the \$15-million Honolulu-Nagoya route.

A new reservations center is opened at Hanover, Maryland, on March 1; the move is, in fact, a takeover of the site previously operated by **America West Airlines**, which has moved its center to Kansas City. Also in March, however, losses and low traffic force the carrier to suspend most of its (formerly **Eastern Air Lines**) routes between Atlanta and Washington, D.C. (DCA). There is good news during the month when Minnesota officials sign documents and turn over \$665-million financing to allow the carrier to construct maintenance facilities.

Seattle-Boston nonstops commence on April 5. Four days later, wide-ranging fare changes are instituted. These commence the next day and include first-class, unrestricted coach-class, seven-day advance purchase leisure, and 21-day advance purchase leisure. In response to **American Airlines'** Value Pricing Plan, Northwest institutes a grown-ups-fly-free fare sale that will place a severe drain on corporate finances.

Also, on April 10, a program to support a charitable endeavor each quarter, Northwest Air Cares, is announced. The activity will focus its fundraising and promotional energies to a given charity for three months at a time.

Nonstop daily flights are inaugurated on April 15 from Honolulu to Nagoya, Japan, over the route acquired from America West Airlines. Meanwhile, a \$450-million, three-year customer service improvement plan is initiated, work begins on the new Minnesota maintenance base, and a \$9-million play is made for the acquisition of the Detroit to London route from the estate of **Pan American World Airways (1)**.

The carrier, on April 23, records the highest-ever marks in a National Aviation Safety Inspection Program (NASIP) directed by the FAA.

On May 8, an advanced digital communications system is introduced at 26 domestic airports, permitting the automated dispatching of flights. The Honolulu to Fukuoka route previously operated by **Hawaiian Airlines** is officially acquired on May 11. Following a review, it is announced on May 19 that the number of flights out of Minneapolis (MSP) will be increased and that the Tokyo hub will be restructured. Also in May, the carrier takes five former **TranStar Airlines** DC-9-51s in trade to **Southwest Airlines (2)** for the 18 Chicago (MDW) gates obtained from **Midway Airlines (1)** the previous year. The Dallas-based carrier also agrees to assume the gate lease obligations, including \$3.8 million in unpaid lease liability, but also takes a 10-year sublease on two Northwest gates at Detroit (DTT).

Daily roundtrip service to Oakland is initiated on June 1. Deep discount fares are introduced two days later. Twice-weekly Seattle to Beijing via Tokyo (NRT) flights commence on June 8.

Four days later, the 32nd A320-211 is delivered making Northwest the world's largest operator of the type. The first of many layoffs are an-

nounced in June and Chairman Checchi asks his pilots to come up with \$500 million in labor concessions.

Later in the month, it is announced that delivery of the remaining 24 A320s on order will be stretched out and that flights to Washington, D.C. (DCA) will be cut by a third. At month's end, 250 management personnel and 250 reservations agents are let go.

The number of Honolulu to Sydney roundtrips is increased from one per week to three on July 1. Plans are announced for an increase of 26 flights per day out of Minneapolis (MSP). On July 21, a code-sharing agreement is joined with **Ansett Airlines of Australia (Pty.), Ltd.** A number of management transfers and promotions are announced during the month, including the appointment of Yale professor and major deregulation player Michael Levine as vice president-management. Twice-daily Minneapolis (MSP) to Oakland services commence on August 1 together with new services to Richmond, Virginia. A B-747-251F with 7.5 tons of supplies is sent to south Florida on August 28 for relief of victims of Hurricane Andrew.

Also during the month, it is announced that daily departures from Milwaukee will be reduced from 28 to 18. A chartered Jumbojet transports the National Football League's Dallas Cowboys and Houston Oilers to Japan for a Tokyo exhibition game. When the regular season begins at month's end, the carrier has exclusive contracts to provide lift to the Detroit Lions, Green Bay Packers, and Minnesota Vikings.

A commercial cooperation and integration agreement with **KLM (Royal Dutch Airlines, N.V.)**, a member of the Wings Holdings investment group, is filed on September 9; the document will allow the two airlines to join together in creating the first unified, global airline system. The next day, the Dutch partner takes on 48 pilots laid off by Northwest.

On a tragic note, Susan Taraskiewicz, a ground crew supervisor at Boston, is murdered at the same time federal authorities are conducting a large-scale mail theft and credit card fraud investigation of Northwest employees. Last seen alive on Sunday, September 13, her body is found in the trunk of her car in front of an auto body shop on Route 1, near Logan Airport, early the next day. Although ten baggage handlers will be indicted, convicted, and sentenced for theft and fraud in 1995, the killer(s) of Taraskiewicz are not apprehended.

The most successful employee idea campaign in company, Northwest Now, completes a 100-day run on September 14, yielding \$87.6 million in annual cost savings and revenue enhancement.

During the month, the local ALPA chapter, having conducted its own review of airline finances, offers the administration a package of \$100 million in pay and work rule concessions over the next three years.

Honolulu to Guam flights begin on October 1, the same day twice-daily roundtrip frequencies between Albuquerque and Minneapolis (MSP) are initiated. The next day, Okinawa to Guam service comes into effect. Becoming the first western carrier to operate through Russian airspace on a regular basis, Northwest begins new Detroit to Tokyo service on October 8. The route, dubbed Siberia II, is operated for 2,500 mi. through Russian territory.

In early November, it is reported that bankruptcy is near. Northwest has depleted a \$600-million line of credit that was supposed to last it through the winter and has only two months cash (\$300 million) on hand. On November 16, the DOT agrees to grant the Northwest-KLM integration plan antitrust immunity. With DOT support in hand, the Dutch carrier comes forward with a \$50-million loan and assists in locating lenders willing to provide \$250 million more, plus \$300 million in delayed principal payments on the debt. Northwest's unions pledge another \$900 million in concessions, to be worked out through negotiations.

On December 9, Northwest becomes the first CRAF carrier to fly troops to Somalia in Operation Rescue. At month's end, the airline, teetering on the brink of bankruptcy, cancels \$6 billion in aircraft orders, including firm commitments for 50 A320s, 24 A340s, and options on 50 B-757-251s and 4 B-747-451s.

For the third consecutive year, Northwest has the best on-time performance among the 7 largest U.S. airlines, based on DOT consumer reports for the domestic operations of 10 reporting U.S. airlines.

Passenger boardings for the year ascend 4.4% to 43,052,000 and freight rises 7.7% to 2.7 billion FTKs. Revenues climb 9.7% to \$7.96 billion, expenses are up 13% to \$8.27 billion, and the operating loss increases to \$308.8 million. The net loss skyrockets to \$386.2 million. NWA, Inc., attempting to restructure its finances and reach accords with the various unions, sees its revenues swell 5.2% to \$8.1 billion. Expenses skyrocket and a \$376.2-million operating loss must be absorbed. Due largely to recession and the new FAS 106 accounting write-off of \$658.6 million, the net loss balloons to \$1.18 billion.

The workforce is cut 6.6% in 1993 to 42,439, 8th largest in the world; the fleet of 456 aircraft is 6th largest. On January 11, the DOT gives its final antitrust approval for Northwest and **KLM (Royal Dutch Airlines, N.V.)** to integrate their services and to operate as a single carrier in the world's first unified global airline system.

Layoffs for 1,043 workers begin on January 18, including 780 flight attendants, as well as reservations and sales agents and personnel at 28 U.S. stations. Bankruptcy is now avoided with a financial restructuring package. Lenders agree to revise \$1.5 billion in debt and employees tentatively agree to exchange \$886 million in wage and benefit cost reductions for 3 seats on the board and 37.5% shareholding.

A Seal of Partnership is unveiled on January 20 which incorporates the logos of both pioneers and on January 30, Northwest and **KLM (Royal Dutch Airlines, N.V.)** begin the integration of their services by offering special low fares for travel to and within Europe. Joint flights commence, using Northwest DC-10-30s, to Amsterdam from Minneapolis (MSP) and Boston.

On March 16, it is announced that the two airlines will inaugurate code-sharing service to 32 current Northwest North American destinations and 33 of the Dutch airline's current markets in Europe, Africa, and the Middle East. Federal Judge Marvin H. Shoob approves a \$458-million settlement on March 22 of a class-action antitrust lawsuit charging Northwest and 5 other carriers with price-fixing. Travelers will now be able to receive discount airfare coupons to compensate for charges by the airlines on flights between January 1988 and June 1992.

On April 4, twice-daily Twin Cities to Reno flights begin along with thrice-daily Detroit to Raleigh/Durham service. Joint overseas flights with **KLM (Royal Dutch Airlines, N.V.)** begin simultaneously, creating the world's third largest airline system and linking more than 300 cities in 100 countries. It is announced on April 15 that the carrier will purchase **USAir's** soon-to-be vacated Baltimore (BWI) to London route for \$5 million and shift its U.S. terminus to Detroit by mid-June.

After **Reno Air** complains to the DOT of predatory practices, Northwest is informed by DOT Secretary Federico Pena on April 30 that any effort to start three new routes in direct competition with the fledgling will be turned over to the Department of Justice for investigation under antitrust laws. Nonstop roundtrip frequencies from Detroit to Tokyo are increased on May 1 to 10 per week.

By June 1, the American and Dutch majors have code sharing arrangements for 12 U.S. and 13 European, African, and Mideast destinations and continue to expand this approach by one to two communities per month. Meanwhile, a "fifth freedom" dispute arises with Australia. The American major is specifically charged by competing **Qantas Airways (Pty.), Ltd.** with exceeding the informal 50% cap on picking up passengers at Tokyo (NRT) during its stop on its New York-Sydney route.

On June 3, the company files suit in Australian court to block the Canberra government's restrictions on the carrier's thrice-weekly flights from Sydney to Tokyo. The next day, the U.S. government bans **Qantas Airways (Pty.), Ltd.** flights to Los Angeles. On June 23, the Australian government abandons its planned sanctions against Northwest in exchange for an agreement with the DOT to drop its retaliatory action against Qantas in a dispute concerning passenger ratios on the three weekly Northwest flights linking New York, Osaka, and Sydney. Service to Australia is now terminated.

Also in June, the company again threatens to file for Chapter XI bankruptcy unless its 3 big unions finally come up with \$886 million more in wage and benefit concessions; in exchange, the workers will gain 37.5% shareholding and 3 of the 15 seats on the board of directors. Although the pilots and flight attendants agree, the machinists' rank-and-file votes down the pact. As the summer fare wars begin, the company joins with **Continental Airlines** in a lawsuit against **American Airlines**, charging damages were incurred the previous year as a result of Bob Crandall's Value Pricing Plan; these legal proceedings are lost.

Under the terms noted above, the union reaches agreement with the company's administration in July, thereby averting a Northwest bankruptcy filing. As part of the arrangement resolving the **Qantas Airways (Pty.), Ltd.** question, Northwest agrees to limit Fifth Freedom traffic between Osaka and Sydney on its New York-Sydney route to 50% of total traffic on the route. The DOT now allows the carrier to transfer the New York terminus of the Australia route to Detroit and Northwest drops its application for Detroit to Brisbane service via Tokyo. It is announced on July 20 that Northwest and **KLM (Royal Dutch Airlines, N.V.)** will expand their joint operations to all KLM flights in the U.S. and will share revenues and costs of operating these flights.

The voluntary restructuring program approved by the unions in July is completed on August 6. The arrangement includes a three-year wage reduction agreement with employees and an employees stock ownership program (ESOP) representing approximately 30% of the corporation. At the same time, a three-year rescheduling of financial obligations to lenders and major vendors and the airline cancels delivery of two about-to-be-received Dash-451 Jumbojets.

On September 22, Northwest and KLM begin to expand their joint venture services from Minneapolis (MSP), Detroit (DTT), and Boston; 11 additional destinations will be visited, including nine by KLM and two by Northwest. Additionally, the partners combine and expand their vacation package programs, beginning with WorldVacations packages in Europe.

On October 1, negotiations are completed for the takeover of the new Fort Lauderdale-based charter operator **Sun Express Airlines** by Air-Tran Corporation, the parent of "Northwest AirlinK" partner **Mesaba Airlines**, and plans are made to turn it over to a new subsidiary, **Conquest Sun Airlines**. The company joins with **KLM (Royal Dutch Airlines, N.V.)** on October 15 to unveil identical tourist-class fares for frequencies between the Netherlands and the U.S. Six days later, the two airlines merge their Dutch cargo operations under the name KLM Cargo. As of October 31, roundtrip Detroit to San Juan service is expanded while nonstop seasonal vacation flights are reinstituted the same day from Detroit, Boston, and Minneapolis (MSP) to the winter holiday destinations in Mexico, the Rocky Mountains, and the Caribbean.

During the year's second half, the minihubs at Seoul, Milwaukee, and Washington, D.C. are eliminated. Wings Holdings, the airline's parent corporation, is renamed Northwest Airlines Corporation on December 7.

On December 17, B-757-251 roundtrips commence to Steamboat Springs' Hayden Airport from Minneapolis (MSP) while, from the same giant hub, daily B-727-251A roundtrips begin to Eagle Airport at Vail, Colorado, on Christmas Day. Also during the month, a new advertising campaign is unveiled; employing retired employees to discuss the airline "then and now," the promotion stresses long-term improvements.

At the same time, a code-sharing agreement is signed with **Alaska Airlines** for service on the Seattle-Los Angeles route. In addition to linking frequent flyer programs, the arrangement will eventually connect 34 U.S. destinations with 14 major points in Asia visited by Northwest.

For the fourth consecutive year, Northwest has the best on-time performance among the 7 largest U.S. airlines, based on DOT consumer reports for the domestic operations of 10 reporting U.S. airlines.

Customer bookings for the year inch up 1.5% to 44,201,000, the globe's 6th highest total; cargo climbs 3.4% to 2.8 billion FTKs, also 6th best. Revenues surge 6.4% to \$8.64 billion, for another global 6th place finish, and expenses dip 1.7% to \$8.35 billion. As a result, a

\$272.4-million operating profit is generated, the world's 7th highest total. Unhappily, a \$115.3-million net loss is suffered; happily, that figure is only 10% of that lost the previous year.

Airline employment inches up 1.7% in 1994 to 44,079. On January 18, Northwest files the initial public stock offering (20 million common shares) traded since the company was taken private in 1989; \$260 million in new equity will be realized by June. The carrier joins with **Delta Air Lines** and **United Airlines** the same day in agreeing to pay \$30 million in \$5-fare coupons and lawyers fees to settle a class-action suit over tax-related surcharges for jet fuel attached to passenger fares at Chicago's airports.

On February 15, Northwest and **KLM (Royal Dutch Airlines, N.V.)** introduce World Business Class, a roomier and enhanced international business-class service offered at a regular business-class price. They are the first airlines from two different countries to offer a joint international service product and identical in-flight amenities.

On February 23, Northwest Aerospace Training Corporation (NATCO) signs an agreement to train pilots for five Chinese airlines; within six years, NATCO will provide pilot training to more than 100 outside customers. Also in February, \$243 million is raised through a note offering secured by 10 jetliners.

The latest of 26 Northwest incidents at Tokyo (NRT) in a year is the most serious. During a March 1 landing, the No. 1 engine pylon partially detaches from the left wing of Flight 18, a B-747-251B, causing the engine to drag along the runway and catch fire; although no injuries are reported, the runway must be closed for half an hour.

A restructuring of the Memphis hub schedule into three omnidirectional banks is completed on March 2, improving connecting opportunities and profitability.

On March 17, the U.S. government settles an antitrust suit against Northwest and five other airlines that agree to changes in their computerized reservations system, which officials complain are used to fix airfares. Without admitting or denying the accusation, it is agreed to end the practice of communicating proposed fare increases to each other through the reservations system maintained by the Airline Tariff Publishing Company.

A major realignment of Pacific service occurs on April 3. Service is suspended from Los Angeles to Sydney and from Seattle to Seoul, while B-747-451 flights commence from Los Angeles to Seoul. The same day, the route from Minneapolis (MSP) to Spokane is extended on to Vancouver. An agreement is reached with the State of Minnesota in April for the construction of a smaller maintenance facility at Duluth and the creation of a reservations center at Hibbing. The Duluth base will be paid for by a \$40-million state loan and a \$10-million Northwest investment. New services are initiated to Boise and Jacksonville on April 20.

Northwest's "A la Carte" meal service is honored on May 4 by the In-flight Food Service Association.

The \$2.5-million purchase of **Sun Express Airlines**, now **Conquest Sun Airlines**, along with its certificate and two Boeing 737-200s, is completed by AirTran Corp. in May. The arrangement is immediately condemned by the Northwest ALPA chapter, which correctly points out that the purchase violates their scope clause in the collective bargaining portion of the major's contract with **Mesaba Airlines'** parent, AirTran Corp.

In June, Northwest threatens to withhold some \$894,000 in pro rata payments to **Mesaba Airlines** if a resolution of the **Conquest Sun Airlines** issue is not immediately forthcoming. Chisholm is selected on June 30 as the site for the carrier's new northern Minnesota reservations and service center. Northwest is also developing an A320-211 heavy maintenance facility based at Duluth.

On July 1, code-sharing flights with **America West Airlines** commence on a route from Tucson to San Francisco.

AirTran Chairman Robert D. Swenson unveils a plan in August which, as soon as certain tax and legal problems are resolved with Northwest, will result in the spin-off of **Conquest Sun Airlines** to AirTran stockholders.

A \$60-million order is placed, also in August, for hush kits for 40 DC-9-30s; ABS Partnership and Pratt & Whitney supply the financing required. Also during the month, Executive Vice President-Marketing and Sales Levine is promoted to executive vice president-marketing and international.

On August 29, a joint marketing and code-sharing agreement is signed with **Asiana Airlines, Ltd.** for service between the U.S. and South Korea.

Arrangements with AirTran Corp. are duly completed and in September the wholly owned subsidiary is reformed into **AirTran Airways**. As part of the deal, Northwest's stake in **Mesaba Airlines** grows to 29.7% and AirTran Chairman Robert Swenson and Chief Financial Officer Jack Olbrych switch their employment to the new entrant. From a base at Orlando, services are continued to destinations in the south and northeast U.S.

Also in early September, a strategic code-sharing alliance, signed the previous month, is implemented with **Asiana Airlines**. Under terms of the agreement, the company will share frequent-flier programs, terminal and lounge facilities, and cargo space in Korea and the U.S. Additionally, the two carriers will share codes on flights to Seoul from New York (JFK), Detroit, Los Angeles, San Francisco, Honolulu, and Saipan.

On September 23, the carrier begins to remove malfunctioning interactive video systems from its aircraft. At month's end, 14 DC-9-30s are purchased from the assets of the former **Eastern Air Lines**.

Dipping into its cash reserve of G 3 billion (\$2 billion), **KLM (Royal Dutch Airlines, N.V.)** takes the opportunity on October 1 to purchase an additional 5% stake. The \$180-million acquisition of the shareholding of Australia's Foster's Brewing Group, Ltd., brings the Dutch carrier's equity interest to 25%, the maximum allowed under U.S. law. Code-sharing commences in cooperation with **Asiana Airlines, Ltd.** on October 30 on flights between Detroit and Seoul (NWA) and Seoul and Saipan, Honolulu, San Francisco, Los Angeles, and New York (Asiana).

The DOT updates the company's authorization to provide third-country code-sharing services on the North Atlantic as of November 1; the revised two-year certification also includes U.S.-Germany and Holland-Germany services in partnership with **KLM (Royal Dutch Airlines, N.V.)**. The company announces, on November 2, that \$350 million in new financing has been arranged that will help the airline to cut its 1997 debt payments by almost half.

Later in the month, the company's cargo operations are spun off into a separate division, or profit center, under its own president, William D. Slattery.

On November 15, the carrier boards its one-millionth Japanese passenger of the year, the earliest date ever for this milestone. In an effort to reduce its annual painting costs by \$1.7 million, two DC-9-51s are given experimental "bowling shoe" livery.

For the fifth consecutive year, Northwest has the best on-time performance among the 7 largest U.S. airlines, based on DOT consumer reports for the domestic operations of 10 reporting U.S. airlines. Passenger boardings slide 3.1% this year to 45,495,000, but freight grows by 5.5% to 2.95 billion FTKs. Revenues grow 5.7% to \$9.14 billion and expenses decline 0.8% to \$8.31 billion. As a result, pretax profits increase to \$830.4 million, while there is a welcome \$295.5-million net gain.

The workforce grows 2.1% in 1995 to 45,000. On January 4, the air ministries of China and Russia authorize a new route from North America via Siberia to China. Two days later, nonstop DC-10-40 flights are initiated from Seattle to Osaka's new Kansai International Airport. Prior to the new airport's opening, Northwest had 18 departures to and from the city's Itami Airport to various U.S. and foreign destinations.

It is announced on January 9 that following five straight profitable quarters by the carrier, the groups taking part in Northwest's restructuring have agreed to a management request. The airline will no longer be required to raise \$235 million in new equity or subordinated debt by mid-1996, as originally pledged in the August 1993 agreement that avoided bankruptcy.

At the same time, the company's Boston to Paris route is abandoned. It is revealed that Northwest will purchase **Delta Air Lines'** Detroit (DTT) to London route authority for \$1.6 million and transfer Frankfurt route authority from Boston to Detroit.

The same day, **ValuJet Airlines** begins service from Atlanta to Detroit (DTT), setting off a price war with Northwest. Northwest also inaugurates flights to Atlanta from Flint, Lansing, Grand Rapids, Kalamazoo, Muskegon, and Saginaw.

It is reported a few days later that the carrier will spend \$23 million this year to renovate passenger facilities at Detroit (DTT). Concourse G of its Davey terminal will be torn down and replaced and Concourses C-F will be refurbished.

On February 11, the carrier joins **Delta Air Lines** in the initiation of a commission cap for travel agents. Four days later, it is among the 5 major airlines named in a suit against the practice by Travel Network, Ltd., franchiser of 350 travel agencies.

Company officials announce on February 15 that they will match the fare cuts for winter and spring travel to the U.S., Europe, and the Caribbean initiated by **American Airlines** and **America West Airlines** two days earlier. Twelve days later, a press release is issued announcing that Northwest will match the price increase, mainly involving business travelers, initiated by **United Airlines**.

Since January, the carrier has teamed with the AmeriCares relief organization to organize a national fundraising effort for relief of earthquake victims in Kobe, Japan. Additionally, company volunteers organize B-747F relief flights that deliver over 500,000 lbs. of relief supplies.

The company, on March 1, prohibits smoking on all of its transatlantic services. On March 8, Northwest and Airtran Corp., after an eight-month dispute, reach a tentative agreement stemming from **AirTran Airways** foray into passenger service. The major will increase its 2% stake in AirTran Corp. to almost 30% while AirTran's jetliner service will be spun off into a separate AirTran Airways, Inc.

Northwest, on March 30, announces a summer fare sale in some of the markets served by rival **American Airlines**; American will exceed the Minneapolis-based major's offer with one of its own the next day. Also in March, agreement is reached with **Air New Zealand, Ltd.** to provide linked frequent flyer programs, shared airport lounges and other facilities, and joint fares from the U.S. to ANZ destinations in the Pacific.

During late spring, the U.S. and Japanese governments become involved in a dispute over landing rights in Japan for **Federal Express**, which wishes to increase its cargo frequencies into that country from its new Subic Bay facility, with the Americans threatening economic sanctions.

At the same time, a code-sharing agreement is signed with **KLM (Royal Dutch Airlines, N.V.)** and **Eurowings Luftverkehrs, A.G.** covering feed over several of the Dutch line's thinner routes into Germany.

Twice-daily DC-9-51 roundtrips commence on April 18 between Minneapolis and Colorado Springs. On April 20, daily nonstops are inaugurated from Detroit (DTT) to London (LGW).

On May 1, service is inaugurated from Minneapolis (MSP) to Calgary and Regina and from Detroit to Ottawa. Flights from Detroit to Halifax and from Minneapolis (MSP) to Saskatoon commence on May 15. The new Canadian routes double the number of company destinations north of the border.

Employing a B-747-251B, Northwest at the end of May undertakes a proving flight from Seattle to Hong Kong via Anchorage, Magadan, Khabarovsk, Haiqag, Beijing, and Shanghai. Also during May, the company and Piedmont Aviation Services undertake a joint-venture marketing agreement for third-party auxiliary power unit (APU) overhaul and repair services.

On June 20, Northwest is drawn into the dispute over landing rights in Japan. Should the fight continue and discussions on revising the 1952 bilateral agreement (which the U.S. opposes) not occur, Japanese Transportation Minister Shizuka Komei threatens to prohibit certain flights to Tokyo of both **Federal Express** and Northwest that originate in the U.S.

Officials from the carrier and **Federal Express** join local VIPs in welcoming **KLM (Royal Dutch Airlines, N.V.)** to Memphis on June

27. The Dutch carrier begins four-times-a-week MD-11 roundtrips from the West Tennessee city to Amsterdam.

On July 1, Northwest wins a \$10-million claim in the U.S. Bankruptcy Court in Boston against **Precision Airlines** and **Northeast Express Regional Airlines**. Both commuters had been "Northwest Airlink" affiliates until the previous summer and had earlier filed for Chapter XI protection. Their owner had not turned over any "Northwest Airlink" passenger revenues to Northwest since the relationship began in 1989.

On July 12, Dallas-based Dalfort Aviation files suit in a local state district court to recover \$1.4 million the airline is holding because it claims the concern has returned five DC-9-51s well past the specified date. Under the contract, Northwest is given the right to withhold \$10,000 per plane per day that it is late. However, Dalfort responds that the delays are of the airline's making and accuses Northwest employees of sabotaging the work because they fear additional outsourcing of repair work on Northwest aircraft.

Two days later, Northwest will file a separate federal lawsuit in St. Paul, Minnesota, accusing Dalfort of missing deadlines for renovation of the five aircraft and asserting its right to the \$1.4 million. Dalfort attorneys make the same claims as those given in Dallas, adding allegations that a Northwest spokesman has libeled it by publicly criticizing its repair work.

The unhappy talks between representatives of the U.S. and Japan end without agreement on July 14. A mini-conference is held on July 20-21 between DOT Secretary Pena and Japanese Transport Minister Komei and reach an accord that avoids a conflict over the route requests made earlier by **Federal Express**. Northwest officials express relief that Japan had not renounced the 1952 bilateral agreement, which could have seriously threatened its beyond-rights from Tokyo.

The temporary accord reached by the ministers on the air route question also includes agreement to enter into later discussions aimed at revising the all-cargo provisions of the 1952 bilateral. Under the July 21 accord, **Federal Express** will be granted the routes it had sought from the Tokyo government earlier and will join Northwest in initiating new routes to Asian points from Japan. Meanwhile the U.S., in exchange, grants **Japan Air Lines Company, Ltd. (2)** a new cargo route from Osaka to Chicago.

By summer, the company is offering 340 daily flights from Detroit (DTT) versus 302 a year earlier. Plans are made to invest upwards of \$25 million in new Detroit improvements along with a new international \$4.3-million check-in ticket counter. The workforce in Detroit is increased from 6,837 to 7,675.

A B-757-251 with 127 passengers encounters severe turbulence at a point 25 mi. NW of Grand Rapids, Michigan, on August 4; one passenger is seriously injured.

A comprehensive marketing and code-sharing alliance is entered into with **Alaska Airlines** on August 22. Under its terms, the two will not only enjoy reciprocal frequent flyer program participation but Alaska's 34 U.S. destinations will be connected to 14 major markets served by Northwest in Asia.

Four-times-per-week B-757 return services are inaugurated by Northwest from Minneapolis (MSP) to Fairbanks.

On August 26, Northwest follows the lead of **Continental Airlines** and temporarily reduces fares on certain routes by up to 58%. Like **Delta Air Lines**, Northwest plans to operate its new weekly trans-Siberian service through the period of favorable winds between October and April.

Dual-designator flights with **Alaska Airlines** commence on September 15 as the Minneapolis-based major adds its code to Alaskan flights between Seattle and Los Angeles, San Francisco, San Jose, Sacramento, Portland, and Spokane that connect with Northwest frequencies from Los Angeles and San Francisco. At the same time, **Alaska Airlines** codes are added to Northwest flights between Seattle and Honolulu that connect with Alaska's frequencies from Seattle to Fairbanks and Anchorage.

Customers are able to depart over the new trans-Siberian route on October 1, flying to Hong Kong from Seattle by way of Anchorage, Magadan, Khabarovsk, Haiqag, Beijing, and Shanghai. The Northwest designation is added to nearly all of Alaska's flights at the beginning of October.

On October 19, the first AmeriCares Heroic Action Award is presented to Northwest for its lifesaving contributions to the relief efforts of Kobe, Japan, following the great earthquake. Also in October, when **KLM (Royal Dutch Airlines, N.V.)** ceases service to Washington, D.C. (IAD), Northwest steps in to provide daily DC-10-40 dual-designator service to Amsterdam.

Weekly nonstop service is launched on November 13 from Minneapolis (MSP) to Tokyo (NRT). The company announces on November 15 that, due to expected attrition, it will hire 840 flight attendants in 1996. In cooperation with **KLM (Royal Dutch Airlines, N.V.)**, passengers from Columbus, Georgia, may connect at Memphis, beginning on November 30, with service to Europe via Amsterdam.

A new bilateral agreement is signed between the U.S. and China in early December. Northwest is authorized to inaugurate nonstop flights from the Midwest to Beijing the following spring. On a lesser note, a new B-757-251 is delivered on December 11 bearing "Toys-for-Tots" titles on the base of its tail as a seasonal goodwill promotion for the humanitarian program.

The U.S. Immigration and Naturalization Service deports 17 British passengers on December 19 for their unruly behavior aboard a Northwest flight from London to Minneapolis. The travelers had objected to having limits placed on their drinking during the flight and in retaliation had thrown food, yelled, and swore, disrupting service to others aboard. The most difficult are restrained by members of the U.S. Olympic Wrestling Team, who happen to be aboard, and one is later held in the U.S. on charges of assaulting a flight attendant, a federal offense punishable with a prison term.

Also in December, **KLM (Royal Dutch Airlines, N.V.)** files suit against its partner seeking to eliminate a "poison pill" provision adopted by Northwest's board, over the objections of its three KLM representatives. The move is allegedly taken as a self-protection measure against any effort by the Dutch carrier to increase its 19% equity.

Enplanements jump 8.4% to 49,313,000, but cargo dips 3.7% to 2.84 billion FTKs. Operating income accelerates 9.2% to \$9.08 billion and costs rise an identical percentage to \$8.12 billion. Operating profit rises to \$913.4 million and a \$392-million net profit is posted.

A total of 47,000 workers are employed in 1996, a 4.4% increase.

On January 3, Northwest joins with **Delta Air Lines** in signing an exclusive five-year agreement with the private operators of Vail-Beaver Creek Jet Center terminal at the Vail-Eagle County Airport in Colorado.

Flight 1, a B-747-251B with 19 crew and 366 passengers suffers an uncontained failure of the No. 2 engine turbine section during the climbing phase of its flight from Los Angeles to Tokyo (NRT) on January 5; the aircraft returns to Los Angeles (LAX), where no injuries are reported.

A major winter storm cripples airline operations on the East Coast between January 7 and 11. All 500 of its daily departures from local airports are cancelled with only a few aircraft left at Washington, D.C. (DCA) to resume flights when the crisis is over.

Twenty-five-year-old Englishman Michael Purcell, one of the 17 British passengers facing deportation, is sentenced to 30 days in jail in Minneapolis on January 9 after pleading guilty to assaulting a flight attendant during the disruptive December flight.

On February 1, electronic ticketing is introduced between Minneapolis and Chicago (O'Hare); such ticketless service is expanded throughout the system over the next 11 months. The company, on February 7, is able to claim six consecutive first-place finishes for on-time performance among the seven largest airlines.

With a February 10 request for 16 aircraft, Northwest becomes the first U.S. airline to order an Airbus A330-300, now being offered as a rival to the B-767-300ER. The order will later be deferred.

In its first major aircraft purchase since going private two years earlier, Northwest, on February 26, places orders with Airbus Industrie for 20 A320s. The order represents a change to an earlier request under which the acquisition of 16 A330s will be deferred indefinitely.

Also during the last week of February, partner **KLM (Royal Dutch Airlines, N.V.)** elects to replace three of its own people on the Northwest board with people not affiliated with the Dutch flag carrier. The departure of KLM President Pieter Bouw, Managing Director Leo van Wijk, and Chief Financial Officer Rob Abrahamsen will allow the carrier to continue its anti-takeover court challenge without any suggestion of a conflict of interest.

Twice-daily B-727-251A roundtrips are inaugurated on March 1 between Detroit and Colorado Springs. It is announced during the month that the company will add 150 flight attendants to its Memphis hub to support increased services.

Northwest introduces its homepage on the World Wide Web on March 28. During a weeklong sale that begins on April 4, the carrier cuts its North American fares by up to 50% for travel during the May 1 to September 9 summer travel season.

Electronic ticketing is introduced on April 15 between Minneapolis and Atlanta, Boston, Los Angeles, Milwaukee, Newark, New York (LGA), Philadelphia, Phoenix, San Francisco, Seattle, and Washington, D.C. (DCA).

On April 26, an alliance is signed with **Air China International Corporation** under which both will steer passengers to the other's flights via their reservations systems. Discussions are held on future joint operations, including coordinated scheduling, reservations, through check-in, marketing, and code-sharing. Cargo does not, at this point, factor into the equation. This is the first alliance between a PRC airline and a major foreign airline.

At the same time, the carrier requests a grant from the Japanese and Chinese governments of temporary permission, effective July 1, for the transfer of passenger service from Shanghai to Guangzhou, the former Canton.

Chinese Consul General Huang Dongbi and **Air China International Corporation** Executive Vice President Wang Jiwei join Northwest officials on May 1 for the inauguration of the first regularly scheduled return service by a U.S. airline to Beijing from the U.S. mainland. Employing B-747-451s, the major begins thrice-weekly frequencies; the inaugural service is flown by the Jumbojet *The Spirit of Beijing*, piloted by Capt. Tom Olson, in 13 hrs. 7 min. It is the first to fly the new leg from Khabarovsk to the Chinese capital on a scheduled basis.

In addition to the direct service, Northwest also operates three weekly flights to Beijing from Los Angeles via Tokyo (NRT).

On May 13, the federal court in St. Paul throws out Dalfort's points in the renovation and penalty dispute, finding 90% of its charges to be without merit.

When the summer transatlantic season begins on June 1, the company, in partnership with **KLM (Royal Dutch Airlines, N.V.)**, increases its four-times-per-week services from San Francisco or Memphis to Amsterdam to daily flights. When KLM begins its own Amsterdam to Beijing flights this month, the partner's' around-the-world-via-China route network is completed.

A number of additional frequencies from Minneapolis begin with the summer schedule on June 1. These include a third daily roundtrip to and from Anchorage, to and from Vancouver, to and from Montreal, and to and from Calgary. An eighth daily roundtrip to and from Boston, a seventh daily roundtrip to and from Los Angeles, a ninth daily roundtrip to and from San Francisco, and a tenth daily roundtrip to and from Seattle are also added.

Designed to help them both fill capacity on eastbound transpacific freighters, Northwest and **Nippon Cargo Airlines, Ltd.** sign an interline agreement on June 1. Under its terms, each carrier, which now operates two weekly B-747F flights between Osaka (KIX) and Chicago (ORD), will have access to the other's two flights on the same routes.

The arrangement is similar to their earlier interline agreement for flights from Tokyo (NRT) to the airports in Seoul, Taipei, and Singapore.

A Minneapolis conference is held during the first week of June to focus on Northwest's three-year recovery from near bankruptcy. Airline officials admit that cultural and personality differences are largely responsible for the erosion of the KLM-Northwest alliance, rather than the contest over stockholders' rights that the Dutch airline leadership claims. KLM, the Northwest officials suggest, has confused alliance with governance.

Officials of the American airline, in light of the legal case filed by the Dutch, have adopted a strictly business approach to the alliance, which is working well financially. Meanwhile in Amsterdam, KLM President Bouw announces that, in light of the uncertain relationship between the two carriers, his airline is shelving for the moment a \$300-million plan to merge its international cargo operation with that of Northwest.

In an agreement brokered by Dallas attorney Sidney Stahl, Northwest and Dalfort Aviation partially settle their acrimonious contract dispute. The airline agrees to drop all warranty claims against Dalfort, as well as claims that the repair firm is responsible for late deliveries. Dalfort is free to pursue its appeal of the St. Paul decision in the Eighth Circuit Court of Appeals and if it wins (it does not), both sides will submit the dispute to binding arbitration by neutral parties.

On June 29, in conjunction with **USAir** and **United Airlines** and in cooperation with Microsoft, Northwest offers its customers software programs that allow do-it-yourself on-line reservations and ticketing. The Minnesota to Alaska scheduled inaugurated the previous August is now expanded to daily service.

On July 1, the carrier links with **Japan Air System, Ltd.** via its reservations system. Transpacific feed is now provided to JAS at Osaka for its routes to Sapporo, Fukuoka, Kochi, and Niigata. The same four cities feed Northwest flights to Honolulu and Los Angeles, with JAS able to issue through-tickets to U.S. cities beyond the California gateway.

In light of the proposed strategic alliance between **American Airlines** and **British Airways, Ltd. (2)**, the company attempts to convince Northwest shareholders that a continuing alliance is the best response. **KLM (Royal Dutch Airlines, N.V.)** President/CEO Bouw announces on July 1 that his company will sell 6,654 shares of Northwest preferred stock back to the American major for some \$378 million. As the result of additional negotiations, a series of new agreements will be concluded over the remainder of the summer.

At the same time, Northwest is forced to postpone until October 1 its own new service from Seattle to Jakarta when the Japanese government refuses to permit the new roundtrips via Osaka (KIX) using beyond-rights held under the 1952 U.S.-Japan bilateral air agreement. Some 6,000 passengers planning to leave Jakarta for the U.S. through Japan must be diverted to **Garuda Indonesia**.

The ongoing dispute with the U.S. over air cargo flights to and beyond Tokyo continues. On July 16, the DOT warns the Japanese Ministry of Transport that unless it relaxes restrictions on **Federal Express** and Northwest by the end of the month, as promised earlier, **Japan Air Lines Company, Ltd. (2)** will be prohibited from carrying freight to the U.S. that has originated in the Philippines, Indonesia, or China. On July 18 the Japanese Ministry of Transport refuses to allow **Federal Express** and Northwest to fly to destinations in Asia from Japan in retaliation for the U.S. threat against JAL.

Also during the summer, a marketing alliance entered into with **Hawaiian Airlines (HAL)** the previous fall takes effect. Having agreed to link their marketing and frequent flier programs, the two companies coordinate their schedules so that passengers arriving at Honolulu on Northwest flights from Los Angeles, San Francisco, Fukuoka, Osaka, Nagoya, and Tokyo are able to seamlessly transfer to HAL flights to Hilo, Kona, Lanai, Kahului, Lihue, and Molokai.

Contract negotiations between the company and the Northwest ALPA chapter commence in August. Issues of pay, pensions, job protection, and work rules will divide the two sides for years.

Following the lead of **Continental Airlines**, Northwest and three other major airlines on September 3 agree in principle to settle a suit by the American Society of Travel Agents charging the carriers illegally conspired to cap travel agent commissions on domestic airline tickets. The five will reportedly pay a total of \$87 million, but will be able to retain the controversial \$50 commission cap.

On September 27, Northwest and Sotheby's conduct the first airline auction live and open to the public using WorldPerks frequent-flier miles as currency. More than 8.3 million miles are bid on more than 30 unique, once-in-a-lifetime experience packages. Habitat for Humanity is the major beneficiary of this charity event.

During early October and continuing into the fall, negotiations begin on new contracts for the company's pilots, machinists, and flight attendants. The negotiations will drag on and eventually cause significant disruption. A new 189,000-sq.-ft. A320 maintenance facility is opened at Duluth.

Due to the unsettled aviation dispute between the U.S. and Japan, both **United Airlines** and Northwest Airlines delay services to Indonesia. *The Jakarta Post* is informed on October 15 that the service that Northwest had hoped to begin on October 1 from Seattle to Jakarta via Osaka should commence on December 1.

"Mystery Fares" are offered to celebrate Halloween on October 31. Travel agents sell \$79 one-party and \$138 two-party roundtrip day-trip vouchers ahead of time for destinations that are not announced until the passengers arrive at their airport check-in counters. Among the 15 destinations visited are Boston, Chicago, Dallas, Denver, Detroit, Milwaukee, Nashville, New York, Orlando, Philadelphia, Phoenix, St. Louis, Salt Lake City, Tampa, and Washington, D.C.

In the face of rising fuel costs, beginning on November 1 **KLM (Royal Dutch Airlines, N.V.)** adds a surcharge to its fares, including those for joint flights with Northwest.

On the same day, Northwest reaches the decision to replace its 22 DC-9-10s, which do not meet Stage 3 noise requirements, with 12 Avro RJ85s. Once in hand, the regional jets will be subleased to its "Northwest Airlink" partner **Mesaba Airlines** and employed to replace the older aircraft with enhanced JetLink services from Detroit and Minneapolis (MSP).

The operating units of the company's passenger division are now divided in early November into two components: ground services and marketing and sales. Donald Washburn, executive vice president-operations and customer relations, takes charge of the services unit while Michael Levine, executive vice president-marketing and international, is given marketing and sales.

The formerly autonomous Northwest Cargo is now amalgamated into the passenger division. Jack Smith is appointed vice president-cargo in mid-month as the freight division, separate for four years, begins to report to Mr. Washburn. William Slattery, former president of autonomous Northwest Cargo, becomes a special assistant to CEO Dasburg.

The Department of State and Northwest, together with six other majors, reach an agreement on November 19 to provide speedier notification of the families of U.S. victims in the event of air disasters abroad. The arrangement, lobbied for by groups representing crash victims' families, puts into effect the provisions of a 1990 federal law calling upon the carrier's to provide the DOS with a passenger list within 3 hours of a crash.

In December, during a flight from Detroit (DTT) to Frankfurt, a passenger suddenly begins strangling a fellow passenger and then attempts to choke the flight attendant who attempts to restrain him. Two military policemen, aboard as passengers, subdue the disruptive man, who is turned over to German police upon landing. German authorities release the man noting that the incident in question had occurred in international airspace and that neither the man nor the two people he had attacked were German.

On December 10, Northwest teams with Microsoft and Worldspan to develop an online ticket reservations/purchasing service. A memorandum of understanding is signed with **Garuda Indonesia** on December

23; it is designed to lead to an operational and marketing alliance to enhance service between Indonesia and the U.S.

On December 24, Northwest boards its 1.5 millionth passenger in Japan during the year, marking the first year the carrier has boarded more than 1.5 million Japanese passengers.

It is noted at year's end that luggage problems have cost the company \$3 million since January.

Customer bookings move up 6.8% to 52,682,000 and 3.27 billion FTKs are operated, a 1.4% decline. Revenues climb 8.8% to \$9.88 billion and costs are a billion dollars less, \$8.82 billion, an 8% growth. Operating profit soars to \$1.05 billion and the net profit improves to \$536.1 million. Both entries on the profit line are company records.

The employee population is increased by 6.4% in 1997 to 50,000. An agreement is reached with the pilots' union in January that allow their scheduling above the contracted minimum monthly limit in exchange for time-and-a-half payments.

While taxiing for takeoff from Tokyo (NRT) on a January 26 service to Minneapolis (MSP), Flight 020, a B-747-451 with 19 crew and 344 passengers suffers the loss of an engine cover, coming, passengers report, after a loud bang shakes the Jumbojet. No injuries are reported and all aboard are evacuated. A 55-yd portion of the runway is littered with debris and the strip is closed for 40 min. while it is cleaned off.

Former U.S. Vice President Walter F. Mondale is elected to the board of directors on January 30.

On February 10, a USAF F-16 makes an unauthorized close approach to a company DC-9-31 near San Antonio, Texas. The incident, like three others earlier in the week involving **Nation's Air**, **American Airlines**, and **Flagship Airlines**, bring a series of investigations by the US Air Force, the FAA, and the NTSB.

Later in the month, the company wins one and loses one in its ongoing dispute with **KLM (Royal Dutch Airlines, N.V.)**. A New York state court rejects a separate KLM suit regarding other Northwest measures. On the other hand, the Delaware Chancery Court rejects Northwest's motion to dismiss the KLM lawsuit over Northwest's "poison pill" amendment, which may now go forward.

On March 10, Northwest launches online booking through its World Wide Web site. The next day, the Japanese Transport Ministry requests the FAA to instruct Northwest to improve its safety operations, claiming that, of 205 regular domestic and international flights disrupted by technical incidents at Tokyo (NRT) in 1996, 21 were Northwest flights, the highest frequency among international carriers. Also in March, the carrier assumes a 40% stake in Edina-based **Champion Airlines**.

To celebrate 50 years of transpacific service, the company on March 12 unveils a B-747-451 "Worldplane"; the Jumbojet's color scheme is decorated with 19 of the largest decals ever manufactured by 3M in the form of children's drawings depicting their communities and celebrating the theme "Bridging the Pacific."

Five days later, Electronic Service Centers are opened at Minneapolis (MSP) and Chicago (ORD).

In something of a surprise move, the carrier announces on March 24 that it will purchase "Northwest AirlinK" partner **Express Airlines I** when its contract expires on April 30. The \$20-million buyout also includes all of the regional airline's stock and that of its affiliate management company, Phoenix Airlines Services.

On March 25, Minnesota Gov. Arne Carlson and Northwest announce a "Fly Local" test in five greater Minnesota cities. The program is designed to reduce airfares and stimulate passenger traffic. Two days later, the airline announces the availability of secured, on-line booking via its Web site.

Also during the first quarter, discussions are undertaken with **Garuda Indonesia** concerning a strategic alliance. The arrangement would include linked frequent flyer programs, joint marketing, scheduling, and code-sharing. At the same time, three B-747-100s are repainted at Ameco-Beijing; Northwest is the first U.S. customer at the Chinese company.

Thrice-weekly nonstop B-747-451 frequencies commence on April 1 from Minneapolis (MSP) to Osaka (KIX). On April 16, **Reno Air** files

suit against Northwest for allegedly cutting airfares to force Reno out of the Minneapolis/St. Paul market four years earlier.

Northwest unveils its International Gold Elite frequent flyer program on April 21; it is designed to recognize international business travelers around the world.

On April 25, company officials announce a special program of discount fares, to run through September 30, for flood victims in the areas surrounding Grand Forks and Watertown, North Dakota. All will be able to employ an unrestricted \$49 one-way fare for flights to Minneapolis/St. Paul.

Coordinated by the company's AirCares program in conjunction with WCCO radio and Target Stores' "Operation Good Neighbor," volunteers from the IAM pack 200,000 pounds of relief supplies collected from the Minneapolis community aboard a Northwest B-747-251F on April 26. The next morning, an all-volunteer flight crew operates the freighter to Grand Forks AFB, where the goods are unloaded and distributed to flood victims throughout the Grand Forks, Watertown, and Red River Valley areas. It is the first of several relief flights that the airline will operate.

At month's end, a \$7.5-million contract is signed with Barry Controls Active Tuned Mass Absorbers for the installation, beginning in July, of 173 sets of its cabin noise suppression systems on its DC-9 fleet.

Lost in the month's other news is the initiation of electronic ticketing at terminals at Minneapolis (MSP).

The nonstop Minneapolis-Tokyo (NRT) route becomes twice daily on May 15. Leaving his 1989 leveraged buyout partner Gary Wilson as sole chairman, Al Checchi resigns as cochairman in May, although he will remain on the board of directors. Checchi will mount an expensive campaign for the Democratic nomination to run for governor of Minnesota; his bid will prove unsuccessful a year hence.

The open case of Susan Taraskiewicz, the baggage handler supervisor murdered near Logan Airport in September 1992, is the subject of a federal grand jury investigation that concludes in May. Not only is information sought as to the identity of her killer(s), but also as to whether there was any connection between her demise and a wide-scale mail theft and credit card fraud investigation federal authorities were conducting against Northwest baggage handlers at the Boston airport. Ten baggage handlers are convicted and sentenced in the case in 1995, but the murderer remains unknown.

In cooperation with **KLM (Royal Dutch Airlines, N.V.)**, a new DC-10-40 route is opened in June from Amsterdam to Bombay and Delhi. The former community is visited four times a week and the latter thrice weekly. At this point, the U.S. major operates a total of 49 weekly flights from Osaka (KIX), including daily nonstops to Manila, Honolulu, Seattle, Tacoma, Los Angeles, Detroit, and Minneapolis.

On June 20, the new weekly nonstop service from Minneapolis-Osaka is upgraded to daily. A memorandum of understanding is signed with Airbus Industrie at the Paris Air Show for the purchase of a large number of new narrow-body jetliners. On June 23, Northwest receives permission from the U.S. and Malaysian governments to commence services to Kuala Lumpur as soon as a beyond-rights agreement can be negotiated between the U.S. and Japan.

Following receipt of critical letters and allegations from a Northwest pilot, engineer, and lead mechanic, Nicholas A. Sabatini, the manager of the FAA's Eastern Region Flight Standards Division, opens a broad investigation of the carrier late in the month. Of particular concern is the airline's \$804-million DC-9 upgrade program.

George Kourpias, former international president of the International Association of Machinists and Aerospace Workers, is named to the Northwest board on July 1.

New entrant **ProAir** launches low-cost, twice-daily nonstop roundtrips from Detroit (DET) to Baltimore (BWI) and to Indianapolis on July 4, followed by the same number of frequencies to Newark on July 14. Flying from Detroit (DTT), Northwest quickly matches the startup's introductory rates, but requires 24-hr. advance booking.

Meanwhile, on July 5, Flight 1446, a DC-9-31 with 4 crew and 48 passengers en route from Milwaukee to Detroit, must declare an

emergency when smoke fills the cockpit; the aircraft is diverted to Flint, Michigan, where a safe landing is made. No injuries are reported.

On July 15, the carrier marks the fiftieth anniversary of its first scheduled service from the U.S. to Japan with a special ceremony in front of its maintenance facility at Wold-Chamberlin Field. Ambassador to Japan Walter Mondale is the featured speaker and the Berlin Airlift Historical Foundation's *Spirit of Freedom* is present. The aircraft is repainted and given period decals, produced by 3M, to help it resemble the DC-4 *Manila* that had inaugurated the original Asian route.

A commercial agreement is signed with **Japan Air System, Ltd.** on July 17 under which the two carriers, in November, will link their frequent flier programs. The two agree to study other possible joint operations, including airport handling, marketing, and even code-sharing.

Manila experiences a runway blackout on July 18 that results in delayed departures, arrivals, and diversions for several hours; two Northwest flights from Japan are diverted to Kao-hsiung, Taiwan.

Given new responsibilities to be assigned to "Northwest Airlink" partner **Mesaba Airlines**—and that regional's success with the three RJ85s already in service—parent Northwest during the last week of July places a \$620-million order for 24 more, which will begin delivery, under lease, to Mesaba beginning the following May. The order will bring to 36 the number available for lease to **Mesaba Airlines**.

The long-simmering boardroom dispute with **KLM (Royal Dutch Airlines, N.V.)**, together with the lawsuits growing out of it, is settled by the two partners on July 31. In effect, they will now become alliance partners, not equity partners. A decade-long commercial and operational partnership document is signed that allows each company to appoint a member to the other's board of directors.

Additionally, a compact is entered into by which Northwest will be able to purchase back, in four tranches over the next three years, the 19% stake held by the Dutch line. KLM will earn a profit on its investment estimated at between \$500–600 million. With the ticklish legal and financial matters concluded, the two companies announce that their working relationship will be intensified. Shared cargo and passenger services will be introduced and talks with other potential alliance partners will be undertaken.

Also during the month, former **Alaska Airlines** President Raymond J. Vecchi is hired as executive vice president-customer service. He is charged with handling a growing wave of customer dissatisfaction. Meanwhile, the carrier's ALPA-represented pilots, tiring of unfruitful negotiations with the carrier's management, file for and are granted federal mediation by the National Mediation Board (NMB).

During the summer, an antitrust lawsuit, *Midwestern Machinery et al v. Northwest Airlines* (case 97-1438) is filed in the U.S. District Court at Minneapolis seeking to reverse the Northwest and **Republic Airlines** merger of 1986. The seven consumers filing the case under a section of the Clayton Antitrust Act seek up to \$400 million for alleged fare overcharges in the years since.

Under terms of a memorandum signed three months earlier, the feeder responsibilities of **Mesaba Airlines** are expanded at Minneapolis on August 1 to cover the flights formerly performed by **Express Airlines I**. The major is provided a warrant that allows it to purchase 880,000 additional shares of its "Northwest Airlink" partner's common stock for \$20 million.

Two weeks later, the carrier announces that it will begin installing the Wordtracer luggage management and tracing system. It is anticipated that the new system will reduce the cost of missing passenger luggage by 50%.

On August 18, the carrier revises its U.S.–Asia B-747 freighter schedule, reducing the cumulative total of takeoffs and landings and keeping the cargo planes airborne longer. The new schedule adds a Wednesday B-747F service from Tokyo to New York, plus two additional flights per week from Tokyo, one each to Los Angeles and San Francisco. Service from Osaka to the U.S. is also boosted from two weekly flights to four.

While en route from Chicago to Tokyo on August 24, a B-747-451 is required to change its route following a volcanic eruption off the Russia's Kamchatka Peninsula.

During the month, Northwest joins forces with the Buick division of General Motors to promote the Regal automobile. Passengers receive a snack pack containing sourdough pretzel mix and promotional material on the car, including an invitation for a test drive. Those actually taking a drive will receive a certificate worth \$800 in discounts for Caribbean cruises.

The code-sharing agreement with **Alaska Airlines** is expanded on August 30 to include Alaska's flights to the Russian Far Eastern cities of Magadan, Khabarovsk, Vladivostok, Petropavlovsk-Kamchatskiy, and Yuzhno-Sakhalinsk.

On September 4, the company raises its domestic fares by 5% and over that weekend most other U.S. majors, except **Southwest Airlines (2)**, join in. On September 8, **American Airlines**, **Delta Air Lines**, and **Trans World Airlines (TWA)** abandon the fare boost, but when **United Airlines** does not go along, these big three reinstate the higher tariffs the next day.

Company gate agents are instructed on September 9 to more stringently enforce a two-piece carry-on luggage limit. The rule does not include passengers' laptops, diaper bags, briefcases, or purses.

At this point, the company orders five B-727-225As modified at Tramco for sports charters. Contracts are signed with the National Basketball Association's Houston Rockets, Golden State Warriors, Indiana Pacers, San Antonio Spurs, Los Angeles Lakers, and Los Angeles Clippers for charter flights that will begin with the new season.

The impact of the Pacific economic crisis impacts the airline by September, particularly in Japan where the value of the yen falls. A weak yen lowers Northwest's expenses in the nation, but not enough to offset lower revenues from yen-generated ticket sales. To keep its planes full, the major must cut fares, which lowers yield. Some routes also have to be scaled back, for example, Fukuoka–Hawaii, which is reduced from daily service to weekly.

Fare sales and promotions are also employed in Thailand, where group outbound traffic has fallen as much as 80%, despite the fact that Thailand is a less-expensive country to visit from Japan or the U.S.

On September 29, KLM President/CEO Leo van Wijk and Northwest President/CEO Dasburg sign the new KLM-Northwest 10-year joint venture agreement at a New York ceremony. According to the terms of the pact, KLM will receive \$1.2 billion over the next three years for the shares it holds in the American major, or a \$400-million profit on its original investment. Northwest will repurchase all of the common and preferred shares held by KLM in four tranches beginning this day.

The schedule calls for 6.8 million common shares and all of the remaining preferred shares to be sold back for \$324 million in 1997. In **1998**, 4.9 million common shares (\$210 million) are to be returned, 3.2 million common shares (\$147 million) in **1999**, and 10 million common shares (\$491 million) in **2000**. As a result of these transactions, KLM's common stock voting position in Northwest will decrease from 19% to 17% in 1997, to 13% in 1998, to 10% in 1999, and zero in 2000.

In addition, KLM President van Wijk will join the Northwest board while Northwest President Dasburg will sit with the leaders of the Dutch major. A process for adding new partners to the compact is worked out; almost immediately thereafter, KLM opens discussions with **Alitalia, S.p.A.** on the subject.

Plans are unveiled for a single marketing force that will be in place for the two carriers around the world the following year, as well as the establishment of a steering committee and employee joint task forces to coordinate further integration. For example, a number of joint task forces are set up to determine and implement improvement recommendations concerning airport check-in, yield management, ticketing and reservations, and other computer-based applications. Another task force devoted to joint networking determines which airline flies which alliance route; revenues are divided between the partners, regardless of which operates a given frequency. Already highly profitable, the alliance is now performing 160 weekly dual-designator transatlantic services plus code-sharing on many other routes.

Although the majors disagree over routing and other issues, they band together behind **United Airlines** on October 1 when the Chicago-based giant cuts commissions paid to travel agencies for writing tickets. Although commissions on roundtrip domestic flights remain at \$50 and there is no cap on international flights, rates are reduced from 10% to 8% for domestic and international ticketing. This payment initiative is immediately matched by Northwest, **American Airlines**, **Continental Airlines**, **Delta Air Lines**, and **USAirways**. **Southwest Airlines** and **Kiwi International Air Lines** announce that they will maintain the 10% scale. The travel agency industry, which despite ticketless travel still writes 80% of all tickets sold, protests the move.

Also on October 1, the Paris Air Show memorandum of understanding with Airbus Industrie is translated into a firm order for 50 A319s, with options for 100 more. The first aircraft is due for delivery in early 1999. The aircraft will be powered by \$500 million worth of CFM56 engines.

Simultaneously, the carrier inaugurates thrice-daily DC-9-32 roundtrips from Detroit (DTT) to New York (LGA). The service complements existing Northwest service between Detroit and Newark and New York (LGA) and White Plains. Weekly roundtrips are also inaugurated between Minneapolis (MSP) and Hong Kong.

Thrice-weekly dual-designator service with **KLM (Royal Dutch Airlines, N.V.)** begins on October 3 from Delhi and Bombay to New York via Amsterdam. The inaugural flight of the first Northwest DC-10-40, unfortunately, is scrubbed when the wide-body is hit by mechanical failure that forces its grounding. Passengers are transferred to rival company flights. The service is relaunched the next day.

Northwest and **Mesaba Airlines** sign a 10-year agreement on October 9 under which Mesaba will operate as Northwest Airlink at Detroit (DTT) and Minneapolis (MSP). Also on October 9, Northwest and **Jet Airways, Ltd.** announce a cooperative marketing agreement to provide enhanced benefits for passengers on Northwest/KLM flights to India.

Since April the company has introduced electronic ticketing at Minneapolis, Chicago, San Francisco, and Seattle; on October 15, 14 terminals at Detroit (DTT) are also plugged in.

On October 27, Northwest ranks second in the *Fortune* magazine survey of the "World's Most Admired Companies."

The three-year-old code-sharing pact with **Asiana Airlines, Ltd.** is concluded on October 30 as the Minneapolis-based carrier continues to refine its global alliances; Asiana, in anticipation of the move, has concluded a new arrangement with **American Airlines**.

A report on the work of the Northwest-KLM task forces is released in early November. It is noted that the 10-year alliance extends geographical coverage from Europe to U.S. to include Europe to Canada, Mexico, and India. The two begin sharing passenger name record data, which details the carriers' passenger relationships. Negotiations with **Alitalia, S.p.A.** continue.

The commercial agreement with **Japan Air System Company, Ltd.** takes effect on November 1. On November 6, Northwest launches a three-week Minnesota Holiday Hunger Relief campaign to benefit the Minnesota Food Bank Network and to ensure more than 2 million holiday meals for the state's hungry. Paper advance boarding passes are eliminated on November 11, although advance seating assignments remain available.

In the wake of the visit of PRC President Jiang Zemin to the U.S. in the early days of the month, the leading Chinese dissident Wei Jingsheng is released from prison on medical grounds. After conferring with U.S. officials, he is flown from Beijing to Detroit on Northwest's B-747-451 service on November 16.

In addition to KLM President/CEO van Wijk, two other notables join the board of directors on November 20: Professor Dennis F. Hightower of Harvard and author/historian Doris Kearns Goodwin.

Following the example announced by **United Airlines**, Northwest, on November 21, limits its coach-class passengers, except frequent fliers, to just one piece of carry-on baggage, plus a briefcase, laptop computer, or purse.

Additionally, as a result of enhanced airport security measures, the carrier is now allowed to cut some costs and to make last-minute plane changes for passengers by halting the issuance of advance boarding passes.

In addition to an August pact with **KLM (Royal Dutch Airlines, N.V.)**, which is seen as a way to contest **SAS (Scandinavian Airlines System)** domination of the Norwegian domestic and European regional markets, **Braathens SAFE, A.S.** on December 1 also initials a strategic, but nonequity, alliance with Northwest. Under its terms, the Oslo-based carrier will code-share on Northwest flights between the U.S. and London (LGW) and Amsterdam, while Northwest is accorded dual-designator status on Braathens routes from London (LGW) and Amsterdam to Norway. The two will also link their frequent flier programs and coordinate customer and airport services.

The same day, Northwest and KLM announce that they will launch a joint, daily roundtrip service the following May from Amsterdam to Philadelphia; a Northwest DC-10-40 will be dedicated to the route.

To help bolster traffic to and from Hong Kong, the carrier, on December 5, puts leisure fares to the former British colony on sale; roundtrip packages, including three nights at a hotel, go for \$629.

On December 7, a flight attendant is seriously injured when the tug pushing back Flight 807 from the gate at Memphis for a flight to Nashville stops suddenly, jolting the DC-9-51 aircraft and its 40-plus passengers. The next day, Northwest "Pilots for Kids" volunteers take Children's Home Society children on a fantasy flight to the North Pole.

During the month, company officials negotiate with those from **Continental Airlines** concerning the possibility of the Minneapolis-based major's purchasing a 24% equity stake and the creation of a new global operating alliance under which each airline will continue its separate identity and maintain its own workforce. Both would, however, share many marketing functions and would offer dual-designator flights. Such an arrangement would allow the Minneapolis-based carrier to take over the shareholding of Continental Chairman David Bonderman and his Air Partners and thereby gain a 52% voting majority.

On December 10, *USA Today* reports the newly released DOT 10-year report of on-time percentages for the nation's 10 major airlines, with a note that the airlines, themselves, began reporting mechanical delays in 1995. The industry average since record keeping was begun in September 1987 is 79.3%; Northwest demonstrates an 81.1% achievement, good for 3rd place.

When apprised of the possible arrangement with **Continental Airlines**, the leadership of Northwest's pilot union, whose members hold an 11.5% stake in the company, refuses on December 16 to relax the scope clause in its contract. The clause prohibits the company from placing its flight code on the flights of other airlines without their exemption.

Negotiations between management and the pilots continue for two more days, during which Steve Zoller, union executive committee chairman, admits that his body does not have the authority to make such a deal. Management officials hint that talks with Continental will have to be broken off.

While parked at the gate at Tucson on December 23 undergoing deicing operations, an MD-80 is struck in its left horizontal stabilizer by the service truck. Although the aircraft sustains only minor damage, the boom operator in the basket is struck in the upper torso during the collision and falls out of the basket, sustaining fatal injuries.

Passenger boardings for the year accelerate 3.7% to 54,650,000, while freight climbs 3% to 3.33 billion FTKs. Operating revenues advance 3.5% to \$10.22 billion, while expenses are up 2.7% to \$9.06 billion. The operating profit grows to \$1.15 billion, while a \$596.5-billion net gain is recorded. The latter figure is the largest annual net income in the company's history.

At the beginning of 1998, Northwest is the 5th largest airline in the world in terms of passenger boardings and fleet size, 10th in terms of freight, 6th in employees with 51,000, 7th in operating income and net profit, and 4th in operating profit.

The fleet, 67.8% of which is Stage III-certified, includes 39 B-727-200As, 184 DC-9s, 43 B-747s, 48 B-757-251s, 50 A320s, 37 DC-10s, and 8 MD-11s.

In January, the company shares with **KLM (Royal Dutch Airlines, N.V.)** the 1997 "Airline of the Year" award from *Air Transport World* magazine.

A fourth weekly roundtrip service is inaugurated on January 1 between Detroit and Beijing. Thrice-daily DC-9-32 nonstop roundtrips commence on January 7 from Jackson, Mississippi, to Memphis. The new frequencies replace the six daily "Northwest AirlinK" departures to Memphis operated by **Express Airlines I**.

On January 13, flight attendant Julie Duncan files a class-action lawsuit against the airline in Kings County Superior Court at Seattle seeking to halt smoking on international flights.

The next day, *Midwestern Machinery et al v. Northwest Airlines*, an antitrust suit seeking to reverse the 1986 Northwest and **Republic Airlines** merger, is dismissed in U.S. Federal Court at Minneapolis.

On January 26, the company joins with **Continental Airlines** in announcing creation of a "global strategic alliance." As negotiated, the pact will allow Northwest to take the 14% of Air Partners I.P.'s Continental common stock equity. Acquisition of the shares of David Bonderman's group will provide Northwest with 51% controlling (voting) interest, but will cost \$519 million—\$311 million stock and the remainder in 4.1 million shares of Northwest common stock.

Fears concerning an end to Continental's independence are assuaged when Northwest officials pledge to place their holding into a "voting trust" for six years, which will be exercised as a block only if another airline seeks Continental's acquisition for itself. Both the DOT and Northwest pilots must grant approval, the latter for any code-sharing.

Although the new U.S.-Japan bilateral agreement announced on January 30 will provide additional competition, it also guarantees the airline's beyond-Japan rights, without flight limitation, and grants Northwest the right to fly between any U.S. and Japanese city-pair.

Twice-weekly B-747F all-cargo service is launched to Manila on February 1. The wide-body freighters, originating at New York on Wednesdays and Chicago on Sundays, fly via Anchorage, Tokyo, and Bangkok.

As South Korea's economy continues to deteriorate, Northwest, on February 2, suspends its thrice-weekly nonstops between Detroit and Seoul. On the other hand, service from Detroit to China is increased from weekly to twice weekly to Shanghai and from thrice weekly to four times a week to Beijing.

On February 11, the pilot of Flight 297, a DC-9-31 en route from Raleigh to Detroit with 94 passengers, notices a warning light indicating high temperatures in the aircraft's tail. An emergency landing is made at Tri-Cities Regional Airport in northeast Tennessee; no injuries are reported.

The annual NAACP Corporate Award is received by the carrier for the first time on February 14. Also during the month, the remaining \$135 million is paid on accounts receivable-backed notes originally due in March 1999.

DOT Secretary Rodney E. Slater and Japanese Transport Minister Takao Fujii are the principals for the formal signing of the new U.S.-Japan bilateral air agreement in ceremonies at Washington, D.C. (IAD) on March 14. Two days later, the DOT authorizes 64 weekly flights to Japan for carriers that in the past have had their services severely limited. It also grants new code-sharing permission, including authority for Northwest and **Continental Airlines** to offer dual-designation on any 14 of the 28 weekly services that Northwest flies to Tokyo from Detroit, Los Angeles, and San Francisco or from Detroit to Osaka.

In the weeks that immediately follow the signing ceremony, Northwest exercises its beyond-Japan rights to provide daily service from Osaka to Manila and from Tokyo to Seoul, Beijing, Shanghai, Manila, Taipei, Hong Kong, Singapore, Bangkok, Guam, and Saipan.

During the month, Northwest board member Maggie Jacobsen joins in negotiations between management and the ALPA-represented pilots in an effort to bring negotiations to a conclusion.

As a result of the slowdown in the Japanese economy, the carrier, on April 5, cuts its daily frequencies from Honolulu to Tokyo from two to one. Employing the "beyond" clause of the new U.S.-Japan bilateral air agreement, Northwest, the same day, inaugurates DC-10-30 daily return service from Osaka (KIX) to Taipei as an extension of its Seattle to Osaka flights. In addition, a fifth daily roundtrip is inaugurated between Detroit and Beijing, while daily roundtrips commence between Las Vegas and Los Angeles.

Simultaneously, Northwest and **KLM (Royal Dutch Airlines, N.V.)** introduce daily nonstop service from Seattle to Amsterdam, the only Seattle to Amsterdam nonstops available.

Clearly dissatisfied with the pace of contract talks between the company and ALPA, unidentified members of the local chapter, in mid-month, begin to circulate leaflets urging their fellow pilots to undertake an unauthorized sick-out and work slowdown in May. Union leaders urge the company's 6,120 union fliers to ignore the widely distributed pamphlets, which are against both the law and ALPA policies.

ALPA pilots attend the annual shareholders meeting to voice complaints. IAM representatives also are on hand, many as picketers.

Protracted contract negotiations with the company's 25,000 IAM-represented mechanics and ground service personnel also become ugly. After firing several machinists for disrupting service, other machinists and ground service personnel cause a variety of disruptions at a number of hubs. A general work slowdown begins at Detroit.

On April 19, the B-747-451 Worldplane, on a normal flight to Detroit from Beijing, brings the noted Chinese dissident Wang Dan, recently freed from prison, to the West. Having waived its right to push back delivery to 2003, the company now accepts another B-747-451.

When company executives float a proposal by them concerning the launch of a low-cost division similar to Shuttle by United or **USAirways'** new MetroJet, company pilots reject the concept. Negotiations between the airline and its fliers for a new labor contract continue to head toward catastrophe. By April 23, the end of the first week of slowdowns at Detroit, more than 100 flights have been cancelled systemwide due to the growing labor problems.

At month's end, the company, without fanfare, joins **Delta Air Lines** in doubling the fee charged to escort unaccompanied children on connecting flights from \$30 to \$60 for each flight leg.

Northwest and **KLM (Royal Dutch Airlines, N.V.)** close their financial relationship on May 1. Northwest repurchases KLM's remaining 18 million shares of its stock for \$775 million in cash and senior unsecured notes. Daily return services are inaugurated to Amsterdam from Seattle and Philadelphia.

Philadelphia-Amsterdam Friendship Day is also celebrated on May 1. At a press conference at Philadelphia, a proclamation is read from the Mayor of Philadelphia recognizing the event. Mayor J. van Houwelingen of Haarlemmermeer (the Dutch city that is home to Schiphol Airport) is given a copy along with a replica of the Liberty Bell. The guest, in turn, presents his host with traditional Dutch wood shoes. Thereafter, Northwest and **KLM (Royal Dutch Airlines, N.V.)** kick off new daily nonstop return service between Philadelphia and Amsterdam.

Overshadowing the positive press coverage of these international developments is the continuing wildcat labor slowdown at Detroit. On May 1, full-scale shouting matches between irate customers and airline employees are so intense that police must be called in. One customer is so upset that he must be taken into custody. Northwest must cancel 25 flights at Detroit and 60 systemwide; hundreds of passengers on other services are inconvenienced.

The five B-727-225As assigned to the company's NBA sports charter program all revert to regularly scheduled passenger services at the beginning of May. Also during the month, Gene Peterson becomes vice president-flight operations.

On May 4, in an effort to gain customer sympathy, Executive Vice President-Customer Relations Vecchi takes the unusual action of offering a public apology to every passenger inconvenienced by the recent Detroit work actions. The same day, NMB referee Jack Bavis calls for both

sides to resume contract talks, with both the IAM and Northwest immediately agreeing.

Introduced on May 6, Northwest E-First provides fee-based upgrades on full-fare electronic tickets on 12 routes made within 6 hours of departure.

The carrier, also in May, expands its alliance with **Continental Airlines**, **America West Airlines**, and **Alaska Airlines** to include **Air China International Corporation**. All four will link their frequent flyer programs, coordinate schedules, offer joint marketing and maintenance where appropriate, share lounges, and plan for code-sharing.

A tragedy is narrowly avoided over Pontiac, Michigan, on May 18 when a small Cessna comes within 500 ft. of a company DC-9-41 that has reached the 6,000-ft. level on its climb away from Detroit (DTT).

To help overcome or avoid problems at Detroit over the Memorial Day holiday, the company, on May 22, adds 208 baggage handlers, service agents, and other personnel.

A new code-sharing agreement begins on June 1 between **Alaska Airlines** and **KLM (Royal Dutch Airlines, N.V.)**. The two will link their frequent-flier programs on selected routes, enter into schedule coordination, and share codes on certain Alaska flights connecting with KLM services to Los Angeles and San Francisco. The arrangement is also extended to KLM services operated by **Northwest Airlines** from Seattle.

Also on the first day of the month, twice-weekly B-747-251B nonstop roundtrips are inaugurated from Las Vegas via Los Angeles to Tokyo. The daily direct service from Chicago and Tokyo ends. Daily nonstop roundtrips are also introduced between Detroit and Manchester, New Hampshire. The next day, long-haul flights are launched between the automobile centers of Detroit and Nagoya, Japan.

The company, which already operates 145 weekly services between the U.S. and Japan, increases its daily Los Angeles-Tokyo service on June 5 to 10 flights per week.

Reliability, baggage, and on-time performance problems with ground workers at the Detroit hub continue. The carrier's pilots, simultaneously and overwhelmingly, authorize a strike if negotiations fail and the NMB declares an impasse.

During these troubles, new entrant **ProAir**, across town at Detroit City Airport, reaches separate five-year agreements with General Motors and Chrysler to provide contract air transport for the two auto makers from Detroit (DET) to Baltimore, Indianapolis, Newark, and Philadelphia. Prior to the arrival of the one-year-old company, that business would have gone to Northwest.

A tentative contract agreement is reached with the IAM on June 14 after a one-day negotiating session at Washington, D.C. The agreement replaces one that had expired in 1996. The next day, the ALPA-represented pilots formally ask the NMB to declare an impasse in their negotiations with company management.

On June 18, weekly Thursday-over-Friday nonstop roundtrips are inaugurated between Tokyo and Anchorage; the seasonal service for Japanese tourists wishing to visit the natural wonders of Alaska is scheduled to continue until September 24. At Anchorage, passengers are able to make seamless connections onto the flights of code-sharing partner **Alaska Airlines**. The next day, the leaders of the pilots union vote to file a grievance challenging the proposed alliance with **Continental Airlines**.

Beginning on June 23, CyberSaver fares are available through e-mail. International electronic ticketing is expanded on June 29 to include flights from the U.S. to London, Paris, and Frankfurt.

Negotiations between the company and its pilots union resume in Denver on June 30, but after just three days, are ended. Both sides plan to inform the NMB that an impasse exists, but agree to talk further after the 4th of July holiday.

Flooding causes power outages at Detroit (DTT) on July 7-8 and attendant flight cancellations. Service returns to normal there on July 9. The same day, however, 48 additional hours of negotiations between the pilots and management at Washington, D.C. end without progress; talks are broken off and no new ones are scheduled.

The company's communications department arranges for a restored World War II Consolidated B-24 bomber to fly in formation with the B-747-451 of a retiring pilot on July 12. The pilot of the Jumbojet, arriving at Minneapolis (MSP) from Osaka, had been involved in the Liberator's restoration and the Northwest executives involved authorized the flight as a tribute. Although no problems occur, the action is strictly prohibited by FAA regulations, which forbid formation flying by any aircraft carrying revenue-paying passengers, and brings about a safety investigation.

At an IAM informational meeting attended by over 2,000 Minneapolis (MSP) IAM District 143 members on July 16, rank-and-file members jeer, curse, and scuffle with General Chairman Paul Scarpari and other leaders who had negotiated a tentative contract in June. Union leaders receive a similar rough reception at an informational meeting at Detroit.

On July 29 the NMB declares an impasse in the negotiations between the ALPA-represented pilots and company management and formally proffers arbitration. The NMB action triggers a 30-day "cooling off period" after which the pilots are free to strike and the company will be allowed to impose a contract.

On July 30, the company's ALPA-represented pilots decline a NMB proffer of arbitration, thus setting up a negotiation deadline of 12:01 a.m. August 29. The flyers also ask Minnesota Governor Arne Carlson to meet with them and discuss the labor situation, but Carlson refuses to become involved. North Dakota Governor Edward Schafer, on the other hand, indicates that he is prepared to ask President Bill Clinton to issue an emergency order blocking a walkout.

Having gradually introduced the idea first on their Pacific routes and then on transatlantic flights, both Northwest and **KLM (Royal Dutch Airlines, N.V.)** become smoke-free worldwide on August 1. Given Northwest's corporate difficulties, this development is virtually overlooked by the mass media.

Results of a verification vote on the June IAM contract are announced on August 5. With more than 23,000 of the approximately 27,000 IAM ground workers casting ballots, 85% vote to reject the tentative contract agreement and authorize a strike. At this point, the NMB makes plans for both sides to return to the bargaining table.

With company employees working to rules and pilots now refusing overtime, some embarrassments occur. After a preseason loss vs. Kansas City in Norman, Oklahoma, on August 8, the pilot of the Northwest aircraft chartered by the Tampa Bay Buccaneers of the National Football League refuses to fly, citing union rules that stipulate work days not exceed 14 hours. The team is forced to spend the night in Oklahoma City.

The company's Azuma Lounge, for its first-class, World Business Class, and WorldClub passengers, is reopened at Tokyo (NRT) on August 10.

On August 11, the carrier signs a cooperative marketing agreement with **KLM Exel, B.V.** that will allow it to code-share on the Dutch regional's flights. The same day, a six-month test of reduced business fares, "Fly North Dakota," is introduced in an effort to stimulate business traffic out of Bismarck.

On August 14, Minnesota Governor Carlson calls key people at Northwest and at the pilots' union and pleads with them to settle their dispute without a strike. Meanwhile, state agencies are asked to develop contingency plans for thousands of passengers who could be stranded if the carrier is struck later in the month.

Both sides in the pilots' dispute resume contract negotiations on August 17, but continue to disagree over job security, compensation, retirement, and vacation-related work rules. Northwest gives strike assignments to its managers and considers various layoff scenarios. Although pilots remain confident that an agreement can be reached, the carrier has amassed a \$3-billion (\$2.08-billion borrowed) strike contingency fund to pay bills during any shutdown and can go dormant for almost a year if necessary.

The next day, "Northwest Airlink" partner **Mesaba Airlines** announces that, in the event of a Northwest pilots strike, the regional affiliate will have to temporarily shut down. On the same day, August 18,

Northwest, after refusing six times over four months to raise its leisure fares, goes out on a limb and increases advance-purchase and sales fares by 4%—a move quickly matched by other airlines.

On August, 18 Flight 87, a B-747-451 piloted by Captains Tim Olson and George "Sarge" Martin with a normal load of passengers plus two observers from the Federal Aviation Authority of Russia, becomes the first service from a U.S. airline to operate through Russian airspace. Cutting 45 min. off its normal time, the Jumbojet from Detroit is flown over the new Polar 2 route, entering Russian airspace approximately 60 mi. from the North Pole and continuing south over the tip of Lake Baikal before exiting Russian airspace. The aircraft now proceeds through Mongolian airspace before entering Chinese airspace to its final destination of Beijing.

As their colleagues move toward a strike at the end of the month, leaders of the Dutch ALPA (VNV) call upon members on August 19 to join the American flyers in a job action if it occurs. **KLM (Royal Dutch Airlines, N.V.)** announces that it will take the VNV to court if such a sympathy strike occurs.

Led by the governor of Michigan, several Midwestern governors send a letter to President Clinton on August 20 outlining their concerns over a possible Northwest pilots strike. The Michigan chief executive is particularly concerned over the economic impact of a strike when his state is still recovering from a bitter strike by employees of General Motors. At the same time, "Northwest Airlink" partner **Express Airlines I** informs the Essential Air Service (EAS) Division of the DOT that it may be forced into an involuntary shutdown in the event of a strike.

Also on August 20, to the amazement of the airline industry, the price hike of August 18 is suddenly rescinded without explanation.

President/CEO Dasburg is elected to the KLM Supervisory Board, an achievement announced by the carrier on August 25.

With a pilots strike pending, the nine teams of the National Football League that have charter contracts with the airline make contingency plans. Tampa Bay, Green Bay, New England, and Philadelphia contract with other airlines on August 25–26.

Also on August 26, Northwest begins the process of cancelling approximately 170 of its 1,700 daily flights scheduled to operate on August 28 and 239 flights on Saturday August 29. This action is taken, even if a strike is averted, to give certainty to the more than 25,000 passengers booked on these flights that might otherwise be adversely affected by a job action. The entire list of domestic and international flight cancellations is posted on the company's Web site.

The next day, the company, to accommodate its customers in the event of a strike, begins to make special arrangements for the acceptance of its tickets by a number of other carriers. Among these are **Alaska Airlines, American Airlines, American Eagle Airlines, American Trans Air, Delta Air Lines, Great Lakes Aviation, Horizon Air, Midwest Express, Trans World Airlines (TWA), and United Airlines**. Across the river from Detroit, at Windsor Airport, **Air Ontario, Inc.** announces plans to significantly increase capacity for travelers flying to Toronto.

After 23 months of negotiation, Northwest pilots initiate a strike against the carrier at 12:01 a.m. on August 29. All company flights cease and pilots begin strike picketing in the Northwest hubs at Minneapolis, Detroit, Memphis, Seattle, Anchorage, and Honolulu.

When the pilots strike occurs, the NFL football teams from Oakland, Minnesota, Tennessee, Buffalo, and Detroit are forced to book aboard other airlines. With upwards of 80% of their traffic connecting to Northwest flights at the major hubs, the company's two "Northwest Airlink" partners **Mesaba Airlines** and **Executive Express I** close down.

At the start of the fifth day of the pilots' strike on September 2, 177 dispatchers and meteorologists are the first company employees to be laid off as decisions are made concerning how many others must be sent home.

The next day, Northwest cancels all 1,700 of its domestic flights through Labor Day and inbound flights from Europe and Asia through September 8. The carrier's popular weekly seasonal service for Japanese tourists between Tokyo and Anchorage must be cancelled until next year.

Additionally, the company issues temporary no-work notices to 27,500 employees in its technical operations, in-flight and ground services divisions, including mechanics, flight attendants, customer service employees, and other ground employees. All will, however, retain their health benefits through the end of the month. Simultaneously, Executive Vice President/Chief Financial Officer James A. Lawrence resigns to pursue other opportunities and is succeeded by Special Projects Officer Mickey Foret.

Also on September 3, Transportation Secretary Slater orders **Express Airlines I** and its fellow "Northwest Airlink" feeder **Mesaba Airlines** to resume service to 17 small towns in 11 states in the Midwest and South. As the DOT official puts it, federal rules prohibit the carriers from suspending air service below mandated levels without first filing a 90-day notice. **Express Airlines I** President/CEO Philip Trenary responds, indicating that the law does, in fact, grant the company permission to close due to events, such as strikes, which it can not control.

Over the next week, which includes the Labor Day holiday, the company remains shut down. The White House, hoping the parties can settle the strike between themselves, refuses to order a back-to-work order. A total of 28,300 employees are laid off and the carrier is losing \$26 million per day. The other carriers with which Northwest has agreements and several with which it does not attempt to fill the service gap left as Northwest cancels 27,000 flights.

During the second week of September, **Trans World Airlines (TWA)** Chairman/CEO Gerald L. Gitner, speaking before the Wings Club in New York, comes out squarely against the proposed domestic code-sharing alliance between **Northwest Airlines** and **Continental Airlines**. He has less to say about the apparently derailed deal between **United Airlines** and **Delta Air Lines**.

Secretary Slater and Attorney General Janet Reno file a lawsuit against **Express Airlines I** and **Mesaba Airlines**, together with **Northwest Airlines**, on September 10 in an attempt to force the two Northwest Airlink affiliates to provide service to the 13 EAS communities.

Northwest itself now steps into the dispute between the DOT and the DOJ and its "Northwest Airlink" affiliates. The major, presenting the same arguments that both **Mesaba Airlines** and **Express Airlines I** have unsuccessfully employed with government officials, files an emergency petition with the U.S. Court of Appeals for the District of Columbia. The petition asks the court to stay the effects of the DOT order that requires Northwest to provide support services so that its affiliates can resume EAS services. Northwest argues that its constitutional right to a hearing has been violated because the DOT issued a final order adversely affecting the carrier's interests without providing it with notice. Furthermore, as preparations for the pilot strike were made earlier in the month, the major had specifically and legally executed an agreement with the "Northwest Airlink" partners suspending all of its obligations, including code-sharing (an important legal point now in play), should a job action occur.

None of these lawsuits will come to trial because, after marathon discussions, a tentative agreement between the pilots and management is reached.

After resisting the temptation to order the striking aviators back to work, the White House had dispatched Deputy Counsel Bruce Lindsey to Minneapolis to pressure the negotiations. With Secretary Slater on hand and Federal Mediator Maggie Jacobsen refusing to adjourn discussions, the parties have learned that President Clinton may, in fact, soon intervene.

Handshakes end the longest job action against a U.S. airline since 1989, when the machinists' strike led to the collapse of **Eastern Air Lines**. In addition to the nearly 30,000 Northwest employees laid off, this job action has cost Northwest approximately \$338 million.

Service is not, however, immediately restored; the carrier remains shut down, with the first actual step forward being a meeting of the pilot association's 17-member executive board on September 12. While this move is awaited, all realize that the airline still faces open contracts with five other unions, including the IAM, which has already asked the NMB to declare its negotiations with Northwest to be at an impasse.

With the authority to do so, leaders of the pilots' union ratify the new contract on September 12, electing not to defer that decision to a vote of the rank-and-file membership. Northwest immediately begins a recall of laid-off workers and plans to have one-fourth of its schedule in operation in four days.

Flight 901, a B-747F, becomes the first service resumed by Northwest when it departs Minneapolis (MSP) for Tokyo on September 14; it joins a second freighter service, from Anchorage to Tokyo, as the only operations by the major that day. Additional cargo services are operated on September 15.

The red-eye Flight 586 becomes the first restored domestic passenger service when it takes off at 3 a.m. CDT September 16 from San Francisco for Minneapolis (MSP). The plane is met in Minneapolis by red and white balloons and costumed Mall of America employees, who give out coupons to the strains of John Philip Sousa's *The Stars and Stripes Forever*.

A total of 430 additional passenger flights depart during the remainder of September 16, beginning with Minneapolis–Chicago service, plus 485 next day, and 954 on September 18, including the first of the commercial demonstration flights over the new Polar 2 route across Russia to China. Northwest is fully recovered by September 21, operating a full schedule of 1,700 daily departures; approximately 98% of all laid-off employees have returned to work.

As a sign of appreciation of and apology to inconvenienced passengers, the company begins to give free drink coupons to all frequent fliers.

Throughout the spring and summer, Northwest, together with **Cathay Pacific Airways (Pty.), Ltd.** and **Singapore Airlines, Ltd.** have been in discussion with the government of the Philippines concerning the acquisition of a possible equity stake in ailing **Philippine Airlines (PAL)**. In an effort to make the carrier more attractive, its executives have attempted to make it more efficient through downsizing. Following a devastating strike and continuing labor discord, Asia's oldest airline is shut down on September 23.

Flights in and out of New Orleans must be cancelled on September 27 in the face of the fury of Hurricane Georges. The next day, **KLM (Royal Dutch Airlines, N.V.)** executives tell the Associated Press that the recent Northwest strike has cost it \$26 million in lost business.

A two-year partnership is now formed with the Minnesota Orchestra. The pact begins with the airline's sponsorship of the orchestra's Japan tour this month.

Toward the end of the month, the company engages in preliminary discussions with **Continental Airlines** concerning a possible global alliance to counter "OneWorld," the pact recently signed by **American Airlines**, **British Airlines, Ltd.** (2), and several other airlines. The Continental-Northwest alliance would also include the extant alliance partners of the two carriers.

In response to falling demand, the company now suspends service in four additional Asian markets: Nagoya to Guam, Minneapolis (MSP) to Osaka (KIX), Taipei to Osaka (KIX), and Minneapolis (MSP) to Hong Kong, a route just one year old. Minneapolis (MSP) to Osaka (KIX) flights will resume June 1, 1999.

Matching a program begun in North Dakota in August, Northwest, on October 1, launches "Fly South Dakota," a six-month test program of reduced business fares to stimulate business passenger traffic from Pierre.

On October 3, the company and the Teamsters call for a federal mediator to help them settle the issues of compensation, job security, and scheduling that prevent Northwest from signing a pact with its flight attendants. The flight attendants also complain about Northwest's free drink coupons, claiming that they may worsen the air rage problem afflicting their airline and others.

Thrice-daily DC-9-31 service is inaugurated on October 7 between Memphis and Gulfport and Biloxi, Mississippi. The flights increase the company's daily seat capacity between the 2 cities from 340 to 600. Also during the day, as a result of considerable political activity by new

Philippine President Joseph Estrada, **Philippine Airlines (PAL)** is able to resume domestic operations over 14 routes.

While en route from Charlotte, North Carolina, to Minneapolis (MSP) on October 12, Flight 1795, a DC-9-41 with 95 passengers, must make an emergency landing at Indianapolis after many passengers and crew members become dizzy, nauseated, and disoriented. One flight attendant must be hospitalized. All of the passengers are booked on other flights.

Because of requests to hold off from potential investors **Cathay Pacific Airways (Pty.), Ltd.**, **Singapore Airlines, Ltd.**, and Northwest, **Philippine Airlines (PAL)** announces, also on October 12, that it will not resume international flights on October 13 as previously indicated. The potential equity investors require time to conduct feasibility studies.

Just after takeoff from Schiphol Airport at Amsterdam on an October 14 service to Detroit, a DC-10-30 with 12 crew and 254 passengers loses the tail engine left fan cowl, which drops off into a farmer's field. The passengers are not aware of the incident and the service to Michigan is completed without incident. News of the damage is released to the media the next morning by **KLM (Royal Dutch Airlines, N.V.)**, which performs maintenance for the U.S. major in The Netherlands.

Rumors concerning the future of **Philippine Airlines (PAL)** become rampant. Although three foreign carriers remain in negotiations with the government of President Estrada concerning a possible investment, they are far from finished. On October 15, two Hong Kong newspapers run reports that a deal has been struck for **Cathay Pacific Airways (Pty.), Ltd.** to take over PAL and that Northwest has withdrawn from negotiations. Both airlines deny both assertions.

The Associated Press reports on October 20 that the DOJ has held several days of talks with executives from representatives of Northwest, **Continental Airlines**, and Air Partners, LP concerning the Northwest-Continental alliance. DOJ is reportedly very concerned over the plan whereby the Minneapolis (MSP)-based major would gain a controlling stake in Continental and then merge the two carriers' routes. Sources suggest the DOJ may file suit before the end of the week in an effort to stop the plan.

Philippine Airlines (PAL) Executive Vice President Manolo Aquino announces on October 20 that, following consultation with potential investors Cathay and **Northwest Airlines**, PAL will be permitted to resume international flights on October 29. It is also confirmed that discussions are continuing with **Cathay Pacific Airways (Pty.), Ltd.**, Northwest, and **Singapore Airlines, Ltd.** All have been asked to submit their proposals by month's end, but Cathay is seen as "the most serious."

Employees are gratified to learn, on October 23, that their employer continues to work with the FBI, the U.S. Secret Service, and postal authorities in an ongoing investigation to unmask the identity of the murderer of baggage handler supervisor Susan Taraskiewicz at Boston in September 1992. The case comes to public attention again when former baggage handler Robert Brooks is sentenced to federal prison for lying to the federal grand jury investigating the homicide the previous May.

A tentative agreement is reached, also on October 23, with the Aircraft Technical Support Association on a new 6-year contract for the carrier's 260 technical support employees.

Also on October 23, the DOJ files suit in the federal district court in Detroit to block the Northwest plan to acquire majority voting control of **Continental Airlines** via a stock purchase. The government contends that the purchase by Northwest of the controlling stake in Continental would effectively merge the nation's fourth and fifth largest airlines and would, thereby, unlawfully limit competition in the U.S. airline industry.

Northwest and AmeriCares partner again in October on an Asian relief project. Together, they collect nearly 200,000 pounds of relief supplies that arrive at Beijing aboard a company B-747F on October 27 for distribution to the victims of Yangtze River floods.

On November 2, the company announces that its new Kuala Lumpur–Osaka (KIX)–U.S. service, scheduled to begin on January 16, will be postponed until February 27. The short delay will allow the carrier to use its aircraft on other Asia–U.S. service to take advantage of peak passenger traffic during the Chinese New Year in February. On the other

hand, the Kao-hsiung-Osaka (KIX)-U.S. service, which is also scheduled to start on January 16, will begin on time.

While negotiations between **Philippine Airlines (PAL)** and **Cathay Pacific Airways (Pty.), Ltd.** continue, Northwest makes an offer to the former on November 6. It involves only management support, without a capital infusion.

The same day a security breach at Detroit (DTT) delays 25 Northwest and 24 "Northwest AirlinK" flights. The suspension is caused when a person bypasses a security checkpoint and disappears into a crowd of passengers. Gates C through G are shut down and hundreds of passengers waiting for planes are forced to pass back through security gates. Airport police also bring in canine teams to search the area.

Some 40 minutes after departure from Seattle on November 8, Flight 50, a DC-10-30, suffers engine problems; an emergency is declared and the wide-body returns to its point of origin. A safe landing is made and no injuries are reported.

Electronic ticketing service to destinations in Mexico and the Caribbean is expanded on November 16.

Also in November, the carrier publicly emphasizes its alliance with **KLM (Royal Dutch Airlines, N.V.)** by painting one of its DC-10-30s in a dual color scheme. On one side, a KLM tail is sported atop a Northwest forward fuselage, with the process reversed on the other side.

The arrangement with **Continental Airlines** to start a joint frequent flier program is put on hold on November 19 when the DOT rules that the two majors cannot begin their loyalty offering before December 4.

The arrangement with **Continental Airlines** to start a joint frequent flyer program is put on hold on November 19 when the DOT rules that the two majors cannot begin their combined loyalty offering before December 4. Also on November 19, Northwest unveils a DC-10-40 Alliance Plane at Minneapolis (MSP) painted in the joint liveries of Northwest and **KLM (Royal Dutch Airlines, N.V.)** to celebrate the successful partnership between the two carriers.

The next day, Northwest, which has vowed to complete its deal with **Continental Airlines** despite the government's antitrust lawsuit, completes its acquisition of a controlling stake in the Houston-based major. The arrangement gives the nation's fourth largest airline a 14% equity stake in Continental as well as voting control of up to 51% of the fifth largest carrier. Executives from both airlines indicate that they will proceed to implement domestic code-sharing involving upwards of 850 flights.

As the result of a relief effort organized by television station WDIV TV-4, the Detroit Pistons, and Art Van Furniture, 50 tons of relief supplies are flown from Detroit (DTT) to Honduras aboard a company B-747-251F on November 23 to aid the survivors of Hurricane Mitch. Simultaneously, a tentative 5-year contract agreement is reached with the 171 Transport Workers Union-represented flight dispatchers and operations planners.

The next day, it is announced that the company will inaugurate thrice-daily nonstop DC-9-41 return flights on January 31 from both Detroit (DTT) and Minneapolis (MSP) to Houston (IAH).

A senior Philippine government official, noting on November 25 that the proposed arrangement with **Cathay Pacific Airways (Pty.), Ltd.** is in significant difficulty and probably will not go through, now openly suggests that Northwest might be better suited for a tie-up with his country's flag carrier. The source, Executive Secretary Ronaldo Zamora, in a radio interview reported by Reuters, Ltd., indicates that Cathay has put forward new and unacceptable conditions, including the removal of pilots who had returned to work following the June pilots' strike. He confirms, as does President Joseph Estrada in a separate interview, that **Philippines Airlines (PAL)** Chairman Lucio Tan is in the U.S. for talks with the Minneapolis (MSP)-based major. Northwest spokesman Douglas Killian indicates that, just because Tan is in New York for discussions, his visit should not be taken as a sign of imminent agreement.

Not long after takeoff from Seattle for Minneapolis on Thanksgiving Eve, a DC-10-30 with 14 crew and 283 passengers experiences electrical arcing in the galley; an emergency is declared and the wide-body

diverts to Spokane, where a landing is made without incident. No injuries are reported and a replacement part is flown in from Seattle a few hours later.

Coincidence and a pair of TCAS mistakes nearly cause a tragic midair collision at a point 30 mi. SW of Albany on December 1. Misreading the movements of a **USAirways** flight, the TCAS aboard an **Air Ontario, Inc.** DHC-8-311 en route from Providence to Toronto inadvertently sounds, directing it to climb so as to avoid a Northwest DC-9-41 flying from Detroit to Providence, whose TCAS has directed the aircraft to descend. An air traffic controller notices the difficulty and calls out a warning as the two planes speed toward one another on a collision course. The jetliner and the commuter plane come within less than a mile (800 meters) of each other horizontally and within 300 feet (90 meters) vertically. FAA regulators launch an immediate investigation.

On November 25, it is announced that in the period May 30-October 3, 1999, flights between Tokyo and Anchorage will be doubled to two nonstops each week. The flights are a continuation of an ongoing seasonal program designed to provide lift for Asian tourists wishing to view the natural wonders of Alaska.

Also during the fourth quarter, the carrier, in cooperation with AmeriCares, operates relief flights that transport 20 tons of supplies and life-saving medicines to families devastated by flooding along China's Yangtze River.

Having negotiated off and on for another week, both Northwest and **Cathay Pacific Airways (Pty.), Ltd.** pull out of investment discussions with **Philippine Airlines (PAL)** on December 2. Philippine President Estrada confirms that the Northwest talks have fizzled, but expresses hopes that he can convince the Hong Kong-based major to continue.

A Saturday B-747-451 departure is added on December 3 to the carrier's nonstop return service from Detroit to Nagoya. The next day, after Flight 71 arrives in Japan, it will continue on to Manila. The new beyond service will supplement Northwest's 14 weekly flights between the U.S. and Manila.

On December 9, Alaska Air Group President William S. Ayer announces that a letter of intent for the creation of a marketing partnership has been signed between its subsidiaries, **Alaska Airlines** and **Horizon Air**, and AMR Corporation and its subsidiaries, **American Airlines** and **American Eagle Airlines (2)**.

Alaska Air Group also announces that notice has been provided to Northwest of its intent to modify an existing marketing agreement. Talks are underway and it is hoped that the 10-year-old alliance might be maintained.

Also in December, the 9,500 ground service force, including mechanics, votes to withdraw from the machinists' union and be represented by the Aircraft Mechanics Fraternal Association.

On December 14, electronic ticketing service is expanded by Northwest to Asian destinations. The same day, the Northwest board of directors offers a long-term contract with president/CEO Dasburg and names Senior Vice President Richard Anderson as executive vice president/chief operating officer.

Alaska Airlines President Ayer and Northwest President/CEO Dasburg jointly announce on December 22 that their commercial cooperation agreement, which includes **Horizon Air**, will be extended. To mark and celebrate this arrangement, both carriers offer their respective frequent flyers the opportunity to earn bonus miles for flights taken on the other carrier between January 4 and February 28, 1999.

Ice storms that sweep across the south on December 23 cause the company to cancel or delay over a hundred flights.

In a radio interview on Christmas Day, Philippine Executive Secretary Zamora indicates that **Philippine Airlines (PAL)** is holding discussions with both Northwest and **Cathay Pacific Airways (Pty.), Ltd.** concerning their possible investment. Although both foreign airlines had indicated weeks earlier that talks were dead, Zamora is quoted to the contrary by the Associated Press. "The truth is their discussions are continuing," the official notes, "However, in order not to disturb the talks, they are not disclosing this to the public."

Northwest and **Continental Airlines** begin dual-designator flights on December 29 on 28 weekly international flights between the U.S. and Japan and 21 weekly flights beyond Japan. From the mainland U.S., Continental places its code on Northwest flights between New York (JFK) and San Francisco to Tokyo (NRT) and between Detroit and Osaka. Similarly, Northwest applies its code to Continental's new B-777-224 daily roundtrips between Newark and Tokyo (NRT).

A powerful winter storm severely impacts company operations in the upper Midwest during the last days of the year. One B-747-251 is, however, chartered on December 30 to fly the University of Tennessee NCAA Division I football team coaches, players, cheerleaders, marching band, real and human-costumed mascots, and various school executives and boosters to Tempe for the Tostitos Fiesta Bowl game.

While landing at Green Bay, Wisconsin, on December 30 after a service from Romulus, Michigan, Flight 529, a DC-9-51 with 6 crew and 113 passengers, strikes its tail on the runway. Although no injuries are reported, the aircraft sustains substantial damage.

During the 12 months, customer bookings, due to the strike, are off by 7.81% to 50.54 million. Cargo traffic falls 13.01% to 2.48 billion FTKs.

Revenues are also off, by 11.5%, to \$9.04 billion, while expenses, up only 1.8%, still total \$9.23 billion. The previous year's operating profit becomes a \$191.4-million operating loss. The previous year's net gain becomes a big \$285.5 million net loss. When certain exclusions are counted in, the net loss is reduced to \$49 million.

A severe winter storm hits the Midwest on January 2-3, 1999, and impacts traffic systemwide; more than 1,100 flights will be scrubbed because of the weather. Due to Detroit's controversial policy of not plowing residential streets, more than half the company's employees are unable to make it to work.

Over 4,500 travelers are stranded on January 3 for up to 8½ hours aboard 34 aircraft that are unable to take off or reach passenger gates through the 10.6-inch snowfall. Some of these passengers (and airline crews) are, in fact, trapped with no water, food, or bathroom facilities.

Numerous other incidents occur during these extreme weather conditions: one aircraft blocks off all access to Concourse C; a catering truck must be used to remove a heart attack victim from a jetliner; parked aircraft block snowplows; managers at Northwest's Strategic Operations Center in Minneapolis fail to heed appeals by Detroit (DDT) company officials to suspend or divert flights headed their way; and 7,000 pieces of luggage are lost.

The carrier is unable to operate any flights into Detroit before noon on January 4. At that point, it attempts to operate as many flights out as possible so as to allow snow removal equipment access to tarmac areas.

Having played for and won the national championship of college football against Florida State University on January 4, the victorious No. 1 Volunteers are flown back to Knoxville's McGee-Tyson Airport on January 5 via the same Northwest plane that had taken them to Arizona.

On January 7, Northwest and **Continental Airlines** begin linking a major portion of their domestic flight schedules and implementing more international dual-designator flights. The two majors, despite DOT opposition, initiate code-sharing on approximately 850 domestic and international flights to 95 destinations.

As part of the arrangement, **Continental Airlines** code-shares daily on Northwest and "Northwest Airlink" domestic flights, including cities where it does not currently fly, such as Sioux City, Boise, Knoxville, and Spokane. Likewise, Northwest code-shares daily on **Continental Airlines** and **Continental Express** flights, including cities where it has no service, such as Corpus Christi, Charleston, Scranton, and Daytona Beach.

Additionally, **Continental Airlines** starts to code-share on select Northwest flights to Canada, such as Calgary, Vancouver, Edmonton, Saskatoon, and Winnipeg. Although Continental already provides daily service to Calgary and Vancouver, it does not operate its own flights to Edmonton, Saskatoon, or Winnipeg.

Acting on behalf of two clients claiming to have been detained for eight hours aboard a company aircraft during the recent Detroit blizzard,

a lawsuit is filed against the airline in Wayne County, Michigan, Circuit Court on January 8.

Mesaba Airlines, on January 14, officially enters into a dual-designator arrangement with Continental. Under terms of the pact, the major's "CO" designator will be placed on all of Mesaba's "Northwest Airlink" flights in and out of both Detroit (DDT) and Minneapolis (MSP).

Also during the day, a preliminary internal report on the recent Detroit blizzard catastrophe is finished and sent to top management; a copy will later be obtained by *The Wall Street Journal*.

Not yet fully recovered from its strike, Northwest, on January 15, refuses to agree to an industry-wide fare increase; the major has now effectively blocked ticket-price increases 16 times in the past year. Kao-hsiung-Osaka (KIX)-U.S. service starts on January 16.

On January 21, former **Alaska Airlines** Chairman/President Vecchi is appointed executive vice president-customer service and president, Michigan operations. In the new post, Vecchi will work closely with Michigan authorities, in particularly those at Detroit where customer relations are not the best.

Executive Vice President-Marketing and International Levine resigns on January 25, effective February 1; he will continue to serve until his retirement on February 28. Simultaneously, President/CEO Dasburg announces the promotion of two vice presidents, J. Timothy Griffin and Philip C. Haan, to the ranks of executive vice president. In addition, Executive Vice President/General Counsel Douglas M. Steenland is given additional responsibility to oversee the company's alliances.

When **Delta Air Lines** on January 29 raises business ticket prices by 2% and leisure ticket costs by 4%, Northwest is one of four majors to quickly follow suit. The Northwest's participation is significant because its past reluctance to raise fares have prevented industry-wide efforts to implement increases over the last year. The move, the first tariff increase for U.S. airlines in 18 months, is seen as the opening salvo in a series of across-the-board fare hikes.

Also on January 29, a press release appears detailing the schedule and price structure for the beginning of service by the new entrant **AccessAir**, including introductory fares. Northwest Airlines indicates that it will match the new prices.

Thrice-daily nonstop DC-9-41 return flights begin on January 31 from both Detroit (DDT) and Minneapolis (MSP) to Houston (IAH).

A three-judge panel of the Eighth U.S. Circuit Court of Appeals at Minneapolis on February 3 rules that U.S. District Judge David Doty had erred in 1998. Doty had dismissed the 1997 *Midwest Machinery et al. v. Northwest Airlines* suit, ruling that since the **Republic Airlines** merger being contested by the plaintiffs had been approved by the DOT, it could not be challenged in court. With the help of friend-of-the-court briefs filed on behalf of the consumers by 11 states attorneys general, the case is reopened. Lawyers for Northwest immediately appeal.

The first **AccessAir** return service from the "Big Apple" to Moline and Des Moines occurs the next day. Also on February 4, daily roundtrip flights commence from Des Moines to Los Angeles (LAX). Introductory \$99 one-way fares will remain in place until March 4.

Leaders of the pilots' unions from Northwest and **Continental Airlines** sign a formal letter of cooperation on February 10 pledging mutual support and cooperation between the two labor groups. The same day, Northwest management and ALPA reach agreement; pilots flying the A319 will be paid at the same rate as those operating A320s.

An agreement is reached between Northwest and **American Airlines** on February 11, which allow Northwest to accept American tickets in the event of further pilot disruptions to American's flight schedule. The pact takes effect immediately.

While preparing for takeoff from Minneapolis (MSP) on February 11, a B-757-251 with 94 passengers aboard knocks over a deicing truck and damages its wing. One of the truck's two workers is injured and taken to the hospital; passengers are later put on another flight.

The *London Sunday Times* reports on February 14 that the airline is in discussions with **Delta Air Lines**, **Alitalia**, **S.p.A.**, **Air France**, and

Continental Airlines concerning the possible forging of a global alliance to rival the existing multinational airline pacts "OneWorld" and the "Star Alliance."

A huge order is placed with Bombardier Aerospace on February 18 for 54 CRJ200LR regional jets, along with 70 options. Deliveries of the aircraft on firm order are to begin in April 2000 and continue through mid-2004.

The Italian news agency Ansa reports on February 21 that **Air France** is in discussions with **KLM (Royal Dutch Airlines, N.V.)**, Northwest, and **Alitalia, S.p.A.** concerning the possibility of Air France joining their global alliance. Northwest and KLM are also alliance partners of **Continental Airlines**, which is one of two U.S. airlines seeking a partnership with the French line. None of the suggested participants will confirm the story.

Having gone missing from the home of Mrs. Marie Bennett in Campo, California, 60 mi. E of San Diego four years earlier, the chocolate Labrador retriever, Bear, is found near the small Michigan community of Evart in mid-February. Reacting to an ad placed on the Internet, Mrs. Bennett identifies her dog. A veterinarian agrees to provide free shots, a kennel donates a shipping crate, and Northwest, on February 22, waives the \$200 shipping fee and flies Bear home. Reporter John Flesher of the AP picks up the story and it appears in newspapers large and small around the world.

Breaking ranks with its partners, **Alitalia, S.p.A.**, through an unidentified spokesman on February 23, confirms that his carrier, along with Northwest and **KLM (Royal Dutch Airlines, N.V.)** are at the "very beginning" of alliance talks with **Air France**.

The CEOs of **KLM (Royal Dutch Airlines, N.V.)**, Northwest, and **Alitalia, S.p.A.** meet with **Air China International Corporation** officials in Beijing, also on February 23, to discuss bringing the Chinese carrier into their global alliance.

Highly critical of the manner in which Northwest had handled the January blizzard at Detroit Metro Airport, U.S. Rep. John Dingell (D-Mich.), whose district includes the airport, introduces legislation in the House of Representatives on February 23 calling for the creation of a "passenger's bill of rights." The bill will require airlines to have emergency snow and other disaster plans and hold them liable for long departure delays not involving safety issues.

New contracts are approved on February 24 with the ticket and reservation agents, clerks, baggage handlers and other ramp operators, and security guards; the 18,000 workers are all represented by the Machinists' union.

The final report on the Detroit blizzard fiasco is released by the airline, also on February 24, and published by the Minneapolis *Star Tribune* the next day. Specific recommendations are made for improvements in 15 identified problem areas.

Originally scheduled to commence on January 16, the startup of Northwest's new Kuala Lumpur–Osaka (KIX)–U.S. service has been postponed until February 27. The short delay has allowed the carrier to use its aircraft on other Asia–U.S. service to take advantage of peak passenger traffic during the Chinese New Year in February.

On March 1, a \$365.5-million contract is awarded by the airline to Huber & Nichols of Indianapolis for the construction of a new terminal at Detroit (DDT).

The DOT fines Northwest \$25,000 on March 3 for violations of the government's code-sharing rules, which require carriers involved in such pacts to inform their customers that their tickets will require them to switch airlines. Half of the penalty will be forgiven if the airline, which has not admitted wrongdoing, commits no further violations in the next year.

On March 15, Northwest, which has been recalcitrant in the past, joins **American Airlines**, **Delta Air Lines**, **Southwest Airlines (2)**, **United Airlines**, and **USAirways** in raising business fares by 1% and imposing another 3% hike on leisure tickets. United had begun this second round of ticket price increases on March 12.

A stay, extended twice, in the 1998 case filed in U.S. District Court in Nevada by **Reno Air** expires on March 15.

Claiming that it has removed its introductory fare, **AccessAir** complains to the DOT that Northwest has not increased prices and is maintaining them below competitive levels. Northwest is, they suggest, engaged in predatory pricing. The company responds on March 16, claiming that AccessAir has never discontinued the introductory fare and that it is still available. Northwest is, therefore, only maintaining a level playing field and has not set its fares below competitive level.

A second daily nonstop roundtrip is introduced for the summer season on April 5 between Minneapolis (MSP) and Anchorage.

Following the initiation of NATO military action against Yugoslavia on March 24, which is designed to change Belgrade's policy toward the ethnic majority in the province of Kosovo, a humanitarian refugee disaster occurs. Thousands flee Kosovo to the neighboring countries of Macedonia and Albania, necessitating the delivery of significant relief supplies.

On behalf of the Heart to Heart organization, a Northwest aircraft flies 10,000 pounds of medical supplies to Amsterdam on April 11. There the goods are off-loaded and sent to the Balkans by truck. The same day, the **Reno Air** case, first filed in 1998, is dismissed by the U.S. District Court in Nevada.

The company's annual stock meeting in New York is ended early by Chairman Wilson on April 23 after protesters, appearing to be flight attendants frustrated with drawn out negotiations between the company and their union, begin yelling and making speeches.

It is reported by Reuters, Ltd. on April 26 that the company has placed a \$3.2-billion order with Airbus Industrie for new A318s.

Although San Jose has a curfew from 11:30 p.m. to 6:30 a.m. Pacific Time, airlines are allowed to fly in during those hours if they are delayed due to mechanical, weather, or ATC problems. The *San Jose Mercury News* reports on April 27 that the city attorney's office has sent letters to six carriers threatening to sue or ban them from the airport and citing numerous violations of the curfew. In addition to Northwest, the companies committing these "blatant violations" include **Mexicana Airlines, S.A. de C.V.**, **American Airlines**, **Reno Air**, **Southwest Airlines (2)**, and **United Airlines**.

Daily nonstop B-747-451 roundtrips commence on May 1 between Minneapolis (MSP) and Oslo. Simultaneously, the carrier begins to code-share with **Braathens, A.S.** from Oslo to over 12 cities in Norway and Sweden.

After 2 1/2 years of negotiations, most recently under supervision of the NMB, the company's flight attendants, represented by the Teamsters, and management adjourn their talks on May 3. Although scheduled to return to the bargaining table on June 2, the union leadership indicates that it will call a strike vote during the week of May 17.

John Moore, southeast regional vice president at Memphis, resigns on May 4 to become executive vice president of Dobbs International Services, also in Memphis.

At a New York press conference on May 10, it is announced that **Alitalia, S.p.A.** will join the multinational airline alliance operated by **Northwest** and **KLM (Royal Dutch Airlines, N.V.)**. The representatives of the partners present indicate that their companies are asking the DOT to grant antitrust immunity to their joint venture, after which they will be able to set ticket prices together, code-share, manage seat inventories, and share services, costs, and revenues. Following approval, the first routes to be operated under the new joint venture will be from Detroit to both Rome and Milan.

This new partnership will form the core of a long-awaited fourth major global airline alliance, "Wings," which will be formally announced later in the year, probably in the fourth quarter. Before that time, it is anticipated that **Continental Airlines** will also become an alliance partner.

On May 11, Northwest is ranked the No. 1 airline on the Internet by *Business 2.0* magazine.

A code-sharing agreement is signed between Northwest and **Big Sky Airlines** on May 13. Two days later, Northwest begins to place its code on select Big Sky flights between Billings, Montana, and 11 other in-state markets, including Glasgow, Havre, Lewistown, Glendive, Miles City, Sidney, Missoula, Helena, Kalispell, Great Falls, and Wolf Point.

Dual-designator services are also offered on Big Sky flights between Billings and Spokane and between Bismarck, North Dakota, and Sidney, Montana. Passengers traveling on Big Sky with Northwest-connect itineraries also benefit from one-stop passenger and baggage check-in and WorldPerks frequent flyer mileage accrual.

On May 14, the carrier agrees to sponsor the Mosaic Youth Theater group's participation at the World Youth Theater 2000 festival in London in July 2000 and to provide free roundtrips for the U.S. members.

A ninth B-747-200F is acquired on May 24; after modifications, it will enter service on September 1.

Employing a DC-10-40, Northwest, on May 30, doubles from one to two the number of its weekly summer season roundtrips between Anchorage and Tokyo (NRT).

Thrice-daily nonstop DC-9-32 roundtrips begin on June 2 from Detroit to Portland, Maine. Simultaneously, a fourth daily nonstop roundtrip is initiated from Minneapolis (MSP) to Houston (HOU).

A tentative contract is reached between management and the Teamsters on June 10 for a new five-year contract; the pact will now be put to the rank-and-file for ratification.

En route from Los Angeles (LAX) to Tokyo (NRT) on June 16, a B-747-451 with 327 passengers makes an emergency landing at Seattle when a suspicious electronic object without an owner is discovered by the crew. After landing, a police bomb squad comes aboard and examines the item, which is found to be harmless, and the aircraft continues its flight.

Wayne County, Michigan, Circuit Judge Daphne Means Curtis rules on June 19 that the various individual cases filed against Northwest as a result of the January blizzard debacle may be combined into a class-action suit. The court estimates that over 8,000 passengers are able to join the lawsuit, based on the number of apology letters and free flight coupons sent out by Northwest after the storm.

Northwest is one of three U.S. airlines tentatively granted a total of 17 additional roundtrips per week on June 23 between the U.S. and China. On June 25, Northwest begins offering flight status and gate information to passengers via pagers or PCS phones.

On June 26, a chartered B-727-225A has the honor of returning the NBA champion San Antonio Spurs home to Texas following their dramatic victories in New York.

A third daily nonstop A320-211 roundtrip is added on July 1 from Ontario, California, to Minneapolis (MSP). After a year of investigation into alleged unsafe maintenance practices and other operations, the FAA, in mid-July, clears the company and provides its approval for Northwest's \$804-million DC-9 upgrade program.

The marketing alliance with **Japan Air System, Ltd.** is enhanced on August 7 when the two companies begin code-sharing. The "JD" code is placed on Northwest nonstop roundtrips between Osaka (KIX) and Detroit, Minneapolis (MSP), Seattle, Los Angeles, and Honolulu, while the Northwest designator appears on JAS connecting service from Osaka to Fukuoka and Okinawa.

On August 10, Northwest becomes the first airline to operate a new route through Russian airspace when its nonstop B-747-451 Flight 087 operates from Detroit (DTT) to Beijing via the "Polar 3" route; an hour of flight time is thus saved.

The additional China route authority announced earlier is confirmed on August 16; Northwest receives four new routes immediately and two in April.

The August 23 issue of Malcolm Ginsberg's *Air and Business Travel News* reports that the proposed "Wings" global alliance is in serious jeopardy. Abstracting a report from the previous day's London *Financial Times*, the newsletter notes that a significant disagreement between **Continental Airlines** and **KLM (Royal Dutch Airlines, N.V.)** concerning linkage and revenue sharing on transatlantic flights risks termination of the grouping and creation of a new alliance without Continental.

Company flight attendants on August 26 reject the tentative contract first announced on June 10.

Twice-daily nonstop DC-9-30 return service is introduced on September 8 between Minneapolis (MSP) and both Missoula and Kalispell, Montana.

Northwest's ninth B-747 freighter, a Dash-249F, enters service on September 1. The aircraft wears a bright half-world globe on its forward fuselage with "Investing in Pacific Trade" script titles along each side of the fuselage behind the wings. On September 15, Northwest announces a "Customers First" service plan.

A commercial agreement is signed with **Malaysia Airlines, Ltd. (MAS)** on September 23. Under its terms, the two majors will soon begin code-sharing transpacific flights. A fourth (Wednesday) weekly B-747-451 return service is added on December 1 between Detroit (DTT) and Nagoya, Japan.

The airline joins with Memphis-Shelby County Airport Authority officials on September 27 to announce a new \$400-million renovation and expansion plan for Memphis International Airport. The projects involved are scheduled for completion in **2004**. The next day, Northwest announces a plan to equip its entire fleet with defibrillators by the end of the year.

Also in September, Northwest unilaterally terminates an agreement with competing **Sun Country Airlines** to share or sell jetliner parts to the smaller concern; the move deepens already hard feelings between the two Minneapolis (MSP)-based carriers.

The situation with **Sun Country Airlines** worsens on October 13. Although Sun Country has already paid a \$500,000-a-year fee for the federally mandated training, Northwest now refuses to train the more than 600 Sun Country workers needing to learn the latest emergency evacuation procedures.

At the end of October, the carrier, and **KLM (Royal Dutch Airlines, N.V.)** terminate their 16-month-old joint Philadelphia to Amsterdam service. Also, Northwest drops its unprofitable Minneapolis-Oslo flights after only five months.

A second daily nonstop roundtrip is introduced on November 1 between (Minneapolis) MSP and Anchorage; this seasonal service will run through April 1. Also on November 1, Northwest and **KLM (Royal Dutch Airlines, N.V.)** introduce their Select line of cargo services; sub-labeled "3-Speed," the product is offered as Select 100 for urgent cargo, Select 300 for standard cargo, and Select 700 for economy cargo.

On November 2, the carrier's 10th B-747-200F is received.

Frequencies from Minneapolis (MSP) to Tokyo (NRT) are increased from seven to nine per week on November 5. The newly received 10th B-747-200F is, also on November 5, placed into service on the Pacific routes.

On November 15, Northwest is allowed to place its code aboard the daily **KLM (Royal Dutch Airlines, N.V.)** return service from Amsterdam to Nairobi and the Dutch line's thrice-weekly roundtrips from Amsterdam to Kilimanjaro and Dar es Salaam.

In an unusual incident on November 23, the captain of a company jetliner preparing to depart from Las Vegas to Detroit (DTT) suddenly departs without warning, hails a taxi, and is taken to a restaurant where he orders lunch. For delaying takeoff by over an hour, the flyer is discharged on December 7.

Daily DC-10-41 seasonal service, continuing until April 1, is launched on December 17 from Detroit (DTT) to Honolulu.

Made possible by a new "open skies" agreement between the U.S. and Italy, Northwest enters the Italian market for the first time on December 20 when it begins to code-share on **KLM (Royal Dutch Airlines, N.V.)** flights to Rome, Milan, Turin, Venice, and Bologna.

The last of 10 new A319-114s to be received since August 5 is delivered on December 28. During the period between March 4 and July 28, seven A320-212s were also received.

Passenger boardings for the year jump 11.1% to 56,114,000, while cargo swells 21.4% to 3.01 billion FTKs. Revenues advance 13.6% to \$10.27 billion, while expenses are up 3.5% to \$9.56 billion. The previous year's losses are turned into profits: \$714 million (operating) and \$300 million (net).

Airline employment at the beginning of 2000 stands at 51,823, a 2.5% increase over the previous 12 months. Among the world's top 25 airlines, Northwest is 5th in total passengers, 15th in FTKs, 10th in employees, 5th in fleet size, 9th in operating revenue, 7th in operating profit, and 11th in net profit.

On January 5, a state judge issues a restraining order against Teamsters Union Local 2000 to halt an alleged sick-out job action planned by its flight attendant members.

When mechanics examine a DC-10-41 at Newark on January 23 following the conclusion of its service from Bombay and Amsterdam, the body of a Turkish citizen is found in the wheel well. The circumstances surrounding the incident remain foggy. The first of 10 additional A319-114s to be received this year is delivered on January 24.

On January 26, Northwest's WorldPerks frequent flyer program is announced as the highest rated U.S.-based program by *InsideFlyer* magazine. Two days later, the company receives the 1999 "Airline Technology Management System" award from *Air Transport World* magazine.

Daily B-757-251 seasonal roundtrips are launched from Memphis to Fort Myers on January 31; they will run until March 30. Simultaneously, seasonal daily A320-211 return frequencies are offered from Detroit (DTT) to Cancún; these will also end on April 1. Also on January 31, the daily nonstop A320-211 seasonal return service between Memphis and Phoenix is made permanent while a second daily A319 roundtrip is begun from Detroit (DTT) to Mexico City.

Having captured the title six times, Northwest is announced by the DOT on February 2 as the most on-time U.S. airline among the seven largest U.S. network carriers for the period 1990-1999. The same day, pursuant to a court order obtained by Northwest, representatives from Ernst & Young begin searching the hard drives of computers belonging to Teamsters Union Local 2000 and 20 Northwest flight attendant members seeking sick-out related information. The airframe of a B-747-151 is donated to Western Michigan University on February 4.

Following a Local 2000 appeal, the U.S. District Court in St. Paul stays the lower court-permitted search of computer hard drives begun on February 2. Afterwards, the airline and the union resume negotiations on a new contract for the cabin crews.

On February 10, the company, hoping to snag some business-class traffic away from discount airlines, introduces its BizFlex product. The new fares are 40% less than coach fares and do not require the Saturday-night layover provision hated by many travelers. The new product had been market-tested in North and South Dakota for six months prior to its launch.

A seasonal A320-211 roundtrip service is initiated on February 12 from Detroit (DTT) to Bozeman, Montana; the frequencies will end on April 1. A block-seat, code-sharing agreement covering certain Caribbean services is signed with **Gulfstream International Airlines** on February 15.

A code-sharing agreement is signed with **American Eagle Airlines** on February 29; under its terms, Eagle places the "NW" code on its SAAB 340B services from Los Angeles to Bakersfield, Fresno, Monterey, Palm Springs, San Diego, Santa Barbara, and San Luis Obispo.

Also in February, **Continental Airlines** Chairman/CEO Gordon Bethune announces that Continental wishes to purchase back the majority stake held by Northwest in a 10-year voting trust. He promises that the strategic alliance between the two airlines will not be impacted.

Northwest is named recipient of the 1999 "Airline Technology Management" award by *Air Transport World* magazine, also in February.

The March 21 accidental cutting of a US West cable near Eagan, Minnesota, causes loss of communications at Minneapolis (MSP) and Detroit (DTW) and the subsequent cancellation of 130 flights systemwide.

Spirit Airlines files a suit in federal court at Detroit on March 29 charging that Northwest forced it to abandon its new flights from Detroit (DTT) to Philadelphia and Boston shortly after their initiation by matching the routes fares and adding more flights. It also alleges that the Minneapolis (MSP)-based major prevented it from acquiring gates at Detroit (DTT). Northwest denies the charges.

An unnamed man sneaks into the cargo hold of a company B-757-251 on March 31 and survives its subsequent flight from Seattle to Memphis. When ground workers open a cargo door, he hops out and scampers away across the tarmac, never to be seen again.

Daily DC-10-41 return service, code-shared with **Alitalia, S.p.A.**, is inaugurated from Detroit (DTW) on April 2 to both Rome and Milan. The dual-designator pact with **Gulfstream International Airlines** also begins on April 2 as the Minneapolis (MSP)-based major places its code on Gulfstream International services to and from Fort Lauderdale, Miami, Tampa, and the Bahamas.

Employing a pair of B-747-451s christened *The Asian Spirit* and *The Alliance Spirit*, Northwest, on April 11, inaugurates new twice-weekly Jumbojet roundtrip flights from Detroit to Shanghai that it code-shares with **Air China International Corporation**. The same day, block-seat code-sharing begins aboard **South African Airways (Pty.), Ltd.** services from Johannesburg to Windhoek, Namibia.

On April 20, one of the two daily summer season return flights between New York (JFK) and Amsterdam operated by **KLM (Royal Dutch Airlines, N.V.)** is given to partner Northwest, which has found itself with an extra available B-747-451.

Daily nonstop DC-9-51 roundtrips are inaugurated on May 1 from Minneapolis (MSP) to New York (JFK). On May 24, the commercial compact with **Hawaiian Airlines** is renewed for another five years.

A fourth bank of service, in the evening, is started in and out of Memphis on June 1. Each of the following cities consequently receives one new daily flight: Alexandria, Atlanta, Baton Rouge, Birmingham, Chattanooga, Chicago (ORD), Columbus, Detroit (DFW), Denver, Fayetteville, Fort Smith, Fort Walton Beach, Greenville/Spartanburg, Gulfport/Biloxi, Houston (IAH), Huntsville, Indianapolis, Jackson, Kansas City, Knoxville, Lafayette, Little Rock, Los Angeles (LAX), Louisville, Mobile, Monroe, Montgomery, Nashville, New Orleans, New York (LGA), Newark, Oklahoma City, Orlando, Paducah, Panama City, Pensacola, San Francisco, Shreveport, Springfield/Branson, St. Louis, Tulsa, Tupelo, and Washington, DC (DCA).

A fifth daily nonstop code-shared roundtrip with **KLM (Royal Dutch Airlines, N.V.)** is initiated between Detroit (DTT) and Amsterdam on June 1; the service will be flown through October 27 by a Northwest DC-10-41. Also on June 1, a new weekly B-747-251B service is inaugurated from San Diego to Tokyo (NRT) via Los Angeles and Osaka (KIX). The connection between San Diego and Los Angeles is made by an A319, the same aircraft type employed to simultaneously initiate a new daily roundtrip from Memphis to San Diego.

Also on June 1, the **Mesaba Airlines** SAAB 340 service from Detroit to Lansing is replaced with a Northwest DC-9-31, while a second DC-9-31 is added to the Michigan capital city from Minneapolis (MSP). The media reports on June 5 that Northwest has turned down a merger bid from **American Airlines** because the share tender was too low.

Daily DC-9-31 return flights are begun on June 15 from Memphis to Charlotte and complement the thrice-daily roundtrips started between the two cities the same day by Airlink partner **Mesaba Airlines**. Simultaneously, twice-daily DC-9-51 roundtrips are started from Minneapolis (MSP) to San Antonio.

Also on June 15, Northwest becomes the first airline to provide its customers with a new luggage service recovery packet, provided when a lost bag is returned to the passenger.

Two B-747-222s are purchased from **United Airlines** on July 5; converted, they will enter service in March and June 2001, giving Northwest Cargo 12 Jumbojet freighters.

Northwest is named 10th best-managed company among non-state-owned major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

On July 12, Northwest becomes the first airline to deliver flight and frequent flyer account information on the Sprint PCS Wireless Web.

On July 13, the carrier increases from 15 minutes to 20 minutes the time it requires domestic U.S. passengers to be at the appropriate gate prior to departure in order that they not lose their preassigned seats.

Continental Airlines, beginning on July 16, places its "CO" code on Northwest daily return flights from Los Angeles to Osaka (KIX) and Tokyo (NRT) and from Seattle to Tokyo (NRT).

The company's 10th Jumbojet freighter, a B-747-212F, wearing a special color scheme promoting the carrier's Select cargo service, enters revenue service on August 16.

On August 22, *Flight International*, in its annual commercial airline survey, reports that Northwest is the fourth airline in the world in terms of revenue passenger kilometers, behind **United Airlines**, **American Airlines**, and **Delta Air Lines**.

Daily DC-9-31 roundtrips are launched on September 1 from Detroit to Charleston, South Carolina, and complement a pair of twice-daily Avro RJ85 frequencies simultaneously started between the city pair by **Mesaba Airlines**. It is announced on the same day that the company will increase its four-times-a-day B-747-451 roundtrips from Detroit to Nagoya and from Nagoya to Manila to daily service on April 1.

On September 16, Northwest begins to code-share on **Air Engiadina** roundtrips from Berne to Amsterdam.

When **United Airlines** on August 26 granted its pilots a huge pay increase, the measure, while buying that airline a certain amount of immediate labor peace, sets off a chain reaction among unions at the other major U.S. carriers. At the end of September, the local chapter of the Aircraft Mechanics Fraternal Association (AMFA) stuns Northwest with a demand for a 117% boost in average annual wages and benefits.

When **ProAir** at Detroit (DET) is shut down by FAA action on September 18, Northwest offers to handle the discount airline's valid ticket holders on a standby basis. The next day, ProAir declares bankruptcy and the offer is withdrawn.

Following a September 24 charter for the Green Bay Packers from their Wisconsin town to Phoenix and back, Northwest retires the B-747-151 employed the next day. The last passenger B-747-100 in service with any U.S. airline, the Jumbojet will be ferried to North Carolina, where its front part (including the cockpit) will be prepared for use by the Smithsonian Institution's National Air and Space Museum.

On October 13, Northwest pulls its inventory from LowestFare.com over bias in schedule displays. At mid-month, the company "borrows" a **Condor Flugdienst, GmbH**, B-757-330 for evaluation, giving consideration to a possible future order for the aircraft type.

Following its earlier introduction at Memphis, the carrier, on October 18, expands its Internet check-in service through its online Web site for customers departing Minneapolis (MSP).

The U.S. Department of Justice, having filed suit in Detroit federal court, continues to attempt to force Northwest to divest itself of its controlling stake in **Continental Airlines**. On October 25, a day before trial is to begin, proceedings are postponed until November 1 in order to allow the two airlines time to work out an agreement with the DOJ. Continental now argues that the stake is not critical to its continuing partnership with Northwest and asks that the Minneapolis-based major just sell back its investment.

The recently retired B-747-151 is ferried to North Carolina on October 26, where it will be disassembled and its nose/cockpit sent for display to the National Air and Space Museum.

Detroit (DTT) to Milan daily return service is suspended on October 28. The roundtrip service code-shared with **KLM (Royal Dutch Airlines, N.V.)** from Amsterdam to India is boosted with the displaced Milan route DC-10-41 on October 29—to Delhi (4 to 7) and to Bombay (3 to 7). The summer New York (JFK) to Amsterdam service operated by Northwest is reclaimed by **KLM (Royal Dutch Airlines, N.V.)**, as is service from Detroit (DTT) to Amsterdam.

The corporation, on November 1, proposes to Mesaba Holdings that it acquire, for \$13 a share, all of the shares of Mesaba Holdings that Northwest does not already own. The major currently holds approximately 28% of the outstanding shares and has warrants to acquire additional shares that would increase its stake to 40%. The offer is made in the wake of one made several weeks earlier by **Mesa Air Group**.

On November 6, Northwest complies with the DOJ antitrust demands and backs out of its plan to acquire a major share of **Continental Airlines**. All of its shares in the Texas major, save a token minority stake, will be sold back to Continental. The next day, the airlines, together with the acting assistant attorney general who is prosecuting the case, appear together before U.S. District Judge Denise Page Hood and gain a week's delay in court proceedings for preparation of the final settlement documents.

In breaking the story, *The Commercial Appeal* of Memphis notes that the two companies will close in about two months after a definitive accord is reached and approvals have been won from their boards, the DOJ, and certain unspecified third parties.

This prophecy will come true ten days later when the two majors announce a definitive agreement on the process of stock repurchase. On January 22, Continental will expend \$450 million to buy back the Northwest equity, giving \$100 checks to each of its 53,400 employees in celebration of this "Independence Day."

Just after takeoff from Minneapolis (MSP) for Portland on November 20, Flight 375, a B-757-251 with 179 passengers, returns to its point of origin and lands safely with a 1-ft.-diameter hole that had developed in its left wing. No injuries are reported.

Due a growing backlog of maintenance due on its aircraft in wake of the mechanics' alleged slowdown, the company, also on November 20, obtains a temporary restraining order from the U.S. District Court against its mechanics. The problem, however, continues. By late the next morning, the airline reports that 36 of 45 flights cancelled thus far are attributed to "maintenance operations issues." The day's total will reach 200.

Northwest and **Malaysia Airlines, Ltd. (MAS)** are granted antitrust immunity by the DOT on November 22; their new code-sharing agreement will be implemented in January on routes from Kuala Lumpur to Los Angeles, Tokyo (NRT), and Nagoya.

Also on November 22, a federal judge suggests he may hold the airline's mechanics in contempt for not agreeing to work more overtime and purposefully delaying aircraft departures. A show-cause hearing is scheduled for November 29. The Aircraft Mechanics Fraternal Association is prepared to argue that there are just too few mechanics employed at Northwest and that there is no organized slowdown. Another 36 flights are cancelled on November 28.

Internet Check-in becomes available to all Northwest customers flying domestically, beginning on December 1.

Northwest announces on December 5 that it will take a \$25-million pretax charge in the fourth quarter related to the sale of its Continental stock back to Gordon Bethune's Houston-based major.

Beginning on December 8, Northwest starts cancelling flights seven to eight days in advance. The same day, however, company pilots agree to begin early negotiations on a new collective bargaining agreement, even though the current agreement does not become amendable until September 13, 2002.

By December 9, Northwest has scrubbed approximately 20% of its 1,700 daily departures.

At this point, the carrier issues a new policy requiring its mechanics to work double (12–16-hour) shifts to help clear the backlog. The local chapter of the Aircraft Mechanics Fraternal Association immediately raises strong safety concerns. On December 11, AMFA national director O. V. Delle-Femine issues a statement indicating that the maintenance backup at Northwest has been caused by the airline's refusal to hire additional mechanics and not by a work slowdown by those already employed. He notes the irony that the carrier is negotiating with its pilots, but not with AMFA.

Also on December 11, a Midwest snowstorm shuts down Chicago (ORD) and associated freezing plays havoc with traffic to and from Detroit (DTT). At the latter point, over 500 people are stranded.

All flights to Memphis are cancelled on December 13 due to freezing rain and ice. At Detroit, where many flights are again shut down, Flight 997 for Miami causes acute embarrassment. A total of 139 passengers

are shuttled on and off their aircraft 3 times over 9 hours before the flight is finally cancelled. Fearing a reprisal of memories of the January 1999 fiasco when 6,240 Northwest travelers were stranded aboard aircraft at Detroit, the company immediately offers its apologies. It also gives each of the passengers \$200 in expense money and a free roundtrip ticket. Those missing connections with cruise ships are flown free to ports where the ships might be met. Less than a month later, on January 11, the carrier, without admitting wrongdoing, will pay a lump sum \$7.1-million settlement to compensate those stuck inside grounded planes on January 2, 1999.

On the plus side, it is also announced on December 13 that a third weekly Detroit–Shanghai nonstop passenger roundtrip and an all-cargo service will be added on April 1. The move comes just as the DOT is making an award of 10 new weekly all-cargo frequencies to China, 2 of which go to **United Airlines**, along with 6 to **United Parcel Service (UPS)** and 1 each to Northwest and **Federal Express (FedEx)**.

The company's daily seasonal nonstop Jumbojet return service from Minneapolis (MSP) to Honolulu is made permanent in mid-December. On December 18, Northwest begins to place its code on the services of **Air China International Corporation** connecting Beijing, Shanghai, and Guangzhou with Shenyang, Xian, Nanjing, Qingdao, Chengdu, and Xiamen. The last of 10 A319-114s to be delivered since January arrives at Minneapolis (MSP) on December 19.

Caught on videotape by KSTP-TV cameramen working on another pre-Christmas story, three baggage handlers are suspended on December 21. The news footage shows the three unloading packages from a Northwest plane at Minneapolis (MSP) and tossing them high into the air like basketballs into a bin. A number of parcels are also shown missing and hitting the ground. The union representing the three workers blames the incident on the airline's outdated equipment.

Following a meeting, also on December 21, during which both sides offer new proposals, the National Mediation Board approves the 1resumption on January 8 of negotiations between Northwest and the AMFA.

A number of A320-212 winter season Saturday return services are initiated on December 23, including Detroit (DTT) to Montego Bay and Punta Cana and Minneapolis (MSP) to Grand Cayman, Puerto Vallarta, and Punta Cana. The Puerto Vallarta from Minneapolis (MSP) route is operated daily beginning on December 31. All of these holiday flights will end in April.

Customer bookings rise 4.6% to 58.72 million. Revenues for the year as a whole increase 11.1% to \$11.42 billion, while expenses surge 13.4% to \$10.85 billion. Operating gain falls 20.3% to \$569 million and net gain drops 14.7% to \$256 million.

It will be reported on February 21, 2001, that Chairman/President/CEO Dasburg, the longest-serving current head of a major U.S. airline after Herbert Kelleher of **Southwest Airlines**, will become chairman/CEO of Burger King on April 1. He will be succeeded as chairman/CEO by Chief Operating Officer Richard Anderson, with Executive Vice President Douglas Steenland becoming president.

NORTHWEST AIRLINES (ISLE OF MAN), LTD.: United Kingdom (1950–1952). In late 1949, **British European Airways Corporation (BEA)**, which has flown numerous unprofitable routes from the Isle of Man for three years, announces that, henceforth, it will provide only "essential links." Associate companies will, however, receive subsidy to provide these services.

During 1950, two small Isle of Man-based charter operators, **Manx Air Charter, Ltd.** and **Mannin Airways, Ltd.** negotiate a merger so that, combined, it might be strong enough to take over the abandoned BEA routes. The discussions fail and Mannin Airways, Ltd. elects to join with **Ulster Aviation, Ltd.** to create Northwest Airlines (Isle of Man), Ltd.

Northwest successfully acquires a two-year BEA associate contract and with 2 Douglas DC-3s, formerly operated by **British Overseas Airways Corporation (BOAC)**, the new entrant launches scheduled flights

from the Isle of Man to Belfast, Blackpool, Carlisle, Glasgow, Liverpool, Manchester, and Newcastle. Unhappily, the state carrier refuses to guarantee subsidy beyond two years. Thus, in 1952, Northwest sells its aircraft and agrees to have its remaining assets purchased by **Lancashire Aircraft Corporation, Ltd.**, which is already flying its own Blackpool to Manchester route.

NORTHWEST AIRWAYS: United States (1926–1934). When the **Charles Dickinson** operation gives the required 45-day notice of route abandonment on August 1, 1926, St. Paul Chamber of Commerce official Lewis H. Britten steps in. Britten, who had backed Dickinson and overseen financing for construction of the local airport, secures sufficient backing from 29 Minneapolis and Detroit business acquaintances (including Henry Ford) to start a company he names Northwest Airways, incorporated under Michigan law, on September 1, with a base at Wold-Chamberlain Field.

As general manager, Britten makes application and wins U.S. Post Office's Contract Air Mail (CAM) Route No 9 (Chicago–Milwaukee–Minneapolis) when it is put up for rebid on September 30. Four pilots are now hired: Robert Radoll, Charles W. "Speed" Holman, Chester Jacobson, and David Behncke (later first president of ALPA) and these join five other employees. Three Stinson SB-1 Detroiters are ordered for a total of \$39,000, while one each Curtiss K-6 Oriole and Thomas Morse Scout are chartered from William A. Kidder, owner of Curtiss Northwest Airplane Company, which Kidder employed to inaugurate mailflights on October 1.

Taking off from Minneapolis, one of the aircraft is forced to crash and is replaced by a second leased Oriole. Having compensated others on Britten's behalf to yield delivery slots, Edward "Eddie" Stinson delivers his Detroiters, the nation's first closed-cabin commercial planes, allowing the Oriole and Scout to be returned to their owner. Capt. Dave Behncke arrives on November 1 and Detroit flights begin on November 2. The same day, Stinson and Charles "Speed" Holman fly the second and third all-black aircraft, nicknamed "Blackbirds," to Minneapolis.

The Blackbirds are repainted late in the second quarter of 1927 as the company prepares to host the traveling public. A new roundel, the airline's first corporate insignia, is introduced bearing gold wings centered on a blue-black, white and red background. One-way passenger flights of \$40 are begun on July 5 between the Minneapolis/St. Paul and Chicago via La Crosse, Madison, and Milwaukee; these continue for three months before severe weather forces cessation. During those months, a total of 106 travelers are boarded. It is also during those months that Holman, chief pilot and a noted stunt flyer, and Behncke clash over aircraft safety; a feud develops leading to Behncke's termination. The fired man goes to work for **Boeing Air Transport** and becomes an active labor leader; his onetime boss will be killed while stunting in an Omaha air show four years later. By late December, the Chicago–La Crosse route is lighted, allowing night flights.

In 1928, the company begins the route expansion that would eventually make it one of the world's largest airlines. Weekly Minneapolis (MSP) via Fargo to Winnipeg service starts on February 1, the company's first international routing. Scheduled air express flights are launched on April 2. Three WACO Taperwings are added to the mail routes. Permanent passenger service is launched on June 7. On September 1, the carrier, employing the second-built Ford 5-AT-2 acquired from its builder just the day before for \$65,000, begins the first coordinated U.S. air-rail service in connection with three railroads.

Under the plan, the company's trimotor, *Grey Eagle*, departs Minneapolis (MSP) with air-rail passengers boarded from Northern Pacific Railroad's morning arrival from the Pacific Coast and arrives at Chicago's Cicero Field three hours later allowing the passengers to catch east-west rail connections. Two other railways will join Northern Pacific at a later date. Minneapolis to Green Bay flights begin on September 15 via Fond Du Lac, Oshkosh, Neenah-Menasha, and Appleton, Wisconsin. Ford 5-AT-3 is delivered on October 6 and joins two

Hamilton H-47 Metal Planes, nicknamed Silver Streaks, during the month in replacing the Detroiters on the Chicago route.

The SB-1s are moved to a new feeder service which, beginning on December 15, connects Green Bay to the main trunk at Milwaukee via Appleton and Fond du Lac. At year's end, the workforce totals 30 and revenues are some \$300,000. That fall, Ford 5-AT Tri-Motors are placed on line and, on December 15, a route is established from Milwaukee to Green Bay. In the six months of the company's second passenger flying year, 6,000 passengers are transported.

Passenger service is inaugurated to Rochester, Minnesota, on May 1, 1929; later in the month, a third Hamilton Metalplane is acquired from its manufacturer. The Ford 5-AT-48 is delivered on June 14. Just after takeoff from the St. Paul airport on June 24, all three engines of Ford 5-AT-2, en route to Minneapolis with eight passengers, quit; the plane crashes near Indian Mounds Park (one dead). It is replaced in service by Ford 5-AT-48 on July 1. Night-airmail flights begin from Minneapolis–Chicago on August 1, the same day the government adopts Northwest's "U.S. Air Mail" insignia for all carriers.

On October 1, Northwest Airways is reorganized under Delaware law and via **Transcontinental Air Transport (TAT)**, the holding company North American Aviation acquires substantial stock. During the year, the airline becomes one of the first to uniform its flight crews; pilots wear navy blue uniforms with double-breasted coats sporting brass buttons and gold trim. The one-millionth mile flown is recorded on December 31 as passenger enplanements reach the 6,000 level for the year.

A fourth Stinson Detroiters is purchased from L. S. De Long in February 1930 and in March, service is added to Rockford and Elgin, Illinois, and Janesville, Wisconsin. Congress passes the McNary-Watres Act on April 29 while, also in April, the airline purchases a fourth H-47, this one from C. H. Keller. Weekly flights, Twin Cities to Sioux City and Omaha begin in May, but are later suspended. Because Manager Britten wanted to start a northern transcontinental route in opposition to certain Post Office backed ideas for expansion, Northwest and its officials are pointedly—and fortuitously—not invited to attend the so-called "Spoils Conference" hosted by Postmaster General Walter Fogler Brown in Washington, D.C. in May.

On June 25, a hangar fire at Chicago destroys a Stinson SB-1 and the Ford 5-AT-3. The carrier's first ground radio installation is purchased and the Nebraska operations base is moved to St. Paul's downtown airport. Thereafter, the carrier expands westward, city by city, through the Dakotas, Montana, the western Canadian provinces, and Washington, picking up additional passengers and mail contracts along the way. E. L. Cord sells Northwest his Stinson SM-2AB Junior in July and on September 27, a gale blows over the 5-AT-48 at Chicago; the badly damaged aircraft will be repaired at the Ford factory during the winter.

The Tri-Motor 5-AT-58, having been employed by Ford as a demonstrator, is purchased on January 31, 1931. The aircraft will be flown by several owners over the next 25 years, but in 1956, it is briefly reacquired by the successor organization, **Northwest Airlines**, under lease from **Johnson Flying Service**, to make a commemorative transcontinental flight. Daily North Dakota service is inaugurated to Winnipeg on February 2 via Fargo and Grand Forks; later in the month, two more Hamiltons are acquired, these from Boeing. After shakedown preparations, Ford 5-AT-58 is placed into service on April 18. A Sikorsky S-38 amphibian is acquired in late April and employed to initiate services to Duluth (which has no airport) on May 31. Earlier in the month, the last new Hamilton Metalplane is purchased from its builder.

On June 2, the Bismarck route is extended as stops are made at Valley City and Jamestown. Also in June, the company buys its last H-47s, one each from D. W. Norris and **American Airways**, along with three Travelair 6000As. Manager Britten now spends much of his time in Washington, lobbying for permission to extend his company's routes to the west. A frugal man, Britten keeps his files at the office of his attorney, William P. MacCracken Jr., assistant secretary of commerce. The final Ford Tri-Motor B, 5-AT-42, is purchased from Standard Oil on

August 1, while the company's last surviving SB-1 Detroiters is sold to G. Gabriel Lamiord in November.

Flights—and accidents—continue in 1932. En route to Chicago with mail on January 21, the Stinson SM-2AB Junior, piloted by Charles Rousch, crashes in poor weather at Calvin Park, Illinois; Rousch attempts to parachute but his rig is caught in the tail assembly and he is killed. While en route from St. Paul to Chicago on April 12, Ford 5-AT-42 piloted by Mal B. Freeburg, literally loses its starboard engine over the Mississippi River; despite a damaged right landing gear, the aircraft is safely landed at Wabasha, near Rochester.

Chief pilot Charles W. "Speed" Holman loses his life in an air show accident in Omaha on May 17. A former banking official and Minnesota native returned from New York City, Croil Hunter, is appointed traffic manager. The leading edge of the right wing of Ford 5-AT-42 is damaged in a June 16 ground collision with a taxiing Stinson Tri-Motor. A Travelair 6000A is acquired, also in June, but is quickly sold to **Canadian Airways, Ltd.** in July; the following month, a Stearman C3B is purchased for the mail service. A second Sikorsky S-38 is purchased in December for the Duluth service.

With Amelia Earhart along as an observer, a Ford Tri-Motor makes a proving flight from Minneapolis to Seattle in January 1933. In February, a Hamilton is lost in a fire. Later in the month, Northwest inaugurates night passenger flights between Chicago and Minneapolis (MSP). The route is stretched westward to Billings via Bismarck, Glendive, and Miles City, on March 2. One of the Travelair 6000As is sold to Mike Cafferelo in May. On June 1, the company is purchased by the North American Aviation subsidiary of General Motors.

Because NAA holds more than one major airline, which is against a policy of Postmaster General Walter F. Brown, it is required to divest itself of Northwest. Minneapolis (MSP) businessmen buy control of Northwest Airways on July 1. Britten becomes senior vice president and Croil Hunter is appointed vice president-general manager.

In August, Ford Tri-Motors replace Hamilton metal planes on the Minneapolis (MSP)–Chicago night service. Simultaneously, passenger baggage limits rise from 30 to 40 pounds per person. While taxiing at Chicago on August 30, the 5-AT-58 suffers the loss of its right wheel hub; the accident forces the aircraft to nose up and fall on its tail, breaking the Ford's back. While flying over West Salem, Wisconsin, on September 20, the ill-fated 5-AT-42, again piloted by Mal Freeburg, loses a propeller from its port engine; although the engine itself does not drop off, the landing gear below it is damaged. Still, Freeburg is able to make a safe, one-wheel landing at La Crosse.

The westward route is extended to Spokane via Helena, Butte, and Missoula on October 23. On the last day of the month, a stop is added at Dickinson, North Dakota; however, a reduction in federal mail subsidy leads to cancellation of flights to Madison, Green Bay, and Duluth. On December 3, Northwest becomes the country's northern transcontinental air carrier when flights link Spokane and Seattle. The next day, service starts to Tacoma.

These West Coast stops represent the successful culmination of a yearlong battle with **United Air Lines** over who would win government approval to, in fact, fly into the Northwest. In a December 13 White House ceremony, President Franklin D. Roosevelt awards pilot Mal Freeburg the Air Mail Flyer's Medal of Honor for his skill in landing the damaged Ford Tri-Motor at Wabasha in April 1932 and the 5-AT-42 at La Crosse in September. Between December 15 and December 30, three Lockheed Orion 9Ds are purchased from their manufacturer.

In January 1934, the U.S. Senate's Special Committee on Investigation of Air Mail and Ocean Mail Contracts, chaired by Alabama Democrat Hugo L. Black, begins to examine the airmail activities of the previous Republican administration. Among the exhibits sought are the files of attorney MacCracken and his clients, including Britten. The files of Northwest's president are most complete, almost diary-like in the amount of gossip correspondence written down.

Britten attempts to remove and destroy this evidence; however, investigators are able to literally piece much of the torn-up material back

together and it is presented before the Committee. Senator Black brings Britten up on charges of contempt of Congress and organizes a Senate trial at which the former company official (Britten had resigned at the start of the trial to spare Northwest from embarrassment) is convicted. He will serve 10 days in jail as the only airline executive to be imprisoned as a result of the airmail hearings.

Meanwhile, as a result of the "Airmail Scandal," President Roosevelt cancels the existing airmail contracts in February and turns the mail business over to the Army Air Corps which, while willing, is not up to the task. In late March, the Post Office allows companies and individuals not involved in the 1930 Spoils Conference to rebid the old routes. Prior to the contract awards on April 20, the carrier is reincorporated, under Minnesota law on April 16, changing its title to **Northwest Airlines, Inc.**

NORTHWEST COMMUTER: United States (1969). Northwest Commuter is founded at Everett, Washington, in early 1969 to provide Piper PA-23 Aztec commuter flights to Seattle. The service ends after only a few months.

NORTHWEST INTERNATIONAL JET, LTD.: Vancouver International Airport, 125-5360 Airport Road South, Richmond, British Columbia V7B 1B4, Canada; Phone (604) 273-5573; Fax (604) 273-4009; Year Founded 1993. NI is set up at Vancouver Airport in 1993 to provide executive and small group passenger charters throughout Canada and the U.S. Milton Woods oversees the work of five pilots and schedules the concern's two Cessna 550 Citation IIs.

NORTHWEST JET: 7000 Merrill Ave., Hangar 31, Chino, California, 91710, United States; Phone (909) 597-9999; Fax (909) 597-6569; Year Founded 1987. NJ is founded at Chino Airport in California in 1987 to provide domestic and worldwide executive and small group passenger charters. Within 13 years, the company employs 10 pilots and operates a fleet that comprises 1 each Learjet 25G, Learjet 36A, Grumman 980 Commander Jetprop, G-500 Aero Commander, and Swearingen Metro.

NORTHWEST ORIENT AIRLINES. See **NORTHWEST AIRLINES.**

NORTHWEST SEAPLANES: 860 W. Perimeter Road, Renton, Washington 98055, United States; Phone (425) 277-1590; Fax (425) 277-8831; <http://www.nwseaplanes.com>; Year Founded 1988. NW Seaplanes is established at South Lake Washington at the Renton Airport in 1988 to operate passenger charters to Seattle/Tacoma International Airport, the San Juan Islands, and Victoria. Additionally, the company operates a variety of charters to various bush and nonscheduled locations, including area lodges, resorts, and fishing hot spots.

In 2000, the fleet features 7 float-equipped de Havilland Canada DHC-2 Beavers and 2 Panther Converted Piper PA-31-350 Navajo Chieftains.

NORTHWEST TERRITORIAL AIRWAYS, LTD. (NWT AIR): Canada (1961–1998). Robert P. Engle forms this carrier in a warehouse in Yellowknife, capital of the Northwest Territories, late in 1961. Employing a lone Douglas DC-3, Engle launches nonscheduled charter services to bush destinations throughout the area in 1962.

In 1963–1967, the operation is gradually enlarged and the fleet is increased by the purchase of four more DC-3s and a Beech 18. All manner of items are transported from husky dogs to cancelled bank checks. A DC-3 begins the carrier's first scheduled service in 1968 from Yellowknife Airport to Coppermine.

In 1969–1975, two de Havilland Canada DHC-6-300s and two former **Canadian Pacific Airlines, Ltd.** DC-6Bs are employed to assist the DC-3s in regular flights to such additional destinations as Holman Island, Cambridge Bay, Gjoa Haven, Spence Bay, Hall Beach, Fort Simpson, Norman Wells, Pelly Bay, and Rankin Inlet. Meanwhile, charter and

contract service operations are undertaken for oil and mineral industries. A DC-3 is lost in a crash at Somerset Island, Northwest Territories, on May 13, 1971 and one is withdrawn in 1975.

When **International Jet Air, Ltd.** of Calgary declares bankruptcy in 1976, its three Lockheed L-188As are purchased for an average price of C\$300,000 and placed in service. A DC-3 is sold that year and one early the next.

Under contract to Dome Petroleum in 1977, an Electra provides contract flights from Calgary and Edmonton to Tuktoyaktuk on the Arctic coast. Although another DC-3 is sold in 1978, Douglas services continue as before; however, the one DC-6B is sold in July.

Having received a license to operate Lockheed L-382G Hercules freighters back in 1973, owner Engle acquires such an aircraft from the South African carrier **Safeair Freighters (Pty.) Ltd.** under charter in September, basing it in London to undertake gold bullion flights. The DC-6B is employed to inaugurate a new route from Yellowknife to Coppermine via Cambridge Bay in November. In December, the carrier acquires a northern transcontinental route from its base to Frobisher Bay via Rankin Inlet.

The last DC-6B is sold in January 1979 and a second Hercules, also leased from **Safeair Freighters (Pty.), Ltd.**, joins the fleet in May.

An ex-military C-47 is acquired in April 1980. In October, the carrier links its Yellowknife base with the small communities of Pelly Bay, Spence Bay, and Gjoa Haven.

The second leased Hercules is returned in May 1981 leaving the first to operate a **Purolator Courier** trans-Canada service alone until joined by an L-188AF in July. Meanwhile, in June, an ex-**Pacific Western Airlines, Ltd. (PWA)** L-382B is acquired. Having acquired the former PWA Winnipeg–Yellowknife service, also in June, Electra flights are introduced over that route in August.

Austin Airways, Ltd. now inherits the **Purolator Courier** contract that NWT Air can no longer fulfill. Significant route expansion begins in December. Two new routes are opened from Winnipeg—to Rankin Inlet and Yellowknife and to Yellowknife direct. Additionally, the DC-3 fleet, stabilized at five, opens services from its base to Fort Liard and Fort Nelson via Fort Simpson.

A former **Pacific Western Airlines, Ltd. (PWA)** L-100-20 catches fire while unloading a cargo of gasoline at a point 200 mi. E of Inuvik on April 11, 1982; although the aircraft is destroyed, its crew escapes injury.

After the failure of **Swiftair Cargo, Ltd.**, the company, beginning in October, assumes the defunct carrier's transcontinental all-cargo route. Nightly, three leased L-188s from opposite directions fly the Toronto, Winnipeg, Edmonton, and Vancouver return service. Domestic and scheduled services continue across the Northwest Territories and to points in Manitoba, British Columbia, Alberta, and Ontario. The Hercules undertakes occasional outsized cargo charters to destinations outside of Canada.

An ex-Imperial Oil Electra joins the fleet in June 1983 and in December of that year, the leased **Safeair Freighters (Pty.), Ltd.** L-382G is returned when the last available PWA L-382G is purchased.

The fourth and fifth Electras join the carrier's fleet in May 1984, allowing NWT Air to take over **Air Canada, Ltd.**'s high priority Gold Label Vancouver–Toronto night courier service flown via Calgary, Edmonton, and Winnipeg. The following month, weekly DC-3 service is initiated between Cambridge Bay and Homan Island and between Hall Beach and Pelly Bay. The direct Winnipeg–Frobisher Bay run is discontinued.

The stops on the trans-Canada night cargo run are rearranged somewhat in April 1985 and a DC-3 cargo frequency is opened between Edmonton and Calgary. A **City Express, Ltd.** Saunders ST-27 is wet-leased to link Montreal and Ottawa with the Toronto cargo terminal. The Hall Beach–Pelly Bay service ends in October, being replaced by flights from Pelly Bay to Gjoa Haven. Airline employment is now 140.

In March 1986, the carrier's cargo operation is pooled with that of **Air Canada, Ltd.** into a joint venture delivery system, allowing first-time

initiation of overnight cargo services to various destinations in the Northwest Territories. In September and October, two Electras are sold to **Falcon Cargo, A.B.** in Sweden and are replaced by an L-188A formerly flown by **Reeve Aleutian Airways**. Another L-188A is leased from Reeve for 10 months in February 1987. The following month, the company joins the "Air Canada Connector" commuter network and in April begins feeder services from Edmonton–Yellowknife and from Cambridge Bay–Coppermine and Holman Island. The state carrier purchases 90% controlling interest in November, with the original owner Robert Engle retaining 10% shareholding.

Toronto is suspended as a cargo terminus in early 1988, leaving NWT Air to fly nightly from Winnipeg–Edmonton via Regina and Saskatoon. Inuvik–Yellowknife–Edmonton L-188A flights begin in the spring and during the summer, thrice-weekly offerings are undertaken between Inuvik and Frobisher Bay via Yellowknife and Rankin Inlet.

A DC-3 is sold in October while a Boeing 737-210C is leased from **American Airlines** and placed into service in November, the same month an L-188A and the two of the last three DC-3s are sold. During the year, Air Canada assumes 100% ownership.

In early 1989, the decision is taken to concentrate solely on services to the Arctic. In February, another Boeing 737-210C is acquired from **American Airlines** and the Winnipeg–Yellowknife route is dropped in March. An understanding is reached with **First Air, Ltd.** to alternate trans-Canada flights north of the 60th parallel and the Edmonton route is extended to Calgary.

The fleet in 1990 comprises 2 leased B-737-210Cs, 3 L-188s, and 1 L-382G Hercules. Founder Engle retires.

Two of the Electras are withdrawn in 1991 and the last Electra is deleted in 1992. Late in the year, the two B-737-210Cs are purchased and a B-737-275C is chartered from **American Airlines**. In 1993, President/General Manager Dan Murphy oversees a workforce of 160. Destinations visited on a regular basis now include Calgary, Edmonton, Yellowknife, Cambridge Bay, Rankin, and Winnipeg.

The fleet of the "Air Canada Connector" partner in 1994 includes 2 owned B-737-210ACs and 1 each B-737-275C (leased), British Aerospace BAe 146-200, and L-382G (leased). Following **Air Canada Ltd.**'s January corporate makeover, the carrier spends the remainder of the year changing the color schemes of its aircraft to match.

Operations continue apace in 1995–1996.

On January 10, 1997, 900 pilots from the other four "Air Canada Connector" airlines go on strike over merged seniority lists. NWT Air is not immediately affected, as its flyers do not participate. When the job action is concluded in early March, **Air Canada, Ltd.** begins a review of its entire regional airline situation. The examination, driven not only by the strike, but by the start up of deep-discount competitors **Vistajet, Ltd.** and **Greyhound Air, Ltd.** as well, results in the major's decision to sell off NWT Air.

Flights under Northwest Territorial Airways continue until June 24, 1998, when the longtime northern pioneer is merged into **First Air, Ltd.**

NORTHWESTERN AIR LEASES, LTD.: Canada (1994–1998). Terry Harold sets up NAL at Fort Smith in 1994 to operate both scheduled and charter flights throughout the Northwest Territories. The fleet includes 1 each Cessna 337C, Cessna 401, British Aerospace BAe Jetstream 31, and 2 Beech 99s. The latter three aircraft are devoted to scheduled flights, which continue until the company shuts down in 1996.

NORTHWESTERN AIRWAYS (PTY.), LTD.: Australia (1938–1940). Northwestern Airways (Pty.), Ltd. is founded at Sydney in the early spring of 1938. After obtaining a de Havilland DH 90 Dragonfly, the company inaugurates unsubsidized service from Sydney to Moree via Tamworth on March 17.

Traffic does not materialize and as a result, flight operations cease on October 20, 1940.

NORTHWESTERN ARCTIC AIR: 6231 S. Airpark Place, Anchorage, Alaska 99502, United States; Phone 907 245-4566; Fax 907 245-4567; Year Founded 1998. NAC is established at Anchorage International Airport in 1998 to operate executive and small group passenger charters. Revenue flights begin with a single Learjet 25B.

NORTHWESTERN EXECUTIVE AIR: 7205 Perimeter Road South, Boeing Field, Seattle, Washington 98108, United States; Phone (206) 767-2539; Fax (206) 767-2549; <http://www.guides.com/acg/northwestern>; Year Founded 1995. One of the largest executive and small group charter operators in the Pacific Northwest, NEA is established at Seattle in 1995. Flights begin to domestic and worldwide destinations with a fleet that comprises 1 Dassault Falcon 50, 1 Grumman G-1159 Gulfstream II, 1 Learjet 55 Longhorn, and 2 British Aerospace BAe (HS) 125 Hawkers.

NORTHWINDS NORTHERN, LTD.: Canada (1988–1996). Lawrence Yusishen establishes Northwinds at Thompson, Manitoba, in 1988 to provide scheduled passenger and cargo flights linking the company's base with Cross Lake and Norway House. Operations commence with 3 Britten-Norman BN-2 Islanders, 2 Piper PA-31-350 Navajo Chieftains, 2 PA-31-310 Navajos, and 1 PA-34 Seneca.

Ray Bayer is appointed general manager in 1990 and flights begin to Winnipeg. The fleet is increased by the addition of a Beech Super King Air 200. In 1991, the Seneca and Super King Air are replaced by a de Havilland DHC-2 Beaver. A DHC-3 Otter is purchased in 1992.

Operations continue apace until 1996.

NORTJET, S.A.: Spain (1988–1992). Nortjet is organized as a charter airline at Madrid in late 1988 and a contract is placed with GPA, Ltd. for the lease of three Boeing 737-4Y0s. Revenue flights commence in early 1989 after delivery of the first aircraft. A total of 376,575 passengers and 51.73 million FTKs are flown by the 153-employee airline during its first full year of service. Although revenues are \$32 million, expenses are \$33.9 million and force and operating loss of \$1.9 million.

Operations continue apace in 1990 as plans are made to offer scheduled services with a British Aerospace BAe 146-200. In light of world recessionary and political developments, the idea is abandoned in 1991. Unable to maintain its viability, the carrier is forced to shut its doors on February 12, 1992.

NORVING, A.S.: Norway (1959–1990). Originally formed at A.S. **Varangfly** at Kirkenes in July 1959, this company begins de Havilland Canada DHC-2 Beaver charter operations on June 20, 1960. Nonscheduled operations, including air ambulance and general charter flights from bases at Kirkenes, Alta, Hammerfest, Tromsø, Bodo, Bronnøysund, Skien, and Bergen continue for 11 years until April 1, 1970, when the company is renamed **A.S. Varangfly-Norwings** and begins scheduled services. Flights link the Kirkenes to Vadsø and Batsfjord.

The corporate image is changed again on July 1, 1972 when the airline is renamed **A.S. Norving**. Over the next decade, the fleet grows to comprise 5 Cessna 404 Titans, 4 Britten-Norman BN-2 Islanders, 1 Cessna 441, 1 Piper PA-31-350 Navajo Chieftain, 3 PA-31-310 Navajos, 1 DHC-3 Otter, and 1 DHC-2 Beaver.

In 1981–1982, Norving becomes the first to take delivery of the new Dornier 228-100 turboprop as passenger boardings rise from 49,510 to 52,190.

In 1983, the commuter airline **A.S. Nordsjofly** is taken over as a subsidiary and the carrier's scheduled is significantly increased. Domestic points now visited include Alta, Batsfjord, Bergen, Farsund, Hammerfest, Hasvik, Haugesund, Kirkenes, Oslo, Skien, Stavanger, Tromsø, and Vadsø.

Regional markets include Kiruna, Sweden, and Rovaniemi, Finland. In addition, replacement services are undertaken by the 152-employee company for **SAS (Scandinavian Airlines System)** linking Trondheim with Sundsvall and Östersund in Sweden. Customer bookings skyrocket 106% to 107,555.

Enplanements for 1984 total 150,000 and the fleet in 1985 comprises 4 Dornier 228-100s, 2 Fairchild-Swearingen Metro IIIs, 2 Beech 99s, 1 Navajo Chieftain, 4 Islanders, 5 Cessna 441C Conquests, and 2 404 Titans.

By 1986, Managing Director Hans Hate's fleet has been upgraded further by the addition of three SAAB-Fairchild SF340s, a fifth Dornier, and four Chieftains; gone are the BN-2 Islanders. A.S. Nordsjofly is fully absorbed during 1987. Over the next two years, the company encounters rising financial difficulties. On February 1, 1988, after the company's failure to win a government air ambulance contract or approval for higher fares, scheduled services are halted and most of the routes are turned over to **Norsk Air, A.S.**

Per Lie is named managing director in 1989. Severe cost cutting measures are put in place, including retirement of the entire fleet save two Dorniers and an Islander. These transport a total of 25,000 passengers on the year. Early in 1990, the company's routes are transferred to Wideroe's and Norving ceases operations in May.

NORWAY AIRLINES, A.S.: Norway (1991-1992). A part of the **Air Europe, Ltd.** empire since 1989, Norway Airlines is reformed at Oslo in the spring of 1991 under the auspices of the Trans Nordic Airlines alliance, initially comprised of **Sterling Airways, A.S.** and **Transwede, A.B.** Two Boeing 737-33As are acquired and employed to begin 12-times-a-week revenue services to London (LGW) during the summer. Between July and December, enplanements total 198,730.

In the spring of 1992, the 123-employee carrier applies for several new routes and trades in its Boeings for 2 machines leased from Transwede: a McDonnell Douglas MD-83 and an MD-87. As the world recession deepens, the airline encounters severe financial difficulties.

The new routes are not inaugurated and during the summer, only the MD-87 is flown. The company is unable to maintain its viability and closes its doors in bankruptcy on October 14. Norwegian authorities rebuff a December 10 purchase offer from **Air Holland Charter, B.V.**, which has demanded, as part of its rescue package, that the 12 weekly roundtrips to London be maintained.

Efforts at refinancing continue throughout 1993-1994. Several of its aircraft will remain out under charter commitments for the next two years.

NORWEGIAN AIR SHUTTLE, A.S.: P.O. Box 115, Oksenoyveien 10, Oslo, N-1331, Norway; Phone 47 67 583 777; Fax 47 67 583 277; <http://www.norwegian.no>; Code BS; Year Founded 1993. Following the December 1992 bankruptcy of **Busy Bee of Norway, A.S.**, a wholly owned subsidiary of the shipping conglomerate LG Braathens, S.A., the assets are reformed by the former regional's management on January 23, 1993 and is given this new corporate identification, including livery and logo. Ownership is divided between Bjorn Kjos (45%), Svein Klev (20%), and the 5% shareholders Arne Jan Eggan, Bjorn Halvor Kise, and Oyvind Hovengen.

Having helped to raise Nkr 2 million in start-up capitalization, the former president, Einar Fjeldstad, remains as managing director. He oversees a workforce of 175, including 55 hired from the ashes of the predecessor airline, and a fleet of 5 Fokker 50s, 3 of which are wet-leased to **Braathens SAFE, A.S.**, and 10 F.27s.

In addition to ad hoc charter and contract service flights, the company also undertakes replacement frequencies for **Braathens SAFE, A.S.**, **Wideroe Norskair, A.S.**, and **KLM Cityhopper, B.V.** Minority owner Klev becomes managing director in 1994. Revenues total Nkr 51.56 million and a net Nkr 4.74-million profit is reported.

Flights continue in 1995-1997. Revenues in these years total Nkr 86.63 million, Nkr 103.29 million, and Nkr 120 million; profits are reported during the first two years noted, Nkr 1.06 million and Nkr 5.91 million, respectively. The workforce is reduced from 79 in 1995 to 77 in 1997.

The fleet in 1998 comprises 4 Fokker 50s. Destinations visited from Oslo include Stavanger, Bergen, Trondheim, Alesund, Kristiansund, and

Molde. The nation's fourth largest airline makes plans to bid on the short-field contract, presently held by **Wideroe's Flyvelskap, A.S.**, when Norway's department of transportation puts it up for bids on April 1, 2000.

During the weekend of January 15-18, 1999, company cabin crews strike for more pay. Approximately 50 departures each day are cancelled to South Norway and Trondheim, with approximately 1,500 passengers affected.

With the beginning of the summer schedule at the end of March, NAS continues to operate replacement flights for **Braathens, A.S.** in western Norway. Approximately 60 daily departures are operated to and between Kristiansand, Stavanger, Haugesund, Bergen, Molde, Kristiansund, and Trondheim.

During the summer, **Helikopter Service, A.S.** and its Tromso-based subsidiary **Lufttransport, A.S.** are taken over by **Canadian Helicopter Corporation, Ltd. (CHC)**. On November 1, daily Fokker 50 roundtrips commence between Bergen and Aberdeen, Scotland.

Enplanements for the year reach 500,000. A total of 17,670 replacement flights on behalf of **Braathens, A.S.** are completed.

The Braathens, A.S. replacement flights continue in 2000. Meanwhile, during the first half of the year, **Canadian Helicopter Corporation, Ltd.** undertakes a program of rationalization, selling off a number of noncore operations. Among these is **Lufttransport, A.S.**, which is passed to Norwegian Air Shuttle, A.S. on July 14 in consideration of a sum of Nkr 85 million (C\$14.3 million).

On August 22, a Fokker 50 is subleased from **KLM Cityhopper, B.V.** The TCAS sounds aboard an **SAS (Scandinavian Airlines System)** B-737-683 from Oslo as it approaches Alesund on August 26 because it has, at the direction of ATC, entered onto the same flight path as a NAS Fokker 50 en route from Molde to Bergen. The jetliner is able to increase its height, avoiding the turboprop.

It is announced on November 17 that the company is operating Fokker 50 replacement services from Stockholm to Newcastle on behalf of **Braathens, A.S.** To accommodate the new offering, flights between Molde, Kristiansund, and Trondheim are cancelled while the return frequencies from Bergen to Molde and Trondheim and from Bergen to Haugesund are reduced to thrice daily.

NOUVELAIR TUNISIE, S.A.: BP 66, Aeroport International, H/B Monastir, Monastir, 5000, Tunisia; Phone 216 (3) 467 100; Fax 216 (3) 467 110; <http://www.nouvelair.com>; Code BJ; Year Founded 1996. **Air Liberte Tunisie, S.A.**, a charter affiliate of the French non-scheduled carrier **Air Liberte, S.A.**, is renamed on July 1, 1996. Other data, repeated here, remains the same. Aziz Miled remains chairman, with Slaheddine Kastalli as general manager; Tunisian Travel Service is the principal shareholder. Employment stands at 375 and the fleet includes 4 McDonnell Douglas MD-83s.

The jetliners, in a new orange-and-blue livery, continue to fly from Monastir and Tunis to popular destinations in Austria, Belgium, the Czech Republic, Germany, Hungary, Ireland, Italy, The Netherlands, Poland, Russia, Scandinavia, and Spain. Neither traffic nor financial data are released.

A fifth MD-83 joins the fleet in March 1997. A total of 2,281 flights are completed during the year with 674,000 passengers visiting 90 European cities.

An order is placed with Airbus Industrie in April 1998 for three A320s.

An MD-82 is wet-leased for the summer charter season.

The MD-82 employed the previous summer is again chartered, on a long-term dry-lease, in March 1999. Also in the spring, construction is begun on a new administration center at the Monastir base. During the fall, a new marketing campaign is begun and the company changes its logo.

In ceremonies at Toulous on December 6, Nouvelair takes delivery of its first Airbus Industrie A320-214, which is christened *Dora*.

Although traffic figures are unavailable, the carrier reveals that it has, during the year, complete 3,173 flights to 90 European airports in

Germany, Belgium, Austria, Spain, France, Italy, Great Britain, Finland, Hungary, Slovakia, the Czech Republic, Denmark, Poland, Norway, and Switzerland. Operations have been conducted on behalf of 35 different tour operators.

The second A320-214 is received on March 13, 2000. The new Airbus equipment replaces MD-83s that had flown between France and Tunisian resort destinations. Chairman Miled leads the company in eleventh anniversary celebrations during November. At the ceremonies, he indicates that the next Airbus will, in fact, be delivered in 2002.

NOVA AIRLINES, A.B. (NOVAIR): Kungstengarten 35, Stockholm, I-000148, Sweden; Phone 46 (8) 674-1130; Fax 46 (8) 674-1140; <http://www.novair.net/uk>; Code 1L; Year Founded 1997. NA is set up at Stockholm on September 28, 1997 to undertake passenger charters and inclusive tour flights on behalf of its owners, the tour operator Apollo Resor, A. B. Roland Lijedahl is appointed managing director and is provided with a fleet comprising 1 each Airbus Industrie A320-230, Lockheed L-1011, and L-1011-500, the later obtained from **TAP-Air Portugal, S.A.**

The TriStars and Airbus inaugurate revenue flights in November to Phuket and the Canary Islands.

Flights continue in 1998. In February, the L-1011-500 is wet-leased to **Premiair, A.S.** of Denmark. The aircraft, beginning on March 10, operates charters from Stockholm, Oslo, and Copenhagen to Barbados, Cuba, Miami, and Mexico City.

Some 80 minutes into a flight from Stockholm's Arlanda Airport to Corfu on July 12, an engine aboard the TriStar 500 with 311 passengers begins to vibrate and is shut down. A safe emergency landing is made back at the point of origin and no injuries are reported.

On November 1, the L-1011-500 is hit by an air stair at Stockholm's Arlanda Airport; repair of the damaged forward fuselage requires a week.

Plans are announced five days later and confirmed on December 23 that the carrier will add a third L-1011-500, a leased former **Nordic European Airlines A.B.** unit.

Revenues for the year total Skr 785 million and a pretax profit of Skr 12.6 million is generated.

After completing a maintenance check in the U.S., the chartered L-1011-500 arrives at Stockholm in January 1999. It is immediately committed to the carrier's summer schedule, set to begin at the end of March.

Refused by **Garuda Indonesia** and acquired by **Air New Zealand, Ltd.**, a B-737-3U3 that has been chartered to **Air Atlanta Icelandic, H.F.** is subleased to Novair at the beginning of April. It arrives wearing a white livery and blue tail, with the titles of its Apollo parent painted on its right side.

It is learned on April 25 that Nova will place two of its three TriStar 1s up for sale in January and February 2000. The charter line is seeking to renew its long-haul fleet with newer types from either Boeing or Airbus.

Three B-737-800s are requested from GATX at the beginning of May. The company will also soon receive several leased B-767-300ERs.

Enplanements for the year total 465,000. Revenues advance to Skr 1.3 billion and a pretax gain of Skr 42.6 million is celebrated. During the year, the company has completed delivery of three Next Generation B-737-85Fs, one of which is employed during this winter's charter season to operate long-haul flights from Scandinavia to Las Vegas on behalf of Apollo Vacations.

A one-year lease is signed with **Swissair, A.G.** on January 23, 2000, for the lease of two Airbus Industrie A330-223s that will replace Novair's Lockheed TriStar. Wednesday TriStar return charters are flown from Goteborg to Munich between May 24 and September 8. The flights are specifically marketed to Nordic customers wanting to see the Oberammergau passion play.

The first A330-223 is delivered on September 29, followed by the second on October 20.

During the year, the Swiss travel group Kuoni Travel Holding, Ltd. purchases a 45% interest in Apollo Resor, A.B., with an option to buy the majority in 2001.

As the year ends, the company employs 400 workers, including 72 pilots and 284 cabin crew. The fleet now includes 3 chartered Next Generation B-737-85Fs and 2 A330-223s.

NOVAIR INTERNATIONAL AIRWAYS, LTD.: United Kingdom (1982-1990). When **Laker Airways, Ltd.** fails in February 1982, the major tour operator Rank Travel, which has significant bookings with the carrier, finds itself without required capacity to meet its obligations. **British Caledonian (Charter), Ltd.**, the charter subsidiary of **British Caledonian Airways, Ltd. (BCAL)**, now steps in and employing two ex-Laker Douglas DC-10-10s, honors Rank's commitments under temporary certification from the Civil Aeronautics Authority (CAA).

In March 1983, BCA Charter and Rank Travel move into a more permanent relationship to meet the tour operator's needs. With Capt. Victor Smith as managing director, the former **Laker Airways, Ltd.** DC-10-10s operate worldwide inclusive-tour and charter flights as before throughout the remainder of 1984 and most of 1985.

In October of the latter year, the three-year old temporary expedient is reformed into a new airline, **Cal-Air International Airways, Ltd.** A new corporate identity, livery, and logo are introduced and before the start of the 1986 season, a third DC-10-10 joins the fleet. During the summer, orders are placed for five Boeing 737-46Bs.

Operations to distant locations continue apace in 1987. In December, **British Caledonian Airways, Ltd. (BCAL)** and its BCA Charter subsidiary are purchased by **British Airways, Ltd. (2)**. With BA already owning a charter subsidiary and not needing two more, it orders the Cal-Air arrangement sold or liquidated.

During the spring of 1988, officials from BA and Rank Travel negotiate the fate of **Cal-Air International Airways, Ltd.** and on May 25, Rank takes control of Cal-Air. To avoid confusion with the flag carrier's holiday subsidiary, Rank agrees to change Cal-Air's corporate identity. On December 7, the name Novair International Airways, Ltd. is announced, along with new livery, logo, and uniforms. A large five-pointed star replaces the Caledonian eagle on the tails of the Douglas transports. Michael Lee is named managing director.

Two B-737-46Bs arrive in the spring of 1989 and together with the three wide-bodies, fly Rank Travel's summer tour program. For the first time, employing the "Baby Boeings," the company operates significant holiday services to European destinations.

Recession and a downturn in the tour industry cause Rank to end its lift experiment and Novair is closed on March 30, 1990.

NOVOSIBIRSK AIRLINES: Ul Chelyuskintsev 36/1, Novosibirsk, 630132, Russia; Phone 7 38 21 24 96; Fax 7 38 32 21 64 31; <http://www.nsk.su/~ngap>; Code L8; Year Founded 1995. NA is set up at Novosibirsk in 1995 to offer passenger charters to domestic and regional destinations. Shareholding is divided between M-Service, CJSC Darus, the International Bank of Reconstruction and Development, the Siberian Branch of the International Association of Company managers, Siberian Consent, and Epitak. Vitaly M. Tchijov is director general.

Revenue flights begin on September 22 with a pair of Tupolev Tu-134As.

Ad hoc service is continued in 1996-1999, during which years the long-haul fleet is enhanced by the addition of two Ilyushin Il-62s and an Il-76M. Destinations visited include Baku, Bucharest, Kiev, Moscow, St. Petersburg, and Yerevan.

In this period, the company also launches scheduled domestic cargo and passenger frequencies to Norilsk, Novosibirsk, Omsk, and Yekaterinburg. This mission is accomplished with 12 Antonov An-24Bs, 5 An-24Rs, 12 An-30s, and 11 Let L-410UVPs.

The workforce totals 100 at the beginning of 2000.

Nusantara Airlines is set up at Subang in 1991 to offer domestic scheduled passenger services. These begin and continue with a Cessna Citation II and a pair of SAAB 340As.

NWT AIR, LTD. *See* **NORTHWEST TERRITORIAL AIRWAYS, LTD.**

NYASALAND AIR CHARTER COMPANY, LTD.: Nyasaland (1949–1952). Several Blantyre businessmen join with a Pretoria, South Africa-based company in 1949 to form this small air taxi and charter operation. Revenue flights, primarily flight training and charters to small communities and bush destinations, commence with a Piper PA-11 Cruiser.

Two Piper J3 Cubs are acquired in 1950. The enterprise is not, however, without risks and by 1951, only one Cub remains available. NACC shuts its doors in early 1952.

NYGE TRAFIKFLYG, A.B.: P.O. Box 321, Stockholm Skavasta Airport, Nyköping, S-61127, Sweden; Phone 46 (155) 77 100; Fax 46 (155) 267 252; Code LP; Year Founded 1991. This new entrant is formed at Stockholm's Skavasta Airport in 1991 to offer scheduled commuter services to local destinations. President Lennart Danielsson's inaugural fleet comprises 3 Embraer EMB-110 Bandeirantes.

Operations continue in 1991–1994 and during the latter year, a fourth EMB-110 is acquired. Executive charter and all-cargo services are added in 1995–2000 as 10 Mitsubishi Mu-2s are acquired.

NYRBA. *See* **NEW YORK, RIO & BUENOS AIRES LINE (NYRBA)**

OAK HARBOR AIRLINES: United States (1971–1974). This commuter line is formed by former Whidbey Air Service CEO Wes Lupien at Oak Harbor, Washington, in March 1971 to provide both local charter services and scheduled flights linked to Seattle–Tacoma International Airport. Revenue flights commence with a single Britten-Norman BN-2 Islander.

A second Islander is acquired in December. It is stationed at Bellingham, Washington, and also flies to Seattle–Tacoma International Airport.

The two aircraft continue to operate these services until May 1974, when the corporate identity is changed to **Harbor Airlines**.

OAHU AND KAUAI AIRLINES. *See* **OK AIR (OAHU AND KAUAI AIRLINES)**

OASIS INTERNATIONAL AIRLINES, S.A.: Spain (1988–1996). Originally organized at Spain in early spring 1988 as **Andalusair, S.A.**, this passenger charter and inclusive-tour operator employs Guillermo

Jauregui as president, with J. Manuel Salgueiro as managing director. A fleet is assembled comprising 2 McDonnell Douglas MD-83s, with a third on order; 90 employees are hired. Nonscheduled services are inaugurated in May between its base at Malaga, in the Canary Islands, and the U.K. city of Manchester. After several months, the Oasis hotel group acquires controlling interest, changes the corporate name and image (while retaining the prior administration) and expands services from Spain to Scandinavia and central Europe.

A total of 150,316 passengers are transported by year's end.

Company employment grows by 52.2% in 1989 to 137 and the third MD-83 is delivered in May.

Passenger boardings jump 197.2% to 446,680.

A fourth MD-83 is acquired in 1990, again in May. Enplanements total 904,654.

The workforce is increased by 24.6% in 1991 to 208 as the leased fleet is reconfigured to include 1 MD-82 and 5 MD-83s. A new management team is put in place, company headquarters are transferred to Palma, and an interest is taken in the U.S. carrier **Private Jet Expeditions**.

Passenger boardings increase by 43.2% to 945,499 while freight climbs 55.7% to 138.2 million FTKs.

Recession causes two MD-83s to be withdrawn in 1992. In December, the carrier announces a plan to reduce costs by 14% and remove the Airbus during the following year. The board votes to increase share capital by 100% while allowing Oasis leadership to hire pilots on temporary contracts.

President/General Manager Antonio Mara oversees a workforce of 269 in 1993 and the fleet includes 3 MD-83s and 1 Airbus Industrie A310-324, which is withdrawn.

During the summer, additional MD-83s are leased for the European holiday routes; these are, however, subchartered to the Mexican affiliate **Aerocancun (Aeronautica de Cancun, S.A.)** come fall. Meanwhile, in early September, a 40% stake is acquired by Interlider of Spain.

Traffic figures for the privately owned company are not available.

Two additional MD-83s and an MD-87 are leased during 1994 as enplanements climb to 1,350,800. There is no change in the workforce in 1995. Flights continue from hubs at Madrid and the Canary Islands to Central Europe, Cuba, the Dominican Republic, Mexico, Scandinavia, and the U.K. Passenger boardings, unhappily, drop 21.2% to 1,064,000.

OBERSCHLESISCHE LUFTVERKEHRS, A.G.: Germany (1925–1926). OL is established at Gleiwitz, Upper Silesia, on February 3, 1925 to provide regional passenger and cargo services. Shareholding is divided between the State of Upper Silesia, the City of Gleiwitz, several local industrialists, and Junkers Flugzeugwerke, A.G.

The new company orders four Junkers F-13 and these are acquired by April and enter service. During the remainder of the year, two G.24s are also added.

When **Deutsche Luft Hansa, A.G. (DLH)** is formed in January 1926, OL transfers its operations to the new flag carrier, in exchange for stock. OL remains a paper airline until it is finally dissolved in 1937.

OCCIDENTAL AIRLINES, S.A.: P.O. Box 32, Ostend Airport, B-8400, Belgium; Phone 32 59 514340; Fax 32 59 510103; Code OCT; Year Founded 1995. Registered in Belgium and based in Nigeria, Occidental is set up in 1995 to undertake international and regional all-cargo services. Flights commence with one each leased Boeing 707-321C and B-707-328C. Flights continue in 1996–2000, during which years a B-707-347C is also acquired.

OCEAN AIR. *See* **REGENT AIR CORPORATION**

OCEAN AIR, S.A.: Portugal (1990–1994). Ocean Air is established at Lisbon in December 1990 and late in 1991 receives authority from the Portuguese government to offer domestic nonscheduled passenger and cargo services. Revenue flights commence at the beginning of 1992 employing a single leased de Havilland Canada DHC-6-300 Twin Otter.

Unable to maintain its economic viability, the carrier suspends operations in **1994**. At this point, **SATA Air Acores (Servico Acoreano de Transportes Aereos, S.A.)** purchases majority equity. Four years later, in February **1998**, SATA purchases the remainder of the company for its operating certificate. The concern is upgraded and relaunched on April 8 as **SATA International, S.A.**

OCEAN AIRWAYS: United States (1979–1982). The small New Jersey commuter **Monmouth Airways** is taken over in **1979** and reformed into this third-level operation. Scheduled passenger and cargo flights are undertaken, beginning on May 7, linking the company's base at Asbury Park with Atlantic City and Washington, D.C. (DCA). President Charles F. Simonelli's fleet grows to comprise 2 Convair CV-440s, 5 Martin 4-0-4s, 1 Beech 99, and 2 Piper PA-31-350 Navajo Chieftains. The privately owned company does not report figures for the year.

In **1980**, it is learned that Ocean flies 46,737 passengers. Unable to weather the recession and fiscal difficulties caused by air traffic problems arising from the summer **1981** PATCO air traffic controllers' strike, Ocean Airways must declare bankruptcy and stop flying in **1982**.

OCEAN REEF AIRWAYS: United States (1977). ORA is established at Key Largo, Florida, on January 1, **1977** to provide scheduled daily shuttle flights for the winter season in addition to its already existing schedule of charter services.

OCEAN REEF AIRWAYS. See also **MONTAUK CARIBBEAN AIRWAYS**

OCEANAIR (1): United States (1979–1984). Financially distressed **Trans-Commuter Airlines** is purchased in the fall of **1979** and reformed into a new third-level carrier, Oceanair (1). Employing 2 Fokker F.27s, 2 Beech B-80 Queen Aircr., and 5 Beech B-65 Queen Aircr., the company resumes its predecessor's scheduled passenger services from San Juan, Puerto Rico, to St. Thomas and St. Croix in the U.S. Virgin Islands. Operations continue apace during the remainder of the decade.

In **1980–1982**, President Jorge Del Valle acquires two CASA C-212-200 Aviocars. On February 18, **1983**, the company is able to inaugurate scheduled flights to the Dominican Republic communities of Santo Domingo and La Romana. Enplanements for the year total 190,231. Operations are halted and Oceanair files for Chapter XI bankruptcy in August **1984**.

OCEANAIR (2). See **AIR ILLINOIS**

O'CONNOR-MT. GAMBIER'S AIRLINE (PTY.), LTD.: P.O. Box 21, Mt. Gambier, South Australia, 5290, Australia; Phone 61 (8) 8723 0668; <http://www.oconnor-airlines.com.au>; Fax 61 (8) 8725 8003; Code UQ; Year Founded 1992. Previously known as O'Connor's Air Service (Pty.), Ltd., this air taxi is reformed at Mt. Gambier in **1992** to offer regional scheduled passenger flights to Adelaide and Melbourne, as well as bush charters. Operations are undertaken and continue with a pair of Cessna 441 Conquests. Operations continue apace in **1993–1995** with daily flights between the cities. Other destinations visited include Kingston, Millicent, Mildura, Mount Gambier, and Naracoorte.

The Conquests are replaced in **1996** by a pair of British Aerospace BAe Super Jetstream 32s. Enplanements reach 17,346.

In late **1997**, O'Connor becomes the Asia-Pacific launch customer for the Jetstream 32 Enhanced. These will replace the Cessna 441s when delivered in **1999**. Passenger boardings, meanwhile, ascend 4.5% to 18,194.

Flights continue in **1998** as the company enters into an affiliation with **Qantas Airways (Pty.), Ltd.** Daily Cessna 441 Conquest return service is inaugurated between Mildura and Adelaide; O'Connor is the only company flying the route. Enplanements surge 33% to 24,000, while airline employment grows to 17.

Passenger boardings for the year jump 26% to 31,000.

A third A\$2.5-million Jetstream 32EP is acquired in August **2000**. On September 1, it replaces Conquests on the Mildura to Adelaide route. Simultaneously, a new J-32 new service is introduced from Adelaide to Whyalla.

O'CONNOR'S AIR SERVICE (PTY.), LTD. See **O'CONNOR-MT. GAMBIER'S AIRLINE (PTY.), LTD.**

ODESSA AIRLINE: Odessa Central Airport, Odessa, 270054, Ukraine; Phone 380 (0482) 252 490; Fax 380 (0482) 250 052; Code 5K; Year Founded 1995. OA is set up at its namesake city by **Air Ukraine** in **1995** to offer domestic passenger charters. Valeri Sergeev is appointed CEO and he begins revenue flights with several Yakovlev Yak-42Ds leased from the parent.

Enplanements in **1996**, the first full year of service, total 108,031. Customer bookings fall 17.5% in **1997** to 91,942, while cargo traffic plunges 61.5% to 2.29 million FTKs.

The business picture does not brighten in **1998**. Passenger boardings fall another 11.4% to 77,000, while freight traffic declines 5% to 2.07 million FTKs.

The airline, which also is paid to oversee the operation of the local airport, is bitterly disappointed when that responsibility is taken away on October 26, **1999**. Enplanements for the year drop to a total of 50,000.

The fleet, at the beginning of **2000**, includes 1 Tupolev Tu-154A, 3 Tu-154Bs, 7 Tu-154Ms, and 4 Yak-40s. Scheduled destinations visited include Baku, Bucharest, Kiev, Moscow, St Petersburg, and Yerevan.

ODIN AIR H.F.: Reykjavik Airport, Reykjavik, IS-101, Iceland; Phone 354 561 0880; Fax 354 551 0858; Code 5A; Year Founded 1992. This Icelandic commuter operator is established at Reykjavik in **1992** to offer scheduled flights to domestic locations. President Helgi Jonsson's inaugural fleet comprises 3 Handley Page HP-137 Jetstream 1s, 1 Mitsubishi Mu-2, and 1 Piper PA-31-310 Navajo. One Jetstream is withdrawn in **1993** and placed into storage.

Service continues throughout the remainder of the decade.

ODYSSEY INTERNATIONAL, LTD.: Canada (1988–1992). Formed at Toronto by Brian Child, chairman of the holding company Soundair, Ltd. in January **1988**, this charter operator is specifically established to emulate the service of **Wardair Canada, Ltd.**, which has now turned to scheduled operations. In June, a management team led by Brian Walker, a former **Wardair Canada, Ltd.** vice president, is appointed and an agreement is signed with the International Lease Finance Corporation (ILFC) for future aircraft charters.

A Boeing 757-27B is acquired on lease from **Air Holland, N.V.** and is delivered on October 31. With passengers boarding, the company's operating license is received just six minutes before the Boeing's inaugural November 3 flight to Las Vegas. Painted in purple, white, and blue livery, the first purchased 757, a Dash-28A, is received on December 20 and "Snowbird" charters are offered to Tampa. On behalf of Thomson Holidays, Ltd., other seasonal destinations initially visited include the Caribbean, Florida, and Mexico. Enplanements during the year's final 2 months total 40,000.

A second owned B-757-28A is delivered in February **1989**, allowing return of the leased Boeing in March. Twice-weekly Alba Tours, Ltd.-sponsored tours are undertaken to Rome, Catania, and Palermo. During May, the new Boeings undertake a series of Toronto to U.K. tours, including visits to Leeds/Bradford on May 3, London's Stansted Airport on May 4, Newcastle on May 6, and Bristol on May 8. Meanwhile, beginning on May 7, charters are started to Athens, followed by Venice on June 16; twice-weekly roundtrip gambling charters are also flown to Las Vegas.

On June 20, an Odyssey flight sets a world record, flying from Vancouver to London (STN) in 8 hrs. 46 min. Following a rock charter to the Soviet capital, a Boeing is flown nonstop from Moscow to Toronto.

In November, two B-737-3S3s are leased from **Air Europe, Ltd.**; one will be employed only for the winter holiday season while the second, which will be given Odyssey livery, is to be retained until 1993.

The fleet in 1990 includes 2 B-757-28As, 2 leased B-737-3S3s, and 1 B-737-400. With the bankruptcy of parent Soundair, Ltd. in February, the charter operation is shut down.

In 1992, the carrier is purchased by **Nationair Canada, Ltd.**, which now becomes Canada's largest charter operator.

OFFSHORE LOGISTICS. See AIR LOGISTICS

OHIO AIR TRANSPORT: United States (1930–1931). OAT is set up as an FBO at Lansdowne Field at Youngstown by a group of local businessmen in the spring of 1930. Paul Wick is chairman with W. Edgar Leedy Jr. as CEO.

A Bellanca CH-300 Pacemaker is acquired, painted black with gold cowl, trim, and titles. An Argo biplane is also acquired. With Leedy as pilot, the Bellanca inaugurates scheduled return service to Columbus on June 10.

With breaks during the winter, flights between the two Buckeye cities are continued until the company, for lack of patronage in a deepening Depression, is forced out of business in March 1931.

OK AIR (OAHU AND KAUAI AIRLINES): United States (1975–1980). Robert Fraker establishes OK Air at Honolulu in the fall of 1975 to provide scheduled passenger and cargo flights to Lihue and Princeville. Cessna 402 services begin on October 1 and continue until January 1980, when the company is purchased by and merged into **Air Hawaii (2)**.

OKADA AIR, LTD.: 178 Sapele Road, Benin City, Bendel, Nigeria; Phone 234 (19) 241 054; Code 9H; Year Founded 1983. Organized by Chief Peter Igbinedion, the Esama of Benin City (capital of Bendel state) in 1983, the new entrant undertakes domestic and international charter passenger and cargo flights in addition to scheduled domestic intercity jet services. The initial fleet of four British Aerospace BAe (BAC) 1-11-320AZs is acquired from **British Caledonian Airways, Ltd. (BCAL)** in September and launch services before October. The company begins to service regional points in early December with an Aerospatiale (SudEst) SE-210 Caravelle VIN.

A Boeing 707-355C freighter is acquired in 1984 to handle the company's all-cargo contracts. Operations continue with charters flown to a variety of destinations, including London, Frankfurt, Zurich, Rome, and Paris and a host of cities throughout Africa and the Middle East. Sub-charters are also flown for other airlines.

In October 1985, the carrier is able to acquire three more BAC 1-11s from **Quebecair, Ltd.** Operations continue apace in 1986–1987 and four additional BAC 1-11s are delivered. Domestic points visited include Abuja, Lagos, Benin, Jos, Enugu, and Port Harcourt.

The fleet in 1988 includes 11 BAC 1-11s, 2 BAe (HS) 748-B2s, 1 B-707-355C, 1 Sud Est SE-210 Caravelle VIN, and 1 Dornier 228-212.

During the first quarter, permission is received from the government for the inauguration of scheduled domestic competition with **Nigeria Airways, Ltd.**

Hard-hit by a financial downturn, the flag carrier institutes cost-cutting measures. Its staff is cut and a number of unprofitable local and regional routes are ended or ordered transferred to Okada. Okada does not want the unprofitable routes and sues to prevent their acquisition.

By the fall of 1989, the privately owned carrier, unable to find foreign currency, is not able to buy spare parts and can keep only four of its planes in flying condition.

A BAC 1-11-320AZ with 92 passengers is badly damaged while landing at Port Harcourt on September 7 when its main landing gear jams; there are no fatalities.

Operations continue with difficulty during the remainder of the year and into the early 1990s.

In 1990–1991, Managing Director Igbinedion's fleet is significantly upgraded. The Caravelle is replaced by seven BAe 1-11-400s and two Dornier 228-212.

While en route from Benin City to Kano on June 26 of the latter year, a BAC 1-11-402AP with 3 crew and 52 passengers is required, by bad weather, to divert to Sokoto, which also turns out to be closed due to the elements. The jetliner circles for an hour until its fuel is exhausted and then makes a forced landing (3 dead).

Despite this loss, the company remains the largest BAe 1-11 operator in Africa.

In 1992, a B-747-146 is purchased and christened *Lady Cherry*; it immediately becomes the fleet flagship and is assigned Hady pilgrimage work from May–July. The BACs are assigned to the development of domestic scheduled services between Lagos, Kano, Kaduna, and Port Harcourt.

In 1993, the airline is one of the largest BAe (BAC) 1-11 operators left in the world. Among its flight equipment are numbered 3 of the original Dash-320AZs, along with 2 each Dash-217EAs, Dash-304AXs, Dash-401AKs, Dash-420ELs, Dash-432FDs, and Dash-539GLs, plus 1 each Dash-301AG, Dash-408EF, Dash-409AY, and Dash-524FF. Additionally, a leased Boeing 707-355C freighter is available, along with 4 B-727-231As and 1 each B-747-146, BAe (HS) 125-3B, and 125-600B.

During July, the company is granted authority to inaugurate weekly return services to Rio de Janeiro.

The fleet is cut back in 1994 by the deletion of two B-727-231As. It is reported that 6 of the 20 BAe (BAC) 1-11s have been cannibalized or lack spare parts. A new government places a moratorium on plans announced by its predecessor to allow Okada to commence international services. At the end of the year, the fleet is increased by the addition of a B-727-251.

Flights continue in 1995, although the B-707-355C is withdrawn. In 1996–1999, the concern is one of the largest private airlines in Africa and operates a fleet that includes 23 BAe (BAC) 1-11s, 1 B-727-251, 2 B-727-230As, 1 B-747-146, and 2 BAe (HS) 125 executive jets. Destinations visited include Abuja, Benin, Calabar, Enugu, Jos, Kaduna, Kano, Lagos, Port Harcourt, and Yola.

At the beginning of 2000, Managing Director Igbinedion's workforce totals 2,600. In November, as the government takes long overdue steps to improve the nation's air safety, aviation authorities begin to de-register aircraft regarded as wrecks or derelicts or those in need of huge repairs. Under this program, Okada loses 23 planes from the national aircraft register. Some expect that the airline will soon lose its operating certificate as well.

OKANAGAN HELICOPTERS, LTD.: Canada (1947–1987). Former farmer and ex-RCAF flight instructor Carl C. Agar, Alfred Stringer, and two others establish Okanagan in Kelowna as an air charter and fixed-wing crop-spraying operation in early 1947. Following a helicopter demonstration at Yakima, Washington, Agar and his partners establish a public company. The three men sell sufficient shares to purchase the carrier's first rotary-wing aircraft, a Bell Model 47B, and begin nonscheduled flights in October.

In 1948, the Bell logs a total of 31 hours flying time, most of which is devoted to timber cruising, crop spraying, and mosquito spraying during the disastrous Fraser Valley flood. Additional piston-engine Bell helicopters are acquired in 1950–1953.

Canadian Helicopters/Helicopteres Canadiens, Ltd. of Montreal is purchased and merged in 1954. Operated as a subsidiary, it is the example upon which later mergers will be based. The first successful experiment is carried out in the seeding of Vancouver Island forest areas by helicopter. A training school is established at Penticton; teaching mountain flying, it will become world famous and will be continued even after its parent company is merged into a larger success. Okanagan machines are also employed in the construction of an oil pipeline from Edmonton to Vancouver.

In 1955, a company Sikorsky S-55 becomes the first helicopter to operate within a few hundred miles of the North Pole during a geological survey. The first Canadian scheduled helicopter service is inaugurated on January 4, linking Terrace and Prince Rupert with Kitimat.

During 1956–1958 an extensive network of domestic and Pacific coast charter operations are handled as additional Bell and Sikorsky helicopters join the fleet. In 1959, one of the carrier's Sikorsky S-58Bs participates in the first power line construction by helicopter, installing concrete bases, transmission towers, and wooden poles in the mountains northeast of Los Angeles, California. Operations Manager Alfred Stringer departs to become president of newly organized **Vancouver Island Helicopters, Ltd.** Okanagan is hired in 1960 by a Montreal radio station to handle the first aerial traffic reporting service in Canada.

Employing new Sikorsky S-64E Skycranes, Okanagan, in 1962, becomes the first helicopter operator in Canada to lift and set large guyed aluminum towers for 500-kv. transmission lines. Also during the year, a company pilot develops the Monsoon Bucket, which is soon widely employed in forest fire control. The first step into the international market is taken in 1963 when a Bell Model 47J is shipped to East Pakistan for a land-use survey.

One of history's largest rescue operations by a single helicopter occurs at the site of the Granduc Mine slide disaster on the British Columbia coast in 1964. An Okanagan S-58B is the first rescue craft to arrive, and despite bad weather and continuous whiteout conditions, it is able to lift out 100 survivors and 28 bodies. Sikorsky S-61N crews are given the first civilian instrument flight rules (IFR) training in Canada in 1965–1966, after which a machine is flown from Stratford, Connecticut to London, England, in the first unescorted helicopter flight across the North Atlantic. Late in the year, the carrier's initial offshore oil industry support activities commence in the North Sea.

During 1967–1968, Okanagan strengthens a string of bases across Canada, including those at Banff, Calgary, Campbell River, Canmore, Cranbrook, Dawson Creek, Dryden, Fort Nelson, Fort St. John, Fort Simpson, Gander, Golden, Goose Bay, Halifax, Inuvik, Kamloops, Milltown, Nelson, Norman Wells, Ottawa, Penticton, Port McNeil, Prince George, Revelstoke, St. John's, Smithers, Terrace, Thunder Bay, Vancouver, Whistler, and Williams Lake. Domestic offshore support operations commence in December of the former year under contract to Shell Oil. The largest single order by a commercial operator to date is now made for 30 Fairchild Hiller FH-1100s. Founder Agar dies in March of the latter year at the age of 67.

In 1969, company S-61Ns are the first in Canada to fly IFR service to offshore Atlantic drilling rigs and the first flown on ice surveys in the Arctic during the dark winter months. Phaseout of the piston-engine fleet is begun in 1970. In 1971, the operator begins a decade-long process of acquiring competitors and smaller Canadian helicopter carriers with the takeover of Ottawa-based **Universal Helicopters, Ltd.**

In 1972, a two-year contract is signed with the Danish government and other parties for the sole provision of a transportation link during the construction of a lead and zinc mine on Greenland's west coast, north of the Arctic circle. **Lac St. Jean Aviation, Ltd.** of Montreal and **Haida Helicopters, Ltd.** of Ottawa are purchased in 1973.

Although the Greenland contract is completed in 1974, a new international division is established at Vancouver. A major overseas expansion program is launched as operations are extended into Thailand, Cambodia, Haiti, Peru, Morocco, Burma, The Philippines, Guyana, and Zaire.

Dominion-Pegasus Helicopters, Ltd. of Toronto and **Sept. Iles Helicopters, Ltd.** of Sept. Iles are taken over in 1975. During the year, a survival division is established and headquartered at Halifax. An Okanagan crew sets a world record for the longest helicopter flight by ferrying an S-61N over a 12,659-mile route from Sydney, Nova Scotia, to Songkhla, Thailand.

Night visual flight rules (VFR) slinging is introduced to the high Arctic in 1976 on ice movement studies. Chairman/President J. W. Pitts oversees a workforce of 550. His fleet now comprises 4 Sikorsky

S-61Ns, 1 S-61L, 1 S-62A, 6 S-58Ts, 1 S-55, 6 Bell 212s, 3 Bell 205As, 3 Bell 204Bs, 87 Bell 206B JetRangers, and 16 Aerospatiale Alouette IIs.

Associated Helicopters, Ltd. of Edmonton is purchased in 1977. An S-61N is tasked to the commuter-style transport of Edson, Alberta, coal miners, 39 miles one way to and from their job site on a daily basis. Okanagan begins participation in an experimental air ambulance service sponsored by the Ontario Ministry of Health.

A helicopter logging division is established in 1978. A joint venture company, **Okanagan Australia (Pty.), Ltd.**, is formed at Perth in association with Brambles Industries, Ltd. and from the main base at Vancouver, Chairman/President J. W. Pitts oversees a workforce of 550. His fleet now comprises 6 Sikorsky S-61Ns, 1 S-61L, 4 S-58Ts, 9 Bell 212s, 5 Bell 205As, 2 Bell 204Bs, and 110 Bell 206B JetRangers.

Bow Helicopters, Ltd. of Toronto is purchased in 1979. Okanagan's helicopters, worldwide, log one million flight hours, including 100,000 IFR hours in the service of Canadian industry. Based at Thunder Bay, a new Sikorsky S-76A "Bandage 3" air ambulance is placed in service in 1981 over 50% of the province of Ontario. The year's financial loss, due to the world economic downturn and higher fuel prices, is significant.

John M. S. Lecky, a 30% shareholder, increases his ownership to 51% control in 1982, assumed through his Resources Service Group. Okanagan becomes a subsidiary of RSG with Lecky as president. The fleet now includes 12 S-61s, 4 of which are nonamphibious S-61Ls.

In 1983, three new helicopter types are introduced in support of the Canadian offshore oil industry: the Bell 214ST and the Aerospatiale AS-32L and AS-350D. Airline employment is cut by 20% to 700 and 30 older helicopters are retired. The S-76 fleet now includes 12 machines, 3 in Canada, 4 in Australia, 3 in Thailand, 1 in India, and 1 in Venezuela.

Operations continue apace in 1984. In December, **United Helicopters, Ltd.**, a subsidiary of the U.K.'s **Bristow Helicopters, Ltd.**, purchases 49% minority shareholding. While transporting 15 workers from Shell Canada Resources, Ltd.'s Sedco 709 rig to Halifax on March 18, 1985, a company Sikorsky S-61N makes a forced landing 34 miles off the coast of Nova Scotia. All aboard are rescued by the Canadian Armed Forces and the damaged aircraft is towed to shore through light seas. The next month, one of the company's two Bell 214STs crashes into Newfoundland's Pacentia Bay, killing all six aboard. On October 23, the last Bell 214ST, on a training flight outside Edmonton, Alberta, crashes, killing both crew members aboard.

During the first quarter of 1986, a company AS-332L Super Puma completes a 2,780-mile flight from Aberdeen, Scotland, to St. John's, Newfoundland, via Reykjavik, Iceland, and Narssarsuaq, Greenland, in 17 hrs. 30 min.

Employing a medically equipped S-76A, Okanagan begins an experimental air ambulance service for the Vancouver area in March 1987. The employee population is stabilized at 650 and the worldwide network includes 50 bases in such additional nations as India, Trinidad, Singapore, Malaya, and Venezuela. The fleet grows to include 10 Bell 206L LongRangers, 44 Bell 206B JetRangers, 2 Bell 214STs, 2 Bell 214Bs, 3 Bell 205s, 1 Bell 204B, 12 Bell 212s, 1 Bell 47J, 12 Sikorsky S-76s, 12 Sikorsky S-61Ns, 5 Aerospatiale AS-350Ds, 2 Aerospatiale AS-332s, and 3 Hughes 369Ds.

During the summer, the carrier is merged with **Sealand Helicopters, Ltd.** and **Toronto Helicopters, Ltd.** to form **CHC Helicopter Corporation, Ltd.** The combined fleet of the new company is 163 helicopters. The Vancouver area air ambulance service is halted in February 1988 and the S-76A is sold to Englewood, Colorado-based **Air Methods** for use in a Minnesota EMS program.

OKAVANGO AIR SERVICES. See AIR BOTSWANA (PTY.), LTD.

OKI AIRWAYS: Lamela 4/1 (Stari Airport), P.O. Box 73, Podgorica, 81000, Montenegro; Phone 381 81 37 704; Fax 381 81 52 648; Code OKI; Year Founded 1993. Dr. Jusuf Hodzic founds OKI at Podgorica on April 28, 1993 to offer international and regional charters,

both passenger and cargo. His concern is the second airline to be formed in the new Republic of Montenegro. A workforce of 10 is recruited and revenue flights commence with a pair of Yakovlev Yak-40s.

Services continue in **1994–1998**, a number of which are flown on behalf of **Montenegro Airlines**. Destinations visited include Bari, Belgrade, and Istanbul. Plans are made to stretch links during the new year to Sofia and Naples.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo, OKI Airways, on March 24, **1999**, halts all service into Belgrade as Yugoslav airspace is closed. A spokesman, in making the announcement, indicates that the situation will be evaluated further; however, that evening, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

Flights to Belgrade, as well as to Sarajevo, Mostar, Zagreb, Split, Skopje, Tirana, Ljubijana, Timisoara, and Sofia remains halted on March 25–31 and for much of the duration of the NATO bombing campaign.

Although the fighting requires that OKI Airways be grounded, the company is able to generate some income by operating a number of refugee flights on behalf of the UN Human Rights Commissioner and International Organization for Migration. Additional relief flights north into Western Europe will also be completed in the days ahead until Operation Allied Force is concluded on June 11.

A ban against flights by Yugoslav-based airlines into the European Union is lifted on October 11.

OKLAHOMA SHORT LINE AIRWAYS: United States (1930). This short-lived southwestern carrier is established at Tulsa in the summer of **1930** to operate multistop, scheduled passenger flights up to Memphis. Travel Air 6000 revenue flights commence in July, but generate so little traffic that they must cease in October.

OKLAHOMA–TEXAS AIR LINE: United States (1931–1932). Organized at Oklahoma City in the spring of **1931**, O-TAL is equipped with a Ryan B-5 Brougham, which is employed to open scheduled passenger and air express flights to Wichita Falls via Lawson on June 15. The company becomes a member of the Independent Operators' Association; services are conducted in association with **Braniff Airways** and continue into early **1932**.

OLLEY AIR SERVICE, LTD.: United Kingdom (1934–1961). In association with **Blackpool and West Coast Air Services, Ltd.**, pioneer **Imperial Airways, Ltd.** pilot Gordon P. Olley registers this air taxi and charter company at London on January 10, **1934**. Initial backing is from Sir James Dunn and Sir Hugo Cunliffe-Owen, who provide capitalization of £6,015. Two de Havilland DH 84 Dragons are purchased in February and May and employed to begin ad hoc charter flights in the spring.

Olley will recall the start of his own airline, but mainly his Imperial flying, in his useful memoirs published during the year, *A Million Miles in the Air: Personal Experiences, Impressions, and Stories of Travel by Air* (London: Hodder & Stoughton, 1934).

An Airspeed AS.6A Envoy 1 is leased from **Cobham Air Routes, Ltd.** in January **1935**. The carrier's first two DH 89 Dragon Rapides are purchased in February and March, replacing a DH 84 sold in February. Regularly scheduled daily flights are undertaken from London (Croydon) to Deauville via Brighton between July 13 and August 31.

The fleet is upgraded in **1936** by the addition of a DH 83 Fox Moth, a DH 84 Dragon, two DH 85 Leopard Moths, and another DH 89 Dragon Rapide. Cobham's Envoy 1 is returned in August, while a DH 84 is sold. In March and July **1937**, two DH 89A Dragon Rapides are acquired. Meanwhile, following a May meeting at the Greyhound Hotel near Croydon Airport, the British ALPA is formed with Lord Chesham as president and Lord Amhurst as vice president. One pilot from Olley

Air Service joins a colleague from Surrey Flying Services and two each from **Imperial Airways, Ltd.** and **British Airways, Ltd.** (1) in forming the initial organizing committee. On September 26, the operator takes a £25,000, one-third interest in the new **Isle of Man Air Services, Ltd.**

In **1938**, **Channel Air Ferries, Ltd.** is formed. The Fox Moth and Leopard Moth are sold in September and October, respectively. Channel's services and aircraft are taken over by another new investment, **Great Western and Southern Air Lines, Ltd.** (owned jointly with the railroad's group, British and Foreign Aviation) in March **1939**. One DH 89 is sold in April, a DH 84 in August, a DH 89 in September, and a DH 89A in October. Meanwhile, all civil flying ceases on September 3 when war is declared on Germany.

A DH 89 is sold in January and a DH 89A and a DH 85 in March, **1940**. On May 5, Olley's firm is one of seven companies joining the **Associated Airways Joint Committee** for the wartime coordination of domestic air routes and services. Capt. Olley is appointed operations manager for the conglomerate and during **1940–1945**, he flies a single remaining Dragon Rapide on occasional charters from his headquarters field at Liverpool.

With two DH 89As, OAS resumes ad hoc charter work from Liverpool on January 1, **1946**, the day civil flight resumes in Britain. Two Percival Proctors are acquired in August and October, respectively. On September 17, a Percival Proctor 1, leased from North Sea Air Transport, is lost in a crash at Zurich. **Air Commerce, Ltd.**, a charter operator based at London (Croydon), and its two DH 89As are purchased in December. The new acquisition is allowed to continue operations under its own name with one retained Dragon Rapide.

Three of Capt. Olley's associate companies are taken into the new **British European Airways Corporation (BEA)** in February **1947**—**West Coast Air Services, Ltd.**, **Great Western and Southern Air Lines, Ltd.**, and **Isle of Man Air Services, Ltd.** Great Western Railway Company and London, Midland and Scottish Railway now share full ownership of the carrier. In April and June, two Airspeed AS.65 Consuls are purchased and these join the Dragon Rapides and Percival Proctors in opening charter services to the Continent during the summer.

In June, Olley participates in aviation industry's relief of stranded British tourists in France and Switzerland, their plight caused by a French railway strike; over 200 passengers are returned to the U.K. An order is now placed for three DH 104 Dove 1s, the first two of which are delivered on September 24 and November 14. Two DH 89As are sold during the year.

Three more DH 89As are added in February **1948**. The third DH 104 is ready to enter service on March 8. Charter operations are again offered, with the carrier gaining a certain reputation for offering flights to horse racetracks.

The fleet in **1949** comprises 6 DH 89As, 3 DH 104s, and 3 AS.65s. The carrier's first scheduled route is obtained under an associate agreement with **British European Airways Corporation (BEA)** and on June 3, four-times-per-week London (Croydon)–Le Touquet service begins. On July 15, a Consul is lost in a crash at Chiswick. A Dragon Rapide is sold in October.

Two more Dragon Rapides are sold during **1950** and during the year, the company's board of directors is reorganized, with Keith Grand named chairman and Capt. Olley retaining his position as managing director.

Except for the sale of the Percival Proctor 3 in November, Olley's fleet does not change in **1951**, while airline employment stands at 50. The company starts three new **British European Airways Corporation (BEA)** associate routes: London (Croydon) to Bristol, Exeter, Newquay, and Land's End, to Weston-super-Mare, and to Bristol. Ad hoc charters continue and a total of 8,750 passengers are flown on the year.

An April Dragon Rapide sale is the only fleet change of **1952**, while new scheduled London (Croydon)–Jersey and Guernsey frequencies are launched. Enplanements reach 8,840. In February **1953**, Chairman Grand resigns and the air company is purchased by **Morton Air Services, Ltd.**, which allows the pioneer to retain its previous identity.

Capt. Olley retains his previous post as managing director. As most of Oiley's fleet is a duplication of Morton's, it is sold to **Cambrian Airways, Ltd.**, then known as **Cambrian Air Services, Ltd.**

Employing **Morton Air Services, Ltd.** DH 104 Dove Is, Olley flies scheduled and nonscheduled services during the following summers; boardings in **1953** are 11,900 and in **1954** total 12,500. Capt. Olley dies on March 18, **1958**; however, Morton keeps his company alive, in timetables, through the summer of **1961**.

OLSON AIR SERVICE: P.O. Box 142, Nome, Alaska 99762, United States; Phone (907) 443-3625; Fax (907) 443-5017; Code 4B; Year Founded 1979. David K. Olson forms OAS at Nome, Alaska, in **1979** to provide scheduled Cessna passenger and cargo flights to the following communities: Diomed, Wales, Brevig, Televe, Shishmaref, Savoonga, Gambell, Golovin, White Mountain, Elim, Koyuk, Shaktoolik, and Council. Operations continue apace for the next 11 years.

The fleet in **1990** includes 3 Cessna 207As and 1 each Cessna 185, Cessna 206, Cessna 310, Cessna 402, and de Havilland Canada DHC-3 Otter. Enplanements total 4,149.

Passenger boardings inch upward in **1991** to 4,278 and a total of 714,923 pounds of mail are also flown.

In **1993–1994**, the company employs 15 workers and operates a fleet of 2 Cessna 402s, 1 Cessna 310, 3 Cessna 207As, 1 Beech 18, and 1 Cessna 185. Passenger boardings for the latter year total 7,947.

One new worker is employed in **1995** and enplanements decline 8% to 7,359.

Traffic recovers in **1996** as customer bookings increase 34.7% to 9,914.

Margaret M. Olson is president in **1997**, with Donald C. Olson as vice president, Karol Olson as secretary, and Margaret C. Olson as treasurer. J. R. Beans is general manager. The fleet now includes 3 Cessna 307s, 2 C-402s, and 1 Piper Saratoga.

Just after landing at Teller on April 3, a Cessna 207A with a pilot and six passengers veers off the left side of the runway; the aircraft's nose-wheel digs into soft snow, causing the plane to nose over. One person receives minor injuries.

While on final approach to Nome on June 27, a Cessna 207A with 2 passengers collides with a 260-ft. tall radio antenna located 3.85 nm. E of the runway. There are no survivors.

The previous year's traffic bonanza turns into a 47.6% downturn in bookings, which fall to 5,199.

Service is maintained in **1998**, but business is horrific. Passenger boardings drop to just 1,000. Still, schedules are met during the remainder of the year and into the new millennium.

OLT (OSTFRIESISCHE LUFTTRANSPORT, GmbH.) See LUFTHANSA CITYLINE, GmbH.

OLYMPIC AIRWAYS, S.A.: 96-100 Syngrou Ave., Athens, GR-11741, Greece; Phone 30 (1) 926-9111; Fax 30 (1) 926-7154; <http://www.olympic-airways.gr>; Code OA; Year Founded 1957. Late in **1956**, Greek shipping magnate Aristotle Onassis purchases the government-owned airline **Technical and Aeronautical Exploitations Company (TAE)** for £700,000 and a guaranteed concession of sole rights to operate all Greek air transport for 50 years. Onassis, the only individual in the world of that day to own a national airline, seeks further assistance.

The government of National Radical Union Prime Minister Constantine Karamanlis also agrees to cover a variety of contingencies, including losses incurred by unauthorized strikes and losses on transatlantic flights. Other concessions granted to the airline include: the right to export profits; the right to import capital goods without customs payments; exemption from corporate taxes and from the payment of landing fees anywhere in Greece; a monopoly on refueling and handling of foreign carriers flying into the country; and, if necessary, interest-free loans of \$3.5 million. As a further assistance, the government also bans all Greek carriers from offering transatlantic charters.

On January 1, **1957**, the ex-government carrier is reorganized, given its present name, and capitalized by Onassis and his three sisters; **UAT French Airlines, S.A.** official Francis ("Tom") Fabre is recruited as managing director. The 14 DC-3s and DC-4 inherited from TAE are given new livery and the Olympic symbol of five circles becomes the company logo.

With Capt. Pavlos Ioannidis at the controls, a DC-3 inaugurates Olympic's flight operations on April 6 over the route from Athens to Thessaloniki. Orders are placed for four DC-6Bs, while three are leased from the French carrier **UAT French Airlines, S.A.** The latter enter service on June 2 on a twice-weekly service from London to Beirut via Paris, Athens, and Nicosia.

The purchased DC-6Bs join the fleet in **1958**. A new service is started to Cairo, domestic routes and frequencies are increased, and the company becomes one of the few in the world to operate the Piaggio P-166 gull-wing transport. Flights are introduced to Zurich, Frankfurt, and Tel Aviv.

Managing Director Fabre resigns in June **1959**. He is succeeded by Costa Konialidis, a cousin of owner Onassis.

Flight 214, a DC-3 with 3 crew and 15 passengers and en route from Athens to Salonika, crashes into a mountain near Avlon Attiki, Greece, on October 29; there are no survivors.

A consortium agreement is signed with **British European Airways Corporation (BEA)** on April 1, **1960**, providing for joint operation and promotion of traffic on routes from London to the Eastern Mediterranean. Chartered British Comet 4B jetliners inaugurate London–Athens service on May 8. Operations continue apace in **1961–1963** and by **1964** the airline's employment population stands at 2,245, the fleet has 15 airliners, and these carry a total of 25,071 passengers on the year. In **1965**, orders are placed for Boeing 707-384s and 727-294s.

The first 707-384C is delivered on May 11, **1966** and is employed to launch an Athens–New York transatlantic service on June 1. The carrier's pilots go out on strike on August 15, but the company is able to operate two international and four domestic flights with nonstriking pilots.

Other unions back the strikers, but owner Onassis refuses to talk until the job action is ended. The strike is finally settled on August 30 with a 50% pay increase for the pilots.

Enplanements for the year total 991,713.

The first B-727-284s begin to arrive in early **1967** and are set to work on the European routes. Passenger boardings exceed the million-mark for the first time (1,133,009).

The workforce stands at 4,000 in **1968**. The fleet now includes 2 B-707-384Bs, 3 B-707-384Cs, 2 B-727-284s, 5 Comet 4Bs, 6 DC-3s, and 8 DC-6Bs. At least three of the latter type are purchased during the spring from **Northeast Airlines**. Service to Africa begins in late March with flights to Nairobi and Johannesburg.

In something of a scandal on October 17, Capt. Donald McGregor, a senior company pilot preparing to undertake the regularly scheduled B-707-384B service to Athens, receives orders for a special mission. Ninety-three passengers on his New York to Greece flight are shifted to another aircraft at John F. Kennedy International Airport in order to make way for Mrs. Kennedy and her 11-person party, who fly to the military base at Andravida, Greece. After landing, the party is transferred to an Olympic Piaggio, which proceeds to Skopios for her marriage to owner Onassis. The CAB probes the mass "bumping" case, but refuses to take action unless complaints are made—and none are.

On November 8, Italians U. Giovine and M. Panichi hijack a B-707-384B with 130 aboard, shortly after its takeoff from Paris for Athens, in protest against the Greek military regime; they force the plane to return to Paris and there surrender. The two will be tried and receive French jail sentences of six and eight months, respectively.

A new B-707-384B is delivered on December 18 and is christened *City of Pella*.

The next day, a B-707-384C with 152 aboard, including the new Mrs. Onassis, is delayed for over 4 hours on the ground at Kennedy Airport

as the result of a bomb threat; finding no explosive, police clear the plane to Athens.

Enplanements this year total 857,080. Orders are placed for two Nihon YS-11 turboprops.

In 1969, the first Nihon enters service. On January 2, ex-convict F. Paravolidakis, after firing a shot at the pilot, takes control of Flight 944, a DC-6B with 102 aboard en route from Crete to Athens, and forces it to fly to Cairo. He will be tried and sentenced to eight months in an Egyptian jail.

On May 18, officials of Britain's airline unions threaten to boycott the company on behalf of its employees if conditions under the Greek military regime make it impossible for Olympic employees to strike.

A DC-3, on an August 16 domestic flight from Athens to Agrinion with 31 aboard, is hijacked by a doctor, with his wife and two children in tow, and forced to fly to Albania. During the flight, the Greek pirate reveals that he had been jailed by the military regime and apologizes to the passengers for their inconvenience, saying he has acted to save his family.

To prevent further hijackings, the company, beginning on September 23, requires all passengers on domestic flights to present identification cards or passports.

On December 8, a DC-6B with 5 crew and 85 passengers en route from Crete to Athens with 90 passengers, crashes during a storm into Mount Paneion near the Sounion beacon, 21 nm. from its destination; there are no survivors.

Bookings for the year skyrocket to 1,544,290.

The Comet 4Bs are returned to **British European Airways Corporation (BEA)** in 1970 as four B-727-284s and four Nihon YS-11s join the fleet. On July 30, the B-727-284 Flight 225, en route from Beirut to Athens with 55 aboard, is hijacked by 6 Arab terrorists; the plane flies to Athens. The plane is held on the ground as the pirates demand the release of 7 other Arab guerrillas held in local jails.

Company President Onassis and two Greek government officials offer themselves as hostages during the negotiations, allowing the passengers to be freed. After picking up the additional passengers, the hijackers fly to Cairo, taking IRC official A. Roachat along as guarantor of the arrangement. At Cairo, freedom is eventually agreed and the plane is allowed to return to Athens on September 7.

On November 5, the nosegear of a DC-6B collapses after the plane's landing at Kerkira, Corfu, causing the Douglas to run off the left side of the runway and come to a stop 450 ft. out; there are no fatalities.

Although freight is off 3.4%, passenger bookings for the year jump 11.1% to 1,737,109. Airline employment is up 28.6% to 5,357.

The wholly owned subsidiary **Olympic Aviation, S.A.** is formed in 1971 to operate service and local flights on behalf of its parent; initial equipment consists of Cessna and Piper lightplanes.

En route from Kalamata to Athens on October 16, a YS-11A is hijacked to Beirut by a lone gunman. Ten days later, another YS-11 en route from Athens to Crete, is diverted to Rome by a single assailant who is overpowered on the ground at the Italian capital.

Olympic adds additional destinations in Europe, the Middle East, and Africa during 1972. With the introduction of service to Sydney, Australia, Olympic now flies to five continents. Between February 12 and June 28, six B-720-051Bs are received from the American carrier **Northwest Airlines**. They are named in honor of rivers: *Axious*, *Acheeloos*, *Pinios*, *Strimon*, *Evros*, and *Allakom*.

On May 28, in an effort to obtain medical treatment in London, a lone assailant hijacks a B-707-284B with 130 passengers en route from Crete to Athens. At his destination, he is surprised by police and captured. He will be tried and receive a two-year prison term.

While approaching Athens in poor visibility after an October 21 flight from Corfu, a YS-11A with 4 crew and 49 passengers crashes into the sea off the capital city (37 dead).

Orders are now placed for Boeing 747-100s. All of the Comet 4Bs having been disposed of, the fleet now includes 5 B-727-284s, 6 B-707-284B and B-707-284Cs, 5 B-720-051Bs, 6 DC-6Bs, 5 DC-3s, and 5 Nihon YS-11As.

Another B-707-051B the *Hestos River*, arrives from **Northwest Airlines** on January 17, 1973, followed by two B-707-351Cs on March 23 and May 18, respectively. Meanwhile, on January 22, a Piaggio 136, piloted by Alexander Onassis, with Capt. Donald McGregor and Donald McCusker as passengers, fails its takeoff from Athens and crashes; young Onassis is fatally injured. Believing the government behind the disaster with assistance from the U.S., Aristotle Onassis blames the U.S. CIA and McCusker (believed to be an agent) for his son's death.

The first B-747-284B is delivered on June 21; christened *Olympic Zeus*, it is used on the New York route beginning in July. A second B-747-284B, the *Olympic Eagle*, arrives on December 7. North Atlantic traffic grows 50% during the year due to a special \$320 nonaffinity roundtrip fare.

Having requested reimbursement for his medical expenses, Capt. McGregor receives a settlement from Olympic in July 1974; he is given \$15,000 (less 15% legal fees). Owner Onassis refuses to allow his lawyers to settle with Capt. McCusker, even after the injured man's lawyers threaten to impound a B-747 in the U.S.

As of September 8, the company's Greek pilots refuse to fly with their American colleagues because of the U.S. government's policy regarding Cyprus. The Greeks ask the Greek transport ministry to dismiss the 11 U.S. employees, including 7 pilots and 4 flight engineers.

In December, following heavy losses (estimated at £15,000 sterling), Chairman Onassis relinquishes his special concession and agrees to turn his airline back to the Greek government.

Enplanements for the year are 2,172,911. The company is grounded pending reorganization.

On January 1, 1975, the government, as sole shareholder, assumes control of Olympic and assigns management of its operations to the Ministry of Transport, which names George Theofanis chairman/CEO. Airline employment is cut 32% to 7,443. Domestic flights begin in the spring and international frequencies are resumed, with new services started to Libya, Saudi Arabia, and Kuwait.

Financial settlement is reached between Onassis and the Greek government in August. Negotiations for the transfer have been difficult, but eventually, the tycoon receives \$69 million, \$34 million of which is earmarked to pay the airline's outstanding debts. He is allowed to keep the company's real estate (worth \$10 million), permitted to sell two Stratoliners to Jordan for \$9 million, and given a Learjet and two helicopters valued at \$5 million.

En route from Athens to Mikonos on September 27, a Shorts SC-7 Skyvan is subjected to an attempted hijacking by a lone assailant holding a bottle of fluid he claims is nitric acid. The man is overpowered by the crew and other passengers and is turned over to police when the little aircraft lands at its destination.

Passenger boardings climb 23.3% to 2,832,646, but cargo is down by 32%.

The employee population grows to 8,486 in 1976. The fleet now includes 2 B-747-284Bs, 6 B-707-284B/Cs, 7 B-720-051Bs, 6 B-727-284s, 3 Shorts SC-7 Skyvans, and 7 YS-11As. On June 26, the *Hermes* is the first of four B-737-284s named for Greek gods to arrive during the next six months.

Service is inaugurated to Dubai and Melbourne, bringing the carrier's total international destinations to 27 and domestic stops to 30.

Diverted from Larissa to Kozani on November 23 because of poor weather, a YS-11A with 4 crew and 46 passengers, on initial approach after a flight from Athens, crashes into a mountain 15 nm. S of Kozani; there are no survivors.

Late in the year, flight and ground hostesses and ticket agents receive new uniforms created by Greek designer Roula Stathia.

Passenger bookings soar 49.2% to 4,354,589.

Enplanements drop to 3,943,589 in 1977, due partially to a strike by stewards and stewardesses that halts company operations on July 24.

Airline employment in 1978 is 9,002. A strike by cabin crews idles the carrier as of January 20. A computerized reservations system is purchased. Routes are extended weekly to Tirana, Albania, and

reintroduced to Tel Aviv, Milan, and Jeddah. The total number of destinations visited by President Nicholas Farmakidis' carrier is now 23.

During the spring, Olympic finally settles with Donald McCusker for the January 1973 crash that killed Alexander Onassis; the payout is \$800,000.

The Boeing Airplane Company discloses its foreign payoffs on August 1, including a \$1.75 million payment to Aristotle Onassis, during the early 1970s, in connection with the sale of two Jumbos to his airline. Five Airbus Industrie A300B4-203s are ordered.

Passenger boardings jump 20.7% to 4,973,316 and cargo accelerates 3.8%.

The number of workers is decreased 0.8% in 1979 to 8,932. The first two A300B4-203s are delivered and are placed in service on regional routes. On June 5, 110 of the carrier's 128 flight engineers strike. A new reservations system is turned on.

Bookings climb 8% to pass the five million mark for the first time (5,129,855); freight grows 11% to 69.4 million FTKs.

Airline employment is cut again in 1980, down by 1.6% to 8,788. The remaining two of the three Airbuses join the fleet, as orders are placed for a sixth, plus two more B-737-284s.

Effects of the fuel crisis and world recession are felt as boardings dip 3.6% to 4,943,000; cargo is, however, up 2% to 70.77 million FTKs.

Yet another A300B4-203 and two B-737-284s are placed in service in 1981. On December 31, Theodoros Lianos becomes president.

Enplanements rebound 1.2% to just over 5 million, while cargo accelerates 16.8% to 82.7 million FTKs. On total revenues of \$497.4 million, expenses are \$525.7 million, producing a loss of \$79.9 million.

The employee population is 9,586 in 1982 as retirement of the former Northwest Airlines B-720-051B is completed. A flight attendants strike grounds the carrier on June 26.

Passenger boardings accelerate 12% to 5,472,000, but freight is off by 6% to 73.81 million FTKs.

The carrier postpones its foreign and domestic schedules until mid-afternoon on January 20, 1983, as the result of a nationwide work stoppage designed to protest the government's decision to freeze wages. Plans are made to receive three B-747-212Bs purchased from Singapore Airlines, Ltd.

Employment remains level, as bookings advance 9% to 5,971,000 and cargo climbs 8% to 79.46 million FTKs. Still, a net loss of \$53.5 million is suffered.

The employee population is increased 4.8% to 10,313 in 1984. The first Jumbojet arrives from Southeast Asia on September 1 and christened *Olympic Spirit*; service is launched to Copenhagen, Toronto, Marseilles, and on a Singapore-Melbourne-Sydney routing.

Late in the year, a major development plan is unveiled. Designed to relieve the financial burden of domestic service and leave the carrier to concentrate on international operations, responsibility for domestic service is shifted to subsidiary Olympic Aviation, S.A. The subsidiary's fleet is beefed up to include 20 aircraft (Shorts 330s, Dornier 228-200s, and 3 helicopters) and 31 Greek stops are turned over.

Systemwide, passenger boardings increase 17.5% to 7,012,000 (71% domestic) and cargo grows 13.2% to 89.91 million FTKs. On revenues of \$455 million, the operating loss is \$12.2 million and the net loss deepens to \$56.7 million.

The workforce grows 17.4% to 12,102 in 1985. The last two B-747-212Bs are acquired on April 1 and December 23, respectively, and are christened *Olympic Flame* and *Olympic Peace*, respectively; the B-747-284B *Olympic Zeus* is sold to Trans World Airlines (TWA). Several new international frequencies are now started, plus service to Alexandria, Egypt.

Passenger traffic rises 7% to 7.5 million and freight soars 36% to 122.2 million FTKs. Revenues grow to \$484.7 million, expenses jump 16% to \$529.97 million, and there are record losses: \$43.3 million (operating) and \$113.6 million (net).

The fear of terrorism, particularly among potential U.S. passengers, has a dramatic impact in 1986. A bomb threat forces a B-747-212B

bound for New York from Athens on January 5 to land at a military airfield in Canada; no bomb is found.

While on a March 4 domestic flight, a lone gunman attempts to hijack a B-737-284 with 76 passengers to Libya; while on the ground at Sasntorini, Greece, for refueling, the pirate is overwhelmed and arrested.

The terrorist threat causes airline employment to decline 6.9% to 11,271 as customer bookings fall 12% to 6,576,000. Freight is also down, by 14%, to 104.77 million FTKs.

The workforce is increased by 2.1% in 1987 to 12,262 as traffic resumes its upward launch. Service is started during the second half to Melbourne and Sydney via Bangkok, to Chicago via Boston, and to Barcelona.

Passenger boardings rise 1.6% to 6,680,281 and cargo is up 0.1% to 104.87 million FTKs. Although an operating profit of \$53 million is generated, there is a net loss of \$68.5 million.

Airline employment falls 1.1% in 1988, to 12,133 and the fleet now includes 6 B-707-284B/Cs, 4 B-747-212Bs, 6 B-727-284s, 11 B-737-284s, 8 A300B4-203s, Shorts 330s, and 7 228s. Orders are outstanding for three B-767-384s and three Avions de Transport Regional ATR42-300s. In June, weekly roundtrip service is introduced linking the nation's second largest city, Thessaloniki, with Paris.

Later in the summer, twice-weekly roundtrips begin between Athens and Barcelona and, in December, a third frequency is offered from Athens to Melbourne, via Bangkok.

Customer bookings ascend 2.2% to 6,829,878, but freight declines 2.6% to 101.96 million FTKs. Revenues climb 10.5% to \$699.5 million; however, expenses are up 13.8% and drop operating income to \$39.2 million. The net loss is reduced to \$62.3 million.

Company employment grows 27.8% in 1989 to 15,500. Retirement of the B-707-284B/Cs begins. A newly-delivered Olympic Aviation, S.A. ATR42-300, with 34 aboard, crashes into a mountain on the eastern Aegean island of Samos on August 4; there are no survivors.

Although passenger boardings slip 2% to 6,681,066, freight rises 1% to 103.19 million FTKs.

The workforce is cut 2.1% in 1990 to 11,906. Long-haul flights begin twice-weekly to Tokyo in September.

Customer bookings decline another 7.5% to 6,134,574, but cargo ascends 9.3% to 112.73 million FTKs. Costs exceed income and there are losses on both side of the ledger: \$24.2 million (operating) and \$164.3 million (net).

The payroll is sliced another 4% in 1991 to 11,429 and the fleet now includes eight A300B4-203s, six B-737-284s, three B-727-230As newly acquired from Deutsche Lufthansa, A.G., 11 B-737-284As, two new B-737-484s, three B-747-212Bs, and one B-747-284B. Four more B-737-484s join the fleet during the year and orders are outstanding for four B300B4-605Rs.

New aircraft livery is introduced and service is inaugurated to Berlin, Munich, and Barcelona. In April, the company inks its first alliance with another carrier, Austrian Airlines, A.G., which provides for code-sharing on flights from Athens to Vienna.

The nation takes the first step toward airline liberalization in September when it ends the carrier's monopoly over the provision of charter services. In December, a block space agreement is launched with Saudia (Saudi Arabian Airlines) on Greek flights from Athens to Jeddah and Riyadh.

The impact of the Gulf war and recession on Greek tourism is negative and consequently, the state carrier suffers a decline in passenger traffic. Boardings fall 18.3% to 5,044,974, while freight inches up 1.4% to 114.24 million FTKs. Revenues slide 7.4% to \$737.6 million, but expenses are higher. The operating loss deepens to \$96 million, but the net loss is cut to \$141.3 million.

The number of employees drops a further 5% in 1992 to 10,861. Emmanuel Fthenakis is named managing director, the first of four requested A300B4-605Rs is placed into service, and flights are begun to Beirut, Boston, and Chicago.

Olympic Aviation, S.A. now becomes operationally independent of its parent. Also, the whollyowned subsidiary **Macedonian Airlines, S.A.** is established to operate charter flights from the Greek province of Macedonia with leased B-737s.

Customer bookings recover and ascend by 11.6% to 5,629,952. Cargo, however, now slides by 6.3% to 107.07 million FTKs.

Airline employment is cut an additional 11.7% in **1993** to 9,600 as the second A300-600R is delivered. New markets are initiated at Naples and Damascus. Failing to win a halt to unprofitable international routes or to win acceptance for a restructuring designed to lower the \$1.3 billion debt, MD Fthenakis resigns in July. He is succeeded by Theodoros Tsakiridis.

Except for the retention of six hubs, financial responsibility for all domestic routes is passed to **Olympic Aviation, S.A.** in December.

Passenger boardings slip 1% to 5,569,834, but freight jumps skyward by 18% to 126.35 million FTKs. The year's losses are severe: \$73.96 million (operating) and \$580.39 million (net). The company's cumulative debt is now \$2.1 billion.

During January **1994**, Managing Director Tsakiridis seeks a Dr 17-billion (\$68-million) loan from commercial banks to cover operating costs during the first quarter. After a rejection the previous year, the new Greek government's transport minister, Ioannis Charalabous, meanwhile, again asks the EU Commission for permission to write off the airline's Dr 325-billion (\$1.3-billion) cumulative debt over the next five years.

In May, Minister Charalabous asks the company to lay off over 1,700 employees in an effort to reduce its \$1-billion debt. Wages are frozen at the previous year's level and plans are announced to end Athens-Tokyo and Chicago services and later flights linking the Greek capital with Vienna, Amsterdam, Australia, and Canada. A Jumbojet is sold and two leased Airbus are returned.

During the final week of July and at the same time it approves a large bailout for **Air France**, the EU Commission authorizes the government of Greece to inject \$2.28 billion into Olympic Airways, S.A. over the next several years. The bailout will consist of a \$1.8-billion write-off of debt, the placement of Dr 54 billion (\$276 million) in loans, which will be converted into equity, and the infusion of Dr 54 billion (\$276 million) in new capital in annual tranches through 1997.

There are, however, stringent conditions: (1) the Greek government is no longer permitted to interfere in the airline's management; (2) no additional government subsidiaries will be permitted; (3) Olympic is to obtain a "common law enterprise" legal status; (4) wages must be frozen in 1995-1996; (5) labor must agree to work rule concessions and other cost-cutting measures; (6) fleet expansion plans must be cut back; and (7) European competitors will be permitted improved access to routes serving the Greek islands.

Services from Athens to Tokyo and Chicago end on November 2. A B-737-284A is hijacked during a flight from Germany on November 8 by 24-year-old Kostas Tsenkides; following the plane's arrival at Salonika, the pirate releases his captives and is arrested by police.

Also in November, two Eurocopter AS-355 TwinStar helicopters are placed into daily service from Athens on emergency medical service (EMS), transport, and cargo flights to 10 of the Greek islands, including Corfu and Rhodes.

The state-aid package is endorsed by the Greek Parliament in December. Late in the year, Prof. Rigas Doganis, chairman of the Department of Air Transport at Cranfield University (U.K.), is named chairman/CEO effective in February.

Customer bookings recover, growing by 6.3% to 5,923,185 and cargo marches along, up 6.8% to 135 million FTKs. Revenues shoot up 12.7% to \$936.58 million, while expenses rise only 2.6% to \$928.84 million. Consequently, there is an operating surplus of \$7.74 million and net loss "improves" to \$37.04 million.

Airline employment declines by 11.7% in **1995** to 9,140. Following a threat of sabotage with poison gas, a B-747-212B is held in a remote section of New York (JFK) following its arrival from Athens on March 20; no attack is made and the plane is released.

Once Chairman/CEO Doganis is aboard, he undertakes a massive restructuring of the company under terms of the European Commission's state-aid plan. In return for the Greek government's first \$81.4 million in funding received in July, he begins implementation of a 15% reduction in force, which will be largely completed by Christmas, along with the implementation of new work rules. A massive customer service training program is implemented for 5,500 employees.

Expenditures are cut across the board and the unprofitable route to Tokyo is terminated; frequencies across the Atlantic are also trimmed. Two A300B4-203s are returned to their lessor as the company renews efforts toward fleet planning and consolidation; no new nonreplacement aircraft will, however, become available for three years.

Just before landing at Athens after a service from Sydney on November 9, a B-747-212B is captured by a lone assailant, who holds a knife against the throat of a female flight attendant while protesting that he does not wish to return to his native Ethiopia. Once the Jumbojet is on the ground in Greece, the pirate is overwhelmed by police.

Late in the year, a new hub is established at Thessaloniki.

Enplanements for the year inch up 3.3% to 6,119,397, but freight falls 13.4% to 116.99 million FTKs. Revenues dip 0.9% to \$941.83 million, but costs fall a heavier 5.6% to \$886.64 million. As a result, there is an operating profit of \$55.18 million and a net gain of \$27.9 million. These figures are later significantly adjusted, rising to \$60.54 million and \$57.2 million, respectively.

The workforce is cut 10% in **1996** to 8,625. Two important international agreements begin during the first quarter. In January, Olympic arranges block-space on **VASP Brazilian Airlines; Viacao Aerea Sao Paulo, S.A.** return flights from Rio de Janeiro and Buenos Aires to Athens are begun. The same sort of accord begins with **Swissair, A.G.** on its flights to Thessaloniki from Zurich.

The Greek government moves during the first quarter to violate the first condition of the six laid down by the European Commission in 1994 for state aid. Parliament votes to give bonuses to workers accepting early retirement, which the EC views as indirect additional government support to the airline. Consequently, on March 12, it holds up the second tranche of financial aid.

On March 14, a Reuters journalist interviews Chairman Doganis at the airline's Athens office. During the conversation, the reporter receives a mobile telephone call from a colleague attending an impromptu press conference called by Greek Transport Minister Haris Kastanides. Turning to Doganis, the surprised Reuters man informs him that he has just been publicly terminated. After firing Doganis, Kastanides implies that the former chairman has been "leaking" unauthorized information to the EC concerning the government workers' bonuses.

In April, Prof. Doganis is replaced by onetime **Pan American World Airways (1)** strategic planner and now aviation consultant Jordan N. Karatzas, who now becomes the 27th Olympic chairman since the return of the airline by Aristotle Onassis in 1967.

In one of his first actions, CEO Karatzas in May appoints as consultants McKinsey & Co., asking that firm to conduct an operational review. The firm's report will suggest methods for improvement of the company's management, including the installation of new financial software.

As a result of the government's April meddling, the EC in July blocks the second installment of state aid (\$98.5 million) from the government to the airline.

In September, a B-747-1D1, B-737-291A, and two Lockheed L-1011 TriStar 1s are subleased from **Air Atlanta Icelandic, H.F.** This additional capacity is employed to fly home eligible voters of all parties from points throughout Europe so that they may vote in the parliamentary elections.

Passenger boardings accelerate 6.3% to 6,502,327 while 119.24 million FTKs are operated, a slight 1.9% growth. Operating income inches up 1.5% to \$991.5 million and costs climb 2.3% to \$685.3 million. Operating gain falls to \$51.3 million and net profit slides to \$46.63 million.

The fortieth anniversary year is celebrated in **1997** as employment is cut by 20% to 7,250. In April, shared code flights begin with **Balkan**

Bulgarian Airlines over a route from Athens to Sofia. Dual designator Athens to Bucharest flights commence with **Malev Hungarian Airlines** at the same time, followed by new services to Moscow and Budapest.

Under terms of a new code-sharing agreement with **Aerosvit Airlines**, a flight operated by the Ukrainian carrier from Kiev to Heraklion begins in June, while in July, twice-weekly return flights are undertaken from Kiev to Malta.

Work continues apace on implementation of the McKinsey restructuring report and fleet modernization moves are made with an August order for two Airbus Industrie A340-300s and four Next Generation B-737-800s for delivery at the end of the century. The Boeing request is valued at \$408 million. CEO Karatzas is unable to advance the carrier's restructuring plan in the face of union opposition.

Just after landing at Thessaloniki in heavy rain following an August 12 service from Athens, Flight 171, a B-727-230 with 8 crew and 26 passengers, begins to hydroplane toward the sea; the pilot steers the tri-jet off the right side of the runway at the last moment. Although the plane is damaged, there are no fatalities.

In September, the EC grants tentative approval for payment of the last two installments of state aid to the carrier in one lump \$150-million payment. In October, however, as controversy continues to swirl around the airline's management, the EC appoints Deloitte & Touche to examine Olympic's books prior to release of the funds.

Daily roundtrips to Prague commence in the fall. In November, the EC elects not to pursue an antitrust case against the airline in exchange for changes in Greek airline employment laws and an end, as of January 1, to the carrier's ground handling monopoly at Athens Airport.

Having abandoned the company's restructuring program in the face of union opposition, CEO Karatzas is terminated by Greek Transport Minister Tasos Mantelis in December. Pledging to end political interference with the airline's management, Mantelis threatens to replace the entire 15-member board of directors if that extreme measure is required.

Passenger boardings surge ahead by 9.1% to 7,091,472 while freight grows 8.3% to 128.9 million FTKs. Revenues total \$1.01 billion, with expenses of \$964.1 million. There is an operating profit of \$48.3 million, but a net loss of \$25.1 million.

Airline employment stands at 6,672 in **1998** and the fleet, 48.7% of which is Stage III-certified, includes 39 airplanes: 9 B-727-200s, 18 B-737s, 4 B-747s, and 8 A300B4s.

In January, Theodoros Tsakiridis returns as chairman/managing director while the Greek government, in its efforts to meet EC demands, declares that the wages paid to airline employees are too high. Minister Mantelis proclaims that Olympic must save at least Dr 50 million (\$160 million) for each of the next five years or face closure.

In February, Olympic begins a process of employee rationalization (i.e., termination), firing 64 seasonal flight attendants.

EISF, the flight attendants' union, protests the terminations and begins a work slowdown. As a result, by month's end, Olympic must cancel some 12 national and international flights per day because it does not have sufficient staff to safely operate them.

Disputes between the company and its workers continue into the second quarter. In April, employees strike over a proposed wage freeze designed to help the company meet its cost-cutting annual goal.

As pilot and cabin staff strikes continue, Olympic, in May, is forced to borrow Dr 4 billion (\$12 million) from two state banks to make the payroll, trusting that revenues from services in June will cover the loans. In June, the government announces that it will no longer guarantee loans to loss-making public sector entities—including Olympic.

The first of five A340-313s is delivered in September; the premier aircraft is christened *Olympia*. Two more are ordered on December 18.

Passenger boardings fall 9.3% during the year to 6.4 million, while cargo traffic drops 12% to 112.02 million FTKs.

Two more A340-313s arrive on February 8, **1999**, with two more scheduled for delivery later in the year. Like the machine received in the fall, the Airbus aircraft replace B-747-284Bs on the carrier's intercontinental routes to North America, Australia, the Far East, and South Africa.

Just prior to the government deadline of February 15 for interested outside bids on a contract to manage the airline, Chairman/Managing Director Tsakiridis resigns.

In anticipation of air strikes by NATO countries against Serbian military targets in a campaign to compel Belgrade to accept a peace agreement with the ethnic Albanians fighting for an independent Kosovo, Olympic, on March 24, halts all scheduled service into Belgrade, as well as nine other Balkan destinations. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that evening, Operation Allied Force, the NATO bombing campaign on targets in Serbia and Kosovo, begins.

Service to Belgrade remains halted on March 25 and for the duration of Operation Allied Force. Flights throughout south-central and southeastern Europe experience delays of 30–60 minutes due to airspace closure.

Callers to a special information line set up by the airline to aid passengers are told, on March 30, that the airline is not flying. Olympic officials are not amused by the prank and ask OTE, the Greek state-owned telephone system, for assistance in finding the person(s) responsible for the incorrect message.

The company admits on April 26 that it has suffered some loss from the Kosovo crisis, but does not yet fully know the impact. There will certainly be a large impact, executives worry, should the matter continue into the tourist season, set to begin at month's end.

Operational Allied Force concludes on June 11. After years of debt and failed restructuring at the national carrier, Greek Transport Minister Tasos Mandelis on June 23 informs Parliament that European Union rules will not permit the state to continue bailing out the loss-making airline. Olympic, he admits, is the worst performer in the cash-starved Greek public sector; it is also realized that the airline has become a test case in the reform program of Prime Minister Costas Simitis.

Thus it is announced that, following a bidding competition, management of the airline, in a last-ditch effort to keep it from bankruptcy, will be turned over to Speedwing, Ltd., the **British Airways, Ltd. (2)** subsidiary on July 1, under a 30-month, £6.3-million contract. The team of Rod Lynch, BA senior executive, and Capt. Jack Lowe, the former managing director of **Air Europe, Ltd.** and the popular and most experienced Concorde pilot, both personally recruited by BA-2 CEO Robert Ayling, will attempt to make the Greek carrier profitable. If they succeed, BA-2 will have the option to purchase a 20% equity stake and take Olympic into the "OneWorld" alliance; if they fail, the Greek government will permit Olympic to go bankrupt.

Over the remainder of the month, much of the Greek press, plus politicians and labor leaders, castigate both the arrangement and the British, with particular abuse falling on Mr. Lynch. In Athens, the new CEO informs a parliamentary committee that he and Lowe have not come to change Olympic, but to undertake and enhance its existing activities. The Greeks are assured that BA has no hostile plans.

Upset that the fate of their airline has been placed in the hands of a competitor and not mollified by Lynch's testimony, airline workers stage a 24-hr. strike on July 1, greeting their new British bosses with what has become a common demonstration of displeasure. More than half the days flights must be grounded, bringing additional fiscal losses. Threats of additional strikes force Economic Minister Yannis Papandoniou to warn, in a July 4 interview in *Apoyevmatini*, that unless employee cooperation is forthcoming, the airline may be sold outright.

On July 7, Papandoniou again appeals to workers, promising that Speedwing will not cut jobs or shrink Olympic domestic flights, though they are authorized to alter the international schedule. Workers again walk out, forcing Olympic to cancel 50 of 79 domestic and international flights.

The initial unrest dies down as July passes into August. During these summer months, CEO Lynch orders a full review of Olympic's fleet as his management team prepares for a September meeting with EU officials. The Speedwing consultants must convince EU regulators that Olympic is proceeding in a manner required to receive state aid.

While en route from Athens to Bucharest on September 14, a Dassault Falcon 900 bizjet, operated by Olympic on behalf of the government of Greece, enters into a rapid descent. Of the 13 persons aboard, 6 are fatally injured and 3 are seriously hurt. The flight crew is uninjured and is able to land the aircraft safely at its Romanian destination.

The last two of four A340-313Xs to be received during the year arrive at Athens on October 14 and 25, respectively.

With Chairman G. Zigoyannis aboard, a company A340-313X flies from Athens to New York (JFK) for the first time on December 9. It receives an arch-of-water welcome from a pair of fire department tankers.

Customer bookings drop 1.6% this year to 6.36 million, while freight traffic falls 8.3% to 103.27 million FTKs.

Airline employment at the beginning of 2000 stands at 6,584, a 0.2% decrease over the previous 12 months. The B-737 fleet includes 1 Dash-33R, 7 Dash-484s, 5 Dash-4Q8s, and 1 Dash-4Y0.

Olympic Club business service is introduced on February 8 aboard company flights from Athens to Alexandroupoli, Chania, Corfu, Heraklion, Kavala, Koa, Mitilini, Rhodes, and Thessaloniki.

On March 17, the board of directors votes to fold the carrier's in-house tour service, Olympic Airtours, back into the parent organization, placing it under the sales and marketing department.

Thrice-weekly return service to Belgrade is resumed on March 23.

Arrangements are completed on March 24 for the long-term lease, beginning in June 2001, of 11 Next Generation B-737-700s and 4 Next Generation B-737-800s; 15 older aircraft will be subchartered or, if owned, sold.

When the summer schedule begins on March 26, weekly frequencies from Athens to Amman, Bangkok, Boston, and Sydney are increased to three; those to Montreal, Moscow, and Toronto are increased to four. Berlin is increased to five, Dubai to seven, and New York (JFK) to nine per week. Daily frequencies from Athens to Frankfurt, Munich, and Paris (CDG) are increased to two, and those to London (LHR), Milan, and Rome are increased to three. From Thessaloniki, service to Berlin becomes thrice-weekly, while new daily roundtrips are introduced to Munich and London (LGW). At the same time, service to Melbourne ceases.

An early morning B-737-484 return service is inaugurated on March 28 between Athens and London (LHR). A third A300-605ER is placed into service on April 3 on the route between Athens and Thessaloniki. Thrice-weekly B-737-284 return flights commence on April 30 from Athens to Benghazi.

On May 16, an order is placed with Boeing for 11 Next Generation B-737-784s and 4 Next Generation B-737-884s with which to modernize its fleet prior to the 2004 Athens Olympiad. At the same time, agreement is reached with GECAS under which the carrier will sell to the GE leasing arm 11 of its B-737-200s and then charter them all back until the new Boeings arrive in 2001-2002.

With Olympic still in difficulty, **British Airways, Ltd.**, (2) announces on June 2 that it will not purchase a 20% equity stake in the Greek flag carrier. In fact, it has also terminated its Speedwing, Ltd. management consultancy early, but under a timetable agreeable to the Greek government. In an interview with the BBC, former Olympic CEO Rigas Doganis criticizes the Speedwing operation, particularly its failure to bring the Greek side of the carrier's operation into its decision-making process.

At this point, the Greek Minister of National Economics and Transport Chris Verelis brings in Price Waterhouse Coopers and Credit Suisse First Boston to conduct an audit and find new management.

Four-times-a-week Fokker 100 return service from Venice to Athens, code-shared with **Alpi Eagles, S.p.A.**, begins on June 11.

Thrice-weekly A300-605ER roundtrips begin on June 18 from Athens to Boston via Manchester, England; the next day, thrice-weekly return flights are started from Athens to Tehran. Chairman Stelios Haji-Ioannou of **easyJet Airlines, Ltd.** bluntly denies media rumors on July 18 concerning his possible purchase of the Greek flag carrier: "I wouldn't take Olympic," he says, "not even as a gift!"

AirlinersOnline.com reports on August 9 that the carrier has informed the **British Airways, Ltd.** (2) subsidiary Speedwing that it will not pay the British company's consulting fee and that, if it wishes to collect anything on the debt, it can sue. By now, the government has received the results of its financial audit of Olympic and has found the airline near collapse. It owes huge sums to various state agencies for fuel, health insurance payments, landing fees, and so forth.

In an effort to keep the airline going and to keep its privatization plans alive, an appeal is now made to the EU Commission for permission to receive a third tranche of state funding earlier denied. Representatives of Olympic's trade unions travel to Brussels to lobby for the aid. Both the plan and the workers are met with a negative reaction as the European Union stays with its earlier position.

In early September, Minister Verelis puts forward a new plan to the cabinet of the Socialist Greek government to remedy the flag carrier's problems. Under his scheme, Olympic would be broken into two halves. One unit, about 65% of the whole, would retain all airline operations with a view to privatization while the other would be saddled with all of the company's debts. The funds raised from the sale of the larger part could then be used to cover the sums owed by the other unit. The scheme is met with negative comment from opposition parties, creditors, and even the EU Commission.

The carrier announces on October 10 that it will soon reopen its office in Nairobi; the company had pulled out of Kenya in December 1998. On October 31, economist Agelos Christodoulatos is appointed chief financial officer.

Despite the UN embargo, Olympic, on November 11, becomes the latest European or African airline to operate a humanitarian flight to Baghdad, Iraq.

B-737-484 return service between Athens and Manchester, England, grows from twice weekly to thrice weekly on November 13.

In an unusual admission of failure, this time in the case of Olympic's reform, the Greek government, on December 8, places an ad in the *Financial Times* seeking parties interested in purchasing a majority stake in its troubled flag carrier. The same day, the government announces that it is seeking tender proposals, by the end of January, for its 51% majority stake in Olympic.

Taking pains to stress its findings are not a reflection on Olympic, the U.S. FAA reports on December 21 that civil aviation authorities in Greece are failing to meet international safety standards set by ICAO. The finding does, however, require the FAA to give Greece a Category 2 safety rating and to mount a closer scrutiny of Olympic and other Greek carriers. No Greek carrier will be allowed to expand its services into the U.S., except through the wet-leasing of U.S.-registered aircraft, until the poor rating improves.

Two B-727-284s have been withdrawn from service in these 12 months and await scrapping at Athens.

As the year ends, Credit Suisse First Boston, which is advising the Greek government on the airline's privatization, will note that six concerns have come forward to express an interest in acquiring a stake in the national airline. The only airlines planning offers are **Cyprus Airways, Ltd.** and **Axon Airlines, S.A.** Bids are anticipated by the end of March.

OLYMPIC AVIATION, S.A.: 96-100 Syngrou Ave., Athens, GR-16604, Greece; Phone 30 (1) 936-2681; Fax 30 (1) 936-3282; <http://www.olympic-airways.gr>; Code 7U; Year Founded 1971. The wholly owned subsidiary Olympic Aviation, S.A. is formed by **Olympic Airways, S.A.** on August 1, 1971 to operate domestic service and local flights on behalf of its parent. Previously operated as the parent's light aircraft division, the company's initial equipment consists of 9 Cessna and Piper lightplanes and 2 helicopters.

In addition to replacement services, charters, and cargo flights flown in 1972-1973, Olympic Aviation also enters into the flight training business, opening what will become an internationally recognized Pilot Training School.

In 1974–1975, the carrier is shifted from the private ownership of Aristotle Onassis to the government at the same time and manner as **Olympic Airways, S.A.** The company also undertakes charter flights to offshore and holiday destinations. Services continue with little change during the remainder of the decade and into the early 1980s. Beginning with the delivery of the *Isle of Skiathos*, two Shorts SC-7 Srs. 3 Skyvans are acquired in 1981–1983.

Late in 1984, a major development plan is unveiled by parent **Olympic Airways, S.A.** Designed to relieve the financial burden of domestic service and leave itself free to concentrate on international operations, the approach shifts responsibility for domestic flights to the Olympic Aviation, S.A. subsidiary. The subsidiary's fleet is beefed up to include 2 Dornier 228-201s, 2 Shorts SC-7 Skyvans, 2 Britten-Norman BN-2 Islanders, 1 Piper PA-23 Aztec, 1 Bell 206, 2 Aerospatiale AS-350B Ecureuils, and 1 AS-318 Alouette. Beginning in 1985, 31 Greek stops are turned over.

Director General G. Gilkopoulou acquires six Shorts 330s in 1986. Destinations visited now include Karpathos, Kasos, Kastoria, Kithyra, Kos, Kozani, Larissa, Limnos, Mykonos, Mytilini, Paros, and Preveza. Late in the year and in 1987, seven additional Dorniers arrive.

A. Rigos becomes director general in 1988 as two Dornier 228-201s are withdrawn. Destinations visited at decade's end include Ioannina, Thessaloniki, Tirana, Chios, Kalamata, Karpathos, Kastoria, Keffallonia, Kithira, Kozani, Leros, Limnos, Milos, Mykonos, Naxos, Paros, Preveza, Samos, Santorini, Sitia, Skiathos, Skyros, Syros, Zakynthos, Rhodes, and Iraklio.

Three Avions de Transport Regional ATR42-320s are ordered in January 1989.

Having deviated 4 nm. from its course on a service from Thessaloniki on August 4, a Shorts 330-200 with 3 crew and 31 passengers crashes into Mt. Kerkis, 8 km. NW of Samos; there are no survivors.

Capt. Kiriakos Avgerinidis becomes director general in 1990 and bolsters the fleet with the acquisition of two ATR42-320s (the first of which arrives in January).

Two more ATR42-320s arrive in 1991 as one Shorts 330 is withdrawn. The first of three ordered ATR72-210s is delivered during the summer. On January 1, 1992, the carrier becomes operationally independent of its parent. A second ATR72-210 arrives and enplanements total one million.

Airline employment stands at 520 in 1993 as a third ATR72-210 is delivered. Two new routes are opened from Athens—to Istanbul via Salonica and to Corfu via Salonica. A new hub is established at Salonica and by year's end the company becomes financially independent of its parent, assuming fiscal responsibility for all domestic routes, except six hubs, including Corfu and Rhodes. The airline receives its own designator.

During the 12 months, scheduled departures total 39,930 and enplanements are 1,069,031.

The fleet in 1994 includes 6 ATR72-210s, 4 ATR42-320s, 1 Dassault Falcon 900, 7 Dornier 228-201s, and 5 Shorts 330s, all of which are later withdrawn and placed up for sale. Thrice-weekly ATR72-210 service is started from Athens to Tirana in Albania in April.

The year's scheduled departures slip to 39,651 as customer bookings ascend to 1,194,388.

Flights continue in 1995. During the spring of 1996, return flights commence between Thessaloniki and both Belgrade and Bucharest. Dr. Petros Stefanou becomes director general. A total of 1,346,635 passengers are flown on 41,350 scheduled departures.

While landing at Paros on May 2, 1997 after a flight from Athens, a Dornier 228-201 with 2 crew and 18 passengers, touches down 4 ft. short of the runway; the mistake causes the nosegear to collapse. Although the aircraft is badly damaged in the subsequent 170-m. slide, there are no fatalities.

The number of scheduled departures climbs to 41,552 and enplanements reach 1,428,732.

Destinations added during the year and into 1998 include Sofia, Rhodes, Cairo, Larnaca, Corfu, Brindisi, and Venice. Flights to Skopje

are discontinued on October 30. Enplanements for the year total 1,245,928.

It is announced on May 7, 1999, that Olympic Aviation has become the European launch customer for the Boeing 717-200. Having signed a lease with Bavaria International Aircraft Leasing Company for two of the aircraft, the company will place the planes, following their delivery in the fourth quarter, into service on routes from Athens and Thessaloniki to the Balkans.

Weekly ATR72-210 roundtrips commence on September 21 from Athens to Skopje; the new service becomes thrice weekly on October 31. Customer bookings this year slide to 1,190,936.

The workforce at the beginning of 2000 totals 575.

Two Boeing 717-2K9s, chartered via Bavaria International Aircraft Leasing, are delivered to company representatives at a Long Beach, California, ceremony on January 6, with the first christened *Andromeda*. The two aircraft begin the premier service by their type in Europe at the end of the month, operating from Thessaloniki to Amsterdam, Berlin, Brussels, Munich, Paris, Stuttgart, and Larnaca.

OMAHA AVIATION COMMUTER: United States (1979–1980). OAC is set up at Omaha, Nebraska, in the summer of 1979 to offer scheduled passenger and cargo flights linking Millard Airport with Kansas City, Missouri. Piper PA-31-310 Navajo and Cessna 310 daily roundtrips commence in August and continue through November 1980.

OMAN AIR, LTD.: P.O. Box 58, Postal Code 111, Seeb International Airport, Muscat, Oman; Phone 968 519 237; Fax 968 510 805; <http://www.oman-air.com>; Code WY; Year Founded 1993. Oman Air is created in March 1993 when **Oman Aviation Services** is renamed. Operations manager Max Paulin oversees a workforce of 1,700 and a fleet that includes 2 Boeing 737-33As leased from Ansett Worldwide, Ltd., 1 de Havilland Canada DHC-6 Twin Otter, 4 Fokker F.27-500s, and 2 Cessna Citation IIs. Destinations visited are the Sultanate communities of Khassab, Buraim, Fahud, North Samin, Samah, Haima, Thumrait, Rima, Saiwan, Dibaa, Khasah, Masirah, Salalah, and Sut.

In July, Oman Air inaugurates its first international route, to Dubai, followed in November with return flights to Trivandrum, India.

Early in January 1994, a new Boeing 737-33A route is opened from Muscat to Kuwait. Flights to Colobo, Sri Lanka, begin in October.

Operations continue apace in 1995 and service to Bombay is started during July.

In March 1996, the carrier enters into a block-space, code-sharing agreement with **Swissair, A.G.** for return flights from Zurich to Muscat. Alone, the company begins roundtrips frequencies to Dhaka, Bangladesh, in September. Enplanements for the year total 399,173.

Airline employment stands at 2,400 in 1997. At the end of May, the company inaugurates return service to Abu Dhabi five times a week and twice weekly to Cairo. In June, new routes are stretched to Doha, Qatar, and to Chennai, India. Passenger boardings soar 22.3% to 513,736 and 2.86 million FTKs are also operated.

Airline employment stands at 2,400 in 1998. A leased B-737-4Q8 is delivered on March 31. Code-shared flights with **Royal Jordanian Airlines** to Amman commence in June. Two Avions de Transport Regional ATR42-520s are ordered for regional routes late in the year. Customer bookings fall 24.7% to 267,000, while FTKs inch up to 2.87 million.

The new ATR42-520s enter service during January 1999 on new services to Jeddah, Saudi Arabia.

Officials from Oman Air meet with their counterparts from **Emirates Airlines, Gulf Air Company G.S.C., Kuwait Airways Corporation, Qatar Airways, and Saudi Arabian Airlines** at Kuwait City on May 15 to plan a united body to compete against the growing number of major world airline alliances. The CEOs, who also agree to meet quarterly, discuss ways to coordinate and develop additional revenues, cut expenses, and invest jointly in support services.

Two Airbus Industrie A310-322s, previously operated by **Swissair, A.G.**, are obtained under charter from ILFC on May 21. The two are

scheduled to be replaced with former **Balair/CTA, S.A.** A310-325s later in the year.

The company's third destination in the UAE, Al-Ain, is introduced in November. Enplanements for the year total 299,000, while 6.84 million FTKs are also operated.

The workforce at the beginning of 2000 totals 2,400. On March 26, the number of weekly roundtrip A310-325 frequencies to Thiruvananthapuram, India, is increased from four to five. Other routes increased include Bombay (2 to 4) and Al-Ain (3 to 8). The number of weekly return flights to other points remains the same as they have for some time: 33 to Dubai, 14 to Abu Dhabi and Salalah, 7 to Doha, 3 to Gwadar, 2 to Dhaka, Karachi, Peshawar, Kuwait, and Jeddah, and 1 to Colombo.

On April 19, DHC-6 return service to Sur is increased from thrice weekly to four times a week. A Boeing 727-86 is leased from **Iran Air** on May 22. It replaces an ATR on the routes to Abu Dhabi and Doha.

In June, the Wings of Oman Lounge is opened for business-class passengers at Oman's Seeb International Airport.

On July 1, duty-free merchandise is made available on international flights for the first time. Due to poor yields, the carrier's twice-weekly return service between Muscat and Karachi is terminated as of July 15.

Wearing the red, green and white livery of the Sultanate of Oman, the B-727-231A of **Nationwide Air Charter (Pty.), Ltd.** is wet-leased to Oman Air between July and September to operate daily services from Muscat to Dubai, Jeddah, Pershawah, Karachi, and Madras. Occasional flights are also made to Bombay. The six-month engagement involves supplying not only the aircraft with its flight deck crew, but also a full complement of 15 cabin crew and the establishment of an engineering support base. A total of 28 Nationwide personnel are based at Muscat to support the contract.

Oman Air is the official airline of the Muscat Festival 2000, staged between October 15 and November 30.

Daily roundtrip frequencies between Muscat and Dubai are boosted to seven a day with the beginning of the winter schedule on November 1. Also in November, company employees receive new uniforms.

OMAN AVIATION SERVICES COMPANY, LTD. (SAO): Oman (1981-1993). SAO is organized at Muscat's Seeb Airport on May 24, 1981 by Royal Decree through the merger of Oman International Services and the Light Aircraft Division of **Gulf Air**. Owned entirely by Omani interests—the government is a 35% shareholder—the new company performs all civil air transport requirements within the Sultanate, including engineering, catering, and airport ground services. Riadh Bin Abdulla Al Busaidi is named chairman and the carrier is capitalized at RO 5 million (\$1.7 million). General Manager R. S. Meldrum's 850-worker company possesses a fleet initially comprising 4 Fokker F.27-600s, 5 Shorts SC-7 Skyvans, 2 Britten-Norman BN-2 Islanders, and 1 Beech King Air 100.

In cooperation with Gulf Air, daily Boeing 737-200 flights link Muscat and Salalah. In 1983-1984, another F.27-600 is acquired, along with two de Havilland Canada DHC-6-300s and a Beech King Air 200. Operations continue apace to six destinations in Oman in 1985 and in 1986 Chairman Al Busaidi also assumes the responsibilities of general manager.

By 1987, the fleet includes the Gulf Air B-737, 2 Twin Otters, and 4 Fokker F.27-600s, the latter operated under charter to Petroleum Development Oman (PDO). The Boeing remains dedicated to eight-times-per-week service between the nation's largest cities, Muscat and Salalah.

The year's enplanements total 77,732.

During 1988-1992, airline employment is increased to 1,650 and the fleet is altered to comprise 5 F.27-500s, 1 Cessna Citation II, and 1 Twin Otter. The Cessna is employed on calibration work in several Gulf area countries while the Fokkers and DHC-6 remained devoted to domestic flights, primarily in support of PDO. A British Aerospace BAe-146 is briefly flown, but withdrawn. In July 1990, Riadh bin Abdulla Al-Busaidi is replaced as managing director by Self bin Hamood Al-Behlany.

In 1993, Operations Manager Max Paulin oversees a workforce of 1,700 and a fleet that includes 2 Boeing 737-33As chartered from Ansett

Worldwide, Ltd., 1 Twin Otter, 4 F.27-500s, and 2 Cessna 550 Citation IIs. Destinations visited are the Sultanate communities of Khassab, Buraim, Fahud, North Samin, Samah, Haima, Thumrait, Rima, Saiwan, Dibaa, Khasah, Masirah, Muscat, Salalah, and Sut. In March, the company is renamed **Oman Air**.

OMNI AIR EXPRESS: 3303 North Sheridan Road, Hangar 18, Tulsa, Oklahoma 74115, United States; Phone (918) 836-5393; Fax (918) 834-4850; <http://www.omniairintl.com>; Code X9; Year Founded 1993. Having flown from Tulsa for a decade as an FAR Part 135 charter carrier, OAE in 1993 is expanded and obtains Part 121 certification. It now offers all-cargo services to regional and international destinations with a two-plane fleet comprising one owned B-727-90C and a leased B-727-21F. The private concern, under the operational direction of Vice President Joe Shriram, does not release its traffic figures.

An operating surplus of \$528,000 and a net gain of \$238,000 are, however, reported.

In the spring of 1994, two B-727-222Fs and a Learjet 24D are acquired and authority is sought to enter the charter passenger business.

Revenues advance a staggering 253.9% to \$9.37 million, while expenses rise 203.8% to \$6.44 million. The operating profit is \$2.93 million and the net profit is \$3.35 million.

Certification is duly received in 1995. Operating income exceeds costs and leaves gains of \$2.48 million (operating) and \$3.92 million (net).

The fleet is increased in 1996 by the addition of a B-727-90C. Revenues plunge 14.8% to \$9.37 million while costs drop 8.1% to \$7.83 million. Operating gain slides to \$1.54 million and a net \$1.75-million profit is reported.

Sanford Burnstein is president in 1997 and the workforce stands at 60. In December, two leased Douglas DC-10-10s, previously operated by **American Airlines**, are acquired with which to inaugurate charter flights from Minneapolis and Boston to Mexico, Aruba, and several other Caribbean holiday destinations on behalf of Trans Global Tours.

The company does not report its traffic figures to the government, but does note that its revenues have shot up 30.2% to \$12.03 million. With expenses of \$11.26 million, operating gain falls to \$764,000. The net profit drops to \$1.13 million.

In February 1998, an agreement is reached with **Condor Flugdienst, GmbH** of Germany for the purchase of two DC-10-30s, which will be delivered in November and June 1999, respectively. Charter flights have not begun as of midyear.

While climbing away from Wichita on June 12, a B-727-222F nearly collides with a USAF Rockwell B-1 bomber, which is also departing. The aircraft come within two seconds of disaster; the degree of vertical separation between them is 3,647 ft., with a mere 100-ft. horizontal separation.

The B-727Fs are all sold to **Kitty Hawk Air Cargo** by month's end.

Revenues this year ascend 168.4% to \$34.69 million, while costs are up 175.7% to \$31.48 million. The operating profit surges to \$3.21 million, while net gain jumps to \$3.73 million.

Authorization is received from the DOD in February 1999 to operate military charters throughout the world with the company's two DC-10-30s and two DC-10-10s. The carrier's B-727F fleet continues to operate all-cargo charters and subcharters on behalf of **Emery Worldwide**, **United Parcel Service (UPS)**, **DHL Worldwide Express**, and **BAX Global**.

A third DC-10-30, purchased from **Condor Flugdienst, GmbH** in July, is delivered at the end of September. On behalf of MLT Vacations and GWV International, the company, with the beginning of the winter schedule on November 1, stations two DC-10-30s at Minneapolis (MSP) and one at Detroit (DTT) to operate passenger charters to Las Vegas, Honolulu, Cancún, Orlando, and Montego Bay.

Passenger boardings this year total 681,000. Revenues fall 19.1% to \$28.08 million, while expenses are down 13.7% to \$27.16 million. The operating profit declines to \$919,000, while net gain is reduced to \$1.63 million.

The workforce at the beginning of 2000 totals 338. A weekly DC-10-30 Saturday charter is operated from Detroit (DTT) to Honolulu between February 5 and April 8. In the fall, the DC-10-30 fleet again transports tourists from the upper Midwest to the sun points of Florida, Mexico, Hawaii, Nevada, and the Caribbean.

On November 3, a DOD-chartered Omni DC-10-30 returns the surviving crewmembers of the USS *Cole*, a victim of terrorism in Yemen several weeks earlier, to their home base at Norfolk, Virginia.

OMNI AIRLINES: United States (1977–1979). Omni Airlines is set up at Las Vegas, Nevada, in 1977 to provide Mooney 20-A scheduled passenger flights to the Grand Canyon and Death Valley; charter services are also available. Operations continue apace until the company goes out of business in 1979.

OMNI AVIACAO E TECNOLOGIA, LDA.: Hangar 1, Aerodromo Municipal de Cascais Tires, Sao Domingos de Rana, 2775, Portugal; Phone 351 (1) 445-8600; Fax 351 (1) 445-8686; <http://www.omni.pt>; Code OAV; Year Founded 1988. Omni is established at the Cascais Municipal Airport near Lisbon in 1988 to engage in aerial work and passenger and small group passenger charters.

Over the next decade, bases are also established at Espinho and Santa Comba Dao. Daily operations are launched from these facilities and upwards of 35 other heliports nationwide. Hydroelectric, aeromedical, construction, and fire-fighting missions are also undertaken. Overhaul and maintenance is undertaken by the carrier's sister company, Aeromec, Lda.

In 1998–1999, Jose M. da Costa is president with Rui de Almeida as operations director. The fleet now includes 2 Bell 206B JetRangers, 3 Bell 206L LongRangers, 1 Bell 205, and 2 Bell 212s. The company also operates three Bell 222s, one each committed to charter, EMS, and rescue. One each Piper PA-31 and Aero Commander 690B fixed-wing aircraft are employed on agricultural and passenger charters.

During the fall of the former year, a contract is signed with the Portuguese government for the operation to two rescue and fire-fighting helicopters from Cascais Airport. One each Bell 212 and Bell 222 are dedicated to the new business.

On March 1, 2000, the carrier is granted two-year certification by the Portuguese government to operate a scheduled service. Two Beech Super King Air 200s are acquired for the purpose and the Aero Commander 690B is retasked to the new product from its previous charter commitment. On August 28, the three aircraft launch daily return service from Lisbon to Vila Real via Braganca.

OMNIFLIGHT AIRWAYS/OMNIFLIGHT HELICOPTERS: 4650 Airport Parkway, Dallas, Texas 75248, United States; Phone (214) 233-6464; Fax (214) 490-1486; <http://www.omniflight.com>; Year Founded 1982. Omniflight Group is established by Daniel Parker, CEO of Parker Pen Company, at Baltimore (BWI) in 1982 to oversee the work of several rotary-wing subsidiaries, including Omniflight Helicopter Services' Omniflight Helicopters and Omniflight Airways. Bases are set up at the Maryland facility, as well as Teterboro, New Jersey, Chicago, Grand Junction, Colorado, Corpus Christi, and Janesville, Wisconsin, where Parker had entered the helicopter business in 1955 and where the company's technical services division is established. The company undertakes extensive charter and contract services, including EMS flights and oil industry support services.

By 1983, the carrier is providing flights with a fleet of Bell 206L LongRangers and Bell 206B JetRangers. Employing a pair of Bell 222s and a Westland 30-100, the company's Omniflight Airways contracts with several airlines, including **Pan American World Airways (1)**, to provide shuttle services between New York (JFK and LGA) and Newark (EWR).

On April 1, 1984, Omniflight Airways, under contract to **Pan American World Airways (1)** and employing two Bell 222s, expands the major's New York City rotary-wing service by adding flights from Man-

hattan to the World Trade Center–Battery Park Heliport. The fleet is expanded to include four Bell 222s and a pair of Westland 30-100s. The major's first-class and Worldpass passengers are able to ride the helicopters for free; however, all others pay a single fare of \$77 for all services.

Just after having landed at Loiza, Puerto Rico, on June 27, a Bell 206L LongRanger with a pilot and six passengers, is parking when an unauthorized person walks into the tail rotor and is seriously injured.

Operations continue apace in 1985 and in May 1986 the fleet is revised. Gone as of May 15 are the Bell 222s and one of the original Westland 30-100s, replaced by two Westland 30-100-60s painted in modified **Pan American World Airways (1)** livery; one of the Westland 30-100s is used for backup.

A Bell 206L LongRanger Medevac, with a pilot, two crew, and a three-month-old patient, crashes at Pollockville, North Carolina, on the night of January 8, 1987; there are no survivors.

The **Pan American World Airways (1)** contract is not renewed; however, Omniflight Airways takes over the shuttle operation, continuing ferry flights between NYC and JFK International and Newark Airports. Meanwhile, an EMS contract is begun in West Berlin with Messerschmitt-Boelkow-Blohm (MBB) BO-105Cs.

The service proves so unprofitable that it must be shut down on February 1, 1988, leaving **New York Helicopter Corporation** as the only NYC-area rotary-wing airline. With 28 helicopters, the company now operates a total of 23 EMS contracts. Late in the year, the company's largest EMS contract is secured, this one with the University of California at San Diego. In December, two new MBB BO-105s undertake 105 hours per month in Gulf of Mexico services on behalf of Conoco.

In January 1989, four of the company's MBB BO-105Cs are assigned to undertake the University of California contract from a newly opened base at San Diego. In October, the company's Gulf Coast operations are sold to Offshore Logistics, Inc., parent of **Air Logistics**, for \$2.6 million. Michael Aslaksen is appointed general manager in December.

Airline employment in 1990 stands at 350. After months of negotiations, Omniflight, in January, is able to buyout Dallas, Texas-based **SilverStar**. The contract adds 190 employees, a repair station, 48 helicopters, and 20 hospital contracts. The Omniflight fleet now includes over 100 rotary- and fixed-wing aircraft, as well as 43 hospital contracts administered from an air-medical division at Addison, Texas.

McDonnell Douglas Helicopter Company executive Robert Buffum is appointed chief operating officer in March. In April, an MBB 105CBS is dispatched to Tompkins County Airport at Ithaca, New York, to service a contract with the Southern Tier Air Rescue consortium of hospitals. Operations continue apace during the remainder of the year and throughout 1991.

Founder/CEO Parker dies at Charleston, South Carolina, on January 28, 1992. He is succeeded as chairman/CEO by his widow JoAnn Slack Parker, with Buffum remaining as chief operating officer. In February, the decision is taken to move corporate headquarters to Addison, Texas, which is completed during the summer and fall.

During the spring of 1993, the maintenance facility at Janesville, Wisconsin, is closed and overhaul services and other activities are consolidated at the new Texas hub. Airline employment falls to 350 and 28 aeromedical contracts are serviced with just under 70 aircraft. William "Bill" Smoot is appointed chief pilot in October.

Operations continue without incident in 1994, until November 4. On that date, a BO-105 EMS helicopter with three aboard crashes while en route to pick up a patient near Tallahassee, Florida (two dead). In December, the company, under contract, provides a Bell 222UT to support Wesley Medical Center in Wichita, Kansas; another is sent to Abilene, Texas, to support the EMS service at Hendrick Medical Center.

Flights continue in 1995. C. Jim Armstrong Jr. is now president/CEO and his rotary-wing fleet exceeds 80 units. Late in the year, \$30 million worth of orders are placed with Agusta for three A109Ks, three A109 Powers, and six A119 Koalas. Omniflight is North American launch customer for the latter two types.

During the first quarter of **1996**, the company completes a maintenance facility and training program for the new Agusta helicopters that begin to arrive in April.

The company signs its longest deal in February **1997**, a 10-year contract with Columbus-based Ohio Medical Transportation. Four Eurocopter BK-117s will be provided for medevac services. Simultaneously, the carrier contracts with the University of North Carolina at Chapel Hill for another BK-117, while yet another BK-117 is dispatched to Seton Health Corporation in Saginaw, Michigan, when that firm renews with Omniflight and replaces its BO-105.

Flights continue in **1998–1999**. While taking off on a medevac flight from Neihart, Montana, for Great Falls on November 17 of the latter year, a Bell 206L LongRanger with four aboard collides with a tower and crashes. Although the helicopter is substantially damaged, neither the pilot, medic, nurse, or patient are injured.

The fleet at the beginning of **2000** includes 3 AS350Bs, 23 BK-117s, 5 BO-105s, 1 Eurocopter EC-135, 7 Bell 206L LongRangers, 5 Bell 222s, 1 Bell 230, and 2 fixed-wing Beech Super King Air 200s.

These 47 machines support medical evacuation programs of the following health care systems: Orlando Regional Healthcare System (Air Care Team); St. Mary's (Michigan) Medical Center (FlightCare); Tallahassee Memorial HealthCare (Life Flight); Methodist Hospital (Indiana) & Clarian Health Partners (LifeLine); Life Star of (Addison) North Texas; Avera (South Dakota) McKennan Hospital (Careflight); St. Vincent Hospital (Montana) & Health Center (HELP Flight); Baptist (Jacksonville) Medical Center (Life Flight); Memorial (Savannah, Georgia) Health University Medical Center (LifeStar); Columbia Wesley (Wichita) Medical Center (LifeWATCH); Sioux City Mercy Medical Center (Mercy Air Care); Mayo (Minnesota) Medical Transportation; Medical University of South Carolina (MeduCare); Native American Air Ambulance of Mesa, Arizona; University of Virginia Medical Center (Pegasus Flight Operations); Cook (Fort Worth) Children's Medical Center (Teddy Bear Transport); Eau Claire Luther Hospital (MayoAir Medical Transport Service); Ohio Medical Transportation (MedFlight); Benefits (Great Falls) Health Care (Mercy Flight); and Sentara Norfolk General Hospital (Nightingale Regional Air Ambulance).

OMSKAVIA AIRLINES: Ulitsa Inzhenemaya 1, Omsk Airport, Omsk, 664103, Russia; Phone 7 (3812) 357 382; Fax 7 (3812) 316 417; Code OMS; Year Founded 1994. Omsk Air is founded at Omsk Airport on February 1, **1994**, to provide domestic passenger and cargo services, both scheduled and charter. The joint stock company Corporation Aircompany Omskavia is the parent organization, created when the Omsk State Air Enterprise is divided into an airline company and an airport operating authority. Shareholding is divided between company employees (51%), the state (20%), and private investors (29%).

Yuri S. Romananuk is appointed director general and he recruits a workforce of 878. Revenue flights are inaugurated with 6 Tupolev Tu-154Bs, plus an unspecified number of Antonov An-2s, An-24s, and An-26s, plus Let L-410s. Enplanements total 186,207.

The fleet numbers 51 aircraft in **1995**, all Soviet-made. Passenger boardings decline by 5.5% to 281,700, but freight traffic rises 1.4% to 8.55 million FTKs.

Flights continue during **1996–1999** with a fleet that now comprises the 6 Tu-154B/Ms, plus 4 An-24s, 2 An-26s, 9 An-2s, and 4 Mil Mi-2 helicopters.

Despite the economic crisis of the latter year's summer, Omsk Air actually lowers its prices on September 22 on its route to Moscow, cutting economy-class tickets from 720 rubles to 670.

The workforce totals 743 at the beginning of **2000**.

OMTA (ORGANIZACAO MINEIRA DE TRANSPORTES AEREOS, S.A.): Brazil (1946–1952). Formed at Belo Horizonte in January **1946**, this air taxi service offers nonscheduled local passenger and cargo flights with a fleet initially comprising four de Havilland DH 89A Dragon Rapides.

Although the operation does not change, services are increased over the next four years and the fleet is altered. The Dragon Rapides are gradually supplemented by 20 V-tail Beech Bonanzas.

In August **1950**, officials of **TAN (Transportes Aereos National, S.A.)** select OMTA as the second acquisition for their new airline consortium, which is also based at Belo Horizonte. OMTA is allowed to continue autonomous operations under its own title for two years.

(2); CANADIAN AIRLINES, LTD.; CATHAY PACIFIC AIRWAYS (PTY.), LTD.; FINNAIR, A/O; IBERIA SPANISH AIRLINES (2); LINEAS AEREAS DE ESPANSA, S.A.; LANCHILE AIRLINES, S.A.; QANTAS AIRWAYS (PTY.), LTD.**

ONEIDA COUNTY AVIATION: United States (1975–1979). This regional begins life as the FBO for Oneida County Airport, located near Utica and Rome, New York. Flight operations are started on September 22, **1975**, when two passengers are flown 37 miles from Utica to Syracuse in a company lightplane. After several months of irregular service on that route, OCA begins flights to Newark in a newly acquired Piper PA-31-310 Navajo.

The total number of passengers transported during the first year of charter flights is 381.

As the carrier's officers sense a need to supplement the declining number of flights provided by **Allegheny Airlines** out of Utica and Rome, OCA expands further in **1976**, adding routes to Boston, Buffalo, and Albany. Meanwhile, three more aircraft, including a Navajo Chief-tain, are acquired.

In **1977**, the company accepts the first of five ordered Fairchild-Swearingen Metro IIs, which places it in an excellent competitive position when the floodgates are opened by the Airline Deregulation Act of **1978**.

During the next two years, additional Metros are purchased and service is launched to Washington, D.C. and New York City. A Metroliner nearly collides with an **American Airlines** B-727-223 over New York (JFK) on April 8, **1979**. In September, the company changes its name to **Empire Airlines**, reflecting its New York base.

ONEWORLD. See **AMERICAN AIRLINES; BRITISH AIRWAYS, LTD. (2); CANADIAN AIRLINES, LTD.; CATHAY PACIFIC AIRWAYS (PTY.), LTD.; FINNAIR O/Y; IBERIA SPANISH AIRLINES (2); LINEAS AEREAS DE ESPANA, S.A.; QANTAS AIRWAYS (PTY.), LTD.**

ONG AIRLINES: United States (1967–1968). Officials of Ong Aircraft Corporation, based at Kansas City, Missouri, establish a scheduled air taxi division during the late spring of **1967** to provide frequencies to St. Louis and Chicago, with intermediate stops at smaller Illinois communities. Employing a Cessna 402, daily roundtrips are initiated in July and are maintained for a year.

ONTARIO CENTRAL AIRLINES, LTD.: Canada (1947–1987). Set up at Gimli, Manitoba, in **1947**, this carrier inaugurates charter, followed by scheduled, services to such provincial destinations as Kenora, Red Lake, and Ball Lake. Air ambulance, charter, and agricultural application services are also initiated. Only small aircraft, including de Havilland Canada DHC-2 Beavers and DHC-3 Otters, are flown until **1969**, when the company acquires its first Douglas DC-3.

A second Douglas transport is purchased in **1976**. In **1979**, Ontario Central is taken over by **Austin Airways, Ltd.** The new subsidiary is operated as a charter affiliate.

On February 15, **1983**, a chartered DC-3 with three crew and one passenger loses engine power over an undisclosed snowy location in Manitoba and makes an emergency landing; there are no fatalities.

By 1985, the fleet comprises 4 DC-3s, 2 Cessna 185s, 1 DHC-2, 1 DHC-3, 1 Beech 18, and several Cessna 180s. Operations cease in 1987 when Austin is merged into **Air Ontario, Inc.**

ONTARIO EXPRESS, LTD.: Canada (1987–1992). When **Air Canada, Ltd.** purchases **Air Ontario, Inc.** in late 1986, **Canadian Airlines International, Ltd.** loses its Ontario commuter partner. To redress that change and to provide feed from Ontario markets unable to support Boeing 737 service, the major's parent, PWA, Inc., establishes a new third-level entrant at Toronto in spring 1987. Christened **Ontario Express, Ltd.**, its shareholding is divided between the holding company (45%), company employees (10%), and the public (45%). Ronald L. Patmore is appointed president and a fleet is assembled in May and June comprising 5 British Aerospace BAe Jetstream 31s.

"Canadian Partner" revenue services are inaugurated on July 15 linking the company base with Ottawa, London, Sarnia, and Windsor. Another Jetstream is received in August and four in December, allowing the initiation of flights to Kingston, Sault Ste. Marine, Thunder Bay, and Sudbury.

Another Jetstream 31 is delivered in February 1988, followed by another pair in March. Also in February, orders are placed for six Avions de Transport Regional ATR42-300s, while flights commence from Sudbury and Windsor to Toronto. Toronto to Pittsburgh replacement service is started on behalf of the parent on April 3.

New service is offered from Thunder Bay to Dryden and Winnipeg beginning in June, the same month in which the first two ATR42-300s are delivered. After workup, the Franco-Italian turboprops are placed into service from Toronto to Pittsburgh, Sault Ste. Marine, and Windsor. A 14th Jetstream 31 is delivered in August and is dedicated to training. In late fall, the Winnipeg–Brandon route of **Calm Air, Ltd.** is acquired while another ATR42-300 is delivered in December.

Enplanements for the year total 252,350 and revenues are C\$34.63 million.

The workforce is increased by 54.6% in 1989 to 450 and the fleet now includes 3 ATR42-300s and 14 Jetstream 31s. Orders are outstanding for 2 ATR42-300s, 2 ATR72-200s, and 9 Embraer EMB-120 Brasilas. A fourth ATR42-300 arrives in February and is employed, beginning in March, to open frequencies from Hamilton to Ottawa and Montreal and from Toronto to Timmins.

Frontier Air, Ltd., based in northern Ontario, is, through the purchase of its Rog-Air, Ltd. parent, taken over in March and merged. Flights from Markham's Buttonville Airport to Ottawa and Montreal commence in September as a joint venture in cooperation with **Air Atlantic, Ltd.** A fifth ATR42-300 arrives at year's end.

Passenger boardings skyrocket 51% to 515,000 and freight is up by the very same percentage to 52.79 million FTKs. Revenues climb 64% to C\$45.5 million.

The payroll is cut 0.3% in 1990 to 545 and the fleet now includes 5 ATR42-300s, 14 Jetstream 31s, 5 Beech 1900s, and 3 Brasilas. Flights commence to Washington, D.C. (DCA) and Newark from Hamilton and from Toronto Island Airport to Ottawa and Montreal.

Customer bookings swell 16.2% to 556,546 and revenues advance 32.4% to \$C65 million.

The fleet is altered in 1991 by the deletion of the Beech 1900s and the addition of one ATR42-300 and four Brasilas. **Air Toronto, Ltd.** is taken over in April and in August, the company begins flying the former regional's services to the U.S. destinations of Allentown, Columbus, Dayton, Grand Rapids, Harrisburg, Indianapolis, Kalamazoo, and Louisville.

Despite this expansion, passenger boardings are impacted by the recession and drop 6.8% to 518,701.

In 1992, the company becomes a part of **Canadian Regional Airlines, Ltd.**

ONTARIO PROVINCIAL AIR SERVICE, LTD. See **LAURENTIDE AIR SERVICE, LTD.**

ONTARIO REGIONAL AIRLINES, LTD. See **AIR GEORGIAN, LTD.**

ONTARIO WORLDAIR, LTD.: Canada (1976–1981). Ontario Worldair is formed by a Jim Mclean-led group at Toronto in January 1976. A Boeing 707-338C is acquired in November 1978, allowing the long-dormant operator to undertake its first charter to Montego Bay on December 1. Charters and inclusive-tour flights for Sunflight Tours are flown to various points in the Caribbean, South America, and Europe during the summer of 1979. The Canadian government charters the aircraft during the fall to provide Vietnamese refugee airlift to Montreal and Toronto from Kuala Lumpur or Bangkok. In its first year, the Boeing visits 68 cities in 31 nations.

A Boeing 707-351C, purchased from the Belgian carrier **Abelag, S.A.**, is placed into service in January 1980. The company's two aircraft undertake a variety of nonscheduled flights to mostly holiday locales. Moslem Hadj pilgrims are flown from Kano to Jeddah in October; however, the contract is broken when **Nigerian Airways, Ltd.** complains about a foreign company taking business away from it.

Already in financial difficulty and short of cash with which to pay steadily increasing fuel bills, Ontario Worldair enters receivership on November 6. Although flight operations continue while a buyout is sought, the Abelag Boeing is turned over to **Air Belgium, S.A.** in December. A proposed travel agency bailout fails to materialize and the company ceases operations on January 13, 1981, after which its B-707-338C is sold to **Worldways Canada, Ltd.**

ONUR AIR, TASIMACLLIK, A.S.: Senlik Mahallesi No. 3 Gatal Sok, Florya, Istanbul, 34810, Turkey; Phone 90 (212) 663-2300; Fax 90 (212) 663-6054; <http://www.onurair.com.tr>; Code 8Q; Year Founded 1992. Onur Air is established at Istanbul in late 1992 as the air transport subsidiary of the tour operator TK Air Travel. Shareholding is divided between Cankut Bagona, Hayri Icli, and Ursai Tubentci. Plans are put in place for the initiation of revenue flights during the following spring.

Chairman Bagona employs Capt. Bial Basar as vice president-flight operations and arrangements are completed for the lease of a single Airbus Industrie A320-211. Charters are inaugurated in May 1993 from all of the major German cities and destinations in several other European nations to vacation, metropolitan, and holiday locations in Turkey. Orders are placed for three more A320-211s, two of which are delivered by year's end.

The fourth leased A320-211 is placed into service during 1994. In 1995, one each A320-212 and two A320-231s are added and orders are placed for two (later four) A321-131s and five McDonnell Douglas MD-88s, plus five options.

The first A321-131 is delivered to the carrier in June 1996 and enters service on routes from Istanbul to Paris (CDG), Lyon, and Hanover.

Operations continue apace in 1997 as the remainder of the Airbus order is filled. The first MD-88 is delivered in April. As the U.S.-made transports continue to arrive during the remainder of the year and in 1998, the company adds additional charter flights to European cities, particularly from the city of Antalya.

Flights continue in 1999. On May 19, the skin of a parked MD-88 is pierced by a baggage cart at Teesside, England. No injuries are reported. A full program of charters is continued during the summer and with the beginning of the fall schedule at the end of October, several new services to the Turkish coast begin. Among these are flights to Dalaman and Bodrum from such points as Humberside.

Airline employment stands at 200 at the beginning of 2000 and the fleet, which has been gradually changed over the last year, now includes 2 A300B4-103s, 2 A321-131s, and 5 MD-88s. To provide lift for its charter program in the fall, **Volare Airlines, S.p.A.** wet-leases both A321-131s from Onur on October 7.

An all-white A300B2 is received on December 23.

OPAL AIR (OPAL AIR SERVICES (PTY.), LTD.): Australia (1963–1985). Registered by founder Warwick Goldsworthy at Adelaide in 1963, this small charter operation is created to provide flights to the opal fields at Coober Pedy and Andamooka. Initial operations are undertaken with a Cessna 205.

Four years later in 1967, the company is reorganized; provided with an airline division, it becomes the first to hold an Australian commuter license and undertakes scheduled services to previous South Australia stops. Frequencies are improved during the remainder of the decade and through the 1970s.

By November 1981, Goldsworthy's 14-employee company is offering operations to Woomera, Olympic Dam, Coober Pedy, and Maria. The fleet comprises 5 Cessna 421s and in 1982–1984 begins flying to Ayers Rock in the Northern Territory.

Unable to maintain viability in the face of national economic hardships, the carrier is forced out of business in 1985.

ORANGE AVIATION, LTD.: Ben Shemen 35, Moshav, Tel Aviv, 73115, Israel; Phone 972 (8) 923-5751; Fax 972 (8) 923-5758; Year Founded 1997. Orange Aviation is established at Tel Aviv in 1997 to offer executive and small group passenger charters around the country and to selected regional destinations. By 2000, Zvi Ehrlich employs 4 full-time pilots and operates a fleet that includes 1 each Piper PA-23 Aztec, PA-31-310 Navajo, PA-42 Cheyenne III, Cessna 421, and Israel Aircraft Industries IAI-1124A Westwind 2.

ORBI GEORGIAN AIRLINES: Georgia (1992–1997). The Georgian directorate of **Aeroflot Soviet Airlines** is reformed at Tbilisi in 1992 as the flag carrier of the now-independent state of Georgia. Vasili S. Jamibasi is managing directorate and his fleet of ex-Aeroflot aircraft includes 12 Tupolev Tu-154s, 12 Tu-134s, and 20 Yakovlev Yak-40s. The previous routes to Moscow and the major cities of other republics are maintained while new services are flown to Cairo and Tel Aviv.

The civil war during the year and into 1993 causes traffic to plunge from a 1990 high of 2.72 million passengers flown. Several of the Yak-40s are lost to the hostilities.

Operations continue under the same adverse conditions in 1994. The fleet is steadily reduced to 6 Yak-40s and 4 each Tu-134As and Tu-154Bs, all painted in an attractive new livery with billboard "ORBI" titles on their forward fuselages.

An associated company, **Georgian Airline-Orbi** is established in 1995 and flights continue into 1996. A Boeing 737 is briefly employed during the former year, but is quickly withdrawn. Destinations visited include Batumi, Berlin, Cairo, Istanbul, Kiev, Moscow, Paris, Prague, Tel Aviv, Vienna, Volgograd, and various other CIS communities.

The company is merged with **Georgian Airline-Orbi** in March 1997, with the new company named simply **Georgian Airlines**.

ORCA AIR, S.A.E.: 40th Street, 254 Digla, Maadi, Cairo, Egypt; Phone 20 (02) 519-6664; Fax 2 (02) 519-6539; http://www.orca-air.com; Code ORK; Year Founded 1995. Orca is founded at Cairo in the fall of 1995 by its president, Diaa el-Gabbari, to offer domestic passenger services. Revenue flights to Alexandria, Cairo, Aswan, Hurghada, and Luxor commence in December with a single Beech King Air 90. Orders are placed for two Fairchild Metro 23Es.

Government approval for start-up, under the law 159 of 1981, is belatedly received on February 3, 1996.

In a March ceremony at the Fairchild Aircraft plant, President el-Gabbari takes possession of his airline's premier Metro 23E, the first of its type to be outfitted with the new Electronic Flight Information System (EFIS). Sharm al-Sheikh joins the route network during the summer.

A second Metro 23E enters service in 1997. Frequencies to and between Alexandria, Aswan, Hurghada, and Luxor are increased. New stops are also introduced to Aqaba and St. Catherine. Plans are made to lease a pair of McDonnell Douglas MD-83s by October 1998. Enplanements for the year total 36,550.

It is reported on the company Web site in April 1998 that the company, during its first 17 months, has transported a total of 24,612 passengers during 1,695 flying hours. Two de Havilland Canada DHC-8-300s are leased during the fall. The MD-83s are not delivered. Instead, a Boeing 707F is acquired to operate all-cargo services throughout the Middle East region.

Flights continue in 1999. Destinations visited include Sharm el Sheikh, Cairo, Aswan, Abu-Simble, Luxor, St. Catherine, El-Gouna, Aqaba, Cyprus, Malta, Antalya, Amman, and Rhodes. An air ambulance service, 24 hours a day, 7 days a week, is also introduced.

Airline employment at the beginning of 2000 totals 150.

ORCAS ISLAND AIR SERVICE: United States (1947–1950). Robert F. Schoen and his wife Margaret Ann found **Orcas Air Service** at Friday Harbor, San Juan Island, Washington State, in early 1947 to provide charter passenger and cargo flights in the Puget Sound and San Juan Islands area. Revenue flights commence on March 29 employing a Stinson 108 Voyager. Early in 1948, flying instructor Roy Franklin joins the company, which is now incorporated with its name changed to **Island Sky Ferries**. A Cessna is added.

In the spring of 1950, the little carrier is purchased from the Schoens by Dr. Wallace Howarth, who changes its name to **Island Air**. Franklin and the Stinson remain with the company.

ORD AIR CHARTER, (PTY.), LTD.: P.O. Box 73, Wyndham, Western Australia, 6740, Australia; Phone 61 (91) 611 335; Fax 61 (91) 611 456; Code QN; Year Founded 1989. Ord is established at Wyndham, Western Australia, in 1989 to offer charter and contract service flights to local, mostly bush, destinations. Governing Director Maxine Reid begins and continues services with a fleet that comprises 3 Beech 58 Barons, 1 Cessna 402C, and 1 Pilatus-Britten-Norman PBN-2 Islander.

Operations continue without change over the next decade. During those years, four Cessna 206s are acquired.

OREL AVIA AIRLINES: 3/5 Str 1 Maly Poluyaroslavsky, Pereulok Suite 47-49, Moscow, 107120, Russia; Phone 7 (095) 975-2506; Fax 7 (095) 975-2445; Code R6; Year Founded 1994. Orel Avia is established at Orel in late 1991 to offer executive and diplomatic services. Under the leadership of General Manager Sergei V. Isakov, revenue services are duly inaugurated with 1 each Yakovlev Yak-40 and Yak-42D.

Flights continue in 1992–2000, during which years Tatevos Surinov becomes president, with Isakov as his deputy and Alexander Romanov as managing director. The workforce grows to 63 and the fleet comes to comprise 3 Yak-42Ds. A license to begin scheduled service is sought as medium-range public passenger charters are now undertaken.

ORENBURG AIRLINES (ORENBURG AVIA): Orenburg Airport, Orenburg, Orenburgskaya Region, 460049, Russia; Phone 7 (3532) 331 105; Fax 7 (3532) 479 878; http://www.cavs.ink.ru/company/orenburg; Code R2; Year Founded 1992. Originally established in 1932 as the Orenburg division of **Aeroflot Soviet Airlines**, Orenburg Airlines, also known as Orenburg State Aviation Company (Orenburgskoe Gosudarstvennoe), is reformed and renamed in 1992 at the same time as many other units of the former national carrier. The large inherited fleet comprises 4 Tupolev Tu-154Ms, 1 Tu-154B, 30 Antonov An-2s, 5 An-24s, and 6 Tu-134As, plus 6 Mil Mi-8 helicopters.

Under the leadership of Director General Boris A. Portnikov, Orenburg initially continues its affiliation with the new **Aeroflot Russian International Airlines (ARIA)** as it provides domestic scheduled and charter passenger flights from Orenburgskaya Airport. Services continue in 1993–1997, during which years the carrier becomes the first Russian domestic airline to offer through ticketing and to introduce the hub-and-spoke connection concept.

In December 1998, Orenburg launches a Russian-language homepage on the Internet's World Wide Web. Enplanements during the year total 245,000.

Scheduled destinations visited at the beginning of **1999** include Adler/Sochi, Ekaterinburg, Irkutsk, Khabarovsk, Krasnodar, Mineralnye Vody, Moscow, Nizhni Novgorod, Novosibirsk, Omsk, Samara, and St. Petersburg.

ORENBURG STATE AVIATION COMPANY (ORENBURGSKOE GOSUDARSTVENNOE). See **ORENBURG AIRLINES (ORENBURG AVIA).**

ORIENT AIR, LTD.: United Kingdom (1991–1994). Chairman/Managing Director Stuart Andrews founds Orient at Gloucestershire Airport in late **1991**. A workforce of 15 is recruited and 2 Piper PA-31-310 Navajos are acquired. Scheduled flights begin in late **1992** linking the carrier's base with Coventry, Waterford, Jersey, and Guernsey.

An Embraer EMB-110P1 Bandeirante is acquired in **1993** and is employed to launch services to Dublin. No traffic or financial figures are available from the privately owned regional, which goes out of business early the following year.

ORIENT AIRLINES, LTD.: No. 19, R-Vithei Preah Mohasat, Tiany Kosomak, Phnom Penh, Cambodia; Phone 855 (23) 426 248; Fax 855 (23) 426 313; Code XE; Year Founded 1995. Established in Thailand in 1992, Chiang Mai-based **Cambodian International Airlines, Ltd.** is grounded in December 1994 by its owners, Siam Kampuchea and the Cambodian government, in order that the latter might launch **Royal Air Cambodge**.

Early in **1995**, the dormant carrier is divided in two. One division is renamed Orient Airlines, Ltd. and its headquarters are transferred to Phnom Penh, while the other becomes **Orient Express Air, Ltd.** Udom Tantiprasongchai remains CEO of the latter and a director on the board of the former, where Dr. Emmanuel Iwuanyawu becomes chairman, with Ray Megwa as general manager.

OA is outfitted with 1 each B-727-225 and B-727-227A and is permitted to resume international scheduled services on 20 routes from Bangkok and Chiang Mai. These schedules are maintained during the remainder of the decade and into the new millennium.

ORIENT AIRWAYS, LTD.: Pakistan (1946–1953). Quaid-i-Azam Mohammed Ali Jinnah, leader of the Muslim League and Pakistan's founder, initiates the incorporation of this enterprise during a February 1944 meeting with Habib Rahimtoola. A plan is put forward to establish a civil airline, which, like the old **Deutsche Luft Hansa, A.G.**, can also act as a reserve military pilot training organization. After VJ-Day, Merza Ahmad and Merza Abol Hassan Ispahani, members of the wealthy Calcutta-based textile mercantile Ispahani family and Muslim League sympathizers, establish and register OAL on October 23, **1946**.

Equipped with several war surplus Douglas C-47s (military DC-3s) and Beech 18s, the company, under the leadership of Managing Director Rafi Ispahani, begins flying from Calcutta and Rangoon via Chittagong and Akyab on June 30, **1947**. On August 1, company headquarters are transferred to Chittagong and on August 14, Pakistan is founded. On September 18, the carrier is ordered by the government to provide those air services necessary to link the country's two wings.

Special services are operated to East and West Bengal during the refugee exodus of September and October. Karachi–Dacca DC-3 flights begin on October 1 via Delhi and Calcutta. Dacca to Calcutta and Chittagong direct services commence the same day, while Akyab is dropped as a stop on the Rangoon route. On October 2, two more DC-3 routes are inaugurated: Karachi to Peshawar via Lahore and Rawalpindi and Karachi to Lahore via Quetta. A Karachi to Lahore direct frequency is initiated on November 5.

The operating base and company headquarters are transferred to Karachi from Chittagong on January 2, **1948**. DC-3 Karachi–Bombay services are started in the spring. By year's end, the company is operating 20 Douglas transports.

On February 12, **1949**, two DC-3s fly supplies from Peshawar to Skardu via Gilgit on behalf of the Ministry of Defence. Becoming the

first Asian Convairliner operator, OAL, on May 1, introduces three pressurized Convair CV-240s on its Karachi to Dacca via Delhi and Calcutta route. During the summer, the Quetta to Lahore segment of the Karachi to Lahore service is withdrawn.

On August 12, **1950**, Karachi to Calcutta via Lahore, Delhi, and Dacca, flights start. As a result of terrible flooding in Punjab, the company launches mercy flights, ferrying in supplies and transporting 3,216 passengers. The Karachi to Bombay service is suspended on December 8.

On August 3, **1951**, DC-3s begin flying from Karachi–Lahore via Multan, but on September 15 the company is forced to suspend two routes because of a gasoline shortage. On November 15, a new multi-stop Dacca to Jessore frequency is introduced.

The company participates in an all-up mail program between East and West Pakistan that begins on April 1, **1952**.

A DC-3 freighter with three crew en route from Karachi to Dacca, crash-lands at Jamshedpur, India, on October 22 (one dead).

While en route from Delhi to Dacca on March 14, **1953**, a CV-240 with 5 crew and 11 passengers disappears. The wreckage is found two days later on a mountain S of Kalahasahar, near Tripura, India; there are no survivors.

Dacca to Chittagong flights are suspended on May 11. A chartered DC-3 with four crew and a passenger en route to Mecca, fails its climb from Sharjah, UAE, on August 2 and makes a forced landing (one dead).

On October 1, the carrier is taken over by the government and, though allowed to continue under its previous name, is made a subsidiary of **Pakistan International Airlines Corporation**, still a paper organization.

CV-240 service is launched thrice weekly from Karachi to Bombay on December 13, **1954**. After suffering engine failure, a DC-3 with three crew and eight passengers makes a forced landing near Skardu, Pakistan, on October 13; although the Douglas must be written off, there are no fatalities.

On March 11, **1955**, **Pakistan International Airlines Corporation (PIA)** comes into being by act of Parliament and officially assumes the assets of OAL, including its two Convairliners and 11 DC-3s.

ORIENT AVIA: Russia (1994–1997). Orient Avia is set up at Moscow on July 13, **1994**, to provide scheduled nonstop roundtrip passenger flights to Vladivostok and other points in the Russian Far East. Shareholding is divided between **Aeroflot Russian International Airlines (ARIA)**, Kazanskoe, Sea Trading Port of Vladivostok, Dalvemo, Nakhodka, and the Far East Shipping Company.

Amiran G. Kurtanidze is appointed general director and he begins revenue services from Moscow and St. Petersburg to Vladivostok on September 27 with 3 Ilyushin Il-62Ms.

Plans to offer charters to Turkey and various Mideast destinations are unrealized in the face of stiff competition from foreign carriers.

Traffic figures for the first quarter of operation total 11,000 passengers carried.

New routes are inaugurated in **1995** to Pattaya, Magadan, and Petropavlovsk. In December, weekly return flights are inaugurated to U-Tapao, Thailand.

As a result, passenger boardings accelerate to 95,800 and 6.68 million FTKs are operated.

Charters to Hourgada, Egypt, along with many other worldwide points begins in **1996** and destinations visited by the end of the year include Bangkok, Brest, Ho Chi Minh City, Jujno, Kamchatskiy, Kaunas, Kiev, Kishinev, Lvov, Petrozavodsk, Sanky, Sakhalinsk, San Francisco, Singapore, St. Petersburg, and Vladivostok.

During the fourth quarter, a homepage is opened on the Internet's World Wide Web. Experiencing fiscal problems, traffic figures are no longer revealed.

In early **1997**, permission is sought and won to begin nonscheduled flights to Hawaii. Overextended, the company suspends operations on July 10.

ORIENT EXPRESS AIR, LTD.: 101/199 Kungkloonchonpritham Road, Baan Nai Fan, Chiang Mai, 50100, Thailand; Phone 66 (53) 320 1567; Fax 66 (5) 320 1565; Code OX; Year Founded 1995. Originally set up in 1992, Chiang Mai-based **Cambodian International Airlines, Ltd.** is grounded in December 1994 by its owners, Siam Kampuchea and the Cambodian government, in order that the latter might launch **Royal Air Cambodge**.

Early in 1995, the dormant carrier is divided in two. One division is renamed **Orient Airlines, Ltd.** and is transferred to a base at Phnom Penh. The other, remaining at Chiang Mai, becomes Orient Express Air, Ltd. Udom Tantiprasongchai remains CEO of the latter and a director on the board of the former.

OEA is licensed to operate Thai domestic routes that bypass the capital of Bangkok. To this end, revenue flights commence with 1 each B-727-225, B-727-227A, and B-737-2E1, all purchased.

Airline employment stands at 120 in 1996 as the company flies over a network of 20 routes leading outward from Chiang Mai and now Bangkok. A Lockheed L-1011-1 TriStar 1 is acquired to help provide lift.

It is announced on May 13, 1997 that the carrier will sell space on its planes' sides for ads in a program reminiscent of the "logo jets" of the U.S. carrier **Western Pacific Airlines (Westpac)**.

Meanwhile, across the border in Cambodia, **Kampuchea Airlines (2)** comes to life on August 1. Yin Chan is appointed CEO and a 40% stake is sold to Orient Express Air. Orient's CEO Udom Tantiprasongchai now also serves as Kampuchea's managing director as well, and arranges for the lease to KA-2 of an Orient Lockheed L-1011 TriStar 1 with which to resume service.

Financial losses due to the nation's currency problem require the company to cease scheduled flights on January 9, 1998. The company continues to operate charters. In November, the Lockheed is leased to **Merpati Nusantara** of Indonesia.

Scheduled operations to its previous charter points are offered by **Kampuchea Airlines (2)** in 1999 and a second Orient Express Air TriStar is briefly dedicated to that company's schedule. Unhappily, the impact of the Asian financial crisis continues to be felt and these new regularly offered flights are not profitable. As the year ends, the Cambodian company joins its Thai associate in offering charters only. Despite hard times, both airlines are able to survive into the new millennium, and are even able to lend a helping hand to another regional company in trouble.

Losing some 20 million baht (\$500,000) a month, Thailand-based **Angel Airlines Company, Ltd.**, on June 1, 2000, stands down for 30 days as it is reorganized.

The sublease of a Lockheed L-1011 TriStar 1 from **Kampuchea Airlines (2)** allows Angel to announce that daily flights to Hong Kong will resume on July 15. Despite the formulation of a rescue plan, Angel teeters on the brink of collapse by mid-July. The announced Hong Kong TriStar service is initially cancelled, but begins on July 22.

As the regional financial picture begins to brighten during the summer, Managing Director Udom announces at the end of July that his company has placed orders for four additional L-1011s, the first of which will be delivered by fall. It is anticipated that at least two of the aircraft will operate long haul charters to Europe. Meanwhile, negotiations are underway with the CAAC in Beijing for authority to operate charters to five cities in mainland China.

It is reported on October 8 that Angel will sign a new marketing and code-share agreement with **China Northern Airlines Company, Ltd.** Under its terms, the previous TriStar lease will end as CNA provides a pair of Airbus Industrie A300-600Rs in November with which to operate Angel's domestic and international routes from Bangkok.

ORIENTAL AIRLINES, LTD.: 3A Abimbola Awoniyi Street, P.O. Box 75543, Victoria Island, Lagos, Nigeria; Phone 234 (1) 83 1108; Fax 234 (1) 83 3037; Code OAC; Year Founded 1990. Oriental is established at Lagos in 1990 to offer regional passenger charter and inclu-

sive-tour flights. Revenue operations commence and continue with a single British Aerospace BAe (BAC) 1-11-501EX.

Flights continue over the next 7 years as the workforce grows to 85. The fleet by 1991-1994 includes 2 BAe (BAC) 1-11-509EWs and 1 each BAe (BAC)-476FM, BAe (BAC)-501EX, BAe (BAC)-515FB, and BAe (BAC)-523FJ. Destinations visited on a scheduled basis include Abuja, Enugu, Owerri, and Port Harcourt.

Operations must be suspended for several months at the beginning of the latter year. The newly delivered BAC 1-11-515FB with 39 passengers is destroyed as the result of a bad landing at Tamanrasset, Algeria, on September 18 (4 dead).

As is the case with other Nigerian private carriers, operations are a downturn in 1995-1998. By the latter year, a number of the BAC 1-11s are out of service and charters are being provided by 1 each Letov Let-410UVP and Lockheed L-1349 Jetstar.

With the coming of the new democratic government, the company's situation greatly improves in 1999-2000. During the latter year, the workforce of Managing Director Chief Emmanuel Iwuanyawu reaches 85.

ORIENTAL PEARL AIRWAYS (PTY.), LTD.: Hong Kong (1971-1977). Led by Executive Director Thomson Chiu, a group of Hong Kong businessmen form Oriental Pearl in March 1971 to operate all-cargo charters from the British crown colony to various destinations in Asia. Employing 2 Douglas DC-6Bs, the carrier undertakes services during the summer.

Unable after six years to find sufficient traffic to stay aloft, the company goes bankrupt and ceases services in 1977.

ORIGIN PACIFIC AIRWAYS, LTD.: P.O. Box 7022, Trent Drive, Nelson, New Zealand; Phone (03) 547-2020; Fax (03) 547-6760; <http://www.originpacific.co.nz>; Code OGN; Year Founded 1996. Origin Pacific is established by Robert Inglis, owner of **Iglis Aircraft Company, Ltd.**, at Nelson Airport in New Zealand during the fall of 1996. Inglis plans to offer corporate and group travel charter flights, as well as scheduled frequencies, to destinations on both the North and South Islands. A Cessna 421 Golden Eagle and a Piper PA-31-350 Navajo Chieftain are employed to inaugurate air taxi flights.

Three British Aerospace Jetstream 31s are requested from BAe Assets Management: Turboprops. Their receipt during the first quarter of 1997 allows the inauguration of scheduled services in April. Destinations visited over the next four years include Auckland, Christchurch, Hamilton, Napier Hastings, New Plymouth, Palmerston North, Tauranga, and Wellington.

Flights continue during the remainder of the year and in 1998-1999. At the beginning of 2000, the workforce of Managing Director Inglis's carrier totals 35. A Fairchild Metro 23 joins the fleet on June 19, chartered from Airwork NZ, Ltd.

ORIOLE AVIA SOVIET AUSTRIAN JV (ORIOLE AVIA SOVIET AVSTRISKOE SP): Russia (1993-1996). Oriole is established at its namesake city's airport in 1993 to provide executive and diplomatic passenger charters and ad hoc cargo and contract service flights. Managing Director Sergei V. Isakov oversees a workforce of 100 and a fleet that includes 2 Antonov An-124s, 3 Tupolev Tu-154s, 3 Tu-204s, 10 Yakovlev Yak-40s, and 4 Yak-42s. Application is made for scheduled routes; however, these are not granted, forcing the company to consider closing down at the end of 1995.

When the new owners of **Vnukovo Airlines** default after only a few months, the government reacquires Vnukovo and sells it during 1996 to the group that holds Oriole. The two companies are combined, with Oriole's management taking the senior slots in the "new" Vnukovo.

ORION AIR: United States (1980-1989). A subsidiary of Raleigh North Carolina-based Aviation Group, Orion is formed in summer 1980 to undertake all-cargo operations, including contract service flights for

major package express concerns. A flight and maintenance center is established at Smyrna, Tennessee. Employing 24 Boeing 727-100s owned by its contract freight customers, as well as 10 Grumman Gulfstream I turboprops, Orion begins regularly scheduled revenue frequencies in October. Among the express firms assisted are **Purolator Courier**, **UPS (United Parcel Service)**, **Burlington Northern**, and **Emery Worldwide**. Operations continue apace for the next three years, during which time two B-727-100s are purchased.

Having landed at Knoxville's McGee Tyson Airport after a service from Pasco on July 16, **1983**, a Grumman G-159 Gulfstream I freighter with two crew overruns the runway. Going off the end of the runway, the aircraft crashes through a fence and stops up against an embankment; although the aircraft is damaged, there are no fatalities.

In **1984**, an application is made to the CAB for authority to operate scheduled domestic passenger flights; permission is received in October. Meanwhile, between August and December, the company begins to operate six former **American Airlines** B-747-123SFs under contract to their new owner, **UPS (United Parcel Service)**.

Revenues total \$40,888,400 and give a net profit of \$6.74 million.

Although Washington, D.C. (IAD) to Miami flights are planned for **1985**, they are not inaugurated. Meanwhile, however, the carrier expands into the inclusive-tour business, employing two DC-8-73s to undertake group charters to Canada, Europe, Asia, the Caribbean, and South America.

Revenues increase 32% to \$60.13 million. The \$10.5-million expense of acquiring the Douglas transports reduces net income to \$2.1 million.

In early **1986**, Aviation Group is purchased for \$130 million by the Virginia-based holding company Primark Corporation. During the remainder of the year and into **1987**, the 1,400-employee company, while operating contract services with 6 B-747-123SFs, 8 DC-9-15Fs, and 30 B-727-100Fs, also expands its inclusive-tour business, acquiring 4 additional DC-8-73s. In February, Executive Vice President/Chief Operating Officer Robert C. Bushman is elected president, succeeding John Pirotte, who remains as chairman/CEO of the Aviation Group. During the year, the company signs a contract with **Eastern Air Lines** to fly a number of the major's passenger airliners over its passenger routes should pilot's strike the Lorenzo operation. The unions blunt the arrangement in court. Late in the year, **UPS (United Parcel Service)**, a major Orion contract, informs the carrier that it will henceforth provide its own airlift and is cancelling its agreement.

A total of 1.17 billion FTKs are flown on the year, almost all of it for UPS. Passenger enplanements reach 1,175,087. Revenues advance to \$68.67 million, expenses are \$65.58 million, and the operating profit is \$3.08 million. A net loss of \$13.8 million must be absorbed.

Loss of the **UPS (United Parcel Service)** contract has a devastating impact on the carrier in **1988**. The staff is cut by 42% to 812 and much of the fleet is withdrawn and sold.

Traffic declines by 49.5% to 593.67 million FTKs. Revenues, however, fall only 6.4% to \$64.3 million. With costs held in line, operating income rises to \$3.37 million and net gain totals \$1.77 million.

The airline's fleet in **1989** includes one each B-727F, DC-8F, and DC-9F. A B-747-121 is leased from Evergreen Aircraft Sales & Leasing for use in an effort to rejuvenate its passenger charter business. In May, a contract is won to fly cargo on behalf of **Emery Worldwide**. This includes a subcontract to operate Express Mail flights on behalf of the U.S. Postal Service from a hub at Indianapolis. Employing aircraft painted in USPS colors, this unique night-mail operation is launched on August 21. Despite these efforts, the results are not all that is desired.

Only 22,975 passengers are enplaned; however, the freight flown for Emery totals 91.95 million FTKs, a 54.9% increase over the previous year's work.

Revenues total \$54.37 million, but expenses are \$65.35 million. The operating loss is \$10.17 million and the net loss is \$15.64 million. Seeing these figures in the making, Orion's owners, the Primark Corporation, determine to exit the air freight industry. Orion ceases operations on December 31. The Jumbojet is returned to Evergreen and the re-

maining assets are sold to **Ryan International Airlines**, which also inherits the **Emery Worldwide** contracts.

ORION AIR CHARTER (PTY.), LTD.: Grand Central Airport, 588 Turbit Road, Halfway House, Midrand, 1685, South Africa; Phone 27 (11) 805-6068; Fax 27 (11) 805-6069; <http://www.orioncharter.co.za>; Year Founded 1997. Orion is established at Midrand in late **1997** to offer executive and small group passenger charters and air express flights to domestic and regional locations. Additionally, rotary-wing aerial work and flight-seeing tours are offered. The fleet includes 1 each Beech Super King Air 200s, Cessna 208B Grand Caravans, and Eurocopter AS-350 Squirrels.

A total of four pilots are employed in **2000** and nonscheduled flights are offered on a daily basis to points in South Africa, Mozambique, Zimbabwe, Swaziland, Botswana, Lesotho, Zambia, and Namibia. Helicopter flights to the Lost City are frequently flown, along with scenic flights over greater Johannesburg, and sundowners on the Magaliesberg mountain range.

Additionally, Orion is called upon to perform medical flights, aerial photography, aerial surveillance, geographical survey, and under-sling operations.

ORION AIRWAYS, LTD. (1): United Kingdom (1956-1960). Captain and Mrs. Peter Palmer form this company at Hurn Airport on January 26, **1956**. No operations are undertaken the first year. Capitalization is increased and in August **1957**, a Vickers Viking is purchased and christened *Sirius*. On August 11, the first passenger charter is inaugurated from Blackbushe Airport to Perpignan. The plane flies tourists to various Mediterranean resorts during the remainder of the year.

Although the company had planned to purchase a Douglas DC-4, it is unable to do so and the *Sirius* flies the **1958** inclusive-tour summer season. A second Viking is delivered on April 18, **1959** followed by a third in August; these aircraft are not christened. The number of inclusive-tour opportunities increases significantly.

On May 30, **1960**, the carrier completes a transfer from the closed facility at Blackbushe to London (LGW). As in previous years, Mediterranean and European resort cities are serviced for inclusive-tour operators; some flights originate from Manchester and Glasgow (Renfrew). At the end of the summer season, the company can find little work for its three aircraft; one is withdrawn on October 10 and a second on October 31. After a final charter to Amsterdam on November 7, the carrier, deep in debt, shuts down.

ORION AIRWAYS, LTD. (2): United Kingdom (1978-1988). The package tour operator Horizon Travel forms this carrier at East Midland Airport, Castle Donington, in Derbyshire on November 28, **1978**, to provide charter and inclusive-tour flights to south European and Middle East destinations. With four Boeing 737-2T5s, Chairman Robert Muckleston's new entrant opens flight operations in March **1980**; the first service is an East Midland-Pisa charter.

A total of 369,000 passengers are carried on the year.

Passenger boardings skyrocket 61.4% in **1981** to 860,000 as 2 more B-737-2T5s are acquired; a fifth B-737-2T5 is added in **1982**, the same year Orion becomes the first non-U.S. customer to order the B-737-300, with a requisition for five of the type.

Bookings increase 9% to 920,000, primarily on inclusive-tour flights to European and North African destinations, which generates a 21.2% increase in employees to 400.

The employee population is boosted 18.4% in **1983** to 450 and a B-737 simulator is ordered for the carrier's main base facility.

Passenger boardings pass the million-mark in annual bookings for the first time, as tour traffic increases 11% to 1,030,000. Airline employment reaches 450 and 3 more B-737-2T5s are delivered.

Enplanements for **1984** jump 28.2% to 1.2 million.

Despite the arrival of 4 B-737-3T5s in **1985**, bookings for the 510-employee, all-737 operator fall off slightly to 1.06 million.

Thirty new employees are hired in **1986** and the fleet includes 5 B-737-2T5s and 4 B-737-3T5s. An order remains outstanding for 1 B-737-3T5, but 2 Airbus Industrie A300B2-1Cs, purchased from **Deutsche Lufthansa, A.G.** for \$60 million, arrive in April and May, beginning operations from London (LGW) and Manchester.

With CAA authority, Orion begins its first scheduled services from London (LGW) to Almeria, Birmingham to Palma, Manchester to Alicante, and East Midlands to Malaga and Palma. Charter and inclusive-tour operations continue from various U.K. airports to destinations in southern Europe, the Mediterranean, and North Africa. A new subsidiary, Orion Flight Training, Ltd., is now established in cooperation with Singer Link-Miles.

Passenger boardings increase 26.4% to 1,340,000, with a record 87% load factor.

The workforce is increased by 14.8% in **1987** to 620. In the spring, the Bass Group of leisure and hotels makes an offer for Horizon and its subsidiaries, including Orion.

Revenue passenger kilometers (RPKs) operated accelerate 19% to 1.79 million.

The company is merged with **Britannia Airways, Ltd.** in August **1988** when Britannia's parent, Thomson Travel Group, purchases Orion's parent.

ORION AIRWAYS (ORION SERVICIOS AEREOS, S.A.): 1342 Amenbar, Buenos Aires, 1426, Argentina; Phone 54 (1) 784-3949; Fax 54 (1) 783-2457; Year Founded 1999. Orion is established by Alfredo Martinez at Buenos Aires Aeroparque Jorge Newbery in **1999** to offer local passenger charters. Revenue flights begin and continue with a single Let L-410UVP.

ORLANDO AIRWAYS. See **FLORIDA AIRWAYS**

ORVIS NELSON AIR TRANSPORT. See **TRANSOCEAN AIR LINES**

ORYX AVIATION (PTY.), LTD.: South West Africa (1956–1959). Oryx is set up at Eros Airport at Windhoek, South West Africa, in **1956** to provide smallplane charters to domestic destinations. Flights continue until March **1959**, when the company is merged with **South West Air Transport (Pty.), Ltd.** to form **Suidwes Lugdiens (Pty.), Ltd.**

OSPREY WINGS, LTD.: P.O. Box 419, La Ronge, Saskatchewan, S0J 1L0, Canada; Phone (306) 635-2112; Fax (306) 635-2134; Year Founded 1995. OW is set up at La Ronge by Garry Thompson in **1995** to offer scheduled third-level flights to local destinations. Revenue flights begin with a single de Havilland Canada DHC-6-200 Twin Otter.

Flights continue in **1996–2000**, during which years the company also operates 1 Cessna 185, 1 DHC-2 Beaver, and 3 DHC-3 Otters.

OSTERMAN AIR CHARTER, A.B. See **INTERNORD, A.B.**

OSTERMAN HELICOPTER, A.B.: PL 2005, Save Airport, Goteborg, S-42373, Sweden; Phone 46 (31) 926000; Fax 46 (31) 926621; http://www.ostermanhelicopter.se; Year Founded 1948. One of, if not the, oldest helicopter companies in the world, Osterman is established at Stockholm in **1948** to operate mail service around the archipelago. Over the next 52 years, the company provides all manner of helicopter work, including passenger and cargo charters. Although the company's major geographic area of operations is in Sweden, qualified assignments are also carried out in Norway, Finland, and Germany.

Among the services provided are air ambulance flights on behalf of the Stockholm county council and the county council in Jamtland, marine surveys and maintenance transport for the National Swedish Administration of Shipping and Navigation, topographical measurements and map production plus line inspection for power companies, including Vattenfall and Sydkraft. Photographic and film flights are made for large

media companies while aerial liming of land areas to fight acidity is also performed. Support is also contracted on behalf of construction projects of different sizes and complexities.

By **1999–2000**, General Manager Lennart Pihl oversees the work of 80 employees and the services provided by 2 each Bell 206B JetRangers, Bell 206L LongRangers, Schweizer 300Cs, Bell 212s, 1 Eurocopter SA 365N Dauphin, 1 BK-117, and 3 each Eurocopter AS 350B1 and AS 350B2. On those occasions when jobs require greater lifting and loading capacity than these helicopters can provide, the carrier leases a Mil Mi-26 from Russia.

Turnover in the former year reaches Skr 130 million. During the latter year, the Eurocopter EC-120, the world's quietest helicopter, is added to the fleet. **Helifyg, A.B.** is purchased and operated as a subsidiary.

OSTFRIESISCHE LUFTDIENST, GmbH. See **FRISIA LUFTVERKEHR NORDDEICH, GmbH.**

OSTERREICHISCHE LUFTVERKEHRS, A.G. (OLAG): Austria (1923–1939). On May 3, **1923**, local banking and railway officials meeting at Vienna in association with **Junkers Luftverkehr, A.G.** found this carrier to provide flights between the Austrian capital and Munich. The company is provided with 2 float-equipped Junkers F-13s, christened *Taube* and *Shieglitz*. Meanwhile, in response to stiffening competition with the **Lloyd Luftdienst, GmbH.** **Junkers Luftverkehr, A.G.** has begun to identify members for a countering confederation. On May 14, the **Trans-Europa Union** is formed; simultaneously, Junkers assumes interest in OLAG, bringing it into the group. The F-13s initiate flight operations the same day, stretching the initially planned route down the Danube to Budapest.

Following the formation of **Deutsche Luft Hansa, A.G. (DLH)** on January 6, **1926**, OLAG, like other foreign Junkers group components, is allowed to go its own way. The Austrian carrier, nevertheless, maintains a close affiliation with its former German parent, flying joint operations on the Berlin–Vienna via Prague route, as well as to Budapest.

In **1927–1929**, frequencies are started to Milan via Innsbruck, to Venice via Klagenfurt, and to Belgrade via Graz. Passenger boardings increase during the decade and in **1930** the carrier enjoys some 8,000 bookings. The fleet, too, is built up and by **1931** it comprises 8 F-13s, 2 G.23s, and 1 G.31.

The route system remains stable during the **1930s** and the only equipment upgrade is the introduction of the ubiquitous Junkers Ju-52/3m. On January 1, **1939**, OLAG is absorbed into DLH.

OUT ISLAND AIRWAYS, LTD. See **BAHAMASAIR, LTD.**

OVERLAND AIRWAYS: United States (1931). Organized at San Francisco in the spring of **1931**, Overland is equipped with a Travel Air 6000, which is employed to launch scheduled passenger flights to the state capital at Sacramento in May. Without a mail contract, traffic is insufficient to generate the revenues required to operate beyond July.

OVERNIGHT CARGO, LTD.: Nigeria/United Kingdom (1993–1995). Overnight Cargo is founded in the summer of **1993** by a Lagos concern and Vital Link Aviation Consultants, Ltd. of the U.K. to provide overnight cargo and express charter services, largely on behalf of other airlines, such as **Federal Express**. Revenue flights commence from a base at Ostend, Belgium, in September with a single Boeing 707-351C leased from **Buffalo Airways**. The principal route is flown back and forth from Belgium to Nigeria.

Operations continue apace in 1994 and in the spring the fleet is enhanced by the addition of a leased Douglas DC-8-55F from **Flash Airlines, Ltd.** In September, a DC-8-55F is purchased from **Kabo Air Cargo, Ltd.**

The ex-Kabo machine is sold to **MK Airlines, Ltd.** in the U.K. in April 1995. The company shuts its doors shortly thereafter.

OVERSEAS AIR TRANSPORT (JERSEY), LTD. See **MERCURY AIRLINES, LTD.**

OVERSEAS AVIATION (CHANNEL ISLANDS), LTD.: United Kingdom (1957–1961). Ex-Autair, Ltd. and Lufttransport Union, GmbH. (LTU) founder Ronald Myhill forms a new charter operation at Southend Airport in late 1957. On February 3, 1958, Myhill, with the assistance of his LTU partner and new managing director, Bernard Dromgoole, acquires a Vickers Viking from **Universal Air Charters, Ltd.** and operates it on behalf of both Overseas Aviation and its Basel-based owners. The aircraft initiates Southend–Basel charters on March 1. Two more Vikings are now obtained, in March and April respectively, joining the Swiss plane during the summer season in offering inclusive-tour flights to the Mediterranean and eastern Europe from Southend and from airports in West Germany. In November, a Canadair C-4 Argonaut is purchased from **British Overseas Airways Corporation (BOAC).**

Four more Argonauts are added during the first quarter of 1959 and these are employed to enhance the carrier's inclusive-tour network from the U.K. and West Germany. Two Vikings are sold in December and one is leased to **Martin's Air Charter, B.V.**

In January 1960, Myhill assists the owners of Copenhagen-based **Flying Enterprise, A.S.** to enter the inclusive-tour business, leasing them a pair of C-4s. Two C-4s are sold, in January and April. In June, company headquarters are transferred from Southend to Gatwick Airport and a Viking leased to **Martin's Air Charter, B.V.** of Holland in 1959 is returned. Summer inclusive-tour flights from London (LGW), Manchester, and the West German airports are again flown. A Viking is added in November. By year's end, the company is one of the major European charter companies.

Another Viking is added to the fleet in April 1961. As the tour season begins, destinations stretch from Scandinavia to North Africa and even across the Atlantic to the U.S. and Canada. One Argonaut is sold in January and another in May and three Vikings are also withdrawn.

On June 1, the surplus **Trans Canada Airlines, Ltd.** Canadair DC-4M-2 North Star fleet is purchased; 11 aircraft are delivered during the third quarter. The carrier's first scheduled service is inaugurated on July 31, a DC-4M-2 flight from Prestwick to London (LGW) via Manchester. A Viking leased from Kay Rings in April is lost in a nonfatal crash landing at Lyons, France, on August 14.

It is now revealed, during license hearings, that company finances are dreadfully weak (it owes £509,000-plus) and creditors now halt provision of its fuel supplies. Consequently, the final roundtrip revenue service is flown, London (LGW)–Lyon, on August 15. At this point, the U.K.'s second largest independent simply collapses, leaving 5,000 tourists stranded on the Continent to be rescued by other British nonscheduled carriers.

OVERSEAS NATIONAL AIRWAYS (1): United States (1950–1983). George Tompkins founds this large charter operation at New York in June 1950 to undertake overseas contracts on behalf of the USAF. The first civilian contract, for Youth Argosy and tour operator All Nations Institute, fizzles on July 4 when the CAB cancels New York–Europe student charters due to abuses by several charter carriers that carry not students, but war brides. Some 200 students are stranded in New York by the CAB's action, which the agency claims was taken because ONA and other operators do not meet its standards.

Employing Douglas DC-4s and DC-6s, the company bids itself from one military contract to another throughout the 1950s, sometimes making and often losing income through the terms of its arrangements. Members of the flying public are not always appreciative.

On August 21, 1959, 50 of 90 passengers aboard a DC-6 en route from Frankfurt to New York refuse to continue their flight after the plane makes a second emergency landing at Shannon, Ireland. After a night on the ground, all do agree to resume boarding the next morning and the flight is completed without further incident. During the year, the aircraft broker Galco purchases most of the first 25 DC-7s of **American Airlines** and several of these will find their way to ONA in the next year or so.

A DC-7 collides with an L-749A at Oakland, California, on June 20, 1961; although no injuries are reported, the Douglas is badly damaged and must be written off.

A second ex-American Airlines DC-7 with five crew on a ferry flight suffers undercarriage failure upon landing at Norfolk, Virginia, on September 26 and runs into a ditch. Although it is damaged beyond repair, none of the crew is hurt.

As the result of too much underbidding (and consequently, loss during performance) of its contracts, ONA is forced to declare bankruptcy on October 29, 1963 and cease flying.

Possessed of an excellent operational reputation, ONA does not lose its CAB supplemental certificate and is able, under the leadership of Steedman Hinckley, to acquire \$26 million in new capitalization from various banking interests. The refinancing allows orders to be placed for two new Douglas DC-8Fs and five DC-9s.

Piston-engine service is resumed on October 4, 1965 with two DC-7s. George Tompkins remains chairman/president and J. W. Bailey is named vice president/general manager. Revenues for the final quarter total \$215,639. Start-up and operating expenses are \$409,293, leaving a loss of \$233,156.

Because of a CAB ruling in 1966, a number of supplementals, including ONA, are granted permanent authority to undertake inclusive-tour charters, affinity group charters, and single entity charters to transatlantic and Caribbean markets in April and September. Meanwhile, two more DC-7s are placed into service and in April and in June the two DC-8-55CFs are delivered.

Revenues for the year are \$10,568,404. An operating profit of \$1,637,064 is earned, as is a net profit of \$906,652.

On June 28, 1967, the carrier becomes a public corporation. At year's end, the workforce is 340 and the fleet includes 2 DC-8-55CFs and 3 DC-9-30CFs. On July 9, a DC-8-55CF gives 158 New York City children a free 27-minute ride over the metropolitan area as part of that city's summer youth program.

A total of 255,902 charter passengers are carried and 5.52 million freight ton-miles are flown. Revenues total \$19,215,105. Profits are \$2,446,694 (operating) and \$1,208,889 (net).

The employee population in 1968 is 625. A third office building is now leased to house the company's new IBM 360/20 ONAmatic computerized reservations system. A wholly owned subsidiary, Automated Terminal Services (ATS), is formed to market the company's expertise in cargo systems. Specialized systems are designed for the USN and for **BWIA (British West Indian Airways, Ltd.).**

The ONA Hotel Corporation is also formed as a subsidiary to build hotels in the Caribbean; partners include the Hotel Corporation of America and Butler's Bank, Ltd. Eight Lockheed L-188A Electra freighters are purchased during the first quarter from **National Airlines** for conversion into freighters, while a DC-9-30CF and a DC-8-63CF are also delivered. A passenger-configured L-188A is leased from **Eastern Air Lines** for a year.

Bookings increase 18.6% to 279,000 and 54.2 million freight ton-miles are flown. Revenues accelerate by 58% to \$30,128,000. The operating profit is \$5,765,567 and the net is \$3,303,793.

The workforce in 1969 is increased to 862. Beginning in March, ONA is the first U.S. supplemental permitted to operate charter flights to the U.S.S.R.; in cooperation with Vacations West and Intourist, the airline launches its first all-inclusive charter on March 2. Two DC-9-33s are delivered in March and are dedicated to providing replacement service for **ALM Antillean Airlines, N.V.**, now owned by the Dutch Antillean government.

In April, a DC-8-63 is leased from **The Flying Tiger Line** for 18 months. Another DC-8-63 arrives in May followed by a third in June, plus a DC-9-33. Operations personnel evaluate acquisition of either the Lockheed L-1011 or the DC-10-30.

Freight ton-miles flown ascend to 114,042,000 and revenues advance to \$60,728,000. While there is a \$1,768,000 operating profit, the net side of the ledger shows a loss of \$677,353.

In 1970, orders are placed for two DC-10-30CFs, as a fifth DC-8-63 and two more Electra freighters join the fleet. **ALM Antillean Airlines, N.V.** On May 2, Flight 980, an ONA DC-9-33 en route from New York to St. Martin with 63 aboard, ditches off St. Croix after running low on fuel during a tropical storm (23 dead). The first company hotel, a 400-room facility at Nassau, opens at year's end.

There is a 17% increase in freight ton-miles flown (137.4 million) and revenues jump 4.38% to \$63.4 million.

Expenses rise 5.9% to create an operating loss of \$1.2 million. Non-transport income, however, turns a certain net loss into a \$3.9-million profit.

In February 1971, the company wet-leases a DC-8-61 to **Saber Air, Ltd.** For the next six months until the contract ends, the Douglas operates long-haul charter flights to London on behalf of the Singapore-based airline.

Employing a DC-8-63 wet-leased from ONA, **Air Siam, Ltd.** initiates freight and also a twice-weekly passenger service from Bangkok to Los Angeles via Tokyo and Honolulu on March 31.

A passenger-configured L-188C is leased from Lockheed during the year to undertake several specific inclusive tour charters.

Freight grows significantly as cargo ton-miles flown ascend to 147.61 million. Orders are placed for two DC-10-30CFs.

In fiscal and labor difficulty, **Air Siam, Ltd.** is shut down on January 11, 1972. The DC-8 is returned to ONA, which is left holding an Air Siam debt for \$2 million in lease fees. The debt is settled when **Air Siam, Ltd.** Chairman Prince Varanand transfers several choice parcels of his personal Bangkok property to the American supplemental carrier.

Two additional L-188AFs are acquired in midyear, but as the Vietnam conflict reaches a conclusion for the U.S., military charters fall off significantly.

Cargo traffic this year drops 1.73%. The nation's third largest supplemental carrier is, however, supported by an increase in passenger boardings from the civilian sector. Charter traffic increases 22% as 411,000 vacationers are transported. Revenues are \$64,504,000, but expenses are \$65,649,000. Consequently, losses are felt: \$1.14 (operating) and \$2.03 million (net).

The workforce in 1973 totals 1,048. The two DC-10-CFs ordered earlier enter service in May. The fleet is further realigned as the carrier purchases three DC-8-21s and a DC-8-61 from **Eastern Air Lines** and leases three of its own DC-8-61s to other airlines.

On June 20, a DC-8-63 is involved in an accident at Bangor, Maine. The last of 13 Lockheed Electras is purchased in September; it will be used for spare parts.

Customer boardings jump 23.8% on the year to 509,000, but cargo traffic is down by 18.3%. Income is \$69.18 million, but expenses zoom to \$75.62 million, due largely to the fuel crisis. The operating loss is \$6.44 million and the net loss is \$4.12 million.

A total of 216 passengers are laid off in 1974. The New York-based supplemental continues to realign its fleet during the year. All 10 active Lockheed Electra freighters are sold (mostly to **Zantop International Airlines**) and replaced by four more DC-8-61s. Enplanements increase by 10% to 562,020; however, freight is off by 18%. Total income is \$82.72 million while expenses are \$82.16 million. The operating income is \$565,000 and this year a net profit \$2.06 million is recorded.

The workforce in 1975 is 1,009. In celebration of the nation's Bicentennial, one DC-8, christened *Independence*, is painted and flown as an airborne American flag; the front half of the fuselage is painted blue and given stars and the logo "USA, 1776-1976," while the rear is decorated in red and white stripes. The aircraft proves the most fanciful ever flown

by any U.S. carrier save those operated by **Braniff International Airways**. Travel group charter flights and one-stop travel charters are now offered, in addition to worldwide military charter flights, which this year include participation in the so-called Vietnam baby lift.

While on takeoff roll from New York (JFK) on a ferry flight to Frankfurt and Jeddah on November 12, a DC-10-30CF with 10 crew and 129 passengers, mostly airline personnel, encounters a huge flock of birds, many of them striking the wide-body. The crew is forced to reject the takeoff and although no injuries are reported, the aircraft, especially its engines, is badly damaged.

Passenger boardings increase 8% to 606,606 and FTKs are down to 90 million. Income is \$95.12 million and expenses are \$94.49 million. As a result, the operating profit is \$626,000 and the net gain is \$2.76 million.

The employee population is cut 39% in 1976 to 604. Another DC-10-30CF is destroyed as the result of a heavy landing at Istanbul's Yesikoy Airport on January 2; no injuries are reported. Early in the year, the carrier is taken over by the Coca-Cola Bottling Company of New York. In anticipation of the receipt of newly ordered Douglas wide-bodies, the carrier during the year withdraws its seven DC-8-30s and three DC-8-20s.

Among these is the *Independence*, withdrawn at year's end after undertaking a special series of student charters to Washington, D.C.

Customer bookings, despite marketing with a Bicentennial emphasis, decline 5.7% to 572,000. Freight traffic does worse, falling by 25.5% to 67.06 million FTKs. Revenues drop to \$88.06 million and expenses shoot up to \$100.7 million. This unhappy imbalance results in a huge \$12.66-million operating loss and a net failure of \$3.92 million.

At the beginning of 1977, the last full year of service, Chairman E. B. Ory and President J. W. Bailey oversee a workforce of 320 and operate a fleet that includes 4 DC-8-63Fs, 4 DC-8-61Fs and 4 DC-9-30Fs.

A DC-80-63CF with 4 crew crashes 2,500 ft. short of the runway at Niamey, Niger, on March 4 (2 dead).

In April, the CAB grants ONA authority to operate its civilian charter program worldwide, excepting Australia, New Zealand, and Japan.

Two DC-10-30CFs remain on order to supplement the two that arrive in May and June and begin in midyear to operate enhanced charter flights. United Air Carriers is established on July 21 as a Part 129 contract leasing company.

Enplanements for the year total 352,013. Additional large losses are suffered.

Unfortunately for the company's future, the financial picture grows so desperate that the only option left is to declare Chapter XI bankruptcy on September 7, 1978. Prior to this event, Overseas witnesses a drop of 60.7% in boardings, down to 219,000. Unable to reorganize and resume operations under its original name, the charter carrier's name is purchased by the surviving subsidiary leasing company, United Air Carriers, early in 1979 and the reborn **Overseas National Airways (2)** is able to recertify in 1980 as a Part 121 charter operator. The leasing concern remains in business, offering aircraft to other carriers. For example, it provides the DC-8-55 that allows the new entrant **Elan Air** to begin flying in early 1981.

ONA-2 gains authority for overseas charter services on routes similar to those held earlier. The operating certificate of its now-dormant predecessor is withdrawn on May 19, 1982, even as ONA-2 is given scheduled service authority, which it will not initiate.

A B-747-243B, formerly flown by **Alitalia, S.p.A.**, is leased on June 14, 1983 and transatlantic passenger charters from New York (JFK) resume at month's end. Two more Jumbojets, a Dash-143 and a Dash-243B, are also leased from Boeing during July.

During December, the company changes its name to **National Airways**, flying under that title for a short time before purchasing rights to and adopting the name **National Airlines (2)**, held by **Pan American World Airways (1)** since its purchase of **National Airlines (1)** at the beginning of the decade.

OVERSEAS NATIONAL AIRWAYS (2). *See OVERSEAS NATIONAL AIRWAYS (1); NATIONAL AIRLINES (2)*

OWEN SOUND AIR SERVICES, LTD. (OSAS): Canada (1973–1979). The flight training, charter, and aircraft sales company OSAS is established by Brian Child at Owen Sound, Ontario (on the Georgian Bay peninsula northwest of Toronto), in October 1973. Employing two new Cessna 150 basic trainers, OSAS begins flight operations in May 1974; a Cessna 310K is acquired in July. The company is transferred in November to Wiarton, 20 mi. NW of Owen Sound.

The company successfully bids on a Canadian government contract in 1975 for the operation of three Cessna 185s in Kenya. Other East African contracts will follow, the profits from which are reinvested in the company.

OSAS grows to a point where it is able to establish bases at Montreal and Vancouver in 1976 and to increase its fleet through the addition of twin-engine Cessna 310s, 402s, and 441s. A variety of charter services are undertaken, ranging from general transport and courier services to Medevac and prisoner transfer flights. In order to concentrate more extensively on the courier business, Child transfers his company to Toronto in August 1977.

In February 1978, the first courier service is undertaken on behalf of Loomis Courier, Ltd.; the charter is flown between Toronto and Montreal employing a Cessna 310. During the fall, a major award is received from the Canadian Bank Clearing Committee. With a fleet of Howard 500s (reconfigured Lockheed Model 18 Lodestars), OSAS begins daily flights transporting cancelled checks between Toronto and the Ontario cities of London, Windsor, and Sarnia.

In early 1979, company officials seek to increase the efficiency of their bank service by introducing a Gates Learjet 23. The corporate aircraft is so successful that it is placed regularly on the Ontario run beginning in March. A second Learjet is now purchased and used to launch a new Loomis Courier route between Toronto and Regina via Winnipeg. Late in the year, the carrier is renamed **Soundair, Ltd.**

OWENAIR (PTY.), LTD.: South Africa (1946–1965). Former **South African Airways (Pty.), Ltd.** pilot Owen G. Davies, who had served with the South African Air Force during World War II, acquires 5 Piper J-3 Cubs and begins an airline named for himself at Cape Town in 1946.

For the next 20 years, Owenair will operate on-demand passenger and cargo charters and air taxi flights to destinations throughout South Africa. Before the company shuts its doors in 1965, it operates not only the Cubs, but as many as 2 Piper PA-23 Apaches, 1 PA-23 Aztec, 5 Cessna 172s, as well as 1 de Havilland DH 89A Dragon Rapide.

OXFORD AERO CHARTER, LTD.: The Farmhouse, Oxford Airport Kidlington, Oxford, England, OX5 1RA, United Kingdom; Phone 44 (1865) 374 262; Fax 44 (1865) 374 263; Year Founded 1979. OAC is set up at Oxford, England, in 1979, to provide small group passenger charters to Scandinavia and the Mediterranean. The profitable concern grows over the next two decades and by 1999 employs 4 pilots and operates 3 Cessna 500 Citation Is.

OXLEY AIRLINES (PTY.), LTD.: Australia (1979–1993). Oxley is formed at Port Macquarie, New South Wales, in 1979 and equipped with 2 Piper PA-31-310 Navajos. The company undertakes scheduled flights to Newcastle and Lord Howe Island as well as Armidale, Invereli, Moree, Narrabri, and Gunnedah, linking country centers with coastal resorts.

During the early to mid-1980s, the fleet is increased by the addition of three Piper PA-31-350 Navajo Chieftains and flights are inaugurated to Brisbane, Casino, Coffs Harbor, Coolangatta, Lismore, and Taree.

An additional Navajo Chieftain is acquired in 1987 followed by a fifth in 1988. In the latter year, General Manager Shane Mooney's carrier begins flying to Ballina. Another PA-31-350 is purchased in 1989 and another in 1990 plus a Beech Super King Air 200. Services from

Port Macquarie are maintained without fleet change in 1991. Enplanements total 13,340.

In 1992, more new equipment arrives: three additional Navajo Chieftains, a Beech 1900D, another Super King Air 200, and an Embraer EMB-110P1, the latter leased from **Shuttle Airlines (Pty.), Ltd.**

Passenger boardings jump 33.3% to 20,000.

The company is purchased by new ownership in early 1993 and Brian Peel becomes general manager. The fleet now includes 9 Navajo Chieftains, 3 Beech 1900Ds, 1 Beech 99, and 2 Beech King Airs. Orders are outstanding for 3 1900Ds, two King Airs, and 1 Beech 99.

Unhappily, the carrier is unable to regain its previous vitality and once again goes into receivership. The company's assets are now purchased by Sydney-based **Impulse Airlines (Pty.), Ltd.**, which will build a new passenger service with them.

OXNARD AIR FREIGHT. *See NORTH AMERICAN AIRLINES (NAA) (1)*

OYA HELICOPTERS, S.A.: BP100, 5 Rue Guist'hau, Ile d'Yeu, F-85350, France; Phone 33 5159 2222; Fax 33 5159 2077; Year Founded 1983. Jean-Baptiste Moreau establishes **Vendee Helicopters** at Port Joinville, on the Ile d'Yeu, 15 miles off the French Atlantic Coast in the Bay of Biscay, in 1983. With the first helicopter ever based on the island (an Aerospatiale Alouette II), Moreau inaugurates passenger and time-sensitive cargo (newspapers, medicine, mail) flights to the mainland city of Fromentine.

Operations are difficult over the next five years and the company changes ownership twice. Enplanements per month in 1988, the line's final year of independence, total 1,489.

In April 1989, Paris-based **Heli Union, S.A.** enters the picture. France's largest rotary-wing operator purchases 33% shareholding and signs a management contract that will provide administrative stability. Maintenance support is also given. By August, ridership of the carrier, now renamed Oya Helicopters, S.A., is up to a monthly average of 1,708.

In 1990, the carrier is provided with an AS-365C Dauphin and the city of Port Joinville undertakes construction of a two-ship helipad on the port's stone wharf, from which waterside location daily services continue.

Enplanements in 1991 total 21,300 and account for 75% of the company's revenues of FFfr 7.1 million (\$1.1 million). With the loss of certain local government subsidies during the year, a loss of FFfr 856,000 (\$142,000) is suffered.

Operations continue apace in 1992–1994. During these years, as before, the company, during slack periods, undertakes a variety of utility flights. These include VIP charters, census flights of local beaches on behalf of the island's tourism council, emergency medical services (EMS), and, under contract to the French Navy, search and rescue (SAR) services.

Flights continue in 1995–2000. During the latter year, President Moreau's fleet includes 2 Dauphins and 1 AS-350.

OZARK AIR LINES (1): United States (1943–1986). Ozark is organized by pilot Homer Dale "Laddie" Hamilton and his business associates Floyd D. Jones, Barak T. Mattingly, and Arthur G. Hayne on September 1, 1943 in response to the government's establishment of a category of feeder airlines. However, due to the war, it is unable to quickly receive its CAB certificate.

Still, the four "sons of the Ozarks" believe they need to demonstrate their suitability to begin scheduled service. In early January 1945, they purchase three Beech 17 Staggerwings. These are put into twice-daily service on January 10 over a triangular route from Springfield to St. Louis to Kansas City and back. The Beech products are replaced in the fall by two war-surplus Cessna UC-78 Bobcats, but in significant financial difficulty and uncertain as to the date for receipt of its license, Ozark suspends operations in November.

There is no CAB action on the company's certification for five years and during this time, Oliver L. Parks, founder/owner of the East St. Louis, Illinois-based Parks Air College is, in fact, able to win CAB certification for his own company in late spring 1950. Just when it appears that Ozark will literally never get off the ground, the better known Parks is forced to delay service inauguration due to a lack of funds. When the certificate of **Parks Air Transport** of St. Louis is cancelled for nonperformance during July, its routes are awarded to **Mid Continent Airlines** and Ozark, effective on September 26. This is the same day that the sale of Parks' assets, including its Great Lakes and Mississippi Valley route segments, to Ozark is completed.

With 40 employees and 4 ex-Parks Douglas DC-3s with hastily applied new livery, the company initiates scheduled service between its new base at St. Louis' Lambert Field and Chicago (MDW) on September 26 via Springfield, Decatur, and Champaign/Urbana. The Flight 2 inaugural transports a total of two passengers, including one picked up at Decatur.

During the fourth quarter, employment is increased to 165 and 5 new stations are added: Quincy/Hannibal, Burlington, Indianapolis, Peoria, and the Quad Cities of Davenport, Rock Island, East Moline, and Moline. In this first year, the new entrant transports a total of 4,001 passengers.

The route network grows in March 1951 to include stops at Kansas City, Tulsa, Paducah, Cape Girardeau, Rockford, Springfield, and Joplin. Four more DC-3s join the fleet and enplanements grow to 53,355. One more DC-3 is purchased in 1952, the year in which the company introduces its first trademark, a squared-off reverse italic "Ozark," with the "O" being larger than the other letters, and a DC-3 flying out of the "O" over the name.

Ozark adds three more DC-3s in 1953. Perhaps, in hindsight, the most celebrated—or disturbing—incident of the early 1950s is a charge of reckless flying against a well-known entertainer-aviation enthusiast. On September 13, the Civil Aeronautics Authority (CAA), forerunner of the FAA, begins a probe of a charge, made by the entire crew of an Ozark DC-3, that Arthur Godfrey violated air traffic rules by flying too close to the Douglas on September 7 near Chicago. The government agency demands Godfrey file a written report within 24 hours and in it, the popular personality reports that he was only saluting the airliner by dipping his wings and that he neither came too close or violated any regulations. The matter is dropped.

Three more stations are added in 1954—Columbia, Jefferson City, and Milwaukee. One more DC-3 is purchased and enplanements reach 156,000. Service to a number of the stations begun in 1951 is suspended on September 26. The route network is boosted by 11 more stops in 1955, including Waterloo, Dubuque, Mason City, Fort Dodge, Sioux City, Louisville, Nashville, Marion/Herrin, Mattoon/Charleston, and Clarksville/Hopkinsville/Fort Campbell. Two more DC-3s are acquired, bringing the fleet total to 15.

Airline employment stands at 700 in 1956 as service is begun to Des Moines and Ottumwa. The carrier is now marketed as "The Business Man's Air Line." On January 19, 1957, Mrs. Mary K. Maddox of St. Louis is celebrated as the one-millionth (cumulative) passenger and flights begin to Minneapolis/St. Paul.

In 1958, the local service carrier's fleet comprises 20 DC-3s. Joseph H. Fitzgerald is appointed executive vice president/general manager and although no new stops are acquired, in September and October the company acquires the last four DC-3s of **Northwest Airlines**. In November, it announces an order for three Dutch Fokker F.27 turboprops to be license-built in Maryland by Fairchild.

During the spring of 1959, frequencies are opened to Iowa City, Madison, and Omaha. In May, the company is ranked first among all U.S. airlines for its on-time performance. The two-millionth passenger (cumulative) is boarded on June 26 and the first of three F.27s to be delivered during the summer arrives on July 27.

Also during the summer, three stylized swallows are adopted as the corporate trademark and the Ozark name begins to appear in a modified

block style italic typeface. On August 6, Laddie Hamilton retires, being succeeded by Fitzgerald on October 16.

Airline employment in 1960 stands at 1,000, 66 of whom are technicians hired to man a new maintenance facility at Rockford, Illinois. The first F.27 scheduled service is flown on January 4 over the St. Louis–Chicago route. New stops are initiated at Galesburg, Bloomington, and Kirksville. On September 6, all 14 aboard a DC-3 are hurt when it crash-lands at Des Moines.

Passenger boardings during the 12 months surge up to 572,348.

Ozark in 1961 has CAB authority to serve a route network stretching through the central Midwest, including cities in Kentucky, Missouri, Illinois, Nebraska, and Minnesota. Four Convair CV-240s are purchased from the West German airline **Condor Flugdienst, GmbH**, and a DC-3 with 12 aboard crashes at St. Louis on June 6 when its brakes fail. The three-millionth passenger (cumulative) is welcomed aboard during the year.

An F.27 with 21 aboard veers off the slick runway at Waterloo, Iowa, after landing on February 25, 1962 and ends up in a snowbank; no one is hurt. Ozark moves from Midway to O'Hare facilities at Chicago, including the transfer up to the new airport of the maintenance facility operating previously at Rockford. The company begins to replace **American Airlines** services between St. Louis and Chicago via Springfield and Peoria and **Braniff International Airways** flights from Chicago to Sioux City. New markets are opened at Sioux Falls, Sterling, Rock Falls, and Mount Vernon and later in the year, the German Convairliners arrive and enter service. A DC-3 with 26 aboard overshoots the runway while landing at Clinton, Iowa, on December 22.

Ozark's central reservations office is transferred on March 15, 1963 to a new facility at Peoria. A DC-3 with 15 aboard is involved in a crash landing at Peoria three days later; no injuries are reported. Also in the spring, plans are announced for the construction of a new hangar and headquarters building at Lambert Field, St. Louis.

An F.27 is purchased from **AVENSA (Aerovias Venezolanas, S.A.)** on May 17 and Fort Leonard Wood and Tulsa are added to the system. On July 30, President Fitzgerald resigns; as a search is started for a new CEO, he is succeeded on an interim basis by Chairman Floyd Jones.

Enplanements for the year are 778,928 and a \$124,000 net profit is earned.

Airline employment in 1964 stands at 1,385 and the fleet includes 35 aircraft. One of these, an F.27, suffers a nosegear collapse after landing from a ferry flight at St. Louis on January 11. Former **Slick Airways** President and **Northwest Airlines** Vice President Thomas L. Grace is named president on February 18. Almost in celebration of his arrival, the St. Louis advertising firm D'Arcy unveils the company's new marketing slogan: "Go-Getters Go Ozark." The media spokesperson for the campaign using the phrase is comedian George Carlin.

In October, Ozark trades several Convairliners to **Mohawk Airlines** (1) in exchange for the lease-purchase of 14 Martin 4-0-4s as 4 more F.27s are acquired. The company moves into its new \$3.1-million general office and jet maintenance facility in mid-November, leased from the City of St. Louis. The first Martin 4-0-4 enters service on December 1.

Passenger boardings accelerate 19% to 961,639 and freight traffic is up by 45%. Revenues swell 20% to \$20.66 million and allow a record net income of \$515,540.

The workforce in 1965 is 1,686. An \$11-million order is placed on January 21 for three DC-9-15s. The central reservations office in Peoria is tied into the Univac 490 operation of **Eastern Air Lines**. One-stop F.27 service is begun between Milwaukee and St. Louis via the Quad Cities. On July 15, requests are sent for three more DC-9-15s. In November, orders are placed for 21 Fairchild Hiller FH-227Bs, followed on November 25 by an order for three DC-9-30s.

Passenger boardings jump 25.5% to 1,215,056, the first time that a million passengers are carried in a single year. Cargo traffic climbs 24.7%.

The first of three Douglas C-47s (military-configured DC-3 freighters) to be received during the year arrives in April 1966 to begin

all-cargo services. The premier DC-9-15, wearing a new green and white livery, lands at St. Louis on May 28 and undergoes crew training throughout June. The carrier commences DC-9-15 service on July 8 between St. Louis and Chicago and thereby enters the jet era. A week later, regular service is inaugurated with special ceremonies at each point along the route. The new aircraft allow the company access to another new destination: Denver.

The second and third DC-9-15s arrive in July and enter service in August, while the first two FH-227Bs are delivered on August 5 and 24, respectively. Two more are delivered on October 6 and November 30. They begin revenue flights on December 19, a day ahead of the year's fifth FH-227B arrival. Merger discussions with **Central Airlines** end and at year's end the company operates 3 DC-9-15s, 6 FH-227Bs (the final machine being delivered on December 29), 10 DC-3s, 2 C-47s, 14 Martin 4-0-4s, 6 F.27s.

Enplanements ascend to 1,419,853 during the 12 months and revenues are \$30,311,785.

Three DC-9-15s and 20 FH-227Bs join the fleet in **1967** and the Martins, F.27s, and 6 DC-3s are grounded and put up for sale.

With the beginning of the summer schedule in late March, the company now offers 17 daily jetliner services, primarily from Chicago (ORD). These are operated to St. Louis, Kansas City, Denver, and Tulsa. En route stops are made at a number of communities, including Cedar Rapids in Iowa and the Illinois towns of Moline and Peoria.

Nonstop St. Louis to Milwaukee DC-9-15 flights also begin. Indeed, on October 19, Kenneth Kammeraad, a passenger on DC-9-15 Flight 901 from Milwaukee to St. Louis, is declared the company's 10 millionth (cumulative) passenger.

Passenger traffic is up by 20% to 1,774,816 and a total of 38.74 million freight ton-miles are flown. Revenues advance 18% to \$35,899,600. The work force is now 1,922.

Company treasurer Edward J. Crane is named executive vice president in **1968**. Due to airport restrictions, only three DC-3s remain, together with three C-47 cargo planes. The first DC-9-30 arrives at St. Louis from Long Beach in February. On March 27, a DC-9-15 with 49 aboard collides with an **Interstate Airmotive** Cessna 150F while on approach to St. Louis; the jetliner is able to land safely, but the private aircraft crashes, killing its pilot and passenger.

Chairman Floyd Jones dies and is succeeded by Jean Paul Bradshaw. Dual first- and coach-class services are offered, beginning on June 1 and \$30 Weekend Unlimited fares are introduced. During the summer and early fall, an F.27 is leased to the Republican Party for use by the Nixon-Agnew "Truth Squad." In August, the last DC-3s are sold to the Griffin, Georgia-based Aviation Academy. Among the school's prizes is N133D, the oldest surviving DC-3, which had begun its service life as a Douglas Sleeper Transport when delivered as *Flagship Tennessee* to **American Airlines** on July 10, 1936.

Orders are placed in September for three more DC-9-30s. The remaining DC-3s are phased out on October 26, following flights from St. Louis to Jefferson City and from Jefferson City to Springfield. Their withdrawal leaves the fleet an all-turbine unit with 5 DC-9-15s, 5 DC-9-30s, and 21 FH-227Bs. The C-47s are also replaced by two FH-227Cs that begin night cargo flights between St. Louis and Chicago.

Flight 982, a DC-9-15 with 4 crew and 64 passengers, fails takeoff from Sioux City, Iowa, on December 27 and crashes 1,181 feet beyond the end of the runway in deep snow; although the aircraft must be written off, there are no fatalities.

Customer bookings climb 23% to 2,139,000 and cargo traffic accelerates by 30%. Revenues jump 25.4% to \$45,010,204.

Airline employment stands at 2,025 in **1969**. A direct Peoria to Washington, D.C. (IAD) route is initiated on April 27 and the airline is able to boast "Now We're 2/3 Transcontinental!" Flights are simultaneously started between Champaign/Urbana and New York (LGA). New Chairman Bradshaw dies in July and is succeeded by Thomas L. Grace, who also serves as president/CEO.

By year's end, the fleet comprises 5 DC-9-15s, 7 DC-9-30s, and 21 Fairchild Hiller FH-227Bs. A total of 49 stations are served and enplanements are 2,332,621. Revenues total \$56.36 million, but there are losses: \$1.19 million (operating) and \$3.99 million (net).

The employee population in **1970** numbers 2,348 (a 5% increase) and the fleet includes 38 aircraft, all Douglas jetliners and Fairchild Hiller turboprops.

Mechanics and related workers, members of the Aircraft Mechanics Fraternal Association, walk out on April 19; the job action is settled by mediated agreement on April 24 and ratified four days later.

Three new nonstop routes are now inaugurated from St. Louis to Des Moines, St. Louis to Minneapolis (MSP), and Des Moines to Chicago. Charter services are greatly expanded and the carrier begins on line participation in the computerized reservations system of **Continental Airlines**.

Passenger boardings jump 5.1% to 2,457,978 and cargo traffic grows by 30.2%. Revenues climb 20.9% to \$68.1 million and expenses accelerate 15.6% to \$66.6 million. Although an operating profit of \$1.5 million is posted, a net loss of \$2,271,000 is absorbed.

Like his predecessor, Chairman/CEO Grace dies in office, on July 21, **1971** and is succeeded by Vice President Edward J. Crane on August 1. In late summer, a new \$3-million general office building is occupied near Lambert Field. Founder Hamilton dies on October 27. Enplanements for the year total 2,757,538 and the profit increases to \$4.35 million.

The workforce in **1972** is 2,681. Employing three leased de Havilland Canada DHC-6-100 Twin Otters, an experimental commuter service is inaugurated between Springfield and Chicago (MDW). Lester L. Cost, board member and former corporate secretary, is named board chairman in May.

A fare quote system is incorporated into the computers of the automated reservations system. Reduced fare Night Hop Service is instituted to select markets, while in other destinations, automatic ticketing is tried. To provide additional capacity, two more DC-9-30s join the fleet, bringing the number of owned Douglas jetliners to 19. All services at Kansas City are transferred on November 11 from Municipal to International Airport.

The same day, an FH-227B sets a speed record of 52 minutes for the service between Lambert and O'Hare airports.

Passenger boardings jump 8.6% to pass the 3 million mark in annual boardings (3,017,386) for the first time. Cargo traffic accelerates by 14%. Income reaches \$90.1 million and with expenses under control, Ozark is able to realize a bottom-line net profit of \$2.56 million.

Fifty-three employees are laid off or not replaced during **1973**. Brandishing a shotgun, AWOL U.S. Army private D. V. Durkin takes a mechanic hostage before taking over a DC-9-30 at Standiford Field Airport at Louisville on January 19. Making his way to the cockpit, the pirate orders the pilot to fly him to an undisclosed location, but he is overpowered by a plain-clothes policewoman before the plane takes off.

Mechanics, members of the Aircraft Mechanics Fraternal Association, engage in an 11-week strike beginning on April 19. A settlement is mediated on June 27 and ratified on July 2.

While on final approach to St. Louis from Marian, Illinois, on July 23, Flight 809, a FH-227B with 3 crew and 42 passengers, encounters a downdraft during a thunderstorm and crashes 2 mi. from the end of the runway (38 dead).

Standard-class fare is inaugurated across the system as all of the company's airliners are converted to single-class seating. A yearlong program of airplane cabin refurbishment is also undertaken and another DC-9-30 is delivered, with orders for four outstanding.

On certain frequencies, unusual marketing innovations are attempted. These include a wine-tasting service and in an effort to provide passengers with a sample of world travel, dinners like those offered by international carriers are offered on selected flights. On October 12, the government announces that, due to the energy crisis, a mandatory jet fuel allocation plan will take effect on November 1. Daily departures are cut by 7% during December as fuel availability tightens.

Customer bookings fall 23.5% to 2,307,000 while cargo is down by 25% to 7.9 million freight ton-miles flown. On revenues of \$81.61 million, expenses are \$79.11 million. The operating profit is \$2.49 million, but a \$170,000 net loss is absorbed.

Airline employment in **1974** is 2,925. During January, some 300 employees are laid off, 12% of the workforce. Due to the continuing energy crisis, daily departures are reduced by another 23%. Also early in the year, service to Chicago (MDW) ends and the company moves its Dallas services from Love Field to the new Dallas-Fort Worth International Airport (DFW). Four more DC-9-30s arrive and the company petitions the CAB for nonstop authority from St. Louis to Nashville. It also seeks to offer service from Dallas (DFW) to Mexico City via Guadalajara, Puerto Vallarta, and Mazatlan.

Single-class DC-9 cabins are made available and the fleet now owns more pure-jets than propjets. On the enplanement side, Ozark makes a big comeback, with record boardings in March, May, June, and August. The 301,497 mark for August is a to-date company record.

Overall, bookings jump 41.3% to 3,261,000. Freight traffic is also up, by 26.5%, as 9.99 million FTKs are flown. Although expenses are \$110.52 million, they are wiped out by overall income of \$118.56 million. Chairman Lester L. Cox and President Crane are able to report an operating profit of \$8.03 million and net income of \$3.28 million.

Twelve new employees are added in **1975**. Four additional DC-9-30s arrive and are employed to begin nonstop services between St. Louis and Nashville, as well as to increase frequencies on other routes. Permission is sought from the CAB to fly to Montreal and Phoenix. With the regulator's authority, the local service carrier turns over its Clinton, Iowa, service for replacement by **Mississippi Valley Airlines**.

The 30 millionth passenger is boarded in May and the twenty-fifth anniversary is celebrated in September.

Although cargo is down 4.5%, customer bookings jump 4.3% to a record 3,401,598. Revenues advance to \$133.88 million and expenses are kept in check at \$130.86 million. The operating profit is \$3.49 million and the net is \$546,000.

The employee population is increased by 6.1% in **1976** to 3,117. The Bicentennial year—and the company's silver anniversary period—is the best in company history to date. A \$2-million program of Comfort Class interior refurbishment is begun aboard the DC-9s and orders are placed for six new DC-9-30s so outfitted. Detroit joins the route network as Ozark now operates to 60 cities in 15 states and the District of Columbia. Service to Detroit begins on December 15.

Passenger enplanements accelerate 12.3% to a record 3,819,503. Freight is a little slower, rising 8.56% to 10.35 million FTKs. Operating income is \$165.4 million and expenses are \$151.04 million. This happy imbalance results in an operating profit of \$13.36 million and record net gain of \$7.17 million.

As Congress begins to consider airline deregulation in **1977**, Ozark becomes one of the concept's most vocal opponents. Nonstop flights are inaugurated from St. Louis to Denver and a new \$2-million hangar is completed at the St. Louis base. The new advertising slogan, "We Make It Easy for You" is now introduced. During the summer, FH-227Bs are sold—two each to **Aerolineas Centrales de Colombia, S.A.** and the Belgian carrier **Delta Air Transport, S.A.**

Enplanements for the year total 4,111,000. An \$8.06-million net profit is reported on income of \$192.99 million.

Airline employment is increased by 16.2% in **1978** to 3,809. Chairman Cox and President Crane oversee a fleet comprising 24 DC-4-30s, 1 DC-9-30F, 7 DC-9-15s, and 14 Fairchild Hiller FH-227Bs. In May, 7 of the company's 400 flight attendants are released as being too overweight, causing the Association of Flight Attendants (AFA) to file an embarrassing federal lawsuit. As is the case with many local service operators, Ozark begins a dramatic expansion following President Carter's signing into law of the Airline Deregulation Act in October. The company adds Philadelphia, Atlanta, Miami, Fort Lauderdale, Orlando, and Tampa to its 51-city route network, which is increased almost overnight by 86.2% to 17,650 unduplicated miles.

In its largest equipment purchase, Ozark commits \$82.5 million, also in October, to the acquisition of two Boeing 727-2D4As and eight more DC-9-30s, six being previously owned.

Passenger boardings jump 13% to 4,725,000 while freight grows 12.1% to 12.73 million FTKs. On revenues of \$229.74 million, expenses are \$209.49 million. A \$20.24-million operating profit is gained, while net profit increases by 1.64% to \$8.2 million.

The number of employees is increased by 6.9% in **1979** to 4,071. The New Orleans market is initially entered on May 15 and operations are switched from Washington, D.C. (DCA) to Baltimore (BWI). At approximately the same time, the airline adopts its final livery, complete with a new arrangement of the tail swallows and bold green stripes. New reservations desks open in Orlando and St. Louis, a new passenger facility is opened at Chicago, and five more DC-9-30s join the fleet.

A seven-week September 14–October 21 flight attendants strike by members of AFA (over contract renewal, not weight limits) shuts down service. A new agreement is ratified on November 5.

Four DC-9-15s are grounded on November 13 due to cracks in their tail sections. In addition, a U.S. District Court finds that by firing its overweight stewardesses earlier, Ozark has violated Title VII of the 1964 Civil Rights Act.

The current strike directly lowers the year's overall passenger boardings by 11.6% to 4,175,000 and FTKs operated to 10.9 million. Although revenues increase 1.6% to \$233.4 million, expenses jump 12.9% to \$236.6 million. The result is a net loss of \$883,000, the first financial reversal in three years. Part of this downturn is temporarily reversed when, 20 minutes after their delivery, the 2 new Boeing 727-2D4As are sold to **Pan American World Airways (1)** at a \$3-million profit.

The **1980s** open badly for Ozark. The employee population is reduced by 6.8% in **1980** to 3,793 and the fleet is strengthened by the addition of 2 DC-9-30LRs. These are employed, beginning on April 19, to offer service over a 2,500-mile route from St. Louis to Kingston, Jamaica. The carrier faces its second job action within a year beginning on May 6 when its Aircraft Mechanics Fraternal Association members idle the carrier for 27 days over pay, pension, and benefit issues. A mediated agreement is ratified on June 2. Declining traffic and rising costs continue.

To overcome these difficulties, schedules are tightened and service is suspended to certain unprofitable markets, although a new frequency is begun to Washington, D.C. (DCA). A public stock offering of 1.7 million shares of common increases capitalization by \$18.5 million, which is applied to the cumulative debt.

In August, the company's ALPA representatives meet with President Crane and work out an arrangement for averting future strikes. Following its flight from St. Louis to Chicago via Peoria on October 25, the last FH-227B is retired. A number of these turboprops are now sold to **Britt Airways, Delta Air Transport, and TAT (Touraine Air Transport, S.A.)**.

A passenger boarding decline of 4.2% (3,999,000) is encountered and cargo falls a larger 17% to 13.54 million FTKs. Although total revenues advance by 27% to \$293.6 million, expenses rise 25.9% to \$294.7 million. The new net loss of \$289,000 is the second poorest showing in two years.

The workforce is reduced a miniscule 0.2% in **1981** to 3,835. On March 12, the company expands its flight system to include Indianapolis, Detroit, and Philadelphia and begins a \$10-million expansion of its Lambert Field facilities. Perhaps surprisingly, the PATCO air traffic controllers' strike of summer and the subsequent ATC restrictions do not affect Ozark badly; in fact, the carrier makes a turnaround this year. With the addition of three new markets—San Antonio, Fort Myers, and Sarasota/Bradenton—the St. Louis-based company becomes the major operator between St. Louis and Florida.

The new Florida business, harvested with the aid of 3 new McDonnell Douglas DC-9-80s (MD-80s), helps boost traffic by 6.8% to 4,273,265; cargo also increases, up 14.6% to 7.65 million FTKs. Revenues climb 29% to \$382.95 million with only a 17.2% rise in expenses

to \$348.93 million. As a result of these shifts and various economies, a record \$16.3-million net profit is posted in addition to the operating gain of \$34.01 million—much to the relief of company officials and stockholders.

The payroll is increased by 4.1% in 1982 to 3,993. The fleet is enlarged by the addition of a DC-9-32 and two DC-9-41s, the latter pair purchased from Japan's **Toa Domestic Airlines Company, Ltd.** Ozark, the nation's 16th largest airline, becomes a transcontinental carrier on October 1 when it begins flights into 6 new cities, including San Diego, Brownsville, Las Vegas, Omaha, Cleveland, and Norfolk. At the same time, many older stations are dropped, such as Rockford, Burlington, Cape Girardeau, Decatur, and Quincy.

To provide greater financial flexibility, the board authorizes a reorganization. Ozark Holdings is formed with Ozark Airlines as its major airline-operating subsidiary. The first DC-9-41 enters service on December 23.

Enplanements rise a modest 2.2% to 4,369,000, while cargo grows 1.1% to 7.74 million FTKs. Operating income jumps 5.77% to \$406.49 million, while expenses are kept at \$388.39 million. Although positive, profits dip to \$18.09 million (operating) and \$7.54 million (net).

The workforce falls 0.3% in 1983 to 3,981 as the company inaugurates service to 3 more Sunbelt cities—West Palm Beach, Charlotte, and Raleigh/Durham. A new cargo facility is opened in St. Louis and a third DC-9-41 is acquired from **TOA Domestic Airlines Company, Ltd.** An order is placed on July 28 for four McDonnell Douglas MD-82s.

A DC-9-31 strikes a snow sweeper after landing at Sioux Falls Airport on December 20, ripping the right wing off the plane, igniting a fire, and killing the sweeper's driver; all 82 people aboard the plane escape injury. The wreckage will be sold to Aviation Sales, which will rebuild the plane and sell it to **Republic Airlines**.

Partially as a result of its expansion actions, passenger traffic jumps by 12.3% to 4,907,810, while cargo increases 13.3% to 22.59 million FTKs. On the financial side, revenues move upward only 6.4% to \$433.2 million. Expenses, although up 10.7%, only reach \$430.76 million. As a result, the carrier is left with an operating profit of \$2.43 million and a net profit of \$1.9 million.

Employment is elevated 1.7% in 1984 to 4,047. Hourly shuttle flights between St. Louis and Chicago are launched in January as Executive Express. Additional routes are opened to the Florida city of Jacksonville and the North Carolina communities of Greensboro, High Point, and Winston-Salem. The expansion gives Ozark a system of service to 66 cities in 25 states coast-to-coast. Northwest Holdings purchases the Lambert Field FBO Midcoast Aviation while in November, a 15-gate expansion of the company's facilities at St. Louis are opened. The two new MD-80s join the fleet late in the year after serving a six-month lease with **American Airlines**.

The year's passenger boardings top the five million mark for the first time (5,052,000), this despite pressure on the carrier's St. Louis hub from both **Trans World Airlines (TWA)** and **Southwest Airlines (2)**. Still, cargo declines 6.7% to 21.05 million FTKs. On the year, operating revenues incline skyward 8.6% to \$465.7 million while expenses rise only 4.5% to \$445.65 million. As a result, operating income advances to \$20.06 million and a net profit of \$12.7 million is earned, the second largest in the carrier's history.

The payroll is boosted 2.4% in 1985 to 4,144 and the fleet includes 50 airliners. In March, a new 15-gate "Airplex" concourse is opened at the St. Louis hub. Ozark again reaches toward new markets, adding Lincoln, Nebraska, and Oklahoma City in April. In October, a code-sharing agreement is reached with the large regional **Air Midwest**, which will provide feed for the national in the Midwest. Carl Icahn's purchase of **Trans World Airlines (TWA)** now makes that carrier such a low-cost enterprise that it is able to further undercut Ozark at St. Louis. The competition is deadly; most of the \$8 million won during the year's first half is consumed during the second half. In November, as almost an aside, Ozark Holdings purchases the St. Louis FBO Midcoast Aviation for \$8.5 million.

As President Crane's company begins to sink into red ink, labor difficulties resurface. In December, Crane seeks concessions from his pilots, but they resist. The year's profit is only \$636,000. The outlook is grim. During the company's last year as an independent, customer bookings swell 12% to 5,541,000 and cargo is up by 51.5% to 46.57 million FTKs. Revenues ascend 3.2% to \$480.54 million, costs are up 8.2% to \$481.59 million, and the operating loss is \$1.05 million. Net profit falls to \$636,000.

Merger negotiations between the Icahn organization and Ozark are undertaken in January and February 1986. On March 6, **Trans World Airlines (TWA)** purchases Ozark's entire shareholding for \$239 million (\$19 per share of common stock). Although the antitrust division of the Department of Justice recommends against the takeover in July, it is approved by the Department of Transportation in September.

Control over the St. Louis hub will be total within a year. Also in September, **Trans World Airlines (TWA)** sells Ozark's entire fleet to a leasing concern and then leases the aircraft back; the transaction gains \$240 million for Carl Icahn's major—the entire price of the Ozark acquisition.

Passenger boardings for the three independent quarters drop 5.2% over the previous period a year earlier, to 4,548,000. During the same period, revenues fall to \$350.7 million, expenses are \$356.7 million, and a \$6-million operating loss is suffered. Still, the carrier goes out on a profitable note with a final net gain of \$4.56 million.

Integration moves ahead during the year's final quarter, aircraft are repainted in **Trans World Airlines (TWA)** livery, and surviving personnel are moved into Chairman Icahn's system. Indeed, another \$25 million is gained by the Icahn group when the Ozark pension plan is terminated. Ozark flies its last scheduled service under its own name on October 26.

In January 1987, Crane becomes vice chairman of the **Trans World Airlines (TWA)** board of directors and Lester Cox a member. Unofficial Web sites concerning Ozark are located at <http://inlink.com/~dougm/ozark.com/> or <http://members.aol.com/dealers/aircraft/airlines/ozark.htm>.

OZARK AIR LINES (2): United States (1999–2001). A 20-year dream of reuniting the flying public with the famous green swallows of **Ozark Air Lines (1)** is realized in late summer and fall 1999 when physician/aviator/businessman Dr. Wesley Stricker, who had purchased rights to the historic name from **Trans World Airlines (TWA)** the previous year, organizes this carrier at Missouri's Columbia Regional Airport. Former USN pilot and KAL-Aero owner/operator John Ellis becomes CEO and together the two complete their business plan and seek financing from a variety of banks, lending institutions, and other financial organizations. Most find the \$25-million start-up capital requested for the purchase of aircraft and other beginning costs too small an amount to be involved with; however, the Union Planters Bank of Columbia agrees to support Stricker and Ellis and give them the loan. The required paperwork is now filed with the DOT and FAA, and orders are placed with Fairchild Dornier for two copies of its new 328JET.

As Washington reviews the company's potential and the aircraft are built in Germany, the Ozark chiefs build a hangar and maintenance facility at the regional airport and recruit a staff to operate the airline. A marketing and reservations contract is signed with Worldspan.

Second operator of the Fairchild-Dornier 328JET, the company receives its operating certificate on February 9, 2000. Five days later, it completes its first operational service, a charter that takes the University of Missouri men's basketball team to and from Lubbock, Texas. Twice-daily roundtrip flights are inaugurated on February 21 from Columbia to Chicago (MDW); one service operates daily except Saturday and the other daily except Sundays.

Plans to operate into Dallas (DAL) are thwarted due to a legal impasse between the cities of Dallas and Fort Worth over the expansion of

flights into Love Field. Consequently, interline arrangements are entered into with **American Airlines** and **American Eagle Airlines**. Under terms of the pacts, Ozark will provide connecting flights into Dallas (DFW) timed to coincide with AA flights; American Eagle will provide ticketing and baggage handling services for Ozark. Twice-daily return service to Dallas (DFW) starts on March 13.

In the weeks that follow, the Chamber of Commerce of Joplin, Missouri, indicates an interest in joining the new Ozark's route network. A \$300,000 incentive package is put together that includes \$200,000 in block grants and \$100,000 from the Chamber's subsidiary Joplin Business and Industrial Development Corporation; an additional \$10,000 in marketing funds are also provided. Ozark begins flying in and out of Joplin in May and with the delivery of its second 328JET, connects that city and Columbia with both Dallas (DFW) and Chicago (MDW).

Under a one-year arrangement signed in January 2001 with the Iowa-based start-up **AccessAir**, new 328Jet one-stop return service from Columbia to Chicago (MDW) via Des Moines, will be inaugurated on February 22. The agreement allows **AccessAir** to withdraw the loss-making Boeing 737-200 it had been employing on its renewed flights. **AccessAir** will fail on February 27 and Ozark will halt operations on March 29.

OZARK AIRWAYS: United States (1932–1933). Organized at Springfield, Missouri, in late 1932, Ozark is equipped with a Stinson that is employed to open scheduled multistop passenger flights to Kansas City. Insufficient traffic does not allow operations to continue beyond March 1933.

PAB AVIATION: 3405 Airport Road, Allentown, Pennsylvania 18103, United States; Phone (610) 266-8188; Fax (610) 266-8189; Year Founded 1986. PAB is set up at Allentown in 1986 to provide domestic and worldwide executive and small group passenger charters. The company grows over the next decade and in 2000, employs five pilots. It operates a pair of Grumman G-1159 Gulfstream bizjets, one of which is normally based at West Palm Beach, Florida.

PAC AIR: United States (1989). Arthur Pearson's Pearson Aviation Corporation, based at the airport at Provincetown, Massachusetts, establishes a scheduled air taxi division in February 1989 to undertake daily roundtrips to Boston. Piper PA-31-350 Navajo Chieftain frequencies are inaugurated on March 20, but cannot be sustained beyond October 14.

PACE AIRLINES: P.O. Box 525, Winston-Salem, North Carolina 27102, United States; Phone (910) 681-5374; Fax (910) 744-1257; <http://flypiedmond.com/pace.html>; Code PDS1; Year Founded 1996. From a base at Greensboro, North Carolina, the original **Piedmont Aviation Services** continues to flourish, despite the transfer of its **Piedmont Airlines (1)** to **USAir**. In 1992, PAS is sold by **USAir** to an investor group that includes its present management. Now, once again, it conducts domestic passenger and cargo charters with a fleet of 36 lightplanes, in addition to its work as an FBO, aircraft sales facility, and maintenance and overhaul business.

By 1994–1995, the company operates a large executive and small group charter service from seven south-central U.S. bases. From Greensboro, PAS flies 1 each Beech Super King Air 200, B-58 Baron, and B-2000 Starship. A Beech 90 King Air is operated from Hickory, North Carolina, while from Morgantown, West Virginia, 1 Cessna 550 Citation II and 1 B-58 Baron are flown.

Winston-Salem is a major Piedmont hub; from this point the company operates 2 each Cessna 525 Citations and Super King Airs and 1 each B-400A Beechjet, B-90 King Air, British Aerospace BAe Jetstream 31, Gates Learjet 31, and Cessna 550 Citation II. At Raleigh, PAS flies 1 IAI-1124 Westwind, 2 B-400A Beechjets, 2 King Air 90s, 1 Gates Learjet 35A, and 1 B-55 Baron.

Piedmont Aviation Services also flies from two Virginia locations. At Norfolk, the company stations 1 each Beech Super King Air 200 and Mitsubishi Mu-300 Diamond, while a Super King Air is flown from Roanoke.

Pace is established under the direction of PAS President Robert H. Wells at Winston-Salem in the first quarter of 1996 to offer charter services. The 56-year-old privately held PAS, which had once owned **Piedmont Airlines (1)**, was itself taken over by **USAir** in the famous Piedmont merger of the previous decade.

The March 28 issue of *The Charlotte Observer* reports that Pace has had to push back its start-up date several times because of disputes over its name. PAS initially applies to the DOT to use the Piedmont name, but **USAir**, which retains the trademark name on its commuter affiliate **Piedmont Airlines (2)**, refuses to abandon it. The next moniker chosen is "Premier," but that name prompts objections from a Colorado entrepreneur planning to begin a carrier with those titles. The third attempt is golden and the DOT approves the Pace name and grants Piedmont a certificate to offer jet charter service.

President Wells negotiates a contract to become the exclusive airline of the Charlotte Hornets NBA basketball team. A single Boeing 737-200 is leased and employed to inaugurate services for the team on March 26.

A total of 4,000 passengers are flown by December 31. The \$2 million in revenues generated exceed costs and allow a \$145,000 operating profit. A net \$100,000 gain is also reported.

Customer bookings in 1997 again total 4,000. Operating revenues skyrocket 87.1% to \$3.78 million, while expenses climb 87.4% to \$3.52 million. The operating profit grows to \$264,000, while a \$158,000 net profit is banked.

Flights continue in 1998. With financial support from Washington, D.C.-based financiers The Carlyle Group, the airline's parent, Piedmont Aviation Services, merges with Hawthorne Aviation on July 27 to become Piedmont Hawthorne Aviation. American Beechcraft, a Leesburg, Virginia-based FBO and Raytheon Aircraft dealer, is merged into the new company, along with Transportech, an FBO at Raleigh that Piedmont has been managing for the past three years.

During the 12 months, passenger boardings skyrocket 300% to 16,000. Revenues advance 28.1% to \$4.85 million, while costs are held to \$4.72 million. The operating profit drops to \$263,000, while net gain falls to \$42,000.

Coming in from Winston Salem to Rogers, Arkansas, on March 20, 1999, the Learjet 35A with two crew and eight passengers undershoots the runway threshold. The left main landing gear collapses after impacting the concrete foundation of the approach lighting system; the bizjet skids 1,700 ft. before coming to rest on the E side of the asphalt strip. The flight officer and a passenger receive slight injuries.

Passenger boardings climb 12.5% this year to 18,000.

A total of 67 workers are employed at the beginning of 2000. The carrier's B-737-242A continues to fly for the Atlanta Hawks, its B-737-247 for the Charlotte Hornets, its B-737-222 for the Washington Wizards and Capitals, and its B-737-4Y0 for the New York Knicks and Rangers.

In July, two company B-737-236As are wet-leased to the new **Sun West International**, which begins operating charters on behalf of Harrah's Casinos at Laughlin, Nevada, and New Orleans.

PACIFIC AERIAL TRANSPORT (PTY.), LTD. (PAT): Australia (1931–1936). Led by Raymond "Battlin" Parer, a diverse group of bush pilots and mining company investors anxious to compete with established **Guinea Airways (Pty.), Ltd.**, form PAT at Salamaua in early 1931. A former **KLM (Royal Dutch Airlines, N.V.)** Fokker F-III, together with spare parts, is purchased for A£700 and delivered; another 1,000 pounds is invested in two reconditioned Bristol Jupiter engines. Parer test flies the Fokker before an interested Salamaua crowd on March 14.

Unfortunately, four days later, the plane, while attempting takeoff, loses engine power and crashes into a treeline; neither Parer or his two passengers are hurt, but the aircraft must be written off. Wau tavern owner Flora Stewart and other investors now step forward to underwrite the purchase of an ex-**Sabena Belgian World Airlines, S.A.** Fokker F-VIIA and a de Havilland DH 50 Moth.

During the early summer, PAT begins a charter service to various points throughout Papua and eastern New Guinea. All manner of cargos are accepted from gold, tools, whiskey, clothing, and medicine; unusual freight includes non-safety Japanese matches, detonators, a cow, and a wild boar that gets loose and catches in the Fokker's floorboards.

Operations continue apace in 1932 and in 1933 the company is taken to court by local Salamaua officials for flying unregistered aircraft, a violation of the Air Navigation Regulations. The £125 fine is paid by investors and well wishers. While undergoing repair at Wau in November, the Fokker's wing is severely damaged, causing the plane to remain out of service for several months.

On June 1, 1934, the New Guinea Centenary Flight Syndicate is formed to sponsor "Battlin'" Parer's entry into the MacRobertson England-Australia Air Race. The famed bush pilot now sells his interest in PAT and with another of the carrier's pilots as companion, departs for England, where he purchases a used Fairey Fox and enters the contest. Meanwhile, three pilots are left to operate the airline's services. The company receives a three-year subsidy from the administration of the Mandated Territory on August 1 for the carriage of passengers and cargo over its existing routes from Salamaua, Lae, and Wau.

Parer's Fox arrives at Melbourne on February 13, 1935. Shortly thereafter, PAT is sold to rival **Guinea Airways (Pty.), Ltd.**, which allows it to continue flying under its original name until October 16, 1936, when it is combined with the air transport division of **W. R. Carpenter and Company** to form **Mandated Airlines (Pty.), Ltd.**

PACIFIC AIR: United States (1994–1995). Pacific Air is established at Portland, Oregon, in 1994 to offer regional passenger and cargo flights. Revenue flights commence during the summer with a pair of Piper PA-31-350 Navajo Chieftains.

Unable to achieve economic viability, the concern shuts down within a year.

PACIFIC AIR AVIATION: 185 East Reno, Hangar B6, Las Vegas, Nevada, 89119, United States; Phone (702) 256-4320; Fax (702) 795-3790; Year Founded 1993. PAC is founded at Las Vegas in 1993 to offer executive and small group passenger charters throughout the U.S. and Canada, as well as to Mexico, Hawaii, the Caribbean, and Central America. Five pilots are employed and flights begin with a IAI 1125 Westwind Astra and a Learjet 35A Century III.

PACIFIC AIR CARGO: 6040 Avion Drive, Los Angeles, California 90045, United States; Phone (310) 645-2178; Fax (310) 645-4876; <http://www.pacificaircargo.com>; Code 8K; Year Founded 2000. PAC is established at Los Angeles in the spring of 2000 to operate scheduled all-cargo roundtrips to Honolulu on behalf of freight forwarders, integrators, and other airlines (as replacement flights). Former American International Airways (American International Cargo) managing partner Beti Ward is named CEO, with Jay Romias as chief financial officer and Jeffrey Vaughn as operations manager.

A Boeing 747F is leased and five-times-a-week return freighter flights duly commence between Los Angeles (LAX) and Honolulu. A total of 44.9 million pounds of cargo are transported during the remainder of the year.

PACIFIC AIR CHARTER. See **AIRNET EXPRESS**

PACIFIC AIR EXPRESS: United States (1982–1987). The freight line PAE is established at Honolulu in August 1982 to provide scheduled all-cargo and charter flights to destinations throughout the state. Revenue flights commence on February 17, 1983. Major destinations visited with a fleet of 4 Douglas C-54Gs (military DC-4s) include Hilo, Kahului, and Lihue.

While on final approach to Kahului on June 29, one of the C-54Gs with three crew suffers the loss of all four engines simultaneously; a belly landing is carried out in a sugar cane field six km. from the runway. There are no fatalities, but the aircraft must be written off.

Employing a fleet of 3 C-54Gs, two Aviation Traders ATL-98 Carvairs and 1 Beech 18, the company continues in operation until 1987.

PACIFIC AIR EXPRESS, LTD.: Solomon Islands (1999–2000). Pacific Air Express is established at Honiara, Guadalcanal, in 1999 to serve as the national freight carrier of the Solomon Islands. A single Boeing 727-200F is acquired and revenue flights begin over a route to Brisbane. The company's principal cargo to Australia is fresh tuna, which is transshipped to the Sashimi market in Tokyo by **Japan Air Lines Company, Ltd. (2)**. General cargo is carried back to Guadalcanal. Occasionally, freight charters are operated to other destinations in the Pacific region.

When a coup is attempted in the Solomon Islands on June 5, 2000, the carrier, not wishing any problems, temporarily suspends domestic and international operations. Domestic political unrest and military action continues, forcing the airline to stand down during the entire summer. Without income, the company shuts its doors. The Boeing freighter will pass to a new Brisbane-based cargo carrier, **Transasian Air Express (Pty.), Ltd.** that will start flying in February 2001.

PACIFIC AIR LINES: United States (1958–1968). The local service carrier **Southwest Airways**, based at San Francisco, changes its name on March 6, 1958. By year's end, the fleet comprises 20 aircraft: 11 Douglas DC-3s, 8 Martin 2-0-2s, and 1 Lockheed L-18 Lodestar. One Douglas transport is sold to Banfe Aviation late in the year.

To service its California-Nevada markets, it soon begins to order new equipment and in April 1959 places two Fokker Fairchild F-27As, license-built by Fairchild in Maryland, into operation.

After trading off its Martin 2-0-2s to **Trans World Airlines (TWA)** in early 1960, the company begins to fly new, pressurized Martin 4-0-4s on November 30. Operations continue largely without incident during the next year.

On July 31, 1961, at the airport at Chico, a DC-3, designated Flight 327, preparing for departure to San Francisco, suffers the loss of its pilot, and a ticket agent, who are shot by an assailant. The gunman will later be convicted of assault with intent to commit murder and is sentenced to a long prison term.

Later, a rag left in the nosewheel compartment causes the nose gear of an F-27A to collapse as the plane lands at Las Vegas on November 15. The left landing gear of a Martin 4-0-4 collapses at Lompoc, California, on April 17, 1962.

On July 7, 1963, an F-27A is involved in a ramp accident at San Francisco that results in serious injury to one of the 14 passengers aboard.

Still, enplanements for the year are up to 521,900 and revenues total \$11,845,600.

Airline employment in 1964 stands at 761 and the fleet includes 18 aircraft. President Harry White's company receives four more F-27As, bringing the total to nine, or one-half of the fleet. Nonstop San Jose to Los Angeles flights begin in the spring and are heavily advertised.

While on a Reno-San Francisco service on May 7, Flight 773, an F-27A with 4 crew and 40 passengers, hits a hilltop near Dublin, California, and explodes; there are no survivors.

Tape recordings and FBI work later reveals that passenger Francisco Gonzalez, who had purchased a .358 Magnum revolver a week earlier and a \$50,000 life insurance policy just before boarding, has shot and killed both Capt. Ernest Clark and First Officer Raymond Andress, causing the Friendship to crash. In a sad and ironic twist, a company rule, issued the week before but not due to take effect until August, requires that aircraft cockpit doors be locked at all times during flights.

Also in May, **West Coast Airlines** attempts to purchase controlling interest, but is forced off as the result of CAB reaction to the acquisition methods of owner Nick Bez. Consequently, WCA sells its 34% shareholding in Pacific.

Passenger boardings jump 15% to 613,999. Revenues swell to \$13.4 million, operating expenses are \$12.1 million, and the net profit is \$1.3 million.

The workforce in 1965 is increased to 802, but still remains the smallest number employed in the U.S. local service airline industry. The fleet now includes 18 aircraft: 9 Fokker F-27As and 9 Martin 4-0-4s. Orders are placed for two Boeing 727-193s and four B-737s. Plans are announced for a new general office and maintenance center at San Francisco. The company's Los Angeles to San Jose route is still the only non-stop flight up and down the north-south California corridor.

As its longtime struggle for California market maintenance continues, Pacific finds itself, beginning in May, the target of an enterprising intrastate, **Pacific Southwest Airlines (PSA)**, which all but forces the larger carrier from several significant California routes and hurts it financially. Meanwhile, as other carriers switch to jetliners, PAL, to remain competitive, does likewise, inaugurating Boeing 727-193 service on July 7. A \$15.50 Commutair fare is introduced; unhappily, **Pacific Southwest Airlines (PSA)** counters with a fare \$2 less.

On September 19, the propeller of a Martin 4-0-4 with seven aboard strikes and kills a ground crewman at San Jose, California. An F-27A with 33 aboard is hit by lightning at 6,000 ft. above Los Gatos, California, on November 24; injuries to people are minor but the turboprop is badly damaged.

Still, bookings increase to 697,055. With 233,160 freight ton-miles flown, Pacific's freight traffic is the smallest for any carrier within its classification range.

The \$1.5-million, two-building administrative and maintenance center is completed at San Francisco in 1966. The B-727-193 order is increased by one and the battle with **Pacific Southwest Airlines (PSA)** continues to be lost. Revenues for the year are \$16,772,600.

PAL attempts a counterattack during the spring of 1967, launching a so-called "safety campaign" in the media that suggests that **Pacific Southwest Airlines (PSA)** is dangerous to fly. The effort backfires. In June, discussions aimed at a possible merger between ailing Pacific and representatives of **West Coast Airlines** begin. In August, the ongoing merger talks are enlarged to include **Bonanza Air Lines** and David R. Grace now becomes board chairman.

Former Bonanza officials G. Robert Henry and Larry Decker come aboard as president and vice president-management, respectively. Following the receipt of stockholder approval of the three-way amalgamation, a petition is filed seeking government permission.

The employee population at year's end is 1,063. The fleet includes 11 F-27s and 3 B-727-193s. Orders are placed for 6 B-737s.

Passenger traffic accelerates 16.5% to 955,613. Revenues advance 8% to \$18,102,456.

Both the CAB and President Lyndon B. Johnson approve the merger on April 1, 1968, and the three independents amalgamate into a new company, **Air West**, on April 9.

PACIFIC AIR TRANSPORT (PAT): United States (1926-1928). Knowing that the Kelly Air Mail law will allow aircraft to compete with his motor coaches, Oregon bus operator Vern C. Gorst and a number of his colleagues elect to win an airmail contract route for themselves in order to control the competition. Gorst's friend, aircraft builder Claude B. Ryan, is persuaded to employ one of his new M-1 cabin monoplanes to take him on a return survey flight along the Pacific coast from Seattle to San Francisco, and over the dangerous Siskiyou Mountains. Meanwhile, Gorst and the bus owners incorporate Pacific Air Transport at North Bend on January 8, 1926 and apply for the Post Office's Contract Air Mail Route No. 8 (CAM-8) from Los Angeles to Seattle. The route is awarded to them on January 27.

A natural promoter, Gorst now hires 10 pilots and together they visit towns and communities along the 1,152-mile route selling the company—literally; a total of \$175,000 in company stock is sold during the tour. Many towns are persuaded to open community airfields. In addition, Standard Oil Company agrees to paint town names atop its buildings and a lighted airway is created by erecting automobile headlights on buildings, poles, hilltops, etc.

To supplement the Travel Air and WACO biplanes already on hand, Gorst now orders first six, then eight, Ryan M-1 mailplanes. These high-wing monoplanes arrive in August, along with two more Travel Airs and a Curtiss Swallow. Taking off at dark from different directions so as to complete the multistop flight in a day, two M-1s inaugurate CAM-8 mail service on September 15.

En route to Seattle from Los Angeles on November 12-13, an M-1 piloted by Charles Eidmer with mechanic Donald Rossiter aboard encounters rain and goes into a spin over Van Nuys; Eidmer safely bails out, but Rossiter is killed. Pilot R. B. "Pat" Patterson is killed on December 16 when his M-1 crashes into the face of Mount Ashland, south of Medford, Oregon. On the year, the company flies 33 intrepid passengers to points along its route; outfitted in goggles, helmets, and parachutes, they ride along with the mail. Sight-seeing flights handle 69 more customers.

Service continues apace in 1927. Many flights can be offered at night, as the Los Angeles-Oregon route is lighted. Still, flying is dangerous. An M-1 piloted by Edward Nehet, flying mail and company inspector Alfred Schaeffer, crashes near Merced, California, on April 3 (two dead).

Constantly in need of funding, CEO Gorst manages to attract the attention of Wells Fargo Bank official William A. "Pat" Patterson, who not only grants a loan, but monitors it to the point of acting as PAT's unofficial chief advisor and accountant as well.

Competition in the California market, especially from the big Ford Tri-Motors of **Maddux Air Lines**, intensifies. Early on October 26, an M-1 goes out of control north of Los Angeles and crashes; pilot Charles Bowman safely parachutes. Caught in a windstorm over Shafter, California, on Christmas Day, pilot James Rutledge parachutes safely from his M-1. Late in the month, Patterson suggests Gorst turn down a merger proposal from Harris "Pop" Hanshue of **Western Air Express (WAE)**.

Patterson next recommends to William "Bill" Boeing that he consider acquiring PAT and advises Gorst that, if the transaction occurs, all of the employees of his financially strapped airline will keep their jobs and the stockholders will be protected.

On the year, company aircraft transport 1,252 passengers and 76,237 pounds of mail over 693,350 miles.

To provide a connection between its aircraft factory at Seattle and the transcontinental terminus of San Francisco, **Boeing Air Transport (BAT)** purchases control of PAT on January 1, 1928, allowing it to operate as a subsidiary under its own name. Gorst receives \$94,000 for his stock and Patterson returns to Wells Fargo, but only briefly; he will soon become a Boeing official and eventually president/CEO of **United Air Lines**. Flying mail over Shasta Springs, California, on January 22, pilot Arthur Starbuck survives when his Travel Air 4000 is forced to the ground by a severe downdraft.

The Fokker Model 4 Universal of pilot James L. Rutledge runs out of gas on March 29 and crashes near Orinda, California. Caught in heavy fog over Canyon City, Oregon, on October 2, a Boeing 40C, piloted by Harry Donaldson with O. P. Donavan, crashes into a tree; Donavan is killed. On October 30, Boeing Airplane and Transport Corporation is formed as the holding company for both BAT and PAT; on December 17, Pacific is merged into BAT.

During the year, PAT carries a total of 1,484 passengers, 117,658 pounds of mail, and 20,319 pounds of express over 703,542 miles.

PAT continues to fly in 1929 and on the year transports 3,279 passengers and 254,457 pounds of mail over 830,000 miles. Operations continue in 1930. Upon takeoff on May 9, a Boeing 40B-4 hits a wagon and crashes; there are no significant injuries. By early August, the entire 1,200-mile route between Seattle and San Diego is lighted. As a result, the carrier begins to offer Boeing 40B-4 overnight service on August 15. En route to Portland from Burbank on November 18-19, a Boeing 40B-4 crashes in the Techachapi Mountains near Ridge Route, California (three dead).

Being ferried to Seattle, a Boeing 40B-4 encounters heavy fog and sleet over Crescent Lake, Oregon, on January 1, 1931 and crashes. On

March 16, the **West Coast Air Transport** subsidiary of **Western Air Express (WAE)** is purchased, along with its three Fokker F-10As and Seattle–San Francisco route. While attempting to land at Burbank on May 4, a Boeing 40C crashes in the Verdugo Mountains (two dead). On July 1, PAT is a merger partner in the creation of the new **United Air Lines**.

PACIFIC AIRLINES: United States (1975). Following its takeover of the Long Beach Douglas DC-3 operator **Pacific Coast Airlines (1)**, San Francisco-based **Pacific Northwest Airlines** is renamed during the first quarter of 1975. The fleet now includes de Havilland DH 104 Doves, Convair CV-240s, Beech 18s, and DC-3s.

Operations continue apace over a route network that includes stops at Oakland, San Jose, Fresno, Bakersfield, and Monterey. Unable to achieve economic viability, the company closes its doors before year's end.

PACIFIC AIRLINES, S.A.: 112 Hong Ha Street, Tan Binh District, Ho Chi Minh City, Vietnam; Phone 84 (8) 845-0090; Fax 84 (8) 845-0085; Code BL; Year Founded 1992. Pacific Airlines is formed at Ho Chi Minh City in 1992 and is the first new carrier formed in the People's Republic of Vietnam following changes in the law allowing foreign investment in the nation's air transport system. The airline is the only joint-stock (or public limited company) airline in Vietnam, its ownership being divided between **Vietnam Airlines, S.A.**, Ho Chi Minh City, **U-Land Airlines, Ltd.**, and Saigon Tourism.

Charter all-cargo flights are offered and employing a Boeing 737-217 leased from **Air Service Nantes, S.A.**, the company inaugurates a jointly operated route with **AOM French Airlines, S.A.** to Paris (ORY) via Bangkok and Karachi.

Daily return services are initiated in October from Vietnam to Taipei and Kao-hsiung.

Operations continue in 1993–1995. Airline employment in 1996 grows to 300. During the spring, a B-737-3Y0 is chartered from **TEA Switzerland, Ltd.** and inaugurates scheduled flights from Ho Chi Minh City to Hanoi via Da Nang. A B-737-2Y5A is subleased from **TEA Cyprus, Ltd.** and used to launch scheduled twice-weekly flights on October 22 from Da Nang and Ho Chi Minh City to Macau.

It is announced by Managing Director Duong Cao Thainguyen on May 13, 1997 that the carrier will sell space on the sides of their two leased Boeings for ads in a program reminiscent of the “logo jets” of **Western Pacific Airlines**.

On May 21, the company cancels its Macau to Ho Chi Minh City and Da Nang flights. In the fall, before any further progress on its expansion agenda can be addressed, the company is shut down, a victim of the Asian currency crisis.

With the regional economic situation improving in late 1999, the company is reopened. Daily roundtrips to Taiwan from Ho Chi Minh City, Da Nang, and Hanoi are resumed with a single McDonnell Douglas MD-82 chartered from the Taiwanese carrier **U-Land Airlines, Ltd.**

The workforce stands at 273 as 2000 begins. Wearing an all-white livery, a leased Airbus Industrie A310-324 enters service in June. Following the failure of **U-Land Airlines, Ltd.**, Pacific replaces its MD-82 with an MD-90-30 leased from another Formosa-based company, **Uni Airways Corporation, Ltd.**

PACIFIC AIRWAYS (1): United States (1922). Employing a rare seven-passenger Curtiss HS-2L, license-built by William E. Boeing and christened *Bluebird*, Ansel C. Eckmann, a former Army pilot, establishes this operation at Madrona Park, Seattle, in 1922. Promotional pamphlets are sent around the Northwest, advertising single-passenger fares of \$5 and charter rates of \$50 per hour for five or less.

Although American owned, the plane is Canadian registered and is flown back and forth to Victoria and Vancouver, British Columbia, during the summer, transporting 450 passengers and half a ton of cargo. After the enterprise closes down for the winter, it does not resume.

PACIFIC AIRWAYS (2). See **AIR L.A.**

PACIFIC AIRWAYS, LTD.: Canada (1925–1928). PA is established at Vancouver, British Columbia, in early 1925 by the noted Canadian World War I ace Donald R. MacLaren. Employing a purchased Curtiss HS-2L flying boat, MacLaren assumes the Canadian Air Board's west coast fishery patrol and also runs a general charter service to bush communities.

Operations continue apace until the little airline is purchased by **Western Canada Airways, Ltd.** in 1928.

PACIFIC AIRWAYS CORPORATION: 3110 Domestic Airport Road, Pasay City, Metro Manila, Philippines; Phone 63 (2) 832-2731; Fax 63 (2) 833-7430; http://www.pacificair.com.ph; Code GX; Year Founded 1947. PAC is formed as an FBO and general aviation company at Manila in 1947. Over the next forty years, lightplane charters are operated throughout the archipelago.

In 1988, PAC begins to provide regional commuter services. The fleet of CEO Celso L. Samaniego and Managing Director Renato S. Anel's small carrier comprises 1 each Beech 55, Beech 65, Cessna 310, Cessna 401, 2 Cessna 421s, 2 Convair 580s, and 6 Pilatus-Britten-Norman PBN-2 Islanders. In 1989, the light Beechcraft are replaced by four Beech 18s and another Islander is placed into service.

A Piper PA-31-310 Navajo is acquired in 1990 but, together with the Cessna 310 and two Islanders, is replaced by four de Havilland Canada DHC-6 Twin Otters (two each Dash-100s and Dash-200s) in 1991. Eladio Ersando becomes president in 1992.

Operations continue in 1993–1994. During these years, Nemesio Tejero takes over as CEO and the fleet comes to comprise 1 Beech 80 Queen Air, 1 Beech 50 Twin Bonanza, 6 Cessna 206s, 2 Cessna 207s, 1 each Cessna 401 and C-421, the 4 Twin Otters and the Navajo, and 2 Rockwell Commanders. Removed are the Cessna 310s, Beech 18s, 55 and 65, the Convairs, and the Islanders.

Operations continue apace in 1995–1996 with 1 owned and 1 leased DHC-6-200 plus 2 chartered DHC-6-100s. Destinations visited from Manila include Lubang, Cullion, Cuyo, Busuanga, Subic Bay, Clark, and Caticlan.

While on its takeoff roll from Manila on a service to Bacolod on April 2 of the latter year, a **Philippine Airlines (PAL)** B-737-200 with 141 passengers crashes into a Pacific Twin Otter with two crew. The nose of the jetliner is damaged, while the lightplane, apparently heading towards its hangar at the time of the incident, is carried 130 m. before it stops in a wrecked condition. Three people aboard the PAL plane are hurt, as is the crew of the de Havilland. With a fleet reduced by one Twin Otter, flights continue apace during the remainder of the year and in 1997–1998.

Early in 1999, a homepage is opened on the Internet's World Wide Web. There the company promotes its four-times-a-day roundtrips from Manila to Caticlan and daily roundtrips from Manila to Busuanga. It also notes that it is the first and only company to receive an air safety award in the country's entire aviation history.

President Felipe Nanalig's workforce totals 120 at the beginning of 2000. The company's 12 Islanders and 4 Twin Otters, plus 40 smaller aircraft, regularly fly from hubs at Metro Manila, Boracay, Cebu, Dumaguete, Cagayan de Oro, Davao, Cotabato, Zamboanga, Puerto Princesa, and Bacolod to any of the 219 airports of the archipelago. Indeed, the company's revised Web site happily points out that the carrier's aircraft regularly bring passengers and cargoes to 89 points in Luzon, 52 in Visayas, and 78 in Mindanao, some of which are not serviced by other airlines.

PACIFIC ALASKA AIRLINES: United States (1973–1985). Originally formed at Fairbanks in 1973, this carrier is initially established as a fire-fighting operator called Aero Retardant, Inc.

Later in the year, the CAB grants authority for the company to operate commercial passenger and cargo charter services in support of pipeline development projects then underway.

Two years later, in **1975**, the Bering Straits Native Corporation purchases majority shareholding, using funds from the Native Lands Claims Settlement Organization, which has been set up to compensate Alaskan natives for land acquired for the Trans-Alaska Pipeline. Early in **1977**, PAA President Don Gilbertson buys back 51% control with the understanding that operations will continue as before. His workforce totals 58 and his fleet is made up of 6 Douglas DC-6s. An operating profit of \$166,500 is realized on income of \$5.7 million.

Following President Carter's October signing of the Airline Deregulation Act in **1978**, employment is increased a dramatic 64.3% to 69. Gilbertson's carrier now elects to add scheduled intra-Alaska passenger services.

A total of 8,000 passengers are carried during the final quarter and freight traffic accelerates 39.3% to 12.8 million FTKs for the year. On revenues of \$8.3 million, a \$500,000 operating profit is reported.

In August **1979**, the company is sold to private investors who appoint Rod Thompson general manager and seek authority to serve destinations in the "lower 48." CAB permission is received in **1980**. Corporate headquarters are now transferred to Miami and a second flight base is opened at Everett, Washington.

Four DC-6s are disposed of and two Fokker F.27s are obtained; these are employed in **1981** to inaugurate scheduled freighter flights from Portland, Oregon, to Seattle and Spokane.

In **1982**, the last two DC-6s are withdrawn and replaced with a Boeing 727-100C. It is employed to initiate passenger charter flights between Seattle and Fairbanks. In September, the company ceases its cargo operation, after having flown 1.62 million FTKs since January.

Operations continue apace in **1983–1984**, but overexpansion and growing financial difficulties force the carrier to cease operations and declare bankruptcy in **1985**.

PACIFIC-ALASKA AIRWAYS. See **PAN AMERICAN AIRWAYS (PAA)**

PACIFIC AMERICAN AIRLINES: United States (1976–1982). In **1976**, **Mercer Airlines** is reformed and changes its corporate identity. Operating from the original Burbank base, the carrier maintains intrastate passenger and cargo charter services, together with contract service flights for the USN. Destinations visited include Point Mugu, San Nicholas Island, Long Beach, San Diego, and San Clemente. From Honolulu, similar contract service flights are undertaken to Christmas Island and Tarawa. President Thomas G. Vander Molen and five associates own the carrier.

In **1978**, airline employment stands at 35 and the fleet comprises 3 Douglas DC-3s, 1 DC-6A, 3 DC-6s, and 1 BAC 1-11-400. Unable to weather the recession of the early 1980s, PAA ceases operations in **1982**

PACIFIC CAL AIR: United States (1979–1983). With a base at Oakland, California, Pacific Cal is set up in **1979** to provide Essential Air Service (EAS) third-level passenger and cargo Piper PA-31-310 Navajo flights, linking its base with Sacramento and Fresno.

The company is acquired by new Oakland investors in **1981**, but continues to be the only airline based at that California city. Orders are placed for four Fairchild-Swearingen Metros.

Enplanements for the year total 6,012.

Employing three of the Metro IIs, the commuter expands its route network in **1982** to include Reno, Nevada, and Boise, Idaho.

Passenger boardings accelerate 41.1% to 10,207.

The fourth Metro II is delivered in January **1983** and the carrier continues operations until recession forces it into receivership late in the year.

PACIFIC COAST AIRLINES (1): United States (1974–1975). The first PCA is set up at Long Beach, California, in the fall of **1974** to operate scheduled local passenger and cargo services with a pair of Douglas DC-3s. The company is purchased by **Pacific Northwest Airways**

during the first quarter of **1975** and the combined carrier is renamed **Pacific Airlines**.

PACIFIC COAST AIRLINES (2): United States (1981–1986). Late in **1981**, **Apollo Airways**, which had declared bankruptcy in September, is purchased by a Houston-based holding company, Gulf Central, reformed, and emerges from Chapter XI under the name Pacific Coast Airlines (2). Employing 7 Handley Page HP-37 Jetstreams, the reborn company undertakes scheduled passenger and cargo flights, linking Bakersfield, Fresno, Lake Tahoe, Las Vegas, Los Angeles, Monterey, Sacramento, San Jose, and Santa Barbara. Overall passenger traffic figures for the commuter, under both names, are not heartwarming.

Passenger bookings are down 22.1% to 94,835. Freight, however, does show 2.9% growth, to 59,000 pounds.

Customer boardings dip 4.1% in **1982** to 91,013, while cargo falls 3.7% to 57,000 pounds. As a result of the downturn, one Jetstream is withdrawn.

Service to San Francisco begins in January **1983**. Traffic improves as enplanements grow 6.2% to 96,655. Employment grows by 17.8% in **1984** to 192. Terrance Cedar becomes president/CEO at year's end. The carrier's seven HP-37s, meanwhile, help to increase customer bookings by 32.2% to 140,063. In all, 40,000 pounds of cargo are hauled.

Still operating under Chapter XI, PCA, in **1985**, becomes a subject of contention between President Cedar, who seeks new investors, and company creditors who wish liquidation. An 11.9% drop in passenger boardings, to 123,364, does not help management's position.

President Cedar's all-out effort to locate new financing leads his company into an ill-fated negotiation with **United Imperial Airlines** in **1986**. When the merger effort fails, the onetime **Apollo Airways**, as well as its suitor, are forced to cease operations on February 7.

PACIFIC COAST AIRLINES (3): United States (1989–1993): A third PCA is established by Carl Strombitski at Newport Beach, California, in **1989** to provide scheduled passenger service in local markets with 3 Piper PA-31-350 Navajo Chieftains. Revenue flights of the privately owned company commence in January **1990**. As with other private airlines, neither traffic nor financial figures are publicized.

Employing two Piper Chieftains (including one new unit), PCA inaugurates scheduled flights to three Oklahoma destinations during **1991**. Operations continue apace in **1992** and the workforce in **1993** totals 25. In serious financial trouble, the company, now operating just one Chieftain, is forced to shut its doors at year's end.

PACIFIC COASTAL AIRLINES, LTD.: Suite 117, 2440 Cowley Crescent, Richmond, British Columbia, V7B 1B8, Canada; Phone (604) 273-8666; Fax (604) 273-6864; <http://www.pacific-coastal.com>; Code 8P; Year Founded 1986. In October **1986**, the **Trans-Provincial Airlines, Ltd.** division of **Air BC, Ltd.**, along with recently acquired **Powell Air, Ltd.**, is sold to a group headed by TPA's former chief pilot Gene Story. Included in the deal are two Twin Otters and the carrier's Prince Rupert base. **Air BC, Ltd.** owner Jim Pattison retains 1 Grumman G-21 Goose, 2 de Havilland Canada DHC-2 Beavers, and 1 DHC-6 Twin Otter and the former TPA base at Port Hardy, where Clayton Hutchings is named manager.

The dormant name of Pacific Coastal Airlines, Ltd., one of the original merger partners forming **Air BC, Ltd.** back in 1979, is reactivated and the new subsidiary is granted both Class 3 scheduled and a Class 9/4 charter licenses. Scheduled services are inaugurated between Bella Bella and Vancouver as well as between Port Hardy, Bella Bella, and Rivers Inlet. Charters are undertaken in support of the logging, commercial fishing, and sport fishing industries.

Operations continue apace into the **1990s**. From a headquarters at Vancouver Airport's South Terminal, President Daryl Smith's company by **1994** employs a staff of 90, which increases to over 120 during busy summer months.

Just after takeoff from the logging camp at Fish Egg Inlet on a service to Pruth Bay in April, the DHC-6-100 with two crew and two passengers stalls and crashes into the water 100-ft. offshore and sinks (three dead). The lost aircraft is replaced with three Beech 99s and a King Air 100.

Two Shorts 360-300s join the fleet in **1995**, along with two Gooses purchased from the Macmillan Blodel timber company. A Twin Otter is reacquired in **1996** while, the same year, a fourth G-21 is purchased from an owner in the U.S. Logging interests and local First Nation Native American communities continue to be major customers.

Flights continue in **1997**. In June, the carrier begins to provide replacement flights for **Canadian Regional Airlines, Ltd.** between Vancouver and Nanaimo. So pleased is the **Canadian Airlines International, Ltd.** parent that, on October 14, it signs a code-sharing agreement with Pacific Coastal. Employing the "CP" code, Pacific Coastal takes over the CRA route on its own as of November 1. Customers are also able to take advantage of the Canadian Plus frequent flyer program and joint fares.

Although **Canadian Airlines International, Ltd.** is renamed **Canadian Airlines, Ltd.** and sold to **Air Canada, Ltd.** in **1998-1999**, the regional initially maintains its relationship with the major, operating sub-contracts on behalf of the CA affiliate, **Canadian Regional Airlines, Ltd.**

With four Gooses in service, PCA, at the beginning of **2000**, is one of the largest operators of the type in the world. Once the sale of the Canadian franchises is completed in early January, the Pacific Coastal arrangement is cancelled. **Air Canada, Ltd.**, in order to rationalize its new acquisitions, particularly its enlarged commuter responsibility, has been required to ax commitments to several western Canada airlines. Immediately after the cancellation, all Air Canada regional code-shares in the area are transferred to **AirBC, Ltd.**, which move leaves a bitter feeling with PCA CEO Daryl Smith and other affected operators.

PACIFIC EAGLE AIRLINES, LTD.: Malaysia (1996-1997). PEA is established in the fall of **1996** to offer public scheduled charter flights to regional destinations. Malaysia's officially designated second national airline is operated by Air Asia, which is owned by Hicom Holdings and Mofaz Air Sqn. Bhd.

Two Boeing 737-300s are leased and on November 17 inaugurates services to Taipei, Taiwan.

Plans are made to initiate routes to Thailand and the Philippines. Before these can be implemented, the carrier is shut down.

PACIFIC EAST AIR: United States (1982-1984). Established by several former **Western Airlines** executives at Los Angeles in the spring of **1982**, PEA is equipped with 1 each Douglas DC-8-61 and DC-8-63 leased from **The Flying Tiger Line**. One of these is employed to inaugurate scheduled, \$99 one-way, economy-fare passenger flights on June 14, linking the company base with Honolulu.

Enplanements for the year total 46,000.

The low-fare airline is expanded early in **1983**, as the second Douglas DC-8-61 begins flying from Los Angeles to Newark. DC-8-62s and DC-8-63s are chartered to replace **The Flying Tiger Line** aircraft and frequencies are initiated to San Jose, San Francisco, Kahului, and New York (JFK).

Passenger boardings climb to 236,000.

Start-up and growth costs and recession cause the carrier significant financial difficulties in **1984**. Early in the year, the state of California sues the PEA for overbooking, combining tours to fill aircraft and failure to make timely refunds. New York and Kahului service is immediately suspended and on May 9, Pacific East stops all flying and files for Chapter XI bankruptcy. With debts of \$10 million and no chance for reorganization, the company is liquidated in August.

PACIFIC EAST ASIA CARGO AIRLINES: P.O. Box 7395, PO Blocked Box, Manila Domestic Airport, Metro Manila, Philippines;

Phone 63 (2) 833-8853; Fax 63 (2) 832-3401; Code PE; Year Founded 1991. Jointly formed in late **1991** on an 80-20 ownership basis by Philippine Aerospace Development Corporation (PADC) and **TNT Worldwide Express (Asia)**, this express cargo carrier, at first briefly known as **Air Philippines (1)**, takes over the services previously flown by PADC's flight division. Employing two British Aerospace BAe 146-300QTs, President Angelo Dwight Penson's operation begins flying freight services five-nights-per-week between the Philippines and Taipei late in the year.

A 10,000-sq.-ft. cargo terminal and offices are secured at Manila's Domestic Airport at the beginning of **1992** and Singapore joins the route network in the spring. In **1993**, Ben Solis becomes managing director and a mechanized package-sorting facility is opened. Having proven too large, the Dash-300QTs are traded in during the fall for a pair of BAe 146-200QTs.

Flights commence during the spring of **1994** from Manila to Seoul and Hong Kong, while the route from Singapore is extended down to Jakarta. To help provide additional capacity, a B-737-53C is wet-leased from the French operator **Euralair, S.A.**

Operations continue apace in **1995**. When the company begins to experience additional growth in **1996**, it finds that it must seek a larger aircraft. The French machine is replaced in August by a B-727-223F wet-leased from Dallas-based **Kitty Hawk Airways**.

In early **1997**, PEAC begins to consider the possibility of expanding to Xiamen and Shanghai and Ho Chi Minh City. Other destinations visited include Hong Kong, Jakarta, Seoul, Singapore, and Taipei.

Flights continue in **1998**. In need of additional capacity in Europe, **TNT Worldwide Express** reclaims the two BAe 146-200QTs at the beginning of April **1999**. They are shifted to London (STN), arriving on April 25 and 28, respectively. Flights continue throughout the remainder of the year with the chartered B-727-53C.

Airline employment at the beginning of **2000** stands at 68. During July, the concern, minus the freighter, is sold to Lucian Tan, CEO of **Philippine Airlines**.

PACIFIC EXPRESS: United States (1981-1984). Pacific Express is organized in April **1981** by the **WestAir Commuter Airlines** as a deep discount intrastate subsidiary airline; it is hoped that the new entrant will be able to compete with **Pacific Southwest Airlines (PSA)** on the busy Los Angeles-San Francisco corridor.

The company, which is also chaired by WestAir CEO Terry Ashton, is forced to delay the launch of its operations by the PATCO air traffic controller's strike and by nondelivery of its order for British Aerospace BAe-146-200s.

The new Chico, California-based entrant inaugurates low-fare service between Chico and Palm Springs via Oakland and San Jose, with six former **British Caledonian Airways, Ltd. (BCAL)** BAC 1-11-201s chartered from British Aerospace on January 27, **1982**.

Hubbing from both San Francisco and Los Angeles, the 540-employee PE expands rapidly, acquiring two more One-Elevens (like the others, on lease from British Aerospace) and flying from Chico to Portland, Oregon, via San Francisco; from Boise, Idaho, to Portland via Medford; and from San Francisco to Palm Springs.

Additional cities in California, Idaho, Oregon, Nevada, and Washington are entered later in the year. Although 480,465 passengers are flown on the year, the carrier, buffeted by recession and fierce competition from **United Airlines** and **Pacific Southwest Airlines (PSA)**, suffers a net loss of \$19.1 million on revenues of \$25.1 million.

Stanley Cobb becomes the large regional's chairman in early **1983** and enters into a marketing arrangement with **Pan American World Airways (1)**, which coordinates connecting flights at San Francisco and Los Angeles under the title Pan Am/Pacific Express. Another BAC 1-11-201 and two Boeing 737-297s (chartered from **Aloha Airlines**) join the fleet, as the overdue orders for six British Aerospace BAe 146-200s are cancelled. The relationship with **WestAir Commuter Airlines** is severed.

This expansion and cost-saving efforts cannot, however, raise sufficient traffic nor reduce expenses enough save the carrier from financial disaster. Despite a remarkable 87% leap in passenger boardings to 896,464, the company is overextended.

As a result, Pacific Express suspends flight operations on February 2, 1984 and files for Chapter XI bankruptcy. A limited restart of B-737-297 charter service on February 13 fails and shortly thereafter liquidation proceedings are begun. Most of the company's assets, including the BAe 146 order that it had cancelled, are acquired by **Pacific Southwest Airlines (PSA)**.

PACIFIC FLIGHT SERVICES: United States (1965–1967). PFS is organized at Honolulu in the spring of 1965 to offer sight-seeing and charter flights to various island destinations. Cessna 172 and Beech 18 revenue services commence on April 6 and are maintained until the operation is halted in 1967.

PACIFIC FLIGHTS: 5000 Cirrus Dr., Medford, Oregon 97504, United States; Phone (541) 779-5445; Fax (541) 772-2759; Year Founded 1978. Pacific Flights is established as an affiliate of the Croman Corporation at Medford in 1978 to offer both passenger charters and helicopter services. Twenty-two years later, Donald E. Wilson is director of operations and oversees a workforce of 17, which not only carries passengers, but also engages in air ambulance, construction, heli-logging, external load, aerial photography, fire fighting, and survey work. The fleet includes 1 each Rockwell Aero Commander 690B, Cessna 340, Learjet 23, and 2 Bell 206B JetRangers.

PACIFIC INTER AIR. See PACIFIC INTERSTATE AIRLINES (PIA)

PACIFIC INTERNATIONAL AIRLINE: United States (1996). President Danny S. Wright's Tucson-based **Sportsflight Airways** is renamed PIA in April 1996. The employee population numbers 100 and nonscheduled charter operations continue to be flown with three leased Boeing 737-233As. From a principal hub at Dallas (DFW), charters are undertaken throughout the U.S., Mexico, and Caribbean.

Traffic results are only reported through June and show combined enplanements of 142,000. The two Boeings continue service into the fall, during which months the company promotes the all first-class sleeperette seating of one of its jetliners normally based at Newark, New Jersey.

Unable to maintain the economic viability of his expanded carrier, CEO Wright, in November 1997, elects to close that operation and to resume operations from Newark as the reborn, if smaller, **Sportsflight Airways**.

PACIFIC INTERNATIONAL AIRLINES, S.A.: P.O. Box 1592, Zona 9-A, Calle 73, Panama City, Panama; Phone 26-3649; Fax 26-4012; Year Founded 1993. PIA is set up at Panama City in 1993 as a scheduled international air cargo carrier. Dr. Fernando Boyd Galindo is president and the concern begins revenue flights with a single owned Boeing 727-23F.

A second B-727-23F is leased in 1995 and, like the first, is employed to haul freight throughout the Americas.

Services are maintained during the remainder of the decade.

PACIFIC INTERNATIONAL AIRWAYS OF ALASKA: United States (1931–1932). After expending nearly \$250,000 and acquiring eight of the territory's Star airmail contracts, this Alaska pioneer, formed in 1931, is purchased by Pacific Alaska Airways, a wholly owned subsidiary of **Pan American Airways (PAA)** on October 15, 1932.

At the time of its acquisition by the growing major, the company owns a hanger at its Anchorage base and has eight employees, including two pilots transferred into the new organization.

PACIFIC INTERSTATE AIRLINES (PIA): United States (1984–1988). Affiliated with the Riviera Hotel, PIA is formed at Las Vegas and opens an office in Los Angeles. Originally known as **Pacific InterAir**, the company changes its name before start-up. Employing 1 each Boeing 727-51 and B-727-225A, the company inaugurates scheduled services in June 1984 linking its Nevada base to Los Angeles, San Francisco, San Diego, Phoenix, and Denver. The company's charter division undertakes group tours from a variety of U.S. cities, all destined for the Riviera. Enplanements total 23,000.

Passenger boardings skyrocket 257.1% in 1985 to 50,000. Enplanements continue to ascend in 1986, reaching a total of 62,400.

In cooperation with **Bahamasair, Ltd.** and a New Jersey tour operator, the carrier initiates Bahamas Express charters in 1987 from Newark to Freeport, in the Bahamas via Atlanta. Consequently, bookings climb another 20% to 78,000. Although revenues of \$3.8 million are generated, \$1.5 million is lost.

Operations continue until 1988 when the carrier goes out of business during the summer. Its assets are sold to **Carnival Air Lines**, which has plans to operate it as Fun Air. When that name proves to be unavailable, a new one is substituted and the reformed airline begins Fort Lauderdale to Nassau charters on November 15 as **Majestic Air**; it will later become **Carnival Air**.

PACIFIC ISLAND AIRWAYS: United States (1976–1983). John H. Brandenburg, owner of the Guam FBO Island Aviation, establishes this third-level operation at his base in 1976. Employing a Cessna 402, he undertakes new scheduled services to destinations in the Northern Marianas complementing the frequencies of **Air Micronesia**.

Operations continue apace in 1977–1978 and by 1979 enplanements are 32,343. The carrier earns an operating profit of \$193,000, but suffers a net loss of 98,000.

Richard L. Brown is appointed new company president in 1980 and services are inaugurated to Cebu, Palau, and Truk.

Passenger boardings jump 27% to 44,305. Revenues advance by 71.6% to \$1.55 million, but although an operating profit of \$540,000 is turned, another net loss, \$71,000, is suffered.

Schedules are maintained in 1981–1982, but flights cease in 1983.

PACIFIC ISLAND AVIATION: Box 318, Saipan, Mariana Islands, MP, 96950, United States; Phone (670) 234-3600; Fax (670) 234-3804; http://www.pacificislandaviation.com; Code 9J; Year Founded 1988. Pacific Island is established by owner Bob Christian on Saipan in August 1988 to provide nonscheduled helicopter flights for Japanese day tourists. Two Cessna 402Cs are added in 1989. In 1991, scheduled Cessna passenger and cargo services begin throughout the Mariana Islands. Primary destinations are Guam and Rota.

Operations continue apace in 1992 as the airline adds a single Embraer EMB-110P1 Bandeirante. The carrier achieves commuter airline status and in December becomes a code-sharing partner of **Continental Micronesia**, taking over the larger airline's Rota flights.

In 1993, President Christian oversees a workforce of 70 and a fleet that is increased to include 3 Brazilian-made turboprops, 4 Cessna 402Cs, and 1 leased Cessna 208 Caravan I.

Frequencies are maintained without change in 1994.

When **Continental Micronesia** discontinues its services to Rota, Guam, and Saipan in February 1995, these are taken over by PIA, which now becomes a code-sharing partner of **Northwest Airlines**.

The fleet in 1996 includes 4 Cessna 402Cs, 2 EMB-110P1s, 1 Shorts 360-200, 1 PA-32, and 1 Bell 206 JetRanger. Passenger boardings total 148,278.

While taking off from Tinian on May 27, 1997, the control yoke of the PA-32, with a pilot and four passengers, freezes. The pilot aborts takeoff and the aircraft porpoises the remaining 1,500 ft. down the runway, collapsing its nose landing gear. No injuries are reported.

During the fall, the company receives U.S. Flag Carrier status from the Federal Aviation Administration. It is the first and only airline based

in the Commonwealth of the Northern Mariana Islands to be so designated.

Customer bookings for the year fall 25% to 111,199. Still, there are profits: \$670,000 (operating) and \$626,000 (net).

The airline becomes a full "Northwest AirlinK" partner in February 1998. Airline employment now stands at 92 and the fleet is increased by 3 Shorts 360-200s and 1 Bandeirante.

On October 1, a new direct service is opened to Tinian from Guam and Saipan.

Passenger boardings climb 9.9% during the 12 months to 168,000, even as revenues plunge 42.5% to \$5.63 million. Costs are down 38.5% to \$5.61 million, leaving an operating profit of \$19,000. The net profit is a little better: \$52,000.

Customer bookings inch up 1.4% in 1999 to 85,000. Revenues fall 8.8% to \$5,136,000 while costs drop 10.8% to \$5,003,000. The operating profit increases to \$133,000, while net gain falls \$1,000 to \$51,000.

Airline employment at the beginning of 2000 declines 8.6% to 96. Twice-daily Shorts 360 roundtrips commence in September between Tinian and Guam. On November 10, Guam passenger arrivals and departures are moved from the old commuter terminal to the modern main terminal of Guam International Airport.

PACIFIC JET CHARTER: 14670 Cantova Way, Suite 200, Rancho Murieta, California 95683, United States; Phone (916) 354-3222; Fax (916) 354-3208; Year Founded 1988. PJC is established at Sacramento Mather Airport in California during 1988 to provide executive and small group passenger charters throughout the U.S., Canada, Mexico, the Caribbean, and Central America. Within a decade, the prospering concern employs 4 pilots and operates 1 each British Aerospace BAe (HS) 125-700 Hawker, Beech Super King Air 300, and Cessna 210 Centurion.

PACIFIC MARINE AIRWAYS: United States (1922–1928). PMA is formed at Wilmington, California, toward the end of spring 1922 to acquire the flying boat service to Santa Catalina Island previously flown by **Syd Chaplin Air Line**. Employing two, later three Curtiss HS-2Ls license-built by William E. Boeing and modified by Donald Douglas, Yosemite promoter Foster Curry's carrier inaugurates twice-daily services to the island resort town of Avalon, beginning on June 4. The one-way fare is \$12.50; \$20 roundtrip.

By the end of 1923, both flying boats are inoperable and the company is nearly out of business.

The company is incorporated by new owner Ellard A. Bacon on August 7, 1924 and the only aviator, A. C. Brown, is appointed chief pilot. Three more HS-2Ls are acquired and a total of 1,983 passengers are transported in 1925, the first full year under Bacon's management. Although figures for 1926 are unavailable, it is known that bookings have advanced to 4,200 in 1927.

Service is maintained until June 1928, when it is purchased by **Western Air Express (WAE)**. Since 1922, the company has gained the reputation of offering the longest sustained passenger service in North America. Two Loening C2H Air Yachts ordered by Pacific Marine are delivered to the new owner just after the sale.

PACIFIC MIDLAND AIRLINES, LTD.: P.O. Box 505, Auckland, New Zealand; Code 2W; Year Founded 1991. Pacific Midland is formed at Masterton on New Zealand's North Island in 1991. Revenue flights are inaugurated by Managing Director Alan Stewart's small regional to Palmerston North, Wellington, and local destinations with a fleet of 2 Piper PA-31-350 Navajo Chieftains.

Operations continue apace during the remainder of the decade.

PACIFIC MISSIONARY AVIATION: United States (1974–1994). PMA is organized at Agana, Guam, in 1974 to undertake nonprofit Christian humanitarian flights in the southern Philippines and throughout the Federated States of Micronesia. The Philippine branch operates

in the Sulu Islands area under the name **Flying Medical Samaritans**. The main emphasis, however, is in Micronesia, where both scheduled and nonscheduled services are offered.

In addition to aeromedical and search and rescue flights, PMA flies regularly scheduled third-level passenger frequencies to Kosrae, Ponape, Yap, Ulithi, and Pingelap. Within a decade, the fleet comprises 1 each Britten-Norman BN-2 Islander, Beech 18, Dornier Do-28, and Evangel 4500. Airline employment in 1985 stands at 25.

Operations continue apace during the remainder of the decade. In 1990–1993, President Edmund Kalau's fleet features 2 Islanders, the Beech 18, and 2 Beech B-80 Queen Airs. The company shuts down in 1994.

PACIFIC NATIONAL AIRWAYS: United States (1980–1981). After briefly providing charter flights to destinations in Mexico, Burbank, California-based PNA is reformed during the fall of 1980 to offer scheduled Douglas DC-3 flights to Las Vegas and the Grand Canyon.

ATC restrictions imposed during the summer 1981 PATCO air traffic controllers' strike result in a lack of traffic; the company is forced out of business in September.

PACIFIC NORTHERN AIRLINES (1): United States (1945–1967). Founded in January 1945 as **Woodley Airlines**, scheduled successor to preceding **Woodley Airways**, Arthur G. Woodley's pioneer Alaskan carrier is renamed Pacific Northern Airways on August 23. Operations continue with 2 ex-USAAF C-73s (military Boeing 247Ds) obtained on June 20. During the first quarter of 1946, four new Douglas DC-3s are acquired, followed by as fifth from the Reconstruction Finance Corporation in May.

On June 20, the company, already certified for certain routes back in 1938, receives a CAB award of a route from Anchorage to Juneau, with intermediate stops. Two ex-military Douglas A-26B Invader bombers are received in October and will be employed for route survey work.

On August 1, 1947, Pacific Northern Airways is renamed Pacific Northern Airlines. Two more DC-3s are obtained in 1948–1949; the first is resold to **All-American Aviation** on May 19 of the former year, while the latter is used for spare parts. Pacific Northern becomes a trunk line at the dawn of the 1950s and adopts the subtitle "The Alaska Flag Line."

On September 29, 1950, the CAB grants it a route between Anchorage and Seattle. On May 24, 1951, this award is supplemented by authority to fly between Portland and Seattle and Fairbanks. The latter service is launched on October 21 with a DC-4 purchased from the Mexican airline **Aerovias Guest, S.A. de C.V.** in July.

In 1953, having acquired three more DC-4s during the spring, the company also adds a Juneau–Seattle route to its system and transfers the small towns of its network around Alaska's Bristol Bay to new entrant **Bristol Bay Airlines**. A DC-3 is sold to **Western Airlines** in December.

After selling additional shares and obtaining a \$1-million loan, Pacific Northern leases three Lockheed L-749A Constellations from **Delta Air Lines** in March and April 1955. A stop at Ketchikan and Annette Island is opened in August. The leased Lockheeds are purchased from Delta on March 2, 1956 and on May 6 a fourth is acquired from **British Overseas Airways Corporation (BOAC)**.

A second British L-749A is arranged for on November 30, 1958. Direct Kodiak to Seattle Constellation flights commence on May 1, 1959 and during the year, Chairman Woodley's firm boards its one-millionth (cumulative) passenger.

An L-749A with five crew and nine passengers disappears during its June 14, 1960 Seattle–Anchorage service; the wreckage is sighted on Mount Gilbert, Alaska, the next day and there are no survivors.

A sixth L-749 is leased from **Trans World Airlines (TWA)** on August 17. In early December, the carrier reports its November bookings were 42% higher than for the same period a year earlier.

An \$11-million loan is floated by CEO Woodley in 1961—equal to a year's gross revenues—and employed to order two Boeing 720-062s (B-720As) that join the fleet in late March and early April 1962. These

allow PNA to enter the jet era on April 27 when they begin flying the Seattle–Ketchikan and Anchorage run.

In 1963, the company transfers its Anchorage–Naknek via Iliamna route to **Northern Consolidated Airlines**. Additionally, the Constellation leased from **Trans World Airlines (TWA)** in 1960 is purchased on October 1, the same day a DC-3 is withdrawn. Two old Douglas transports are sold during the year and a third goes to **Air Ivorie, S.A.** on June 15, 1964. During the latter year, airline employment stands at 627 and the fleet includes 9 aircraft. Enplanements are 184,000, 16.5% higher than the 158,000 boarded a year earlier.

The workforce in 1965 is 800 and the fleet includes 9 aircraft: 2 B-720As, 1 DC-3, and 6 L-749s. As the result of a CAB route realignment between larger carriers, Pacific Northern loses its prime Seattle–Anchorage monopoly when it begins sharing the route with **Northwest Airlines** on March 29. The coastal run from Washington to Alaska via Ketchikan, Juneau, Yakutat, and Cordova, is also maintained. The CAB does, however, withdraw the carrier's authority to serve Portland, although a monopoly on the Ketchikan–Juneau segment is allowed.

At the end of the year, the government's regulators offer a lump sum payment of the previous three years' subsidies, coupled with a total cessation of such payments in the future.

In addition, the company originates 232,913 passengers during the year and records its best financial year, with total revenues of \$30 million and a net profit of \$2 million.

An L-749A is destroyed in a bad landing at Kenai, Alaska, on June 6, 1966; there are no fatalities.

On June 20, a B-720-048, originally operated by **Aer Lingus Irish Airlines, Ltd.**, is purchased from **Braniff International Airways**; 10 days later, a seventh and final L-749A is acquired from **Trans World Airlines (TWA)**. The airline is caught up in the "merger fever" sweeping the Alaskan airline industry in the middle part of the decade. Having lost several of his best routes and destinations, Arthur Woodley agrees to a merger with **Western Airlines** on October 31.

The company's integration into the larger airline (a two-for-one stock transaction) is completed on October 1, 1967, at which time the PNA identity disappears.

PACIFIC NORTHERN AIRLINES (2): United States (1973). The second PNA is set up at Portland, Oregon, in 1973 to provide scheduled passenger and cargo services. Employing a Douglas DC-3, flights are duly inaugurated linking the company's base with Seattle's Boeing Field, Spokane, Yakima, and Medford. Unable to achieve viability, the company is soon out of business.

PACIFIC NORTHERN AIRWAYS (1). See **PACIFIC NORTHERN AIRLINES (1)**

PACIFIC NORTHERN AIRWAYS (2). See **WILBUR'S FLIGHT OPERATIONS**

PACIFIC NORTHWEST AIRWAYS: United States (1974–1975). Pacific Northwest Airways is established during the late summer of 1974 through the merger of **Ram Airways** and **Valley Airlines**. The company, employing the de Havilland DH 104 Doves, Convair CV-240s, and Beech 18s of the merger partners, inaugurates scheduled passenger and cargo services on December 1.

Destinations visited include Oakland, San Jose, Fresno, Bakersfield, and Monterey. The Long Beach Douglas DC-3 operator **Pacific Coast Airlines (1)**, also organized during the fall, is taken over during the first quarter of 1975 and is renamed **Pacific Airlines**.

PACIFIC OVERSEAS AIRLINES CORPORATION: United States (1945–1947). **Industrial Air Transport** is organized at Ontario, California, in October 1945 by former personnel of **Corsairway**, the Consolidated-Vultee Aircraft Corporation wartime air transport division. A

two-year subcontract is obtained from **United Air Lines** to fly thrice-daily transpacific, all-cargo services.

Employing a fleet of 15 Douglas C-54s still technically owned by the U.S. Army Air Forces, the renamed company inaugurates flights to Tokyo on March 18, 1946. On May 31, a C-54 arrives at Ontario, California, carrying the first freight shipment from the Orient since 1941.

The subsidiary **Pacific Overseas Airlines (Siam), Ltd. (POAS)** is established at Bangkok on May 25, 1947. Shareholding is divided between the carrier (44%), the Thai government (26%), and Thai investors (30%). Twice-weekly revenue services commence to Ontario with a pair of leased C-54s. POA itself continues flight operations until September when the United contract is concluded. POAC is then reformed into a ground support and certified repair station, although some of its personnel are involved with POAS.

PACIFIC OVERSEAS AIRLINES (SIAM), LTD.: Thailand (1947–1951). POAS is established at Bangkok on May 25, 1947, to operate twice-weekly return flights to the U.S. Shareholding is divided between the Thai government (26%), the American carrier **Pacific Overseas Airlines** (44%), and Thai shareholders (30%). Two Douglas C-54s are leased from POA and revenue services commence to Ontario, California. Regional flights are conducted by 2 chartered DC-3s and 1 Consolidated PB5Y-5A Catalina.

Although POA itself retires from flight operations in September, its offspring continues its transpacific services for another four years.

A C-54 with 4 crew and 20 passengers crashes near Mount Butler near Hong Kong on March 11, 1951; there are no survivors. On November 1, the company is sold to **Siamese Airways Company, Ltd. (SAC)**. That carrier and its prize are immediately merged to create **Thai Airways Company, Ltd.**

PACIFIC PARADISE HELICOPTERS. See **KENAI AIR OF HAWAII**

PACIFIC SEABOARD AIR LINES: United States (1933–1935). Former New York lawyer and aviation enthusiast Carleton Putnam founds his first airline, Pacific Seaboard Air Lines, on June 15, 1933. On June 23, scheduled, but unsubsidized, passenger and air express service is opened from Los Angeles' Glendale Airport to Mills Field, San Francisco, via Santa Barbara, Santa Maria, San Luis Obispo, Paso Robles, Monterey, Salinas, and San Jose. The inaugural aircraft employed is Putnam's personal Bellanca CH-300 Pacemaker *Miss San Jose*.

The route, flown by three Pacemakers acquired in June and July (including one purchased from Wayne King, "the Waltz King"), is advertised in the local media as "The Scenic Route" and "Cheaper Than Driving Your Car"—and at 3.5 cents per mile it is—but loses money. Still, in just over 4 months, 1,113 passengers are transported.

On October 15, flights are started between San Francisco and Sacramento, followed by service from Sacramento to Stockton and Modesto on November 1 and to Monterey on November 15. Late in November, the Los Angeles–San Francisco multistop route is closed for the winter.

The Los Angeles–San Francisco service is reopened briefly during the first week in February 1934. On February 9, effective February 19, the U.S. Post Office, as a result of the so-called "Air Mail Scandal," cancels all existing mail contracts. The White House now calls upon the U.S. Army Air Corps to fly the mail, a military option that is not successful.

At the end of March, the Post Office rebids the routes, opening applications in late April. Putnam wins not a California route subsidy, but a contract to fly the Chicago–New Orleans mail route, AM-8. As a result, he quickly shifts his airline from California to Memphis. A Pitcairn PA-6 is purchased on April 14 and two more CH-300s are acquired during the first week of May.

Putnam's Pacemakers inaugurate their Chicago–New Orleans via Peoria, Springfield, Memphis, Greenwood, and Jackson mail service on June 3. A Bellanca Type D Skyrocket joins the fleet 16 days later. Passengers are first flown on July 17. The company's headquarters at

Memphis are moved to Chicago in September 1935 and on December 3 the corporate identity is changed to **Chicago and Southern Air Lines**.

PACIFIC SKYWAY: 2320 Thompson Way, Santa Maria, California 93455, United States; Phone (805) 925-1160; <http://www.pacificskyway.com>; Year Founded 2000. Pacific Skyway is established at Santa Maria in January 2000 to offer daily roundtrip commuter flights to San Jose, Sacramento, and Las Vegas. Revenue flights begin and continue with a pair of British Aerospace BAe Jetstream 31s. Charters between those cities on behalf of the gambling industry are also flown.

PACIFIC SOUTHWEST AIRLINES (PSA): United States (1946–1988). Founded by Joseph Plosser Jr. and Kenneth G. Friedkin as a flight training and charter operation at Lindbergh Field in San Diego in 1946, Friedkin School of Aeronautics is born in 1947 when partner Plosser is bought out by mortgage broker Victor Lundy and the concern is renamed. Additional hangar space is rented and flight instructors J. Floyd “Andy” Andrews, Leo Leonard, Gordon Tinker, and Hugh Wood are all hired to assist Plosser and Friedkin. All provide an education for GI Bill recipients, with particular emphasis on pilot training for the students drawn from the ranks of these former military personnel. Friedkin diversifies into other aviation activities during 1948. Public relations aerial banner towing and live bait transport flights are offered, while Cessna UC-78 Crane passenger charter flights are also made from Lindbergh Field under the marketing name Friedkin Airlines Charter Service.

With the supply of potential pilots drying up, Friedkin and his 50 employees form Pacific Southwest Airlines (PSA) in the spring of 1949 in an effort to expand business. Scheduled weekly \$15.60 (one-way) intrastate flights are started to Oakland via Los Angeles (Burbank Airport), on May 6 with a single Douglas DC-3 piloted by Plosser and Andrews. Instructor Gordon Tinker will be the first pilot permanently assigned to the airline.

This first Douglas transport is leased for \$2,000 per month; however, its owner expects the airline to operate it only 12 hours per month, not the 150 experienced. Initial flights are made on weekends and at such low fares that many military personnel come to employ it as a prime transport mode. At this early point, the company earns its enduring nickname, “The Poor Sailor’s Airline.”

When a physically large repossession agent is sent to reclaim the overactive aircraft, a new lease more agreeable to the lessor is rapidly signed and flights continue until early December when the plane is sold to **Arrow Air**. The airline’s history appearing on the “Catch Our Smile” website reveals that the first PSA corporate headquarters erected at Lindbergh Field at this time is an old rehabilitated and repainted USMC latrine set up near the company hangar at a cost of \$3.80. The 6’ x 12’ structure houses a ticket counter as well as the dispatch, flight control, and reservations center.

By the close of its first year of low-fare service, the infant airline has transported 15,011 passengers and earned revenues of \$172,796. After deducting \$160,902 in expenses, a remarkable \$11,984 profit is generated.

A second DC-3 is acquired in 1950 and traffic triples to 45,000. Growth continues and, as an intrastate, PSA is regulated by Sacramento and not the CAB in Washington, which has taken a dim view of another contemporary low-cost, no-frills operator that is attempting transcontinental service in the manner of Stanley Weiss’ confederation, **North American Airlines (1)**.

This second year is not quite as successful as the first. Although operating income climbs to \$503,737, expenses jump to \$517,334, leaving a loss of \$8,597.

On July 4, 1951, frequencies are started from San Diego to San Francisco, again via Burbank. During the year, dispatcher Gary Golliher and flight attendant Beverly Ann Knowles are married aboard a company

DC-3 5,000 ft. over San Diego. Maintenance Chief Douglas Kelly plays a portable organ while Capt. Bogle both flies the aircraft and sings for the newlyweds. Passenger boardings by paying customers jump to 75,995 and a profit of \$6,093 is earned.

At the beginning of 1952, airline employment stands at 119. Three more DC-3s are acquired and customer bookings surge to 92,484. Although revenues pass the \$1 million mark for the first time (\$1,125,364), costs are higher at \$1,151,972. The loss is \$26,608.

In 1953, the workforce grows to 190. A route is stretched between Burbank, San Diego, and Long Beach. Enplanements reach 115,028 and revenues advance to \$1,454,413. Unhappily, expenses are \$1,491,990, leaving a loss of \$37,577.

A victim of financial mismanagement, the carrier’s only California-based competitor, **California Central Airlines (CCA)** goes bankrupt in 1954, leaving the Golden State’s intrastate skies to Friedkin. Still, PSA drops service to Oakland and Long Beach. Customer bookings fall to 102,124, but a net \$26,711 profit is posted.

Buoyed by success, PSA launches San Diego–Los Angeles (Burbank)–San Francisco operations in January 1955 and traffic mounts so quickly that by December, it becomes necessary to begin replacing the DC-3s with the first two of four ex-**Capital Airlines** DC-4s. Another DC-4 enters service in 1956 and helps enplanement totals to reach 191,221. On revenues of \$2,122,376, costs are \$2,063,788 and the profit is \$58,558.

Airline employment stands at 246 at the beginning of 1957. The fourth DC-4 is delivered during the spring. In June, CEO Friedkin announces that PSA intends to purchase two French-made Sud-Est SE-210 Caravelle jetliners at a cost of \$5 million; this price will prove to be too high and the order is not consummated. However, on September 16, an \$8-million order is given to Lockheed for three L-188A Electras, which will be leased backed from Baron Conrad Hilton’s Electrahit Corporation. The deal is publicly announced on September 21.

During these 12 months, passenger boardings increase to 256,454 and a profit of \$762,294 is earned.

The route network is expanded once more in 1958; in July, flights begin into Los Angeles (LAX). A total of 10 daily roundtrip frequencies are offered over the California corridor.

Enplanements for the year are 295,818, but profits fall to \$322,031.

Patronized by large segments of the commuting public and virtually ignored by larger competitors, the carrier is able to boldly handle its mounting loads by leasing the 3 Lockheed L-188C Electras from Hilton for 42 months, beginning with the delivery of the first on November 6, 1959. A new 49-minute “Electra Jet” service is inaugurated on November 20 between San Francisco, Burbank, and San Diego and between San Diego, Los Angeles, and San Francisco; the new frequencies cost \$11.81 per head.

Passenger boardings rise to 355,099 and revenues are \$4,362,921. With expenses of \$3,907,015, the profit improves to \$455,906.

The carrier employs 300 workers at the beginning of 1960. So successful are the Electras that PSA is able to retire its four DC-4s. Employing a leased Douglas DC-6B, service is resumed from Los Angeles (LAX) to Oakland in October. The year’s passenger bookings fall to 289,100 and net profit is just \$499.

Another Electra joins the fleet in 1961. The Oakland service is discontinued in March because of poor loads and the DC-6B is returned. Passenger boardings swell to 713,064 and a profit of \$310,483 is posted on revenues of \$9.7 million.

Founder Friedkin dies of a cerebral hemorrhage on March 17, 1962; the 46-year-old is succeeded by close associate Capt. J. Floyd Andrews. Yet another Electra is acquired in April and enplanements pass the one-million mark for the first time (1,032,515). The year’s profits are a record \$1,368,770 million.

Trans California Airlines begins to compete against PSA in July 1963 with Lockheed Constellations; however, it will fail within 18 months. To secure additional financing for the purchase of new flight equipment, Andrews’ company goes public. Another L-188C, left over

at Lockheed when the **Capital Airlines** order is cancelled, arrives on May 17. For the first time in this company's history (and perhaps the first appearance by the jolly elf on any airline), Santa Claus makes appearances on nearly every PSA flight between San Francisco and Los Angeles on Christmas Eve.

Passenger boardings shoot skyward to 1,305,058. Revenues total \$17,432,534 and costs are \$15,180,815. Profit doubles to \$2,251,719.

As the **1960s** progress, Pacific Southwest's frequency, reliability, and low fares on its California routes comes to threaten other, larger competitors. Even giant **United Air Lines** is forced to take notice as the decade moves along, placing DC-8 and B-720-022 jetliners on the Los Angeles-San Francisco route in competition with PSA's turboprops.

Airline employment in **1964** stands at 575 and the fleet includes 6 L-188 aircraft. On June 30, PSA makes a \$27-million order for five B-727-14s.

Enplanements for the year are 1,532,243 and revenues are \$20,897,000. Expenses are \$17,509,414, allowing a profit of \$3,387,586.

The workforce in **1965** is increased by 200 as service to Oakland is resumed in January. The initial B-727-14s are delivered on April 9 and are placed into service beginning in early May. The company is listed on the New York Stock Exchange on June 21. In October, the company inaugurates low-fare Los Angeles-San Jose flights.

At year's end, the fleet includes 11 aircraft: 5 B-727-14s and 6 L-188Cs. Orders remain outstanding for two more Boeing "three-holers" and, late in the year, requests are made for two DC-9-30s.

A total of 1,863,088 passengers are originated as the carrier begins to drive its large local service rival **Pacific Air Lines** from several of its routes and hurt its traffic levels. Profits slip to \$2,034,932.

Two more B-727-14s are acquired in **1966**. Flights to San Jose from San Diego, Los Angeles, and Burbank are initiated in May and, in midyear, seven B-727-214s are requested for 1968 delivery. During the year, comedian Ronnie Schell begins a 10-year stint as the carrier's television advertising spokesman.

Enplanements swell to 2,712,811 and revenues are \$38,138,652. With costs of \$28.6 million, the net profit is \$4,307,289.

Air California becomes a competitor in January **1967** and Los Angeles-Sacramento service is initiated in February. Petitions are introduced seeking route approval to San Francisco and Sacramento from Orange County and Ontario Airports. Having flown for the company almost from the beginning, Capt. Michael Bogle now becomes chief pilot. Meanwhile, the new governor, Ronald W. Reagan, will become one of PSA's highest profile frequent flyers, while his daughter, Maureen, will work for awhile in the company's public relations department.

In May, the company begins training pilots for **Deutsche Lufthansa, A.G.**, employing initially Piper PA-24 Comanches, followed by PA-23 Aztecs featuring B-727 instrumentation.

In August, the company applies to the CAB for permission to launch interstate flights to Portland and Seattle; the request, however, is shortly thereafter withdrawn. The fleet now includes 8 B-727-14s, 2 DC-9-30s, and 6 L-188Cs.

In early December, a reindeer head and the words "Season's Greetings" are painted on the fin of a B-727-14. The first two B-727-214s arrive later in the month, leaving orders outstanding for five B-727-214s and four B-737-214s. By now, phaseout of the L-188Cs is well underway.

Customer bookings climb to 3,346,484. Revenues jump to \$48,824,936 and net earnings accelerate to \$4,167,822.

The employee population numbers 1,800 at the beginning of **1968** and the fleet will be upgraded this year by the addition of five more B-727-214s and four B-737-214s. Having lost the intrastate local service war, the larger **Pacific Air Lines** is driven into a merger with **Bonanza Air Lines** and **West Coast Airlines**, the three becoming **Air West** on April 9. By the year of the **Air West** merger, PSA is offering 73 different operations in the Los Angeles-San Francisco corridor and has extended service to Sacramento.

Contracts are entered into or renewed with **Japan Air Lines Company, Ltd.** (2), **All-Nippon Airways Company, Ltd.**, and **Deutsche**

Lufthansa, A.G. for the training of their pilots. A local auto rental firm, Val Car, is purchased with which to begin a Fly-Drive-Sleep service and in October regularly scheduled frequencies commence to and from Ontario, California. The low-fare, high-frequency strategy leads the intrastate to the enviable position of being among the world's leaders in numbers of passenger boardings and the largest carrier in the country not regulated by the CAB.

Passenger boardings jump 19% to 3,997,524 and revenues advance by 17% to \$57,167,767. With expenses of \$52.2 million, the net gain is \$4 million.

In **1969**, the workforce totals 1,889. The carrier now begins to phase out its B-727-14s and DC-9-30s and replaces them with 9 B-727-214s and 6 B-737-214s for a fleet total of 26 aircraft. With the retirement of the last Electra during March, the company becomes a true "all-jet" carrier.

A new \$3.75-million, 187,000-sq.-ft. headquarters is opened, replacing the \$3.80 1950 "latrine." Destinations served now include San Diego, Ontario, Los Angeles, Hollywood/Burbank, San Jose, Oakland, San Francisco, and Sacramento.

Over 100 daily frequencies are offered over the California corridor and enplanements reach 4.4 million. The profit slips to \$3,747,016.

Airline employment in **1970** numbers 2,300 and the fleet includes 25 aircraft. In January, PSA offers to merge with its financially troubled rival, **Air California**; however, after five months of protracted hearings before the Public Service Commission, the bid is withdrawn. The company's high frequency, commuter-oriented intrastate operations becomes the model for other operators. The basic red and white color scheme is replaced by fuchsia, orange, and red livery, while aircraft are also given painted "smiles," becoming known as "Grinningbirds." Female flight attendants add hot pants and go-go boots to their uniforms and crew members are encouraged to employ standup comedy routines to entertain passengers during flights.

Service is resumed to Long Beach in December and the company enters the hotel business by purchasing a most unique hostelry, the ocean liner *Queen Mary*. On Christmas Eve, President Andrews announces a firm order for two Lockheed L-1011 TriStar 1s, plus three options, to be delivered beginning in 1972.

Enplanements this year swell to 5,163,000. Operating profit climbs to \$3.6 million.

Emulating the PSA operation, **Southwest Airlines** begins its own low-fare service in Texas during **1971**. At the same time, the "smile" becomes the airline's all-encompassing logo, appearing on everything from paper plates to brochures to airliners. The Val Car subsidiary is sold and other diversified interests acquired over the past several years, such as hotels and radio stations, are unprofitable. As a result of engine difficulties, Lockheed must delay TriStar deliveries and, unable to achieve desired modifications, PSA cancels its order in December.

Meanwhile, the California-based carrier's passenger boardings increase to 5,589,775. Revenues hit \$86,182,885, while operating expenses are \$81,943,550. A net profit of \$4,239,335 is earned.

A. G. Sims, armed with a shotgun, and his female accomplice, I. P. Robinson, brandishing a pistol, hijack Flight 902, a B-727-214 with 151 aboard during a January 12, **1972**, San Francisco-Los Angeles flight. The Boeing discharges its passengers in Los Angeles and later flies to Tampa, where the pirates demand a larger aircraft for a flight to Africa. When that demand is not met, the pair forces the aircraft to fly to Cuba. The man will make the mistake of returning to the U.S. 6 years later; he will be caught, tried, and sentenced to 50 years in prison.

Given the company's continued rapid growth, it is found beneficial for the air transport firm to change its corporate structure. In March, the company begins reorganization into a holding company, PSA, Inc., with the airline as principle subsidiary. Also in March, management of three hotels is given to the Hyatt Corporation.

Sh. H. Speck hijacks Flight 942, a B-727-214 with 92 aboard en route from San Diego to Oakland on April 9 and demands \$500,000 in ransom and parachutes. He is arrested by FBI agents while leaving the plane at

Oakland. Upon examination, Speck will be found mentally unbalanced and sent to a psychiatric hospital for a year.

Two days later, the FAA files charges against the carrier for failing to screen passengers in accordance with its new regulations.

En route from Sacramento to Los Angeles via San Francisco on July 5, Flight 710, a B-737-214 with 86 aboard is commandeered just after takeoff from the intermediate point by D. Alexlev and M. D. Azmanoff, who demand \$800,000 in ransom and parachutes, plus maps for a flight to Siberia. Back on the ground at San Francisco, two FBI agents board the plane (one covertly) and a gun battle erupts during which the hijackers and a passenger, 66-year-old S. Carter, are killed and three passengers are wounded. The family of Carter, the airline's first passenger fatality, will receive a \$100,000 air travel insurance payment on July 22.

The next day, AWOL U.S. Army soldier F. Goodell hijacks another B-727-214, Flight 389 with 58 aboard en route from San Diego to Sacramento, and diverts it to Oakland. There he demands and receives \$455,000 in ransom, parachutes, and handcuffs and after detaining 5 of the 57 passengers as hostages, orders the plane to takeoff. When faced down by determined FBI agents who refuse to grant clearance, the 21-year-old surrenders. He will be tried and given a prison term of 30 years.

Service to Fresno and Stockton begins in July. Also during the summer, a joint fare program is undertaken with **San Francisco-Oakland Helicopter (SFO-1)** which assists both carriers in increasing their share of the San Francisco-Los Angeles market. During the year, Westgate California Corporation, which had purchased **Air California**, announces its intention to seek a merger with PSA. The DOJ threatens an antitrust injunction and the plan is abandoned.

During the fall, a short-lived Fly-Drive-Sleep total transportation package promotion is initiated. On December 1, a new order is placed for two L-1011 TriStar 1s, with three options.

Customer bookings are boosted 7.5% to 6,356,875. Net income grows 28% to \$5,957,485 million.

The holding company's creation is completed on February 28, **1973** by a transfer of stock. When J. Floyd Andrews becomes chairman/CEO early in the year, the presidency goes to one of the company's original pilots, William R. Shimp. A new color scheme is adopted and four B-727-214s, painted in new livery and with wide-body interiors, are delivered.

Approximately 600 maintenance and operations personnel stage a bitter six-week strike over wages between mid-November and December 23. Before a pact can be signed with the Teamsters Union to end the company's first-ever job action, the airline operates 60% of its schedule with nonunion employees and a B-727-214 is vandalized at Los Angeles.

Enplanements for the year advance 5.2% to a record 6,356,875 million. Although revenues exceed \$100 million for the first time, costs associated with the strike leave a net profit of only \$627,123.

The workforce in **1974** is 2,670. One of the two YS-11A-200s employed for training purposes with four crew makes a forced landing in the desert 14 km. E of Borrego Springs, California, on March 5 while on a training flight; there are no injuries, but the aircraft is damaged beyond repair. Another B-727-214 is delivered on March 15.

The first two of four Lockheed L-1011 TriStar 1s arrives in July and is christened *Mother Grinningbird*. The new jetliner begins the company's premier wide-body Los Angeles (LAX)-San Francisco service on August 1.

The second TriStar 1 arrives in October, during which month the 50 millionth passenger (cumulative) is boarded, a highpoint for the company's twenty-fifth anniversary year.

The Arab oil embargo has a dramatic impact and the California air travel market declines by a full 10%.

Customer bookings, as a result of the economy, grow only 0.9%, to 6,381,197. Revenues climb to \$123.4 million and costs reach \$120.1 million. The profit improves to \$1,589,627.

Two hundred additional workers join the company in **1975**. The fleet now includes 23 B-727-214s and 1 B-727-14. Having decided to standardize on the less-expensive "three-hole" Boeing as a result of the na-

tional economic and energy situation, the two newly delivered TriStar 1s are placed into storage during the last week of March and the company refuses acceptance of three more ready at the manufacturer's Palmdale plant. An abortive effort is made to lease the two parked wide-bodies to **Air Siam, Ltd.**; prior to their final disposal a decade hence, the L-1011s will cost the company \$4 million per year to maintain.

New services are started between Los Angeles/Hollywood and Burbank in April. Following the demise of **Holiday Airlines**, PSA acquires that defunct carrier's southern routes into Lake Tahoe from San Diego, Los Angeles, and Burbank. As the resort community of South Lake Tahoe will not allow noisy jetliners to fly into its airport, PSA, which had planned to begin immediately operating its new prize, leases three L-188As, previously operated by **American Airlines**, and one of the L-188As it had previously owned. The first Electra is available in time to begin Lake Tahoe service in April, with the others joining in during August and October.

Enplanements this year rise only slightly, up 0.76% to 6,436,436. Although the \$152,521,000 raised in revenues are sufficient to generate a \$131-million operating profit, a \$16.67-million net loss is absorbed. The latter is due to penalties invoked upon refusal to take the L-1011s as well as losses taken upon divestiture of certain radio and hotel investments.

The employee population is increased by 1.2% in **1976** to 1,529. The last B-737-214 service is flown on January 29 and the final two machines are sold to **Frontier Airlines (1)**. President Shimp succeeds Floyd Andrews as chairman/CEO in March upon the latter's resignation; Paul Barkley becomes president. The company continues to seek a buyer for its TriStars and sells all of its remaining radio stations and two of the four hotels.

Passenger boardings accelerate 2.4% to 6,951,000 while FTKs grow much more, rising 30.6% to 3.3 million. Revenues advance to \$155,874,000 and profits total \$3,501,000.

A new computerized reservations system comes on-line in **1977**. Application is made to the CAB for authority to begin service to Reno and Las Vegas, as well as to the intrastate destination of Monterey. PSA representatives now join a few other upstarts and many consumer advocates in lobbying Congress for passage of airline deregulation legislation.

Two B-727-200s are received from their manufacturer and five B-727-100s are purchased from **Northwest Airlines**. All are given wide-body interior refurbishment and new exterior liveries. An L-188A route is opened from Lake Tahoe to San Francisco, along with another to Monterey, together with a deep discount service to Los Angeles and Burbank. The California Public Utilities Commission grants permanent authority in December for flights into South Lake Tahoe from San Francisco and points in southern California.

Enplanements total 7,194,000 and a \$2.09-million net profit is reported on income of \$191.85 million.

In both U.S. commercial aviation and PSA history, **1978** is an important year. In May, the company becomes the first to introduce automated ticket vending machines. In the year airline deregulation becomes law, the CAB allows PSA to become an interstate airline by awarding it authority to commence flights to Reno from Oakland and to Las Vegas from San Diego. Airline employment is consequently increased by 2.7% to 3,800.

Simultaneously, the carrier's early orders on September 28 for 10 units make it launch customer for the McDonnell Douglas DC-9-80 (MD-80); its two L-1011 TriStars are leased back to Lockheed, which subleases them to **AeroPeru (Empresa de Transportes Aereos de Peru, S.A.)**.

On September 25, a Cessna 172 of **Gibbs Flite Center** collides with PSA Flight 182, a Boeing 727-214 en route from Sacramento via Los Angeles over San Diego during the jetliner's landing approach to Lindbergh Field; they crash into a residential area. Among the 144 killed are 37 PSA employees.

The first fatal mishap in company history results in a certain amount of adverse publicity and renewed attention to the question of lightplane flights in heavy commercial travel areas. The story is reported by Robert

P. Chapman in his *Pilot Fatigue: A Deadly Cover-Up* (Smithtown, N.Y.: Exposition Press, 1982).

The nation's twelfth largest airline commences Bright Lights Flights to its new Nevada destinations on December 15. Late in the year, low-cost, late night services are suspended.

During the year, passenger traffic increases by 7.8% as 7,802,000 customers are carried. Revenues increase 19.8% to \$229.88 million, and net income zooms upward 452% to a record \$11.6 million.

The workforce is increased by 1% in 1979 to 3,837. Three L-188As are retired from the South Lake Tahoe service in February.

The route system is increased to 14 cities in March when San Diego to Phoenix service is added. As the result of increased maintenance costs, both the final Electra and the Lake Tahoe and Monterey services are concluded at the end of April. The withdrawn turboprop aircraft are sold to **Evergreen International Airlines**.

Meanwhile, in little over a year, Harold C. Simmons's Dallas-based Valhi, Inc. has acquired 21% shareholding, worth \$12 million; Valhi now makes a takeover bid. Construction is started on a flight training center at the San Diego base, near where a \$2.8-million computer reservations complex is occupied at the Scripps Ranch Business Park.

Los Angeles to Phoenix service is inaugurated in September. Employing a fake bomb, John Everett Gray hijacks Flight 784, a B-727-214 with 108 aboard en route from Los Angeles to San Diego on October 30 and diverts it to Tijuana, Mexico, where he is arrested by police. Gray will be extradited back to the U.S. where he will be tried and given a 16-month prison term.

Also in November, new service is initiated from Los Angeles to Salt Lake City. Throughout the year, fuel prices accelerate as a national energy crisis grows.

On the year, passenger bookings rise 11% to 8,657,000, revenues accelerate 27.5% to \$335,838,000 million, and another record profit (\$23,097,000 million) is posted.

The employee population is cut by 26% in 1980 to 3,283. PSA settles with Valhi, Inc. in February, following the failure of its takeover attempt. The subsidiary JetAir Leasing and \$16 million from the settlement with raider Simmons; in effect, he is given cash plus four B-727-214s, which he will sell to **Eastern Air Lines** a year later.

PSA becomes an international airline in April with the inauguration of flights from Los Angeles to the Mexican cities of Puerto Vallarta and Mazatlan.

Steven W. Bilson seizes Flight 818, a B-727-214 at Stockton, California, on May 1 and frees all of his hostages except the flight engineer. He then demands to be flown to Salt Lake City, but, as the plane has no pilot, it cannot lift off. Frustrated, the man surrenders. Bilson will be tried and given a 15-year prison sentence.

Concerned with the two-man cockpit of the new aircraft, as well as such other issues as wages and working conditions, the pilot members of the Southwest Flight Crew Association (SFCA) go on strike, beginning on September 28. Although the job action has significant impact upon traffic and income, replacement pilots and non-striking senior personnel are initially able to maintain schedules. During the 52-day job action, replacement service is provided on the Burbank to San Francisco route by **Aspen Airways**.

The pilots strike is settled by mediated agreement on November 15. With no helpful gains made by SFCA, the membership will elect to leave that group and sign on with ALPA.

The airline acquires the first of its MD-80 order (now increased to 20 units), also in November. This "Dash-80" enters service on December 17, the same day the pilots ratify their new contract, and is the first of its type to begin operations in the U.S.

Enplanements for the year dip by 30% to 6,053,000. While revenues jump 10.2% to \$370 million, expenses increase by 21.1% to \$358 million, leaving a net profit of \$12.1 million, a 28.6% drop in 12 months. Still, the carrier's financial position allows it to move into the CAB's new airline classification schedule as a "National."

The number of workers grows by 24.5% in 1981 to 4,087. Housing the nation's first MD-80 simulator, the company's new multimillion-dollar training center opens at the Scripps Ranch Business Park in San Diego. As 12 more MD-80s come on-line and the rivalry with **AirCal** (the new name of **Air California** adopted in March) intensifies, MD-80 service is initiated to John Wayne-Orange County Airport in October and to Seattle and Tucson in December. Entry into John Wayne comes as the result of victory in a legal suit.

Largely unnoticed during the year is the appointment of Sari Schnepf to the right seat of a B-727-214; she is the company's first female pilot.

The PATCO air traffic controllers' strike and attendant FAA flight restrictions hold down traffic growth to only 1.6% for the year as 6,152,000 passengers are carried and 4.3 million FTKs (a 30% decline) are operated. Revenues, however, are elevated by 18.2% to \$438.8 million and net profits, partially generated from aircraft sales and proceeds from safe harbor leasing and viable subsidiaries, climb to \$28.6 million.

Airline employment is reduced by 11.9% in 1982 to 3,600. A B-727-214 is leased to **Air National**, which that charter operator employs to open domestic passenger flights. Otherwise, 21 of the 23 requested MD-80s are delivered during the year, making PSA the first airline in the U.S. to fly mostly Next Generation aircraft.

Midnight Flyer, deep-discount, late-night flight service is resumed in June. Frequencies are increased on services to Phoenix and Burbank.

On October 18, following the collapse of **Braniff International Airways** in May, PSA officials announce that they have agreed with the executors of the onetime major to lease 24 Braniff B-727s, repaint them in PSA colors, and begin flying them the following spring on routes from Dallas (DFW). The move is opposed in court by **American Airlines**, another Dallas (DFW) homesteader and in November is rejected by the Braniff unions, the members of which do not wish to accede to a PSA demand that they be junior to those pilots flying with PSA. Meanwhile, service to Puerto Vallarta is abandoned in September and, simultaneously, after losing a fare war with **Western Airlines**, the company pulls out of Salt Lake City.

In December, another plan is put forward to employ the assets of bankrupt **Braniff International Airways**. PSA agrees to open a Texas division at Dallas (DFW), to lease 28 B-727-227s, and to fly to 16 cities using Braniff slots. Special efforts would be made to hire ex-Braniff personnel before an agreement deadline of February 1.

On its existing routes, the company experiences a 15.7% boost in enplanements to 7,119,000; cargo increases a significant 47.5% to 6.33 million FTKs. Operating income jumps 12.26% to \$378.13 million while expenses rise 12.62% to \$395.58 million. Although a \$17.43-million operating loss is suffered, PSA is able to generate a net profit of \$18.6 million.

The payroll is increased a significant 10.1% in 1983 to 3,965. The deadline for an agreement to open a Texas operation based at Dallas (DFW) passes on February 1 and is later killed by a U.S. Court of Appeals, which rules that aircraft from the bankrupt major cannot be leased to the California-based national. Now the "Official Airline of Disneyland" under a new 12-year agreement with the entertainment giant, PSA also introduces new flight attendant uniforms, an Executive Flyer frequent flyer program, a new advertising campaign ("Our Smiles Aren't Just Painted On"), complete with slogan buttons worn by flight attendants, and to match **AirCal**, snack service and assigned seating.

When **AirCal** and **United Airlines** increase frequencies in the Los Angeles-San Francisco corridor in September, PSA finds itself engaged in a two-front fare war. In response, it introduces hourly flights for a total of 17 daily roundtrips. Seat assignments on all flights are not initiated and the last B-727 is sold at the beginning of October.

In an effort to reach smaller markets, PSA orders 20 British Aerospace BAe 146-200s with 25 options, worth \$300 million, to complement its fleet that now consists of 21 MD-80s and 4 DC-9-32s, the latter acquired from **Air Canada, Ltd.** Meanwhile, competing **AirCal** takes aim on PSA's markets and makes considerable and costly inroads.

Still, the addition of Spokane, Portland, and Albuquerque to the route system allows a 13.7% increase in passenger traffic to 8,099,000 customers carried and freight traffic to 7.33 million FTKs, a 15.7% boost. Revenues move upward 11.6% to \$530.8 million, but expenses are up 29.24% to \$453.94 million. The financial reversal brings an operating loss of \$9.3 million and a net loss of \$12.6 million, the first significant fiscal downturn suffered in years.

Employment falls 2.1% in **1984** to 3,628. Company gates are opened in January at Terminal One at Los Angeles (LAX). Automatic check-in machines are turned on at all PSA destinations and the Executive Flyer frequent flyer program is linked to the loyalty program offered by **Trans World Airlines (TWA)**.

Paul Barkley succeeds William Shimp as CEO in March, with the latter becoming board chairman. Shimp will die of a heart attack on May 11. PSA also begins to take delivery of the first six BAe 146-200As, dubbed "Smileliners." The premier British 100-seater, called a Smileliner by company publicists, arrives in May and is placed into service between Burbank and Oakland on June 20; the six-abreast seating arrangement is not popular with customers and will be reconfigured to five-abreast. The 26th MD-80 is also acquired and systemwide frequencies are boosted.

Company officials negotiate cost-saving agreements, estimated to be worth \$20 million every year, in new three-year labor contracts with employees. The arrangements include profit sharing plans equal to 15% of the airline's pretax profits.

In September, nonstop roundtrips are begun between Stockton and Los Angeles; the frequencies are the only nonstop all-jet services between the two communities.

The last B-727-214 service is flown on November 26, after which the type is now withdrawn from company service. The type has given PSA 300 million miles and carried over 92 million passengers for it during 20 years.

Although passenger bookings dip 2.7% to 7,880,327, due largely to a fare war with **AirCal** and freight is down 0.5% to 7.29 million FTKs, revenues earned are up 15.7% to \$538.1 million and expenses are kept in hand with a 7.1% increase to \$507.2 million. The year's net loss is slimmed to \$4.8 million, and comes on top of a \$30.81-million operating profit.

The payroll is increased a healthy 23.1% in **1985** to 4,800. PSA continues to compete with **AirCal** for the lucrative California market, committing \$1 billion for its new fleet of 20 BAe 146-200As, 14 more of which arrive during the year. Flights to Albuquerque are temporarily suspended in April so that the capacity employed on that route may be diverted. Much of the Golden State traffic lost by **United Airlines** during its midyear strike is retaken over by PSA and frequencies up and down the California corridor accelerate to 180 per day.

In July and August, two MD-80s are leased from **Hawaiian Airlines**; the L-1011s, long on lease to **AeroPeru, S.A.**, are sold to **Worldways Canada, Ltd.** Russell L. Ray Jr. is appointed president during the latter month. In September, **Continental West Airlines** invades PSA's California markets, setting off a fare war. During the last quarter, the carrier is restructured.

Chairman/CEO Paul Barkley and new president (as of August) Russell L. Ray realign the route system in hopes of dominating the "California Corridor," upgrade the fleet, and make arrangements for a \$100-million senior note. Flights to Bellingham, Washington, commence in October and a new terminal is opened at San Francisco in November, along with a curbside terminal at Oakland. A second reservations center comes on-line at Reno.

In the company's largest single day expansion ever, service is initiated on December 19 from California to the northwestern cities of Boise, Pasco, Eureka, Yakima, Medford, and Eugene.

Simultaneously, the carrier begins flying south of the border once more with a frequency to Cabo San Lucas. On the same day, PSA Expressway, an every-half-hour 6:30 a.m. to 10 p.m. shuttle, is launched between Los Angeles (LAX) and San Francisco, while the super quiet

BAes allow service in and out of Orange County to be tripled. Late in the month, a blanket of fog forces cancellation of many flights to various Pacific Northwest destinations. PSA is now the 13th largest airline in the U.S., serving 30 cities in the western part of the country and Mexico.

Customer bookings jump 15.6% to 9,040,000. Revenues advance 18.1% to \$635.38 million, costs grow 18.6% to \$601.44 million, and a \$33.93-million operating profit is created. Although still a loss, the net failure improves to minus \$648,000.

Airline employment rises 16.3% in **1986** to 5,000. In January, the \$100-million senior note offering is made. In addition, Intra-Mail, a same-day, small-package delivery service, is introduced. During the spring, a BAe 146 simulator arrives from England. The sales staff is increased to 18 and aircraft interiors are redone in tones of gray, with magenta, pink, and rose accents.

In late March, a Northwest Airlink marketing agreement is signed with **Northwest Airlines**, allowing the two carriers feed each other's flights at Los Angeles (LAX), Seattle, and San Francisco. A sum of 15\$ million is provided to newly retained advertising agency Travisano & Partners. At this point, the company begins to name its aircraft *Smile of* . . .

In May, service begins to Monterey and is resumed to Albuquerque. Other new destinations initiated during the spring include Concord, California, Bend, Oregon, and Steamboat Springs, Colorado; destinations dropped include Boise and Eureka.

The 31st MD-80 arrives in June and in July a strategic marketing agreement is signed with **Air Canada, Ltd.** During August, PSA boards in excess of one million passengers in a month for the first time.

Hourly frequencies are begun in September, on business days, between John Wayne Airport and San Francisco. At the same time, new service is introduced from Burbank to San Francisco and from Los Angeles to Las Vegas, while flights to Eureka and Boise are suspended.

On December 8, **USAir** announces that it is acquiring PSA for \$397 million. The move, which is designed to increase the major's West Coast presence, surprises the entire airline industry.

Passenger boardings leap upward by 18.5% to 10,721,000 and revenues ascend 20.9% to \$768 million. Expenses, led by repair bills for the Avco-Lycoming engines of the BAe 146-200As, jump 23.5% to \$742 million. The operating profit falls to \$26 million and the net loss worsens to \$3 million.

Following approval of the merger by the DOT in January **1987**, the San Diego-based company continues to operate as a **USAir** subsidiary during a period of integration. In February, hourly service, between 6:30 a.m. and 8:45 p.m., is started between San Francisco and San Diego. Later in the spring, a daily nonstop schedule is introduced between Los Angeles and Bellingham/Seattle and four daily nonstops commence between San Jose and Los Angeles.

PSA officially becomes a **USAir** division on May 29.

On December 4, the BAe-146-200A *Smile of Disneyland* is damaged in a ground collision at Los Angeles (LAX) with an **Eastern Air Lines** L-1011; although no injuries are reported, the plane must be written off.

On December 7 former **USAir** passenger agent David A. Burke takes a 44 magnum pistol aboard Flight 1771, a BAe 146-200A with 5 crew and 37 passengers. Burke, estranged from his girlfriend and angry over his November 19 dismissal for theft, seeks vengeance on his former boss and fellow passenger Raymond Thomson. Once the British-made jetliner is en route from Los Angeles to San Francisco, shooting begins and a report of gunfire on board is radioed to ATC before the flight crew is killed.

The murders/suicide is completed when the aircraft smashes into a Templeton, California, cattle ranch; there are no survivors. The tragedy leads to a number of new FAA security rules still in effect and effective December 21, all employees of airlines, including flight crews, must pass through security screening before boarding aircraft.

Customer bookings advance by 4.2% to 11,172,000 and freight climbs 24.3% to 13.91 million FTKs. According to **USAir** sources, the

onetime terror of California commuter skies earns revenues of \$420 million during the year's first half. Losses on that income total \$23.1 million (operating) and \$2.2 million (net).

In early 1988, a BAe 146 is sold to **Atlantic Airways, A.S.** of the Faeroe Islands. The integration process is completed on April 9 and the last service, Flight 1486, is completed that day between San Diego and Las Vegas.

PSA, a pioneer in low-cost, no-frills service, disappears within its new owner, its aircraft all repainted from their famous smiling livery into **USAir's** conservative hues. During its final quarter of life, PSA transports a total of 2.4 million passengers, down 10.7% over the same period during the previous year. The airline's memory will later be fostered when, in November 1995, the "USAir Express" carrier **Jetstream International Airlines** is renamed **PSA Airlines**. An unofficial PSA Web site is <http://www.CatchOurSmile.com>.

PACIFIC SPIRIT AIR, LTD.: South Terminal Building, #111, 4440 Cowley Crescent, Richmond, British Columbia V7B 4B9, Canada; Phone (800) 665-2359; <http://www.pacificspiritair.com>; Year Founded 1997. Hanna Air, Ltd. is purchased by Mark Sager, owner/operator of the Silva Bay Resort and Gabriola marina, and Chris Holmes in 1997 and renamed. Employing several de Havilland Canada DHC-2 float-equipped Beavers, the concern maintains regularly scheduled flights between Gabriola and the Gulf Islands and Vancouver International Airport. Thetis Air, Ltd. is purchased and merged in May 1999 and in September, Robert Conconci, owner/operator of The Timbers on North Pender Island, purchases Holmes's ownership.

To celebrate the company's combined 15-year history, Pacific Island introduces special seat sale prices in January 2000 designed to benefit the residents of the Gulf Islands. During the spring, the route network is reorganized into two divisions. The northern Gulf Islands system covers Silva Bay on Gabriola and Telegraph Harbour on Thetis, while the southern Gulf Islands system includes Ganges on Salt Spring, Port Washington on North Pender, Miners Bay on Mayne, and Lyall Harbour on Saturna.

PACIFIC TRANSAIR (PTY.), LTD.: Australia (1995–1997). PTL is set up by Nicholas Leach at Sydney in the winter of 1995 to offer regularly scheduled services over routes to Brisbane and Melbourne. Two Boeing 737-291s are leased early in 1996 to begin operations; however, one is chartered to **Air Philippines (2)** in June.

The company is shut down in 1997.

PACIFIC WESTERN AIRLINES, LTD. (PWA): Canada (1953–1987). Having acquired five other independent operators in the previous four years, **Central British Columbia Airways, Ltd. (CBCA)**, owned by Russell Baker and Karl Springer and based at Richmond, British Columbia, changes its name and corporate identity to Pacific Western Airlines, Ltd. on May 15, 1953.

The inaugural fleet comprises 1 Douglas DC-3, 4 de Havilland Canada DHC-2 Beavers, 2 Consolidated PB5Y-5A Cansos, 4 Noorduyn Norsemen Vs, 1 Grumman G-44 Widgeon, 2 Fairchild 71s, 1 Beech 18, and 1 Beech 17 Staggerwing. A second DC-3 is acquired in June. Competition is begun with **Queen Charlotte Airlines, Ltd. (QCA)** over certain routes out of Vancouver and along the British Columbia coast, particularly to Kitimat.

A stiff rivalry with QCA continues in 1954. Three Beavers and three Grumman G-73 Mallards are added to the fleet. The latter are placed into service on the route from Vancouver to Kitimat. Late in the year, the assets and routes of Edmonton-based **Associated Airways, Ltd.** are purchased and amalgamated. Especially important are the purchased carrier's DEW Line transport contracts.

The fleet in 1955 comprises 85 aircraft, primarily Noorduyn Norsemen, Douglas DC-3s, and DHC-2s. During February and March, three Curtiss C-46A freighters are acquired to maintain the far north defense-related services.

A former Associated Airways Avro 685 York C.1 is lost at Yellowknife after failing takeoff on April 11; there are no fatalities. A second ex-Associated Avro 685 York C.1 freighter with two crew is lost near Edmonton on May 26; there are no survivors.

Between May and August, seven Avro Anson Vs are purchased.

Meanwhile in July, the assets and routes of the competing **Queen Charlotte Airlines, Ltd. (QCA)** are purchased, vastly enlarging PWA. One of the three G-73 Mallards is lost in a crash on August 3. A Bristol 170 Mk. 31 with two crew and four passengers is lost 22 km. N of Thorhild on September 17 (two dead). Another Avro 685 York C.1 freighter with two crew is lost at Thoa River on September 29 (one dead).

A Fairchild 71 floatplane is lost in a takeoff accident at Ocean Falls, British Columbia, on November 13.

Upon the final absorption of QCA in 1956, two Avro York 685 freighters, a DC-4, and four DC-3s join the fleet. Two DHC-3 Otters are acquired, one each in January and June, along with two Barkley Growers. Two Bell Model 47Gs are purchased in February. The last PB5Y-5A Canso joins the fleet in April, along with two Bellanca 31-55Bs, a Stinson 108-2, a Cessna 120, and a Fleet 80. Another float-equipped Fairchild 71 is lost when landing at Kitimat on August 8. Three Avro Anson Vs also arrive during August.

An Avro 685 York C.1 is lost at Cape Perry on September 13; no other details are known. In October, two Beech 17s are withdrawn. Gross revenues have increased ten-fold since 1953.

A DC-3 with 18 aboard is destroyed in a crash near Port Hardy, British Columbia, on June 23, 1957 (14 dead); the disaster is caused by an employee's failure to remove the ground control block from the aircraft's rudder. A Stranraer flying boat with four aboard fails its takeoff from a lake in British Columbia on October 2 and crashes; there are no survivors. Two DC-4s purchased during the summer are placed into service in October, the same month the lone Grumman G-44 Widgeon is sold.

In November, the **Canadian Pacific Air Lines (CPAL)** Prairie Service route is taken over from Edmonton–Moose Jaw and Regina. Co-founder Russell Baker dies in 1958. His legacy will be remembered by John Condit in his *Wings over the West: Russ Baker and the Rise of Pacific Western Airlines* (Vancouver: Harbour Publishing Co., Ltd., 1984).

Baker's carrier now employs 600 people and with 22 machines, possesses the largest DHC-2 fleet in the world. One of these is lost in an August 29 crash in the Northwest Territories (four dead). Five Bell Model 47G helicopters are acquired in April and the carrier's Beech 18A is sold in September.

As part of a major upcoming route realignment, several of the airline's Vancouver Island services and its two Grumman G-73 Mallards are turned over on May 26, 1959 to **B.C. Airlines, Ltd.** In July, another DC-4 enters service. Early in the same month, CPAL's Mackenzie Service multistop route from Edmonton to Yellowknife and 18 points further north along the Mackenzie River are assumed, along with two DHC-3s and four C-46Cs that the larger carrier had dedicated to it. The transaction, which also includes CPAL's stocks of supplies and base facilities, is completed for C\$1 million.

These markets are received in exchange for limited rights to make return flights between Montreal and Vancouver. Pacific Western begins Edmonton to Uranium City, Yellowknife, Inuvik flights on July 13, with full transfer of the 3,750-mile route up to Aklavik completed on July 30. During the year, two Anson Vs, the two Bellanca 31-55Bs, the Junkers W-34F, two Norsemen Vs, the Fleet 80, the Stinson 108-2, and the Cessna 120 are sold.

Orders are placed for three DC-6Bs in 1960. Making a single-engine landing at Port Hardy on January 29, a C-46C with 3 crew and 48 passengers overshoots the runway and ends up in a swamp, damaged beyond repair; there are no fatalities. The two York 685s are withdrawn and sold in April. Helicopter operations end in the spring and all seven Bell Model 47Gs are sold in May to **Pacific Helicopters, Ltd.**

On August 15, a DHC-2 with four aboard crashes near Lorna Lake, British Columbia; there are no survivors. Two PB5Y-5A Cansos are sold,

also in August, and other aircraft withdrawn during the year include a Junkers H-34F, two Norseman Vs, three Norseman IVs, two Cessna 180s.

In 1961, two DC-7s are requested and an Anson V is withdrawn in March. In April, the number of Grumman G-21 Goose aircraft is two, and the same month, a DC-4 is sold. On May 24, a DC-3 is written off after crashing at Snowdrift, Northwest Territories. It is replaced by another DC-3, which enters service in April 1962. Meanwhile, in March, three Anson Vs are sold. The first DC-6B, purchased from the American carrier **Northwest Airlines** on June 8, arrives in August and enters operations over the longer segments. Livery and color schemes on company aircraft are now changed.

The Edmonton–Calgary route is suspended in 1963. Three more DC-6Bs arrive and two C-46s are sold. No-reservation DC-4 Chieftain Airbus (shuttle) service is then inaugurated Calgary–Edmonton. A C\$114,534 net profit is recorded for the year.

The first Canadian inclusive-tour charter service from Vancouver to Grand Cayman Island or Great Britain is begun by the DC-6Bs early in 1964, but handed over to the two DC-7s upon their arrival in February and May. Sixty-four round trips are made during the year to the U.K. alone.

Passenger boardings on the Calgary–Edmonton shuttle total 50,000 out of a systemwide enplanement total of 204,711. Revenues jump 41% to C\$8.8 million and the net profit is C\$331,324.

Airline employment in 1965 stands at 520. The mixed fleet comprises 49 aircraft of 15 types: 14 DHC-2s, 2 DC-7s, 2 Beech 18Ss, 4 Cessnas, 5 DC-3s, 2 DC-4s, 6 DC-6Bs, 2 Grumman G-21s, 6 DHC-3s, 1 Piper PA-23 Aztec, and 3 Sikorsky Model 47 helicopters. Two DC-7Cs join the fleet in February, replacing the two earlier DC-7s; they are followed by two DC-6s in March and May, respectively.

All overhaul activities are now centered in Vancouver and frequencies on the Chieftain Airbus shuttle service are increased, bringing in 49% greater revenues. Late in the year, the northern division's small aircraft operations are transferred to **Northward Aviation, Ltd.**

Passenger boardings jump 27% to 280,426, of which 230,396 are carried on scheduled (not charter) services. Revenues of C\$11.53 million are earned and the net profit nearly doubles, up to C\$601,202.

Airline employment in 1966 stands at 575. Orders are placed for a Boeing 707-138B, a B-737-265, three Lockheed L-382Bs (commercial Hercules) freighters, and four Convair CV-640s. A Beech C-18S and four DHC-3 Otters are sold in January, followed by a fifth in September.

Most of the Mackenzie River routes and charter operations in the Northwest Territories are sold to **Northward Aviation, Ltd.** The carrier now divides its operations into two divisions: a lightplane unit based at Edmonton that flies to frontier areas, and the main element based at Vancouver that conducts operations with such heavy aircraft as DC-6Bs.

With delivery in late winter 1967 of the L-382B, Pacific Western becomes the world's first operator of the commercial Hercules. Initially added to support the search for northern energy resources, the aircraft, following the spring ice breakup, join the main cargo fleet in worldwide charter operations. During their first year, the L-382Bs will fly to over 50 countries.

The four CV-640s are also received and placed in service on scheduled routes. Two C-46s are sold in May followed by a third in late fall. In September, a Grumman Goose is sold. The B-707-138B is delivered on November 13 and is employed to launch new inclusive-tour flights to Mexico and Hawaii.

The arrival of new aircraft in the previous year allows the sale, early in 1968, of three DC-3s, two DC-6Bs, and a DC-7C. Orders are placed for a B-737-275 and a B-737-275C. CPAL routes from Edmonton to Port Hardy via Prince George and Sandspit are taken over in late spring.

During the summer, the B-707-138B begins flying to additional European charter destinations. The last four Grumman G-21s are sold in August. The B-737-275 ordered in 1966 is delivered on November 26 and is the first of its type received by any Canadian carrier. It is employed to inaugurate Calgary–Vancouver Stampeder Service on December 17. Two DC-3s and the last Otter are withdrawn during the year.

Airline employment is 1,050 in 1969. Two more DC-6Bs are acquired in February and the last PBV-5A Canso is sold in March. Another DC-3 is sold in April, followed by the sale of a Beech D-18S in May. The first L-382B Hercules freighter is destroyed as the result of a bad landing at Caycaya, Peru, on July 16; there are no fatalities. It is later replaced.

Also in July, a second B-707-138B joins the fleet. Another transfer of license from **CP Air, Ltd.** (formerly CPAL) allows Pacific Western to begin flying routes throughout interior British Columbia.

While on initial approach to Campbell River airport on September 17, Flight 627, a CV-640 with 4 crew and 11 passengers, strikes a 932-ft. hill and crashes at Elk Island Park (4 dead).

A fifth DC-4 is purchased in December. The Calgary–Edmonton Chieftain Airbus shuttle service now averages some 250,000 enplanements per year; overall, passenger boardings total 560,434.

The employee population is increased a whopping 65% in 1970 to 3,010. The fleet now numbers 23 aircraft: 2 B-707-138Bs, 2 DC-3s, 3 DC-4s, 3 DC-6Bs, 3 Hercules, 4 B-737-275/275Cs, and 4 CV-640s.

Vancouver–Seattle via Victoria B-737-265 scheduled frequencies are opened in the spring.

One of the DC-6Bs purchased the previous year is withdrawn in September and in the fall, **B.C. Airlines, Ltd.**, together with its two Grumman Mallards and four Nord 262s, is purchased and merged, allowing greater expansion of British Columbia interior and coastal services.

Passenger bookings jump 37% to 889,577 and freight traffic balloons by 58%.

An order is placed in 1971 for a B-727-171C. The British Columbia coastal routes and two Mallards are sold to **West Coast Air Services, Ltd.** Charter flights are increased, with San Diego a new destination. Orderly retirement of larger elements in the piston-engine fleet continues with the sale of two DC-6s in January and a DC-6B in November, the same month the final CV-640 is received. Simultaneously, two Lockheed L-188As, first operated by **Western Airlines**, are acquired under 19-month leases, for both scheduled and charter flights.

Enplanements accelerate to 1,094,154, passing the landmark boarding mark of a million passengers in a single year for the first time.

The four Nord 262s are withdrawn and sold in 1972, along with the last three DC-4s and the final DC-6B. The fleet is enhanced by the addition of a B-707-321C, a B-727-92C, and two B-737-275s. Two Lockheed L-188As, previously flown by **National Airlines (1)**, are leased to operate charters between Calgary and the Beaufort Sea. They will be employed only until new B-737 orders can be filled. A DC-3 is sold in March.

On September 14, an L-188A makes a successful wheels-up emergency landing at CAB Namao, north of Edmonton. Three DC-4s are sold between November and December.

Passenger and cargo charters proliferate. Passenger boardings rise 13.3% to 1,262,000 and freight soars by 41%. Consolidated revenues of C\$57.5 million set a new income record.

On final approach to Edmonton Airport in heavy snow on January 2, 1973, the B-707-321C with a five-man crew lands short of the runway near Nisku and is destroyed; there are no survivors and the 75 head of cattle aboard are also killed.

A B-707-351C replacement is purchased from **Northwest Airlines** on March 2 and yet another B-737-275 joins the fleet as orders are placed for three more of the latter type. A fourth Hercules is also received and the last DC-3 sold. The carrier now becomes the first Canadian regional to fully computerize its reservations system while, at the same time, introducing a new logo and aircraft livery.

A total of 45 connections in the northwestern and western sections of the nation are served as application is made for additional routes. Meanwhile, newly formed **Northern Thunderbird Air, Ltd.** begins to feed Pacific Western with scheduled commuter services to and from the British Columbia cities of Kamloops, Kelowna, Penticton, Prince George, Quesnel, and William Lake. A L-382B Hercules freighter makes the first Canadian all-cargo flight into Communist China.

Bookings this year grow to 1,671,000.

The employee population in 1974 is 2,249. In order to assure the development of air transport in northern and western Canada and maintain the financial stability of the nation's largest regional carrier, the Conservative government of Alberta Premier Peter Loughead acquires 99.8% interest in Pacific Western in August, paying C\$36 million. Rhys Eytton is appointed president/CEO; he is the first Pacific Western president not to hold a pilot's license. Meanwhile, a B-727-171C is added to the fleet.

Passenger boardings jump 15% to 1,966,198 while cargo climbs 13%.

The workforce is reduced by 45 employees in 1975. The changeover to new livery begun in 1973 is completed. Four additional B-737-275s are placed in service, allowing the return of two L-188As and two CV-640s.

In accordance with terms of a new U.S.-Canada bilateral air treaty, direct scheduled service is inaugurated from Vancouver to Seattle on a route acquired from **Air Canada, Ltd.**

Passenger bookings rise 9.8% to 2,148,680 and cargo advances 14.6%. Despite a 22% increase in operating expenses, a C\$1.36-million profit is recorded.

The carrier begins 1976 as the nation's third largest airline after **Air Canada, Ltd.** and **CP Air, Ltd.**, a position it will hold until December 1986. The last two L-188As are returned to their lessor in April. A B-727-171C begins Vancouver-Niagara Falls charter flights while scheduled service is opened from Vancouver-Edmonton via Kamloops. The 1974 government of Alberta buyout is challenged in court.

In September, company headquarters are transferred to Calgary from Vancouver; not wishing to leave British Columbia, President Donald Watson resigns. The nation's second cargo flight into Communist China is accomplished to Shanghai by a B-707F in October.

While on an overseas deployment, an L-382B with five crew and one passenger strikes a tree and crash-lands, stopping against a giant termite mound near Kisangani, Zaire, on November 23; there are no survivors.

Passenger boardings grow only 1.9% to 2,191,000 and cargo drops 39.4%.

An L-382B is acquired in 1977 to replace the one lost in 1976. Early in the year, the Canadian Supreme Court approves the carrier's 1974 purchase by the provincial government of Alberta. The B-727-92C purchased in 1972 is sold to **Continental Airlines** in July.

Bookings advance during the 12 months to 2,526,810 and a net profit of C\$14.8 million is reported.

Airline employment stands at 3,156 in 1978.

While landing at Cranbrook, British Columbia, in a snowstorm on February 11, a B-737-275 with 5 crew and 44 passengers attempts to swerve to miss a snowplow on the runway, but crashes to the left and catches fire (42 dead).

On April 30, 72% (later 96.5%) controlling interest is taken in Winnipeg-based **Transair, Ltd.**, which is allowed to operate as a separate entity as the merger process goes forward. Meanwhile, Pacific Western begins to withdraw from long-haul charters, selling its B-707-138B and leasing an L-382B to **Alaska International Airlines**.

Orders are placed for four B-767-275s and a B-737-275 as two B-737-2A9Cs join the fleet and the last three CV-640s are withdrawn.

Passenger boardings rise 7% to 2,727,274 and cargo climbs 15.5%. Revenues advance 36% to C\$153.5 million, while expenses grow 38.3% to C\$134.8 million. The profit is up a huge 160.2% to C\$7.3 million.

In February 1979, an agreement is worked out with the Canadian Transport Commission whereby the **Transair, Ltd.** subsidiary ceases all scheduled operations east of Winnipeg and inaugurates service from Winnipeg to Calgary and Edmonton via Regina and Saskatoon. The B-707-351C is sold in May.

An ITC (Inclusive Tariff Charters) base is established at Toronto in October, the same month nonstop Vancouver-Prince George service is launched. On December 1, all **Transair, Ltd.** operating licenses and routes are transferred to Pacific Western and the subsidiary is fully integrated. All that remains is amalgamation of certain personnel and aircraft.

Passenger bookings for the Calgary-based regional jump 17.2% to 3,642,000 while freight rises 5.6%. Revenues accelerate 17.2% to

C\$241.5 million, expenses climb 17.5% to C\$255.1 million, and a record C\$15.2-million profit is recorded.

The Boeing 707-351C is sold in late winter 1980. The Transair merger is at last officially completed on March 15, at which time a new Pacific Western corporate identification program is introduced that features such revisions as redesigned aircraft exterior paint schemes, new aircraft interiors, changes in uniforms, and facilities design.

In May, a B-737-275 is sold and during the summer, nonstop service is inaugurated from Edmonton to Vancouver, Calgary to Vancouver, and Edmonton to Whitehorse.

Passenger enplanements advance 21.8% to 4 million and freight skyrockets by 62.6%. Revenues are up 19.8% to C \$202.4 million and expenses rise 18.2% to C\$186.3 million. Profits are C\$19 million (operating) and C\$10.2 million (net).

A Hercules freighter is sold to **Northwest Territorial Airways, Ltd./NWT Air** in January 1981. Victoria-Kelowna nonstop flights commence along with nonstop frequencies from Vancouver to Alberta and Toronto. In competition with **CP Air, Ltd.** and **Air Canada, Ltd.**, the carrier initiates nonstop services from Vancouver-Edmonton, Vancouver-Calgary, and Vancouver-Toronto via Calgary and Brandon.

Passenger boardings rise 3.8% to 4,173,000 and cargo moves ahead a slight 0.6%. Revenues jump 29% to C\$266 million and expenses are up 28.4% to C\$244 million. Operating profit accelerates 37.5% to C\$22.47 million while net profit soars 46.5% to C\$15.2 million.

The employee population in 1982 totals 3,791. The fleet now comprises 1 B-727-171C, 2 L-382Bs, 17 B-737-275s, and 5 B-737-275Cs.

Much of the carrier's attention for the year is focused on preparations for receipt of the B-767-275s ordered in 1978. Four B-737-275s are sold to **Pan American World Airways (1)** and one to **America West Airlines**. Flights to Uranium City in Saskatchewan are halted in November.

Passenger and freight traffic fall 16% (to 3,483,767) and 14.3%, respectively. The year's operating profit is C\$19.7 million and the net falls significantly, down to C\$4.9 million.

The workforce is reduced 1.5% in 1983 to 2,999. The first B-767-275 is delivered in February and is placed in revenue service on March 17 on weekday return flights from Vancouver-Winnipeg via Calgary and Regina. The second arrives in March and is employed to begin Vancouver-Saskatoon via Edmonton weekday return services. On weekends, the two new planes fly charters. An interline agreement is signed with **Wardair Canada, Ltd.** allowing PWA passengers to connect with Wardair charters at any PWA gateway city.

Two more B-737-275s are transferred to **America West Airlines**. In December, the Alberta government of Premier Loughead sells 85% of the company to the public through subscription. To prevent a takeover by eastern Canadian or other interests, the terms of the sale stipulate that no individual or group can own more than 4% of the stock. The carrier's administration is still controlled by CEO Eytton via the newly created Pacific Western Corporation, Ltd. Also in December, another Hercules freighter is sold to **Northwest Territorial Airways, Ltd./NWT Air**.

As the effects of the worldwide recession continue to impact on scheduled and charter traffic, passenger boardings dip 3.9% to 3,353,000 and cargo falls 19%. Overall revenues increase 2.5% to C\$255.8 million and expenses, which had gotten out of hand in 1982, are up only 2.3%. The operating profit climbs to C\$21.3 million and the net profit is up significantly, to C\$8.4 million.

Airline employment is cut another 6.8% in 1984 to 2,794. Another B-767-275 and a B-737-275 are placed in service and a 40% interest is taken in the Lethbridge, Alberta-based commuter **Time Air, Ltd.**

An uncontained engine failure is experienced by a B-737-275 with 5 crew and 113 passengers during its takeoff roll from Calgary on March 22; although the departure is aborted, debris punctures a fuel tank, causing fire. All aboard are safely evacuated onto the runway, but the Boeing is burned out.

The flight operations of Dome Petroleum, Ltd. are taken over in June, along with a B-737-2T2C and two months later, the last B-727-171C is sold to Echo Bay Mines, Ltd.

Passenger bookings fall again, down 4.5% to 2,545,000 and freight is off another 9.7%. Revenues accelerate a slight 2.5% to C\$247.4 million, but expenses are up 4.4%, leaving an operating profit of C\$18.7 million and a net profit of C\$5.39 million.

The workforce is increased 8.9% in **1985** to 2,250. In February, scheduled service is inaugurated to Thunder Bay from Brandon and nonstop flights commence from Calgary to Winnipeg and Saskatchewan to Toronto. In April, nonstop service is initiated from Winnipeg to Toronto and Calgary and from Edmonton to Vancouver. Also in April, the carrier becomes the only major airline in Canada to standardize on the B-737, another of which is received new in May together with two leased from **America West Airlines**.

Toronto-Vancouver service is inaugurated in May via Thunder Bay, Brandon, Calgary, and Kelowna and also in May the two B-767-275s are sold. The last L-382B is sold to **Northwest Territorial Air, Ltd.** in June. "Air Canada Connector" service is opened as a joint marketing program with **Air Canada, Ltd.** and **Time Air, Ltd.** in the fall. Three major unions strike on November 20, but scheduled and charter operations are maintained, despite much bitterness.

Passenger boardings climb 4.5% to 1,567,000, and freight soars 23.9%. Revenues grow 9.9% to C\$341.1 million, and expenses increase 8.3% to C\$216 million. Profits are C\$4.76 million (operating) and C\$10.3 million (net).

The strikes end on March 31, **1986** with new contracts signed and the workforce increased to 2,700. Scheduled service is inaugurated from Winnipeg to Ottawa on June 16, as the Canadian capital city finally joins the route network. With an effective opening date of September 15, the commuter airline network "Pacific Western Spirit" is established on July 14. Thompson, Manitoba-based **Cal Air International, Ltd.** and **Time Air, Ltd.** join the new "Pacific Western Spirit" commuter system on July 15-16.

A major financial arrangement is concluded on August 5. Five B-737-275s are sold to Citibank of New York for C\$70 million and another 11 to a British syndicate led by Midland Bank for C\$185 million. The aircraft are to be turned over to Shannon, Ireland-based GPA Group, Ltd. between 1990 and 1995, but until then will be flown by Pacific Western under lease. In November, two B-737-3Y0s are leased from **Monarch Airlines, Ltd.** for Toronto winter charters and another for Winnipeg tour flights.

On December 2, in something of a surprise, the nation's third-largest carrier purchases financially troubled CPAL, paying C\$217 million in cash to parent C.P., Ltd., and assuming the C\$600-million debt of the country's second largest airline while assuming its No. 2 ranking. Pacific Western's Rhys Eyton becomes chairman/CEO, with Murray Sigler as president/chief operating officer. The purchased carrier is allowed to retain its separate identity until the merger process is completed the following spring. The year's enplanements dip to 2.5 million and revenues slide marginally to C\$269.8 million. Costs are kept down and allow the operating profit to climb up to C\$19.4 million. The company goes out a shareholder's winner as net gain balloons to C\$28.4 million.

On April 26, **1987**, the two amalgamated air transport companies, together with the CPAL subsidiaries **Nordair, Ltd.** and **Eastern Provincial Airways, Ltd.**, are titled **Canadian Airline International, Ltd. (CAI)**.

PACIFIC WESTERN AIRWAYS: United States (1968-1969). The American PWA is set up as a commuter at Salt Lake City in the early summer of **1968** to provide scheduled passenger services over a route to Durango via Provo, Price, Green River, Moab, Monticelo, Blanding, and Cortez. Beech 18 revenue services, including some charters, are inaugurated on July 8, but continue for less than a year.

PACIFIC WINGS: P.O. Box 930, Paia, Hawaii 96779, United States; Phone (808) 873-0877; Fax (808) 873-7920; <http://www.pacificwings.com>; Code LW; Year Founded 1998. Myron Caplan, chairman/CEO of Las Vegas-based **Air Nevada (2)** closes down his

mainland operation in January **1998** and moves it to Hawaii, where it is renamed. Beginning in February, both scheduled and charter services to points on the Big Island as well as to other destinations throughout the island chain are offered.

Employing a fleet of 5 Cessna 402Cs and 1 C-172, scheduled roundtrip revenue flights are launched and continued. Daily flights include Kahului to Kamuela, Kalaupapa, and Hana, and Honolulu to Kamuela; twice-daily flights are offered from Molokai to Kalaupapa and Hana, and from Honolulu to Malaupapa. Thrice-daily flights include Kahului to Honolulu and Honolulu to Hana; four-times-per-day service is offered from Kahului to Molokai and Honolulu to Molokai. In addition, charters are flown to Hana, Maui and Kalaupapa, as are Big Island Volcano air tours.

On September 30, a homepage is opened on the Internet's World Wide Web.

Customer booking for the year skyrocket 149.3% to 17,000.

Flights continue in **1999**. Passenger boardings increase to 24,000.

A total of 52 workers are employed at the beginning of **2000**, a 116.7% increase over the previous 12 months. During the first quarter, a new color scheme is applied to the company's Cessna 402s.

PACIFICA AIR, LTD.: New Zealand (1992-1993). Pacifica is established at Lyttelton in **1992** to offer regional flights with 2 Piper PA-31-350 Navajo Chieftains and 1 Fairchild Metro II.

Anita Gardner is general manager and operations continue for a year.

PACIFICAIR. See **PACIFIC AIRWAYS CORPORATION**

PAFCO. See **PRIORITY AIR FREIGHT COMPANY**

PAGAS AIRLINES (PORT AUGUSTA AIR SERVICES [PTY.], LTD.): Australia (1967-1982). Registered at Adelaide in **1967** as Port Augusta Air Services (Pty.), Ltd., this carrier initially operates lightplane charter services. During the **1970s**, the company is reorganized and a new airline division is formed under the operating name PAGAS Airlines. An extensive system of scheduled stops is built up throughout South Australia and Queensland, including Adelaide, Andamooka, Broken Hill, Hawker, Innaminchka, Kingscote, Leigh Creek, Mount Gunson, Oodnadatta, Penneshaw, Port Augusta, and Port Pirie.

At the end of the decade, the fleet comprises 2 Embraer EMB-110 Bandeirantes and 3 Aero Commander 500s. In **1982**, the carrier is renamed **Trans Regional Airlines (Pty.), Ltd.**

PAI (PANAMA AIR INTERNATIONAL, S.A.): Panama (1991-1993). After purchasing the assets of **Air Panama International, S.A.** from the Panamanian government, PAI is formed at Tocumen International Airport in Panama on November 6, **1991**. Local Coca-Cola bottling plant owner J. J. Vallarino 3rd is chairman, with former **Southwest Airlines (2)** founder, board member, and President Rollin W. King as president/CEO.

The company's operating certificate is received on February 11, **1992**. Employing a Boeing 727-81C first flown by Japan's **All Nippon Airways Company, Ltd.**, **Air Panama International, S.A.** routes to Bogota, Caracas, Guayaquil, Havana, Lima, Los Angeles, Mexico City, Miami, New York, Buenos Aires, and Rio de Janeiro are maintained or added.

Unable to achieve viability, the company shuts down in **1993**.

PAISA (PANAMENA DE AVIACION INTERNACIONAL, S.A.): Panama (1967-1969). Formed at Panama City on the spring of **1967** as an affiliate of **VIASA (Venezolana Internacional de Aviacion, S.A.)**, PAISA begins scheduled service with a DC-9-51 leased from VIASA on May 3, **1967**.

Over the next year, a route network is built up including stops at Caracas, Maracaibo, and San Jose, Costa Rica. Unable to sustain its operations, the company stops flying in the fall of **1969**.

PAK-AIR, LTD.: Pakistan (1948–1949). The Haroon family forms Pak-Air, Ltd. in 1948 to operate Douglas DC-3 scheduled services between Karachi and Lahore and Delhi. Hussain Malik is named managing director and a management contract is signed with the American supplemental carrier **Trans-Ocean Air Lines (TAL)** to provide for aircraft, flight crew, training, and maintenance.

Employing its Douglas aircraft and a Curtiss C-46 Commando supplied via TAL, the company competes with government-favored **Orient Airways, Ltd.** over a route from Karachi to Lahore and Delhi. It also transports Indian and Pakistani citizens being repatriated following the subcontinent's division.

Following the spring 1949 rejection of its advice in a copilot flying-status dispute, TAL cancels its management contract. Shortly thereafter, while en route Calcutta–Karachi, a Pak-Air Douglas transport crashes into a mountaintop (25 dead); as a result of the tragedy, the company is forced to cease operations in November.

PAK WEST AIRLINES. See **SIERRA WEST AIRLINES (2)**

PAKISTAN INTERNATIONAL AIRLINES CORPORATION (PIA): PIA Building, Quaid-e-Azam International Airport, Karachi, 75200, Pakistan; Phone 92 (21) 457-2011; Fax 92 (21) 772-7727; <http://www.piac.com>; Code PK; Year Founded 1951. PIA is established as a Ministry of Defence department on May 25, 1951 and orders are placed for three Lockheed L-1049Cs. The first tentative schedules are worked out for when it begins services at an unknown future date.

On October 1, 1953, privately owned and financially strapped **Orient Airways, Ltd.** is purchased by the government and merged with the paper PIA; Orient continues to operate under its own identity.

The three L-1049Cs are delivered in the spring of 1954, with the first aircraft registered on April 24. PIA, still operating under the Defence Ministry, launches nonstop Karachi to Dacca “inter-wing” service on June 7, replacing the **Orient Airways, Ltd.** Convair CV-240 operation. CV-240 flights from Karachi to Bombay begin on December 13.

Enplanements for the three Lockheeds for the half-year through December are 9,758.

Weekly L-1049C service from Karachi to Cairo and on to London opens on February 1, 1955. On March 11, PIA is formally established as a civilian airline by act of Parliament; shareholding is divided between the government (60%) and private interests (40%). Zafarul Ahsan is appointed managing director and the assets of the Ministry of Defence and **Orient Airways, Ltd.** are merged. The fleet includes the Super Constellations, 2 Convair CV-440s, and 11 Douglas DC-3s. In the merger process, the company also takes over the de Havilland DH 89A Dragon Rapides and other limited assets of **Crescent Air Transport, Ltd.**, which had failed the previous December.

Orient Airways, Ltd.'s routes are now flown under PIA livery, as the independent ceases to exist. Nonstop Karachi to New Delhi CV-240 flights begin on March 15 with a newly delivered Convairliner. An agreement is now signed for technical assistance with **Pan American World Airways (1)**, which agrees to train crews, etc., under a \$3-million U.S. International Cooperation Administration contract similar to that which it holds with **Ariana Afghan Airlines Company, Ltd.**

The year's bookings are up to 84,508.

During 1956, DC-3s/CV-240s consolidate domestic and regional services and open a route to Chittagong and Cox's Bazaar. A fourth Convairliner is acquired and orders are placed for three Vickers Viscount 815s.

A DC-3 freighter with three crew crashes into Lash Golath Mountain in Pakistan on February 25; there are no survivors.

In October, Karachi to Dacca frequencies are increased to daily, while the routes from Dacca to Lahore and from Karachi to Bombay become twice weekly.

During the year, an engineering base takes shape and the first Super Constellation engine is overhauled at PIA's own shop. Extensive additional training programs are launched.

Enplanements are 133,071. It is reported that a small profit has been made; previously, the carrier has been running an annual loss in the area of Rs 10 million.

On July 1, 1957, a DC-3 with 4 crew and 20 passengers disappears on a Chittagong to Dacca flight; wreckage is found on Charlakhi Island in Bengal Bay on July 3 and two survivors are rescued.

Also during the month, two Lockheed L-1049H Super Constellations are ordered.

Customer bookings this year jump to 190,592.

The first L-1049H is placed in service on March 6, 1958 over the Karachi and Lahore to Dacca all-cargo and passenger route.

On May 15, in its initial climb away from Palam Airport at Delhi on a service to Karachi, Flight 205, a CV-240 with 6 crew and 32 passengers, unaccountably descends and strikes the ground; 21 aboard the aircraft are killed, as are 2 people on the ground.

Two additional V-815s are requested as bookings for the year swell to 206,918.

The Vickers Viscount 815 *City of Karachi* is placed in service on January 31, 1959 over the Karachi to New Delhi route. The same plane begins flying to Bombay on February 2 and to Lahore and Rawalpindi on February 6. A political scapegoat to the whims of new Pakistani dictator Ayub Khan, Managing Director Ahsan is forced to resign in March and is replaced by Air Commodore M. Nur Khan. When the second Viscount 815, *City of Dacca*, is received, it begins operations to Peshawar on April 15.

A Vickers Viscount 815 is wrecked in a bad landing at Rawalpindi on May 18; there are no fatalities. While on a training flight over Karachi on August 14, a Vickers Viscount 815 with three crew crashes while attempting to execute a go-around maneuver (two dead).

On October 2, an order is placed for five Fokker F.27-100s, as the fleet is left with only three turboprops. Boardings drop to 200,000.

On February 9, 1960, an agreement is signed with **Pan American World Airways (1)** for the trial lease of a Boeing 707-121, making PIA the first jet operator in Asia. The aircraft, *Clipper Viking*, begins weekly proving flights in partial PIA colors—actually, just a tail fin sticker—from Karachi to London on March 7. The first all-Pakistani crew pilots the Boeing to London on June 20 and on October 4 the trial lease becomes a regular charter and the aircraft now appears in full PIA livery for the first time.

Meanwhile, on April 17, Karachi to Lahore Viscount 815 service starts, the same day twice-daily Rawalpindi to Lahore DC-3 flights begin. The last L-1049C London service is flown on October 1.

Enplanements accelerate to 259,621.

The fleet at the beginning of 1961 comprises not only the leased B-707-121, but 3 Viscount 815s, 3 L-1049Cs, 2 L-1049Hs, 9 DC-3s, 4 F.27-100s, and 1 F.27-400. The entry of the Fokker Friendships into service in January allows the DC-3s to be placed on special “bush” operations in northern Kashmir. A special low-fare, no-frills DC-3 East Pakistan “airbus” service begins on March 25.

On May 5, the London B-707-121 route is extended to New York and transatlantic boardings total 8,000 for the year. Meanwhile, direct New York to Karachi mail flights begin on July 30. The company's first owned jetliner, a B-720-048B (B-720B), is delivered on December 29.

The B-707-121 lease is not renewed; rather, the fleet is upgraded in 1962 by the addition of three purchased Boeing jetliners and five DC-3s are retired. The new B-720-040B arrives at Karachi on January 2 after a record-breaking flight of 6 hr. 43 min. 51 sec. over 3,900 nm. from London. As the remaining units of the four-plane order are received, they join the first on flights from Karachi to London via Tehran, Geneva, and Frankfurt. Several also link east and west Pakistan.

A proving flight is made by a DC-3 from Rawalpindi to the far north-west mountain community of Chitral on February 18. Withdrawn from international schedules, the Super Constellations take over the country's major domestic routes during the year. *Clipper Viking* is returned to Pan Am on December 12.

North Atlantic boardings rise by 2,000.

Due to a lack of traffic, the New York service ends in late March 1963. The company signs a reciprocal services pact with **Aeroflot Soviet Airlines** on October 7. PIA is the first foreign airline to receive landing rights in Moscow and permission to continue flights through the U.S.S.R. to other countries. Employing Sikorsky S-61Ns, a 10-point helicopter commuter network is inaugurated in East Pakistan on November 25.

Enplanements systemwide for the year total 572,086.

Early in 1964, Viscount 815 service is inaugurated from Peshawar over the Khyber Pass to Kabul, while F.27-100s start flying from Lahore to Delhi. The first route from the West into the closed People's Republic of China is opened by PIA on April 29; a B720-040B service from Dacca to Shanghai via Canton is initiated. On May 10, the opening found to the Soviet Union the previous fall is consummated. PIA becomes the first foreign airline to operate to and beyond Moscow via a new B-720B route to London connecting through the Russian capital and Frankfurt.

The full 10-stop network of helicopter routes is finally opened in river-divided East Pakistan. A fourth B720-040B, two more F.27s, and three Hawker-Siddeley Tridents are ordered.

An F.27-200 with 4 crew and 22 passengers is destroyed as the result of a bad landing at Dacca on June 25; there are no fatalities.

The workforce is 8,524. Passenger boardings rise 25% to 762,782 and a 5th consecutive profit is shown on revenues of \$44.7 million.

The fleet in 1965 comprises 3 B720-040Bs, 3 DC-3s, five F.27s, 1 FH-227, 4 L-1049Cs, 3 Viscount 815s, and 3 S-61Ns. Air Vice Marshall Nur Khan, PIA's managing director, and Air Marshall Ashgar Khan, commander-in-chief of the Pakistan Air Force, swap positions on February 20. Nur Khan's last act before shifting offices is to order Hawker Siddeley HS Trident 1Es, overruling his technical experts who favored Boeing 727s.

On a March 26 domestic flight, a DC-3 with 4 crew and 22 passengers crashes near Lowari Pass (18 dead).

A large, modern, engine overhaul base is built at Karachi in the spring.

While on initial approach to Cairo from Dhahran on May 20, Flight 705, a B720-040B with 5 crew and 120 passengers crashes short of the runway (119 dead). This tragedy occurs just after the inauguration of service to Tehran, Cairo, and Dharain on the London route.

As the Indian and Pakistani military engage in armed conflict, the Indian government bars Pakistani flights over India and cancels PIA landing privileges on September 6. PIA halts services and sends its aircraft to temporary hubs at Tehran and Istanbul; the border struggle is brief and services from home soil are resumed before the end of December.

Meanwhile, in an unrelated incident, an F.27-200 freighter with four crew crashes near Naran, Pakistan, on October 8; there are no survivors.

Airline employment is now 8,528, cargo traffic is up 28%, and a total of 728,757 passengers are flown.

With the fighting over, PIA overflights of India for the Dacca to Lahore service are allowed to resume on February 9, 1966, while the old circular route from Karachi to Dacca via Colombo is replaced by a direct service over southern India. The first of four Hawker Siddeley HS Trident 1Es to be received during the year is delivered on March 1, followed by the second 18 days later. These enter service on routes from Karachi, Lahore, and Rawalpindi to Dacca, and later to Persian Gulf states, while two B-707-340Cs are delivered in July, followed by five more F.27s.

Following one each fatal operational and training accident, the S-61N East Pakistan helicopter service, too expensive to continue, is closed down. One Super Constellation, all three Viscount 815s, two DC-3s, and the last two S-61Ns are retired as orders are placed for three more Boeing 707-340Cs and three F.27s.

The three surviving Super Constellations launch night air coach services over domestic routes in early fall. Beginning November 1-2, flights to Paris, Istanbul, Baghdad, Kuwait, and Nairobi via Aden are offered, followed on November 10 by Bahrain, Doha, and Dubai.

During the year, an IBM 1401 computer is installed at PIA headquarters; it is the first computer in Pakistan. The PIA Air Academy is also launched.

Enplanements dip to 617,560.

The employee population stands at 11,324 in 1967. The Fokkers enter service and B-707-340C flights are inaugurated to Bangkok on April 1. Reciprocal service to Communist China is widened on April 22 and flights to India resume on October 25. In November, Dera Ismail Khan becomes an alternative stop on the Karachi to Rawalpindi route.

Passenger boardings jump 40% to pass the million-mark in annual boardings for the first time (1,029,226).

The total number of employees in 1968 is up to 12,663. Options are taken for two B-747-100s and a fourth B-707-340C is placed in service.

The DC-3s in East Pakistan are all replaced by June with Fokker Friendships. S. U. Durrani is appointed managing director; the carrier's management structure is now reorganized.

A new purchasing agency, the subsidiary Airline Agencies, Ltd., is created along with the subsidiary PIA Hotels, Ltd., which plans to build a dozen hotels in the country over the next two years.

When Capt. M. Saleghee refuses to depart Canton on September 25 with a B-707-340C he deems unsafe, it is delayed in the Chinese city for three days. On September 28, PIA dismisses the captain and a ground engineer, at which point the airline's other pilots go out on strike. The job action is resolved the next day when Saleghee is reinstated.

Cargo traffic grows 16.2% and passenger traffic rises 13.8% to 1,171,396. Total revenues earned are \$70.88 million.

Early in 1969, **Iran Air** and **THY Turkish Airlines** are joined in the study of a joint airline consortium, which is never completed. A fifth Trident 1E is placed in service. A STOL evaluation is undertaken to find an aircraft to replace or supplement the F.27s in East Pakistan. The Dacca to Bangkok route is extended to Manila and Tokyo on November 1.

An F.27-200 with 4 crew and 31 passengers crashes near Shemshernagar, Pakistan, on December 30 (7 dead).

Systemwide, the workforce totals 13,514 and enplanements are 1,291,950.

Employment grows 6.9% in 1970 to 14,738 and is 14th largest among all the world's airlines. The 5 Trident 1Es are sold to China and replaced by 3 B-707-373Cs purchased from **World Airways**, bringing the fleet total to 23 aircraft: 9 B-707s, 3 B-720Bs, 9 F.27s, and 2 DHC-6s, the latter Canadian aircraft placed in service in East Pakistan.

En route from Rawalpindi to Lahore on August 6, an F.27-200 with 4 crew and 26 passengers crashes 11 nm. SE of its point of origin in thunderstorms; there are no survivors.

The first international service to the new capital of Islamabad is flown by a PIA B-707-340C from Amsterdam.

Late in the year, Stratofreighter service is inaugurated to London.

Passenger boardings accelerate 4.3% to 1.35 million and freight is up 9.4%.

While attempting to land at Shamsheernagar in northeast Pakistan on January 1, 1971, an F.27 with 27 aboard crashes (6 dead). A closed circuit television system is installed at Karachi Airport.

The national unrest worsens throughout the next 11 months. December is a terrible month for Pakistan and the airline. On December 3, one J. Kay, brandishing a pistol, seizes a B-707-340C on the ground at Paris (ORY) with 21 aboard preparing to depart for Rome. Kay threatens to blow up the craft if it is now allowed to depart for Karachi with 20 tons of medical supplies for Bengali refugees, but is captured following a struggle with cockpit personnel. She will be placed on trial and receive a five-year prison sentence, later suspended.

The same day, war breaks out between Pakistan and India over East Pakistani political ambitions. A DHC-6-300 is destroyed during an Indian air raid on Dacca airfield on December 5.

A jetliner with 33 passengers disappears into the Himalayas five days later; the wreckage is found two days later and there are no survivors.

An F.27-200 with four crew en route from Karachi crashes near the Iranian border on December 12; there are no survivors. Three days later, a B-707-340C freighter with five crew crashes while on approach to Urumqi-Diwopu Airport in China, killing all aboard.

Anticipating better days, orders are placed for three DC-10-30s. The Indo-Pakistani conflict is over within two weeks of its start and East Pakistan is reconstituted into the independent nation of Bangladesh. Although the company stops flying into the east, it leaves its 2,500-man local workforce in place. With the two halves of Pakistan now permanently disassociated, PIA traffic demand is reduced by 50% or more.

As a result of the struggle, the carrier suffers a traffic decline to 1,035,623.

Efforts toward averting a potential catastrophe occupy the airline's management at the beginning of 1972. While every department seeks to renew itself, none is more innovative than marketing. In February, flights to Shanghai and Canton are rerouted from Karachi via Colombo. The company can point with pride to the resumption, in April, of services across the North Atlantic from London to New York.

Late in the year, Rafique Saigol becomes the first businessman to be appointed managing director. The imaginative Batik Route is inaugurated on November 3 from Karachi to Jakarta via Colombo, Kuala Lumpur, and Singapore.

Flight 631, an F.27-600 with 4 crew and 22 passengers crashes into the foothills of the Himalayas, near Jalkot, in bad weather on December 8; there are no survivors.

During the year, terminal facilities at the airports at Islamabad and Karachi are expanded.

The impact of the war with India and the creation of Bangladesh continue to cause severe traffic reversals as passenger boardings drop 21.2% to 854,475 and freight is off 6%.

The employee population in 1973 numbers 12,553. Among the tangible results of recovery from the war with India is the initiation of twice-weekly services from Karachi and Islamabad over the Himalayan Mountains to Peking on January 20; Canton service ends. An order is placed for two Douglas DC-10-30s in April. It will later be shown that the decision to take these aircraft comes as the result of illegal commissions.

An F.27-200 with 6 crew and 34 passengers strikes trees and crashes 800 m. short of the runway at Lyalpur on May 28; amazingly, there are no fatalities.

A management contract is signed with the Maltese government, a B720-040B is provided, and a 20% interest is taken in the new carrier **Air Malta Company, Ltd. (2)**. Senior PIA executive M. M. Salim is sent to the Mediterranean as head of the company team.

During the year, a long-term boom in the transport of Pakistani laborers to the Persian Gulf and Mideast region begins.

Cargo accelerates 5.3% and passenger boardings swell 23.2% to 1,052,713.

Air Marshal Nur Khan returns as chairman in early 1974 and Managing Director Saigol is succeeded by Enver Jamall. A bilateral agreement signed between Pakistan and North Korea provides rights for PIA to carry passengers to P'yongyang and beyond. Permission is also received to overfly that Communist land, making the carrier the first foreign operator to receive that right.

The first of two DC-10-30s to be received during the year is delivered on March 1. On April 4 it is placed on the North Atlantic route to New York, which is rerouted via Paris instead of London and is the subject of an operating rights dispute for some months. Meanwhile, two B720-040Bs are leased to **Air Malta Company, Ltd. (2)**. They are replaced by a B-720-047B (B-720B) purchased from **Western Airlines**.

During August, a number of Lockheed C-130 Hercules turboprops are leased from the Pakistani Air Force to operate the company's mountain services. Three more B-720-047Bs, originally flown by **Western Airlines** in the U.S., join the fleet that includes 6 B-707-340Cs, 1 B720-040B, and 6 F.27s. Five Twin Otters once used in East Pakistan and two Fokker Friendships are sold.

During the year, a new uniform for PIA flight attendants is introduced. A facility is established for testing CF6-50 jet engines and components of DC-10 aircraft.

Passenger boardings drop 24% to 918,443 and freight accelerates 8.4%. Airline employment is 12,930 and the net loss for the year is \$1 million.

The workforce is 13,022 in 1975. Five of the Stratoliners are leased out and a third DC-10-30 is delivered, allowing twice-weekly New York service, again via London. Orders are placed for two B-747-200s, an earlier order for Dash-100s having been cancelled due to the Bangladesh independence unrest.

A bomb rips apart a B-707-340C at Islamabad on July 6, a half-hour after the plane arrives from Karachi with 130 passengers; no one aboard is injured. A B-707-340C is sold to **Biman Bangladesh Airlines, Ltd.** on November 6.

Cargo soars 39% and passenger bookings jump 36% to 1,434,000.

Airline employment grows 5.3% in 1976 to 17,611. A fifth B-720-047B and a fourth DC-10-30 are added and two F.27s leased to **Libyan Arab Airlines** are returned. Two B-747-282Bs, the former *Luis de Camoes* and *Bartolomeu de Gusmao*, are leased from **TAP-Air Portugal, S.A.** on April 12 and 22, respectively, with an option to purchase. These enter service on May 5 on routes from Karachi and Rawalpindi to New York via London.

Under the leadership of Managing Director Jamall, a new air agreement is negotiated in July with **Indian Airlines Corporation** Managing Director Mehta and **Air India** Managing Director Appuswamy, acting on behalf of the Indian government. The arrangement allows service to be started from Karachi to Bombay, Delhi, and Dacca and from Lahore to Delhi.

During the year, a new corporate identity program is implemented.

Freight is up 16.5% and passenger enplanements climb 25% to 1,792,000.

Two more B-707-340Cs are acquired in 1977 and routes are opened to Amman and Djakarta. A strike by pilots and service personnel forces a suspension of services on April 20. Later, two PIA subsidiaries are established and registered in the UAE to promote and manage hotel projects.

Traffic rises to 2,115,516 passengers carried.

Dar Es Salaam and Kilimanjaro are added to the 36-stop international route network in 1978; an internal domestic network of 20 destinations is also maintained.

Armed with a grenade, Saeed Hussain takes over an F.27 with 42 passengers, including Chairman Nur Khan, at the airport at Islamabad on January 20 and demands a ransom of \$2 million. Chairman Khan attempts to overpower Khan, but the grenade goes off killing the airline boss. Hussain is beaten by his captives before he is dragged off the plane in critical condition. Hussain will be tried and given a death sentence.

Managing Director Jamall ascends to the chairmanship and \$167 million in orders are now placed for four Airbus Industrie A300B4-203s.

On March 2, a man tries to seize a B-747-282B with 357 passengers during a flight from Islamabad to Karachi. He is jumped by three passengers and a grenade goes off, tearing off the pirate's arm and wounding the three vigilantes. Tried for his crime, the perpetrator will be hanged in 1979.

On December 16, an F.27-200 with two crew crashes while engaged in stall testing at Karachi (one dead).

Passenger boardings jump 20% to 2,769,138 and freight grows 18.6%. Employment is up 11.2% to 21,604. Revenues of \$335 million are earned and expenses are \$308 million; the net profit skyrockets 75.5% to \$26 million.

An automated reservations system is placed in service in March 1979 and a \$25.7-million wide-body hanger is completed at Karachi. Domestic stations are cut over to an in-house computerized reservations system.

On July 26, the fleet is enlarged by the addition of a third B-747, a Dash-240B combi (BC), and a leased A300B2-103.

On November 25, the captain of Flight 840 en route from Jeddah to Karachi with 145 mostly Moslem passengers aboard, reports smoke in the cabin. The B-707-340C with 11 crew crashes into a rocky area 125 km. from its point of origin; there are no survivors.

Flights to Moscow largely cease following the Soviet invasion of Afghanistan. Pakistan refuses to recognize the Russian-installed government in Kabul and PIA stops flying to that country's airports.

Passenger bookings climb 7.8% to 2,886,748 and freight rises 10.6%. Revenues are \$412.7 million, expenses are \$382.2 million, and a record \$30.5-million profit is earned.

The workforce is increased by 8.9% in 1980 to 21,201. The carrier's 20% holding in **Air Malta, Ltd.** is sold to the Maltese government and M. M. Salim returns to assume the managing directorship.

On March 7, another B-747-240BC is delivered. The first three A300B4-203s arrive and are placed into service. Later, a new flight control system is opened at Karachi Airport.

After stowing away on a B-707-340C at London (LHR) on November 12, 14-year-old Mark Sherlock travels to Damascus unchallenged.

Passenger enplanements accelerate 9.4% to 3.01 million and freight moves ahead by 4.7% to 233.42 million FTKs.

The workforce in 1981 stands at 21,127, a 0.3% drop, and one DC-10-30 is leased out as the fourth A300B4-203 arrives. Two de Havilland Canada DHC-6s are purchased from the Canadian airline **Austin Airways, Ltd.**

A B-720-047B with 7 crew and 72 passengers, is damaged beyond repair as the result of a bad landing at Quetta on January 8; there are no fatalities. A Karachi Airport hangar fire on February 2 destroys a DC-10-30.

On March 2, armed political dissidents take over Flight 326, a B-720-047B with 159 persons en route from Karachi to Peshawar and force it to fly to Kabul, Afghanistan. The release of relatives jailed in recent Karachi political disturbances is demanded and the plane sits on the ground as negotiations continue.

On March 5, hostage Tariq Rahim, a Pakistani diplomat, is murdered and thrown off the plane, but on March 7, four hostages are freed, including two American women, Deborah Weisner and Charlotte Hubbell.

The Boeing flies to Damascus on March 8, where new negotiations are started with Syrian and Pakistani officials. The next day, all of the captives are freed, but the hijackers threaten "extremely drastic measures" unless all of the demands are met. Still, on March 10, the pirates trim their demands, reducing the number of prisoners to be freed and extend their deadline in response to pleas from a Syrian official.

On March 12, after the hijackers set a new deadline and promise to kill three American hostages if it is not met, the Pakistani government agrees to release 55 political prisoners. The next day, Libya promises to receive the freed Pakistani prisoners.

On March 14, the hijackers surrender to Syrian authorities, who have promised them political asylum in exchange for an end to the 13-day ordeal. Ironically, upon the release of the hostages, it is found that one, American Craig Claymore, has been wanted by U.S. authorities since February 20 as the alleged leader of a heroin-smuggling ring; another, Lawrence Gordon Lome, is identified by Canadian authorities as an escaped convict, missing for five years. Both will be extradited.

An F.27-600 with three crew on a training flight crashes at Gilgit on June 5 while practicing touch-and-go landings; there are no fatalities.

Pakistani military authorities arrest union officials and raid airport offices in an August 17 crackdown that is officially designed to save the airline from bankruptcy.

Later, a duty free shopping complex is set up at Karachi Airport. During the year, hijacker Saeed Hussain, convicted of the January 1978 piracy in which Chairman Khan died, exhausts his appeals and is hanged.

Chairman/CEO Jamall retires at the end of the year; he will publish his recollections in a limited edition 20 years later as *I Remember: A Mosaic of My Memories of Civil Aviation on the Subcontinent, 1939 to 1981* (London, Eng.: Private print, 1990).

Passenger boardings rise 5.9% to 3,143,122, but cargo dips 3.5% to 244.18 million FTKs. Still, the picture grows dark: payroll can only be met by taking high interest, short-term loans and rising fuel bills are illegally paid with money from pension funds.

The military government of President Zia intervenes at the beginning of 1982 to save the carrier from possible bankruptcy. Secretary General

of Defense M. Rahim Khan is appointed chairman and Air Marshal Wigar Azim becomes managing director.

Severe cost-cutting measures are undertaken, including reductions in personnel (down to 20,813) and a ban on union activities. Government approval is given for the purchase of a DC-10-30 and an A300B4-203, plus improved computerization of the reservations system.

Freight drops 9.1% to 266.14 million FTKs; however, passenger boardings, reacting to improved service standards, rise 8.1% to 3,256,000.

The workforce is reduced another 9.1% in 1983 to 19,420. Computer automation of the budget, finance, revenue, and other important areas is undertaken. Coach-class services between Lahore and Karachi and between Islamabad and Lahore are introduced.

Cargo grows 3.1% this year to 229.38 million FTKs and passenger bookings advance 6% to 3,462,192. On revenues of \$577.4 million, up 17.4%, a \$33-million operating profit is realized.

The employee population declines 0.3% in 1984 to 19,360. The fleet now comprises 7 B-707-340Cs, 4 B-747-240BCs, 4 DC-10-30s, 9 F.27s, 3 B-720-047Bs, and 5 A300B4-203s.

A third transatlantic flight is added in January, with service from New York (JFK) to Istanbul and Islamabad via Frankfurt. The DC-10-30/A300B4-203 option is changed in August to a \$157-million order for six B-737-340s.

Cargo soars 16.4% to 268.18 million FTKs and passenger boardings grow 5.5% to 3,659,360. A \$41.9-million operating profit is posted.

Airline employment is 19,122 in 1985. The first Asian Dash-300 customer, PIA receives the first of five ordered B-737-340s in July; the remaining four will be delivered by year's end. All but two B-707-340Cs are replaced as two A300B4-203s also join the fleet in summer, along with two DHC-6s that begin feeder operations from Islamabad-Lahore.

Four domestic destinations are added and additional Lahore-Jeddah service is provided. Copenhagen becomes a stop in Europe, Damascus is added as a new destination, Islamabad to Moscow to London service is reintroduced, all-cargo service begins to Zurich, and a fourth Karachi to New York frequency commences.

Late in the year, four B-747-217Bs are acquired from CP Air in exchange for four DC-10-30s, with the first Jumbojet arriving at Karachi on December 18.

During the year, new flight attendant uniforms are introduced, along with the first automated ticketing facility.

Passenger boardings accelerate 5.3% to 3,846,000 and freight is up 16.1% to 314.28 million FTKs. Revenues are \$601.35 million and expenses are \$550.11 million, allowing an operating profit of \$51.24 million.

The payroll grows 6.2% in 1986 to 20,300. With the arrival of the sixth B-737-340 early in the year, the last B-720-047B is retired. The government now requires a significant increase in the airline's domestic regional and feeder operations. Air Marshal M. A. Daudpota becomes managing director in April and the second Canadian Jumbojet arrives on May 8. In July, PIA Holdings, Ltd. is established for the purpose of managing the carrier's subsidiaries.

In August, a business-class service, called Sohni, is introduced on all B-747-240BC/-217B frequencies, including that started to Manila and Tokyo by the third B-747-217B, following its arrival on September 25.

While on initial approach to Peshawar on the night of October 23, an F.27-600 with 5 crew and 49 passengers, drops below minimum altitude and hits the edge of a ditch 10 km. S of its destination. The turboprop breaks up, coming to rest upside down (13 dead).

Late in the year, a 10% domestic fare increase is permitted and on November 6 the last B-747-217B is delivered from Vancouver.

Customer bookings accelerate 3.3% to 4,154,257 and cargo climbs 3.5% to 320.55 million FTKs. Revenues reach \$607.6 million and despite a loss of \$18.5 million on domestic services, an overall \$35.3-million gain is generated.

The workforce is cut 2.8% in 1987 to 18,910; however, the modernization of the jet fleet is completed. One Stratoliner is hush-kitted in the fall and begins all-cargo services to Europe and the U.S.

During the year, a flight kitchen is inaugurated at Islamabad and flights begin to Toronto.

Revenue passenger kilometers flown advance 3.9% to 7.3 billion while freight climbs 3.3% to 322.9 million FTKs. Revenues rise 6.2% to \$636 million, but fast-growing costs whittle down the operating income to \$40.8 million.

The fleet in 1988 includes 6 B-707s, 8 B-747-200s, (including 4 acquired from **CPAair** in exchange for 4 DC-10-30s), 11 F.27s, 8 A300B4-203s, 6 B-737-340s, and 2 Twin Otters.

The DHC-6s begin flying to Muzaffarabad and Rawalakot. Later, one is converted for use by the government as a VIP aircraft. Two provincial government officials traveling on Flight 320, an A300B4-203 with 156 passengers en route from Karachi to Quetta on March 12, subdue a man who has shot an airline guard during his hijacking attempt.

En route from Karachi to Quetta on March 29, a B-707 with 143 passengers is captured by a lone assailant demanding to be flown to India. The perpetrator is overpowered by crew members, restraining him until the aircraft reaches its scheduled destination.

Passenger boardings, which are once again reported, jump 9.7% to 4,881,160 while cargo accelerates by 19.4% to 393.03 million FTKs. Revenues climb 11.7% to \$652 million and grant a \$39.91-million operating profit. A net profit of \$23.8 million is also generated.

In 1989, the 19,350-employee corporation withdraws 1 B-707-340C and adds 3 more Friendships, purchased from **Rio Sul (Empresa Rio-Sul Servicos Aereos Regionais, S.A.)** of Brazil. In April, a contract is signed with **Zambia Airways Corporation** to provide the African carrier with assistance in the areas of data processing, computerization, accounting, engineering, and flight operations.

Beginning in May, PIA introduces the first direct Hadj flights from Lahore to Jeddah. As of June 30, the company has an authorized share capital of \$236.4 million, of which \$129.7 million is issued, subscribed, and paid.

One of the new Fokkers with 5 crew and 49 passengers departs Gilgit on August 25 on a service to Islamabad, but crashes in the Himalayan Mountains near Bunji; there are no survivors.

With the improvement of Lahore Airport, Jumbojet flights to London from that destination are now inaugurated, with Toronto also joining the route network. Additionally, the carrier's terminal facilities at New York (JFK) are completely renovated, with special attention shown to first-class and business-class lounges.

During the year, two women pilots are hired.

Customer bookings bounce upward by 2.4% to 5,008,971 while cargo moves ahead by 7.7% to 418.66 million FTKs. Revenues increase 11.4% to \$657.54 million, expenses are up 10.9% to \$611.72 million, and operating income is \$45.81 million. Net gain inches up to \$25.4 million.

Company employment grows 3.1% in 1990 to 19,950, 25th highest among all the airlines of the world. Upon the retirement of Chairman Daudpota, PAF Air Marshal Farooq F. Khan is named to the vacant post, with longtime official Arif Ali Khan Abbasi as managing director. The fleet now includes 8 A300B4-203s, 1 each B-707-351B and B-707-323C, 2 B-707-340Cs, 1 B-707-373C, 6 B-737-340s, 4 B-747-217Bs, 2 each B-747-282Bs, B-747-240B/Cs, and DHC-6-300s, 13 F.27-200s, and 1 F.27-400. Orders are outstanding for 3 A310-308s.

Frequencies on the New York route become daily and additional markets are added at Hong Kong and Jakarta. Additionally, flights begin from Peshawar to Jeddah via Lahore and directly from Lahore to Bangkok.

In July, a joint marketing agreement is signed with **Air Lanka, Ltd.** which provides for revenue pooling on routes from Colombo to Karachi, Karachi to Bombay, and Male to Colombo.

Enplanements through November total 4,761,198 and 386.68 million FTKs are flown. Income exceeds expenses and there are profits: \$27.9 million (operating) and \$13.4 million (net).

No personnel changes are made in 1991, while the first A310-308 is received in June. Peshawar is added as the fourth Hadj departure point,

while agreements are signed to link PIA's reservations with SABRE, Galileo, and Amadeus.

Passenger boardings for the whole year dip 2% to 5,033,000, while freight falls 10.6% to 378.38 million FTKs. Although revenues ascend 10.3% to \$738.8 million, expenses are more and as a result, the operating loss is \$4.8 million. There is a \$13.7-million net loss.

The employee population is increased by 5% in 1992 to 20,950.

In compliance with the United Nation's air embargo of Libya, PIA, on April 15 announces the suspension of its weekly service to Tripoli.

A company employee expresses hope on April 28 that the company will soon be able to resume flights to Kabul, suspended 13 years earlier. Pakistan, a backer of the mujahedeen who have taken over the Afghanistan government, had not recognized the ousted government of President Najibullah.

PIA, in May, becomes the first airline to fly to Tashkent in the new state of Uzbekistan; the weekly roundtrip flight from Islamabad provides access to the famous historical cities of Samarkand and Bukhara. Two Ilyushin Il-86s are wet-leased from **Uzbekistan Airways** and are employed to carry Hadj pilgrims between May 7 and July 15. Direct flights between Islamabad and Singapore and between Lahore and Kuwait are introduced, as are services to Zurich and Sharjah.

On August 3, the government announces a policy of domestic regulation; although private airlines will be allowed to compete on local services, PIA retains its status as single overseas flag carrier.

While en route from Karachi to Kathmandu, Nepal, on September 28, Flight 268, an A300B4-203 with 12 crew and 155 passengers, crashes into a cloud-shrouded mountain at the 7,300-ft. level; there are no survivors.

Customer bookings increase 11.8% to 5,918,000 while cargo swells 7.3% to 406.19 million FTKs. Revenues move to \$880.4 million and expenses are \$839.5 million. As a result, the operating surplus is \$40.9 million and net gain of \$40 million is banked.

No changes are made in 1993 to the workforce of Chairman Anwar Zahid and Managing Director/Air Vice Marshal Farooq Umar. Over the past several years, the fleet has been increased by the addition of two A300B4-203s leased from **Air France** and two A310-308s. Jakarta, Johannesburg, Baku, and Alma Ata join a route network that now includes, in addition to 35 domestic stops, services to Abu Dhabi, Amman, Amsterdam, Athens, Baghdad, Bahrain, Bangkok, Beijing, Bombay, Cairo, Colombo, Copenhagen, Damascus, Delhi, Dhaka, Dharan, Doha, Dubai, Frankfurt, Istanbul, Kathmandu, Kuala Lumpur, Kuwait, London, Male, Manila, Manchester, Moscow, Muscat, Nairobi, New York, Paris, Rome, Sana'a, Sharjah, Tashkent, Tehran, Tokyo, Toronto, Tripoli, Riyadh, Singapore, and Zurich.

In May, the first Hadj flights are flown from Sukkur and Multan. The last two B-707-373Cs are withdrawn in December.

Passenger boardings slip 3.3% to 5,725,466 while freight is off slightly, 0.9%, to 409.82 million FTKs. Profits are \$22.9 million (operating) and \$25.6 million (net), the latter earned largely through the disposition of A300B4-203s.

The employee population is reduced by 0.7% in 1994 to 20,800, even though new services are added to Al-Ain, Ashkabad, Baku, Ras al-Khaimah, and Fujairah. *Air Safari* flights begin to northern Pakistan, taking tourists to visit mountain spots. Plans are made to initiate new services in the coming year to Beirut, Johannesburg, and Hong Kong.

While on final approach to Dera Ismail Khan following a July 6 service from Islamabad, Flight 684, an F.27-200 with 4 crew and 38 passengers suffers engine problems. Losing height rapidly, the crew must choose between landing in a river and landing in a rice paddy. The latter is chosen and the turboprop, after touching down, slides 300 m. into a tree. Although the aircraft is damaged beyond repair, there are no fatalities.

Service to Ras al-Khaimah in the UAE begins in September, the sixth Mideast destination. In November, the government allows the carrier to increase its fares; price rises will continue to rise on a regular basis.

Passenger boardings dip 0.2% to 5,713,054, but freight grows by 8% to 442.43 million FTKs. Revenues fall 4.6% to \$770.07 million and although the operating profit is up to \$29.9 million, net gain drops to \$4.5 million.

There is no change in the workforce during 1995. An A310-308 resumes weekly services for the carrier between Karachi and Beirut on January 26; PIA is the 26th foreign carrier to return to Lebanon since the end of its civil war.

New services to South Africa and Hong Kong also commence. The Air Safari flights prove so popular that a B-737-33A is dedicated to the service, which, due to the number of Japanese passengers, has doubled the load factor on the Islamabad-Tokyo route.

Helicopter services in support of tourism are introduced from Islamabad, Abbottabad, Lahore, and Sialkot. The company's homepage on the World Wide Web is opened.

Flight 722, a B-747-240 with 15 crew and 240 passengers suffers an uncontained engine failure after takeoff from New York (JFK) on December 7; the aircraft safely returns and no injuries are reported.

Customer bookings decline by 6.3% to 5,354,809 while cargo inches up 0.6% to 445.04 million FTKs. There are profits: \$39 million (operating) and \$10 million (net).

Airline employment is boosted 6.9% in 1996 to 21,707 and the fleet now operates 47 aircraft. M. Nawaz Tiwana is named managing director. The government of Prime Minister Benazir Bhutto is toppled during November.

On December 8, the company's A310-308s launch new twice-weekly flights via Frankfurt to New York and Washington, D.C. This routing is followed on December 12 with twice-weekly B-747-217B or B-747-282B frequencies via Amsterdam to New York and Chicago. Yangon also joins the regional route network.

Passenger boardings shoot up 6% to 5,677,398 and 423.42 million FTKs are operated, a 4.9% drop. Revenues are also off, by 3.5%, to \$788 million, but costs also fall, declining 3.3% to \$752 million. Operating gain declines \$3 million from the previous year, while the net profit is down \$4 million.

The workforce is cut 3.4% in 1997 to 5,223. B-747-240B/Cs replace the earlier passenger-configured Jumbojets on the Chicago route on January 15.

Nawaz Sharif becomes Prime Minister in February; the new national leader is reportedly in favor of the airline's independence. On March 20, a \$1.2-billion fleet enhancement plan is announced that has as its goal the replacement of 21 of the carrier's 46 aircraft over the next 3 years. A plan for capitalization and financial restructuring of the flag carrier is also unveiled.

At the beginning of the second quarter, the airline lays off 1,400 of 2,000 "unqualified" workers given positions during the regime of former Prime Minister Bhutto. Many of those laid off appeal to the courts and are reinstated. Due to a 4-hr. boarding card mix-up, Prime Minister Sharif is unable to take a flight from Islamabad to Karachi that he had booked during the month. Bumped to a later Karachi flight, the angry leader ensures that additional positions are vacated.

Parliamentary Secretary Syed Zafar Ali Shah informs the National Assembly on May 14 that previous recommendations to privatize the airline or acquire new aircraft will not be implemented. Meanwhile, Managing Director Tiwana recommends that the airline board be restructured in order to eliminate government functionaries and patronage appointments. In mid-month, Shahid Khaqan Abbasi, an experienced engineering and five-term member of the National Assembly, is named chairman. He succeeds Defense Secretary Hasan Raza Pasha.

In late spring, much of the management structure is altered. While also serving as Minister of State and the Prime Minister's aviation advisor, Chairman Abbasi holds a press conference on June 4 to announce that "the era of political pressures and bribery" is over at the carrier. He notes that the government has granted the corporation's board full autonomy to end political patronage and to operate the airline "on purely commercial lines." Abbasi also concedes that the U.S. service is unprofitable.

On July 6, Yangon becomes a twice-weekly stop on the carrier's A300B4-203 service from Karachi to Bangkok. Unprofitable services to Athens, Washington, D.C., and Chicago are withdrawn in July.

Also during the month, the financially strapped carrier, having put up its spare parts inventory and common stock as collateral, receives short-term loans of \$25 million and Rs 2.3 billion from The National Bank of Pakistan and Habib Bank, Ltd., respectively. The funds will be employed to meet the carrier's most urgent billing in both foreign and local currency.

On September 12, it is announced that the company has put off a decision on a multimillion-dollar wide-bodied aircraft to replace its aging Boeings.

A310-308 service is resumed from Washington, D.C. (IAD) to Frankfurt and Pakistan on October 26. Flights depart from Washington, D.C. (IAD) on Tuesdays and Fridays, with the former continuing to Lahore and Karachi and the latter going by way of Islamabad to Karachi.

Frequencies to Johannesburg commence in late fall.

Customer bookings ascend 3.1% to 5,830,212 while freight inches up 0.7% to 426.2 million FTKs. Revenues total \$817 million, but expenses reach \$936.7 million. Consequently, there is a \$119.7-million operating loss and an equal net loss.

Airline employment stands at 18,034 in 1998. The fleet, 93.8% of which is Stage III-certified, includes 32 airplanes: 2 B-707Fs, 10 A300s, 8 B-747-200s, and 6 each B-737s and A310s. A second weekly B-737-340 service is opened between Pasni and Sharjah Pasni at the end of March, along with new twice-weekly A300 frequencies from Quetta to Peshawar.

Following India's explosion of several test atomic bombs during the spring, there is growing public reaction throughout the subcontinent. Having arrived from Turbat and Gwadar after dark on May 25, an F-27-200 with 29 passengers, is hijacked on the ground at Hyderabad Airport by three Baluchistan students who believe they are still in India.

These members of the Baluchistan Students Federation undertake negotiations with an official they believe to be Pakistan's ambassador to India, demanding an end to Pakistan's plans to test its own A-weapons in their home region. Just before dawn on May 26, the Fokker is stormed by government commandos, who free all aboard and arrest the students.

The three skyjackers and an airport security official who had conspired to allow them to board the Fokker with weapons, are tried by a special antiterrorism court in Hyderabad. On August 20, all are sentenced to hang within a week.

On June 1, PIA withdraws its first-class facilities on international flights. From this point on, all international flights are operated with business- and economy-class seating only. Also on June 1, Rangoon flights are added on alternate Thursdays.

Passenger boardings drop 9.5% to 4.65 million, even as cargo traffic climbs 17.1% to \$327.72 million FTKs. An Rs 2.16-billion operating profit is posted for the year (\$46.83 million).

It is announced on February 4, 1999 that the company's last two Stratofreighters, the B-707-323C and B-707-340C, are being withdrawn from the fleet and will be sold by March 1. It anticipates their replacement with two new freighters.

Discussions opened earlier with Korean Airlines/Korean Air (KAL) concerning the possible acquisition by PIA of two B-747-3B5Bs ends at mid-month. KAL wishes to sell the aircraft while the Pakistan line wishes only to lease.

Chairman Abbasi informs Reuters, Ltd. on February 25 that PIA will decide within the next six to eight weeks on what type of long-haul aircraft to purchase as a replacement for its aging passenger fleet. The choice will be made from among the Airbus A340-300, A330-300, and A330-200 versus the Boeing 777-200 or B-747-400. Abbasi also goes on to say that six of the current B-747-200s will be phased out and sold and will be replaced with B-747-300s leased from either Singapore Airlines, Ltd. or Cathay Pacific Airways (Pty.), Ltd. Talks are now underway with both carriers.

A new station is opened at Shannon, Ireland, on March 1; the Irish airport will serve as a technical transit stop for company flights en route

from Karachi to the U.S. and Canada. Upwards of 72 crew will be based at Limerick; the new enterprise will pump £1.5 million in revenues into the local economy via hotel bills, with another £1 million in airport handling fees. Irish residents are almost as excited to learn that Saleem Sherwani, a double Olympian and double World Cup gold medalist who is one of Pakistan's greatest hockey players, is PIA's new Shannon station manager.

It is announced on March 5 that all six B-747-367s owned by Cathay Pacific will be chartered. *The Irish Times* reports that the first two passenger flights into Shannon arrive on March 17, St. Patrick's Day; one is routed out to Washington, D.C. (IAD) and Toronto and the other to New York (JFK).

During the first quarter, a five-year contract is signed with **Transaer International, Ltd.** Under its terms, the company will wet-lease four A300B4-203s from the Irish carrier to assist in the annual Hadj pilgrimage program.

The Cathay Pacific Jumbojets are introduced, beginning on May 1, on revenue flights to the U.K. and Saudi Arabia (frequencies to Saudi Arabia are enhanced from 21 to 23 every week). All appear in the company's new livery, which includes an all-white fuselage, larger titles in green, and an ethnic-patterned tail reminiscent of those of **Aeromexico (2) (Aerovias de Mexico, S.A. de C.V.)**. Indeed, so pleased are company officials with the new tail design that it will be ordered applied to existing fleet aircraft, some of which will not otherwise be repainted.

Also on May 1, direct flights begin to Dubai from Faisalabad and Multan. Simultaneously, regular shuttle flights every three hours in each direction are introduced between Karachi and Islamabad and Karachi and Lahore. Tokyo (NRT) terminator flights are made one-stop (Manila), while return frequencies to Amman, Istanbul, and Tehran become twice weekly.

Despite the Kargil border conflict, ongoing since May, air travel between India and Pakistan remains unaffected. As late as July 15, it is noted by *The Times of India* that PIA continues to operate five-times-a-week A300B4-203 service between Karachi and Bombay. Indeed, since May, traffic on the route has increased.

As related in a sensational trial the following February, the routine October 12 service from Colombo, Sri Lanka, to Karachi nearly ends in disaster. Just as pilot Capt. Syed Sarwat Hussein is lifting his A300B4 into the air on its homeward flight, Pakistani Prime Minister Nawaz Sharif, in a continuing national political feud, fires Army chief Gen. Pervez Musharraf, one of the 190 other passengers aboard. As the Airbus approaches Karachi, Sharif allegedly orders that it not be allowed to land. Running out of fuel, Hussein is forced to locate an alternate landing field and determines that he can reach the south Pakistan city of Nawabshah. While into his descend, Hussein receives word that that airport is also closed to him (although he is able to learn that it was not closed to other traffic). An ATC message is now received warning that the jetliner must fly to another country, as it does not have permission to land anywhere in Pakistan. Continuing on toward Nawabshah, the pilot radios back that, if he is not permitted to land, the aircraft will run out of fuel and crash, killing all aboard. As the aircraft flies on toward its potential fiery end, the Pakistani military takes over the Karachi Airport and the ATC and orders Hussein to return. The A300 lands with minutes of fuel remaining.

Passenger boardings this year fall 4.2% to 5,029,000, while cargo drops 11.2% to 315.61 million FTKs. The previous year's operating loss is turned into a \$9.63-million operating gain.

Airline employment at the beginning of 2000 stands at 17,836, a 1.1% decline over the previous 12 months. The B-747 fleet now includes 2 each Dash-282Bs and Dash-240Bs, 4 Dash-217Bs, and 5 Dash-367s.

The trial of Nawaz Sharif, since deposed as prime minister, opens at Karachi at the end of January. The Pakistani Army publicly charges him with giving the orders barring Gen. Musharraf's plane from landing the previous October and endangering the lives of all aboard. The charge, which Sharif denies, carries the most severe penalty if proven. Among more than 50 witnesses called to testify against the former government

leader—and by far the most damning—is PIA pilot Hussein, captain of the endangered Airbus.

To coincide with the beginning of the summer schedule at the end of March, the company changes the colors of its aircraft tail fins from "flowery" green to solid green.

Twice-weekly B-747-367 return flights begin on April 16 from Karachi to Birmingham, England, via Copenhagen. Simultaneously, five-times-a-week roundtrips are launched from Manchester, England, to New York (JFK), employing B-747-367s on two services and B-747-240Cs on the other three.

Twice-weekly A310-308 roundtrips are begun on May 23 from Karachi to Hong Kong and are flown via either Lahore or Islamabad and Bangkok.

Suspended for two years, twice-weekly B-707-320C roundtrip all-cargo service is resumed on June 25 between Karachi and London.

On June 27, the media reports that PIA will be discharging 900 employees due to "inefficiency and corruption." The news causes much consternation among the carrier's staff, leading Managing Director Sher Afgan Malik to offer a reassurance on July 1 that no jobs would be lost.

Talks designed by the Pakistan Airline Pilots Association to regain certain free travel facilities withdrawn from its members on September 6 are held with the airline's top executives on September 7. When these prove fruitless, the carrier's flyers commence a three-day "go-slow" campaign, which has an impact on PIA's domestic and international schedules.

Over the Boston region on September 13, Flight 722, a B-747-367 with 120 passengers en route from New York (JFK) to Karachi via Manchester is forced to return to its point of origin after New York police receive a telephone call stating three bombs are aboard the plane. A thorough search of the plane and passengers' luggage finds no bomb and the Jumbojet is allowed to depart after a five-hour delay. Most surmise that the reason for the hoax is that Pakistan's military ruler, Gen. Musharraf, who had come to the UN to attend the Millennium summit, is a passenger.

While on descent into Lahore on an October 8 service from Bhawalpur, the crew of Flight 604, an F.27-200, are distressed to learn that the rear wheels of the turboprop will not deploy. The aircraft circles the airport for 35 minutes attempting to lower them; failing, they execute a forced landing during which the wing is badly damaged. No injuries are reported.

Flights on the unprofitable routes to Amman, Male, Tehran, Cairo, Damascus, Baku, Zurich, and Nairobi are cut on October 29 in favor of expanded frequencies to the Gulf States and the U.K.

In one of a number of high-profile prosecutions brought under the anticorruption campaign of Gen. Musharraf, Air Marshal Waqar Azeem (Ret.), PIA's former managing director and three of his brothers are found guilty of corruption by the Accountability Court in Rawalpindi on November 12. Azeem receives a \$30,000 fine and is sentenced to seven years in prison; his brothers each receive four years. The air marshal's wife, who has also been tired, is acquitted.

When a new highway between Islamabad and Faisalabad is opened on November 18, the PIA air link between the two cities is discontinued.

When ailing former Prime Minister Nawaz Sharif is pardoned by Pakistan's military government from the life prison term imposed upon him for hijacking and terrorism, he is required to go into exile. When it is made known that a PIA aircraft will not be available for an exile flight, a **Saudi Arabian Airlines B-777-268** transports Sharif and members of his family from an air base near Islamabad to Jeddah on December 9. Sharif receives an official welcome upon his arrival, a move considered something of a slap by his former captors.

PALAIR MACEDONIAN AIR LINES, A.D.: Macedonia (1991–1996). Established at Skopje in 1991, Palair is organized to fly regional services into southern Europe over routes the grounded **JAT Yugoslav Airlines** is forced to discontinue. President Bitoljana Vanja's fleet comprises 4 Antonov An-24s and 1 Tupolev Tu-154B-2 leased from supporting **Balkan Bulgarian Airlines**.

Two Fokker 100s arrive in **1992**, along with two more Tu-154B-2s, as nonscheduled charter routes to Western Europe are maintained, particularly for migrant workers from Turkey and the former Yugoslav federation.

Operations continue in **1993** under Serbian control. Just after takeoff from Skopje in a snowstorm on March 5 on a service to Zurich, Flight 301, a Fokker 100 with 5 crew and 92 passengers loses roll controllability due to ice on its wings. The aircraft smashes into the ground 382 m. past the end of the runway, where it breaks into 3 pieces (83 dead).

The jetliner is replaced by two F.28 Fellowships, a Dash-1000 and Dash-4000, leased from **TAT European Airlines, S.A.** In July, orders are placed for five more Fokker 100s, the first two of which are delivered beginning on October 1.

Destinations visited in **1994** include Amsterdam, Berlin, Brussels, Dusseldorf, Frankfurt, Munich, Paris, Salzburg, Vienna, and Zurich. Three more Fokker 100s arrive and an order is placed for a Boeing 737-500.

Flights continue in **1995**, although the Boeing order is cancelled. Destinations visited include Geneva, Hamburg, Istanbul, Moscow, Rome, and Stuttgart. Flights are suspended in late December.

On February 15, **1996**, President Clinton lifts the sanctions placed on **JAT Yugoslav Airlines** by the U.S. five years earlier. By May, JAT is operating to all 32 of its 1990 European destinations, although with fewer frequencies.

With the major flag carrier permitted to step up its resumption of services, the political need for Palair disappears. Yugoslavia now withdraws Palair's financial base, causing it to stop flying. The bright red aircraft are returned to their owners and company headquarters are shut down. Palair remains registered with IATA until **1998**.

PALESTINE AIR TRANSPORT, LTD.: Palestine (1934–1941). On December 18, **1934**, With funds from Jewish and British sources and an affiliation with **Imperial Airways, Ltd.**, Pinchas Ruttenberg forms the first purely commercial airline in the British Mandate. Two Short S.16 Scions are acquired and on March 20, **1937**, the company is renamed Palestine Air Transport, Ltd. With an Imperial Airways crew at the controls, a Scion inaugurates thrice-weekly scheduled service from Lydda to Haifa.

When Dov Field north of Tel Aviv is opened in **1938**, company headquarters are transferred from Lydda. The following year, **1939**, PAT purchases a de Havilland DH 89A Dragon Rapide and a Short S.22 Scion Senior. A frequency is opened that year to Larnaca and charter flights are made to Egypt. All operations cease in June **1941**.

PALESTINE AIRWAYS, LTD. See **PALESTINE AIR TRANSPORT, LTD.**

PALESTINIAN AIRLINES: P.O. Box 4043, Gaza, Palestine; Phone 972 5 034 3603; Fax 972 7 821 309; <http://www.palestinianair.com>; Code PF; Year Founded 1996. Having been created by the Palestinian government in July 1994, this new carrier is physically established at Gaza in late **1996** in accordance with agreements reached in talks between Palestinian and Israeli negotiators. A pair of Boeing 727-100s and two Fokker 50s are acquired by Palestinian Civil Aviation Authority Director Fayed Zaidan, who is also the carrier's chairman, as a gift from The Netherlands and plans are made to inaugurate scheduled services from a new airport at Rafah in southern Gaza.

For security reasons, Israel refuses to allow the company to commence operations from Gaza. Consequently, the carrier launches operations from Port Said, Egypt, in January **1997**. The initial services, operated with the Fokker 50s, are chartered pilgrim flights to Jeddah.

The premier pilgrim flight, on January 25, is delayed for two days by bureaucratic wrangling over procurement of the proper Saudi landing permits. Then, on the day of takeoff, the service is held back for three hours because of fog. The first of 24 Hadj flights between Port Said and Jeddah commence on March 1.

Having been put off, the inauguration of scheduled services is finally announced for June 1, with a flight from Amman, Jordan, to El Arish, Egypt. Unhappily, this start-up is also delayed.

A month later, on July 23, twice-weekly Fokker 50 return revenue frequencies are finally initiated over a network from El Arish to Amman and the Gulf States. Delayed by technical difficulties, the inaugural flight, with 35 passengers, arrives 3 hours late.

By August 8, the company has operated 24 Hadj services to Jeddah. In total, \$386,000 is generated, leaving the company with a large deficit.

Flights continue during the remainder of the year and in **1998**. On November 24, the new Gaza facility at Dahaniyeh, Yasser Arafat International Airport, is finally opened. Commercial aircraft and airline representatives from Jordan, Egypt, Spain, Austria, Morocco, Israel, and other nations participate in ceremonies marking the occasion. The emotional highlight of the day is the arrival from Egypt of the first PA Fokker 50, which is met by President Arafat himself.

The carrier transfers its operations to the new Gaza facility on November 27. Revenue flights commence on December 1 with daily return services to Cairo, Amman, and Jeddah. Another ribbon-cutting ceremony for the new airport is attended by U.S. President Clinton on December 14.

The company completes its first Hadj pilgrim flight to Jeddah, Saudi Arabia, on February 25, **1999**. A contract is signed with Canada's Bombardier Aerospace in March for two each DHC-8-Q300s and CRJ200LR regional jets.

With Palestinian Aviation Authority Director/Chairman Zaidan as passenger, a B-727-100 flies from Gaza to Abu Dhabi on April 10. The first commercial service to a Gulf Arab state is followed on April 16 with scheduled twice-weekly return flights to Dubai.

On April 20, it is announced that Palestinian Airlines will begin flying during the summer to Istanbul, Larnaca, and Tripoli. Regularly scheduled twice-weekly frequencies to Abu Dhabi commence on May 13.

The Bombardier order is confirmed on June 27. The turboprops are expected by July **2000** and the Canadairs by the second quarter of **2001**.

With the objective of assuming a larger role in the regional air transport picture, Palestinian, during the summer, concludes commercial agreements with **Royal Air Maroc, EgyptAir, S.A.E., Royal Jordanian Airlines, Qatar Airways, TunisAir, Yemen Airways, and Tarom Romanian Airlines, S.A.**

A total of 376 workers are employed by the airline at the beginning of 2000.

A commercial arrangement is inked with **Alitalia, S.p.A.** on January 6; plans are made for joint operation of a route from Gaza to Rome. A week later, Chairman Capt. Zeidan announces that the airline is seeking a financier from the private sector to help it begin the privatization process.

During the spring, plans are announced for the acquisition of three Boeing 737-300s; orders for two each Dash-8 turboprops and Canadair CRJ200LRs also remain outstanding. In May, the carrier's chairman travels to Seattle for discussions with Boeing. The company joins IATA on May 23.

Twice-weekly B-727-230A return service from Gaza to Istanbul begins on June 1. The first of two DHC-8-Q311s is delivered on July 21 and is christened *Hebron*.

The political disturbances in the West Bank of Palestine causes the Israelis to close Gaza Airport on October 8. Consequently, the airline is grounded. The airport is reopened on October 19 and Palestinian is able to get flights away to Cairo and Amman. Flights from the facility are irregular thereafter through the end of the year. The two delivered DHC-8-Q311s are placed in storage in Austria while the unaccepted CRJ200LRs remain in Canada.

PALM AIR CHARTER: 2432 Winchester Road, Hangar 15, Memphis International Airport, Memphis, Tennessee, 38116, United States; Phone (901) 398-6900; Fax (901) 398-6860; Year Founded 1997. PAC is set up at Memphis in **1997** to offer worldwide passenger charters. With a workforce of 6 full-time and 57 part-time staff, the FAR

Part 135 operator inaugurates revenue services with a fleet of 1 each Cessna 650 Citation III, Learjet 35A, and Beech King Air 100.

PALM SPRINGS AIRLINES: United States (1936–1937). Palm Springs is organized at Los Angeles in the fall of 1936 to offer unsubsidized passenger flights to the resort community of Palm Springs. Revenue flights commence in December; however, traffic is insufficient to justify operations beyond July 1937.

PALMAIR FLIGHTLINE, LTD. See FLIGHTLINE, LTD.

PALMAS AIR CORPORATION: United States (1975–1977). Palmas Air Corporation, based at Santurce, Puerto Rico, establishes a scheduled air taxi division in 1975. Employing a Britten-Norman BN-2 Islander, daily roundtrips are duly inaugurated from San Juan to Humacao and are maintained for two years.

PAN AERO INTERNATIONAL: United States (1981–1984). Established at Tampa, Florida, in 1981 as **Aero Exchange**, this all-cargo charter operator is renamed Pan Aero International shortly thereafter. A Boeing 707-321C freighter is acquired and employed to undertake freight charter and contract service flights along the U.S. East Coast.

In 1984, the enterprise, while seeking additional authority, is renamed **Florida West Airlines**.

PAN AFRICAN AIRLINES, LTD.: PMB 21054, Ikeja, Nigeria; Phone 234 (1) 496-3607; Fax 235 (1) 496-3972; Year Founded 1961. In 1961, PAA is set up at Ikeja, with minority ownership held by Miami-based Africair (Dispatch Services, Inc.), to operate domestic and regional international charter and contract service flights, as well aircraft maintenance. B. J. Finan is managing director and he is allowed to recruit a workforce that will reach 110 within 7 years.

Much of the flight activity is undertaken in support of the nation's oil industry. Flights commence with Cessna lightplanes and Bell 47G helicopters.

The fleet is significantly increased during 1962 when two Curtiss C-46 Commandos and a Douglas DC-4 are placed into service.

Another C-46 will be operated during 1964–1966. During these years, the fleet grows to include 1 DC-6A (which replaces the DC-4) and C-46s, plus 4 Beech 18s, 3 Cessna 206s, 2 each C-185s and C-310s, 1C-150, 1 Grumman G-73 Widgeon, and 5 Bell Model 47 helicopters.

During the civil unrest of 1967, the company's aircraft are called upon to airlift refugees out of the eastern part of the country.

Arriving at Port Harcourt on the night of September 28, 1968, a C-54B with 2 crew and 55 passengers, plus a cargo of munitions, strikes a tree and crashes into a village; all aboard are killed as is 1 person on the ground.

A DC-4 is destroyed during a rocket attack on Port Harcourt on May 24, 1969. A second DC-4 is also destroyed on the ground at Port Harcourt on November 10, this one as the result of a Biafran air raid.

Service continues during the 1970s. As the company comes to more and more to rely upon helicopters for the accomplishment of its energy industry support mission, most of the heavy aircraft will be withdrawn in the early 1980s.

By 1985, the fleet includes 4 Cessna 402s, 2 C-404s, 7 Bell 206B JetRangers, 4 Bell 206L LongRangers, and 3 Bell 47Gs.

A decade later in 1995–2000, Chairman Chief Chris Ogunbanjo and Managing Director S. Ravai continue to operate domestic flights with 150 employees and a mixed fleet. Equipment now includes 6 JetRangers, 5 LongRangers, 1 Cessna 425, and 2 Cessna 208 Caravan Is.

PAN AIR LINEAS AEREAS, S.A.: Jose Silva 9, Madrid, E-28043, Spain; Phone 34 (1) 519-6342; Fax 34 (1) 416-7208; Code PV; Year Founded 1988. Pan Air is formed at Madrid in summer 1988 to offer all-cargo charter and contract service flights to destinations in Eu-

rope, the Mideast, and North Africa. Ownership is divided between Spanish private interests and **TNT International Aviation Services** (25%), with Nicholas Valero named as director general. A fleet is assembled comprising 2 British Aerospace BAe 146-200QTs and 1 Fokker F.27-600QC. Flights are undertaken on behalf of TNT beginning in December.

In 1991, the Fokker is replaced by a 146-300QT and the TNT stake is increased (to 49%). Director General Valero is named president in 1992 and is succeeded as managing director by David Robinson. Airline employment in 1993 stands at 73 and in 1994 the TNT-dedicated fleet includes 4 BAe 146-200QTs and 1 BAe 146-300QT.

During the first quarter of 1995, A. Paulkner, S.A., a Madrid-based travel industry concern (78%) joins with the Melillian Council (2%) and private investors (20%) to set up a passenger and charter operation, **PauknAir, S.A.**, based at Melilla Airport. Pan Air employs a pair of newly acquired BAe 146-100QCs to inaugurate services on behalf of PauknAir during the third quarter to the holiday destinations of Almeria, Malaga, and Milan.

Flights continue in 1996–1997. Destinations visited include Almeria, Barcelona, Madrid, Malaga, Melilla, Valencia, and Zaragoza. A total of 248,778 passengers are flown during the latter year.

While on final approach to Melilla Airport following a September 25, 1998, service from Pablo Picasso Airport at Malaga, a **PauknAir, S.A.** BAe 146-100QC with 4 crew and 34 passengers, crashes into mountainous terrain near Cap des Trois Fourches, about 5 mi. N of its destination; there are no survivors.

The company's principals decide to exit the passenger airline business and the service from Malaga to Melilla is turned over to **British World Airlines, Ltd.**

Nightly cargo and express flights throughout Europe and North Africa continue to be offered on behalf of **TNT Express Worldwide** during 1999. Another BAe 146-200 QT enters service during May.

A total of 160 workers are employed at the beginning of 2000 to operate and coordinate the BAe 146-300QT and seven BAe 146-200QTs chartered from TNT. All are repainted during the year in TNT's new color scheme. An Airbus Industrie A300B4-103F is also operated in TNT livery.

In late December, the company's aircraft begin flying a new route from Liege to Pescara via Bologna on behalf of TNT.

PAN AM (PAN AMERICAN AIRWAYS): Pease International Tradeport, 14 Aviation Avenue, Portsmouth, New Hampshire 03801, United States; Phone (603) 436-1626; Fax (603) 436-1198; <http://www.flypanam.com>; Code PN; Year Founded 1998. Unable to maintain economic viability, **Pan American World Airways (2)** declares bankruptcy on February 26, 1998. A desperate effort is made to secure additional financing and to prepare a reorganization plan acceptable to the carrier's creditors, as well as the U.S. Bankruptcy Court for the Southern District of Florida (Miami), Judge A. Jay Cristol presiding. Chairman Charles Cobb and President/CEO David A. Banmiller both resign before the end of April, leaving the carrier in the hands of new General Manager Robert Mencil, former operations director at **Carnival Air Lines**.

During the last week of April, Timothy Mellon, of the famous Pittsburgh family and himself a pilot, and David Fink, principal owners of New England-based Guilford Transport Industries, which operates 3 railroads and 1,600 miles of freight lines in the Northeast, offer \$24.5 million for PAWA-2's remaining assets. It also agrees to provide the airline with \$5 million to fund creation of a reorganization plan that will be submitted to the U.S. Bankruptcy Court, Southern District of Florida, on May 20.

With 125 employees, Pan Am continues to operate charters to Aruba and Mexico from Fort Lauderdale with two chartered B-727-200As and a B-737-200. Meanwhile, lead bankruptcy counsel John Kozyak contacts all voting classes of the airline's creditors, each of whom overwhelming votes approval of the new plan.

Having been duly submitted to Judge Cristol on May 20, the reorganization plan is taken under study for a month. On the afternoon of Monday, June 29, the judge, having heard from all the parties and wishing to keep the Pan Am name flying, confirms the plan. Under its terms, Guilford, in return for its investment, will acquire the three aircraft, a stock of spare parts, route authorities, and intellectual property associated with the Pan Am name. Optimists suggest that this will be the last time PAA-2 will return to bankruptcy court and that it will soon be flying scheduled services again.

Indeed, plans are made to launch limited scheduled flights from Orlando to the northeast and Puerto Rico but, by June 10, two days before launch date, the necessary paperwork required by the DOT had yet to be filed. Needless to say, these flights are delayed.

David Fink becomes president on July 1. Instead of becoming the third Pan American World Airways, the airline is renamed Pan Am (Pan American Airways). Having now emerged from bankruptcy, the company continues to offer charter flights, both passenger and freight, throughout the summer and into the fall. The B-737-200 is sold and replaced with another B-727-200A; ancillary maintenance inventories are also sold. Orders are placed for four more used B-727-200As.

On October 1, a fourth B-727-200 is placed into service. In November and into December, Pan Am, using its own capital (i.e., that of Guilford Transportation Industries) renovates a 200,000-sq.-ft. hangar at Pease International Tradeport, the former Pease AFB at Portsmouth, New Hampshire. On December 17, it is announced that this new facility will become headquarters for the airline, which by now has also added the four other Boeing trijets. In making this statement, President Fink notes that Guilford's railroad and real estate businesses will also be moved to the Tradeport from Nashua, New Hampshire.

Enplanements during the 12 months total 19,000. Revenues plunge 65.9% to \$46.75 million, while expenses drop 68.1%, but still total \$66.89 million. The operating loss falls to \$20.14 million and the net loss "improves" to \$20.39 million.

At the beginning of 1999, Pan Am acquires a pair of CASA C-212-Aviocars that will be employed to shuttle spare parts and other supplies back and forth between Nashua and the airline's operating base at Miami. Painted in full Pan Am colors and titles and christened as *Clipper Casablanca* and *Clipper Casanova*, the two operate under the historic secondary title of **Boston-Maine Airways (2)**.

Beginning with the B-727-225A *Clipper A. Jay Cristol*, five of the seven Boeings (two each Dash-225As, Dash-221As, and 2J0As), all retrofitted to meet Stage III noise regulations, have been christened. The other names are *Clipper Omagh*, *Clipper Deschapeller*, *Clipper Pathfinder*; and, in honor of president Fink's first flight instructor, *Clipper Walt Helmer*. Together, these ships offer 65 weekly charters to vacation destinations.

At the beginning of March, the fiscally troubled discount operator **Kiwi International Air Lines**, owned by Dr. Charles Edwards and based at Newark, undertakes discussions with Guilford Transportation owners Timothy Mellon and David Fink, PAA-2 owners, concerning a rescue arrangement. Pan Am has wet-leased replacement aircraft to Kiwi since February.

Just 58-years-old, company founder Martin R. Shugrue Jr. dies at home in Houston on March 7. Depressed over the failure of his efforts with Pan Am, he will miss seeing, by just three months, the carrier's return to the sky.

Kiwi Holdings, which has a 15% stake in the company, is reorganized on March 15. New officers and offices are selected and, as Kiwi's financial picture continues to darken, the pursuit of a bailout is intensified.

On the morning of March 23, Secretary Rodney Slater holds a press conference to announce possible DOT actions concerning Kiwi. The government, according to Slater, has taken the unusual step of trying to ground the discount carrier, filing a show-cause order that claims Kiwi lacks the financial stability—and management sufficiently competent—to operate the airline safely. Unless Kiwi can successfully respond with

a new management plan, it's operating certificate may be withdrawn within three weeks.

In a separate announcement, the FAA reports that for the last several months it has been operating stepped-up surveillance and monitoring of the airline, in light of the situation with its finances and high-ranking personnel. The agency maintains that it has determined that Kiwi may be able to operate safely despite its financial problems, but that the agency will need to continue to devote significantly more resources than it possesses in any monitoring effort.

Kiwi is not caught unaware by Slater's announcement in Washington, D.C. Later in the day, having completed fiscal arrangements, Kiwi files for Chapter XI bankruptcy protection, owing \$750,000 in airport fees. Simultaneously, Kiwi names consultant Gillespie president and receives \$3 million in debtor-in-financing from Guilford Transportation. A hearing in bankruptcy court on the Pan Am arrangement will be held on March 29.

Guilford indicates that it is seeking a stronger scheduled division to complement Pan Am's charter operations. As soon as the bankruptcy court sets a price, Guilford will purchase Kiwi's assets. Meanwhile, the airline named for the wingless bird will maintain its current six-city schedule, charter Pan Am aircraft, and continue its upgraded service to Puerto Rico.

Citing safety concerns at bankrupt Kiwi, the FAA grounds the once-innovative discount carrier on March 24. Of particular concern are aircraft in less-than-airworthy condition and failure by the company to perform adequate maintenance on its four B-737s. Kiwi is given 10 days to appeal the ruling, but if it loses, the airline is informed that it will have to reapply for FAA certification. That process, if restarted, will be lengthy, requiring at least several months.

The shutdown comes as a surprise and strands thousands of travelers who have booked tickets for spring break, Easter, and Passover. It also throws 450 of the company's 500 employees out of work.

On March 25, Kiwi and FAA officials meet for two hours at New York (JFK) with executives of the former attempting to convince the FAA to reverse its grounding order. Kiwi indicates that the expected Pan Am money and seven wet-leased aircraft will satisfy agency demands, as well as those of the DOT expressed earlier in the week.

When the regulators refuse to relent, Kiwi appeals the FAA decision to the NTSB, which must rule within 60 days of its receipt of the FAA response. The board cannot rule until the FAA counters Kiwi's appeal. A spokesman for Guilford Industries owner Mellon in Connecticut indicates that Pan Am's ownership is waiting to see what happens next and will then determine whether or not to proceed with the takeover.

Continental Airlines offers to honor some Kiwi tickets on a standby basis and to provide reduced-rate tickets to other Kiwi passengers. **American Trans Air** and **Midway Airlines (2)** come forward with similar proposals.

On March 26, Kiwi President Gillespie informs reporters that the proposed arrangement under which Kiwi is to be purchased by Pan Am will fail if the FAA revokes his airline's operating license. "Without a valid, even severely restricted Air Carrier Certificate," Gillespie reports, "Kiwi has no hope of completing the Pan Am or any other transaction."

Pan Am legal representative Jack Sherwood agrees, informing Gillespie and the press that he will withdraw the Guilford Transportation offer of support on Monday when representatives of the two companies appear before U.S. Bankruptcy Court Judge Rosemary Gambardella in Newark. Sherwood indicates that the original Pan Am offer had been made on the assumption that Kiwi could continue operations, an assumption the FAA grounding ruins. In short, there is nothing to finance unless the airline is able to get up and running again. If it can, Pan Am may reconsider the financing proposal.

Kiwi Chairman Edwards, contacted by the news media, indicates that he is not surprised by the Pan Am development. If, however, the airline is able to win reinstatement and Pan Am chooses not to participate, three other investors have been found who are each willing to invest several millions of dollars. No one, however, is interested in financing a

grounded airline. Not only do all of its employees stand to lose their jobs, Edwards notes, but he will personally be out \$21 million as well.

Late in the day, Kiwi President Gillespie again urges the FAA to reconsider, this time requesting permission to fly only one of the company's three working jetliners outfitted with safety personnel, and that only after FAA-supervised pre-and post-flight inspections. Again, the FAA rejects the petition.

Louis Lavelle, a staff writer for the Bergen County (N.J.) *Record*, reviews the situation in the March 27 issue of his newspaper. All of the analysts contacted in conjunction with the preparation of the article suggest that it is unlikely that any investors will step forward, even if the FAA revocation order is lifted.

On March 29, Judge Gambardella holds off appointing a bankruptcy trustee until April 1, giving Kiwi three days to get the grounding order lifted. Pan Am General Counsel John Naldolny indicates that, should the order be reversed, "we certainly stand ready to assist them." An FAA spokesman contacted during the day indicates that the revocation edict still stands.

In early April, Kiwi is able to convince the FAA to modify its order from revocation to suspension. Work begins on regaining certification. Meanwhile, Pan Am seeks to obtain the scheduled certificate of **Nations Air Express**, another small Eastern carrier that had declared bankruptcy the previous October and is preparing to file its reorganization papers with the U.S. courts.

The documents are duly filed on April 19 and declare that a deal is in the works under which **Nations Air Express** will be rescued by a group of investors, led by David Fink and his Guilford Transportation Industries, which had rescued **Pan American World Airways (2)** the previous year.

Ten days later, Pan American announces plans to acquire Nations Air and use its aircraft to undertake its own forthcoming scheduled services. The arrangement is never consummated.

Having by now relocated several of its jetliners to Pease International Tradeport, Pan Am, on April 28, announces its first new services since its acquisition by Guilford Transportation Industries the previous June. In addition to five new frequencies, the company plans to add two more scheduled flights from Pease by year's end, possibly to Atlanta and Philadelphia.

Beginning on June 8, Pan Am inaugurates daily charters from Pease to Sanford, Florida (serving Orlando), with continuing service to San Juan. Flights from Sanford, Philadelphia, San Juan, and Aguadilla, Puerto Rico, are simultaneously initiated. DOT approval to resume scheduled passenger services is received on August 18; authority from the FAA is expected shortly.

After spending the summer vainly seeking a buyer for Kiwi, now devoid of market value, Kiwi bankruptcy trustee Charles Stanziale gives up on September 1; the next day, papers are filed with the U.S. Bankruptcy Court seeking to convert the carrier's Chapter XI status to Chapter VII, liquidation. **Nations Air Express**, another possible partner, will stop all activities within a month as well.

On September 2, Pan Am receives FAA approval to operate scheduled service for the first time under this reincarnation. In a special media event held at Pease International Tradeport on September 28, the carrier's newest remodeled B-727-200A is christened *Clipper Portsmouth* by former Portsmouth mayor Eileen Foley.

Fully-scheduled Clipper Class flights are resumed on October 7 with the inauguration of a daily B-727-200A route from Pease International Tradeport to Sanford. Daily (except Tuesdays) B-727-200A roundtrips commence on November 19 from Portsmouth, New Hampshire (serving Boston) to Gary, Indiana (serving Chicago) and Sanford, Florida (serving Orlando).

Enplanements for the year total 104,000.

Company officials arrive at Pittsburgh on January 18, 2000 aboard the *Clipper Portsmouth*. The Boeing is made available for public viewing at a news conference where new service for Portsmouth is announced. A special nonstop roundtrip charter is operated on January 25 from Man-

chester, New Hampshire, to Des Moines for media personnel, campaign professionals, and others involved in the Iowa presidential caucus. During January and February, a company B-727-200A is chartered as the presidential campaign aircraft of U.S. Senator John McCain.

In February, Pan Am purchases seven Stage 3 Heavy Weight Systems from Raisbeck Commercial Air Group, which will be installed on the carrier's B-727-200As at the manufacturer's Portsmouth facility at the rate of one per month through August. In reporting the story on March 13, *Aviation Week and Space Technology* reveals that these hush kits will cost Pan Am between \$695,000 each plus 30 installation man-hours to \$1,295,000 each plus 215 installation man-hours.

Scheduled daily return flights begin on March 1 from Bangor to Sanford via Portsmouth on March 1. Weekend B-727-200A charters for the Boston-based package tour operator TNT Vacations are inaugurated on March 4 from Portsmouth via Florida to either St. Kitts or St. Martin. Flights from Portsmouth to Pittsburgh commence on March 20, with flights to Gary, Indiana, serving Chicago.

Not originally scheduled to start for several weeks yet, the new daily B-727-200A return service from Pittsburgh to Sanford is actually introduced on March 27 in anticipation of a strike (which does not occur) at **USAirways**.

Nonstop B-727-200A roundtrips are started on May 1 from Bangor to Pittsburgh.

While en route from Sanford to Pittsburgh on July 28, Flight 164, a B-727-200A with 4 crew and 52 passengers, encounters severe turbulence 60 mi S of Columbia, South Carolina. The series of jolts knocks one flight attendant unconscious and 12 passengers are tossed about the cabin. The aircraft, which had dropped almost 1,000 ft., makes a successful emergency landing at Yeager International Airport, Charleston, South Carolina. Sixteen injured people (including one flight attendant and a seriously hurt passenger) are taken to local hospitals.

MidAmerica St. Louis Airport, 24-mi. E of St. Louis at Belleville/Mascoutah, Illinois, becomes a company destination on August 16 when the carrier's B-727-200As launch twice-daily return services to it from Gary, Indiana (serving Chicago), and daily roundtrips from Sanford, Florida (serving Orlando).

On August 19, one daily B-727-200A roundtrip is launched from MidAmerica St. Louis to Pittsburgh, with continuation to Portsmouth. (serving Boston). In September, the carrier petitions the DOT for authority to service Washington, D.C. (DCA) from several of the under-used airports it currently serves.

Daily B-727-200A daily return flights begin on November 13 from Allentown, Bethlehem, and Easton in the Lehigh Valley (serving Philadelphia) to MidAmerica St. Louis, Portsmouth (serving Boston), and Gary, Indiana (serving Chicago).

It is announced on December 5 that daily B-727-200A roundtrips will begin from LeHigh Valley (serving Philadelphia) to Sanford, Florida (serving Orlando) on January 8. On December 12, word is published that daily nonstop B-727-200A roundtrips will begin on February 1 between Worcester, Massachusetts, and Sanford, Florida (serving Orlando).

PAN AM AIR BRIDGE: United States (1996–1999). In early 1996, a number of investors become interested in a possible feeder link with the new **Pan American World Airways (2)**. Among the investors are Craig Robbins, Chuck Slagle, and Charles Cobb, who had purchased the rights to the original Pan Am name and logo. Calling themselves the Pan Am Air Bridge Partnership Group, they acquire **Chalk's International Airlines (1)** and transform it into Pan Am Air Bridge.

From its base at Fort Lauderdale, Florida, the company's 3 Grumman G-73 Turbo Mallards, repainted in new titles and livery, are ready to continue their provision of seaplane services and the Chalk's name is not immediately painted off the carrier's terminals. The Mallards are christened *Clipper Cuba Libre*, *Clipper Bahamas*, and *Clipper Key West*.

The first service, on March 1, is a charter from Watson Island (downtown Miami) to Key West and Fort Jefferson. It follows a celebratory 9 a.m. continental breakfast and press conference.

The next day, the *Clipper Cuba Libre* flies to the site of the previous week's tragic events off the coast of Cuba. Flowers of sympathy are scattered over the site in memory of several flyers for the "Brothers to the Rescue" exile organization shot down by Cuban military aircraft on February 24. Members of the public had been invited to bring a single flower or small bouquet to the company facility this Saturday morning and to record their names and messages in a logbook, which is given to the family of the slain flyers.

Regularly scheduled frequencies resume on April 26 from Fort Lauderdale to Watson Island, Bimini, and Paradise Island.

In the wake of the **Valujet Airlines** disaster in May, the U.S. DOT slows its approval of new airlines. On September 4, the new **Pan American World Airways (2)** is officially formed and takes a 30% interest in PAAB; it is certified by DOT and the FAA on September 18 to begin operations. When PAA-2 launches scheduled Airbus A300B4-203 service on September 26, it does so having borrowed PAAB's "OP" designator.

Enplanements total 43,636.

The "OP" designator is returned to PAAB by PAWA-2 on March 27, 1997, when the latter is able to take over the "PA" symbol of its historic predecessor, **Pan American World Airways (1)**.

At the end of the year, negotiations begin for the sale of the company and Air Alaska demonstrates interest. At the same time, a Turbo Mallard is painted in the white-and-yellow corporate colors of the Mexican beer *Corona*.

Customer bookings fall 17.7% to 35,925.

On February 2, 1998, Fort Worth, Texas-based Air Alaska, an aircraft leasing company, acquires the 70% controlling interest held by Air Bridge, Inc., whose principal shareholder is Mr. Robbins, president of Dacra Development Corporation, the Miami Beach real estate developer. As part of the \$10-million price, \$350,000 is designated to retire a note to **Pan American World Airways (2)** and, later, its parent, Pan Am Corporation, which maintains its one-third stake. The five Turbo Mallards are purchased and leased back to the carrier by its new owner. Air Bridge management remains in place.

Plans are announced by PAA-2 President David A. Banmiller and Air Alaska Chairman Patricia Long to strengthen and broaden the unique South Florida seaplane service. These hopes will survive even as Banmiller's airline fails and he withdraws on April 30 in favor general manager Robert Mencil.

Pan American World Airways (2) is purchased out of bankruptcy by Guilford Transportation Industries on June 29 and although its operations continue in Florida, its headquarters are moved to the Pease Tradeport at Nashua, New Hampshire, in December.

The relationship between the large carrier and the small is maintained, with Pan Am Air Bridge continuing to offer its Turbo Mallard flights into early 1999.

On Wednesday, February 10, 1999, **Pan Am Air Bridge** files for Chapter XII bankruptcy protection with the U.S. Bankruptcy Court at Dallas, Texas, and suspends service the next day. On February 12, the court reaches an agreement with **Gulfstream International Airlines** to resume service to Bimini on a temporary basis, effective February 26, as the historic carrier attempts to reorganize under the protection of the bankruptcy laws.

The U.S. Bankruptcy Court at Dallas, on February 24, requests that Gulfstream also continue to operate **Paradise Island Airways** as it, too, reorganizes under the protection of the bankruptcy laws.

GIA's President Cooper indicates that the historic airlines will be preserved and that they will resume 12 daily Grumman amphibian roundtrips on February 26 from Miami to Bimini and Paradise Island and from Fort Lauderdale to Bimini, Paradise Island, and Walker's Cay. While a final decision on the future of **Pan Am Air Bridge** is made, its planes, like those of **Paradise Islands Airways**, are repainted in the colors of **Chalk's International Airlines (2)**.

As **Chalk's International Airlines (2)**, PIA and PAAB continue and expand daily services as of February 26. In April, PIA is merged into Gulfstream International.

In August, the seaplane operation is purchased out of bankruptcy by south Florida businessman and former **Eastern Air Lines** pilot James Confalone for \$925,000. A holding company, Flying Boat, Inc., is established under Chairperson Patricia Long to provide management and recapitalization and William "Bill" Jones is named airline president. Reclaiming for the carrier the title of world's oldest continuously operated scheduled air carrier, Confalone renames the venture **Chalk's Ocean Airways** in honor of founder Arthur B. Chalk and financier Ocean Bank.

PAN AM EXPRESS: United States (1986-1991). Philadelphia-based **Ransome Airlines**, a **Delta Airlines** "Delta Connection" partner, is purchased by **Pan American World Airways (1)** in the spring of 1986 to feed the major's international services as the subsidiary **Pan Am Ransome Express**. John F. Leonard is appointed president. Revenue flights begin on June 1, employing a fleet of 8 de Havilland Canada DHC-7-102s and 4 Mohawk 298s. Delivery of 6 SAAB SF340s begins in August.

Enplanements for the year total 555,100, a decline of 8.9% in a year.

The fleet in 1987 is increased by the addition of two more DHC-7-102s. All of the Mohawks are sold as orders are placed for 12 Avions de Transport Regional ATR42-320s. On April 10, an SF340 must make an abrupt 60-degree turn and descend 3,000 feet to avoid hitting a USAF C-130 near McGuire AFB, New York; a passenger and a flight attendant are injured.

During the fourth quarter, a new **Pan Am Express of Berlin** is established to operate turboprop services from West Berlin's Tempelhof Airport to various European destinations.

Passenger boardings jump 37.3% to 761,954.

In January 1988, the first six ATR42-320s are delivered; half this number are sent to West Berlin to inaugurate the subsidiary's services. Late in the first quarter, service is started from New York (JFK) to the Ontario city of Hamilton.

Overall customer bookings accelerate by 22.8% to 936,070, including 88,621 flown in Germany.

The 412-employee, 2-continent feeder has an outstanding 1989. From a base at Los Angeles (LAX) on June 1, the company begins West Coast services. Dash-7 flights are inaugurated linking that base with San Diego and Santa Barbara.

Flying 8 ATR42-320s (6 in Germany) and 12 DHC-7-102s in the U.S., the large regional transports a total of 1,214,762 passengers for a 29.8% increase. These figures include an almost unbelievable 188.9% increase to 258,729 in Germany.

Although the employee population remains unchanged in 1990, the fleet is upgraded by the addition of 3 ATR42-320s and 10 British Aerospace BAe Jetstream 31s. Orders are placed for three ATR72-200s. In May, Pan Am Express inaugurates service to Miami, feeding the parent's new hub with the first five Jetstreams. Daily roundtrip flights also begin linking Miami with Fort Myers, Key West, Melbourne, and Sarasota/Bradenton.

Following Iraq's August invasion of Kuwait, difficulties of travel in the fourth period leaves the large regional with no growth. At this point, the California operation is shut down. Indeed, customer bookings decline a slight 0.1% to 1,213,286.

In March 1991, the company begins twice-daily Jetstream 31 services from Miami to Rock Sound/Governors Harbour and Eleuthera Island in the Bahamas. When the parent ceases trading in December, Pan Am Express is purchased by **Trans World Airlines (TWA)** to operate its feeder services in the colors of "TWExpress."

PAN AM EXPRESS OF BERLIN: United States (1986-1991). During the summer of 1987, Pan Am officials determine that most jetliners are largely unsuitable on the West Germany corridors leading to West Berlin's Tempelhof Airport. Facing stiff competition from **British Airways, Ltd. (2)**, they approach Knut Kramer, president of **Tempelhof Airways USA**, regarding a possible takeover of the small regional turboprop operator already based at the West Berlin facility.

Although 51% majority ownership is purchased, in November it is instead decided to allow **Pan Am Ransome Express** President Leonard to establish an overseas subsidiary operation, Pan Am Express of Berlin, which will operate under the same ex-**Ransome Airlines** certificate. Thirty-year **Pan American World Airways (1)** veteran Julius Succhi is sent out as general manager to establish the Berlin branch line, which will complement the major's services out of West Berlin's Tegel Airport.

Operations to Tempelhof commence in January 1988 with 3 Avions de Transport Regional ATR42-320s delivered from among the first 6 acquired by the parent at Philadelphia. They are employed to open routes from Stockholm, Oslo, Copenhagen, Sylt, Hamburg, Bremen, Hanover, Dortmund/Strasbourg, Basel/Mulhouse, Zurich, Innsbruck, and Salzburg. Every six months, one of the aircraft is returned to the Pennsylvania base for maintenance. Enplanements for the year total 88,621.

A fourth ATR42-320 arrives in May 1989. Passenger boardings skyrocket 188.9% to 258,729. Separate traffic figures are not revealed in 1990. Upon the failure of **Pan American World Airways (1)** in December 1991, assets of this operation are purchased by **Deutsche Lufthansa, A.G.**

PAN AMERICAN AIRWAYS (PAA): United States (1927-1950). John Hambleton, Cornelius Vanderbilt "C. V." Whitney, Anthony Fokker, and other friends, led and persuaded by Juan Terry Trippe, an ex-naval officer and pilot who has made a survey flight to Florida and across to Cuba, put up \$300,000 and form the Aviation Corporation of America (ACA) on June 2, 1927. Among those subscribing capitalization are William A. Rockefeller, Seymour H. Knox, Sherman Fairchild, Grover Loening, William H. Vanderbilt, W. Averill Harriman, Edward O. McDonnell, and John Hay Whitney.

The organization becomes one of three involved in an effort to establish international air service southward from Florida. After appointing Andre Priester, a Fokker associate, as chief of operations and engineering, Trippe and Hambleton persuade Cuban President Gerardo Machado to grant ACA a monopoly on landing rights to outside (i.e., U.S.) airlines.

Meanwhile, on the day of the New York City ticker-tape parade for returning transatlantic aviator Charles A. Lindbergh, Trippe, who has watched the event from the luxurious Union Club, finds a way into a private party at the Commodore Hotel honoring "The Lone Eagle." Meeting Lindbergh, the ex-naval flyer urges the young hero to hire a lawyer to sort through the flood of employment and endorsement offers he is receiving.

With the Cuban concession in hand, Trippe and his associates enter into discussions to convince the other two potential American entrants to join with them in forming a single infant flag line in which none of the parties would hold total control and all would share the risk. Thus, Atlantic, Gulf and Caribbean Airways of Reed Chambers and Richard Hoyt, would join with Richard Bevier and John K. Montgomery's Pan American Airways and Trippe's Southern Air Lines in backing Montgomery's carrier. The latter was originally formed by Army Air Corps officers Henry "Hap" Arnold and Carl Spaatz and has won Foreign Air Mail Route (FAM) No. 4 from Key West to Havana. Negotiations continue.

Meanwhile, the emerging new airline faces an immediate problem. According to the terms of the Pan American Airways airmail grant, it must demonstrate its ability to fly a regular schedule over a designated route by October 19. The route chosen is Key West to Havana and failure to make the flight will result in forfeiture of the company's \$25,000 deposit.

Key West businessman and civic leader Malcolm Meacham, owner of much of the north end of the island, leases airport space to Trippe for \$1 per year, but the inaugural aircraft, two Fokker F-VIIa/3ms ordered on August 19, cannot be delivered to Miami before the end of September. Even then, prepositioning to Key West may not be possible, as that city's Meacham Field is incomplete.

On October 13, the board of directors appropriates \$18,000 for a hangar and \$10,000 for runway construction; Key West native Floyd Walton is hired as the company's first mechanic. The two trimotors are delivered on September 30 and christened *General Machado* (named for Cuba's president) and *General New* (named for Harry New, U.S. Postmaster General).

At Key West, Pan American Airways representative J. E. Whitbeck learns on October 18 that a float-equipped Fairchild FC-2 belonging to **West Indian Aerial Express, S.A. (WIAX)**, en route from New York to Barahona in the Dominican Republic, has stopped at Miami to fix an oil leak. Whitbeck quickly asks the careful pilot, Cy Caldwell, if he will fly 7 sacks of Key West mail (13,000 letters), plus another 15,000 just in by train, to Havana under contract to Pan Am. Caldwell, who will have to stop at Havana en route to the Republic, agrees. He reaches Key West at dusk and accepts Whitbeck's payment of \$145.50.

At 8:05 a.m. on October 19, *La Nina*, piloted by Caldwell and carrying its 251-lb. Pan Am payload, departs Key West. One hour and 10 minutes later, she arrives at Havana. FAM-4 is at least temporarily secure and the prospects for Trippe's airline brighten greatly. Conversely, Caldwell inadvertently dooms his own employer to a future takeover.

During the next 10 days, the Meacham airfield becomes sufficiently serviceable to allow Pan Am's two Fokkers to fly in from Miami. Due to inclement weather, breakfast ceremonies marking the official inauguration of FAM-4 and the company's first regularly scheduled flight are held in a Key West hotel, La Concha. From the little one-hangar field on the island at the end of the Florida Keys, the inaugural Fokker, piloted by Hugh Wells with Edwin C. Musick as navigator and John Johansen as engineer, lifts off for Havana with 772 pounds of mail at 8:25 a.m. on October 28.

An hour and 20 minutes later, the Dutch-built aircraft lands at the Cuban capital, where it is met by President Gerardo Machado, who rechristens it *General Machado*. A foot of rain falls on Havana overnight delaying the Fokker's return; Musick and Wells change seats for the flight back to Key West on the morning of October 29. Landing at noon, the aircraft picks up another load and returns to Cuba before sundown.

With an eye toward the possibility of competition with **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)**, an expanding German-controlled airline based in Colombia, the paper **Sociedad Anonima Colombo-Americano de Aviacion, S.A.** is founded on November 27. A total of 19,496 pounds of U.S. and 877 pounds of Cuban mail are transported in November.

The first Sikorsky S-36 is delivered on December 7. Mail poundage rises to 26,513 U.S. and 1,492 Cuban in December. On December 31, the ledgers show income to date of \$29,575.49 and a net loss of \$1,712.57. For the year, Pan Am is first American airline to operate a permanent international air service, the first to operate landplanes over water on regularly scheduled flights, and the first to operate multiengine aircraft permanently in scheduled transportation.

Daily mail flights continue largely without incident throughout the fall and winter. In January 1928, Charles A. Lindbergh, remembering Juan Trippe's advice the previous summer, becomes the company's "technical advisor" for a modest \$10,000 annual retainer and stock options. On January 16, passenger services are inaugurated to and from Havana; the four intrepid travelers mark the true beginning of what will become the world's premier international passenger air transport system. Unsuccessful, the S-36 is returned to Sikorsky in February.

Robert H. Fatt becomes the third PAA pilot on May 21. After an F-VIIa/3m checkout ride and two roundtrips to Havana as Musick's copilot, Fatt is promoted to captain. On May 29, the FAM-4 mail contract, at \$2 per mile, is made permanent. After a year of talk, the parties involved in merger discussions finally reach closure. Two days later, on May 31, under terms of the Foreign Air Mail Act of March 8, FAM Routes Nos. 5 and 6 are advertised.

On June 4, Juan Trippe offers his only competitor for FAM-6, Roscoe Dunten, **West Indian Aerial Express, S.A. (WIAX)** operations director who is in New York seeking fiscal backing, 7,000 shares of PAA stock,

worth \$100,000, for his operation. Orders are placed for 12 Fokker F-10A trimotors on June 20.

On June 23, the Aviation Corporation of the Americas—a slight change of working title away from that of Trippe's original company—is incorporated under Delaware state law. Ownership is divided between the groups of Trippe/Hambleton/Whitney (40%), Chambers/Hoyt (40%) and Montgomery (20%). Four days later, the new holding company, with Richard Hoyt as chairman, purchases the airline, route, and equipment assets of the merger partners, accepts capitalization of \$500,000, and formerly establishes Pan American Airways (PAA) as its operating subsidiary.

Shareholding is increased, as aviation interests purchase many \$15 shares; share value will rise to \$89 at the time of the October stock market crash. During the Great Depression, when banks do not make loans and indeed, until a Lehmann Brothers stock underwriting in 1945, all but a few fees and fares of the airline's backing will be supplied by airmail subsidy, wealthy friends, and colleagues. Trippe and Lindbergh lobby new Postmaster General Walter Fogler Brown concerning the FAM routes.

On July 14, the Post Office grants PAA another pair of \$2-per-mile mail contracts (FAM-5 and FAM-6). Meanwhile, the two Fokker F-VIIa/3ms continue their daily flights to Havana. Due to the public's fear of flying, filling the eight seats on each flight is often difficult. At Miami, a company advertising campaign runs: "Fly with Us to Havana and You Can Bathe in Bacardi Rum Four Hours From Now!" Somewhat less interested in enticing the Prohibition-tired elite, air crews simply visit Cuban bars and dare American tourists to fly with them back to Florida.

Dunten and Trippe reopen merger discussions for **West Indian Aerial Express, S.A. (WIAX)** on August 7; the PAA CEO now offers 5,008 shares of company stock (worth \$75,120) for the Dominican carrier. On August 15, the *General Machado*, piloted by Robert Fatt, turns off course and becomes lost. The *General New*, sent to find her sister, can locate nothing. Having run out of gas, the *General Machado*, meanwhile, sets down in the Gulf of Mexico near the tanker *SS American Legionnaire* and sinks (one dead).

The firm of Doremus & Co. is hired to blunt adverse publicity and to provide the company with professional public relations. The fleet now comprises two Fairchild FC-2s and one Fokker F-VIIa/3m. The first Sikorsky S-38A is delivered on August 20; it costs \$31,500. An unnamed replacement F-VIIa/3m arrives on August 31, along with a Loening C-2 Air Yacht. A hurricane destroys the **West Indian Aerial Express, S.A. (WIAX)** headquarters at Santo Domingo on September 12 and grounds *La Nina*.

An operating terminus, as well as FAM-4, is moved from Key West to Miami on September 15, where mail can be sent to and received from the north via **Pitcairn Aviation's** mail service. Incidentally, the move also doubles the mileage of the FAM-4 route—and the income from it. The same day, as negotiations with **West Indian Aerial Express, S.A. (WIAX)** continue, the flagship of the Dominican line, the *Santa Maria*, is turned over; the onetime rival for FAM-6 now has no aircraft. On September 16, half interest is purchased in **Peruvian Airways, S.A.**

On October 16, **West Indian Aerial Express, S.A. (WIAX)** shareholders vote to sell their company to PAA. A fourth mail route, FAM-7, is awarded to PAA on October 24. With work on the new airfield at 36th Street being completed, the *General New* is transferred to a base there on October 29 and it begins return Havana flights.

The sister soldiers on from Key West until December 3, when service from that inaugural facility is terminated. Meanwhile at San Juan, Puerto Rico, on October 29, the company's new Loening C-2 Air Yacht is lost in a crash. In Miami two days later, the first production Sikorsky S-38A amphibian is placed in service on the Havana run. PAA, on November 28, officially purchases WIAX, completing its first significant takeover of another air carrier. Aside from the elimination of a competitor and the gain of a few aircraft, Trippe's greatest gain is chief pilot Basil Rowe.

On November 28, all of the major Peruvian air rights earlier acquired by the U.S. agricultural support firm **Huff-Daland Dusters** are purchased. On December 21, the South American subsidiary **Chilean Airways, S.A.** is founded; although it will not operate like the **Peruvian Airways, S.A.** arrangement, it serves notice to the larger W. R. Grace Corporation that Pan Am seeks entrance to its "preserve" on the west coast of the southern continent. After taking stock of its gain, the carrier officially dissolves **West Indian Aerial Express, S.A. (WIAX)** on December 22.

Two more S-38s enter service on December 30, while half interest in **Chilean Airways, S.A.** is officially acquired on December 31, the same day upon which the first two Fokker F-10As are received. During the year, President Trippe and **Imperial Airways, Ltd.** Chairman George Woods-Humphrey begin a multiyear correspondence on a variety of issues, including the possibility of transatlantic services.

Enplanements total 1,184 and 345,725 pounds of mail are carried, resulting in a U.S. government mail subsidy of \$160,000. Total miles flown are 118,868.

This year the carrier is the first American airline to use radio communications, to carry emergency lifesaving equipment, to use multiple flight crews, to develop an airport and airways traffic control system, and the first to order and purchase aircraft built to its own specification, i.e., the S-38B. Incidentally, Andre Priester, upon seeing the operating manual of **Deutsche Luft Hansa (DLH)**, orders a copy for Pan Am—the first adopted by any U.S. airline.

The carrier's second Loening C-2 Air Yacht is lost in a crash at San Jose, Costa Rica, on January 1, 1929. Total route mileage is 261 and on January 2, the same day FAM-8 to Mexico City is advertised, flights begin over FAM-7 from Miami to Nassau. The Ford Tri-Motor 5-AT-11 is delivered on January 4; it is specially equipped with five wing gas tanks that will hold 565 gallons of fuel for flights between Havana and Santiago de Cuba. A week later, on January 9, passengers and airmail are initially delivered over FAM-6 from Miami to San Juan on the inaugural flight by the company's first Fokker F-10A, the *Christopher Columbus*.

On January 23, the entire stock, routes, aircraft, and other assets of **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** are purchased from its founder, George Rihl, for Pan Am stock (worth 300,000 pesos) and a vice presidency for Rihl. The buy allows the American company access to the Mexican capital and control of the route system to, from, and through Central America. As the only operator that can, through its new subsidiary, legally operate in Mexico, the move also assures the award of FAM-8, despite lower bids by six other competitors.

Two days later, on January 25, an accommodation is reached with W. R. Grace Corporation. The large U.S. trading interest and the expanding airline each pledge \$1 million in initial capitalization and form the joint company **Pan American-Grace Airways (PANAGRA)**. Four Fokker F-10As are received on January 31–February 1. FAM-5, the inter-Central American service, is inaugurated on February 4, Miami to the Canal Zone, while the Brownsville to Mexico City via Tampico and Tuxpan FAM-8 opens on March 10.

Both routes are inaugurated by Charles A. Lindbergh; John Hambleton is copilot for the first flight, made by the Ford Tri-Motor 5-AT-12 wearing the dual national registrations NC-9661 and M-SCAN. The public fanfare and advance publicity concerning Lindbergh results in a mile-long traffic jam on every road out of Miami Airport on February 4.

During a stop at Mexico City during the first return on February 11, Ambassador and Mrs. Dwight Morrow announce the engagement of their daughter, Anne, to pilot Lindbergh. The subsidiary **Peruvian Airways Corporation, S.A.** is sold to **Pan American-Grace Airways (PANAGRA)** on February 25. PAC CEO Harold R. Harris becomes vice president-operations of the new organization, with John C. MacGregor as vice president-general manager.

The Ford Tri-Motor 5-AT-22 is turned over to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on March 5, along with the 5-AT-27 two days later. The former is replaced in PAA service by the 5-AT-23 on March 25. A third Ford Tri-motor, 5-AT-31, is sent to Mexico on

March 28. United Aircraft and Transport Corporation, led by Frederick B. Rentschler, purchases 50,000 shares of PAA stock at \$57.50 on April 15; the total infusion is \$2,875,000.

The first production vertical windshield S-38B is delivered on April 25; three more arrive in May. Passenger service on FAM-5 begins on May 22 as that frequency is elevated to thrice weekly. With overnight stops at Belize and Managua, the 2,064-mile route requires 56 hrs. flying time. Also in May, Ford 5-AT-11, used briefly with special wing tanks in Cuba, is delivered to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**; it will be employed by the Mexican subsidiary on the Brownsville–Mexico City route until the end of 1937. The company now moves to upgrade Mexico's landing fields in order to accommodate the additional Tri-Motors that will be delivered.

En route to Wilmington, North Carolina, from New York City, co-founder John Hambleton is killed in the crash of a private plane on June 8. The first F-10A, *Christopher Columbus*, is destroyed in a Santiago de Cuba crash on June 13 (two dead). On June 23, through flights are launched from Miami to Curaçao, via the Canal Zone.

Two more F-10As are delivered on June 26. On June 30, the last vertical windshield S-38B is placed into service. It is employed by Basil Rowe to undertake a survey flight to Paramaribo on July 17, a week after the ninth and tenth F-10As are placed into service. The new Ford Tri-Motor, 5-AT-62, is turned over to **Pan American-Grace Airways (PANAGRA)** on July 31.

The first two production sloping windshield S-38Bs are handed over on August 16, the same day the last two F-10As are received, and August 28, but the first is lost in a Miami takeoff crash on September 16.

Meanwhile, beginning on September 23, FAM-6 from Puerto Rico to Dutch Guinea is ceremoniously started in a multistop three-week S-38 flight by Charles Lindbergh, Juan Trippe, and their wives. Mrs. Betty S. Trippe recalls this and many other events from 1925–1968 in her diary and letters, *Pan Am's First Lady* (McLean, Va.: Paladwr Press, 1996).

Two more S-38Bs are delivered in September, one each on the 16th and 30th. Also in September, the extension from Curaçao is terminated and FAM-6 is operated via Port of Spain and Paramaribo. An S-38 crashes after takeoff from Miami on September 19 while FAM-8 is extended to Guatemala City via Vera Cruz, San Geronimo, and Tapachula.

Two additional S-38Bs are also delivered in October, one each on the 10th and 16th. Piloting an S-38B, Basil Rowe makes the first airmail flight from Miami–Merida via Havana and Cozumel, on November 12. A Loening C-2 Air Yacht is sold out of service on November 29 and on December 2, the Ford 5-AT-27 is reclaimed from **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** for use on flights in the Panama Canal Zone. Orders are placed on December 20 for 3, 38-passenger Sikorsky S-40s, the world's largest civil aircraft. An S-38A is delivered on December 30, but is damaged beyond repair the same day.

Two years and 2 months old on December 31, the company now serves 28 countries with a fleet of 60 aircraft that operate from 60 operated or owned airports or seaplane bases. The route structure totals 12,265 miles and there are 24 ground radio stations.

Enplanements for the year total 20,728 and passenger mileage is 2,752,880. Route mileage grows from 261 to 6,093.

This year the carrier is the first American airline to employ cabin attendants and serve meals aloft, the first to develop and use instrument flying techniques, and the first to develop a complete aviation weather service.

On February 15, 1930, a "gentleman's agreement" is concluded between Juan Trippe and Peter Paul von Bauer, president of the financially troubled airline, **SCADTA (Sociedad Colombo-Alemana de Transportes Aereos, S.A.)**. Unpublicized in Colombia, Trippe promises \$1.1 million in financial assistance in exchange for the acquisition of 84.4% controlling interest over the next year, provided in bearer certificates with no names on them. The deal also includes von Bauer's pledge to cease activities outside Colombia and to vote his unowned shares as directed at his own board meetings. In essence, Trippe gains another subsidiary. Frequencies on most routes are tripled during the month and the carrier now operates 88,522 miles per week.

Charles Lindbergh and Basil Rowe, flying an S-38B, make the first airmail flight from Miami to the Canal Zone on April 26 via Havana and Puerto Cabezas. Flying an S-38B, the two famous pilots undertake a survey flight from the Canal Zone to Jamaica on May 1, while on May 14, a jointly owned **PAA-Imperial Airways, Ltd.** subsidiary enterprise is formed to plan and undertake transatlantic service. The Ford Tri-Motor 5-AT-31 is reclaimed from **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on May 19.

The long-dormant **Southern Air Lines**, now renamed **New York Airways (1)**, is now resurrected. Outfitted with Ford 5-ATs, Fokker F-10s, and Sikorsky S-38Bs, it inaugurates service on June 1 from Long Island's North Beach Airport to Atlantic City, New Jersey. The carrier's last Loening C-2 Air Yacht is transferred to **Peruvian Airways, S.A.** on July 1, the same day PAA and **Imperial Airways, Ltd.** both receive permission from the government of Bermuda to operate a New York–Bermuda service. Also in July, a day is cut off the journey from the U.S. to Panama via Mexico, airmail flights across the Caribbean are doubled, and the airmail line is extended from Rio de Janeiro 3,000 miles to Paramaribo. Route mileage is thus increased to 18,217.

The Atlantic City end of NYA-1's route from Long Island is stretched down to Washington, D.C. on August 2 via Baltimore. Following six months of intrigue, covert maneuvering, noncooperation in the field, and support from Postmaster Walter Fogler Brown, the Aviation Corporation of the Americas is able to acquire Ralph O'Neill's **New York, Rio and Buenos Aires Line (NYRBA)** for \$2 million on August 19. O'Neill, who has pioneered air transport along the eastern coast of South America, refuses a vice presidency.

On September 3, an F-10A is destroyed in a hurricane in Santo Domingo. The **New York, Rio and Buenos Aires Line (NYRBA)** board turns over the company's assets on September 15. These include a series of bases, mail contracts with Argentina, Chile, and Uruguay, a subsidiary, **NYRBA do Brazil, S.A.**, and a fleet of 6 Ford 5-ATs, 9 Consolidated Model 17 Fleetsters, 6 Sikorsky S-38Bs, and 11 Consolidated Model 16 Commodore flying boats. U.S. FAM-9 is awarded to Pan Am on September 24, followed by FAM-10 for the east coast of South America on September 30.

On October 17, O'Neill's former subsidiary is renamed **Panair do Brazil, S.A.**; its headquarters continue at Rio de Janeiro with a maintenance base set up at Belem. Its fleet, manned by American pilots, is equipped with 6 S-38Bs, including the ex-**New York, Rio and Buenos Aires Line (NYRBA)** *Porto Alegre, Bahia, Pernambuco, and Sao Luiz*, and the Commodores *Buenos Aires, Rio de Janeiro, Havana, New York/Santos, Uruguay/Sao Paulo, Argentina, and Miami*.

A significant "summit" meeting is held in New York on November 21 between **Imperial Airways, Ltd.** Chairman George Woods-Humphrey, **Aeropostale (1) (Compagnie Generale Aeropostale, S.A.)** CEO Andre Boiloux-Lafont, and Juan Trippe. The three leaders, upon advice of their attending chief pilots, sign a tripartite agreement not to fly the North Atlantic except in joint operations between New York and Lisbon via Bermuda and the Azores. The French Aeropostale, which owns exclusive rights to the Azores–Lisbon segment, is in deep financial difficulty and about to fail. On November 28, a **Panair do Brazil, S.A.** Commodore makes its first mail flight from Belem to Santos.

Beginning on December 2, employing the ex-**New York, Rio and Buenos Aires Line (NYRBA)** Commodores *Cuba* and *Trinidad*, the carrier is able to reduce flight time on the FAM-5 route to 29 hrs. 15 min.; the cutoff is flown via Cienfuegos, Cuba, and Kingston, Jamaica, to Cristobal, Panama. Basil Rowe, in an S-38B, makes the initial survey flight. The 600-mile Jamaica–Panama over-water stage is the longest then operated. In accordance with the "gentleman's agreement" between Trippe and von Bauer, **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** ends service to Guayaquil in December. At year's end, the fleet totals 111 aircraft.

Traffic grows 60% for the year as bookings reach 44,000 and passenger mileage tops 4.2 million. The route network is now 18,021 unduplicated miles. Among the firsts claimed for the carrier during the year is

the honor of being the first in the U.S. to offer international express service.

During the winter season of 1931, some 4,000 passengers per week are flown from Miami to Havana and Nassau; the Havana frequency is six flights per day. While transporting mail for **Pan American-Grace Airways (PANAGRA)**, an S-38B crashes into the jungles beyond the landing field at Guayaquil on February 7; rescuers must cut their way in to save the uninjured survivors.

The Brazilian subsidiary **Panair do Brazil, S.A.** inaugurates passenger service from Belem to Santos on March 2. The S-38s now fly to San Juan via Cuba, Haiti, and the Dominican Republic, four times per week. Pan Am begins participation in the operation of Colombia's **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** on March 3. During the March earthquake at Managua, the radio of Basil Rowe's S-38B is the only radio contact for the Nicaraguan capital with the outside world. Rowe undertakes a series of food airlifts and by April 1 has transported out a total of 98 people.

The company concludes its acquisition of 84.4% control of **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** on April 10. Richard Hoyt steps down as Pan Am board chairman on April 28, remaining a director until his death in 1935. He is succeeded by Cornelius Vanderbilt "Sonny" Whitney. The next day, Aviation Corporation of the Americas is dissolved, officially becoming Pan American Airways (PAA). In accordance with the Trippe and von Bauer agreement, **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** ceases service to Panama in June, thereby ending a U.S. Department of State concern about German inroads toward the Canal Zone.

On June 26, Juan Trippe writes to America's six leading aircraft manufacturers seeking proposals for supply of an airliner with a 2,500-mile range. The **New York Airways (1)** subsidiary is sold to **Eastern Air Transport** on July 15 and on July 16, joint PAA and **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** airmail service is inaugurated from Bogota to New York. An F-10A conducts a proving flight from Boston to Bangor, Maine, via Portland.

As the first step toward a possible Pacific route, the company's famous technical representative, Charles Lindbergh and his wife Anne depart Long Island on July 27, headed north in the Lockheed Sirius, later christened *Tingmissartog*. On July 28, an S-41 undertakes a survey from Bangor to St. John, New Brunswick; the S-41 exploration is finished at Halifax, Nova Scotia, on July 29. Under contract to **Boston-Maine Airways**, PAA begins regular service over the surveyed route on July 31; F-10As fly the Boston-Bangor segment and S-41s the Bangor-Halifax leg. Simultaneously, FAM-12, which covers the route, is awarded by the U.S. Post Office and an agreement is reached with **Colonial Air Transport** for feed from its New York-Boston service.

An S-38A is fatally damaged when it hits an obstacle while landing at Ponce Harbor in San Juan on August 12; all aboard are saved. Having obtained a concession to establish an airline in Colombia, Gonzalo Mejia incorporates **UMCA (Urba, Medellin and Central Airways, S.A.)** in Delaware on August 24. One of two S-41s being employed on the **Boston-Maine Airways** contract crashes in Massachusetts Bay off Gloucester on August 27 (one dead); it will be salvaged, repaired, and sold to a private owner.

A violent hurricane sweeps Belize, British Honduras, on September 10; S-38Bs piloted by E. S. Rodenbaugh and Basil Rowe undertake mercy flights, bringing in food, medicine, and Red Cross personnel. After flying via Canada, Alaska, Siberia, Japan, and China, the *Tingmissartog* is badly damaged in a Yangtze River accident near Nanking on September 19. Although the aircraft is too badly damaged to continue, the Lindberghs report that, given Soviet cooperation (which is not forthcoming), a Pacific rim or "Great Circle" route to Asia is possible. Mrs. Lindbergh recalls the flight of the *Tingmissartog* in her *North to the Orient* (New York: Harcourt, Brace, 1935).

The **Boston-Maine Airways** contract is concluded on September 30 and the two F-10As employed for it are sold to **Transamerican Airlines** on October 5.

The hulk of the S-38A wrecked on August 12 is scrapped on October 7 while the last three F-10As are now transferred to the Mexican subsidiary **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**. On October 10, Basil Rowe flies the first production Sikorsky S-40 from Sikorsky's Bridgeport factory to the Anacostia Navy Yard, including a low, publicity run over the U.S. capitol. On October 12, in an elaborate live radio ceremony, the First Lady, Mrs. Herbert Hoover, christens it *American Clipper*.

Later in the afternoon, Rowe makes two special flights over Washington, D.C., with others laid on for the next day. The "clipper" title is registered and every major PAA aircraft thereafter incorporates it. After returning to Bridgeport on October 14 for two days of publicity flights over New York City, the *American Clipper* proceeds to Miami and arrives on October 25, after making publicity stops at Norfolk, Savannah, Charleston, Jacksonville, and Palm Beach.

On November 2, the FAM-10 route is extended from Santos, Brazil, down to Buenos Aires, completing PAA's encirclement of South America. The U.S. is now connected to 100 different towns and cities in 31 Latin countries—and the most distant capital of the 31 is only 7 days away. The second S-40, the *Caribbean Clipper*, is delivered on November 16. On November 19, with Charles Lindbergh in the left seat and Igor Sikorsky a passenger, the *American Clipper* enters service on the Canal Zone route, flying via Cienfuegos and Kingston. In Barranquilla, Lindbergh turns command over to Rowe, who arrives at a Cristobal on November 22.

The welcome from Canal Postmaster General Bliss also gives PAA the honor of being the first American airline to develop and operate a four-engine flying boat. Four days later, on November 23, a Consolidated Model 16 Commodore arrives at Buenos Aires, completing the first through-passenger service to Argentina down the east coast of South America. During the year, masses of air are analyzed in a new tropical weather forecasting method and at year's end, the carrier posts its first profit (\$105,452) on total revenues of \$7,913,587.

On January 1, 1932, the creditors of the bankrupt French airline **Aeropostale (1) (Compagnie Generale Aeropostale, S.A.)** grant the company permission to employ its Azores landing concession, obtained earlier from the Portuguese. The Mexican subsidiary **Aerovias Centrales, S.A.** is set up on February 26 to assume the principal Mexico City-Ciudad Juarez route of defunct **CAT (Corporacion de Aeronautica de Transportes, S.A.)**. Employing an ex-New York, Rio and Buenos Aires Line (NYRBA) Consolidated Model 17 Fleetster and four transferred Fokker F-10As, this carrier will create a multistop Mexico City-Nogales route. On April 13, PAA takes 54% majority control of **UMCA (Urba, Medellin and Central Airways, S.A.)** and its Canal Zone route of Medellin to Balboa. Also in April, the Bermuda concession, as yet unrealized, is withdrawn.

On May 6, **Compania Nacional Cubana de Aviacion Curtiss, S.A.** is purchased from North American Aviation; the new Cubana subsidiary retains its previous name, minus the word Curtiss. In the first concrete step toward construction of a "Great Circle" route to Asia, Pacific Alaskan Airways is formed as a wholly owned subsidiary on June 11. After having spent half a million dollars on start-up and suffering a collective \$100,000 loss, negotiations begin for the purchase of Alaskan Airways and Pacific Alaska Airways.

Three days later, on June 14, the **New York Airways** subsidiary S-38B crashes while en route to Atlantic City and is destroyed; no one aboard is hurt. On July 12, passenger service is started from Cristobal and Balboa to Turbo and Medellin over the **UMCA (Urba, Medellin and Central Airways, S.A.)** concession, linking with **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** at the latter city. The Pan Am aircraft and personnel employed operate under UMCA colors.

The Ford Tri-Motor 5-AT-22 is reacquired from **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on July 19; it will be turned over to **Pan American-Grace Airways (PANAGRA)** a month later. After serving in the Panama Canal Zone since December 1929, the 5-AT-27 is

returned to the Mexican subsidiary the same day. Also in July, Danish authority is received to conduct a study of possible airline routes across Greenland. The services of and support for the 1932–1933 Greenland expeditions of famed Arctic scientist Dr. Vilhjalmur Stefansson are acquired and provided.

In addition, **Transamerican Airlines** is paid \$55,000 for a 75-year landing concession it holds from Iceland, but which is subject to lapse if not exercised by 1936. The last S-40, *Southern Clipper*, is delivered on August 30.

Alaskan Airways is purchased from the Aviation Corporation (AVCO) on September 1; included in the sale are several Fairchild 71s and the transfer of 40 employees. Being operated in Brazil by the subsidiary **Panair do Brazil, S.A.**, the ex-**New York, Rio and Buenos Aires Line (NYRBA)** Sikorsky S-38B *Porto Alegre* is stolen by São Paulo revolutionaries on September 25; without a qualified pilot, the flying boat crashes about 25 km. inland (four dead). Forced back by bad weather while en route to San Lorenzo, Honduras, from Managua, Nicaragua, on October 2, the Ford 5-AT-23 crash-lands in a swamp at El Accituno, Honduras; although no one is killed, the plane is destroyed. The survivors are rescued by USMC aircraft led by Capt. F. P. Mulcahy.

The Anchorage-based charter carrier **Pacific International Airways** is acquired on October 15, together with its three Fairchild 71s. During the fourth quarter, Pacific Alaska Airways is merged with Alaskan Airways, with the former name surviving. Arrangements are made at the Fairbanks, Anchorage, and Nome operating bases and the Star Mail services over 2,600 miles of routes to communities in the interior, the Kenai Peninsula, and Western Alaska are solidified.

Weathermen of the operations department set up a number of upper air meteorological stations to measure winds and suggest favorable courses and flight levels. The first ex-**New York, Rio and Buenos Aires Line (NYRBA)** Consolidated Commodore to be retired is the *Rio de Janeiro*. After three years as a factory demonstrator, the Ford Tri-Motor 5-AT-74 is purchased on November 4. On November 30, contracts for long-range flying boats are signed with the Sikorsky Aviation Corporation of Bridgeport, Connecticut, and the Glenn L. Martin Company of Baltimore. The company's profit is \$698,526.

On March 31, 1933, a 45% interest is taken in **China National Aviation Corporation (CNAC-1)**. The actual transaction is somewhat convoluted, as Trippe's carrier pays \$282,258 to the Curtiss-Wright Corporation's Intercontinent Aviation subsidiary for **China Airways Federal**, its own nonflying subsidiary that actually owns the stock. The purchase is a bargain, as CAF had paid well over half a million dollars for the shares just three years earlier.

The new Ford Tri-Motor, 5-AT-115 is delivered on May 1 while the last S-36A is damaged beyond repair in a Caribbean crash on May 26; also in May, the last F-10A is scrapped. The Ford 5-AT-116, the last of these trimotors, is acquired on June 17 and turned over to the western division for use on the Mexican service. Mail is added under contract to the **UMCA (Uraba, Medellin and Central Airways, S.A.)** Panama–Medellin route on June 20. During the month, two Sikorsky S-38 flying boats are ordered transferred to the **China National Aviation Corporation (CNAC-1)** base at Shanghai.

The Ford 5-AT-31 is returned to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on July 7; with Harold Bixby having obtained the concession, **China National Aviation Corporation (CNAC-1)** Douglas Dolphins begin service on July 7 over Chinese Route 3, Shanghai–Canton via Wenchow, Foochow, Amoy, and Swatow.

Flying the repaired Lockheed Sirius *Tingmissartog* specially outfitted with PAA navigational gear, the Lindberghs depart New York on July 9 for a survey of the east and west coasts of Greenland and the southern end and west coast of Iceland. The Lindbergh flights are supported by the research ship *SS Jilling*, with Dr. Stefansson aboard.

On August 12, a Curtiss Robin belonging to the subsidiary **Cubana (Compania Nacional Cubana de Aviacion, S.A.)** spirits overthrown dictator Gen. Gerardo Machado from Havana to Miami. The next day, Cuba's ex-secretary of state, Orestes Ferrara, points a gun at Capt. Leo

Terletsky and, without a ticket, is able to escape to Miami aboard the regularly scheduled S-38B flying boat. The plane takes off in a hail of gunfire from an angry mob—9 bullet holes are later found in the aircraft—leaving 14 paying passengers behind. Machado is replaced by Cuban Air Force Sergeant Fulgencio Batista, who had once held a typist position with Pan Am at its Havana landing field.

Two ex-**New York, Rio and Buenos Aires Line (NYRBA)** Consolidated Model 17 Fleetster floatplanes are transferred to **Pacific Alaska Airways** during the summer and begin the first airmail service from Fairbanks and the interior of Alaska to Auke Bay, Juneau, on September 3. During this operation, one is written off in a crash and replaced with 2 Fairchild 71s; the 3 aircraft deliver 11 passengers and 360 pounds of first-class mail on the inaugural flight.

In October, S-38 scheduled service is inaugurated by the Brazilian subsidiary, **Panair do Brazil, S.A.**, from Belem to Manaus, 900 miles up the Amazon River. Also during the month, representative Bixby signs an agreement with the Chinese government covering the introduction of S-38 operations on October 24 from Shanghai to Canton. To avoid arousing the interest of the expansionist Japanese, Bixby actually signs for a phantom Pacific American Airways. Although CNAC-1 will operate the services, the two amphibians will operate in Pacific American livery with American registration numbers.

On December 13, orders are placed for 12 Lockheed Model 10A Electras. Having also visited the Faroes, Shetlands, western Norway, the Baltic, Leningrad and Moscow before returning via the Scandinavian capitals and the U.K., the Lindberghs arrive at New York on December 19.

During the year, a modern hangar is constructed for Pacific Alaska Airways at Fairbanks and the maintenance base there is improved. Also, the Miami to Argentina flying boat service is highlighted in the Fred Astaire-Ginger Rogers motion picture musical *Flying Down to Rio*. Released by RKO Studios, the film is produced by Pan Am board member Merian C. Cooper. The airline's net profit this year is \$898,488.

At the end of January 1934, it is reported that the three Southern Division flying boats *American Clipper*, *Caribbean Clipper*, and *Southern Clipper* have completed 1,000 flights, with almost 100% of them posting an on-time arrival; they are now advertised as "Pullmans of the Skies." Although its reputation is somewhat tarnished as a result of the Black Committee hearings on the "Air Mail Scandal," PAA, because it flies only foreign routes, is the only airline whose contracts are not cancelled when President Roosevelt ends all domestic mail subsidies across the board on February 9.

Following its participation in the March relief of the Russian's beleaguered Chelyuskin Arctic Expedition, the surviving Pacific Alaska Airways Consolidated Fleetster is sold to the Soviet trading company AMTORG. Despite these goodwill gestures, the Soviets continue to refuse Siberian landing rights, forcing PAA to abandon plans for a "Great Circle" route to Asia and to look at the possibility of flying there via the Central Pacific. Meanwhile, in London, officials of **Imperial Airways, Ltd.** seek to prepare for a transatlantic flying boat service. They complain to the British Air Ministry that the £1,427,533 sterling given the American carrier the previous year by way of subsidy will, if continued, leave the Empire unable to compete anytime soon unless that figure is matched.

Following the loss of the first CNAC-1-operated S-38 the previous December, the second unit crashes into Hangchow Bay, off Shanghai, on April 10. Also in April, multistop Los Angeles–Mexico City Lockheed Model 10 Electra flights begin. Later in the month, the ultra modern Dinner Key air terminal is opened at Miami and, nearly ready for delivery, the first S-42 establishes a world weight-carrying record on April 26.

Reports of the Lindbergh and *SS Jilling* expedition are presented in May and suggest that an air service to Europe, via the North Atlantic, is possible with proper weather allowances. Also, on May 31, Pacific Alaska Airways begins operation of the only Ford 8-AT, equipping it with skis, floats, or wheels as necessary. The first Sikorsky S-42, which

sets another world weight-carrying record on May 17, is delivered on June 5.

The huge new S-42 flying boat is test flown by Charles Lindbergh, Edwin C. Musick, and Sikorsky's chief test pilot Capt. Boris Sergievsky under transport conditions over a predetermined measured course on August 1; it sets eight world records and generates much desired press coverage.

Lindbergh and Basil Rowe place the new S-42 into commercial service on August 16 over the three-day, multistop Miami–Rio de Janeiro route. Aboard on the historic occasion are Juan Trippe, Andre Priester, and Department of Commerce official Eugene L. Vidal. Following a day layover, the flying boat proceeds to Buenos Aires. The entire trip down the east coast of South America takes six days instead of the previous eight. When the S-42 arrives at Rio, it is christened *Brazilian Clipper* by Getulio Vargas, wife of the president of Brazil.

The first Douglas DC-2 is delivered to the Mexican subsidiary **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on September 20. Together with **Panair do Brazil, S.A.**, PAA is awarded Brazilian cabotage rights on September 28. On October 3, President Trippe informs the U.S. Navy that PAA is ready to fly the Pacific and seeks a lease on Wake Island.

Two Douglas Dolphins are sent out to China and are employed, beginning on November 1, to restart the Shanghai–Canton service suspended the previous April. Following some months of negotiations with the British, the company is able to add Hong Kong on November 5 as a stop on its Chinese Dolphin coastal route. Nick Bez's Juneau-based **Alaska Southern Airways** is purchased on November 13 to stop its expansion on a route to Seattle that might block PAA's Asian plans. Meanwhile, during the year, PAA constructs the first integrated radio network in Alaska suitable for aviation use.

The second S-42 is delivered in December; christened *West Indies Clipper*, it is placed in service in the Caribbean. By year's end, PAA and PANAGRA are operating a combined total of 69 ground radio stations throughout Latin America. Statisticians reports that, in the years since 1932, the percentage of company flights finished has declined to 99.46%. With a fleet of 85 aircraft, the company now averages more than 100,000 passengers per year on a 32,000-mile route network.

In January 1935, PAA advises the U.S. Bureau of Air Commerce of its desire to begin transatlantic service; the letter is acknowledged on February 4. The previous day the Ford 5-AT-115 is crated up and sent by ship to **China National Aviation Corporation (CNAC-1)** at Shanghai. A new Pacific division is established on March 1 with headquarters at Alameda, California. It is led by former Assistant Secretary of Commerce for Aeronautics Clarence M. Young, hired the previous November. The Ford 5-AT-74 is turned over to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on March 5.

In preparation for its role in transpacific surveys, the S-42 *West Indies Clipper* is taken out of service, stripped of its seats and otherwise modified, and renamed *Pan American Clipper*. On March 23 it is flown from Miami to the Virgin Islands and back in a 2,500-mile, 17-hrs. 16-min. test. Personnel on the flight include chief pilot Capt. Edwin C. Musick, copilot Robert O. D. "Rod" Sullivan, navigator Fred Noonan (who will disappear with Amelia Earhart), and engineer John Leslie.

With Navy permission granted, the support ship *SS North Haven* departs San Francisco on March 27 headed toward the U.S. Pacific possessions of Midway, Wake, and Guam. Aboard are 44 company personnel, 74 construction workers, 250,000 gallons of avgas, supplies, tools, windmills, motor launches, storage dewars, and all other items required for self-sufficiency during the forthcoming base-building process. Simultaneously, the *Pan American Clipper* departs for San Francisco (Alameda) via Cuba, Veracruz, and Acapulco.

Employing the assets of **Alaska Southern Airways** purchased the previous year, Pacific Alaska Airways launches the first scheduled passenger air service between Juneau and Fairbanks via Whitehorse, Yukon Territory, during the first quarter.

On April 11, PAA acquires the Mazatlan–Hermasillo–Mexicali route abandoned by Walter Varney's Mexican carrier **LAO (Lineas Aereas**

Occidentales, S.A. de C.V.) the previous day. Lockheed Orions are quickly introduced on the route. Having performed several test flights along the California coast since arriving at Alameda, Capt. Musick's modified S-42 *Pan American Clipper* undertakes a 23-hr. 41-min. proving flight to Honolulu on April 16, returning a week later. A new S-42 *West Indies Clipper (2)* replaces the *Pan American Clipper* in early May.

On June 12, Musick begins a test of the Alameda–Honolulu–Midway segment of the proposed transpacific route. Transpacific support contracts are signed with the Matson Navigation Company and Inter-Island Steam Navigation Company on June 20.

Lockheed Model 10 Electras are provided to **Cubana (Compania Nacional Cubana de Aviacion, S.A.)** on July 29, allowing introduction of the noted Havana–Santiago Cuban Air Limited service. Meanwhile, the construction crew from the *North Haven*, at work since May, concludes, at month's end, the establishment of flying boat bases at Guam, Wake, Midway and the improvement of those at Honolulu and Manila. Also included in the \$2-million undertaking are shops, offices, radio and living quarters. Participant William S. Grooch tells much of the story in his *Skyway to Asia* (New York: Longmans, 1936).

Also in July, the first S-42A, the *Jamaica Clipper*, enters South American service.

The Ford Tri-Motor 5-AT-116 is passed to **China National Aviation Corporation (CNAC-1)** on August 12 while, on August 20, a Pacific Alaska Airways Lockheed Model 10A Electra transports home from Whitehorse the bodies of Will Rogers and Wiley Post. The S-42 *Pan American Clipper*, piloted by Rod Sullivan, tests the transpacific route's Midway–Wake leg beginning on August 9. Following a violent hurricane in the Florida Keys that leaves 700 dead on September 5, Basil Rowe pilots relief supplies to survivors. On October 5, Capt. Sullivan's S-42 examines the Wake–Guam segment of the transpacific route.

The first Martin M-130 is commissioned at Baltimore on October 9 in a ceremony carried over nationwide radio; in his remarks, President Trippe announces the ship will be named the *China Clipper*. Incidentally, it will make the company the first American airline to install facilities for heating food aboard an aircraft. A 25-year Manila landing concession is granted by the Philippine government on October 17.

PAA is awarded the transpacific mail route, FAM-14, on October 25; the subsidy is the same \$2 per mile awarded for FAM-4 out of Key West in October 1927. Having spent three months in orientation with the M-130, Capt. Musick and the *China Clipper* arrive at Alameda from Baltimore on November 11, flying via Miami, Acapulco, and San Diego. During the fall, President Trippe agrees to a proposal from William "Pat" Patterson, president of **United Air Lines**, to join in the funding to be provided by the "Big Four" airlines for creation of a four-engine experimental landplane, the Douglas DC-4E.

The second M-130, *Philippine Clipper*, is delivered on November 14. On November 22, Postmaster General James Farley, Governor Frank Merriam, Mayor Angelo Rossi, President Trippe and others attend a huge banquet in San Francisco. The festivities, plus radio broadcast ceremonies, are held prior to the *China Clipper*'s inauguration of the world's first heavier-than-air airmail flight across the Pacific from San Francisco. The *China Clipper* is crewed by Musick, Sullivan, Noonan, and the other officers of the *West Indies Clipper*.

Witnessed by over 100,000 spectators, the flying boat arrives at Manila Bay on November 29, having flown via Honolulu, Midway, Wake, and Guam, with 1,837 pounds of mail (110,865 letters) in 59 hrs. 48 min. On the same day that Musick departs California, New Zealand grants landing authority for Auckland.

Also in November, proposals for joint operations based on a transatlantic service are sent to **DDL Danish Airlines (Det Danske Luftfartsselskab, A.S.)** and **DNL Norwegian Airlines (Det Norske Luftfartsselskab, A.S.)**, the national airlines of Denmark and Norway. Capt. Musick appears on the cover of the December 2 issue of *Time* magazine. The *China Clipper* reaches San Francisco (Alameda) from Manila on December 6 with 98,000 letters after its multistop 63-hr. 28-min. flight,

having completed its first 16,420-mile roundtrip in total flying time of 123 hrs. 12 min.

The second M-130, the *Philippine Clipper*, departs Alameda for Manila on December 9. At this point, the Japanese, who have formerly broadcast their Pacific weather forecasts in plain language, encode the signals. On December 12, the DOS advises that it has received promises of foreign facilitation of any company transatlantic services. **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** takes over the **Aerovias Centrales, S.A. de C.V.** route from Mexico City to the U.S. frontier on December 18. Simultaneously, **Aerovias Centrales, S.A. de C.V.** is dissolved as the result of a dispute with the government that its pilots all be Mexican nationals; its Fleetster is scrapped.

Having finally obtained its own Portuguese concession to land in the Azores, the carrier applies to the French government on December 16 for permission to offer twice-weekly transatlantic flights to French ports of Paris' choice. The S-42 *West Indies Clipper* (2), which succeeded the test ship *Pan American Clipper* back in May, is destroyed in a Port of Spain accident on December 20. It is replaced by the second S-42A, the *Antilles Clipper*. The last M-130, the as-yet unnamed *Hawaiian Clipper*, is delivered to Alameda on December 24.

The Consolidated Model 16 Commodore *Cuba* is destroyed by fire at Dinner Key, Miami, during the year and the Commodore *Havana* is withdrawn. Terminals and airports owned by PAA jump from 166 to 202 and route mileage grows from 31,259 to 40,479. Despite an outlay of \$4 million for new aircraft and ground facilities (including a new airfield at Juneau, Alaska), the company reports revenues of \$10,127,837 and a net profit of \$1,193,732 for the 12 months.

On January 25, 1936, President Trippe and **Imperial Airways, Ltd.** Chairman Sir George Woods-Humphrey agree to divide all transatlantic service between their companies. The understanding will lead to protests from other parties and delays in the granting of operating and landing permits. A second *Brazilian Clipper*, an S-42A, enters Latin American service in February. Also in February, two Fairchild 91s (XA-942As) are provided to **Panair do Brazil, S.A.** for high-speed service on the Amazon River.

The proposals made to the Danish and Norwegian flag carriers in November are accepted in March. So pleased are the Norwegians that they immediately order their own Sikorsky S-43 for **DNL Norwegian Airlines (Det Norske Luftfartsselskap, A.S.)** and grant cooperation to PAA's plans for joint proving operations in Greenland during the upcoming two summers. Permission is also obtained to establish a radio station in Iceland; it, too, is up and operating during 1936-1937. Transpacific cargo flights are authorized in early in March and during the month, the experimental DC-4E is launched with commitments from the "Big Four" airlines, plus Pan Am. The final M-130 flying boat, the *Hawaiian Clipper*, is flown to Hawaii on March 30.

While taking off from Port of Spain, Trinidad, on April 11, the S-42 *Puerto Rican Clipper* hits a launch; the plane swings into a "water loop" and crashes (three dead). The last S-42A, the *Dominican Clipper*, is delivered in April and placed in South American service; on April 28, the first Sikorsky S-43 "Baby Clipper" arrives, after establishing two payload records in test flights three days earlier.

Simultaneously, USN meteorologist/cryptographer John Cooke is seconded to Guam to serve as Pan Am's chief local radio operator to break the code being employed by the Japanese to broadcast their regular weather reports. The codes are broken and the weather forecasts relayed to Alameda and Honolulu for company and other use. Following the completion of his mission, Cooke trains his Pan Am successors and returns to active duty.

With President and Mrs. Trippe in attendance, the *Hawaiian Clipper* is christened the *Hawaiii Clipper* at Honolulu in May 3 ceremonies; it thereafter departs for the Orient. Another S-43, the first equipped with twin tails, joins the fleet on June 11; it is followed into service by a third "Baby Clipper" on July 4. Concerned by the rising cost of the DC-4E, Pan Am, together with **Transcontinental and Western Air Lines (TWA)**, withdraws from the Douglas project in mid-month; the two

withhold their funding and elect to join with Boeing in development of the Model 307 Stratoliner. The paper airline **Chilean Airways, S.A.** is dissolved on July 30.

Another S-43 arrives on August 6. Also in August, the Warner Brothers motion picture *China Clipper* is released. Written by Frank Wead, starring Pat O'Brien, and made with close cooperation from the airline, the film explores the history of the fictional "Trans-Ocean Airways" up through its introduction of Martin flying boat service across the Pacific Ocean. The film affirms for its audiences the strength of U.S. technology and innovative adventurism in an increasingly dangerous world.

During the summer, crews from the SS *North Haven* establish hotel and other passenger facilities on Wake and Midway Islands. The first Sikorsky S-42B *Pan American Clipper II* is delivered in September, along with a fifth S-43. The colonial government of Hong Kong grants a concession on September 17. Also in September, the U.S. government grants permits for a transatlantic service and another S-43 is delivered; a sixth is acquired on October 3.

En route to Guatemala City, a DC-2 crashes north of San Salvador on October 10 (five dead). The *Hawaiii Clipper* inaugurates the world's first transocean scheduled passenger service by a heavier-than-air flying machine on October 21. Seven passengers are taken to Hawaii; there, the only traveler to pay the \$360 Alameda-Honolulu fare disembarks and is replaced by five more passengers. The other travelers, who paid \$800 for a one-way ticket, continue on to Manila Bay, arriving on October 26.

Supported by local airplane builder Glenn L. Martin, the company begins negotiation with the City of Baltimore on November 6, which result in the signing of a 25-year lease for 10 acres of land to be developed into a flying boat base. The wholly owned subsidiary **Panama Airways, S.A.** is formed on November 7; it is equipped with the Ford 5-AT-74, reclaimed from **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on November 10. The *Hawaiii Clipper* is back at Alameda by November 11. The CNAC-1 Shanghai-Canton route is extended to Hong Kong in November to provide a connection into China for passengers of the transpacific flying boats.

Two additional S-43s arrive in December, one each on the 18th and 31st. They are turned over to **China National Aviation Corporation (CNAC-1)**, with the former becoming the personal transport of Mme. Chiang Kai-shek. Also in December and employing PAA Ford 5-ATs, **Panama Airways, S.A.** begins service and an S-43 received in September begins services from a base at Port of Spain, Trinidad.

The S-42B *Pan American Clipper II* is turned over to the Pacific division at Alameda on January 7, 1937. At Shanghai on January 19, Harold Bixby signs an airmail contract on behalf of CNAC-1 for PAA's transpacific route. As the result of Boeing 314 development difficulties, the delivery agreement is revised the next day, allowing a three-month extension for each aircraft. En route from Vitorio to Rio de Janeiro on February 8, an S-43 suffers an in-flight engine fire; upon its return to Vitorio, the aircraft sinks. On February 22, the U.K.'s Civil Aeronautics Authority grants PAA authority to operate transatlantic services twice weekly to and from London. The next day, the fourth S-43 is transferred to **Panair do Brazil, S.A.**

Concessions facilitating the transatlantic service are also obtained from Canada on March 5, Bermuda on March 25, Ireland on April 13, and Portugal on April 14. On March 15, orders are placed for three Boeing 307 Stratoliners. Renamed *Samoa Clipper*, the new S-42B, piloted by Capt. Musick, departs San Francisco on March 17 and arrives at Auckland on March 29 via Honolulu, Pago Pago, American Samoa, and a rendezvous with the S.S. *North Wind* at Kingman Reef. The *Samoa Clipper* returns to Alameda on March 29. It is now renamed *Hong Kong Clipper* and is dispatched to Hong Kong to provide a weekly link with Manila, beginning on April 16. Located on the Chinese mainland, the Portuguese colony of Macao grants a landing permit on April 28. The next day, the original S-43 is sold to **Panair do Brazil, S.A.**

Having secured \$8 million in city funding after two years of discussions, the company now rapidly begins construction of a flying boat base at North Beach Airport on land acquired in 1933; a temporary

facility is quickly thrown up employing an existing hanger and ramp. Other facilities are started in Canada, Ireland, and the Azores; at the latter point in April, Chairman Trippe has acquired rights to land at Horta.

As of May 15, three more S-43s have been delivered on the year, the last "Baby Clippers" to be acquired by the company. An Atlantic division is formed at Port Washington, New York, in May and has 113 employees by June. Alternating with the **Imperial Airways, Ltd.** Shorts S23 *Cavalier*, the S-42B *Bermuda Clipper*, piloted by Capt. Harold Gray, undertakes four route proving flights to Bermuda between May 27 and mid-June.

Regularly scheduled weekly return service begins from New York and Baltimore to Bermuda on June 18. By this time, PAA has been awarded the mail contract for the FAM-17 route. The last two active Consolidated Model 16 Commodores, *Trinidad* and *Puerto Rico*, are retired; one is sold to China and the other to Mrs. Chamberlin. The S-42B *Pan American Clipper*, piloted by Capt. Harold Gray with a crew of six, now undertakes four North Atlantic proving flights: to the New Brunswick town of Shediac on June 25; to the Newfoundland city of Botwood on June 27; to Southampton via Shediac, Botwood, and the Irish city of Foynes on July 3; and to Southampton via Bermuda, the Azores, Lisbon, and Marseilles on August 16.

Meanwhile, following the disappearance of aviatrix Amelia Earhart and her navigator, former PAA employee Fred Noonan, while en route from New Guinea to Howland Island on July 1, both PAA and USN radio stations pick up mysterious signals that some will believe are distress calls from the two. The radio traffic, although triangulated, reveals no survivors.

PAA and **Imperial Airways, Ltd.** officials meet at Dublin on July 26 with those from the British and Irish governments to coordinate upcoming transatlantic flights. Areas of common interest examined include signal codes and communications, weather forecasting, and postal services. The S-42 *Brazilian Clipper* is renamed *Colombia Clipper*, while the S-42B *Pan American Clipper* is renamed *Hong Kong Clipper* and sent out to the British colony to replace the first ship by that name. *Pacific Alaska Airways* sells its Ford 8-AT to Charles Babb on August 3 for just \$1,750; six months later, the single-engine aircraft will pass to Colombian mining interests. The Ford 5-AT-31 is reclaimed from **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** on August 27 and undergoes modification. The S-42B Bermuda service becomes twice weekly on August 25.

The carrier's first two Douglas DC-3s are delivered on October 1; the number will increase to eight by November 11. With the new Baltimore base readied, the *Bermuda Clipper* inaugurates Maryland-Bermuda flights on November 17.

To inaugurate scheduled service to New Zealand, the original *Hong Kong Clipper* is returned to Alameda in early December. Rechristened *Samoan Clipper* and again flown by Capt. Musick, she departs on the inaugural return service via Honolulu, Pago Pago, and Kingman Reef, on December 23. The upgraded Ford 5-AT-31 is sold to the Nicaraguan government on December 31.

Operating losses for the Pacific division, as reported the same day, total \$474,858 for the year.

On January 11, 1938, while on a second scheduled New Zealand flight, the S-42B *Samoan Clipper*, dumping fuel because of the shutdown of its leaking No. 4 engine and returning to Pago Pago, explodes in midair; Capt. Musick and his entire six-man crew are killed. Remains of the Sikorsky are located by the U.S. seaplane tender *Avocat* the next day, 14 mi. NW of the island. Following the loss of the British flying boat *Cavalier* on January 21, the *Bermuda Clipper* maintains the U.S.-Bermuda return service alone. In February, company officials again join with those from the British and Irish governments and **Imperial Airways, Ltd.** in conference in Canada; the executives promise to standardize communications procedures and weather forecasting.

An S-43B is forced down near Kingston, Jamaica, on April 25; all aboard are rescued. FAM-15 and FAM-16 are awarded to the Pacific Alaska Airways subsidiaries on May 3. Designed by Wellwood E. Beall,

the first Boeing 314 is launched at Duwamish Waterway, Puget Sound, near Boeing Field. Just after takeoff for Miami from Rio de Janeiro on July 15, a DC-3 loses an engine and crashes into a hospital; one elderly patient on the ground is the only fatality. On July 28, the M-130 *Hawaii Clipper*, piloted by Capt. Leo Terletzky en route to Manila from Guam, disappears without a trace approximately 565 miles from Manila (15 dead). Sixteen ships and 10 airplanes, including 5 Army Air Corps B-17s, search 160,000 square miles but nothing is found except a suspected gasoline and oil stain on the water about 50 miles from the aircraft's last reported position. Pan Am now has the unwanted distinction of being the first airline in the world to lose a transoceanic passenger flight.

Three days later, on July 31, Pacific division ledgers show a \$373,523 loss since January. Large American flags are now painted on the bows and wings of clippers to prevent attack by Chinese or Japanese planes. On August 19, the company's Northwest division begins a series of 10 Sikorsky S-43 return survey flights from Seattle to Juneau.

The company is able to fly only 60% of its transpacific schedule during the remainder of the year, losing \$95,000 per month (each lost trip being worth \$10,000). Losses on the route for the year equal all but \$75,000 of the \$1.2 million earned by the South American division. In December, the S-43 stationed at Port of Spain in Trinidad is laid up and its gear is removed.

A year behind schedule, the first Boeing 314, the *Honolulu Clipper*, is delivered to PAA at Astoria, Oregon, on January 27, 1939. The M-130 *China Clipper* inaugurates service from the company's new flying boat base at Treasure Island in San Francisco Bay on February 5; the *Honolulu Clipper* begins transpacific operations from Treasure Island on February 22. The next day, the Portuguese government grants landing rights in the Azores. The first Boeing flying boat slated for the Atlantic arrives at Baltimore from Washington State on February 24; repositioned to New York, it is christened *Yankee Clipper* by Mrs. Eleanor Roosevelt in elaborate ceremonies on March 3. The christening bottle contains no champagne; rather, water collected from all of the seven seas.

At a special board meeting on March 14, Chairman Whitney is voted chief executive; Juan Trippe remains as president. Meanwhile, another Boeing 314 is delivered to Pan Am's Pacific division. Also at mid-month, a third conference, at Dublin, occurs between company leaders and those from the British and Irish governments, plus **Imperial Airways, Ltd.**; the result is formation of the Trans-Atlantic Air Service Safety Organization (TASSO).

On March 26, the *Yankee Clipper*, piloted by Capt. Harold E. Gray, begins a 6-country survey flight from Baltimore to Europe and return; in addition to the 11-man crew, 9 official visitors are aboard, including 3 manufacturers' representatives and 6 government technicians. Three-and-a-third days are spent in the air during the 11,017-mile trip and points visited before the ship returns to Baltimore on April 17 include the Azores, Lisbon, Biscarosse, Marseilles, Southampton, and Foynes.

Meanwhile, following CAB hearings in February and March, the transpacific airmail rate is elevated to \$3.35 per mile on April 1. The second Pacific Boeing is christened *California Clipper* on April 25; the name will later be changed to *Pacific Clipper*. Also in April, the third Atlantic Boeing, the *Dixie Clipper*, is delivered. The CAB grants its approval for transatlantic service on May 17, with President Roosevelt's following on May 18.

Piloted by Capt. Arthur E. LaPorte, the *Yankee Clipper* undertakes the world's first scheduled transatlantic airmail service on May 20-22, the twelfth anniversary of Lindbergh's Paris flight, flying FAM-18 via the southern route to Southampton from Port Washington via the Azores, Lisbon, and Marseilles. The giant flying boat arrives in England with 1,804 pounds of mail (200,000 letters) after a flight of 29 hrs. The first regularly scheduled commercial roundtrip flight is completed on May 27 when the Boeing arrives back at Port Washington with 2,025 pounds of mail from the U.K.

On June 24, the *Yankee Clipper*, this time flown by Capt. Harold E. Gray, opens the northern mail route to Southampton via Shediac, Bot-

wood, and Foynes with 20 nonpaying guests aboard. Meanwhile, a schedule for passenger service is distributed; fees are shown as \$375 one-way and \$675 roundtrip. The first ticket is sold to Washington, D.C. resident W. J. Eck, who had applied for it in 1929. Eck's seat had originally been reserved for the late Will Rogers.

Back from the Pacific, Capt. Robert O. D. "Rod" Sullivan inaugurates the world's first scheduled transatlantic passenger service by heavier-than-air craft on June 28; carrying 17 passengers, his *Dixie Clipper* flies the southern route to Southampton, returning 4 days later. A ninth DC-3 is delivered on July 1.

In early July, the fourth Atlantic Boeing, the *American Clipper*, is delivered; it is christened at Terminal Island, San Pedro, on July 6. It will make six demonstration flights over Los Angeles (with movie stars as passengers) before departing to New York. The *Yankee Clipper* inaugurates the northern route on July 14 and the French government, on July 15, confirms transatlantic operating authority first given on a preliminary basis on January 17.

On August 13, an S-43B with 16 aboard crashes into a harbor caisson while landing at Rio de Janeiro and breaks in half (14 dead). Beginning on August 22, the first B-314 survey flight is undertaken by the *California Clipper* to Auckland; 25 U.S. military officials are aboard as passengers.

As the result of the outbreak of war on September 3, the northern transatlantic route is terminated at Foynes and the southern at Lisbon. Rumors circulate concerning attempts by refugees at Lisbon to bribe Pan Am officials for seats on the U.S. bound clippers. An imaginary last flight over the northern route, extremely accurate from a technical viewpoint, is recreated in author Ken Follett's *Night over Water* (New York: William Morrow, 1991).

Having logged 15,000 miles and 101 hrs. 52 min. flying time, the *California Clipper* returns to San Francisco on September 6. On September 29, orders are placed for six additional Boeing 314s. The northern transatlantic route must be abandoned on October 3 as aerial conflict about the British Isles intensifies. Simultaneously, the number of "special passengers" booked on the company's regularly scheduled thrice-weekly flights increases and includes government officials, correspondents, military officers, and U.S. and foreign spies.

On October 4, the press reports Pan Am's order for six additional B-314s at \$800,000 a copy. Also in October, hearings are held before the CAB concerning the company's proposal for the new Auckland route. On November 14, orders are placed for three yet-to-be created Lockheed Model 44 Excaltors; the project will be cancelled. Capt. W. A. Cluthe, piloting the *Honolulu Clipper*, completes the last Boeing flying boat familiarization flight to Auckland on November 30.

Every Thursday during the 1939 San Francisco World's Fair, certain of the spectators are allowed to step forward at the Treasure Island base to obtain the autograph of the departing flying boat's captain; the most popular of these "stars" are Steve Bancroft and John Hamilton. Arriving back at New York on December 20, the *American Clipper* completes the carrier's 100th transatlantic crossing. On December 31, the largest net profit to date is posted: \$1,984,438.03.

As the result of board action taken on January 9, 1940, the president, rather than the chairman, is authorized as the CEO; Juan Trippe returns to power. While landing at Horta on March 21, Capt. Gray's *Dixie Clipper* is damaged when it hits heavy swells; temporarily repaired, the Boeing is returned to Baltimore where she will undergo 55 days of repair. Replacing the Baltimore facilities, a new Marine Air Terminal is dedicated at New York on March 20. Following the ceremonies, the *Yankee Clipper*, under Capt. Charles Lorber, departs for Lisbon.

During the winter flying season, only 14 of 24 westbound transatlantic flights are completed due to storms and strong winds. In all, only 40 of 87 scheduled transatlantic trips are completed. At month's end, the first Boeing 307 Stratoliner, the *Clipper Rainbow*, is delivered.

Capt. Sullivan's *Atlantic Clipper* arrives at New York from Lisbon via Horta on April 16, having completed a record crossing of 26 hrs. 2 min. On April 24, orders are placed for three DC-4s. Eight DC-3s are deliv-

ered in May. The first Boeing 307 Stratoliner *Clipper Rainbow* departs Miami on June 3 for Bogota; flying via Barranquilla, the pressurized airliner secretly brings in a variety of pilots and technicians who remain largely out of sight for the next week. The paper Colombian subsidiary **Sociedad Anonima Colombo-Americano de Aviacion, S.A.** is dissolved on June 7, the same day on which the CAB grants a Treasure Island-Auckland via Canton Island and Noumea, route certificate.

Having smuggled company employees in aboard **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** aircraft, Pan Am's secret ownership of SCADTA is now revealed to U.S. and Colombian government officials. On June 8, 80 German employees of SCADTA are terminated (still known as the "delousing") and are immediately replaced by the Americans who had come into the country aboard the *Clipper Rainbow*. Three days later, on June 11, the Pan American-Imperial Airways Company, formed in May 1930, is dissolved. The same day, an order is signed for 40 Lockheed Constellations, with deliveries beginning in 1943.

On June 14, **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereos, S.A.)** is renamed **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)**. Pan Am emerges with 64% shareholding. government. At mid-month, Boeing 314 service is extended from San Francisco to Los Angeles and Honolulu and on June 18, transatlantic frequencies are increased from two to three per week. The S-42 *Bermuda Clipper*, renamed *Alaska Clipper* and assigned to Pacific Alaska Airways, inaugurates the first mail service between Seattle and Juneau on June 20.

The entrance of the transnational carrier's big flying boat on the scene is protested by the local Alaskan regional carriers, which soon respond by synchronizing their biweekly Ketchikan to Juneau flights. The *Alaska Clipper* is replaced on the Bermuda service by the *Pan American Clipper III*, which is thereafter relabeled the *Bermuda Clipper*. Four days later, the *Alaska Clipper* begins twice-weekly return passenger and mail service over the Juneau-Seattle route. The roundtrip fare is \$100.

Also in June, the three S-40As *American Clipper*, *Caribbean Clipper*, and *Southern Clipper* are retired from scheduled service and placed on a charter footing; while the *Southern Clipper* is overhauled, her two sisters undertake "special flights" in the Caribbean for the U.S. government. Two more B-307s, *Clipper Flying Cloud* and *Clipper Comet*, are received at month's end; all three of the Stratoliners will be placed into service in the Caribbean area, specifically on the routes from Brownsville and Los Angeles to Mexico City.

During the first week of July, Juan Trippe meets with President Roosevelt, who asks the airline leader to covertly build a series of bases for the U.S. government; arrangements will be made via the DOS with the British government. In the meantime, the DOS-administered Airport Development Program is launched for the improvement of landing facilities at Belem and the old **Air France** airfield at Natal in Brazil. The first Boeing 307 Stratoliner *Clipper Rainbow* is placed on scheduled service on July 4 and on July 12, the B-314 *California Clipper* introduces the first regularly scheduled airmail service from Treasure Island to Auckland via Los Angeles, Honolulu, Canton Island, and Noumea in New Caledonia.

On July 15, the CAB grants a seven-year transatlantic certificate to **American Export Airlines (Amex)**; Pan Am sues, challenging the legality of the new entrant's owners (a steamship line) to operate an air carrier. At PAA urging, Congress will deny Amex a mail subsidy. Los Angeles to Honolulu return flying boat service begins on July 23. An S-43 crashes in the Caribbean on July 28, but it will be rebuilt. Also in July, two more DC-3s join the fleet.

When the *Yankee Clipper* arrives at Lisbon on August 4, the event marks the carrier's 200th Atlantic crossing. Due for delivery to Pan Am during the second quarter of 1941, three Boeing 314s are sold to the British Purchasing Commission on August 30 for \$1,035,400 apiece; the total company profit for the three exceeds \$600,000.

On September 1, direct U.S.-Colombia flights begin and the 1933 mail contract ends. PAA begins operating B-307s over the route from

Miami to Cristobal, Panama, on September 1, reducing flight time on that segment by six hours. Passengers connecting to the **Pan American-Grace Airways (PANAGRA)** service down the west coast of South America are now able to reach Buenos Aires from New York in just three-and-a-half days.

Passenger service is introduced on the San Francisco–Auckland route of the Boeing 314 *California Clipper* on September 11.

A 40% interest is taken in **Aeronaves de Mexico, S.A. de C.V.**, then operating a Mexico City–Acapulco route, on September 12. Also in September, PAA-constructed Barreiras Airport, carved out of the Brazilian wilderness inland between Belem and Rio de Janeiro, is opened. Its completion allows the B-307 *Clipper Rainbow* to open service to Belem, at which point a DC-3 connection allows one-stop continuation service to Rio. Also in September, the B-307s *Clipper Comet* and *Clipper Flying Cloud* are placed in service to Mexico City from Los Angeles and Brownsville.

On October 1, developing transatlantic competitor **American Export Airlines** announces its purchase of Lowell Yerex's **TACA (Transportes Aereos Centro-Americanos, S.A.)**, reportedly for \$2 million. As an initial response, taken on October 10, **Aerovias de Guatemala, S.A.** is established as competition to the local TACA subsidiary; PAA takes 40% shareholding and a Guatemala City meatpacker and U.S. citizen, Alfred Denby, is named manager. Arriving at Port Washington from Lisbon after dark on October 11, Capt. Sullivan's *Yankee Clipper* becomes the first transoceanic, heavier-than-air machine to make a night landing in the U.S.

On November 2, a subsidiary, Pan American Airport Corporation, signs a government contract under the Airport Development Program to begin the covert construction of airfields on those Caribbean islands obtained by the U.S. in the famous "destroyers for bases" deal with the U.K. announced back on September 3. President Roosevelt's discretionary accounts provide the carrier with \$12 million in addition to \$3 million for support activities. Under the arrangement, 15 bases are to be built for \$4.3 million down the islands to Brazil's bulge and 10 from Tampico to Venezuela via Central America, at \$3.2 million; additionally, 9 seaplane bases are to be constructed at \$1.4 million.

Beginning on November 3, the *Yankee Clipper* becomes the first of the original Boeing 314 flying boats to be upgraded to 314A status. Having received new Pan Am-supplied Douglas DC-2s, **Aerovias de Guatemala, S.A.** initiates service on November 7. November 22 marks the fifth anniversary of transpacific service.

Returned to service, the improved Boeing 314A arrives at Lisbon on December 18 with 13,402 pounds of mail, the largest mail poundage transported across the Atlantic in a single flight by a heavier-than-air machine prior to the 1950s. Late in the year, the *Alaska Clipper's* Seattle–Juneau service, now flown via Ketchikan, is taken over by a DC-3 and a corporate navigation division is established at the University of Miami to train not only its own personnel, but navigators for the U.S. and British military.

A total of 2,122 passengers are transported to Europe during the year and 2,846 to Asia. Many flights from Lisbon depart with only a few VIP passengers—or none at all. A total of 242,223 pounds of mail are hauled eastward and 192,540 pounds westward. The Postmaster General's annual report shows that the company has received \$47 million in airmail subsidy since 1929, while all other U.S. carriers together have received only \$13 million more.

The operating certificates of **TACA de Guatemala, S.A.** are withdrawn by the government on January 1, 1941 and **American Export Airlines** withdraws its offer to purchase the remains of the Yerex airline empire. Interamerican all-cargo flying boat service is inaugurated on January 27 when, piloted by Capt. David G. Desmond, with only two other men in her crew, the *Southern Clipper*, the world's first scheduled air freighter, departs Miami. The flying freighter reaches Port au Prince, Haiti, on January 30 where her 3,366-pound payload is offloaded. Also in January, eight more DC-3s are placed in service.

On February 3, Capt. Gray's *Dixie Clipper* departs Lisbon for Bolama, Portuguese Guinea, the Atlantic division's twelfth overseas base.

Returning to New York on February 9 via Port of Spain and San Juan, the Boeing becomes the first all-metal air transport to fly the longest nonstop commercial air route then existing, the first U.S. commercial aircraft to land in and depart from Africa, and the first to carry passengers and cargo across the South Atlantic. Among the passengers are President Trippe and 1940 Republican presidential candidate, Wendell Wilkie. The Lisbon–Bolama–Trinidad–San Juan–New York route becomes regularly scheduled on February 15.

The S-42A *Dominican Clipper* is lost in an accident in San Juan Harbor on March 10. During the month, the *Dixie Clipper* completes the carrier's 300th transatlantic crossing; since 1939, excluding flights to Bermuda, a total of 3,600 passengers and 314 tons of mail have been flown to Europe. The CAB grants a route certificate for Singapore service on April 29. The wholly owned subsidiary *Panama Airways* is dissolved on April 30.

On May 2–10, the *California Clipper*, piloted by W. J. Barrows, inaugurates biweekly airmail flights from Treasure Island to Singapore via the Central Pacific and Manila. An M-130 over the Central Pacific route to Hong Kong on alternate weeks allows the company's transpacific service to be maintained on a weekly basis. Return flights covertly include the latest military intelligence reports.

Pacific Northwest Airways and the company's Northwest division are merged on May 5 into an Alaska division. On May 23, a DC-3 is passed to **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)**. Also in May, five additional DC-3s are received. While on a training flight over Long Island Sound, the *Dixie Clipper* becomes the first U.S. commercial aircraft to directly assist in the rescue of a downed airman. Prior to his pickup by the USCG, the Pan Am aircraft provides a life-ring to Robert L. Hall, who has crashed his U.S. Army Air Forces XP-50.

On June 17, while visiting London to deliver the annual Wilbur Wright lecture to the Royal Aeronautical Society, British Prime Minister Winston S. Churchill meets with Pan Am President Trippe. Arrangements are now made between the U.S. War Department and Pan Am for the support of British military forces in Africa. The subsidiary **Atlantic Airways**, jointly owned with **British Overseas Airways Corporation (BOAC)**, begins ferrying aircraft from Miami to Africa on June 21 via the Caribbean, Brazil, and South Atlantic.

Most of the 18-man skeleton crew, including 10 pilots and 2 copilots, for the new operation are supplied by PAA. People of note in this group include Joseph Mackey, who performed aircraft ferrying for the RAF and who will establish the postwar carrier **Mackey Airlines**; James Bledsoe, who will serve as the postwar chief engineer of **China National Airways Corporation (CNAC-1)**; U.S. Air Mail Service and **Western Air Lines** pilot Al DeGarmo; and Capt. Hal Sweet, the famous **China National Airways Corporation (CNAC-1)** pilot of the DC-2 1/2 (a DC-3 repaired with a DC-2 wing), who had evacuated Gens. Wavell and Brett to Rangoon, Burma. Captain Bob Crawford, who will later write the official "Off We Go" Air Force song, is in charge of Pan American Air Ferries, Inc. (PAAF) training.

The first PAAF mass flight, from Miami Municipal Airport to Lagos, Nigeria, via Belem, comprises 10 Lockheed Model 10A Electras and Model 18 Lodestars purchased by U.K. representatives from U.S. airlines and private companies.

Also in June, the last Pacific Boeing 314 is delivered and christened *Anzac Clipper*. On June 29, **Pan American-Grace Airways (PANAGRA)** route from Puerto Suarez, Bolivia, is pushed to Corumba, Brazil, where a linkup is made with PAA.

Two new covert, one-year contracts are now signed by the U.S. government with company subsidiaries. The first with Pan American Airways-Africa, Ltd. (PAAA) on July 15 calls for the carrier to establish a system of bases and route facilities and system for the transfer of supplies and return of ferry pilots. The work will include the upgrade of several **Imperial Airways, Ltd.** bases and the construction of many others, mostly in the Sudan and Nigeria, along a route to Cairo and Tehran. The second contract, signed with PAAF on July 24, provides for the direct transport

of lend-lease aircraft over the Pan American Airways-Africa route network. Later, urgent cargo and spare parts will also be ferried.

With his headquarters at Miami's civilian airport, PAA Vice President Franklin Gledhill is placed in charge of these operations, with George Kraigher as operations manager in Africa; a subcontract is signed with **Panair do Brazil, S.A.** to handle PAAF affairs in Brazil. The second transatlantic ferry flight and the first under the control of PAAF is now conducted with a mix of seven Lockheed Lodestars and Douglas DC-2s from Miami to Belem to Accra on the Gold Coast. At midyear the old Consolidated Model 16 Commodore *Miami* is transferred to the Brazilian air force as the *Belem*.

On August 10, daily Treasure Island-Honolulu B-314 service is initiated by the *Anzac Clipper*. President Roosevelt publicly reveals PAAF on August 19. Also in August, the final Atlantic-based B-314 is delivered and christened *Capetown Clipper*. It is soon sold to the War Department for \$900,000; leased back, it will be flown in support of transatlantic projects undertaken to aid the British war effort.

The first mission of the big flying boat is the transport, beginning on September 27, of the 52-man nucleus of the PAA-Africa pilot and mechanics staff from North Beach, Long Island, to Bathurst and Lagos via the Caribbean and Natal, Brazil. Regularly scheduled transatlantic air express service is inaugurated by the *Dixie Clipper* on September 28. PAA provides two Boeing 247Ds to **Aeronaves de Mexico, S.A. de C.V.** on September 30. Also in September, the company begins to increase its orders for DC-4s.

President Roosevelt, on October 3, officially authorizes Pan American Air Ferries to begin large scale delivery of lend-lease military aircraft; PAA-Africa will fly C-46, C-47, and other transport planes. The same day the S-42A *Dominican Clipper* crashes while landing at San Juan, Puerto Rico (two dead).

Three days later, on October 6, PAA-Africa Operations Manager Capt. George Kraigher and a picked crew make a DC-3 survey flight over the **British Overseas Airways Corporation (BOAC)** trans-African airport network from Lagos. Destinations visited include Kano and Maiduguri in Nigeria, Chad's Fort Lamy, El Geneina, El Fasher, El Obeid, and Khartoum in Sudan, Cairo, Tehran, Basra and around the southern Arabian peninsula to Karachi via Oman.

On October 16, the CAB allows the addition of Suva, Fiji, as a stop on the transpacific route. Two S-42Bs are transferred to Manila to increase connecting frequencies with Hong Kong and Singapore. With the Pan American Airways-Africa route network completed in just 61 days construction time, Pan American Air Ferries inaugurates scheduled lend-lease deliveries on October 21 with seven DC-3s from the Gold Coast community of Takoradi to Khartoum via Dakar, Accra, Lagos, Kano, Maiduguri, El Geneina, El Fasher, and Khartoum. On October 29, with an RAF ferry crew at the controls, a PAA-Africa DC-3 makes the division's first official flight from Takoradi to Cairo. Also, the last DC-3 to be received by PAA before the attack on Pearl Harbor arrives during the month.

On November 5, Boeing B-314 passenger service is inaugurated from Treasure Island to Auckland via Los Angeles, Honolulu, Canton Island, Suva, and Noumea. At Fisherman's Lake, approximately 800 miles south of Dakar, the *Capetown Clipper*, piloted by Capt. Harold Gray, alights on November 20 where John Leslie, the Atlantic division chief, elects to establish a new African base. Gray and the *Capetown Clipper* inaugurate airmail service to Leopoldville, Belgian Congo, with a cargo of 4,369 letters.

During the month, the merchant vessels SS *Acadia* and SS *Santa Paul* are chartered to transport PAA-Africa personnel and cargo to West Africa for the base-building project. From the Fisherman's Lake Clipper-connection base, ferry pilots will be able to shuttle back and forth to Takoradi or Khartoum. At this point, on the eve of American entry into the war, PAA is the world's largest commercial air transport concern, serving 62 foreign nations and covering approximately 98,582 unduplicated miles.

On December 7, the Japanese opens World War II in the Pacific with the aerial attack on Pearl Harbor. On that morning, the *China Clipper* re-

turns to Treasure Island from Honolulu. An hour out of Honolulu, when the Rising Sun attack on Pearl Harbor begins, the Boeing 314 *Anzac Clipper*, piloted by Capt. H. Lanier Turner, diverts to Hilo. Having unloaded its passengers and mail, the ship is refueled by hand and returns to Treasure Island on December 7-8. Capt. John Hamilton's Martin M-130, en route to Guam from Wake, is recalled to that island by the prearranged signal "Case 7, Condition A."

After the *Philippine Clipper* lands, USMC officers ask Hamilton to conduct a reconnaissance flight, but before the aircraft can be readied, Japanese aircraft attack Pan Am and USMC installations and planes. Most of the installations are destroyed and strafing puts more than 60 (some say as many as 97) bullet holes in the flying boat and kills 9 of PAA's 66 station staffers.

Stripped of her mail and cargo, the *Philippine Clipper* is able to flee to Midway with 70 company employees aboard. One man is left behind and interned after the island is captured on December 23. Caught in the air between Noumea and Auckland by the "Case 7, Condition A" signal, the B-314 *Pacific Clipper*, piloted by Capt. Robert Ford, proceeds to Noumea, from which it is ordered to proceed on to New York. Before departing, an informal camouflage paint scheme is applied, partially covering the American flag logo.

The *Philippine Clipper* returns from Midway to Pearl City, Hawaii, on December 8. Eleven company employees will be captured on Guam, which comes under initial attack on this day. Meanwhile, Japanese aircraft attack **China National Aviation Corporation (CNAC-1)** aircraft and the S-42 *Hong Kong Clipper* at Hong Kong's Kai-tak Airport on Kowloon Peninsula. The flying boat, being readied for rapid departure by Capt. Fred Ralph and his crew, is destroyed by strafing. A CNAC-1 plane takes Ralph and his airmen off the island and helps them reach Calcutta.

On December 9, the *Capetown Clipper* is dispatched to Calcutta with a high priority shipment of Curtiss P-40 tires and spare parts; offloaded, the goods are shipped inland by **China National Aviation Corporation (CNAC-1)**. While on a training flight, an S-38B crashes at Miami on December 11 (two dead).

By the time Hong Kong falls on December 12, William Langhorne Bond, in charge of the company's interests (including CNAC-1) in the British colony, has managed to evacuate 275 people and 3 aircraft to Calcutta. At Washington, D.C. the same day, Navy Secretary Frank Knox, upon the recommendation of former PAA Captain Dutch Schildhauer, creates the Naval Air Transport Service.

On December 18, the Boeing 314 Clippers *Capetown*, *California*, *Anzac* are turned over to the U.S. War Department, which will designate them as C-98s.

The *California Clipper* is transferred from Honolulu to the Atlantic division, while the *Honolulu Clipper*, undergoing overhaul at San Francisco, is allowed to remain with the carrier's Pacific division. The government also purchases the Clippers *Pacific*, *Honolulu*, *Yankee*, *Atlantic*, *Dixie*, and *American*, but these will be turned over by the War Department to the Navy for use by its new Naval Air Transport Service.

Made flyable by the 10 tons of tires, ammunition, and spare parts received at Rangoon from Calcutta via **China National Aviation Corporation (CNAC-1)**, American Volunteer Group ("Flying Tiger") P-40s defend the Burmese city on Christmas Day.

By month's end, nearly all of the carrier's flying boats and three Stratoliners have been sold and turned over to the government, which will continue to operate them with Pan Am crews. Twelve Lockheed Model 18 Lodestars are acquired during the year, 10 for the **Panair do Brazil, S.A.** subsidiary and 2 for the Alaska division. In addition to its S-38s and Commodores, the company owns a fleet that comprises 3 S-40As, 6 S-42s, 4 S-43s, 2 M-130s, 9 B-314s, 4 DC-3s, 24 DC-3As, and 3 B-307s. The huge route network is about to shrink to a wartime configuration of just 82,000 miles.

Enplanements since January total 200,000 and the year's net profit is \$6.9 million.

Having flown 31,500 miles from San Francisco, the *Pacific Clipper* arrives at the Marine Terminal at New York (LGA) on January 6, 1942.

In 25 days, the Boeing 314 visits Honolulu, Canton Island, Noumea, Auckland, Gladstone, Darwin, and Surabaya, where it narrowly misses being shot down by Allied fighters initially mistaking it for a Kawanashi Emily. The flight continues on to Trincomalee, where the No. 3 engine fails and is repaired with parts manufactured on the spot, Karachi, Bahrain, Khartoum, Leopoldville, Belem, Trinidad, and Puerto Rico.

During this flight, the *Pacific Clipper* achieves the first aerial crossing from New Caledonia to Australia, the first circumnavigation of the globe by a commercial aircraft, the longest continuous trip ever made by a commercial plane, and the first around-the-world flight of a plane following an equatorial (or near equatorial) route. The West Africa–Brazil hop of 3,583 miles is the longest nonstop flight yet recorded by the company.

Just to make certain that it does not fall into Japanese hands, the company's stock of aviation fuel at Macao is destroyed on January 16. En route to Africa, a Lockheed Lodestar is damaged in a January 21 crash at Natal, Brazil. Having been turned over to the Navy, the *China Clipper*, *Philippine Clipper*, and their drafted crews are allowed to continue the daily Treasure Island–Honolulu shuttle. To help keep needed supply lines open to the Asian and African war zones, a new Africa–Orient division is established.

Also in January, the three Boeing 307s are directed to fly high-priority cargo from the U.S. to South America. Three C-47s (military DC-3s) are received through the Defense Supply Corporation. On January 31, the B-314 *Pacific Clipper* flies 56 delegates, including Under Secretary of State Sumner Welles, home from the Rio Conference; the 4,350-mile flight to Miami is made in a record 33 hours.

Cornelius V. Whitney resigns from the board on February 25. Meanwhile, CEO Trippe is offered command of the Army's Air Transport command by General Henry "Hap" Arnold, chief of the Army Air Forces; though tempted with the rank of brigadier general, the airline leader declines, claiming he is temperamentally unsuited to not having final authority.

En route to Africa on a PAAF flight segment from Natal on the evening of March 14, a B-25C, piloted by veteran Alaskan bush pilot Kenneth Neese, is lost when it crashes into a hilltop upon takeoff (four dead). The last CNAC-1 DC-2 is lost in a crash at Kunming the same day; PAA orders Pacific Alaska Airways to dispatch one of its DC-3s as a replacement. The 28th DC-4 is ordered, also in March.

En route to the Mideast on April 12, a B-25 being ferried by PAAF crashes into a mountainside at Oshogbo, Nigeria, during a thunderstorm (four dead). The carrier's 40% interest in **Aerovias de Guatemala, S.A.** is reduced to 20% on April 15.

On April 18, Army B-25s from the aircraft carrier USS *Hornet* bomb Tokyo in the famous "Doolittle Raid." Eight of the navigators aboard those medium bombers were among those trained by Pan Am at the University of Miami campus. Also in April, the headquarters of Pan American Air Ferries (PAAF) is shifted from Miami Municipal Airport to the 36th St. Airport.

Beginning in April and continuing in May, 28 PAA-Africa personnel, led by Capt. Dallas Sherman, contribute to the aerial evacuation of Allied soldiers and refugees from a main evacuation point at Myitkyina, Burma, over the Himalayan Mountains ("The Hump") to Dinjan, in the northeastern extremity of India. Flying 80% of the ferry flights, along with a few pilots from the AAF, RAF, and **China National Aviation Corporation (CNAC-1)**, these Pan Am pilots are responsible for saving 3,564 women, children and wounded soldiers from Burma. The PAA-Africa and other DC-3s have also made it possible for P-40s of The Flying Tigers to operate in Burma for as long as they do by providing ferried-in fuel and ammunition.

Also in May, the first large PAAF mass ferry flight is conducted to the Middle East with 70 North American B-25C medium bombers for the Soviet Air Force. Since April, 28 PAA-Africa personnel, led by Capt. Dallas Sherman, contribute to the aerial evacuation of Allied soldiers and refugees from Burma to Dinjan. Flying 80% of the ferry flights, along with pilots of **China National Aviation Corporation (CNAC-1)**,

the company is responsible for the evacuation of 3,000 passengers over "the Hump."

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen and promised by ATA President Edgar Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities. Aircraft are now dispatched to Edmonton, Alberta, for participation in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Also in June, the B-314 *Atlantic Clipper* transports Queen Wilhelmina of the Netherlands and her retinue from Ulster to Shediac, New Brunswick. Out of fuel, a PAAF-flown Lockheed B-34 Ventura is badly damaged when it crashes on the beach at Marshall, Liberia, on June 25.

In the first week of July, six PAA-Africa DC-3s, over a 33-hr. period, deliver badly needed shell fuses from the West Coast of Africa to Alexandria and Cairo via the central African ferry route, changing crews at Khartoum. Three more PAAF-operated aircraft, all A-28 Hudsons, are lost during ferry flights in July, including one each at Marshall, Liberia, and Natal, Brazil, and the third at Kano, Nigeria; only the Natal crash is fatal (three dead).

While training USN pilots at Miami, the old S-40A *American Clipper* is severely damaged in an accident on July 24. Also during July, an airport is opened on Ascension Island and company ferry flights are now able to refuel there. Simultaneously, a new 5,000-ft. paved landing strip is completed at Juneau, Alaska.

During the first seven months of 1942, Pan Am has overseen the delivery of 1,445 warplanes and tons of supplies and ammunition, to British forces being pushed by Rommel toward Suez.

PAAF dispatches its own representative to Belem on August 8, taking over the coordination of ferry work previously contracted to **Panair do Brazil, S.A.** On August 28, the CAB revises the method of the company's airmail payment. The same day, AAF Air Transport Command Commanding General Harold L. George reviews the PAAF training center at Miami. The next day, a B-34 Ventura, suffering engine failure, crashes as it attempts to land at Cape Palmas, Liberia (three dead).

Four more C-47s are delivered through the Defense Supply Corporation in August and during the summer PAAF delivers 100 Lockheed A-28 Hudsons to Cairo, where most will ferry gasoline on behalf of the British 8th Army.

A cost plus 4% fee contract is signed with the U.S. Naval Air Transport Command (ATC) on September 1 to reinforce the essential commercial services to Alaska being provided by **United Air Lines** and **Northwest Airlines**. Two weeks later, employing USN R4D-1s (naval DC-3s), 10-times-weekly flights are initiated from Seattle to Fairbanks via Juneau.

On September 9, another S-43 is transferred to **Panair do Brazil, S.A.**, followed by a fifth on September 28. Meanwhile, on September 19, a new Martin B-26 Marauder en route to Tel Aviv on a ferry flight is lost when it crashes into a Nigerian hillside between Vario and Kaduna during a thunderstorm; all aboard survive. On September 27, both crewmen bail out of an A-20, which catches fire in midair over Fort Liberty, Haiti.

On October 1, it is announced that, one month hence, PAAF and PAA-Africa will be dissolved and all aircraft ferrying will be assumed by Gen. George's ATC. The same day, the company's guesthouse at Piarco is completed; it will be used as an overnight stop for company crews and passengers for many years to come. Another A-20 is destroyed in a nonfatal crash at Nasiriya, Iraq, on October 6 when it hits an unmarked ditch while taxiing in a dust storm. En route to Ceylon, a

PAAF-ferried Consolidated PBY-5A Catalina crashes on a hilltop while taking off from Gura, Eritrea, on October 14; no injuries are reported.

In mid-October just prior to the Battle of El Alamein, the *Capetown Clipper* arrives in Africa with a priority cargo of great importance: dust filters for General Montgomery's tank engines. During the month, a total of 121 aircraft are ferried to the Mideast by PAAF, including 45 Douglas A-20 Havocs for the Soviets. Over 500 aircraft have been transported by PAAF in 194 mass flights during the past 18 months.

On November 1, the Army Air Forces' Air Transport Command assumes responsibility for the ferrying of aircraft, although much of the work will still be accomplished under contract. During the year, Pan American Air Ferries (PAAF) transports a total of 540 aircraft (bombers) through South America and over to Africa. Among its last actions, PAA-Africa crews bring five new Douglas C-54s to Accra on November 11; these are turned over to the Africa-Orient division, which begins to transship cargo under contract from the West African coast, up the chain of Pan Am-made bases, to the British Army near Cairo. Late in the year, the division begins moving it beyond Egypt to India and a connection with the Hump ferry operation of **China National Aviation Corporation (CNAC-1)**. The Miami-India service becomes known as the "Cannonball Express."

On January 7, 1943, Transatlantic Manager John C. Leslie orders the *Dixie Clipper* and *Atlantic Clipper* to depart New York for Miami. In Special Mission No. 70, the *Dixie Clipper*, piloted by Capt. Howard M. Cone Jr., with Passenger No. One, "Mr. Jones" (President Roosevelt) and other VIPs aboard, departs Miami on January 11. The *Atlantic Clipper*, piloted by Capt. Richard Vinal, provides security backup and transport for presidential aides and civil and military officials. After a 10-hr., 1,633-mi. flight, the two Clippers land at Port of Spain, Trinidad, where the party will spend the night.

From Port of Spain on January 12, the Pan Am flying boats proceed for 8 hours and 1,227 miles to Belem, at the mouth of Brazil's Amazon River, where a 3-hour break is taken for fuel and servicing. Taking off into the night, the planes wing their way east over their longest leg, 2,500 miles, to arrive in mid-afternoon, January 13, at Bathurst, Gambia. There, PAA's special passengers board a C-54 for Casablanca. The *Atlantic Clipper*, meanwhile, transports diving equipment to Algiers and proceeds on to Bahrain. Captain Bill Masland awaits the conclusion of the Casablanca conference with plans to fly Roosevelt and Churchill on to Australia for a meeting with Chiang Kai-shek.

On January 21, the M-130 *Philippine Clipper*, piloted by Capt. Robert Elzay and transporting from Honolulu Pacific Submarine Fleet Chief Adm. Robert H. English and his staff, crashes into a mountain near Booneville, California, some 100 miles from San Francisco (19 dead). The wreckage will not be found for almost two weeks. Their security supposedly compromised by Japanese intelligence, Roosevelt and Churchill do not proceed to Australia; however, the *Atlantic Clipper* does transport Gen. Albert C. Wedemeyer and his staff to that destination.

Having reacquired "Mr. Jones" at Bathurst on January 24, the *Dixie Clipper* takes him back across the Atlantic to Natal, Brazil, from whence he flies to Trinidad aboard the same C-54 employed in Africa. Reunited with the Boeing at Port of Spain, the Commander-in-Chief arrives back at Miami on January 30, having spent a total of 70 hrs. 20 min. aboard the flying boat and celebrated, aloft, his 61st birthday. The Casablanca flight marks a number of firsts, including the first time a president is flown outside the U.S., the first time a U.S. president is flown over an ocean, and, in fact, the first airplane voyage by a sitting chief executive.

While circling to land on the Tagus River at Lisbon at dusk on February 22, the *Yankee Clipper*, with 39 aboard, catches a wing in the river and cartwheels. Twenty-four aboard the flying boat are killed, including singer Tamara Drasin and correspondent/OSS agent Ben Robertson Jr., as the wreck sinks within 10 minutes. Upon investigation, the tragedy is blamed on pilot error and Capt. Robert O. D. "Rod" Sullivan, the first pilot to complete 100 transatlantic flights, is forced to resign.

At the time of the wreck, a total of 1,225 transatlantic Boeing flights have been safely made, during which 44,000 passengers have been taken back and forth over 6 million miles to Europe, along with 2.5 million pounds of mail. The next day, **Panair do Brazil, S.A.** receives its sixth and last transferred S-43. Also in February, the entire Atlantic division is placed under command of the Naval Air Transport Command for the duration of the war.

In March, the Boeing 314 *American Clipper* makes 20 transoceanic crossings, including 2 roundtrips between the U.S. and Brazil, covering over 55,000 miles and transporting some 106.5 tons of supplies. The USN contract route to Alaska is extended from Kodiak to Dutch Harbor and Adak in April. In May, the *Dixie Clipper* is transferred to the Pacific division and assigned to the San Francisco-Honolulu shuttle. With the Miami to Natal route now chiefly flown by C-47s, the C-98 flying boats are assigned, beginning in June, exclusively to the South Atlantic route between Natal and West Africa. The *China Clipper* is returned to Pan Am on June 13 and in one of the few flights by a company flying boat across the U.S., is transferred to Miami, where she is refurbished and repainted. The old S-40A trainer *American Clipper* is retired from USN service on June 24.

On July 14, a 30% interest is acquired in **AVENSA (Aerovias Venezolanas, S.A.)**. While in service on the South American routes, the S-42B *Pan American Clipper III* is lost on July 27 at the Brazilian town of Manaos, 1,000 miles upriver from the mouth of the Amazon. Following a midyear meeting with the USAAF chief, Gen. Henry "Hap" Arnold, and the leaders of 17 U.S. airlines to consider postwar aviation policy, President Trippe issues a proposal on September 20 for an All-American Flag Line or "Community Company." The idea will stay alive for several years and be hotly debated in the U.S. Congress.

The *China Clipper* begins shuttle flights to Leopoldville on October 13. Since its beginning in September 1941, the company's transatlantic air express service, as of October 31, has flown 4.3 million pounds between the U.S. and Europe. In September and October alone, the B-314s have flown 7,500 pounds of maps and charts to Gen. James H. "Jimmy" Doolittle, the 12th Air Force commander.

A Netherlands West Indies permit is received on November 10 for the addition of a Curaçao stop on the Miami-Caribbean run. Eight days later, the 5,000th ocean crossing since Pearl Harbor is completed. With a sufficiency of C-54s (military DC-4s) now available, the War Department in November turns the three C-98s over to the USN, which, in turn, will release them to the company's Pacific division.

Company ownership of **Panair do Brazil, S.A.** is reduced on December 7 to 58%; 42% shareholding is sold to local interests. On December 10, a 45% interest is taken in **Bahamas Airways, Ltd.** Three unnamed Consolidated Model 16 Commodores are recommissioned and assigned to the new partner. The first is lost in a crash during a test flight on December 24. The Alaska division is operating 11 R4D-1s at year's end. During the year, the company is paid \$85 million for its government contracts, most of it to Pan American Airports, Inc.; commercial routes gross another \$35,550,168.

The name of **Cubana (Compania Nacional Cubana de Aviacion, S.A.)** is changed to **Cubana (Compania Cubana de Aviacion, S.A.)** on February 1, 1944. Seven days later, the first plane from Miami lands at New York (LGA). The airline begins three-and-a-half-day express service from the U.S. to India on March 13, while service is started to Point Barrow on Alaska's north coast on March 22. Also in March, the Alaska division becomes part of a combined Pacific-Alaska division.

Miami to Nassau and Miami to Merida, Mexico, clipper flights begin on April 15. Accelerated flights begin on April 21 from Seattle to Adak via Anchorage; the Aleutian service now requires 36 hrs. flying time instead of 84. On April 26, a 40% interest is taken in **CDA (Compania Dominicana de Aviacion, S.A.)**. While the U.S. Congress debates the merits of an All-American Flag Line, the CAB on June 14 announces its willingness to receive applications for new international route certification.

The Alaska contract with the government ends on July 31. The S-42 *Hong Kong Clipper* sinks at Antilla, Cuba, on August 7 and on August 30 a 40% interest is acquired in **COPA (Compania Panamena de Avia-cion, S.A.)**. Also in August, the old S-40A trainer *Caribbean Clipper* is withdrawn from USN service. On September 17, the S-40A freighter *Southern Clipper* is retired and sold for scrap.

LACSA (Lineas Aereas Costarricenses, S.A.) is formed on October 17, with PAA taking a 40% interest. On November 16, a 40% interest is acquired in **SAHSA (Servicio Aereo de Honduras, S.A.)**; the next day, 40% of the shares of **LANICA (Lineas Aereas de Nicaragua, S.A.)** are also taken. At Mexico City, Wilbur Morrison is appointed a vice president to lead the Latin American division; he will hold the post for 22 years. Late in the year, the three conscripted Boeing 307 Stratoliners are returned and in December company shareholding in **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** rises to 56%. The old Consolidated Model 16 Commodore *Uruguay/Sao Paulo* is transferred to the Brazilian air force as the *Manaus*. Net profit for the year is only \$1.6 million.

On January 8, 1945, the *China Clipper*, piloted by Capt. Cyril Gayette and en route to Leopoldville from Miami, crashes into an unidentified object in the water at Port of Spain, Trinidad (23 dead). Orders are placed for the Republic CV-37 Rainbow on February 15. Between March 19 and May 4, the Subcommittee on Aviation of the Committee on Commerce of the U.S. Senate holds hearings on S. 326, the All-American Flag Line proposal known as the McCarran Bill after its sponsor, Senator Pat McCarran of Nevada. One of the chief witnesses opposed to the concept is **American Airlines** President Ralph S. Damon. Meanwhile in March, the company applies to the CAB for the right to fly domestic U.S. routes.

In April, in response to an overture from workers at the PAA overhaul base, the Transport Workers Union establishes an air transport division and establishes a new local in Miami. Also in April, the carrier joins with 40 others from 25 nations in forming IATA.

Having outwitted speculator Floyd Odium, Juan Trippe, supported by Kuhn Loeb, acquires \$43 million in increased capitalization on June 25. The maneuver will stand the executive and his company in good light when future financing is required at the dawn of the Jet Age. The CAB, on June 1, announces its decision to grant transatlantic operating certificates to both **American Export Airlines** and **Trans Continental and Western Airlines (TWA)**. Pan Am and TWA are authorized to fly south of the 50th parallel with the former allowed onward rights to Calcutta via Istanbul and Karachi.

On July 5, the CAB approves a large number of transatlantic routes for various U.S. carriers. The ruling ends hopes for S. 326 which, nevertheless, is voted upon on July 6; the result is a tie and the legislation does not leave its subcommittee.

While making a landing under instrument conditions at Fort de France, Martinique, on August 3, an S-43 crashes and sinks in 20 fathoms of water (4 dead). Twelve company employees captured at Wake and Guam in December 1941 are released in September after four years of internment in Japan.

Following V/J Day, company officials reflect on PAA's wartime contributions. At least 12 aircraft have been destroyed and over 200 employees killed. Some 90 million miles have been flown in government service and over 15,000 ocean crossings have been made, including 3,000 across the Pacific and 3,800 over the Atlantic. In addition to its training of thousands of military pilots and mechanics and its VIP flying boat service (which has undertaken over 700 missions), the company, together with **British Overseas Airways Corporation (BOAC)**, pioneers the microfilming of mail as a weight reduction measure (V-Mail or Airgraph). On the \$90 million expended by Pan American Airport Corporation in South America, not a single penny in profit is made.

Having organized workers in Miami, the air transport division of the Transport Workers Union signs its first airline contract in September, a historic document with PAA.

British Overseas Airways Corporation (BOAC) clerks and executives help to dock and unload two Pan Am flying boats on October 10, as airport and airline workers at Bermuda strike. On October 24, a survey team aboard a new DC-4 undertakes a 25,000-mile inspection of the company's former Pacific bases and potential new ones with an eye toward resuming commercial services from the U.S. to Asia with landplanes. The "Skymaster" survey requires a total of 27 stops, including Honolulu, Midway, Wake, Guam, Tinian, Saipan, Manila, Iwo Jima, Tokyo, Nanking, Tsingtao, Shanghai, Hong Kong, Hainan, Saigon, Batavia, Singapore, Calcutta, and Rangoon in 140 flying hours over 28 days.

The first revenue-service DC-4 is delivered on November 4 and is christened *Clipper Raven*. En route to San Francisco from Honolulu on November 4-5, the B-314 *Honolulu Clipper*, a veteran flying boat with 18,000 flying hours logged, loses two engines and puts down at sea in an emergency landing. After all 23 of the crew and passengers are removed, the aircraft is taken in tow by the USS *Manila Bay* (CVE-61) the next day; however, five days into the haul, the line parts. The USS *San Pablo* (AVP-30) also gets a line attached, but the floating aircraft now slams into the ship's side, fatally damaging itself. There is no option but to sink her by gunfire, even though it takes 1,300 rounds of 20-mm. cannon fire to do so.

Regularly scheduled, daily, 20-hr., \$278 one-way Boeing 314 Treasure Island-Honolulu passenger service resumes on November 16. A \$25-million order is placed with Boeing on November 28 for 20 B-377 Stratocruisers, with deliveries to begin a year hence. All interest in **Aerovias de Guatemala, S.A.** is sold to **Aviateca (Aerolineas de Guatemala, S.A.)** on November 30. Five more DC-4s are received during the month: *Clipper Monsoon*, *Clipper Mandarin*, *Clipper Lightfoot*, *Clipper Malay*, and *Clipper Courser*.

The **China National Aviation Corporation (CNAC-1)** is dissolved on December 20. On December 24, the final B-314 transatlantic flight is concluded by the *Bermuda Clipper*. At three days and two-and-a-half nights, the 3,650th flight is also the shortest recorded. During the month, three more DC-4s arrive: *Clipper East Indian*, *Clipper Monsoon*, and *Clipper Kit Carson*.

Operating revenues for the year total \$67,791,000 and the route network is now 93,076 unduplicated miles.

Transatlantic runs under contract to the USN end on January 2, 1946, while New York to Bermuda flights begin two days later. The first Lockheed L-049 Constellation is delivered at New York on January 5 and is christened *Clipper Mayflower*. It is the first of its type to enter commercial service when it departs New York (LGA) later in the day for a flight to Bermuda. The last transpacific flying boat service is undertaken on January 6. A second L-049, the *Clipper Challenge*, is delivered on January 12. The company's transatlantic Constellation service begins—to Lisbon—on January 14, the same day flights are started to the Belgian Congo. An L-049 Constellation with 41 aboard drops a burning engine and makes a crash landing at Windham Field near Willmantic, Connecticut, on January 19; there are no serious injuries.

On February 4, Pan Am becomes the first U.S. airline fly an L-049 to London. Departing New York (LGA), the Lockheed *Clipper Bald Eagle*, piloted by Capt. R. W. Fordyce with 29 passengers aboard, flies to Gander, on to Shannon, and hence to Hurn Airport near Bournemouth, arriving the next day in 12 hrs. 9 min., almost 5 hours better than the previous 17-hr. DC-4 mark. A total of 36 passengers are aboard for the return flight.

On March 22, the company signs a UN Relief and Recovery Agency (UNRRA) contract to fly personnel and medical supplies to Shanghai via Tokyo. Weekly U.S.-Shanghai L-049 flights commence three days later. On March 28, in accordance with a new Mexican law, company interest in **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** is reduced to 45%. The first return UNRRA charter trip from Shanghai to San Francisco is completed on March 31. Also in March, the company provides its Brazilian subsidiary, **Panair do Brazil, S.A.**, with its first three Lockheed L-049 Constellations.

The Hawaii-California return B-314 service ends on April 8, when the *American Clipper* arrives at Mills Field from Honolulu. Simultaneously, DC-4s begin service to Hawaii; the route is reduced from 20 hours flying time to 10 and the fare drops to \$195 from \$278. The surviving U.S. Boeing flying boats, *Atlantic Clipper*, *Dixie Clipper*, *American Clipper*, *Capetown Clipper*, *Pacific Clipper*, *California Clipper*, and *Ansac Clipper* are now retired to anchorage off the naval air station at San Diego, where they are offered for sale by the War Assets Department. At the time of retirement, the *Dixie Clipper* is the senior aircraft, having logged 19,000 flight hours over 1.25 million miles.

The first film to be premiered aboard an airliner is shown aboard a PAA L-049 Clipper en route to Ireland from New York on April 15. The same day, a UNRRA Constellation arrives at Seattle from China. The next day, the L-049 *Manoel de Borba Gato* of the **Panair do Brazil, S.A.** subsidiary becomes the first foreign airliner to arrive at London's new Heathrow Airport.

A C-54, from Hurn, England, makes the first all-cargo transatlantic flight on May 7. As the result of the CAB's May 17 ruling in the Latin American Route Case, the carrier receives a valuable New York to San Juan route. However, several domestic airlines are given permission to fly where PAA had previously operated alone, especially in Mexico. (Actually, there is no competitive penetration into Mexico until new bilateral agreements are signed in 1957.)

With receipt of the L-049 *Clipper Golden Fleece* on May 25, a total of 20 additional Constellations have been received since January. A total of 20 DC-4s join the fleet, beginning on May 29 with the *Clipper Flying Arrow*.

Two L-049s arrive at London from New York on June 1 opening the first direct service from New York. Three ex-military Douglas C-54s are purchased for **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** and converted to civil DC-4 standard; the first is delivered to Mexico City on June 6. The same day the *Clipper Mandarin* completes the carrier's first peacetime landplane flight to New Zealand. New York to Vienna via Brussels and Prague biweekly service begins on June 16.

Two days later, a Constellation, en route from New York to London, suffers a fire in its No. 4 engine, which falls off its mount. The incident requires the L-049 to make a forced landing at Windham Field, Williamantic, Connecticut, but no injuries are reported. The problem is traced to a defective cabin supercharger drive shaft from the outer engine. The CAB rules that these must be sealed off on all Constellations (requiring them to fly unpressurized at lower altitude) until Lockheed can remedy the problem. When the CAB grounds the industry's Constellations for inspection, the company temporarily suspends its New York to London service as well as that to Manila.

On June 20, in another strike against Pan Am's one time "chosen instrument" status, the CAB grants **Northwest Airlines** permission to become the second U.S. airline to open a transpacific route. Simultaneously, **United Air Lines** is authorized to begin serving Hawaii from California. A new express route is inaugurated on June 27 from New York to Buenos Aires via San Juan; the next day, a Constellation holds a fashion show over New York. Also in June, the CAB strengthens the company's European route award by adding three additional gateways, including Frankfurt.

The S-42 *Colombia Clipper* and the S-42As *Jamaica Clipper*, *Brazilian Clipper*, and *Antilles Clipper* are scrapped on July 15. The same day, DC-4 passenger flights are inaugurated to Buenos Aires. These end two days later as Argentina, seeking a more favorable arrangement with the carrier, orders their suspension. Overnight New York to San Juan service begins on July 31.

The **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** interest is reduced to 41% on August 5. New York to Puerto Rico \$150 roundtrip excursion fares, with a 45-day stopover, are introduced on August 8. August 13, the CAB confirms Pan Am's lease lucrative route from New York to Johannesburg via the Central Atlantic stops of the Azores, Dakar, Monrovia, Accra, and Leopoldville. On August 15, Argentina

once more permits the use of Buenos Aires as the southern terminus of the New York route.

New York-London Constellation service is resumed on September 1, followed by a renewal of biweekly New York-Vienna flights five days later. The year's last DC-4, the *Clipper Fleetwing*, is delivered on September 8. On September 16, DC-4s resume company service to Manila and interest in **COPA (Compania Panamena de Aviacion, S.A.)** falls to 33% on September 18. Brazilian ownership of **Panair do Brazil, S.A.** is increased on September 19 from 42% to 52% majority; the interest in **AVENSA (Aerovias Venezolanas, S.A.)** is increased to 37%. Simultaneously, the last two Consolidated Model 16 Commodores are retired by the **Bahamas Airways, Ltd.** partner; they will be scrapped two years later. Constellation flights to Manila are resumed on September 22.

While en route from New York to London via Gander and Shannon on September 24, the L-049 *Clipper London* with 10 crew and 26 passengers, is unable to extend her landing gear and makes a crash landing at Shannon, Ireland. Although the aircraft must be written off, there are no fatalities or serious injuries.

A stop at Santa Maria, Azores, on the Leopoldville route, replaces one at Shannon on October 20. Four days later, the company temporarily suspends its transpacific flights west of Honolulu to Manila and the Far East because of a deterioration of the communications facilities remaining from wartime. CAA intervention is sought.

On November 3, nightclub service is introduced Miami to Havana flights. The same day, the company claims a record peacetime passenger movement in taking 1,000 delegates to a women's benefit association convention on the day's Havana flights.

On November 29, fares are cut to and between 127 cities in the Caribbean and South America. CAB hearings on the company's domestic route application also begin in November. Another L-049 crashes at Shannon on December 28.

A total of 66,500 transatlantic passengers are carried on the year, over half of all carried between the U.S. and Europe.

An S-43 is destroyed in a crash at São Paulo on January 3, 1947. On January 10, the CAB's Domestic Routes Case hearings end and six days later the company resumes San Francisco to Manila service. Nonscheduled New York to Johannesburg flights are initiated on February 5 and beginning on February 15 PAA assists the Syrian Aviation Company in opening a Damascus-Jedda route. The same day, twice-daily roundtrips are introduced on the New York-Bermuda route.

Following **American Airlines'** February 20 cancellation of the Republic Rainbow, the manufacturer, despite Pan Am's exercising an option for a total of 12 aircraft, cancels the airliner. Juan Trippe's airline, which has counted on the new ship for many of its domestic services, now informs the CAB that it cannot offer this new equipment. Daily Miami-Montego Bay service begins on February 23.

The most interesting event in March is the muffed first landing at Moisant Airport at New Orleans. Unfamiliar with the area, the pilot of the company L-18 Lodestar scheduled to complete the historic arrival, accidentally lands at Shushan Airport, instead. Apprised of his error upon landing, the Lockheed's captain climbs back aboard his plane, departs, and flies an extra leg over to Moisant.

To compete with **United Air Lines'** April 1 start-up of one-day New York-Hawaii service, the company cuts its own fares on the Honolulu route. The CAA, on April 9, gives its initial approval for use of the U.S. Army's wartime Ground Control Approach radar for use by commercial airlines for traffic control. The agency authorizes Pan Am to test the device at Gander, Newfoundland.

Senate bill S. 987, a new version of the All-American Flag Line proposal, is introduced by Senator McCarran and Senate subcommittee hearings are conducted, beginning on May 17. Hearings on four similar bills are held in the House of Representatives. Votes on the concept in both legislative bodies, when eventually taken, will be negative. Daily London-Vienna flights begin on May 23 and four days later DC-4 multistop service is inaugurated to Sydney, Australia, employing the new Skymaster sleeper *Clipper Union*.

Multistop service to Shanghai is resumed with DC-4s on June 3. The *Clipper America* begins a 13-day around-the-world service on June 17; the company's first circumnavigation mission will end with a second plane on June 30.

On June 19, the No. 2 engine of the L-049 *Clipper Eclipse* with 10 crew and 26 passengers catches fire over Syria and falls out, forcing the Constellation to make a forced landing in the Euphrates desert near Mayadine (14 dead).

Between June 21 and 28, three L-749s are accepted: *Clipper Glory of the Skies*, *Clipper Sovereign of the Sky*, and *Clipper Romance of the Skies*. The last returns from the company's first around-the-world service on June 30, the 13-day multistop flight begun on June 17. The 100,000th passenger is transported to Bermuda on July 27.

During Senate hearings in August, Howard Hughes claims Sen. Owen Brewster has attempted to force a merger between Pan Am and **Transcontinental and Western Air Lines (TWA)**. San Francisco to Hong Kong flights are resumed on September 2.

A DC-4 with 5 crew and 36 passengers makes a crash landing at New York's Floyd Bennet Field on September 20; all aboard escape fire and injury as the pilot and crew are lauded for their heroism. On September 24, PAA becomes the first airline to offer scheduled around-the-world service; a DC-4 departs San Francisco for Tokyo, Hong Kong, and other destinations. That night, sleeper service is inaugurated on the nonstop New York to London run. Washington, D.C. becomes a stop on the New York to Buenos Aires service on September 29.

As the result of faulty weather information, a company DC-4 passes through a hurricane while en route from Havana to Miami on October 12. A DC-3 with 5 crew and 13 passengers is reported missing in Alaska on October 27; a search is mounted and finds the wreckage—and no survivors—on Annette Island's Tamgas Mountain on November 1. Meanwhile, on October 28, a stone memorial plaque is erected at Key West Airport by the State of Florida, marking the site as the birthplace of international daily commercial airmail and passenger service under the U.S. flag.

Complete (100%) ownership is taken in **UMCA (Uraba, Medellin and Central Airways, S.A.)** on December 2. A total of 31 DC-4s are delivered during the year and airline employment now totals 19,000. The company's annual report for 1947 shows it to be the first airline in the world to top \$100-million gross revenues.

L-049s open New York–Johannesburg service on February 26–28, 1948. On March 3, the company asks the CAB to bar an extension of the **TACA (Transportes Aereos Centro Americanos, S.A.)** permit to serve Miami and New Orleans. PAA charges that the Waterman Steamship Corporation owns the competitor and operates its as an illegal invasion of the air transport field and as a way to evade income taxes. On March 18, New York–New Delhi flights begin. Despite faulty landing gear, an L-049 lands safely at Accra on March 23.

The L-049 *Clipper Empress of the Skies*, with 31 aboard en route from Karachi to New York via Brussels, London, and Shannon, hits a 3-foot stone wall after undershooting its Shannon landing on April 15 and crashes (30 dead). An L-049 flies the New York City–Bermuda run in a record 2 hrs. 15 min. on April 27. A Connie establishes a new record for Johannesburg–New York when it arrives on May 23—37 hrs 14 min. George Bernard Shaw assists in promoting PAA summer tours to Ireland by writing copy for ads that begin to appear on June 17. On July 17, the company takes a DC-4 off its Vienna schedule to assist in the Berlin Airlift. Also in July, DC-4 service from New York to Rio de Janeiro, multistop, daily is introduced.

Between August 6 and September 15, a fleet of 10 Curtiss C-46 freighters is acquired. Beginning on October 1, L-049s offer plane-to-ground radio-telegraph services for passengers. Reversing the CAB on October 4, President Harry S Truman allows PAA to undertake Seattle and Portland–Honolulu service (if flights continue beyond Hawaii), but refuses to allow resumption of the company's earlier shuttle service from the West Coast to Hawaii. The New York to London nonstop frequency is resumed on October 18 and the company's 45% interest in **Ba-**

hamas Airways, Ltd. is sold to **British South American Airways Corporation, Ltd.** on October 23.

C-46 all-cargo flights from New York–Buenos Aires (multistop) and Boston–Bermuda begin on December 1. With the delivery of the last machine on December 17, the company has received a total of 20 Convair CV-240s since April for use on its Caribbean services. Employing DC-4s, Pan Am initiates tourist-class flights from New York to San Juan. Many Puerto Rico laborers use the popular \$75 service to immigrate to New York. An interline agreement is signed with **British European Airways Corporation (BEA)** on December 26 and on December 28 a DC-6 establishes a new speed record for the Miami–Balboa run—4 hrs. 1 min.

Also in December, CEO Trippe secretly reaches agreement with **American Airlines'** Chairman C. R. Smith to purchase the latter's **American Overseas Airlines** subsidiary. **American Airlines** President Ralph S. Damon, uninformed of the negotiations, resigns. He will now become third president of **Trans Continental and Western Air Lines (TWA)** from which position he will attempt to prevent CAB and White House approval of the sale. Only three DC-4s are delivered during the year: the *Clipper Gem of the Skies*, *Clipper Don Quixote*, and *Clipper Ocean Express*. North Atlantic enplanements total 55,000.

With two failed engines, a DC-4, en route to Barcelona from Boston, makes a successful emergency landing in the Azores on January 13, 1949. On January 30, a private Cessna 170 crashes into the L-749 *Clipper Monarch* over Port Washington, New York, just after the Clipper's takeoff from New York en route to London. Both occupants of the light-plane are killed when it rips a 15-ft. hole in the forward part of the upper fuselage. The Constellation is able to land safely at Mitchell Field, New York, with no injuries to any of the 33 aboard.

The first Boeing 377 Stratocruiser is delivered to the carrier at Portland, Oregon, on January 31 in its initial silver and blue paint scheme and is christened *Clipper America*.

During the remainder of the first quarter, five more B-377s join the fleet: *Clipper Golden Gate*, *Clipper Tradewind*, *Clipper Friendship*, *Clipper Flying Cloud*, and *Clipper Southern Cross*. DC-4 tourist-class flights to Rio and Buenos Aires begin on March 1. During March, a large promotional campaign is initiated on behalf of the "Strato Clippers"; the B-377s visit a number of domestic cities for public ground inspections and in addition, over 110,000 lucky passengers receive courtesy flights. Among these are those aboard a B-377 that flies from San Francisco to Washington, D.C. in a record 6 hrs. 22 min. on March 3. The six new Boeing airliners are placed into service on the San Francisco–Honolulu route on April 1 and the New York–Bermuda run on April 15.

The Stratocruiser *Clipper America* makes a proving flight from New York to London on April 28 in a record 9 hrs. 46 min. at an average speed of 365 mph. The next day, DC-4 Miami to Mexico or Guatemala roundtrip tours are begun.

During the first two quarters and beyond, DC-4s provide evacuation flights from Shanghai to Hong Kong. In April and also in May, the B-377s *Clipper Golden Eagle*, *Clipper Mayflower*, and *Clipper United States* are received. The big Boeings begin an all-first-class President Service from New York to London on June 2. Guam to Tokyo or Bangkok cut-rate tours are started on June 25.

On July 7, a Stratocruiser, en route from London to New York, loses a propeller 800 mi. W. of Shannon; it is able to safely return to the Irish airport.

Between July 8 and July 18, engine trouble causes four Ireland-bound B-377s to turn back to New York. On July 19, flights to Guatemala are suspended during the civil revolt. Company DC-4s become the first U.S. commercial aircraft to enter the Korean Airlift. Flying via Honolulu and Midway, a Stratocruiser makes a survey flight from San Francisco to Tokyo in September; the trip requires 25.5 hrs.

B-377 service is initiated from New York to Frankfurt on October 5 and twice weekly from San Francisco to Tokyo on October 17. Also on the latter day, the carrier cuts 20 hours off its New York to Hong Kong run by dropping the Calcutta stop. San Francisco to Singapore flights are launched on October 31.

With the delivery of the *Clipper Morning Star* on December 30, the carrier has received a total of 21 purchased and eight acquired Boeing 377s since January. Two DC-4s, the *Clipper Northern Light* and *Clipper Resolute*, are delivered throughout the year. Meanwhile, four L-749s, acquired earlier to provide extra capacity before delivery of the Stratocruisers, are now sold to **Air France**.

Bookings for the North Atlantic route total 61,000 during the 12 months.

On January 3, 1950, a B-377 flies from Tokyo to Honolulu in a record 11 hrs. 24 min. The same day, the company is renamed **Pan American World Airways (1)**.

PAN AMERICAN-GRACE AIRWAYS (PANAGRA): United States (1929–1967): Unable to successfully compete in each other's spheres of influence, the Aviation Corporation of the Americas, parent of **Pan American Airways (PAA)**, and the W. R. Grace Corporation negotiate a compromise on January 25, 1929. On February 21 in Delaware, each company pledges a million dollars capitalization and incorporates a joint airline known as Pan American-Grace Corporation, better known as Pan American-Grace Airways or PANAGRA. John D. McGregor of **Pan American Airways (PAA)** is named vice president/general manager from New York while the PANAGRA representative on the PAA board is Robert H. Patchin.

The **Pan American Airways (PAA)** subsidiary **Peruvian Airways Corporation, S.A.**, purchased for leverage the previous September, is taken over on February 25. Peruvian's CEO Harold R. Harris becomes PANAGRA's on-scene vice president-operations, working out of the new company's Lima headquarters at Las Palmas AFB. All six of the Peruvian Fairchild FC-2s and FC-2Ws are taken over and the initials of the new concern are stenciled on their fuselages.

Flights are maintained on the Lima to Guayaquil route recently established by Vice President Harris, as well as to other points served earlier.

On March 2, the U.S. Post Office awards the partnership the FAM-9 contract for service from the Panama Canal Zone over 4,598 miles to Santiago de Chile and Buenos Aires. Also in March, two more Fairchild FC-2Ws are delivered to the company. At month's end, service is opened from Lima to Arequipa, in the southern part of the country.

The first U.S.–Peru air link is established as of May 14. On that date, a PANAGRA FC-2 departs Miami for Panama via Central America. A chartered **Pan American Airways (PAA)** Sikorsky S-38B takes the mail sacks on May 17 from Cristobal in the Canal Zone on to Talara, Peru, via Panama City, Buenaventura, Tumaco, Guayaquil, and Puerto Pizarro. There the cargo is shifted to a PANAGRA FC-2, which completes the trip by reaching Mollendo on May 18 via Pimentel, Trujillo, Lima, and Ica. Other PANAGRA Fairchilds and the S-38 simultaneously begin to operate FAM-9 in reverse.

The route is stretched down to Santiago, Chile, on July 31 via Antofagasta, Copiapo, and Ovalle.

The first four Ford Tri-Motors, 5-AT-54, Dash-55, Dash-56, and Dash-59, are delivered at New York in July; christened *San Fernando*, *San Cristobal*, *Santa Mariana*, and *San Jose*, they enter service on August 11. On September 1 and 15, two additional Ford 5-ATs, Dash-61, and Dash-62 are received from the assets of **New York, Rio and Buenos Aires Line (NYRBA)** that were purchased by **Pan American Airways (PAA)** and named *San Pedro* and *San Pablo*. The *San Pedro*, formerly the NYRBA *Santiago*, undertakes the first service from Santiago, Chile, to Buenos Aires, Argentina, on September 4; the flight, routed via Rosario, Cordoba, and Mendoza, requires 10 hrs. 30 min. and features the first in-flight lunch in South American airline history.

The *San Pedro* inaugurates a through mail service in reverse from Buenos Aires to Santiago via Mendoza, Cordoba, and Rosario on October 8; piloted by PANAGRA Vice President/General Manager John C. McGregor and Raymond Williams, the trimotor flies the first mail from the U.S. across the Andean route. Meanwhile, the first three Sikorsky S-38Bs are delivered, one each on September 30, October 22, and November 22. On November 30, a frequency is introduced to Montev-

ideo from the Brazilian city. Also during the month, Colombia grants landing rights to PANAGRA.

Two of the new Fords are damaged during the first week of January 1930. The 5-AT-59 *San Jose*, with six aboard, makes a hard landing at Pacasmayo, Peru on January 1; no injuries are reported. The 5-AT-55 *San Cristobal* is damaged at Montevideo, Uruguay, on January 6.

The Miami–Uruguay service remains an all-mail operation until January 16, when passengers are allowed to fly from Cristobal to the north Chilean city of Arica aboard the new S-38B *San Juan* and several of the new Ford 5-ATs. Robert “Bob” Reeve, who will later establish **Reeve Aleutian Airways**, is the S-38Bs pilot. The grant of Colombian landing rights the previous fall and delivery of the *San Juan* allows PANAGRA to take over operation of FAM-9 all on its own.

The pace of the mail route is increased on April 26, after which the time it takes but 6 1/2 days for a letter to reach Buenos Aires from New York City. On May 21, the first airmail flight is completed to Managua in an S-38B flown by pilots Schultz and Terletzky. In October, Charles A. Lindbergh sells Harris a Curtiss Falcon, which is painted to resemble an airmail letter with oversized postage stamps.

A Loening C-2 Air Yacht is obtained to operate the Buenos Aires–Montevideo trans-River Plate segment, beginning on November 30. With a huge 550hp Wright Cyclone engine, the single-seater Falcon is employed, beginning in December, to haul mail over the Uspallata Pass between Santiago and Buenos Aires.

Further improvements in frequency are made in early 1931. An S-38B is lost in a crash just short of French Field, Canal Zone, on February 7. Three days later, Vice President-Operations Harris personally arranges for the Prince of Wales and a 10-person party to be flown from Lima to Arequipa aboard the Ford 5-AT-59 *San Jose*.

The same month an FC-2 is destroyed in a Chilean crash.

Piloted by Byron “By” Rickards, the Ford 5-AT-56 *Santa Mariana*, its crew and mail, are taken hostage on February 16 by rebel soldiers at Arequipa. The mail, being considered sacred by both sides, is released to a company Lockheed Vega that retrieves it from Rickards the next day and flies it on to Lima.

Simultaneously, Peruvian President Sanchez Cerro, having decided to make war on Colombia, demands that PANAGRA turn over to him all of the company's aircraft in Peru. CEO Harris protests, but eventually turns over a Fairchild, which is subsequently crashed.

On March 2, the coup against President Cerro fails and the *Santa Mariana* flies its leader from Arequipa across the border to Arica, Chile.

The Ford 5-AT-55 *San Cristobal*, piloted by Clifford Travis with a party of six **Pan American Airways (PAA)** officials on an inspection tour, makes a noninjurious crash at Ovalle (Chile) on April 1.

The first night passenger flight from Lima to Arica is made on May 31–June 1, largely along the coastline. On August 10, the first radio station is switched on.

Arica–Santiago de Chile passenger flights commence with radio-equipped Fords on August 15, while passengers are taken over the Andes to Buenos Aires and Montevideo in Fords as of October 5.

Meanwhile, no PANAGRA official is made known of **Pan American Airways (PAA)** President Trippe's secret accord with Peter Paul von Bauer, president of the competing, Colombian-based **SCADTA (La Sociedad Colombo-Alemana de Transportes Aereo, S.A.)**, who has earlier attempted to form anti-PANAGRA government coalitions. Major competition will now come from Elmer Faucett's **Faucett Peruvian Airlines (Compania de Aviacion Faucett, S.A.)** in Peru, the Chilean army airline **LAN Chile Airlines, S.A.**, and the German-backed Bolivian carrier **LAB (Lloyd Aereo Boliviano, S.A.)**.

The Ford 5-AT-62 *San Pablo* is damaged in an undetailed accident at Ilo, Peru, on October 10; she will be repaired.

When Vice President McGregor visits Lima from New York in November, Harris flies him aboard a Fairchild P-4 on the first flight through the Monturaqui Pass between Antofagasta, Chile, to Salta, Argentina. The adventure is officially billed as a search for an alternate route from the Uspallata Pass.

The Loening C-2 Air Yacht is lost in a bad landing at Montevideo on April 3, 1932. The Ford 5-AT-61 *San Pedro* is damaged in an undetailed accident at Cerro Azul, Peru, on May 19. In association with **LAB (Lloyd Aero Boliviano, S.A.)**, a joint service is operated from Lima to Tacna and hence over the border to La Paz; the operation is short-lived, being abandoned by LAB on June 27.

On July 16, the Ford 5-AT-62 *San Pablo* piloted by Capt. C. J. Robinson en route from Santiago de Chile to Buenos Aires, crashes in the Argentine Andes near Mount El Plomo, close to the railway town of Puente del Inca, during a snowstorm (nine dead). The wreckage will not be found for 20 months.

On August 7, in bad weather, the 2,300-mi. service from Buenos Aires to Lima is completed in 23 hrs. A week later, when snow closes the Uspallata Pass, the company makes a record 13 flights through the Andes cut, shuttling passengers who have no other way to get through.

The replacement for the *San Pablo*, the 5-AT-22, is acquired from **Pan American Airways (PAA)** on August 22 and is christened *San Felipe*; it enters service in September after engine modifications at PANAGRA's Lima shops. A company FC-2 is sold to the Peruvian government in October. Now a W. R. Grace accountant in the South American division, America's first ace, Douglas Campbell, who had flown with the 94th Aero Squadron during World War I and joined Grace as a messenger in 1919, is assigned to PANAGRA. He will eventually succeed Vice President Harris.

Three S-38Bs are delivered in early 1933, one in February and two in April. Meanwhile, on March 11, a Fairchild FC-2W2 is washed out at Mendoza, Argentina. Two more Ford 5-ATs are delivered, one each in April and June. The second machine is the last of its type ever manufactured. Rebuilt at PANAGRA's Lima facility with spare parts from the ex-Chilean ID-407H and other aircraft, the Ford 5-AT-66 *San Rafael* enters service on May 21.

Meanwhile, on May 8, the company is able to establish a radio station at the summit of Uspallata Pass, near the famous Christ of the Andes statue; two Chilean volunteers transmit weather reports from the primitive facility.

Under charter to the Compania Explotadora Cotabamas, S.A., the Ford 5-AT-54 *Santa Rosa*, piloted by Capt. Tommy Jardine, transports 55 tons of hydroelectric power-generating equipment, transformers, generators, and so forth in two-ton shipments from an airfield at Cuzco to Huanacopampa. From there, the equipment is hauled to the CEC mining site at Cochasyhuas.

Company aircraft provide lift for delegates and others attending the Pan American Conference at Montevideo in December. One service on December 19 is laid on especially to deliver the wife of U.S. Secretary of State Cordell Hull to the gathering.

The Ford 5-AT-66 *San Rafael* is withdrawn after a takeoff accident at Lima on March 21, 1934 (three dead); among the injured are Manuel Trucco, Chilean ambassador to the U.S., and the two principal PANAGRA vice presidents, McGregor and Harris. A short-lived service is offered from Lima to Cuzco between May 13 and 27. The Ford 5-AT-55 *Santa Mariana*, with 10 aboard, crashes into Mar Chiquita, a shallow lake near Juinin, Argentina, on June 11 (five dead); the survivors wait atop the wing for rescue while the plane will later be salvaged and rebuilt.

The Ford 5-AT-17 is purchased from **Trans Continental and Western Air (TWA)** for \$5,000 on July 5. Christened *Santa Rosa*, the aircraft is especially equipped by company mechanics at Lima with a special sliding fuselage top over the cabin for use in carrying oversized freight shipments.

Readied, the *Santa Rosa*, piloted by Capt. Tommy Jardine and C. H. Pursley, resumes the transport of large cargo on behalf of the Compania Explotadora Cotabamas, S.A. on August 4. Jardine and Pursley continue flying from Cuzco to Huanacopampa until August 17, when they are relieved by Capt. Fritz Sterling and Haynesworth Lesesne.

The first Douglas DC-2 is delivered to Capt. Tommy Jardine and Bob Disher at the Santa Monica factory on August 27, where it is christened

Santa Ana; they fly it down to Brownsville, Texas, where it is painted and given a radio set.

The carrier establishes a Peruvian subsidiary, **Compania Aerovias Peruanas, S.A.**, promising to equip it with 5-AT-54, the *San Fernando*. Two additional DC-2s are delivered on September 8 and 12; christened *San Martin* and *Santa Lucia*, respectively, they are stationed at Lima.

The *Santa Ana* departs for South America on September 13, landing at Cristobal, Canal Zone, later in the day. On September 17, the *Santa Ana* completes its delivery flight from Cristobal to Lima via Talara in a record 9 hrs. 35 min. The 1,573-mi. one-stop flight is the first to link Cristobal and Lima on the same day.

Just three days later on September 20, Capt. Warren D. Smith pilots the carrier's second DC-2 from Cristobal to Lima via Talara in just 8 hrs. 45 min. A third DC-2 arrives before the end of the month. The *Santa Rosa* is joined on the Cuzco to Huanacopampa mining charter on September 25 by a second unmodified Ford 5-AT, piloted by Capt. Byron "By" Richards; the two aircraft attempt to complete their contract before the rainy season.

On October 6, the first DC-2 service is made from Santiago to Buenos Aires via the Uspallata Pass. Upon arrival, Capt. Smith flies a public relations service around the country; among his guests is the Primate of Poland, Monsignor A. Lord. A return flight to Santiago is completed without incident the next day.

The DC-2 *San Martin*, piloted by Capt. Warren D. Smith with **Pan American Airways (PAA)** officials as guests, is flown from Santiago de Chile to Buenos Aires via Mendoza on October 11 in a record 4 hrs. 28 min. All remaining **Peruvian Airways, S.A.** concessions are transferred to PANAGRA on October 23. The Compania Explotadora Cotabamas, S.A. mining contract is finally completed on October 31. Since the start of the project in August, the two Ford Tri-Motors involved have transported 815 metric tons of machinery.

In early November, Dr. Serge A. Korff of the California Institute of Technology contracts with the company for lift in connection with his conduct of high altitude studies on cosmic rays. On November 11, the Ford 5-AT-54 *San Fernando* flies Dr. Korff and his instruments to an altitude of 26,100 ft. over Lima. The experimental flight also breaks all then-extant South American altitude records.

The Ford 5-AT-17 *Santa Rosa*, in 3 trips on November 16–27, transports 5.5 tons of machinery from Cajamarca to Chachapoyas. The DC-2 *Santa Lucia* conducts a second Korff flight on December 2, climbing to 30,300 ft. over Lima. By year's end, PANAGRA and **Pan American Airways (PAA)** are operating a combined total of 69 ground radio stations throughout South America.

On January 17, 1935, the Ford 5-AT-17 *Santa Rosa* completes an all-cargo service from Lima to Huancayo. An earthquake strikes the Lima area just after the Ford's return.

The DC-2s *Santa Silvia* and *Santa Elena* are delivered in January and March, respectively. Shortly thereafter, DC-2s are introduced on the Santiago de Chile–Buenos Aires segment. A new radio station is opened at Pisco, Peru, in April.

Bolivia grants route authority to PANAGRA on May 18; roundtrip flights from Tacna, Peru, to La Paz are inaugurated by the DC-2 *Santa Ana* on May 31. Meanwhile, the first company radio station had opened in Bolivia, at Charana, the day before.

In June, the company is contracted to provide airlift for delegates and others attending or flying inspection missions in connection with a regional conference held at Buenos Aires to bring an end to the Chaco War between Bolivia and Paraguay. On June 9, a company plane transports the Peruvian foreign affairs minister, his wife and secretary, to the Argentine city via Santiago.

A group of Chilean negotiators and newsmen fly the DC-2 *Santa Ana*, christened "The Ministerial Special" for the trip, from Lima to Buenos Aires. The next day, the Ford 5-AT-55 *Santa Mariana* transports a joint U.S.-Chilean military observer team from Lima to Tarija, Bolivia, via the Chilean communities of Ovalle and Antofagasta.

A 58-day contract is undertaken with the Ford 5-AT-17 *Santa Rosa*, beginning on June 28, to transport 350 metric tons of heavy mining equipment into northern Peru on behalf of the Sindicato Minero Parcoy.

The trunk route is improved during the summer when a Consolidated Commodore, leased from **Pan American Airways (PAA)**, is placed into service on the service to Guayaquil, Ecuador, from Cristobal via Buenaventura, Colombia, on July 16. **Compania Aerovias Peruanas, S.A.** receives its operating certificates from the government on July 23. On July 27, the DC-2s *Santa Lucia* and *San Martin* take a combined party of 28 sight-seeing tourists from Santiago through the great pass to Buenos Aires. The largest number of passengers to cross the Andes in a single day to date are 42 flightseers taken from Santiago to Buenos Aires on July 30 by the DC-3s *Santa Elena*, *Santa Silvia*, and *Santa Ana*.

DC-2s commence through flights from Guayaquil to Buenos Aires via Lima and Santiago de Chile on August 24. The Ford 5-AT-54 *San Fernando* flies mining equipment between Huamachuco and Piaz daily between August 30 and September 13. Portable radio stations are set up at Huamachuco and Piaz for the duration of the contract while a permanent radio station opens at Junin, Argentina, also during September.

Employing the Ford Tri-Motors 5-AT-54, 5-AT-59, 5-AT-61 acquired under lease from PANAGRA in September and October and the 5-AT-17 *Santa Rosa*, **Compania Aerovias Peruanas, S.A.** inaugurates scheduled services on November 1, taking over the routes from Lima to Arequipa and to Chiclayo.

The same day a weekly "fast" four-day DC-2 schedule is introduced from Cristobal to Montevideo via Guayaquil, Lima, Santiago, and Buenos Aires. Company operations at Lima are transferred from Las Palmas AFB to Limatambo Airport, SE of the city, when it opens on November 3.

Capt. Harold MacMickle and three others are killed and two houses are wrecked when the Ford 5-AT-17 *Santa Rosa* crashes near Limatambo Airport at Lima on December 25, during a training flight. Also in December, a radio station is turned on at La Paz.

Every-two-weeks Ford 5-AT flights begin from Lima to Huancayo on January 17, 1936, offered by the subsidiary **Compania Aerovias Peruanas, S.A.**

On March 3, following the crash of a Peruvian air force mailplane with its two-man crew during a flight from Quito to Guayaquil, a search is mounted by PANAGRA Capts. Jack Miller, Jack Squire, and Craig Brown. The flyers are located in a search joined by the Americans, who also assist in the rescue.

A new airport is opened at Arequipa on April 25. The first of two ordered Sikorsky S-43s arrives on April 28.

The government of Ecuador awards Capts. Miller, Squire, and Brown its Abdon Calderon medal in a May 26 ceremony.

The first of two S-43s replaces the Consolidated Commodore (returned to PAA) on the Cristobal-Guayaquil route on June 4.

Between June 28 and August 26, the American trunk carrier and its Peruvian subsidiary combine to fly 350 tons of mining equipment to Piaz from Huamachuco.

It is meanwhile noted that, by July 15, the time required to fly a letter from Miami to Montevideo has been reduced to just five days. Also in August, Vice President Harris flies to Buenos Aires to escort a delegation of U.S. postal officials on a South American inspection tour to Chile and hence up the west coast to Cristobal.

Regularly scheduled service is inaugurated on October 9 from La Paz to Oruro and Uyuni. A second S-43 joins the fleet on October 12. Four days later, a radio station opens at Uyuni, Bolivia, followed by another at Oruro on October 19.

Visiting from New York, Vice President McGregor departs with Vice President Harris on another adventure on October 21. Carried in an S-38 piloted by Capt. Don Beatty from the Peruvian coastal town of Chiclayo, the three fly east into the Amazon basin pursuing a possible route over valley and river toward a connecting point with **Pan American Airways (PAA)** on the Brazilian border. The plane lands at Iquitos, where it is decided that too little traffic can be generated from any such union to make it economically viable.

From Uyuni on March 12, 1937, PANAGRA moves south to the new destination of Villazon, near the Argentine border. The technically difficult weekly DC-2 Diagonal route from La Paz to Cordoba, Argentina, is opened on April 16.

By June 1, return service over the route is operated twice weekly. Also during the month's first week, **LAN-Chile, S.A.'s** lone operational S-43 disappears while on a service from Punta Arenas to Puerto Montt. Flying his S-38 from Buenos Aires across the Uspallata Pass to Santiago, Capt. Fritz Sterling participates in the search for the lost aircraft; after several days, only one body and pieces of debris are located.

On July 18, the Sikorsky S-43s are assigned to fly the Colombia-Ecuador route, calling at Cali instead of Buenaventura. U.S. Mail is initially carried over the Diagonal route on July 23.

While landing at Cristobal on August 2, an S-43 crashes (14 dead). Eight days later, the DC-2 *Santa Elena*, piloted by Capt. Joe Pursley and copilot Frank deCesare, flies the president and war minister of Argentina from Buenos Aires to Cordoba to participate in ceremonies surrounding the opening of the Argentine air force academy. On August 23, the DC-2 *Santa Elena* crashes at San Luis, Argentina; both Pursley and deCesare are killed.

The company's first two DC-3s are received on October 1 and 19, respectively and are placed on the Panama-Ecuador-Chile trunk route on November 1. Meanwhile, the first S-43 is involved in a landing accident at Maracaibo, Venezuela, on October 28; it will be repaired. A third DC-3 arrives on November 15.

With DC-3s taking over the route, the frequencies between Santiago and Buenos Aires are cut on April 1, 1938, from thrice weekly to weekly.

On April 26, PANAGRA, in exchange for a 20% interest, transfers its Peruvian subsidiary **Compania Aerovias Peruanas, S.A.** to **Faucett Peruvian Airlines (Compania de Aviacion Faucett, S.A.)**.

When **Pan American Airways (PAA)** complains, on June 15, that the PANAGRA passenger service between Buenos Aires and Montevideo is cutting into its yield, Vice President-Operations Harris orders his service ended.

While en route from Santiago to Lima on a June 19 ferry flight, the DC-2 *Santa Lucia*, piloted by Capt. Donald Sheets with three other crew, encounters heavy cloud cover and radios that it is diverting toward Arica. The plane disappears and despite a sizeable air search, is not found. The wreckage will be found in February 1941 on 23,000-ft. Mount Mercedarid, N of Santiago.

Meanwhile, on July 10, S-38s on the northern route are replaced by DC-2s and DC-3s, with refueling stops added at Cali, Buenaventura, and Tumaco.

A thrice-weekly return shuttle service is inaugurated in October between La Paz and Arequipa. During the month, Vice President/General Manager McGregor is honored with the Chilean Orden de Merito.

Service begins to Quito, Ecuador, on November 19. The Diagonal route terminus is switched to Arica in early December.

Following the January 25, 1939 earthquake in central Peru's Bio-Bio province that kills 30,000 people, PANAGRA jumps into action providing relief. Through mid-February, the company's Fords and DC-2s fly 700 injured citizens from the inland city of Chillan and the coastal town of Concepcion to Santiago's hospitals.

On February 16, Vice President/General Manager McGregor resigns; he is succeeded on February 29 by W. R. Grace Vice President Harold J. Roig, who is also given the title of president, the first in company history. Vice President-Operations Harris is transferred to company headquarters in New York on March 1; he is succeeded by Douglas Campbell.

The Ford 5-AT-22 *San Felipe* is sold to the South American Gulf Oil Company (SAGO) on March 15, for use in Colombia. On March 18, the government of Chile decorates those PANAGRA personnel involved in the earthquake relief; included are Operations Manager Thomas J. Kirkland and pilots Charles R. Disher, Harry Collier, Warren B. Smith, and Fritz Sterling.

A second weekly roundtrip service is inaugurated between Cristobal and Quito on April 2. The fourth and fifth DC-3s are delivered between June 28 and July 1. DC-2 shuttle service is initiated between Guayaquil and Quito on July 22; after the runway at Guayaquil is lengthened, DC-3s replace the DC-2s during September.

The last Ford is sold to the Aramayo Mines in Bolivia during October, while La Paz native Gordon Barber purchases an S-43.

The company's second weekly return service to Ecuador from Cristobal is switched from Quito to Guayaquil on December 9.

The company's second weekly return service to Ecuador from Cristobal is switched back to Quito, from Guayaquil, on January 31, 1940.

Three additional DC-3s are placed in service during April; equipped with more power Pratt & Whitney engines, they are known as DC-3As. The earlier Wright-powered DC-3s will be phased out as soon as possible and replaced by these newer units.

The twice-weekly roundtrip service between Cristobal and Buenos Aires via Lima becomes thrice weekly on July 1. Repaired once, the original S-43 is again damaged; on July 19, it suffers a landing accident at Recife, Brazil.

Pan American Airways (PAA) begins operating Boeing 307 Stratoliners over the route from Miami to Cristobal, Panama, on September 1, reducing flight time on that segment by six hours. Passengers connecting to the PANAGRA service down the west coast of South America are now able to reach Buenos Aires from New York in just three-and-a-half days.

To put the German-backed **SEDTA (Sociedad Ecuatoriana de Transportes Aereos, S.A.)** out of business, the CAB authorizes PANAGRA on November 2 to open a cabotage service within Ecuador in direct competition. Guayaquil to Quito DC-2 services begin on November 8. On November 29, a DC-2 crashes at Quito; although none of the passengers are hurt, the cockpit crew is injured, including Capt. Jack Scheidel, who will never fly again.

A fourth weekly roundtrip service is added between Santiago and Buenos Aires on December 2. On December 26, the original S-43 is sold to **Panair do Brazil, S.A.** The next day, the PANAGRA board elects Thomas Kirkland a company vice president.

Having been classed as a strategic airline by the U.S. War Department, PANAGRA is able to launch a \$1-million expansion and modernization program in January 1941. The first phase concentrates on the improvement of air-ground communications and weather forecasting. At the same time, the U.S. CAB imposes its jurisdiction over the company and begins to impose severe operating restrictions designed to improve safety.

In its citation recognizing the company on March 15, the Inter-American Safety Council notes that PANAGRA had transported 14,600 passengers the previous year over 15.25 million miles without a fatality.

Flights to other Ecuadorian domestic points such as Loja, Cuenca, Manta, Salinas, Quito, and Esmeraldas, begin on March 16. As the result of the government's cancellation of the operating permit of **Deutsche Lufthansa Sucursal en Peru, S.A.** in February, PANAGRA is awarded its routes from Lima to Corumba and Guajara Mirim on April 1. A ninth DC-3 joins the fleet on April 5, followed by a 10th on April 15. A \$150,000 additional subsidy allows the American carrier to improve the nation's airway system and to build airports. Also during the month, Arequipa replaces Arica as the connecting point on both the north-south route and the Diagonal service.

Cigarette smoking aboard company aircraft is permitted on April 22 for the first time. Service is inaugurated to and from Cuenca, Ecuador, on April 25 following a ceremony in which Vice President-Operations Campbell opens the city's new airport. Arroyo del Rio, president of Ecuador, and other VIPs are aboard the first DC-3 service out.

LAB (Lloyd Aero Boliviano, S.A.) is nationalized in late May, its German employees are terminated and PANAGRA is asked to provide assistance. Vice President Harris arrives from New York to personally supervise both the takeover and LAB's rebuilding.

On June 3, the U.S.-registered company takes over the Rio de Janeiro to Lima service, flying via Corumba, La Paz, and several smaller cities.

Seven days later, the Bolivian route is extended to Puerto Suarez via La Paz, now served four times a week. A weekly roundtrip route is opened from Quito to Cristobal.

While making practice landings at Rio de Janeiro on June 26, the second S-43 crashes, breaks in two, and sinks. Three days later, the Puerto Suarez route is pushed to Corumba, Brazil, where a linkup is made with **Pan American Airways (PAA)**.

On August 6, a five-year management contract is signed between the Bolivian government and the company for the operation of **LAB (Lloyd Aero Boliviano, S.A.)**; part of the fee provides 23% shareholding. PANAGRA takes over the Cochabamba-Puerto Suarez trunk route and provides three Lockheed L-18 Lodestars. Simultaneously, a new Transcontinental service is instituted from Rio de Janeiro to Lima via Bolivia.

Two additional DC-3s are received later in the month. A new trans-Andean establishes a record on August 16-17 for the transport of 422 passengers between Santiago and Mendoza, Argentina. Also carried are tons of mail and supplies which, like the customers, had been delayed by bad weather in the Uspallata Pass.

On August 26, a new one-stop roundtrip Bullet route is opened from Cristobal to Lima via Guayaquil. The previous overnight stop at Quito is eliminated.

The government takes over the fleet of **SEDTA (Sociedad Ecuatoriana de Transportes Aereos, S.A.)**'s on September 5. Later in the month, a "milk-run" roundtrip route is opened from La Paz to Santa Cruz, where the Germans previously running LAB had built an airport designed as a mini-version of Berlin's Tempelhof Airport. The return service is then pushed to Corumba via Concepcion, San Ignacio, San Jose de Chiquitos, Robore, and Puerto Suarez.

The Quito to Guayaquil route, previously operated four times a week, is increased to six times a week on September 23, while the number of weekly return frequencies to Loja and Cuenca are each increased to three. A fifth-weekly roundtrip is started on October 8 from Santiago to Buenos Aires.

John T. Shannon is elected a company vice president on November 14; he relocates to New York City to handle sales. The number of weekly stops at Quito is reduced to one on November 15. Frequencies on the Santiago to Buenos Aires route become daily on November 25. Charles Disher becomes vice president-operations on November 28, with Floyd Nelson succeeding him as chief pilot.

On December 3, Quito is dropped from the international network, while Japan bombs Pearl Harbor on December 7, officially bringing the U.S. into World War II. To participate more fully in the U.S. war effort and for increased security, company operations in Panama are transferred on December 11 from France Field at Cristobal to Albrook Field at Balboa.

During the year, the company transports 29,600 passengers, 7.8 tons of mail, and 233 tons of express packages over 2.26 million revenue miles.

A second weekly Transcontinental return frequency is initiated on January 3, 1942, pushing on to Cordoba, Brazil.

On January 10-30, in the largest mass movement of passengers in South American history to date, PANAGRA aircraft transport 200 delegates, staff, and media personnel to and from the Pan American Conference at Rio de Janeiro.

Between February 6 and June 11, four more radio stations are opened in Ecuador, Argentina, and Chile. A fifth weekly return service is inaugurated on February 15 between Balboa, Panama, and Buenos Aires via Santiago.

The subsidiary **Aerovias del Ecuador Panagra, S.A.** is established at Guayaquil on March 1; under the direction of General Manager Wayne Ballentine, the new entrant will take over the Ecuadorian internal services from PANAGRA.

Ecuador signs a five-year mail contract with PANAGRA on March 28. A sixth weekly roundtrip route is started on April 21 between Balboa and Buenos Aires via Santiago.

The fleet on May 3 includes nine DC-3As, two DC-2s, a Stinson SR-10 Reliant and an FC-2W2 (both used as trainers), and several miscellaneous aircraft. On May 15, company aircraft transport medical personnel and others from the Ecuadorean Red Cross from Quito to remote locations struck that day by earthquakes.

While en route from Miami to Lima on May 31, Peruvian President Manuel Prado addresses his people from the cockpit of a PANAGRA DC-3; the signal is relayed from the company radio station to Radio Nacional, which broadcasts it over the air. Prado is the first chief executive anywhere to make a radio broadcast from an aircraft in flight.

Vice President Harris is seconded to the U.S. Army Transport Command on June 1 as a civilian advisor. The same day, Capt. Warren B. Smith, who has become the first pilot ever to cross the Uspallata Pass a thousand times, receives a congratulatory telegram from U.S. President Franklin D. Roosevelt and is made a "Knight of the Andes" by the Chilean government.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen and promised by ATA President Edgar Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities. Aircraft are dispatched to Edmonton, Alberta, for participation in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Meanwhile, on July 9, two company DC-2s are tasked to launch the carrier's first scheduled all-cargo service over a route from Balboa to Lima. The operation is also the first regular commercial air cargo service to be certified by the CAB.

Travel time on the Transcontinental route from Rio de Janeiro to Lima by July 17 is just two days; the return from Lima to Rio requires only a one-and-a-half days. During the summer, Vice President-Operations Campbell travels to Washington, D.C. where he not only convinces the War Department not to strip aircraft from his fleet as it had other U.S. carriers, but to provide it with three new DC-3s.

Appointed communications director on August 4, Valmore La Pierre institutes a three-week, five-city installation of new radio stations in Ecuador, Peru, and Argentina.

All-cargo DC-2 flights begin from Cristobal to Lima via Guayaquil on August 28. Shortly thereafter, the DC-2 *Santa Silvia* crashes near Lima. Vice President Harris resigns from the airline on September 15 to become a colonel on the staff of the commanding general of the AAF Air Transport Command. Although he will climb to the rank of brigadier general and serve several other airlines after the war, he will not return to PANAGRA.

Between September 30–October 6, the remaining DC-2F, assisted by DC-3s, transports 14,000 kilos of cargo south from Balboa. Meanwhile, on October 3, a shipment of 881 kilos of medicine, manufactured by the Quito firm of Laboratorios Industriales Farmaceuticos, S.A., is shipped north to the U.S.

En route from Arequipa to Lima on January 13, 1943, a DC-3 with four passengers is blown off course and crashes into the side of an 11,000-ft. mountain; the passenger, a British government courier, is the only survivor and is rescued two days later. On January 27, President Roig accepts the Inter-American Safety Council award. Also during the month, the company begins to file flight plans for the first time.

The all-cargo service is extended on February 3 from Lima to Santiago and across the Andes to Buenos Aires. Aerovias del Ecuador, S.A. inaugurates service from Quito to the Colombian city of Ipiales, a city first visited by PANAGRA on March 2. A 10% reduction in ticket prices is announced the next day.

On July 1, Capt. J. H. Miller completes his 20,000th PANAGRA flying hour. The three DC-3As granted by the War Department arrive at Limatambo Airport at Lima on August 24. Also during the month, H. E. Benham becomes director of ground training. The fifteenth anniversary is celebrated on September 13.

A third weekly Transcontinental service is inaugurated on December 8, linking up with **Panair do Brazil, S.A.** Simultaneously, a fifth weekly roundtrip is started from Lima to Santiago.

Enplanements for the year total 68,700, with 1.98 million pounds of cargo transported. Route miles are increased to 8,800.

A DC-3A is converted into a freighter on January 1, 1944, when a cargo hatch is installed in the top rear of the fuselage. The new aircraft is employed on January 21 to transport a gift from the U.S. government to Peru, a shipment of 500,000 whitefish and 40,000 lake trout eggs for the International Fish Hatcheries at Chucuito, Lake Titicaca.

Aerovias del Ecuador, S.A., on February 18, initiates a second weekly return service between Quito and Ipiales.

The Peruvian fish flight is repeated in reverse on March 15 when a company freighter transports a load of huge *Bufo Paracnemis* and *Bufo Arenarium* frogs from the Chaco region to Balboa and on to Miami. The amphibians are released into Florida's swamps in an effort to exterminate plant parasites; 50 years later, the frogs, having reproduced well, will themselves be regarded as pests.

President Roig is reelected at a general meeting at New York on April 15. Also during April and into May, PANAGRA aircraft transport 8,275 pounds of quinine, valued at \$150,000, from La Paz to Lima. There it is picked up by U.S. military aircraft and flown to Washington, from whence it will be distributed to military hospitals and medics for use in the war against malaria.

Lloyd Aero Boliviano, S.A., under PANAGRA direction, begins direct weekly return service to Tarija on April 6. A month later, LAB's Cochabamba to Yacuiba roundtrip route is stretched to Santa Cruz.

The fifteenth anniversary of the initiation of airmail service between the U.S. and the western side of South America is celebrated between May 18–26; messages of congratulations are exchanged between President Roosevelt and the president of Ecuador.

The subsidiary Compania de Aviacion Pan American Argentina, S.A. is established at the end of May, with George P. Smith as its general manager.

On June 1, Col. Harris is named chief of staff of the USAAF Air Transport Command. Peruvian President Prado and his staff are flown on a tour of the southern town of Arequipa, Cuzco, and Puerto Maldonado on June 22.

A shipment of penicillin is rushed from the U.S. to Arequipa, reaching Chachani Airport on June 29. During the month, a company medical department is opened at Lima's Limatambo Airport.

The fifteenth anniversary of the initiation of airmail service between the U.S. and the western side of South America is celebrated again on July 21 when President Roosevelt and the president of Chile exchange congratulation messages; the Chilean post office authorizes a special stamp to mark the occasion.

The company celebrates its sixteenth anniversary on September 13; at ceremonies in New York marking the occasion, President Roig announces orders for three DC-4s. Five days later, on September 18, **LAB (Lloyd Aero Boliviano, S.A.)** receives the Inter-American Safety Award for 1943.

A 1,040-kg. shipment of Fleischmann's yeast is sent from Lima to Guayaquil aboard a company aircraft during September. Also in September, mosquito-eating fish known as *gambusias* are transported to Rio Tercero, Argentina, where they are released to help end an outbreak of malaria.

In October, W. R. Grace & Co. and **Pan American Airways (PAA)** officials split over PANAGRA's desire for a direct New York–South American west coast route. Grace petitions the CAB and President Roosevelt to grant the joint airline a U.S. terminus at Miami. At PAA urging, the CAB rejects the request.

Enplanements for the year total 84,206; over 1,000 tons of cargo and 158 tons of mail are also flown.

Piloted by Capt. Ernest Hummel, the first of three additional new DC-3As is delivered to Lima on January 24, 1945. Vice President-Operations Kinkaid takes a leave of absence on March 1 to serve with the USN.

On April 10, a DC-3 freighter transports 1,316 kg. of generator parts from Balboa to Guayaquil; the shipment is the largest yet transported aboard a company aircraft. VE-Day occurs on May 8. The tenth anniversary of PANAGRA service to Bolivia is celebrated on May 13; parties and ceremonies are held, congratulatory messages exchanged, and, in honor of the occasion, a special stamp is unveiled by the Bolivian post office.

On June 5, the U.S. Court of Appeals grants W. R. Grace & Co. officials the right to appeal the CAB's rejection of its bid for a Miami terminus. Three days later, Col. Harris is promoted to the rank of brigadier general.

In August, the company provides **LAB (Lloyd Aero Boliviano, S.A.)** with the first of 20 DC-3s to be acquired over the next 20 years.

On September 1, two additional weekly roundtrips are added on the Balboa to Lima route, bringing the total to nine, together with one more weekly return service from Lima to Santiago, for a total of six. Frequencies from Guayaquil to Quito are boosted from 4 weekly return flights to 12, while a second roundtrip is instituted between Quito and Esmeraldas and another between Quito and Ipiales.

The company celebrates both its own seventeenth anniversary and V-J Day on September 13; during the war, it is announced, PANAGRA has transported 206,384 passengers, 5.26 million pounds of cargo, and 1.01 million pounds of mail. Orders are now placed for DC-6s.

USAAF Air Transport Command Commanding Officer Gen. Harold L. George sends the airline a thank-you letter on November 8; the next day, the ATC liaison office at Miami is shut down. The last of the three new DC-3As arrives in Lima on December 5.

Enplanements for the year reach 94,000.

Early in 1946, J. Peter Grace joins to board and the long-smoldering feud between W. R. Grace & Co. and **Pan American Airways (PAA)** officials over the possibilities of a Miami gateway for PANAGRA. The U.S. government has come to see the gateway as a detriment to American prestige in the company's service region.

On February 3, Vice President Campbell announces a large number of administrative changes. Back from the USN, Vice President Kinkaid is assigned to the New York office, while Vice President Shannon is assigned to oversee workup of the new four-engine flight equipment. Capt. Disher becomes director of operations, maintenance, and communications.

A coup attempt in Ecuador fails on April 1. Rather than execute the 10 captured ringleaders, the government asks that PANAGRA fly them out of the company the next day. Under guard, six are transported to Ipiales and four to Talara.

On April 5, Capt. Warren B. Smith completes his 1,500th crossing of the Andes between Santiago and Buenos Aires; he is welcomed by a large crowd and Chilean air officials upon his return, who give him another award.

Four days later on April 9, PANAGRA receives the Inter-American Safety Council award for 1944. On April 19, the company charts a pair of C-54s (military DC-4s) from the Argentine concern Doder Aviation. A month later, during ceremonies celebrating the seventeenth anniversary of airmail service to Peru, the Peruvian government renews its concession.

On May 22, as the result of the CAB's findings in its Latin American Route Case hearings, the board, with White House approval, awards PANAGRA permission to extend its route network north from Panama to Miami. Pan American Airways (PAA) agrees to allow PANAGRA to fly on its certificate over the new route.

Under the ruling in the Latin American Route Case, the CAB grants a competing South American route to **Braniff Airways** during the sum-

mer. Because of **Pan American Airways (PAA)** and Mexican government maneuvering, Braniff is, however, unable to immediately begin competition.

A ceremony is held at the Lima Country Club on July 19 as the company graduates its first class of flight hostesses; the 15 Peruvian women become the first female flight attendants to serve with any South American airline.

Before the new Balboa to Miami route is up and ready, PANAGRA launches DC-4 service from Miami to Buenos Aires via Santiago. The first leg between Florida and Panama is operated by PAA and requires a change of aircraft.

Two more DC-3 roundtrips between Lima and Santiago are introduced on September 17. When additional DC-4s become available on October 11, they enter service on the long-haul route from Balboa to Buenos Aires.

The Transcontinental route is extended to Campo Grande, Brazil, on November 1. On November 17, one-stop DC-4 flights are introduced between Lima and Santiago via Antofagasta; the southbound run is PANAGRA's first night service. The previous daily DC-3 roundtrips from Lima to Santiago are reduced to twice weekly.

Following the expiration of the **LAB (Lloyd Aero Boliviano, S.A.)** management contract on August 2, a second technical agreement is signed on November 26 giving the American carrier a reduced 19.8 shareholding. Lima-based **Peruvian International Airways, S.A. (PIA)** is now organized to give PANAGRA what will be its only serious international competition.

Daily DC-4 flights link Buenos Aires and Santiago on December 26, allowing passengers to fly four-engine aircraft all the way north along the west coast to Panama.

The Argentine cities of Cordoba, Mendoza, Salta, and Tucuman on the Diagonal route are affected when, on January 1, 1947, Argentina bans cabotage service by international airlines. By April 20, the number of seats aboard the DC-4s has been reduced from 55 to 44; there is no impact upon yield.

The first DC-6 is delivered on May 20; the delivery flight from Santa Monica to Buenos Aires is completed in just 23 hrs. 25 min. flying time. Just as the company is becoming the first in South America to have DC-6s, so too has the CAB come through with final authorization allowing PANAGRA to fly between Panama and Miami on its own certificate. The first through return flight from Buenos Aires to Miami is completed with a DC-4 on May 31.

DC-6s replace the DC-4s on the Argentine service on July 17; with President Roig, his wife and daughter aboard, the inaugural DC-6 service to Buenos Aires from the company's new Miami terminal is completed via Balboa, Lima, and Santiago de Chile.

With considerable fanfare at every stop, PANAGRA officially launches thrice-weekly DC-6 El Inter Americano sleeper service from Miami to Buenos Aires on October 11. Six days later, James W. Walker Jr. is named South American regional manager. He arrives just in time to be caught up in a wave of South American nationalism that will be costly to PANAGRA.

During the second week of November, company DC-3s participate in the earthquake relief effort at San Ramon, Peru, 125 mi. NE of Lima, transporting scientists and relief workers in and some of the injured out, flying over 16,000-ft. mountains in the process. Having assisted in the formation of CORPAC, a Peruvian quasi-governmental communications agency, company officials are surprised on November 24 when the new organization seizes all of the commercial aviation communications and operational facilities in Peru. Days later, **AVIANCA Colombia Airlines, S.A.** takes over the carrier's communication facilities in Colombia, again without compensation.

Aerovias del Ecuador, S.A. halts service to Salinas on February 7, 1948. The El Inter Americano return service is expanded on May 16 from thrice weekly to daily. Receipt of additional DC-6s (for a total of five) allow stops to be made at Guayaquil and Antofagasta on alternating days.

On June 4, competing flights are finally inaugurated by Braniff, now **Braniff International Airways**, when one of its DC-6s inaugurates El Conquistador flights from Houston to Lima. Eventually, BIA flights from Houston and Miami will extend down the length of the entire Southern Hemisphere.

The retiring Capt. J. R. McCleskey is succeeded as chief pilot by Capt. Frank Havelick on July 1. The same day **LanChile Airlines, S.A.** takes over the PANAGRA meteorological section at Lima. On July 20, a company DC-3, piloted by Capt. Lloyd Domning, makes the first night crossing of the Andes by an airline, flying from Chile to Argentina via the Monturaqui Pass.

On August 2, DC-4 all-cargo multistop services are inaugurated weekly from Buenos Aires to Balboa. Simultaneously, the Diagonal service from Lima to Buenos Aires is reduced to weekly. A DC-6, piloted by Capt. Donald McArthur, crosses the Andes between Buenos Aires and Santiago on August 16 at 30,500 ft., a new record altitude for the DC-6.

On September 13, the company's twentieth anniversary is celebrated in ceremonies at Limatambo Airport. A birthday report, issue on September 21, reveals that since start-up, the carrier has transported 24 million pounds of cargo and four million tons of mail over its South American route network.

Meanwhile, **Peruvian International Airways, S.A. (PIA)** vexes PANAGRA officials by being the first to make a scheduled flight to New York.

A new DC-6 route is inaugurated on October 8 when selected El Inter Americano flights stop at Antofagasta instead of Santiago and then proceed to Buenos Aires via the Monturaqui Pass.

While en route over the El Inter Americano route on November 4, Capt. Frank W. McGann discovers the Comet 1948-I. Credit for the discovery will, however, be given to a Prof. Paraskevopoulos in South Africa. The next day, the DC-6 on the El Inter Americano route transports the first shipment of radioactive materials in South American history. The materials, provided by the Oak Ridge National Laboratory at Knoxville, Tennessee, has been dispatched to the pathology department at Lima's Hospital Dos de Mayo.

Fares on the El Inter Americano route are reduced on February 8, 1949. Additional fare reductions are made on other key routes on March 1. On March 5, the original Fairchild FC-2 is partially disassembled and shipped aboard the DC-4 freighter to Miami, from whence it will be sent to the Smithsonian Institution.

When the **LAPA (Linea Aerea del Pacifico Sur, S.A.)** hangar at Santiago de Chile catches fire on March 7, PANAGRA personnel join the local fire brigade in an effort to contain it. Unhappily, significant LAPA equipment and aircraft are burned in a disaster at an estimated loss of 60 million Chilean pesos.

The first company DC-4 landing is made at Quito on March 18; workers unload an iron lung from the four-engine aircraft and take it to the local hospital for use by a North American patient. The service is an experiment conducted in an emergency; no one and no cargo is taken out on the return due to the short runway.

The same day, all copilots who have also been trained as flight engineers become flight crew members on DC-6 services south of Lima.

On March 25, the company receives a special citation from the Inter-American Safety Council covering the previous five years. Five days later, a four-way agreement is inked between PANAGRA, **Pan American Airways (PAA)**, W.R. Grace, and **National Airlines (1)**. Under its terms, subject to CAB approval, National would increase its share issue, with PAA taking 30% and Grace 18%. Additionally, a one-plane American flag line route would be established from New York to Buenos Aires via Miami and Panama.

In less than 24 hours after the request, the El Inter Americano DC-6 arrives at Guayaquil on April 2 with not only passengers but a consignment of whooping cough serum for the son of the president of Ecuador, Galo Plaza. The serum has been sent from the Children's Hospital in Philadelphia via Miami.

In a public relations coup, PANAGRA is first on the scene with replacement parts when *The Independence*, the DC-6 of President Harry S. Truman, breaks down at Key West on April 20. A DC-4 is ferried to Miami on May 19 for conversion into a new tourist-class service that is about to be introduced.

A second DC-4 is converted on June 12 and on June 19 the first re-modeled DC-4 is employed to inaugurate Tourist Class services, twice weekly. Food services are limited on the new flights, which, however, connect with those **Pan American Airways (PAA)** flights from New York and Buenos Aires that offer the same kind of service.

President Roig retires from his post on July 11, remaining as vice chairman of the W. R. Grace & Co. board of directors. He will soon be succeeded by Grace's senior vice president, Andrew Shea.

En route to Santiago on July 26, the El Inter Americano DC-6 suffers an engine fire that forces it to divert to Los Cerrillos; a safe emergency landing is completed and no injuries are reported. Tariffs for air cargo are reduced by 15% on August 1 and a new, single, and simplified airway bill is introduced. As no one aboard was killed or hurt in the July 26 incident, the airline is able to receive its fourth straight annual safety award from the Inter-American Safety Council on August 2.

Beginning on August 5, PANAGRA DC-3s shuttle relief supplies to victims of Ecuador's Ambato earthquake. Company employees also collect money to assist the survivors, which funds are given to President Galo Plaza.

Flights in Bolivia are grounded between September 1 and 15 due to a local revolution. In a special ceremony at the Peruvian embassy in Washington, D.C. on September 12, President Roig and Vice President Campbell are made Commanders of the Order of the Sun. The twenty-first anniversary is celebrated on September 21.

Andrew Shea becomes the carrier's second president on October 1. On October 2, hostesses are assigned to the Tourist Class service, replacing the single stewards who had previously passed out box lunches and other snacks.

On October 5, President Shea begins a 25-day South American inspection tour; he will visit 12 cities in 7 countries. The same day, Capt. Jack Miller, an 18-year company veteran, is given a special party for having completed 25,000 flying hours. An anniversary party is also held aboard the El Inter Americano DC-6 as it flies across the Andes from Santiago to Buenos Aires on October 12.

Liquor service becomes available on El Inter Americano flights on December 17.

Through an interchange agreement with **Pan American Airways (PAA)**, PANAGRA is able to send its aircraft to Houston and New Orleans beginning in the first quarter of 1950.

As of April 1, the carrier is able to cut its U.S.-Bolivia flight time by two hours through the use of Jet-Assisted Take-Off (JATO) on its DC-4s. A cargo of 200 rare chinchillas is shipped to Miami on April 14 for transfer to a breeding location in New York State.

Company DC-3s are pressed into service on May 22 to support rescue and relief efforts in the wake of an earthquake in Peru's Cuzco region. In the largest airborne medicine delivery flight in the history of South American aviation to date, seven tons of medicines are shipped from Miami to Sao Paulo on May 23, where they are turned over to Squibb & Sons.

On June 6, in 2-day company service from Houston, 17 kilos of blood plasma are delivered to Cochabamba, Bolivia. By June 20, the four-engine Douglas transports are regularly flown into Cochabamba, Santa Cruz, and La Paz.

Needed to repair the city electric power plant, an 800 pound cargo of spare parts arrives at Lima from Switzerland via Miami on July 4. A rare Spectacle Bear is shipped to New York from Lima on July 18.

A Chinese-language timetable for the El Inter Americano route is issued on July 20 for the Chinese living on the west coast of South America. Eight days later, a DC-4 JATO experiment is successfully executed at Quito. Also on July 28, the government of Peru awards the airline a gold medal honoring it as the first commercial airline in the country.

On August 13, DC-6 Miami–Buenos Aires luxury flights commence. On October 24, the company joins **National Airlines (1)**—also partially owned by W. R. Grace & Co.—in announcing plans for an equipment exchange on routes north of Miami.

While en route from Balboa to Santiago on November 6, a baby is born on the Balboa to Guayaquil segment of the El Interamericano DC-6 service. Hostess Violetta Laureys and Mrs. Dexter Farnsworth, wife of a company pilot, assist in the delivery. The parents, Mrs. and Mrs. Rafael Undurraga, name the boy Carlos Antonio Panagra Undurraga. The event is good for many press releases.

At the beginning of December, **National Airlines** terminates the interlocking four-party agreement with **Pan American Airways (PAA)**, **PANAGRA**, and W. R. Grace & Co., cancelling the stock options held by PAA and Grace to purchase unissued National stock.

A DC-4 is detached from the fleet on December 13 and delivered to the **Pan American Airways (PAA)** base at Brownsville, Texas, where it is modified and from which it is sent to San Francisco to begin service on the Korean Airlift on December 30.

A refit of the company's DC-6s begins on January 13, 1951; the planes are given the same more powerful engines employed on DC-6Bs, Pratt & Whitney R-2800CB-16s.

During the first quarter, PAA, now **Pan American World Airways (1)**, files a petition with the CAB objecting to the **PANAGRA–National Airlines (1)** equipment plan and seeking, for itself, an exchange arrangement with **Eastern Air Lines**.

Ecuador throws a special party for Capt. Warren B. Smith on April 17, celebrating his 20,000 flying hours. Company DC-3s provide assistance in Ecuador, starting on May 18, after forest fires devastate the Esmeraldas area.

Hoping to speed a decision on the earlier PAA request, Grace in July sells its shares in **National Airlines (1)**; however, the CAB defers a ruling. On July 30, a DC-6 makes the 200,000th crossing of Ecuador.

On January 14, 1952, Edward Bern is elected vice president-management. Upgraded to DC-6B standards, the DC-6s, with their new power plants, return to the fleet in greater number during the first quarter.

To assist with aid to casualties of the Bolivian revolution, company DC-3s fly medicines into La Paz on April 10. A new thrice-weekly El Pacifico tourist-class service is introduced between Miami and Lima on May 1, using the upengined DC-6Bs; two flights continue to Buenos Aires.

In cooperation with **National Airlines (1)**, DC-6Bs are employed on May 24 to inaugurate New York to Buenos Aires flights down the west coast of South America and across the Andes.

James T. Scholtz succeeds the resigned James W. Walker Jr. on July 11 as regional manager for South America. New green hostess uniforms are introduced on August 1, replacing the original gray suits. An eighth consecutive award is received from the Inter-American Safety Council on August 8.

The DC-6 reengining project is completed on September 11 at a cost of \$300,000. On December 12, the Frye Trophy is received for the fastest Miami–Buenos Aires scheduled service. The award is received by Vice President Campbell from aviation pioneer Jack Frye in a New York City ceremony.

The carrier's first instrument-landing system (ILS) is turned on at Limaambo Airport, Lima, on March 1, 1953.

A DC-6 is employed on August 24 to transport Gen. Manuel A. Odria, president of Peru, and his VIP staff from Lima to Sao Paulo for a meeting with Chilean President Getulio Vargas. The flight is hosted by **PANAGRA** President Shea.

The company's twenty-fifth anniversary is celebrated on September 13 and on September 24 an order is placed for five DC-7s.

On November 20, the CAB examiner in the equipment exchange case recommends that both **PANAGRA** and **Pan American World Airways (1)** be allowed their suggested equipment exchange plans.

In December, an annual tradition is begun, in partnership with Macy's department stores, of sending a Santa Claus to visit underprivileged children at every South American destination.

A DC-6B flies from New York to Panama on January 25, 1954 in a record 7 hrs. 42 min. President Shea is guest of honor at the annual Newcomen Society of North America dinner on February 25; libraries around the U.S. receive a small pamphlet containing a copy of his remarks as part of an information dissemination program carried out by the Society to this day.

The company celebrates its 20,000th trans-Andean crossing between Santiago and Buenos Aires on March 3. On March 20, the first regularly scheduled DC-6 service is started into La Paz. On March 26, the full CAB again defers a ruling on the equipment issue.

The company begins the gradual withdrawal of its pilots from South America on June 1; all company pilots and their families will be based in Miami by 1960. Also on June 1, El Pacifico service becomes twice weekly and stops are added at Quito and Cali.

On June 10, **Pan American World Airways (1)** makes a public offer to sell its portion of **PANAGRA** to **Braniff International Airways** for \$5 million; Braniff expresses interest. The previous year's DC-7 order is changed on June 14; 5 DC-7Bs at a cost of \$2 million each are wanted instead. A record 10th award is received from the Inter-American Safety Council on June 25.

To give U.S. businessmen a look at South America (and the airline), **PANAGRA**, on October 8, organizes and provides lift and escorts for executives to 11 cities in 9 countries. On November 1, the U.S. DOS contracts with the carrier to transport four tons of household effects of the new U.S. ambassador from the U.S. to Bolivia; when the flight is made a week later, it will be the first such cargo service ordered by the department. Macy's opts out of the Santa Claus tour when it begins on December 19, but it is, nevertheless, hugely successful.

Upengined DC-3As begin enhanced service in Peru, Bolivia, and Ecuador in February 1955; an announcement concerning the "Hi-Per" Douglas transports' improved capabilities and offerings is made by Vice President Campbell on March 8.

The first television advertisements for the company run in the U.S. on May 8. The same month, Lawrence Spivak, host of *Meet the Press*, interviews President Shea, who highlights the virtues of travel to South America with color films, color also being a relatively new development in U.S. television.

With the addition of two more DC-6B tourist flights between Miami and Lima on June 1, the total number of such return services climbs to seven each week.

On July 16, the CAB rejects the disputed equipment exchange proposals of both **PANAGRA** and **Pan American World Airways (1)**. Eleven days later, new air-conditioned DC-7Bs are received and on August 1 these are employed by the joint-airline to initiate Miami–Buenos Aires flights.

Three days later, on August 4, it joins **Pan American World Airways (1)** and **National Airlines (1)** in signing an equipment exchange document for one-plane New York–Latin America through service. A two-week goodwill tour through Peru, Ecuador, and Colombia using a **PANAGRA** DC-6 is laid on for the president of Bolivia and a VIP party, starting on August 8.

The one-plane through service from New York via Washington, D.C. and Miami to South America begins on September 15. National crews fly the aircraft from New York to Miami, Pan Am crews take it from Miami to Panama, and **PANAGRA** crews take over in Panama and continue down to Buenos Aires.

On March 22, 1956, the carrier lowers its rates by introducing a year-round excursion fare that takes effect a month later on April 23. Two DC-6s and a DC-4, each wearing the name *City of New Orleans* painted on its nose, are tasked on April 6 to transport the New Orleans Symphony Orchestra, instruments, and equipment, on a 22-city South American tour.

During the summer, **Braniff International Airways** decides to sell its South American network. Vice President Wright Rex Brack makes an appointment to covertly offer the package, including planes, routes, facilities, equipment, and any other assets, to **PANAGRA**; he is authorized

to take as little as \$5 million. No formal offer is, however, made. When Brack shows up in New York to visit President Shea, he is turned away and never sees the PANAGRA leader. Whether or not such an arrangement would have received CAB approval is still debated; in the end, positions will be reversed and it will be Braniff that ends up with the large South American system.

In 22 flights completed between July 23 and 27, company DC-4s transport 55.5 tons of prefabricated building materials to San Ignacio, Bolivia, where the Point For Program builds a public health hospital.

When equipment of the Backus & Johnson Brewery del Peru breaks down at Lima in mid-September, arrangements are made for PANAGRA to bring down 460 pounds of replacement machinery, in two big cases, on September 21. After the cargo ship SSPT *Seafarer* is beached on the coast near Los Villos, Chile, in mid-December, company aircraft, on December 20, bring in over 10 tons of ocean vessel salvage equipment to help keep the ship from breaking up.

Cy Collins is named the new vice president-sales and traffic on January 2, 1957. On January 11, the company's largest advertising campaign ever is launched in newspapers, magazines, and via electronic media in both North and South America.

The feud between the company's owners is reopened on February 18 as PANAGRA seeks CAB permission to operate routes to the U.S. East and West coasts; again **Pan American World Airways (1)**, without such routes of its own, objects.

A company DC-7B is chartered on February 28 to fly a bevy of Hollywood stars from New York to Montevideo for an international film festival. The flight is a public relations bonanza and hosts such celebrities as Yul Brynner, Craig Stevens, Lana Turner, Van Heflin, Anita Ekberg, Joanne Dru, Hedda Hopper, and Ann Miller.

Both sides in the route dispute file briefs on March 11 and, again, Juan Trippe offers to sell his interest in PANAGRA to **Braniff International Airways**. Cargo service into La Paz is doubled on April 1 as a new DC-4 service commences from Lima via Arica. A program of DC-7B JATO tests commence on April 29.

The 25,000th trans-Andean flight is accomplished on July 1. Regular service is maintained with little change through the remainder of the year.

On January 2, 1958, PANAGRA receives a diploma of honor from the Direccion Aeronautica of Chile, which honors the company for being the first foreign concern to operate an airline in Chile. Company aircraft provide assistance to earthquake survivors near Arequipa, Peru, during the first quarter. The company receives a certificate of appreciation on April 17 from the Peruvian Red Cross for its response.

On September 13, the company hosts a New York City gala celebrating its thirty years of Latin American airline service. The fleet now comprises just 20 aircraft: 4 Douglas DC-3s, 2 DC-4s, 9 DC-6/6Bs, and 5 DC-7/7Bs. Orders are placed for four DC-8-31s.

On October 28, a DC-7B, with 45 aboard en route to New York from South America, is forced into a steep dive to avoid a USAF tanker refueling two jet fighters over Wilmington, North Carolina; both PANAGRA and the USAF claim that their aircraft are in the proper airspace.

Another successful multicity Santa Claus flight is launched on December 15.

After a brief illness, chief pilot Floyd Nelson dies at Miami on January 29, 1959. First-class service is extended to the formerly all-tourist-class destinations of Cali, Quito, and La Paz on March 1. The DC-6B fleet, having been reconfigured for split-class service, is employed to these and other destinations, such as Guayaquil, Lima, Santiago, and Buenos Aires requiring two kinds of seating.

The Inter-American Safety Council certificate for 1958 is received on March 12; another award from this body will be received on June 30 for safe operations over the previous three years.

In early May, the DOJ brings suit against **Pan American World Airways (1)**, W. R. Grace & Co., and PANAGRA for monopolistic tactics in South American trade. Company lawyers will tie up the suit in court until PANAGRA is eventually sold.

As part of President Eisenhower's Special International Program for Cultural Presentation, 3 aircraft are tasked to transport 108 musicians, instruments, and equipment of the National Symphony Orchestra on their South American tour. Beginning on May 20, the ensemble will play in 19 countries in 12 weeks.

Service to the Ecuadorian cities of Manta, Cuenca, and Esmeraldas, begun in 1940-1941, is discontinued in November. Simultaneously, cabotage flights within Bolivia are withdrawn east of Santa Cruz.

Popular entertainer Sonny Fox joins Santa Claus in South America in mid-December; the 10,000th free toy is given away during this tour. On December 21, the Nice International Club of the Air in France awards PANAGRA a special service plaque, the first ever given to a South American company. The award is presented in local ceremonies by World War I French ace Roger Millo.

The final DC-4 service is completed on February 1, 1960; thereafter, the type is removed from the company fleet. A few of the earlier DC-3As are still in service in Ecuador. DC-6Bs replace the "4s" on flights to Arica, Cochabamba, La Paz, and Lima.

The first of four DC-8-32s is received on April 6. The delivery flight, piloted by veteran Capt. Frank Havelick, Ernest Hummel, and Charles Schultz, is made from Long Beach to Miami on April 17 in just 4 hrs. 40 min. Local service within Bolivia ends on May 1.

The new Douglas jetliner is employed, via the interchange with **Pan American World Airways (1)** and **National Airlines (1)**, to inaugurate scheduled twice-weekly roundtrip service on May 2 from New York's Idlewild Airport to Buenos Aires via Miami, Panama, and Lima. National flies the segment from New York to Miami and Pan Am the Miami to Panama segment.

A massive earthquake rocks Chile in late May. On May 24, the first PANAGRA DC-6 departs Miami for Chile with food, medical supplies, and clothing for the survivors. The massive disaster requires significant outside assistance and by May 27 sufficient additional company aircraft have been committed as to bring in 50 tons of supplies.

Relief operations continue into June when the entire enterprise is taken over by the USAF in "Operation Samaritan," a huge around-the-clock effort employing Douglas C-124 Globemasters and smaller military transports. Air Force pilots rely on PANAGRA weather, communications, and navigational facilities. A DC-3 is loaned to the Chilean government, which needs to get into damaged or smaller fields.

DC-8-32 service is doubled from two weekly flights to four on July 1. Simultaneously, the first DC-7F freighter is operated from the U.S. to South America, replacing a DC-6A added earlier in the year, on a weekly schedule from Miami; cities visited include Panama City, Guayaquil, Lima, La Paz, and Cochabamba. Incidentally, over the next 6 months, the plane will transport, among other cargo, 80 horses and 300 sheep.

Daily New York to Lima DC-8-32 return service starts on October 30; four flights continue on to Buenos Aires. On the other three days, DC-7Bs provide the onward service.

Children's television host Fred Scott accompanies the Santa Claus trip, beginning on December 8; like Bob Hope, Scott films his trip and shows it on his program early in the new year.

Service and internecine board bickering continues apace during the remainder of the year and into 1961; however, the carrier suffers from increased competition from both **Braniff International Airways** and other Latin American airlines.

Both partner companies continue to be the subject of a DOJ antitrust suit; Grace is found innocent but **Pan American World Airways (1)**, because of its tactics in the joint boardroom, is found guilty and is ordered to sell its interest in PANAGRA.

On May 9, a record eight tons of cargo is transported by a DC-8-32 into South America; on June 15, the first DC-8-32 service arrives at Santiago. DC-8-32 roundtrips from New York to Buenos Aires grow to six each week on August 30; on the seventh day, a Miami-Buenos Aires service is operated with a DC-7B. Simultaneously, all five DC-7B services into Santiago are replaced with jet frequencies.

Santa Claus is joined on his December southern tour by Claude Kirchner, host of *Terrytown Circus* on WOR-TV.

In just four years, flight equipment, if improved in quality, is halved in number; the fleet in 1962 comprises only 10 aircraft: 6 DC-7Bs and 4 DC-8-32s.

With 26,000 flying hours and 30 years of service, famed pilot Capt. Tommy Jardine retires on April 1. He travels to Lima where he is honored in a grand ceremony 12 days later.

A DC-7B flies a 100-lb. rush cargo of Vitron-C into Cochabamba on May 16; the medicine is needed to help treat anemia among Yucarare Indians suffering from a hookworm infestation. During June and July, 75 tons of tinned Argentine beef is transported from Buenos Aires to Santiago in the cargo holds of the jetliners.

A DC-7B with 6 crew and 36 passengers is destroyed on October 29 as the result of a bad landing at La Paz, Bolivia; there are no fatalities.

A ton of toys are distributed during the annual Santa Claus flight in December.

Shareholding within and service to **LAB (Lloyd Aero Boliviano, S.A.)** ends in 1963. On February 1, a fourth weekly DC-7B service is undertaken from Miami to both Bolivia and Ecuador via Panama. On May 7, PANAGRA is the first civilian airline to win the "Will of Flight" trophy bestowed by the Chilean Air Force. Vice president since 1948, Douglas Campbell retires on June 27.

Pan American World Airways (1) and W. R. Grace & Co. apply to the CAB for approval of an arrangement that would see the former acquire the latter's 50% interest in PANAGRA. The regulators will not approve.

On September 13, the thirty-fifth anniversary is celebrated. To mark the occasion, U.S. Senator George Smathers (D-Fla.) reads a tribute to the company into the *Congressional Record*.

DC-8-32 service into Guayaquil starts on October 28. The Santa Claus tour is run again during the week of December 11. Since its beginning a decade earlier, over 20,000 toys have been given away.

Enplanements total 145,113. Revenues total \$22.7 million, providing a net profit of \$850,000.

Airline employment in 1964 stands at 1,332 and the fleet includes 8 aircraft. The CAB grants the company permission to commence nonstop New York and Miami DC-8-32 flights to Lima.

The only daily jet service between the U.S. and Argentina is started on June 2 as company DC-8-32s fly from New York to Buenos Aires. Other routes served by the Douglas jetliners on a weekly basis include 10 flights to Lima, 5 to Santiago, 3 to Guayaquil, and 1 to Antofagasta.

The company's DC-8-32s commence flights to the high-altitude airport at Quito on July 1. On August 8, Chief Pilot Havelick makes the first experimental DC-8-32 landing at La Paz, Bolivia, at 13,358 ft., the highest airport in the world. The Douglas is the first four-engine jetliner ever to land at the city and is met by the nation's president, Paz Estenssoro. He and U.S. Agency for International Development (AID) executives, who provided the funds, take part in a ribbon-cutting ceremony to open the new airport. When scheduled service starts on October 25, PANAGRA is the only airline to fly into the Bolivian city, offering three flights in from Miami and two flights out from La Paz.

The Christmas Santa Claus tour in mid-December visits Panama City, Quito, Guayaquil, La Paz, Lima, and Santiago. At the end of the year, PANAGRA is one of the companies to receive an "E" award as a business providing extraordinary benefit to the U.S.

Passenger traffic remains level. Revenues of \$23 million are earned, allowing a net profit of \$1,020,000.

The workforce in 1965 is increased to 1,283 and the fleet is decreased by 1 aircraft. Veteran Capt. Frederick "Fritz" Sterling retires on January 15 after 31 years with the carrier; his log shows over 23,000 flying hours. Another pioneer, Capt. Warren B. Smith also retires after 34 years; he is famous for flying the trans-Andean route from Santiago to Buenos Aires via the Uspallata Pass.

After an earthquake hits Chile on April 8, a DC-8-32 is loaded with 13,000 pounds of medical supplies and rushed from Miami to Santiago

the next day in just 8 hrs. 15 min. Over the next week, the carrier will transport 13.3 tons of earthquake supplies collected by the Church World Services into Santiago aboard regularly scheduled DC-8-32 freight and passenger flights.

Capt. Warren B. Smith dies at home on May 21. In accordance with a will found three months after his burial, Capt. Smith is exhumed and cremated; his ashes are dispersed over the Uspallata Pass on August 1 by a company DC-3, accompanied by an honor squadron of Chilean Air Force jet fighters.

On June 4, nonstop DC-8-32 return service is initiated from Buenos Aires to La Paz.

When catastrophic rains and floods overwhelm Chile in mid-August, PANAGRA again leads the air transport arm of relief operations. On August 17, the company gathers together its entire stock of blankets from every plane, warehouse, office and terminal and transports them to Santiago. President Shea orders all aircraft flying into the country to take whatever relief supplies might be made available by any agency, government or private. On August 23, 6,659 pounds of fur coats and winter clothing donated by the Lutheran World Relief organization is flown into Santiago in the belly of the regularly scheduled El Inter Americano DC-8-32 service. At the same time, a DC-7F freighter brings in 18,737 pounds of supplies provided by the Catholic Relief Services.

On August 28, the carrier begins a free travel service for South American students attending U.S. colleges. A new office and shop facility is completed at the Callaco Airport in Lima.

Under special guard, a collection of pre-Colombian gold art and treasure is transported from Lima to Washington, D.C. on September 21 for display in the National Gallery of Art. Orders, valued at \$42 million, are placed on October 15 for four DC-8-62s and a DC-8-62F, which will be delivered in early 1967. The annual Santa Claus tour begins on December 13.

Enplanements reach 158,172 and passenger traffic climbs by 29.6%.

The fleet in early 1966 comprises 3 DC-7BFs and 4 DC-8-32s. The route network exceeds 20,000 miles.

Begun during the previous year, negotiations continue with **Braniff International Airways** for purchase of the airline. The **Pan American World Airways (1)** share of the arrangement would be \$22 million, while Braniff reaches a similar agreement with W.R. Grace for ownership of the other half interest. Just as the contract is being drawn up for an August transfer, the departure of Braniff's CEO Charles E. Beard and management change causes a delay and some renegotiation.

Pan American World Airways (1) and W. R. Grace & Co. finally sell their shares in PANAGRA to **Braniff International Airways** for \$30 million on January 8, 1967; the merger is completed on January 31. That day, the last flight, operated by a DC-8-32 piloted by Capt. James R. McCleskey, is flown from Lima to Miami in six hours.

Like **Pan American World Airways (1)** two decades later, this historic carrier was no more. In the end, writes William A. Krusen in his definite company history *Flying the Andes: The Story of Pan American-Grace Airways and Commercial Aviation in South America, 1926-1967* (Tampa, Fla.: University of Tampa Press, 1997), PANAGRA had two great achievements. It brought commercial aviation to a large part of South America and showed some of the best aspects of the U.S. and its people to the Latin American countries.

There is an unofficial Web site at <http://www.netten.net/~jschulta/panagra>.

PAN AMERICAN WORLD AIRWAYS (1): United States (1950-1991). After acquiring the assets of the Pan American Corporation, Juan Trippe's pioneer airline is restructured on January 3, 1950 and renamed. The same day, a B-377 flies from Tokyo to Honolulu in a record 11 hrs. 24 min. Stratocruiser revenue services from San Francisco to Honolulu commence on January 15.

En route from New York to London on February 10, a Stratocruiser's door flies open over St. James, Long Island, and steward J. Harris falls to his death; his body will not be found until March 8. The entire Pan

Am board is flown from Los Angeles to Honolulu on February 21; among the dignitaries on board the Stratocruiser are Trippe, Sherman Fairchild, Gen. George C. Marshall, and Prescott F. Bush, father and grandfather of future presidents George Bush and George W. Bush.

On March 4, company flights begin to Prague. During April and May, the B-307 Stratoliners *Clipper Rainbow*, *Clipper Flying Cloud*, and *Clipper Comet* are sold to William "Bill" Conrad's Miami-based Airline Training, Inc.; all will be resold within a year. As the result of the CAB ban on the activities of many charter operators, the carrier, between June 10 and 17, joins **Eastern Air Lines** in flying 5,000 Puerto Rican migrant workers to Michigan. In the middle of that week, on June 13, B-377 sleeper service is opened from Honolulu to Manila via Tokyo.

A C-46F with two crew must be written off following a hard landing at Merida, Mexico, on June 15; neither pilot is hurt. Puerto Rican migrant workers are flown to New York state on June 26–27 and on June 28 direct New York–Beirut flights begin.

New York–Buenos Aires Stratocruiser sleeper flights are opened on July 5. Three days later, the airline establishes a single flight kitchen in New York City to cook and freeze meals to be served over half the world via storage freezers set up in key cities. The installation of special ovens to heat food during flights is begun on company aircraft and a contract is signed with a London caterer to supply the remainder of Pan Am's food needs.

The CAB denies, on August 1, an application for domestic routes linked to the airline's international routes. The 40% interest in **LANICA (Lineas Aereas de Nicaragua, S.A.)** is reduced to 20% on September 6 and two days later, the new Prague service is suspended for lack of traffic. C. R. Smith of **American Airlines** sells **American Overseas Airways (AOA)** to Juan Trippe on September 25 for \$17,450,000.

Acquired with AOA are 1 DC-3, 4 DC-4s, 8 Boeing 377 Stratocruisers, 7 Lockheed L-049s, as well as route approvals to Paris and Rome. The aircraft all receive new livery almost immediately. The last four new DC-4s are delivered on September 25: *Clipper Rotand*, *Clipper Munich*, *Clipper Dusseldorf*, and *Clipper White Falcon*. Also in September, orders are placed for 45 DC-6Bs.

In October, tourist-class B-377 flights are undertaken from New York–Bermuda. En route from New York to London on October 14, a B-377 is forced to land at Gander, Newfoundland, with two dead engines.

Former Pacific Division CEO Clarence M. Young now returns as vice president and three CV-240s are sold to **Mid-Continent Airlines**. On November 13, a Basra–Karachi–New Delhi link is added to the route system, allowing the first worldwide, air-to-ground communications system via voice radio. Transatlantic traffic rises to 69,000 passengers carried while, systemwide, boardings exceed one million.

The Stratocruiser *Clipper Washington* is damaged in a London landing accident on January 2, 1951. Famed Pan Am Capt. Charles Blair flies the North American P-51C *Excalibur III* nonstop from New York to London on January 31 in 7 hrs. 48 min. Unfortunately, the record is not witnessed by the Federation Aeronautique Internationale (FAI), and so remains unofficial. The U.S. Supreme Court refuses, on March 6, to hear an appeal by former **American Overseas Airways (AOA)** employees to reverse their company's takeover by Pan Am. The airline joins with **Eastern Air Lines** on April 1 to cut New York to San Juan tourist-class fares.

On May 4, the CAB grants a permit for experimental tourist-class service to London from New York. A C-46F is lost at Sao Paulo on May 8; there is no information on casualties.

Following debate at the annual IATA meeting beginning on May 9, the cartel agrees to a modified version of Pan Am's North Atlantic tourist-class proposals. New York to Bolivia flights commence on June 9. Mechanics and ground crews at New York's Idlewild Airport strike on June 15 to protest the dismissal of 89 former **American Overseas Airways (AOA)** workers; the job action spreads to New York (LGA) the next day. The strike is settled after Pan Am offers the laid off workers jobs in Miami or Texas or severance pay.

En route from New York, the L-049 *Clipper Great Republic* with 9 crew and 31 passengers crashes into the jungles 4 mi. S of Sanoye, Liberia, on June 22; there are no survivors.

Because the IATA agreement contains frequency limitations, the CAB disapproves the IATA arrangement on July 31 and Pan Am's own experimental service thus briefly fails.

Coming into Kingston, Jamaica, on September 2 after a flight from Miami, a CV-240 with 4 crew and 30 passengers lands 800 feet short of Runway RWY 14 and rushes into the ocean; although the aircraft must be written off, there are no fatalities.

Another IATA meeting is held in late November where an acceptable plan for transatlantic tourist-class fares are agreed upon. Orders are placed for five DC-6A freighters. TWU ground and flight service workers strike at New York, Miami, and San Francisco between December 15 and 18, with 600 travelers stranded on the first day. The strike by 5,000 employees is settled for a 10-cent-per-hour pay raise. As the result of the **American Overseas Airways (AOA)** merger, company passenger traffic increases by 21%, including an increase in North Atlantic bookings to 92,000.

Employing a recently received DC-6A, the company inaugurates the first all-cargo service across the North Atlantic on January 4, 1952. The first DC-6B is delivered on February 27 and is christened *Clipper Liberty Bell*. Two more of the type are delivered before the end of the first quarter: *Clipper Priscilla Alden* and *Clipper Goodwill*.

Just after takeoff from San Juan for Miami on April 11, the No. 3 engine of Flight 526A, a DC-4 with 5 crew and 64 passengers, fails. The pilot declares an emergency and begins a return to San Juan. Unable to maintain altitude, he is faced with a possible landing in a congested area or a ditching at sea. The latter is chosen and the plane is put down 11 mi. NW of the airport, 4.5 mi. offshore. The plane breaks in half and sinks in 3 minutes (52 dead).

En route from Rio de Janeiro to Port of Spain on a leg of a flight from Buenos Aires to New York on April 29, the propeller of the No. 2 engine of B-377 *Clipper Good Hope* separates in flight. The buffeting that follows takes off the port wing and causes the plane to crash into a hill near Carolina, in the jungles of northern Brazil some 900 mi. NNW of Rio (50 dead). The next day, the *Clipper Golden Eagle* is also damaged in a crash landing for the same reason.

The DC-6B *Clipper Liberty Bell* is the first of its type to enter company service when she inaugurates economy all-tourist Rainbow Service flights from New York to London on May 1. The same day, several official and unofficial rescue groups begin to seek survivors of the Stratocruiser *Clipper Good Hope* and on May 15, CAA investigator S. A. Magness and a Brazilian Air Force major are taken hostage by one party, demanding their own helicopter evacuation from the harsh environment. Brazil sends in paratroopers the next day, who effect their rescue and the two detainees finally reach Belem on May 28.

Steward M. Cappellero falls 12,000 feet into the sea off Rio de Janeiro on July 27 when a Stratocruiser door flies open during a flight to Montevideo. Three days later, the line begins weekly New York to Beirut all-cargo service via stops in Europe.

The DC-6B *Clipper Pathfinder* is received on August 23. DC-6Bs open an Asia Express London–Hong Kong service on September 2. On September 29, a DC-6B flies from New York to Frankfurt in a record 11 hrs. 58 min.

Becoming the first U.S. airline to order a British transport, Pan Am requests three de Havilland DH 106 Comet 3s on October 20, the first order for a foreign jetliner made by an American air transport concern; they will not be received. Late in the year, a CV-240 is sold to **Mid-Continent Airlines** and during the 12 months a total of 18 DC-6Bs are delivered, most entering service shortly after their arrivals. Transatlantic enplanements climb to 118,000.

A DC-6B flies from Boston to London on February 9, 1953 in a record 9 hrs. 13 min. In March, it is reported that the carrier's B-377s, in four years, have flown in excess of a half million passengers over 51.27 million miles. Also during the first quarter, two former AOA

L-049s are sold to **British Overseas Airways Corporation (BOAC)**. Direct Philadelphia–Europe thrice-weekly service is opened on April 1 while a direct U.S. to Saigon service via Manila is launched on May 18. En route from Honolulu to Wake Island on June 12, a B-377 literally loses its No. 4 engine and must make an emergency landing at Johnston Island.

Three in a lightplane are killed on July 28 in a takeoff collision with a Constellation at San Salvador; the American aircraft lands safely. The 40% interest in **LACSA (Lineas Aereas Costarricenses, S.A.)** is reduced to 36% on August 7. On August 22, Pan Am joins with **Capital Airlines** in offering experimental package tours on the installment plan from Pittsburgh to Bermuda.

Also during the month, DC-6Bs begin to replace Constellations on the New York to Buenos Aires run. With the delivery of the last machine on December 12, the carrier has received three of four ordered Convair CV-340s. During the year, most of the C-46 fleet is sold back to the USAF while 13 additional DC-6Bs join the fleet.

Traffic on the Atlantic crossing to Europe rises to 123,000 passengers enplaned.

Under contract to the U.S. Air Force, Pan Am, in January 1954, takes over operation and maintenance of the Florida Missile Test Range; the changeover will be completed by March.

En route from New York to London via Shannon on February 15, a DC-6B with 36 aboard overshoots its landing at the Irish airport; although the aircraft is badly damaged, no injuries are reported. The last CV-340 is received on February 18 and on March 16, the airline begins to offer private staterooms on its New York to Paris, Rome, Frankfurt, and Beirut routes.

The first of three DC-6A freighters to be delivered on the year arrives on April 30 and is named *Clipper Gladiator*; the other two, the *Clipper Jupiter* and *Clipper Westwind*, join the fleet in May and June, respectively. A DC-6B flies from Caracas to New York on June 9 in a record 7 hrs. 17 min. and with the delivery of the *Clipper Fair Wind* on June 15, the 45-unit DC-6B order is completed.

The next day, flights are rerouted to avoid crossing Guatemala during its civil unrest; service to, from, and over that country resumes on July 4. An order is placed on July 14 for 26 DC-7Cs and on July 23 the company's interest in **Cubana (Compania Cubana de Aviacion, S.A.)** is sold to local interests. A second, weekly, New York to Europe all-cargo route is opened on August 16; 10 days later on August 26, the B-377 *Clipper America Friendship* is sold to **British Overseas Airways Corporation (BOAC)**. On September 3, a new record is claimed: 10 west-bound transatlantic flights en route simultaneously.

On November 1, DC-6B service is inaugurated from Los Angeles to Rio de Janeiro and eight days later, on November 9, a fourth weekly transpacific frequency is added. On November 15, nonstop U.S.–Europe service is initiated by Stratocruisers outfitted with extra fuel tankage.

The four CV-340s are sold to **National Airlines (1)** late in the year. Simultaneously, one CV-240 is sold to **Middle East Airlines, S.A.L. (1)**, three to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**, and one to **Northeast Airlines**.

A total of 138,000 passengers are flown over the North Atlantic.

As a result of difficulties in U.S.–India bilateral air agreement negotiations, service to New Delhi must be suspended on January 17, 1955. The carrier's interest in **Middle East Airlines, S.A.L. (1)** is sold to the Beirut-based carrier's president on January 30.

En route to Honolulu and Sydney on March 26, the B-377 *Clipper United States*, with 23 aboard, loses its No. 3 engine and propeller and is forced to ditch in the Pacific Ocean 35 miles off the coast of Oregon (4 dead). The incident receives prominent media attention and is the subject of a book by *The Longest Day*-author Cornelius Ryan, *One Minute to Ditch!* (New York: Ballantine Books, 1955).

In April, the carrier is granted a route to Ankara via Istanbul. The first of seven DC-7Bs is delivered on the year arrives on April 23; christened *Clipper Evening Star*, it is assigned to the transatlantic route after shake-down. On May 10, Pan Am and the U.S. government offer a plan to ex-

pand and modernize **Pakistan International Airlines Corporation (PIA)** in order to provide a Karachi–West Pakistan link; the Americans provide \$3 million in foreign aid for this improvement. The first DC-7B is followed into transatlantic test service by the *Clipper Jupiter Rex*, which arrives on May 25.

When both new Douglas aircraft commence revenue flights on June 13, each fly the Shannon to New York legs of their services from London (LHR) in the same record time: 10 hrs. 33 min. On June 15, the *Clipper Evening Star* makes the first nonstop passenger flight from New York to Paris, by-passing the usual stop in Ireland. The same day, it is announced that Pan Am and **THY Turkish Airlines (Turk Hava Yollari, A.O.)** have signed a contract under which the Turks will be trained in modern techniques over the next year. The \$475,000 U.S. government foreign aid project will be headed by Capt. S. H. Miller. The company begins to equip its DC-6s and DC-7s on June 26 with weather-detecting radar and the next day, it completes its 50,000th transatlantic crossing.

A New York–London B-377 flight is piloted for one trip by a father and son team on July 13. Also during the month, a company flight crew, after a personal check by Atlantic division chief pilot Holland L. Redfield, transports the prime minister of Thailand around the world from New York (LGA) aboard the L-749 *Columbine II*, which President Eisenhower has personally lent for the trip. The prime minister, unwilling to use the aircraft's normal USAF crew, had requested a Pan Am service.

On August 4, the airline agrees on an equipment interchange with **National Airlines** and **Pan American-Grace Airways (PANAGRA)** for one-plane New York–Miami–South America through service, thus ending the CAB's "Balboa Case." New York to Bermuda luxury service is opened on the last day of the month. Joint service with **National Airlines** and **Pan American-Grace Airways (PANAGRA)** is opened on September 14 from New York to Buenos Aires via the South American west coast.

The DOJ now files a civil antitrust suit against Pan Am, **Pan American-Grace Airways (PANAGRA)**, and W. R. Grace & Co. claiming the three monopolize air travel between the U.S. and South America. Company lawyers stall the suit in court until 1966. Simultaneously, the Antitrust Subcommittee of the Judiciary Committee of the U.S. House of Representatives, chaired by Emanuel Celler, opens hearings on charges of the Pan Am-PANAGRA monopoly. No additional antitrust proceedings follow the Congressional investigation.

The rotary-wing operator **New York Airways (2)** signs a contract with Pan Am on October 2 to provide the pioneer with inter-airport flights for passengers making connecting flights between the three major airports in the New York City area. Nonstop New York to Ciudad Trujillo flights begin on October 12 and the next day, orders valued at \$96 million are placed for 20 Boeing 707-121s and 25 Douglas DC-8s. These are the first significant orders for American jetliners and will put the Boeing firm on the road to long-lasting domination of the world's commercial jetliner business. Three days later, the prototype of the 707, known as the 367-80, makes a roundtrip Seattle–Washington, D.C. flight in 8 hrs. 8 min.

At the annual meeting of IATA in New York, President Trippe delivers an eloquent speech on the value of tourism, the "tourist plane," and the race "between education and catastrophe." New York to Vienna via Munich service is initiated on October 27, followed by direct New York to Ankara flights on November 11. Former vice president and airline legend Andre A. Priester dies of a heart attack in Paris on November 28. On December 12, San Francisco is made the new terminus on the Los Angeles–Caracas joint service, with four flights per week made over the extended route; the same day, 80 minutes is cut from the New York to Buenos Aires service. A U.S.-bound DC-7B with 42 aboard returns safely to Rome on December 28 on two engines, after one engine falls off and a second fails over northern Italy. North Atlantic enplanements for the year jump to 187,000.

Four L-049 Constellations are sold to **Delta Air Lines** on February 1, 1956 and on March 20 Pan Am begins to replace the DC-4s flying its

Caribbean routes with DC-6Bs. A summer Alaskan tour program is announced on May 5, in cooperation with **Wien Alaskan Airlines**. The first of 26 DC-7Cs arrive during the spring; one of these demonstrates the type's range on May 26 when it flies a nonstop Miami to Paris proving flight.

On June 1, the "Seven Seas" *Clipper Black Hawk* is the first DC-7C to enter regularly scheduled service on the transatlantic route. Third-class service is inaugurated on June 20 over the New York to San Juan route. The DC-7C *Clipper Flora Temple* enters service two days later.

On August 24, an agreement is reached with **Aeroflot Soviet Airlines** for the two companies to honor each other's passenger tickets and cargo documents. Also in August, at the request of the carrier's Latin American division, engineers at the Douglas Aircraft Company propose a scaled-down DC-8; "Project 2000" is also known as the DC-9.

Pressed by the Department of State, Pan Am purchases a half-share in the new Afghan carrier, **Ariana Afghan Airlines Company, Ltd.**, on September 12 and agrees to provide it with technical assistance under a \$2.5-million contract; the arrangement is sweetened via a loan from the U.S. Export-Import Bank.

En route from Honolulu and 1,000 mi. W of San Francisco in the early hours of October 16, Flight 943, the B-377 *Clipper Sovereign of the Seas*, piloted by Capt. Richard Ogg with 12 other crew and 24 passengers, loses 2 engines, with the third "windmilling." The Stratocruiser, returning home from an around-the-world flight, is able to position herself over the USCG cutter *Ponchartrain* (WPG 70), which it circles for two hours until sunrise allows a successful ditching in a very smooth sea. Only five aboard are slightly injured and all are able to climb into life rafts and be rescued from the bobbing aircraft, which stays afloat for 21 minutes. This incident, which is captured on film (with a sequence published in the April 2001 issue of *Airways*), reveals the heroism and remarkable airmanship of the Boeing's crew and attracts media attention for weeks.

Outbound for Honolulu from Los Angeles on October 18, another Stratocruiser with 69 aboard develops engine troubles, but is able to land safely at San Francisco. Flights into the Mideast are disrupted during the first week of November by the Suez crisis. During the year, the U.S. International Cooperation Administration awards a \$2-million grant to **Thai Airways, Ltd.**; three L-1049Gs are ordered for it and Pan Am receives a contract to provide management and technical assistance.

The number of travelers flown over the North Atlantic reaches 221,000. The carrier now serves 111 cities, flying 54.5% of all U.S. overseas service, which includes 60% of all cargo and 59% of all passengers. The capital investment of the nation's largest airline in terms of assets accounts for 67% of the total amount invested by U.S. carriers in foreign flight.

Development of **Ariana Afghan Airlines Company, Ltd.** commences on January 16, 1957 and on February 10, a DC-7C flies the Tokyo to Seattle route nonstop in a record 14 hours. New York to Nassau flights begin on February 24 with 30-day excursion fares to Nassau introduced on March 16. Six days later, DC-7Bs are assigned to the New York-South America service. Company interest in **SAHSA (Servicio Aereo de Honduras, S.A.)** is reduced to 38% on April 5 and on April 27, seven flights are delayed at Idlewild Airport, New York, because of a bomb scare. Flights are initiated on May 27 from New York to Barbados via San Juan and Antigua. Ten days later, on June 6, regularly scheduled cargo service is extended to Hamburg and West Berlin.

A DC-6 flies from New York to Capetown, South Africa, on July 13 in a record 37 hrs. 55 min. Pan Am now begins weekly service from Johannesburg via the Belgian Congo to Ghana and Liberia. The 40% shareholding in **CDA (Compania Dominicana de Aviacion, S.A.)** is sold to Dominican interests on July 26. Also in July, the contract with **Thai Airways, Ltd.** begins and the three Super Constellations ordered the previous year are delivered to Bangkok. On August 22, Miami to Rome service is inaugurated via San Juan and Madrid. The Spanish capital simultaneously becomes a stop on the New York to South Africa passenger route.

In a public relations success, the carrier announces on September 9 that it is preparing to make the first commercial flight to Antarctica under a USN contract. On September 11, DC-7C service is initiated between London and San Francisco via the polar Great Circle Route across Frobisher Bay and Baffin Island. Nonstop DC-7C New York to Rome flights commence two weeks later on September 25.

A New York to Baghdad frequency is introduced on October 6. The previously announced flight to Antarctica departs San Francisco on October 12 and is completed four days later. Meanwhile, the 40% ownership of **LANICA (Lineas Aereas de Nicaragua, S.A.)** is reduced to 13% on October 14. The company's 30th anniversary is celebrated on October 27. The next day, the first production B-707 Stratoliner, the Dash-121 N708PA, is rolled out at Boeing's Renton, Washington, plant.

Seven days later, on November 4, an agreement is reached with the Matson Steamship Company for the initiation of sea-air travel between the U.S. West Coast and Fiji, New Zealand, and Australia.

En route from San Francisco to Honolulu, Flight 7, the B-377 *Clipper Romance of the Skies* with 8 crew and 36 passengers, vanishes without a trace on November 8-9 after passing the point of no return between the two destinations. A search, led by the U.S. aircraft carrier *Philippine Sea*, begins around a probable ditching scene (30 degrees and 105 miles off course) and 19 bodies are found 900 miles from Honolulu on November 13, but no other survivors. The first Boeing 707-121, N708PA, makes its maiden flight on December 20; the first of these new jetliners will be delivered within eight months. A number of CV-240s are sold to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** at year's end.

North Atlantic enplanements for the year rise to 258,000.

The fleet in 1958 comprises 131 aircraft: 23 Boeing 377 Stratocruisers, 4 DC-3s, 23 DC-4s, 48 DC-6/6Bs, 7 DC-7Bs, and 26 DC-7Cs. The B-377 *Clipper Golden Gate*, with 8 crew and 49 passengers, is so badly damaged during a wheels-up emergency landing at Manila on June 2 that it must be written off; one person is killed.

On June 5, a DC-6A, the *Clipper Ocean Express*, is delivered; it is followed by another, the *Clipper Undaunted* on August 6. The first Boeing 707-121, N709PA, is delivered on August 15 and is christened *Clipper Tradewind*. It is employed, on August 23, to make the first commercial jet flight by a U.S. aircraft, the airlift of cargo between Miami and San Juan on a proving mission.

On September 9, the company enters into an interline arrangement with **National Airlines (1)**; each carrier agrees to acquire a percentage of the other's stock and the major offers the domestic charter use of its Boeing jetliners.

With various government VIPs in attendance, First Lady Mamie Eisenhower christens the *Clipper Caroline* at Washington, D.C. (DCA) on October 16; following the ceremonies, the jetliner departs on a demonstration flight to Brussels with 39 aboard.

The B-707-121 *Clipper Mayflower* inaugurates the company's—and the nation's—first transatlantic jetliner service from New York to Paris on October 26; the 111 passengers and 16 crew enplaned aboard Flight 114 are the largest number that have yet boarded a scheduled service. The Boeing, piloted by Capt. Samuel H. Miller, returns to Idlewild Airport on October 30 completing the first American roundtrip jet service. The same day, N712PA, arrives from Boeing.

Fog at London on November 16 forces the carrier's first New York to U.K. jet flight to land at Shannon; the company is still able to mark its 75,000th transatlantic crossing since 1939. On November 17, the B-707-121, which had completed its flight from Shannon, departs London for New York and is able to arrive at Idlewild the next morning ahead of a **British Overseas Airways Corporation (BOAC)** Comet 4 dispatched simultaneously.

In accordance with its September agreement, the pioneer now leases the B-707-121 *Clipper America* to **National Airlines (1)**, allowing it, on December 10, to become the first U.S. domestic airline to offer commercial jet service, New York to Miami. Three more B-707-121s arrive by December 19 and are named *Clipper Washington*, *Clipper Constitution*, and *Clipper Maria*.

The *Clipper Constitution* crashes at Montserrat Island the same day it is delivered. Three DC-6Bs are provided to **AVENSA (Aerovías Venezolanas, S.A.)** during the year. Bookings on the North Atlantic run advance to 278,000 as Pan Am makes 170 weekly flights to Europe.

The long-range intercontinental version of the Stratoliner, the B-707-320, makes its first flight on January 11, 1959.

En route from Paris to New York on February 3, a B-707-121 with 114 aboard lands safely after surviving an almost 30,000-ft. mid-Atlantic dive to 8,000 ft. attributed to a malfunctioning of the automatic pilot. Although high-speed buffeting causes the loss of small pieces from the airframe, only one person is slightly hurt.

In 1983, famed dancer and choreographer Gene Kelly, one of the many celebrities on the flight, tells columnist William F. Buckley Jr. about the incident, which Buckley relays in the September 8, 1998 edition of his column *On the Right*. At midocean between Ireland and New York, according to Kelly, the pilot and copilot both depart the cockpit to visit with passengers. At some point, the plane goes into a steep dive from 35,000 ft. after the altitude-control seizes up. "We all screamed and yelled," Kelly recalled, "we just knew that we were going to die." And, he noted, it took such a long time to fall 27,000 feet. Struggling back to the cockpit, the pilot is able to regain control at 8,000 ft and bring the aircraft level.

A DC-7C with three crew is wrecked by a hard landing at San Francisco on February 20; there are no fatalities.

Indonesia grants the carrier landing rights on March 5 and while on an April 10 charter, the B-377 *Clipper Midnight Sun*, with five crew and five passengers, undershoots the runway at Juneau and crashes. Although no injuries are reported, large numbers of school children assemble beyond the runway to watch firemen put out the blaze.

On April 26, twice-daily B-707-121 New York to London flights begin. The two Stratoliners leased to **National Airlines** are returned on May 15.

The number of weekly New York to Paris jetliner frequencies is increased to 11 on June 1 and 5 days later on June 6, weekly B-707-121 service is inaugurated from San Francisco to Jakarta.

A DC-6A/B freighter with six crew and two passengers makes a forced landing at Shannon, Ireland, on June 22 after having failed its takeoff; there are no fatalities.

Following a belly landing at Tokyo on July 9, the B-377 *Clipper Australia* with 6 crew and 53 passengers must be written off; no injuries are reported.

During takeoff from Idlewild for Europe on July 12, a B-707-121 with 113 aboard loses two wheels; the jetliner circles the airport for four hours while the runway is coated with foam that allows it to land safely. Meanwhile, the incident becomes a major media event as over 1,000 persons crowd the runway area following radio and television reports. While Cardinal Spellman is taken to the control tower to publicly pray for a safe landing, New York Port Authority rescue personnel are forced to spray newsmen and sightseers to keep them off the runway and from interfering in emergency preparations. Later, when the plane is down, both politicians and the media berate New York Port Authority personnel for hindering fire department rescue operations and news access. However, the Boeing's pilot, Capt. Sommers, charges that the crowd near the runway would have blocked rescue crews. All but 15 of the original passengers depart on the next jetliner flight to London, with Capt. Sommers at the controls.

The first of 20 B-707-321s to be delivered is received on July 19 and is christened *Clipper Golden Eagle*. The next day, New York to Buenos Aires jetliner service begins; a Boeing from Buenos Aires arrives at Idlewild Airport on July 21. Three days later, on July 24, a B-707-321 flies from New York to Moscow in a record 8 hrs. 53 min., breaking an **Aeroflot Soviet Airlines** Tupolev Tu-114 record set 10 days earlier.

En route from New York to Buenos Aires on August 17 with 122 aboard, a B-707-121 returns to Idlewild when its hydraulic system fails; the jetliner is able to make a safe descent after its landing gear is lowered manually.

Two more speed records are turned in during proving flights made in late August: on the 21st, a B-707-321 flies from Anchorage to Tokyo in 7 hrs. 54 min., while on the 25th, another Boeing arrives in San Francisco just 4 hrs. 46 min. after departing Honolulu.

Regularly scheduled service from Los Angeles and San Francisco to London (LHR) via a polar route begins on August 27. B-707-321 flights commence on September 5 from San Francisco to Tokyo via Honolulu. A DC-4 freighter with three crew is lost near Tegucigalpa, Honduras, on September 12; there are no survivors.

The company suspends service to Nicaragua on October 1 following an embargo by the government on its property. Simultaneous east-west transpacific service begins the next day. A B-707-321 flies from San Francisco to Tokyo in 13 hrs. 20 min., while a second clipper arrives in San Francisco from Tokyo on October 3 after a flight of 15 hrs. 13 min.

Eight days later, the B-707-321B *Clipper Windward* starts around-the-world—excluding transcontinental U.S.—jetliner flights from London. The B-707-321 *Clipper Splendid* is delivered on October 19, followed by the *Clipper Viking* on October 27.

National Airlines (1) on November 1 again leases company Stratoliners for its winter flights; this year, six B-707-121s are employed. The first of six B-707-331s purchased from the Hughes Tool Company is delivered on November 5 and is named *Clipper Donald McKay*. Daily San Francisco–Tokyo B-707-321 flights commence on November 17, followed by initiation of the same schedule from New York to San Juan by B-707-121s on November 22.

A new B-707-321 begins flying to Australia on December 18, the same day that the U.K. orders the airline's Jamaica to New York service halted under terms of the 1946 Bermuda I Treaty. A compromise is quickly reached and beginning on December 22, Pan Am is allowed to fly its jetliners into Ciudad Trujillo and from there mount propeller flights to Jamaica.

The airline's Boeing jetliners establish three speed records in one day on Christmas Day: London to New York in 6 hrs. 21 min., Paris to New York in 7 hrs. 10 min., and Los Angeles to London in 11 hrs. 5 min. Company interest in **Aeronaves de Mexico, S.A. de C.V.** is finished on December 26 and sold to the Mexican government. On the last day of the month another B-707-331, originally intended for **Trans World Airlines (TWA)**, is received and christened *Clipper Dashaway*.

For the year, a total of 336,000 North Atlantic passengers are served.

Nonstop all-cargo services employing DC-7CFs are initiated on January 2, 1960, while the first of 16 DC-8-32s to be received on the year arrives on February 7 and is christened *Clipper Mandarin*. The same day, a B-707-121 with 123 aboard makes a faulty ILS landing at Los Angeles; all aboard are injured to some degree.

On February 9, the B-707-121 *Clipper Viking* is leased to **Pakistan International Airlines Corporation (PIA)** for 18 months; painted in PIA livery, the aircraft will inaugurate the Asian carrier's first jetliner service from Karachi to London. The Boeing 707-121 lease to **National Airlines** ends on February 18, when that carrier begins service with its own DC-8s.

In March, the carrier's first DC-6B, *Clipper Liberty Bell*, is leased to faltering **Capital Airlines**. *Clipper Mandarin* begins New York to Bermuda service on March 27, followed by service from New York to London on April 27.

Under the interchange agreement with **Pan American-Grace Airways (PANAGRA)** and **National Airlines (1)**, the company, beginning on May 2, operates the Panama to Miami segment of the joint service from South America to New York's Idlewild Airport employing the new PANAGRA DC-8-32.

A worldwide air-truck cargo system is established on June 4 in cooperation with Consolidated Freightways. Six days later, at the request of the U.S. State Department, the carrier accepts a \$4.6-million foreign aid contract to train personnel for **Ariana Afghan Airlines Company, Ltd.**, in which it has purchased 49% interest for \$200,000 and from which it will receive \$412,000 in fees.

San Francisco to Tokyo service is resumed on July 1, followed on July 11 by the first direct jet passenger service from Buenos Aires to Brasilia. Following the collapse of **Transocean Air Lines (TAL)**, also on July 11, the U.S. Department of Interior asks Pan Am to take over the Trust Territory Air Services previously flown by the large supplemental. Juan Trippe's airline continues to link Guam with Truk, Ponape, Majuro, Saipan, Yap, Koror, and Majuro with a combination of Douglas DC-4s and Grumman G-71 Albatross amphibians.

On July 15, the CAB orders Pan Am and **National Airlines** to divest themselves of their holdings in one another. By this time, the international holds 25% interest in the latter while National controls 6% shareholding in Pan Am—both blocks of stock make their owners the largest shareholders in their interline partner.

The opening of Hong Kong to Manila jet service scheduled for August 3 is delayed by a strike at the latter destination; operations commence two days later. Six days later, the Philippine government bans the company's jets and asks Pan Am to use piston-type aircraft pending the approval of the carrier's jet schedule. A B-707-321, later held at fault by an Italian investigation team, narrowly avoids an August 11 midair collision with a **British European Airways Corporation (BEA)** Viscount over Rome's Ciampino Airport; 23 aboard the British turboprop are hurt.

An inattentive ground crewman damages a DC-7 at Accra, Ghana, on September 7 and a DC-8-32 flies from Chicago to London on September 11 in a record 6 hrs. 55 min. A second air-truck cargo system is established on October 14, in cooperation with Terminal Transport Company. Three days later, a B-707-121 is leased to **AVIANCA Colombian Airlines, S.A.** for a year; the action allows that national carrier to begin its first pure jet services.

The twenty-fifth anniversary of the inaugural transpacific flight of the *China Clipper* is marked in San Francisco ceremonies on November 26. New economy-class fares are introduced on December 1 and after over 20 years of service, the last B-377 service is completed on December 18 when the chartered *Clipper Queen of the Pacific* arrives at San Francisco from Honolulu. The year's last DC-8-32, *Clipper Rambler*, is delivered on December 22.

Bookings for the North Atlantic swell to 368,000.

Brazil-Japan service is opened on January 16, 1961 and the last three DC-8-32s are delivered during the year, beginning with the *Clipper Cathay* on February 15. The same day, a B-707-121 encounters clear-air turbulence near Honolulu resulting in severe injury to a passenger.

A DC-7CF with three crew crashes while on final approach to Stuttgart on February 18; although the aircraft must be written off, there are no fatalities.

The DC-6Bs *Clipper Pathfinder* and *Clipper Frankfurt* are now transferred to **LACSA (Lineas Aereas Costarricenses, S.A.)**.

All-jet service is inaugurated between New York and Puerto Rico on April 30 and on May 4 Miami-Havana flights are resumed. The **UMCA (Uraba, Medellin, and Central Airways, S.A.)** subsidiary is dissolved on June 15. On June 26, the carrier introduces portable freight platforms that are carried to a plane on a forklift and move inside the craft on rollers imbedded in the fuselage floor. Also on this day, a DC-6B's landing gear collapses when the plane sets down at Miami.

The last shareholding in **Panair do Brazil, S.A.** is sold during the summer.

On August 9, Flight 501, a DC-8-32 with 81 aboard en route from Houston to Panama, is hijacked to Havana via Mexico City by French Algerian A. C. Cadon; Cuba orders an immediate release for the plane, its crew and passengers. Cadon will be deported to Mexico, where he will be convicted of robbery and illegal firearms possession and sentenced to a prison term of almost nine years.

Two Miami-Havana flights are cancelled on September 15 as the result of uncertainty over new Cuban exit rules. The next day, a DC-8-32 with 133 aboard is involved in a landing accident at Idlewild Airport.

North Atlantic enplanements balloon to 404,000, while total passenger boardings reach 3.6 million. In terms of the total number of travelers carried, Pan Am now ranks as the world's ninth largest airline; how-

ever, in terms of passenger-miles flown, the company ranks third behind **Aeroflot Soviet Airlines** and **United Air Lines**. North Atlantic passengers climb to 403,602.

The fleet in 1962 comprises 111 aircraft: 9 DC-4s, 29 DC-6s, 20 DC-7s, 18 DC-8s, 32 Boeing 707s and 720s.

The first of five Boeing 707-321Bs to be received on the year is flown to Juneau, Alaska, in February, opening jetliner service to Alaska. Just after touchdown on the recently lengthened 8,500-ft. main runway, the aircraft becomes the subject of impressive ceremonies. Flanked by U.S. Senators Ernest Gruening and Bob Bartlett, Representative Ralph Rivers, Governor William Egan, and Pan Am officials, the state's first lady, Neva Egan, christens the Boeing *Clipper Alaska* before a crowd of 5,000 people.

A DC-8-32 with 107 aboard is involved in a nonfatal landing accident at Mexico City on April 7, while the second of five B-707-321Bs to be acquired is received on April 12 and is christened *Clipper Evening Star*. A B-707-321 overshoots the runway while landing at Manila on April 27; none of the 53 people aboard report injuries. During the month, an order is placed for 14 B-707-321Cs to be delivered beginning the following spring.

A DC-8-32 encounters clear-air turbulence while approaching San Juan, Puerto Rico on June 14; one of the 37 passengers aboard is seriously hurt. The next day, a B-707-121 over the same city narrowly avoids a midair collision with another jetliner.

The B-707-321Cs enter service on July 1 over routes from New York to Frankfurt via London, San Francisco to Tokyo via Honolulu, and San Francisco to Saigon via Honolulu and Tokyo. On July 26, 10 passengers and 2 crewmen are seriously hurt as a B-707-321 with 86 aboard must dive to avoid colliding with a Dutch military aircraft near Amsterdam, Holland. Also in July, the 100,000th Atlantic crossing is made.

The DC-8-32 *Clipper Flying Cloud* is sold to **Panair do Brazil, S.A.** on September 29 and in compliance with a Cuban government order, flights to Havana are suspended on October 24. The next day, President Kennedy signs a bill authorizing a Congressional payment of \$20,000 each to three survivors of a 1943 flying boat crash. Returned by **United Air Lines**, which had purchased leasing **Capital Airlines** the year before, the company's first DC-6B, *Clipper Liberty Bell*, is chartered to **Austral (Lineas Aereas, S.A.)**; it will later be sold to the Argentine line.

Despite Havana's November 10 invitation, Juan Trippe delays a resumption of services to Cuba. The B-707-321 *Clipper Viking*, on lease to **Pakistan International Airlines Corporation (PIA)** since 1960, is returned on December 12.

After some months of negotiations, a plan is filed with the CAB on December 20 for a merger with **Trans World Airlines (TWA)**. The next day, the carrier agrees to meet Cuba's demand for a resumption of services. The Castro government has made it the price for releasing more relatives of ransomed Cuban prisoners that have since returned to the U.S. During the year, the company becomes the first to establish a global electronic reservations system with its PANAMAC and North Atlantic traffic advances to 448,837 passengers transported.

On January 28, 1963, the CAB recommends that the carrier be awarded a U.S.-Tahiti route. The first of three Boeing ex-American Airlines B-720-023Bs to be delivered arrives on February 13 and is christened *Clipper Carib*. The Pan Am Building is opened at 45th Street and Park Avenue in New York City on March 7. Designed by Walter Gropius, it is the largest commercial building in the world and constructed perpendicular to all of the other skyscrapers in midtown Manhattan. On March 27, Havana-Madrid flights are resumed.

On April 28, unrest in Haiti requires suspension of service to Port-au-Prince. The first three of 14 B-707-321Cs are delivered on May 2—*Clipper Gladiator*, *Clipper Jupiter*, and *Clipper Challenger*. These convertible aircraft can transport up to 13 pallets, each of which can accommodate 4 tons of cargo.

A Belgrade stop is added in Europe on May 3 and on May 27 the 7,000th around-the-world flight is completed. On June 3, provisional orders are placed for six Anglo-French Concorde SSTs; none will be

delivered. The new B-707-321Cs are employed to launch the first scheduled transpacific all-cargo jet service on June 17.

A B-707-121 with 117 aboard encounters clear-air turbulence near Wilmington, North Carolina, on July 8, resulting in serious injury for one passenger. Pan Am agrees on July 11 to purchase and lease two helicopters to **New York Airways (2)**, which in turn agrees to operate a service between the proposed heliport atop its Pan Am Building and the major's terminal at Idlewild Airport. A B-707-321 with 169 aboard encounters clear-air turbulence just after takeoff on a military charter from McGuire AFB, New Jersey, on August 13; a stewardess is seriously hurt.

Also in August, a business jets division is formed to market the French-made Dassault Falcon 20 in the U.S. Required for survival, the U.S.-Tahiti route's other claimant, **South Pacific Airlines**, now negotiates an arrangement with Pan Am that calls for the major to lease the special carrier's network for half of its operating profit over the next decade.

The deal, struck on September 18, comes undone when President Kennedy approves the original CAB recommendation and Pan Am is given the entire route. In a September 22 test supervised by the FAA at Idlewild Airport, a total of 189 people are evacuated from a jetliner in 2 min. 20 sec. In a significant piece of publicity, British secret agent James Bond, played by Sean Connery, is seen flying a Pan Am Boeing jetliner in the second 007 movie, *From Russia With Love*.

Piston-engine flights end on October 1 and five days later, on October 6, Pan Am inaugurates London to New York via Iceland service. On October 16, the carrier and **Trans World Airlines (TWA)** jointly announce termination of their merger proposal agreement by mutual consent. A B-707-321 flies from Tokyo to San Francisco on October 21 in a record 7 hrs. 48 min. On October 29, the U.S. Customs Service orders a B-707-321 not to land after fog and rain has closed Idlewild Airport. The aircraft, with 76 aboard and arriving from Rome with a blown tire, is able to make a safe landing at Bradley Field, Connecticut. The next day, a DC-7B is sold to Hartford, Connecticut-based Global Presentations for use as a flying showcase.

A New York to Buenos Aires nonstop service is announced on November 1 and the DC-8-32 *Clipper Rambler* is sold to **Panair do Brazil, S.A.** on November 23.

On December 8, Flight 214 is en route from Puerto Rico to Philadelphia via Washington, D.C. The B-707-121 *Clipper Tradewind* with 8 crew and 73 passengers is hit in the fuel tank by lightning during a thunderstorm and crashes into a field near the city of Elkton, Maryland; there are no survivors.

A plan put forward by Pan Am and **Pan American-Grace Airways (PANAGRA)**, which would allow the former to buy out the W. R. Grace & Company 50% shareholding in the latter, is disapproved by the CAB.

Employing a Grumman G-111 Albatross under contract to the U.S. government, PAWA-1 inaugurates mail and express flights between Mombasa, Kenya, and Port Victoria, Seychelles, in support of the construction of a satellite tracking station. The aircraft also transports mail, ill workers, and citizens from the island of Mahe to Mombasa.

Systemwide enplanements total 4,963,000 with transatlantic bookings climbing 22.3%, to 539,015.

Airline employment in 1964 totals 26,530 and the first Hawaii to Tahiti jetliner service is inaugurated on January 4. The first of 10 B-707-321CFs to be delivered arrives on February 27 and is named *Clipper Courser*.

The B-720-030B (B-720B) *Koln* is purchased on March 12 from **Deutsche Lufthansa, A.G.** and is rechristened jet clipper *Bonita*. The B-707-139 *Clipper Southern Cross*, oldest Boeing jetliner in the fleet, nearly crashes just after takeoff from Baltimore on March 15.

On April 7, Flight 212, the *Clipper Southern Cross* incoming from Puerto Rico with nine crew and 136 passengers, overruns its runway after landing at New York's new John F. Kennedy International Airport (renamed from Idlewild); 46 are injured, but there are no fatalities.

Four days later, a DC-6B with 25 aboard crashes at San Jose, Costa Rica; one crewman is seriously hurt.

The first one-plane service from the southeastern U.S. to Europe begins in May as the result of an interchange agreement signed with **Delta Air Lines**. A Pan Am DC-8-33 is able to operate over Delta's route from New Orleans to Washington, D.C. (IAD) via Atlanta and on to London and Frankfurt.

A B-707-321CF flies from San Francisco to London on June 28 in a record 9 hrs. 30 min. Also in June, the 40% interest in **LACSA (Lineas Aereas Costarricenses, S.A.)** is reduced to 33%.

In July, Juan Trippe becomes CEO/chairman of the board—an empty post since being vacated by C. V. Whitney years earlier—and Harold Gray is elected president. Unable to succeed without the route awarded to Pan Am by the CAB the previous year, **South Pacific Airlines** sells out to the larger company in November. Transatlantic flights now number 214 per week, while 152 transpacific flights are made. During the year, direct New York to West Berlin jetliner service is inaugurated. Seven more Intercontinental hotels are opened and most of the 54 Falcon jets ordered from Dissolute by the business jets division are sold.

Pan Am lobbyist Samuel Prior, who secretly serves as the airline's link with the CIA, becomes involved in plans to discredit Indonesian President Sukarno. The covert action calls for a jetliner chartered by him to be bugged with electronic listening devices while Hamburg prostitutes, acting as stewardesses, attempt to seduce the leader.

On September 15, flights are resumed to Jakarta after a one-week boycott of the line by the local Communist-dominated airport workers union. The same day, a B-707-321 flies from Chicago to Shannon in a record 6 hrs. 11 min. A management and technical assistance agreement is signed with **Iran Air** in October.

On November 8, the carrier pays a \$5,000 fine to the FAA for the near-crash of the *Clipper Southern Cross* at Baltimore; the government cites Pan Am's violation of a May 1960 overhaul directive.

In another publicity coup, the company arranges during the fall to bring The Beatles to the U.S.; CBS-News is at New York (JFK) when a B-707-321, temporarily rechristened *Jet Clipper Beatles*, delivers the British rock group for their appearance on *The Ed Sullivan Show*. Pictures of the lads deplaning under the plane's name are shown around the world in both print and electronic media.

On November 12, as the result of a brief electrical system failure, a B-707-321 with 102 aboard en route from Honolulu to Los Angeles makes a 12,000-ft. dive; the plane recovers in time to avoid tragedy and no one is hurt. Another B-707-321, en route to Honolulu from San Francisco on November 30, becomes the first to relay in-flight messages via Satellite Syncom III; the one-hour experiment is conducted in association with the National Aeronautics and Space Administration (NASA).

The Pan Am Building heliport, 808 feet up in the middle of Manhattan, is officially opened in ceremonies on December 22. Governor Nelson Rockefeller, Mayor Robert Wagner, and Juan Trippe participate while Vice President Hubert H. Humphrey, in a phone message from Minneapolis, gives the signal to turn on the lights. Cardinal Francis J. Spellman is among the day's first passengers flown by **New York Airways (2)** out to the Pan Am terminal at John F. Kennedy International Airport.

In terms of passengers carried, Pan Am now ranks as the seventh largest airline in the world; it is first in air freight and second in terms of total employment.

Total passenger enplanements reach 5,325,000 as bookings on the North Atlantic swell 22% to 675,397. Revenues total \$604.7 million. Net income totals \$37,140,000, a 10.6% increase over 1963 and an all-time high for any airline.

Airline employment in 1965 is down to 23,102. A B-707-321 with 77 aboard encounters severe turbulence near Bermuda on January 31; injuries are minor.

On February 1, orders are placed for 25 B-727-121s; the first is delivered later in the year and is christened *Clipper Sam Houston*. The first of 55 B-707-321B Advanced to be delivered arrives on February 6 and is named *Clipper Dauntless*. When the former subsidiary **Panair do Brazil, S.A.** fails on February 16, a leased Pan Am DC-8-32 and DC-7C

are returned and two other DC-8s are released to **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**.

While landing at Saigon on March 26, a military charter B-707-321 with 170 aboard drags its No. 4 engine pod. ALPA pilots strike the carrier between April 1-18.

The day the job action is settled, Pan Am begins weekly roundtrip service from New York City to Douala, Abidjan, Cotonou, Robertsfield, and Dakar under a blocked-space agreement with **Air Afrique, S.A.** Under this arrangement, the African company is given the right to reserve 35-45 seats and a portion of the cargo and mail space on each PAWA-1 flight. Pan Am employs a B-707-321C that it has, briefly, named *Clipper Antelope of Africa*.

On April 23, a B-707-123B with 102 aboard damages its nose gear while landing at Merida, Mexico.

The new routes are inaugurated on May 1 from New York to Douala via Abidjan, Cotonou, and Dakar, as well as New York to Nairobi via Dakar, Lagos, and Entebbe plus New York to Prague via Glasgow. On May 30, the carrier loans **New York Airways (2)** \$1.2 million to counteract a congressional move to cut off its subsidy.

By summer, the number of weekly flights across the Atlantic has risen to 258. In addition, jetliner flights are up 50% over propeller flights and carry three times more passengers. Landing rights in Kenya are received on June 25 and the next day the CAB authorizes Pan Am to subsidize **New York Airways (2)**.

Three days later, on June 28, Flight 843, *Clipper Friendship*, a B-707-321B with 153 aboard, lands safely at Travis AFB after losing an engine and part of its right wing in a fire shortly after its takeoff from San Francisco for Honolulu. The detached power plant, which had exploded when a turbine wheel disintegrated, crashes through the concrete wall of a cabinet shop, missing workmen by 15 feet and coming to rest in an alley.

When federal subsidies for helicopter carriers ends on July 1, Pan Am takes over sponsorship of **New York Airways** and 44% shareholding. With three Vertol 107s, the rotary-wing operator adds the roof of Manhattan's Pan Am Building to its route network. The first U.S. air link with a U.S.S.R. satellite nation is established on July 18 when New York to Prague, Czechoslovakia, flights are started.

A CV-240 crashes into a mountain and burns on Montserrat on September 7 (30 dead). En route from Fort de France on September 17, Flight 292, a B-707-121B with 9 crew and 21 passengers, crashes into Chances Mountain; there are no survivors.

On December 22, former FAA Administrator Najeeb E. Halaby is named a vice president.

Company presence in Southeast Alaska ends during the year when the CAB, in an effort to cut its subsidy costs, gives the carrier's Juneau-Seattle route to **Pacific Northern Airlines**. Alaskan operations are now centered on Fairbanks.

A management and support contract is signed with **Air Guinee (Compagnie Nationale Air Guinee, S.A.)** under U.S. AID auspices. Pan Am operatives, expert assistants to foreign airlines, arrive in Conakry, along with a DC-4.

A total of 16 new jetliners are acquired during the year, with orders outstanding for 44 and the fleet now comprises 67 Boeing 707s, 3 B-720-023Bs, 1 B-727-121, 1 B-720-030B, 19 DC-6s, 8 DC-7s, and 18 DC-8-32s.

With the construction of 3 additional Intercontinental Hotels, the total number held rises to 32. A second B-720-030B, the *Nurnburg*, is purchased from **Deutsche Lufthansa, A.G.** on December 1 and is rechristened *Jet Clipper Panama*.

North Atlantic enplanements grow 20.3% to 733,324, while total bookings rise 9.4% to 5,458,919. Operating revenues increase 10.6% to \$669,019,000, while the net rises to \$52,075,000.

Pan Am's present transatlantic route certificate is renewed by President Johnson on February 11, 1966.

When Kwame Nkrumah is overthrown as president of Ghana in February, he receives sanctuary in Guinea. At this point, Pan Am is forced out of the picture as the government, with Nkrumah's help, turns, as it had earlier, to the Soviets for assistance with its airline.

On April 13, a \$525-million order is placed for 25 Boeing 747 Jumbos; it is the single largest contract yet for a single aircraft type.

In May, the carrier contracts with the government to fly 3,000 U.S. troops on furlough from Vietnam to Taiwan, Hong Kong, or Tokyo for \$1 per month; 23,000 are transported by the end of June employing former Internal German Service DC-6Bs. Flying from Tan Son Nhut Airport at Saigon, as well as Da Nang, Cam Ranh Bay, and Nha Trang, the onetime frontline aircraft will fly rest and recuperation shuttles for the next three years.

On July 15, Singapore bars Pan Am from serving Manila from Singapore, restricting that route to **Malaysian Airways, Ltd.** Meanwhile, upwards of 22 commercial flights per week are cancelled during the peak tourist season through August, as the capacity is employed to fly American soldiers to Saigon. The last piston-engine aircraft is retired in September. One of the 160 Dassault Falcon 20s ordered for the business jets division makes a record-setting bizjet transatlantic flight on September 26, flying 2,388 mi. from St. John's, Newfoundland, to Lisbon in 4 hrs. 38 min.

Four B-727-121QCs are placed in service throughout the year on services within Germany and the Caribbean, while four more B-720-030Bs are acquired from Lufthansa. Flight 708, a B-727-21F with three crew, descends below its assigned altitude and crashes near Dallgow, East Germany, on November 15; there are no survivors.

A B-707-321 with 107 aboard makes a safe emergency landing at Istanbul on December 13, after colliding with seagulls on takeoff. The first of five B-707-321C Advanced to be delivered arrives the next day and is named *Clipper Archer*. Pan Am's Worldport terminal at New York (JFK) receives \$126 million in improvements and a new \$98-million maintenance facility is occupied at the Queens landing field. Direct service to Cam Ranh Bay and Da Nang, South Vietnam, begins on December 30.

During the year, veteran pilot Capt. Marius ("Lodi") Lodeeson publishes his memoirs, *I, the Airline Pilot* (New York: Dodd, Mead). In 1984, the work will be supplemented by his *Captain Lodi Speaking: Ten Million Leagues around the Earth on the Installment Plan* (Suttons Bay, Mich.: Argonaut Press).

Passenger traffic climbs 25% on the year as North Atlantic traffic amounts to 898,234 passengers carried. The company now serves 118 cities and earns a net profit of \$71,953,000 million on total operating revenues of \$837 million.

Airline employment in 1967 reaches 30,085 and the fleet now comprises 5 B-707-121Bs, 26 B-707-321s, 36 B-707-321Bs, 28 B-707-321Cs, 9 B-720Bs, 20 B-727-121s, 4 B-727QCs, and 15 DC-8-32s; orders remain outstanding for 45 B-747s. It is now determined to sell off the DC-8-32 fleet as 2 B-727-121Cs are received, including the *Clipper Betsy Ross*.

On January 2, airline sources report that South Vietnam has been harassing Pan Am flights to Saigon in an effort to force the U.S. to provide **Air Vietnam, S.A.** with two new jetliners. Two days later, after it is agreed that the South Vietnamese airline would receive the desired equipment, the Saigon government pledges to end flight delays. On January 8, the carrier's 50% interest in **Pan American-Grace Airways (PANAGRA)** is sold to **Braniff International Airways**.

Under terms of an interchange agreement with Braniff, a Pan Am B-707-321B is able to fly over Braniff routes from Houston and Dallas to Chicago and then on to London and Frankfurt.

Braniff now also assumes the PANAGRA interchange agreement with **National Airlines (1)** and Pan Am. Consequently, the three companies are able to provide one-plane through service from New York to Miami over National's routes, from Miami to Panama with Pan Am, and over the old PANAGRA routes to Lima, Peru. To operate the Miami to Panama segment, Braniff leases a DC-8-62 to Pan Am, painting it in PAWA-1 livery.

President Johnson approves the renewal of the company's transatlantic route certification on February 11.

While approaching Wake Island on March 29, a B-707-321C makes the first public demonstration of a satellite data link from a civil aircraft.

Employing a special antenna, the signal is sent up to the NASA satellite ATS-1 and then down to a ground station in California, which passes it on to company headquarters at New York (JFK). The first of 16 B-707-321CF Advanced to be delivered arrives on May 1 and is named *Clipper Onward*. Pan Am's contract to operate Trust Territory Air Services ends upon the creation of **Air Micronesia**.

Beginning on July 1 and for the second straight year, the carrier hires and trains college students to serve as flight attendants during the summer. The world's first completely automatic approach and landing with passengers aboard is recorded by a B-707-321B on July 7. Nine days later, on July 16, Pan Am begins flying servicemen from Vietnam to Hawaii free of charge for reunions with their wives, whom the company agrees to transport from the West Coast at a 25% fare reduction.

On July 20, a Philippine court orders the airline to pay \$375,000 in damages to Filipino poet R. Zulueta for refusing to fly him from Wake to Manila two years earlier. The new B-727-121C *Clipper Ganges* is received on September 25.

Later in the year, Pan Am becomes the first airline to make fully automatic approach and landing a regular feature in scheduled service. A company B-707-321 is shown landing at Hamburg, rolling to the gate, and its passengers departing into the terminal in the Peter O'Toole and Omar Sharif motion picture *Night of the Generals*.

Transatlantic boardings increase 19.7% to 981,403 as overall enplanements accelerate to 7,997,000. In terms of total passengers carried, the company now ranks as the sixth largest airline in the world; it remains first in air freight. Revenues advance 13% to \$950,230,000 while expenses accelerate 17.8% to \$835,251,000; the net profit falls to \$66,247,000.

The workforce totals 38,980 in **1968**. During the year, a total of 12 B-707-321Bs and 6 B-707-321Cs are delivered; orders are outstanding for 37 B-747s. On January 2, the two B-727-121Cs obtained the previous year, including *Clipper Ganges*, are sold to **Air Vietnam, S.A.** Also, on January 15, all interest in **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** is sold to local interests.

While on the ground at Da Nang, South Vietnam, preparing for a military charter to Hong Kong on February 9, a DC-6B is seized by an armed U.S. serviceman. He will be overpowered and, in due time, court-martialed. Upon examination, however, it is determined that the man is mentally deficient and he is given a medical discharge and sent to a psychiatric institution.

On February 15, the USAF Military Airlift Command (MAC) requests the carrier to place 7 more B-707-321CFs on military airlift service; the airline already has 18 aircraft committed.

The same day, Pan Am and **New York Airways (2)** dispute the subsidy amount contained in the new contract signed between the two for operations by the latter from the Pan Am Building; consequently rotary-wing shuttle flights from that location now cease. A new contract is finally signed with the helicopter line on May 2. On May 25, Juan Trippe retires; Harold Gray becomes chairman/CEO with Najeeb Halaby as president.

On June 12, while on final approach to the airport at Calcutta, India, in bad weather, a B-707-321C with 10 crew and 53 passengers strikes a tree 1,128 m. short of the runway and crashes (5 dead).

An interchange agreement with **Northwest Airlines** takes effect on June 1 and NWA is able to begin its first transatlantic service from Minneapolis/St. Paul to London (LGW) via Detroit. Both companies employ Boeing Stratoliner equipment.

As an **Aeroflot Soviet Airlines** Il-62 is landing at New York (JFK) on July 16, two Pan Am Boeing 707-321Bs, one with VIPs and press and the other with revenue passengers, arrive at Moscow's Sheremetyevo Airport, signaling the first commercial airline service between the U.S. and U.S.S.R.

On August 3, the CAB authorizes a resumption of shuttle flights by **New York Airways (2)** from the Pan Am Building, requiring that the operation be controlled by Pan Am; the major agrees to purchase Sikorsky S-61s for the service. New York to Prague service is suspended on Au-

gust 21 following the Soviet invasion of Czechoslovakia and the last 15 DC-6Bs are all sold on September 17; Prague flights resume on September 23. The world's largest commercial airliner, the B-747-100, is ceremoniously rolled out in Pan Am colors at the new Boeing facility at Everett, Washington, on September 30.

En route from New York to San Juan on November 24, Flight 281, a B-707-321B with 103 passengers, is taken over by 3 armed men, who explain that their actions are the "easiest way" to reach Cuba; the jetliner is released after reaching Havana. One of the men will be smart enough to remain in Cuba; two others will return to their native Puerto Rico in the mid-1970s, where they will be captured, tried, and sentenced to long prison terms.

On approach to Caracas on a service from New York on December 12, Flight 217, a B-707-321B with 9 crew and 42 passengers, crashes into the sea 11.5 mi. N of the Venezuelan city; there are no survivors.

Flight 799, a B-707-321C freighter with three crew, takes off from Elmendorf AFB, Alaska, on December 24 with its flaps in a retracted position; the aircraft consequently crashes and there are no survivors.

The 33% interest in **COPA (Compania Panamena de Aviacion, S.A.)** is reduced to 26% on December 31. Pan Am becomes the first airline to transmit engine data and position information from the air to the ground in less than a second via a data link system that routes the information to a computer in the home office and then to interested departments.

Construction is begun on a \$50-million passenger terminal at New York (JFK) and the Intercontinental Hotels Corporation subsidiary builds 7 additional hotels for a total of 45. The company's trademark is now second in worldwide recognition after Coca-Cola; a spaceship in the year's most famous sci-fi movie, *2001: A Space Odyssey*, wears the Pan Am logo.

North Atlantic passenger traffic rises 20% as 1,052,760 passengers are carried. Overall passenger boardings jump 16% to 9,291,000 and freight traffic accelerates 19.2%. Revenues exceed \$1 billion (\$1,036,100,000) for the first time.

Airline employment in **1969** totals 38,000. The company's last 38% interest in **AVIANCA Colombian Airlines (Aerovias Nacionales de Colombia, S.A.)** is sold and the last DC-8-32s are turned over to their purchasers, **Delta Air Lines** and **United Air Lines**. After an eight-month effort, Pan Am is finally able to place an ad in the Moscow papers on February 10 announcing its Moscow-New York service. The carrier now becomes the first to demonstrate satisfactorily and receive FAA approval for regular use of the Carousel IV inertial guidance system. Also, Pan Am becomes the first airline to install computers on its aircraft to analyze engine performance and display malfunctions for crews.

On April 11, company pilot Capt. Scott Flowers and the manufacturer's flyer Brian Wygle make the premier test flight of Boeing's *Jumbojet*, Model 747-121 N747PA. It is the first airframe assigned to a commercial carrier, the builder having retained the first one for itself.

On April 13, four gunmen force Flight 460, a B-727-221 with 90 passengers en route from San Juan to Miami, to divert to Cuba; the plane and passengers are allowed to fly back to Miami later in the day.

Clerical and related workers, members of the Teamsters, strike the carrier on August 8; however, their job action is settled by mediated agreement three days later.

The company agrees to increase its subsidy investment in **New York Airways** on August 29 by up to \$260,000 and to advance the funds necessary for the purchase of three new S-61s. New York to Tokyo via Fairbanks flights are initiated on September 1. On October 19, the company receives a one-year permit from the City of New York to take over and operate a heliport at 61st Street and East River.

En route from Mexico City to Merida on October 21, Flight 551, a B-720-030B with 50 passengers, is diverted to Cuba by an armed young man identified as 17-year-old Henry Shorn of Detroit.

Under contract to **New York Airways**, services from the East River heliport commence on November 5. Chairman/CEO Gray dies of cancer

later in the month and is succeeded by President Halaby. The first two B-747-121s are received on December 12 and 19, respectively; they are christened *Clipper Pride of the Sea* and *Clipper Champion of the Seas*.

Meanwhile, the as-yet-unnamed prototype N747PA, under the command of PAA-1's Capt. John R. Walker, is sent on an extensive promotional tour; between December 20 and 29, the giant plane visits Honolulu, San Francisco, Los Angeles, Miami, Bermuda, Philadelphia, and Boston. At the latter point, 8,200 visitors tour the aircraft and 344 receive a demonstration ride.

Enplanements total 10,961,400, but **Trans World Airlines (TWA)** now replaces the pioneer as the number one American carrier to Europe. A \$19.9-million loss is suffered on the year, harbinger of a series of economic reversals to come.

Employment in 1970 totals 37,762. N747PA visits Houston on January 1–2 and a record 15,317 citizens tour the Jumbojet. The first of 19 B-747-121s to be delivered on the year arrives at New York (JFK) on January 9 and is named *Clipper Spark of the Ocean*. It is employed to undertake a 6 hr. 30 min. proving flight to London (LHR) on January 13. The passenger manifest contains 361 names (mostly company staff) and represents the first time more than 300 people have crossed the Atlantic aboard a heavier-than-air flying machine.

The next day, January 14, the carrier makes a third attempt to evacuate 423 persons from a Jumbojet in 90 seconds, a condition of the aircraft's certification. The FAA is not satisfied when the exercise cannot be completed, withholding its certification until defective escape chutes are modified.

Having returned to Washington, D.C. (IAD), the Jumbojet N747PA is the subject of an elaborate christening ceremony on January 15. Surrounded by CAB officials and other dignitaries, First Lady Patricia Nixon climbs to the dedication platform to pull a lever that is supposed to release a cloud of red, white, and blue water over the leviathan. (Housing a sensitive radar system, the aircraft nose is too delicate to receive the blow of the traditional champagne bottle.) Embarrassingly, the lever fails and, consequently, the christening of *Clipper America* is dry.

Finally, on January 20, the carrier's Jumbojets are certified by the FAA, clearing the way for an inaugural revenue flight to London. The same day, preflight grooming of the *Clipper Spark of the Ocean*, scheduled to make the historic flight, is completed at New York, as the third Jumbojet, *Clipper Victor*, is delivered.

Pan Am's final shareholding in **SAHSA (Servicio Aereo de Honduras, S.A.)** is disposed of to **TAN (Transportes Aereos Nacionales, S.A.)** on January 21, the same day on which the fourth Jumbojet, *Clipper Ocean Herald*, arrives. Later in the day, the airline faces a number of problems in getting off the inaugural flight to London. As environmental activists picket in the terminal, tourists, enthusiasts, and the media crowd the gate area, causing the ticketing and boarding process to collapse into pandemonium. Once passengers and crews are aboard, mechanics have great difficulty in shutting the rear door. Finally, Capt. Robert Weeks' giant craft develops an overheated No. 4 engine during taxiing and must return to the terminal, there to deplane the passengers and unload all of the baggage loaded with such difficulty earlier.

While the backup B-747-121 *Clipper Young America* is being readied and loaded, Pan Am takes its passengers, now reduced in number from 362 to 322, out to dinner. The Jumbojet, now seven hours behind schedule, takes off at 1:52 a.m. on January 22. By now, the orchids pinned on the uniforms of the flight attendants the previous evening are wilted. The giant airliner completes its first roundtrip, arriving back at New York (JFK) on January 24 after a 7 hr. 8 min. flight from London (LHR). Three days later, on January 27, service is suspended between Washington, D.C. and Nassau and Freeport in the Bahamas.

Beginning early in February, the company takes delivery of four more B-747-121s: *Clipper Belle of the Sea*, *Clipper Maid of the Seas*, *Clipper Ocean Pearl*, and *Clipper Sparkling Wave*. Coming into Paris on the first B-747-121 flight from New York on February 5, Pan Am's Jumbojet is obligated to circle Paris (ORY) for half an hour to give smaller craft time to get clear of its turbulence. Once on the ground, the controller guiding

it toward the airport terminal is forced to run to the building's second floor because the height of the plane hides him from the pilot's view.

New York to San Juan Jumbojet flights commence on February 7 and two days later, on February 9, a B-747-121 en route from London to New York is forced to return to the U.K. when an engine overheats 1,000 miles out over the Atlantic. The *Clipper Ocean Pearl* is briefly leased to **American Airlines** on February 11 and Pan Am reports, on February 24, that B-747-121 New York–London service has shown a profit in its first four weeks, with flights averaging 61% of passenger capacity. New York–San Juan flights are also successful, averaging 86% capacity.

Daily New York–Paris Jumbojet service begins on March 1. Employing the leased *Clipper Ocean Pearl*, **American Airlines** is able to launch transcontinental Jumbojet services on March 2. The same day, employing a pair of 30-passenger S-61s purchased with Pan Am funds, **New York Airways** launches service linking the city's three major airports.

Later in the day, the *Clipper Neptune's Car* becomes the 10th Jumbojet delivered. On March 10–12, the company inaugurates the first scheduled B-747-121 service to Tokyo and Hong Kong; the flight marks the first commercial transpacific flight by the aircraft type.

The ship will be joined by the *Clipper Ocean Spray*, *Clipper Black Sea*, *Clipper Crest of the Wave*, *Clipper Dashing Wave*, *Clipper Gem of the Seas*, and *Clipper Neptune's Favorite*, all delivered between March 28 and April 26. Meanwhile, on March 29, a second Jumbojet, the *Clipper Black Sea*, is chartered to **American Airlines**. Due to civil unrest, service is, meanwhile, suspended to Haiti on April 25.

A B-747-121 is delayed in Milwaukee for nearly five hours of repairs on May 4 after its pilot reroutes his flight from Frankfurt and London to Chicago because of a drop in oil pressure. During the remainder of the month, the B-707-321 *Clipper Viking* is sold and the B-747-121s *Clipper Queen of the Seas*, *Clipper Ocean Rover*, *Clipper Fortune*, *Clipper Sovereign of the Seas*, and *Clipper Queen of the Pacific* all arrive, the last two named in a rare double delivery on May 31. That same day, the *Clipper Ocean Pearl* is returned by **American Airlines**.

On June 9, Pan Am and Sikorsky participate in a cooperative demonstration to test the theory that large helicopter airlines can cut travel time between city centers. A USMC CH-53A, carrying a group of government officials, newsmen, industry, and airline officials, flies from atop the carrier's New York headquarters building to Washington Hospital Center in 1 hr. 17 min.

En route from Beirut to Rome on June 22, Flight 119, a B-707-321B with 134 aboard is hijacked by U.S. Albanian resident H. Xaferi and forced to fly to Cairo, where the pirate seeks asylum. After forcing his way into the cockpit and threatening the plane's pilot with a pistol, Xaferi unexplainably but enthusiastically fires a shot out of a window upon landing. He will make the mistake of returning to Los Angeles in 1973, where he will be arrested, tried, and given a 15-year prison sentence.

Regularly scheduled Jumbojet service from New York to Rome begins on July 1, followed by the initiation of B-747-121 frequencies to Bermuda on July 27.

On August 2, gunman R. Rivera-Rios becomes the first to hijack a Jumbojet when he forces Flight 299, a B-747-121 en route from New York to San Juan with 379 aboard to divert to Havana's Jose Marti Airport. The first Jumbojet to visit Cuba under any circumstances, Fidel Castro wishes to see the large plane for himself and meets the plane. While the pirate is taken in hand, Castro exchanges comments with Capt. Watkins and is given a quick tour and a chance to shake hands with willing passengers. The big plane takes off for Miami 52 minutes later. The hijacker will return to the U.S. in 1978; captured by police, he is tried and given a life prison term.

The next day, the pilot of Flight 742, a B-727-121 with 125 passengers on a German internal service flight from Munich to West Berlin, foils a hijacking attempt by one J. Huber, who had demanded a trip to Budapest. When convinced that the trijet does not have the range to make it to Hungary, Huber surrenders. He will later be committed to a psychiatric facility.

The last B-747-121 arrives on August 4 and is named *Clipper Messenger*. During August, the reciprocal air link between the U.S. and U.S.S.R. is expanded to six flights per week and includes Washington, D.C. as a destination. Under its mutual aid obligation, Pan Am pays \$3.65 million to **Northwest Airlines** and **National Airlines** during their strikes.

Guerrillas from the Popular Front for the Liberation of Palestine attack four western airliners on September 6, including Pan Am Flight 93. The B-747-121 *Clipper Fortune* with 17 crew and 153 passengers is commandeered over Amsterdam and diverted first to Beirut and then to Cairo. After those aboard deplane, it is dynamited the next day; this destruction marks the first operational loss of a Boeing Jumbojet. The event is reviewed by Holland L. Redfield in his "The Hijacking of Pan Am Flight 93," *Airliners* 9 (November–December 1996): 52–57, 62.

On September 14, the carrier sells its final shareholding in **LACSA (Lineas Aereas Costarricenses, S.A.)** to Lloyd International of London.

En route from New York to London with 235 aboard on September 17, a B-747-121 makes an emergency landing at Bangor, Maine, because of a bomb threat. The passengers are taken aboard another Jumbojet because experts are not available to refold the evacuation chutes. The B-707-321 *Clipper Splendid* is withdrawn from service at month's end and placed into storage. The B-747-121 *Clipper America*, which prior to her christening had made so many goodwill publicity tours, is officially delivered on October 3, the last of the original order for 25 Jumbojets.

All 89 aboard are safe as the engine of a Jumbojet catches fire upon landing at London (LHR) on October 27. The *Clipper Black Sea* is returned by **American Airlines** on October 31. Clear-air turbulence causes a B-747-121, en route from New York to Paris on November 4 with 148 travelers aboard, to shake badly over Nantucket, injuring 20 passengers not wearing seat belts; the Jumbojet returns to New York where seven are hospitalized. Two days later, on November 6, Earl Mountbatten of Burma, in a rush to return to London from Washington, D.C., obtains FAA permission to fly in the hold of a Pan Am B-707-321CF, the first aircraft available.

A total of 20 Jumbojets are introduced into service during the year; however, difficulties with their engines cost the company \$2.5 million per month in cancelled or interrupted flights. Still, the introduction of so many giant airliners within a 257-day period (almost every two weeks) is a remarkable feat. During the year, Pan Am becomes the first airline to test Data Link automatic aircraft identification and position equipment. In the most widely seen publicity for the company this year, actor Yves Montand, with outstretched arms, offers song from the roof of the Pan Am Building in the motion picture *On a Clear Day You Can See Forever*. Still, bookings increase only 1.08% to 10.98 million as freight rises by 4.1%. Revenues total \$1,123,591 and expenses are \$1,153,457; these leave an operating loss of \$29,866,000 and a net loss of \$48,458,000.

The withdrawn B-707-321 *Clipper Splendid* is sold to **Dan Air/Dan Air Services, Ltd.** on January 1, 1971. Pan Am and Delta B-747 Jumbojets now begin to alternate on the European (London and Frankfurt) segments of the interchange agreement, which has been in force between the two carriers since 1964.

On March 15, the final 26% interest in **COPA (Compania Panamen de Aviacion, S.A.)** is sold to local partners. During the second quarter, five B-747-121s join the fleet. The second Jumbojet freighter, *Clipper Pacific Trader*, is delivered on April 25.

After five years of negotiations with the Polish government, direct New York–Warsaw service begins on April 29, the same day direct and regular flights begin from New York to Bucharest.

Flight 442, a B-707-321B with 69 passengers en route from Caracas to Miami, is hijacked and forced to fly to Havana on May 29; Cuban authorities hold the jetliner for a week before allowing it to return to south Florida.

En route from San Francisco to Saigon via Honolulu, Guam, and Manila on July 25, Flight 6005, a B-707-321C freighter with four crew, strikes Mount Komunay, 20 mi. ENE of Manila; there are no survivors.

Three days later, on July 28, company officials announce that the carrier will no longer promote or take part in Safari tours that involve killing animals classified by the World Wildlife Fund as endangered species. Although it is admitted that the policy change will cost several hundreds of thousands of dollars in lost charter revenues, Pan Am hopes to recoup the income by offering and promoting photographic safaris to the same areas.

While taking off for Tokyo on July 30, Flight 845, the B-747-121 *Clipper America*, piloted by veteran Capt. C. York "Cal" Dyer with 218 passengers, hits a runway light at San Francisco. After circling the airport for two hours dumping 180,000 pounds of jet fuel, the Jumbojet makes a safe emergency landing; 26 aboard are injured. Although Capt. Dyer will retire after this, his last flight, the plane will be repaired within three months at a cost of \$4.84 million and returned to service.

On September 30, Pan Am and **Trans World Airlines (TWA)** announce that renewed merger discussions have been discontinued. Between October 2–8, Washington University physicist Dr. Hafele and astronomer R. Keating make a global flight on a jetliner equipped with an atomic clock in an experiment designed to test crucial implications of Einstein's theory of relativity. At the end of their mission, the two conclude that they might have proved a part of the famous theory. Former **American Airlines** Vice President William Seawell becomes president on December 1. As of December 4, all international flights to India and Pakistan are suspended because of the conflict between the two countries.

Enplanements for the year are 11,307,435 and the net loss is \$46 million.

The workforce in 1972 totals 34,915. Beginning early in the year, Pan Am offers special group tours of Hawaii for the handicapped; the tours are accompanied by personnel trained to be of assistance. As the result of discussions held between the flight service department and South African officials late the previous year, the carrier announces on February 11 that it will include African-American stewardesses on its flights to South Africa.

Losses for the first quarter are the worst in company history to date and Chairman Halaby and President Seawell come to odds over operational details. A board clique favorable to the latter succeeds in engineering Halaby's resignation. William Seawell is elected chairman/CEO on March 22 and puts in a new management team. Major organizational changes are now undertaken along divisional lines: system, Atlantic, Latin America, Pacific.

Ex-chairman Halaby recalls his time at Pan Am in his reminiscences, *Crosswinds: An Airman's Memoirs* (Garden City, N.Y.: Doubleday, 1978).

Increased emphasis is now placed on passenger service and a Total Travel marketing concept is implemented. A joint marketing effort is started with **Allegheny Airlines (1)** and a new jet maintenance center is completed at New York (JFK). In April, in an effort to attract younger passengers to its transatlantic services, the carrier begins to offer flights featuring folk singers, hard rock music, and/or organic food. Vietnam War opponents firebomb the carrier's Barcelona offices on May 25.

En route from San Francisco to Saigon via Manila on July 2, Flight 841, a B-747-121 with 153 passengers, primarily U.S. military personnel, is hijacked just after departure from the Philippines by a Vietnamese wielding a knife and demanding a diversion to Hanoi. The pilot, ignoring the man's threats to blow up the Jumbojet, lands at Tan Son Nhut Airport at Saigon on schedule.

Once the aircraft is on the ground, the flight crew enters into negotiations with the pirate. At the best moment, the captain jumps the hijacker, who is holding a stewardess with a knife, and orders an armed passenger (a private security guard) to shoot. The dead hijacker is unceremoniously tossed out the cabin door, while the remaining passengers are quickly evacuated, with some being hurt in the process.

Having lost \$500,000 on the routes during the winter of 1972, the company is authorized by the CAB on October 14 to suspend service from the U.S. to Iceland and Finland. Five-times-per-week New York to Monrovia flights commence on October 29 and later in the year, the company becomes the first to use electronic surveillance and screening devices for security in boarding passengers.

The Grumman G-111 Albatross contract service between Mombasa, Kenya, and Port Victoria, Mahe, begun almost exactly a decade earlier, is terminated with the opening of the new Seychelles International Airport.

During the year, Vice President-Engineering Sanford B. Kauffman retires. He had risen from his 1929 appointment as Andre Priester's assistant and will publish his recollections as *Pan Am Pioneer: A Manager's Memoir from Seaplane Clippers to Jumbo Jets*, edited by George E. Hopkins, (Lubbock, Tex.: Texas Tech University Press, 1995).

In December, Allan H. Topping is sent to Saigon to serve as the company's director of operations for South Vietnam and Cambodia.

Passenger traffic increases by 3.7% as 11,742,000 passengers are carried and freight increases by 6.5%. North Atlantic bookings are up 18.3% to 1,742,446. Systemwide income is \$1.30 billion, but expenses are still high at \$1.305 billion. The year's operating loss is \$1.93 million and the net loss declines to \$28.9 million.

The workforce in 1973 is 32,507, down 2,500. Exercising its option to withdraw, Pan Am cancels its order for Anglo-French Concorde on January 31; the European SST has experienced significant cost overruns. As the result of reduced fuel allocations, service to 10 foreign gateways is suspended. Simultaneously, the company begins to concentrate on the group charter market, becoming the largest inclusive-tour operator in the world. The charter fleet is increased by 2 aircraft to a total of 13 B-707-321Bs. Former Pacific division CEO Clarence M. Young dies on April 10. In June, the world's largest single air terminal is opened at New York (JFK) as implementation of a joint marketing program with **Allegheny Airlines (1)** continues.

On July 22, just after takeoff from Papeete, Tahiti, on the second leg of a service from Auckland to Los Angeles via Papeete and Honolulu, Flight 816, the B-707-321B *Clipper Winged Racer* with 10 crew and 69 passengers, makes an excessive turn and crashes into the sea. There are no survivors and the aircraft sinks at a depth of 700 m., making recovery of the black boxes impossible. Among the victims is top motorcycle racer Geoffrey Perry.

During the summer, and to highlight the new marketing arrangement with **Allegheny Airlines (1)**, flight attendants from each airline fly aboard the other's flights.

On September 10, orders are jointly announced with Boeing for 10 B-747SP-21s (and 15 options). As launch customer, Pan Am will have the honor of being first to place the \$28 million aircraft into service. As a result of the energy crisis, the government announces on October 12 that a mandatory jet fuel allocation plan will take effect on November 1.

En route from New York (JFK) to Prestwick, Scotland, on November 3, Flight 160, a B-707-321CF with three crew and a cargo of nitric acid, encounters difficulties over Sherbrooke, Quebec. A request is made to land at Boston where, during the approach, smoke and fire are reported in the cockpit and cargo hold. The plane crashes and there are no survivors.

Later in the month, the B-747-121 *Clipper America* is leased to **Air Zaire, S.A.** and repainted in that flag carrier's colors, including a colorful interior that includes tiger-skin lavatory walls. It is christened *Mont Floyo*.

The B-707-331 *Clipper Dashaway* is sold to **Air Manila International** on December 12.

While on the ground at Rome on December 17, being readied for a flight to Beirut and Tehran, Flight 110, a B-707-321B with 10 crew and 69 passengers, is attacked by 5 Palestinian guerrillas firing submarine guns and throwing grenades. Thirty-one persons, including a stewardess, the wife of Capt. Andrew Erbeck, 4 Moroccan government officials, and 14 U.S. ARAMCO employees, are killed and 18 wounded.

After destroying the Boeing, the killers then seize 6 Italian hostages and murder 2 before escaping aboard a **Deutsche Lufthansa, A.G.** B-737-230.

The last B-747-121, *Clipper Romance of the Seas*, is delivered on December 20. Late in the year, the \$100-million Worldport terminal at New York (JFK) is officially dedicated and **Allegheny Airlines (1)** also begins to operate from it. Male flight attendants receive new uniforms, the first designed in 30 years.

Bookings reach 11,489,000, off 2.2% from 1972. Transatlantic flights are still popular, however, growing to ferry 1,859,146 travelers, an 18.5% boost. Freight grows by 2.5%. Revenues total \$1.49 billion. The loss is \$18 million—bad, but an improvement.

The workforce totals 31,883 in 1974. From January 8–27, company executives William T. Seawall, Thomas J. Flanagan, and Dan A. Cousy visit Peking to initiate talks on the reestablishment of commercial routes to the Chinese mainland. At the same time, a B-707-321B is chartered to **Air Vietnam, S.A.** On January 10 and as a continuing result of the energy crisis, a 25% scheduling reduction is effected by the layoff of 1,000 flight attendants—20% of the carrier's total—plus 175 management staff at the New York headquarters.

On January 30, Flight 806 is on approach to the airport at Pago Pago for an intermediate stop from Auckland to Los Angeles. The B-707-321B, piloted by Capt. Leroy Petersen with 9 other crew and 91 passengers, encounters wind shear caused by a rainstorm, about 3 km. short of the runway, forcing the plane into trees and a subsequent crash .65 nm. short of the runway. It is later revealed that almost all aboard survive the impact, but massive panic in the cabin, in which passengers crush against doors that then cannot be opened, results in 97 people being killed by smoke or fire before they can evacuate.

The tragedy is retold by John Godson, *Clipper 806: The Anatomy of an Air Disaster* (Chicago: Contemporary Books, 1978) and William Norris, *Willful Misconduct: The Story of a Crash of Pan American Flight 806 and of What Happened Afterward* (New York: W. W. Norton, 1984).

Ashley Anding, the 16-year-old daughter of Joseph Anding, a Pan Am flight inspector en route with his family to Pago Pago to investigate the January 31 tragedy, is accidentally strangled in flight near Honolulu on February 4 by the seatbelt on her B-747-121.

The B-707-121B *Clipper Maria* is leased (later sold) on March 4 to Pan Ayer, which charts it to **THY (Turk Hava Yollari, A.O.)**. On a lighter note, an unidentified nude male streaks through a B-747-121 during a March 10 New York–London flight. Also in March, the interchange agreement with **Northwest Airlines** on a joint service from Minneapolis/St. Paul to London via Detroit, ends.

On April 15, the B-747SP-21 contract with Boeing is renegotiated; for financial reasons, the firm order is now for 7 planes with 18 options. Five of the aircraft will be leased rather than purchased.

On April 22, Flight 812, a B-707-321B en route from Hong Kong to Los Angeles via Sydney with 11 crew and 96 passengers, crashes into a nearby mountainous region while making its landing approach to the Indonesian city of Denpasar. There are no survivors in this, the fourth Stratoliner loss suffered by the carrier in nine months.

The first known instance in which a major airline deals with organized crime is revealed by federal sources on May 31. It is alleged that, during the previous fall, Pan Am secretly paid intermediaries for the mob some thousands of dollars for the recovery of 2,000 ticket blanks stolen from travel agencies and other sources.

On July 19, a 12-foot wing flap from a Jumbojet falls off during its approach to Sydney, Australia, damaging homes in 2 suburbs. The Portland–Seattle–Fairbanks route and related equipment are sold to **Western Airlines** on September 28 for \$6.65 million.

An agreement is signed with **Trans World Airlines (TWA)** on October 16 providing for the exchange of selected route authorities, including TWA's transpacific route, for a temporary five-year period. The only one of its type acquired, the B-747-273C *Clipper Mercury* is received under lease from **World Airways** on October 20. The route exchange agreement with **Trans World Airlines (TWA)** is filed with the CAB on

October 22 and, during the month, renewed merger discussions are held with this partner.

Desperate for funding, the airline's leaders negotiate a 10-year loan from the Shah of Iran, in exchange for 6% shareholding. The Department of State gives its reluctant approval, but Iran elects not to go through with the arrangement.

On December 17, a new route-exchange agreement is filed with the CAB incorporating certain changes from the first agreement with **Trans World Airlines (TWA)**. The same day, the carrier announces its withdrawal from the industry's controversial "mutual aid pact," stating that, since the arrangement was instituted in 1958, it has paid out \$50.9 million to other airlines, but has received only \$5.3 million in return.

The 13% interest in **LANICA (Lineas Aereas de Nicaragua, S.A.)** is reduced to 10% on December 31. Longtime technical advisor and aviation hero Charles A. Lindbergh dies in Hawaii. Pan Am is the first airline to install fleetwide Ground Proximity Warning Systems (GPWS) and have that system certified by the FAA. In addition, an improved Panamac II computerized reservations system comes on line.

A total of 1,389,197 passengers are flown across the Atlantic, a decline of 25.3%. Overall bookings fall 13.3% to 9.96 million. Revenues climb 6.6% to \$1.5 billion; however, expenses (led by \$340 million for jet fuel) leave a \$95-million operating loss. The net loss is \$85.5 million. A \$125-million line of credit must be obtained from major lenders to keep the airline in business through the winter.

Airline employment in **1975** totals 28,445, a decrease of 2,400.

The company is named "Airline of the World" by *Air Transport World* magazine in January. A 300-pound Bengal tiger escapes from its cage during a voyage from Munich aboard a B-707-321CF on February 1; the situation is discovered by a cargo handler at New York (JFK), who receives help in luring the animal back into its cage and avoiding an incident. Also in February, the CAB approves the route exchange program with **Trans World Airlines (TWA)**. The agreement is implemented on March 2 with **Trans World Airlines (TWA)** suspending service on its transpacific route, as well as those to Bangkok, Bombay, and Frankfurt.

A case is made to the U.S. Congress for subsidy, but is turned down and only the \$125-million line of credit extended by the carrier's major lenders keep it in business until negotiations can begin on a long-term solution. Members of Betar, a militant Zionist youth organization, dumps "plagues of blood, live frogs, live locusts, and live mice" in the carrier's New York ticket office on March 25 because Pan Am is the only American carrier that conducts regularly scheduled flights to Syria.

Out on lease to **Air Zaire, S.A.** since November 1973, the B-747-121 *Mont Floyo* is returned at the beginning of April; repainted, the plane returns to company service once more as *Clipper America*.

Supported by Holt International and Friends for All Children, the USAF dispatches a Lockheed C-5A Galaxy to Saigon in early April to airlift out South Vietnamese orphans in Operation Baby Lift. Just after takeoff on April 4, the giant aircraft, with a crew, 62 adults, and 243 orphans aboard, crashes into a rice paddy and flips over, bursting into flame. Over 200 aboard are killed, including 140 children. Within 24 hours of this disaster, Pan Am sends in two chartered Boeing 747-121s, with volunteer crew, doctors and nurses, to complete the mission. Over 700 children are removed from the doomed republic.

The Saigon office is closed on April 25 and twice-weekly flights from the U.S. are terminated. Under prodding from station chief Albert Topping, previously cancelled B-707-321C Flight 842, by order of President Gerald Ford, is redesignated special MAC charter NAB-2, and departs Saigon for Manila that Thursday with an all-volunteer crew, fuel tanks two-thirds empty, and several hundred passengers, many company employees, dependents, or orphans. With Pan Am cooperation, this final evacuation mission will form the basis for the 1991 Richard Crenna-James Earl Jones NBC-TV motion picture *Last Flight Out*. A Lockheed TriStar will be employed in that film to represent the Boeing and will wear the fictional name *Clipper Unity*. When South Vietnam falls on April 30, the B-707-321B on lease to **Air Vietnam, S.A.** is in Hong Kong, from where it will return to the U.S.

Near St. John's, Newfoundland, on May 7, a pressurization system malfunction aboard a B-707-321B causes a passenger to die of a heart attack. After the carrier receives FAA permission, it allows former British Prime Minister Edward Heath to fly from London to New York on May 24 aboard a B-707-321CF in order to keep a speaking engagement at the National Press Club luncheon in Washington, D.C. The unusual flight is made because no commercial flight is available exactly when needed. Final shareholding in **LANICA (Lineas Aereas de Nicaragua, S.A.)** is sold to local interests in August. During the year, the *Clipper Messenger* is converted into the company's first Jumbojet freighter, a B-747-121F.

North Atlantic bookings drop 16.1% to 1,166,114 while systemwide enplanements fall 16.5% to 8,243,000. In terms of total passengers flown, the carrier ranks as the world's 15th largest; it is still the largest in terms of freight. Revenues are \$1,673,660 and expenses are \$1,708,778; losses total \$35,118,000 operating and 53,952,000 net.

Airline employment in **1976** is 26,813, down 5.7%. In January, the company receives the 1975 "Airline of the Year" award from *Air Transport World* magazine. The interchange agreement with **Delta Air Lines** now comes to an end.

The first of five B-747SP-21s to be delivered on the year arrives on March 5 and is christened *Clipper Freedom*. It is followed by the B-747SP-21 *Clipper Constitution* on March 29. The first scheduled B-747SP-21 nonstop Los Angeles-Tokyo service is opened by the *Clipper Freedom* on April 25. On April 26, the same day the B-747SP-21 *Clipper Mayflower* is delivered, the *Clipper Constitution* initiates non-stop flights from New York to Tokyo. The carrier's 30% interest in **AVENSA (Aerovias Venezolanas, S.A.)** is sold to local Venezuela interests on April 28.

On May 1-3, the B-747SP-21 *Clipper Freedom*, the name of which has been changed to *Clipper Liberty Bell*, commanded by Vice President Capt. Walter H. Mullikin, makes a 46-hour, around-the-world New York-New York flight with stops only at Delhi and Tokyo. The bicentennial flight, with 200 paying passengers aboard, establishes a new circumnavigation time record.

Two more B-747SP-21s are delivered on May 12 and May 28, respectively, the *Clipper Liberty Bell*, now the *Clipper Freedom*, and the *Clipper Great Republic*. The B-747-121F is delivered on July 2 and is named *Clipper Fortune*, as B-747SP-21 flights also commence from New York to Bahrain.

On December 8, the B-747SP-21s inaugurate twice weekly return service from San Francisco and New York to Auckland and Melbourne. A sixth B-747SP-21 is ordered from Boeing the next day. Completed in 13 hrs. 15 min. the longest scheduled, nonstop route in airline history is initiated on December 13, the 7,475-mi. return run from Australia to the U.S.

During the year, the *Clipper Fortune*, in storage for the past five years, becomes the second Dash-121F freighter.

Enplanements grow 1.2% to 8,339,000 while freight advances by 4.5%. A net profit of \$94.6 million is recorded atop a \$14.2-million operating profit. The latter is the result of \$1.73-billion total income that holds expenses of \$1.71 billion in check.

The workforce in **1977** sinks to 26,409. In January, the carrier shares the 1976 "Market Development Award" from *Air Transport World* magazine with **Western Airlines**.

On March 27, the world's worst aviation disaster (to date) grows out of terrorist actions. Just after noon local time, a bomb explodes in the passenger terminal at Las Palmas Airport and warnings are issued concerning a second blast. All air traffic is now diverted to Norte Los Todeos on Tenerife Island in the Canary Islands. This includes PA1736, the B-747-121 *Clipper Victor* with 16 crew and 380 passengers flying to Europe from Los Angeles via New York and **KLM (Royal Dutch Airlines, N.V.)** KL4805, the B-747-206B *Rijn* with 14 crew and 248 passengers en route to New York from Amsterdam.

Unlike the KLM passengers, those aboard the Pan Am aircraft remain aboard and are ready to leave as soon as the ban on service to Las

Palmas is lifted at 3 p.m. Unfortunately, all of the taxiways are congested with other diverted aircraft and immediate departure is not possible. PA1736 is required to backtrack on Runway (R) 12 for departure on R30, but the entrance to R12 is blocked by KL4805, which is being refueled.

Finally, at 5:59 p.m., its refueling completed and all but one of its passengers reboarded, KL4805 is cleared by ATC to backtrack on R12 and make a 180-degree turn at its end. At 6:02 p.m., PA1736 is cleared to follow the KLM Jumbojet. PA1736 is told to leave R12 at the third taxiway. Three minutes later, KL4805 reports itself ready for departure and is given instructions, which are reported back to ATC with the added words "We are now at takeoff." The *Rijn*'s brakes are released and it begins to roll.

ATC, knowing that PA1736 is still taxiing, meanwhile advises KL4805 to stand by for takeoff until the *Clipper Victor* has cleared the runway. Not having takeoff clearance but, as the result of misinterpretation, in absolute conviction that it had been given, the Dutch Jumbojet continues.

At the last moment, the flight crew of the *Rijn* sees the *Clipper Victor* still taxiing down the runway and tries to climb away, becoming airborne after a 65-ft. taildrag in an excessive rotation. The flight crew of the *Clipper Victor* immediately turns their aircraft to the right and applies full power.

Although KL4805 is airborne, it smashes through the top of PA1736's after fuselage, destroying it and taking off the tail as well. The *Rijn* flies on out of control before crashing and bursting into fire; flaming wreckage spills 1,488 ft. down the runway.

All aboard the KLM Jumbojet are killed, but 7 crew and 34 passengers aboard the Pan Am plane survive. At the time of writing, the 579 total deaths at Tenerife continue to hold the top spot on the list of accidents and death. Somewhat surprisingly, the tragedy results in only one small paperback book, written by survivor Norman Williams, with George Otis, *Terror at Tenerife* (Van Nuys, Calif.: Bible Voice, 1977). Some years later, Karl E. Weick will add perspective in his "The Vulnerable System: An Analysis of the Tenerife Air Disaster," *Journal of Management* 16 (September 1990): 571-593.

On May 6, the sixth B-747SP-21 is delivered and is named in honor of longtime company advisor and hero, *Clipper Lindbergh*. The christening ceremony, in which Mrs. Anne Morrow Lindbergh smashes the champagne bottle across the aircraft bow, is time to also celebrate the fiftieth anniversary of her late husband's 1927 flight to Paris.

A new Bermuda II U.S.-U.K. bilateral air agreement is signed on June 11 allowing the carrier to maintain its services to London. A B-747-123SF is purchased from **Trans-Mediterranean Airways, S.A.L.** on June 28, becoming the third Jumbojet freighter, *Clipper Carrier Dove*.

To celebrate the carrier's fiftieth anniversary, the B-747SP-21 *Clipper Liberty Bell* is rechristened *Clipper New Horizons*. The SP, with 172 passengers and piloted by Capt. Mullikin, makes a record-breaking, one-time 54-hour, 26,300-mile flight, New York to New York, on October 28-30. Seven world speed and distance records are set and the airplane has the distinction of being the only one ever to fly around the world both at the horizon and via the poles.

The company now becomes the first to offer a \$999 around-the-world excursion fare while the *Clipper Pacific Trader* becomes the last Dash-121F freighter. On December 15, 2 more B-747SP-21s are officially requested, bringing fleet orders to 10.

Enplanements jump to 8,651,424. In terms of total passengers carried, the company now ranks as the world's 17th largest airline; it remains the leader in air freight. Revenues total \$1,973,151,000 and the net profit is \$45,004,000.

Employment increases by 1.5% in 1978 to 26,964 and the company becomes the first international airline to introduce Clipper Class, a new service for business travelers and full-fare economy passengers. The route exchange agreement with **Trans World Airlines (TWA)** ends in March. On April 22, a company delegation in Hanoi formally applies to the Vietnamese government for permission to make daily flights over

the country to save time on trips between Hong Kong and Thailand. Also in April, the remaining 49% interest in the Pan Am Building is acquired from the Erwin S. Wolfson estate.

A B-747-132 is purchased from **Delta Air Lines** on May 9 and christened *Clipper Seamen's Bride*. Also in May, orders are placed for 12 Lockheed L-1011-585 TriStars (plus 14 options) and on June 9 and July 12, respectively, 2 more B-747SP-21s, the *Clipper Washington* and the *Clipper Plymouth Rock*, are delivered; however, scheduled service to the U.S.S.R. is suspended.

On June 16, it is announced that Pan Am will begin a month of experimental, daily, \$149 roundtrip B-707-321B stand-by flights from Boston to Amsterdam to promote the new Massachusetts to Holland route. It is necessary to "bump" 68 passengers from the inaugural flight on June 16 due to overbooking. The carrier is overwhelmed by thousands of travelers wishing to take advantage of the experimental transatlantic fare; hundreds of travelers are stranded in Amsterdam on July 16, again, as a result of overbooking on the one daily flight. The low-cost experiment ends with many complaints, but the route is secure.

To fulfill a 40-year desire for a domestic route network, the company purchases **National Airlines** for \$400 million in August, following a year of negotiating while fending off bids from **Eastern Air Lines** and **Texas International Airlines**. An application is filed with the CAB seeking approval the merger. With the Trans-Alaska Pipeline completed, Pan Am's Jumbojets are too large for the Alaska market; with no smaller aircraft available, the company elects to end its 46-year affiliation with the territory-state after a final September flight.

Beginning on October 30, as a result of the airline's April request, its jetliners are able to fly over Vietnam and Laos en route from New Delhi to Hong Kong. This marks the first time since the end of the Indochina war in 1975 that an American airliner has been allowed to use the airspace of the two nations.

The International Hotel Corporation subsidiary signs a \$500-million memorandum of understanding to build hotels in the People's Republic of China. During the year, 10 European gateways are dropped (including Moscow) while flights to Portland and Boston in the U.S. are also stopped.

Having served as a company pilot for 20 years, former Vice President Horace Brock publishes this year the definitive 3rd edition of his insightful memoirs, *Flying the Oceans: A Pilot's Story of Pan Am, 1935-1955* (New York: Jason Aronson). The work will be supplemented in 1981 by the author's brief *More about Pan Am* (Lunenburg, Vt.: Stinehour Press).

Bookings increase 9.2% to 9,528,000 while freight grows by 7.3%. Revenues are \$2,281,821 and expenses are 2,138,092. The operating profit is 143,729,000 and the net profit skyrockets by 163.98% to \$118,801,000.

The workforce is increased by 4% in 1979 to 28,055.

Sleeperette seats are installed in the upper decks of eight B-747SP-21s. Beginning in February, these seats are available on routes from New York to Tokyo, Dhahran, or Buenos Aires and from Los Angeles to either Tokyo or Auckland.

Early in the year, Pan Am drops its membership in IATA, while pledging its willingness to continue in the association's trade activities and discussions. At the same time, the company begins joint New York-Dhahran operations with **Saudia (Saudi Arabian Airlines)**. Consolidation with **National Airlines** occupies much of the year with application of Pan Am's livery to **National Airlines'** B-727-235s, the first outward sign of the merger.

A B-747-221 with 114 aboard en route from New York to Saudi Arabia on March 26, is ordered to land at Damascus for allegedly violating Syrian airspace; it is allowed to leave after three hours.

A lone gunman takes over Flight 816, a B-747SP-21 on the ground at Sydney, Australia, preparing for an April 4 service to Auckland, New Zealand. A woman and a policeman are stabbed in the process, but the pirate is shot dead by police marksmen before the Jumbojet is forced to depart.

On April 20 and May 11, two additional B-747SP-21s, the *Clipper Black Hawk* and the *Clipper White Falcon*, are delivered. Meanwhile, following the crash of a Sikorsky S-61L at Newark Airport, **New York Airways** declares bankruptcy in April.

The first B-747-221F, *Clipper Bald Eagle*, is delivered on July 25. Also in July, Pan Am finally wrests total control of **National Airlines** from Frank Lorenzo and **Texas International Airlines**; Lorenzo's sale of his shares brings TI a pretax \$46-million profit. The first Dash-221F is followed by the second, *Clipper Golden Eagle*, on August 28. Also in August, the *Clipper Express* is returned to **The Flying Tiger Line** while two B-727-204s, originally ordered by **Ozark Airlines**, are delivered. As phaseout of the B-707s continues, new performance management systems are installed in the remaining units of the fleet.

The wholly owned subsidiary, Pan Am Technical Services, is reorganized in September and renamed Pan Am World Services. New services are started to Houston, African and South American services are upgraded to B-747-221B/B-747SP-21 equipment, and frequencies to Auckland and Sydney are restructured.

Capt. Vernon H. Julifs dies of a heart attack during an October 1 Honolulu to Los Angeles flight, just minutes after asking to be excused from his aircraft's controls. On October 25, a B-747-221 en route from Houston runs so low on fuel that its pilot must request an emergency landing at Newark, where two of the plane's engines fail just after the landing is completed. The *Clipper Mercury* is returned to **World Airways** in December.

Bookings for the year advance 5.41% to 10,043,000 while cargo is up by 2.63%. In terms of revenue passenger kilometers flown, the carrier now ranks as the world's seventh largest airline; however, it loses its long-held premier freight ranking to **The Flying Tiger Line**. Revenues are \$2,573,943,000 while expenses, led by soaring fuel prices, are \$2,501,891,000. The operating profit declines 49.86% to \$72,052,000 while the net profit falls by 35.91% to \$76,128,000. Combined profit for Pan Am and National is \$76.1 million.

The workforce declines 10.8% to 32,259 in 1980. In January, the company receives the 1979 "Technology Management Award" from *Air Transport World* magazine.

The \$437.7-million purchase of **National Airlines** is approved by the CAB on January 7; company auditors know that the \$50-per-common-share acquisition costs \$228.6 million more than its appraised value. With the purchase comes a fleet comprising 24 B-727-235s, 10 B-727-135s, 11 DC-10-10s, and 5 DC-10-30s. The latter wide-bodies are wholly incompatible with the new parent's Boeing fleet.

President Daniel Colussy and Executive Vice President Bill Waltrip debate the merits of various integration plans; the Colussy's desire for rapid merger is adopted and the onetime flight engineer now vice president, Martin R. Shugrue Jr., is assigned the task. The process will require months and prove expensive, both in terms of cash and morale.

Ground crews, members of Teamsters Local 732 that service **Aeroflot Soviet Airlines** jetliners at New York (JFK), walk off their jobs for six hours on January 18 after the arrival of Ambassador Anatoly Dobrynin to protest the Russian invasion of Afghanistan; the walkout also delays several Pan Am flights. After 20 members of the Transport Workers Union local receive layoff notices, 9,000 ground service personnel strike at San Francisco on January 24. The next day, the union workers defy a court order to return to work, forcing the cancellation of over 100 flights. The strike ends on January 26.

The first of 12 Lockheed L-1011-585s is delivered in the spring; christened *Clipper Eagle*, it is placed in service on May 1 over the route to Caracas from New York via San Juan. During this period, the B-747-121 *Clipper America* is renamed *Clipper Sea Lark*. On May 24, the CAB grant's the company's request for the permanent Miami to London route previously flown by **National Airlines**.

The B-727-21 *Clipper Meteor* with 6 crew and 67 passengers under-shoots the runway while landing in heavy rain at San Jose, Costa Rica, on September 3 and shears off its undercarriage; although the aircraft is destroyed in the accident, there are no fatalities.

On September 10, Pan Am rescinds plans for a temporary suspension of its New York to Rome service. Difficulties are encountered in the integration of **National Airlines (1)** into Pan Am. However, the amalgamation is officially completed on October 26, on which date **National Airlines (1)** ceases to exist. Meanwhile, the company's first competitor, Ralph A. O'Neill, founder of the **New York, Rio and Buenos Aires Airline (NYRBA)** in 1929, dies in California on October 23; a World War I ace, he is buried with full military honors.

During the rest of the year, all remaining B-707s begin withdrawal from scheduled service and are put up for sale or transferred to charter operations.

With 20 free guests aboard, a B-747SP-21 lands at Peking on December 7, where it is met by U.S. Ambassador Leonard Woodcock and **CAAC (The General Administration of Civil Aviation of China)** Deputy Director Lin Zheng. The arrival ends a 31-year break in air service between the U.S. and China.

Based on a variety of data, including 50 interviews conducted with Juan Trippe over three years (the only instance of personal journalistic collaboration over his long career), *American Saga: Juan Trippe and His Pan Am Empire* by Robert Daley is published during the year by Random House. It will be only slightly eclipsed in size by Marilyn Bender and Selig Altschul's *The Chosen Instrument: Pan Am, Juan Trippe—The Rise and Fall of an American Entrepreneur* (New York: Simon and Schuster, 1982). Unlike Daley, about one-third of the business reporters' work extends beyond the end of the Trippe era.

Passenger boardings decline by 3.9% to 15,217,000 and freight falls by 12.1%. Revenues are up 11.39% to \$3,638,934,000 while expenses jump 17.06% to \$3,768,548,000. The oil crisis alone has forced up expensive fuel bills by 60% in a year. Consequently, a record \$129.6-million operating loss is suffered. Still, an \$46-million net profit is reported.

The workforce is reduced by 6% in 1981 to 30,331 and the white-collar staff is cut by 25%. Both management and labor will agree to accept 10% pay cuts and a salary freeze.

The need for liquidity now results in assets sales. The lease of the Pan Am Building is sold to Metropolitan Life on January 5 for \$400 million, which allows a \$294.4-million profit on the transaction. The B-707-321B *Clipper Reindeer* makes the final flight by a company Stratoliner on January 26. Following the New Orleans to Philadelphia charter, the aircraft joins the final 24, also all based at New York (JFK), in retirement.

On January 28, Pan Am becomes the first U.S. airline to inaugurate regularly scheduled service to the People's Republic of China. A B-747SP-21 undertakes the New York–Beijing flight via Tokyo. B-747SP-21 service is started from San Francisco to Tokyo, Shanghai, and Beijing on February 2. Founder Juan Trippe, who suffered a cerebral hemorrhage the previous fall, dies at the age of 82 on April 3.

Internally, the founders passing is hardly noticed as internecine warfare between company officials leads to the ouster of President Colussy and his replacement by Vice President Waltrip. When the dust of the boardroom fracas settles, tribute to the founder is paid on April 11 when the B-747-121 *Clipper Sea Lark* is renamed *Clipper Juan T. Trippe*. Frequencies on the China route reach three per week by April 26.

Florida–Mexico flights begin during the summer as service is suspended to Warsaw, Costa Rica, and Istanbul. A total of 19 B-707s, 5 DC-10-30s, and several B-747-121s are withdrawn and placed up for sale; however, the German fleet is increased by the delivery of 8 B-727-221s. On September 1, Chairman William T. Seawell is succeeded by former **Air Florida** CEO C. Edward Acker, who is named chairman/CEO, with ex-**Braniff International Airways** official John Casey as executive vice president.

Labor and management agree to 10% wage cuts and a wage freeze. Additional cost-cutting measures include the September 30 sale of the Intercontinental Hotels Corporation for \$368 million to Grand Metropolitan of London and disposal of the company's 50% interest in Falcon Jet Corporation. Changes are instituted in the domestic system, the

charter market is reentered, and a plan for the establishment of commuter associates at five hubs is announced.

The company's former chief training pilot, Holland L. Redfield, who is also the first pilot type-approved to fly the B-747, publishes his memoirs, *Thirty-Five Years at the Outer Marker: An Aeronautical Autobiography* (Setauket, N.Y.: Pilot Publishing).

During the year, Capt. Ned Wilson, who has flown for the airline since 1940, also retires; his memoirs, *For Pilot's Eyes Only* (McLean, Va.: Paladwr Press) will be published in 1993.

Enplanements for the year fall 12.6% to 13,684,000 while cargo is off by 1.3% to 1.45 billion FTKs. The freight figure remains significant, however, as still no other American passenger airline even comes close to hauling as much cargo as Pan Am. In terms of the total number of passengers flown, the carrier now ranks as the world's 11th largest; it has fallen to 6th in freight. Revenues are off 1.47% to \$3,585,584,000 while expenses rise 5.16% to \$3,963,015,000; losses are \$377,431,000 operating and \$18,875,000 net. Still, there is some hope, as all of the short-term and floating rate debt is eliminated.

Airline employment falls 11% in 1982 to 27,000. A WorldPass frequent flyer program is introduced for business passengers. Tariffs on the transatlantic routes to London and Miami are cut by 67% to attract riders and deep discount fares are put in place in Florida, especially in Miami, which further deflate Chairman Acker's old firm, **Air Florida**.

During its initial climb from New Orleans on July 9 on a service to Las Vegas, Flight 759, a B-727-235 with 7 crew and 138 passengers, reaches an altitude of 150 ft. and then begins to descend. The aircraft strikes trees 2,376 ft. from the runway and smashes into 6 houses in Kenner, a "Crescent City" suburb; there are no survivors from the aircraft and 4 people are killed on the ground. The tragedy is the second worst disaster in U.S. civil aviation history to date.

Flight 830, the B-747SP-21 *Clipper Ocean Rover* with 15 crew and 270 passengers en route from Japan to Honolulu on August 11, lands safely after a bomb, planted by Palestinian Mohammed Rashid, explodes in the cabin, while the plane is at 25,000 ft., 150 mi. W of its destination. A 16-year-old Japanese teenager is killed and 14 others are injured. Despite a hole in the cabin floor and a rapid decompression that requires use of emergency air masks, the Jumbojet is able to make a safe emergency landing.

Rashid will later be captured in Greece, convicted on terrorist charges, and given a 15-year prison sentence. Athens will, however, deport him to Tunisia (and freedom) on December 5, 1996.

On August 27, the company institutes random searches of its planes after a cleaning crew finds a bomb on a charter flight on a layover en route from Rio de Janeiro to Los Angeles.

The hemorrhage of red ink becomes a flood late in the year. Among the charges coming in the fourth quarter are personnel severance costs, sale costs for the L-1011-500s, \$99 fares, and currency exchange difficulties. The most positive highlight of the year is inauguration, on November 4, of the world's longest nonstop, scheduled revenue-earning service from Los Angeles to Sydney, Australia, across the international dateline. The weekly B-747SP-21 service departs on Thursday evening and arrives in Sydney on Saturday morning in a flying time of 14 hrs. 30 min.

The B-747-221F *Clipper Golden Eagle* is sold to **Japan Air Lines Company, Ltd.** (2) in December. At year's end it is discovered that 40% of Pan Am's group business has been lost to a marketing mistake: to save on an expenditure, commission override payments made to some travel agents surpassing certain sales levels, together with free travel bonuses for those arranging convention business, are suspended.

Bookings for the year drop 6.16% to 12,841,000 while freight inches up only 0.9% to 1.46 billion FTKs. The cargo total is still twice as large as that achieved by the second place scheduled major **American Airlines** and exceeds that for any other U.S. carrier save **The Flying Tiger Line**. Revenues decline 3.19% to \$3,471,376,000 and expenses fall 3.01% to \$3,844,112,000. The operating loss declines to \$372,736,000, but the net loss skyrockets to \$485.3 million, \$272.9 million in the fourth quarter alone.

The workforce is increased by 989 people in 1983 and in a rare triple acquisition, 3 B-747-212Bs are purchased from **Singapore Airlines, Ltd.** on February 24. The new Jumbojets will be christened *Clipper Water Witch*, *Clipper Wild Wave*, and *Clipper Gem of the Ocean*.

A **Kuwait Airways Corporation** B-747-269B grazes a Pan Am B-737-222 as they are waiting to takeoff at Frankfurt on March 12, causing extensive damage to both planes, but no injuries. Many new services from Kansas City to Europe, the Mideast, and Africa begin on April 24, but daily service to Florida from the Missouri city ends. William Cohen of Miami pleads no contest to 38 counts of theft and is sentenced on May 7 to 7 years probation for masquerading as a company flight attendant to save at least \$40,000 in airfares.

Freighter operations are now ended and the German service becomes an all-B-737 operation. An arrangement is made with **American Airlines** to trade DC-10s for B-747-123s. Later it is decided, instead, to put the B-747s up for bids, with Pan Am receiving a set cash figure for every Jumbojet it loses in the process. The People's Republic of China protests against the resumption of flights to Nationalist China on June 17 and demands that the U.S. government designate another carrier to fly to Peking. The Reagan administration does not comply and hints at retaliation if Red China moves against the pioneer.

A new air bridge service is inaugurated on July 1 linking Miami with Tampa and Orlando.

En route from Miami to Orlando on July 2, Flight 378, a B-727-235 with 61 aboard, is hijacked to Havana by Angel Martinez and Omar Merida, both of whom display alleged bombs and both of whom are arrested by Cuban police as soon as the plane sets down at Havana.

On July 31, the company announces that it will finish phasing out its all-cargo aircraft with the sale of its last B-747-221F, *Clipper Bald Eagle*, to **Japan Air Lines Company, Ltd.** (2) for \$42 million. Meanwhile, the *Clipper Carrier Dove*, *Clipper Fortune*, *Clipper Pacific Trader*, and *Clipper Messenger* are sold to **The Flying Tiger Line**.

Also in July, service to Budapest, suspended in 1978, is resumed and Raleigh/Durham becomes a destination on August 1. A B-747-121 with 16 crew and 227 passengers runs off the runway just after landing at Karachi on August 4; although the aircraft takes some damage, no injuries are reported.

Spicer Lung Sr., laid off in July as the carrier's Houston catering manager, subdues a Spanish-speaking man's August 2 attempt to hijack Flight 925, a B-727-235 with 130 passengers and en route from Miami to Houston, to Cuba. Grateful Pan Am officials offer him a new job and on August 16 he begins work as supervisor of ramp operations at San Francisco. The hijacker will receive a 12-year prison term for his actions.

Meanwhile, on August 4, the B-747-121 *Clipper Belle of the Sea* skids off the runway during its Karachi landing and is so badly damaged that it must be written off; no injuries are reported, however.

Acquired from the assets of **Braniff International Airways** and christened *Clipper America*, the final B-747SP, a Dash-SP27, is delivered on September 23. On October 26, a B-707-321B recreates the company's first jetliner service to Paris on its twenty-fifth anniversary and on December 1, a B-747-123 is purchased from **American Airlines** and christened *Clipper Beacon Light*. At month's end, New York to Geneva flights begin.

Enplanements jump 14.9% during the 12 months to 14,758,000, but cargo drops 30% to 992.8 million FTKs. Revenues improve by 1.68% to \$3.529 billion while expenses decline 8.52% to \$3.516 billion. As a result, the carrier is able to post its first operating profit since 1979, \$13,131,000. Still, a net loss of \$51,025,000 is suffered.

The workforce is reduced 5.7% in 1984 to 26,262. When air traffic controllers mistakenly direct two of the company's Jumbojets, with 496 aboard, to intersecting flight paths 200 miles east of Miami on New Year's Day, only a last minute dive by one prevents a midair disaster. Management now announces its decision to require the redemption of accumulated mileage in the WorldPass program by the end of June.

On April 1, **Omniflight Helicopter Services**, under contract to Pan Am and employing Bell 222s, expands the major's New York City

rotary-wing service by adding flights from Manhattan to the World Trade Center-Battery Park Heliport. First- or Worldpass passengers are able to ride the helicopters for free; however, the single price for all others is \$77 one way. A fourth B-747-212B is purchased from **Singapore Airlines, Ltd.** on May 1 and is named *Clipper Mandarin*, while another B-747-123 is acquired from **American Airlines** on May 30 and is christened *Clipper Empress of the Skies*. It is followed into service by two more former **Singapore Airlines, Ltd.** B-747-212Bs purchased on June 8 and June 24, respectively, the *Clipper Belle of the Sky* and *Clipper Cathay*. The ex-**National Airlines** (1) DC-10s are sold by the end of June. Preferring to concentrate on belly cargo, the last dedicated Jumbojet freighter is now passed to **Japan Air Lines Company, Ltd.** (2).

The earlier WorldPass redemption decision turns out to be an error as, during the busy second quarter, 11% of the airline's traffic is for free travel. Fare-paying passengers must be turned away and the carrier loses some \$45 million in the stampede of those seeking free miles.

A proposal is approved by company shareholders in July to form a holding company, Pan Am Corporation, in a share-for-share exchange of stock. Vice President Shugrue becomes vice chairman and chief operating officer. An order is placed on September 13 for 12 Airbus Industrie A310-300s and 16 A320-300s. The next day, September 14, Pan Am Corporation is formed as a public holding parent, with two subsidiaries: Pan American World Airways (1) and Pan Am World Services; it is incorporated under Delaware law.

Three more nonstop weekly B-747SP-21 flights are added from New York to London in October, along with another nonstop Jumbojet service from San Francisco to Tokyo and a fourth weekly nonstop frequency from Miami to Buenos Aires. With a fleet of 115 jetliners, the company now provides scheduled service to 28 cities in the U.S. and 61 overseas. Principal stations are Miami, San Francisco, Los Angeles, Tokyo, London, West Berlin, Frankfurt, and especially, New York (JFK).

Business-class seats are cut back in favor of increased coach capacity in a plan to enhance yield. The first 4 of 12 ordered Airbus A300B4-203s is received on lease in the late fall and at the end of November a B-727-214 is purchased from **Pacific Southwest Airlines (PSA)** and christened *Clipper Flying Cloud*.

On December 21, the first A300B4-203, *Clipper America*, begins New York-Barbados service via Port of Spain; it is followed into service on December 23 by the other three available units of its type. The new B-747-212B *Clipper Fairwind* enters service at year's end.

Passenger boardings dip 2.6% this year to 14,388,000 and freight drops 5.8% to 935.71 million FTKs. The year is very sour financially, due to a strong U.S. dollar, lower international fares, the end of wage concessions, and foreign currency difficulties. Operating income falls 4.2% to \$3.38 billion and expenses grow 0.1% to \$3.51 billion. The operating loss is \$135.21 million and a \$206.83-million net loss must be reported. The cash position is \$451 million.

The payroll is reduced by another 6.6% in 1985, down to 24,537. Oranette Mays shoots her way onto Flight 558, a B-727-235 on the ground at Cleveland on January 4 and holds four hostages; she says little for more than six hours until she is wounded by a team of police officers who storm the plane. Placed on trial for air piracy, she will be found not guilty by reason of insanity.

The former **Singapore Airlines, Ltd.** B-747-212B *Clipper China* *Clipper II* arrives on January 16 and two new airmail stamps honoring the famed *China Clipper* used to open transpacific services in 1935 are issued by the Post Office on February 15.

Following the breakdown of talks begun in January, 5,800 mechanics and related workers, port stewards, dispatchers, commissary workers, technicians, and building service personnel, all members of the Transport Workers Union, walk out for 28 days beginning on February 28, dooming the company to another unprofitable year. Some 2,000 management employees are able to keep the carrier in the air during the 47-day job action and approximately 50% of the schedule is completed. Restoration of full service is delayed until March 27 as

talks are undertaken with the flight attendants union, which also threatens a walkout.

The first of four A310-222s (for the German service) and three A310-324s (for the U.S.) are received in the spring as a new international hub is opened at Washington, D.C. (IAD). Under contract to the major, Puro-lator Courier begins an airport-to-door \$50-per-bag luggage-handling service for transatlantic passengers arriving in New York. Now badly in need of revenues, CEO Acker meets with **United Airlines** boss Richard Ferris for a week in New York's Plaza Hotel and the two agree, in principle, to a transfer of Pan Am's Pacific route network.

On April 22, Pan Am and **United Airlines** announce the arrangement, under which the former sells its profitable Pacific division (a quarter of its entire business), including all of that organization's routes (except California-Hawaii), stations and equipment, and 11 B-747SPs, to the latter for \$750 million. United agrees to retain 3,000 personnel. Meanwhile, agreement is reached with the flight attendants and full service resumes by month's end. Formerly with **National Airlines**, the B-747-212B *Clipper Fleetwind* is delivered.

Other routes, to a total of 23%, are sold later in the year. The first A310-324, *Clipper Miles Standish*, is placed into domestic service on May 28. En route from New York to London with over 300 people aboard on June 20, a Jumbojet is diverted to a safe landing in Scotland after one of its engines disintegrates.

During the summer and fall, international frequencies are increased and new markets are opened at Amsterdam, Bucharest, Belgrade, Tel Aviv, Athens, Bangkok, Warsaw, and Nice. By October 1, Resorts International, owner of Chalk's International Airline, has acquired 10% shareholding; the Pacific division sale wins CAB approval on November 7. Five former **United Airlines** B-747-122s are purchased with four arriving in December: *Clipper Belle of the Sea*, *Clipper Sea Lark*, *Clipper Witch of the Wave*, and *Clipper Tradewind*.

Customer bookings, hurt by the strike, decline 7% for the year to 13,183,000 and cargo plunges 13.8% to 806.65 million FTKs. Revenues fall 6.5% to \$3.09 billion, expenses dip 3.6% to \$3.28 billion, and the operating loss is up to \$197.67 million. Helped by the huge Pacific sale, a \$51.75-million net profit is generated and the cash position is \$344 million.

Airline employment is reduced by 3.4% in 1986 to 23,700 as the **United Airlines** Pacific deal is completed just after New Year's. The last of five B-747-122s arrives in February and is named *Clipper Nautilus* while the final Lockheed TriStar is sold, also in February. During the year, four ex-**Deutsche Lufthansa, A.G.** B-727-230s join the fleet. Pan Am's German fleet also comprises 16 B-737-221s.

In January, Pan Am World Services acquires all of the capital stock of Technicolor Government Services. The four B-727-230s are employed on April 27 to resume U.S.-U.S.S.R. services suspended in 1978; the "three-holers" fly weekly from Frankfurt to Moscow and weekly from Frankfurt to Moscow via Leningrad. Two days later, on April 29, long-haul flights to Moscow and Leningrad from New York are resumed; a B-747SP-21, with U.S. Ambassador Arthur Hartman and 56 passengers aboard, arrives at the Soviet capital from New York (JFK) via Frankfurt.

The Civil Reserve Air Fleet of the USAF oversees the 48-hour conversion of a B-747-121 into a military aircraft during a March 1 readiness drill; the carrier will continue to use 19 planes that can be modified for use in military airlifts if needed. At a May 13 press conference, the company's leadership announces that it has acquired, effective in September, a number of slots and gates from Texas Air Corporation (TAC) for \$65 million. With DOT approval, it will commence a northeast shuttle service in competition with **Eastern Air Lines** and **New York Air** beginning on October 1.

During the next several months, TAC sells Chairman Acker 46 slots and 2 gates at New York (LGA). When added to the 8 slots already held, this provides enough space to launch 12 daily roundtrips to Washington, D.C. (DCA), where 18 slots are acquired and to Boston, where 1 gate is acquired.

In addition, **New York Air** flights into New York (LGA) are cut back to five roundtrips per day and that TAC subsidiary shifts its emphasis to

Newark. At the same gathering, it is revealed that a new security force has been created to foil terrorism and that its services will be available under contract to other airlines. As if in reply to the latter announcement, a bomb rips through Pan Am's Karachi office on May 27, killing a security guard.

On June 1, the company acquires Philadelphia-based **Ransome Airlines**, renaming the de Havilland Canada DHC-7-102 operator **Pan Am Express**. The new subsidiary is charged with improving the company's domestic feed from the northeastern U.S. to New York (JFK). Also in June, Pan Am initials a five-year agreement, becoming a "multi-host" partner in the **American Airlines** SABRE computerized reservations system; in exchange, American obtains right of first refusal on any further sale of Pan Am assets. Both carriers merge their frequent flyer programs.

On July 1, **Pan Am Shuttle, Inc.** is formally organized as a subsidiary and former **Republic Airlines** Vice President Bruce Nobles is named president/CEO. During August, eight **PEOPLExpress** B-727-227s are leased and with them, four Pan Am A300B4-203s are assigned under charter to the new air shuttle operation. A310-324 roundtrip flights commence during the summer, under the government's 120-minute rule, from Detroit to London.

Four Palestinian gunmen dressed as security guards speed across the tarmac at Karachi International Airport at 6 a.m. local time on September 2. They exit a blue van and climb aboard Jumbojet Flight 73, the B-747-121 *Clipper Empress of the Seas*, which has put down at this intermediate stop en route from Frankfurt to New York City. The plane's two pilots and flight engineer escape through an emergency hatch over the cockpit, but the remaining 375 passengers are all taken hostage.

An hour and a half later, the hijackers locate Rajesh Kumar, an American citizen, shoot him in the head, and toss his body out of the aircraft. **Saudia (Saudi Arabian Airlines)** Ground Manager Nasim Kahan, acting as interpreter, learns that the pirates wish to fly to Cyprus and they give the government until 7 p.m. to allow the flight to take off.

At the designated hour, the terrorists are informed that a new flight crew cannot make it aboard before 11 p.m. At 9 p.m., as the on-board generator runs out of fuel and the lights dim, the hijackers, speaking soothing words of comfort, herd the passengers to the center of the plane. An hour later, the pirates explode two hand grenades and begin firing their machine pistols at the passengers, some of whom are able to break open a safety door on the right side of the Boeing and scramble down an emergency chute.

After a 15-minute delay, commandos, who have been assembling outside the aircraft, storm aboard, capture or shoot the hijackers, and climb up one of the chutes to open a safety door, freeing additional captives. A total of 19 passengers are killed and 43 wounded in the melee prior to the arrival of the special forces.

The surviving terrorists will be tried and ordered executed, although these death sentences will be commuted. Structurally sound, though damaged, the Jumbojet will be repaired and returned to service. The ordeal is recalled by Hussain S. Shaffi in his *Holocaust on Pan Am Flight 073* (New York: Rivercross Publishing, 1994).

The impact of the Chernobyl nuclear disaster in the U.S.S.R., when added to the shock of the Pakistani tragedy, also impacts summer traffic. Directly in competition with the shuttle service of **Eastern Air Lines**, the carrier opens **Pan Am Shuttle** flights on the Washington-New York-Boston route on October 1. William S. Bain, an **Eastern Air Lines** pilot, is killed when he misses the runway in fog at Tampa on November 6 and flies his Piper PA-23 Aztec into a B-727-235 with 23 aboard, injuring several. As the result of economic and fleet considerations, service to Hawaii is suspended in December.

Despite the terrorist scare, overall passenger boardings rise 6.9% to 12,448,000 and cargo jumps 34.2% to 807.96 million FTKs. Revenues plunge 16.5% to \$2.58 billion, costs decline 11.1% to \$2.92 billion, and a \$342.15-million operating deficit is recorded. The net loss spirals downward \$447.54 million to \$484.93 million and is the worst financial result for any U.S. carrier during the year. The long-term debt is \$825 million and the accumulated deficit is \$785 million; the carrier's net worth is \$8.6 million and the cash position is \$225 million.

Airline employment drops 7.2% in 1987 to 22,000. Early in the year, Citicorp agrees to lend the corporation \$75 million if an equal amount can be raised from other sources; when the secondary support does not materialize, the deal is cancelled. Later, in exchange for a mortgage on its 15 owned aircraft, General Electric Credit Corporation advances Pan Am \$125 million. In February, company unions collectively declare their desire for merger with some other airline.

Another \$94 million is lost during the first quarter and a shareholder revolt against Chairman Acker begins in late spring. A group led by Intercontinental Assets Chairman Jeffrey Epstein and holding 40% interest demands control. Acker refuses and, together with his management teams and bankers from Drexel Burnham, entertain a series of potential merger partners, including MGM owner Kirk Kerkorian, U.K. financier Sir James Goldsmith, Steven Hoffenberg's Towers Financial, and Jay Pritzker, owner of Hyatt Hotels and Braniff, Inc.

Meanwhile, shuttle service is started on June 1 between West Berlin and Hamburg, Munich, and Frankfurt. Jetliners from Pan Am and **VIASA (Venezolana Internacional de Aviacion, S.A.)**, carrying a total of 180 passengers, nearly collide over the Atlantic Ocean 800 miles south of New York on July 9. A **Trans World Airlines (TWA)** Jumbojet, arriving at New York from Milan on August 5, passes within 600 feet of a Pan Am B-727-227 shuttle jet, en route from Boston to New York (LGA), before being guided to a safe landing at New York (JFK).

Also in August, "Water Shuttle to the Shuttle" is inaugurated; a high-speed powerboat ferries passengers from downtown Manhattan to the historic Marine Air Terminal at La Guardia Airport.

Claiming that **American Airlines** has been too slow in installing its reservations system, Pan Am, on September 30, terminates its agreement to use the SABRE system in September. **American Airlines** agrees to give up the right of first refusal for the sale of any Pan Am assets and the merged frequent flyer programs of both airlines are unlinked. The New York-area helicopter shuttle service contract with **Omniflight Airways** is not renewed; however, that company assumes responsibility for ferrying passengers between JFK International and Newark Airports and the East 60th Street Heliport.

A jetliner comes within 50 feet of hitting a DC-3F shortly before they both land at St. Croix on October 27. On November 11, another aircraft encounters heavy turbulence over the Atlantic Ocean, but is able to land safely in Miami, with 26 injured people. Passengers on the New York to Washington shuttle are delayed 30-60 minutes on November 17 by USAF fighter planes flying over the Pentagon as part of the ceremonies saluting Defense Secretary Caspar W. Weinberger on his last day in office.

In November, a promotion is inaugurated with Polaroid timed for the Christmas gift-buying season. Purchase of a new camera and a standard-fare roundtrip **Pan Am Shuttle** ticket entitles the customer to a free roundtrip **Pan Am Shuttle** flight. Late during the month, the B-747-212B *China Clipper II* is renamed *Clipper Hawaii*.

Late in the year, **Pan Am Express of Berlin**, a subsidiary of the Philadelphia-based feeder, is established to provide turboprop service to West Berlin's Tempelhof Airport, as a complement to the major's jetliner service to the divided city's Tegel Airport.

In December, Jay Pritzker proposes a merger between Pan Am and **Braniff, Inc.** The merger is opposed on operational grounds by Pan Am Vice Chairman/Chief Operating Officer Shugrue, as well as the carrier's unions, which are asked for \$800 million worth of concessions. Toward month's end, Pritzker backs off. Meanwhile, Los Angeles investor Kerkorian, despite limited union support, goes ahead with a proposal to purchase the carrier from its parent.

Financier Kerkorian offers \$75 million in cash, \$400 million in junk bond financing, and the assumption of \$1 billion in debt for less than 50% shareholding; however, he requires labor concessions worth \$239 million, while offering the unions 20% interest. During the year, six A310-324s are delivered and are placed on the North Atlantic routes.

Largely unnoticed during the year is the appointment of Colleen Burgess to the right seat of a B-727-221; she is, officially, the company's

first female pilot, although Susan Hartsman, hired by **National Airlines (1)** in 1979, had come over in the 1980 merger.

The year's boardroom difficulties do not impact traffic this year, which show gains. Customer bookings ascend a welcome 20.4% to 14,986,000 while cargo closes up by 8.8% to 886.88 million FTKs. Although revenues are up by 6.55% to \$2.91 billion, expenses jump to \$30.2 billion, and the operating loss is \$113.29 million, an "improvement." The net loss is also cut, to \$274.59 million.

The payroll is reduced another 0.4% in **1988** to 21,907. The fleet now includes 6 A310-324s, 7 A310-222s, 28 B-747-100s, 7 B-747-221Bs, 12 B-737-200s, 50 B-727-200s (12 of which are leased to the shuttle operation), and 12 A300B4-203s. During the year, a number of the Jumbos will be modified with side cargo doors in order that they may fulfill the requirements of the government's Civil Reserve Air Fleet. The U.S. Air Force will designate the modified Boeings as C-19As.

In early January, financier Kerkorian's offer is rejected. Now, as a result of this and the Pritzker fiasco, board member and former DOT Secretary William T. Coleman Jr. is able to negotiate union concessions in exchange for a change in the airline's top management. Interestingly enough, at this point, the company receives the 1987 "Labor Relations Award" from *Air Transport World* magazine.

The board now requests and receives Chairman/CEO Acker's resignation on January 21; he receives a \$1 million "golden parachute." Also ousted is Vice Chairman/Chief Operating Officer Shugrue and several management officials. Shugrue moves over to become the top official at **Continental Airlines**. Acker is succeeded by ex-**Continental Airlines** President Thomas G. Plaskett.

Unable to earn a profit on its New York City helicopter shuttle, **Omniflight Airways** ceases the ferry operation on February 1. On February 3, the company agrees to pay \$17.2 million in the largest cash settlement in a case alleging age discrimination in the history of the Equal Employment Opportunity Commission. This is the result of a suit by the Commission on behalf of a group of former pilots who were not allowed to work as flight engineers after they were required to retire as pilots at age 60.

Company officials on May 11 announce that the **Pan Am Shuttle**, which has been struggling financially since October 1986, has now broken into the black. Simultaneously, it is disclosed that the **Pan Am Shuttle** has joined with Meridien Hotels to offer weekend getaway packages to New York and Boston. Direct New York to Moscow B-747SP-21 service begins on May 14 and in June, Pan Am World Services takes over the Dilks Company. Following the accidental destruction of an Iranian Air jetliner over the Persian Gulf by an antiaircraft missile from the USS *Vincennes* on July 3, the company shifts the routing of its thrice-weekly New York-Karachi service. Also in July, the six-times-per-week Miami to Ecuador route is closed.

Eight passengers on a flight en route from New York to Rio de Janeiro on September 21 are injured by turbulence over the Caribbean; one man later dies of a heart attack. During the fall, nonstop service is initiated from Washington, D.C. (IAD) to Los Angeles, timed to meet the carrier's transatlantic flights to Paris and Frankfurt.

Beginning in November, WorldPass frequent flyer members are offered a choice of nine specially catered meals on domestic flights and on international flights originating in the U.S. There is a catch: meals must be individually requested a day in advance.

During the first week of December, an anonymous telephone message is received at the American Embassy at Helsinki, Finland, warning that an attack will be made upon a Pan Am Jumbojet, en route from Frankfurt to New York, before Christmas. The tip will be made known to other U.S. embassies, but not the general public.

Flight 103, a B-727-221, arrives at London (LHR) from Frankfurt on December 21 with passengers and baggage for a connecting Jumbojet flight to New York. Inspection of luggage, supposedly having been rendered in Germany, is not repeated in England.

Not long after takeoff from London (LHR) as a continuation of Flight 103, the 18-year-old B-747-121 *Clipper Maid of the Sea*, 1 of 19 Jumbos

the USAF has paid to have modified into combi freighters, with 16 crew and 243 passengers, explodes in midair 31,000 feet over Lockerbie, Scotland. The blast immediately rips the fuselage apart causing, in engineering terms, catastrophic structural failure. The cockpit and forward fuselage separate from the main body and as it falls to earth, loses all four engines and suffers the disintegration of the rear fuselage.

There are no survivors from the disaster aloft and an additional 11 people on the ground are also killed and 5 injured when the center fuselage and wings crash into the Sherwood Crescent subdivision of Lockerbie. The wreckage erupts into a huge fireball that digs a giant crater and destroys at least 20 homes outright and damages others beyond repair.

Investigators will initially look to Iran, but will soon thereafter develop information that Libyan agents are behind the atrocity. The tragedy, immediately far more damaging to the company's image than its finances (though, in the end, a significant long-term contributor to the company's demise), becomes the subject of countless articles and books. Among the latter are:

Matthew Cox and Tom Foster, *Their Darkest Day: The Tragedy of Pan Am 103 and Its Legacy of Hope* (New York: Grove Weidenfield, 1992); Joan Deppa, et al., *The Media and Disasters: Pan Am 103* (Washington Square, N.Y.: New York University Press, 1994); Steven Emerson and Brian Duffy, *The Fall of Pan Am 103: Inside the Lockerbie Investigation* (New York: G.P. Putnam, 1990); David Johnston, *Lockerbie* (New York: St. Martin's Press, 1989); D. Leppard, *On the Trail of Terror: The Inside Story of the Lockerbie Investigation* (London: Jonathan Cape, 1991); and Ann McLaughlin, *Report of the President's Commission on Aviation Security and Terrorism* (Washington, D.C.: GPO, 1990). The tragedy is also the subject of a congressional hearing by the U.S. House of Representatives, Committee on Government Operations, Government Activities and Transportation Subcommittee, *The Bombing of Pan Am 103—A Critical Look at American Aviation Security: Hearings* 101st Cong., 1st sess. (Washington, D.C.: GPO, 1989).

Like several other air disasters, Lockerbie even spawns a made-for-television feature film, this one from Home Box Office (HBO): *The Tragedy of Flight 103: The Inside Story*.

Meanwhile, in news almost unnoticed in the aftermath of the disaster, the Transport Workers Union, representing ground personnel, agree to accept binding arbitration in new labor agreements, allowing the pioneer carrier to call off a threatened sale of its Latin American division.

Passenger boardings for the year jump 13.2% to 16,969,000 and freight rises 19.3% to 1.05 billion FTKs. Again costs exceed income. Revenues advance 23.36% to \$3.59 billion, but expenses rise 22.22% to \$3.69 billion. The operating loss is \$105.28 million and the net loss is \$118.25 million. Although negative figures, both of the losses represent upward progress. The Latin American division remains the carrier's most profitable unit, generating \$647.8 million in sales (18% of total revenues) and an \$82-million operating profit. The parent organization, Pan Am Corporation, also reports improvements, although the loss lines of \$63.5 million (operating) and \$72.7 million (net) are still written in red.

The workforce is increased by 34.2% in **1989** to 29,400 and the fleet now includes 28 B-747-100s, 7 B-747-212Bs, 89 B-727-200s, 12 A300B4-203s, 7 A310-222s, and 12 A310-324s. Nine B-727-200s are on order.

The search for a merger partner continues, but as the pioneer's ledgers continues to show red ink, asset sales resume, with the most notable transaction the \$110.5-million vending of the Pan Am World Services subsidiary, which is now transferred to Johnson Controls. In an important speech to a Shearson Lehman Hutton investment conference in New York at the end of February, Chairman/CEO Plaskett concedes that the pioneer can no longer survive on its own and would acquire a merger partner rather than be taken over.

In cooperation with **MALEV Hungarian Airlines** and using Pan Am's A310-324s, joint weekly service is inaugurated in March from New York to Budapest; flights to Warsaw are increased to four per week. On the domestic side during the month, daily B-727-221 flights are initiated

from New York to Jacksonville via Atlanta. The first quarter following the Lockerbie tragedy is a financial nightmare; of the \$151 million lost, the bombing costs a direct \$55 to \$60 million in lost income.

On April 2, daily nonstop A310-324 flights begin from Chicago to Frankfurt while, also in April, the pioneer inaugurates daily flights from New York to Kansas City via Cincinnati. En route to a White House reception, astronaut David M. Walker, commander of the space shuttle *Atlantis*, flies his jet trainer within 500 feet of a Jumbojet with 176 aboard, west of Washington, D.C. on May 16. Accused of violating flight procedures in the near-collision, Walker pledges his full cooperation in the FAA examination that follows. On May 18, daily nonstop A310-324 service is inaugurated from New York to Brussels, with continuing service to Dusseldorf.

Discussions are held with **Deutsche Lufthansa, A.G.** concerning a possible takeover of Pan Am's Internal German Service, while **America West Airlines** expresses interest in purchasing the **Pan Am Shuttle**. On May 30, the last day to place bids, Chairman/CEO Plaskett, having spent the spring securing backing, makes a \$2-billion (\$115-per-share) offer for **Northwest Airlines**—it will not be enough. Also in May, CEO Plaskett becomes the first Pan Am chairman in the last 20 years to visit South America; while in Rio de Janeiro, he announces that a new marketing program is being launched to improve Latin American service. It will include an \$8-million investment in Brazil to improve catering service and another \$4 million to educate customer service personnel.

The successful and profitable subsidiary Pan American World Services is sold to Johnson Controls in May for approximately \$130 million. At the time it is spun off, the unit has approximately 10,000 employees and is grossing about \$500,000 annually.

Pan Am now begins to celebrate the fiftieth anniversary of transatlantic service and announces a sweepstakes, the winner of which will receive 50 years of unlimited free travel for 2 by company aircraft. A daily Jacksonville–Miami route is opened in July while, in September and in cooperation with **Aeroflot Soviet Airlines**, twice-weekly all-cargo Il-76T service is inaugurated from New York to Moscow via Shannon and Amsterdam. Four ticket agents at New York (JFK) are arrested on October 15 on charges of stealing \$48,000 from the carrier.

Also in October, daily frequencies are initiated from Miami to Grand Cayman, Cayman Islands, from Miami to Raleigh/Durham and Charlotte, North Carolina, from Miami to St. Martin, and from New York to Fort Lauderdale and Hollywood. Thrice-daily frequencies are begun from Miami to Nassau, Philadelphia, Washington, D.C. (DCA), and Boston. In November and December, the pioneer increases its Florida service by 50%, from 96 to 140 departures. New destinations served from Miami include Charlotte, Raleigh/Durham, St. Martin, Antigua, and San Juan.

Customer bookings ascend a slight 2.5% to 17,383,000 and cargo does worse, rising only 0.4% to 1.06 billion FTKs. Revenues move ahead by just 0.54% to \$3.61 billion and costs jump 9.41% to \$3.93 billion. The operating loss more than doubles to \$318.81 million and net loss almost triples to \$414.73 million. Parent Pan Am Corporation likewise suffers losses: \$306.5 million (operating) and \$336.6 million (net) on \$3.56 billion in revenues, down 0.2%. During the past decade, Juan Trippe's pioneer has sold off assets worth \$1.2 billion and still lost a staggering \$3 billion.

The workforce is reduced by 16.3% in 1990 to 24,600, 17th largest among the world's airlines; with 162 jetliners, fleet size is the 12th largest. In January, stockholders are horrified to learn that shares purchased for \$1,000 in 1980 are now worth only \$439. Early in the year, Pan Am dry-leases five B-747-121s and two B-747-212Bs from the **Evergreen International Airlines'** leasing arm, Evergreen Aircraft Sales & Leasing Co. Three of the former are the major's Jumbojets sold to Evergreen and leased back in an arrangement that nets the national carrier a quick \$65 million. Payments are also deferred on new aircraft and engines coming from Airbus Industrie and United Technologies.

A new policy is announced on March 7 promising a free flight to anyone with a valid complaint about service in first class on roundtrip

flights between New York and San Francisco and between Washington, D.C. and Los Angeles. As a result of a first quarter fare war with the dying **Eastern Air Lines** over East Coast routes, the company, on March 31, has only \$90 million in cash, having lost another \$190 million since the new year. As the second quarter begins, orders are given for additional cost savings, however small, wherever they can be made; for example, soup is eliminated from short-haul luncheon menus saving \$500,000.

Syracuse University dedicates a limestone memorial wall on April 22 engraved with the names of 35 students killed in the December 1988 Lockerbie tragedy. Thrice-weekly nonstop roundtrip flights commence on May 15 between New York's John F. Kennedy Airport and Helsinki; the new service replaces the previous Finland connection made through Stockholm. Also in May, the **Pan Am Shuttle** is put up for sale and **Deutsche Lufthansa, A.G.** pays \$150 million to takeover the Berlin-based German route network.

During June and July, discussions on the possibilities of a takeover are begun with **Trans World Airlines (TWA)** owner Carl Icahn. Following Iraq's August 2 invasion of Kuwait, Pan Am shifts Flight 1066, its thrice-weekly A310-324 New York to Karachi via Frankfurt and Riyadh service to a more southerly route in order to avoid Iraqi airspace. On August 10, service to Trinidad and Tobago is resumed. Also in August, the carrier dispatches several Jumbojets to participate in the allied buildup in Saudi Arabia, Operation Desert Shield, under its Civil Reserve Air Fleet commitment.

Fuel prices now jump skyward as a result of the Mideast crisis and, with recessionary pressures at home, pushes Pan Am to the wall financially. Nonstop service begins in September from Miami to Valencia, Venezuela, from Miami to Curaçao via Aruba, and from Miami to San Pedro Sula, Honduras, via Belize City, Belize.

In October, **Deutsche Lufthansa, A.G.** completes the purchase of Pan Am's Internal German Service. Merger discussions with Icahn end on October 22 and the next day, the company's prize London (LHR) route is sold to **United Airlines** for \$290 million. Due to a diplomatic dispute between the U.S. and U.K. over the exchange of one American major for another under terms of the bilateral air agreement between the two nations, the deal is not immediately consummated. The Miami to San Salvador frequency becomes nonstop in November.

In December, daily A300B4-203 service is inaugurated from Miami to Aruba and nonstop frequencies commence from Miami to Managua, Nicaragua, and to Newark. Simultaneously, insurance rates for flights in the Mideast skyrocket; for example, \$162,500 is charged for each service into Riyadh, Saudi Arabia, and \$65,000 for every flight into Tel Aviv.

Longtime veteran pilot Capt. Kimball J. Scribner publishes his memoirs during the year, *Adventures in Aviation* (Long Beach, Calif.: Manfield Publishing, 1990).

Passenger boardings jump 3.2% during the 12 months to 17,930,000, but freight is down again, by 5.2%, to 1 billion FTKs. Once the world's largest airline in terms of both categories, it can now muster only 16th place for the former and 20th for the latter. The year's losses total \$146.35 million (operating) and \$257.39 million (net).

The increased insurance costs force a suspension of service to Tel Aviv and Riyadh on January 3, 1991. Devoid of cash and with little income as the result of the Gulf crisis, Pan Am goes to its bankers and **United Airlines** during the first week of January to arrange a bridge loan until the London route sale, still stalled in Washington, can be approved. All agree under one condition; the carrier must declare bankruptcy in order that the advanced funds might be repaid first in the likely event of corporate failure. On January 8, the historic company enters Chapter XI, but even though the DOT approves the London route sale late the same day, it has no chance of recovery. The employee population is now 24,600.

On January 20, a troop-carrying Jumbojet, commanded by Capt. Albert E. Brockob, encounters two Iraqi Scud missile alerts within an hour, once while disembarking soldiers at King Fahd Air Base near Dhahran and later in the dark at Riyadh. Beginning on January 25, the carrier

Cobb and Shugrue, now meet with Mark Hanna. As a result, the Frost Hanna Mergers Group agrees to provide a significant portion of the financing package needed to launch a new Pan Am. The breakdown reads: \$2.6 million in equity and trademark from Cobb; \$500,000 from Shugrue; discounted IGN Bank Airbus leases worth \$3 million; \$4 million in cash, offices, parts, and manuals from the **Eastern Air Lines** estate; \$10 million from Frost Hanna; and \$10 million from other investors, including Phillip Frost himself. Planning proceeds over the next three years with Mr. Cobb as chairman of the incorporated, but paper, enterprise to be known as Pan Am Corporation, whose airline operating subsidiary will be Pan American World Airways (2).

In January 1996, Mr. Cobb joins with Craig Robbins and Chuck Slagle to purchase **Chalk's International Airlines**. That pioneer, the oldest continuously operated air taxi—some say airline—in the world, is reformed into **Pan Am Air Bridge**. Its Grumman G-73 Mallards are repainted in the colors of **Pan American World Airways (1)** and resume flights to and from its South Florida and Bimini destinations on March 1.

Meanwhile, during the first quarter, officials representing PAWA-2 begin to announce potential destinations to be visited over the next year: New York, Miami, Los Angeles, San Francisco, San Juan, and Chicago. They also begin planning for a Pan Am Alliance, to be made up of a group of small- or medium-sized airlines who will offer connections to Pan Am passengers. An application is filed with the government on March 29 seeking authorization to fly to New York from Los Angeles, San Francisco, and Miami.

During the first week of April, interviews begin for 52 pilots and 120 flight attendants, who will enter training in May. The company's key management team members are named on April 17. In addition to CEO Shugrue, these include Vice President-Operations/Chief Operating Officer James W. Arpey, General Counsel/Chief Financial Officer John J. Ogilby Jr., Vice President-Personnel, Training, and In-Flight Services Karen T. Averill, Vice President-Passenger Services/Cargo William Elio, Vice President-Marketing Richard F. Blake, and Vice President-Sales Donald M. McSullivan.

In the wake of the **Valujet Airlines** disaster on May 11, the DOT slows its certification process for new airlines. The first of four classes of flight attendants completes its training at the Pan Am International Flight Academy, adjacent to Miami (MIA), on June 10. The first A300B4-203, resplendent in Pan Am colors, arrives at Miami (MIA) on June 25.

On July 4, a gala party is held during which Kristina Trippe, granddaughter of the founder of PAA-1, and Lars Lindbergh, grandson of the famed aviator and PAA-1 consultant, christen the Airbus *Clipper America*. The ceremony is attended by over 150 pilots and flight attendants, who have recently completed full comprehensive training. These crews, over a third of which have a PAA-1 heritage, have over 1,750 combined years of industry experience.

On July 17, Mr. Shugrue reaches a tentative agreement to buy **Carnival Air Lines** for a price that includes \$100 million in cash and about half of Pan Am's stock. If consummated, the arrangement would, by use of CAL's papers, give the new Pan Am the necessary certificates to immediately begin flying again. Two weeks later, on August 1, Carnival's Chairman Reuven Wertheim calls off the tentative agreement, stating that he and Shugrue have been unable to come to terms for what would essentially be Carnival's sale.

On August 21, the DOT gives its tentative approval for operations in a show-cause order; 15 days are allowed those who would object. Among those coming forward are Rosemary Wolfe, president of Justice for Pan Am 103, and George H. Williams, president of Victims of Pan Am Flight 103. Both individuals object to the "resurrection" of the Pacific pioneer as well as the involvement of Mr. Shugrue, whom they hold responsible for helping to create the conditions leading to the 1989 Lockerbie tragedy.

Frost Hanna Mergers and all other investors come together on September 4 and officially form Pan American World Airways (2), with Mr.

Cobb as board chairman and Mr. Shugrue as president/CEO. A 30% interest is now taken in **Pan Am Air Bridge**, which will continue to provide seaplane feeder and publicity services for the new entrant. By now, three A300B4-203s have been acquired and one is employed on route-proving to California and another to Florida. The carrier must also obtain FAA certification, which, along with DOT approval, is duly received on September 18. The next day, the carrier begins accepting reservations for the service that will begin on September 26.

On September 23, a company official announces that the carrier will inaugurate daily long-haul flights from New York to Los Angeles/San Francisco and Miami. Tickets are sold under a contract with the Oasis CROS and a Worldpass frequent flyer program is unveiled. Simultaneously, the Frost Hanna-Pan Am merger is completed. The next day, the airline begins trading on the American Stock Exchange under the symbol PAA.

At New York (JFK) early on September 26, Mr. Lindbergh and Miss Trippe christen a second of the company's A300B4-203s as *Clipper Fair Wind*. The two dignitaries join CEO Shugrue and 117 other passengers as the Airbus, under the command of Captains Keith Mackey (one of the former-PAWA-1 employees) and Stanley Midnight, departs New York at 8 a.m. for an uneventful inaugural flight to Miami.

When it arrives at Miami International Airport at 10:56 a.m., the former **Continental Airlines** Airbus taxis to Gate 4 under a water cannon salute from airport fire trucks. After the passengers deplane, President Shugrue, in the presence of Chairman Cobb and other investors, gives a talk, answers questions from 50 media personnel, and then reboards the plane for a return flight to New York.

The company designator is not the historic "PA" of **Pan American World Airways (1)** but is, in fact, "OP," the sign given to **Pan Am Air Bridge**, which earlier had served as **Chalk's International Airline** and was, if anything, older than Juan Trippe's creation.

The first regularly scheduled service is flown from New York to California by the *Clipper Tradewind* on September 28, with the *Clipper America* in reserve. Advertisements begin to appear in early October employing the logo and lingo of **Pan American World Airways (1)**.

During the fall, a wet-lease agreement is signed with **Nations Air Express**, under which the small airline operates its single B-727-231 on replacement flights in Pan Am livery and under the name *Clipper Goodwill*.

When introductory fares end on November 24, the company introduces a new and unusual pricing structure. Unlike many airlines that offer different fares for passengers who book a week or more before their flights, PAWA-2's ticket prices for each flight rise as the aircraft fills.

In early December, a third A300B4-203 joins the first two and launches twice-daily return services from Miami to San Juan, Puerto Rico, on December 14. A code-sharing agreement is reached with **AeroPeru, S.A.** covering flights from New York (JFK) to Lima via Miami. Arrangements are reached with AVReps International and AVMan International to provide marketing and sales support in Central and South America and Mexico.

Enplanements reach 87,000 and 3.45 million FTKs are operated. Revenues of \$10.24 million are generated, but start-up and associated costs of \$24.9 million leave large losses: \$14.65 million (operating) and \$27.5 million (net).

In late January 1997, two more A300B4-203s are purchased and merger discussions with **Carnival Air Lines** resume as Chairman Cobb and President Shugrue once again seek to accelerate their carrier's expansion plans. Daily nonstop roundtrips commence on January 5 between New York and San Juan.

The fourth A300B4-203 enters service on March 1 and the airline now serves New York, Miami, and Los Angeles. Twice-daily roundtrips commence this day from Chicago (MDW) to San Juan via Miami.

After marathon negotiations on March 19–20, Shugrue is able to announce on March 21 that the new Pan Am will acquire **Carnival Air Lines**. Carnival's majority owner, Mickey Arison, will invest \$30 million in the combined company, thus gaining 42% shareholding, while

refuses to carry any Iraqi passengers on its flights, whether they present any signs of threat or not. On a happier note, the fiftieth anniversary of the World War II subsidiary Pan American Airways-Africa is celebrated during the month with a reunion at Miami.

The ban against Iraqi passengers is modified on February 6 to allow those with permanent resident status in the U.S. to fly; in the face of civil rights charges, the ban is lifted entirely on February 22. Also in February, the pioneer begins daily nonstop B-727-221 flights from Miami to Cleveland and Detroit and weekly nonstop A310-324 frequencies from Miami to Recife, Brazil. Following the February 27 announcement of a cease-fire in the Gulf War, the next day the company records its largest single day of flight bookings since the previous August's Kuwait invasion.

The British approve **United Airlines'** entry into Heathrow Airport in the first week of March and thus allow the route sale to be completed. As part of the arrangement, a large-scale joint marketing, scheduling, frequent flyer and code-sharing scheme is put into effect and **United Airlines** begins to feed passengers to Pan Am's Miami gateway to South America. On March 8, Pan Am is able to make a payment on its Bankers Trust loan and a leasing payment to Airbus Industrie.

Pan Am officials urge **United Airlines** to takeover the company's remaining assets and the carrier now becomes the subject of a bidding war between **Delta Air Lines** (\$310 million), **Trans World Airlines (TWA)** (\$1.3 billion), and **United Airlines** (\$465 million). The U.S. Federal District Court in Atlanta converts an antitrust lawsuit against nine airlines into a class-action suit on August 7 that could benefit many consumers and cost the carriers millions of dollars. The suit charges that this company and the others conspired to keep ticket prices higher at 23 hub airports.

On August 12, the U.S. bankruptcy court, on behalf of creditors, accepts **Delta Air Lines'** refigured \$1.776-billion offer for the pioneer's New York-Washington shuttle, its transatlantic authority from John F. Kennedy International Airport to Europe, its Frankfurt hub, and 52 jetliners. Officials of the Atlanta-based major agree to prop up the faltering 64-year-old pioneer with a \$455-million investment, a \$140-million line of credit, and to direct its operations (almost as a subsidiary) exclusively toward its traditional South American services. As part of the arrangement, Pan Am Chairman/CEO Plaskett and other top management officials resign. Once president of **Pacific Southwest Airlines (PSA)** and now vice president/general manager of McDonnell Douglas Corporation, Russell L. Ray Jr. now becomes, as it turns out, Pan Am's last president/CEO.

On November 1, **Delta Air Lines** assumes Pan Am's routes to the Pacific and Far East, along with 6,000 employees, promising sufficient investment in the carrier to save the jobs of 13,000 more. It also acquires 21 Airbus A310-222/324s and 24 B-727-200s.

A three-year investigation of the Lockerbie tragedy is concluded on November 14 with the Lord Advocate, Scotland's chief law official, issuing a warrant for the arrest of two Libyans, Abdel Baset Ali Mohamed al-Megrahi and Al-Amin Khalifa Fhimah. The two are charged with conspiracy, murder, and contravention of the U.K.'s Aviation Security Act of 1982. The U.S. issues a similar indictment.

Operations at the once proud international continue in the red; of the initial **Delta Air Lines** credit, \$115 million is gone by December 1 and Pan Am is losing \$3 million per day. Alarmed at the fiscal drain, officials in Atlanta unhappily realize the point has come where **Delta Air Lines** must, for its own sake, withdraw its financial pledge and not make the final \$25-million payment into the credit line. The move forces Pan Am to go under, as all realize that the withdrawal of the healthy major's backing will close Juan Trippe's creation.

Pan American World Airways (1), with 35 minutes of available funds, ceases operations at 9 a.m. on December 4 and orders its crews aloft to continue their scheduled flights back to New York (JFK) or other appropriate bases. In late afternoon, Flight 436, the B-727-235 *Clipper Goodwill* piloted by Capt. Mark Pyle, returns to Miami from Barbados following a morning flight down from New York. Prior to completing

the last Pan Am flight ever, the trimotor makes a low slow pass over the international airport, located, as it is, not far from where the company had launched its illustrious career 64 years earlier.

Prior to its collapse, the corporation flies a total of 10,955,000 passengers on the year, a decline of 38.9%; freight is down 41.7% to 587.77 million FTKs. The final revenue picture shows revenues declining 38.9% to \$2.09 billion and expenses dropping 20% to \$2.56 billion. The operating loss is \$468.75 million and the net loss is \$492.23 million.

A seven-year dispute concerning the Lockerbie suspects begins on December 8 when Libya, concerned that the two will not receive a fair trial, refuses to hand the men over. Libya will maintain its position, despite the introduction of UN sanctions on air travel and arms sales in April 1992, which are tightened in December 1993.

Clipper Juan T. Trippe, the last operational Jumbojet in Pan Am markings, receives a water-spray salute from airport fire trucks and departs New York (JFK) on May 12, 1992 for storage at Norton AFB, California. Prior to the Boeing's departure, all PAA-1 employees at JFK have taken the opportunity to sign their names on the plane's fuselage. The last PAA-1 aircraft remaining at JFK are a pair of B-727-200s, which will be sold within weeks.

In 1993, prominent Miamian and former U.S. Ambassador to Iceland/Under Secretary of Commerce Charles Cobb purchases the Pan Am trademark for \$1.3 million and announce plans to reincarnate the pioneer. On November 3, 1995, President Bill Clinton, before hundreds of people at Arlington National Cemetery, dedicates a monument to the memory of those killed in the 1988 Lockerbie bombing. **Pan American World Airways (2)**, the "new Pan Am," is officially created on September 4, 1996.

Libyan leader Colonel Gaddafi eventually turns over suspected bombers Abdelbaset Ali Mohamed Al Megrahi and Al Amin Khalifa Fhimah, who are placed on trial on May 3, 2000, at a specially convened Scottish court sitting at Camp Zeist in the Netherlands. It is anticipated that the case will take more than a year to adjudicate. Twelve years after the destruction of PanAm 103 over Scotland and nine months after the beginning of an international \$80-million trial by a three-judge panel in The Netherlands, former Libyan intelligence agent al-Megrahi is found guilty of the crime on January 31, 2001, and is sentenced to life in prison. Former **Jamahiriyah Libyan Arab Airlines** official Fhimah, who had been charged with helping al-Megrahi plant the bomb-laden suitcase at Malta, is found innocent and is released.

There are two Web sites concerning Pan American World Airways (1). One is maintained by Information Systems Tech, Inc. at <http://www/panam.com>, and the other is a historical archive located at <http://www.library.miami.edu/archives/panam/pan.html>.

PAN AMERICAN WORLD AIRWAYS (2): United States (1996-1998). In 1993, prominent Miamian and former U.S. Ambassador to Iceland/Under Secretary of Commerce Charles Cobb purchases the trademark of **Pan American World Airways (1)** from the bankruptcy court for \$1.3 million, announcing plans to reincarnate the pioneer international carrier as a domestic airline. Meanwhile, Martin R. Shugrue Jr., former vice chairman/chief operating officer of PAA-1, **Continental Airlines** president, and recently trustee for the estate of failed **Eastern Air Lines**, learns of the availability of EAL's Airbus Industrie A300B4-203 fleet.

In early 1995, Cobb and Shugrue meet and begin planning for the birth of a new transcontinental carrier, to be named in honor of Juan Trippe's pioneer. Shugrue convinces the IGN Bank of Holland to provide financial backing for the use of several of the ex-EAL, and **Continental Airlines**, A300B4-203s, while Cobb begins the search for the necessary industrial investors. Although interest is found, cash on an acceptable basis is not, and the formation process drags on. Cobb then chances to meet and explain his project to fellow University of Miami board member Phillip Frost at a November gridiron party at the home of pro football great Nick Buonicotti.

Frost, who is chairman of Ivax Corporation and whose name is linked to a prominent investment group, expresses interest; he, together with

Shugrue is able to announce another \$30 million in funding has also been located.

The previously employed "OP" designator is returned to **Pan Am Air Bridge** on March 27 when the company is able to being employing the "PA" designation in its reservations system; "PA" had been the symbol for the company's historic predecessor, **Pan American World Airways (1)**.

B-727-200A flights from Miami to Santo Domingo, Dominican Republic, commence on April 6. The next day, the company sells \$25 million in a private placement of preferred convertible securities.

On April 30, plans are announced for the carrier to move from the international terminal at New York (JFK) to that half of the TWA domestic terminal vacated by the major back in January. Roundtrip frequencies between New York and Los Angeles are advanced to thrice-daily on May 1. The same day, flight operations at New York (JFK) are transferred from the east wing of Terminal 4 to the Pan Am Terminal 6, the former **Trans World Airlines (TWA)** domestic terminal.

On May 5, the Dade County Metro Commission approves a \$5-million loan to the airline in exchange for a pledge from PAWA-2 that it will headquarter in Miami and create at least 600 new jobs for local residents. The county will employ airport revenues to provide a bridge loan and then seek permanent financing from the DOT.

In a further effort to improve services, **Air Ukraine** on May 14 forges interline agreements with **Delta Air Lines**, **Continental Airlines**, and Pan Am. In an exclusive arrangement, Pan Am offers reduced fares to all AU passengers whose final destinations are Los Angeles, San Francisco, or Miami.

The next day, **Carnival Air Lines** also transfers its New York operations to Pan Am Terminal 6. Simultaneously, PAWA-2 replaces the B-727-200A employed on the Santo Domingo service with an A300B4-203.

By mid-May, three more A300B4-203s have been received since January, bringing the PAWA-2 Airbus fleet to eight. The latest to be received is christened *Clipper Charles A. Lindbergh* on May 21.

On May 22, the **Carnival Air Lines** FunPass becomes a partner in Pan Am's WorldPass. A300B4-203 frequencies between New York and Los Angeles are increased from one to three on June 1.

Overnight on June 10–11, wires of the ground proximity warning system located in the electronics bay underneath the cockpit of an A300B4-203 (which had arrived in early evening from Los Angeles) are cut as it sits on the ground at Terminal 6 of New York (JFK). A Pan Am maintenance supervisor discovers the vandalism and reports it to Port Authority of New York and New Jersey Police, who in turn call in the FBI. A criminal investigation is launched in an attempt to determine whether or not a disgruntled worker perpetrated the act.

Beginning on July 1 and continuing through September 1, a third daily nonstop service is added between New York and San Juan via Miami. On July 14, first-class New York (JFK)–Los Angeles (LAX) passengers are offered free New York–Miami bonus tickets.

A 3-year, \$60 million contract is signed with British Aerospace Aviation Services, Ltd. on August 1 for heavy maintenance on the carrier's A300B4-203 fleet. Senior Vice President-Operations James W. Arpey is named chief operating officer the same day.

To assist with the costs of merger, **Carnival Air Lines** establishes a pair of credit bridge facilities worth \$25 million during the month and guaranteed by PAWA-2 and Carnival's principal shareholder, Mickey Arison.

On August 24, Flight 6, an A300B4-203 with 11 crew and 254 passengers, loses power to its No. 2 engine and aborts its takeoff from Los Angeles for New York (JFK); the badly damaged engine is shut down and the flight is cancelled.

In early September, the DOT grants an exception to PAWA-2 to complete its stock acquisition of Carnival even before the government completes its review of the merger of the two airlines. The takeover of **Carnival Air Lines** is officially completed on September 26, the first anniversary of PAWA-2. The third quarter returns on September 30

show a \$51.1-million net loss (\$80.2 million since start-up) on revenues of \$90 million. Drastic action must be taken to halt the hemorrhage.

During October, the company drops its unprofitable New York to Los Angeles service and grounds 7 of its 10 A300B4-203s, which are proving too expensive to operate. All seven are to be returned to the Netherlands' IGN Bank, from which they have been leased, even as the carrier pays a \$4.9-million penalty for their early retirement. The remaining three, flown on the New York to Santo Domingo route, as well as from New York to Miami and occasionally Puerto Rico, will be returned by January.

The company now begins to concentrate on service between the northeast and Florida employing the fleet acquired with **Carnival Air Lines**. The westernmost destination is now Chicago. Although the company technically holds two operating certificates, it continues to integrate the Pan Am and Carnival infrastructures; the combined workforce is reduced from 2,200 employees to 1,800.

An alliance is signed with **SAETA (SA Ecuatoriana de Transportes Aereos)** on November 3; it will allow passengers of the U.S. carrier to connect at Miami with SAETA flights to Quito and Guayaquil, while customers coming north may smoothly exit onto Pan Am flights. In a Thanksgiving week action arranged by onetime Carnival owner Mickey Arison, who is now a 42% minority owner in Pan Am, the company's board of directors replaces President/CEO Shugrue on November 24 with Arison-ally and former **AirCal** President David A. Banmiller. A co-founder with a 5% stake, Shugrue is named the board's nonexecutive vice chairman. Banmiller immediately promises to implement a recovery plan that continues to emphasis on more frequent flights with less capacity. A search, ultimately unsuccessful, begins for \$100 million in new capitalization.

At month's end, code-sharing agreements are signed with **Royal Air Maroc** and **Balkan Bulgarian Airlines**.

On December 12, the carrier increases its borrowing capacity under its NationsBank credit facility from \$20 million to \$25 million.

Following ceremonies centered around the christening of a former Carnival B-737-4Q8 as *Clipper Boston*, five-times-per-day roundtrips begin on December 16 between Boston and New York (JFK). One-way fares will be \$49 until January 4 and \$99 thereafter.

Passenger boardings total 734,000. Huge losses are suffered: \$72.09 million (operating) and \$76.52 million (net).

At the beginning of **1998**, the company operates 42 daily flights to 14 cities with 14 leased aircraft.

The \$5-million borrowing increase with NationsBank Corporation becomes due for repayment on January 28; however, the lender, subject to certain conditions, agrees to extend the repayment date to March 30.

With the capital search failing, the company slides deeper into debt. Over \$14 million is owned to the Dutch aircraft broker ING Aviation Lease, N.V., with an excess of \$15 million more owed to other suppliers and vendors. The carrier is served with lease default notices from the aircraft lessors, but negotiates with them to defer and restructure payment.

Bad news continues in early February when Pan Am is notified by the Airline Reporting Corporation that it is required to provide additional security of approximately \$3.3 million on or before February 23 for travel agency sales and refunds. The company does not have funds for this security. The bad news is outlined in a February 23 8-K document filed with the Securities and Exchange Commission.

Although PAWA-2 had announced plans earlier to deactivate its A300 fleet by 30, it finds it necessary to advance the grounding to capitalize on anticipated cost advantages that will occur by simplifying the fleet. The last two remaining wide-bodies stop flying on February 25. With the grounding of the A300s, the carrier also suspends scheduled service between New York (JFK) and Nassau, Ponce, and Santo Domingo.

Also on February 25, Pan Am advises the Airline Reporting Corporation that it wishes to remain a member and in accordance with ARC procedures and policies, has established a ticketing and refund procedure for travel agencies in lieu of the requirement to post a \$3.3-million additional security.

Unable to make payments, the airline files for Chapter XI bankruptcy protection from its creditors at the U.S. Bankruptcy Court for the Southern District of Florida in Miami after the close of business on February 26. Assets of \$50 million are reported against liabilities of \$147 million. Judge A. Jay Cristol is told that the carrier has a tentative agreement with New York-based Rothschild Recovery Fund for \$10 million to cover the restart of operations.

The airline stops flying and lays off 1,250 employees on Friday morning. A large number of customers are stranded and other airlines are asked (although there is no obligation) to accept passengers ticketed on Pan Am.

At an emergency court hearing on February 28, CEO Banmiller must admit that the Rothschild arrangement has not been finalized. Parent Pan Am Corporation, which has not filed for bankruptcy, pledges to continue the search for funds with which to resume flying. Judge Cristol approves a budget using cash collateral to keep a skeletal Pan Am organization functioning.

Thomas Luria, a lawyer for Carl Icahn, announces that the multimillionaire businessman and former owner of **Trans World Airlines (TWA)** is interested in lending Pan Am \$15 million. Other Pan Am creditors, led by Nationsbank Corporation, express concern about any deal that will give another investor a superseding interest in the airline's assets.

PAWA-2, during the week of March 2, is able to undertake 10 charter flights on behalf of **Kiwi International Air Lines**, which needs extra charter lift capacity. The flight activity will bring in some cash, keep the carrier's operating certificate current, and keep the organization nucleus in place.

On Friday, March 13, Carl Icahn appears before U.S. Bankruptcy Court Judge Cristol, who is overseeing the PAWA-2 case. Icahn proposes that a term sheet he has executed with Pan Am Corporation be allowed to stand and that he acquire the carrier's assets and infuse cash to restart the carrier in an arrangement valued at \$43 million. The deal includes an \$8-million cash payment for such company assets as the name, operating certificate, and real estate holdings.

Executives simultaneously announce that the Pan Am Corporation holding company and all other subsidiaries not now in bankruptcy are so placed. Several of its board members, including Chairman Cobb, Dr. Phillip Frost, and Howard Frank, resign.

The Icahn bid is not warmly received by Judge Cristol and the noted entrepreneur/financier withdraws it on March 16. In a press release from the company late in the evening of March 18, the carrier announces that it is continuing intensive efforts to find investors or purchasers, although discussions with one, Milan Mandaric, have been terminated. It is also stated that the company may be downsized into a small-scale charter airline.

On March 19, the company announces that it has rejected seven leases of B-737-4Q8s chartered from ILFC; the \$60,000-per-day costs exceed income. The rejections are to take effect on March 23 following the completion of the planes' last charters over the weekend. At the same time, the Miami Heat professional basketball team is notified that it must find another carrier after March 25.

President/CEO Banmiller announces his resignation on April 22, effective April 30. He will be succeeded by a new general manager, Robert Mencil, formerly director of operations for **Carnival Air Lines**, who will take over responsibilities for day-to-day operations.

During the last week of April, Timothy Mellon and David Fink, principal owners of New England-based Guilford Transport Industries, which operates 3 railroads and 1,600 miles of freight lines in the Northeast, offer \$24.5 million for PAWA-2's remaining assets. It also agrees to provide the airline with \$5 million to fund creation of a reorganization plan that will be submitted to the U.S. Bankruptcy Court, Southern District of Florida, on May 20.

With 125 employees, Pan Am continues to operate charters to Aruba and Mexico from Fort Lauderdale with two chartered B-727-200As and a B-737-200. Meanwhile, lead bankruptcy counsel John Kozyak con-

tacts all voting classes of the airline's creditors, each of whom overwhelming votes approval of the new plan.

Having been duly submitted to Judge Cristol on May 20, the reorganization plan is taken under study for a month. On the afternoon of Monday, June 29, Judge Cristol, having heard from all the parties, confirms the plan. Under its terms, Guilford, in return for its investment, will acquire the three aircraft, a stock of spare parts, route authorities, and intellectual property associated with the Pan Am name. Optimists suggest that this will be the last time PAWA-2 will return to bankruptcy court and that it will be flying scheduled services again within a year.

PAN AMERICAN WORLD AIRWAYS (3). *See* **PAN AM (PAN AMERICAN AIRWAYS)**

PAN AVIATION: United States (1987–1994). Miami-based Pan Aviation is established in **1987** to conduct worldwide all-cargo charter and contract service flights. Revenue operations commence with a single Boeing 707-320C. By **1993**, the fleet has been increased by the addition of a second Dash-320C, a Cessna T-210L Turbo Centurian II, and a Lockheed L-1329 Jetstar 6.

Flights cease in **1994**.

PAN EUROPEENE AIR SERVICE, S.A.: France (1989–1994). PEAS is established in **1989** to offer regional scheduled and nonscheduled operations. Revenues services commence with 2 each Beech 99s and Piper PA-31T Cheyenne IIs. The first jet, a Cessna 550 Citation II, is delivered in **1990**, along with a leased Aerospatiale AS-350B Ecureuil helicopter.

The mixed fleet becomes even more diverse in **1991** as a Fairchild-Swearingen SA227 Metro III is purchased. Operations continue apace in **1992–1993** with a fleet that includes 2 Beech 99s and 1 each Beech 1900D, Metro III, Cheyenne II, Citation II, and Ecureuil.

Unable to maintain economic viability, the company shuts down in **1994**.

PAN ISLAND AIR TOURS: United States (1972–1974). Pan Island, as its title states, is set up at San Juan, Puerto Rico, in **1972** to offer scheduled air tours and air taxi flights to Vieques and St. Thomas. Although daily and on-demand Britten-Norman BN-2 Islander frequencies are duly inaugurated, they can only be maintained for two years.

PAN MALAYSIAN AIR TRANSPORT, SDN. BHD.: Hangar B, Subang International Airport, Subang, 47200, Malaysia; Phone 3-746-2367; Fax 3-746-1714; Year Founded 1979. Pan Malaysian is established at Subang in **1979** to provide local third-level, mostly charter and contract, services. Scheduled and charter operations continue with little change over the next 15 years.

In **1993**, Chairman Piaruddin Bin Fathodin oversees a workforce of 38 and a fleet of 2 Shorts SC-7 Skyvans and 1 Bell 206L LongRanger helicopter. Operations continue in **1994–1996**, although the number of Skyvans is reduced to one. The workforce in **1997–1998** stands at 76.

PANAGRA. *See* **PAN AMERICAN-GRACE AIRWAYS (PANAGRA)**

PANAGRA AIRWAYS: 750 S.W. 34th Street, Suite 201A, Fort Lauderdale, Florida 33315, United States; Phone (954) 359-9944; Fax (954) 359-3075; <http://www.panagra.com>; Code 7E; Year Founded 1997. Steeped in the tradition of the original **Pan American-Grace Airways (PANAGRA)** and noting the publicity generated in the birth of **Pan American World Airways (2)**, PANAGRA Airways is created at Fort Lauderdale, Florida, early in **1994** by former **Eastern Air Lines** Capt. James Peabody and Capts. Manuel "Buzz" Labee and Dick Llope, who had once flown for **Pan American World Airways (1)**.

Three years will be required to obtain the capital investment, operating authority, offices, staffing, and aircraft necessary to start flying. A total of \$1.5 million in cash and lines of credit are obtained from five

former pilots plus Cy Case, owner of the Fort Lauderdale Jet Center. The wife of investor Hugh Pierce, a former EAL captain, is the daughter of a former PANAGRA-1 executive.

PANAGRA-2 acquires a former **American Airlines** Boeing 727-23, painted in a simple white livery with the single word titles "PANAGRA" painted billboard size along the fuselage. With its FAA FAR Part 121 certificate in hand on March 25, the new entrant inaugurates its first charter three days later to Grand Cayman in the Caribbean.

In April, the company's Boeing is chartered to **Cayman Airways, Ltd.** for six weeks while its two B-737s undergo certification maintenance checks. The trijet is operated on all Cayman routes; the aircraft comes with a first-class section that is test-marketed as a business-class section.

Services continue apace during the remainder of the year, as scheduled charter flights are also made to destinations in the U.S., Central, and South America.

Enplanements total 31,000. Although operating revenues of \$5.22 million are generated, expenses are \$6.12 million. Consequently, there is an \$898,000 operating loss. The net loss is \$1 million.

Service is maintained in **1998** and is well received. During the 12 months, passenger boardings skyrocket 219.4% to 99,000. Revenues surge 26.3% to \$6.59 million, while costs are up 32.8% to \$8.13 million. The operating loss ascends to \$1.54 million, while net loss climbs to \$1.63 million.

The carrier's one-plane operation silently continues in **1999**. The earlier aircraft is replaced with a B-727-227A previously operated by **Greyhound Air, Ltd.** in Canada. Unhappily, passenger boardings for the year plunge 76.3% to 27,000.

PANAIRO DO BRAZIL, S.A.: Brazil (1930–1965). On September 15, **1930**, **Pan American Airways (PAA)** acquires its short-lived rival **New York, Rio and Buenos Aires Line** and its Brazilian subsidiary **NYRBA do Brazil**. The new subsidiary of the American international is renamed Panair do Brazil, S.A. on October 17 and is so recognized by a Brazilian government decree of November 21.

The aircraft assigned to Panair from Ralph O'Neill's failed enterprise include four Consolidated Commodores (*Rio de Janeiro, Santos, Sao Paulo, Argentina*) and four Sikorsky S-38 (*Porto Alegre, Bahia, Pernambuco, Sao Luiz*) flying boats. Mail flights begin from PAA's Belem terminus to Santos on November 28. Company headquarters are set up in Rio de Janeiro with a maintenance base at Belem.

Five-day Belem–Rio passenger service is inaugurated on March 2, **1931**. The fleet is augmented during the summer by the addition of two more of the Commodores *Miami* and *Buenos Aires* and an S-38. On November 23, the Rio route is extended down to Buenos Aires via Fortaleza, Salvador, Rio de Janeiro, and Porto Alegre. However, a complete flight from Belem still only includes a five-day voyage with stops at night. U.S. citizens comprise all Panair aircraft crews.

Sao Paulo revolutionaries hijack an S-38 on September 25, **1932** and the unqualified, hostile pilot crashes the aircraft 15 miles from the city. Two S-38s are added and are employed, beginning on September 15, **1933**, to open a main 900-mile route from Belem to the Amazonas provincial capital of Manaus via Cameta, Currallinho, Gurupa, Monte Alegre, Santarem, Obidos, Parintins, and Itacoatiara. The coastal route started in 1931 is duplicated in March **1934**. On September 28, **Pan American Airways (PAA)** is granted cabotage rights to also provide service from Belem to Rio de Janeiro and Buenos Aires. Brazilian crews are first allowed to take over some Panair flights in **1935**. In November, an S-38 route is initiated from Manaus to the Maderia River community of Porto Velho.

A maintenance hanger and office building are opened at Rio de Janeiro's new Santos Dumont Airport early in **1936**. The first of two Fairchild 71 (XA-942A) amphibians is delivered to Belem in February, allowing Panair, in late March, to extend frequencies on the Manaus route to Porto Velho via Borba, Manicore, and Hamaita. Later in the year, the fleet is augmented by the addition of two Lockheed Model

10Es and the first of eight Sikorsky S-43 "Baby Clippers" is delivered on October 27. The second Fairchild 71 is delivered in December.

The newly arrived Fairchild 71 enters service in January **1937**. En route from Vitorio to Rio de Janeiro on February 8, the also-new S-43 develops an in-flight engine fire; after putting back down at Vitorio, the amphibian sinks. **Pan American Airways (PAA)** transfers a second S-43 on February 23 to replace the first. On March 23, Electra service is initiated from Rio de Janeiro to Belo Horizonte, the state capital of Minas Gerais. In late spring, the Porto Velho route is extended to Rio Branco via Labrea and Roca do Acre. Another S-43 joins the fleet on April 29.

The fleet in **1938** comprises 7 Commodores, 6 S-38s, 1 Lockheed Express, 2 Fairchild 71s, 2 S-43s, and 2 L-10Es. In September, the last remaining pilots are replaced by Brazilians. Routes are opened in **1939** to Uberaba, Governador Valadares, and São Paulo, direct via Poca de Caldas. On May 8, a Fairchild 71 is lost while taking off from the Amazon River at Santarem; no injuries are reported and the aircraft is salvaged and rebuilt.

In **1940**, the Belo Horizonte frequency becomes daily while the São Paulo through-route is flown five times per week. In June, a Douglas DC-2 is delivered via Juan Trippe's carrier. In terms of passenger kilometers flown, Panair now ranks as the fourth largest carrier in Latin America.

In late winter **1941**, a second DC-2 arrives, but together with the first, it is soon transferred to Uruguay, being replaced in April by the first of 14 Lockheed L-18 Lodestars that will be delivered through January 1945.

Funded by a five-year government grant of 27 million milreis, Panair is authorized, on July 25, to begin construction of airports at Salvador, Recife, Maceio, Fortaleza, Natal, Belem, São Luis, and Amapa. The same day, it is given permission to open two new routes: Rio de Janeiro–Belo Horizonte–Patos–Goiania and Rio de Janeiro–São Paulo–Curitiba–Fozdo Iguaçu–Asuncion–Corumbá–Campo Grande–São Paulo–Rio de Janeiro. In Amazonas, the Manaus route is now stretched to Tabatinga via Cadajas, Coari, Tefe, Fonte Boa, Santa Antonio de Ica, and São Paulo de Olivença.

Contracts are also signed with **Pan American Airways (PAA)** to support the American major's ferry work at revitalized bases at Natal and Belem. On December 8, a Fairchild 71 is badly damaged in a Belem landing accident.

Late in the year as the **Syndicate Condor, S.A.** operation is taken over, the German operator's Porto Velho–Rio Branco and Corumbá routes, as well as those in the states of Maranhão and Ceará, are transferred to Panair. An S-43B is acquired from **Pan American-Grace Airways (PANAGRA)** on December 26.

Crashes claim one Fairchild and six Lodestars in **1942–1943**. Panair operations in Amazonas support the war effort of the U.S. Rubber Development Corporation. Another two S-43s are transferred from **Pan American Airways (PAA)** on September 9 and September 28, 1942, respectively, followed by one more on February 23, 1943. On August 17, 1943, a government decree authorizes the carrier to launch services to neighboring countries. The former **Pan American-Grace Airways (PANAGRA)** "Baby Clipper" is written off at Manaus, Brazil, on December 1 and on December 7, Pan Am shareholding is reduced to 58%.

On January 1, **1944**, Dr. Paulo Sampaio becomes president. A former **Pan American Airways (PAA)** S-43 is lost in an accident at Santarem, Paraguay, on May 25. The last of 14 Lodestars is delivered in January **1945**, followed by two Model 12s that are quickly replaced. The first of 21 DC-3s (converted to civil standard from ex-military C-47s) are placed in service and flights commence to Iquitos, Peru. After 7,000 hours of service, the second Fairchild 71 is withdrawn later in the year and scrapped.

The first of 14 ex-**Pan American Airways (PAA)** L-049s is received in March **1946**; christened *Manoel de Borba Gato*, it makes a proving flight with 14 passengers from Rio de Janeiro to London on April 16. The crossing marks the first aircraft of a foreign airline to land at the

new Heathrow Airport, the first Constellation to land at Heathrow, and the first Brazilian service to the U.K.

A second Constellation, the *Domingos Alfonso Sertao*, is employed to start transatlantic L-049 service to London on April 27. As additional Constellations join the fleet, routes are opened to Paris on July 1 and Rome on October 3. Meanwhile, on September 19, capitalization is increased from 80 to 100 million cruzeiros and Juan Trippe sells 400,000 shares to the Brazilians, giving that nation 52% majority control.

Direct L-049 service to Rome begins on September 24. Three days later, on September 27, a DC-3 with 3 crew and 22 passengers is hit by lightning over Belo Horizonte, takes fire, and crashes; there are no survivors.

An S-43 is withdrawn in November, leaving only two in service.

A S-43 crashes into the Amazon River near São Paulo de Olivença on January 5, 1947 (11 dead). L-749 Constellations are now received from the American owner and the first is put into service in May from Rio de Janeiro to London via Recife, Dakar, London, and Paris. L-749 flights are inaugurated to Cairo on June 5 and Istanbul on November 16.

After eight years of service, the original **Pan American Airways (PAA)** S-43 is withdrawn on January 10, 1948. The Paris L-749 route is extended to Frankfurt on March 9. Simultaneously, Constellation flights are launched to Montevideo and Buenos Aires. The Amazon fleet is reinforced by the introduction of eight Consolidated PBY-5A Catalinas that replace the remaining S-43.

The 1,000th transatlantic crossing is made on April 29, 1949. Late in the year, the Istanbul route is closed.

An L-749 with 7 crew and 43 passengers crashes near Porto Alegre on July 28, 1950; there are no survivors. Service to Istanbul is reopened on August 3 and extended to Beirut on October 5.

Lisbon and Madrid join the European network in 1951 and service is launched to Santiago de Chile and Lima. While going around from a missed landing at Uberlandia, Brazil, on February 28, 1952, a DC-3 with 32 passengers strikes a line of trees and crashes (8 dead).

Two Constellations are lost in accidents during the year and two replacements are obtained from **Aeronaves de Mexico, S.A. de C.V.**

Orders are placed on March 20, 1953 for four de Havilland DH 106 Comet 2 jetliners. Coming in on approach from London, an L-049 with 7 crew and 10 passengers crashes 6.5 km. SW of São Paulo on June 17; there are no survivors.

Hamburg is added as a European stop on August 31 and on December 30, the carrier opens the world's longest nonstop regularly scheduled air route, a 4,837-mile link between Lisbon and Rio de Janeiro. The flight requires 21 hrs. 40 min.

Flights commence to Dusseldorf on March 22, 1954. On October 1, despite crashes of the type earlier in the year, President Sampaio reconfirms the carrier's faith in the Comet. Employees strike the airline on January 24, 1955 and as a result, Dr. Argemiro Hungria de Silva Machado succeeds Dr. Sampaio as president on May 25. En route from London to Buenos Aires on June 16 with 10 crew and 14 passengers, an L-749 crashes near Villa Elisa, Paraguay; among the 16 killed is U.S. newsman J. G. Dowling. Orders are now placed for five DC-7Cs.

A Consolidated PBY-5A with three aboard crashes near Parcentins on April 18, 1957; there are no survivors. On November 22, a two-year operations agreement is signed with **LAN (Loide Aereo Nacional, S.A.)** for joint services in the north and northeast sections of Brazil, coordinating schedules, etc., so as to avoid wasteful competition.

In February 1957, **LAN (Loide Aereo Nacional, S.A.)** orders four DC-6As for lease to Panair. Simultaneously, Panair agrees not to employ its long-haul aircraft in direct competition with the smaller airline. The first DC-7C, a two-year-old machine previously operated by **Pan American World Airways (1)**, is delivered on April 16. Christened *Bandeirante Fernao Dias Pais*, it is placed on transatlantic service shortly thereafter. Company officials during the summer announce plans to reengine 11 of its L-049s with Eland turboprop engines built by the British firm of D. Napier and Son, Ltd.

LAN (Loide Aereo Nacional, S.A.) receives its first DC-6A in December 1958; christened *Garcia de Arica*, it is immediately leased to

Panair. Meanwhile, two additional DC-7Cs are received throughout the year; they are named for other Bandeirantes: *Antonio Raposo Tavares* and *Nicolau Barreto*.

The three other **Lan (Loide Aereo Nacional, S.A.)** DC-6As (*Bartolomeo Bueno da Siqueiro*, *Fernando de Camargo*, *Francisco Dias de Avila*) are placed in domestic service by Panair under charter in February 1959. In March, the four DC-7Cs and four DC-6As are flying daily service to Europe, Argentina, Chile, and Peru. Orders are now placed for four Douglas DC-8-33s. A Constellation, en route from Rio de Janeiro to Belem and hijacked by rebels on December 4, lands at Buenos Aires, where the men surrender and from which the Lockheed is returned. At this point, the decision is taken not to proceed with installation of turboprop engines aboard the Constellations, which by this time are no longer front-line equipment.

On October 30, 1960, a pooled **Pan American World Airways (1)**/Panair route is opened from Rio de Janeiro to Lisbon. In terms of passenger kilometers flown, the Brazilian carrier now ranks as the fifth largest in Latin America and the second in Brazil behind **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)**.

The cooperative agreement with Loide ends in February 1961 and the four leased DC-6As are returned. The first DC-8-33 is received in March; christened *Manuel do Borba Gato*, it is placed on the European service on April 20. Two more are received during the summer and fall.

In October, four SE-210 Caravelle VIRs are ordered from France. A DC-7C is destroyed as the result of a bad landing at Belem on October 14; there are no fatalities.

En route to Rio de Janeiro from Lisbon via Ilha do Sal and Recife on the evening of November 1, the DC-7C *Bartolomeo Bueno da Silva*, with 7 crew and 38 passengers, strikes an 84-m.-high hill outside Recife and breaks up 2,720 m. short of the runway; there are no survivors.

Named *Bras Cubas* and *Garcia d'Avila*, the DC-8-33s begin flying to Buenos Aires and Santiago de Chile four days later. The remaining **Pan American World Airways (1)** interest is sold and Panair becomes a completely owned Brazilian airline.

Having lost its nosewheel during a flight from Rio de Janeiro to Galeao on March 3, 1962, an L-049 lands without it and is damaged beyond repair; no injuries are reported.

The DC-8-33 *Bras Cubas* with 11 crew and 94 passengers fails its takeoff from Rio de Janeiro on August 20, crashes through an airport wall into Guanabara Bay for 160 ft., and then drifts 330 ft. before submerging 25 minutes later (15 dead).

Meanwhile, the four Caravelle VIRs are received during the spring and summer; christened *Antao Leme da Silva*, *Dominigos Rodrigues de Carvalho*, *Fernando de Camargo*, and *Francisco Dias de Avila*, on September 15 they begin supplementing L-049s and L-1049s on the domestic flights to Manaus, Salvador, Fortaleza, Belem, and Recife. In October, two additional DC-3s are acquired in support of the Amazonas service. A replacement DC-8-33 is received in November and named *Bras Cubas II*.

An L-1049 with 7 crew and 43 passengers crashes into the jungles near Parana de Eva, in the vicinity of Manaus on December 14. Rescuers struggle through the undergrowth for four days to reach the wreck, but find no survivors.

Late in the year, the company withdraws nine L-049s, placing them into service, some for cannibalization of spare parts.

A DC-7C with seven crew crashes during takeoff on a training flight from Rio de Janeiro on April 8, 1963; there are no survivors.

Two final DC-7Cs, the *Bartolomeu Buena da Silva II* and *Bras Esteves Leme*, arrive from **Pan American World Airways (1)** in August for use on the pooled service to Portugal. In November, pool agreements for European services are signed with **Deutsche Lufthansa, A.G.**, **Alitalia, S.p.A.**, and **Aerolinas Argentinas, S.A.** Upon the receipt of government authority in 1964, charter services are flown from Lisbon to Luanda on behalf of **TAP-Air Portugal**.

Flights to Europe end on February 10, 1965 and the government cancels the carrier's operating authority the next day. On February 16,

Panair declares bankruptcy with a debt exceeding \$65 million. Routes and aircraft are subsequently divided between **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** and **Cruzeiro do Sul, S.A.** Some of the older equipment is sold off over the next several years.

PANAIR FLUGANLAGE, GmbH.: Germany (1969). Germania Fluganlage, GmbH. is established at the beginning of January 1969 to offer life for the travel concern Paneuropa, GmbH. Unhappily for the new entrant, **Germania Fluggesellschaft, GmbH.** raises objections to the company's name, forcing an almost immediate renaming. While operating authority is sought, the company begins revenue operations on February 5, employing a wet-leased Sud-Est SE-210 Caravelle.

Just after the company's first owned aircraft, a British Aircraft Corporation BAC 1-11-515, is received on June 13, Panair receives its operating certificate. Although the company has a successful summer season, it once again faces moniker problems in the fall. This time the U.S. giant **Pan American World Airways (1)**, concerned about confusion in names so similar, demands a change. On December 31, the Dusseldorf-based operator becomes **Paninternational Airways, GmbH.**

PANAMA AERONAUTICA, S.A.: Panama (1960–1962). Founded on October 3, 1960 with the purpose of flying to Miami, this entrant receives an American CAB concession in 1961 and actually begins service in March 1962. The company is not able to maintain its business and closes before the end of the year.

PANAMA AIRWAYS: United States (1990–1991). Jon McMinis founds PA at Panama City, Florida, in 1990 to provide scheduled passenger and cargo commuter flights to regional destinations. The fleet comprises 2 Piper PA-31-310 Navajos and 1 PA-34 Seneca and these are employed to inaugurate daily roundtrips linking the company's base with Tampa, Orlando, Pensacola, and New Orleans. Operations continue only into 1991.

PANAMA AIRWAYS, S.A.: Panama (1936–1941). Panama Airways is formed on November 7, 1936 as a wholly owned subsidiary of **Pan American Airways (PAA)**. Working under authority of the Canal Zone Commission, the American major's surrogate inaugurates twice-weekly Ford 5-AT service in December, linking Cristobal with Balboa, 35 miles away.

Despite the availability of faster Douglas DC-2s from the parent, PA finds a niche in working with cruise ships. Beginning in early 1937, sight-seeing tours above the Panama Canal are offered and are coordinated with ship arrivals and departures so as to allow upwards of 36 roundtrips per day at \$14 per trip between the cities. Of the 16,000 cruise ship passengers visiting Cristobal during the year, 3,000 of them take advantage of these flights.

Operations continue apace in 1938–1940, with a few other destinations added. When the company is dissolved on April 30, 1941, it is offering daily frequency over its 47-mile-long route system, in addition to the sight-seeing flights.

PANAMA CARGO THREE, S.A.: Panama (1993–1994). PCT is established at Panama City in 1993 to offer ad hoc, regional, all-freight charters. Revenue operations are started and maintained for a year with a single Convair CV-580F.

PANAMBRA, LTDA.: Bolivia (1980–1989). Another small "meat hauler," Panambra is founded at La Paz in 1980 to offer nonscheduled all-cargo services around the country. Operations are undertaken with a single Convair CV-440.

The aircraft is lost to accident in 1985, but is replaced by another CV-440 purchased from **Frigorifico Reyes (Fri-Reyes), Ltda.** Flights continue until the end of the decade.

PANAVIA, S.A.: Apartado 6-4670, Panama City, Panama; Phone 507 (2) 384 503; Fax 507 (2) 384 509; Code PNV; Year Founded

1994. This small all-cargo concern is established at Panama City in 1994 to offer freighter flights around the country and throughout Central America. Revenue service begins with a single Boeing 727-100F.

PANDA AIR, LTD.: Monticello County International Airport, White Lake, New York 12786, United States; Phone (914) 292-5126; Fax (914) 292-1304; <http://www.guides.com/acg/panda>; Year Founded 1995. Panda is established at White Lake, New York, in 1995 to provide domestic and regional executive and small group passenger charters. Revenue flights begin and continue with a fleet of 6 Piper PA-31-350 Navajo Chieftains.

PANHANDLE AIRWAYS: United States (1977–1978). Panhandle is set up at Pensacola, Florida, in 1977 to offer scheduled daily passenger shuttles to Panama City, Tallahassee, and Tampa. Beech 18 roundtrips, operated thrice-weekly, are duly inaugurated and are maintained into 1978.

PANHAVIA FLIGHT TEST AND OPERATIONS COMPLEX. See PANKH (PANKH NPO)

PANINTERNATIONAL AIRWAYS, GmbH.: Germany (1969–1972). As the result of a moniker challenge by the U.S. flag carrier **Pan American World Airways (1)**, Panair Fluganlage, GmbH. is renamed on December 31, 1969. Several adjustments are made during the first quarter of 1970, as the one-plane house carrier of the tour operator Paneuropa, GmbH. prepares for the summer season. Principal among these are the relocation of the company base to Munich and the addition of two more British Aircraft Corporation BAC 1-11-515s. With the beginning of the summer holiday season at the end of March, the company's U.K.-made jetliners transport vacationers to resorts in North Africa, the Mediterranean, and the Canary Islands.

During the spring, the decision is made to enter the North Atlantic market in 1971. To that end, the company, in July, purchases a pair of discarded **American Airlines** Boeing 707-123 Stratoliners. These are ferried to London (LHR) in November and prepared for delivery to Germany at the beginning of the new year.

Not long before departure of the ex-AA jets for Dusseldorf in January 1971, it is discovered that someone has forgotten to obtain the necessary permits needed to fly into Germany. During the three months it takes to obtain the required paperwork, Paninternational must not only pay for the grounded Stratoliners, but wet-lease substitute jetliners to carry out a commitment for the lift of an increased number of travelers. The arrival of a fourth BAC 1-11-515 arrives on March 15, but the four BACs, taken altogether, still cannot provide the required capacity. Additional subcharters must still be arranged. Throughout the spring and summer, costs mount, even as the Stratoliners enter service.

The straw that breaks the proverbial camel's back occurs on September 6 when one of the BAC 1-11-515s is forced to make an emergency landing (safely it turns out) on a German autobahn. The event generates heavy and unwelcome media exposure, which leads a number of tour company companies to pull their business.

Having received no payments for its aircraft, **American Airlines** withdraws its Boeings on October 1. Financial and safety concerns force the company to cease flying on October 6, stranding several thousand customers at their resorts and gaining even more bad publicity. The remainder of the year is spent by company executives attempting to guarantee the safety of their aircraft, boost funding, and find new patrons.

In January 1972, Paninternational is cleared to resume operations. Before it can, however, BAC steps in and repossesses aircraft nos. 2, 3, and 4 for nonpayment. Down to one plane and only a few potential customers, the airline declares bankruptcy in March and is liquidated.

PANJNAD AVIATION (PTY.), LTD.: P.O. Box 1499, Rawalpindi, Pakistan; Phone 92 (51) 863 414; Fax 92 (51) 862 174; Year Founded 1993. Azhar Wali Mohammad, managing director of one of the nation's

largest rotary-wing operations, also establishes a fixed-wing division of his company at Islamabad in **1993** to provide scheduled passenger and cargo services linking major cities with both jet and turboprop equipment.

Employing de Havilland Canada DHC-6 Twin Otters and Fokker F.27s, commuter services are inaugurated on May 1 from hubs at Lahore and Multan to such smaller communities as Gujranwala and Bahawalpur.

Operations continue apace in **1994–2000**. The helicopter fleet now includes 3 Bell 206L LongRangers and 2 Bell 412SPs.

PANKH (PANKH NPO): 138 Kirov St., Krasnodar, 350723, Russia; Phone 7 (8612) 556 975; Fax 7 (8612) 361 559; Code PNH; Year Founded 1966. Pankh Company, A.O. is originally formed at Krasnodar in **1966** as Panhavia Flight Test and Operations Center. For a quarter of a century, the company is engaged in rotary-wing manufacturing, FBO, and support operations for a variety of U.S.S.R. activities in the region between the Caucasus Mountains and the Black Sea.

Beginning in **1990**, the company is forced to increasingly operate without fiscal support from the Soviet central government. As a result of national change from communism to democracy, the carrier sees a business decline of 350% by **1994**.

In **1995**, the operation is privatized; the Center is renamed and former Mil Mi-26 pilot Vladimir B. Kozlovsky is named chairman. Domestic ad hoc charters, including aerial survey, heavy-lift, environmental, and resupply work, are offered with a rotary-wing fleet of Mil Mi-8s, and Mil Mi-26Ts, plus Kaman Ka-26s and Kaman Ka-32s.

A variety of commercial operations begun in the early 1990s are continued and new ones begin. Typical missions include construction, logging, tower-placement, fire fighting, oil spill cleanups, crop-spraying. Flight testing and certification services continue with an employment population of 400, including 60 pilots and 30 scientists. Although business has fallen off since 1990, plans are made to enter the international market by accepting contracts in Southeast Asia and Papua New Guinea.

Flights continue in **1996–1999**, during which years the company employs 400, including 60 pilots. The rotary-wing fleet includes 12 Mi-2s, 9 Ka-32s, and a miscellaneous number of Mi-8s, Mil Mi-10s, Mil Mi-17s, and Ka-26s. The company also operates 5 Antonov An-2 biplanes for local fixed-wing utility charters.

In addition to its domestic aerial work, Pankh also operates contract heavy lift services in Southeast Asia and Papua New Guinea, with 3 Mi-8s and 1 Ka-26 under the direction of Foreign Relations Manager A. Kozlovsky.

A total of 360 workers are employed at the beginning of **2000**.

PANNON AIR SERVICE, KFT.: 2043 Budaors 3, Pf. 32., Budaors Airfield, Budapest, Hungary, H-1117; Phone 36 (1) 249-9775; http://www.pannonair.hu; Year Founded 1998. PAS is established at Budaors Airfield at Budapest in March **1998** to provide executive and small group air taxi and charter flights. In addition to charters, the 11-person workforce also offers a flight school, sight-seeing junkets, and assistance with flight planning.

Early in **2000**, **MALEV Hungarian Airlines, Rt.** withdraws the 5%-7% discount it had been offering its largest tour operator customer, HTC, Kft. (which accounts for about half of the nation's charter tourism business via Hungary's largest charter agency, Jorgos Travel, Kft.) and begins phasing out its Tu-154M fleet. After talks with Pannon's joint managing directors Attila Szabo and Viktor Hajdu and Chief Financial Officer Janos Molnar, HTC Managing Director Tamas Havas withdraws his account from MALEV and together the four reform and upgrade Pannon on April 16 into Hungary's first private charter airline. HTC takes a 20% equity stake in the airline and Jozsef Somodi becomes its lone managing director.

In April, two MALEV Tu-154Ms are leased to the upgraded operator. The first is delivered on May 15 wearing an all-blue fuselage with large orange Pannon titles. Shortly thereafter, the aircraft, under exclusive

contract to HTC and its partner Jorgos Travel, Kft., launch package tour flights to various Greek islands and other Mediterranean destinations on behalf of HTC, which now attempts to beat MALEV's prices.

HTC Managing Director Havas will tell the *Budapest Business Journal* in a May 22 interview, that while the new operation costs as much as the old, the chance to introduce competition into a closed market has made the effort worthwhile.

Unhappily, cooperation between the new partners soon breaks down in the face of intense holiday market competition from MALEV and foreign operators. By summer, HTC is losing significant money as fuel prices rise and passenger numbers slide. Blaming travel discounts by its competitors, HTC begins selling tickets so far below market prices that huge debts quickly pile up. Money to cover them is allegedly diverted from deposit funds numerous customers have paid for future trips. Pannon does not support the idea of closing down the season and bank loans are insufficient to help it cover its operational costs.

On September 1, Pannon cancels six flights to Greece and Spain, claiming that HTC has failed to pay its bills and cannot do so. Managing Director Somodi and HTC Managing Director Tibor Harci exchange conflicting accusations about payments in the media, with the latter insisting that Pannon could not launch the flights because of its own outstanding debts with airports in Greece and Hungary. The feud leaves 1,626 vacationers stranded abroad with no scheduled means of returning home.

With the facts of the case closer to Somodi's view than Harci's, HTC collapses on September 4 and files for bankruptcy and liquidation (the failure also takes down Jorgos Travel, Kft.). The move allows it to invoke a Ft 35-million insurance policy held with AXA Colonia Insurance, Rt. The claim is insufficient to cover the cost of returning HTC's vacationing clients. The Hungarian Ministry of Economics dips into the Tourism Target Fund and provides the Budapest Chamber of Commerce and Industry with Ft 75 million (\$268,000). The funds are employed to complete arrangements on September 5 for the return of all the affected tourists by bus or aboard special **MALEV Hungarian Airlines, Rt.** flights.

While police begin collecting information on HTC to determine whether or not it should be prosecuted for fraud, Pannon officials indicate that they will attempt to attract other charter contracts and may, perhaps, change the company's branding.

On September 10, the HTC situation worsens when the offices of Jorgos Travel, Kft., where all the network records are maintained, mysteriously take fire and burn down. Investigation into the collapse and fire will continue into the new year.

PANORAMA AIR TOURS: United States (1971–1994). Thomas McCroskey forms Panorama Air at Honolulu in **1971** to undertake air tour services. Beech 18 operations commence on March 5, with the fleet later updated by Beech 99s. Over the next decade, full-day eight-island tours are developed, with landings at three or four of five islands. Half-day trips to Kauai are also undertaken, along with a popular volcano tour.

In **1983**, regularly scheduled passenger commuter flights are inaugurated linking Honolulu with Kaunakakai on Molokai. The fleet is upgraded with the addition of eight Piper PA-31-350 Navajo Chieftains. These scheduled and charter operations are maintained during the next decade. Tragedy strikes on December 23, **1987**, when a Navajo Chieftain with a pilot and seven sightseers aboard, disappears into the Pacific Ocean southeast of Honolulu.

The fleet in **1991** includes 9 Navajo Chieftains. In December, the carrier halts scheduled Honolulu to Molokai flights, but continues charter operations. In **1993**, President Ralph McCroskey's workforce totals 80 and the fleet comprises 10 Navajo Chieftains. Service is suspended in **1994**.

PANORAMA FLIGHT SERVICE: Westchester County Airport, 22A Hangar Road, Hangar F, White Plains, New York 10604, United States; Phone (914) 328-9800; Fax (914) 328-9684; Year Founded 1958. Panorama is originally established as the FBO at Westchester

County Airport in **1958**. Over the next 40 years, the concern also adds a prosperous executive and small group charter business, which takes customers throughout the U.S., Canada, Mexico, Central America, and the Caribbean.

In **2000**, the company employs 11 pilots and flies 2 Learjet 55 Longhorns and 1 each Learjet 25D, Learjet 35A Century III, Cessna 550 Citation II, and C-414 Chancellor.

PANTANAL TAXI AERO (PANTANAL LINHAS AEREAS SULMATOGROSSENSES, S.A.): Av. Das Nacoes Unidas, 10.989.8 Andar Cj 81, São Paulo, SP, CEP 04578-000, Brazil; Phone 55 (11) 829-4033; Fax 55 (11) 828-0306; <http://www.pantanal-airlines.com.br>; Code P8; Year Founded **1992**. With a base at Campos Grande, Mato Grosso de Sul, Pantanal Taxi Aero commences scheduled, third-level passenger and cargo services to destinations in the State of Mato Grosso and in the northern part of the State of Parana during the fall of **1992**. The fleet of this new entrant comprises 1 each Embraer EMB-120 Brasília and EMB 810 Seneca and 2 EMB-110P Bandeirantes, with orders outstanding for 2 Brasília.

In **1993**, owner and President Marcos Sampaio Ferreira, oversees a workforce of 30, adds 2 more Brasília (1 each in January and July), and orders an Avions de Transport Regional ATR42-320, which arrives in December.

The European aircraft is the first of its type to be introduced in Brazil when it enters service in January **1994**. In addition, two Beech 1900Ds are temporarily employed. Two more ATR42-320s are requested. Service is inaugurated to the previously unserved communities of Mucuri in Bahia state and Videira, in the southeastern state of Santa Catarina.

Although traffic figures are not released, it is noted that revenues of \$14 million are earned.

Airline employment stands at 230 in **1995** and the fleet now includes 1 ATR42-320, 3 EMB-120s, and 1 EMB-110P; both 1900Ds are returned. The two new ATR42-300s arrive in February.

Enplanements total 204,408 and revenues skyrocket 114.3% to \$30 million.

Thirty workers retire or are laid off in **1996**. One Brasília is withdrawn as the two ATR42-320s arrive. Customer bookings dip 0.1% to 204,313 and 531,000 FTKs are operated, a 10% decline.

An EMB-120RT with 3 crew and 13 passengers is destroyed as the result of a bad landing at Vilhena on March 3, **1997**, following a service from Campo Grande; there are no fatalities.

During the summer, an ATR42-320 is leased from Aviation Enterprises in Florida for 55 months.

The Brazilian Department of Civil Aviation (DAC) indicates on December 30 that it will begin to institute domestic airfare deregulation in January.

Passenger boardings decline another 8.9% to 186,052, while cargo inches up 0.2% to 532,000 FTKs.

Acting as agent for Fuselage Finance, Ltd., Fortis Prop Jet charters an ATR42-320 to the company in May **1998**.

On December 30, the Brazilian DAC scraps its last regulations over passenger airline fares, a year to the day after it had launched domestic deregulation. DAC does, however, indicate that it will remain vigilant to abuse, including dumping, cartels, monopolies, and predatory pricing. As domestic competition stiffens, additional alliances with foreign airlines are expected.

Service is maintained in **1999** and a frequent flyer program, Bonus de Viagem Pantanal, is introduced.

A total of 250 workers are employed at the beginning of **2000**. Delivery of the company's seventh ATR42-320 is taken on January 4. It is followed into service by the eighth ATR42-320, an ex-Brit Air, S.A. turboprop received on September 5.

PAPILLON AIRWAYS: United States (1984-1994). A subsidiary of the Hanalei, Kauai, Hawaii-based **Papillon Helicopters**, Papillon Airways (*papillon* means "butterfly" in French) is established at Grand

Canyon, Arizona, in **1984**. Employing what will become a fleet of 14 Bell 206B JetRangers and 206L LongRangers, flight-seeing charters are flown daily over the region's natural attractions.

The carrier continues in business through the next decade until June **1994**, when it is purchased, together with its Papillon Helicopters parent, by Atlanta-based **Crescent Airways**. The operation is now relabeled as Papillon Grand Canyon Helicopters.

PAPILLON GRAND CANYON HELICOPTERS: P.O. Box 455, Grand Canyon, Arizona 86023, United States; Phone (520) 638-9330; Fax (520) 638-9349; <http://www.papillon.com>; Code HI; Year Founded 1994. Following its purchase by **Crescent Airways** in June **1994**, **Papillon Airways** is renamed to more closely reflect its principal business, flight-seeing. Located just off Highway 64, inside the North Entrance to Grand Canyon Airport, a new, 29,100-sq.-ft., state-of-the-art heliport complex designed to accommodate large groups of both domestic and international passengers is opened in November **1995**.

Despite widely publicized federal government noise-abatement initiatives, operations by the world's largest helicopter sight-seeing company continue apace in **1996-1998**. New special programming is offered to companies and associations, including many seeking adventurous recreational activities during annual meetings.

Brenda Tormo is president in **1999**, with James H. Carrick as director of operations. The fleet includes 6 Bell 206B JetRangers, 14 Bell 206L LongRangers, and 1 Sikorsky S-55T. In November, Papillon receives FAA approval to integrate two highly modified Sikorsky/Orlando S-55Ts into its Las Vegas-based air tour fleet as well as the Grand Canyon fleet. Designed to produce low noise levels, the Sikorskys will enter service by March.

The Web site of the USAir Tour Association will report during the following year that Papillon has operated more than 32,000 flights, which have transported almost 152,000 passengers.

The two Sikorsky/Orlando S-55Ts duly join the fleet in the spring of **2000**. Tourist flights continue without incident or headline until September 18. While on a sight-seeing flight from Las Vegas to the Grand Canyon, one of these helicopters, with a pilot and six passengers, loses engine power and is forced to make a hard landing at a spot 4 mi. E of Hoover Dam, Arizona. The S-55T is substantially damaged and all aboard receive minor injuries.

PAPILLON HELICOPTERS: United States (1979-1995). Papillon is formed at Hanalei, Kauai, in Hawaii in **1979** to provide scenic air tour and charter flights around the state. Bases are established at Waikoloa, Hawaii, Lahaina, Maui, and Princeville, Kauai. In **1984**, a mainland subsidiary, **Papillon Airways**, is established.

While on a flight-seeing tour at Kula, Hawaii, on September 26, **1985**, an Aerospatiale AS-350B with a pilot and four passengers, loses altitude while attempting to cross power lines and crashes; one person is killed while the others receive minor injuries.

Over the next decade, operations continue with a fleet that comes to comprise 4 Bell 206B JetRangers, 4 Bell 206L LongRangers, and 4 Eurocopter AS-350Bs.

On June 1, **1994**, as the result of a May 6 decision, Atlanta-based **Crescent Airways** pays \$35 million to takeover this Hawaiian tour operation. Included in the buyout are 21 helicopters, ground facilities, and the separate carriers and repair operations, all of which will function as wholly owned Crescent subsidiaries under their previous names.

Unable to economically integrate the Papillon acquisition, which, in turn, cannot adjust to the FAA's new operating rules in Hawaii, **Crescent Airways** in early January **1995** finds itself in significant financial difficulty. It loses a utility-line patrol contract, realizes lower margins on new Gulf of Mexico contracts, sees its insurance costs jump \$1.52 million, and is unable to cover salary increases.

On January 13, a standstill agreement between the company and its creditors expires and CEO Jack Hereth is unable to find major new investment.

Crescent files for bankruptcy in February, but continues to operate with a \$4.8-million package provided by First Union National Bank. The new arrangement provides needed working capital and replaces the company's revolving credit. When the company's quarterly report is filed at the end of March, it is revealed that Bell Helicopter Textron and **Papillon Airways** are the company's two largest unsecured creditors. Crescent is now in default on \$19.9 million in loans.

In May, the board of directors decides to liquidate Crescent's assets rather than attempt to reorganize and emerge from bankruptcy. It will, however, attempt to keep the Papillon Hawaii subsidiary alive. Chairman Hereth resigns and is replaced by CEO Erskine. Crescent operations cease on May 31.

In July, a line of credit is obtained from First Union Bank of Florida. It covers the cost of preparing a plan for the bankruptcy court that will explain how Crescent will liquidate its Part 135 operation, but keep Papillon Hawaii flying. The plan is not completed and Papillon Hawaii is closed down on September 5.

Crescent's 30-plus JetRangers and LongRangers, plus six AS-350Bs and two JetRangers from PH are disposed of by the end of September.

PAR AVION (PTY.), LTD.: Australia (1989–1990). Par Avion is established on Tasmania in late fall 1989 to offer scheduled third-level passenger flights across the sea to Melbourne. Operations commence in November with a pair of Mohawk 298s (U.S. conversions of the French-made Nord 262).

Without sufficient fiscal backing, the new entrant is unable to achieve viability and collapses in April 1990.

PARADISE AIR: United States (1979–1983). Taking advantage of deregulation, Morris Sakuda forms PA at Honolulu in the fall of 1979 to operate as a low-fare regional. Employing a Piper PA-23 Aztec and a Piper PA-31-310 Navajo, Paradise inaugurates scheduled roundtrips to Molokai on November 27.

Service continues until the company goes out of business on December 10, 1983.

PARADISE AIRLINES: United States (1962–1964). Paradise Airlines is established at Las Vegas in late 1962 to provide charter and inclusive-tour passenger flights to destinations in the western U.S. Revenue operations commence in early 1963 with a trio of leased Lockheed L-049 Constellations, the former **Trans World Airlines (TWA)** *Star of France*, *Star of Lebanon*, and *Star of Dublin*.

Operations continue apace into early 1964. On March 1, the former *Star of France*, with 4 crew and 81 passengers, crashes 9 nm. NE of Lake Tahoe in a snowstorm during its final approach; there are no survivors. The disaster brings the company's immediate shutdown and liquidation.

PARADISE AIRWAYS: United States (1995). In early 1995, the company headquarters of **Antigua and Barbuda Airways International, Ltd. (ABA)** are moved to Manassas, Virginia, where the firm is reformed as NavCom Aviation and purchases the assets of the failed **UltraAir**. Those resources are combined with those of ABA, including the chartered B-727-2B6A, to create **Paradise Airways**.

Eliza Jackson is named president/CEO, an operating base is established at Miami (MIA), and a leased fleet is assembled comprising the two **UltraAir** B-727-231s and the previously employed B-727-2B6A. The previous routes are initially flown, together with new scheduled flights to San Juan, St. Croix, and St. Thomas.

The Newark destination will later be exchanged for Washington, D.C. (IAD). One of the B-727-231s is leased to the Fort Lauderdale-based start-up Liberty Airlines. The carrier is renamed **Prestige Airways** in December. Enplanements total 115,540.

PARADISE ISLAND AIRWAYS: United States (1988–2000). Television mogul Merv Griffin purchases **Chalk's International Airlines (1)**

in 1988 as a vehicle with which to transport passengers to the new STOLport near his resort on Paradise Island in the Bahamas. Chalk's, with the oldest continuous airline-operating certificate in the U.S., is renamed Paradise Island Airlines, doing business as Chalk's International Airlines and is now the second largest nonaffiliated regional carrier in the country.

General Manager S. P. Allen's company, having lost its independence, converts into a Part 121 carrier and the fleet is revised to include 4 Grumman G-73 Turbo Mallards and the first company landplanes, 2 de Havilland Canada DHC-7-102s leased from Aviation Enterprises, Inc. The Canadian-built turboprops operate five roundtrips per day from Fort Lauderdale to Paradise Island and four per day from Miami, while the Mallards maintain their earlier routes to the U.S. Virgin Islands. Combined enplanements grow by 12% to 96,000.

In May 1989, Resorts International is forced into Chapter XI bankruptcy. Under provision of the filings, the corporate debt is restructured, with Griffin retaining only 22% of his previous shareholding. The air transport subsidiary is split into two divisions: **Chalk's International Airlines (1)** and **Paradise Island Airways**, it being a requirement of the bankruptcy court that PIA be sold with its Resorts International parent.

Retaining the original Chalk's Part 121 certificate, the landplane operation is turned over to the latter and it is announced that the former will receive a new Part 135 license and be sold. The sale does not immediately occur and the Mallards continue their amphibious shuttle flights to the Virgin Islands on a charter basis.

Meanwhile, PIA's two DHC-7-102s transport a total of 196,927 scheduled passengers to Paradise Island from Fort Lauderdale, Miami, and Palm Beach.

In cooperation with **Virgin Atlantic Airways, Ltd.**, PIA begins a series of charters during the spring of 1990 taking passengers from the British carrier to Walt Disney World in Orlando. John W. Presburg, an official with **Henson Aviation**, is hired in July as senior Resorts International vice president and chief operating officer of the airline subsidiaries, reporting to corporate CEO David Hanlon. Two more Dash 7s join the PIA fleet and negotiations are opened with the Illinois-based United Capital Corporation for purchase of the seaplane operation. In December, UCC's president purchases the Chalk's name, Part 135 certificate, and all 16 seaplanes.

The 160-employee, 4 Dash 7 PIA transports a total of 310,232 passengers, a significant increase over the previous year.

Chalk's begins operations in January 1991 as **Flying Boats, Inc.**, doing business as **Chalk's International Airlines**. With no purchasers for PIA yet on the horizon, the fleet of the 198-employee, Part 121 operation is reduced to 1 in-service DHC-7-102 as customer bookings decline 7% to 288,625.

In 1992, the carrier's 4 Dash 7s transport a total of 344,646 passengers, a 19.4% boost. Income exceeds costs and there are profits: \$5.15 million (operating) and \$99,553 (net).

The payroll grows by 12.3% in 1993 to 201 and 2 more DHC-7-102s join Chief Operating Officer Presburg's fleet.

Passenger boardings fall another 7.8% to 317,815 and revenues drop 3% to \$21.8 million. Expenses are \$20.28 million and operating income dips to \$1.51 million. There is a net loss of \$3.32 million.

The workforce is cut by 10.4% in 1994 to 180. Late in the year, Merv Griffin sells out to an unidentified owner. At this time, the company flies six daily services from Miami, four or five from Fort Lauderdale, and two from West Palm Beach.

Customer bookings drop another 13.5% to 274,958.

The workforce of the Fort Lauderdale-based carrier is reduced to 135 during 1995. The company becomes the 11th "USAir Express" carrier in September. The company's four DHC-7s are repainted in "USAir Express" livery, as **USAirways** begins to accept reservations on the carrier's behalf.

During the last week of November, an FAA inspection uncovers deficiencies in aircraft maintenance and record keeping, which results in the carrier's brief grounding. The first de Havilland is cleared to resume

services on November 30, followed by a second on December 1. The remainder are back in the air by month's end.

The 6 de Havillands fly a total of 246,260 passengers on the year, a 10.4% decline.

In January 1996, former U.S. Commerce Department Undersecretary Charles Cobb and Chuck Slagle purchase Chalk's. That pioneer, the oldest continuously operated air taxi—some say airline—in the world, is reformed into **Pan Am Air Bridge**. Under the new name, the company resumes flights to and from its South Florida and Bimini destinations on March 1.

On September 15, Paradise and **Carnival Air Lines** enter into a five-year code-sharing agreement, under which the latter cancels its participation in the "USAir Express" program, while adding more flights in cooperation with the potential **Pan American World Airways (2)** merger partner.

Under the block-seat, dual-designator pact of September 15, Carnival and Paradise Island on November 15 increase the number of flights between Florida and Paradise Island, the Bahamian resort island. Paradise also adds connecting service from Fort Lauderdale to Key West, from Miami to Fort Myers, and from Orlando to Key West. Late in the year, Paradise notifies **USAir** that it does not, after all, wish to withdraw from its franchise arrangement.

The traffic picture for Paradise Island, meanwhile, finally improves; passenger boardings jump 9.7% to 270,196.

On February 27, 1997, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional paints its aircraft in a modified version of the major's new grey and dark blue livery. Also, new services to Branson, Missouri, are promised.

Customer bookings fall 17.8% to 244,644.

In April 1998, **Air Alaska** signs a letter of intent to purchase all of the company's outstanding stock from PIA Holdings. The April acquisition arrangement with Air Alaska having fallen through, the "USAirways Express" company **Paradise Island Airways** again becomes available.

On July 31, **Gulfstream International Airlines** is acquired by G-Air Holdings Corporation, a public corporation, through a reverse merger transaction. On August 1, Paradise Island Airways is sold to G-Air Holdings, the new parent of Gulfstream, which will now operate both airlines as its subsidiaries. Chief Operating Officer Roger Larreur indicates that PIA will continue to operate its daily service between airports in South Florida and Paradise Island in the Bahamas under its historic marketing name **Chalk's International Airlines (2)**. However, the PIA arrangement with **USAirways** will now be terminated and the carrier will join GIA in operating under "Continental Connection" flight codes and branding.

Like GIA, Paradise Island suspends service on September 24–25 in the face of Hurricane Georges. All flights are resumed from Miami, Fort Lauderdale, and West Palm Beach on September 26.

Although Paradise returns to service, it is also bankrupt.

Customer bookings for the 12 months drop 15.7% to 206,000.

By the beginning of 1999, Paradise Island has cut its airline employment by 16.7% to 150.

On Wednesday, February 10, **Pan Am Air Bridge** files for Chapter XII bankruptcy protection with the U.S. Bankruptcy Court at Dallas, Texas, and suspends service the next day. On February 12, the court reaches an agreement with Gulfstream International to resume service to Bimini on a temporary basis, effective February 26, as the historic carrier attempts to reorganize under the protection of the bankruptcy laws.

The U.S. Bankruptcy Court at Dallas, on February 24 requests that **Gulfstream International Airlines** also continue to operate PIA as it, too, reorganizes under the protection of the bankruptcy laws.

GIA's President Cooper indicates that the historic airline will be preserved and that it will resume its 12 daily Grumman amphibian roundtrips on February 26 from Miami to Bimini and Paradise Island and from Fort Lauderdale to Bimini, Paradise Island, and Walker's Cay. While a final decision on the future of **Pan Am Air Bridge** is made, its

planes, like those of **Paradise Islands Airways**, are repainted in the colors of **Chalk's International Airlines (2)**. As **Chalk's International Airlines (2)**, PIA and PAAB continue and expand daily services as of February 26.

PIA ceases operations on May 11. Afterwards, **Gulfstream International Airlines** continues to operate its aircraft from Florida to Paradise Island. For the first-five-and-a-half months of the year, the division's passenger boardings drop 13.1% to 179,000.

On August 18, 2000, USAirways Group begins negotiations with **Gulfstream International Airways** concerning a takeover the stock of Paradise Island Airways. The same day, a new **USAirways** subsidiary, **Potomac Air**, is established to operate in the Northeast and Mid-Atlantic regions as part of the larger merger proposal between its parent and **United Airlines**. A deal between the major and Gulfstream is struck on August 24 wherein **USAirways** acquires 100% shareholding in PIA. On October 2, Merv Griffin's old commuter is merged into **Potomac Air**, giving it an automatic Part 121 operating certificate.

PARADISE ISLAND HELICOPTERS, LTD.: P.O. Box N-3725, Nassau, The Bahamas; Phone (242) 363-4016; Fax (242) 363-4016; <http://bahamasnet.com/helicopter.html>; Year Founded 1998. PIH is set up at Paradise Island Heliport, 1/4 mi. E of Nassau Harbour in 1998. Employing a Bell 206B JetRanger, the company begins sight-seeing tours of the Harbour, over cruise ships and the downtown area of Nassau, to Paradise, Gilligan's, Rose and Blue Lagoon Island, including views of Dolphin Encounters and the Stingray Club, and Cable Beach.

PARAENSE TRANSPORTS AEREOS, S.A.: Brazil (1952–1970). Antonio Alvs Ramos Jr. forms **Paraense Commercial, Ltda.** at Belem on February 22, 1952. Planning to operate a beef haulage and general charter service, Ramos purchases a former **Aero Geral, S.A.** Consolidated PBY-5 Catalina and begins flying to the Goias community of Pedro Afonso on March 30. Two more Geral Catalinas are acquired in 1953–1954. In 1955, the company is renamed PAT.

Two Curtiss C-46 freighters are obtained on September 4, 1957 and in March 1958 are employed to begin scheduled frequencies to Rio de Janeiro via Pedro Afonso, Cristallandia, Brasilia, and Goiania. Service is also started from Rio to São Paulo. Over the next two years, six additional C-46s are acquired, several in passenger configuration. During the same time, three Commandos are lost.

A C-46D with four crew fails its takeoff from Rio de Janeiro on May 31 and crashes; there are no survivors.

A C-46A with five crew is lost at Rio de Janeiro on January 6, 1959; there are no fatalities. Another C-46A with five crew is lost near Babaculandia, Brazil, on July 15; again, there are no fatalities.

A new route, actually awarded two years earlier, is started in August 1960 São Paulo–Cuiaba–Porto Velho–Rio Branco. Other destinations added include Campo Grande, Manaus, Jacareaconga, Itaituba, Sanarem, Altamira, Braganca, Pinheiro, Parnaiba, and Fortaleza.

A C-46A fails its initial climb away from Belem on September 22; no one is hurt in the subsequent forced landing.

Over the next decade, Ramos expands his network, but in the process, gains a terrible reputation for poor safety. A C-46A with two crew is destroyed in a takeoff accident at Pedro Alfonso, Brazil, on June 27, 1962; neither flyer is hurt.

A Douglas DC-3 is purchased on February 7, 1963, but is soon lost in a forced landing near Porto Velho. Of three DC-4s purchased in two-year period, one is lost under unknown circumstances at São Paulo on May 5 and another crashes upon takeoff from Belem on April 4, 1964 and is destroyed; no fatalities are reported in either incident.

Of the six C-46s acquired in 1957–1959, all are lost by 1965, including one lost in a nonfatal landing accident at Rio Branco on March 24. A C-46A with 3 crew and 10 passengers is destroyed in a midair explosion near Buraco on August 12; there are no survivors. Another C-46A with 2 crew is lost 25 mi. from Vilhena on October 23; there are no fatalities.

The fleet at the beginning of 1966 includes just 7 Commandos, 4 DC-4s, and 1 DC-3. Six more C-46s are purchased from Sweden late in the year.

Five Fairchild Hiller FH-227Bs are ordered in November 1967 and delivered to the company's Belem base in January 1968. Christened *Rio Rapajos*, the first enters service in February. Operations continue without incident in 1969.

While on final approach to Baia de Guajara Airport on March 14, 1970, an FH-227B with 5 crew and 35 passengers, crashes 1 mi. short of the runway and into Guajara Bay (38 dead). Another FH-227B is later wrecked by a vehicle on the ground at Belem Airport.

Already in financial difficulty from previous losses and unable to compete with all but one modern airliner not grounded for repair or overhaul, the carrier is now subjected to an audit-inspection by the federal government. On May 29, Paraense's operating permit is pulled and on July 15 the government takes over the last four surviving aircraft and gives them to **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)** for use on the Ponte Aerea Air Bridge shuttle service.

PARAGON AIR: P.O. Box 575, Commuter Airline Terminal, Kahului Airport, Kahului, Maui, Hawaii 96732, United States; Phone (808) 244-3356; Fax (808) 873-7895; <http://www.maui.net/~wings>; Year Founded 1980. Paragon is established at Kahului in 1980 to provide fixed-wing passenger and cargo charters, 24 hours a day, to Maui, Molokai, Lanai, Oahu, Hawaii, and the Kalaupapa Peninsula on the island of Molokai.

Family-owned and operated, the state's oldest FAR Part 135 fixed-wing charter company has a perfect safety record by 2000, operating a fleet of Piper PA-31-350 Navajo Chieftains and Britten-Norman BN-2 Islanders.

Among the celebrities transported by the concern over the years are: Steve Jones, Michael Douglas, Kenny Loggins, Mike Love, Richard Pryor, Bill Gates, the John Paul Getty family, Kevin Costner, Dennis Hopper, and Jackson Browne.

PARAGUAY AIR SERVICES (SERVICIOS AEREOS DEL PARAGUAY, S.A.): Paraguay (1957–1958). PAS is started in 1957 as a joint venture between private investors in Paraguay and Brazil. Two Curtiss C-46s and a Douglas DC-4 are acquired and employed to inaugurate revenue flights between the company's main Asuncion base and Rio de Janeiro, Buenos Aires, and Montevideo.

The company becomes embroiled in political difficulties in early 1958 after operational irregularities are charged. The controversy leads to cancellation of the carrier's certification.

PARAMOUNT AIRWAYS, LTD.: United Kingdom (1987–1989). Paramount is established as a charter carrier at Bristol in January 1987. Christopher Parker is chairman with Roy Steptoe as managing director. The first two of four leased McDonnell Douglas MD-83s (the first airline to place that aircraft on the U.K. civil register) are delivered in April, the same month in which the company receives a government license to operate charter services. The new carrier, by fall, has sold 90% of its capacity to major British tour operators for the following summer.

Chairman Parker's nonscheduled passenger carrier inaugurates 32 roundtrip weekly charter and inclusive-tour flights in the spring of 1988 to various European destinations. During the fall, the company enters into takeover discussions with the bankrupt U.S. charter operator **Sun-world International Airways**; when these fail, the American concern ceases operations in November. At the end of the year, **Amber Airways, Ltd.** is purchased and merged. Two Boeing 737-277s, leased from Ansett Worldwide, are acquired as part of the deal.

When the British holiday and vacation travel market suffers a big downturn in 1989, Paramount encounters significant financial difficulty. Despite an attempt to rescue the carrier and infuse it with the additional capital required to allow its participation in the winter holiday tour season, Paramount's viability cannot be maintained—the British charter market is, in the face of recession, just too weak.

Operations cease on November 2 and 130 employees are immediately laid off. The remaining 40 staffers are released on December 1 when the wet lease on its last B-737-277 expires. The company is liquidated near Christmas.

PARIZ AIR: 435 Safarkhan Ave., Tehran, 14547, Iran; Phone 98 (21) 822-1771; Fax 98 (21) 821-1969; Code IRE; Year Founded 1997. Pariz is established at Tehran in 1997 to offer international passenger charters between Bandare Abbas and Ras al-Khaimah. Revenue operations begin with a pair of Yakovlev Yak-40s.

PARKS AIR TRANSPORT: United States (1947–1950). Parks Air Transport is established at East St. Louis in December 1947. Despite the fact that it is unable to obtain Douglas DC-3s, Parks announces on June 8, 1950 that it will open lightplane services over 3,000 miles of government-approved routes in Missouri and Illinois.

The CAB steps in on July 28 and cancels the airline's permit, primarily because it had not inaugurated services when announced and because it did not have larger transports. Parks routes are transferred to two other start-up regionals: **Ozark Air Lines** and **Mid Continent Airlines**.

Parks goes to court on August 2 and on August 9 receives an injunction against the CAB, barring it from transferring the carrier's routes and asking it to reconsider its position. Parks, meanwhile, prepares to begin service.

Meanwhile, **Ozark Air Lines** also prepares to initiate eight former Parks routes on August 26. To avoid a nasty court fight, **Ozark Air Lines** purchases Parks on September 20, preventing it from ever actually beginning flight operations.

PARS AIR COMPANY: Iran (1969–1980). Established in 1969 as a private operator and as a maintenance company for general aviation, Pars Air begins scheduled services in March 1977 employing 2 leased Fokker F.28-4000s. New routes and replacement flights for **Iran Air** are undertaken linking the Tehran base with Ramsar, Nowshahr, Dasht-e-naz, Masshad, Birjand, Zahedan, Kerman, Hamadan, Sanandaj, Tabriz, Shiraz, Lavan Island, Ahwaz, and Khorramabad. Substantial traffic greets the new services.

During 1978, Managing Director Dr. Mansour Rafat's fleet comprises 3 chartered F.28-4000s plus 1 Shrike Commander, 3 Britten-Norman BN-2 Islanders, 1 Piper Aztec, and 1 Cessna 206. The carrier ceases operations during the traumatic revolutionary year of 1979.

In 1980, the new Islamic government takes the company in hand and merges it with **Air Taxi Company** to form **Iran Asseman Airlines**.

PARSA, S.A.: Apartado 9-001, Panama City 5, Panama; Phone (507) 226-3803; Fax (507) 226-3422; Year Founded 1990. Based at Panama City, Parsa begins scheduled, third-level passenger and cargo flights throughout Panama in 1990. By 1994, General Manager Jose I. de Roux's fleet has grown to comprise 1 Piper PA-34 Seneca, 3 Pilatus Britten-Norman BN-2 Islanders, and 1 Cessna 208 Caravan I.

Six years later in 2000, the fleet includes 2 Islanders and the Seneca.

PARTNER AIR COMPANY (PARTNER AVIAKOMPANIYA): Pushkin Mayakovskogo Str 15, Pushkin, 189620, Russia; Phone 7 (812) 476 9744; Fax 7 (812) 465 4304; Code PRR; Year Founded 1993. Partner is established at Pushkin, in the St. Petersburg Region, in 1993 to offer executive passenger flights and cargo charters in Russia and northern Europe. Vassili I. Bessarabov is general director and he inaugurates flights with 1 Antonov An-26 and 2 Yakovlev Yak-40s. A second An-26 is acquired in 1994.

Flights continued during the remainder of the decade. During these years, one each An-26 and Yak-40 are withdrawn.

PASSAREDO TRANSPORTES AEREOS, S.A.: Ave. Nove de Julho, 549 Centro, Ribeirao Preto, SP, 14025-000, Brazil; Phone 55 (16) 625-3737; Fax 55 (16) 625-1070; <http://www.passaredo.com.br>;

Code Y8; Year Founded 1995. With a quarter of a century of experience in the motor bus arena, Victor Passaredo establishes this airline subsidiary at Riberao Preto, centered in São Paulo State, during the first quarter of 1995. Jose Luiz Felicio is appointed managing director and is provided with 2 "QC" models Embraer EMB-120 Brasília. These inaugurate scheduled revenue services on July 1, linking the company's base with Aragua, Belo Horizonte, Curitiba, Golanta, Palmas, and São Jose dos Camps. A third Brasília arrives in late September.

Enplanements for the first half of 1996 total 17,496. The company becomes the first to operate nonstop from São Paulo to Vitoria de Conquista, an agricultural community in the northeastern state of Bahia.

Service continues in 1997. Late in the year, the company leases an Airbus Industrie A310-322 previously operated by **Sabena Belgian World Airlines, S.A.** The largest aircraft in company history is employed to undertake passenger charters to Natal, Recife, and Fortaleza, plus points in the Caribbean.

Service is maintained during the remainder of the decade and the fleet is enhanced by the addition of a third Brasília.

A total of 150 workers are employed at the beginning of 2000.

PATRICIA AIRWAYS, LTD.: Canada (1928–1929). After a successful two-year run as the moving force behind Patricia Airways and Exploration, Ltd., Capt. Harold A. "Doc" Oaks departs **Patricia Airways and Exploration, Ltd.** in early 1928 to begin **Western Canada Airways, Ltd.** Following his departure, Oaks' former partners reorganize PA&E and in October transfer its headquarters to Sioux Lookout, Ontario. Also in the fall, the Curtiss HS-2L previously operated by the recently defunct **Central Canada Airways, Ltd.** is purchased.

Operations continue apace into 1929, during which year the carrier, aircraft, and personnel, are purchased by and absorbed into **Canadian Airways, Ltd.**

PATRICIA AIRWAYS AND EXPLORATION, LTD.: Canada (1925–1928). Just after the January 1925 collapse of the pioneer **Laurentide Air Service, Ltd.**, a pioneer in gold mine air service, a huge new gold strike is made in Ontario's Red Lake area. A gold rush follows which, had Laurentide been able to hold on, might have provided sufficient revenues for it to continue.

Three investors step in to take up the slack and establish a new air service, **Patricia Airways and Exploration, Ltd.**, named in honor of the northwestern Ontario district where the Red Lakes gold mine is located. Chief among these investors is Capt. Harold A. "Doc" Oaks, a veteran of the Royal Flying Corps who had visited the Red Lake field on a dogsled and staked a claim. Oaks sells his claim and employs the funds received to acquire a float-equipped Curtiss Lark biplane; his colleagues pitch in and lease a Curtiss HS-2L flying boat.

Beginning in April 1926 and continuing through 1927, Oaks and company fly summer (float) and winter (skis) Lark plus HS-2L frequencies, transporting passengers, mail, and general freight, including mining equipment—the Lark can carry 400 pounds in its second cockpit. During the 2-year period in more than 10 flights per day, PA&E flies 260 passengers, 1.5 tons of mail, and 7 tons of mining and prospecting equipment into the Red Lake gold mines.

In January 1928, Oaks departs to begin **Western Canada Airways, Ltd.** and this carrier is reorganized into **Patricia Airways, Ltd.**

PATRIOT AIRLINES: United States (1992–1994). Patriot is established at Los Angeles in 1992 to offer all-cargo services with 2 leased Boeing 727-23Fs. The jetliners' livery features a white fuselage with 2 red horizontal stripes from nose to tailcone, one above and one below where the windowline would have been in a passenger plane, and a blue tail with a small American flag and 13 stars.

A total of 1.52 million FTKs are flown and revenues are \$1.3 million. Expenses associated with start-up cause initial-year losses of \$898,943 (operating) and \$939,762 (net), fold to 11.5 million FTKs. Revenues total \$3.9 million and, again, expenses are higher. As a result, a second

year of losses, albeit far less, is suffered: \$41,190 (operating) and \$70,260 (net).

Freight declines 29.5% in 1994 to 9.01 million FTKs, but operating revenue rises 34.6% to \$5.29 million. Expenses jump 61% to \$6.39 million, leaving an operating loss of \$1.1 million and a net downturn of \$1.09 million. The fiscal downturn is too severe and the company shuts its doors at year's end.

PAUKNAIR, S.A. See PAN AIR LINEAS AEREAS, S.A.

PAVCO: 1110 26th Ave., NW, Gig Harbor, Washington 98335, United States; Phone (253) 851-5577; Fax (253) 851-8709; Year Founded 1983. Pavco is established at Gig Harbor, near Tacoma, in 1983 to offer passenger and cargo charters to small, nearby communities. By 2000, Charter Manager Mike Pickett oversees the work of 3 full-time pilots and the operations of 3 Cessna 172 Skyhawks, 1 C-206T Stationaire, 1 C-337 Super Skymaster, and 2 Piper PA-23-250 AztecFs.

PAWAN HANS HELICOPTERS, LTD.: Safdarjung Airport, New Delhi, 110003, India; Phone 91 (1) 461-5711; Fax 91 (1) 461-1801; http://www.pawanhans.com; Year Founded 1985. Originally incorporated in New Delhi on October 15, 1985 as the Helicopter Company of India, Ltd., the carrier is reformed in 1988 and renamed Pawan Hans Helicopters (*pawan hans* is Hindi for "swan of the skies"). Shareholding continues to be held by the Indian government, 78%, and the Oil & Natural Gas Corporation, Ltd. (ONGC), 22%. The company still offers both offshore oil industry support and passenger flight-seeing tours in the mountains to the north of the country.

The company initially selects the Aerospatiale AS-365C Dauphin as its helicopter, but an offer from the U.K. government of Prime Minister Margaret Thatcher to the Indian government of Rajiv Gandhi leads to a split order and results in the company and the government acquiring 21 Westland 30s as well. The British-made helicopters are paid for out of a £65-million foreign aid line.

Upon their arrival, the Westlands are put into service in support of a contract from ONGC. One is lost in a fatal crash before the end of the year.

Flights continue in 1989. On December 11, a Westland 30 transporting 11 ONGC personnel is involved in an accident; 5 people are seriously hurt and the aircraft must be written off. This is the second serious accident this year.

At the end of December, it is reported that the company may purchase 12 Bell 214STs or Aerospatiale AS-332L Super Pumas for use in its long-range offshore support operations, railway support, and high-altitude missions.

On January 2, 1990, the carrier grounds its Westland 30s. Indian Air Force Mil Mi-8s and Mi-17s are pressed into service to visit the offshore oil platforms until the suspect helicopters can be inspected and placed back into service.

On May 21, Dr. Hussainy, Director of Technical Development & Production (Air) of the Indian Ministry of Defence submits a report on the Pawan Hans operation to the Indian Directorate General of Civil Aviation. In it, he finds the company "unprofessional in many areas," especially maintenance. He is also critical of Westland and of the Westland 30's engine manufacturer, Rolls Royce.

As a result, the ONGC contract is terminated and half the Pawan Hans fleet is grounded. The Indian Air Force is once again called upon to employ its helicopters to visit the ONGC rigs and Air Commander C. M. Singla, a 27-year Indian Air Force helicopter veteran, is named managing director.

At the end of the year, only the Dauphins and six Westland 30s are in service, primarily being employed on tourism and railway support within India and on communications flights in the Himalayas.

The concern's 19 Westland 30s are grounded on February 10, 1991. Following a review by the Civil Aviation Ministry, the company is informed in June that it will no longer be able to employ the type. West-

land studies the crashes, furnishes on-site expertise to Pawan Hans, and offers operational suggestions. The grounding, nevertheless, continues. At this point, the company is again reformed and the ONGC acquires a 49% minority stake.

With the 19 Dauphins and 3 new Bell 206L LongRangers, Pawan Hans is able to resume its upward climb later in the year and into 1992. A new contract is received from the National Thermal Power Corporation to undertake power line inspections, while the ONGC again finds favor with the company and allows Pawan to conduct pipeline surveys. Law enforcement support work is found in the Punjab, a medevac service is flown in the coalfields in Nagpur, and Aerospatiale Lamas and Ecureuils are flown on behalf of the Ministry of the Environment and the Gas Authority of India, respectively.

Having recovered from the damning 1991 report, Pawan Hans establishes a helicopter training academy and its maintenance activity becomes a profit center. By the end of the year, the carrier, in a nation where there are less than 50 civil helicopters in operation, the company is the major rotary-wing operator on the Indian subcontinent. Total revenues reach Rs 955.3 million (\$23 million).

In 1992–1996, PHL enjoys its greatest success in the offshore oil sector. The Dauphin 2s remain in the air an average of 15,000 hours per year for the ONGC, serving the 150 rigs operated in the main tract 200 km. from Bombay, plus other installations off Madras and Vijayawada in the southern part of the country. Use becomes so intense that, at one point, 86 landings are made within a week.

The company also continues to grow in the area of passenger transport, particularly in those regions with an inadequate surface transport infrastructure. Six Bell 206L-4 LongRangers are acquired to meet this need as the Westland 30s remain grounded for lack of a buyer. Until they are sold or returned to service, the company sustains a Rs 16-million (\$461,000) annual write-off.

Revenues during the latter year reach Rs 1851 million, while profit hits Rs 461 million.

The inaugural customer service is flown in June 1993 and links the Himalayan shrines of Badrinath and Kedarnath (at the 11,000-ft. level) with the tourist resort of Dehra Dun. Thereafter, a scheduled network is established in the state of Sikkim and flights are conducted between its capital, Gangtok, and outlying helipads in local communities. Short-haul charters are also operated from Bombay and Delhi to other major Indian cities.

In addition to these services, three Mi-8s are acquired to offer new flights in the Lakshadweep Islands and throughout the northeastern state of Nagaland. The operations are modeled on that offered in Sikkim. Eventually, the Westland 30s are returned to service and no further problems are encountered with them.

Operation of these services is sometimes spotty and government subsidy is not always very generous. Consequently, revenues drop to Rs 1517 million. Still, Rs 619 million in profits are reported.

During the spring of 1997, the company enters into negotiations with the Indian government to take over emergency air services from the Indian Air Force in the northeastern state of Arunachal Pradesh. A further plan is put forward to passenger network linking the other northeastern states of Mizoram, Meghalaya, and Nagaland.

By 1998, the fleet of Managing Director Singla includes 19 SA-365N Dauphin IIs, 19 Westland 30s, and 3 each Bell 206L-4 LongRangers and Mil Mi-8s. Plans are made to acquire four heavy helicopters and two lighter machines with which to undertake the expansion noted above. Among the candidates are the Mil Mi-17, Bell 407, and Eurocopter AS-350B-2 Ecureuil. Two Bell 407s and three Mi-17s are eventually selected.

During the closing ceremonies of August 13–14 marking the fiftieth anniversary of India's independence from the U.K., Pawan Hans provides free joyrides for 200 underprivileged and handicapped school children at New Delhi and Bombay. Civil Aviation Secretary P. V. Jayakrishnan presides over the function at New Delhi. Shri Kulwant Singh Kohli, Sheriff of Bombay, inaugurates the flights from his city.

It is reported on November that, since its start-up, the company has achieved 2.25 million flight hours.

Airline employment stands at 780 at the beginning of 1999; Pawan Hans, the largest rotary-wing operator in India, has a net worth of Rs 2732 million and equity capital of Rs 1137 million. Services provided include offshore support, interisland transportation, customs and pipeline surveillance, search and rescue, passenger charter and flight-seeing, policing, VIP transport, aerial photography and filming, flower dropping, and customized services.

Major customers include the ONGC, the governments of Punjab and Arunachal Pradesh, Oil India, Ltd., the Gas Authority of India, Hardy Exploration, Indian Customs, BSF, and the Lakshadweep Administration.

Flights continue in 2000.

PB AIR, LTD.: 101 Sunset Road, Bangkok, 10300, Thailand; Phone 66 (2) 669-2066; Fax 66 (2) 669-2092; <http://www.pbair.com>; Code PBA; Year Founded 1990. Tycoon Piya Bhirombhakdi establishes this carrier at Bangkok in 1990 to provide regional flight services for executives of his Singha Brewery. Passenger flights begin and continue with a Socata TBM700.

In October 1996, PB Air takes delivery of a Dornier 328-110; the first of its type to feature a quick-change interior, it is initially configured for use as a 20-seat corporate aircraft.

In November 1997, chief pilot Capt. Anusorn Singhagajen indicates to the media that his employer will begin scheduled flights in early 1998. He notes that the company may only fly to destinations not served by Bangkok Airways, Ltd. or Thai Airways International, Ltd.

With the completion of the new airport at Bangkok, Dornier 328-110 scheduled service to Chumporn, 170 nm. S of the capital, is inaugurated in March 1998. At the end of May, arrangements are completed that will allow the airline to provide feeder service on behalf of Angel Air, Ltd. On behalf of Angel, flights are inaugurated in June from Bangkok to Chiang Mai via Udon Thani.

The company's air operator's certificate is upgraded at the beginning of 1999 as Jothin Pamon-Montri becomes president. Scheduled jetliner flights from Bangkok to Roi Et begin in early March with a fleet of three Fokker F.28-4000s first flown by SAS (Scandinavian Airlines System). Later in the spring, new frequencies are offered from Khon Kaen to Chiang Mai. The Dornier returns to its earlier corporate role following completion of its last revenue flight on October 31.

Service is maintained during the remainder of the year and into 2000. Scheduled destinations visited from Bangkok include Chiang Mai, Chumphon, Khon Kaen, Krabi, Roi Et, and Udon Thani.

In May, Angel Air, Ltd., teetering on the brink of collapse, cancels its long-term agreement with PB Air. PB Air, for its part, turns around and initiates its first scheduled international route, operating its F.28-4000s daily from Bangkok to Singapore via Krabi. This new schedule is reduced to four times a week in mid-August.

On August 21, PB Air files a breach-of-contract suit against Angel Air, Ltd. and additional charges for passing nearly 20 million baht in bad checks to it for lease payments. PB Air is the first creditor to take action against troubled Angel. The matter is kept quiet until revealed by the *Bangkok Post* on October 17.

The Fokker route from Bangkok to Singapore via Krabi becomes a daily service once again on October 28.

PBA. See PROVINCETOWN-BOSTON AIRWAY (PBA)

PDG HELICOPTERS, LTD.: The Heliport, Dalcross, Inverness, Scotland, IV1 2JB, United Kingdom; Phone 44 (1667) 462740; Fax 44 (1667) 462376; <http://www.pdg-helicopters.com>; Year Founded 1995. Black Isle Helicopters, Ltd. and Dollar Helicopters, Ltd., both subsidiaries of the Morristown, New Jersey-based Lynton Group, are merged with Inverness-based PLM Helicopters, Ltd. in July 1995 to form the PLM Dollar Group. The enlarged concern, which will fly as

PDG Helicopters, is now the largest onshore helicopter charter operator in the U.K. and boasts a combined 40 years of operational experience.

Under the direction of CEO John Poland, the company engages in a variety of helicopter work, including construction support, filming, corporate and passenger charter, fire fighting, live fish transfers, and forestry and arboricultural support. During the remainder of the decade, bases are opened throughout the U.K. and the fleet comes to include a mix of 15 Eurocopter AS-315s, AS-350s, and AS-355s, plus Bell 206B JetRangers.

PEACE AIR, LTD.: P.O. Box 6036, Peace River, Alberta, T8S 1S1, Canada; Phone (403) 624-3060; Fax (403) 624-3063; <http://www.peaceair.com>; Year Founded 1962. W. Gayton organizes Peace Air at Peace River, Alberta, in 1962 to offer scheduled passenger air taxi flights throughout the prairie and northern areas of the country. In addition, charter and contract service flights are also undertaken.

Three decades later, in the early 1990s, the company employs 12 workers and a fleet of 1 Piper PA-31-350 Navajo Chieftain, 1 PA-31-310 Navajo, 1 PA-23 Aztec, 1 Cessna 210, 2 Cessna 206s, 2 Cessna 185s, and 1 Cessna 172.

By 1997, Albert Cooper is president and oversees a workforce of 17. The fleet includes 3 each Cessna 172s, C-206s, C-210s and 2 each Navajos and PA-34 Senecas. Revenues total C\$2 million.

During these years, regular scheduled and charter flights are offered to Edmonton City Center Airport, Calgary, Grande Prairie, Fort St. John, Fort Nelson, and Prince George.

A new Pilatus PC-12 joins the fleet in 2000 as scheduled service begins to Jasper/Hinton on September 5.

When new Calgary startup **Capital City Air, Ltd.** begins flying deep-discount services in August, it bills itself as a deep-discount alternative to **WestJet Airlines, Ltd.** and **Air Canada, Ltd.** By November, Capital City's British Aerospace Jetstreams are having so many maintenance problems that flights must be cancelled and many customers are lost.

As the year ends, Capital City is in both operational and fiscal distress and its board of directors is forced to take drastic action. An arrangement is worked out with Peace Air under which it will take over operation of the carrier at the end of January, replacing the Jetstreams with a PC-12. On January 25, all 47 of Capital City's employees will be sacked and negotiations with Peace will begin in earnest on a joint venture or merger.

PEACH AIR, LTD.: United Kingdom (1997–1999). Peach Air is established at London (LGW) in the spring of 1997 to offer charter and inclusive-tour flights to holiday destinations in Europe and the Mediterranean. A subsidiary of **Caledonian Airways, Ltd.** and Goldcrest Holidays, the new company is equipped with 2 used Boeing 737-204s and 2 Lockheed L-1011-385 TriStar 1s wet-leased from **Air Atlanta Icelandic, H.F.** Operations commence on May 1 and continue during the remainder of the year.

While on approach to London (LGW) from Dubrovnik on August 13, 1998, a B-737-204 with 6 crew and 115 suffers a sudden loss of cabin pressure after a crack occurs in a cargo door. The captain and a flight attendant lose consciousness, but quick action by the first officer allows the little Boeing to make a safe emergency landing. The captain and four passengers are taken to hospital with minor injuries.

By November 1, the U.K. charter airline business is rapidly approaching consolidation. In late October, Thomas Cook Group, which has recently purchased and begun to merge both Sunworld and its house carrier **Airworld Aviation, Ltd.**, as well as **Flying Colours Airlines, Ltd.**, acquires Carlson LeisureGroup and its airlines **Caledonian Airways, Ltd.** (2) and Peach Air.

Through the move, Thomas Cook gains Caledonian's slots at London (LGW) and Manchester and with 32 aircraft, now owns the second largest fleet among the nation's charter carriers. Plans are announced for an increase of service from London (STN), Bristol, Cardiff, Birmingham, and Glasgow. The fleet will also be rationalized, with only the TriStars seen as certain for retention.

As the year ends, Thomas Cook Group, which has assigned its own name to the enlarged travel group, is conducting marketing surveys to determine which airline brand name has the best public image and should be retained for the larger carrier. Early betting is that the names Caledonian (with its memory of delays and incidents) and Peach Air will disappear in addition to that of Airworld, with the romantic Flying Colours winning the label. A final decision is promised before the start of the 1999 summer holiday season.

Flying Colours is indeed the surviving airline and its enlarged fleet of 34 aircraft begins the new summer holiday season at the end of March 1999. The amalgamation comes as the European Commission grants permission for Thomas Cook to merge with the Carlson Leisure Group's U.K. travel interests.

PEARL AVIATION (PTY.), LTD.: 7 Slade Crt., Darwin Airport, Darwin, Northern Territory, 0821, Australia; Phone 61 8-89-206666; Fax 61 8-89 453668; Year Founded 1970. Pearl Aviation is established at Darwin in 1970 to provide airport services and to operate executive and small group charters and bush flights throughout the Northern Territory and later, across the nation. By 2000, the company employs 22 full-time workers and operates 2 Beech King Air 200s and 1 each Dassault Falcon 50 and Cessna 550 Citation II.

PEARL AVIATION AUSTRALIA (PTY.), LTD.: Fountelroy Ave., Perth Airport, Perth, Western Australia, 6104, Australia; Phone 61 (8) 9479 2555; Fax 61 (8) 9479 2525; Year Founded 1964. Begun at Wittenoom, Western Australia, in 1964 as the FBO Skywest Aviation (Pty.), Ltd., the company sets up a charter operation in 1967 initially known as **Pilbarra Air Services (Pty.), Ltd.** In 1972, the concern is relocated to Perth Airport at Redcliffe and renamed **Skywest Airlines (Pty.), Ltd.** Skywest wins a government contract in 1978 to provide Coastwatch services on behalf of the Customs Service. As the decade ends, the carrier is operating not only this duty, but some scheduled services and charter flights on behalf of area oil and mining companies.

Stillwell Airlines, Ltd., the largest commuter operator in the region, is purchased in 1980 and merged. **Transwest Airlines (Pty.), Ltd.** is taken over in January 1982 and two more companies are swallowed in 1983: **H. C. Sleight Airlines (Pty.), Ltd.** in July and Tamworth-based **East-West Airlines (Pty.), Ltd.** in December. East-West, which has grown to become the nation's largest regional airline, is allowed to retain its previous moniker.

After East-West is sold to **Ansett Australia (Pty.), Ltd.** in 1987, Skywest Airlines maintains its regional routes independently until 1994, when it, too, becomes an Ansett feeder. Two years later, in 1996, Skywest Aviation is sold to Paspalye Pearl Group and renamed. The Customs Service contract ends in 1997, but a new arrangement is made under which the company flies two Fairchild Metro 23s on behalf of the New South Wales Aerial Ambulance service.

As the decade ends, Pearl, the largest provider of specialist aviation services in Australia, concentrates on the provision of maintenance planning and aircraft acquisition services, performance analysis, and design and training.

A total of 191 workers are employed at the beginning of 2000.

A Cessna 550 Citation II is now based at Perth for charters, with two Beech Super King Air 200s housed at Darwin.

PEARSON AIRCRAFT: United States (1969–1995). Earl Pearson establishes his flying school and charter operation at Fairchild International Airport, Port Angeles, Washington, in October 1969. Employing 1 each Cessna 207 and Cessna 182, he inaugurates scheduled air taxi flights on November 1, 1972. Over the next six years, Pearson maintains operations linking his base with Seattle, Tacoma, and Olympia; his fleet grows to include 4 Cessna 402Cs.

By 1978, enplanements total 18,446. Boardings jump 59.9% in 1979 to 46,000. Freight accelerates by 48.8% to 138,000 pounds.

Scheduled operations are suspended in October **1981** when James Sherrell and **San Juan Airlines** purchase Pearson's scheduled division. Charter and air taxi flights are resumed and continue; meanwhile, following the demise of **San Juan Airlines** in **1986**, a limited number of scheduled services are once more offered. In **1993–1994**, Phil M. Pearson is CEO. Flights cease in **1995**.

PEE DEE AIR EXPRESS: United States (1980–1982). Robert T. Fulmer forms Pee Dee as an all-cargo commuter at Florence, South Carolina, in early **1980**. Equipped with a pair of Piper PA-31-350 Navajo Chieftains, Fulmer's tiny operation flies 1.68 million FTKs of freight by year's end. Small package delivery operations on behalf of air freight forwarders and others continue in **1981**, but the overall number of FTKs operated declines 23.4% to 1.36 million. Operations cease in the recessionary year of **1982**.

PEGASUS AIR: United States (1984). Pegasus Air is established at Washington, D.C. (IAD) in **1984** as the airline division of an FBO/charter operation to provide scheduled passenger services to Philadelphia and to Fayetteville, North Carolina. Although Piper PA-31-350 Navajo Chieftain daily roundtrips are duly inaugurated, they can only be sustained for a few months.

PEGASUS AIRLINES, LTD.: United Kingdom (1958–1961). Located at Blackbushe Airport, Claydon Aviation, Ltd. doing business as Pegasus Airlines, is established in January **1958** to operate charter flights from that location, as well as London (LTN). A **Hunting Clan Air Transport, Ltd.** Vickers Viking is acquired in February and employed to initiate inclusive-tour flights to Mediterranean destinations, beginning at the end of March. Ostend and Jersey are visited during the summer season and into the fall.

In early **1959**, two more Vikings are purchased and these are employed to launch the year's charter season from the new pick-up point of Glasgow. When the airport at Blackbushe is closed in **1960**, Pegasus transfers its base to London (LGW). From the new facility, the carrier also inaugurates a scheduled domestic route to Blackpool.

The company consolidates all of its inclusive-tour activities at Gatwick Airport in the spring of **1961**. In October, Pegasus, in significant fiscal difficulty, announces that it must shut down. The last flights are operated in December.

PEGASUS AIRLINES (PEGASUS HAVA TASIMACILIGI A.S.): 34800 Istayon Caddesi, Yesilyurt, Istanbul, 34800, Turkey; Phone 90 (212) 663-2931; Fax 90 (212) 663-5458; Code PG; Year Founded 1989. Pegasus is established at Istanbul on December 1, **1989** to offer charter and inclusive-tour services to destinations in Europe, the Mideast, and the Mediterranean. Majority shareholding is held by **Aer Lingus Irish Airlines, Ltd.** Revenue operations commence on April 15, **1990**, with a pair of Boeing 737-4Y0s chartered from GPA. One of the jetliners is withdrawn in **1991**, but is replaced in **1992** with a B-737-4Q8, also chartered, from the International Lease Finance Corporation (ILFC).

Operations continue apace in **1993**; however, in **1994**, the carrier is sold to Yapi Kredi Bank and M. Karamehmet. O. Berkman is chairman and his chartered fleet includes 2 B-737-4Q8s and 1 B-737-4Y0.

Destinations visited from Ankara, Antalya, Aoana, Dalaman, Ismir, and Istanbul include: Berlin, Cologne, Dusseldorf, Frankfurt, Hamburg, Hanover, Nuremberg, Helsinki, Joensuu, Jyväskylä, Kuopio, Oulu, Rovaniemi, Oslo, Stavanger, Tromsø, Trondheim, Cork, Dublin, Isle of Man, London (LGW), Manchester, Newcastle, Prestwick, Lyons, Nantes, Mulhouse, Paris (ORY), Amsterdam, Rotterdam, and Tel Aviv.

Another leased B-737-4Y0 is received at the beginning of **1995**. When the winter vacation schedule begins in the U.S. in October, both B-737-4Q8s are subleased to **Carnival Air Lines** and are sent to Miami wearing a hybrid color scheme.

A third chartered B-737-4Y0 is acquired in **1996** as the two B-737-4Q8s remain with **Carnival Air Lines**. Destinations visited in **1997** include Amsterdam, Berlin, Cologne, Cork, Dublin, Dusseldorf, Frank-

furt, Hamburg, Hanover, Helsinki, Isle of Man, Joensuu, Jyväskylä, Kuopio, London (LGW), Lyons, Manchester, Mulhouse, Nantes, Newcastle, Nuremberg, Oslo, Oulu, Paris (ORY), Prestwick, Rotterdam, Rovaniemi, Stavanger, Tel Aviv, Tromsø, and Trondheim.

In late September, when **Carnival Air Lines** is taken over by **Pan American World Airways (2)**, the leased B-737-4Q8s are returned. At the same time, orders are placed for one each B-737-4Q8 and B-737-8Q8 for delivery in spring 1998 and spring 1999, respectively.

The B-737-4Q8, leased from ILFC, arrives under a five-year charter in March **1998**. Flights continue and in November a B-737-4Y0 is leased to **Ryan International Airlines**; Ryan will operate the aircraft for Trans Global Tours on winter season package tour vacation flights from Minneapolis (MSP) to Florida and Las Vegas.

Simultaneously, the B-737-4Q8 is subchartered to **Winair**. The U.S. carrier will employ the jetliner, beginning in March **1999**, to operate replacement service from Newark and Islip, New York, to Florida on behalf of **Sun Jet International Airlines**.

The B-737-8Q8 is delivered on March 25. Configured in an all-economy cabin arrangement, the new aircraft is employed to routes that connect several Turkish cities with destinations in Europe. Upon the failure of **Winair**, the aircraft is returned.

During the fall, an alliance is entered into with **K2000, Ltd.** A B-737-4Y0 is subleased to the Auckland, New Zealand-based start-up, allowing it to begin revenue flights on December 1.

The Pegasus workforce totals 237 at the beginning of **2000**. Citing lack of demand, **K2000, Ltd.** shuts down on January 11. The "Baby Boeing" is returned to Turkey. The B-737 fleet now includes 2 Dash-86Ns, 4 each Dash-4Q8s and Dash-4Y0s, and 1 Dash-42R.

A B-737-4Q8 is subleased to **Air Algerie, S.A.** in February to operate European and regional services.

The second two of a seven-plane request for Next Generation B-737-86Ns are delivered on April 30 and June 2, respectively.

Another B-737-4Q8 is forced to make an emergency landing at Dusseldorf on September 5 after smoke is reported in its cabin. A newly received Next Generation B-737-86N is subleased to **Khalifa Airways, S.A.** on December 29.

PELAIR AVIATION (PTY.), LTD.: P.O. Box 208, Mascot, New South Wales, Australia; Phone 2-9669-3555; Fax 2-9317-5505; http://www.pelair.com.au; Code QH; Year Founded 1996. L. Lewis establishes Pel-Air at Botany, New South Wales, in **1966**, to offer charter and contract service flights. Operations commence and focus largely on the provision of services to the oil exploration industry in Thailand, Malaysia, Burma, Singapore, and New Guinea under contract to Total, Exxon, and British Petroleum.

Later, in the **1980s**, the company begins subcontract service for the larger freight airlines and courier flights for the nation's mining industry. By **1994**, the fleet includes 1 Shorts 330, 1 Dassault Falcon 20, and 7 Israeli Aircraft Industries IAI-1124 Westwinds.

In **1995**, the company wins a contract from the Australian Department of Defence for the provision of six IAI-1124s for use in such diverse activities as target towing, personnel training, and defense system calibration and testing.

Thirty years after start-up, the company, in **1996**, also acquires a fleet of Fairchild Metro IIs and Metro IIIs with which to supplement the company's specialized freight activities.

In **1997–1999**, Pelair flies not only IAI Westwinds and Metros, but several other executive types, including Learjet 35As and 36s and Beech Super King Air 200s. During these years, the company places enhanced emphasis on its time-sensitive "Must Travel Fast Courier" service as well as its "Fly-In/Fly-Out" air service for the mining industry, both products initially begun earlier in the decade. Pel Air also becomes an audited and approved carrier for the UN and even transports the Sydney 2000 Olympic bid committee around Africa.

In **2000**, a Metro III is leased to **McKinley Air Charter (Pty.), Ltd. (Macair)**.

PELANGI AIR SDN. BHD.: 18th Floor, Menara Tr, 161-B Jalan Ampang, Kuala Lumpur, 50450, Malaysia; Phone 60 (3) 262-4453; Fax 60 (3) 262-4515; <http://www.pelangiair.com>; Code 9P; Year Founded 1987. The regional Pelangi (which in the Bahasa Malaysian language translates as "rainbow") is formed at Subang International Airport, Kuala Lumpur, on September 1, 1987. Its purpose is to take over the operations of **Malaysia Air Charter, Ltd.** (nicknamed MACair) and provide scheduled services in addition to the charter flights of **Pan-Malaysian Air Transport, Ltd.**

Malaysian Airline System, Ltd. (MAS) holds 11% shareholding in the semi-state carrier and Dato Abdul Aziz is named chairman/CEO. Other owners of the company, capitalized at \$1.25 million U.S., include the state government of Terengganu (44%), Wira Keris Engineering, which is controlled by the state government of Perak (33%), and Malaysian Helicopter Services (11%). Led by Capt. Ismail A. Bakar as general manager, five MAS executives are seconded over to establish the new company on a firm footing.

Equipped with a pair of brightly liveried de Havilland Canada DHC-6 Twin Otters and manned by a staff of 25, General Manager Bakar's company inaugurates third-level flights to Ipoh, Malacca, and Penang on January 1, 1988. Additional destinations added during the year include Johor Baharu, Kuantan, Kerish, Kuala Terengganu, Kota Baharu, and the island resort of Tioman. Pretax profits total M\$500,000.

Two Dornier 228-208Ks are acquired in 1989-1990 and services are inaugurated to Padang and Pekanbaru, Indonesia, and Singapore. One of the two turboprops acquired is the *Petromas*, which had previously operated on behalf of MACair.

Enplanements total 45,000 in the former year and 60,000 in the latter, while profits in 1989 are M\$685,000, reaching M\$1 million a year later.

A Dornier 228-208K is acquired in early 1991. During the first quarter, orders are placed for two Fokker 50s, with options taken on two more. When **Malaysian Airlines, Ltd. (MAS)** initiates services to Phnom Penh, Cambodia, in the spring, the third-level carrier is forced to abandon its plan to do so. Still, a new route is started to Batam Island, Indonesia, in April. The first Fokker 50 arrives during October and enters service on November 1.

Another Fokker 50 arrives in February 1992 plus a fourth Dornier 228-208K. Zahari Mohammed Noor now becomes general manager. The new Fokkers open services from Kuala Lumpur to Btama and Padang in Indonesia and replace a Dornier 228-208K on an earlier service from Kuala Lumpur to Btama.

On February 3, 1993, Pelangi opens joint return service with **SilkAir, Ltd.** (employing the former's Dorniers) between Malaysia's Tioman Island and Seletar, Singapore.

The fleet in 1994 includes 3 Dornier 228-208Ks, 1 228-212K, and 2 Fokker 50s, 1 of which is leased from **Malaysian Airlines, Ltd. (MAS)**. Tan Sri Saw Hwat Lye becomes chairman, with Abdul Rahman Dat Samsu as general manager/CEO. Orders are placed in 1995 for two each de Havilland Canada DHC-8-200s and DHC-8-300s with which to replace the Fokker 50s. The company begins to suffer from labor problems. When the Malaysian Department of Civil Aviation declares the runway on Pangkor Island to be unsafe, Pelangi is forced to suspend its twice-daily return flights from Kuala Lumpur.

Airline employment stands at 339 in 1996 and three more Fokker 50s arrive, including another MAS machine. Markets served include Banda Aceh, Ipoh, Johore Baharu, Kerteh, Kuantan, Malacca, Medan, Padang, Palembang, Pekan Baru, Penang, Seletar, and Tioman Island.

Due to a mass exodus of pilots, the company is forced to cancel over 175 flights in the month after October 16.

It is announced on November 27 that Pelangi will be purchased by **Malaysian Airlines, Ltd. (MAS)** early in the new year. The flag carrier already holds an 18% stake in Pelangi via its parent **Malaysian Helicopter Services Sdn. Bhd.**

On January 2, 1997, the company is purchased by MAS (18%) and three institutions associated with the Terengganu state government

(82%). Chairman Lye and General Manager Samsu are allowed to remain.

The summer Asian economic crisis that ravages Indonesia also impacts Pelangi. On September 15, the thrice-weekly return services from Banda Aceh to Kuala Lumpur via Penang are suspended. Weekly frequencies are reduced from seven to three to Pekanbaru in Riau, from seven to five to Padang in West Sumatra, from seven to four to Medan in North Sumatra, and from seven to three from Palembang in South Sumatra. It also does not replace the Fokker 50s as originally planned.

Unlike several other Indonesian air transport firms, the company does not fold during the Asian currency crisis and, indeed, will recover from the fiscal difficulties that situation creates. In 1998, twice-daily return service is resumed between Kuala Lumpur to Pangkor Island. The number of flights to cities in Sumatra is now increased.

Pelangi's schedule is sometimes erratic, particularly in the matter of scheduled charters. In mid-August 1999, the Perak government complains that the apparent uncertainties surrounding Pelangi service to Pangkor Island are beginning to affect tourism. State government leaders demand that the airline improve its performance.

At the end of October, the thrice-weekly route from Banda Aceh to Kuala Lumpur via Penang is reopened.

The number of weekly return frequencies from Padang, capital of West Sumatra, to Kuala Lumpur is doubled from three to six during the fall of 2000.

PELICAN EXPRESS: 7501 Pembroke Road, West Hollywood, Florida 33023, United States; Phone (305) 966-9750; Fax (305) 885-8271; Code PEX; Year Founded 1992. Pelican is set up at West Hollywood in 1992 to operate regional FAR Part 135 charter flights to regional destinations. Services commence and continue with a fleet that includes two IAI Jet Commanders and three HFB Hansa Jets.

PELIKAN BLUE LINE: Podgorica, 81000, Montenegro, Year Founded 1997. Privately owned Pekikan is established at Podgorica in 1997 by its CEO/owner Dragan Ivancevic, to offer passenger air taxi flights as well as to provide pilot training. Revenue operations commence with 1 each Aerospatiale Gazelle helicopter, Cessna 172, and Piper Warrior. The company also operates the government's Cessna 421 Golden Eagle under contract. These operations are continued in 1998-1999.

Early in 2000, the company receives an air operator certificate from the Montenegro government for the initiation of scheduled passenger service. Two Let L-410UVPs are acquired and at the end of March, weekly return flights are inaugurated from Podgorica and Tivat to Bari in Italy and Banjaluka, Bosnia-Herzegovina. During the summer, a second flight is introduced between Podgorica and Bari and new weekly roundtrips begin between Podgorica and Skopje.

CEO Ivancevic tells *Flight International* on September 26 that he is planning to grow his workforce to 60 early in the new year and acquire larger aircraft in order to expand his scheduled network throughout Europe.

PELITA AIR SERVICE: Jalan Abdul Muls 52-56A, Jakarta, 10160, Indonesia; Phone 62 (21) 231-2030; Fax 62 (21) 231-2216; Code EP; Year Founded 1963. PAS is the commercial flight subsidiary of Pertamina, the national oil corporation of Indonesia. Formed in early 1963, the company's principal mission is to support its parent as Dinas Penerbangan Pertamina, a department within the company. The unit provides logistical services and support for resource exploration with an initial fleet of 1 Aero Commander and 2 Douglas DC-3s.

On January 24, 1970, the company is reformed and tasked to provide contract, charter, and leasing operations in support of the national oil and gas industry.

Operations are undertaken with Fokker F.27s, de Havilland Canada DHC-6-300 Twin Otters, and Shorts SC-7 Skyvans. Between April and May 15, a BAC 1-11-416 is leased from its manufacturer; it will be char-

tered again in **1974–1975**. On both occasions, the aircraft is subleased to **Merpati Nusantara Airlines** to fly Australian passengers from Darwin to Denpasar on the island of Bali.

Flights continue in **1976–1977**. The company now has the opportunity to perform a useful public service. When Lockheed in the summer of **1978** dispatches an L-100-30 civil Hercules demonstrator to Indonesia for examination by the oil industry, it provides a series of twice-daily preview flights from Jakarta to Padang and Jambi, Sumatra. Rather than fly empty, the aircraft transports 1,300 families from the capital region to their new homes in the government's resettlement territories.

Flights continue without incident in **1979**; however, there are two accidents in **1980**. A chartered CASA C-212 Aviocar 100 with 3 crew and 10 passengers crashes into Cemonyet Mountain on January 23 in bad weather; there are no survivors. Having run out of fuel, an F.27-400 freighter with four crew crashes onto Misool Island on October 13; this time, there are no fatalities.

In **1981**, PAS becomes a "profit center," with a separate headquarters located at Jalan Abdul Muis No. 52-56A Jakarta; its fleet is based at Pondok Cabe, known as Pondok Cabe Airfield.

For a period in the **1980s**, Pelita continues to be engaged in the government-sponsored transmigration effort to relocate thousands of citizens from heavily populated Java to other islands in the archipelago. A private operation, PAS releases neither traffic nor financial data. Beyond the 1,300 families transported in the Lockheed demonstration, no one knows how many people the company relocates.

While descending from 3,000 ft. on January 24, **1984**, an IPTN (CASA) NC-212-200 Aviocar with two crew and seven passengers crashes into a mountain near Manado (six dead).

Toward the end of the decade, the fleet comprises 8 Fokker F.28-1000/4000s, 2 Fokker F.27s, 6 Lockheed L-382G Hercules freighters, 5 de Havilland Canada DHC-7-103s, 3 Transall C-160Ps, 3 British Aerospace BAe (HS) 125-600Bs, 8 Shorts SC-7 Skyvans, 4 IPTN (CASA) Indonesian-made CN-212-100 Aviocars, 8 IPTN (CASA) NC-212-200s, 2 Piper PA-31 Navajos, and 40 helicopters.

An IPTN (CASA) NC-212-200 Aviocar with 3 crew and 13 passengers reports mechanical problems and ditches into the Java Sea on January 2, **1990** (9 dead).

The equipment of Director Oedyono Adwisastro's 2,199-employee company is upgraded in the early **1990s**. In **1991**, the fleet includes 1 leased BAe (BAC) 1-11-401AK, 2 F.28-1000s, 5 F.28-4000s, the 5 DHC-7-103s and 3 C-160Ps, now upgraded by the addition of 3 C-160NGs and 1 BAe 146-200. The Fokker Friendships and one Hercules are removed. Orders are outstanding for a Fokker 100, a Grumman G-111 Albatross, and one each Grumman Gulfstream II and Gulfstream III.

The fleet in **1992** features the delivered Fokker 100, the Grumman G-111 Albatross, 2 Grumman Gulfstreams, the remainder of the 1991 fleet, and 54 helicopters, including 34 German-made MMB BO-105Cs. In **1993**, airline employment stands at 2,153.

Services continue apace in **1994** as orders are placed for five Fokker 70s with which to replace the F.28s. To assist **Sempati Air** with capacity requirements on its new route from Jakarta to Christmas Island, the company leases to it the F.28-4000 *Kurau*.

The first new Fokker 70 is delivered at the end of September **1995**. Two more Fokker 70s arrive in **1996** and in July the company signs a memorandum of understanding with Lafayette, Louisiana-based **Petroleum Helicopters, Inc.** to cooperate on the upcoming \$2-billion NATUNA offshore project, which is being jointly developed by Esso and Indonesia's government oil company. Both companies will provide full-time offshore flight service within two years.

Two additional Fokker 70s enter service during **1997** as the company is entrusted by the UN to perform light operations in Africa and South-east Asia for humanitarian missions. Drawing on its income from the energy industry during the time of Indonesia's economic upheaval, Pelita continues flying in **1998**. It does, however, remove the British Aerospace BAe 146-200 Statesman executive aircraft acquired back in 1986.

The Fokker F.28-4000 *Matak* is leased to **Air Ivoire (Societe Ivoirienne de Transport Aerien, S.A.)** in September **1999**. A new Avro RJ85 is received before Christmas.

A total of 977 workers are employed at the beginning of **2000**. The fixed-wing fleet now includes Fokker 100s, Fokker 70s, Fokker F.28-1000s/-4000s, Gulfstream G-IIIs, DASH-7s, CASA 212-200s, and an Avro RJ85. The rotary-wing component includes Sikorsky S-76, Bolkow NBO-105, Eurocopter SA-330J Puma, and SA-332C Super Puma helicopters.

While on final approach to a bush field in Aceh Province on a December 19 Exxon charter from Medan, a DASH-7 is forced to abort and pull up when gunmen open fire on it from the ground. The de Havilland is hit by at least three bullets, but is able to safely return to its point of origin.

PEM AIR, LTD.: Pembroke 8, Area Municipal Airport, RR 6, Pembroke, Ontario K8A 6W7, Canada; Phone (613) 687-8139; Fax (613) 687-5166; <http://www.pemair.on.ca>; Code PD; Year Founded 1970. A group of Pembroke and area businessmen set up Pem Air, Ltd. in the spring of **1970** to undertake scheduled air taxi flights to Toronto. Employing a Beech 18, the company inaugurates revenue services from Pembroke and Area Municipal Airport in late May.

An ex-**Great Lakes Airlines, Ltd.** Douglas DC-3 is acquired in **1971**, followed by a second in **1972**. These are employed to stretch routes to North Bay and Montreal. A third DC-3 is acquired in **1976**. Two years later, in **1978**, one of the Douglas transports is replaced by a new Beech 99. In **1979**, the last two DC-3s are withdrawn and in **1980**, two Piper PA-31-350 Navajo Chieftains are placed into service.

President Delbert A. O'Brien oversees a workforce of 20 in **1981**. The following year, the Beech 99 is sold to **Bearskin Lake Air Service, Ltd.** In **1983–1984**, a third Navajo Chieftain is purchased. By **1987**, a total of six PA-31-350s are in service and a new market has been opened at Cornwall.

Two Navajo Chieftains are withdrawn in **1989**. In **1990**, another Navajo Chieftain is withdrawn and replaced by a Beech King Air 100. In **1992**, the fleet is further downgraded; the remaining Pipers are replaced by two more King Air 100s. Operations continue largely without change in **1993–1996**.

To replace air service lost with the closure of **NorOntair, Ltd.** in 1995, the Ontario Northland Transportation Commission on June 1, **1997** provides C\$150,000 per year for two years to nine northeastern communities in the province. The funds will be employed by the cities to fund replacement flights. Pem Air receives C\$900,000 to link six of these towns and cities.

Under the direction of General Manager Jason O'Brien, the Pembroke-based carrier starts daily Navajo Chieftain service under the program from Elliot Lake to Toronto via Gore Bay. During the remainder of the month, Pem Air makes arrangements to station a PA-31-350 and ground crew at both Elliot Lake and Wawa.

Using Elliot Lake as a hub, Pem Air launches daily service on July 1 to Chapleau, Hornepayne, and Wawa. It also serves Kirkland Lake and the Tri-Towns (through Earlton) with improved scheduling to Sudbury and Elliot Lake. From those points, flights are offered to Toronto. It is expected that the increased feed from northern Ontario will make the entire new network profitable and worth sustaining after subsidy ends.

These flights, together with other services, are maintained throughout the remainder of the year and in **1998**.

Early in **1999**, a new subsidiary, Trillium Air, Ltd. is established and outfitted with a British Aerospace BAe Jetstream 31. The new enterprise launches a daily schedule in June linking Kitchener–Waterloo Regional Airport with Ottawa.

The new enterprise launches a daily schedule on June 21 linking Kitchener–Waterloo Regional Airport with Ottawa.

Pem Air frequencies are maintained in **2000**. Airline employment stands at 43 and the fleet now includes 2 each Jetstream 31s, Piper Navajo Chieftains, and Cessna 172s and 1 each Beech King Air 100, King Air 90, and Cessna 150.

A new subsidiary, Trillium Air, Ltd., is established in June and initiates daily Jetstream 31 roundtrips connecting Kitchener–Waterloo International Airport with Ottawa.

PENA TRANSPORTES AEREOS, S.A. (PENTA): Placa Eduardo Gomes s/n, Santarem, Paras, 68025-710, Brazil; Phone 91-522-6719; Fax 91-522-6025; Year Founded 1994. Pena Taxi Aereo, Ltd. is established in 1994 to offer nonscheduled passenger and cargo services throughout the country. Operations commence with 2 Embraer EMB-110 Bandeirantes, 1 of which is leased from **Brazil Central (Linha Aerea Regional, S.A.)**, and 2 Cessna 208s, both chartered from the same airline.

Operations continue apace in 1995–1996. The fleet is increased with another Brazil Central Caravan I, a McDonnell-Douglas MD-500N helicopter, and a Neiva (PA-31T) NE-821.

The company is reorganized and renamed in 1997. Founder Cesar Pena Fernandes remains president. In December, two de Havilland Canada DHC-8-314s are chartered from **SA Express (Pty.), Ltd.**

Flights continue in 1998–2000.

PENAIR. See PENINSULA AIRWAYS (1)

PENINSULA AIR (PTY.), LTD.: Australia (1993–1995). This regional carrier is established at Melbourne in January 1993 and Managing Director Joanne Jenner begins scheduled passenger and cargo flights almost immediately. The inaugural fleet includes 1 each Cessna 421 Conquest, Cessna 402, Cessna 310, Beech 58 Baron, Piper PA-31-310 Navajo, and Piper PA-34 Seneca.

Flights continue apace in 1994 as Canberra joins the route network and orders are placed for two Piper PA-31-350 Navajo Chieftains, one of which enters service by year's end. Unable to continue, the company shuts down in February 1995.

PENINSULA AIRWAYS (1): 6100 Boeing Avenue, Anchorage, Alaska 99502, United States; Phone (907) 243-2485; Fax (907) 243-6848; <http://www.penair.com>; Code KS; Year Founded 1955. Orin D. Seybert, 17, arrives at Pilot Point, Alaska, with his schoolteacher parents and a two-seat Taylorcraft, in 1954. The following year, the youth also acquires a four-seat Piper Tri-Pacer.

In the spring of 1956, Seybert organizes Peninsula Airways at King Salmon, Alaska, to provide charter passenger and cargo flights to local and bush destinations, with the special attention to the needs of the seafood industry. Flights commence with a four-seat Piper Tri-Pacer.

Peninsula is incorporated on March 1, 1965. Alaska Aeromarine, the fixed base operator at King Salmon, is purchased. The arrangement gives Seybert the local Standard Oil dealership, two more airplanes, and an airport with connecting airline services to Anchorage provided by **Northern Consolidated Airlines** and **Pacific Northern Airlines**.

In 1966, Peninsula determines to offer its own service to Seattle. The long-haul flight is to be executed with a Douglas DC-4 that unhappily fails its November 17 takeoff from Seattle with 28 aboard and crashes; there are no survivors.

A contract is signed with **Reeve Aleutian Airways** in 1967 to provide contract flights linking King Salmon with Egegik, Ugashik, Pilot Point, South Naknek, and Levelock. Piper and Cessna lightplanes are employed. Over the next decade, Convair CV-580s and de Havilland Canada DHC-6 Twin Otters are occasionally leased from the partner.

Founder Seybert, who by this time is married, on May 1, 1969, purchases Tibbetts-Herre Airmotive, the 19-year incumbent FBO at Naknek. With Orin as president and his wife Jennie as secretary, George R. Tibbetts now becomes the new vice president.

In the period from 1970–1976, Peninsula launches regular service between King Salmon and the Pribilof Island communities of St. Paul and St. George. The routes are subsidized by the National Marine Fisheries Service and the U.S. Postal Service. These flights and other charters are undertaken with a Grumman G-73 Super Widgeon wet-leased from **Reeve Aleutian Airways** to Dutch Harbor, Atka, and Adak.

Two Grumman G-21 Goose amphibians are purchased from Reeve Aleutian Airways on February 1, 1977. These are employed to expand the subcontract to all bush points certificated to Reeve throughout the Alaskan Peninsula and Aleutian Islands. To assist in the performance of this task, Peninsula sets up an operating base at Cold Bay complete with offices, hangars, and employee housing.

Contract and charter services are maintained throughout 1978–1979.

Following receipt of its own Part 401 certificate from the CAB, together with FAA Part 135 operating authority in 1980, Peninsula begins scheduled commuter flights to points in the southwestern part of the state, while charter and contract service flights are continued. Destinations visited in the Pribilof Islands, Alaskan Peninsula, and Bristol Bay areas include Cold Bay, Egegik, Igiugig, King Salmon, Levelock, Naknek, Nelson Lagoon, Pilot Point, Port Island, South Naknek, and Ugashik.

In 1983, the company acquires its first turbine aircraft, a Cessna 441 Conquest, which is employed on operations out of Cold Bay. The fleet of 1 Piper Conquest, 2 Grumman G-21 Geese, 1 Grumman G-73 Super Widgeon, 1 Piper PA-23 Aztec, and several smaller floatplanes maintain services during the remainder of the year and throughout 1984. Peninsula is the first Alaskan air carrier to qualify for the CAB's Essential Air Service (EAS) subsidy and provides such service to various points in the Aleutians and Kodiak Island.

All of the assets of Kodiak-based Air Transport Services are purchased in 1985. The acquisition brings a hangar, offices, two Piper PA-31-310 Navajos, a Cessna 207, and a Britten-Norman BN-2 Islander. The new aircraft allow year-round scheduled service to be provided to all points on the island.

Late in the year, the Seybert family and the company move to Anchorage, where a new hub is started at Lake Hood. Two Conquests are stationed at the new base, first to provide charters and then scheduled service to the Pribilof Islands.

Two 50-passenger Convair CV-580s are acquired in early 1986 and scheduled service is launched from Anchorage to King Salmon and Dillingham. The first of six Fairchild Metro IIIs is placed into service in June 1987.

Early in 1988, amphibious operations cease as the company is transferred to Anchorage. All of the previous fleet is sold except for 1 Navajo, the Islander, and the Conquest. To handle cargo operations, a Cessna 208 Caravan I is now purchased.

When the bush operators at Dillingham lose their certificates after failing FAA inspections, Peninsula establishes a base in that community, with a hangar and the Piper Aztec and Cessna 207, before their disposal. New scheduled routes are initiated to the surrounding region.

On October 27, President Seybert visits **MarkAir's** offices to confer with Vice President Larry Anderson. Discussion ensues on possible collaboration on route distribution. It will later be alleged that **MarkAir's** suggestions constitute an attempted limitation of competition on routes between Anchorage and southwest Alaska regional hubs.

The fleet is supplemented in 1989 by three Fairchild Metro IIIs.

In April, Peninsula is one of five Alaskan air carriers subpoenaed by the Department of Justice to provide information in an investigation of possible antitrust violations in the airline industry. Together with **Reeve Aleutian Airways**, **Frontier Flying Service**, **Ryan Air Service**, and **Alaska Airlines**, Peninsula is required to supply documents dating back to January 1, 1984, to a May 9 grand jury session, or forward them directly to Washington. Although the airline subpoenas do not name a target, the May 6 issue of the *Anchorage Daily News* reports the subject is **MarkAir**. President Seybert confirms to the newspaper that he has been contacted by DOJ lawyers within the past year concerning possible antitrust violations by Neil Bergt's carrier.

Peninsula is now contracted by Exxon Corporation to provide support flights to the area of the *Exxon Valdez* oil spill cleanup. At the same time, a contract is received from Alaska Regional Hospital to provide 24-hour fixed-wing medevac services.

The fleet is increased in 1990 by three more PA-31-310s and six PA-32 Cherokee Sixes. Authority and a contract is obtained to provide

Essential Air Service (EAS) flights to three more Alaskan communities and, as a result, traffic figures are now reported. These show that the 132-employee carrier flies a total of 72,150 customers on the year.

Another Metro and three additional Cherokee Sixes are purchased in 1991. The company is reformed and adopts the marketing title Peninsula Airways, doing business as **PenAir**. Jennie Seybert becomes the majority shareholder (51%) and is elected board chairman. Orin holds a 15% stake and remains as president. During the spring and summer, the carrier is successfully inspected by Exxon, the U.S. Office of Aircraft Services, the DOD, and survives two FAA "white glove" safety reviews.

A PA-32 must be written off following an August 22 crash at Togiak, Alaska. By September, the company holds 28% of the market on the route between King Salmon and Anchorage.

Another Conquest and three Grumman Geese are acquired as the carrier in November becomes a part of the **Alaska Airlines** commuter network. The major's "4200-4299" codes are assigned to the PenAir Metroliner flights out of Anchorage and all passengers on those routes are eligible to receive Alaskan frequent flyer club miles.

Enplanements for the year surge 27% to 103,428.

Peninsula Airways is able to avoid direct involvement in the debilitating fare war between **MarkAir** and **Alaska Airlines** in early 1992. The carrier, together with Alaska and **Reeve Aleutian Airways**, now begins to coordinate schedules and exchange passengers with Alaska's jetliners serving Anchorage. During the summer, thousands of fishermen and processing workers are flown out to harvest Bristol Bay salmon.

Traffic declines at the Seyberts' small regional in 1993, as passenger boardings are off 5.6% to 97,641. The growth pattern is reentered in 1994, however, as customer bookings accelerate 17.7% to 114,800. These permit small profits: \$1.25 million (operating) and \$179,000 (net).

Airline employment stands at 250 in 1995 and several new routes are inaugurated, including Aniak, St. Mary's, and McGrath. Orders are placed for a pair of SAAB 340Bs. A new headquarters is opened in Anchorage.

While taking off from a gravel airstrip at Toksook on May 8, the right main tire of a PA-31-350, with one pilot and five passengers, strikes a snow berm, causing the tire and gear strut to separate from the landing gear. The aircraft continues to Dillingham, where a gear-up landing is made. Although no injuries are reported, the aircraft is badly damaged.

A Grumman G-44 with two passengers ground loops while taking off from Kodiak on July 31; although no injuries are reported, the left wheel rim is broken near its hub.

En route from Dutch Harbor on August 11, a G-21A, with two passengers, disappears; search and rescue efforts are suspended four days later.

By November, the company has become the largest commuter or regional airline in Alaska, a title later turned over to **ERA Aviation**.

Enplanements accelerate another 30.8% to 150,311 and 5.06 million FTKs are also operated. Operating income grows by 15.5% to \$25.5 million and costs rise only 11.3% to \$23.2. Profits grow substantially, with operating gain up to \$2.3 million and a net \$800,000 profit reported.

Following a service from Saint Paul Island, a Swearingen Metro III with 2 crew and 11 passengers makes a hard landing at Saint George Island on May 3, 1996, during which the right main landing gear and the nose landing gear both collapse. There are no fatalities.

A month before **Reeve Aleutian Airways** halts its contract service, Peninsula, on June 4, begins thrice-weekly Metroliner service from Anchorage to Adak. The premier SAAB 340B joins the fleet late in the year, becoming the first of the Swedish type to see service in Alaska.

Overall passenger boardings for the year jump 7.7% to 161,826.

The fleet in 1997 includes 2 newly acquired SAAB 340Bs, plus 11 Piper Saratogas, 6 Metros, 6 Navajos, 4 Cessna 208 Caravans, 2 Cessna Conquests, 2 Gooses, 2 Turbo-Gooses, 2 Widgeons, 2 Cherokee Sixes, and 1 each Cessna 206, C-185, C-180, and Piper T-1040.

Flight 354, a Cessna 208 with one pilot and two passengers, impacts trees just after takeoff from Naknek on July 21; although no injuries are reported, the aircraft sustains substantial damage.

Customer bookings climb 8.9% to 176,170.

Just after takeoff from Port Heiden on a January 30, 1998, all-cargo service to Chignik, an iced-up Cessna 208A impacts open, frozen tundra 1 mi. SW of its point of origin; the pilot is not injured.

A PA-32 with one pilot and three passengers lands short of the runway at Kongiganak on February 24 and is substantially damaged; no injuries are, however, reported.

Flight 323, a Grumman G-21A with a pilot and eight passengers, on a return flight from Akutan to Dutch Harbor on April 15, is held up from landing for 15 minutes due to weather. The pilot elects to set the amphibian down on the water 6 mi. W of Unalaska Airport to await improvement. The Goose porpoises on a swell and its left horizontal stabilizer strikes the water and is damaged. Consequently, a rescue boat is sent out to take off the passengers and the plane is water-taxed to the harbor.

Flights continue apace during the remainder of the year. Passenger boardings inch up 1.9% to 201,000, while cargo traffic rises 11.3% to 7.46 million FTKs. Revenues also grow a slow 1.9% to \$35.22 million.

By the beginning of 1999, the workforce has been increased by 8.6% to 380.

While landing at Chefornak after a March 27 service from Bethel, Flight 421, a PA-32 with one pilot and one passenger, loses its nose landing gear after hitting hard. Although the aircraft is badly damaged, neither person aboard is hurt.

Customer bookings rise 6.6% during the year to 192,000.

A total of 350 workers are employed at the beginning of 2000.

When **Reeve Aleutian Airways** suspends its scheduled services on December 6, Peninsula agrees to accept Reeve tickets until December 8.

PENINSULA AIRWAYS (2): United States (1973). PA-2 is set up as a tiny passenger and commuter carrier at San Carlos, California, in 1973. Cessna 402 revenue flights commence on local routes, but cannot be maintained to year's end.

PENN-AIRE: United States (1980). W. C. McQuaide establishes Penn-Aire at Altoona, Pennsylvania, in the spring of 1980 to offer scheduled passenger services to New York (LGA). Employing a Piper PA-31-310 Navajo, McQuaide inaugurates daily roundtrips in June. Expected traffic does not materialize and the company shuts down in July.

PENNSYLVANIA AIR LINES AND TRANSPORT COMPANY (PAL): United States (1930–1936). Early in November 1930, **Clifford Ball Air Line** is purchased by the Pittsburgh Aviation Industries Corporation (PAIC) and renamed **Pennsylvania Air Lines (PAL)**. Both the holding company and airline have the same principal stockholder, board chairman, and president: George R. Hann. The previous passenger services between Cleveland, Pittsburgh, and Washington, D.C. and airmail flights between Cleveland and Pittsburgh are maintained.

The company's inherited, two-year-old Contract Air Mail Route No. 11 from Pittsburgh to Cleveland is extended to Washington on June 1, 1931 and a week later, PAL aircraft begin flying mail to the nation's capital. While flying over Pittsburgh en route to Cleveland on November 28, the engine of Melvin Garlow's New Standard D-27 quits; Garlow bails out safely, but the mailplane slams into the front of the city's Exposition Building tearing away its front to a height of 100 feet.

Services continue without significant change in 1932. On October 21–22, while flying over the Allegheny Mountains near Somerset, Pennsylvania, Murl Estes' mailplane catches fire, forcing him to bail out. The Ford 5-AT-53 is purchased from **National Air Transport (NAT)** on June 27, 1933. **National Air Transport (NAT)** will sell PAL four more Tri-Motors during the remainder of the year: 5-AT-52 on June 29, 5-AT-26 on July 10, 5-AT-15 on October 17, and 5-AT-73 on November 29.

On February 9, 1934, the U.S. Post Office, as a result of charges in the so-called "Air Mail Scandal," cancels all existing airmail contracts. The White House now calls upon the U.S. Army Air Corps to fly the mail, a military option that is not successful. PAL continues passenger

and air express, sporadically, as it awaits the outcome of the government's experiments. As a result of the Air Corps failure, the Post Office rebids the contracts at the end of March.

Prohibited from applying are any companies that had participated in the so-called "Airline Spoils Conference" hosted by Postmaster General W. F. Brown in 1930. As a result, PAL, like numerous other carriers, slightly changes its corporate identity, becoming Pennsylvania Air Lines and Transport Company. While retaining considerable influence due to his shareholding, Board Chairman George R. Hann resigns. The Post Office opens applications at the close of April.

A new Pittsburgh competitor, **Central Airlines**, underbids PAL for its old route and begins mail and passenger flights from Washington to Cleveland in May. The Washington–Cleveland passenger service is reopened by PAL in June, during which month the assets of the **Kohler Aviation Corporation**, which had ceased operations in March, are acquired by purchase. Late in June, the company wins a Detroit–Milwaukee mail contract, which it begins on July 5 with three Keystone-Loening C-2C amphibians obtained in the Kohler takeover. On December 26, the company announces the purchase of a fleet of Boeing 247Ds from **United Air Lines (UAL)**. Former Kohler Chief Pilot Joseph Doerflinger, who had come over in the merger, is released at year's end.

Late in **1935**, competition with **Central Airlines** intensifies when the new entrant acquires Ford Tri-Motors. PAL loses heavily. The Fords 5-AT-15, 5-AT-26, 5-AT-53, and 5-AT-73 are sold to Lowell Yerex, founder of **TACA (Transportes Aereos Centros-Americanos, S.A.)**, on January 21, **1936**, while the 5-AT-52 passes to the same carrier five days later; they will all be ferried to Honduras six months later.

In April, PAL acquires three Boeing 247Ds from **United Air Lines (UAL)**. These are given a modified United logo, consisting of a circle and bar inset with a keystone and symmetrical wings. Chief Pilot R. L. "Bud" Baker, who flew Clifford Ball's inaugural service, places the first into service on the Washington–Detroit route at month's end. **Central Airlines** counters with five new Stinson Model As. A fare war begins between the two carriers which, after heated negotiations, is resolved and leads to a merger on November 1.

PENNSYLVANIA AIRLINES: United States (1970–1992). Harrisburg Commuter, a subsidiary of the L. B. Smith Aircraft Corporation, operating regularly scheduled passenger and cargo revenue flights from Harrisburg to State College and from Harrisburg and Lancaster to Washington, D.C. (DCA), is purchased on January 29, **1970** by L. W. "Roy" Clark. The company is reformed, reregistered as **Pennsylvania Commuter Airlines**, and outfitted with a fleet of Beech 99s. Later in the year, the company begins flying daily roundtrip replacement service for **Eastern Air Lines** over the major's route from Lancaster to Washington, D.C. (DCA).

Daily scheduled Cessna 402C service is inaugurated in **1971** linking State College with Pittsburgh, while a Beech 18 route is stretched from the home of Pennsylvania State University down to Washington, D.C. Although the Smith company had agreed two years earlier to provide financing for the next decade, Clark is able to repay the loan by the end of **1972**.

On October 1, **1973**, the Lancaster–Washington feeder affiliation with **Eastern Air Lines** is dropped in favor of membership in **Allegheny Airlines (1)'s** "Allegheny Commuter" network. With its aircraft repainted in the distinctive red and white livery of the nation's premier regional affiliation, PCA not only maintains its previous frequencies (including Lancaster), but adds a new route from Philipsburg, Pennsylvania, over to Pittsburgh.

In **1974–1975**, additional destinations are added as a significant local route network is assembled; Harrisburg, Philadelphia, Pittsburgh, and Newark all become key destinations. When Johnstown-based Allegheny partner **Air East** has a bad accident and is forced to close late in the year, PCA steps in to take over its assets and route network.

Enplanements in the latter year are 149,899.

Airline employment in **1976** stands at 120. The carrier's six Beech 99s, Cessna 402, and Cessna 310 inaugurate new services from Pitts-

burgh to State College. During the first quarter, company aircraft also begin to fly over the former **Air East** route from Altoona to Pittsburgh via Johnstown.

Passenger boardings jump 17.5% to 180,167 and freight is up by 11.6% to 2.61 million FTKs.

Company headquarters are transferred to Harrisburg International Airport at Middletown in **1977** and the fleet is upgraded to include three de Havilland Canada DHC-6-200 Twin Otters.

Enplanements total 205,264.

The workforce is increased by 27.7% in **1978** to 120. Following President Carter's October signing of the passenger airline deregulation law, Pennsylvania initiates a number of new routes, increasing its route network by 23.6% to 1,931 unduplicated miles.

Commuter traffic rises by 11.7% as 229,352 passengers are carried.

Airline employment grows by 40% in **1979** to 210. Three leased Mohawk 298s are acquired from **Allegheny Airlines (1)** in early spring and orders are placed for three Shorts 330s. The former Nord 262s, once operated by **Lake Central Airlines** prior to its takeover by **Allegheny Airlines (1)**, enter service over a new route from Pittsburgh to Williamsport.

Passenger boardings balloon upward 56.5% to 358,890.

Airline employment in **1980** stands at 228, an 8.1% boost, as the first Ulster-made Shorts turboprop joins the fleet together with a fourth chartered Mohawk. Orders are placed for six DHC-8s and two Embraer EMB-120 Brasilas.

"Commuter" is dropped from the airline title and the year's bookings advance by 12% to 401,711, a new record.

An employee appreciation program is started in **1981**, as is a new in-flight magazine. Service is initiated to New York (JFK and LGA) as two more Shorts 330s are added. The PATCO air traffic controllers' strike and subsequent ATC restrictions significantly impact traffic. As a result, airline employment is reduced to 167 during the fourth quarter.

Enplanements fall all year (only April and May show increases), down 7.8% to 370,374. Cargo does even worse, plunging 37% to 565,480 pounds.

Although slot restrictions again hamper growth, expansion brings a workforce increase of 21.6% in **1982** to 203. The fleet now includes 5 Shorts 330s, 4 Mohawk 298s, 3 DHC-6s, and 6 Beech 99s. After introducing flights between Philadelphia and New York (JFK) in June, the company steadily increases to reach first position in the market.

Still, overall passenger boardings dip 3.1% to 358,754.

In **1983**, new general offices and a maintenance center are occupied at Harrisburg International Airport and the last Mohawk is retired in May.

Having resigned from his job at the airline just hours earlier, passenger Wilmer W. Stillman jumps out of the emergency door of a Shorts 330 during the October 29 Harrisburg–Washington, D.C. flight; his body is found near Newberrytown, Pennsylvania, on November 5.

Customer bookings rebound, jumping 12.9% to 403,561. Cargo advances 6% to 402,000 pounds.

Airline employment in **1984** is 220 and the fleet comprises 4 Shorts 360s, 7 Shorts 330s, and 3 de Havilland Canada DHC-6 Twin Otters. With the arrival of two Shorts 360s during the year, the last Beech 99s are sold. Founder Roy Clark retires during the year, turning the business over to his son, William C. "Bill" Clark.

Passenger boardings jump 15.1% to 464,462 and freight dips 0.1% to 401,000 pounds.

In April **1985**, 100% shareholding is acquired by USAir Group, which now restructures its Allegheny feeder system into "USAir Express."

Customer bookings ascend 4.6% to 485,942, but cargo falls 12.5% to 351,000 pounds.

The 200-employee large regional enjoys a 9.9% increase in enplanements in **1986** to 534,287. Freight dips a further 0.4% to 350,000 pounds.

Airline employment is increased by 32% in **1987** to 230 as the carrier enjoys a record passenger year. Founder Roy Clark dies on March 18 at the age of 76.

Enplanements jump 29.3% to 690,618. Freight, however, is down by 15.9% to 294,000 pounds.

The workforce doubles in **1988**, up 52.2% to 350 and the fleet now includes 4 Shorts 360s, 2 Shorts 330s, 9 leased Beech 1900s, and 1 chartered Shorts 360.

The record previous year's traffic flow turns into a mere trickle as passenger boardings rise only 0.6% to 694,817. Cargo grows by 6.3% to 313,000 pounds.

Employment, fleet, and traffic all remain level in **1989**. Customer bookings total 694,607.

The fleet in **1990** includes 13 Beech 1900s, 5 de Havilland Canada DHC-8-201s, and 5 Shorts 360s.

Passenger boardings renew their upward glide path, climbing 8.4% to 752,926.

The fleet of the 361-employee regional grows by 3 DHC-8-201s in **1991** as 1 Shorts 360 is retired.

Customer bookings accelerate 18.1% to 889,237.

In August **1992**, the United Automobile Workers (UAW) is only able to obtain 89 of 210 eligible votes in a representation election held by company mechanics. Later in the month, the subsidiary is merged with **Allegheny Commuter**, formerly **Suburban Airlines**, to form **Allegheny Airlines (2)**. President Bill Clark of Pennsylvania becomes CEO of the enlarged operation.

PENNSYLVANIA AVIATION. See WINGS AIRWAYS

PENNSYLVANIA CENTRAL AIRLINES (PCA): United States (1936–1948). Following an intense competition in the skies over the northeast U.S., the rivals **Central Airlines** and **Pennsylvania Air Lines and Transport Company (PAL)** merge into the new Pennsylvania Central Airlines (PCA) on November 1, **1936**. Financier George R. Hann is chairman, with PAL's C. Bedell Monro as president and Central's James H. Carmichael as chief pilot. Central's Stinson Model A Tri-Motors and PAL's Boeing 247Ds are initially employed.

Flooding during the extreme winter of early **1937** isolates Pittsburgh. Outfitted with special tires, the carrier's Boeings are, for awhile at least, the only aircraft able to fly into or out of the city. Later in the first quarter, 4 of the PAL B-247s are sold after the crisis, as an arrangement is made with **United Air Lines** for the purchase of 10, later 13, B-247Ds. As the result of new U.S. Post Office bids let on June 11, the company in August receives the Contract Air Mail route 34, Washington to Buffalo via Harrisburg. Service over the 330-mile new route is inaugurated in October.

The Stinsons are replaced in **1938**. Prior to the Japanese attack on Pearl Harbor, this small trunk consolidates a route system west and south of the District of Columbia with slots in cities from Baltimore and Buffalo to Chicago and Birmingham.

Orders are placed for Douglas DC-3s in **1939** and Operations Manager James H. Carmichael delivers the first DC-3 to Pittsburgh from Burbank in December. Meanwhile, a "Tobacco Route" is stretched south from Norfolk, Virginia, via North Carolina to Knoxville, Tennessee, and on to Alabama. With additional Douglas transports on hand, frequencies on the Washington to Detroit via Pittsburgh and Cleveland route are increased to seven per day on January 2, **1940**. Also, The Capital Lines marketing term is also applied to three daily roundtrips from Washington to Norfolk and from Detroit to Chicago. In April, Operations Manager Carmichael is promoted to vice president-operations. While en route from Washington to Pittsburgh on August 31, a DC-3 encounters a thunderstorm that forces it into the ground near Lovettsville, Virginia (25 dead). Five more DC-3s join the fleet during the year.

A B-247D, piloted by Capt. Russell Wright, loses an engine and fails its takeoff from Charleston, West Virginia, on April 16, **1941** and lands in a grove of trees near the Kanawha River. Sliding along the mountain-side, the plane suffers the loss of its wings, but its fuselage remains intact; only stewardess Irene Coates is injured. During the summer, company headquarters are shifted from Pittsburgh to Washington, D.C.

The fleet now totals 18 Douglas DC-3s and 5 Boeing 247Ds. These transport a total of 342,872 passengers over a scheduled network of 19,564 unduplicated miles.

In late December, the U.S. Army takes over two-thirds of the carrier's fleet, allowing the seven planes remaining to be employed after March **1942** in the first domestic scheduled military cargo service. This Air Transport Command contract sees Penn-Central's planes delivering men and goods between Chicago and Washington and later between Harrisburg and San Francisco.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen and promised by ATA President Edgar Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities. The aircraft are dispatched to Edmonton, Alberta, to participate in a massive contract airlift that is quickly organized for the defense of Alaska. Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Beginning in mid-July, the company contributes aircraft to a 50-transport group from 6 contract carriers, including **American Airlines**, **Braniff Airways**, **Chicago & Southern Air Lines**, **Northeast Airlines**, **Transcontinental and Western Air Lines**, and **United Airlines**, which are rushed to Presque Isle. From here, the planes, joined by 110 Air Transport Command C-47s, will transport the supplies and men required to set up and man the bases at Newfoundland, Labrador, Greenland, and Iceland that will facilitate "Operation Bolero," a mass bomber ferry from the U.S. to England.

During the remainder of the year and in **1943**, the carrier undertakes special flights to Greenland and Alaska and operates navigation and radio schools for the Army at Washington and Roanoke, Virginia.

During **1944**, the company is marketed as PCA-The Capital Line. Its route network now covers 3,925 unduplicated miles. On December 16, the CAB awards the company civilian access to New York from Chicago via Detroit. Passenger boardings for the year reach 433,000.

CAB certification for operations out of New York (LGA) is received on January 6, **1945**. The Easter season is marred when a DC-3, with 20 aboard, crashes near Morgantown, West Virginia, on April 16; there are no survivors. Pittsburgh to New York City service is inaugurated on July 2. The first flight carries 19 local mayors and civic representatives, who are welcomed by the airport's namesake Mayor La Guardia.

Following V-J Day, the carrier gradually rebuilds its fleet and resumes its prewar routes and services. Income is good and with orders placed for DC-4s, Skymaster flights from Chicago to New York via Detroit and Pittsburgh commence in mid-July. Twelve war-surplus C-47s converted to civil DC-3 standard by the Martin Company are received on October 5 and on November 17, the carrier is able to purchase the same C-54 flown to Casablanca by President Roosevelt. Late in the year, it is announced that pending CAB approval, the company will merge with Boston-based **Northeast Airlines**; the government regulators will not permit the consolidation.

On January 6, **1946**, a DC-3 with four crew and seven passengers overshoots the runway and crashes into a creek at Birmingham, Alabama (three dead).

On January 15, the company enjoys the distinction of being the first to place the DC-4 into commercial service, when the former *Sacred Cow*, converted to civil standards, begins flying its routes. Fifteen more reconfigured C-54s will join the fleet during the year. Pittsburgh to Chicago flights begin on March 11. The CAB now allows additional nonstop authorities and route extensions, but the company is still unprofitable.

Engaged in a training mission with only its four flight crew aboard, a C-54A crashes while on final approach to Washington, D.C. on September 12; although the aircraft must be written off, there are no fatalities.

With each passenger now flying an average of 208 miles instead of the average of 500 for the air transport industry as a whole, PCA loses \$3.5 million on the year.

Less than a year after the big Douglas transports begin revenue operations, the carrier loses one in a June 13, **1947** disaster. Flying low in a rainstorm, Flight 410, the C-54D *Capitaliner Baltimore*, piloted by Capt. Horace Stark, with 2 other crew and 47 passengers en route from Chicago to Washington, D.C., crashes into a mountain near the Appalachian Trail community of Shannondale, West Virginia, near Charles Town. When the wreckage is found the next day, there are no survivors of this second worst airline tragedy to date. It is recalled by Richard Faris in his "The Last Ridge Before Washington," *Airliners* 9 (July–August 1996): 50–57, 60–61.

In late summer, the Baltimore Colts professional football team becomes the first athletic organization to fly with the airline. Two DC-3s are chartered to fly 60 players, club officials, newspapermen, trainers, and equipment people to Akron, Ohio, for an exhibition game with the Cleveland Browns.

President Monro becomes board chairman on October 1, with Vice President Carmichael becoming president. To halt the fiscal hemorrhage, the new leader institutes cost-cutting procedures, lays off 1,500 workers, and increases reliance on air freight income.

In February **1948**, the airline is authorized to omit the Detroit stop from its Chicago to New York service. To give the firm a positive new image and help it shed its regional identity, the board agrees to a corporate reformation. On April 21, PCA is renamed **Capital Airlines**.

PENNSYLVANIA COMMUTER AIRLINES. See **PENNSYLVANIA AIRLINES**

PENZA UNITED AIR DETACHMENT (PENZENSII OBEDNENNY AVIAOTRIAD): **Russia (1992–2000).** The Penza division of **Aeroflot Soviet Airlines** is reformed into PUAD during **1992**. Under the leadership of Director General Gennadi Eremin, scheduled and charter regional passenger and cargo services are undertaken with a fleet that includes 3 Antonov An-24Bs, 6 An-24RVs, 1 An-26, 2 An-12s, and 29 An-2 biplanes.

Service is maintained throughout the remainder of the decade. Severely impacted by the Russian financial crisis of the late 1990s, the carrier is liquidated on February 21, **2000**.

PEOPLEXPRESS: United States (1980–1987). PEOPLEExpress is the first independent national airline to be designed from scratch, founded, certified, and placed into service following passage of the Airline Deregulation Act of 1978. In terms of pricing, scheduling, and customer service, it will prove, at least for awhile, that the days of the pioneering air carriers are not over.

Three former **Texas International Airlines** officials (President Donald C. Burr, Vice President-Management Gerald Gitner, and Burr's executive assistant, Melrose Dawsey) pool savings of \$545,000 and incorporate People Express, Inc. (with the marketing name PEOPLEExpress) at Houston on April 7, **1980**. On July 22, an application for certification is filed with the CAB, which grants the petition on October 24.

On November 6, the company, initially classified as a large regional, with the assistance of the San Francisco venture capital firm of Hambrecht & Quist, goes public, selling 3 million common shares of stock at \$8.50 each. After expenses, \$23.5 million is left for start-up, including the acquisition of 17 \$4.5-million Boeing 737-130s from **Deutsche Lufthansa, A.G.** A large workforce is recruited from unemployed airline workers; each new recruit is required to invest in the corporation and, in turn, become "managers" in an organization designed to have no hierarchy or seniority differences. Everyone is considered a manager of something, e.g., pilots are flight managers, flight attendants are customer service managers.

PEOPLEExpress, led by founder Burr, moves to company headquarters at the seldom employed North Terminal of Newark (EWR) in early

1981. Having received major overhauls as part of their acquisition, the first three Boeing 737-130s arrive from Germany in March. These are employed to begin low-fare, no-frill, high-frequency flights to Columbus, Buffalo, and Norfolk on April 30.

Indeed, the operation is so low key that in exchange for fares of \$23–\$79, the carrier maintains no airport ticket counters and hence suffers no cancellations and does not have a toll-free phone number. It serves no in-flight meals, passengers are charged \$3 for checked baggage, and fares are collected by flight attendants on board during flights. There are, in fact, only two kinds of fares, based on time of day: peak (7 a.m. to 7:59 p.m.) and off-peak (8 p.m. to 6:59 a.m. weekdays and all day on weekends); there are no restrictions or minimum stays.

As additional Boeings become available, routes are stretched to Baltimore, Boston, Syracuse, Jacksonville, and Indianapolis. Airline employment is now 250. In an effort to compete, **United Airlines** introduces low-fare Friendship Express service over a sixth of its route network on June 12; high operating costs doom the effort.

While making its descent into Newark (EWR) on August 17, a B-737-130 with 118 aboard has a near miss with a private lightplane over Morristown, New Jersey; no injuries are reported. As an aftermath of the August PATCO air traffic controllers' strike and President Ronald Reagan's mass firing of strikers, the FAA announces a reduction in frequencies at a number of major airports, including Newark. At dawn on October 25, before the FAA restrictions take effect later in the day, all PEOPLEExpress B-737-130s are dispatched from the New Jersey airport to the unrestricted gateways of Buffalo, Syracuse, Columbus, and Baltimore.

From those sites, flights begin to Sarasota. The same \$59 one-way flights are initiated to West Palm Beach on November 21.

Largely unnoticed during the year is the appointment of Beverly Burns to the right seat of a B-737-130; she is the company's first female pilot.

Although the need for additional ground support increases the carrier's costs, it is able to remain aloft and to fly 952,000 travelers during its first 8 months. Revenues total \$38.38 million. Still, start-up costs and the strike combine to create expenses of \$45.58 million. Initial losses are significant: \$5.74 million (operating) and \$7.93 million (net).

In **1982**, under terms of the CAB's airline category scheme, PEOPLEExpress is reclassified as a national carrier. In February, president and cofounder Gerald Gitner moves to **Pan American World Airways (1)**; he is succeeded by Harold "Hap" Paret, another ex-**Texas International Airlines** veteran. Service is initiated to Pittsburgh in March and Melbourne, Florida in April. An arrangement is made with McDonnell Douglas for the acquisition of eight used B-727-200s; options are also taken for the purchase of nine new B-727-200s and eight DC-9-80s (MD-80s). When the last B-737-130 arrives from Germany, observers note that someone has added a tear trickling down tail fin's face logo.

Rights into Washington, D.C. (DCA) are obtained in June and low-cost flights into the nation's capital begin on August 3.

Joined by Morgan Stanley, Hambrecht & Quist orchestrate another public stock offering on August 19; 2.47 million shares bring in slightly more than \$28 million.

Two Boeing 737-217s are purchased from **CPAir, Ltd.** in November, with the first arriving on November 9. It is employed to inaugurate services six days later to Burlington, Vermont, and Hartford, Connecticut. A third Canadian Dash-217 arrives in December, allowing Burr's company to begin serving Washington, D.C. (IAD). Late in the year, London route authority is requested from the CAB.

During its first full year of operations, passenger boardings skyrocket 200.2% to 2,859,000 and revenues of \$138.68 million are earned, a 261.08 boost. Expenses climb to \$128.23 million and consequently, profits are generated: \$10.45 million (operating) and \$1 million (net).

Early in **1983**, an agreement is reached with the creditors of failed **Branniff International Airways** for the purchase of 20 B-727-227s plus the lease of the former South American pioneer's B-747-227B, once known, because of its livery, as "Big Orange." London permission is received from the CAB in March.

To finance the Braniff aircraft deal, another million shares are sold on April 26 at \$32 each. President Pareti, in London on May 20 to negotiate landing rights with the British Civil Aeronautics Authority, announces that starting on May 23, PEOPLExpress will begin taking reservations for \$149 one-way transatlantic economy-class service. It will also offer a discounted premium-class service, with more leg-room and quality cold meals.

The one-time "Big Orange" inaugurates Newark to London (LGW) return flights on May 26. President Burr is the first off the aircraft when it reaches England and holds a press conference to report the launch. Thereafter, the Jumbojet will enjoy a 100% load factor on nearly every service, with hundreds of would-be passengers turned away. Also in May, a fourth B-737-217 arrives from **CPAir, Ltd.**

On June 1, another major, **Trans World Airlines (TWA)**, counterattacks on the North Atlantic, cutting its fares from six U.S. gateways to London by 25%.

The deregulation darling continues to enjoy excellent domestic traffic growth, though not without problems. As thousands of first-time-flyers attempt to book passage, reservation phones are unable to handle the volume. Additionally, air traffic control in the New York area is unable to handle the increase during the first days of summer. At times, delays reach six hours.

The bulk of the B-727-227s arrive during the summer and during those months, an attempt to enter the Minneapolis (MSP) hub of **Northwest Airlines** is beaten off when the major counterattacks with low fares and many more frequencies out of its base.

On October 1, \$69 one-way Newark to Houston flights begin five times per day service. It is suggested in some quarters that this challenge to Donald Burr's onetime associate Frank Lorenzo causes the latter to take **Continental Airlines** into Chapter XI bankruptcy. Simultaneously, **British Airways, Ltd. (2)** enters the price war between People and TWA on the North Atlantic, reducing its roundtrip London-New York fare to just £249.

While en route from Buffalo to Newark on October 15, Flight 104, a B-737-227 with 107 passengers, is taken over by a lone assailant, Gamiel Robert Ambrose, who falsely claims to be armed and demands that the aircraft be flown to Atlantic City. At the gambling mecca, the perpetrator is arrested by police as he hails a taxicab. Upon examination, the pirate will be certified as mentally unstable and sent to a psychiatric institution.

As of December 31, the company is larger than all but four national carriers, **Southwest Airlines**, **Piedmont Airlines (1)**, **Frontier Airlines (1)**, and **PSA (Pacific Southwest Airlines)**, and with 150 daily Newark departures, is the largest carrier on the U.S. East Coast.

On the year, passenger traffic increases 100% to 5,697,000 passengers carried. Revenues skyrocket 110.3% to \$292.06 million and expenses, up 111.6%, are held to \$271.62 million. As a result, operating income accelerates to \$20.44 million and the net profit jumps to \$10.4 million.

In January 1984, the company receives the 1983 "Market Development Award" from *Air Transport World* magazine.

Massive expansion continues as the 4,000-employee carrier moves into significant new markets, some against major competition and competitors such as **Northwest Airlines**, **United Airlines**, and **American Airlines**. The onslaught begins against the former carrier on June 1 when PEOPLExpress, having regrouped from its previous failure, inaugurates flights to Minneapolis (MSP). Two weeks later on June 15, the carrier's first transcontinental route is started to Los Angeles; three newly added former **Alitalia, S.p.A.** B-747-243Bs are employed to offer \$119 one-way fares.

Flights into the **United Airlines** and **American Airlines** bastion at Chicago commence on August 22, the same day orders are placed for 25 additional Boeing jetliners. Within two weeks, the three impacted majors engage Burr in a fare war. Meanwhile, expansion continues apace; flights begin to Detroit and Miami on September 5, San Francisco on September 28, Cleveland on October 18, Denver on November 19, and Orlando on December 19. The former Braniff "Big Orange" is sold to **Northwest Airlines** in December.

Traffic increases 59.7% as 9,098,109 passengers are flown. A total of 3.64 million FTKs are also hauled. On the year, revenues zoom upward by 104.8% to \$586.8 million, expenses increase 112.3% to \$566.6 million which, when added to the costs of growth and the fare war, force People's operating profit to drop to \$20.16 million and net gain to \$1.65 million.

In what will prove a successful marketing strategy for use against Chairman Burr's carrier, Robert Crandall, chairman/CEO of **American Airlines**, with great fanfare and publicity that promises both PEOPLExpress prices and amenities, introduces the ultra-low ticket prices of AA's Ultimate Super Saver fare on January 18, 1985. Indeed, by using American's innovative SABRE reservations system and the yield management concept—the ability to accurately predict the proper mix of fares to sell on a given flight—Crandall begins a competitive process that will take away People's *raison d'être*, i.e., cheap seats. With help from other carriers employing similar tactics, American will ultimately put the surging entrant out of business.

Later in the month, President Pareti resigns.

Seven additional Boeings now arrive and the fleet comprises 22 Boeing 737s, 45 B-727s, and 3 B-747-243Bs. In February, a B-747-133 is leased from Guinness Peat for four months and is the only aircraft employed that is not painted in People's livery.

In line with other airlines emerging from recession, ticket prices are increased an average 10% in March and Wall Street now contributes a further \$33 million in capitalization. With the addition of Charlotte and Dayton to its market system in late winter, 4,000-employee PEOPLExpress, which has flown 23 million plus passengers since 1981, offers 394 nonstop daily flights to 36 cities in 20 states and England.

In March, under an agreement with the Port Authority of New York and New Jersey, \$175 million in construction is begun for completion of the unfinished Terminal C (to be named PEOPLExpress Terminal) at Newark (EWR). Daily nonstop flights commence between Cincinnati and Newark on April 1.

The last of four B-747-243Bs once flown by **Alitalia, S.p.A.** is delivered on June 10. On June 24, more than 400 people are evacuated from one of these 747s after a bomb threat forces it to make a nonscheduled landing at Chicago (ORD). Daily nonstop service between Newark and Nashville begins on June 26, followed by first-time flights to St. Louis, New Orleans, and San Diego. At the end of the second quarter, the carrier is returned to profitability and is now the ninth largest U.S. airline and the largest operating into the New York area.

Marylander Waleed Muaket is charged on July 6 with making terrorist threats when he tells a flight attendant aboard a B-727-227 that he wishes to hijack it. Four B-747-238Bs, formerly operated by Australia's **Qantas Airways (Pty.), Ltd.** are now purchased, with the first delivered on July 10. A B-727-217, taxiing at Newark on July 18, nearly collides with a **World Airways** DC-10-10; more than 200 passengers are jostled, but none are injured. In July and August, the carrier expands to five more cities, including Montreal, Atlanta, Dallas (DFW), Albany, and Providence.

At a shareholders meeting in August, the company's first dividend is voted: five-cents-a-share quarterly. In addition, anti-takeover rules are instituted. Employing a B-747-243B, daily nonstop service is launched from Newark to Brussels on September 8; the fare is \$99 one way, rising to \$149. Later in the month, frequencies begin to Birmingham, Charlotte, Columbus, Raleigh/Durham, and Nashville. On September 20, **Continental Airlines** Chairman Lorenzo makes a bid for financially distressed **Frontier Airlines (1)**. To avoid being ensnared by Lorenzo, who is perceived to be a union buster, Frontier and its unions involve Donald Burr in a bidding war for the 40-year-old carrier and its Denver slots. The second former **Qantas Airways (Pty.), Ltd.** Jumbojet arrives on September 27.

When company officials receive a bomb threat on October 1, a Jumbojet is forced to make an emergency landing at the Dugway Proving Ground airfield in Utah; 146 people are safely evacuated and no bomb is located. Meanwhile, the unionized **Frontier Airlines (1)** is captured

by nonunionized PEOPLExpress on November 22 at a cost of \$24-a-share; the former will be operated as a subsidiary.

Passenger boardings jump 30.8% to 11,907,000. Revenues mushroom by 55.7% to \$927.87 million, costs advance 55.3% to \$894.49 million, and the operating profit bounds upward to \$33.37 million. Unhappily, there is a net loss of \$20.13 million due to the costs of gaining **Frontier Airlines (1)**.

During January 1986, a section of the PEOPLExpress Terminal (formerly Terminal C) at Newark (EWR) is opened to B-747 operations only, thereby offering some relief to the congestion at North Terminal. On January 31, the nation's oldest commuter airline, **Provincetown-Boston Airline (PBA)** is purchased, instantly increasing the number of People stations in Florida to 14.

An interline agreement is established with **Britt Airways** on February 5; however, by February 26, that Terre Haute-based regional is also a fully owned subsidiary. **Frontier Airlines (1)** is now losing \$10 million per month and at the end of the first quarter, Burr must report an unprecedented combined loss for People and Frontier of \$58 million.

On May 1, a frequent-flyer program is introduced for business travelers; a number of planes introduce first-class sections this same day and a third Australian Jumbojet is delivered. At the same time, a Jumbojet \$99 Air Bridge service is inaugurated between Denver and Newark.

Fiscal bleeding is now so intense that the only way to avoid bankruptcy is to find a buyer and, late in the month, Burr enters discussions with Frank Lorenzo. When news of the discussions leak, other airlines enter the bidding, including **United Airlines**, **Delta Air Lines**, and **Western Airlines**.

On July 6, Texas Air Corporation (TAC) bids \$9 per share; the next morning, **United Airlines** offers \$146 million for the **Frontier Airlines (1)** subsidiary alone. On July 10, the latter bid is accepted; however, the arrangement is dead within weeks, killed by the **United Airlines** and **Frontier Airlines (1)** unions over pilot seniority. Frontier ceases operations on August 24, filing for Chapter XI bankruptcy four days later in a Denver court.

On September 15, with no other viable options available, PEOPLExpress and its subsidiaries are sold to TAC. The low-fare pioneer's employees and the public are informed by Lorenzo and Burr during an afternoon news conference at the reservations center in Newark.

Allowed to continue its separate identity during the integration process, the low-fare carrier inaugurates frequencies in December from Newark to Honolulu via Los Angeles. At the same time, a B-747-238B, which has a Bob Hope profile painted on its tail, is employed to fly the comedian and his troop of entertainers to the South Pacific. It is hoped that the fee and public exposure from a television program at Christmas will be helpful. TAC shareholders approve the takeover on December 31.

During three quarters of independence, the largest deregulation-born airline transports a total of 10,756,171 passengers (off 9.7% over the same period a year earlier) and hauls 146.49 million FTKs. Revenues fall 5.5% to \$668.44 million, expenses rise 7.8% to \$739.7 million, and the operating loss is \$71.26 million. An enormous \$120.25-million net loss is taken.

Newly reconfigured B-727-227s allow first-class service to be introduced in January 1987 on every flight between Newark and Chicago. The Jumbojet service to Brussels is suspended after the last flight arrives back at Newark on January 16; 10 days later, the last **Qantas Airways (Pty), Ltd.** B-747-238B is accepted. The final company services are completed on January 31 and on February 1 PEOPLExpress, together with **New York Air**, is merged into the TAC flagship, **Continental Airlines**. Continental will complete Newark's PEOPLExpress Terminal, once again named Terminal C, and by the early 1990s, had finally completed the repainting of all the aircraft acquired in the merger. There is an unofficial Web site for PEOPLExpress at <http://www.flash.net/airline/pehist.html>.

PEREGRINE AIR SERVICES, LTD.: United Kingdom (1969–1986). Peregrine is established at Aberdeen, Scotland, in 1969, to offer

charter, air taxi, and contract service flights, particularly in support of the North Sea energy industry. Services by the 90-employee firm continue throughout the 1970s, employing 2 Beech Super King Air 200s, 3 Cessna 404 Titans, and 4 Piper PA-23 Aztecs.

Peregrine's most significant claim-to-fame occurs on December 30, 1982, when it becomes the first U.K. operator of the new British Aerospace BAe Jetstream 31. A second of these turboprops is placed into service in 1983 and a total of 70,000 passengers are transported during the year.

Managing Director Mike Hornblower's company maintains services until 1986.

PERIMETER AIRLINES, LTD.: 626 Ferry Road, Winnipeg, Manitoba R3H 0T7, Canada; Phone (204) 786-7031; Fax (204) 783-7911; Code UW; Year Founded 1976. Perimeter Airlines is formed by William J. Wehrle in the summer of 1976 as the scheduled air transport division of Winnipeg-based Perimeter Aviation, Ltd., an FBO, charter, and flight training center at Manitoba's principal airport. Employing a fleet of Beech B-65/B-80 Queen Airls, the new entrant inaugurates flights in September.

During the remainder of the decade, regular passenger services are undertaken to St. Theresa Point, Brandon, Dauphin, Garden Hill, Red Sucker Lake, God Narrows, Gods River, Cross Lake, Norway House, Berens River, and Watson Lake. Other points served from Winnipeg include Poplar River, Yorktown, and Saskatoon.

The first of many Fairchild-Swearingen Metros is delivered in 1978 and by 1981 the fleet comprises 3 Beech B-80 Queen Airls, 1 B-65 Queen Air, 6 Beech B-55 Barons, 1 King Air 100, 1 Gates Learjet 35A, and 2 Fairchild-Swearingen Metro IIs.

Enplanements total 26,215 in 1982. In 1983–1985, the fleet is increased by the addition of three Douglas DC-3s and a Piper PA-31-310 Navajo. Services and frequencies are maintained throughout the remainder of the decade.

In 1990, three Barons are replaced by the addition of three more Metroliners and a Fokker Fairchild F-27J. Two additional Metro IIs are purchased in 1991, but two Queen Airls, the Fokker, and a Baron are withdrawn in recessionary 1992. In 1993, President Wehrle oversees a workforce of 105 and adds 2 more Metro IIs. His fleet in 1994 thus includes 13 Metros, 1 Learjet 35A, and several Beech twins. A 14th Metro is acquired in 1995 and operations continue apace in 1996–2000.

PERKIOMEN AIRWAYS: United States (1976–1980). Perkiomen Airways, Eugene Plum's FBO/charter operations based at Reading Airport in Pennsylvania, elects to establish a scheduled service under its own name in 1976 to provide passenger air taxi services to New York (LGA) via Allentown. Daily Piper PA-31-310 Navajo roundtrips are duly inaugurated and are sustained until late 1979.

In January 1980, an airline division is established and begins service under the name **Air Pennsylvania**.

PERM STATE AIR ENTERPRISE (PERMSKOE GOSUDARTSVENNOE A/P): Russia (1993–2000). Based at the airport of its city namesake, Perm State is established in late 1993 to offer passenger and cargo flights throughout the former Soviet Union. Igor D. Grachev is managing director and operations are undertaken with a mixed fleet that includes Antonov An-24s and An-26s and Tupolev Tu-154Bs and -134s.

Operations continue apace in 1994–1995. In 1996, with financial assistance from the regional administration and Tupolev, the carrier acquires a Tu-204 assembled at the Aviastar aviation enterprise in Ulyanovsk. The first company to put the new jetliner into service, the airliner will provide important information on in-service performance and operational costs.

The fleet in 1997–1999 includes 4 Tu-154Bs, 5 Tu-134s, 1 Tu-204, and 3 each An-24s and An-26s.

Scheduled destinations visited during these years include Adler/Sochi, Anapa, Antalya, Baku, Bourgas, Chisinau, Ekaterinburg, Frankfurt, Krasnodar, Larnaca, Mineralnye Vody, Moscow, Samara, St. Petersburg, Tashkent, Varna, Yerevan. During these years, the Tu-204 is occasionally leased to **Avia Express Cruise**, which successfully operates on the routes from Moscow to Chita and to Barnaul.

It is reported that on January 19 of the latter year, a Mil Mi-8, on visual approach to a landing site 38 km. from Chaikovsky, loses contact with the ground and crashes. On November 16, that the airline has joined with **Siberian Airlines (Sibir)** in a concentrated effort to acquire part of the 25% market share held by **Vnukovo Airlines** in the Ural and Siberian markets.

The workforce stands at 1,000 at the beginning of 2000. A strategic marketing and cooperation agreement is signed with **Aeroflot Russian International Airlines (ARIA)** in early spring. Under its terms, the state carrier launches daily roundtrips from Perm to Moscow on June 7. On October 1, executives of ARIA announce the creation of a new airline, **Aeroflot-Perm**, which incorporates the previous Perm State Air Enterprise.

PERMIAN AIRWAYS: United States (1979–1982). John Andrews and David Glover set up Permian at Midland, Texas, early in the second quarter of 1979 to provide scheduled passenger and cargo services to Texas and Oklahoma destinations. Employing a pair of Piper PA-31-350 Navajo Chieftains, the commuter inaugurates daily roundtrips in May linking the company's base with San Angelo, San Antonio, Lubbock, Amarillo, and Carlsbad.

Operations continue apace in 1980–1981, but economic difficulties force it to close its doors on September 10, 1982.

PERSIAN AIR SERVICES, LTD.: Iran (1957–1961). Founded with the assistance of the British independent **Skyways, Ltd.**, PAS is formed in February 1955. Equipped with Avro Yorks, the company begins freight service to Europe, flying a route from Tehran to Basel via Abadan, Beirut, and Brindisi.

An Avro 685 York C.1 with 4 crew and 9 passengers is lost 40 mi. SW of Basra on September 14; although the aircraft must be written off, there are no fatalities.

An Avro 685 York C.1 is destroyed in a ground accident at London Stansted Airport on September 17, 1956, while another is lost 4 mi. S of Kuwait City on July 15, 1959.

In the spring of 1960, an ex-transatlantic DC-7C is acquired from **Sabena Belgian World Airlines, S.A.** and on June 20 it is used to launch weekly passenger flights from Tehran to London via Geneva, Paris, and Brussels. In August 1961, leased Boeing 707-138s are employed to inaugurate jetliner flights over the DC-7C route. On November 2, the government of Iran merges PAS with **Iranian Airways (Iranair)** to form **United Iranian Airways**, predecessor of the present **Iran Air**.

PERSONAL JET CHARTER: 5401 NW 15th Ave., Fort Lauderdale, Florida 33309, United States; Phone (954) 776-4515; Fax (954) 491-5771; Year Founded 1980. PJC is set up at Fort Lauderdale Executive Airport to operate executive and small group passenger charters throughout the Western Hemisphere, with emphasis on Central and South America. By 1998–2000, the company employs 12 pilots and flies 2 Learjet 55 Longhorns and 2 Learjet 35A Century IIIs.

PERUVIAN AIRWAYS CORPORATION, S.A.: Peru (1928–1929). At the beginning of 1926, Peruvian cotton farms are under siege by plant-eating armyworms. Acting on behalf of the planter community, Pedro Beltran, himself an owner of a large cotton farm, travels to Washington, D.C. to consult with the U.S. Department of Agriculture, which recommends crop dusting. The DOA sends him down to Monroe, Louisiana, to the headquarters of **Huff-Daland Dusters**, the world's only aerial crop-spraying company. Beltran is able to convince Huff-Da-

land to send its chief entomologist, Collett Everett (C. E.) Woolman down to check out the problem and, once on the scene, the scientist finds such promise that a contract for dusting is signed.

In December, Huff-Daland CEO Harold R. Harris and Woolman, along with five crated Petrel 31 dusters, arrive by ship at Lima, Peru. After reassembling their aircraft, the two begin what will prove to be a valuable seasonal service to local cotton growers.

Back in the U.S. on March 8, 1927, Huff-Daland Airplanes, Inc., the dusters' parent organization, is purchased by the Hayden Stone brokerage house based in New York City and is reorganized, becoming the **Keystone Aircraft Corporation**. Later in the year, Harris presents a report on the Huff-Daland operation in Peru, which is complete with maps and notebooks containing proposed passenger and airmail routes down the west coast of South America.

Hayden Stone senior partner Richard Hoyt brings in Juan T. Trippe and Andre Priester of newly formed **Pan American Airways (PAA)** to review the Harris documents. Trippe and Priester, who are quickly expanding into the Caribbean from south Florida, are excited

Stone and Trippe move to form a new airline for Peru on September 4, Peruvian Airways Corporation, S.A. (PAC). Trippe will be president of the new carrier, with Harris as vice president/general manager. An arrangement for joint services is quickly struck with Harris and Woolman, in their capacity as officers of the Huff-Daland Dusters Air Navigation Company, and orders are placed for Fairchild cabin monoplanes.

After two successful seasons in both the U.S. and Peru, Harris and Woolman, still in charge of Keystone's Huff-Daland Dusters subsidiary in South America, seek additional opportunities for that organization and also for the new PAC. On May 28, 1928 they are awarded Peruvian government permission to initiate services both within the nation and to the U.S.

Supplying a Fairchild FC-2 and operating under terms of Huff-Daland's government certificate, Peruvian Airways, S.A. inaugurates regularly scheduled weekly flights from Lima's Santa Beatriz racetrack to Talara on September 13. A large crowd is present for the event, including the president of Peru, Augusto Leguia, the army chief of staff, Col. C. J. Bazo, and U.S. and British ambassadors. The president and the American representative join Peruvian Postmaster General H. G. Hanrott and Benjamin Romero, editor of the Lima newspaper *El Comercio*, in handing mail into the Fairchild to pilot Daniel Tobin. Once hands are shook, Hanrott and Romero join Tobin aboard the Fairchild, which takes off on the first U.S.-operated scheduled flight south of the equator.

Three days after Peruvian Airways' first revenue flight, the Aviation Corporation of the Americas, holding company of Juan Trippe's **Pan American Airways (PAA)**, purchases 50% shareholding in the Peruvian Airways Corporation, S.A. operation. Just over two months later, on November 28, all of the Huff-Daland operating permits are turned over to Peruvian Airways Corporation, S.A.

On November 30, the many-stop Lima–Talara route is extended over water north to Guayaquil, Ecuador. During the month, Harris and Woolman briefly return to Louisiana to review the U.S. operation of **Huff-Daland Dusters** and where Woolman remains when Harris returns to Peru.

In December, PAC General Manager Harris begins executing a number of roundtrip experimental Lima to Guayaquil services with a newly delivered Fairchild FC2-W2.

By year's end, a total of 135 passengers have been carried over 24,800 miles.

On January 24, 1929, the company extends its service south of Lima to Mollendo via Ica.

Despite the success of Peruvian in establishing a long-segment route network from Ecuador almost to the Chilean border, **Pan American Airways (PAA)** is unable to easily employ its partner to move directly into western South America. This difficulty forces Juan Trippe to strike a deal with the giant American shipping W. R. Grace Corporation and discussions between the two concerning formation of a cooperative venture begin on January 25.

On February 16, PAC's Harris transports the president of Ecuador, together with his wife and son, on a flight-seeing trip over Guayaquil. When they land, Harris, personally, has the nation's mail concession, together with the right to turn it over to another corporation.

Just five days later on February 21, such a corporation is formed when the equal-share carrier **Pan American-Grace Airways (PANAGRA)** is incorporated in Delaware by Pan Am and Grace. Peruvian Airways Corporation, S.A. is merged into the new entrant the same day, with CEO Harris becoming the new concern's vice president-operations.

PETERSEN AVIATION: 7155 Valjean Ave., Van Nuys, California 91406, United States; Phone (818) 989-2300; Fax (818) 902-9386; <http://www.petersenaviation.com>; Year Founded 1982. Originally established in 1982 as an FBO at Van Nuys Airport, Petersen, over the next 15 years, also becomes a significant charter operator.

By 2000, nonscheduled executive and small group flights are undertaken on a worldwide basis, with emphasis on North and South America. The aircraft fleet includes 3 Grumman G-1159 Gulfstreams, 2 British Aerospace BAe (HS) 125 Hawkers, 1 Cessna 500 Citation I, and 1 Beech 400A Beechjet.

PETROLADA: Russia (1994–1996). The small ad hoc freight-charter concern Petrolada is established at Petrozavodsk's Peski Airport in 1994. K. K. Fedorov is named general director and he begins revenue flights with a single Antonov An-12. Flights continue until 1996.

PETROLAIR SYSTEM: Ave. Louis Casai 71, Cointrin, CH-1216, Switzerland; Phone 41 2292 92730; Fax 41 2292 92757; Year Founded 1977. PS is established in 1977 as an international executive charter service and international aircraft lessor. I. McGrath is managing director.

This largely unknown operation continues apace for the next two decades. By 2000, Petrolair employs 40 workers and owns a fleet that comprises 1 each Boeing 757-200, B-737-200, Bell 214ST helicopter, and 2 Grumman Gulfstream IV executive jets.

PETROLEUM AIR SERVICES, LTD.: P.O. Box 2711, 5 Dr. El Battraway St., Nasr City, Cairo, Egypt; Phone 20 (2) 262-5046; Fax 20 (2) 260-2184; Code PAS; Year Founded 1982. PAS is organized at Cairo in 1982 to provide passenger and cargo charter and contract service flights in support of the nation's oil industry. Ownership is divided between Egyptian General Petroleum (75%) and Air Logistics International (25%). The initial fleet comprises 5 de Havilland Canada DHC-7s, 4 Bell 212s, 2 Bell 206B JetRangers, and 2 Bell 206L LongRangers. Internal flights are made both to the Gulf of Suez and the Western Desert.

A decade later, in 1992, Chairman/Managing Director Amir Riad's fleet comprises the same number of Dash 7s, but the rotary-wing component is increased by the addition of 7 additional Bell 212s, 4 additional 206Ls, and 5 412s.

Airline employment stands at 491 in 1993–1994. Tameem Fahmy is now managing director and his fleet includes 5 DHC-7s, 2 Bell 206Bs, 6 Bell 206Ls, 3 Bell 412s, and 10 Bell 412s.

In 1997–2000, Amir A. Riad is again chairman/managing director.

PETROLEUM AVIATION CHARTER SERVICES, LTD. See PYRAMID AIRLINES, LTD.

PETROLEUM HELICOPTERS, INC. (PHI): P.O. Box 90808, Lafayette, Louisiana 70509, United States; Phone (318) 235-2452; Fax (318) 235-7312; <http://www.phihelico.com>; Year Founded 1949. Lafayette-based Petroleum Helicopters, Inc. (PHI) begins charter operations in February 1949 with 4 Bell Model 47s owned by Igor Sikorsky associate E. "Tug" Gustafson, \$100,000 in capitalization, and 8 employees. Operated in response to the Louisiana trans-swamp transportation needs of founders Jack Lee, Robert L. Suggs, and Maurice M.

"Dooky" Bayon, PHI is the largest commercial rotary-wing operator in the world. If the first helicopter invented by Leonardo da Vinci in 1480 had been flying nonstop from that time to the present, it would not have recorded as many flight hours as PHI has logged since its founding in 1949.

Gustafson returns to Sikorsky in 1951, but returns briefly in 1955 to sell PHI its first S-55. Following the death of Jack Lee in 1957, Robert Suggs becomes chairman; Frank Lee, young son of the founder, will become president years later. During the 1950s and 1960s, PHI pioneers offshore oil rig support operations, primarily along the Louisiana and Texas coasts of the Gulf of Mexico, but also at other sites around the globe. It also undertakes contract service operations overseas. The first Bell 206L LongRanger enters service in 1966. The company flies a total of 8,000 hours per month. In October of 1967, a Russian-manufactured Mil Mi-10 is purchased to support road-building operations in South American jungle areas. Now 18 years old, the firm is transporting 30,000 offshore workers monthly to and from rigs in the Gulf of Mexico.

Three years later, on September 30, 1970, the company completes its millionth flight hour.

When the company celebrates its twenty-fifth anniversary on February 21, 1974, it employs 370 pilots, 364 maintenance personnel, and 197 helicopters. In August 1975, PHI becomes the first commercial helicopter operator authorized by the FAA to make all-weather flights in the Gulf of Mexico.

Operations continue apace in 1976–1977 and by 1978 President R. L. Suggs oversees a workforce of 1,400. His fleet comprises 2 Aerospatiale SA-330J Pumas, 25 Bell 212s, 6 Bell 205As, 22 Bolkow Bo-105s, 145 Bell 206B JetRangers, 30 Bell 206L LongRangers, and 14 Bell Model 47Gs. In 1979, a Bell 222 is acquired and provided to New Orleans-based West Jefferson Medical Center, which establishes an Air Care Flight Service to offer an offshore hospital-based program to serve the petroleum industry in the Gulf of Mexico.

Multifaceted operations continue into the 1980s. An aeromedical services division is established in 1981 and begins offering specialized flights with a single medically equipped helicopter. A quarter century later in 1998, 36 helicopters will be devoted to this unit.

In May 1982, the company accepts the first Aerospatiale AS-332L Super Puma sold in North America, as well as Bell's first production 214ST. The approximate number of offshore support flight hours per month reach a peak of 35,166.

While landing on an oil drilling rig platform E of Cameron, Gulf of Mexico, on March 1, 1983, an AS-350D with a pilot and four passengers suddenly loses power. As the machine autorotates, the pilot attempts, unsuccessfully, to deploy the emergency floats; one does not inflate. The helicopter touches down in the water and rolls over, but all aboard escape before it sinks.

Having departed an offshore platform in the Gulf of Mexico for Venice, Louisiana, on January 24, 1984, a Bell 206L LongRanger with a pilot and five passengers encounters a fog bank. The pilot elects to turn back but descends and strikes the water. Although the occupants following the ditching will report only minor injuries, rescue is delayed five hours due to deteriorating weather.

While preparing to depart from a drilling rig at W Cameron Blk. 624 in the Gulf of Mexico on March 12, a Bell 206L LongRanger with a pilot and four passengers is caught by a strong gust of wind and blown off the platform into the water. Four are killed and one passenger survives with serious injuries.

While taking off from an unmanned rig at W Cameron Blk. 540 in the Gulf of Mexico on April 4, the tail section of an AS-355F carrying a pilot and three passengers hits a rotating beacon support bracket on top of a crane structure. The helicopter crashes into the sea and there are no survivors.

During a flight over the Gulf of Mexico on June 8, a Bell 206B JetRanger with a pilot and three passengers suffers total loss of power and is required to ditch, landing hard. The aircraft's float devices having

been deployed, the aircraft remains atop 5-ft. waves until a rescue can be effected.

In January 1985, a Bell 214ST has the honor of logging the company's five millionth flight hour. During the same month, a new Bell 222UT is delivered. Overseas contracts are now held in Ecuador, Saudi Arabia, Surinam, Zaire, and Trinidad and Tobago.

The fleet includes some 350 helicopters, including 200 JetRangers and LongRangers, 18 Sikorsky S-76s, 4 Bell 214STs, 35 Bell 212s, 4 Bell 222s, 10 Bell 412s, 10 Aerospatiale SA-332L Super Pumas, 20 Aerospatiale AS-355 Twin Stars, plus a number of Bell Model 47Gs and Bolkow Bo-105s.

After departing an offshore oil rig south of Dauphin Island, Alabama, on the night of March 9, a Bell 206L LongRanger with a pilot and three passengers encounters heavy fog and low ceiling; while attempting to return to its point of origin, the helicopter crashes and there are no survivors.

When Baton Rouge-based **Commercial Helicopters** goes out of business in May, it (unsuccessfully) sues the largest offshore operator, claiming predatory pricing.

On August 5, 1986, the company signs a contract with Cleveland, Ohio-based Metropolitan General Hospital for three Sikorsky S-76s for the health service provider's Metro Life Flight emergency medical service (EMS). These are the heaviest helicopters in the U.S. EMS market to date and when they enter service on September 1, are the first to be flown by two pilots both day and night. The S-76s succeed two Aerospatiale AS-350Bs previously operated by Oklahoma City-based **Cimarron Helicopters**.

While taking off from a barge at Lompoc, California, on October 16, a Bell 206B JetRanger with a pilot and four passengers is caught by a loosely secured rope net, which snaps. The aircraft's nose pitches up and the helicopter banks left into a crane and davit, before falling overboard and sinking (two dead).

At year's end, the company operates 381 helicopters in offshore support roles.

After hearing a loud "boom," witnesses observe an Aerospatiale AS-355F come apart in flight at Venice, Louisiana, on July 4, 1987, and crash into the water, killing its pilot.

In November, the company raises its rates for offshore-support helicopter services in the Gulf of Mexico.

On December 21, an Aerospatiale SA-330 Puma with 2 crew and 13 passengers explodes in midair as it is about to land on a Penrod Drilling Corporation rig in the Gulf of Mexico in bad weather; there are no survivors. Operating revenue is \$163.2 million; however, the continuing slump in the offshore business earlier in the year causes a net loss of \$1.5 million.

On January 5, 1988, an S-76, being operated under contract to the Skymed Hospital Helicopter Consortium of Columbus, Ohio, is damaged when its main rotor-blade-tip caps strike the hospital helipad.

An AS-330J Puma with 2 crew and 14 passengers develops a directional-control problem while lifting off from an oil rig in the Gulf of Mexico on July 14. The aircraft is unable to quickly inflate its floats following its emergency water landing and sinks. One person is killed and one seriously injured; the other escape unhurt.

With the Gulf support market improving slightly, the carrier is able to announce a 7% rate increase on August 1. Revenues advance to \$175.4 million and allow net income of \$4 million.

The company's fortieth anniversary is celebrated on February 21, 1989 at a special luncheon at Lafayette, Louisiana. While flying in clear weather approximately two miles offshore from Galveston, Texas, on July 11, a company Aerospatiale AS-350D midairs an **Air Logistics** Bell 206L Long Ranger; both pilots are killed in the resulting crash. Flying a company S-76 on August 4 on a run from an offshore platform south of Morgan City, Louisiana, to Houston and back to Baton Rouge, pilot Jack Schweibold sets a new world helicopter speed record, averaging 184 mph over the 556-nm. flight.

Longtime chairman and founding partner, 77-year-old Robert Suggs, dies of a heart attack at his Metairie, Louisiana, home on September 4.

Cofounder Maurice Bayon becomes company chairman and President Frank Lee succeeds Suggs as CEO. In December, the fleet is expanded by the addition of seven BO-105CBSs, three used BO-105Cs, and three Bell 412s.

Orders are placed for 15 Bell 206L-1 LongRangers for the fleet of the world's largest private helicopter operator. Revenues for the year are \$184 million and the net profit is up to \$9.9 million.

The company employs 750 pilots and 1,000 mechanics in 1990 and 300 helicopters (including 133 twins) are active in offshore support roles. All but 16% of the company's business is from oil and gas operations in the Gulf of Mexico.

Following the retirement of Maurice M. Bayon, Carroll W. Suggs, widow of founder Robert L. Suggs, is named board chairman on March 1. Almost immediately, the new chairman must deflect a larger managerial voice for Sir Ronald Brierley's Hong Kong/New Zealand based investment firm Industrial Equity (Pacific), Ltd., which had purchased the 12% stake held by Bayon.

On October 1, the board of directors rejects a \$195.2-million merger offer from the New Orleans-based marine and gas compression equipment firm Tidewater, Inc. Two weeks later, PHI's second largest shareholder, Industrial Equity (Pacific), Ltd. agrees to sell the helicopter carrier 473,638 shares of PHI and 213,516 shares of Offshore Navigation, Inc. common stock that it holds for \$17.8 million.

In October, the three children from Robert Sugg's first marriage sue their stepmother, seeking to overturn her majority control of the carrier. As a result, the estate is not fully distributed. An MBB B-105 is lost during a November training flight (one dead).

Revenues for the year total \$201.8 million and low expenses allow a net gain of \$9.1 million.

The 15 Bell 206L-1 LongRangers ordered in late 1989 are delivered in 1991. On January 19, a Bell 206B JetRanger crashes into the Gulf of Mexico in fog (two dead). In late January, the company places the largest single order yet received by Bell Helicopter Textron. The \$136-million request will buy 66 Bell 206B-3 JetRangers and 88 Bell 206L-3 LongRangers, to be delivered over the next 6 years.

Operations continue without incident until August 26, when a Bell 412 with 13 aboard and on final approach to an offshore rig 60 miles south of Cameron, Louisiana, experiences a tail rotor malfunction and is forced to ditch (one dead).

In October, the company records its seven millionth flight hour, a record for a commercial helicopter operator. Of these, over six million have been completed in the 814 Bell helicopters the carrier has operated since 1949.

Still, a decline in gas and oil exploration in the Gulf of Mexico requires the company to lay off 125 employees during the remainder of the fourth quarter. A medically configured MBB BK-117 is acquired in December and delivered to New Orleans-based West Jefferson Medical Center, the Air Care Emergency Flight Service of which continues to be the only hospital-based program flying offshore to service the petroleum industry in the Gulf of Mexico.

A continuing lack of energy exploration demand forces PHI to reduce its workforce by another 124 employees in February 1992. The initial delivery of Bell 206L-3 LongRangers is also delayed. On March 1, President/CEO Frank Lee becomes vice chairman and is succeeded in the executive posts by New Orleans attorney D. Andrew Lang.

On May 1, the company inaugurates a fixed-wing corporate charter and aeromedical service from Houston (HOU) employing a Beech Super King Air 200. On July 16, CEO Lang is dismissed, while A. Byron Elliott becomes board vice chairman and acting administrator with Chairman Carroll Suggs. Meanwhile, former Bell Helicopter Textron Chairman Leonard "Jack" Horner is voted to a board seat and John M. Unterecker becomes company vice president/chief financial officer.

On August 23, 104 company helicopters, in the face of Hurricane Andrew, are evacuated inland from Gulf of Mexico bases to facilities at Lafayette and Baton Rouge, Louisiana, McComb and Hattisburg, Mississippi, and Houston, Texas. The coastal facilities suffer relatively light

damage, although power is lost and a door is blown off a hangar at Morgan City, Louisiana.

During the year, a new top-down safety program is implemented at a cost of \$1 million per year.

Airline employment in January 1993 stands at 1,746 and Gary Golden is appointed vice president-operations in April. The fleet comprises 265 helicopters and 4 fixed-wing aircraft, plus 25 EMS-configured helicopters. Contracts are held with all of the major oil companies with operations in the Gulf of Mexico or along the Atlantic Coast, with the U.S. Department of the Interior, pipeline construction companies, and others. Foreign operations are conducted in Ecuador, Trinidad, the Philippines, Zaire, and Angola.

On August 1, a contract is signed with the world's largest helicopter air medical transport program, Arizona-based Samaritan AirEvac. Under terms of the agreement, PHI supplies three Eurocopter BK-117B-2s and a BO-105LS. Reacting to competitive market conditions, the company discharges 83 pilots and technicians during the fourth quarter in its fourth layoff in 2 years.

Airline employment at the beginning of 1994 stands at 1,764.

In February, the company orders five McDonnell Douglas Helicopter Systems (MDHS) MD Explorers for use on its air medical contracts; the first will be delivered following the type's certification by the FAA. On March 1, a contract begins with Carolina AirCare under which the helicopter line will provide a Eurocopter BK-117, pilots, and maintenance for the provider's eight-year-old statewide service.

After Kazakhstan is opened to foreign business in September, PHI enters into a contract with that nation's National Oil Company. A Bell 212, pilots, and maintenance crew are dispatched to provide support, under a contract that begins in November. In December, Vice President/General Manager Benjamin Schrick is appointed chief operating officer. At the same time, two Kazakh pilots and a representative from the country's aviation regulatory body are sent to Louisiana to receive helicopter training.

During its history, PHI has been a pioneer in basing helicopter operations at offshore locations, as well as in the development of airborne support techniques in the offshore oil and gas operational environment, and corporate training programs for flight crews and technicians. The company was the first to design and construct offshore refueling facilities for helicopter operations, to use electronic data processing in support of commercial helicopter operations, and to use the Sikorsky S-76 as an air medical transport. PHI is also the first commercial operator to fly helicopters under IFR conditions without the aid of autopilot systems, to log a million flight hours, and the first to log two million, three million, etc. through seven million flight hours. The operator of the world's largest commercial heliport at Morgan City, Louisiana, the company also achieved a developmental first in designing the "sling load" method of heavy equipment transport by helicopter.

In January 1995, the company signs a joint-venture agreement with New York-based **Clintondale Aviation**, which specializes in the provision of air transport in the CIS. The two begin to jointly operate a Bell 212 on an oil industry support contract in Kazakhstan.

On April 3, the carrier receives the National Ocean Industries Association "Safety in Seas" award.

Training of the three Kazakh pilots is completed and they return home in April to operate the Bell 212 contracted on behalf of Kazakhstan National Oil Company. The annual report released on April 30 reveals revenues of \$175.4 million and a net gain of \$5.2 million.

On July 28, **Bristow Helicopters, Ltd.** of the U.K. takes a 51% stake in Dublin-based **Irish Helicopters, Ltd.** while PHI purchases the remaining 49% interest, the maximum allowed for foreign ownership under European Commission rules. The combined price is \$8 million. The company will be allowed to retain its current identity and management team.

After evaluation of a system developed by a Massachusetts concern, PHI, in October, determines that it will not, at this time, introduce a satellite-based tracking system in the Gulf of Mexico. In November, the

carrier provides five Eurocopter BO-105s to Arizona's AirEvac EMS operation; AirEvac thus becomes the first U.S. air medical program to operate this helicopter type.

The fleet in 1996 includes 250 helicopters and is one of the world's largest. On March 19, the FAA presents PHI with its "High Flyer Award" for 82,000 flight hours of accident- and violation-free flight time in the aeromedical industry. On April 25, the company receives the Flight Safety Foundation's "President's Citation for Safety."

For its fiscal year ending April 30, the company reports a net profit of \$6.5 million on revenues of \$187.3 million.

On June 5, PHI acquires 50% of the outstanding stock of **Clintondale Aviation**. Under the direction of Chairman Suggs and International Vice President Gary Weber, plans are made to enlarge the PHI presence in the CIS.

Employing BO-105s, PHI operates small package express services during the Atlantic Olympic Games, beginning on July 1. Also in July, the company signs a memorandum of understanding with Jakarta-based **Pelita Air Services** to cooperate on the upcoming \$2-billion NATUNA offshore project, which is being jointly developed by Esso and Indonesia's government oil company. Both companies will provide full-time offshore flight service within two years.

Formed late the previous year, the joint-venture helicopter maintenance company Siam Aerospace Company, Ltd., created in partnership with Aviation Electronic Support (Pty.), Ltd. of Singapore, begins operations in September.

PHI becomes the first civilian operator to be awarded the National Science Foundation Antarctic support contract; the USN has supported NSF activities on the frozen continent since 1959. The 140-day contract takes effect on October 6 when 12 staff, a Bell 212, and 3 Eurocopter AS-350Bs begin flying the first of an anticipated 1,850 hours.

During takeoff from Venice on October 16, a Bell 206L LongRanger with a pilot and three passengers reaches an altitude of 50 ft. when a loud popping sound is heard. The main rotor blade flexes down and severs the tailboom during the forced landing that follows. No injuries are reported and a later inspection reveals that frogs have been ingested into the engine.

On November 28, an AS-350B with a pilot and two passengers en route from High Island 446 platform in the Gulf of Mexico to High Island 105 platform, crashes while making an emergency landing at High Island A20 platform; there are no survivors.

While en route from the oil platform High Island 446 in the Gulf of Mexico for High Island 105 on November 28, Flight 71, an AS-350B with a pilot and two passengers, reports severe vibration before diverting for an emergency landing at Galveston. The helicopter disappears and there are no survivors.

An SA-315B, which has been sent to Peru, crashes during takeoff from a landing pad at Sapahwa on December 29; the aircraft is badly damaged, but the pilot is not hurt.

As part of a continuing expansion into helicopter repair and overhaul, PHI, in February 1997, purchases the helicopter composite repair capability of Nordam Group. The actual work will be performed by a new subsidiary, Acadian Composites. Also during the month, the NSF contract is completed.

In March, the company's minority stake in **Irish Helicopters, Ltd.** is sold to **Bristow Helicopters, Ltd.** for an undisclosed sum.

After a period of campaigning, the Office and Professional Employees International Union (OPEIU) files an application for representation of the carrier's pilots with the National Mediation Board (NMB). An NMB-supervised election results in rejection of the union; however, the OPEIU resumes its efforts to organize PHI.

While en route from Ewing Banks 826 platform in the Gulf of Mexico on a September 18 flight to Venice, Louisiana, a Bell 407 with a pilot and four passengers experiences engine failure and is forced to ditch at point 70 mi. SW of Fourchon, Louisiana. Although the pilot receives minor injuries, all are quickly rescued.

PHI returns to Antarctica in October for the second year. The same three AStars and Bell 212 involved the previous year are sent down

again. A spokesman for the National Science Foundation notes that the switch from Navy lift to a civilian helicopter contractor is saving the U.S. Navy \$2.5 million per year.

Airline employment at year's end stands at 1,825; these personnel work at 45 domestic and 11 foreign bases. Revenues total \$212.4 million.

Flights continue in 1998. A total of 76% of the concern's business comes from oil and gas operations in the Gulf of Mexico, with EMS service (15%) and international activities (9%) making up the remainder.

Another application for representation of the company's pilots is filed by the OPEIU with the NMB and the second employee election within a year is held on March 31. Once again, the pilots vote to reject the OPEIU bid. The NMB certifies the OPEIU election results on October 28.

Company employment at the end of the year totals 2,178. The fleet includes 300 aircraft flown from 41 domestic and 10 foreign bases.

Revenues reach \$238.8 million.

While departing Eugene Island 193, an oil platform located in the Gulf of Mexico, on March 17, 1999, the pilot of an AS-350B with three passengers loses control. The helicopter rolls inverted and drops into the ocean on the north side of the platform (two dead).

The largest U.S. helicopter concern working in the Gulf of Mexico, PHI, at the beginning of 2000, operates an eclectic fleet of 300 helicopters. It serves drilling rigs located as far as 200 mi. offshore in 3,000 ft. or more of water. The mix of activity is approximately 35% deepwater and 55% shallow (inshore).

Minutes after the January 24 FAA certification ceremony at the Heli-Expo 2000 convention, the first two production Bell 427s are delivered to PHI.

Having successfully defeated the attempt of its pilots to organize in two attempts since 1996, PHI finally loses in March. Under the leadership of Line Pilot Stephen Ragin, 293 of 540 eligible employees vote, in a National Mediation Board-conducted election, in favor of representation by the Office of Professional Employees International Union (OPEIU).

A \$7-million S-76C+ is acquired in June and enters service in August.

PETRONORDAVIA AIRLINE: Stretenski Blvd. 9/2, Moscow, 129010, Russia; Phone 7 (095) 925-1287; Fax 7 (095) 923-0353; Year Founded 1992. This small carrier is established in 1992 as a division of the German energy concern Petronord, A.G. General Director Sergey A. Mitchkin employs a workforce of 16 and undertakes flights to the north of the country with a single Yak 40.

Services continue in 1993-2000, during which years a second Yak-40 is acquired and charters are operated throughout Russia and the CIS.

PETROZAVODSKOE AVIAPREDPR: Peski Airport, Solomensk Shusse, Petrozavodsk, 185006, Russia; Phone 7 (81400) 44574; Fax 7 (81400) 43891; Year Founded 1994. PA is set up at Peski Airport at Petrozavodsk in 1994 to provide ad hoc passenger and cargo charters and also rotary-wing aerial contract work. General Director Vladimir A. Nikolaev launches services with a mixed fleet of Antonov An-2 biplanes and Mil Mi-8 helicopters.

Flights continue in 1995-2000 with 10 An-2s, 10 Mi-8s, and 9 Kamov Ka-26s.

PGA-PORTUGALIA AIRLINES (COMPANHIA PORTUGUESA DE TRANSPORTES AEREOS, S.A.): Aeroporto de Lisboa, Rua C-Edif. 70, Lisbon, P-1700, Portugal; Phone 351 (1) 842-5520; Fax 351 (1) 842-5500; <http://www.pga.pt>; Code NI; Year Founded 1997. In order to increase public recognition, Portugalia Airlines, S.A. is renamed in January 1997. Chairman/President/CEO Joao Ribeeiro da Fonseca oversees a 720-person workforce and a fleet of 6 leased Fokker 100s, all in new livery. Shareholding continues to be divided between Gestres-Gestao Estrategica Espirito Santo (51.575%), Banco ESSI (10.49%), and private investors.

From bases at Porto, Madrid, Faro, and Lisbon, the carrier performs scheduled or inclusive-tour passengers to Basel, Bilbao, Brussels, Cologne, Faro, Gran Canaria, Hanover, Lisbon, Madrid, Manchester, Palma de Mallorca, Porto, Strasbourg, Stuttgart, Tenerife, Turin, and Valencia.

In January, the carrier, having decided to add new capacity, completes a comprehensive assessment of both the Canadair RJ and the Embraer ERJ-145 Amazon. Orders, valued at \$90 million, are placed on February 1 for six of the latter. Plans are now initiated for the company to truly become the regional carrier of the Iberian Peninsula. Service between Lisbon, Porto, and Faro in March.

On April 1, the carrier "invades" Spain, launching frequencies from Lisbon and Oporto to Barcelona, Bilbao, Las Palmas, Palma de Majorca, Tenerife, and Valencia. At the same time, service starts from Barcelona to Bilbao and from Valencia to Palma de Majorca. When **TAP-Air Portugal, S.A.** deletes its service from Lisbon to Manchester, England, that route is taken over by the regional on May 1.

The first two ERJ-145s are delivered on May 14 and June 15 and begin service on June 1 and July 1. Meanwhile, in June, the company introduces Private Club-First Business business-class service on its Fokker 100s. New convertible leather seats are also installed on the Dutch-made jetliners.

By July, the company has increased its total number of flight cycles to 1,725, an increase of 40% over the previous year. In the U.K., the airline forges connections with **Business Air, Ltd.**, **British Regional Airlines, Ltd.**, **Manx Airlines, Ltd. (2)**, and **Aer Lingus Irish Airlines, Ltd.** The company continues its search for a new partner as the second pair of Amazons is delivered in October and November; merger talks begin with **TAP-Air Portugal, S.A.**

The fourth new Amazon initiates return flights to Milan at the end of November. In December, a \$30-million request is placed for two more EMB-145s. During the year, capitalization is increased by two-thirds to cover the costs of expansion and equipment.

Passenger boardings jump 20.8% to 757,410 (on 18,702 scheduled departures) while freight increases 40.5% to 1.41 million FTKs. Revenues advance 6.9% to \$99.35 million, while expenses rise 6.8% to \$95.54 million. The operating profit grows to \$3.8 million and there is a net gain of \$2.3 million.

The last two ERJs are delivered in January and March 1998. At the beginning of the year, Private Club lounges are opened at Madrid and Porto. Thrice-daily nonstop roundtrips are initiated at the end of March between Lisbon and Barcelona while, on April 1, daily return service begins from Porto and Lisbon to Nice and Lyon.

Joint flights start on May 1 in cooperation with **Crossair, Ltd.** between Lisbon and EuroAirport Basel Mulhouse Freiburg.

With the success of Lisbon's Expo '98 and the buoyant national stock market, Grupo Espirito Santo decides at the end of July to end merger talks with **TAP-Air Portugal, S.A.** Instead, in something of a risk, it decides to list the airline on the stock market in November.

Daily roundtrips commence at the end of October between Porto and Munich via Lyon and from Porto to Barcelona. Daily return flights from Lisbon to Marseilles begin at year's end.

Customer bookings surge 20.2% this year to 911,000, while cargo traffic rises 1.5% to 1.43 million FTKs. For the first time, the number of travelers carried on international flights represents more than half (56%) of PGAs scheduled passenger traffic.

By the beginning of 1999, airline employment has been increased by 19.8% to 944. A code-sharing agreement is signed with **RLA (Regional Lineas Aereas, S.A.)** in January; under its terms, the two are able to sell tickets on each other's new direct twice-daily roundtrips between Lisbon and Casablanca. The service is operated with a Beech 1900D, newly acquired by RLA.

In July, principal shareholder Grup Espirito Santo sells 42% of its shareholding to SAirGroup, parent of **Swissair, A.G.** An additional 43% is sold to SAirGroup's Portuguese allies, the state-owned Caixa Geral de Depositos, the nation's largest bank, the government holding company Partest, and Banco Cif, which is controlled by Banco Comercial

Portugues, S.A. Daily ERJ-145 return service is launched on October 31 from Lisbon to both Bordeaux and Toulouse.

New daily roundtrips are introduced from Lisbon and Porto at the end of October to Toulouse and Bordeaux.

Customer bookings this year drop 8.2% to 836,000, while freight traffic falls 17.1% to 1.19 million FTKs.

The workforce at the beginning of 2000 totals 1,017. The ERJ-145 fleet is increased to eight on March 21 by the delivery of the latest two Brazilian-made regional jets.

New daily ERJ-145 roundtrips are launched on March 26 from Lisbon to Bologna. Daily Fokker 100 return flights are simultaneously initiated from Lisbon and Porto to Hamburg, along with six-times-a-week Fokker 100 return frequencies to Schoenefeld Airport, Berlin.

Having identified serious doubts, the EU Commission, in mid-June, opens a four-month antitrust investigation of the takeover bid by SAirGroup and its allied Portuguese banks. Principal concern has arisen over the anti-competition potential of a concentration of airline ownership, given that the groups involved also hold sway over **TAP-Air Portugal, S.A.**

The EU Commission reports on August 18 that SAirGroup, parent of **Swissair, A.G.**, and a group of Portuguese investors have withdrawn their plans to take a 42% controlling stake in Portugalia.

Frequencies between Porto and Barcelona are boosted to thrice daily on October 29, even as the number of weekly flights for Porto and Lisbon to Stuttgart reaches six per week. A third daily roundtrip service between Casablanca and Lisbon is introduced in partnership with **RLA (Regional Lineas Aereas, S.A.)**.

PHARAOH AIRLINES, S.A.E.: 5 Dr. Batrawy St., Box 2711, Naser City, Cairo, Egypt; Phone 20 (2) 262-5046; Fax 20 (2) 262-2184; Code PHA; Year Founded 1998. This new Egyptian charter operation is established at Cairo in the spring of 1998 to fly tourists to Turkey and the Greek holiday islands. Two Boeing 737-222s, first operated by **United Airlines** years earlier, are leased and delivered to Aviation Cosmetics of Eindhoven, Holland, for painting.

When the first Boeing 737-222 emerges from the workshops, it wears an attractive sand-colored fuselage with the head of Pharaoh Akhnaton painted on the black tail. The first revenue service is flown on July 16 from Cairo to Istanbul.

The second B-737, a Dash-4Q8, arrives later in the year, wearing the same paint scheme, but with the face of Pharaoh Tutankhamun on the tail.

Both "Baby Boeings" operate charters in 1999–2000 from Egypt to Turkey, Italy, and the Greek islands.

The B-737-4Q8 is returned to ILFC on August 15 of the latter year and is passed on to **Virgin Blue (Pty.), Ltd.** in Australia.

PHILADELPHIA JET SERVICE: 401 City Ave., Suite 800, Bala Cynwyd, Pennsylvania 19004, United States; Phone (610) 667-6700; Fax (610) 667-1459; Year Founded 1991. PJS is set up at Philadelphia in 1991 to offer executive and small group passenger charters throughout the eastern U.S. and to Caribbean destinations. Three pilots are hired and revenue flights begin with a single Grumman G-1159A Gulfstream III.

PHILADELPHIA RAPID TRANSIT AIR SERVICE: United States (1926). The Philadelphia Rapid Transit Air Service is formed by street railway official Thomas E. Mitten in the spring of 1926 to offer an experimental flight service in connection with the city's Sesquicentennial Exposition for the signing of the Declaration of Independence. Fokker official Andre Priester is appointed operations manager and two Fokker F-VIIa/3ms are purchased and christened *Kendrick* and *Wilbur*.

The two trimotors are employed to inaugurate thrice-daily scheduled passenger service (at \$15 per person one way or \$25 for a 15-day roundtrip ticket) to Hoover Field in Washington, D.C. on July 6. Simultaneously, the carrier, having obtained U.S. Post Office Contract Air

Mail Route No. 13 (CAM-13), also begins mail flights. Chief Pilot Edwin C. Musick, who would, before his loss in 1938, become the most famous commercial pilot in America, flies one of the Fokkers. The CAM-13 contract expires on October 6 and is replaced by CAM-15, Philadelphia to Norfolk, Virginia, which is initiated four days later.

The great Philadelphia celebration ends on November 30, at which point the pioneer shuts down. During its short career, it flies 3,695 passengers exactly on schedule without a single accident. Within a year, both Priester and Musick will be employed by another tightly scheduled airline—**Pan American Airways (PAA)**.

PHILIPPINE AERIAL TAXI COMPANY: Philippines (1930–1939). Privately owned PATCO is established at Manila on December 30, 1930, initially to transport supplies, equipment, and personnel of its organizers. Shareholding is divided between a group of individual investors led by former U.S. Army Aviation Service Maj. Joseph Suvent, who had attempted to start the **Philippine Airways Service** a decade earlier, and Spanish citizen Andres Soriano, president of the Miguel brewery.

The concern orders one each WACO and Stinson biplanes and these are employed, beginning on March 31, 1931, to inaugurate both private and public charter operations to Baguio, Paracale, and Legaspi. One of the routes flown rather regularly, that north from Manila to Baguio, becomes fully scheduled on Christmas Eve.

The Philippine Bureau of Posts awards the company a mail contract on January 25, 1932 for its Manila–Baguio route. The company continues its largely unheralded services without change over the next two years. In April 1934, the two original aircraft are joined by three Bellanca cabin aircraft and on November 14 the Commonwealth grants the carrier a permanent license. Although not immediately of concern, a new constitution is adopted by the Philippines during the year, one that permits a president and full political administration.

There are no additional significant occurrences with PATCO until February 28, 1938, when one of its Bellancas disappears into the sea near Manila. After the establishment of the Bureau of Aeronautics, its officers arrive at company headquarters on November 1 to inform PATCO executives that, after a grace period, they will no longer be permitted to operate single-engine aircraft, the only type in their fleet.

Paul L. Gunn brings his wife and four children to Manila in early 1939 to serve as President Soriano's personal pilot; his name will become very familiar in local aviation circles during and after World War II.

Unable to acquire larger aircraft, PATCO declares bankruptcy in September. During its nine years of operation, the pioneering operator has flown over 25,000 passengers. Less than two years later, Gunn will recommend that Soriano form another carrier. The new **Philippine Airways**, established in February 1941, purchases PATCO's assets on July 22 for 500 pesos.

PHILIPPINE AERO TRANSPORT, INC. (PATI). See PHILIPPINE AEROSPACE DEVELOPMENT CORPORATION (PADC)

PHILIPPINE AEROSPACE DEVELOPMENT CORPORATION (PADC): Philippines (1974–1991). Established by the government at Manila in May 1974 to provide flight as well as ancillary aviation services, PADC begins nonscheduled passenger and cargo charters throughout the archipelago on September 10. An airline division, Philippine Aero Transport, Inc. (PATI) is established on May 24, 1975. A fleet of 10 Britten-Norman BN-2 Islanders and several Bolkow BO-105 helicopters is assembled and revenue services commence from Cebu in December to 18 destinations in the Visayas Islands.

Operations continue in 1976, during which year the company adds five additional points. After an uneventful 1977, the company is ordered merged into **Philippine Air Lines (PAL)** in December 1978. The service continues under its own name, but is gradually reduced. On September 15, 1979, 10 markets are abandoned, although 7 are transferred to PAL. Revenue operations over the PATI routes are suspended by PAL on February 1, 1980, and the remaining Islanders are turned back to PADC.

In 1991, PADC, which has offered charters for a decade, abandons direct flight operations, electing to join with TNT Worldwide Express (Asia) to form **Pacific Far East Cargo Airlines**.

PHILIPPINE AIR EXPRESS: Philippines (1947). The story of PAE is the story of the Philippines most enterprising pre-World War II local pilot, Jose Tinsay. A native of Iloilo on Panay, Tinsay learns to fly in the U.S. during 1919. There, he purchases a Curtiss Oriole that he ships home by steamer.

Once it has been reassembled, the Oriole is employed, during the summer of 1920, to begin a passenger charter service from Iloilo to Bacolod, 27 miles away across the Guimaras Strait on the island of Negros. Tinsay's unnamed operation is the first in Philippine airline history to transport fare-paying customers.

Services continue and in 1925 a Curtiss Junior joins the Oriole. Regularly scheduled service, again the first in national air history, is inaugurated with a one-way \$25 fare (50 pesos). Charters are also undertaken to destinations on both Panay and Negros.

There are no changes in operations until the winter of 1932–1933, when Tinsay's concern is acquired by the **Iloilo-Negros Air Express Company**.

Tinsay returns to the Philippine air transport scene in early 1947 when he begins Philippine Air Express. Revenue all-cargo flights are inaugurated between Iloilo and Manila with a single war-surplus Douglas C-47. En route between the two cities on November 22, the Douglas catches fire and explodes; Tinsay and two others are killed, as is their company.

PHILIPPINE AIR LINES (PAL): PAL Building, 1 Legaspi Street, Legaspi Village, Makati, Metro Manila, 1059, Philippines; Phone 63 (2) 818-0111; Fax 63 (2) 810-9214; <http://www.philippineair.com>; Code PR; Year Founded 1941. At the recommendation of his personal pilot, Paul L. Gunn, Andreas Soriano, president of the San Miguel brewery, plus Juan Elizalde and a small group of Manila businessmen, form Philippine Airways on February 26, 1941 as successor to **Philippine Aerial Taxi Company (PATCO)**. On March 10, the carrier enters into a management contract with Soriano & Company and three days later, the corporate identity is changed to Philippine Air Lines.

Soriano is president, with Gunn as director of operations and Elizalde a director; Soriano contributes his own Beech 18 to the enterprise, while Elizalde provides a Beech 17 Staggerwing.

Flying the Twin Beech, Gunn and another American copilot personally begins revenue flights on March 15, with a service that flies five passengers from Manila's Nielson Airport to the hillside resort at Baguio. The Staggerwing initiates a route to Legaspi on March 17. Another Beech 18 is added on April 9, allowing the route network to be expanded to Naga, Dact, Tacloban, Masbate, and Cebu.

On July 22, the remaining assets (one WACO biplane and a Bellanca cabin monoplane) of **Philippine Aerial Taxi Company (PATCO)** are purchased for PP 500. Full-scale competition is contemplated with Iloilo-Negros Air Express Company (INAEC) and at this point, the Commonwealth's government, through its National Development Corporation, steps in and purchases a 34% stake, which increases the carrier's capitalization to PP 1 million.

Upon the outbreak of the Pacific war on December 8, Gunn's three Beeches, the WACO, and the Bellanca become an important logistical component of Gen. Douglas MacArthur's attempt to defend the Bataan Peninsula and other parts of the archipelago, flying secretly from Grace Park Cemetery as the "Bamboo Fleet." The tiny transports' missions include medical evacuation flights to Australia and return with medical supplies, the provision of guidance for flights by fighters and bombers, and local transport. The Japanese shoot down two PAL aircraft over southern Mindanao Island and destroy the other on the ground during a strafing attack.

When his aircraft are destroyed, Gunn assists in evacuation flights with other aircraft types. Indeed, on one occasion, while piloting a Boe-

ing B-17 Flying Fortress, Gunn is forced to crash-land after being attacked by a Japanese Mitsubishi Zero fighter; he is able to repair the bomber and fly it out to Australia.

Both Soriano and Gunn reach Australia. During the war years, the company president serves on Gen. MacArthur's staff, even finding the opportunity to enter into discussions with **Transcontinental and Western Airlines (TWA)** chief Jack Frye concerning postwar expansion. The airline's chief pilot becomes a valued member of Gen. George Kenney's U.S. Fifth Air Force; Maj. "Pappy" Gunn, one of the older officers among thousands of young personnel, makes a further contribution by designing staggering forward-firing armament systems for light- and medium-bombers.

With the war all but over following the atomic bombing of Japan, President Soriano, Maj. Gunn, and PAL's board of directors meet at the Soriano facilities in damaged downtown Manila on August 11, 1945. Plans are made to revive the airline, with possible help from TWA. With assistance from **Pan American Airways (PAA)**, the prewar carrier **Iloilo-Negros Air Express Co.**, renamed **Far Eastern Air Transport (FEAT)**, resumes operations on November 15. Meanwhile, Howard Hughes is persuaded to give TWA assistance to Soriano's effort to reestablish PAL.

PAL's governing body meets again on January 10, 1946. The company is officially reborn during this conference. Shareholding is increased to PP 2 million, including a 28% stake assigned to **Transcontinental and Western Airlines (TWA)**. Five ex-military Douglas C-47s are acquired and converted to DC-3 civil standard; these permit PAL to resume its services from Nielson Field on February 14, with services to Cebu and Legaspi. The payroll now has 108 names. PAL and FEAT plan to commence China flights while another small carrier owned by a group of former USAAF pilots, **Commercial Air Lines, Inc. (CALI)**, begins operations to the islands south of Manila.

In early July, PAL charters the DC-4 *Talao-Manila Bay* from Orvis Nelson's new **Transocean Air Lines (TAL)** to fly nonscheduled charters to California transporting U.S. servicemen stateside. The first flight, from Manila to Oakland (across the Bay from San Francisco) via Guam, Kwajalein, and Honolulu, flown by Nelson and a TAL crew on July 31, gives PAL the honor of becoming the first Asian airline to fly across the Pacific to the U.S. Meanwhile, following Philippine independence on July 4, PAL is designated the new country's national airline.

With **Pan American Airways (PAA)** Pacific operations suspended and a maritime strike in progress, the PAL-TAL route is, during the summer and fall, the only commercial communications channel to the Orient from the U.S. On September 13, yet another small carrier, **Trans-Asiatic Airlines (TAALI)**—again owned by ex-U.S. military servicemen—receives a permit to operate across the South China Sea. The PAL-TAL *Talao-Manila Bay* inaugurates service to Hong Kong and Shanghai on September 5 and to Bangkok in November. Meanwhile, a DC-3 with 3 crew and 2 passengers is lost in an accident 50 mi. E of Cotoabato on October 1; there are no fatalities.

Late in the year, PAL purchases two DC-4s from TAL, which begin scheduled service to the U.S. West Coast on December 3. The fleet at year's end comprises 16 DC-3s, 5 DC-4s, and 3 Beech 18s.

Pan American Airways (PAA) finally resumes transpacific services on January 20, 1947. On January 25, a C-47 freighter with four crew crashes into Mount Parker at Hong Kong while on initial approach; there are no survivors.

In March, **Transocean Air Lines (TAL)**, in exchange for the two DC-4s, acquires a minority interest in PAL, cancelling its **Transcontinental and Western Airlines (TWA)** contract and giving it, instead, to Nelson's carrier, which will now act to operate the Philippine's international services. Shareholding is increased to PP 5 million; Chairman Soriano, with 22.5% of the shares, is the largest minority owner.

Unable to continue, competitor **Far Eastern Air Transport, Inc. (FEAT)** sells out to PAL on May 3 for PP 3.4 million. A wet-leased TAL DC-4 opens a Manila to Madrid service on May 3 via Calcutta, Karachi, and Cairo, allowing PAL to become the first Asian airline to fly to Europe.

On May 6, the American CAB grants the airline a transpacific route to the U.S. A month later, President Harry S Truman approves transfer of the international mail contract previously operated by **Pan American Airways (PAA)** to the carrier. **Commercial Air Lines (CALI)** on July 22 receives a scheduled service permit and places its 12 DC-3s on routes to Amoy, Shanghai, and Hong Kong. PAL takes over the PAA mail contract in August; both PAA and **Northwest Airlines** receive Fifth Freedom rights beyond Manila.

Officially scheduled PAL DC-4 flights to San Francisco commence on October 27. During the remainder of the year and early into the next, the company transfers operations across Manila from Nielson Field to Nichols Field.

The first of two new DC-6s to be received on the year arrives at Manila on May 23, **1948**. Christened *Bataan* and nicknamed *Pacific Pacemaker*, the new aircraft replaces the over-ocean TAL DC-4s on May 29, flying via Wake Island instead of Kwajalein. The second DC-6, *Leyte*, meanwhile, begins service to Shanghai on May 26. Rome and London become the latest European markets on July 24.

On September 1, **Commercial Air Lines (CALI)** and its DC-3s are purchased and absorbed. PAL shareholding is redivided between the Philippine government (34%), Soriano (17%), **Transcontinental and Western Air Lines** (7%), **Transocean Air Lines** (8%), and private interests the remainder. The government's equity is obtained by the expedient of converting state loans to the airline.

The 12 newly received ex-C-47s are placed on domestic routes, while the DC-4s are sold and the proceeds employed to order additional DC-6s.

Service to Shanghai is suspended on the first day of the month; however, the new airliners now link Manila with London via Bangkok, Calcutta, Karachi, Cairo, Rome, and Madrid.

A DC-6 is involved in a nonfatal landing accident on Wake Island on November 15 and must be written off.

The company's third DC-6, the *Manila*, initiates new service to Tokyo on January 26, **1949**. In February, two DC-4s open Asia's first coach-class service on routes to Hong Kong and Tokyo.

While on a Daet to Manila run on May 7, a DC-3 with 3 crew and 10 passengers explodes in midair over Alabat Island, killing all aboard. Weeks later, some wreckage is recovered that indicates that a sudden blast had occurred in the plane's tail section. On June 2, police apprehend two ex-convicts who are alleged to have placed a bomb aboard the DC-3 to kill a single passenger, the husband of a woman involved with another. A third man will be apprehended later. The woman had given the three PP 185 (\$100) to carry out the mass murder.

Also in June, company capitalization jumps to PP 12 million; President Soriano acquires much of TAL's stake, becoming the dominant minority owner. The fourth DC-6, the *Mindoro*, arrives on October 25 and enters service on the European network on November 1.

Meanwhile, a C-54A must be written off following a hard landing at Tokyo on October 28; no serious injuries or fatalities are reported.

On January 24, **1950**, a DC-3 with three crew and a passenger disappears between Iloilo and Manila; there are no survivors.

PAL begins to experience significant financial reversals that result in a redistribution of shareholding. The Philippine government acquires a 54% stake, while Soriano's share declines to 22%. On May 27, the board of directors authorizes disposal of the four DC-6s in favor of two DC-6Bs, which are ordered from Douglas on December 21. Meanwhile, with its major source of trade dried up by the Communist revolution in China, **Trans-Asiatic Airlines (TAALI)** sells out to PAL late in the year. Also during the year, Maj. "Pappy" Gunn resigns after differences with President Soriano.

On May 31, **1951**, the three men convicted of bombing a DC-3 in 1949 are given death sentences. Maj. Gunn establishes a nonscheduled charter operation, **Philippine Aviation Development**, which operates Beech 18s. In July, a company delegation is dispatched to Tokyo to assist workers from TAL in training technicians for the new **Japan Air Lines Company, Ltd. (2)**. Flights to Taipei commence on November

16. Orders are placed for Convair CV-340s with which to improve domestic services.

While climbing away from the airport at Lahung, Cebu, on March 10, **1952**, a DC-3 freighter with three crew strikes the top of a house and crashes; there are no survivors. Another DC-3 with 3 crew and 26 passengers fails its takeoff from Baguio on March 30 and crashes (10 dead).

The first new DC-6B arrives in Manila on July 4 and is christened *Magellan's Cross*. It begins flying to Frankfurt and Zurich from Manila on July 30, the same day frequencies are initiated to Okinawa. On October 24, a marketing agreement is signed with **Aeronaves de Mexico, S.A. de C.V.**

During an attempt to divert the aircraft to Communist China, Chinese gunmen kill two crewmen of a DC-3 en route from Laoag to Aparri on December 30. Chinese Nationalist warplanes force the craft to land on Quemoy Island, where it is found that all seven aboard the Douglas, including two Americans, are safe.

Back in the Philippines, the first CV-340 arrives on April 4, **1953**. Local airports are in such bad repair that, despite company appeals for help in their upgrade, it will prove unprofitable to operate the new airliners at home. Service to Hamburg begins on April 1.

On June 8, President Truman and the CAB authorizes an extension of the company's Oakland service down to Mexico City, in association with **Aeronaves de Mexico, S.A. de C.V.** The plan falls apart when, just before services commence, the CAB refuses permission to include a stop at Tokyo and a technical objection by **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)** is upheld by Mexican courts, thereby preventing launch of the Mexican service. Unable to successfully operate in the Philippines, the company's new Convairs enter service on regional routes: Hong Kong on June 16, Taipei on June 23, and Bangkok on October 27.

A fully loaded DC-3 makes an emergency landing in a rice paddy field near Tuguegarao on October 15; although the aircraft must be written off, there are no fatalities.

Beirut becomes a stop on the European route as of November and De Luxe flights commence on December 1 from Manila to Cagayan de Oro. Also in December, the company attempts to establish a helicopter commuter airline with the introduction into local service of three Hiller H-12s.

On January 5, **1954**, El Economico service is launched by DC-3s in the north of Luzon; the deep discount flights will later spread throughout the nation. The Philippine government assumes majority control in 1954; Eduardo Z. Romualdez is appointed chairman with Soriano remaining as president.

A DC-6 with nine crew and seven passengers crashes while on approach to Rome's Ciampino Airport on January 14; there are no survivors.

With the San Francisco route proving uneconomical and other financial concerns causing losses, Soriano is unable to win the Philippine government's approval on March 30 for a plan to increase capitalization to PP 10 million and purchase four DC-7s. Government officials put forward a demand for increased and improved domestic services. The next day, all U.S. and European services are terminated and the DC-6Bs are removed from regional routes, being replaced on flights to Bangkok, Hong Kong, and Taipei with CV-340s.

All four-engine airliners are offered for sale in April. During the same month, service to Bangkok is suspended and the DC-3s replace Convairs on the route to Taiwan. An H-12 crashes on June 5. The end of the Huk Rebellion in May permits El Economico service to be safely pushed on June 15 to 15 points in the Central Philippine's Visayas Islands, with a similar route stretched to Taipei. The first Filipino nationals accept senior management posts on December 31—Operations Director Roberto Lim and Traffic and Sales Director Renato Barretto.

The regional route to Hong Kong is built up in **1955**, as is an elaborate domestic network, complete with four classes of service. A Rural Air Service (RAS) is inaugurated on June 15 in which five de Havilland Canada DHC-3 Otters assist the DC-3s in providing bush flights con-

necting small communities with major airports in the Visayas and Mindanao.

During the first quarter of 1956, the government commits to a program of local airport improvement. On March 27, orders are placed for two Vickers Viscount 770D turboprops. By summer, RAS is flying El Economico service to 52 domestic markets. Nonstop DC-3 trunk line flights are initiated on October 24 between Manila and Davao, the most southern of provincial capitals.

Enplanements this year total 252,760.

The British-built Viscounts arrive at the beginning of spring in 1957; as no domestic airport can accommodate them, they are placed on the Hong Kong route beginning on May 10. Two Fokker F.27 Friendships are ordered from The Netherlands in July. Paul L. "Pappy" Gunn, who had helped Andres Soriano create PAL, is killed when his **Philippine Aviation Development** Beech 18 crashes at Tanauan, Batangas, on October 11. On December 11, a de Havilland Canada DHC-3 Otter fails its takeoff from Ozamiz and crashes (two dead).

American pilot James Fleming's **Fleming Airways Systems Transport (FAST)** begins nonscheduled operations on March 5, 1958. His services will eventually become a concern for PAL. Viscount 770D service from Manila to Cebu commences five days later. Meanwhile, it is announced in September that the DC-8-50 has been chosen as the carrier's first jet equipment; orders are placed for two. Turboprop flights from Manila to Zamboanga on Mindanao begin on December 12, but because of airport inadequacy, they must be withdrawn shortly thereafter.

The U.S.-Filipino bilateral air agreement is abrogated (effective a year hence) by the Philippine government on February 29, 1959; a new air traffic agreement between the country and its former colonial master is sought. Executives Barretto and Lim are promoted vice presidents in March and on April 9, deep discount DC-3 *Star* red-eye night frequencies are inaugurated. On August 15, services on two of these routes are enhanced: the *Bicol Star* (to Legaspi) and the *Southern Star* (to Davao).

Passenger boardings this year accelerate to 655,748, including 27,759 on the Hong Kong service.

While on a January 12, 1960 training flight, a Scottish Aviation Twin Pioneer 2 with three crew makes an extremely bad landing at Plaridel; although the plane must be written off, there are no fatalities.

The first Fokker Friendship arrives on March 9, while the first of several Scottish Aviation Twin Pioneers begin taking over Rural Air Service routes from the DHC-3 Otters on March 15. After the arrival of a second F.27-100 ten days later, Fokker trunk line service begins between the principal cities and Viscount 770D flights to Cebu are increased to three roundtrips each day. Domestic destinations served now total 72.

In April, minority shareholder **Transocean Air Lines (TAL)** ceases trading. Despite the introduction of Fokker F.27-100s in March, the DC-3 remains the fleet's principal aircraft type. One of these, with 30 aboard, is forced to ditch at Bias on July 13 while on an interisland flight between Negros and Mindanao; all aboard are saved.

A DC-3 is destroyed on the ground at Manila during a typhoon on November 19. On November 23, a DC-3 with 4 crew and 29 passengers disappears while on an Iloilo-Manila flight; the wreckage of the aircraft is found on Mount Baco, Mindoro Island, the next day and there are no survivors.

En route to Mindanao with 3 crew and 34 passengers on the evening of December 22, a DC-3 crashes on takeoff from Cebu and makes a forced landing (28 dead).

President Carlos P. Garcia's government now orders a suspension of all night flying.

The Committee on Transportation and Public Service of the Philippine Senate commences public hearings into PAL safety, beginning on January 3, 1961. Heated testimony at the inquest and inflammatory reporting in the national press follow for over a month. Meanwhile, on January 9, F.27-100 service is launched to Baguio.

On February 11, founder and longtime President Soriano informs Chairman Romualdez that he intends to quit, a position made known to the newspapers the next day. No one can persuade the gentleman to

change his decision; his final annual report is presented to the board of directors on March 23 and his departure takes effect on March 31. The pioneer's duties are assumed in a concurrent capacity by Chairman Romualdez.

Night Mercury Viscount 770D service begins to Bacolod on June 28, the first PAL night flights in over six months. On July 1, the Twin Pioneers begin retirement from the RAS. The first portion of the new Manila International Airport opens on September 22 and, employing Boeing 707-321s leased from **Pan American World Airways (1)**, jetliner service is inaugurated between Manila and Hong Kong.

Although the first of two ordered Douglas DC-8-53s becomes available in November, the financing package is not in place, so delivery is postponed.

Passenger traffic for the year reaches 790,000, including 37,000 passengers flown on international service.

A change of government on January 19, 1962 requires that Chairman Romualdez retire. He is succeeded as president by Renato Barretto. The fleet he inherits comprises 19 DC-3s, 4 Viscounts, 3 F.27-100s, 3 DHC-3 Otters, and 3 Twin Pioneers.

With financing finally in place, the first DC-8-53 is acquired in February. The airline is unable to operate the new jetliner, so it is leased to **KLM (Royal Dutch Airlines, N.V.)**. The order for the second DC-8-53 is cancelled.

Filipino businessman Benigno ("Benny") Toda Jr. is elected board chairman on March 29, with his colleague, Manuel Marquez, as vice chairman. Following its use by Douglas to set several transpacific speed and distance records, the DC-8-53 order cancelled by PAL is picked up by **KLM (Royal Dutch Airlines, N.V.)** in April.

Arrangements are completed for its use by the Filipino airline and thus the Dutch flag carrier supplies the DC-8-53 *Sampaguita* under a wet-lease-purchase contract on June 15; it wears its tricolored PAL paint scheme on one side only. Three days later, it replaces the chartered Pan Am Boeing on the Hong Kong service.

After two days of trials, the *Sampaguita*, piloted by a KLM cockpit crew, is employed to resume international services across the Pacific on June 20 from Manila to San Francisco via Honolulu. When the new jetliner first flies from Manila to Bangkok via Hong Kong on June 24, the British, concerned over too many foreign jet services into their crown colony, prohibits more of these services; Viscount 770Ds return to the route.

On July 1, the Douglas jetliner flies San Francisco to Manila in a record 14 hrs. 55 min.

While climbing out of Paranaquerizal on an October 12 training flight, an F.27-100 with three crew crashes; there are no survivors. On October 23, a DC-3 freighter with three crew is destroyed as the result of a bad landing at Cagayan de Oro; there are no fatalities.

By year's end, a second transpacific DC-8-53 service is inaugurated and Capt. Oscar Ramos becomes the carrier's first Filipino jetliner commander.

Five F.27-100s are received in 1963. While on a March 3 domestic flight, a DC-3 with 3 crew and 24 passengers crashes into Mount Boca, south of the city of Malalag on Mindanao Island; there are no survivors.

The carrier suffers a job action by certain of its employees during April, during which month **Fleming Airways System Transport (FAST)** is able to take up some of the flag line's load with services to Davao, Cebu, and Bacolod.

Being incompatible with Chairman Toda, President Barretto resigns on August 5 and is succeeded by Ralph Igoa. On September 6, ground personnel strike, forcing service cutbacks.

Enplanements for the year total 1,115,895; revenues of \$1,179,375 are earned.

The workforce stands at 1,632 in 1964. A DC-3 with 3 crew and 29 passengers crashes near Marawi on February 21 (31 dead).

To compete with the deep-discount services of **Fleming Airways System Transport (FAST)**, PAL purchases a DC-4 from **Japan Air Lines Company, Ltd. (2)** and employs it to begin nonscheduled,

low-cost domestic Maya services. A DHC-3 Otter with 11 aboard, crashes near Zamboanga on May 20; there are no survivors. President Igoa resigns on March 19. Ground crews are able to save several DC-3s from destruction during Typhoon Dading on June 29.

On July 1, the Philippine Supreme Court confirms the government as principal owner of the airline. On August 24, the Government Service Insurance System, which holds the government's stake, announces that it will sell its shares to Chairman Toda. Maya charter services are doubled with a second DC-4 during the month.

Meanwhile, the undemocratic ownership decision brings a howl of press criticism and a public auction on the Manila Stock Exchange is held on September 2. The government stake is cut to 49% when Toda ally Anselmo Trinidad acquires 5% shareholding. Two BAC 1-11-402s are ordered for domestic service on November 3, with a third taken on option. Without government support, the Rural Air Service now ends.

Passenger boardings jump 24% to 1,468,282, while net earnings rise 75% to \$1.275 million. For the first time, both international and domestic operations make money; the latter remain unsubsidized and offer the lowest per-mile fares in the world outside of the Soviet Union.

The payroll is expanded in **1965** to 3,916. On January 18, the government reduces its holding to 24% while Rubicon, Inc., a Filipino corporation headed by Chairman Toda, purchases 51% majority control. The remaining 24% interest is taken by Pan Am. Airline pioneer Andreas Soriano Jr. returns to the board of directors while Chairman Benigno P. Toda Jr. takes on the additional job of president. Former President Barretto and a group of friends establishes **Fairways**; it inaugurates services on March 8.

Transpacific services are increased to thrice weekly during the first quarter and in-flight movies are introduced on these services. While en route to San Francisco on March 27, the DC-8-53 *Sampaguita* becomes the first regularly scheduled transpacific airliner to show an in-flight motion picture. On March 30, a management contract is signed with Rubicon, Inc. The fleet is strengthened by the addition of six DC-3s, four DC-4s, three F.27-100s, and three Hawker Siddley HS 748s. The same day, another new entrant, **Air Manila**, starts operations.

Fleming Airways System Transport (FAST) ceases operations on July 6. Eight days later, Viscount 770D service is restarted to Taipei. A PAL DC-3 crashes at Panay Island on July 30 (36 dead). The BAC 1-11 order is increased to three, and requisitions are made for a third DC-8 (a Dash-55F) and three F.27-100s.

The second DC-8-53 arrives at Manila on September 20; christened *Mabuhay*, it enters service to Sydney on October 6. All but one of the 37 aboard are rescued after a DC-3 crashes shortly after takeoff from Manila on October 19. Ferdinand Marcos is elected the nation's president on November 9.

The DC-8-55F arrives at year's end and begins all-cargo services throughout the region. Passenger boardings rise 13.8% to 1,670,337 and revenues rise 12%.

The unscheduled discount Maya service is terminated on February 25, **1966**. Airline capitalization is increased during March from PP 25 million to PP 100 million; Chairman Toda and Rubicon, Inc. increase their stake to 51.5%. The first BAC 1-11-402 is delivered to Manila on April 19. To begin replacing the Viscounts, it enters service to Hong Kong on May 1. The British-manufactured jetliners are known as PALjets. BAC 1-11-402 local service commences on May 4 from Manila to Cebu, Bacolod, and Davao.

En route from Mamburao to San Jose on June 29, Flight 785, a DC-3 with 4 crew and 24 passengers, crashes at the 2,300-ft. level of Mount Rabangan (26 dead). Another DC-3, also with 28 aboard, crashes near Sablayan, on Mindoro Island, on July 2 (26 dead).

The second PAL jet arrives on September 24 and the BAC 1-11-402 option is taken up in December.

Enplanements dip to 1,477,000.

Airline employment in **1967** is 4,500. The fleet now includes 3 BAC 1-11-402s, 23 DC-3s, 3 DC-4s, 2 DC-8-54s, 1 DC-8-55F, 14 F.27-100s, and 5 HS 748s. The last Viscount is retired as two more DC-8-63s are ordered.

The company's third BAC 1-11-402 is leased to **Bavaria Fluggesellschaft, mbH.** on February 23 for eight months of charter flying. The carrier suffers three fatal accidents within five months.

Flight 345, an F.27-100 with 4 crew and 15 passengers, crashes on final approach to Mactan on February 28 following a service from Manila (12 dead).

The last Viscount 770D service is completed on April 10, from Bacolod to Manila. It will be replaced by a BAC 1-11-402. Night Mercury flights cease on April 21. Nineteen additional people are killed aboard the new Fokker F.27-200 demonstrator at Malaybalay on Mindanao on April 27. Iloilo is added to the domestic BAC network on May 6.

Night Jet BAC 1-11-402 services commence on June 26 between Manila and Cebu.

Flight 385, an F.27-100 with 4 crew and 17 passengers, crashes into a Negros Island mountain peak, near Bacolod, while on July 6 domestic flight; there are no survivors.

In light of the Fokker crashes, Chairman Toda elects not to seek newer Dutch turboprops but, rather, to place an order on July 8 for six Hawker Siddley HS-748s. The first of the new British-made aircraft arrives at the beginning of November and enters service between Manila and Puerto Princesa on November 15. The third BAC 1-11-402, off lease to **Bavaria Fluggesellschaft, mbH.**, arrives by month's end.

Passenger bookings accelerate to 1,615,000 and net earnings rise a dramatic 87.4% to PP 11 million.

The workforce in **1968** is increased to 5,328. Six new aircraft are delivered: a DC-8-53 (christened *Champaca*), a BAC 1-11-527, and four HS 748s. Orders are placed on February 28 for two more 748s, a BAC 1-11-527, and two DC-8-63s. At PP 52 million, the latter two will prove too expensive and will not actually be acquired.

BAC 1-11-527 frequencies to Bali begin on March 19 and the last DC-3 is retired on March 28 after completing a service from Virac and Naga to Manila. DC-8-53 flights are undertaken to Tokyo, beginning on April 4. Also in April, the 15 millionth passenger is boarded.

The new HS-748s are unable to service several smaller communities; however, at the personal request of President Marcos, service to Hilonog, Calapan, Mamburao, and Jolo is resumed by the Douglas transports on May 27. The DC-8-55F is now sold to **KLM (Royal Dutch Airlines, N.V.)**.

Rubicon, Inc., headed by PAL Chairman/President Toda, acquires the 20% shareholding of **Pan American World Airways (1)** and 5% stake of **Trans World Airlines (TWA)**, increasing to 74% its holdings in the carrier.

Transporting 48 passengers, a BAC 1-11-402 crashes not far from Manila International Airport on September 12 (45 dead). BAC 1-11-527 roundtrips from Manila to Saigon commence on November 1.

En route from Mactan to Manila on November 5, an F.17-100 with 30 passengers is hijacked by 4 armed men. A gun battle breaks out between the pirates and a security guard, during which one passenger is killed, while the guard, a pirate, and two passengers are wounded. The three unhurt skyjackers flee as soon as the plane lands and are not apprehended.

Bookings advance to 1,663,258 and revenues grow to \$47.7 million.

The employee population is decreased to 5,067 in **1969** as two DC-8-63s, a HS 748 and a BAC 1-11-527, are delivered. Former President Igoa returns to the airline; being elected executive vice president on March 29, he is given a significant portfolio of stock and Chairman Toda places him in charge of day-to-day operations.

DC-8-63 service to Amsterdam is inaugurated on April 3 via Bangkok, Karachi, and Rome.

While flying at 2,000 ft. on a scheduled domestic service between Mactan and Zamboanga City via Dipolog City on September 6, an HS 748-2A with 31 passengers is rocked by an explosion in the rear lavatory. The Fokker is able to make a safe emergency landing at its destination and five people are reported injured. It will be determined that the blast has been caused by a bomb, set off in the lavatory by the saboteur, who falls—or jumps—to his death through the hole his act creates.

When a power failure cuts off signals from an automatic direction finder while it is on initial approach to Manila Airport on September 12, a BAC 1-11-402AP with 5 crew and 42 passengers strikes a 760-ft.-high hill near the capital city and crashes (45 dead).

The Bali route is terminated on November 29 because of traffic problems with Indonesian authorities. Enplanements are 1,852,000.

Daily flights are inaugurated to San Francisco on April 1, 1970 plus a third weekly frequency to Tokyo and a second to Europe. DC-8-63s are introduced on domestic routes.

En route to Manila via Romblon-Roxas on April 21, Flight 215, an HS 748-2A with 4 crew and 29 passengers, crashes 75 mi. N of the city. There are no survivors.

The next day, the blast is linked to a lavatory explosion and upon discovery of the bodies of 3 children not included on the passenger manifest, the death toll is raised to 36. It will be suggested that the act was either a suicide or, more likely, the cold-blooded assassination of Col. Filemon Lagman, who is in charge of halting illegal mining and logging operations in Isabela Province.

The pilot of an F.27-100 with 4 crew and 29 passengers loses control during takeoff from Iligan on May 9. His aircraft crosses the shoulder of the runway, where its wingtip strikes a pile of rocks, causing the turbo-prop to flip over (1 dead).

While flying from Manila to Bacolod on June 2, Flight 537, an F.27-100 with 4 crew and 40 passengers, is rocked by the detonation of a fragmentation grenade that kills the suspected saboteur outright, wounds 13 others, and blows a 3-ft. hole in the fuselage. The pilot is able to successfully land at Roxas Mins.

An F.27-200 with 3 crew and 26 passengers is badly damaged in a hard landing at Dumaguete on July 1; there are no fatalities. Also in July, orders are placed for four BAC 1-11-527s.

A passenger sets off a bomb aboard a Manila-bound HS 748-2A on September 5, blowing a hole in the roof. The man then climbs out through the hole and falls to his death; the aircraft is successfully landed.

Melbourne becomes the second Australian market on September 9. With Chairman Toda often away, the unpopular administration of Executive Vice President Igoa suffers a 22-day strike by company unions in October. In November, the maintenance facilities suffer \$400,000 damage from Typhoon Yoling, which also destroys three DC-3s. Nearly two-thirds of the carrier's pilots resign in protest against Igoa on December 12. International schedules are reduced, flights to 23 domestic destinations are cancelled, and the company continues flights with nonunion and management staff.

As a result of the airline's fourth quarter difficulties, passenger boardings dip 9.8% to 1.67 million, forcing a 30% reduction in the staff. For the first time in some years, an operating loss of PP 29 million is suffered.

In March 1971, following receipt of government permission, service is withdrawn to 2 regional and 17 additional domestic points and all but 2 of the DC-3s saved by presidential order in 1968 are now retired. In addition, 530 company employees are laid off. **Air Manila** and **Filipinas Orient Airways** step in to restart 13 of the suspended services.

While on a March 30 domestic flight from Manila to Davao, a BAC 1-11-402 with 45 passengers is hijacked by 5 persons armed with pistols. The pilot is forced to fly to Canton, China, via Hong Kong, where half the passengers are released. The next day, the aircraft, its remaining passengers, and its crew are allowed to return to Hong Kong. Two of the skyjackers will make the mistake of returning to the Philippines in 1977; they will be captured, tried, and executed.

Another 19% cut is made in the workforce. One of the European flights is extended to Frankfurt. The first BAC 1-11-527 is delivered on October 26.

Bookings decline still further, to 1,328,220, and the employee population is cut another 19%.

PAL in 1972 has 4,259 staff on its payroll and its fleet includes 3 DC-8-54s, 2 DC-8-53s, 12 HS 748s, 12 F.27-100s, 3 BAC 1-11-402s, and 3 BAC 1-11-527s. To help cover the cost of the new BAC units, the three Dash-402s are returned to their manufacturer during the first quarter.

A DC-8-63 is leased from **KLM (Royal Dutch Airlines, N.V.)** on May 4. Typhoon Gloring on July 18 causes moderate damage to ground facilities by flooding. Having declared martial law the previous day, President Marcos, on September 24, orders a military takeover of the airline; it is maintained that the move is necessary to guard against a Communist conspiracy to overthrow the government. The Air Force is given responsibility for overseeing the nation's three airlines.

An HS-748-B2 with 4 crew and 24 passengers is destroyed as the result of a bad landing at Bisling on November 28; there are no fatalities.

Enplanements grow 6% to 1,413,000, and freight is also up, by 19%.

The fleet is increased in 1973 by the addition of two DC-8-33s and an HS 748. The employee population grows to 4,733. As a result of the fuel and political crises, President Marcos decrees a one-airline policy for his nation. By government directive of March 31, it is required that the country's three principal airlines merge at year's end.

Having received backing from the government and loans from **KLM (Royal Dutch Airlines, N.V.)** and a bank in The Netherlands, Chairman Toda places a \$49.28-million order on June 14 for two DC-10-30s and service is inaugurated to Frankfurt and restarted to Singapore. En route from Davao to Bacolod, three young Filipinos hijack a BAC 1-11-527 to Hong Kong on October 11, holding President Toda as hostage; they agree to surrender their arms and return to Manila in return for amnesty.

Late in the year, orders are placed for two more BAC 1-11-527s. Passenger traffic grows 9% to 1,529,000 and freight traffic accelerates by 27%.

On January 1, 1974, a directive from the defense secretary directs the Philippine National Bank to take over the assets of the two small carriers founded in 1965, **Air Manila** and **Filipinas Orient Airways**, and merge them into PAL, with the former to be operated as an international feeder. On February 28, the carrier celebrates its twenty-eighth anniversary. The same day, PAL acquires three Nihon YS-11As and two F.27-100s from the small, now-defunct competitors.

A bomb explodes in the rear restroom aboard a BAC 1-11-527 (RP-C1184) near Manila on June 6; fortunately, the plane, with 63 passengers, is safely landed. The BAC 1-11-527s ordered the year before are delivered on June 8 and July 5, respectively. In a public ceremony, First Lady Imelda Marcos christens the first *Imelda* by; it will be employed as a government VIP transport.

A DC-10-30 leased from **Pan American World Airways (1)** replaces the DC-8-53s on the San Francisco run on July 11. The first of two owned Douglas wide-bodies enters service six days later, allowing transpacific frequencies to increase to five per week. The leased unit is seized by the U.S. government at San Francisco on July 25 on the grounds that the carrier is unauthorized to fly the craft into the U.S. on the schedule offered. The matter is quickly resolved when Manila authorizes increased frequencies to the Philippines for U.S. airlines and posts a \$200,000 security bond.

The domestic route network is expanded to 50 Philippine towns and an expanded computerized reservations system is installed. In cooperation with **Merpati Nusantara Airlines**, charter services to Bali are inaugurated in November. Still, as the result of a 355% increase in local fuel costs, domestic service actually loses PP 3.7 million. Four Nihon YS-11As join the fleet, replacing three HS 748s; three additional BAC 1-11-527s are also delivered, along with two BAC 1-11-524s previously operated by **Germanair Bedarfsfluffahrt, GmbH**.

Passenger boardings soar 64% to 2,529,000 and the highest profit ever of PP 35.7 million (\$4.7 million) is reported.

Airline employment in 1975 is 6,640. Just after takeoff from Manila on February 2, an HS 748-A2 with 4 crew and 29 passengers suffers a fire in its No. 2 engine; the plane crashes into a rice field 2.6 nm. SSW of the airport and there are no survivors.

While en route from Pagadian to Zamboanga on February 25, a DC-3 with 32 passengers is captured by two gunmen, one of whom demands a pardon for a previous offense. At their destination, the pirates negotiate with government officials for 10 hours before surrendering. Both will be tried and sentenced to death by firing squad.

Arrival of the second owned DC-10-30 allows replacement of the leased wide-body, which is returned to **Pan American World Airways (1)**; the owned aircraft are placed on the Pacific routes as well as some flights to Europe and Australia. Two more BAC 1-11-527s and six YS-11As join the fleet as the last two DC-3s are at long last sold.

A tire bursts aboard an HS 748-A2 with 4 crew and 39 passengers, as it takes off from Manila on May 10; there are no fatalities reported.

On May 24, a number of local routes are transferred to the new Philippine Aero Transport, Inc. subsidiary of **Philippine Aerospace Development Corporation (PADC)**.

A passenger is killed by a bomb blast from Flight 126, a BAC 1-11-527 with 5 crew and 68 passengers, during a June 5 domestic flight from Legaspi to Manila. Another 45 passengers are injured, while the alleged saboteur is also killed. Descending to a lower altitude, the plane makes a safe emergency landing at its destination.

Previously operated by **LIAT (Leeward Island Air Transport, Ltd.)**, two BAC 1-11-517s are acquired on September 27 and November 1, respectively.

Passenger bookings increase 10.3% to 2,790,973, but rising expenses, particularly fuel, send the net profit down to \$1 million.

Three armed hijackers commandeer a BAC 1-11-527 with 79 aboard during a flight over the southern Philippines to Cagayan de Oro on April 6, 1976. The aircraft is diverted to Manila, where they demand the release of six political prisoners, \$300,000 in ransom, water for the passengers and fuel for takeoff. The next day, the hijackers release 70 passengers in exchange for airline official Rafael Loga. On April 8, the aircraft arrives in Bangkok with 2 hostages and 10 airline staffers, where they are delayed as a search is made for a country willing to give the pirates sanctuary. On April 10, the hijackers and their prisoners transfer to a DC-8-63 and fly to Libya via Karachi, where the perpetrators surrender their hostages and give up on April 15. They are not granted political asylum.

On May 21, Muslim dissidents seize Flight 116, a BAC 1-11-527FK with 6 crew and 103 passengers en route from Davao to Manila, and order it diverted to Zamboanga Airport, Mindanao. There they demand a \$375,000 ransom and a DC-8-63 with crew for a flight to Libya. The next day, government officials reject demands for food and water unless hostages are released and 14 are set free. On May 23, Philippine troops storm the airliner after the hijackers kill two hostages. In the exchange of gunfire that follows, 3 hijackers and 10 hostages are killed and the aircraft is destroyed. Twenty-two other hostages and three other pirates are wounded. The three surviving terrorists will be tried and executed.

On June 1, the Philippine labor department rules that the company's policy of hiring only unmarried women as stewardesses is illegal and unconstitutional. Three days later on June 4, an Air Manila division Lockheed L-188A and its occupants are lost in a crash at Guam.

During July, the government orders the carrier to reduce costs and increase capitalization. A third DC-10-30 is delivered in late October and placed on the European service on November 1, freeing the DC-8-53s for other routes. At the same time, the **British Caledonian Airways, Ltd. (BCAL)** BAC 1-11-501 *Isle of Mingulay* is also acquired.

Cargo for the year grows 29.2% and passenger traffic is up 2% to 2,815,680. The workforce increases 6.2% to 7,050. The highest revenues to date—\$173.3 million—are earned. International operations produce a \$3-million profit, which is insufficient to offset the \$4.25-million loss in domestic services, primarily due to the inadequacy of the fare structure in which tickets are too inexpensive; the overall loss is thus \$1.25 million.

DC-8-53s begin flying to Jakarta and Kuala Lumpur on April 7, 1977. A DC-8-53 with 13 crew and 127 passengers lifts off prematurely during its April 18 takeoff from Tokyo (HAD) for Manila. The aircraft comes back down, skids off the runway, and slides 800 m. before stopping in a muddy field with all four engines and the undercarriage torn off. There are no fatalities.

As if this aircraft damage is not sufficient to cause concern, a series of damaging government and press reports reach a crescendo the next

day. On April 19, the press reports that PAL has billed President Marcos PP 2.4 million for junkets by the First Lady. In addition, it is revealed that, in 1975 alone, companies controlled by Chairman Toda, including the unknown Alfa Manufacturing Company, had received PP 55 million from the airline, with another PP 50 million having been spent on mysterious and undocumented expenses or write-offs.

While on final approach to Mactan Island on July 17, a YS-11A with 3 crew and 22 passengers suffers trouble with its No. 1 engine and is forced to ditch. Although the plane sinks in 17 ft. of water, there are no fatalities.

A DC-10-30 aborts its takeoff from Honolulu on August 20 after an engine stalls; 80 passengers are reported injured during evacuation from the wide-body. On September 1, DC-8-53 services are initiated to Port Moresby.

On October 16, due largely to the previous year's loss, the press revelations, and continuing deterioration in performance and service, a publicly embarrassed Chairman Toda offers the Rubicon share of PAL to the government.

The offer is accepted on November 17; the carrier is thus nationalized and placed under the control of the Government Services Insurance System. Simultaneously, Roman A. Cruz Jr., GSIS chairman/president, becomes the airline's chairman and president, and his first act is to cancel all contracts with Toda's concerns and to increase capitalization from PP 25 million to PP 250 million.

Enplanements for the year total 2,971,852 and two Boeing 727-2F6As are placed on domestic routes.

Chairman Cruz establishes new performance standards in 1978 and places orders for another DC-10-30. DC-10-30 transpacific services are extended over to Singapore on April 1. On August 12, orders are placed for three B-747-2F6Bs.

Flight 148, a BAC 1-11-527 with 84 passengers en route from Cebu to Manila on August 18, suffers a bomb explosion in the left rear lavatory, killing the bomber, who falls through the hole created into the sea. The aircraft is the same one (RP-C1184) attacked in June 1975 and the new explosive has been placed in the same location as that in the previous incident. After descending to 12,000 ft. to equalize pressure, the aircraft makes a safe emergency landing at its destination.

So far as is known, this is the only civil jetliner to suffer two separate in-flight bombings and survive. With a 2' x 3' hole in the portside of its fuselage, the BAC will be returned to Hurn, England, for repairs, flying the entire trip at or below 12,000 feet.

An \$89-million order is placed on November 15 for two Airbus Industrie A300B4-103s. The front landing gear of another BAC 1-11-527 carrying 96 people collapses during the plane's landing at Manila on November 25; 13 are injured. In December, PAL is ordered to take over the local services operated by the **Philippine Aerospace Development Corporation (PADC)** subsidiary Philippine Aero Transport, Inc. (PATI).

During the year, the workforce is boosted 14.5% to 8,610. Passenger boardings jump 12.9% to 3,412,000, but cargo drops a startling 71.7%. To help reverse the latter trend, an Armstrong-Whitworth Argosy freighter is acquired at year's end.

Former Executive Vice President Igoa sells his 100,000 shares of PAL stock on January 31, 1979 for PP 5.74 million. Construction is started on a new wide-body hangar and in-flight service center at Manila. Repaired and upgraded, the BAC 1-11-527 bombed the previous year is returned to PAL service on March 27.

As a result of the Chicago **American Airlines** DC-10 disaster, the company's entire DC-10-30 fleet is grounded between May 25 and June 23 as PAL mechanics, like their cousins worldwide, search for problems with the trijet. While the DC-8s attempt to take up the transpacific slack, two **Hughes Airwest** B-727-2M7s are leased for local and regional services. On July 14, PAL becomes the first airline ever elected to the gourmet society Les Chaines de Rotisseurs.

Service is initiated to Bahrain and Athens on July 25, while the first owned B-727-2F6A arrives in late July and enters service on August 1

to Peking and Canton. The second purchased trijet is delivered at the beginning of September and starts flying on September 10 between Manila, Cebu, and Davao.

On September 15, seven routes operated by the **Philippine Aerospace Development Corporation (PADC)** subsidiary Philippine Aero Transport, Inc. (PATI) are taken over.

The premier A300B4-103 begins flying to Singapore on December 4 and on December 29 the first B-747-2F6B is delivered, followed by the second A300B4-103 on New Year's Eve.

Passenger enplanements grow 1.6% to 3,467,419. An operating loss of \$668,679 is suffered, but a net \$1.7-million profit is banked.

Airline employment is increased by 2.7% in 1980 to 9,596. As the last transpacific DC-8-53 is withdrawn, the first B-747-2F6B enters service on January 4 over a new Manila-Honolulu-Los Angeles route. The second B-747-2F6B arrives on February 22, followed by a third on March 21. These assume a multistop frequency to Amsterdam and in April begin a new service to London. Additionally, the Manila technical center is expanded and an improved reservations system is installed.

Special low-cost *Night Jet* red-eye fares, known as *Bululit*, are instituted, dawn-to-dusk, on May 12 for flights between Manila, Cebu, Davao, and Zamboanga. Iloilo becomes a Bululit destination on June 6.

Previously operated by **Arkia Israel Airlines, Ltd.**, a BAC 1-11-523 is acquired on July 7.

On July 12, Manila police seize an unarmed Filipino, who has attempted to hijack a B-727-2F6A en route from Manila to Cebu by claiming to have a bomb. When confronted by the pirate, the cockpit crew simply closes and locks the door between themselves and the passenger cabin and returns the aircraft to its point of origin.

The *Quetzal*, the lone BAC 1-11-516 operated by **AVIATECA (Empresa Guatemalteca de Aviacion, S.A.)** is acquired at month's end. Super Mabuhay business-class service is introduced on August 28.

It is reported on November 15 that the carrier, after stripping the paint from the units of its BAC 1-11 fleet, has saved \$120,000 in fuel and maintenance during the year. A fourth B-747-2F6B is delivered on December 14.

Cargo traffic soars 35.8% to 146.91 million FTKs, but passenger boardings dip 1.6% to 3.4 million. Revenues jump 50% to \$438 million, but expenses grow faster, up 56% to \$457 million. Operating and net losses are, respectively, \$18.98 million and \$52.6 million.

The employee population is reduced by 2.6% in 1981 to 9,343. Three A300B4-203s join the fleet, as renewed emphasis is placed upon passenger service and frequencies are increased on a number of routes. Martial law is lifted on March 17 and the last DC-8-53 is retired on March 26. In mid-April, the former **Hughes Airwest** B-727-2M7 *Hooray for Hollywood* transports Pope John Paul II during his Philippine visit.

In November, a joint service agreement is signed with **Kuwait Airways Corporation** providing for joint services on a route from Manila to Kuwait City that employs aircraft and crews of the Middle Eastern carrier.

Enplanements climb 8.2% to 1,099,000, while freight advances 36.9% to 179.26 million FTKs.

The employee population in 1982 is increased 12.6% to 9,837. Services are initiated to Dhahran, Dubai, Paris, Zurich, and Brisbane. After 11 years as U.S. ambassador, Eduardo Z. Romualdez, also on May 7, again becomes PAL chairman; Roman Cruz remains president/CEO and Ralph Igoa as executive vice president.

Armed with a hand grenade, disgruntled army veteran Juan Cieano holds 109 passengers hostage aboard an A300B4-203 on the ground at the airport on Cebu on May 21, while demanding government reforms and a PP 6 million ransom; sleepy, the man is seized by undercover police the next day.

An HS 748-2A with 5 crew and 25 passengers, aborts its takeoff from Joho on July 11. The turboprop overruns the runway and crashes into a wall and several motor vehicles; there is one fatality and the aircraft is destroyed.

With this crash, the number of HS 748s is reduced to six; the YS-11A fleet is cut to seven by a sale. The carrier is one of six now participating

in an ICAO grant to train personnel from **Biman Bangladesh Airlines**. Service is extended to Brisbane on June 5, to Dubai on August 7, and to Paris and Zurich on November 4.

Although cargo dips 7.1% to 181.13 million FTKs, passenger bookings jump 10.3% to 3,894,673, of which 2,737,864 are domestic.

Regularly scheduled flights to Seoul and Bandar Seri in Brunei commence on March 2, 1983. An important new bilateral agreement is signed between Manila and Tokyo on April 21. The weekly DC-10-30 route to South Korea is suspended on May 6 due to a dispute between the two nations concerning the transport of guest workers to the Mideast. On the plus side, B-727-2F6A service is simultaneously inaugurated to Kota Kinabalu in East Malaysia.

Exercising its newly won Fifth Freedom from the Japanese, PAL launches Jumbojet services to San Francisco via Tokyo on August 2. A BAC 1-11 with 81 aboard skids off a wet runway at Cagayan de Oro on August 8; no injuries are reported. Having suspended the landing privileges of **China Airlines, Ltd. (CAL)** on September 3 for returning the former Filipino Senator Benigno S. Aquino Jr. to Manila, where he is assassinated on August 21 while stepping off the plane, PAL loses its landing rights in Taipei. Executive Vice President Igoa retires on December 23.

Political crises and economic difficulties, such as the peso devaluation on June 23, of the last quarter cause a fiscal setback and the company stops printing its annual report.

Enplanements are up to 4,286,062 and freight jumps 23% to 220.5 million FTKs. Although a small \$5.3-million operating profit is generated, a \$126.5-million net loss is taken.

The workforce stands at 9,625 in 1984 as the Los Angeles frequency becomes daily.

The last of the B-727-2F6As and B-727-2M7s are withdrawn on May 31.

After landing at Tacloban on August 4, a BAC 1-11-527FK with 5 crew and 70 passengers, overruns the runway and stops in the sea; there are no fatalities.

The fourth A300B4-203 arrives on August 31 and begins thrice-weekly service between Manila and Cebu.

Another major peso devaluation occurs in the fall, causing further financial difficulty. *Mabuhay* business-class service is introduced on domestic routes on October 16 and, on November 20, the final YS-11A is retired.

In December, joint services begin with **Air Niugini, Ltd.** over a route from Manila to Port Moresby; Papua New Guinea aircraft are employed exclusively.

Passenger bookings rise 2.1% to 4,378,000. Revenues jump 42.5% to \$445.5 million, and expenses are \$418 million, leaving operating and net profits of, respectively, \$27.5 million and \$11.5 million.

Airline employment is increased in 1985 by 2.6% to 9,876. Two DC-10-30s are sold and one more A300B4-203 joins the fleet. Amoy replaces Guangzhou as a stop on the Beijing route as of April 1. The U.S. route is extended to Chicago on November 17 and a BAC 1-11-527 proving flight is made from Manila to Ho Chi Minh City on November 25. A300B4-203 service to Cairo starts on December 3 and Ho Chi Minh City becomes a regularly scheduled destination.

Passenger boardings increase 3.4% to 4,363,000, but freight is off 7.6% to 203.6 million FTKs.

In January 1986, twice weekly B-747-2F6B Manila-Chicago service is inaugurated. With the coming of civil unrest in February, immediate plans to inaugurate weekly scheduled service to Vietnam are shelved. As the result of Corazon Aquino's "Fiesta Revolution," begun on February 22, a group of 105 Philippine soldiers commandeer a company BAC 1-11-527 at Cotabato. To come to the aid of their beleaguered president, they order the plane to be flown to Manila, where they are arrested when they step off the plane.

Romualdez and Cruz resign on February 24, leaving the airline in the hands of Aquino supporter Martin P. Bonoan, senior vice president/chief operating officer, who becomes acting president on February 24. Under

his direction, PAL flights are shut down for a day to inhibit the transport of Marcos supporters and the company facilitates the takeover of Manila International Airport by security forces of the new government. Still, key old guard airline executives arrange for fuel to be secretly supplied to rebel helicopters and make a BAC 1-11-527 available to the insurgents.

The revolution ends on February 26 when President Ferdinand Marcos flies to Hawaiian exile—owing PAL PP 35.8 million.

On April 6, a new PAL board of directors is elected by GSIS and the new Tourism Minister Jose Antonio Gonzalez becomes its chairman. Manila businessman Dante Santos, founder of the nation's largest home appliance company, is named president/CEO with revolutionary hero Bonoan remaining senior executive president/chief operating officer.

A new paint scheme is introduced on company aircraft on July 1, symbolic of the new sun rising over the Philippines, while the government establishes a special audit commission to examine PAL's losses under the Marcos regime; ironically, former President Cruz is defended by his successor.

When Corazon Aquino flies to the U.S. in October aboard the company's Jumbojet, she becomes the first Philippine president to pay for a ticket.

Employment remains the same and despite the national turmoil, customer bookings swell 3.2% to a record 1,406,000. Cargo is, however, again down, by 3% to 197.47 million FTKs. Losses must be handled: \$26.7 million (operating) and \$91.5 million (net).

The payroll is increased by 4.3% in **1987** to 10,300. A300B4-203s take over all frequencies between Manila and Cebu on May 6. As the result of a new arrangement with British Aerospace, the company, also in May, receives four Shorts 360-300s in trade-in for three HS 748s, to be turned in over the next year. Based at Cebu, the leased aircraft will provide service in the southern part of the nation.

On initial approach to Baguio on a June 26 service from Manila, an HS 748-2A with 4 crew and 46 passengers crashes into 2,100-m.-high Mount Pugo, 9 miles away, during a monsoon rainstorm and explodes; there are no survivors.

In July, President/CEO Santos also takes over the roles of senior executive president and chief operating officer, the positions held by the late Martin Bonoan, who had died of a heart attack in May.

The first of two B-747-283B combis (BC) formerly flown by **SAS (Scandinavian Airline System)** is leased from Guinness Peat and delivered on November 4.

En route from Cebu on December 13, one of the new Shorts 360-300s with 4 crew and 11 passengers, crashes into Mount Munay, 16 km. SW of Iligan on Mindanao; there are no survivors. Among the dead is the wife of former Operations Director Roberto Lim.

Passenger boardings ascend 4.4% to 1,469,000 and freight is up by 4.8% to 207.01 million FTKs. Revenues rise 23.2% to \$475.8 million and costs fall 3.2% to \$403.8 million. Operating profit swells to \$72 million and a net gain—the first in six years—of \$15.1 million is reported.

A300B4-203 roundtrips commence on February 7, **1988** between Cebu and Tokyo. The second chartered B-747-283BC arrives on February 20 and, like the rest of the fleet, receives a new livery. Despite requests by President Aquino, 10,300-employee PAL resists planning for privatization. After disagreements with company President Santos, Chairman Gonzalez resigns in early May; Leslie Espino now becomes executive vice president/chief operating officer. Former executive Lim files a \$2-million suit against the company on May 21 claiming the airline is unsafe and seeking establishment of an organization to monitor national civil air operations.

The government, meanwhile, begins to plan the deregulation of the nation's airline industry. President Aquino revokes her predecessor's forced nationalization of PAL in August, setting the stage for the creation of several independent air carriers. In September, the company undertakes a \$350,000 study of its proposed privatization. Beginning on September 25, the company's Fokker F.27s are replaced by Fokker 50s.

Late in the year, a fuel tax is imposed on the airline, but it, too, is contested. On December 16, even as the PAL privatization study continues, the government determines that its shareholding in the flag carrier should be reduced dramatically.

Customer bookings leap upward by 16.3% to 1,682,000 and cargo climbs 27% to 274.09 million FTKs. Revenues adjust skyward by 10.6% to \$532 million, but expenses zoom upward more quickly and leave the carrier with a \$3.29-million operating loss.

The workforce grows by 3.9% in **1989** to 10,706 and orders are placed for 10 B-737-300s. As the result of the successful suit filed by former executive Lim the previous year, the Philippine Air Safety Foundation is founded on February 28; Lim will be named its first director on June 27. The privatization study initiated the previous September is completed in March.

In addition to its two regular weekly flights from March International Airport on Mactan Island, serving Cebu, the company on March 20 undertakes the first of 10 special charters for the year designed to bring in an increasing number of tourists from the Japanese city of Nagoya.

The controversy over the type and quality of PAL service now heats up, with particular reference to local operations. On the evening of May 4, officials at Mactan International Airport have their runway lights turned off just as an A300B4-203 with 225 passengers prepares to land; the wide-body must return to Manila. The last HS-748 service is completed on May 31 from General Santos on Mindanao to Cebu.

On July 21, a BAC 1-11-516FP with 5 crew and 93 passengers overshoots the runway while landing at Manila in rain and fog and bounces onto a highway, strikes four trucks, and blocks railway tracks. Although there are no fatalities aboard the jetliner, which is damaged beyond repair, several vehicles are destroyed on the road and eight people are killed.

Also in July, a joint marketing agreement is signed with **Trans World Airlines (TWA)** that provides for code-sharing on routes from Manila to San Francisco and Los Angeles operated by PAL and on TWA services from San Francisco or Los Angeles (LAX) to New York (JFK). The first two B-737-3Y0s arrive under lease from GPA Group and enter service on August 28; the American-built aircraft will begin to replace the BACs. There is a general fare increase in October and in December joint freighter services begin from Manila to Seoul under a pact with **Korean Airlines/Korean Air (KAL)** that specifies use of KAL aircraft and crews on the route.

The nation's political strife allows passenger boardings to inch upward only 0.6% to 1,772,000. Freight does much better, ascending by 8.2% to 291.83 million FTKs. Revenues, nevertheless, march along by 20.7% to \$635.7 million, expenses are held in check, and a net \$14.3-million profit is celebrated.

Company employment is increased by 4.5% in **1990** to 11,188 and the fleet now includes 43 aircraft, even though retirement of the BAC 1-11s is started. In cooperation with **Korean Airlines/Korean Air (KAL)** and employing a KAL A300F4-203, weekly Seoul-Manila all-cargo flights begin in January.

As a B-737-3Y0 with 6 crew and 113 passengers Boeing is being pushed back at Manila on May 11 preparatory for departure on a service to Iloilo, a massive explosion in the center fuel tank pushes the cabin floor skyward (8 dead). The center fuel tank is empty, save for some vapors, and it will later be determined that damaged or improperly insulated electrical wires caused the detonation.

As the result of a new four-year agreement with the government of France, the company, at month's end, inaugurates Manila to Paris service via Bangkok, Dubai, Karachi, and Rome. Employing Egyptian jetliners, joint services are launched with **EgyptAir, S.A.E.** in June linking Manila with Cairo.

Following Iraq's August 2 invasion of Kuwait, the carrier's transport of Philippine workers to the Middle East dries up.

One of the few big Asian airlines to suffer a traffic downturn during the year, PAL watches its customer bookings slide 7% to 1,672,000 and cargo fall 10% to 273.51 million FTKs. Still, the year is good finan-

cially. Revenues ascend 11% to \$564 million and expenses allow profits: \$74.3 million (operating) and \$25.8 million (net).

The payroll is decreased a slight 0.3% in 1991 to 12,830. The fleet now includes 4 owned and 2 leased Airbus Industrie A300B4-203s, 1 of the latter coming over from **South African Airways (Pty.), Ltd.**, 1 chartered A300F4-203, 1 each British Aerospace BAe (BAC) 1-11-501EX, 1-11-518FG, 1-11-523FJ, 2 each 1-11-517Fes, 524FFs; 3 1-11-527FKs, 1 leased B-737-3S3, 9 chartered B-737-3Y0s, 4 leased B-747-2F6Bs, 2 leased B-747-211Bs, 1 each chartered B-747-211B and B-747-283B, 2 leased B-747-283B/Cs, 2 chartered DC-10-30s, 10 Fokker 50s, and 7 Shorts 360s.

In January, Manila to Sydney DC-10-30 service is increased to five frequencies per week. On March 1, the pioneer receives new leadership. Government official Catalino Macaraig Jr. is named chairman, with Feliciano R. Belmonte Jr. as president/CEO. The carrier's fiftieth birthday is celebrated on March 15; it now enjoys the distinction of being the longest serving airline in Asia. Given the nation's economic problems, more elaborate, yearlong celebrations are cancelled later in the month.

Determined to privatize the airline, the government, in September, agrees to assume PAL's \$520 million in foreign debt in return for 80% shareholding, which will be sold to private investors. The explosion of Mount Pinatubo has a significant impact on tourism. During December, three groups step forward to bid on the airline: PR Holdings, advised by **Korean Airlines/Korean Air (KAL)**, **American Airlines**-backed PCIBank, and **British Airways, Ltd.** (2) supported UBP Capital Group.

Passenger boardings increase by 9.3% to 1,833,030, but freight is down by 2.8% to 267.37 million FTKs. Revenues advance 14.7% to \$1.03 billion and expenses are held down, allowing operating gain to reach \$97.3 million. The net loss is cut to \$743,000.

The employee population is increased by 5.6% in 1992 to 13,545. The carrier is largely privatized in February as PR Holdings, backed by two of the country's largest banks, AB Capital Group and the Bank of Commerce, bid \$369 million in cash and government debt instruments and assume 67% shareholding. Philippine Long Distance Telephone Co. Chairman Antonio O. "Tony-Boy" Cojuangco, a nephew of Corazon Aquino, succeeds the resigned President/CEO Belmonte, Philippine Vice President Fidel Ramos is named president, and **Korean Airlines/Korean Air (KAL)** is retained for technical assistance. Orders are placed for six A340s and four B-747-4F6s.

A number of new routes are inaugurated, including daily flights to Abu Dhabi and twice-weekly roundtrips to Fukuoka and Saipan. The latter service is the first to the U.S. Micronesian trust territory by a non-U.S. airline. Service is also reintroduced to the Chinese city of Xiamen.

On May 11, Filipino Vice President Ramos is elected President.

The seven uneconomical Shorts 360s are removed from domestic service in September and by year's end, the last six BAC 1-11s have been retired.

The new frequencies lead to a 12.9% boost in customer bookings to 6,201,039. Cargo is up 1.7% to 311.94 million FTKs. Revenues swell 15% to \$1.19 billion and expenses total \$1.1 billion. The resulting operating surplus is \$86.72 million while a net profit of \$44.52 million is posted.

The workforce grows by 4.3% in 1993 to 14,125 and the fleet is increased by one A300B4-203 and two B-747-4F6s. Orders for a half dozen A340-211s are postponed for a year; the manufacturer will arrange with **Cathay Pacific Airways (Pty.), Ltd.** to dry-lease the aircraft. In addition to providing passenger and cargo flights to 43 domestic stops, the airline also provides international services to Abu Dhabi, Bandar Seri Begawan, Bangkok, Brisbane, Cairo, Dhahran, Dubai, Frankfurt, Fukuoka, Ho Chi Minh City, Hong Kong, Honolulu, Jakarta, Jeddah, Kao-hsiung, Kota Kinabalu, Kuala Lumpur, Kuwait, Labuan, Los Angeles, London, Manado, Melbourne, New York, Paris, Riyadh, Rome, San Francisco, Seoul, Singapore, Sydney, Taipei, Tokyo, and Xiamen.

President Ramos directs the Philippine National Bank in February to sell at auction the last 19.8% stake held by the government in PR Holdings; it will continue to hold a 33% interest via the Government Service

Insurance System. A boardroom fight at PR Holdings headquarters in March between the Chinese-born brewing and tobacco baron Lucio Tan and Chairman Cojuangco results not only in the \$192-million sale but in an ownership change.

Tan, who becomes known as "El Kapitan," assumes controlling interest and replaces Cojuangco with his ally, the former agricultural minister Carlos ("Sonny") Dominguez, although Cojuangco retains his board seat. Former San Miguel beer executive Jose Antonio Garcia becomes president/chief operating officer.

Under a joint service agreement signed with **Egyptair, S.A.E.**, flights recommence in June from Manila to Cairo again employing aircraft and crews of the North African airline. A similar agreement for use of partner aircraft is inked with **Air Niugini (Pty.), Ltd.** in July for passenger flights from Manila to Dominica and with **Saudia (Saudi Arabian Airlines)** in August for ad hoc joint cargo services from Manila to Riyadh. Another pact is inked with **Bouraq Indonesian Airlines** in October for passenger services from Manado to Davao.

Passenger boardings for the first eight months increase a modest 6% to 4,401,879 and freight does better, gaining by 11% to 221.94 million FTKs.

A revenue crisis occurs between April and December as net income falls from \$60 million to \$2 million. In September, new Executive Vice President Romeo S. David informs a Manila business forum that the company is actively seeking a marketing and code-sharing alliance with a foreign airline. Meanwhile, the government begins searching for a buyer for its remaining shares. The arrival of the first two B-747-4F6s in November and December allows their introduction on the nonstop transpacific routes to Los Angeles and San Francisco and the retirement of the last two DC-10-30s.

The number of employees is reduced by 0.9% in 1994 to 14,000.

Domestic destinations visited include Legaspi, Naga, Puerto Princesa, Bacolod, Butuan, Cebu, Iloilo, Kalibo, Roxas, Tacloban, Tagbilaran, Cagayan de Oro, Davao, Dipolog, General Santos, and Zamboanga.

Five-times-a-week roundtrips between Manila and Osaka commence on November 1.

Cruising at 30,000 ft. some 185 mi. E of Okinawa, Flight 434, a B-747-4F6 with 293 passengers en route from Manila to Tokyo on December 11, is rocked by a bomb blast that kills 1 Japanese passenger and injures 10 others. The Jumbojet makes an emergency landing on Okinawa; a Muslim extremist group claims responsibility.

Overall customer bookings for the whole year increase to 6,857,743 and 381.23 million FTKs are flown. Revenues are \$741 million and a loss of \$39 million is incurred.

The workforce is reduced another 0.2% in 1995, down to 13,869. On January 3, President Ramos signs an order deregulating the Filipino airline industry. Lucio Tan is elected board chairman on January 30.

Ramzi Ahmed Yousef, a Mideast terrorist suspected of the December bombing, is captured in Pakistan during the first week of February and taken to New York to stand trial. Yousef is also suspected of taking part in other plots, including an attempted assassination of Pope John Paul II, the attack on the World Trade Center, and planned bombings of U.S. and foreign airlines. On March 30, Philippine authorities charge Yousef with murder for the December 11 bombing.

During midyear, a new bilateral air agreement is signed between the U.S. and the Philippines. Shortly thereafter, the Philippines is slapped with Category 2 safety-oriented restrictions. The controversial U.S. rules require that nations whose airlines do not meet the minimum safety codes as published by ICAO will have their frequencies to the U.S. frozen and are barred from opening any new routes.

In the wake of the huge annual loss, Chairman Tan creates a potential transport crisis when, in the summer, he announces plans to suspend flights to 42 unprofitable domestic destinations. The Tan recommendation is bitterly opposed by Philippine President Ramos. Undoubtedly as a result of the proposed service cutback, a recapitalization plan put forward by Tan is blocked by the airline's other major shareholders, backed by the government, which has filed suit.

A seat exchange agreement is inaugurated with **Vietnam Airlines** in October on a frequency from Manila to Ho Chi Minh City. On December 15, two of the three B-747-2B4BCs owned by **Middle East Airlines, S.A.L.** are leased for six months.

In something of a surprise given the carrier's continuing bleak finances, a \$4-billion order is placed at year's end for 24 Airbus Industrie A340-311s, 8 A330-311s, 12 A320-214s, and 8 B-747-400s for delivery in the middle of 1997 through the end of 1998.

Passenger boardings accelerate by 4.9% to 7,190,073, but cargo dips 1.7% to 373.61 million FTKs. Revenues are just over a billion dollars, but losses continue; the operating loss is \$32 million while the net downturn is \$66 million. Over the past 12 years, the company has lost \$428 million.

Airline employment in **1996** stands at 14,125, a 1.8% increase. On January 5, a \$700-million order is placed for General Electric and CFM International engines.

While taxiing to the hangar after passenger disembarkation at the terminal on April 2, a **Pacific Airways** DHC-6-200 with two crew aboard crosses Runway 13 at the same time a PAL B-737-200 with 141 passengers is taking off. The little Boeing collides with the Twin Otter and carries it for 130 m. before stopping. Both aircraft are damaged; three people aboard the PAL plane are hurt, as is the crew of the de Havilland.

In the spring, PAL concludes a wet-lease arrangement with **World Airways** for the charter of several MD-11s in order to get around the FAA's Category 2 restrictions in the only manner allowed.

A three-and-a-half-year battle for control of the carrier between owner Tan and the Filipino government is concluded in June; Tan's PR Holdings is allowed to assume 67% control. Manolo Aquino now becomes executive vice president.

Owner Tan now commits an additional \$156 million; in exchange, three government financial institutions with investments in the carrier are insured against loss with a buy-back guarantee: if PAL is not profitable within six years, they can purchase it back and Tan will quit the airline business. Meanwhile, the U.S. Export-Import Bank backs the funding needed for two more B-747-400s and a German bank loans the airline \$100 million. Other European financial institutions also provide funding that will cover the Airbus/Boeing purchase.

In an effort to upgrade service and support, the company, also in June, opens the \$60-million PAL Learning Center at Manila; it will train flight crew and maintenance personnel. It will also ensure computer literacy. To help cover capacity needs after return of the **Middle East Airlines, S.A.L.** Jumbojets until its own aircraft are available, two A340-312s are wet-leased from **Gulf Air Company, G.S.C.**; one enters service in July and the second in September.

The second A340-312 is employed on September 19 to commence four weekly nonstop dual-designator flights with **Canadian Airlines International, Ltd.** between Manila and Vancouver, with continuing service to Newark.

CAI initiates its portion of the code-sharing pact on October 28 with three weekly flights from Vancouver to Manila via Hong Kong. Also in September, the four MD-11s wet-leased from **World Airways** enter service on routes from Manila to Los Angeles via Seoul and from Manila to New York through Vancouver.

On October 30, airline ground workers, members of the PAL Employees' Association (PALEA), go on strike, forcing the suspension of a number of scheduled services. On November 1, additional flights must be cancelled, particularly those to international points. The job action ends on November 2 after the laborers and management conclude conciliatory talks and sign an agreement under the watchful eye of Philippine Labor Secretary Leonardo Quisumbing. The work stoppage has cost the company PP 100 million (\$3.8 million), largely because of the cancellation of 30 international and 100 domestic services.

The airline is now embroiled in a dispute with its pilots' union regarding pay and staffing levels on the company's long-haul services.

While maneuvering at Manila preparatory to its takeoff for London on December 4, the left wing tip of an A340-211 with 280 passengers

brushes the tail of a B-737-200 with 160 aboard about to depart for Butuan. The Airbus is later cleared for departure, but the passengers of the little Boeing, whose rudder is damaged, must transfer to another aircraft before they can leave.

At the beginning of December, the government's labor department had ruled that PAL must give its pilots a 15% pay increase annually over the next five years. On December 10, Chairman Tan calls this ruling "unreasonable" and claims that his airline will have to cut an ambitious \$3.2-billion expansion plan in half because of it.

On December 17, the carrier and its pilots union successfully negotiate certain terms for a new collective bargaining agreement, with points covering long-term compensation, work rules and productivity based on increased compensation for increased work, and the staffing of long-haul flights with second officers. The pilots continue to demand an immediate 10% pay increase, as well as such perks as an executive car for each flyer.

Frequencies are opened from Manila to Shanghai at year's end.

Enplanements soar 14% to 2,817,321 and 328.81 million FTKs are operated, a 3% increase. A PP 2.50-billion loss is suffered.

The workforce is cut a drastic 18% in **1997** to 11,587. In January, a B-747-283BC is withdrawn and passed to **Atlas Air**, which takes over its lease and sends it to the Boeing plant at Wichita for conversion into a freighter. A contract agreement is now reached between PAL and its pilots. Chairman Tan, who had threatened to cancel an order for B-747-400s and A340-313s, now allows the orders to stand.

International markets visited include Amsterdam, Bangkok, Brisbane, Dharhan, Dubai, Frankfurt, Ho Chi Minh City, Hong Kong, Karachi, Kuala Lumpur, Los Angeles, New York, Paris, Rome, Seoul, Singapore, Sydney, Taipei, Tokyo, and Vancouver. The domestic network comprises 36 communities beyond Manila served by 160 daily departures by a fleet of 4 A300B4-203s, 12 B-737-300s, and 50 Fokker 50s.

The company's stockholders, in February, approve a doubling of capitalization, up to PP 20 billion (\$770 million). The funding is needed to help cover the cost of the \$3.2-billion expansion plan Chairman Tan had threatened to cancel in December.

En route from Manila to San Francisco on March 6, a B-747-4F6 is diverted to Yokota Air Base in Japan after an 80-year-old Filipino male passenger suffers respiratory difficulties. Passengers remain on board as the man is treated at the base and returned to the Jumbojet, which departs for California four hours after touching down in Japan.

A company general manager, held prisoner by Moslem guerrillas for 50 days, is released unharmed on June 16.

On July 11, Moslem gunmen abduct Flaviano Fucoy, the airline's southern provincial branch manager, near the town of Labangan; President Fidel Ramos dispatches military units to curb the kidnappings.

After having received a substantial payment from PAL the same day, **World Airways** and PAL resolve a contractual dispute that allows two MD-11s leased to the Asian airline to be placed elsewhere during the third quarter. PAL agrees to operate two other MD-11s currently in its fleet until February **1998**.

Manila experiences a runway blackout on July 18 that results in delayed departures, arrivals, and diversions for several hours; PAL flights from Hong Kong and Taipei are diverted to nearby Mactan.

The two A340-211s previously dry-leased by **Cathay Pacific Airways (Pty.), Ltd.** are placed into service in late July. The previous route to London (LGW) via Bangkok, Abu Dhabi, and Frankfurt is revised into a direct service from Manila to London (LHR).

At the same time, the PAL Learning Center, which controls the carrier's four principal training units, is tasked with improving corporate culture. A new advertising slogan, "Philippine Airlines: Asia's Sunniest" is consequently unveiled, along with new staff uniforms. Aircraft are emblazoned with the logo of a rising sun to herald the carrier's rebirth. However, as a result of the growing Asian currency crisis, few can anticipate that within a year the airline will actually die and be reborn again.

The first A320-214 is delivered on August 6. The carrier announces on August 21 that, as a result of "staggering" losses caused by the

Category 2 restrictions imposed by the U.S. government, it will cease service to New York on September 2.

With the removal of two **World Airways** MD-11s in September, PAL abandons its wet-leased service to Los Angeles via Seoul. Claiming that the U.S. government has been unreasonable in the application of its Category 2 restrictions, PAL now requests that the Philippine CAB suspend operations into Manila by U.S. airlines, particularly the cargo flights of **Polar Air Cargo** and **Northwest Airlines**, which are seeking new frequencies. The CAB does not honor the flag carrier's request.

Figures through September are subsequently released and show a net loss for nine months of \$122.6 million.

On October 15, acting on behalf of the full CAB, Executive Director Silvestre Pascual orders PAL to roll back a 35% fare increase. The nation's airfares, states Pascual, have not been liberalized as PAL, quoting a 1995 decree from President Ramos, has contended.

In late summer and early fall, the company begins to receive its new A330-301s. These replace the two B-747-211Bs on routes to Abu Dhabi, Dhahran, Dubai, Riyadh, and Jeddah. On October 1, the company launches an all-A330 service to Singapore.

En route to a record PP 8-billion (\$202-million) loss, the company towards year's end institutes a number of cost-cutting measures to survive the Asian currency crisis that has severely impacted PAL since midyear. Among the measures adopted is a new policy that requires the forced retirement of pilots who have either served the company for 20 years or have flown 20,000 hours, regardless of age.

In November, after the two carriers negotiate their early return, **Atlas Air** obtains the two B-747-211Bs operated under lease by PAL. Once in hand, Atlas causes them to be dispatched to Wichita for conversion into freighters.

A320-214s replace older A300B4-203s on the carrier's five-times-a-week service from Manila to Kuala Lumpur, beginning on December 1.

When in December the company orders the early retirement of Senior Pilot Capt. Albino Collantes, aged 45, under its new termination policy, it sets off a major confrontation with the pilots' union, whose president, Capt. Sotico Lloren, points out that the jobs of 225 flyers are immediately at stake.

Also during the month, negotiations are undertaken with Boeing concerning the airline's plans to cancel six B-747-400s. At the end of December, company management approves the cancellation of four of the Jumbojets scheduled for delivery from **1999 to 2001**; Boeing does not accept the cancellation.

Enplanements for the year total 2.7 million, while freight jumps 24.9% to 436.2 million FTKs. When figures are released in March, it will be shown that the company has lost PP 8.08 billion (\$192 million) and is \$2.1 billion in debt.

While the confrontation between the airline and its pilots' union continues, the regional currency crisis severely affects the company.

Starting on January 1, 1998, A320-214s replace B-737-3Y0s on the carrier's daily flights from Manila to Bandar Seri Begawan via Kota Kinabalu. At the same time, the older, all-economy class service is replaced with the new business product, *Mabuhay Class*.

The all-Stage III-certified fleet now includes 4 each B-747-4F6s, A340-313s, A340-242s, 3 each B-747-2F6Bs and A320-211s, 9 each B-737-3Y0s and A300B4-203s, 8 A330-301s, and 10 Fokker 50s.

In February, the company announces that it will not take six B-747-4F6s it has ordered, deferring them "indefinitely" and becoming the first airline to default in Asia since the previous year. Additionally, the arrival of five of eight A320-214-203s is deferred by a year or two. The two remaining MD-11s are returned to **World Airways**.

The largest annual loss ever, PP 8.08 million, is officially reported in March. The company is so strapped for funds that President Garcia now appeals to his employees to invest their life savings in the airline, promising them "competitive" interest rates.

In a March letter to workers, President Garcia paints a bleak picture of PAL's survival chances. Noting that the company is, due to the currency crisis, "in serious financial trouble," he indicates that the carrier

will not survive "unless we take drastic steps." Comparing PAL to a "sick man" surviving on a day-to-day basis, Garcia indicates that severe medicine is required, including drastic fleet and staff reductions.

On March 22, an A320-214 piloted by Capt. Teodoro Facun makes an extremely short landing at Bacolod in the central Philippines following a flight from Manila. Flight 137, with 5 additional crew and 129 passengers, is unable to stop and continues 650 ft. beyond the end of the 6,888-ft. runway. In the process, the jetliner crashes through a perimeter fence, bounces across a small river, strikes 30-plus squatter homes, and comes to rest in the Brilliant City Pub House on the edge of a highway. Three people are killed on the ground and 44 injured; all but 21 of the passengers the Airbus are also hurt and the plane itself must be written off.

PAL and **Canadian Airlines International, Ltd.** expand code-sharing on services between the two countries beginning on May 1. On that day, PAL reschedules its three nonstop weekly flights to Vancouver in order to offer better connections through the CAI hub. All Manila-Vancouver frequencies become nonsmoking on May 16.

The arrangement with CAI is enhanced on June 1 as PAL begins to place its code on the Canadian carrier's flights between Vancouver and Toronto. Customers may now seamlessly travel between Manila and Toronto, with only a brief stopover at Vancouver. Plans are announced for the June 28 launch of a fourth daily Manila-Vancouver nonstop.

On June 5, all 625 of the carrier's line pilots strike the company over its retirement plan; only 25 management pilots are available and they are unable to handle the schedule. Most international and domestic flights must be cancelled, affecting thousands of passengers.

Chairman Tan and President Garcia fire all of the striking pilots on Sunday, June 7, calling their action illegal. At the same time, company management reports that the strike has "irreparably damaged the company's cash flow" and has scared off potential investors, including negotiations with **Northwest Airlines**.

The Department of Labor intervenes on June 8, agreeing to take the pilots back if they will return to work the next day. The DOL orders the pilots to return to work by June 9 or face the possibility that they will be replaced. The pilots' union refuses the labor office's attempts to formally deliver the back-to-work order and none of the striking flyers come back on deadline day.

The bitterness engendered is now so great that Chairman Tan indicates that he will not accept back the striking pilots after settlement and will, instead, scale back PAL's operations to a point where it primarily concentrates on domestic services.

On June 15, the day before the job action ends, the Philippine Department of Labor informs both PAL and the pilots' union that the airline has the legal right to require early retirements, the chief point of contention between the two sides. The strike ends on June 16, at which point all of the pilots are fired. The 11-day job action has cost PP 150 million (\$3.8 million) in lost revenues.

In an effort to assist in the replacement of capacity on routes from Manila to Australia, **Qantas Airways (Pty.), Ltd.** now upgrades its capacity, changing from the B-767-338ERs previously employed to B-747SP-38s; the number of frequencies between the two nations is also boosted.

Three days later, PAL announces that, in a last-ditch effort to survive the effects of the strike, it must lay off 5,000 workers (40% of its workforce) and immediately downsize to "forestall further losses and certain closure." The retrenchment, the largest in the Philippines in years, causes the airline's flight attendants and ground personnel to threaten strikes as well.

Also on June 18, it is announced that the carrier is closing down its Australian offices and will shortly terminate all operations "down under."

On June 19, PAL files a rehabilitation plan with the Philippine Securities and Exchange Commission (SEC). Noting that it is unable to meet payments on its loans, the carrier also indicates that it will cut its workforce by 40%, dispose of 40 of its 54 planes, suspend two-thirds of its

routes, and sell off subsidiaries. The strike thus far has cost over PP 2 billion (\$50 million) in lost revenues.

Plans are announced on June 21 for the disposal of all 8 of the carrier's A340-313s, 4 A330-342s, 5 B-747-2F6Bs, 10 Fokker 50s, 5 A300B4-203s, and 8 B-737-3Y0s. Accomplished through a combination of early lease terminations and sales, the move will leave PAL with just 14 airplanes, but will generate \$1.5 billion.

At this point, PAL owes \$400 million to local banks, chiefly the Philippine National Bank, along with \$1.6 billion to U.S. and European creditors.

The U.S. Bankruptcy Court of the Northern District of California issues orders on June 22 that prevent PAL's U.S. creditors from foreclosing on the carrier's loans until July 2. The next day, the Philippine SEC allows PAL to temporarily suspend payments to creditors for 30 days while an interim rehabilitation committee works out a revised rehabilitation plan for the airline that will be presented on July 24.

In separate statements issued on June 22, President Fidel Ramos indicates that he will not intervene in the labor dispute. President-elect Joseph "Erap" Ejercito Estrada, who will succeed Ramos at the end of the month, indicates that he cannot back a government bailout.

While the company, on June 24, enters negotiations with its sole engine supplier, General Electric Co., for the settlement of its financial obligations, PAL reports that it has a total of 96 pilots of various positions on active duty, including 34 from management.

On June 25, the carrier indicates that it will hire back some of the dismissed pilots if they agree to a 20% pay cut. Meanwhile, Chairman Tan lets it be known that he is considering the appointment of a number of laid-off flyers from **Garuda Indonesia** at \$1,000 per month, a third of the salary paid to PAL's dismissed pilots.

The same day, Airbus Industrie agrees to take back eight aircraft. It will assist PAL to sell four purchased units and will make four leased machines available to other airlines. Despite this good news, the company must also note that it is having great difficulty finding buyers for 13 planes it is trying to sell.

The pilot strike ends on June 26 after 22 days.

At month's end, as creditors give the carrier a reprieve on payments on its \$2.1-billion debt, negotiations continue for a delivery delay on 12 A320-214s. At the same time, **Air Philippines** continues its efforts to expand and take market share from the major.

Joseph Estrada is inaugurated as president of the Philippines on July 1 and soon finds himself embroiled in the PAL situation. During the next week, PAL continues efforts to restructure its \$2 billion in debts. By now, the company has fired all of the striking pilots and laid off 5,000 more of its cabin and ground crews. All but 5,000 of the staff will be gone by September and the remaining 8,500 ground crew workers now issue a warning that they will strike.

On the evening of July 9, President Estrada calls in Chairman Tan for consultation and to receive a report on the PAL plan to reduce the airline fleet to only 14 aircraft. Estrada, who is Tan's political patron, indicates that he will join the effort to find a solution to the PAL labor disputes because they are damaging the country. Meanwhile, he asks Tan to increase the fleet to 21 aircraft and retain at least 9,000 workers.

The next morning, Labor Secretary Bienvenido Laguesma issues an order halting the ground workers' strike. President Estrada, meanwhile, speaks to the leaders of the company's three unions, stressing the need for both sides to continue negotiations and to find a settlement. He reports on his conversation with Chairman Tan and, as Laguesma had earlier, warns against a strike.

Executive Vice President Aquino announces at a press conference a spin-off plan for the carrier's major services on July 15, one that it hopes to complete within six months. Among the assets and functions that will be turned into joint ventures that partners will purchase in exchange for equity in the airline are maintenance and engineering, catering, ground handling, cargo services, and flight information services. Aquino announces frankly that, except for maintenance and engineering, little interest has so far been shown by any concerns in the other company services.

Perhaps most disturbing to listeners in and out of the airline is Aquino's denial of reports that the airline might revise its restructuring plan and elect to retain 21 aircraft as President Estrada had requested. "It's not an option," the executive notes, "we are working on the Plan 14. There's no Plan 21." On July 22, the Philippine SEC grants a 50-day extension of the July 24 deadline for the airline to submit its rehabilitation plan.

The Aquino statement, a failure of discussions concerning the reinstatement of retrenched workers, and the airline's continued downsizing brings about a full-scale strike on July 22 by the remaining 8,000 PAL-employed members of the Philippine Airlines Employees Association (PALEA). The immediate effect is the cancellation of 16 domestic flights.

President Estrada calls PALEA strike leaders and PAL officials, led by Executive Vice President Aquino, to his home on July 25 and personally becomes involved in a marathon 15-hr. bargaining session. Having brokered a deal, Estrada calls a press conference on the morning of July 26 to announce that the ground crew strike is over. Under terms of the arrangement between the airline and workers, PAL will be allowed to reduce the PALEA workforce by 1,800 by August 16; each ruffed worker will receive a \$712 settlement. The airline will be able to push ahead with its plans for a 14-aircraft fleet, while further negotiations ensue.

PAL President Garcia resigns on July 29 and it is announced that, because of the airline's impending receivership, he will not immediately be replaced. The workforce at this point now totals 8,617: 224 pilots, 653 cabin crew, and 7,740 ground personnel.

Negotiations between the carrier and PALEA continue. Although a debt moratorium is in hand as a survival plan is discussed, PAL officials note that creditors have refused to agree to any restructuring plan unless new capital is infused into the 57-year-old airline, but that prospective investors have been driven away by the recurring labor disputes.

On September 11, PALEA and PAL agree to halt public acrimony and to accept management's proposals in order to create and project an atmosphere conducive to investor and creditor confidence. Under terms of the arrangement accepted from CEO Tan, PALEA workers will receive three board seats and PAL stock in exchange for a 10-year suspension of their collective bargaining agreement. In addition, workers will receive 20% ownership of the company, with each employee receiving 60,000 shares of stock valued at \$6,900. PAL pledges to stop cutting salaries.

The board of PALEA reverses its decision on September 16 and publicly rejects the September 11 deal, claiming that the decade-long suspension of labor bargaining would be unconstitutional, as they would be abandoning their right to organize. Adding fuel, it is noted that Chairman Tan and his other companies have earned at least PP 25 billion from doing business with PAL over the past five years.

On September 17, an unaudited financial statement is submitted to the SEC showing a PP 2.2 billion (\$50.2 million) net loss for the second quarter, which is the first quarter of the airline's fiscal year—an amount that is three times more than that incurred for the same period in 1997.

Taking this bad news together with the PALEA action into account, the Interim Receivership Committee recommends closure of the airline. During an emergency closed-door session in the afternoon, the directors approve the action, effective at midnight on September 23.

Facing the press with the news the next morning, Vice President Rolando Estabillo indicates that efforts to rebuild the ailing carrier are no longer feasible. "We're going to close. It's final," he states. Chairman Tan is called to meet with President Estrada that evening.

Tan is talked into lowering the collective bargaining agreement suspension to five years and into agreeing to invest additional funds if PAL workers will vote to accept his revised plan.

After meeting with representatives from both sides over the weekend, President Estrada appears on the radio talk show of private station DZMM on September 20 to explain the situation. He comments on Chairman Tan's agreement offer, indicates his willingness to surrender a government board seat to PALEA (for a total of four), and appeals to both sides "on bended knee" to end their dispute.

President Estrada meets with both union and airline representatives on Monday, September 21. Meanwhile, approximately 9,000 PAL employees begin to vote in several polling places in Metro Manila on a ballot with but one question: "Do you accept the following offer (terms specified above) of Mr. Lucio Tan?" The results will be known the next day.

As the voting continues, PAL executives seek a further two-month moratorium on servicing \$2.1 billion in debts to foreign and domestic creditors. Finance Secretary Edgardo Espiritu and other officials indicate that the government may lend PAL PP 1.5 billion (\$34 million) to ensure domestic routes are served until PAL can be resurrected; the amount suggested is raised during the day to PP 2.5 billion.

Elsewhere, there is additional speculation on the nation's transport future.

Tourism Department Secretary Gemma Cruz Aranets indicates that members of the tourist industry should brace themselves, projecting calamitous effects if the carrier shuts down. The regional news media reports the labor-management crisis; some outlets suggest that the Philippine government is prepared to step in and take over Asia's oldest airline. Others suggest that is not quite true; however, Defense Secretary Orlando Mercado suggests that President Estrada may order the Philippine Air Force to fly the mail.

When the employee votes are counted on September 22, it is learned that Chairman Tan's terms have been rejected. Finance Secretary Espiritu indicates that, in the light of the negative election results, any suggestion of government loans in any amount is no longer valid.

PALEA officials, realizing the end of the airline is near, send a last minute proposal to Labor Secretary Laguesma suggesting a way to break the impasse. All that would be required would be for PAL to recognize PALEA's status as a union, security of tenure, retention of existing benefits and inclusion of inflation in any consideration of salary increases.

CEO Tan, who has given directors audiotapes of the song *Auld Lang Syne* to be played in company offices, agrees to let his executives meet with PALEA and government representatives, but indicates that any agreement must be reached by midnight. As these talks continue, the last flight out of Manila departs for Los Angeles at 9:30 p.m. (1330 GMT), while the last incoming flight arrives 10 minutes later.

Aklan Congressman Allen S. Quimpo hurriedly attempts to cobble together a consortium of businessmen willing to buy Chairman Tan's stake in PAL should the airline close. He has the support of tourism officials, particularly those on Boracay Island.

Following two hours of talks with officials of local airlines in Malacanang, President Estrada tells the press late in the evening that three foreign airlines are interested in buying PAL's assets should it fail: **Cathay Pacific Airways (Pty.), Ltd.**, **EVA Air, Ltd.**, and **Northwest Airlines**. Meanwhile, **Cebu Pacific Air**, **Air Philippines**, **Asian Spirit**, **Grand International Airways**, and several smaller operators are left to fill any void.

After six hours of negotiations between management and PALEA, Asia's oldest airline is closed at 12:01 a.m. local time on September 23. National transport chaos results as thousands of passengers and tons of cargo are stranded in provincial airports as well as Manila.

The next day, the U.S. Export-Import Bank is able to get a U.S. court warrant to seize the B-747-4F6s it requires back from PAL; one is taken over by authorities at Hong Kong and the other in Los Angeles.

On Friday, September 25, President Estrada orders representatives from PALEA and PAL to resume negotiations under the direct supervision of Labor Secretary Laguesma. His press secretary also announces that the Philippine chief executive anticipates that, by Monday, he will have made some arrangements to fill the gap left by the PAL shutdown.

A government-appointed management committee of the SEC had earlier begun negotiating with several foreign carriers concerning equity shareholding in PAL. Having been charged with supervising its liquidation, it now agrees when President Estrada's administration, via its partially owned PNB Holdings, contracts with **Cathay Pacific Airways**

(Pty.), Ltd. on September 26 for the operation of short-term cabotage charter flights.

Estrada defends his action to the media in his weekly radio address as having been taken on a temporary and emergency basis and so as not to disrupt tourism and commerce. He frankly admits that the government cannot take over the airline because there is insufficient money in public coffers to underwrite the carrier's \$1-million-a-day losses.

Under the direction of Cathay Managing Director Chen, the Hong Kong-based major begins flying Philippine domestic routes at dawn on September 28, initially operating six roundtrip flights each day from Manila to Cebu City, Davao, Cagayan de Oro, Bacolod, Tacloban, and Puerto Princesa. The Hong Kong-based airline contributes five A330-342s to the endeavor, while also employing three PAL aircraft staffed by PAL pilots and flight attendants. PAL ground crews service the aircraft. Cathay continues to maintain its 38 weekly roundtrips between Hong Kong and Manila.

President Estrada is a passenger on the first flight between Manila and Cebu City, where he meets with local officials and again stresses that these cabotage flights will only be maintained until Filipino carriers can take over.

The sight of the Cathay aircraft in Philippine skies has a significant impact on businessmen, government officials, members of the public, and, perhaps most importantly, upon those from PALEA and PAL continuing in the negotiations. "We were saddened," union president Alexander Barrientos will tell reporters.

The two sides are now able to resolve their bitter feud because the introduction of the foreign airliners has shown that President Estrada, whose administration has been a media target on other issues, is serious about resolving the transport crisis. PALEA now backs down and accepts management's offer of a 20% equity stake in return for a 10-year moratorium on strikes and wage haggling. Although the restructuring plan will be resubmitted for a vote by employees in two days, Estrada is confident enough to announce to the public that PAL is expected to be flying domestic routes again within a week to ten days, hopefully as early as the first week of October.

Meanwhile, Chairman Tan is invited to meet with the unionists at a reconciliation meeting at the presidential palace where Estrada informs both sides that he has asked the SEC management group to stop its liquidation activities and, instead, seek new loan restructuring from PAL's creditors. Additionally, it is noted that **Cathay Pacific Airways (Pty.), Ltd.** will continue its cabotage service only until PAL flights resume. Tan informs the gathering that, if the vote goes PAL's way, domestic flights can be restarted on October 7, with international service two weeks later.

Not everyone employed by PALEA is pleased with the turn of events. Over 1,000 workers from a more radical wing of the union march to the presidential palace on September 29 to protest PALEA's approval of the PAL management plan to reopen the airline, especially the agreed-upon suspension for 10 years of collective bargaining. Also during the day, PNB Holdings contracts with **Dragonair (Pty.), Ltd.** of Hong Kong to operate thrice-daily domestic services beginning on September 30.

Even before workers begin to cast their ballots, Chairman Tan flies abroad seeking to make arrangements with the airline's creditors that will prevent confiscation of PAL's aircraft. Before leaving, he discusses the prospects for investment by foreign airlines and asks all of his senior officers to tender their resignations in order to give prospective investors a free hand in reviving the company.

The **Dragonair (Pty.), Ltd.** A320-231 begins to operate essential domestic routes on September 30 from Manila to Bacolod and Cagayan three times a day.

Ballots from the worker referendum are duly counted by the Department of Labor on October 2 and give the airline a new chance at life through an affirmative 3,254 to 1,794 margin. Acceptance by the employees of the equity-sharing offer is also seen as a political victory for President Estrada, who has been strongly involved in the PAL story since early September. Still, a number of radical workers oppose the settlement and vow to file lawsuits and perhaps take disruptive actions.

Also during the day, Vice President-Sales Avelino I. Zapanta signals agents that they are free to begin selling domestic tickets again the next morning.

Over the next five days, plans are put together to get the airline back in the air. As the date for return approaches, some 300 radical workers, in a protest action, refuse to return to work. Executive Vice President Aquino lets them know that those failing to show up on Monday will be fired. Leaders of PALEA begin the process of electing three representatives to the PAL board.

The company's 7,577 workers return to their posts on Monday October 5. In Hong Kong, **Cathay Pacific Airways (Pty.), Ltd.** Managing Director Chen announces that he has received word that PAL will return to service within two days. Given this development, it is further noted that Cathay and Dragon will cease their temporary cabotage operations for the island nation late on October 7, having provided a total of 60 chartered flights.

The last Cathay cabotage service operated in the Philippines is the 6:45 p.m. Wednesday night flight from Cebu City to Manila. Upon its arrival at Manila, the Cathay service continues on to Hong Kong. Dragonair concludes its activities the same day.

Also on October 7, PAL is able to restart 14 of its domestic routes employing 9 aircraft. It is announced that international service will resume on October 15 to Los Angeles, San Francisco, Hong Kong, Taipei, Xiamen, Fukuoka, Tokyo (NRT), and Singapore. Load factors for the first day are bad, just more than 33%; the next day, they rise to 40%, reaching 60% on October 9.

During a question-and-answer period during his regular weekly radio show on October 10, President Estrada is asked which airline he will be flying during his upcoming Singapore visit. He quickly identifies the resurrected flag carrier as the airline of choice.

President Estrada and an entourage of government officials and businessmen fly on the PAL A320-211 *Kalayaan I* to Singapore on October 11 for the four-day 7th East Asia Economic Summit. The flight is the first international service by PAL since before the shutdown and the first foreign trip by Estrada since his June election.

Also on Sunday, Executive Vice President Aquino confirms that PAL will resume international services on October 13 with twice-daily roundtrips to Hong Kong and between three and four weekly services to seven other destinations. It will be necessary to obtain three A330s and an A340-313 parked in Sharjah, UAE, after the shutdown.

Although PAL is still negotiating, the U.S. Export-Import Bank has indicated its desire to terminate leases on the two Jumbojets it has been financing for PAL. To avoid possible confiscation of the Export-Import Bank-financed Jumbojet still in its hands should it be flown to Los Angeles or San Francisco, Aquino indicates that an A340-300 leased from another source will serve the U.S. routes.

Because of requests to hold off from potential investors **Cathay Pacific Airways (Pty.), Ltd.**, **Singapore Airlines, Ltd.**, and **Northwest Airlines**, PAL announces on October 12 that it will not resume international flights on October 13 as previously indicated. The potential equity investors require time to conduct feasibility studies.

In an October 7 statement revealed on October 12, Alexander Shum, the Cathay country manager, indicates that his airline is prepared to operate charter flights to Cebu from Japan if the Manila government requests them.

Rumors concerning the future of PAL become rampant. Although these carriers remain in negotiations with the government of President Estrada concerning a possible investment, they are far from finished. On October 15, two Hong Kong newspapers run reports that a deal has been struck for Cathay to take over PAL and that **Northwest Airlines**, another suitor for PAL's hand, has withdrawn from negotiations. Both airlines deny both assertions.

By October 19, PAL is operating thrice-daily roundtrips between Manila and Cebu, as well as 11 flights to other destinations. Up to this point, load-factors aboard the Airbus aircraft employed on the routes average 30%–40%. Meanwhile, the Hong Kong media reports that **Cathay**

Pacific Airways (Pty.), Ltd. is in "active discussions" with the government of the Philippines concerning an equity stake, but that the company has made no decision on whether or not to take an interest.

Executive Vice President Aquino announces on October 20 that, following consultation with potential investors Cathay and **Northwest Airlines**, PAL will be permitted to resume international flights on October 29. The initial service will consist of thrice-weekly roundtrips between Manila and Los Angeles and San Francisco.

Discussions are resumed with the U.S. Export-Import Bank concerning the lease of the two seized B-747-4F6s, a need for which is anticipated by December. The SEC asks the Export-Import Bank to return the aircraft and a federal court in San Francisco will, within days, so order a return.

It is also confirmed that discussions are continuing with **Cathay Pacific Airways (Pty.), Ltd.**, **Northwest Airlines**, and **Singapore Airlines, Ltd.** All have been asked to submit their proposals by month's end, but Cathay is seen as "the most serious."

Domestic service is significantly increased on October 23. Two more daily roundtrips are offered between Manila and Cebu. In addition, the first A330-342 arrives at Manila from Sharjah during the day.

Roundtrips are laid on the next day from Cebu to Davao, Bacolod, Zamboanga, and Iloilo. Eighteen destinations are now served and income reaches PP 25 million each day.

A **Cathay Pacific Airways (Pty.), Ltd.** spokesperson on October 26 insists that no decision on acquisition of a stake in Philippine Airlines (PAL) has yet been made. The next day, a PAL executive expresses assurance that Cathay will acquire a 40% interest and that its proposal will be submitted before the close of business.

Due to public demand and the action of the federal court in San Francisco, PAL elects to chance the use of a B-747-4F6 when it restarts North American service. Orchestrated by Maria Lourdes Afzelius, PAL manager of special services, colorful bunting, local cuisine, and a live native band are on hand as 200 passengers arrive at Manila on October 29. Following ceremonies, the group boards Flight 102 for a flight to Los Angeles and San Francisco.

By the beginning of November, domestic load factors have reached 80%, 100% on certain flights. At the same time, the SEC approves the airline's request to return 14 leased aircraft and to pay off PP 84.6 million in debts.

Executive Vice President Aquino informs the press on November 5 that **Cathay Pacific Airways (Pty.), Ltd.** had made a conditional equity offer for PAL two days earlier. President Estrada indicates that Cathay has his blessing to take over management control.

At Cebu for a meeting, Philippine Finance Secretary Espiritu also confirms the existence of a proposal, while adding further detail. He, however, raises a number of management issues yet to be ironed out. Among these is a Philippine law that requires that certain of the airline positions be held by citizens, including 60% of the board seats, and that no more than 40% of a utility may be owned by foreign interests.

Espiritu indicates that the process for the transaction will be for PAL to implement a capital hike that will dilute the holdings of Chairman Lucio Tan's group from the present 56.63% and allow the new partner to join. Tan will be stripped of his management roles, but will retain a board seat. Stockholders, old and new, will need to infuse PP 6 billion (\$150 million). At least two or three weeks will be required to complete final arrangements in order to allow Cathay time to study PAL's technical systems.

When contacted for his reaction to the optimistic Filipino comments, Cathay Chairman Sutch indicates that the airline will insist on having management control. "That will need quite a lot of negotiations," he tells Reuters, Ltd., "I expect them to continue for a long time yet."

While negotiations between PAL and Cathay continue, **Northwest Airlines** makes an offer on November 6. It involves only management support, without a capital infusion.

A "source involved in the talks" refuses on November 9 to confirm Asian media reports of the past few days that **Cathay Pacific Airways**

(Pty.), Ltd. is willing to inject \$75 million-plus into PAL, but does note that the figure will be less than the carrier had sought. Additionally, the unnamed reporter indicates that PAL will not only accept the figure, but also turn over management control to Cathay in any manner the Hong Kong-based major desires. The Filipino laws will be followed and methods will be found to bend them to meet necessity.

Cathay Pacific Airways (Pty.), Ltd. and the Interim Rehabilitation Receiver of PAL jointly announce on November 10 that the PAL receiver has accepted Cathay's conditional proposal for a possible investment in PAL. Their statement indicates that the two sides will now work together to draw up a comprehensive rehabilitation plan for the financially troubled Filipino flag carrier, which will be submitted to the Philippine SEC and creditors for final approval. Although the exact amount of equity infusion by Cathay and the Tan Group and local investors is not yet determined, it is expected to be in the \$75 million-plus range the media has been reporting. (It will be reported by a Hong Kong source the next day as PP 2-3 billion.) It is anticipated that as much as a month may be required to complete the rehabilitation plan.

The next day, Benjamin Palma-Gil, president/CEO of the Philippine National Bank indicates that its remittance subsidiary, rather than the bank proper, may consider investments in the flag carrier. The only way the bank will consider increasing its \$17.9-million equity stake is if it can be linked to the remittance operation. A global remittance company, separate from the bank, will be established within a month.

Cathay Pacific Airways (Pty.), Ltd. CEO David Turnbull simultaneously indicates that his carrier has, indeed, made a provisional offer of PP 3-4 billion, but that he expects the offer will include a group of foreign investors that together will hold the 40% stake allowed under Filipino law. It is also reported that Cathay wishes the Philippine government to divest its shareholding in PAL, although PAL Executive Vice President Aquino stresses that such a divestment is not an absolute condition of Cathay's investment.

The Filipino company's chief financial officer, Jaime Bautista, informs reporters that it would be perfectly acceptable for Cathay to link up with the Philippine National Bank or a local affiliate of the American International Group to obtain 50% control of the airline. This would skirt the national law limiting foreign ownership to a 40% maximum.

A330-342 service to Hong Kong and Tokyo resumes, also on November 11. On November 13, PAL requests that the SEC grant it another extension on its deadline to finalize its rehabilitation program.

A340-313 service is restarted to Taipei on November 18. As the result of support received from the airline's major foreign creditors during the day, the SEC, on November 19, grants PAL an extension for receipt of its rehabilitation plan. The new due date will be December 7, the same day Cathay is set to complete its 25-day final due diligence leading to the injection of fresh capital. The airline simultaneously resumes flights to Fukuoka.

Having become restless over fears of retrenchments should a deal with Cathay actually be struck, an independent group of PAL workers calls for a rally outside company headquarters in Manila's Makati business district on November 20. Few workers turn up.

Of greater concern are mounting losses, which must also be reported this Friday. The net loss for the period from March through the end of September has accelerated to PP 6.099 billion (\$154 million), up from PP 2.11 billion a year earlier. Revenues for those six months, meanwhile, have plunged to PP 11.74 billion from PP 17.58 billion the previous year. PAL officials from Executive Vice President Aquino on down realize that the loss will have an impact on Cathay's valuation of the company and may eventually undermine talks between the two carriers. There is no immediate comment from Hong Kong.

A senior Philippine government official, noting on November 25 that the proposed arrangement with Cathay is in significant difficulty and probably will not go through, now openly suggests that **Northwest Airlines** might be better suited for a tie-up with his country's flag carrier. The source, Executive Secretary Ronaldo Zamora, in a radio interview reported by Reuters, Ltd., indicates that Cathay has put forward new and

unacceptable conditions, including the removal of pilots who had returned to work following the June pilots' strike. He confirms, as does President Estrada in a separate interview and Northwest spokesman Douglas Killian, that Chairman Tan is in the U.S. for talks with the Minneapolis (MSP)-based major.

Having negotiated for another week, **Cathay Pacific Airways (Pty.), Ltd.** and **Northwest Airlines** both pull out of investment discussions with PAL on December 2.

Philippine President Estrada confirms that the Northwest talks have fizzled, but expresses hopes that he can convince Cathay to continue. In a statement from Manila, a Cathay spokesman indicates that the parties involved could not resolve "certain critical issues" and, consequently, the airline chooses not to pursue this investment opportunity.

Insiders let it be known to the media that neither PAL's unions or Estrada himself have been flexible in the matter of management control issues, particularly requested staff cuts, while Cathay has also been troubled by valuation of the airline and the lack of profit margins on domestic routes. These are now mostly loss-making as a result of the depreciation of the Philippine peso. Some involved in the talks speculate that a takeover of PAL management by Cathay may violate the 1987 Filipino Constitution's foreign ownership provisions.

Executive Vice President Aquino indicates that the required SEC rehabilitation plan, stand-alone if necessary, will be filed on December 7, but fails to indicate who any of the desired airline partners in the process could be. It is, however, revealed that a local group has committed to infuse \$90 million of the \$150 million required and that the airline has resumed talks with an unnamed potential foreign investor.

On December 3, President Estrada, who notes that his government has no money to bail out PAL, announces that **Cathay Pacific Airways (Pty.), Ltd.** has indicated a willingness in a letter to return to the negotiating table with the Filipino airline. There is disagreement on that point from Cathay.

In Manila, Peter Foster, Cathay's local station manager, bluntly indicates, "We are not having talks with them, the talks are over." In Hong Kong, Cathay CEO Chen more gently but just as firmly confirms withdrawal from talks with PAL and thanks the Philippine government for allowing the carrier an opportunity to pursue the opportunity. "We wish Philippine Airlines well," he adds, "and we will remain open to future cooperation in other areas of mutual benefit."

On December 4, it is revealed that Taipei-based **EVA Airways, Ltd.**, which the media had reported as being in talks with PAL following Executive Vice President Aquino's December 2 statement concerning a potential foreign investor, has not been contacted and has no plans to enter into equity negotiations with PAL. Presidential Executive Secretary Zamora tells reporters that government financial institutions may be tapped to extend loans to the airline, provided there is sufficient collateral.

President Estrada is unsuccessful in his weekend efforts to rekindle discussions between PAL and **Cathay Pacific Airways (Pty.), Ltd.** Filipino newspapers on December 6 suggest that the carrier is negotiating with **Singapore Airlines, Ltd.**, but both airlines downplay reports. Agence France-Presse reports that a team from SIA will arrive in Manila during the week for talks.

On December 7, the company takes its first shaky steps towards recovery as it submits a proposed rehabilitation plan to the SEC. The plan outlines a new business program for the next five years with the goal of generating revenues of \$855 million by 2005. Under the scheme, PAL hopes to reach its target turnover with a fleet of 22 jetliners and 7,500 employees. Provision is also made for the enhancement of both international and domestic routes. Also, the plan calls for debt restructuring, a capital injection of \$150 million (lowered from the \$200 million originally sought), a reduction in the par value of existing common stock shares from PP 5 to 1 centavo, fleet reduction, and a spin-off program for such noncore services as catering and ground handling.

In an interview with Reuters, Ltd., Executive Vice President Aquino adds that the airline will also seek debt forgiveness from some of its

thousands of creditors. He notes that, under the rehabilitation plan, the airline's fully secured creditors are to be asked for a one-year grace period on principal payments and an extension of the maturity of credit facilities by three years. Partially secured creditors will be asked to extend the maturity of their loans by four or five years. All creditors will also be expected to forgive all default interest on debt.

Finance Secretary Espiritu informs reporters that the government has readied a bridge financing plan from unexcited government financial institutions in case PAL requires additional funding. In a worst case scenario, the financial institutions can provide a loan through April. It will definitely not be considered as a capital infusion.

Espiritu and his government colleagues continue to hope a foreign airline partner can be found within six months of the plan's implementation, one that will provide \$60 million in vital equity. At the same time, President Estrada indicates that he has once again invited Cathay to a meeting the next day where the parties may resume talks.

On December 8, Espiritu sweetens the deal for Cathay, indicating that the Filipino government will provide bridge financing through April if **Cathay Pacific Airways (Pty.), Ltd.** will come in; no capital infusion would be expected from Cathay before that time. The company rehabilitation plan presented to the SEC the previous day envisages an injection of fresh capital of \$150 million. The first tranche of \$90 million, to be paid as soon as the plan is approved, would be put up by PAL Chairman Tan and other investors.

Despite the new offer, Cathay does not send a representative to meet with Chairman Tan or other PAL officials during the day. A disappointed President Estrada indicates a meeting has been rescheduled for sometime within the next week.

Also during the day, the SEC sends a copy of the rehabilitation plan to the European Export Credit Agencies, those creditors that control leases on 12 Airbus jetliners or more than half of the 22 planes PAL would continue to fly, asking for their comments on the package by December 22. Similar copies are sent to and requests made of other creditors as well.

Cathay Pacific Airways (Pty.), Ltd. CEO Chen, on December 9, notes for reporters on December 9 that the airline has had no formal approach by the Philippine government for a resurrection of equity discussions, despite all of the information coming out of the Philippines to the contrary. Indicating that his airline has put in a lot of financial and manpower resources on the due diligence, Chen reiterates that talks to acquire a stake in PAL are over.

Simultaneously, **Singapore Airlines, Ltd.** indicates that it, too, has "no interest" in investing in PAL. Although it had earlier expressed an interest, it now puts out a statement in order to end speculation over its making a possible bid.

The PAL situation remains in flux through the rest of the week. On December 12, President Estrada, during his weekly radio program, reveals that the airline is losing PP 21 million each day. He still hopes to find a foreign airline partner for the flag carrier and notes that, even in the face of CEO Chen's remarks, he still has not lost hope in arranging a deal with **Cathay Pacific Airways (Pty.), Ltd.**

While great attention has been paid to PAL's restructuring and its negotiations with foreign airlines, an aid package of potentially greater impact is being put together outside the country. In Tokyo, a \$30-billion financial support scheme for Asia is being organized by Japanese Foreign Minister Kiichi Miyazawa.

Finance Secretary Espiritu on December 14 tells reporters that, considering the importance of PAL as a flag carrier, the Filipino government is looking at the possibility of making the restructuring of the airline a part of the Miyazawa initiative, which also provides support for corporate restructuring. Although President Estrada still prefers that PAL take on a strategic partner to which it could turn over management, Espiritu notes that the Philippines—which hopes to receive about \$3 billion in short-term loans and another \$3 billion in long-term loans from Tokyo's largess—could obtain the needed \$150 million capital infusion by tapping into Miyazawa income. Any request to use Miyazawa Funds must,

according to Espiritu, come from the government task force for the rehabilitation of PAL, the SEC, and PAL management.

The European Export Credit Agencies rejects the PAL rehabilitation plan on December 22. The consortium is made up of Britain's Export Credits Guarantee Department, the German insurance group Hermes, the French credit insurer Coface, and the French bank Credit Agricole Indosuez, which latter institution acts as the security trustee and assignee of lessors' rights to the 12 PAL Airbus planes in question.

Officials of the Credit Agricole Indosuez deliver the group's comments to the SEC in Manila. A review of the documents indicates that the plan as drafted fails to address two key points—presence of a strategic partner airline and infusion of the original \$200 million.

Hundreds of other creditors also reject the terms of the rehabilitation plan. Financial institutions in particular express concern over PAL payments of loans. Executives from the Philippine Commercial International Bank, in its SEC filing, suggests that, if the airline reduces its capacity, some of PAL's stock of spare parts should be sold to pay domestic loans. It also asks that the company limit the maturity of both its secured and partially secured outstanding payments to 15 years instead of 10. The state-controlled Philippine National Bank objects to the proposed lowering of the par value of existing common stocks.

Airline Chief Financial Officer Bautista confirms to reporters that most creditors are rejecting the plan. "We will be talking to them," he indicates, "we are confident that we will be able to agree on terms that will make this rehabilitation plan successful." At the same time, the Bautista and PAL lawyers detail the fine points of the survival plan to an SEC technical panel set up to evaluate its viability. This panel will issue a set of recommendations during the week of January 3.

In a radio interview on Christmas Day, Philippine Executive Secretary Zamora indicates that PAL is holding discussions with **Northwest Airlines and Cathay Pacific Airways (Pty.), Ltd.** concerning their possible investment. Although both foreign airlines had indicated weeks earlier that talks were dead, Zamora is quoted to the contrary by the Associated Press. "The truth is their discussions are continuing," the official notes, "However, in order not to disturb the talks, they are not disclosing this to the public." He also reiterates the Estrada administration's position that the government will not take over PAL and assume its huge debts.

The search for capital continues. On December 27, Carlos Arellano, the Social Security System administrator tells reporters at a news conference that the Filipino state pension fund he runs would be willing to invest up to PP 1 billion (\$42 million) in the national airline, but only after it demonstrates that it will be profitable. The remarks follow upon those made a few days earlier by the International Finance Corporation, the investment banking arm of the World Bank, which also indicates a willingness to invest, but only after a foreign carrier makes its own equity investment.

President Estrada holds a news conference at Ninoy Aquino International Airport at Manila on December 28, where he and other top government officials have come to welcome overseas Filipino workers home for the holidays. The chief executive confirms the talks revealed by Executive Secretary Zamora and expresses his confidence that there will be a settlement, probably with **Cathay Pacific Airways (Pty.), Ltd.**, in January.

Two additional direct Cebu to Tokyo (NRT) roundtrips commence on December 29, raising total frequencies on the busy route to five times a week.

Passenger boardings for the year are 1.37 million, while 176.53 million FTKs are also operated. The operating loss grows to \$260 million.

It is announced on January 8, 1999, that PAL has hired a team of former **Cathay Pacific Airways (Pty.), Ltd.** officials to help it restructure. Regent Star Services (Pty.), Ltd., a consultant firm established and led by former Cathay Taiwan/Philippines General Manager Foster and Swire Pacific (Pty.), Ltd. Financial Director Michael Scantlebury, receives a five-year technical services contract. The new management team is given extensive powers to turn around the debt-ridden carrier

and Foster is personally guaranteed by President Estrada that the investment required to restructure the airline will be provided.

Once the team is in place on January 13, Foster quickly moves to revisit a number of creditors who have so far refused to endorse the airline's rehabilitation plan that calls for grace periods on repayments and debt forgiveness on default interest. He also rejects the idea of renewed negotiations with Cathay, his former employer.

A group of creditors, holding notes through Deutsche Bank valued at \$95.9 million of the total \$178.5-million face value of PAL's outstanding floating rate notes (FRNs), inform the airline on January 11 that it has rejected the airline's reform proposals because they do not offer reasonable terms of settlement. The next day, the U.S. Export-Import Bank, which is the trustee for four of PAL's B-747-4F6s, and Japan's Dai-Ichi Kangyo Bank join Deutsche Bank in voicing their opposition to the proposed rehabilitation plan for the money-poor airline.

Foster, the new chief adviser, indicates that he will visit with the Deutsche Bank note holders and the other creditors as soon as possible.

A meeting is arranged in Hong Kong on January 15 between representatives from Deutsche Bank, the U.S. Export-Import Bank, and Dai-Ichi Kangyo Bank, which together account for 75% of PAL's obligations and own 90% of its fleet. Advisor Foster, accompanied by Philippine SEC Chairman Perfecto Yasay Jr. and commission member Manolito Soller, are able to reach some accommodation.

Officials of the airline and its creditors agree that PAL will have a grace period until the end of February before it must submit a new rehabilitation plan. A fresh capital infusion of \$200 million must be made a part of the revised document, instead of the \$150 PAL had proposed back in December.

Additionally, unless a "minimum amount" is paid by January 29, the creditors threaten to begin seizing company aircraft. The payment envisioned is between \$50 and \$100 million and its receipt will help to provide proof that PAL is acting on its revival in good faith. Payment is, in fact, made the basic condition for a continuation of negotiations between PAL and its creditors over a new rehabilitation plan.

Yasay assures the representatives that a technical committee of his group is already at work on a new plan and should have a draft ready shortly. Cash will also be sought.

Returning to Manila, Foster urges PAL employees in the carrier's finance department to help find ways to cut costs, while those in sales and cargo are asked to generate revenues. It is necessary, he points out, to raise cash before the end of the month to avoid the danger of fleet repossession.

President Estrada admits at Manila on January 16 that PAL is not among the projects to be funded by the first tranche of the Miyazawa Fund initiative from Japan.

Major personnel changes occurring during the third week of January. On January 19, the SEC approves changes in a committee composed of senior airline managers forging the rehabilitation plan. Chairman Tan steps aside as convener of the group in favor of a director-ally, Luis Juan Virata, chairman of the investment bank Jardine Fleming Exchange Capital. Retained are Chief Financial Officer Bautista and an SEC representative. Added are three Regent Star Services executives, chief adviser Foster, financial advisor Scantlebury, and Richard Nuttall.

In an effort to improve relations between labor and management and to employ the "professional" management sought by many of the airline's creditors, Chairman Tan steps down as president/CEO on January 21 and turns over control of PAL to Director Virata and the Regent Star executives. Chief Financial Officer Bautista now becomes executive vice president/chief operating officer.

Having raised \$37.9 million from operational revenues, Chief Operating Officer Bautista offers the funds to the creditors on the deadline date of January 29. Although it is less than had been demanded, airline officials indicate that it is made "in good faith," and trust the creditors will accept this first debt service since the previous June 19 in the same way. Acceptance will allow PAL's senior managers and advisers to return to the negotiating table and jointly draw up a new rehabilitation plan for submission to the SEC on or about March 15.

Under a recently signed code-sharing agreement, PAL is able to purchase a "block-seat" allocation on each of 11 weekly flights operated by **Malaysia Airlines Sqn. Bhd. (MAS)** from Manila and Cebu to Kuala Lumpur, Kota Kinabalu, and Kuching beginning on February 1. This is the first such dual-designator pact PAL has entered into since reopening its business on October 7.

The Boeing Company weighs into the airline's situation on February 2; documents obtained by Reuters, Ltd. show that the manufacturer has found PAL's rehabilitation effort defective for sidestepping its own claim as an unsecured creditor for damages arising out of PAL's breach of contract in purchasing B-747-400s.

The same day, management and labor representatives vow to make a fresh start in their relations.

On February 10, the nation's SEC hands down several rulings concerning the airline. It is authorized to pay some debt from before June 1998 and to terminate the lease early of a B-747-200. In addition, the company is allowed to hire Chase Manhattan Asia, Ltd. and LEK/ALCAR Consulting Group to provide additional advice concerning its rehabilitation plan. The \$480,000 contract will be paid in two installments. It denies a PAL request to stop several lessors from terminating leases on four B-737-300s.

The SEC, on February 12, orders PAL to pay an additional PP 423.471 million (\$10.9 million) to service some of its maturing obligations. By its order, the regulators allow the airline to sell PP 441.925 (\$11.4 million) worth of assets to raise cash needed for its operations.

Beginning on February 16, Executive Vice President Bautista and chief adviser Foster go on the road for a series of what are described as "crucial" meetings with creditors designed to garner support for a revised rehabilitation plan.

The first conference with U.S. and European creditors occurs in Washington, D.C. on February 18. There a compromise is arranged with Airplanes Finance, Ltd., GPA Group, and GE Capital Corporation (all of which have leased B-737-300s to PAL) under which the motion filed to repossess the aircraft will be withdrawn in return for payments and new guarantees. Under the accord, PAL will pay arrears of \$8.94 million by September 1 and will also begin paying \$220,000 per month to each lessor.

Also on February 18, the carrier joins the ASEAN Air Pass scheme.

Without revealing details, chief adviser Foster reports that the February 19 presentation before U.S. Export-Import Bank representatives and representatives of European creditors was well received and expresses hopes for similar success in Manila on February 25 and in Hong Kong on March 1. He cautions, however, that debt restructuring and equity investment issues remain to be resolved before the entire plan can be completed and turned over to the Philippine SEC by March 15.

Except for three paragraphs detailing lessors rights and consequences that might arise from defaults, the SEC approves the February 18 compromise with the aircraft lessors.

The last Fokker 50 service, a roundtrip from Manila to Naga, is completed on February 28. With the end of turboprop service to its far-flung provincial airports, the carrier will operate an all-jet fleet for the first time in its history.

Thrice-weekly B-737-3Y0 roundtrips to Naga and Tuguegarao, Cagayan, are started or resumed on March 1. The jetliner replaces a Fokker 50 used on the Tuguegarao service prior its suspension the previous June. In support of tourism, additional roundtrips are simultaneously laid on from the capital city to Legazpi City.

Plans are simultaneously announced for the transfer of international and domestic operations from two separate terminals into Terminal 2 at Ninoy Aquino International Airport by mid-April. The move is being made to consolidate services and cut costs.

Having digested the SEC's February 26 order, Airplanes Finance, Ltd., GPA Group, and GE Capital Corporation, together with PAL, visit the agency's Manila offices on March 5. There they ask the SEC to approve the February 18 compromise document as signed, with the lessors indicating that they cannot honor the agreement if all of its terms are not adopted.

On March 9, Chief Operating Officer Bautista, in a letter to employees, reports on the March 1 Hong Kong meeting with representatives of the U.S. Export-Import Bank and the European credit agencies. The creditors conditionally agreed to the proposed rehabilitation plan that will be submitted to the SEC on March 15. The most important stipulation in their acceptance remains a capital infusion into the carrier of approximately \$200 million.

The on-line news service Asia Pulse (Pty.), Ltd. reports the results on March 10 of a two-week snapshot of domestic market share compiled for February 1–15. Between them, **Air Philippines**, **Cebu Pacific**, and **PAL** offered 31,714 seats during the period (not all were occupied). Of the total number of passengers boarding planes of the three airlines, PAL got 15,250 or 63%, followed by Cebu Pacific with 7,715, and Air Philippines with 1,350.

Flight 103, the carrier's B-747-46F service from Los Angeles to Manila, must be recalled to Los Angeles (LAX) on March 13 after an anonymous telephone caller informs the airline of a bomb threat. Once the 345 passengers on board are taken off, the plane is searched, but no explosive is found.

On March 15, after months of work and negotiations, a delegation of top PAL executives led by President/CEO Virata present the long-awaited rehabilitation plan, formally known as *The Amended and Restated Rehabilitation Plan*, to the Philippine SEC. Chief Operating Officer Bautista, chief adviser Foster, and Interim Rehabilitation Receiver Chairman Renato Z. Francisco join the airline chief in turning over the document to SEC Chairman Yasay.

The new plan takes into account the major creditors' proposal that \$200 million in new equity be injected into financially distressed PAL by June 4. It also calls for the sale of noncore assets, including the company's maintenance and engineering division, and a reduction of the fleet to 22 planes to service just 12 international and 17 domestic routes.

The delivery of the rehabilitation plan coincides with the carrier's fifty-eighth birthday, another point not lost by all of those involved. During the day, the Catholic mass is celebrated in all PAL facilities.

Frequencies are boosted on a number of domestic routes on March 15 as the carrier prepares for its peak summer season. Flights from Cebu to Bacolod, Davao, and Iloilo become daily roundtrips while frequencies to Naga are upgraded to B-737-3Y0 and those to Puerto Princesa are now flown with A330-342s. The number of weekly flights from Manila to 12 points is also increased, including thrice-daily to Cagayan de Oro, twice-daily to Tacloban, 51 per week to Cebu, 17 per week to Davao, 16 per week to Kalibo, 11 per week to Legaspi, and 12 per week to Zamboanga.

Finance Secretary Espiritu reports on March 17 that at least three (unidentified) foreign investors have come forward, each expressing an interest in infusing the entire required \$200 million into the carrier. Such a capital injection and the other key requirements of the plan should be completed by a June 15 deadline, at which point PAL would once again become, in Espiritu's words, "a viable institution."

On March 19, the European Export Credit Agencies (EECA), one of the airline's major creditors, signals its conditional approval of the rehabilitation plan. Another creditor, Credit Agricole Indosuez, announces on March 25 that the 17 French, German, and British banks it represents under the EECA have fully accepted PAL's rehabilitation plan.

In the latest addition to PAL's domestic network and the first route restarted since the submission of the revised rehabilitation plan on March 15, a B-737-3Y0 inaugurates five-times-a-week roundtrips between Manila and Awang Airport in Maguindanao, Cotabato, on March 29.

In a move adjacent to the PAL saga, the courts give Chairman Tan a boost during the month when a judge in Manila dismisses a PP 25-billion tax evasion suit filed against the billionaire's Fortune Tobacco Company by the previous Ramos government.

On April 5, the SEC releases numerous documents that give the press a chance to report on the progress of the airline's restructuring program. It is noted that, subject to the February 18 agreement, GPA Group, GE Capital Corporation, and Airplanes Finance, Ltd., have agreed to sup-

port the airline's plan. One short-term creditor, Chase Manhattan Bank, rejects the survival scheme entirely.

Principal shareholder Lucio Tan, on April 8, agrees to obtain the \$200-million cash injection required for the SEC plan on April 15 if PAL is unable to secure the funds anywhere else.

Two days later, on April 10, PAL, on behalf of CMC Express Travel & Tours, begins a series of charter flights between Japan and Clark International Airport in central Luzon.

With the press speculating upon a rift between beer and tobacco mogul Tan, still one of the wealthiest men in the country, and the management team led by chief adviser Foster, Tan steps forward on April 19 to announce that he is resuming his old post as the airline's CEO, as well as providing the \$200-million cash infusion required by creditors and the SEC under the airline's recent rehabilitation plan. Tan indicates that current CEO Virata will remain on the board of directors, while Vice President-Sales Zapanta will be the new president/chief operating officer. Foster and his ex-Cathay colleagues will continue to run the airline from behind the scenes.

A spokesman for the carrier indicates that 50% of the fresh equity is being immediately placed under escrow while the other half of the sum, being raised by Tan together with a group of unidentified investors, will be put up no later than June 4. Neither Tan or Foster offer comment.

In a letter to the SEC the next day, the Marubeni Corporation of Japan provides conditional approval of the revised rehabilitation plan, provided the \$200 million in fresh capital has come in. At the same time, the U.S. Export-Import Bank and a group of European creditors, collectively known as the Export Credit Agencies, write to the SEC protesting the Tan management coup and indicating that they wish it nullified.

Also on April 20, the SEC appoints an interim rehabilitation receiver to the airline who will meet with the principal shareholder to discuss his recent move to recapture the position of CEO. The receiver must approve the entire rehabilitation plan in order to win full SEC approval. The regulatory body also indicates that a reduction in force from 8,000 to 3,000 employees would be acceptable both to itself and to creditors. Prior to the SEC's final decision on June 4, cuts may be made from the divestment of noncore businesses, such as ground handling and catering.

The SEC receiver meets with Chairman/CEO Tan on April 21, the same day on which SEC Chairman Yasay announces his reduction in force recommendations in a radio interview. New President Zapanta also holds his first news conference, during which he indicates that Chairman/CEO Tan is still seeking half of the needed \$200 million and reiterates Tan's pledge to provide the additional funds himself if need arises. Zapanta indicates that he will meet with major creditors within a week to address their concerns; he will be joined by SEC Chairman Yasay.

On April 22, the airline issues a major statement aimed at its creditors and employees, assuring them that fears about the rehabilitation plan and the return of PAL's majority owner as CEO are unfounded. Several demand a meeting with the Philippine SEC.

After conferring with the airline's major creditors on April 30, SEC Chairman Yasay informs reporters that the U.S. Export-Import Bank has withdrawn its support for the carrier's rehabilitation plan. The U.S. creditor, which is owed 16% of the airline's \$2.2-billion debt and holds the leases on four B-747-46Fs, is not pleased with the airline's recent management change; bluntly Yasay notes, "they expressed that they were not confident with Mr. Tan."

Other creditors at the meeting, including Credit Agricole Indosuez which, as security trustee of 12 PAL planes, represents the European Export Credit Agencies of the French, British, and German governments, do not go quite as far as the Americans, indicating that they are concerned over the Tan matter and are studying developments. Like the U.S. delegation, these creditors point out that Tan's resumption of leadership violates conditions of the rehabilitation plan that no management changes take place at PAL without their prior approval.

The aircraft creditors had originally set June 4 as the deadline for PAL to raise the additional \$200-million equity required by the rehabilitation

plan. SEC Chairman Yasay will now ask all of these creditors to vote on the rehabilitation plan on May 15 before deciding on its future.

Philippine President Estrada, in his weekly radio address to the nation on May 1, indicates that Chairman Tan had visited him the previous evening. Noting that he is losing PP 20 million (\$527,700) daily in Asia's oldest airline, PAL's chairman informs the president that he may resign his newly resumed post.

Following a May 3 meeting with Tan and government economic managers to discuss the carrier's prospects, President Estrada informs reporters that he has given the chairman until the end of May to come up with the \$200 million he has promised to inject or step aside, at which point the government will look for other investors. Under no circumstances will the Filipino government invest its own scarce resources in the airline.

On May 4, PAL submits additional details of its rehabilitation plan, meeting an SEC deadline for a more detailed document. Other than Chairman Tan, it does not identify any other investors and does not divulge the basis for its projected future income, a key formula sought by the SEC. SEC Chairman Yasay indicates that his body will review this filing and decide if it is sufficient.

If the plan is found worthy, the cash-strapped airline will be placed into an independent receivership. They will ensure that the new management strictly complies with all provisions of the rehabilitation plan. At the same time, the chairman again warns that, should the \$200-million equity requirement not be met and other key components of the plan are not in place by June 4, PAL's liquidation will be ordered.

Elsewhere, President Estrada and Finance Secretary Espiritu both indicate that PAL must continue flying. If necessary, and as a last resort, Espiritu indicates that the Philippine government will take over the airline's management and head the search for additional capitalization. Both men, however, indicate that no state funds will be infused.

As they leaders talk, Chairman Tan departs for Frankfurt in an effort to talk **Deutsche Lufthansa, A.G.** into recapitalizing PAL.

SEC Chairman Yasay reports on May 5 that Tan is, indeed, conducting negotiations with **Deutsche Lufthansa, A.G.** concerning a purchase of the ailing Manila-line's maintenance and engineering division. On May 6, Tan's office and SEC Chairman Yasay receive official notice that the U.S. Export-Import Bank will no longer oppose any aircraft repossession plan or plan that opposes PAL's rehabilitation program. Indeed, it will petition the U.S. bankruptcy court to withdraw an earlier injunction restraining American firms from taking action against PAL's assets.

This latest U.S. document sends Executive Secretary Zamora and Finance Secretary Espiritu into a hurried meeting with President Estrada. The two emerge concerned that alternative financing be quickly found to keep the U.S. Bankruptcy Court, which now has full discretion to decide, from seizing PAL's American aircraft. All seems to hinge on gaining approval for the company's rehabilitation document on or before June 4.

For his part, SEC Chairman Yasay angrily—and undiplomatically—scolds the U.S. Export-Import Bank for behaving like a bully. He demands the U.S. agency take its case to Philippine courts, which might, just as he would, find them in contempt of Filipino law and procedures.

On May 7, the Philippine cabinet and President Estrada again discuss the PAL situation, with the chief executive indicating that PAL will not be allowed to close. On a brighter note, it is revealed that the government is negotiating with two foreign groups (including one from the Mideast) concerning their possible investment. In something of a teaser, it is noted that one of them, unnamed, will make a \$20-million down payment on a stake by May 10.

May 10 comes and goes without delivery of the promised \$20-million payment having been received. In a letter to employees from President Zapanta, it is revealed that Chairman Tan has approved the distribution of 60,000 shares of stock to each PAL employee, beginning this week. The distribution is in accordance with the promise made to the airline in 1998 for shares and board seats in exchange for the suspension of strikes and collective bargaining for a decade.

A spokesman for President Estrada informs the press on May 11 that, should Chairman Tan, who is currently talking to **Deutsche Lufthansa, A.G.**, be able to find other investors, the government will investigate ways for its financial institutions to invest in PAL "on a purely commercial basis." The government plans to keep the airline flying, without an actual state fiscal bailout. Government firms that might be able to provide equity include the Land Bank of the Philippines, Development Bank of the Philippines, Government Service Insurance System, and the Retirement Services and Benefits System of the Philippine armed forces.

Early on May 12, Chairman Tan sends word ahead of his return from Frankfurt that **Deutsche Lufthansa, A.G.** has informally agreed to take over management of the airline under contract, without putting in any investment. At Manila, meanwhile, an unnamed Singapore-based global fund is also identified as a possible investor. There is also speculation that a Mideast group, possibly from Kuwait, is also interested, but has insisted that Tan step aside and waive his preemptive rights before it will take a stake.

Having returned from Germany, Chairman Tan meets with PAL's board of directors on May 14 to review his trip. After the meeting, the tycoon meets with reporters and informs them, in general, concerning his discussions with possible foreign investors. Several remain very interested, but desire a guarantee that airline workers will not strike for 10 years. President Zapanta, also at the news conference, indicates that he and senior company officials will meet with the airline's two major unions to obtain the necessary pledges under the stock distribution noted on May 10.

Former Chief Operating Officer Bautista, a member of the airline's receivership team, reveals on May 17 that most of the carrier's creditors, including the export credit agencies from Britain, France, and Germany, have voted to back PAL's rehabilitation plan.

Later in the day, SEC Chairman Yasay tells reporters that his agency has taken the decision in principle to approve the restructuring plan and that a formal order may be issued as early as Tuesday. Reacting to an additional U.S. Export-Import Bank communication received on May 14 that again objects to the plan, Yasay indicates that the SEC is disappointed. On the other hand, he stresses, the U.S. creditor has no choice but to approve the scheme as the majority of other creditors have and because the bank, having subjected itself to Philippine jurisdiction, cannot seize its aircraft. If it continues to try to do so, the SEC will cite it for contempt.

The SEC, as anticipated, formally approves the PAL rehabilitation plan on May 18, contingent upon a \$200-million capital infusion being made on or before June 4. In a statement, Chairman Yasay's institution indicates that creditors holding 55% of the total \$2.2-billion debt have accepted the plan and thus all are formally bound by it, including the U.S. Export-Import Bank, which had withdrawn its support.

Across town, PAL Chairman Tan appeals to the airline's largest union to make good on its promise of no strikes and no collective bargaining for the next decade. He makes it crystal clear that foreign interests will not make a commitment without the pledge and that the SEC will not extend its June 4 date. Should the \$200-million infusion not be forthcoming, creditors will immediately begin to pull out their aircraft.

Acting under terms of the PAL rehabilitation plan, the government of the Philippines on May 21 begins to withdraw operating permits from certain other airlines on routes from Manila to destinations at Hong Kong, Manila, Taipei, and the Far East. **Emirates Airlines, Ltd.** of Dubai is the first given notice that, effective June 1, its authority to operate roundtrips from Manila to Hong Kong has been withdrawn.

Also on May 21, the powerful Cebu Travel and Tours Association and Cebu Association of Tour Operators throw their collective weight behind the PAL bid to rehabilitate and pledge full support to the flag carrier.

On a less positive note, the U.S. Export-Import Bank requests that the SEC fully disclose all details surrounding the vote of approval reported to have been taken by other PAL creditors in favor of the rehabilitation

plan. Specifically, the U.S. agency wishes to know the identity of creditors whose vote was solicited and a description of the manner in which such solicitation was made.

In complete contradiction of statements made just days earlier, Chairman Tan, on May 24, indicates that he will probably need to ask the SEC for a one-month extension on its June 4 deadline to raise the \$200 million needed to keep the airline flying. A dejected Tan frankly admits that he has no confidence that he can locate investors during the next two weeks who are willing to cover half the capital infusion. In addition, Tan reveals that **Deutsche Lufthansa, A.G.** still has not formally agreed to become the airline's management consultants.

This gloom-and-doom gives way to a dogged final push during the last week of May and first week of June to raise the required equity. On June 4, two hours before expiration of its deadline, Chairman Tan is able to deposit \$200 million of fresh capital into PAL's bank account.

The new 31.15% shareholders, saviors of Asia's oldest airline, include five Tan-controlled Filipino companies (\$100 million); Top Wealth Enterprises (Pty.), Ltd., a Hong Kong-based investment firm (\$70 million); and the Filipino financial concerns Maxell Holdings Corporation and Richmark Holdings Corporation (\$30 million). Chairman Tan's stake is now 53.7%, while PAL employees hold 2.70% of the carrier and various other minority shareholders have the 4.19% remainder.

While taxiing at Los Angeles (LAX) on June 6 just after landing on a service from France, **Corsair, S.A.** Flight 942, a B-747SP-44 with 17 crew and 257 passengers, stops short of its assigned gate with its left wing partially extended onto the taxiway. Simultaneously, PAL Flight 103, a B-747-4F6 with 20 crew and 405 passengers, is taxiing west and collides with the stationary Corsair aircraft. Although the wings of both aircraft are damaged, no injuries are reported.

On June 7, a Permanent Rehabilitation Receiver is appointed by the SEC to replace the Interim Rehabilitation Receiver; seven members of the interim panel are retained to monitor and supervise the implementation of the rehabilitation plan.

President Zapanta reveals to the press on June 14 his hope that the Regent Star Services management team might be changed. It is also noted that discussions are underway with the consulting division of **Deutsche Lufthansa, A.G.** concerning a management contract and until one can be negotiated, the Regent arrangement remains. The SEC, on June 15, indicates that a new team would be acceptable, but warns against a drawn-out changeover period.

The petitions on June 17 that the SEC withdraw its approval of the carrier's rehabilitation plan, claiming that the process of approval had been undertaken in error of the country's insolvency law. Lufthansa Consulting, GmbH, signs an agreement with PAL on June 19 under which it will advise on the Philippine line's ongoing restructuring process.

Deutsche Lufthansa, A.G., via its Lufthansa Technik, A.G. unit, agrees on June 22 to consider purchase of the PAL maintenance and engineering (M&E) divisions. Three days later on June 25, Boeing files a petition with the SEC in which it, like the U.S. Export-Import Bank, requests a review of the PAL rehabilitation plan, stating that the document does not address the builder's claims for \$128.8 million lost when PAL cancelled an order for eight B-747-4F6s.

The two-year, monthly flat-fee contract with Lufthansa Consulting, GmbH, takes effect on July 1. Under its terms, the German major will not undertake a full management role, but will act as consultant-advisor on fleet, routes, and yield management. It now begins a two-month assessment of PAL's operations. Discussions commence with Regent Star concerning termination of its five-year contract.

Beginning on July 5, PAL management and officials from the U.S. Export-Import Bank, joined by executives from the Central Bank of the Philippines, attempt to resolve outstanding issues surrounding the impasse over the Jumbojet payments. The American agency is offered an observer seat on PAL's rehabilitation committee. The matter drags on, resulting in a threat from Chairman Tan on July 21 to withdraw the \$200 million if the U.S. Export-Import Bank does not back off.

Following assurances from both PAL management and the Philippine government that the airline will be viable, the U.S. Export-Import Bank, on July 23, withdraws its opposition to the flag carrier's rehabilitation plan.

Despite the authority issue of May, PAL and **Emirates Airlines, Ltd.** are able to reach an accommodation through talks in July and August. A block-seat, code-sharing agreement is signed by PAL with Emirates on August 20. Fifteen months after being forced to suspend service, the Manila-based concern will return to Dubai on September 1 when it re-sells seats on each of Emirates three weekly nonstops between Manila and Dubai. This is the first dual-designator pact entered into by PAL since implementation of the company's rehabilitation plan in June.

Lufthansa Technik, A.G. and PAL announce that the former's due diligence of the Philippine M&E operation will be completed in September, at which point formal takeover negotiations will begin.

In addition to the resumption of Dubai flights on September 1, PAL now begins to receive suggestions based on the work of Lufthansa Consulting, GmbH. It also enters into negotiations with Lufthansa Technik, A.G. for the sale of its maintenance arm.

During October, the company consolidates its domestic and international operations into one Manila hub, the new NAIA Centennial Terminal 2.

Claiming that Taiwan's airlines are snatching passengers at Manila and flying them on to third countries without sixth freedom rights, President Estrada's government unilaterally ends the existing air agreement with the Republic of China, thereby severing air links between the two nations. The dispute will have an impact on the many Filipino workers who need passage to and from their jobs in Taiwan. Roundtrips between Manila and Taipei are cancelled, effective October 1.

Overall customer bookings this year ascend 46.7% to 3,944,000 while freight traffic accelerates to 184.9 million FTKs. Revenues move up 2.6% to \$320.85 million, while expenses decline 19.2% to \$251.81 million. The previous year's heavy losses are turned into profits: \$69.03 million (operating) and \$812,000 (net). The latter figure will later be amended upwards to \$1 million and represents the first major gain in seven years.

Airline employment at the beginning of 2000 stands at 8,086, an 8.5% decline over the previous 12 months. The B-737 fleet now includes 1 each Dash-332, Dash-33A, and Dash-36N, 6 Dash-3Y0s, 2 Dash-4Y0s, and 1 Dash-4S3.

Return service between Manila and Hong Kong is increased from 14 to 24 frequencies per week for the Chinese New Year, which begins on February 5. Four days later, the A330-301 employed on the route is replaced with a B-747-4F6.

In a further effort to boost the economic recovery of Philippine Airlines, the Securities and Exchange Commission, on March 16, approves an agreement between **Air Philippines (2)** and the flag carrier under which the domestic airline will wet-lease three B-737-222s for local service flights. In exchange, PAL will provide, for a reasonable fee, catering, ground handling, light maintenance and personnel in and out of Manila.

Regularly scheduled four-times-a-week return service is resumed on March 26 from Cebu to Hong Kong. It had been suspended during the bleak financial days of June 1998. Also during March, the company celebrates its fifty-ninth anniversary.

A bomb threat is called in on April 14 just before departure of the scheduled B-737 service from Manila to Zamboanga. All aboard are evacuated, but a search finds no explosive. On April 16, the company reaches an agreement with **Lufthansa Cargo Airlines, A.G.** under which PAL will sell space aboard the German line's Manila to Frankfurt cargo flights.

The aviation press reports late in the month that Chairman Tan wishes to sell off his 70% stake; with his carrier still deeply in debt, the \$800 million asking price is viewed by analysts as overly optimistic.

While en route from Davao City to Manila on May 25, Flight 812, an A330-301 with 13 crew and 278 passengers, is taken over by masked

skydiving enthusiast Reginald Trance Chua, aka Augusto Lakandula. He complains that his wife has run off with a policeman and demands that the pilot return to his point of origin. When Captain Emmanuel Generoso explains to the crying pirate that there is insufficient fuel, the hijacker, who has smuggled a gun and grenade aboard, calmly and in the style of an Old West train robber steals the passengers' valuables. He orders the flight crew to descend to 6,000 ft. and circle over the town of Real in Quezon Province, 40 mi. E of Manila. After the plane is depressurized, Chua, wearing a homemade parachute and a pair of swim goggles, orders a flight attendant to pop the seal of the rear safety door and help him to jump out by giving him a push.

Unlike the disappeared robber D.B. Cooper, witnesses on the ground actually see Chua separate from his parachute in midair and plunge to his death onto a hill. Shortly thereafter, soldiers recover the 26-year-old's body, buried in mud with only its hands and knees protruding, from a heavily forested area where residents had indicated a parachutist had landed. The bag of valuables is not recovered. The Airbus, meanwhile, lands at Manila with its door open and all aboard exit safely.

The weekly services to Sydney abandoned two years earlier are resumed on June 2 with thrice-weekly roundtrips operated by both B-747-4F6s and A330-301s. During the second week of the month, Chairman Tan reduces the asking price for his 70% stake to \$200 million, but stipulates that a purchaser must assume the carrier's \$2-billion-plus debt. No takers step forward.

A dual-designator pact is signed with **Kuwait Airways Corporation** on June 28 covering services between Manila and Bangkok. On July 1, the company begins to code-share with **Malaysia Airlines, Ltd. (MAS)** on flights between Manila and Kuala Lumpur and from Manila to Kota Kinabalu and Cebu. It also starts to code-share with **Egyptair, S.A.E.** on services between Manila and Cairo.

Direct four-times-a-week A320-200 return service is resumed on July 15 between Manila and Pusan, South Korea.

During the month, Chairman Tan purchases the air freight company Pacific East Asia Cargo and begins seeking B-727Fs for it, reportedly in an effort to enter the Philippine all-cargo arena.

Following months of negotiation, a certain number of protests by affected workers, and the creation of a German-led joint venture company Lufthansa Technik Philippines, an arrangement is finally made for the sale of the M&E unit to **Deutsche Lufthansa, A.G.** Viewed by workers and executives alike, a symbolic turnover ceremony is held at the PAL Technical Center in Paranaque City on August 31. Chairman Tan turns over the organization to LTP president/CEO Thomas Gockett. The next day, LTP opens for business employing most of the roughly 1,500 workers formerly employed by M&E.

After a year of heated words between Taiwanese and Filipino aviation and other officials, the governments of the two nations are able to sign a new air service agreement on September 28. In essence, the Manila government grants the carriers of Taiwan in fact the sixth freedom rights they had earlier exercised on an unauthorized basis. Debt-ridden PAL indicates that it will lose upwards of \$800 million under the new arrangement, but that it will, when it resumes flights to Taipei at the end of October, be able to provide Filipino workers transport home for Christmas.

Twice-weekly A330-301 roundtrip service is inaugurated on October 1 from Cebu to Seoul, S. Korea.

On October 13, it is revealed that **China Airlines, Ltd. (CAL)** is one of four international airlines with which Chairman Lucio Tan is negotiating a possible sale of his carrier. The others mentioned include **EVA Airways, Ltd.**, **Deutsche Lufthansa, A.G.**, and **Royal Brunei Airlines**.

New weekly B-737-3Y0 roundtrips commence on November 5 between Subic Bay and Hong Kong.

After a two-and-a-half year suspension, four-times-a-week A330-301 roundtrips are resumed on December 2 from Manila to Jakarta via Singapore.

PHILIPPINE AIR SERVICE: Philippines (1920). Following the graduation of 20 Filipino pilots from the flying school maintained by

Glenn H. Curtiss, the Commonwealth's Council of State on July 7, **1920** authorizes creation of a national air service. Five seaplanes are ordered for the new company, but insufficient funding stifles the enterprise before it can get off the ground.

PHILIPPINE AIRWAYS SERVICE: Philippines (1919). After the 1918 armistice ending World War I, two former U.S. Army Air Service pilots, Maj. Joseph Stevenot and Capt. Alfred Croft, migrate to the Philippines in early **1919**, hoping to open a commercial air service. Supported by Filipino Director of Posts Jose Topacio and employing a Curtiss Jn-4 Jenny, the two make a November 29 demonstration flight from Manila to Cebu and Iloilo carrying a load of mail. The impressed Topacio attempts to find government funding to initiate the mail service, but is unsuccessful. After a few additional charters, Stevenot and Croft abandon their plans.

PHILIPPINE AVIATION DEVELOPMENT: Philippines (1951–1957). Having disagreed over policy matters with his superior, Chairman Andres Soriano, the legendary aviator and mechanic Paul L. "Pappy" Gunn (who had helped Soriano establish his dream) resigns from **Philippine Air Lines (PAL)** in **1950**. The following year, he establishes the nonscheduled PAD to operate lightplane passenger and cargo charters.

Gunn is permitted by the Philippine government in **1954** to expand his service and operate twin-engine Beech 18s, which he had first flown for PAL in 1941. He is killed when one of these Twin Beeches is involved in an accident at Tanauan, Batangas, on October 11, **1957**; his sons quickly sell out.

PHILLIPS AIRLINES: United States (1959–1985). Joseph H. Phillips establishes **Phillips Michigan City Flying Service** as the FBO and charter operation for the airfield at Michigan City, Indiana, in **1959**.

In the early spring of **1966**, Phillips Airlines is formed as the company's scheduled air transport division. Daily roundtrip scheduled Piper PA-23 Apache and Aztec air taxi flights are started to Chicago (ORD) on April 16. Charter flights are also undertaken.

Over the next 15 years, Phillips' service grows. Frequencies are also undertaken to La Porte and Valparaiso. In **1981**, the fleet comprises 1 Piper PA-31-310 Navajo, 4 Aztecs, 1 PA-34 Seneca, and several smaller aircraft employed for flight training. Operations cease in May **1985**.

PHILLIPS FLYING SERVICE: United States (1943–1983). Alfred Phillips establishes an FBO at Conway in **1943** to provide services in support of aviation in northern Michigan. Charters for passengers and cargos are arranged and then undertaken over the next 20 years to local and bush destinations.

During the summer of **1964**, the decision is taken to offer a scheduled air taxi service linking Pellston with Mackinac Island and St. Ignace. A connection is established with **North Central Airlines** at the former point and revenue flights, employing a Piper PA-32 Cherokee Six, commence on September 29.

Operations continue apace during the next two decades, even though the carrier is twice sold, first to John Guisinger and then to Welch Aviation. The company closes its doors in **1983**.

PHOENIX AIR, GmbH.: Airport Munich II, Munich, D-85327, Germany; Phone 49 (89) 97597550; Fax 49 (89) 97597552; <http://ourworld.compuserve.com/homepages/Phoenix-Air>; Year Founded 1979. Bernard and Margreth Schautuss establish the air taxi Phoenix Air at Munich in **1979** to offer executive and small group passenger charter services. Revenue flights commence and continue with a single Learjet 35A. The workforce totals five in **2000**.

PHOENIX AIRLINES: United States (1980). Phoenix is set up at Atlanta's Peach Tree Airport in **1980** to provide daily passenger and cargo services to Savannah, St. Simons Island, and Jacksonville. Employing a

de Havilland DH 114 Heron, the company duly inaugurates roundtrip revenue frequencies, but these can only be maintained for a few months.

PHOENIX AIRWAYS, LTD.: Switzerland (1970–1981). PA is established at Basel in October 1970 to operate public passenger charters and inclusive-tour flights to destinations throughout the world. Operations commence on April 1, 1971, following delivery of a British Aircraft Corporation BAC 1-11-529.

Ad hoc services continue through the 1970s, during which decade a Boeing 707-138B is also operated. While on final approach to Buenos Aires Aeroparque in a severe storm on May 7, 1981, the BAC with 30 passengers crashes into the River Plate; there are no survivors. The tragedy and resulting bad publicity and legal claims puts the company out of business by the end of the year.

PHOENIX AIRWAYS (PTY.), LTD.: South Africa (1994–1995). Richard Gain establishes Phoenix at Johannesburg during the fourth quarter of 1994. Employing three Boeing 727-23s, first flown by American Airlines years earlier, the company inaugurates daily deep-discount services in December linking its base with Cape Town and Durban.

Early in 1995, a Lockheed L-1011 TriStar 1 is leased and employed to operate a weekly roundtrip service from Johannesburg to the Maldives Islands. Additionally, scheduled roundtrips are launched between George and Port Elizabeth.

Large numbers of consumer complaints concerning service quality and overbooking are filed with the South African government. When authorities approach the airline seeking to examine its books, Phoenix refuses. Undoubtedly in response, the government now denies Phoenix applications to undertake services from Johannesburg to Antananarivo, the Comoros, Freetown, Khartoum, Mauritius, Mombasa, the Seychelles, Victoria, and Windhoek.

Phoenix is sold to another concern in July, at which point John Crouse is appointed chairman. This changeover does not seem to help, as information on the carrier dries up shortly thereafter.

PHOENIX AVIATION, LTD.: United Kingdom (1991–1994). PA is established at Coventry, England, by S. Barrett-Jolley in 1991 to provide all-cargo services. The company does not immediately begin operations under its own name. Rather, its Boeing 707-379C is leased to **Race Cargo Airlines, Ltd.** of Ghana.

The 35-employee Phoenix begins its own long-haul revenue flights in 1992 using 2 chartered 707s, 1 Dash-336C originally operated by **British Overseas Airways Corporation (BOAC)** and 1 Dash-351C first delivered to **British Airways, Ltd.** (2). Recession has a serious impact during the start-up year and in 1993 only the Dash-336C is flown.

Operations cease early in 1994.

PHOENIX EXPRESS. See **REPUBLIC EXPRESS AIRLINES**

PIA (PACIFIC INTERNATIONAL AIRLINES, S.A.): P.O. Box 1592, Zone 9-A, Calle 73, San Francisco Edificio Palma Real PB, Panama City, Panama; Phone 26 3649; Fax 26 4012; Year Founded 1993. Pacific International is established at Panama City in the fall of 1993 to offer ad hoc cargo charters throughout the Americas. A Boeing 727-23F is purchased from **Federal Express** and begins the company's service in early 1994.

Flights continue in 1995–1999, during which years Dr. Fernando Boyd Galindo is president and a second B-727-23F enters service.

PIA (PERUVIAN INTERNATIONAL AIRWAYS, S.A.): Peru (1946–1949). Capitalized at \$4 million by Clement M. Keys and other U.S., Peruvian, and Canadian investors, PIA is formed at Lima on January 14, 1946. The remainder of the year is spent in obtaining traffic rights and assembling a fleet of ex-military Douglas C-54s, modified to DC-4 civil standard. During aircraft trials at Morrison Field, Florida,

one of the airline's DC-4s is equipped with radar, thus making this little-known carrier the first to operate such instrument-assisted airliners.

Lima–Havana via Panama DC-4 service begins on May 14, 1947 followed by the inauguration of flights to Autofagasta on August 18 and Washington, D.C. and New York on September 26. The frequencies of the North American services are increased on November 25.

Capital is doubled and the airline is marketed in 1948 as "The Airway of the Americas." On July 9, four-year-old Donna Moore arrives by DC-4 at New York's Idlewild Airport, becoming the first arrival at the city's new airport. Mail unloaded from the aircraft is also the first to be received there. The overnight stopover at Lima is eliminated from the New York City to Santiago run on August 17.

The newcomer's efforts bring such strong reaction from competitors, especially **Pan American-Grace Airways (PANAGRA)**.

A C-54A with two crew and four passengers is damaged beyond repair while landing at Cerro Morimo, Peru, on December 12; there are no fatalities.

The New York to Santiago service is suspended on February 10, 1949, due to financial difficulties. As the fiscal picture blackens, the regular New York to Lima route must be closed on February 25. Three days later, operations are halted as PIA is forced out of business.

PIASA COMMUTER AIRLINES: United States (1981). PCA is set up at St. Louis, Missouri, early in 1981 to provide scheduled passenger and cargo services in both Illinois and Missouri. Equipped with a Piper PA-31-310 Navajo and a Beech 99, the new commuter inaugurates daily roundtrips on March 11 to Kansas City and Johnson County, as well as to Springfield via Mount Vernon.

Operations are hardly underway before the ATC effects of the summer's PATCO air traffic controllers' strike forces the company out of business.

PICKWICK AIRWAYS: United States (1929–1930). Charles F. Wren forms this feeder carrier at Los Angeles in early 1929, equipping it with 3 Bach 3-CT-6 Air Yachts. These trimotors are employed on March 29 to inaugurate thrice-daily passenger and air express flights to San Diego; in July, the Los Angeles terminus is stretched up to San Francisco. Just after takeoff from Glendale on August 7, the fuel lines of two engines of a Bach 3-CT-6 clog, forcing the aircraft to crash-land; no injuries are reported. During the summer, Wren decides to extend his route network to the south and acquires a Ryan B-5 Brougham for the purpose.

In September, under the subtitle Pickwick Latin American Airways, the Ryan inaugurates new 15-stop, 2-way service from Los Angeles to Mexico City. En route to Nogales from Tijuana on September 17, a Fairchild 71 makes an emergency crash landing on a highway at Jacumba, California; the pilot, Russell Hall, is fatally injured.

With dreams of an international network, Wren extends his route network down the Mexican peninsula to San Salvador in January 1930. Passenger and air express traffic at this time cannot alone support an airline's activities; a mail contract is required. Pickwick is unable to intrude upon the monopoly on Latin American mail contracts held by **Pan American Airways (PAA)** and without the subsidy is forced to cease operations in June.

PIEDMONT AIRLINES (1): United States (1940–1990). Thomas H. Davis founds **Piedmont Aviation Services** at Wilmington, North Carolina, on July 2, 1940. The general aviation sales, service, and charter FBO is reformed from the **Camel Flying Service** that Davis purchased from L. S. McGinnis. One of three stockholders, Davis is elected vice president, treasurer, and director; there are also five employees.

A major aircraft wholesaler within a year, Piedmont accepts an Army pilot training contract after Pearl Harbor and opens a primary and advance flying school approved by the Civil Aeronautics Administration (CAA).

Also in 1941, Piedmont becomes the first CAA-approved overhaul facility located between Washington, D.C. and Atlanta. During the war

years, Davis's firm also trains flight instructors from Central and South America. Vice President Davis is elected Piedmont's president in 1943. Also during the year, an AAF air crew indoctrination program is started at Greensboro-High Point Airport.

On D-Day, June 6, 1944, Davis applies to the CAB for local route authority under a new classification, Feeder Airline, which the government regulators will unveil on July 11. Employing lightplanes, PAS, after V-J Day in 1945, operates passenger and cargo charters throughout the southeast.

In 1946, a DC-3 is leased from **Southern Airways**; the company's first machine will not be named. The FBO, acting as a holding company, receives its CAB certificate (no.208) for its airline division on April 4, 1947 and receives permission to offer scheduled services between coastal North Carolina and the Ohion Valley beginning on September 7. Before the inauguration of services can take place, the CAB must order its postponement because of a petition filed by another airline. The case goes quickly through the legal system to the U.S. Supreme Court.

President Davis now publishes his thoughts on forming his new carrier: "How to Start an Airline," *Air Transport* 5 (October 1947): 47-50. The Piedmont case before the Supreme Court is settled in favor of Piedmont on December 12 and the CAB now clears the carrier to begin flying.

Piedmont Airlines, Inc. is officially organized as a holding company on January 1, 1948. **Piedmont Aviation Services** and Piedmont Airlines are its subsidiaries. A public stock offering is organized to provide capitalization and a total of 273 employees are recruited or available. Three Douglas DC-3s are acquired; the three transports begin a christening tradition when each is labeled a *Pacemaker* (names will occasionally be worn by different aircraft simultaneously: *Great Smokies Pacemaker*, *Blue Ridge Pacemaker*, and *Appalachian Pacemaker*. With President Davis and his wife aboard on February 20, Flight 41, the DC-3 *Great Smokies Pacemaker*, departs Wilmington, North Carolina, for Cincinnati. The premier service is operated via Pinehurst, Charlotte, Asheville, TriCities, and Lexington, with the return flight in reverse order.

On March 1, Piedmont opens a second return route from New Bern, North Carolina, to Louisville, again with six intermediate stops, including four in North Carolina: Goldsboro, Raleigh/Durham, Greensboro/High Point, Winston-Salem. Roundtrips are started on April 16 to Danville and Roanoke, Virginia.

Frequencies to the Virginia communities of Lynchburg, Richmond, and Norfolk, as well as to Charleston, West Virginia, commence on May 14 as do flights from Norfolk to Cincinnati, Ohio. Seasonal frequencies are also introduced between New Bern and Morehead City, South Carolina.

On the year, a total of 39,370 passengers are carried over 9.3 million passenger miles. A profit of \$12,171 is reported.

On September 25, 1949, Piedmont inaugurates flights to Fayetteville, North Carolina, while service to Newport News commences on November 14. Summer service to Myrtle Beach, South Carolina, begins on May 14, 1950. As of July 1, a total of 21 destinations are visited and unduplicated route mileage reaches 1,480 miles.

Operations continue apace in 1951 and in May 1952 the company's certificate is renewed by the CAB for an additional seven years, the longest renewal given to a local service carrier at that time. Frequencies are now initiated to Beckley, West Virginia, on July 15, Hickory, North Carolina, and Knoxville on August 25 and to Huntington, West Virginia, on November 3.

Having become a leading local service carrier in the southeastern U.S., Piedmont adds flights to London-Corbin, Kentucky, on October 1, 1953 and to Bluefield-Princeton, West Virginia, on May 15, 1954.

Airline employment stands at almost 800 in 1955 and the fleet includes 13 DC-3s in addition to the original 3 named units: *Kanawha River Pacemaker*, *Commonwealth Pacemaker*, *Tidewater Pacemaker*, *Ohio Valley Pacemaker*, *Blue Grass Pacemaker*, *Piedmont Pacemaker*, *Tennessee Valley Pacemaker*, *Chesapeake Pacemaker*, *Yadkin Valley Pacemaker*, *Shenandoah Valley Pacemaker*, *Hampton Roads Pacemaker*, *San Hills Pacemaker*, and *Buckeye Pacemaker*.

Service is inaugurated from Charleston, West Virginia, to Columbus, Ohio, on March 18 via Parkersburg, West Virginia. Access to the District of Colombia market is obtained; thrice-daily roundtrip flights from Charlottesville, Virginia, to the nation's capital commence on August 17, continuing on to Knoxville. The Washington, D.C. to Tennessee schedule is increased to five daily flights by year's end, when the company receives a permanent CAB certificate and is one of 13 airlines designated a local service carrier.

During these 12 months, the one-millionth (cumulative) passenger boarded is among the 361,000 passengers flown.

On June 6, 1956, a \$6-million order is placed for eight Fokker F.27s. The *Tidewater Pacemaker* is severely damaged in a landing accident at Shelbyville, Tennessee on June 13. The same day, the door of an unnamed Douglas transport opens at a point over North Carolina and a passenger falls out. Duncan Renaldo, star of television's *The Cisco Kid*, flies a Piedmont DC-3 into Bluefield, West Virginia, in 1957 during a promotional tour. As earlier, the original **Piedmont Aviation Services** continues to fly passenger and cargo charters to points throughout the southeast.

The fleet at the beginning of 1958 comprises 21 DC-3s. Those added during the past three years include *Potomac Pacemaker* (which will end up preserved at Durham's Museum of Life and Science), *Tarheel Pacemaker*, *Peninsula Pacemaker*, *James River Pacemaker*, and *Catawba Pacemaker*. On November 14, Piedmont becomes the second local service carrier to commence Fokker F.27 Friendship service when the *Peninsula Pacemaker*, the first of the eight turboprops to be delivered from Holland, begins flying to Washington, D.C.

During the spring of 1959, the CAB allows Piedmont to launch flights to Washington, D.C. (DCA) from Roanoke via Harrisonburg. The remaining seven F.27s arrive during the year and are christened *Old Dominion Pacemaker*, *Cape Fear Pacemaker*, *Catawba Pacemaker*, *Palmetto Pacemaker*, *Kitty Hawk Pacemaker*, *Cumberland Pacemaker*, and *James River Pacemaker*.

The brand new *Palmetto Pacemaker* is damaged while landing at Greensboro, North Carolina, on April 28 when its landing gear collapses. As the new turboprops enter service, they come to serve 24 of the carrier's 32 destinations. On October 30, en route from Washington, D.C. to Charlottesville, the DC-3 *Buckeye Pacemaker* with 27 aboard crashes into Mount Afton in the Blue Ridge Mountains of Virginia, near Waynesboro (36 dead).

New service is inaugurated on February 1, 1960 from North Carolina to Harrisonburg, Staunton, and Waynesboro, Virginia. On April 20, 1960, a Cessna 310 collides with the F.27 *Palmetto Pacemaker* over Hickory, North Carolina; although the liner, with 40 aboard, lands safely, the 4 aboard the lightplane are killed. Frequencies to Frankfort, Kentucky, begin on December 1.

After takeoff on February 17, 1961, the starboard landing gear of the F.27 *James River Pacemaker* locks up, forcing the pilot to make an emergency landing at Goldsboro AFB; injuries are slight. On March 31, new service starts to the North Carolina communities of Elizabeth City and Rocky Mount. In April, the company unveils its Xcursion Plan, the first weekend discount fare to be offered by a local service carrier.

In July, 17 Martin 4-0-4 Skyliners are purchased at the bargain price of \$6.5 million from **Trans World Airlines (TWA)**, while, at the same time, 14 DC-3s are put up for sale. The number of pressurized Martin's in the fleet will eventually hit 35 with the addition of several from **Eastern Air Lines**.

The first 4-0-4 arrives in October and is christened *Tidewater Pacemaker*. It will be followed by *Great Smokies Pacemaker*, *Savannah River Pacemaker*, *Mount Mitchell Pacemaker*, *Ohio Valley Pacemaker*, *Appomattox Pacemaker*, *Blue Grass Pacemaker*, *Rappahannock Pacemaker*, *Shenandoah Valley Pacemaker*, *Tennessee Valley Pacemaker*, *Sand Hills Pacemaker*, *Commonwealth Pacemaker*, *Yadkin Valley Pacemaker*, *Piedmont Pacemaker*, *Hampton Roads Pacemaker*, *Kanawha River Pacemaker*, *Tar Heel Pacemaker*, *Appalachian Pacemaker*, *Pamlico Pacemaker*, *Pee Dee Pacemaker*, *Manasas Pacemaker*, *Chesapeake Pacemaker*, *Peachtree*

Pacemaker, Santee Pacemaker, Blue Ridge Pacemaker, Tidewater Pacemaker, New River Pacemaker, Potomac Pacemaker, Buckeye Pacemaker, Albemarle Pacemaker, York River Pacemaker, Long Island Pacemaker, Cherokee Pacemaker, Neuse River Pacemaker, and Roanoke Valley Pacemaker.

A DC-3 crashes into a hillside near Bristol, Tennessee, on November 19; all nine aboard are hurt.

An electrical failure causes the collapse of an F.27s landing gear during the aircraft's landing at Charlotte, North Carolina, on January 1, **1962**; none of the 36 persons aboard is hurt. The CAB, in March, authorizes Piedmont service to the South's major market, Atlanta, as the company's annual federal subsidy is increased from \$4 million to \$6 million, the last time the payments will rise.

Flights commence on June 25 to the Georgia capital from Charleston, West Virginia, Washington, D.C., and Baltimore. The routes out of Maryland and D.C. allow additional frequencies into communities in the Blue Ridge Mountains, Shenandoah Valley, and Piedmont region from Norfolk and Richmond. Other communities visited for the first time at the same time include Jacksonville and Camp Lejeune, North Carolina, Florence and Columbia, South Carolina, Augusta, Georgia, Pulaski, Radford, and Blacksburg, Virginia, and Myrtle Beach, South Carolina (year round).

A Martin 4-0-4 with 24 aboard overshoots the runway while landing at Rocky Mount, North Carolina, on August 6; no injuries are reported.

The premier Martin 4-0-4 *Tidewater Pacemaker* with three crew is destroyed as the result of a bad landing at Wilmington during an August 22 training flight; there are no fatalities.

A Martin 4-0-4 is slightly damaged while taxiing at Pittsburgh on October 3. At an unknown point during these 12 months, the carrier's first class of female flight attendants join their male purser colleagues in the air.

The new destinations, coupled with an advertising campaign emphasizing flights "Across the Top of the South," push enplanements to 664,000.

Together with **Allegheny Airlines (1)**, Piedmont offers 30-day, \$99 Visit America fares for foreign tourists, beginning in January **1963**. Having flown the company's first service back in 1948, the *Great Smokies Pacemaker* also makes the company's last DC-3 flight on February 20. With the DC-3s retired, Piedmont is the first local service carrier to be completely outfitted with pressurized airliners.

Airline employment in **1964** stands at 1,632 and the fleet includes 33 aircraft. On April 16, service is inaugurated to Hot Springs, Virginia. Applications are filed with the CAB for extensions into South Carolina, Georgia, and Tennessee.

The board of directors declares a 10¢ cash dividend to stockholders, the first such dividend in the company's history and the first cash dividend ever declared by a publicly owned U.S. local service airline.

Passenger boardings pass the million mark in annual bookings (1,078,023) for the first time. Airline revenues climb 12% to \$24,535,379. Including about 10% earned from the light-aircraft sales and service divisions of **Piedmont Aviation Service** at Winston-Salem, net profit skyrockets by 92.7% over 1963 to a record \$1,243,450, making the year the most successful in company history to date.

The workforce in **1965** is increased to 1,744 and 2 more aircraft join the fleet. On January 21, a Martin 4-0-4 with 28 aboard suffers a landing gear failure during its touchdown at Staunton, Virginia; no injuries are reported. The decision is now taken to upgrade the Fokker fleet and an agreement is signed with Fairchild to turn in the Dutch-made turbo-props as partial payment for 10 FH-227Bs. At the end of the year, Piedmont is the first local service carrier with all cities above the CAB's minimum traffic requirements. An application is filed with the regulatory body for route extensions to New York City.

Customer bookings jump 20% to 1,182,631 and cargo is up by 37.6%. Revenues climb 17.3% to \$28,779,999.

Orders are placed in January **1966** for six Boeing 737-101s (the order is later changed to Dash-201s). Following the collapse of its landing gear at Roanoke on July 7, the Martin 4-0-4 *Buckeye Pacemaker* is writ-

ten off. Another Martinliner, the *Appomattox Pacemaker* with three crew, crashes at New Bern, North Carolina, on November 20; there are no survivors and the wreckage must be scrapped.

The first three FH-227s (which will be upgraded to FH-227B standard) are delivered in November: *Appomattox Pacemaker, Buckeye Pacemaker, and Peninsula Pacemaker*. A route award for New York City is also received during the month and on November 15, F.27 flights commence from Washington, D.C. (DCA) to New York (LGA). Despite a third consecutive year of reduced federal subsidy payments, financial arrangements are completed for the financing of the new equipment. The year's net earnings are \$1,859,016.

On March 15, **1967**, the company enters the jet era by launching Boeing 727-100QC services over its major routes, initially with the first B-727-22, *Manhattan Pacemaker*, delivered under lease from its manufacturer in February. After several weeks of familiarization training, the new aircraft enters service on the New York route on March 15. New service to Greenville and Spartanburg, South Carolina, begins on April 1.

A chartered DC-3 with nine aboard crashes near Lexington, Kentucky, on April 3; there are no survivors. A second chartered B-727, a Dash-51C, *Empire State Pacemaker*, now also begins operations in Piedmont livery.

On July 19, confusion over instrument approach landing instructions given by air traffic controllers to a **Lanseair, Inc.** Cessna 310 with three passengers causes that plane to midair Piedmont Flight 22 at 6,132 feet outside of Hendersonville, North Carolina. En route from Asheville to New York (LGA), the company's first jetliner, the *Manhattan Pacemaker*, is carrying 5 crew and 79 passengers. There are no survivors from either plane and among the victims are Navy Secretary-designate J. T. McNaughton, his wife, and son.

Construction is started on a major headquarters and maintenance base at Winston-Salem. Operation of the general aviation division continues and a new subsidiary, Piedmont Aerospace Institute, is opened to train mechanics. All three crewmen aboard a prepositioning flight are killed when a Martin 4-0-4, the *Appomattox Pacemaker*, crashes during its landing at New Bern, North Carolina, on November 20.

At year's end, the employee population numbers 2,408 and the fleet includes 43 aircraft: 1 B-727-51C, 10 Fairchild Hiller FH-227Bs, and 32 Martin 4-0-4s. Orders are placed or outstanding for 6 B-737-201s and 10 YAMC YS-11A-205s, which will later be upgraded to Dash-505 standard. A total of 1,699,558 passengers are originated. Revenues advance 21% to a record \$52,304,642 and the net profit increases slightly, to \$1,890,857.

The employee population in **1968** numbers 2,768. In need of additional capacity, orders are placed for 60 (later reduced to 11) Nihon NAMC YS-11A-505s. Nashville and Memphis join the route network on February 1.

The first of 12 Boeing 737-201s to be delivered arrives at Winston-Salem on May 30 after a 4-hr. 47-min. flight from Seattle; it will be christened *Piedmont Pacemaker* and enter service on July 1. Piedmont will eventually operate the largest B-737 fleet in the world.

At Kanawha County Airport, Charleston, West Virginia, on August 10, an inoperable glide slope—part of the airport's instrument landing system out since June 16—causes the FH-227B *James River Pacemaker* to crash. The aircraft, with 3 crew and 35 passengers arriving from Cincinnati in dense fog, strikes a line of trees 360 ft. from the end of the runway (35 dead).

The new \$8-million headquarters is dedicated at Winston-Salem in late October. Six additional B-737-201s are purchased in December. Passenger boardings jump 17.2% to 1,993,045 and freight traffic accelerates by 41%. Revenues for the airline division grow 10% to \$46,956,030.

In the spring of **1969**, the company becomes the leading American operator of the Japanese-made Nihon YS-11A. The premier "Cherry Blossom Pacemaker," YS-11A-205, is delivered in early May; christened the *Blue Ridge Pacemaker*, it inaugurates service on May 19 over a route

from Washington, D.C. to Tri-Cities, Tennessee, via Roanoke and Bluefield. It will be followed over the next 4 months by 20 more: *Tidewater Pacemaker*, *York River Pacemaker*, *New River Pacemaker*, *Potomac Pacemaker*, *Albemarle Pacemaker*, *Long Island Pacemaker*, *Cherokee Pacemaker*, *Neuse River Pacemaker*, *Roanoke Valley Pacemaker*, *Garden State* (later *Pamlico*) *Pacemaker*, *Grand Strand Pacemaker*, *Manassas* (later *Croatan*) *Pacemaker*, *Old Hickory Pacemaker*, *Pee Dee Pacemaker*, *Santee Pacemaker*, *Shenandoah Valley Pacemaker*, *Great Smokies Pacemaker*, *Ohio Valley Pacemaker*, *Peachtree Pacemaker*, *Tennessee Valley Pacemaker*, and *Yajima Pacemaker*.

As more B-737-201s join the fleet, controversy explodes over their third cockpit crew member. A 21-day pilot strike begins on July 21 that shuts the airline down; before the job action is settled on August 18, it will help rob Piedmont of this year's profits.

Meanwhile, the decision is taken to retire the Martinliner fleet. On December 1, daily roundtrips are inaugurated into Chicago (MDW); Mayor Richard D. Daley presides over ceremonies marking start-up.

Enplanements for the year are 2,133,630. Revenues total \$54.41 million, but losses are taken: \$162,000 (operating) and \$1.85 million (net).

The workforce in 1970 is 2,994 and the fleet includes 42 aircraft. At the new decade's start, the fleet includes 12 Boeing 737-201s, 9 FH-227Bs, and 21 YS-11As. The last Martin is retired on February 15, following the completion of Flight 823 from Washington, D.C. (DCA) to Wilmington. Service is started to Charleston, South Carolina, on April 26 and a new route is opened from Norfolk to New York.

Additionally, Bartlett M. Shaw is named vice president-administration.

Passenger boardings jump 21.5% to 2,718,000 and cargo traffic does better, up by 27%. Income swells to \$70.66 million and an operating profit of \$1.68 million is earned. A net loss of \$3.71 million is, however, absorbed.

A new central reservations office is occupied at the Winston-Salem headquarters in April 1971. On June 18, a federal sky marshal, disguised as a pilot, subdues B. R. White aboard Flight 25, a B-737-201 on the ground at Smith-Reynolds Airport, serving Winston-Salem, after White attempts to hijack the aircraft, about to depart for New York, to Havana. He will receive a five-year prison term.

On September 15, Piedmont becomes the first carrier to fly into the small airfield servicing the Greenbrier resort at White Sulphur Springs, West Virginia.

The original **Piedmont Aviation Services** continues to operate charters to points throughout the southeast. Enplanements for the year total 2,818,819.

The employee population in 1972 numbers 3,254 and the fleet is upgraded by the addition of three more B-737-201s. The twenty-fifth anniversary year is celebrated as employees present CEO Davis with a restored Taylor E-2.

Passenger boardings accelerate 11.33% to pass the three-million mark in annual boardings for the first time (3,179,000). Cargo traffic is also up, by 13%. On total revenues of \$93 million, expenses are \$83.82 million, leaving an operating profit of \$9.26 million. The net profit for this twenty-fifth anniversary year is \$3,323,317.

Twenty-eight new employees join the company in 1973. On January 2, C. A. Wenige, attempts to hijack Flight 928, a YS-11A just arrived at Friendship International Airport in Baltimore, to Canada. He is talked out of the deed by Lawrence Cardinal Sheehan, the Archbishop of Baltimore and arrested by FBI agents. Wenige will be tried and given a prison term of 20 years.

As the result of a petition filed the year before, the CAB allows Piedmont to realign its route network. In addition, a new route from Washington, D.C. (DCA) to Louisville, received by transfer from **Eastern Air Lines**, is inaugurated.

The fleet grows to 46 aircraft with the addition of a 16th B-737-201. One of these is involved in an accident at Greensboro, North Carolina, on October 28. Statistics for the year generally confirm the carrier's description of the past 12 months as "the most successful" in its history to date.

Customer bookings accelerate 11.3% to 3,537,000 and cargo traffic grows 14.4%. Income is \$107.48 million and expenses are \$98.14 million. Although the operating profit is up to \$9.33 million, net income is down slightly to \$3.31 million.

Airline employment in 1974 is 3,666. During the spring, the carrier inaugurates service from its base at Winston-Salem to Chicago (ORD). Three additional B-737-201s are delivered and the corporate image is changed by the introduction of a new design, logo, and uniforms for staff and flight personnel.

A new red, white, and blue livery is unveiled by the newly acquired B-737-201 *Yadkin Valley Pacemaker*. Largely unnoticed during the year is the appointment of Cheryl Faye Peters to the right seat of a YS-11A; she is the company's first female pilot.

Enplanements shoot up 8.4% to 3,831,000 and freight is up by 1.4% as 9.84 million FTKs are flown. Revenues grow by 22.7% to \$133.95 million while expenses are kept under control at \$118.44 million. The operating profit is \$15.5 million and the net remains almost level at \$3.48 million.

The workforce is reduced in 1975 to 3,307. The last FH-227Bs are retired and pilots and flight attendants now sport new uniforms. Permission is sought from the CAB for nonstop authority from New York and Washington, D.C. to Greenville and Spartanburg, South Carolina, and for routes between Memphis and Denver via Wichita and between Denver and Atlanta. In addition, it agrees to receive, upon approval of the regulators, nonstop Chicago-Louisville authority from **Eastern Air Lines**.

Passenger boardings decline 5.71% to 3,602,990 while, at 8.80 million FTKs, freight traffic is off by 11.5%. Revenues advance to \$135.66 million and expenses are \$133.16 million, leaving an operating profit of \$2.5 million. The net is a loss, \$1.35 million.

The employee population is reduced in 1976 to 3,146, a 3.1% cut. The 20th B-737-201 joins the fleet. Three more retired FH-227Bs are sold and in December, requests are made for six more B-727-100s.

Customer bookings jump 7.13% to 3,859,819 while cargo traffic grows by 4.7% to 9.2 million FTKs. On revenues of \$154.68 million, expenses are \$145.06 million and the operating income is \$9.61 million. The \$4.39-million net profit is the second highest in company history, save only that of 1974.

The first B-727-100 arrives in January 1977 and is christened *Kitty Hawk Pacemaker*. Service continues apace while hearings are held in the U.S. Congress on airline deregulation. Former **Eastern Air Lines** official William R. "Bill" Howard is appointed senior vice president and is dispatched to Washington to lobby against deregulation.

Enplanements for the year are 4,148,000. A \$7.49-million net profit is earned on revenues of \$181.58 million.

Airline employment is increased by 16.2% in 1978 to 4,300 and the fleet comprises 4 B-727-100s, 21 B-737-201s, and 20 YS-11As. Steward Stephen John Addona, with help from other passengers and crew members, captures hijacker Sam Dawkins Jr., who tries to commandeer Flight 964, a YS-11A, while the turboprop is on the ground at an intermediate stop at Kinston, North Carolina, during a Washington, D.C.-Wilmington flight on January 28. Dawkins will be sentenced to prison for 15 years.

Fifteen-year-old Richard C. Bland fails in his attempt to hijack Flight 66, a B-737-201 with 66 passengers, while it is en route from Richmond to Newark on April 1. He surrenders at Richmond after the passengers are safely evacuated and the crew escapes through the cockpit windows. Upon examination, Bland will be found mentally unstable and will be sent to a psychiatric institution.

Service is inaugurated to Miami on June 15, followed by Tampa on July 1. The last of 11 B-727-100s acquired as additional capacity enters service at month's end. Among these is the *Mount Mitchell Pacemaker*, which had previously served with **Northwest Airlines** and gained some notoriety when skyjacker D.B. Cooper parachuted from it over Oregon in 1971. In September, company shares begin trading on the New York Stock Exchange.

After planning through the mid-**1970s**, an explosion of progress comes to Piedmont after President Carter signs the Airline Deregulation Act in October. Indeed, Piedmont will prosper more than any other airline in the country—at least for awhile. In the fourth quarter, new routes are opened to Boston, Philadelphia, Denver, and Pittsburgh. The 10-million-mile route system now affords services to 80 cities in Georgia, North and South Carolina, Tennessee, Virginia, West Virginia, Kentucky, Ohio, Maryland, New York, New Jersey, Illinois, and the District of Columbia.

In anticipation of exciting times ahead, the carrier agrees to sell its YS-11As to **Pinehurst Airlines** and acquires additional Boeing capacity (B-727/B-737s).

Passenger boardings increase by 10.1% to 4,614,000 while cargo advances by half that rate, 5.7%, to 10.08 million FTKs. Operating income grows by 13.23% to \$205.6 million while expenses are held to \$199.77 million. Although the operating profit is \$5.83 million, a net loss of \$5.59 million must be absorbed.

The number of employees is increased by 16.3% in **1979** to 5,000. As the year's results demonstrate, the company posts the highest growth rate in the local service airline industry for passenger and cargo traffic and revenues. Service is begun to the key Florida markets of Tampa, St. Petersburg, and Clearwater and to the Texas hub city of Dallas (DFW). **Air Florida** makes a brief and unsuccessful takeover effort.

Passenger traffic increases by 19.5% to 5,497,000 passengers carried while freight jumps 17.5% to 11.85 million FTKs. Operating revenues rise 44.4% to \$296.8 million and the net profit skyrockets a remarkable 99.7% to \$11.6 million.

The employee population grows by 9.3% in **1980** to 5,702. By altering many of its routes to avoid congested hubs, Piedmont is able to maintain its pace while starting flights to Houston and placing greater emphasis on hubs at Baltimore and Dayton. On August 29, a private plane is involved in a near miss with a B-737-201 carrying 69 passengers, including Virginia's former governor Mills E. Godwin Jr., near Richmond.

A **Delta Air Lines** B-727-232 nearly collides with a Piedmont B-737-201 west of New York (LGA) on December 10 after an apparent error in traffic controller communications. This year, President Davis receives the prestigious Tony Jannus Award.

As its routes lengthen, Piedmont's passenger boardings continue to multiply, up 22% to 6,706,340; FTKs operated multiply by 12.4% to 21.7 million. Revenues accelerate 35% to \$480 million and expenses, while up by 35.2%, are held to \$446 million. As a result, the net profit bounces upward by 43.9% to \$16 million.

The number of workers is increased by 16.1% in **1981** to 6,618. Frequencies are started to Philadelphia and Orlando during first quarter. Forty B-737-201 or Dash-201As are in service by midyear and delivery is momentarily expected for the first of 35 B-727-200As to arrive over the next 7 years. Founder Davis becomes board chairman/CEO on July 1 and is succeeded as president by Senior Vice President William B. Howard. A new \$2.5-million training center is opened and named in honor of the chairman.

Despite the PATCO air traffic controllers' strike, Piedmont's deregulation strategies continue to demonstrate their wisdom, as the job action proves little more than a bother. The first B-727-214A, acquired from **Pacific Southwest Airlines (PSA)**, is placed into service on September 2 and the premier hub is opened at Charlotte, North Carolina.

On December 11, a stock purchase agreement is signed with the Norfolk and Western Railway Company. The railroad agrees that, until January 26, 1987, it will not purchase more than 20.5% of the airline's stock; two railway executives will join the Piedmont board while a Piedmont official is to be placed on the railway's board.

Company officials are pleased when the books are closed on the year. Where other airlines have faltered, Piedmont is deeply in the black. Passenger traffic increases 27.1% to 8,523,758 riders and freight rises 6.1% to 12.03 million FTKs. Revenues advance 37.8% to \$562.3 million, expenses are kept in line with a 32.9% rise, and the bottom line net gain reaches \$32.6 million—up 102% and a new company record.

To show his appreciation, Chairman/CEO Davis surprises each of the company's 6,600 workers with a new \$100 bill.

In January **1982**, the company receives the 1981 "Market Development Award" from *Air Transport World* magazine. Following the record year just past, Piedmont Airlines now expands aggressively. In addition to an enlargement of its Charlotte hub (to 172 daily departures by December 31), a new one is opened at Dayton to link Ohio and the Midwest with North Carolina. The only subsidized airports now served are Winston-Salem and White Sulphur Springs, West Virginia. The last YS-11A-500 flight (also the last company turboprop and propeller service) is completed at Winston-Salem by the *Shenandoah Pacemaker* on March 14; Piedmont is now an all-jet operator.

The first all-female crew to operate a jetliner in revenue service flies a B-737-201A service on May 10: Capt. Cheryl Faye Peters, Flight Officer Rebecca Rose Schroeder, and Flight Attendants Paula Lanier, Dolly Wenat, and Cindy Perry.

A new computer reservation center is occupied at Reston, Virginia, and on July 1 a new hub is opened at Dayton with 16 daily flights to 9 destinations. Construction is started or continued on a general aviation facility at Norfolk and a maintenance facility at Greensboro. All remaining YS-11A-500s and B-727-100s are retired and 22 new aircraft are acquired for what has become the world's largest fleet of B-737s. A systemwide Take the Family fare is introduced for the winter travel season.

In the fall, President Davis accepts an invitation to address a meeting of the Newcomen Society in New York City; as is the Society's custom, his remarks are published as a small pamphlet, *The History of Piedmont: Setting a Special Pace*.

During the year, the payroll is increased by 17.6% to 8,000, enplanements reach 8,539,767, up 17.1%, while cargo climbs an equal 17.4% to 14.1 million FTKs. Operating income jumps 16.54% to \$655.34 million and expenses are kept to \$633.38 million. Although down slightly, profits continue to be generated: \$10.45 million (operating) and \$30.46 million (net).

The payroll is boosted by 21.5% in **1983** to 9,803. Company founder Thomas H. Davis retires on January 1 (effective May 4) and is succeeded as chairman/CEO by President William R. Howard, who keeps up the explosive growth trend begun by his predecessor in 1978. Nine additional B-737-201As and six B-727-214As are delivered.

A B-737-201 makes an emergency landing at Kanawha Airport, Charleston, West Virginia, on May 1 when an engine fails shortly after takeoff for Washington, D.C. (DCA); no injuries are reported.

Upon his retirement on May 4, employees present Chairman/CEO Davis, who will stay on as a member of the board and chairman of its executive committee, with a Rolls Royce convertible. They have also contributed for the establishment of the Thomas H. Davis Business Scholarship at Wake Forest University. Mechanics present the founder with a personalized "PIEDMONT" license plate.

The company boards a million passengers in a month for the first time during June.

Meanwhile, expansion of the hubs at Dayton and Charlotte continues and on July 15, a third hub is established at Baltimore (BWI). The number of daily departures from the Maryland facility is increased from 6 to 29 to 14 destinations.

The large, Maryland-based regional and former "Allegheny Commuter" inaugural partner **Henson Aviation** is acquired on November 1 through a five-year stock exchange program, together with its aircraft and routes; the new subsidiary is renamed **Henson, the Piedmont Regional Airline** and begins providing feed to Norfolk. The arrangement marks the first time in commercial aviation history that a U.S.-certified airline has owned its own regional partner.

Six new departures are added from the Baltimore (BWI) hub on December 15, including nonstop service to Orlando and Newark and additional nonstops to Boston, Tampa, New York (LGA), Greensboro, High Point, and Winston-Salem. En route from Tampa to Jacksonville on December 29, a B-737-201A is pounded by a violent thunderstorm that re-

quires the pilot to abort the flight and return to his starting point; three aboard are injured.

Passenger boardings increase by 31.9% to 14,220,000 and freight is up by an almost equal percentage, 32.6%, to 41.31 million FTKs. Revenues swell 31.67% to \$862.88 million while expenses are held to \$804.37 million, a 27% increase. As a result, a \$58.49-million operating profit is generated; the net profit, however, drops \$5 million to \$25.5 million.

Employee rolls increase 22.5% to some 12,000 in 1984 and the first of 12 former **Garuda Indonesian Airways** Fokker F.28-1000s are acquired from the Dutch manufacturer in a splendid deal: \$3 million a copy, completely refurbished.

While landing at Erlanger, Kentucky, on March 8, a B-737-201A with 30 passengers nearly collides with 8 unreported snow removal vehicles plowing the runway. The plane's captain makes an immediate go around and the aircraft misses the snow removal vehicles by just 10 feet.

While en route from Charleston, South Carolina, to Miami on March 27 with 59 aboard, Flight 451, a B-737-201A, is hijacked by a man claiming to be a member of the Black Liberation Army and diverted to Cuba. The pirate is arrested at Havana (he will receive a 15-year prison term) and the little Boeing returns to Miami the same day.

The first of the unnamed F.28-1000s enters service on the route from Lexington, Kentucky, to Chicago (ORD) on April 1. Others will be introduced on some of the company's other short-haul routes, including new markets at Kalamazoo, Battle Creek, Albany, Savannah, Rochester, and Evansville. Employing six newly acquired, former **All Nippon Airways Company, Ltd. (ANA)** B-727-281As, Piedmont, also on April 1, becomes a transcontinental airline when frequencies are initiated from Charlotte and Dayton to Los Angeles. First-class service is introduced on these flights.

Founder/director Davis receives an honorary doctorate from Wake Forest University at this year's commencement exercises; he will also receive the coveted Guggenheim Medal presented to aeronautical pioneers.

While deplaning passengers at Washington, D.C. (DCA) on September 3, a B-737-201A is struck by lightning that jolts six workers standing near the airliner; all are taken to the hospital for treatment of electrical shock. Transcontinental service begins on November 1 from Dayton and Charlotte to San Francisco; prevailing winds occasionally force the B-727-214As to land at Denver for refueling on the westward leg.

Passenger traffic is stimulated to increase 22% to 14.7 million passengers carried and cargo jumps 30.3% to 25.28 million FTKs. With \$1.28 billion in total revenue, 1984 is a landmark year in the history of Piedmont Airlines, as it exceeds the mythical admission fee and joins the ranks of the country's major air carriers. Expenses are held to \$1 billion and a huge \$125.75 million operating profit is generated. Almost as important and certainly as impressive is yet another record net profit, \$58.49 million—more than that of **Continental Airlines**, **Pan American World Airways (1)**, **Republic Airlines**, **Trans World Airlines (TWA)**, or **Western Airlines**.

The payroll shoots up by 18.4% in 1985 to 14,500, as Piedmont becomes the eighth largest passenger airline in America in terms of passenger boardings. In January, the carrier receives the 1984 "Airline of the Year" award from *Air Transport World* magazine.

Early in the year, it starts service to Knoxville and St. Louis, thus maintaining an average of opening service to one new city every other month since the implementation of the deregulation law of 1978. Its 64 Boeing 737s, 34 B-727-200s, and 5 F.28-1000s are flying to 100 cities in 24 states and the District of Columbia, boarding 1.2 million travelers per month. The 737s include 10 newly received Dash-301s from the 35; 6 more F.28-4000s are on order.

In May, **Sunbird Airlines**, later **CCAair**, becomes the "Piedmont Commuter" serving Charlotte. On May 23, the B-737-301 *Nancy Davis Pacemaker* arrives in North Carolina from Seattle; it is named in honor of the founder's terminally ill wife.

The first B-737-301 *City of Dallas Pacemaker* enters service in June. While maneuvering around a thunderstorm near Vero Beach, Florida, on June 16, a B-737-201 with 45 passengers encounters heavy turbulence; the two flight attendants conducting beverage service at the time are both injured, one seriously.

Mrs. Nancy Davis dies on July 18.

On October 1, following the arrival of additional Fokker jetliners, nine are employed to launch "Project Omaha"—56 new intrastate Florida frequencies—under the name Piedmont Shuttle, including new F.28-1000 flights to Tallahassee, Naples, Gainesville, Key West, and Fort Lauderdale. On October 2, the New York-based large regional **Empire Airlines (2)** is purchased for about \$41 million (\$15 per share). It will be allowed to function as a subsidiary as approval of the merger is awaited from Washington.

While climbing away from Washington, D.C. (DCA) on November 3 on a service to Charleston, West Virginia, a B-737-201 with 60 passengers encounters heavy turbulence; two flight attendants are injured, one seriously.

In November, Piedmont becomes the first airline in the world to be certified for use of a wind shear detection and alerting system in its aircraft. Later in the month, **Jetstream International Airlines** becomes the "Piedmont Commuter" providing feed into Dayton and **Henson Aviation** launches a service called the Piedmont Shuttle Link.

Bookings for the year bounce up by 26.5% to a record 18,053,000 as cargo ascends by 4.5% to 59.75 million FTKs. Revenues jump over \$1 billion and the net profit is \$66.7 million. Revenues swell 20.4% to \$1.36 billion, expenses jump 24.7% to \$1.25 billion, and the operating profit is \$107.47 million. Net gain climbs to a record \$66.71 million.

Airline employment improves by 25.3% in 1986 to 20,000. During January, a Piedmont Shuttle Link operation is inaugurated in Florida; 103 daily F.28-1000 flights link 12 cities and connect with the major's intrastate operations. Two small commuter carriers, **Southern Express** and **Trans Air**, are contracted to provide local feed, but both are soon terminated (the first in January and the second on April 1) for noncompliance.

The **Empire Airlines (2)** merger is completed on February 1. Immediately, the Piedmont workforce is increased by 1,000, the F.28 fleet grows dramatically with the addition of 15 Dash-4000s, and 10 new cities join the route network.

On March 15, **Brockway Air** becomes the "Piedmont Commuter" partner for Boston, Newark, and New York (LGA).

In April, two F.28-4000s arrive and are transferred to the **Empire Airlines (2)** subsidiary. Following receipt of DOT approval, Empire is fully absorbed on May 1; ex-**Empire Airlines (2)** F.28-4000s repainted in Piedmont livery inaugurate the company's first international service, flying from Baltimore (BWI) over the former New York regional's routes to Ottawa and Toronto.

The 40% interest in **Henson Aviation** not already owned is purchased, along with the outright acquisition of **Jetstream International Airways**. A DC-3 is acquired from Basler Flight Services in Wisconsin; repainted as the *Piedmont Pacemaker*, it is based at Charlotte and employed for promotional flights.

During this period, Chairman Howard holds closed-door meetings with **USAir** officials concerning a possible merger. On April 30, company stock trades at a high of \$44 1/4a share, closing at \$43 3/4.

At the company's annual meeting on May 28, a resolution is voted requiring any purchaser to pay for the airline in cash. If such an arrangement cannot be made, stockholders will have to agree by a 75% voting margin. Also in May, Piedmont becomes the sixth U.S. airline (after **American Airlines**, **Delta Air Lines**, **Eastern Air Lines**, **Trans World Airlines**, and **United Airlines**) to board two million passengers in a month.

On June 1, **CCAair** becomes a "Piedmont Commuter" partner and begins flying to the north Florida destination of Jacksonville from Greenville and Spartanburg. During the day, service is launched to New York (JFK) and a new code-sharing agreement begins with **Trans**

World Airlines (TWA) allowing Piedmont to place its code on 20 TWA services from New York to Europe.

With McLean Stevenson of the television series *M*A*S*H* as spokesman, the company, on June 18, begins its largest-ever marketing campaign, aimed squarely at New York City.

Also in June, the company becomes launch customer for the B-737-401, with an order for 25 with 30 options.

Arriving from Newark on October 25, Flight 467, the B-737-201A *Kanawha River Pacemaker* with 5 crew and 114 passengers, overruns the runway at Charlotte. The plane hits a localizer antenna array and a concrete culvert, pushes on through a chain-link fence, and stops at the edge of a railroad embankment, 440 ft. past the end of the runway. Although the aircraft is damaged beyond repair and 34 people aboard are slightly injured, there are no fatalities.

Permission to begin transatlantic flights from Charlotte is sought as orders are placed with Boeing for six B-767-201ERs.

Former **USAir** Vice President-Maintenance Thomas Schick joins Piedmont in the same role on August 21. On August 25, Piedmont stock soars to a record high of \$47. Also during August, the one millionth "Piedmont Shuttle" passenger is boarded in Florida.

Piedmont, the City of Charlotte, and the City of Tampa request that the DOT transfer the dormant Tampa transatlantic London authority to Charlotte and that Piedmont be selected to fly the new route. Merger discussions are held with **Trans World Airlines (TWA)** during the month; the North Carolina carrier will not take over the Howard Hughes pioneer.

In December, Vice President-Management William G. McGee is elected executive vice president.

A disabled passenger is seriously injured on December 30 when the left handrail of the airstair collapses while he is boarding a Fokker F.28-4000 at West Palm Beach. The rail had been discovered as defective at Tallahassee and temporarily repaired with metal glue.

Enplanements for the year accelerate 26% during the 12 months to 22,800,000, while cargo rises 12.5% to 33.65 million FTKs. Revenues swell 21.24% to \$1.65 billion, costs are up 19.69% to \$1.5 billion, and the operating profit is up to \$149.91 million. Net gain ascends to \$72.36 million.

A total of 1,500 employees are hired in **1987** and the fleet is increased by the addition of 17 B-737-301s and 6 B-767-201ERs.

In January, Piedmont receives the 1986 "Financial Management Award" from *Air Transport World* magazine.

On January 30, company stock closes at \$58 3/8.

At an extraordinary board meeting held on February 4, a Special Committee is established to evaluate and participate in any merger activities.

Piedmont's availability brings two bids from **USAir** Group's Chairman Edwin Colodny in February. The first, on February 5, offers Piedmont shareholders \$63 a share, payable in cash and stock. The second, on February 13, is worth \$71 per share, payable in equal \$34 tranches of cash and stock. On February 16, the Norfolk Southern Railway begins to explore the possibility of purchasing the airline and makes a bid of \$1.5 billion (\$65 per share). Both the **USAir** and Norfolk Southern offers are disclosed next day.

The Special Committee recommends acceptance of the Norfolk Southern tender on February 19. Later the same day, the former **Allegheny Airlines (1)** improves its offer to \$1.6 billion. For the record, the mechanics of the two-step offer include: first, a cash offer for 50.1% of the fully diluted outstanding Piedmont shares at \$71 each; second, a merger of the two airlines in which each remaining Piedmont share will be converted into **USAir** common stock valued at \$73 each. This third bid is contingent on Piedmont granting **USAir** the option to purchase up to 18.5% of the remaining shares outstanding at \$71 each. After a speedy review of the latest **USAir** offer, the Special Committee, also on February 19, recommends rejection of the Norfolk Southern offer.

Corporate raider Carl Icahn, who will eventually acquire **Trans World Airlines (TWA)**, makes a similar pledge on March 4, indicating

that should his advance be spurned, he might attempt to take over **USAir**. On March 5, **USAir** refines its proposal into a final offer to acquire Piedmont in a two-step (offer and merger as before) all-cash transaction under which Piedmont shareholders would receive \$69 for each share of stock owned. Icahn's approach is rejected by Piedmont's Special Committee and the airline's board of directors on March 6 when they agree to support the **USAir** cash bid.

On March 9, Chairman Howard and his northern **USAir** counterpart, Edwin Colodny, announce that Piedmont has been purchased by **USAir** Group for \$1.6 billion in the largest—and most expensive—airline merger to date. Creation of the nation's seventh largest carrier is referred for assessment to an independent law judge. Meanwhile, the new **USAir** subsidiary continues to retain its identity during what will prove a two-year integration process.

On March 17, Carl Icahn announces a temporary suspension of his takeover activities. The next day, Flight 74 is the first to operate a TCAS system on a regularly scheduled commercial service. When **USAir** Group, on March 23, seeks to purchase 100% of Piedmont's stock through a voting trust, the DOT steps in and limits the purchase to 51% on a fully diluted basis. The remaining shares are returned to the stockholders. On March 30, Piedmont stock closes at a record high of \$70 1/8.

On April 3, the tender offer by **USAir** for the available 92% of Piedmont stock expires. **USAir** obtains about 9.3 million shares at \$69 each which, combined with what it already owns, gives it 51% of Piedmont's stock on a fully diluted basis. The London application is approved by the DOT on April 23.

In May, flights begin from Charlotte to Seattle and first-class service becomes available on all flights; six-days-per-week flights are also inaugurated from Syracuse to Niagara Falls. Growth also continues in the bustling new Florida market. The first B-767-201ER, christened *The Pride of Piedmont*, arrives at Charlotte on May 21. A second long-range aircraft arrives at the end of the month.

On June 15, the new B-767-201ERs launch daily roundtrip flights from Charlotte to London (LGW), flying under the FAA's 75-minute rule. It is announced on July 1 that Piedmont has had the best on-time performance of any U.S. major during the previous six months. Piedmont shareholders approve the **USAir merger** at an extraordinary shareholders meeting on July 23.

Chairman/President/CEO Howard resigns in August; he will be succeeded, in October, by Executive Vice President McGee. At the same time, Senior Vice President-Operations Gordon Bethune, who will one day lead **Continental Airlines**, resigns and is succeeded by Vice President-Management Schick. Also during August, B-767-201ER roundtrips begin from Charlotte to Los Angeles.

The independent law judge recommends against the **USAir** merger on September 21. During the same month, flights begin to Birmingham, Alabama, and to Columbus, Ohio, (suspended earlier). Following renewed arguments, the independent law judge is overruled by the DOT on October 30 as company stock closes at \$63.

When Chairman/President/CEO Howard resigns in September, he is succeeded in October by Executive Vice President McGee.

The independent law judge recommends against the **USAir** merger in October, but following renewed arguments, is overruled by the DOT on October 29.

Also in October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

America West Airlines protests the **USAir**/Piedmont merger to the U.S. Circuit Court for the District of Columbia on November 2, but the next day that body rejects the appeal. Piedmont becomes a fully owned **USAir** subsidiary on November 5.

The London route is followed on November 15 by the introduction of service to Nassau from Baltimore (BWI) and Charlotte. On December 8,

flights begin to Phoenix and San Diego. A carry-on baggage program developed by Piedmont and approved by the FAA takes effect industry-wide during December.

During the year, a new reservations center at Dayton joins those already at work in Reston, Orlando, and Nashville.

Passenger boardings jump 11.3% to 25,368,067 while freight increases 82.3% to 63.36 million FTKs. Revenues ascend by 18.52% to \$1.96 billion, the greatest percentage increase of the year among passenger-carrying U.S. majors. Expenses grow by 19.67% to \$1.8 billion and the operating profit is \$160.23 million. Net profit reaches \$98.55 million.

The workforce is cut by 0.3% in 1988 to 21,430. Although everyone associated with the **USAir** subsidiary expects this to be the carrier's final independent year, Piedmont still adds 11 more B-737-301s, 2 more B-767-201ERs, and 9 B-737-401s, for which the company is launch customer.

In January, weekend first-class service at discounts of 40%–50% are offered. In addition, members of the frequent flyer program are now given mileage points for visits to Marriott hotels or resorts. Ordered earlier, the first B-747-400 makes its maiden flight at Renton, Washington, on February 19.

Employing a restored DC-3, founder Davis, along with the pilots from the original service, other old-time employees, and North Carolina dignitaries, restage the company's first scheduled flight on February 20, flying from Wilmington to Charlotte in a grand fortieth anniversary event.

Daily roundtrip, nonstop flights are inaugurated from Fort Myers to Charlotte and Baltimore in March, along with twice-daily nonstop roundtrips from Charleston, South Carolina, to Washington, D.C. (DCA). F.28-4000s are employed to begin new daily flights from Washington, D.C. (DCA) to Jacksonville.

En route from Charlotte to Columbus, an F.28-4000 is forced to make an emergency landing in Charleston, West Virginia, on April 14 after an engine explodes into jagged pieces, slicing through both sides of the plane and slightly injuring two flight attendants.

Chairman/president/CEO McGee resigns on June 24 and is succeeded as president/chief operating officer by Tom Schick; **USAir** Chairman/CEO Colodny becomes Piedmont's chairman/CEO.

Daily nonstop frequencies commence in August between Oneida County Airport in New York State and Baltimore (BWI). The first B-737-401 is delivered in September and in October, Piedmont joins its parent in a sustained marketing move against **Braniff, Inc.** at Kansas City by introducing thrice-daily roundtrips from that Missouri City to Charlotte.

Daily nonstop roundtrips commence in November from Syracuse to Tampa. Service is continued to Fort Lauderdale as part of an extension of the company's Ottawa to Syracuse B-737-201A service. In December, daily nonstops are launched from Kansas City to Baltimore (BWI), San Francisco, and Chicago.

Customer bookings jump 7% on the year to 27,123,000 and cargo skyrockets 94.8% to 109.72 million FTKs. Revenues advance 20.34% to \$2.36 billion, expenses rise 15.66% to \$2.08 billion, and the operating profit of \$277.36 million is a new record. Net gain almost doubles to \$159.44 million.

Piedmont continues to be operated as a subsidiary during the amalgamation process. The right engine of a B-737-301 falls off at a height of 800 ft. during takeoff from Chicago (ORD) on January 20, 1989; the plane is able to land safely with the one remaining engine. Daily nonstop service is inaugurated on March 15 from Tampa to Los Angeles. In March and April, 22 flights are added to its Charlotte service, including new frequencies to West Palm Beach and Gainesville. The airline's frequent flyer program members are automatically enrolled in **USAir's** own program on April 3.

Daily roundtrips are offered, beginning on June 1, from Baltimore (BWI) to Bermuda. Also on June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. Piedmont, with seven security breaches, is faced with \$52,000 in punishment.

When mechanics leave rubber wheel blocks in a B-737-401, it is forced to make an emergency landing in Greensboro on August 3 with its left landing gear undeployed; none of the 100 people aboard are hurt.

The final service is operated between Dayton and South Bend on August 4. Complete integration is delayed by pilot negotiations beyond the target date of August 5, but is finally achieved on February 1, 1990. There is an unofficial Web site for Piedmont Airlines at <http://www.jetpiedmont.com>.

PIEDMONT AIRLINES (2): 5443 Airport Terminal Road, Salisbury, Maryland, 21804, Washington; Phone (410) 742-2996; Fax (410) 742-4069; <http://www.piedmont-airlines.com>; Code EN; Year Founded 1993. In honor of its onetime owner and code-sharing partner, **Henson Aviation** is renamed in 1993. The transformation also serves the purpose of registering the trademark Piedmont name. The fleet of the largest "USAir Express" carrier now includes 2 owned and 3 leased de Havilland Canada DHC-7-102s plus 18 owned and 21 leased DHC-8-102s. Four of the latter machines are chartered from the Canadian regional **Time Air, Ltd.**

All previous routes and services continue, as do contract negotiations begun between the company and the Air Line Pilots Association (ALPA), begun in September 1992.

Passenger boardings increase 10.5% over the last Henson year to 2,481,176.

Airline employment stands at 1,100 in 1994. At the end of February, the NMB declares Piedmont and its pilots to be at an impasse in their contract negotiations and orders a 30-day cooling off period ending March 25. At the last minute, the leaders for the 390 pilots reach a tentative new four-year agreement that provides for wage and benefit increases.

Customer bookings accelerate 8.1% during the 12 months to 2,682,560.

The workforce is increased by 30% in 1995 to 1,430. The company's 46 aircraft transport a total of 2,658,481 passengers, a 1% decline.

The employee population in 1996 is increased by 213 and the fleet now includes 3 DHC-7-102s and 46 DHC-8-102s.

During the first quarter, Robert H. Wells, president of Piedmont Aviation Services, approaches **USAir** seeking permission to employ the Piedmont name for a new charter operation that PAS will soon begin. **USAir** refuses and Wells's concern is eventually certified as **Pace Airlines**.

Passenger boardings accelerate 3.2% to 2,744,451 on 146,096 scheduled departures.

While on final approach to Pittsburgh on February 21, 1997, a DHC-8-102 suffers an uncommanded disconnect of its roll control system. The captain is able to stabilize the aircraft and land safely with no injuries to the plane or its passengers.

On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional will repaint its aircraft in a modified version of the major's new grey and dark blue livery.

DHC-8-102 service between Washington, D.C. and New Haven, Connecticut, is advanced from twice daily to thrice daily on June 15.

On the year, customer bookings climb 6.1% to 2,912,309 on 149,177 scheduled departures.

At the beginning of 1998, the fleet of President John F. Leonard includes 54 DHC-8s. Flights continue apace during the remainder of the year. Passenger boardings jump 6% to 3.08 million.

The workforce at the beginning of 1999 totals 1,776. On March 26, an order is placed with Bombardier Aerospace for nine DHC-8Q-200 37-seat turboprops.

Passenger boardings this year rise 4.2% to 3,162,000.

Airline employment at the beginning of 2000 stands at 2,079, a 17.1% increase over the previous 12 months.

Twice-daily DHC-8-100 USAirways Express roundtrips commence on June 1 between Philadelphia and Bangor, Maine.

Following the creation of **Potomac Air** on August 18 and its subsequent takeover of the Part 121 certificate of **Paradise Island Airways** on October 2, two DHC-8-200s are leased to the new "USAirways Express" carrier.

At the end of the year, following unsuccessful negotiations, the airline's flight attendants vote to strike over wages and working conditions if, early in the new year, the National Mediation Board declares an impasse in their contract negotiations and no progress is made during the mandatory 30-day cooling off period.

It will be reported by *The Charlotte Observer* on March 3, 2001, that PA-2, with its sister "USAirways Express" carriers **Allegheny Airlines (2)** and **PSA Airlines** are, tentatively, to be sold to **Atlantic Coast Airlines** if and when government regulators approve the pending takeover of USAirways by **United Airlines**.

PILBARRA AIR SERVICES (PTY.), LTD. See **SKYWEST AIRLINES (PTY.), LTD.**

PILGRIM AIRLINES: United States (1962–1986). Acquired by Joseph M. Fugere two years earlier, the FBO/charter operation **New London Air Services** is reformed on April 1, 1962 and the flight portion is renamed Pilgrim Airlines. Regularly scheduled passenger and cargo third-level Piper PA-23 Apache revenue operations between New London and New York City (La Guardia and Idlewild Airports) begin on August 16, the same day the carrier receives its certification from the FAA.

In September, a twin-engine Beech C-45H converted to Beech 18 civil standard is acquired, allowing twin-engine flights.

A total of 1,500 passengers are transported in the commuter's first four-and-a-half months.

Traffic triples in 1963 and doubles in 1964. By 1965, passenger boardings have increased 10-fold and a plane larger than the currently employed Beech 18 and Pipers is required. That year, Fugere approaches de Havilland Canada and helps to convince that manufacturer that small commuter airlines like his will employ the STOL (Short Take-off and Landing) aircraft it is developing.

The opportunity to acquire sufficient funding to launch the Canadian turboprop arrives in June–August 1966. As a result of a 66-day strike by the International Association of Machinists and Aerospace Workers (IAM), much of the nation's air transport system is shut down. During this time, a New York-based air freight forwarder contracts with founder Fugere to take over the carriage of its high priority shipments, mainly pharmaceuticals. Consequently, Pilgrim employs one Beech 18 on a route from John F. Kennedy International Airport to Chicago via Pittsburgh and a Piper PA-32 Cherokee Six to Baltimore and Boston.

The \$150,000 profit earned during the two months is sent to Canada to buy a plane and in September the first Pilgrim Twin Otter is delivered. Following training and promotional use, it allows Pilgrim to become the first (by only one hour over **Air Wisconsin**) regional in the world to operate the DHC-6-100.

The Twin Otter sets a standard of excellence for the nation's growing commuter airline industry and establishes Joe Fugere's carrier as a viable transportation system for southwestern Connecticut. For three years following the first DHC-6-100 flight, Pilgrim's enplanements increase by 20,000 per year. This success leads to expansion and in June 1967 operations are inaugurated between New Haven and New York City. A year later, flights begin to New York City from Hartford.

Operations continue apace in 1969–1970. On February 11 of the latter year, a Twin Otter with two crew and three passengers disappears

into Long Island Sound; wreckage is found off Groton, Connecticut, four days later, but there are no survivors.

Rights to the Hartford–Montreal route operated by **North American Airlines (2)** since the previous year are acquired in 1971; the takeover forces the Windsor Locks-based international commuter to cease operations. Pilgrim purchases several Volpar Turboliners from the assets of the former carrier.

During 1972, Pilgrim begins landing in Boston and Bridgeport is added to the system network in 1973. Enplanements during the latter year are 98,863.

Pilgrim continues to expand throughout the remainder of the decade. International services commence on July 1, 1974 with the inauguration of thrice-daily Volpar Turboliner (modified Beech 18) service Groton and New London via Hartford to Montreal flights. Additional markets entered include Bridgeport, Providence, Islip, Boston, Washington, D.C. (DCA), and Manchester, New Hampshire.

Passenger boardings jump 9.3% to 108,809.

The workforce in 1975 is 85. In January, Pilgrim receives the 1974 "Regional Airline of the Year" award from *Air Transport World* magazine.

The company's five Twin Otters accommodate 91,712 passengers, a 15.7% decline. Freight traffic is also down by 23.8%.

Five employees are laid off in 1976 or not replaced. Service is inaugurated from New London to New York (LGA) via New Haven.

Customer bookings accelerate 22.5% to 112,349 and cargo is up by 19.7% to 105,605 pounds flown.

In 1977 the Volpar Turboliner is removed from the New York–Montreal route and replaced with a pair of Beech 99s.

Boardings for the year total 139,955 travelers.

As is the case for other regionals, profits increase greatly from passage of the Airline Deregulation Act of 1978. Following the law's October signing, airline employment is boosted by 27.8% to 115. Services are inaugurated from Islip to New Haven, Boston, and New London. During the year, a sixth Twin Otter and two additional Beech 99s are acquired.

Customer bookings increase by 22.8%, up to 171,916.

There is further growth in 1979 as the workforce is increased by 29.5% to 136. New routes are started from the Rhode Island capital of Providence to New York (JFK and LGA), and Islip airports.

Bookings advance by 13% to 193,587, while cargo is down 9% to 146,000 pounds.

The following year, 1980, is an impressive year for the New London-based large regional. The employee population grows by 23.2% to 175 and John Sterne is voted executive vice president. Routes are thrown out to Manchester, New Hampshire and Washington, D.C. and the carrier replaces **Delta Air Lines** on the major's route from Manchester to New York (LGA).

Pilgrim acquires its first new modern airliner since 1966, the former **Aer Lingus Irish Airlines, Ltd.** Fokker F.27-100 *St. Flannan*. The previous year, the turboprop had become the only one of her type fitted with a large cargo door (LCD), thereby, technically, becoming an F.27-700.

Following a lengthy delay because of the FAA-mandated certification process, the new plane commences flights from New York (LGA) on December 19. The aircraft is the first Fokker-built Friendship to enter service in the U.S. (as opposed to the F-27s built under contract by Fairchild in Maryland).

At year's end, the fleet comprises 2 Beech 99s, 5 DHC-6-100s, and 2 F.27-100s, the second purchased from **Flugfelag Islands, H.F. (2)/Ice-landair, H.F.**

Passenger boardings increase 5% to a record 202,821, even as cargo declines by 14.2% to 11,000 pounds.

The number of workers is up again in 1981 by 15.8% to 169. In April, the twentieth anniversary is celebrated with public ceremonies. Two more Fokkers are acquired, from **Aviacion y Comercio, S.A. (AVI-ACO)**, and service is inaugurated to Keene, New Hampshire, and Otawa, Canada. The route from New York to the Canadian capital, inau-

gured on December 15, is the first direct service between the two cities offered by an American commuter airline.

Despite the PATCO air traffic controllers' strike during the summer and fall and subsequent ATC restrictions, customer bookings for the year rise 8.2% to 219,372. Freight falls a hefty 23.5% to 9,000 pounds.

The payroll grows yet again in **1982**, up 12.4% to 190. Pilgrim launches F.27-100 service from New Haven to Washington, between Hartford and Montreal, and from New London to Washington. Two more Fokkers, first flown by **Trans-Australian Airlines (Pty.), Ltd.**, are added to the 3 Friendships, 5 Twin Otters, and 1 Beech 99 already in the fleet.

A Beech 99 with two crew and five passengers undershoots the runway at Groton, Connecticut by 850 ft. while landing on February 1; although the aircraft is damaged beyond repair, there are no fatalities.

A DHC-6-300 with 2 crew and 10 passengers makes a forced landing into Scituate Reservoir, near Providence, Rhode Island, on February 21 (one dead).

Enplanements this year rise 7.7% to 236,210 while cargo increases 52.7% to 21,000 pounds.

Forty new employees are hired in **1983** as another AVIACO F.27-100, plus a DHC-6-300, are acquired, giving the fleet six of each type. Additional routes are opened to Washington, D.C. (DCA) from the Connecticut cities of Bridgeport, Fairfield, New London, and New Haven. A new Bradley Field maintenance hangar is occupied and a Fokker F.28-3000 jetliner is purchased on December 31.

Passenger boardings jump 20.4% to 283,325 and freight accelerates 21% to 25,410 pounds.

While taking off from New York (JFK) on January 13, **1984**, Flight 35, an F.27-100 with 3 crew and 21 passengers, loses power in both engines and comes down hard on the runway, skidding for 1,200 ft.; although the aircraft is badly damaged, there are no fatalities.

While FAA and NTSB inspectors review the circumstances surrounding the accident, the F.28-3000 arrives from Holland at month's end. At \$2,300 a day in interest charges, it remains grounded until the investigation is completed. The F.27-100s must operate under restrictions during the period.

Boston-Ottawa flights begin in the summer, as does the carrier's participation in the frequent flyer program of **American Airlines**.

Pilgrim finally enters the jet era in September when it places its Fokker F.28-3000 into service between New York and Ottawa.

Passenger traffic on the year accelerates 6% to 301,406 passengers flown.

The employee population grows by 20% in **1985** to 360. The fleet now includes the F.28-3000, 5 DHC-6-100s, and 6 F.27-100s. In February, Pilgrim becomes the third largest regional airline in the Northeast when it acquires 100% of financially troubled Connecticut rival **NewAir** in exchange for a 20% equity stake by the acquisition's former owners.

Four of the merger-partner's six aircraft (Twin Otters) are placed into service under new livery when the two integrate their schedules and operations in April. **NewAir**, which remains an FBO at Tweed-New Haven Airport, is allowed to retain an Embraer EMB-110P1 Bandeirante as an air taxi, while a Shorts 360 is subleased to **Suburban Airlines**.

Pilgrim Airlines' frequencies from Connecticut to New York (LGA) and Washington, D.C. (DCA) are now increased, while the **NewAir** service to and from both Newark and Philadelphia is incorporated. The route network increases to 17 cities.

Customer bookings accelerate 23.8% to 372,983 and cargo rises 17.7% to 153,000 pounds. The marriage with **NewAir** is an expensive one for founder Fugere's Pilgrim, which suffers considerable loss on its revenues of \$25 million.

Early in **1986**, financially distressed Pilgrim Airlines becomes a takeover target for another Connecticut-based commuter, **Business Express**. Under terms of the February 28 merger arrangement, Pilgrim, which is taken over by the BEX parent Marketing Corporation of America (MCA) for just \$1 million, operates briefly as **Pilgrim Business**

Express. Its fleet is changed as the eight Twin Otters are replaced by five Beech 99s transferred from President James McManus' parent. Integration is completed by year's end, at which point the Pilgrim Airlines name disappears.

PILOT, LTD. (PILOT TOO): No. 101, 43 Chekhova St., Yuzhno-Sakhalinsk, 693004, Russia; Phone 4242 (23) 3839; Fax 4242 (23) 4080; Code CZA; Year Founded 1993. Pilot is founded at Aeroport Khomutovo at Yuzhno-Sakhalinsk in **1993** to fly cargo charters to East Asia and North America. Oleg G. Beloglazov is director general and he initiates services with 2 Antonov An-12s and 3 An-26s.

PILOT AIR COMPANY (PILOT AVIAKOMPANIYA): Russia (1994-1996). Pilot Air is set up at Vladimiri in **1994** to provide ad hoc air taxi, aerial survey, energy and communication support work, agricultural applications, and air ambulance services. General Director S. P. Zicheep begins revenue services with 3 Mil Mi-8 helicopters. These continue until **1996**.

PILOT PRIVATE ENTERPRISE (PILOT CHASTNOE PREDPRIATIE): Russia (1994-1996). Pilot Private is set up as an air taxi operation at Krasnovarski Krai in **1994**. General Director V. V. Budrin undertakes his ad hoc services with an unspecified number of Antonov An-2 biplanes.

Flights continue until **1996**.

PINE STATE AIRLINES: P.O. Box 88, 74 Airport Avenue, Frenchville, Maine, 14745, United States; Phone (207) 543-6334; Fax (207) 543-6038; http://www.siv.com/psa/psa.htm; Code PW; Year Founded 1996. Roland Martin sets up Pine State at Frenchville in **1996** to offer FAR Part 135 services to domestic locations. Revenue flights commence and continue with a single Cessna 402C.

PINEHURST AIRLINES: United States (1973-1982). Pinehurst Air Transport is established by Lewis Carter Burwell Jr. at Pinehurst, North Carolina, in **1973** to provide Douglas DC-3 passenger and cargo services to various local resorts. The company is transferred to Greenville, South Carolina, in **1979** and reformed into the all-cargo commuter Pinehurst Airlines. Equipped with a fleet of 5 NAMC YS-11A freighters, President Carter Burwell III's carrier begins service to regional destinations.

In **1980**, the first full year of operation, freight traffic is up 310% to 50.97 million FTKs.

Six more of the Japanese-made turboprops are acquired in **1981**. In July, the company launches limited scheduled passenger services—just in time to be severely limited in these new operations by the PATCO air traffic controllers' strike and subsequent ATC restrictions.

Indeed, the cash flow problem becomes so acute that the carrier must stop flying in September. To this point, it was en route to another successful year, having flown 32.7 million FTKs of freight, 60% more than in the previous year's first nine months.

Unable to resume operations, Pinehurst goes bankrupt in early **1982** and is liquidated.

PINEHURST AIR TRANSPORT. See **PINEHURST AIRLINES**

PINK AVIATION, GmbH: Austria (1993-1994). Pink Aviation is established at Vienna in late **1993** to offer third-level all-cargo flights about the nation. Revenue services begin with a pair of Shorts SC-7 Skyvans. Flights cease in **1994**.

PIONEER AIR LINES: United States (1946-1955). Originally founded as **Essair**, the nation's premier feeder airline, Pioneer is the result of that carrier's May 15, **1946** decision to change its corporate identity. Former **Braniff Airways** Executive Vice President Robert T. Smith joins famed barnstormer William Long in ownership; the former is president with the latter board chairman. The 96-employee company's 3

Lockheed Model 10A Electras, sporting the company's new aircraft livery and buffalo logo, maintain passenger, cargo, and mail service over Contract Air Mail Route No. 64 from Houston to Amarillo via Austin, San Angelo, Abilene, and Lubbock.

Following his spring purchase of five government surplus Douglas C-47s from the War Assets Administration depot at Walnut Ridge, Arkansas, for \$20,000 each, General Manager L. H. Luckey returns to Arkansas during August and acquires four more for \$15,000 each. Eight of these are converted under contract to civil DC-3 standard; indeed, Pioneer is the first local service carrier to be equipped with the Douglas transport.

The company is also the first in its classification to receive CAB approval to operate at night and on instruments. As modification work on the new aircraft continues, the CAB on November 27 grants the company a number of new routes as the result of its findings in the Texas-Oklahoma Route Case.

Enplanements for the year exceed 5,000.

Airline employment stands at 219 on January 1, 1947. In March, the first DC-3 conversion is completed in the company's Houston shop. When available, the nine Douglasses will be christened *Rangers* after famous Texan heroes: *The Kit Carson*, *The David Crockett*, *The Ben Milam*, *The Mirabeau B. Lamar*, *The James Fannin*, *The Stephen F. Austin*, *The Sam Houston*, *The Coronado*, and *The William B. Travis*. As the Douglas fleet reaches full strength, the original Essair Lockheed Model 10A fleet is sold. Gerald "Jerry" Warren is hired to become manager of the new Abilene station and is assigned 18 employees to operate the new Texas mini-station (an early hub) at the city's eastside Municipal Airport.

In February, scheduled service is launched from Houston over the new routes granted by the CAB the previous year to Abilene via College Station/Bryan, Waco, Dallas, Fort Worth, Mineral Wells, and Cisco/Eastland/Ranger. Also included are routes from Abilene to Midland via Big Spring and Sweetwater, a spur connecting Midland to San Angelo, and the 1945 route.

During April, Pioneer's DC-3s fly medical supplies and personnel into Texas City to assist victims of the disastrous explosion and fire. Later in the year, new IFR beacons are constructed at Bryan, Sweetwater, Plainview, and Temple and employment by year's end reaches 360.

A devastating winter blizzard rocks Texas during January 1948, severely limiting Pioneer's operations. On February 17, the airline is granted enough new routes to raise its route mileage by one-third, to 2,183 unduplicated miles. Markets are added in the New Mexico cities of Clovis, Santa Fe, Tucumcari, Las Vegas, Roswell, Las Cruces, and Albuquerque. *The Pioneer Plainsman* and *The James Bowie*, two new DC-3s, are acquired for the addition.

A number of services developed by Vice President-Traffic and Sales Harding Lawrence are offered as "commuter specials." Meanwhile, goodwill and publicity flights are made throughout New Mexico in April and May, with scheduled service beginning on May 1.

Profits in 1949 and 1950 exceed \$225,000 per year; however, the final profit from operations is earned during the latter year. The DC-3 fleet grows to 12 in 1950 through the addition of an unidentified unit; these are all refurbished. Inside, window drapes and wall murals are hung. The external livery is red and blue, with a bison displayed on the blue tail. When the two-year certificate expires, the Roswell-Las Cruces-El Paso route is ended.

Over Amarillo on March 2, 1951, copilot John Dowd falls out of a DC-3 while trying to close its door that had come open. A total of 404 flights with more than 20 passengers are operated in August. Seeking to upgrade its fleet, becoming in the process the first feeder to do so, the airline, during the remainder of the year, test operates a Super DC-3 and a SAAB 90A-2 Scania over its route network.

Following the profitable \$1.1-million sale of its DC-3s to the USAF, which immediately places all 12 into service as C-117Cs, Pioneer attempts to escape subsidy and upgrade its competitive image through its June 1952 purchase of nine Martin 2-0-2As from **Northwest Airlines**,

at \$300,000 each. The First National Bank at Dallas and the Chase Manhattan Bank at New York lend Pioneer \$4.18 million for the Martin project.

In addition to \$544,000 per copy overhaul and modification, including a new livery that retains the buffalo on the tail, these are given new *Pioneer Pacemaster* names. Many of these names were used earlier as *Rangers*: *Pacemaster David Crockett*, *Pacemaster Stephen F. Austin*, *Pacemaster Sam Houston*, *Pacemaster Ben Milam*, *Pacemaster William B. Travis*, *Pacemaster Kit Carson*, *Pacemaster James Bowie*, *Pacemaster Mirabeau B. Lamar*, and *Pacemaster James Fannin*.

Martin 2-0-2A service is inaugurated in July, the same month that a \$4-million order is announced for the purchase of five Convair CV-340s. Meanwhile, the company asks the government to increase Pioneer's mail subsidy to cover the cost of operating the new equipment.

Convinced that the move would not be healthy and violates government aid rules (when the \$841,000 DC-3 profit is used to offset losses in mail subsidies), the CAB, in March 1953, pressures Pioneer into relinquishing its Martins and returning to DC-3s. The regulators also refuse the carrier's emergency plea for an \$886,000 grant to cover the cost of the reconversion. Constantly in financial difficulty thereafter and losing \$3,000 per day by August, Pioneer grounds its Martins and begins to seek DC-3s.

Three Douglas transports are briefly chartered from **Eastern Air Lines**, while nine more are leased from **United Air Lines**. All of these aircraft are chartered through Leeward Aero Services, but only nine will actually be operated. The CAB allows the airline to create a special subsidiary, Pioneer Aeronautical Services, to sell the Martins and their ownership is transferred to the new concern.

Chairman Long and President Smith meet with **Continental Air Lines** President Robert F. Six during the fall and begin to negotiate a merger. Six agrees to keep all of the former *Essair's* employees, combine the routes of the two carriers, put Long and Smith on his board, and hold on to Harding Lawrence, who will one day become chairman/CEO of **Braniff International Airways**. Pioneer agrees to the marriage on December 10. The nation's oldest local service carrier will be acquired for \$768,815 cash and \$390,000 in Continental stock. It will continue to operate as an independent subsidiary while the CAB studies the takeover.

The airline's final year is one of its best. New service is started to Mineral Wells, Snyder, and Breckenridge and even the financial picture is brighter. On June 14, the company leases a number of its formerly owned Martin 2-0-2As and places them into service on two routes: Houston to Midland via Austin and San Angelo and Dallas/Fort Worth to Lubbock.

Following much publicity generated by Vice President Lawrence's public relations department, Amarillo businessman Lester R. Dollison is designated the one-millionth passenger (cumulative) to be boarded on August 9, the company's ninth birthday. Government approval of the **Continental Air Lines** takeover is given on December 7.

After a decade of service, Pioneer disappears completely on April 1, 1955 when its integration into **Continental Air Lines** is completed. On merger day, 11 of the company's 23 destinations are exclusively served.

PIONEER AIRLINES (1): United States (1966–1968). The first Pioneer Airlines is formed at Springfield, Missouri, in late spring 1966 to offer scheduled third-level passenger and cargo flights to various destinations in Missouri, including Columbia and St. Louis.

Employing Cessna 205s and 402s, revenue services commence on June 20 and are maintained until 1968.

PIONEER AIRLINES (2): United States (1976–1986). Founded as Pioneer Airways at Denver on March 16, 1976, this small regional employs three Beech 99s to launch scheduled revenue service on January 10, 1977 over a route linking its Stapleton International Airport base with Ogallala, North Platte, and McCook. Enplanements for the year total 1,008.

Operations and traffic totals remains level in **1978** as David Forward is appointed president.

Chairman Howard "Bo" Callaway's carrier begins to replace the **Frontier Airlines (1)** on new Essential Air Service (EAS) flights at various points in March **1979** and inaugurates a period of expansion in keeping with the new free market philosophy of the Airline Deregulation Act of 1978.

Destinations visited now include Ogallala, North Platte, Lexington, Lincoln, Omaha, Sidney, Alliance, Chadron, Gillette, Sheridan, and Williston. The 594-mile nonstop Denver to Williston route is the longest segment flown by a U.S. commuter airline.

Passenger boardings skyrocket by 95.2% to 21,000.

With a fleet of 5 Beech 99s and 5 Fairchild Hiller FH-227s, Pioneer flies 25,017 passengers and 92,000 pounds of freight in **1980** to 11 cities in Nebraska, Colorado, New Mexico, North Dakota, and Wyoming.

During the year, Pioneer Airways is reformed and renamed and the fleet is enhanced by the addition of Swearingen Metros.

Chairman Callaway resigns in **1981** and is succeeded by David R. Forward, who also serves as president/CEO. Five more cities are added to the route network, including an EAS route from Denver to Santa Fe inaugurated in March.

Bookings skyrocket 123% to 55,872. Freight traffic is also up, by 22.8% to 113,004 pounds. To help handle the increase, the fleet is now expanded to 7 Beech 99s.

Upward progress continues, albeit with loss, in **1982**.

A Swearingen Metro freighter with two crew flies into the ground at Pueblo on December 7; both men die.

Enplanements increase 59.1% to 88,893 and cargo jumps a spectacular 176.5% to 312,500 pounds.

The fleet is altered in **1983**; gone are the FH-227s and 3 Beech 99s, replaced by 7 Fairchild-Swearingen Metro IIIs.

Passenger boardings dip 4.2% to 84,172, but cargo jumps 14.3% to 225,144 pounds.

In **1984**, Pioneer becomes associated with **Continental Airlines** and as a "Continental Express" commuter network partner begins coordinated services in January, feeding passengers to that recovering major at Denver.

Enplanements for the year total 156,387.

As **1985** begins, the company's 9 Fairchild Metro IIIs and 2 Beech 99s are operating to 14 markets in Colorado, Idaho, New Mexico, North Dakota, South Dakota, and Wyoming. One more Metro III joins the fleet as orders are placed for five Avions de Transport Regional ATR42s. In April, twice-daily flights are inaugurated from Denver to Sheridan, Wyoming, with one service continuing on to Billings, Montana.

A total of 159,905 passengers are flown on the year, a 2.2% boost.

Citing extreme price competition, with resulting low yields and traffic losses, the carrier, in the words of one official, simply "runs out of money" and suspends operations on May 19, **1986**. It is, thereafter, liquidated and its EAS routes are recontracted to **GP Express**.

PIONEER AIRLINES, LTD.: Kenya (1978–1985). Privately owned PAL is formed at Nairobi in the summer of **1978** to provide scheduled passenger services into the eastern part of Kenya along with ad hoc safari and aerial tour flights. Revenue service flights commence on October 13 with a fleet of 4 each Piper PA-31-310 Navajos and Cessna 402s.

Rising expenses and worldwide recession during the early **1980s** conspire to cause a loss of economic viability, forcing the commuter to shut down in **1985**.

PIONEER AIRWAYS. See **PIONEER AIRLINES (2)**

PIPER TWINAIR: United States (1966–1968). William "Bill" Piper's son-in-law Thomas Hartford, chairman of the Castanea Corporation, purchases Monmouth, New Jersey-based **Air Taxi Associates (Eastern Air Taxi)** in **1966**, renaming it in honor of the famous lightplane designer. Daily roundtrip commuter services, flown by Piper PA-23

Aztecs, PA-32 Cherokee Sixes, and PA-31-310 Navajos, are maintained between Monmouth County Airport and New York (JFK).

In **1967**, a feeder arrangement is signed with **Trans World Airlines (TWA)** and in **1968** the company is sold to Charles Robertson, who re-names it **Monmouth Airlines**.

PITCAIRN AVIATION: United States (1925–1930). Pitcairn Aviation is started, initially as a flying school and aircraft manufacturing concern, at Bryn Athyn, Pennsylvania, in **1925**. It is a subsidiary of the Pitcairn Company, holding company for Pittsburgh Plate Glass Company, and is operated by Harold F. Pitcairn, son of the holding company's owner. During the next two years, Pitcairn specializes in the manufacture of mailplanes, winning praise for his PA-1 through PA-4 Fleetwing mailplane series.

Early in **1927**, Pitcairn seeks the U.S. Post Office contract to fly mail over 792-mile Contract Air Mail Route (CAM) No. 19 from New Brunswick, New York, to Atlanta. The government award is made on February 28. To fly his \$3-per-pound contract, the aircraft builder now designs the PA-5 Mailwing and begins to construct 12 of them.

While the U.S. Commerce Department attempts to overcome a delay in lighting the airway between New York and Atlanta—a requirement if the company is to fly at night—Pitcairn spends the remainder of the year preparing for route inauguration. Between May and December, FBO and flight service bases are established at Richmond, Greensboro, Spartanburg, and Atlanta.

In October, the decision, based on the continuing delay in airway lighting, is made to sell 9 of the 12 Mailwings, beginning with 4 to **Texas Air Transport**. In late October, the company also bids on a 641-mile Atlanta–Miami via Jacksonville segment (CAM-25) pioneered by the inactive **Florida Airways Corporation**. That award is won on November 23, giving the new entrant the longest north-to-south route in the industry. During the year, the company hauls 16,051 sight-seeing and charter passengers and trains 118 pilots.

Early in **1928**, six Southern pilots and a Californian are hired, World War I veterans and barnstormers among them, and the initial workforce reaches 44. On April 30, the government's lighted airway, consisting of 2 million candlepower beacons located every 12 miles, is nearly completed and thus a 1,411-mile "eastern airline" is born.

At daylight on the May 1 launch date, Pitcairn finds so much mail on hand that it has to operate double schedules, both northbound and southbound. Two Mailwings take off from Atlanta's Candler Field that night heading north, while another pair leaves Hadley Field at New Brunswick for the Dixie flight. Crowds numbering in the hundreds turn out at the scheduled stops along the way—Washington, D.C., Richmond, Greensboro, and Spartanburg. On May 7, a PA-5 crashes into Stone Mountain, Georgia; pilot John Kytte escapes serious injury.

The first company fatality occurs on May 22 when pilot Ed Morrissey, en route to Washington from Richmond in a PA-5, becomes lost in heavy fog and crashes. Four days later, James R. Reid is killed when his Mailwing crashes at Richmond while attempting to make an emergency night landing. During the first month of service, a total of two tons of mail is transported. The first of four PA-6 Super Mailwings is placed on the route in July. Blown off course, pilot John Kytte survives his second "unscheduled" landing of the year on August 15 when his PA-5 hits a mountain near Old Fort North Carolina.

On December 1, CAM-25 is opened from Atlanta to Miami via Jacksonville, again in the daytime, pending completion of the lighted airway. Once the company's four new PA-6 Super Mailwings are in operation, the time required to get mail from Miami to New York shrinks to 16 hours from the railroad's 48 hours. Furman A. Stone is badly hurt when his PA-5 goes out of control over Waycross, Georgia, on December 16 and crashes.

For the eight months of flying time, the company's books show that 85,153 pounds of mail (no passengers) have been carried over 369,417 miles. The carrier has met 93% of its schedules and Pitcairn is the largest line operated by one company east of the Mississippi River.

Airline employment in 1929 totals 91 and the monthly payroll now averages \$16,000. During the spring, the company adds stops in Daytona Beach, Orlando, Tampa, St. Petersburg, and Macon. On March 1, a PA-5 suffers engine failure while taking off from Daytona Beach, Florida; pilot C. J. Faulkner is not hurt. When his PA-6 suffers engine failure over Blue Plains on April 25, pilot Verne Treat parachutes safely; the plane wreckage is repaired.

In early June, Pitcairn decides to concentrate on manufacturing planes, being intrigued by a new autogiro being developed in Spain. Determined to escape a hostile takeover by other operators, Pitcairn sells his company to the airline and aircraft manufacturing magnate, Clement M. Keys, for \$2.5 million on June 12.

Operations continue without inspiration, but with serious human loss. On July 8, pilot Thomas Gurley is killed when his PA-5 crashes at Berlin, New Jersey, when a spark from the aircraft's experimental 10-ft. aerial mast ignites the aircraft. Keys sells Pitcairn Aviation to his North American Aviation group on July 10.

After only a week with the company, pilot Vivien M. Jones, while test flying a PA-5 in aerobatics over Tampa, Florida, experiences wing failure; he is killed in the crash of the aircraft. Arriving from New York on September 13, pilot Syd Molloy is killed when his PA-6 crashes into the radio tower at Fort McPherson, Georgia. A total of 111,428 pounds of mail are carried during the year.

On January 17, 1930, Pitcairn's air transport concern is renamed **Eastern Air Transport**.

PITT AIRLINES: United States (1967–1969). Connellsville-based **Pitt Airways** is reformed and renamed on August 3, 1967. Employing a Beech 18, the company continues to provide passenger shuttles between Pittsburgh's two major airports. A Piper PA-31-310 Navajo is added in 1968, as are flights to local destinations ringing the western Pennsylvania metropolis. Planning to offer services to regional destinations, the company is renamed **Keystone Commuter** in 1969.

PITT AIRWAYS: United States (1965–1967). Pitt Airways is established at Connellsville, Pennsylvania, in early 1965 as the flight service division of the FBO Miller Aviation Center. Employing a Beech 18, Pitt inaugurates scheduled shuttle flights on March 1 linking Pittsburgh's two airports.

Operations continue apace until August 3, 1967, when the company is reformed and renamed **Pitt Airlines**.

PITTSBURGH AIRWAYS: United States (1929–1931). PA is formed at its namesake city in the fall of 1929 to offer multistop, scheduled passenger service to New York City via York and Philadelphia. Equipped with a pair of Travel Air 6000s, the carrier inaugurates flights on November 1.

The Ford Tri-Motor 4-AT-54 is purchased from **Pennsylvania Airlines** on May 27, 1930, but the company's newest and largest aircraft is lost in a crash at Jennerstown, Pennsylvania, on December 20. Travel Air frequencies are continued in 1931 and on October 13 Pittsburgh joins with **USAirways** to form **United Aviation**.

PLANEMASTER SERVICES. See **PLANEMASTERS, LTD.**

PLANEMASTERS, LTD.: Dupage Airport, West Chicago, Illinois, 60185, United States; Phone (630) 513-2100; Fax (630) 377-3283; Year Founded 1970. Planemasters, Ltd. is established as a fleet management concern in 1970. During the late 1980s, the decision is taken to not only provide equipment to others, but to provide FAR Part 135 charters of its own under the name Planemaster Services. Revenue services duly begin and in 1989 the company operates 1 owned Beech King Air 90, along with 2 leased Cessna 208 Caravan Is and 3 C-208Bs. One leased C-208 is removed in 1990.

Another chartered C-208B is acquired in 1992 followed by a fifth in 1996. John McHugh is president in 1997–1999 and all-cargo charter services continue to be operated by 6 Caravan Is.

Meanwhile, in addition to the original King Air 90, the remainder of the fleet has grown to include 2 each IAI-1125 Westwind Astras, Cessna 500 Citation Is, C-525 Citation Jets, and Beech King Air 100s, as well as 1 each C-501 Citation I/SP, C-550 Citation II, and Beech King Air 90A.

While taking off from Warsaw, Indiana, on a Part 135 cargo flight to Jeffersonville, on January 19, 2000, a Cessna 208B notices a snow plow coming toward him on the runway. Unable to either abort or keep flying, the pilot immediately puts the plane back down and impacts the airport perimeter fence, coming to rest on a railroad track embankment. Although the aircraft is badly damaged, the flyer is able to walk away.

PLANET AIRWAYS: 1050 Lee Wagener Blvd. Fort Lauderdale, Florida 33315, United States; Phone (954) 359-8600; Year Founded 1997. Planet Airways is founded by Peter Garrambone and Orlando entertainment mogul Louis Peariman in the summer of 1997. On September 25, an application for an operating certificate as a public interstate charter airline is filed with the DOT.

The actual start-up process develops slowly, with expensive hearings and petitions between company lawyers and the government consuming most of the next two years. Certification is finally received on December 15, 1999.

In February 2000, arrangements are completed for the acquisition of a hush-kitted Boeing 727-23, as two more trijets are sought and Tony De Camillis becomes president. Chairman Garrambone informs the press that the company will go public later in the year to acquire the capital needed to acquire a travel agency and to expand the jetliner fleet.

During the summer, the carrier still has only one Boeing, without titles, which it flies on a subservice for **Air D'Ayiti, S.A.** between Miami and Port-au-Prince. Arrangements are, however, completed for the purchase of two B-727-224As.

It is reported in early October that the airline has painted its B-727-23 in full colors and applied titles.

When Planet is unable to receive its second B-727, a Dash-224A, as scheduled on December 1, it leases the former "Bush-Cheney" B-727-225A campaign plane from **Miami Air International**.

PLAS (PRIMERA LINEA AEREA SANTAFECINA, S.A.): Argentina (1958–1965). PLAS is formed at Santa Fe in 1958 to fly roundtrip third-level service to Buenos Aires via Rosario with 2 used Lockheed Model 10E Electras and 2 Model 18 Lodestars leased from **Norsur (Compania Argentina de Aeronavegacion, S.A.)**. Before the end of the year, the carrier enters into a cooperative agreement with **ALA (Aerotransportes Litoral Argentina, S.A.)**, which promises to provide support and access to several of its routes into the northeastern part of the country. The carrier is liquidated in 1965 after ALA elects to join forces with **Austral Airlines (Compania Argentina de Transportes Aereos, S.A.)**.

PLATINUM AIR CHARTER EXECUTIVE JET, LTD.: Operations Building, RAF Northolt, West End Road, Ruislip, Middlesex, England, HA4 6NG, United Kingdom; Phone (020) 8842 4400; Fax (020) 8845 5667; http://www.platinumair.com; Year Founded 2000. Platinum Air is established in July 2000 and is the first air taxi and air charter concern to operate from the Royal Air Force Base Northolt, located N of London (LHR) on the A40 motorway. A mixed fleet of 4 British Aerospace BAe Jetstream 31s, 1 Cessna Citation II biz jet, and 1 each Beech King Air C90 and Beech Super King Air 200.

Premium Service charters commence on August 21 to a number of European destinations, including Amsterdam, Geneva, Nice, Paris (CDG), Frankfurt, Milan, Malaga. Cargo and express service is also available.

PLUNA (PRIMERA URUGUAYAS DE NAVEGACION AEREA, S.A.): Colonia 1013-1021, Casilla de Correo 1360, Montevideo, Uruguay; Phone 598 (2) 930 273; Fax 598 (2) 921 747; http://www.

pluna.com.uy; Code PU; Year Founded 1935. Local Montevideo investors, led by Alberto Jorge Marquez and his brother, create this carrier in September 1935. Orders are placed for British-made aircraft and the first two aircraft received are de Havilland DH 90 Dragonflies. Christened *Churrinche* and *San Alberto*, they inaugurate service from Montevideo to Artigas and Rivera on November 20, 1936.

The first government subsidy, £6,000, is received in November 1937 and is employed as a down payment on two ex-British Airways, Ltd. (1) DH 86s, which are received in 1938. They are named *Santa Rosa de Lima* and *San Felipe y Santiago* and are placed on the domestic frequencies.

Service is maintained during 1939–1940 and in 1941 the fleet is strengthened through the addition of an ex-Air France Poetz 621. The government passes legislation in January 1943 requiring a reorganization of the airline that gives the state 49% interest. In February, the January law is set aside, but the carrier's subsidy is ended. On March 15, PLUNA ceases operations.

PLUNA is reborn on September 15, 1945. Capitalized at one million Uruguayan pesos (UP) or \$500,000, its major shareholder is the government (83.5%). Two former Pan American Airways (PAA) Douglas DC-2s and four ex-USAAF C-47s (military DC-3) are acquired and placed in service. Additional C-47s are received in 1946 and converted to DC-3 civil standard.

Capitalization is increased to UP9 million on December 9, 1947 and the government's shareholding is increased to 94.4%. A DC-3 begins the carrier's first international service on May 4, 1948, flying to Porto Alegre, Brazil. Frequencies are maintained in 1949–1950. The remaining private shares are acquired by the government in 1951 and orders are placed for four de Havilland DH 114 Herons. Service is launched to Asuncion via Salto.

The Herons enter service in 1953. Orders are placed for three Vickers Viscount 769Ds in 1955. In 1956, thrice-daily DC-3 services are started to Buenos Aires and weekend flights are offered to the resort of Puente del Este. The Viscounts begin service in 1958, gradually replacing the Herons, which are sold in England over the remainder of the decade.

The Viscounts are placed on the Buenos Aires shuttle in 1961. PLUNA's only fatal accident occurs on October 9, 1962. While taking off from Carrasco Airport for a test flight, a DC-3 with 10 crew crashes; there are no survivors.

Two (later three) ex-Alitalia, S.p.A. Viscount 745s join the fleet in 1967 and late in the year, the company takes over CAUSA, its aircraft, and route network. In 1968–1969, the fleet is altered to include four Viscounts, two Fokker F-27s, and two leased Fairchild Hiller FH-227s (modified American-made F-27s). In December of the latter year, a new Boeing 737-A3 is acquired from its manufacturer. It is painted in a bright orange livery.

Currency and other economic difficulties cause severe problems in 1970–1972, not the least of which is suspension of the Rio de Janeiro and São Paulo routes.

The three Viscount 769Ds are sold and enplanements in 1973 are only 119,200. Airline employment in 1974 is 427. In order to concentrate greater effort on the Buenos Aires route, PLUNA is now made responsible only for international services. Domestic flights are turned over to the Air Force's transport squadron **Transporte Aereo Militar Uruguayano (TAMU)**, along with the Fokkers and Fokker-Fairchild. The fleet flagship B-737-A3 is sold to the Honduran airline **TAN (Transportes Aereas Nacionales, S.A.)**, which promptly repaints it.

Passenger boardings soar 60% to 298,000 and freight traffic skyrockets by 100%.

A Vickers Viscount 769D with 5 crew and 52 passengers, goes off the runway upon landing at Buenos Aires on May 11, 1975; there are no serious injuries reported.

Although three former **VASP Brazilian Airlines, S.A.** Viscount 827s are added, loss of the domestic network causes bookings to adjust downward, dropping to 290,000.

The workforce in 1976 is 544. The fleet now includes 2 Viscount 745Ds and 3 Viscount 827s. Passenger boardings remain level at 290,000, but cargo increases 72.4%.

Two additional Viscount 745Ds join the fleet in 1977. While on final approach to Salto-Nueva Hesperid on June 20, an EMB-110C with 2 crew and 13 passengers flies too low, strikes trees in an orange grove, and crashes (5 dead).

In November 1978, two Boeing 727-30QCs are purchased from **Deutsche Lufthansa, A.G.** Bookings remain level.

The three Viscount 827s are retired in 1979. Passenger boardings jump 82.6% to 356,672 and cargo skyrockets 185%.

The workforce in 1980 totals 487. Bookings dip 1.8% to 350,200, and freight drops 4.2% to 704.8 million FTKs. The fleet is increased in 1981 through the addition of three B-727-2A3As and the retirement of all remaining Viscounts.

Enplanements still decline, however, to 332,097, due largely, as in the previous year, to increased fuel bills and the world economic recession.

The employee population in 1982 is 836, a 0.7% boost. A B-707-387B is chartered from **Aerolineas Argentinas, S.A.** to open a single, weekly international service from Montevideo to Madrid.

As the result of the opening of 2 river bridges between Uruguay and Argentina, passenger boardings fall 12.5% to 256,000 and freight is off 1% to 1.04 million FTKs.

Airline employment in 1983 falls to 823. One B-727-30QC is retired. Bookings drop another 7.1% to 231,317, but cargo is up by a very healthy 45.2% to 1.52 million FTKs.

Only five new employees are hired in 1984 and the second B-727-30QC is sold. It is replaced with three new B-737-2A3As. Passenger boardings jump 5% to 252,000 and freight rises 27% to 1.94 million FTKs.

The workforce is increased 2.9% in 1985 to 851 and a second B-707-387B is leased from **Aerolineas Argentinas, S.A.** An agreement is reached with **Transavia Holland, N.V.** to lease one B-737-2A3A every summer.

Freight drops 5.4% to 1.83 million FTKs, but enplanements rise 2.3% to 255,000.

Four employees are laid off early in 1986 as the carrier encounters significant financial and administrative difficulty. Still, a ground handling joint venture begins with **Aerolineas Argentina, S.A.** on the Montevideo–Buenos Aires shuttle.

Traffic figures are released through June showing a 12.1% increase in passenger boardings to 151,720 and a 13.3% increase in freight 1.1 million FTKs. In October, PLUNA negotiates a management contract with **Ansett Airlines of Australia (Pty.), Ltd.**

Operations continue apace in 1987. In March 1988, an agreement to integrate routes is signed with **LAB (Lloyd Aero Boliviano, S.A.)** and **LAP Paraguayan Airlines, S.A.** Discussions commence with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** in September aimed at the possible acquisition of shareholding by the Spanish flag carrier. The company's B-707-387B is banned from the Montevideo–Madrid route on December 31 for lack of a hush kit.

In 1989, the fleet includes 1 leased B-707-387B, 1 owned B-707-387B, and 3 owned B-737-2A3As.

In 1991, a B-737-2A3A is chartered to **Transavia Airlines, N.V.** of Holland and a Douglas DC-8-61 is leased. The company plans privatization and discourages the formation of new domestic carriers. In March, a joint venture agreement is signed with **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)**; employing two leased DC-10-30s, the Brazilian carrier undertakes international flights for the Uruguayan line from Montevideo to Miami and Madrid.

The DC-8-61 is returned in 1992, the B-707-387B is retired, and the year-old joint service with the Brazilian airline ends. Still, the DC-10-30s are retained on lease and operates to the previous destinations plus Rio de Janeiro.

Enplanements this year total 448,840 and revenues are \$68.2 million. Expenses are higher and there are losses: \$43,133 (operating) and \$8.6 million (net).

The Dutch return the carrier's "Baby Boeing" in **1993**. Chairman Gustavo Cola Cancela's 904-employee company provides scheduled passenger and cargo services from Montevideo to Asuncion, Buenos Aires, Porto Alegre, Punta del Este, São Paulo, Rio de Janeiro, and Santiago de Chile. With the removal of the Stratoliners, PLUNA now enters into a contract with **Spanair, S.A.** for flights to Madrid from Montevideo, employing the latter's B-767-3Y0ERs.

During the year, the government seeks to privatize the carrier. In October, it announces that, of its four prequalified bidders, only a consortium led by **VASP Brazilian Airlines (Viacao Aerea de Sao Paulo, S.A.)** has not dropped out. VASP's bid to acquire 51% majority ownership is rejected by the government, which pledges to attempt to privatize the airline again in the new year.

Passenger boardings for the year jump 15% to 528,047 and freight climbs 1.9% to 5.52 million FTKs.

During the spring of **1994**, the government again welcomes bids for the privatization of the airline. Only an international consortium created by the Argentine corporation Tevicom Fapeco and the local Uruguayan investors Cipreses and Roberto Cobelli makes an offer: \$2 million in cash and an assumption of \$20 million in liabilities in exchange for 51% share capital.

Once the offer is accepted in July, the new partners retain **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** as a management partner, without investment; the Brazilian major agrees to transfer over a pair of DC-10-30s, in a new color scheme, with which PLUNA can resume its long-haul international frequencies.

Enplanements fall to 499,079. Although there is a \$5.45-million operating profit, a huge \$16.39-million net loss is taken.

The workforce is reduced by a dramatic 52.5% in **1995** to 485. Customer bookings fall 4.7% to 476,676 and 3.6 million freight FTKs are operated. Revenues swell 7.5% to \$65.6 million and costs fall a slight 0.4% to \$55.34 million. Operating gain doubles to \$10.26 million and the net loss is cut to \$12.04 million.

Markets visited from Montevideo in **1997** include Asuncion, Buenos Aires, Madrid, Melo, Paysandu, Porto Alegre, Rio de Janeiro, Santiago de Chile, São Paulo, and Tel Aviv.

In February, the company and **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** agree to operate joint offices. VARIG will provide local management and sales for PLUNA in Brazil, Chile, and Paraguay while PLUNA reciprocates in Uruguay.

A B-737-2A3A in May is the first owned plane painted in the airline's new white, navy blue, and gold livery.

In early in **1998**, under the new arrangement with the Brazilian major, PLUNA subleases a VARIG B-737-2Q8A. The aircraft enters service wearing a colorful livery designed by Carlos Pez Vilaro. Flights continue during the remainder of the year.

At the beginning of **1999**, Managing Director Nery A. Trois oversees a workforce of 635.

Although traffic figures are not reported, a \$3-million net gain is posted.

Service is maintained in **2000**. Weekly B-737-200 roundtrips are resumed on October 26 between Montevideo and Florianopolis, Brazil.

POCONO AIRLINES: United States (1965–1990). Pocono Airlines is founded by Walter Hoffman in late spring **1965** and inaugurates Beech 18 daily roundtrip scheduled flights on June 15 over a Mount Pocono, Pennsylvania, to Philadelphia route. Within two years, service is also extended to New York City.

Under an associate contract, Pocono becomes an "Allegheny Commuter" on July 15, **1968** and transfers to Wilkes-Barre–Scranton International Airport at Avoca, Pennsylvania. The company will hold its own for the remainder of the decade and begin to grow in the early **1970s**. By **1974**, enplanements are 33,301.

Airline employment in **1975** stands at 37.

The carrier's 3 Beech 99's board 42,694 passengers, a 22% increase. Freight is also up, by 44% to 337,000 FTKs.

The employee population is increased by 8.1% in **1976** to 40. The company's 3 Beech 99s are able to boost passenger boardings by 7% to 45,499. Cargo does just as well, also rising 7%.

Operations continue apace in **1977** and Pocono begins to expand following passage of the Airline Deregulation Act in **1978**. Destinations now served include Williamsport, Philadelphia, Newark, and New York (JFK). The fleet comprises 2 Fairchild-Swearingen Metro IIs, 2 Beech 99s, and 1 Piper PA-31-310 Navajo.

Enplanements total 42,240.

The number of employees is increased 25% in **1979** to 65.

Passenger boardings accelerate 47.2% to 80,000 and freight traffic is up by 16.4% to 39,000 pounds. On revenues of \$2.55 million, expenses are held to \$2.17 million. As a result, a \$385,000 operating profit and \$291,000 net profit are earned.

Having enjoyed success the previous year, Pocono Airlines Chairman W. E. Hoffman increases his workforce by 10.8% in **1980** to 72 and adds 2 Swearingen Metro IIIs. Seeing a need for additional capacity, Hoffman places an order for three SAAB-Fairchild SF340s. Passenger boardings increase by 9.3% to 87,166 and cargo skyrockets an unbelievable 218.4% to 92,000 pounds. The year's revenues are up 37% to \$3.5 million, but a 53% jump in expenses (led by higher fuel bills) to \$3.47 million leaves an operating profit of only \$37,000.

Although traffic falls off sharply during the last third of **1981** due to the PATCO air traffic controllers' strike and subsequent ATC restrictions, the small regional is able to record a 6.6% rise in enplanements to 92,875. Freight carriage is also successful, rising 76.6% to 221,697 pounds. Orders are placed for another Metroliner plus three SAAB-Fairchild SF340s.

Airline employment in **1982** stands at 65 and the fleet still comprises 2 Fairchild-Swearingen Metro IIs and 2 Beech 99s. One of the latter slams into the runway and skids to a stop during its takeoff from New York (JFK) on January 15; one passenger is injured.

Bookings increase only 1% to 93,763, but cargo grows 20.2% to 266,389 pounds.

Traffic rebounds strongly in **1983**. The SF340 order is cancelled when Nord 262s become available.

Passenger boardings in this year rise 28% to 120,419, allowing the carrier to add its ordered Metroliner. Freight plunges 58.1% to 112,000 pounds.

Employment grows by 6.5% in **1984** to 115 and the fleet includes 3 Metro IIs and 5 Nord 262s, one of which is received during the year. A new headquarters and training center is opened at Wilkes-Barre–Scranton International Airport and commuter service is inaugurated between the company's base and Washington, D.C. Passenger traffic surges 69% to 191,938 passengers flown. Cargo climbs 32.8% to 148,000 pounds.

The payroll is increased another 7.8% in **1985** to 124 and the fleet is expanded by the addition of 2 more Nord 262s. At year's end, service is halted between Wilkes-Barre and Newark.

Customer bookings ascend 9.6% to 210,311, but freight declines 16.5% to 123,000 pounds.

At the beginning of **1986**, flights begin to Washington, D.C. (DCA) and Philadelphia from Newport News. When the bankrupt **Air Florida** emerges from Chapter XI in August under the name **Jet Florida**, it acquires Pocono in a hostile takeover.

Passenger boardings drop 7% on the year to 195,000. The fleet in **1987** includes 7 Nord 262s and 1 Dornier 228-212. Customer bookings swell to 218,966.

Unable to maintain equilibrium in a period of managerial and financial upheaval, the 24-year-old "Allegheny Commuter" partner declares Chapter XI bankruptcy on May 25, **1988**. Two months later, when its contract with **USAir** expires and is not renewed, the small regional ceases operations. Its fleet of 7 leased Nord 262s is repossessed.

Pocono, like other contemporaries in a similar situation, does not disappear. Rather, it is reformed in early **1989** and negotiates a contract from **Trans World Airlines (TWA)** to provide feeder service for that major at Boston, New York (JFK), and Washington, D.C. (DCA). A fleet

of five (later nine) leased Fairchild Metro IIIs is obtained and "TWExpress" revenue flights commence on March 8. Thrice-daily weekday service is initiated in October from Philadelphia to Washington, D.C. (DCA); weekend frequencies are added on the route in November.

A total of 100,828 passengers are carried during the remainder of the year to 11 cities in 5 states. Unhappily, costs again exceed expenses and a \$3.5-million loss is suffered.

On January 5, 1990, Pocono returns to Chapter XI and shuts down, returning all of its Fairchild Metro IIIs to the airline's lessors. With an unpayable \$4.5-million bank loan barring the way, the airline is unable to restart operations.

POHJANMAAN LENTO, O/Y: Finland (1991-1992). This new regional carrier is formed at Vantaa in 1991 to provide scheduled flights to Helsinki and other domestic locations. The initial fleet comprises 2 Beech 99s, 1 Cessna 404, and 1 Catpass King Air 200. The Cessna is withdrawn in early 1992 but, unable to maintain viability during a recession, the entire company folds before year's end.

POINT AIR, S.A.: France (1980-1987). Le Point-Air, S.A. is established at Aeroporte de Lyon-Satolas, France, in late fall 1980 to provide passenger charter flights from Lyon and Basel to destinations in Europe, Africa, and Asia. Employing a Boeing 707-321B, inclusive-tour revenue services are started in December to what will become the carrier's two main destinations: Burkina Faso and Reunion Island.

Operations, supplemented by the addition of a Douglas DC-8-61, continue until Point Air stops flying in 1987.

POINTS OF CALL AIRLINES, LTD.: Canada (1985-1990). Established at Edmonton, Alberta, in 1985 with Jan Backe as president, Points of Call floats its initial stock offering on the Alberta Stock Exchange in June 1987, raising sufficient share capital with which to acquire a former **Air New Zealand, Ltd.** Douglas DC-8-52 in September. Delivered to Edmonton on April 9, 1988, the hush-kitted Douglas is later transferred to a new operating base at Vancouver.

The carrier's operating certificate is received in May and on behalf of Fiesta Holidays, Ltd., charter service is inaugurated from Vancouver, Edmonton, and Calgary to Amsterdam on June 28. During the winter holiday season, the carrier undertakes charters to Costa Rica, Cuba, the Dominican Republic, and Mexico, all via Miami.

Vancouver to Honolulu flights begin in March 1989. During the summer, Manchester joins Amsterdam as a European "point of call." Unable to weather the recession, the carrier ceases operations in January 1990.

POLAR AIR CARGO: 100 Oceangate, 15th Floor, Long Beach, California 90802, United States; Phone (562) 436-7471; Fax (562) 436-9333; <http://www.polaraircargo.com>; Code PO; Year Founded 1993. Created to provide lift for a few freight forwarders serving the Pacific Rim, PAC is organized at Seattle in January 1993. It is a partnership between NedMark Transportation Services (originally established by Edwin H. "Ned" Wallace and Mark West to advise **Air Hong Kong, Ltd.**) and minority shareholders **Southern Air Transport (SAT)** and **Polaris Aircraft Leasing**, owned by General Electric.

Management is composed of several former executives of **The Flying Tiger Line**, led by Chairman/CEO Wallace and President/Chief Financial Officer West, who now begin to rebuild the old Tigers freighter operation. The company is equipped with 4 leased Boeing 747-122Fs and initially elects to limit its market to freight forwarders and international agents, excluding shippers.

The initial Jumbojet flight is made on April 25, a charter from New York (JFK) to Vienna via Prestwick, Scotland. Under a marketing agreement signed with **Aeroflot Russian International Airlines (ARIA)**, an all-cargo test flight is made on May 13 from New York to Moscow via Shannon, Ireland. Practice freight services to such Oriental destinations as Hong Kong and Singapore commence simultaneously, also flown under SAT's operating certificate.

In July, cooperative flights are undertaken weekly with **Aeroflot Russian International Airlines (ARIA)** over a route from New York (JFK) via Shannon to Moscow and Khabarovsk, continuing on to Hong Kong. At the same time, weekly all-cargo service is inaugurated from JFK to Sydney, Australia, via Los Angeles.

Two additional frequencies begin in September, one each to Prestwick, Scotland, and to Singapore and in November the decision is made to advance out from under the SAT certificate and operate the company under its own authority. Although traffic data are incorporated into that of SAT, it is reported that the first year's revenues are \$66 million.

Airline employment stands at 258 in 1994 and in March the corporate name of NedMark is changed to Polar Air Cargo, Inc. An application is made for an all-cargo carrier operating certificate, which is duly received from the DOT on July 4. Also during the month, the FAA certifies the carrier as a supplemental air carrier.

In September, **Southern Air Transport** withdraws from the Polar arrangement, leaving the new cargo carrier to charter its 5 B-747-122Fs, 3 B-747-121Fs, and 1 each B-747-124F and B-747-132F from **Polaris** and to operate them with its own crews. Shareholding is now divided between Wallace and West (51%) and General Electric (49%).

Plans are made to inaugurate services to South Korea, the U.K., Taiwan, Hong Kong, and Australia and to acquire two more Jumbojets, which will make the airline the largest all-747 freighter operator in the world.

A total of 196.6 million FTKs are operated and revenues exceed \$170 million.

The workforce grows to 475 in 1995. The company's 12 freighters operate 1.1 billion FTKs. Revenues well exceed costs and there are nice profits: \$21.94 million (operating) and \$8.29 million (net).

There is no change in the employee population during 1996. Early in the year, the DOT advances the carrier into the National ranking. Two B-747-123Fs are leased from **Arkia Israeli Airlines, Ltd.** The three-year-old weekly frequency from New York to Prestwick, Scotland, is transferred down to London (LHR) and increased to thrice weekly.

Cargo increases 16.1% to \$1.27 billion FTKs and operating income accelerates 10.8% to \$260.18 million. Expenses are almost double that, up 19.2% to \$253.65 million. Operating gain slides to \$6.52 million and the net profit is down to \$3.37 million.

With a fleet of 19 Jumbojet freighters, in early 1997 Polar operates to 19 destinations on 5 continents. During the first quarter, routes are stretched to Bangkok, New Delhi, Manila, and Dubai.

Founded by refugees from the now defunct **The Flying Tiger Line**, the company, on April 15, becomes the third U.S. all-cargo carrier to undertake transpacific flights to Japan. The company joins **Federal Express** and **UPS (United Parcel Service)** by offering weekly roundtrips from the U.S. West Coast to Osaka. Several of its managers in Japan have had long experience in that nation with **The Flying Tiger Line**.

On April 17, Polar, which already serves London (LHR) thrice weekly, introduces twice-weekly B-747-100F frequencies to Manchester.

Beginning in early May, 2 B-747Fs transport 18 Indy race teams, their vehicles, and associated equipment, to Rio de Janeiro, Brazil, in a move valued at \$45 million. After the May 11 race, the teams are returned to their point of origin, Rickenbacker International Airport at Columbus, Ohio.

Flights from New York to New Delhi via Amsterdam are increased on July 31 from one per week to three. On August 7, direct service is resumed from New York to Prestwick, Scotland, thrice-weekly.

Scheduled authority to South Africa is received from the DOT on December 10.

A total of 1.92 billion FTKs are operated, a 40% increase over 1996. Operating revenues increase 32% to \$343.54 million, while expenses jump 33% to \$337.27 million. The operating profit dips slightly to \$6.26 million, but a \$2.48-million net loss is suffered.

At the beginning of 1998, PAC is the 17th largest airline in the world in terms of freight carried. On February 17, the Asian marketing team is significantly boosted by the addition of two company vice presidents tasked to oversee operations in that region.

In April, under authority received the previous December, Polar launches weekly B-747F service from the U.S. to Johannesburg via Amsterdam, Cairo, Nairobi, and Harare. This service represents the only scheduled flights to the African continent by an American all-cargo airline.

Despite moves into new markets, the Asian economic downturn has an impact; during the second quarter, \$10.4 million is lost on revenues of \$70.4 million.

The fourth largest all-cargo carrier in the world, Polar, on August 22, inaugurates twice-weekly B-747F return service from Miami to Lima, Peru.

Continuing its work in providing the only scheduled freighter service between the U.S. and the African continent, Polar, in mid-October, boosts its frequencies to Johannesburg from weekly to twice weekly.

DOT Secretary Rodney E. Slater praises the company's African activities at his November 16 news conference on "Safe Skies for Africa."

The year closes with a flourish as, on December 2, twice-weekly B-747F all-cargo service is launched from Manila to New York (JFK) via Tokyo (NRT), Anchorage, and Chicago (ORD). The new service places the airline in a position to respond to shifting patterns of international air freight demand on a global basis.

In a press release put out on December 18, the company announces that Ned Wallace and Mark West, the company's cofounders and its chairman and president, respectively, will both retire at the end of the year.

During the 12 months, cargo traffic falls 23.64% to 1.44 billion FTKs. Revenues drop 10% to \$309.38 million; although costs are off 0.5%, they still total \$335.91 million. The previous year's operating profit becomes a \$26.52-million loss, while the net loss grows to \$38.35 million.

Recently the chief financial officer of Caliber Systems (now a part of **Federal Express**) and now a Polar board member, Louis Valerio succeeds Wallace and West on January 7, 1999 and given their titles.

While continuing its effort to reverse its fiscal losses, PAC is able to benefit from a decision made at its founding. With more freighters available than any other carrier in the Civil Reserve Air Fleet, Polar is well situated to support the U.S. military when its participation in NATO's Operation Allied Force begins on March 24.

As the air campaign against targets in Yugoslavia designed to force Belgrade to change its policies in Kosovo province intensifies in May and June, PAC is able to operate 100 missions from U.S. bases to Europe. This number, representing a substantial increase over PAC's normal traffic, has a significant positive impact on company ledgers.

Robert E. Martens is appointed president/chief operating officer in July.

With the assistance of the National Mediation Board, the carrier and its ALPA-represented pilots are able to agree on a new contract, which is announced on October 2.

It is announced on October 7 that the company has withdrawn one of its B-747-122Fs and replaced it with a pair of chartered B-747-2U3BFs, once flown as passenger planes by **Garuda Indonesia**.

Late in the fourth quarter, Polar enters into partnership air cargo venture with **Air New Zealand, Ltd.** on flights from the U.S. to the South Pacific.

Cargo traffic this year falls 4.3% to 1.4 billion FTKs. Revenues are up 2.1% to \$315.99 million, while expenses drop 8% to \$308.96 million. The previous year's operating loss becomes a \$7.02-million gain, while the net loss "improves" to \$8.27 million.

The workforce totals 444 at the beginning of 2000, a 14.1% decline over the previous 12 months. The B-747 fleet now includes 1 each Dash-124F, Dash-132F, Dash-283BF, Dash-245F, Dash-259F, and 2R7F, 2 each Dash-123Fs, Dash-2U3BFs, and Dash-249Fs, 3 Dash-121Fs, and 5 Dash-122Fs.

The B-747-132F is withdrawn on March 30 and sold for scrap.

When CEO Louis J. Valeiro departs on May 26 to pursue other interests, he is succeeded on an interim basis by Chairman Eric M. Dull. During the summer, a PAC Charter Services division is set up to market charter and aircraft lease opportunities.

One of the B-747-200Fs also operates under an ACMI contract for **Finnair O/Y**, flying one weekly roundtrip between New York (JFK) to Helsinki via Goteborg and a second from New York (JFK) to Helsinki via Prestick and Goteborg.

In an effort to formalize its nonscheduled operations, a separate business unit, PAC Charter Services, is established on September 7. Under the direction of Vice President Lynn Stauffer, the new organization begins to provide aircraft leases and full planeload charters to the air freight forwarding industry. Previously operated by **Tower Air**, a sixth B-747-200F, wearing Polar's new color scheme, is added on September 15. Also in September, **Evergreen International Airlines** Vice Chairman Ronald Lane is lured away to become Polar's chief marketing officer while **America West Airlines** Vice President-Flight Operations Lee Steele becomes vice president and director of flight operations.

The first of five ordered B-747-46NFs is delivered in a new color scheme in Seattle ceremonies on October 16 and is immediately flown to the company's Long Beach base. Leased on a long-term basis from GECAS, the new *Spirit of Long Beach* is placed into service on routes from New York (JFK) and Chicago (ORD) to Hong Kong, Taiwan, and Tokyo (NRT).

The Jumbojet fleet is further expanded in November. Two more B-747-200Fs enter service, one each on November 3 and November 21, while two additional B-747-46NFs are also received, one on November 12 and one on November 16. The Dash-46NFs fly primarily to Tokyo (NRT), Taipei, and Hong Kong. Meanwhile, all of the Dash-200Fs are placed on services to the South Pacific and Europe, while the Dash-100Fs fly to South American and on nonscheduled charters.

As December ends, arrangements are completed for the initiation, on January 11, of twice-weekly return flights between the U.S. and Kuala Lumpur, Malaysia.

POLAR AIRLINES: United States (1974–1980). Polar Airlines is established by Timothy Ewell at Anchorage, Alaska, in 1974 to offer scheduled third-level service, on an exemption basis, to Kenai. Charter operations are also undertaken. Permanent authority for the route is sought from the Civil CAB. Regional flights begin to Valdez, Gulkana, Big Delta, Fairbanks, Tok Junction, Tanacross, and Northway in 1975–1977 and the fleet comes to include a mix of Aero Commander 680s, Fairchild PC-6s, Piper PA-31-310 Navajos, a Beech 18, and several Cessna lightplanes.

Although statistics are not available for 1978, those reported in 1979 show that the company's 4 Piper PA-31-350 Navajo Chieftains, Cessna 310, and Cessna 206 hauled 26,000 passengers and 440,400 pounds of freight.

In financial difficulty as the result of the fuel oil crisis at decade's end, Polar Airlines also encounters regulatory obstacles. When the FAA revokes the carrier's certificate on August 25, 1980, the airline is shut down.

POLAR ALASKA ENTERPRISES. See **POLAR INTERNATIONAL AIRLINES**

POLAR INTERNATIONAL AIRLINES: United States (1986–1989). George E. Matz sets up Polar Alaska Enterprises at Fairbanks, Alaska, in early 1986 to undertake scheduled passenger and cargo services to local and regional communities, including those in support of the energy industry. Equipped with Cessna and Beech lightplanes and a Fokker Fairchild F-27B, Matz inaugurates services in March linking the company's base with Anaktuvuk Pass, Nuisqsut, Prudhoe Bay, and Prudhoe Bay-Barter Island. The company name is changed to Polar International Airlines in December.

Operations continue apace until the carrier goes out of business in 1989.

POLARFLY, A.S. *See* WIDERØE'S FLYVESELSKAP, A.S.

POLARIS AIR TRANSPORT, A.S.: Norway (1966–1969). PAT is established at Oslo in 1966 to provide both passenger and cargo services. Revenue operations begin with a fleet of 3 Convair CV-240s and 2 Douglas DC-3s and continue until 1969.

POLARIS CHARTER COMPANY, LTD. *See* WARDAIR CANADA, LTD.

POLARWING, O/Y: Finland (1990–1995). Polarwing is established at Helsinki in 1990 to offer all-cargo flights to both domestic and regional destinations, primarily in Scandinavia. Revenue operations commence with 3 leased Cessna 406 Caravan IIs. The fleet is enhanced in 1991 by the addition of a Beech 1900C.

The new unit is unsatisfactory and is withdrawn in 1992. Operations continue in 1993, but in 1994, only a single Caravan II is dispatched. Flights cease in 1995.

POLET AIRLINE. *See* POLYET AIRLINE.

POLIOT CHERNOBYL: Russia (1994–1996). Following a suspension of government funding, an air transport arm of GosNII-GA, the State Scientific and Research Institute for Civil Aviation, is set up at Moscow's Sheremetyevo Airport in 1994 to earn income to continue the development and testing of various projects. V. A. Goriatchev is put in charge and he inaugurates international passenger and cargo charter services with a fleet that includes 1 each Tupolev Tu-154M and Tu-134, 1 Ilyushin Il-62, 2 Il-76s, and 4 Il-18s, plus 4 Antonov An-12s and 1 An-30. Flights continue until 1996.

POLISE AIR: Russia (1993–1996). Polise Air is founded at Talagi Airport in Arkhangelsk in 1993 to fly scheduled services to Moscow. R. A. Danin is general director and he inaugurates flights with a single Tupolev Tu-134. Operations continue until 1996.

POLISH AIRLINES. *See* LOT POLISH AIRLINES, S.A.

POLLOCK AIRLINES. *See* ALASKA AIRLINES

POLNIPPON CARGO, S.A. *See* POLONIA AIRLINES, S.A.

POLO AVIATION, LTD.: Urchinwood Manor, Congresbury, Bristol, England, BS19 5AP, United Kingdom; Phone 44 (0) 1934 877000; Fax 44 (0) 1934 834683; <http://www.personal.unet.com/~bengrove/polo.htm>; Year Founded 1996. Ben Grove founds Polo at Bristol, England, in 1996 to offer a variety of commercial and contract work, private and corporate charter, training, sales, maintenance, and helicopter management throughout the U.K. and into northern Europe. Revenue flights commence and continue with a mixed fleet of Robinson 22s, Bell 206B JetRangers, and Eurocopter AS-350 Squirrels.

The carrier is particularly proud of its core of corporate charter customers and also offers flight training with its Robinsons.

POLONIA AIRLINES, S.A.: Brukselska 17E, Warsaw, P-03996, Poland; Phone 48 (90) 215 827; Fax 48 (90) 671 936; <http://www.tlpolonia.com>; Year Founded 1990. The Polish–Japanese joint-venture carrier Polnippon Cargo is established at Warsaw's Okęcie Airport in 1990 to provide all-cargo charter services exclusively to Japan. Revenue flights commence with a pair of Ilyushin Il-18Ds.

Operations continue in 1991–2000. During these years, the carrier is reformed, expanded, and renamed. Daniel Flisinski is president and it is determined that Africa will become an important new market.

Permanent representatives and a group of Polish ground and flight employees are sent out to gain service contracts in Yemen, Uganda, and Zaire. The Il-18Ds continue to undertake all-cargo services throughout

Africa, the Mideast, and to Japan while Polonia also begins to wet-lease a wide variety of Russian-made equipment, including Antonovs, Yaks, and Mil helicopters.

POLSKIE LINIE LOTNITZE. *See* LOT POLISH AIRLINES, S.A.

POLYARNY AIRLINES: 13 Kirov Street, Office 454, Yakutsk, Russia; Phone 7 (4112) 241873; Fax 7 (4112) 423085; Year Founded 1994. One of several small airlines in Russia's Sakha region, Polyarny operates scheduled and charter flights throughout the area employing a fleet of 1 Tupolev Tu-154 and 2 Antonov An-26s, plus several An-24s and An-2 biplanes. Like **Pulkovo Airlines**, the company is part of an airport component that includes the airports at Chersky, Ust-Nera, Sangar, and Mama. Many of the carrier's flights are made on behalf of the Sakha and Russian ministries of health, defense, state, and internal affairs. A significant number of the services are air ambulance missions.

The Russian currency crisis that begins in August 1998 and the escalating rise in the price of aviation fuel have a devastating impact on the airline. Fuel shortages are so great that, during the winter of 1999, the airline is only able to survive because of some judicious product reserving, as availability becomes both short and expensive. By the new year, it is reported that the airline's finances have also reached a point of near collapse. With no funds to pay utility bills, the airline's facilities are reportedly unheated.

The airline is not as lucky in 2000 as it had been earlier. The Sakha government continues to build up a tremendous debt with the airline, as do agencies of the Russian government in Moscow.

An effort is made in April to redress the situation. The regional government decrees that the airline be restructured and that the nine airports for which it has also been responsible be stripped off, leaving the carrier as a freestanding entity. The airports will, in fact, be far worse off as they are saddled with the debt of the previous combined enterprise and will, as the year moves on, suffer significant declines in traffic.

The situation for Polyarny, on the other hand, is not greatly improved. It will suffer a continued downturn in income while being ordered to pay fuel debts of 3.4 million rubles to its supplier, AirportGSMservice. At this point, the airline is owed 174 million rubles by various government departments.

The situation is further exacerbated when the airline's leaders agree to accept two An-74s from the Sakha Aviation Training Centre. It will cost the airline 900,000 rubles a month to operate the aircraft at a time when its revenues total only 300,000 rubles a month. Two An-26s are sold to help increase income.

In June, staff of Polyarny Airlines, concerned over the allocation of funds to the pilots' pension fund and the An-26 disposal, appeal to the Sakha Aviation Department seeking an independent audit of the company.

During the summer and into the fall, the situation worsens and the Tu-154 must be parked. It is possible to continue flying one each An-2 and An-24, the latter employed on a scheduled route from Yakutsk to Batagai.

Lack of fuel, due to shortages and debts, forces Polyarny to cease operations on October 16. The shutdown results in delays of up to 40 days for flights into such remote locations as Nizhneyamsk. In November, Deputy Director General A. Gabyshev enlists the support of the deputy chairman of Il Tumen, the Sakha parliament, V. Filatov in an effort to obtain relief from the government. Hoped for are either repayment of the debts owed the carrier or permission to establish its own fares independently.

At the beginning of December, Filatov and Aviation Staff Trade Union of Sakha director Mikhail Vasilyev are able to convince the regional government to make available 11.8 million rubles (of 14 million rubles requested) to the local ministry of health for payments (in two 6-million ruble tranches) to four regional carriers, including Polyarny. The infusion allows Polyarny to resume limited services during the Christmas holiday.

As the year ends, the Sakha Regional Aviation Department appoints Semen Terkhov to take over as Polyarny's new director general. At the same time, it notes that the airline does not have sufficient income to purchase fuel, to keep its aircraft airworthy, or to maintain required safety levels. It is suggested that it may be necessary to shut the company down by refusing to renew its operating license when it expires on February 18.

In late January 2001, the company's license to operate scheduled services will be suspended, forcing it to become a charter operator. Analysts will suggest that the government will not, in fact, shut down the airline, but will first give new Director General Terkhov an opportunity to win new funding from Moscow. Terkhov, since the announcement of his appointment, has been busily lobbying the Federal Civil Aviation Service (GSGA) for help.

POLYET AIRLINE: Sophia Perovskaya Str. 37A, Voronezh, 394035, Russia; Phone 7 (0732) 556 710; Fax 7 (0732) 550 661; <http://www.polet.ru>; Code POT; Year Founded 1995. Polyet is set up at Voronezh in 1995 to offer worldwide all-cargo charters, as well as domestic and regional passenger charters. Anatoly S. Karpov is director general and he begins revenue flights with 2 each Antonov An-26s and Yakovlev Yak-42Ds, plus 1 Yak-40.

The An-26s are replaced in 1996 by a pair of An-124-100 Ruslans. The workforce reaches 100 employees.

In 1997, the Kompomash concern develops the idea for air-launched missiles that will take satellites into space. The proposal is similar to a 1970s USAF scheme for dropping cruise missiles from Lockheed C-5s and will rival the current U.S. Orbital Sciences program, which deploys the Pegasus launcher from below the fuselage of a Lockheed L-1011 TriStar. A letter of intent is signed with Polyet for the joint development of this launch system.

In 1998, Kompomash and Polyet reform their joint enterprise into the Air Launch Aerospace Corporation (ALAC), taking on as additional partners the Khimavtomatika Design Bureau and the BoRo Corporation. The Makeev and Myasishchev design bureaus will be brought in later. During the year, the company receives an *Award of Excellence* from the U.K.-based Institute of Transport Management.

Polyet, which has operated throughout the CIS, Eastern Europe, and the Far East without incident since its beginning becomes embroiled in a political controversy during the first quarter of 1999.

While making a refueling stop at Baku, Azerbaijan, on March 18, an An-124-100 is detained by security police from the Azeri National Security Ministry, who question its documentation. Upon examination it is found to be transporting 6 MiG-21 fighter planes and 30 "suspicious passengers," believed to be Russian military personnel and engineers. The personnel aboard the aircraft, which has landed from Kazakhstan, initially indicate to the independent Azeri news agency Turan that their destination is Yugoslavia, but they then change it to North Korea.

Inspectors are at a loss to explain why the plane is at Baku, which is far to the west of either Kazakhstan or North Korea. Paperwork is discovered indicating that the plane is actually en route to Liberec in the Czech Republic.

Reports begin to circulate in the Western media on March 23 that the seized Russian cargo plane had been bound for Yugoslavia in breach of an international arms embargo against Belgrade in place for some years. The matter is now particularly sensitive in that NATO will, with 24 hours, be attacking Yugoslav targets in an effort to force Yugoslav leaders to sign a peace accord for its unruly Kosovo province. Before returning to Russia from an unfinished mission to Washington, D.C., Russian Prime Minister Yevgeny Primakov denies his nation is attempting to break the international arms embargo.

The Russian foreign ministry sends a note to its Baku counterpart on March 24 indicating that the cargo aboard the detained Ruslan is not Moscow's property. The following day, the Azeri foreign ministry requests that Russian Ambassador Alexander Blokhin provide assistance in inspecting the aircraft and settling the incident. Help is not forthcoming

and, with several versions of events and destinations, a criminal probe of the cargo is launched.

Over the next five days, both Russia and Kazakhstan continue to deny reports that the Ruslan had been bound for Yugoslavia, claiming instead that the giant transport had been chartered to deliver Kazakh planes to Slovakia.

Following a meeting with Moscow Mayor Yuri Luzhkov on March 29, President Haydar Aliyev of Azerbaijan orders the release of the Russian cargo plane and its four crew. The 6 MiG fighter jets and 30 passengers will, however, be required to remain behind under investigation in the ex-Soviet republic.

On March 31, the An-124-100 and its four-man crew is allowed to fly to Russia; its cargo of fighter planes and its 30 passengers remain behind under investigation.

Services are maintained without further incident or headline during the remainder of the year. The carrier quietly acquires licenses for flights to the U.S. and upgrades its two An-124-100s to the latest international standards by equipping them with hush kits, GPS, TACAS, and modern communications gear. The company's outsize charters generate revenues of \$300 million for the year.

During the first quarter of 2000, the government turns over the first two of four former Russian Air Force An-124s the carrier is to receive in order for it to support the ALAC program. The aircraft are delivered without engines and essential on-board equipment and will require from 6 to 12 months to be converted to civil standard.

Director General Karpov, on behalf of Polyet, receives the *Global Cargo Airline 2000 Award* from the Institute of Transport Management in Moscow ceremonies on April 14.

In its December issue, *Flight International* reveals that the ALAC, formed two years earlier, has won Russian government approval to proceed with its satellite air-launch program. Permission is received to have the Avistar factory at Ulyanovsk modify four RusAF An-124s, the last of which is taken over on September 28, to Dash-100 standard.

When the Ruslans, which Polet will operate, are delivered in 2003, they will take two-stage missiles to an altitude of 36,000 ft. for deployment. At that altitude, the tail ramp of the modified aircraft will be lowered and the parachute-equipped launch vehicle will roll out. Six seconds after exit, the missile's first stage will fire, boosting the satellite on its way into orbit.

POLYNESIAN AIRLINES, LTD.: P.O. Box 599, Beach Road, Apia, Western Samoa; Phone 685 21261; Fax 685 20023; <http://www.polynesianairlines.co.nz>; Code PH; Year Founded 1959. Formed at Apia on May 7, 1959, major share holders in Polynesian include the government of Western Samoa, **Tasman Empire Airways, Ltd., Fiji Airways, Ltd.**, and private local interests. Revenue flight operations commence with a Percival Prince in March 1960, just after the collapse of **Samoa Airlines, Ltd.**

Following national independence in 1962, the company acquires a Douglas DC-3 and begins additional routes, to the Cook Islands, in 1963. The route network grows during the remainder of the decade to include links between Apia, Nadi, Funamotu, Tafuna, and Niue Island.

The DC-3 with three crew crashes into the Apolima Strait on May 11, 1966 while on a training flight from Faleolo Airport; there are no survivors. A replacement DC-3 arrives in 1968.

Almost immediately after takeoff from Falulua, Western Samoa, on January 13, 1970, Flight 208B, the DC-3D with 3 crew and 29 passengers, encounters turbulence sufficient to cause a stall, leading to a crash into the sea and subsequent explosion; there are no survivors.

The Douglas had been the only aircraft owned by the carrier at the beginning of the year. Two Hawker Siddley HS 748s replacements and a Britten-Norman BN-2 Islander allow services to resume some weeks later.

Operations continue apace in 1971 and 1972 with enplanements in the latter year reaching 51,090.

Although the fleet size remains the same in 1973, the workforce is now 183.

Passenger boardings jump 21.4% to 65,000 and freight traffic swells 43% to 67,000 FTKs flown.

Twelve employees are laid off in 1974 or not replaced. The carrier's 2 HS 748s transport a total of 79,459 passengers for a 7% increase. Cargo skyrockets 54% to 100,000 FTKs.

Flights continue apace in 1975-1976. The carrier is restructured in 1977 and the ownership pattern changes; the majority shareholder becomes the government of Western Samoa (70%).

In November, employing a Boeing 737-219 leased from **Air New Zealand, Ltd.** (successor to **Tasman Empire Airways, Ltd.**), scheduled services are started to Auckland and Rarotonga. Simultaneously, the internal service linking the islands of Upolo and Savaii are also taken over.

Airline employment at General Manager J. T. Betham's carrier totals 170 in 1978. Beginning on February 25, the leased Boeing is employed to inaugurate flights from Apia to Auckland via Nuku Alofa, Tonga.

Operations continue apace in 1979-1981, during which years an Australian-made Government Aircraft Factories GAF N-22B Nomad christened *Apaula* is acquired.

In 1982, a management contract is signed with **Ansett Airlines of Australia (Pty.), Ltd.** that also provides a B-727-277 under contract, the ANZ Boeing being returned.

By the middle 1980s, Niue, Noumea, Pago Pago, Papeete, Sydney, Tongatapu, Vava, and Vila are added into the route network.

In 1985, the fleet comprises the leased Ansett jetliner, painted one side in Polynesian colors and the other side in the colors of **Cook Islands International, Ltd.**, which leases the craft part-time. Also leased are two GAF Nomad N-22Bs and two Islanders; gone are the HS 748s.

Operations continue apace in 1986 and the management contract with **Ansett Airlines of Australia (Pty.), Ltd.** is renewed in July 1987 for another 10 years.

Declining traffic and revenues toward decade's end bring significant changes. The leased Boeing is returned and in 1988, General Manager J. Buchanan's airline is flying only between the islands of Savaii and Upolo, employing only one BN-2. Still, a Polypass program is initiated, giving travelers unlimited travel for 30 days anywhere on the company's route network.

A Boeing 727 is acquired in late 1989 and employed to restart flights to American Samoa in 1990. Acting General Manager J. Moynihan is appointed to replace Buchanan for a year and a new de Havilland Canada DHC-6-300 Twin Otter is purchased to link the domestic islands. Flights to and between Sydney and Auckland begin in November.

A B-737-3Q8 and a B-737-3S3QC arrive under charter in 1991-1992 and routes to Nadi and Tongatapu are reopened. Ansett withdraws from its support contract during the latter year and five years of legal wrangling and claims will follow. A B-767-209ER is wet-leased from **Air New Zealand, Ltd.**

In 1993, the 319-employee fleet of the new general manager, Papalii Grant Percival, comprises the 2 B-737-300s, 1 DHC-6-300, and 1 BN-2 Islander. Schedules are maintained as the Kiwi jetliner is replaced by a B-767-333ER chartered from **Air Canada, Ltd.**

The wet-leased B-767-333ER is returned to Canada on April 15, 1994. Although an operational success, at \$2 million a month, the wide-body is too expensive for the small carrier to operate. Arrangements are made to replace the wide-body with a used **Kuwait Airways Corporation** being marketed by Fortis Aviation for \$40 million. As financial difficulties continue, an interline agreement with **Hawaiian Airlines (HAL)** is suspended.

In February 1995, a commercial arrangement is entered into with **Air New Zealand, Ltd.**, which will provide for code-sharing, joint sales and marketing, and other coordinated activities. While the **Air New Zealand, Ltd.** B-737-200 is grounded for engine repairs in March and April, the company leases its B-737-3S3QC to the New Zealand flag carrier. It also charters the former B-767-269 from Fortis Aviation, Ltd. Part of the cost and a shared route are born by **Royal Tongan Airlines, Ltd.** and, as a result, the aircraft also wears that company's markings as well.

In February 1996, the company begins code-sharing flights with **Air New Zealand, Ltd.** to Apia, Samoa, from Wellington and Auckland. Although traffic figures are not provided, it is announced that the net profit has been doubled to \$869,000.

Destinations visited in 1997 include the New Zealand cities, as well as Melbourne, Nadi, Pago Pago, Rarotonga, Sydney, and Tongatapu.

Operating as Flight 211, the DHC-6-300 with two crew and three passengers, is forced by bad weather to divert from its intended destination of Pago Pago. The turboprop crashes into Mount Baea, near Faleolo Airport at Moamoa, its new destination, on January 7 (three dead).

On July 10, *The Samoa Observer* leaves a blank space in its front page where it was to have printed 19 charges concerning the management of the state-owned carrier. The nation's Supreme Court had ordered it not to publish its allegations and turns down a petition against its restraining injunction. CEO Richard Gates and Flight Operations Manager Ian Gemmell, meanwhile, continue a defamation lawsuit against the newspaper for its earlier reporting of the DHC-6 accident.

On September 3, the carrier reaches a settlement with **Ansett Australia (Pty.), Ltd.** over claims arising from their severed 1992 support contract; exact terms are not made public. A code-sharing agreement signed a month earlier begins with **Royal Tongan Airlines, Ltd.** on October 28. Under its terms, Polynesian's current weekly service from Apia to Melbourne via Wellington will be extended by way of Tonga.

Profits are reported for the year, although the exact figure is not released.

Flights continue in 1998. The company now operates nine daily flights between the two Samoas, employing Twin Otters.

The agreement with **Hawaiian Airlines, (HAL)**, suspended some four years earlier, is reinstated on December 7. The interline agreement covers both passengers and bags transferred between the Samoan-government owned carrier and HAL. Simultaneously, the American Samoa attorney general has waived an entry permit requirement for HAL transit passengers passing through Pago Pago on their way to Samoa.

Storms batter the two Samoas during mid-December, disrupting flight schedules. One of the company's DHC-6s is badly damaged in a ground accident at Faleolo Airport on December 20, leaving only one Twin Otter to ferry passengers and cargo.

The continuing feud with *The Samoa Observer* heats up again in February 1999. The airline is able to win a restraining order barring the newspaper from using leaked airline documents that reveal details of advances and allowances paid to senior company staff. The details of the documents are, nevertheless, published abroad.

In early March, the airline goes to court seeking to have the publisher of the country's only daily newspaper arrested and sentenced for contempt of court. On March 10, Radio Australia reports that *The Samoa News*, located on neighboring American Samoa, has requested that the U.S. government file a protest and the local leaders retaliate for the company's action by banning the Samoan ferry boat from entering the harbor at Pago Pago.

Under terms of a new code-sharing agreement with **Qantas Airways (Pty.), Ltd.** that takes effect on November 1, Polynesian is able to expand its Trans Tasman services from three of its own B-737-3Q8 flights made with the owned jetliner *Tooa*, to a total of eight, including five flights operated by Qantas. In addition, Qantas is able to have its own seats available on six Polynesian flights per week, including through-flights from Melbourne to Wellington and on to Apia and from Sydney to Auckland and Apia. Qantas also shares two flights per week from Sydney to Auckland.

Service is maintained in 2000. On November 14, the company takes delivery of the first of two B-737-8Q8s it has chartered long-term from ILFC. The new aircraft, wearing a revised "rainbow" color scheme, is placed into service on November 25, offering direct twice-weekly return flights from Apia to Australia and Honolulu.

POLYNESIAN AIRWAYS: 471 Aowena Place, Honolulu, Hawaii 96819, United States; Phone (808) 836-3838; Year Founded 1966.

Polynesian is founded at Honolulu in **1966** to provide charter cargo and air tour flights linking the company's base with Kaunakakai on Molokai. Although operations cease in **1971**, they are resumed on a scheduled basis by Robert S. Wittinghill in May **1987**.

Services are maintained with a fleet of 2 Beech 18s and 1 Beech Bonanza. Low-key services are maintained without fleet change over the next decade.

Flight 222, a Beech 18 with two crew and a load of U.S. mail, crashes while landing at Honolulu on February 22, **1997**. Those aboard escape, but the freighter is destroyed by fire.

Services are maintained without further incident during the remainder of the decade.

POLYOT AIRLINES. *See* **POLET AIRLINE**

POMPANO AIRWAYS: United States (1981–1985). Third-level operator Pompano is created at Fort Lauderdale, Florida, in **1981** to provide scheduled passenger flights between its base, Miami, and the Bahamian cities of Governors Harbour, Marsh Harbour, North Bleuthera, Rock Sound, and Treasure Cay. A number of these operations are taken on behalf of **Air Florida** under the marketing name "Air Florida Commuter." Flights continue apace in **1982** and in tune with the marketing campaign "Love at First Flight."

Enplanements reach 92,000 in **1983**. Following the demise of **Air Florida** in early **1984**, this operator becomes an independent in May. The fleet now comprises 5 Nord 262s and 3 Cessna 404 Titans.

Enplanements reach 27,343.

As the result of a dispute between the airline and a group of creditors, Pompano files for Chapter XI bankruptcy in January **1985**. It maintains a full schedule and transports 7,500 passengers for five months until the courts decide that ownership of the aircraft lies with the creditors. Unable to continue financially, the carrier closes up its shop in June.

PONCE AIR. *See* **PRINAIR (PUERTO RICO INTERNATIONAL AIRLINES)**

PONDEROSA AIRLINES: P.O. Box 269, Taylor, Arizona 85939, United States; Year Founded 1974. Jay Leon Perry founds Ponderosa at Taylor, Arizona, in January **1974** to operate charter and contract service flights in connection with his FBO, Ponderosa Aviation.

In the spring of **1980**, permission is received to initiate a seasonal scheduled service to Whiteriver and Phoenix. These are inaugurated in May with 3 Rockwell Shrike Commander 500s and 2 Rockwell Grand Commander 680s.

Flights to Show Low begin in **1981**. The scheduled portion of the service is abandoned in mid-**1983**, allowing the carrier to maintain an emphasis on its charter business. Perry remains CEO during the **1990s**.

POPLAR BLUFF AIRWAYS: United States (1964–1967). Poplar Bluff Airways is set up at Poplar Bluff, Missouri, during the late fall of **1964** as the scheduled airline division of Radford Air Service. Employing 1 each Beech 18 and Piper PA-32 Cherokee Six, the commuter inaugurates daily passenger and cargo roundtrips in December, linking its base with St. Louis.

Operations continue apace until December **1967**.

PORT AUGUSTA AIR SERVICE (PTY.), LTD. *See* **PAGAS AIRLINES (PTY.), LTD.**

PORTLAND AIRWAYS: United States (1932–1933). Established at Portland, Oregon, in the fall of **1932**, the company is equipped with 2 Stinson Junior Ss that are employed to inaugurate scheduled passenger and air express services up to Walla Walla, Washington, beginning in October.

Without a mail subsidy, the carrier is unable to generate sufficient revenue traffic to survive beyond January **1933**.

PORTS OF CALL: Stapleton Plaza Office Center, 3333 Quebec Street, Suite 9100, Denver, Colorado 80207, United States; Phone (303) 322-5600; Fax (303) 329-6129; <http://www.pocdenver.com>; Year Founded 1966. Ports of Call, also known as Denver Ports of Call, is established, under Federal Air Regulation (FAR) 123, as a Denver-based travel club in **1966**. Domestic and international travel experiences are provided for its membership, beginning with a single Douglas DC-7. Three years later, a DC-7C is acquired, followed by a Lockheed L-188A Electra turboprop in **1972**.

A Convair CV-990A Coronado, previously operated by **APSA (Aerolineas Peruanas, S.A.)** before its 1971 collapse, is purchased on October 24, **1973**, and allows the club to enter the Jet Age. Five more Coronados are acquired from **Modern Air Transport** in **1975–1976** and these allow flights to many world destinations, with flights to Honolulu the most popular.

Escaping charges of vehicular homicide and grand larceny at Grand Isle, Nebraska, on April 20, **1976**, Robert Lyle Lentz captures a Piper PA-31-310 Navajo at the local airport, together with its pilot and a mechanic, and orders it to Denver. The lightplane takes off and circles the airport for half an hour while Lentz's demands are made known, including a request for a flight to Mexico.

FBI agents offer Lentz the use of one of the travel club's CV-990As. While the pirate and his hostages land and make their way to the aircraft, agents secret themselves within the jetliner's cabin. Just after midnight, FBI agent Ted Rosack, dressed as an airline pilot, emerges from the cockpit and fatally shoots Lentz, who is caught off guard in the passenger cabin.

Within 15 years of its beginning, the club's membership exceeds 69,000. In **1981**, the original FAR 123 certificate is upgraded to FAR 125 status and allows the club to undertake passenger charters and affinity group flights on behalf of other organizations, although not for commercial enterprises. The new certification allows the company to upgrade and it begins to add a number of Boeing jetliners, retiring two of its Coronados.

Although the remaining Coronados are withdrawn because they cannot meet federal Stage I noise regulations, in early **1984** the fleet still comprises 5 Boeing 707-320Bs, 3 B-707-123s, and 1 B-727-100. Late in the year, the company, which is the largest air travel club in the country but does not have a Part 121 charter certificate, is charged with operating illegal passenger charters, including those flown on behalf of Democratic presidential candidate Gary Hart.

The matter is referred to court where it is ruled that Ports of Call may continue to fly charters for sports teams and operate its club-oriented business. If it wishes to expand beyond that, it must gain proper authority.

The carrier applies for and receives charter certification in July **1985**. It also announces plans to change its name to **SkyWorld Airlines**. During the one month that it chooses to release traffic figures, the company reports enplanements of 28,000. The name change is allowed; however, the reborn airline continues to be known as Ports of Call until the change becomes official on August 1, **1986**. Ports of Call remains the parent organization and will later be sold to **American Trans Air**.

Although claiming no association with the former Ports of Call Travel Club, which had been sold to **American Trans Air** parent Amtran in 1990, this organization is reborn and reformed in February **1995**. Owned and funded by former Ports of Call Flight Operations Director Robert Resling and private investors, renewed emphasis on club travel on specially chartered flights begins via a Denver travel agency bearing the predecessor's purchased trade name. Former Ports of Call General Manager Nancy Waite is director of club operations, while Karen Henderson is manager of club operations.

Club memberships are sold for \$75 (later \$125), with an annual fee of \$50 (later \$75) and reduced costs on club charter flights anywhere in the world. Initial membership rolls show 4,000 names. The club specializes in trips for senior citizens and at least one "mystery tour" is offered annually. For these trips, members are told the cost, average temperatures,

and a few other details but do not receive word on the destination until they are in the air. The first "mystery trip" is operated with 56 members on July 10.

Operations continue without headline or incident in **1996–1999**. Early in **2000**, the decision is taken for the club to once again operate its own aircraft. The former Sky King British Aerospace (BAC) 1-11-400 employed to transport the Sacramento Kings is acquired during the summer and given a new color scheme and titles.

An open house to celebrate the club's return to the sky is held at the plane's base at Denver Jeffco Airport in Jefferson County NW of Denver, on October 14. Tours are given of the interior of the BAC, which is outfitted with comfortable leather seats and passenger electronics.

The jetliner's first charter is operated to Laughlin the next day. Witnesses report that the hush-kitted BAC requires 8,500 ft. of the 9,000-ft. runway for its takeoff.

PORTSMOUTH, SOUTHSEA AND ISLE OF WIGHT AVIATION, LTD. (PS&IOW): United Kingdom (1932–1940). Founded as **Inland Flying Services, Ltd.** on April 16, 1929, that company is renamed **Wight Aviation, Ltd.** in March 1930 and Portsmouth Southsea and Isle of Wight Aviation, Ltd. (PS&IOW), in May **1932**. Equipment consists of 1 each Westland Wessex, Spartan, DH 80A Puss Moth, and Monospar ST.4. On June 27, Portsmouth–Ryde Wessex ferry flights across Spithead begin, reaching a peak summer frequency of 18 per day. A connection is offered by Solent Coaches, Ltd. four days later and a service is initiated to Shanklin. Monospar and Puss Moth Ryde to Shoreham flights begin on September 5.

On May 1, **1934**, thrice-daily Heston–Ryde and Shanklin flights begin employing the Wessex and a new de Havilland DH 84 Dragon. With the Wessex, Dragon, and two DH 80A Puss Moths, two new routes are opened on May 17: Shoreham to Bournemouth via Portsmouth and Ryde to Bournemouth via Shanklin.

During the summer of **1935**, an experimental service is offered from Southampton via Portsmouth to Paris. Summer frequencies are maintained in **1936–1937** and a Portsmouth–Sandown service is flown between July and September **1938**. In accordance with the Air Navigation Order of September 16, on October 21 the new Air Transport Licensing Authority grants the carrier route certification from Ryde to Portsmouth, Bournemouth, and Southampton and from Portsmouth to Lea.

When war is declared on Germany on September 3, **1939** the company ceases flying. It joins neither National Air Communications nor the **Associated Airways Joint Committee** for allocation of wartime domestic routes and services and the firm is liquidated in early **1940**.

PORTUGALIA AIRLINES (COMPANHIA PORTUGUESA DE TRANSPORTES AEREOS, S.A.): Portugal (1987–1996). The initial project for the creation of this carrier is started in Lisbon in **1987** by a group of pilots from the former colonies of Angola and Mozambique. Joined by COOPAV, the Airline Pilot's Association, and TRANSCONSULT, a consultant company, the group establishes Portugalia Airlines as a joint-stock company on July 25, **1988**.

The new enterprise names Dr. Joao Ribeiro Fonseca chairman/president and approximately \$36 million in financial backing is provided by Grupo Espirito Santo and Grupo Melio. Because **TAP-Air Portugal, S.A.** owns the right to provide all Portuguese international services, the government refuses a company application to fly to foreign destinations. Following a delay, a new air transport liberalization law is enacted that allows Portugalia to operate.

Three Fokker 100 jetliners are leased from GPA, Inc. in late spring **1990**, aircraft originally ordered by **Braniff, Inc.** Two Fokkers are on hand as domestic charter operations are inaugurated by the 321-worker concern on July 7 from Lisbon to Faro and to Oporto. The third leased Fokker 100 arrives in November and launches charter frequencies to Funchal, Madeira. Enplanements for the first 6 months total 146,318.

In **1991**, authority is again unsuccessfully sought from the government for the initiation of international scheduled service. The year is not

profitable as a \$10-million loss is suffered. The company seeks additional capitalization in the form of loans and grants from additional private investors and banks and at the end of December, names banking executive Joao Ribeiro da Fonseca as chairman/president. Customer bookings for the first full year are 270,952.

Early in **1992**, Chairman Fonseca, with board support, publishes a new five-year plan that addresses such issues as cost-control, efficient management, and route expansion. The 321-member staff agree to a three-year wage freeze.

Scheduled authority and a fourth Fokker 100 are received in the spring and services are begun in June from Lisbon to the European cities of Cologne, Turin, Birmingham, and Strasbourg. Daily charter flights are also inaugurated from Porto and Faro to Madrid. An application is made to fly new routes to France, Germany, Italy, Spain, and the U.K.

Enplanements for the year total 294,000 and the loss is cut to \$2 million.

Airline employment in **1993** stands at 245. Another Fokker 100 is delivered in April and is employed, beginning in May, to inaugurate scheduled flights to Madrid. During its period of recovery, the company enjoys excellent support from Mobil, its fuel supplier, and from foreign regional airports, which do not press the carrier too closely for landing and departure fees. Unhappily, Portuguese regional airports not only pressure the company for payment, but add interest to the carrier's account when it cannot immediately handle its invoices.

Although customer bookings nearly double to 447,240 and a \$2.58-million operating profit is generated, the net loss grows to \$3.62 million.

The workforce is increased by 13.5% in **1994** to 425 and the fleet grows to include 6 chartered Fokker 100s. Service is inaugurated to Hanover and Brussels. Passenger boardings accelerate 15.3% to 515,843; in addition, 526,000 FTKs are also flown. Revenues increase 27.4% to \$66.61 million while expenses rise only 24.1% to \$61.68 million. There is, thus, an operating profit of \$4.93 million and the net loss is cut to \$242,814.

Airline employment stands at 503 in **1995** and a block-seat, code-sharing agreement is signed with **TAP-Air Portugal, S.A.** With the beginning of the summer schedule at the end of March, scheduled service is initiated from Lisbon and Porto to Stuttgart and to Mulhouse, Basel, Freiburg via Madrid. The number of weekly roundtrips from Lisbon to Cologne is increased to five, while return flights from Lisbon to Madrid become thrice daily. A second daily roundtrip is introduced in September between Porto and Madrid.

Enplanements this year accelerate 12.2% to 578,734 and cargo increases 62.8% to 856.41 million FTKs. Operating revenues are \$84.39 million, a 26.7% increase; costs are up an almost identical 26.6% to \$82.3 million. As a result, operating gain is \$2.09 million while a net profit of \$423,000 is recorded.

The workforce stands at 565 in **1996**, up 12.3% over 1995. A sixth Fokker 100 is delivered in January and introduces the company's new color scheme. At the end of March, roundtrip frequencies to Cologne and Stuttgart are boosted to six per week, to Turin, five per week, and to Mulhouse, Basel, Freiburg to four per week.

By July, the carrier is completing 1,267 flight cycles per month. Company executives, however, are disappointed by the traffic generated as a result of its alliance with the national flag carrier. Consideration begins concerning possible linkage with a new partner.

Enplanements are up 8.3% to 626,985 (on 13,900 scheduled departures), but cargo is down, falling to 841,000 freight FTKs operated. Revenues jump 10.1% to \$92.91 million while costs are up 2.1% to \$84.03 million. The operating profit quadruples to \$8.88 million and net gain doubles to \$820,000.

The company is renamed **PGA-Portugalia Airlines, S.A.** in January **1997** and all of its aircraft receive the new livery.

POTOMAC AIR: USAirways; 23245 Crystal Drive, Arlington, Virginia 22227, United States; Phone (703) 418-7000; <http://www.usairways.com>; Code US; Year Founded 2000. On August 18, **2000**, US Airways Group begins negotiations with **Gulfstream International**

Airways concerning a takeover the stock of moribund **Paradise Island Airways**. The same day, a new **USAirways** subsidiary, Potomac Air, is established to operate in the Northeast and Mid-Atlantic regions as part of the larger merger proposal between its parent and **United Airlines**. If government regulators approve the amalgamation, Potomac Air will become DC Air. It will be a separate company established by the partners to resolve antitrust concerns occasioned by the position of **USAirways** as the leading carrier at Washington's Reagan National Airport and of **United Airlines**, a major operator in and out of Dulles International Airport. Robert Johnson, **USAirways** director and Black Entertainment Television founder, will own the new regional, which, it is hoped, will immediately begin serving 43 cities out of Washington, D.C. (DCA). If the arrangement is struck down, Potomac will continue as a new "US-Airways Express" carrier.

A deal between the major and Gulfstream is struck on August 24 under which **USAirways** acquires 100% shareholding in PIA. On October 2, Merv Griffin's old commuter is merged into Potomac Air, giving it an automatic Part 121 operating certificate. In the interim between the two dates, a headquarters and operational base is established at the Roanoke International Airport maintenance base closed by **USAirways** Chairman Stephen M. Wolf when he took over the company in 1996.

A workforce of 120 is now built up under the direction of executives seconded over from **Allegheny Airlines (2)** and **PSA Airlines**. Two de Havilland Canada DHC-8-200s currently operated by **Piedmont Airlines (2)** are wet-leased, with plans to obtain others. Initially, a start-up date of November 12 is forecast. Left unresolved is the mechanics of a potential merger with DCAir, the company being set up to take over the majors' routes from Washington, D.C. DCAir owner Johnson now indicates that he is negotiating to sell up to 49% of his carrier to another airline, probably **American Airlines**, which would then lease to DCAir the planes and crews necessary for operations.

Initial planned destinations from the Washington, D.C. (DCA) base include Baltimore/Washington, Charleston, West Virginia, Greensboro/High Point, White Plains, and Roanoke. As up to six more turboprops are acquired from **Piedmont Airlines (2)**, routes will be extended to Allentown, Charlotte, Greenville/Spartanburg, Knoxville, Philadelphia, Norfolk, Pittsburgh, Richmond, and the West Virginia communities of Greenbrier/Lewisburg, Clarksburg, and Morgantown.

As the year ends, the deadline for federal antitrust regulators to rule on the United-USAirways merger is moved from January 16 to April 2, 2001. Nevertheless, company employees look forward to Potomac Air's inaugural DHC-8-200 "USAirways Express" service to be made from Washington, D.C. (DCA) on shared **Piedmont Airlines (2)** routes to Charleston, West Virginia Greensboro/High Point, and White Plains on January 5.

POWELL AIR, LTD.: Canada (1960–1985). Powell Air is founded at Powell River, British Columbia, by Daryl L. Smith in 1960 to provide extensive seaplane charter operations with a fleet of de Havilland Canada DHC-2 Beavers and DHC-3 Otters. In addition, charter and contract service flights are also undertaken to local and provincial destinations. In 1980, two decades after start-up, Powell is also offering scheduled services to Vancouver Island and Sechart. Thirty-three employees are responsible for a fleet that comprises 3 Piper PA-31-310 Navajos, 1 PA-23 Aztec, 3 Beavers, and 4 Cessna 180s. In 1981, the Convair CV-440, formerly operated by **Kelowna Flightcraft, Ltd.**, is purchased for use on the Vancouver service. That route is maintained until late 1984, when it is purchased by **Air BC, Ltd.** The Convair is sold and in 1985, the carrier itself is sold to **Pacific Coastal Airlines, Ltd.**

POWELSON AIR SERVICE: United States (1938–1939). Established at San Juan in October 1938, Powelson is the first airline established on the American dependency of Puerto Rico and the first to fly in the Greater Antilles east of Cuba.

Partially scheduled flights are inaugurated to Ponce and are maintained until June 1, 1939. At this point, the operation is purchased by newly formed **Caribbean-Atlantic Airlines (Caribair)**.

PRAIRIE AIRWAYS, LTD. See CANADIAN PACIFIC AIR LINES, LTD. (CPAL)

PRAVCO (PUERTO RICO AVIATION COMPANY): United States (1987–1994). President Jose R. Vargas sets up PRAVCO at Luis Munoz Marin International Airport at San Juan in 1987 to provide air taxi, executive passenger, air express, cargo, and air ambulance flights around the Commonwealth and into the Caribbean.

By 1993, the workforce includes 5 full time and three part-time pilots and the fleet comprises 1 Gates Learjet 24, 1 Piper PA-60-600 Aerostar, and 2 Cessna 402B/Cs. Business ends in 1994.

PRECISION AIRLINES: United States (1972–1995). Founded at Springfield, Vermont, in January 1972 as Precision Valley Aviation, Suki and Walter L. Fawcett Jr.'s new carrier initially operates as an all-cargo commuter service. By 1976, the fleet totals 6 Beech 18s and 1 Piper PA-31-350 Navajo Chieftain.

A total of 3.9 million pounds of freight are hauled during the year.

Regularly scheduled third-level passenger service begins in June 1977. Destinations inaugurated include Boston, Manchester, Nashua, Concord, Keene, Rutland, and Springfield. With 2 Chieftains and 1 Twin Beech in service, enplanements reach 15,000 by December 31. Weathering the storms of deregulation, it begins to grow.

Enplanements in 1978 total 91,698 and a profit of \$74,000 is earned.

The workforce is increased by 34.7% in 1979 to 136. The fleet now includes 3 Beech 99s and 1 Navajo Chieftain. Orders are placed for a pair of Swearingen Metro IIs.

Passenger boardings shoot up by 101.2% to 102,000, while cargo falls by 10.9% to 2.94 million pounds. Revenues jump 88.6% to \$3.76 million while net profit skyrockets 325.7% to \$315,000.

A 15.5% traffic increase is experienced in 1980, particularly after the purchase and merger of rival **Winnispesauke Airlines** in January. A total of 112,563 passengers are carried, but FTKs operated falls by 40.2% to 1.75 million.

Employees watch in horror as recession and the PATCO air traffic controllers' strike of summer 1981 and the subsequent ATC restrictions force enplanements to fall 13.9% to 98,827 and cargo to dip 10% to 1.57 million pounds.

The Fawcett's fleet in 1982 comprises 5 Piper PA-31-350 Navajo Chieftains, 1 PA-31-310 Navajo, 4 de Havilland Canada DHC-6 Twin Otters, 1 Cessna 310, and 6 Beech 18s.

The decline in fortunes is somewhat reversed as the number of passenger boardings rises 26.4% to 124,920. Cargo fails miserably, however, dropping 43.1% to 899,000 pounds.

Despite the carrier's initial launch of the Dornier 228-202 into the ranks of American commuter liners with orders in 1983, the German-made turboprop is not certified in the U.S. and five Beech 99s are acquired until approval is received.

The privately held carrier sees a 4% dip in passenger bookings to 129,916. Freight plunges again, down 48.5% to 463,000 pounds. Boardings curve upward again in 1984 as a 17.3% boarding rise allows a record 140,657 travelers to fly. Cargo, however, plunges by 45.1% to 254,527 pounds.

Airline employment increases 20% in 1985 to 240 as Precision's 4 Dornier 228-202s, 5 Beech 99s, 3 Piper PA-31-310 Navajos, and 1 de Havilland DHC-6 Twin Otter are providing scheduled services to cities in Vermont, New Hampshire, Massachusetts, New York, New Jersey, and Pennsylvania.

In March, the last of six Dornier 228-202s ordered earlier is received, as plans are made to convert six options into deliveries.

Customer bookings for the year ascend 24.9% to 175,647.

On May 1, 1986, the carrier becomes a member of the **Eastern Air Lines'** "Eastern Express" commuter network and grows into a large regional. Airline employment is reduced 1.9% to 260 and the fleet includes 6 Dornier 228-202s, 5 Beech 99s, and 3 Navajos.

The number of passenger boardings rises a further 16.3% to 212,238. The workforce is reduced by 3.8% in 1987 to 250. Still the carrier enjoys a good year as its customer bookings swell 22.3% to 260,717. There are no changes in the workforce or fleet during 1988. Passenger boardings rise again, up by 11.1% to 289,774.

When its major partner is shut down by job actions in March 1989, this 600-employee "Eastern Express" affiliate is thrown into a tailspin. With nothing to feed, it cancels its schedule and seeks to resume business as either an independent or a code-sharing associate of another airline. In May, a contract is signed with **Northwest Airlines** and Precision becomes that carrier's second "Northwest AirlinK" feeder in the Northeast.

In December, founders Walt and Suki Fawcett sell out to Allyn Caruso, owner of the other northeastern "Northwest AirlinK" partner, **Northeast Express Regional Airlines**, who will operate Precision as a separate affiliate.

On the year, the company's 13 Dornier 228-202s transport a total of 197,032 passengers.

The workforce is increased by 16.7% in 1990 to 350 and the fleet now includes 14 Dornier 228-202s, with 4 Fairchild Metro IIIs on order.

Continuing to operate from Manchester, the large regional transports 281,268 passengers, a boost of 29.7%.

Company employment grows by 15.8% in 1991 to 446 and the fleet is altered to include 13 Dorniers and 4 Metro IIIs. Following a similar test at **Mesaba Aviation**, Rick Douglas, director of the President's Committee on the Employment of People with Disabilities, is refused permission to board a Dornier 228-202 on October 5 under federal regulations that require those boarding to be ambulatory.

Customer bookings jump another 13.8% to 296,800.

Enplanements slip 0.8% in 1992 to 294,472. In 1993, President Caruso oversees a workforce of 310, a 13.9% decline. His fleet comprises 13 leased Dornier 228-202s and 1 Fairchild Metro III.

Passenger boardings leap upward by 16.5% to 368,581.

The carrier's "Northwest AirlinK" affiliation and that of **Northeast Express Regional Airlines** is lost during the summer of 1994. The code-sharing revocation is such a major catastrophe that the company stops flying scheduled services and files for Chapter XI bankruptcy protection. **Northwest Airlines** goes before the bankruptcy court to claim \$10 million in passenger revenues accumulated by Northeast and Precision since 1989 on "Northwest AirlinK" commuter routes from Boston that President Caruso never turned over.

Nonscheduled flights continue to be made in 1995 as founder Caruso plans to bring his company out of Chapter XI. On July 1, the bankruptcy court rules that he must turn over to **Northwest Airlines** the \$10 million in passenger revenues the major had claimed the previous summer. Unable to do so, Caruso liquidates both Northeast and Precision.

PRECISION HELICOPTERS: 17770 NE Aviation Way, Newberg, Oregon 97132, United States; Phone (503) 537-0108; Fax (503) 538-2414; <http://www.flyprecision.com>; Year Founded 1983. Precision is formed at Newberg in 1983 to offer a variety of helicopter work throughout the Northwest, most of it associated with timber resources. By 1993, President Dennis Sturdevant's fleet includes 10 Hiller 12ET Schweizer 300Cs and 1 each Eurocopter AS-350B A-Star and Bell 206B JetRanger.

The company's service in the 1990s remains much as it was in the 1980s. In addition to FAR Part 135 charters, the company also offers sight-seeing and VIP taxi flights; aerial support for movies, commercials, and other photographic activities; aerial crane and lifting; animal and timber census; and fire fighting, under contract to both state governments and the U.S. Forest Service.

The number of Schweizer 300Cs is reduced to four by 2000 as the fleet is augmented with additional Schweizer 330s, McDonnell Douglas MD-500s, and Hiller UH-12ETs.

PRECISIONAIR SERVICES, LTD.: P.O. Box 1636, Arusha, Tanzania; Phone 255 (5) 77319; Fax 255 (5) 78204; <http://www.precisionairtzm.com>; Code PW; Year Founded 1994. The air taxi Precisionair is established at Arusha in 1994 to fly lightplane passenger and cargo charters to bush destinations around the country.

An agreement is entered into with **Air Tanzania Corporation** in the fall of 1999 under which the carrier will be allowed to provide domestic scheduled services on behalf of Air Tanzania. Chairman Basil Mramba and Managing Director Michael Shirima arrange the acquisition of one Avions de Transport Regional ATR42-320, christened *City of Arusha*, and two Let L-410UVPs.

Scheduled flights commence in November. Daily roundtrips are operated from Arusha to Zanzibar for tourists. Additionally, frequencies are inaugurated to 12 local destinations, including Bukoba, Dar es Salaam, Kilimanjaro, Mwanza, Seronera, and Shinyanga.

A total of 119 workers are employed at the beginning of 2000. The fleet is now increased by the addition of a second ATR42-320 and two Cessna 208 Grand Caravans. A homepage is opened on the World Wide Web.

PREMIAIR, A.S.: Copenhagen Airport South, Hangar 276, Dragor, DK-2791, Denmark; Phone 45 32 47 72 00; Fax 45 32 45 12 20; <http://www.premiari.dk>; Code DK; Year Founded 1993. Transnational PremiAir is established at Copenhagen Airport South at Dragor in September 1993 by the combination of the SAS Leisure subsidiary **Scanair, A.B.** and **Conair, A.S.**, owned by Denmark's Simon Spies Holdings. P. Langkjaer is appointed chairman, with Thomas Rosenqvist as managing director; employment at the merged carrier is offered to most of the employees of the two partners.

The new charter operator is provided with a fleet that includes 3 Airbus Industrie A300B4-120s, 6 A320-212s, 1 leased McDonnell Douglas MD-83, and 4 chartered Douglas DC-10-10s, including that first flown by the U.S. carrier **Western Airlines**. All are painted in a simple all-white scheme, with the aircraft tails sporting orange and blue circles representing the sun and the sea. Three of the latter type are subleased to the American operator **Sun Country Air Lines**. Scheduled revenue flights are inaugurated to major European cities from Stockholm, Billund, Copenhagen, Malmo, Bergen, Stavenger, Oslo, and Goteborg.

Enplanements total 2,844,600.

The workforce totals 900 in 1994 and the merger of the partners becomes official on January 1. The MD-83 lease is not renewed and one of the DC-10-10s comes back off lease.

During the year, traffic for the new enterprise falls precipitously, with customer bookings down 61.2% to 1,102,500.

Fifty-three new employees are hired in 1995, a 5.9% increase. Passenger boardings rebound, growing by 5.5% to 1,162,800.

In February 1996, the carrier's parent, Simon Spies Holdings, is acquired by **Airtours International Airways, Ltd.**, whose parent is Airtours, plc. Thus, the British charter line gains control of PremiAir. On September 6, Airtours, plc. is reorganized to reflect recent acquisitions and changes. **Airtours International Airways, Ltd.** and PremiAir are assigned to a new Aviation Division under Managing Director Michael Lee. The combined fleet now totals 32 aircraft.

Airtours does not release PremiAir traffic figures for the year. It does however repaint the fleet in the same colors as those of **Airtours International Airways, Ltd.**

Plans are made to inaugurate flights to Miami and Newark (EWR) in the spring of 1997. Other destinations visited include Athens, Chania, Heraklion, Kos, Las Palmas, London (STN), Malaga, Palma, Paris, Rhodes, Rome, Sklathos, and Tenerife.

On September 29, PremiAir purchases the four DC-10-10s that it has been operating under charter since 1993. The first is almost immediately taken over.

One of the newly purchased DC-10-30s experiences a number of technical problems that cause the company long delays. Fearful that the delays might damage its reputation with customers, plans are announced on December 30 for the possible replacement of the offending aircraft.

Enplanements for the year total 1,474,700.

The fleet in 1998 includes 3 A300B4-120s, 6 A320-212s, and 4 DC-10-10s.

On February 18, Premiair officially serves notice that it will be riding itself of the DC-10-30 that has forced it to suffer several long delays due to mechanical problems. Arrangements are made to wet-lease a Lockheed L-1011-500 TriStar 1 from **Nova Airlines (Novair), A.B.** of Sweden.

It is announced on March 8 that **Airtours International Airways, Ltd.** will lease the ex-Condor DC-10-30 that Premiair has decided to replace. The aircraft will be flown during the period of a capacity crunch, which is expected to be over by the end of May.

Novair begins TriStar operations on behalf of Premiair on March 10, taking over the charters previously operated by the Danish line's withdrawn DC-10-30 from Stockholm, Oslo, and Copenhagen, to Barbados, Cuba, Miami, and Mexico City.

Flights continue during the remainder of the year. During the spring of 1999, Airtours places orders for six A330-243s. It is reported in the October issue of *Airways* (published in August), that the second pair will, upon their delivery in the fall, be transferred to Premiair. At this point, it is also expected that Airtours International will then adopt the Premiair moniker.

Two new A330-243s are delivered, one each on November 11 and December 10. Both are leased from **Airtours International Airlines, Ltd.** for the winter holiday season and will be returned next spring when the carrier receives its own A330s.

Customer bookings this year plunge 9% to 1,428,000. Revenues drop 8.2% to \$425.42 million, while expenses, though down 9.5%, still total \$437.56 million. The previous year's operating loss "improves" to minus \$12.13 million and the net gain of 1998 becomes a \$10.51-million loss.

Airline employment at the beginning of 2000 totals 1,061, a 2.8% decline over the previous 12 months.

A total of 85 cabin personnel demonstrate at Gardermoen International Airport in Norway on May 9, expressing displeasure with the carrier's use of nonunion employees to carry out a service to Cyprus.

While conducting the first inspection in several days of the compartment above the rear wheels of a company A330-243 that had arrived at Stockholm from Crete on June 4, workers, on June 5, discover two dead bodies. Identification suggests the men had stowed away in the Dominican Republic on June 2 during the plane's stopover.

Three new A330-343Xs are received via **Airtours International Airlines, Ltd.** this year, one each on July 24, August 10, and September 14. These replace four DC-10-10s, which are turned over to Airtours for use on its winter tours.

PREMIER AIRLINES (PTY.), LTD.: 456 St. Kilda Road, Suite 22, Melbourne, Victoria, 3004, Australia; Phone 61 (3) 9820 3133; Fax 61 (3) 9820 3165; Year Founded 1994. Premier is set up at Melbourne in 1994 to operate contract trans-Tasman freight flights on behalf of **DHL Worldwide Express** from Sydney to Auckland. The carrier is outfitted with a single Boeing 727-2J4AF and commences revenue services that continue, without change, over the next three years.

PREMIER AVIATION: Hangar 1, Sikorsky Airport, Stratford, Connecticut 06497, United States; Phone (203) 375-5677; Fax (203) 380-0838; Year Founded 1984. Premier is set up at Sikorsky Airport in 1984 to offer worldwide executive and small group passenger charters. By 1998-1999, the successful small concern employs three pilots and flies a single Dassault Falcon 50.

PRESIDENT AIR, LTD.: 36-38 Mao Tse Tung Blvd., Phnom Penh, Cambodia; Code TO; Year Founded 1997. Following the national political upheaval of July 1997, President is established at Phnom Penh by private investors to operate scheduled domestic services, as well as charters to Bangkok. Employing a mixed fleet comprising 1 each Fokker F.28-1000, F.27-100, Antonov An-26B, and 2 An12s, the new company begins revenue services in the spring of 1998.

Flights are maintained during the remainder of the decade. Local destinations visited at the beginning of 2000 include Battambang, Ratanakiry, Siem Reap, and Stung Treng.

PRESIDENTIAL AIR: United States (1995-1996). After a year of preparation, country music promoter Raymond G. Novelli and Clayton Barnett, a Long Beach air taxi operator and principal in the President's Travel Club, establish their airline at Los Angeles in the fall of 1995. An Airbus Industrie A300B4-203, first flown by **Continental Airlines**, is leased and employed to inaugurate both first-class and discount service to Atlanta, beginning in October.

Plans are announced to begin frequencies to Chicago, Houston, Detroit, Orlando, and Mexico City and a Boeing 727-112 is chartered. The Boeing is quickly leased to the campaign organization of Republican presidential candidate Bob Dole.

Citing a problem with its leasing partner, ING Aviation Lease, the company suspends its charter operations and returns its certificate to the DOT at the end of February 1996. Although Presidential plans to resume service, it does not. Bob Dole's charter is transferred to **AV Atlantic**.

PRESIDENTIAL AIRWAYS: United States (1985-1989). Former **PEOPLExpress** President/Chief Operating Officer Harold J. Pareti and other ex-officials of the Newark-based low-fare carrier organize Presidential Airways at Washington, D.C. (IAD) just after the new year in 1985 and incorporate it in Delaware on March 5. Between August and September, \$28 million in equity is gathered, including a successful \$17.25 million from a stock offering (3.45 million shares), and orders are placed for 7 used B-737-200s.

The 401-employee new entrant receives its operating certificate from the FAA on October 4. Employing four used Boeing 737-230Cs (first flown by **Deutsche Lufthansa, A.G.**), which it has leased from the Clarendon Group, a major stockholder's affiliate, begins deep discount flights on October 10 to Hartford, Boston, Cincinnati, Indianapolis, and Miami.

A total of 129,000 passengers are transported during the remainder of the fourth quarter, including 47,700 in November alone. Revenues total \$6.8 million, but expenses of the company launch are \$16.8 million. As a result, the operating loss is \$9.8 million and net loss is \$9.5 million.

The new subsidiary Washington Air Corporation is established in 1986 as the 1,027-employee large regional flies into significant competition from **United Airlines** and **New York Air**, both of which create hubs at Washington, D.C. (IAD) in the spring. Even though the airline takes a fiscal pounding, its fleet grows to include 11 leased B-737-230Cs as Pareti fights back. The company doubles and then triples its route network and, by July, is serving 19 cities.

Orders are placed on June 30 for five British Aerospace BAe 146-200s and, on July 1, the company begins to code-share with **Pan American World Airways (1)** on flights from Dulles to Miami. The first BAe 146-200 is delivered on August 8 and in an effort to boost its size, the carrier purchases the Las Vegas-based charter operator **Key Airlines** in early August for \$18 million, \$15 million of which is borrowed money. During reduced-schedule weekends thereafter, Key wet-leases a number of the "Baby Boeings" for charters to the Caribbean. The company, which had backed construction of a new mid-field Dulles terminal, is the first tenant; when its VIP lounge is opened, it is known as "The Oval Office."

A total of 1,080,705 passengers are hauled during the 12 months and although exact financial data is not released, the reversal is strong enough to force the company to reevaluate its plans to become a national airline centered on Dulles.

Airline employment falls 11.9% in 1987 to 793. On March 23, Presidential accepts the opportunity offered by Texas Air Corporation (TAC) to become a **Continental Airlines** affiliated "Continental Express" carrier. Presidential's midfield Dulles terminal position, as well as "The Oval Office," is now sold to **Continental Airlines** for \$6.3 million as the major assumes its new partner's outstanding \$5.2-million loan. The

terminal will form the hub center to which Presidential will provide feed from medium-size outlying markets.

BAe now refuses to continue financing the carrier's 146-200s unless the **Key Airlines** subsidiary is sold. Former Presidential board member T. Coleman Andrews III, the new chairman of **World Airways**, agrees to purchase **Key Airlines** for \$18 million and the transaction is completed in May. Days later, the **New York Air** code-sharing partner **Colgan Airways** is acquired by Presidential for \$1.1 million. Going back to British Aerospace, Presidential trades in Colgan's fleet of Beech and Shorts turboprops, leasing 10 Jetstream 31s, 3 of which are placed into service during the summer.

Meanwhile, Presidential Airways, in its role as a **Continental Airlines** feeder, pulls out of its larger markets like Boston, Atlanta, Cleveland, Detroit, Orlando, and Miami and substitutes smaller communities such as Columbus, Albany, Birmingham, and Huntsville. The B-737-230C leases are gradually terminated as the company, before year's end, acquires its five BAe 146-200s. When Continental withdraws from Dulles in favor of Newark (EWR), Presidential load factors plummet.

Downsizing impacts both traffic and revenues. Customer bookings decline 33.7% to 846,237 and revenues drop 20.7% to \$58.4 million. The year's losses are \$32.2 million (operating) and \$28.5 million (net).

The workforce is cut by 5.8% in 1988 to 747 and the fleet includes 1 leased B-737-230C, 7 Jetstream 31s, and 8 BAe 146-200s. Two additional Jetstreams and 3 Beech 1900s will be delivered before the end of the year, and orders are placed for 16 de Havilland Canada DHC-8s. In January 1989, 10 additional BAe 146-200s are ordered.

As the result of low traffic yields, the code-sharing arrangement with **Continental Airlines** is terminated in mid-January. On January 19, Presidential is offered, and accepts, the opportunity to assume much of **Air Wisconsin's** role as the "United Express" feeder operation at Dulles.

On February 5, the company officially shifts its allegiance, becoming **United Airlines** partner and coordinating its D.C. schedules with the major to enable passengers to connect conveniently. The same passengers also receive credits in United's Mileage Plus frequent flyer program. As its aircraft receive yet another new livery, the company on March 1 begins serving 20 cities from Dulles on behalf of its new code-sharing affiliate, offering a total of 75 daily departures. During the summer and fall, the last B-737-320C is leased to the Democratic National Committee and serves as Michael Dukakis's campaign plane.

"United Express" BAe 146-200 flights commence in September to Birmingham, Mobile, Cleveland, and Worcester, Massachusetts. In October, the company initiates thrice-daily BAe 146 flights from Birmingham to Mobile and Washington, D.C. and four-times-per-day Jetstream 31 frequencies from Lynchburg to Washington, D.C. Senior Vice President/Chief Operating Officer William Stockbridge resigns in October and is succeeded by Robert Tucker; at the same time, John Utter becomes senior vice president-finance.

Passenger boardings jump 13.9% to 731,292.

Airline employment climbs 13.8% in 1989 to 850 and the fleet now includes 12 Jetstream 31s and 8 BAe 146-200s, 2 of which are wet-leased to **British Airways, Ltd. (2)**. Overexpansion and heavy debt force the carrier to file for Chapter XI bankruptcy on October 26, reporting assets of \$38 million and \$74 million in liabilities. **United Airlines** advances its feeder partner \$1 million at month's end.

The fleet shrinks by four Jetstreams and six 146s following a November 15 short-term agreement between the airline and the British manufacturer. This is put in the form of a court order that calls for the immediate grounding of these planes should Presidential fail to make its lease payments. Efforts to restructure and obtain recapitalization now fail and when it is unable to make prescribed lease payments on its remaining BAes, Presidential is forced to return them and ceases operations on December 4.

Despite the leasing of two de Havilland Canada DHC-8-300s, President Hap Paretto is unable to maintain even a portion of a weak new schedule of 27 flights per day to 7 cities. During the final year, a total of

478,341 passengers are flown, a 34.6% decline over the same period a year earlier.

PRESIDENTIAL AVIATION: 2665 NW 56th St., Hangar 54, Fort Lauderdale, Florida 33309, United States; Phone (954) 772-8622; Fax (954) 771-2622; Year Founded 1974. Presidential is established at Fort Lauderdale Executive Airport in 1974 to provide executive and small group passenger charters throughout the U.S. and into South America and the Caribbean. By 1998-1999, the company employs four pilots and flies a single Learjet 55 Longhorn.

PRESTIGE AIRWAYS: United States (1995-1997). **Antigua Paradise Airways, Ltd.,** the new national flag carrier of Antigua and Barbuda, also known as **Antigua and Barbuda Airways International, Ltd. (ABA)**, is set up in the spring of 1994. Employing a leased Boeing 727-2B6A, nonscheduled services are inaugurated to Newark (EWR) and New York (JFK) during the summer.

In early 1995, the company headquarters of **Antigua and Barbuda Airways International, Ltd. (ABA)** are moved to Manassas, Virginia, where the firm is reformed as NavCom Aviation and purchases the assets of the failed **UltraAir**. Those resources are combined with those of ABA, including the chartered B-727-2B6A, to create **Paradise Airways**.

Eliza Jackson is named president/CEO, an operating base is established at Miami (MIA), and a leased fleet is assembled comprising **UltraAir's** pair of B-727-231s and the previously employed B-727-2B6A. The previous routes are initially flown, together with new scheduled flights to San Juan, St. Croix, and St. Thomas.

The Newark destination will later be exchanged for Washington, D.C. (IAD). One of the B-727-231s is leased to the Fort Lauderdale-based start-up Liberty Airlines. The carrier is renamed **Prestige Airways** in December. On December 21, one of its B-727-231s is dedicated to the provision of charter flights from Cincinnati to Orlando, Tampa, and Fort Lauderdale on behalf of Sunair.

Enplanements total 115,540.

In 1996, services are inaugurated to Flint and Orlando and the company's three trimotors transport a total of 109,000 passengers, a 6% decline. Early in 1997, the company halts scheduled flights to Orlando and Flint and announces that it will henceforth concentrate on nonscheduled operations. At this point, 30,000 passengers have been transported.

The charter operation never really gets off the ground and the company is liquidated. At the time of its failure, Prestige has had operating revenues of \$1.7 million, but registered a \$922,000 net loss.

PRIDE AIR: United States (1985-1988). Pride Air is organized in early 1985 by former **Continental Airlines** employees and of its \$15.5 million in initial capitalization, \$14.8 million comes from a group of 364 pilots. As a group, company employees own 65% of the carrier, with a key part of the organizational structure being the employee stock ownership plan. Having led the effort to create this new entrant, one-time **Continental Airlines** employee association head Paul Eckel becomes chairman, with former CA Vice President-Management Barrie Duggan as president.

Revenue flights are inaugurated from the New Orleans hub on August 1 to West Palm Beach, Tampa, Jacksonville, Fort Lauderdale, Miami, Orlando, Sarasota, San Jose, Los Angeles, San Diego, Sacramento, and Las Vegas.

Having leased six used Boeing 727-191s and three B-727-291s from **Frontier Airlines (1)**, the company completes its initial 16-market route system during the week of August 19 through the addition of 9 more towns. On November 15, operations are suspended while the company declares Chapter XI bankruptcy on December 2 and negotiates for funding from three potential sources.

The hoped-for recapitalization does not occur and a two-year search for new funding begins. Unable to either refinance or reorganize, a bankruptcy judge orders the company to be liquidated in early 1988.

PRIESTER AVIATION SERVICES: PAL—Waukegan Airport, Wheeling, Illinois 60090, United States; Phone (847) 537-1200; Fax (847) 459-0778; Year Founded 1945. PAS is set up as an FBO in 1945. Over the next 40 years, the concern also comes to offer passenger and cargo charters and to establish a facility at Lake Tahoe, California.

By 1998–1999, Priestler is a major worldwide executive charter concern that operates with flight attendants and full galleys on most flights. The main fleet, flying out of Wheeling, Illinois, consists of 3 each Learjet 35As and Dassault Falcon 20s, 2 each Canadair CL-600 Challengers and Grumman G-1159 Gulfstream IIs, and 1 each Beech King Air 90 and Cessna 414 Chancellor. A Learjet 35A is based in California.

PRIMAC AIR: 333 Sylvan Avenue, Englewood Cliffs, New Jersey 07632, United States; Phone (201) 871-1800; Fax (201) 871-2324; <http://www.primac.com>; Year Founded 1997. Under the direction of President Mary J. McLaughlin and Chief Pilot John De Benedictis, Primac Air is established with two divisions in 1997 to operate both cargo and passenger charter services. The International Courier Division, based at Teterboro, offers nightly, on-demand, Cessna 310 flights to and from New York, Montreal, and Canada. The aircraft, available 24 hours a day, 7 days a week, also allows its customers to connect with frequencies to Europe by major airlines. The Charter Division, based at Teterboro, also operates on-demand flights employing a Cessna 402.

A Cessna 208B Grand Caravan is acquired by the courier union in March 2000 and is employed to fly pharmaceutical shipments between New York City and Canada.

PRIME AIR: United States (1984–1989). Prime Air is established by William R. Langley at Clarksville, Tennessee, in 1984 to operate regional charter and contract service flights in the Nashville area. Operations continue apace in 1985 and 1986 and EAS scheduled flights are offered linking the company's base with Mount Vernon, Illinois, and St. Louis.

In 1987, company headquarters of the 15-employee small regional are transferred to Carbondale, Illinois. The three available Piper PA-31-310 Navajos begin providing services to four cities at the tip of that Midwestern state and transport a total of 2,500 passengers on the year.

Operations continue apace in 1988; however, in early 1989, the company runs afoul of the U.S. government's safety codes, reporting requirements, and other laws and regulations. It is grounded by the FAA on June 9.

As a result of an investigation by the Office of Aviation Analysis as well as the DOT's Office of the Inspector General, Chairman Langley is convicted in federal court in November 1993 of filing false claims for hundreds of EAS flights never made and collecting \$298,000 for them. He is fined \$250,000 and sentenced to prison in December.

PRIME AIRBORNE: Elmira–Corning Regional Airport, Horseheads, New York 14845, United States; Phone (607) 739-7148; Fax (607) 795-0371; Year Founded 1994. Prime Airborne is set up at Elmira–Corning Regional Airport in New York during 1994 to provide executive and small group passenger charters and fleet management. Seven pilots are hired and the company begins revenue services from three bases.

One each Grumman G-1159 Gulfstream II and a Dassault Falcon 20 are flown from the headquarters airport, while a Gulfstream IIB is stationed at Baltimore (BWI), and a Grumman IV is based at Burbank, California.

PRIMEAIR EXECUTIVE CHARTER (LUFTHAFTGES, mbH.): Airport Munich, Munich, D-85356, Germany; Phone 49 (89) 9702004; Fax 49 (89) 9702006; Year Founded 1993. Primeair is set up at Munich Airport in 1993 to provide executive and small group passenger charters. Ten pilots are hired and revenue flights begin with 2 Learjet 55 Longhorns and 1 Beech Super King Air 200.

PRIMERA LINEA AEREA SANTAPECINA, S.A. See PLAS (PRIMERA LINEA AEREA SANTAPECINA, S.A.)

PRIMERA URUGUAYAS DE NAVEGACION AEREA, S.A. See PLUNA (PRIMERA URUGUAYAS DE NAVEGACION AEREA, S.A.)

PRINAIR (PUERTO RICO INTERNATIONAL AIRLINES): United States (1964–1985). Formed by Jaime Carrion at Ponce on July 4, 1964 as the air taxi **Ponce Air**, the company identification is changed in 1966 at the same time operations are shifted to San Juan and scheduled San Juan–Ponce flights are inaugurated. Flying de Havilland DH 114 Herons, the little carrier begins competing with larger **Caribair (Caribbean-Atlantic Airlines)** over routes on the big island, as well as routes to St. Croix and St. Thomas in the U.S. Virgin Islands.

Operations continue apace for the remainder of the decade with only one major incident.

On initial approach to San Juan on a March 5, 1969 service from St. Thomas, a DH 114 Heron 2 with 2 crew and 17 passengers, crashes into the Sierra de Luquillo mountains 24 km. S of the runway. The wreckage is found the next day, but there are no survivors.

Company pilots, members of the ALPA, go out on strike on October 19, 1970; a mediated agreement ending the job action is reached on October 31.

En route from San Juan to Ponce on December 21, Flight 157, a DH 114 with 21 passengers, is taken over by a lone assailant, who demands a flight to Cuba. The crew overwhelms the pirate before the diversion can be affected. Upon examination, the hijacker will be ruled mentally unstable and sent to a psychiatric facility for two years.

The company grows and prospers during the 1970s, especially after **Caribair (Caribbean-Atlantic Airlines)** is taken over by **Eastern Air Lines** in May 1971. Ownership is acquired from founder Carrion by the Pittsburgh-based conglomerate Union Corporation. Destinations visited include Ponce, Mayaguez, Virgin Islands, Santo Domingo, and the Netherlands Antilles.

On April 8, 1972, J. L. Lugo, a former church administrator, hijacks a Heron at San Juan. After collecting \$290,000 in ransom and taking J. L. Carrion, a Banco Popular de Puerto Rico official, hostage, Lugo forces the DH 114 to fly to Cuba.

Eight days later, a lone assailant, armed with a fake gun and a fake bomb, attempts to take over Flight 179, a Heron preparing to depart from Ponce to San Juan. He is overpowered by another passenger and a mechanic and handed over to airport security. The man will be tried and given a two-year prison term.

While executing a go around from Ponce–Mercedita Airport, Puerto Rico on June 24, Flight 191, a DH-114 Heron 2B with 2 crew and 33 passengers, loses control and crashes (20 dead).

The company's 24 de Havilland DH 114 Herons transport a total of 868,036 passengers in 1973 with similar enplanements in 1974.

In 1975, Chairman Robert Sabel oversees 421 employees of the world's largest commuter airline. New scheduled services are inaugurated between San Juan and the Guadeloupe city of Pointe-à-Pitre. A DH 114 is lost in an accident at San Juan on July 11.

Passenger boardings decline 4.1% to 42,694.

The number of employees is boosted by 5% in 1976 to 544 and another Heron is acquired for the fleet. In December, service is initiated from San Juan to Antigua via St. Thomas and St. Martin. The return from Antigua to San Juan includes stops at St. Martin and St. Croix.

Customer bookings decline by 1% to 823,073. Flights are maintained as before during 1977. The highlight of the year is a pilots strike, which starts on September 18. The flyers return to their cockpits on November 1 and a mediated agreement between their chapter of ALPA and management is concluded on December 29.

The workforce in 1978 totals 600. Cesar Toledo is appointed president and the fleet comprises 26 Herons, the largest working collection of the type in the world. The company briefly suspends all flights on

April 18 pending an investigation of suspected sabotage against one of its aircraft.

In the year of U.S. airline deregulation, bookings reach 704,978. PRINAIR now ranks first among all U.S. commuters in terms of passenger traffic.

Grossly overweight and out of balance, Flight 610, a DH 114 Heron with 2 crew and 19 passengers, crashes just after takeoff from St. Croix for St. Kitts on July 24, 1979 (8 dead).

The carrier is grounded by the FAA on October 26 for a series of operating deficiencies discovered in a special inspection of the airline ordered after the St. Croix tragedy.

Still, the year's passenger boardings jump 13.5% to 848,000.

In 1980, the company experiences its first upward pause in years, suffering a traffic decline of 15.6% to 715,714. The downturn not only causes the carrier to withdraw two Herons from service, but costs the company its rating as the nation's largest commuter airline, a title now acquired by Philadelphia-based **Ransome Airlines**.

Although two Convair CV-580s join the Heron fleet in 1981 and inaugurate service to Puerto Plata and Santiago de los Caballeros in the Dominican Republic, boardings fall again, off 8% to 658,475. The one-time largest commuter now falls to third behind **Ransome Airlines** and **Air Wisconsin**.

The year's highlight in 1982 is the boarding of the 10-millionth passenger (cumulative) in February. Orders are placed for 10 CASA C-212 Aviocars. During the year, the company becomes the only carrier in U.S. civil aviation history to negotiate its own officially written bilateral agreement with a foreign nation. A modification is arranged to the 1948 bilateral between the U.S. and the Dominican Republic that allows for direct air service from San Juan to the new Aeropuerto Del Este, built by Club Med on the eastern tip of the island nation.

Rising expenses, led by fuel costs, together with continuing recession, cause traffic to dip yet again, down 4.7% as 630,938 travelers are flown.

In January 1983, the Caribbean Basin & Latin American Investment Corporation assumes majority control, purchasing 98% shareholding from Varona, Pennsylvania-based Union Corporation. The new holding company had been established by Chairman Toledo, hotelier Nicholas Noguera, and three other Puerto Rican businessmen.

Computerization is now undertaken with the SystemOne Direct Access reservations system of **Eastern Air Lines**.

Bookings are down again, off 8.6% to 576,378 and these downturns contribute to continuing financial difficulties.

The fleet is enlarged in 1984 by the last of 10 CASA C-212-200s ordered in 1982. Still, the fleet retains 3 CV-580s and 16 Herons, although only 6 of the latter are still operational. Services are halted to Puerto Plata, Tortola, and Virgin Gorda and destinations now visited include Mayaguez, Ponce, San Juan, St. Croix, St. Thomas, St. Martin, St. Kitts, La Romana, Santo Domingo, and Santiago. The latter route is flown in coordination with **Dominair (Aerolineas Dominicanas, S.A.)**.

Passenger boardings decline once more, down 1.3% to 568,832.

In the spring of 1985, New York-based **Air Niagara** Chairman John Burns attempts a rescue merger of the one-time biggest commuter carrier, by purchasing 81% majority shareholding. With a questionable airline past, Burns, who comes under DOT investigation, seeks to merge his Empire State operation with the now-small regional, outfit it with a pair of DC-9-10s, and inaugurate services from Orlando and San Juan to other Caribbean points.

When these arrangements cannot be completed, Burns pulls out. As a result, the fiscally stricken PRINAIR is forced to shut down in June after having flown 173,667 passengers since January. Officials led by President Cesar Toledo attempt to restart in July, but must close the doors for good before month's end.

PRINCE EDWARD AIR, LTD.: 250 Brackley Pt. Rd., P.O. Box 2349, Charlottetown, Prince Edward Island, 8C1 PE1, Canada; Phone (902) 566-4488; Fax (902) 368-3573; <http://www.peair.com>; Year Founded 1990. T. W. Collingwood and Gus Ollerhead set up PE

at Charlottetown in January 1990 to provide both scheduled third-level and charter service in Atlantic Canada. Revenue frequencies commence with a fleet that includes 4 Beech Super King Air 200s, 2 de Havilland Canada DHC-6-300 Twin Otters, and 3 each Fairchild Metro IIs and Metro IIIs.

Flights continue in 1990-1999, during which years a Beech 99 and two Cessna 208 Caravan Is enter service. Airline employment grows to 40 and, during the latter year, a third Cessna Caravan is acquired.

PRINCESS AIR, LTD.: United Kingdom (1990-1991). Established at Essex in early 1990, Princess inaugurates daytime inclusive-tour passenger services from Southend to Venice at the end of April with a British Aerospace BAe 146-200 leased from **Air Nova, Ltd.** and christened *Princess Alison*. During July, the company acquires a purchased BAe 146-200QC, for which it is the European launch customer, and on August 1 begins to fly cargo at night over a route from Southend Airport to Cologne.

Other passenger charter destinations visited include Alicante, Malaga, Palma de Mallorca, Faro, and Jersey.

Unable to achieve financial viability in a recessionary period, the company ceases operations on February 27, 1991. Touche Ross is appointed administrated receivers as the company is liquidated in an effort to recover over £750,000 (\$1.42 million) in debts.

PRINCESS AIRLINES, S.A.: Iasonidou 2, Helikon, Athens, GR-16777, Greece; Phone 30 1960 1168; Fax 30 1064 2307; Code PER; Year Founded 1998. Princess established at Athens in the spring of 1998 to offer passenger charters and inclusive tour flights to France, Germany, and other northern European destinations. Revenue flights commence and continue with a single leased Boeing 737-300.

The company experiences bad press in Germany in the spring of 1999 due to numerous flight delays. A B-737-2P5 is delivered, wearing titles in support of Siokas Reisen.

PRINCETON AIR LINK: United States (1986-1988). This small New Jersey regional is formed by its president, John S. Hoyt, in the summer of 1986. Equipped with 3 Britten-Norman BN-2 Islanders, it begins 12-times-per-weekday scheduled roundtrip services to **Delta Air Lines'** Gate 67 at Newark's Terminal B on September 2 and transports 924 passengers by year's end.

Early in the fall of 1987, the company ceases operations in order to refinance and reorganize. Four-times-per-day Islander flights linking Princeton with New York (JFK) commence in the spring of 1988. Unable to achieve viability, PAL again stands down, in September. This time it goes completely out of business, liquidating its assets.

PRINCETON AIRWAYS: United States (1978-1982). James T. Lewald establishes the airline division of his Princeton-based FBO Princeton Aviation Corporation in January 1978 to offer scheduled passenger and cargo services to Newark and Boston. Daily roundtrip revenue services commence on February 13.

Employing a pair of Britten-Norman BN-2 Islanders, the carrier transports 23,000 passengers in 1979, the first full year of operations.

In 1980, President David E. Van Dyke's fleet grows to include 1 Piper PA-31-350 Navajo Chieftain and 3 Islanders. Scheduled service is launched on June 3 between Newark and New York (JFK). Passenger boardings ascend 36.1% to 31,359.

The route system is altered in 1981 and an Australian-made GAF Nomad N-24A is placed into service. Passenger bookings rise 3% to 32,297.

Unable to weather the airline wars, Princeton ceases scheduled operations in July 1982. Prior to quitting, the company flies 17,423 passengers, a 6.2% boost over the same period a year earlier.

PRINCEVILLE AIRWAYS: United States (1980-1989). Having developed the Princeville resort at Lihue, on the island of Kauai,

Colorado-based Consolidated Oil & Gas, acting through the Princeville Development Corporation subsidiary, establishes this third-level airline at Honolulu in July **1980**. Employing two de Havilland DHC-6-200 Twin Otters, President Lawrence S. Pricher's company begins regularly scheduled passenger flights on September 9, replacing **Air Hawaii (2)** service from the state capital to Princeville.

Over the next six years, P.A. adds flights to Kamuela and Waikoloa on the island of Hawaii. The fleet in **1986** includes 1 Cessna 402B and 4 de Havilland Canada DHC-6-300 Twin Otters.

A total of 8,200 passengers are flown on the year. Although revenues of \$2.8 million are earned, there is a \$218,000 loss.

When the parent Princeville Development Corporation is purchased by the Australian firm Quintex, it becomes necessary, under the law, to sell the commuter because foreign concerns are prohibited from owning more than a 25% stake. In December, the small regional is acquired for \$3.2 million by **Aloha Airlines**, which it will feed, beginning on April 1, **1987**, as a code-sharing subsidiary based at Honolulu and at a secondary base at the new airport at West Maui. Henceforth, its traffic figures will be included with those of its parent.

While on an evening service from Kahului to Kaunakakai on October 28, **1989**, Flight 1712, a DHC-6-300 with 2 crew and 18 passengers collides with a rocky slope of one of the coastal mountains on Molokai and crashes; there are no survivors.

At month's end, the company is renamed **Aloha Islandair**.

PRIORITY AIR FREIGHT COMPANY (PAFCO): United States (1979–1981). A division of Kirksville, Missouri-based **Horizon Airways, Inc.**, with which it shares its airline code, PAFCO is initially set up by its founder, Gilbert Chcone, at Chicago's Meigs Field in early **1979** to provide scheduled cargo services to Milwaukee. Cessna 402C passenger roundtrips are added in March, linking the company's base not only with Milwaukee, but with Minneapolis, South Bend, Fort Wayne, and Indianapolis as well.

Although the company loses its certification from the FAA in December, it is regained during the following spring. Scheduled Piper PA-31-310 Navajo operations resume on July 1, **1980**, and are maintained until May 15, **1981**, when PAFCO is purchased by Joseph Valee and renamed **Skytrain Airlines**.

PRIORITY AIR TRANSPORT: United States (1967–1970). PAT is set up at San Francisco, California, in the summer of **1967** to offer scheduled passenger, cargo, and mail service to Sacramento via Salinas and Redding.

Beech 18 and Cessna 402 revenue flights commence on September 2 and continue until the company goes out of business in **1970**.

PRIVATAIR, S.A.: Geneva Airport, Geneva, CH-1215, Switzerland; Phone 41 (22) 929-6730; Fax 41 (22) 929-6731; <http://www.privatair.com>; Code PTI; Year Founded 1977. This corporate carrier is established at Geneva Airport in **1977** to provide executive passenger flights for businessmen and VIPs from the western side of Switzerland using a fleet of bizjets previously owned by the Greek tycoon John Latsis. Distinguished passengers are expected to include heads of state and royalty, as well as celebrities, entertainment financiers, and CEOs of multinational corporations. The company will pride itself on its discretion. All aircraft wear a distinctive red-and-white Swiss-oriented livery.

On October 2, **1989**, PrivatAir takes delivery of a Boeing 757-23A, capable of providing large group worldwide services. It will remain the only aircraft of its type available for private hire in the world. Capacity is further enhanced on October 14, **1995** when a B-737-3L9 arrives.

By the middle **1990s**, Operations Director Capt. Christopher Randle flies two of the largest aircraft held by VIP and business airlines anywhere. European flights are provided not only by the 737, but also by one each Grumman G-1159C Gulfstream IV and British Aerospace BAe (HS) 125-800 Hawker.

Three Next Generation B-737-7AK advanced passenger jetliners, configured as BBJs, are delivered in **1999**, one each on April 7, November 2, and December 22.

A total of 85 workers are employed at the beginning of **2000**. Hosted by Peter Alliss, the B-757-23A operates an around-the-world golfing tour from London between November 18 and December 10, while the B-737-3L9 flies an around-Europe golfing tour. Stops on the itinerary of the former include Bermuda, Orlando, Las Vegas, Pebble Beach, Hawaii, Sydney Ayers Rock, Bali, Katmandu, Agra, and Dubai. The all-inclusive cost per person is £31,850. The European tour includes stops in eight countries, six in Europe, and two in North Africa. Such famous golf courses as Valderrama, Druid's Glen, The Carnegie Championship Links, and Royal Dornoch are open for play and the all-inclusive fare for this tour runs £18,650.

No longer needed after the European tour, the B-737-3L9 is put up for sale at the end of the year.

PRIVATE JET EXPEDITIONS: United States (1989–1995). Private Jet is established as a travel club at Atlanta in December **1989** to operate exotic package tour flights with a single Boeing 727-31 first flown by **Trans World Airlines (TWA)**, but now christened *Explorer I*. Shareholding is divided between Jack DeBoer, owner of Residence Inns, and Society Expeditions founder Theodore Swartz.

A total of 632 passengers are flown during the inaugural month and revenues total \$435,388. Expenses involved in setting up the 12-employee airline reach \$4.2 million and like many new entrants, it begins life with a negative balance sheet. Losses total \$3.7 million (operating) and \$4.4 million (net).

The workforce is doubled to 25 in **1990** as the lone Boeing flies a total of 3,000 passengers during the first full year. Revenues total \$3 million, but expenses are higher and losses are again suffered: \$2.69 million (operating) and \$4.34 million (net).

In early **1991**, the company is sold to the Club America Vacations consortium, led by Apple Vacations and affiliated with the Spanish-based The Oasis Group, owner of the carrier **Oasis International Airlines, S.A.** The company is upgraded from a "club" into a full-fledged charter airline and the fleet is increased by the addition of four Oasis McDonnell Douglas MD-83s.

With the addition of new charters, customer bookings increase to 24,000 and revenues skyrocket 95.3% to \$5.93 million. Expenses surge 30.6% to \$7.48 million and cut operating loss to \$1.54 million. A net profit of \$1.63 million is generated.

Authority is received early in **1992** to offer scheduled service from Atlanta to St. Louis. As additional McDonnell Douglas transports (seven MD-83s, an MD-82, and an MD-87) are obtained, the B-727-31 is withdrawn.

Having hit 220 kmh on its takeoff from Boston on August 30, an MD-83 suffers the explosion of two of its main landing gear tires, which are ingested into the left engine. The departure is safely aborted.

Passenger boardings skyrocket to 473,000 and revenues total \$53.4 million. Operating income surges to \$293,828, but net profit plunges to \$39,177.

Airline employment stands at 480 in **1993** and the all-chartered fleet now includes 11 MD-83s and 1 each MD-82 and MD-87. Limited scheduled service is initiated from Atlanta to St. Louis, Chicago, Miami, and Newark.

Customer bookings accelerate to 1,041,000. Although revenues rise 79.2% to \$95.71 million, expenses surge 90.3% to \$101.07 million. The operating loss is \$4.97 million and net loss totals \$7.39 million.

Daily roundtrip flights begin on January 14, **1994** from Miami to the Virgin Island destinations of St. Thomas and St. Croix.

On May 26, Private Jet begins flying its now deeply discounted scheduled services between Atlanta and Miami as National Airlines (3), hoping that the famous moniker of the carrier taken over by **Pan American World Airways (1)** in 1980, will give it more visibility.

The aircraft employed on the scheduled routes are a pair of leased DC-9-51s painted in the new National colors; the first arrives on May 25 followed by the second in June.

The company abruptly cancels most of its National Airlines (3) scheduled flights after October 3 due to financial problems. Of the 5,000 displaced passengers, those booked on flights through November 15 are assigned to other carriers while everyone else receives a refund. Agents are able to easily rebook a number of travelers as the carrier returns to charter work. A total of 219 employees are also laid off.

At year's end, the company is elevated by the DOT to National status.

Passenger boardings inch up 0.5% to 1,046,000 and 41,000 FTKs are flown. Revenues decline 8.6% to \$88.01 million and, although the percentage of rise is down, expenses increase by 7.8% to \$93.36. The operating loss grows to \$5.35 million, while net loss "improves" to \$6.05 million.

The workforce stands at 301 in 1995. Fiscal difficulties continue, forcing Club America to sell out to NAL Holdings in early March. On March 13, Oasis withdraws its aircraft and charter contracts and Private Jet shuts down. Effective March 28, the DOT suspends the carrier's operating authority for economic reasons, while the FAA lifts its license because of safety concerns. Charters are, however, flown for Club America Vacations through a wet-lease arrangement with **Kiwi International Airlines** until March 30. At this point, the tour operator abruptly shuts down, leaving 2,000 clients stranded at destinations in the Caribbean and Mexico.

PRIVATE WINGS FLUGCHARTER, GmbH: Flughafen Tempelhof-GAT, Berlin, D-12101, Germany; Phone 49 (30) 6951-2591; Fax 49 (30) 6951-2260; Year Founded 1991. Private Wings is founded at Berlin's Tempelhof Airport in 1991 to provide executive and small group passenger charters to worldwide destinations. Eight pilots are hired and revenue flights begin with 1 each Learjet 35A Century III, Beech Super King Air 300 and Super King Air 200. The latter two machines operate primarily between German destinations.

PRO AIR SERVICES: United States (1981-1988). PAS is set up at Miami in 1981 as a subsidiary of the International Transfer Company. The regional inaugurates daily scheduled roundtrips linking its base with Fort Lauderdale, Key West, and Marathon, as well as the Bahamian destinations of Marsh Harbour and Treasure Cay. The fleet will eventually come to include 1 each Cessna 404 Titan, Douglas DC-3, Martin 4-0-4, Aero Commander 500B, and 2 Beech 18s.

Operations continue apace until 1988 with frequencies meanwhile having been added to Rock Sound, Governors Harbour, and North Eleuthers.

PRO AIRLINES: United States (1972). Minneapolis-based Executive Air Transport, Inc. forms this scheduled airline subsidiary during the summer of 1972 to maintain passenger and cargo flights during the **Northwest Airlines** strike begun on June 30. Lightplane roundtrip services to Bismarck via Jamestown and Fargo are inaugurated on August 7 and are maintained 29 days beyond the end of the Northwest job action on October 2.

PROAIR: 101 Elliott Ave. West, Suite 500, Seattle, Washington 98119, United States; Phone (800) 939-9551; <http://www.proair.com>; Code P9; Year Founded 1996. Trusting that a simplified fare structure, increased passenger leg room, better meals, and an easier hub will attract customers, ProAir (which had originally been conceived of as a sports charter carrier) is established by Kevin Stamper at Detroit (DET) in the spring of 1996. Work is 75%-80% finished for the company's government certification at the time of the May **Valujet Airlines** disaster. That crash slows the entire FAA regulatory process for new entrants by six to eight months. Still, of the nearly 30 start-ups applying to the government for certification since 1995, ProAir will be the only one granted approval.

The certification process is completed in early 1997, at which time the company hires an initial nonunionized workforce of 170. In February, Chairman/CEO Stamper names former **WestAir Airlines** Chief Operating Officer Craig Belmondo as president/chief operating officer. Two Boeing 737-49Rs, originally built for **China Hainan Airlines**, are chartered in June, one each from GE Capital Aviation Services and the other from the Kanematsu Corporation. The distinguishing characteristic of their color schemes is shown on their tails, which are designed to resemble close-up of a feather. One is painted in "Fenway Sign" green and the other in orange. Orders are placed for two more "Baby Boeings" that will wear yellow and purple tails.

Ticketless travel will be employed and there are just two classes: business and coach. Low-cost introductory fares, up to 50% less than that of the competition, and ease of access from Detroit, just 10 minutes from the airport, are trumpeted in initial advertisements. It goes unsaid that the major potential competitor, **Northwest Airlines**, hubs at Detroit Metropolitan Airport.

Twice-daily nonstop roundtrips from Detroit to Baltimore (BWI) and to Indianapolis commence on July 4, followed on July 14 by the same number of frequencies to Newark, which serves New York City as well. Flying from Detroit (DTT), **Northwest Airlines** quickly matches the company's introductory rates, but requires 24-hr. advance booking. Twice-daily roundtrip nonstops are launched from Detroit to Milwaukee on August 1.

On August 24, Chairman Stamper sends an open letter to area business executives seeking their support in his contest to keep fares low and offering a limited number of free flights in a promotion good through November 20. As the resident airline, company officials make a significant contribution to the sixtieth anniversary open house of Detroit (DET) on September 6.

Responding to the carrier's efforts to combat Northwest's Detroit market lock, Chrysler Corporation during the fall pledges its support, and a certain amount of business, to the new entrant.

On October 6, the company increases its service between Detroit (DET) and Baltimore and Newark from two daily roundtrips to three. Flights between Detroit City and Milwaukee and Indianapolis remain on a daily frequency.

Scheduled Saturday seasonal service from Detroit to Orlando commences on December 27; simultaneously, Saturday and Sunday flights begin from the Michigan airport to Southwest Florida International Airport at Fort Meyers.

Passenger boardings of 65,000 are reported.

On May 1, 1998, a second daily nonstop roundtrip is started from Detroit (DET) to Indianapolis. The Orlando Saturday service is concluded on May 3. Although service to Milwaukee ends, twice-daily roundtrips are inaugurated on May 18, between Detroit City and Philadelphia.

On June 11, while competing **Northwest Airlines** suffers productivity problems at Detroit Metropolitan, ProAir reaches separate five-year agreements with General Motors and Chrysler to provide contract air transport for the two automakers from Detroit to Baltimore, Indianapolis, Newark, and Philadelphia.

The company celebrates its first anniversary on July 4 by lowering its one-way coach fares for the day to each of its four destinations. A partnership is announced with The Hertz Corporation on July 6; one-call reservations will result in the availability of rental cars for business passengers flying into Detroit (DET).

Another B-737-49R is received on October 15, when plans are announced to employ the new aircraft, beginning on November 21, in seasonal weekend services.

The company operates out of the International Terminal at Detroit (DTT) on October 24-25 while the runway at Detroit (DET) is resurfaced. Customers are notified of the change a week in advance.

The DOT, on October 29, awards ProAir two slot exemptions at New York (LGA). Chairman/CEO Stamper excitedly announces that his carrier will commence service to that city on January 10.

On November 10, the carrier announces several strategic business decisions, including the introduction of new service to Atlanta and Seattle. The latter will commence on January 10. Also during the day, former **Reno Air** Customer Services Director James Walsh is named vice president-customer service, while **Northwest Airlines** Director of Marketing and Communications Eric Steinwinder becomes vice president-management.

Seasonal B-737-49R weekend roundtrips commence on November 21 from Detroit (DET) to Orlando and Fort Myers. Two days later, the company takes delivery of a brand new B-737-39R.

At the beginning of December, the Detroit Investment Fund, a \$52-million private equity concern, gives Chairman/CEO Stamper a \$3-million investment check.

Employing the newly received B-737-39R, roundtrip service is added between Detroit (DET) and Atlanta on December 14, 12 times a week.

On December 19, weekend flights begin to Tampa and St. Petersburg. The weekend Florida frequencies will end on May 2.

Twice-weekly B-737-49R roundtrip Moonlight Service is initiated on December 20 between Detroit City (DET) and Las Vegas.

During the 12 months, customer bookings skyrocket 318.5% to 272,000. Although revenues total \$20.83 million, expenses are \$34.24 million. There is an operating loss of \$13.41 million, while a net loss of \$15.76 million is suffered as well.

On January 17, 1999, daily B-737-47R roundtrips commence between Detroit (DET) and New York (LGA). This new service is followed on January 28 by the introduction of four-times-weekday B-737-47R roundtrips from Detroit (DET) to Chicago (MDW). ProAir now offers 108 weekly departures, more than twice the number provided during the fall.

A corporate travel agreement is signed with Masco Corporation on June 24, allowing the Detroit-based concern and its affiliated companies to lock in their annual travel costs.

On August 25, the company announces that it will soon launch "ProAir Express" service, flying SAAB 2000s to nearby airports. Four-nights-a-week B-737-400 roundtrips are introduced on December 23 between Detroit (DET) and Seattle.

Passenger boardings increase 52.6% to 415,000.

The workforce stands at 440 at the beginning of 2000. In January, a \$7-million loan is received from Daimler Chrysler and General Motors. Early in February, the United Auto Workers (UAW) invests \$14 million in the company in return for discounted airfares for its members.

In order to accommodate the spring schedule, service to Philadelphia is temporarily suspended on March 26. The next day, a new daily roundtrip is inaugurated from Indianapolis to Orlando and one additional flight is added from Detroit (DET) to New York (LGA) and Orlando. Connections to Seattle are now offered at Atlanta, Orlando, and Indianapolis.

On May 11, it is announced that the carrier will soon be discontinuing its services from Detroit (DET) to Indianapolis, Philadelphia, Newark, and Seattle. The cuts amount to almost half the schedule. Struggling with its finances, the company stops flying from Detroit to Indianapolis and Seattle (site of its home office) on May 20.

By May 22, the carrier has stopped flying to Philadelphia and Newark. The same day, Blue Cross-Blue Shield drops its health insurance coverage of ProAir employees for premium nonpayment and **Delta Air Lines** sues the company for nonpayment of aircraft repair invoices.

The carrier undergoes a focused inspection on June 12–23 by the FAA's Seattle Safety District Office; ProAir will later charge that the FSDO failed to communicate with it following the review and refused to respond to inquiries concerning its findings.

ProAir returns its two B-737-300s on July 11 and its executives meet with FAA officials in Washington, D.C. on August 2, where they learn the negative results of the June inspection. No earlier concerns are discussed.

While backing out after pushing back from the terminal at New York (LGA) on September 15, the ProAir Boeing 737-43Q impacts a parked

Midwest Express Airlines MD-80. The tails of both aircraft are damaged, forcing both companies to cancel flights.

FAA Administrator Jane F. Garvey issues an emergency order at midnight on September 18 ordering the company to halt all flights and revokes its Part 121 operating certificate. The order cites continuing maintenance, oversight, quality control, and record-keeping problems resulting in widespread failures to comply with applicable federal aviation regulations and serious aircraft safety concerns (including the alleged falsification of records by Maintenance Director Oscar Arriaga). ProAir believes the regulator's action is based on erroneous and outdated information from the June FAA focused review and that the grounding will be reversed upon appeal. Nevertheless, it is announced that, until the FAA issue is resolved, current ProAir ticket holders will be able to receive refunds or will have their tokens honored, on a standby basis, by **Northwest Airlines** or **Spirit Airlines**.

To preserve its existing resources (now just \$440,000 in cash) and aircraft, President Belmondo takes the company into Chapter XI bankruptcy the next day, hoping to give it a chance to reorganize and resume operations. **Northwest Airlines** withdraws its offer to honor the ProAir tickets, but **Spirit Airlines** agrees to continue its support through September 30 for ProAir passengers holding confirmed tickets for flights between Detroit (DET) and New York (LGA) or Orlando.

The *Detroit Free Press* reports that, in addition to \$14 million from the UAW, the carrier also owes \$31.9 million to its top 20 creditors.

President Belmondo, on September 20, appeals the FAA ruling to the NTSB, under the law that allows him to do so within the first 48 hrs. after such an action. The NTSB is required to respond within 60 days.

On September 27, while the appeal goes forward, 275 of the carrier's 300 employees are laid off.

On September 28, William E. Fowler Jr., the NTSB administrative law judge, declines to hear the company's appeal, indicating its belief that the FAA ruling is correct. Lease payments are maintained on the remaining B-737-49R and B-737-43Q.

On November 13, the company agrees to an FAA proposal for a process that may see the carrier return to Michigan skies around January 21. Under terms of the document signed by ProAir Chairman/CEO Kevin C. Stamper and FAA Counsel George L. Thompson, the airline will drop its appeal of the revocation order. Meanwhile, the government will withdraw that order and agree to work with ProAir on a fast-track process to determine if it can fly again. Before it can do so, ProAir will first have to move its headquarters from Seattle to Detroit and prove to the FAA, as well as the DOT, that it can overcome both its financial and maintenance and safety problems.

Although the FAA will have seen sufficient progress to reissue an AOC on January 23, a spokesman for the DOT will indicate to *The Detroit News* on January 25 that none of the necessary documents of financial proof have, as yet, been filed with it.

PROFIT AIRLINES (PROFIT EXPRESS): United States (1980–1985). Profit Airlines is established by the freight forwarder Profit Freight Systems (also known as PBA-Profit by Air) at Atlanta in 1980 to provide scheduled jet all-cargo services between the U.S. and Puerto Rico. Revenue flights commence with a Convair CV-880M wet-leased from the short-lived **Central American Airways (CAA)**.

A second CAA Convair enters service in 1981; however, it is soon determined that cargo containers are not interchangeable between the two narrow-bodies and other aircraft and so the CAA flights are discontinued. In 1982, the carrier contracts to employ wet-leased **Arrow Air** Douglas DC-8Fs. These aircraft maintain company services until operations are suspended in 1985.

PROMAIR AUSTRALIA (PTY.), LTD.: Australia (1977–1995). Promair is established in 1977 at a private airfield at Pt. Welshpool, near Wilson's Promontory near Melbourne, to fly charters out to the Bass Strait destination of Flinders Island. The main link between the Island

and Victoria, the company transports milk, fruits and vegetables outward and returns with lobsters.

Brian and Michael Tucker take charge of the company in 1986 and begin to fly scheduled services to Flinders Island and Launceston, Tasmania, with four Piper PA-31-310 Navajos painted in a livery of orange, brown, yellow, and white. During 1987–1989, regularly scheduled flights are also begun to Melbourne.

During 1990, a contract is awarded to the company to fly to Tasmania all of the items required by Revco automotive parts outlets. At the same time, a joint sea-air operation is begun with the service operated by the *Bass Strait Seacat*; passengers reaching Tasmania by the catamaran are returned to Victoria by air.

Late in the year and into 1991, service is introduced Geelong–Grovedale, with thrice-weekly flights to Launceston and to Bairnsdale and Sale, connecting through the Latrobe Valley to Launceston.

In October 1993, the company base is shifted to Georgetown. Managing Director Brian Tucker undertakes to continue revenue services with a fleet of 3 Navajos. Financial problems are encountered in 1994, causing the carrier to shut down in early 1995.

PROMECH: 1515 Tongass Avenue, Ketchikan, Alaska 99901, United States; Phone (907) 225-3845; Fax (907) 247-3875; <http://www.promechair.com>; Code Z3; Year Founded 1993. Promech is established by Kevin Hack at Ketchikan, Alaska, in 1993 to offer scheduled, charter, and contract service flights, including mail and cargo, to surrounding and bush communities. The all-float-equipped fleet includes 3 Cessna 185s, 3 de Havilland Canada DHC-2 Beavers, and 1 each DHC-3 Otter and DHC-6-300 Twin Otter. Orders are outstanding for another floatplane Twin Otter.

A total of 2,791 scheduled passengers are flown on the year.

Airline employment stands at 15 in 1994 and customer bookings triple to 8,312. Enplanements skyrocket an almost unbelievable 386% in 1995 to 40,370.

There are no changes in the workforce during 1996 as passenger boardings plunge to 11,171. In 1997, President Hack's fleet includes 5 Beavers, 3 Twin Otters, and 2 Cessna 185s.

Customer bookings increase 55.6% to 17,377.

Successful service is maintained in 1998 as passenger boardings rise 5.6% to 18,000.

Customer bookings for 1999 rise 13% to 21,000.

PROMPT AIR: 5300 West 63rd Street, Chicago, Illinois 60638, United States; Phone (773) 581-9010; Fax (773) 581-9197; Year Founded 1993. Alan R. Kaufman sets up Prompt Air in 1993 to provide all-cargo services throughout the Chicago area, plus markets in Illinois, Indiana, and Wisconsin. Revenue operations commence with a fleet of 9 Cessna 210s and 5 Piper Aztecs. Each year, the company will be plagued with accidents.

Just after takeoff from Indianapolis on December 20, 1995, a Cessna 210 suffers loss of engine power; the aircraft is able to execute a safe emergency landing back at its point of origin and its pilot is not injured.

While on final approach to Springfield, Missouri, on a service from Cahokia, Illinois, on November 15, 1996, a Cessna 210 collides with terrain one mi. from the runway; the pilot is killed and the aircraft is destroyed.

Just after takeoff from Milwaukee on an all-cargo service to Louisville, on February 20, 1997, another Cessna 210 with two crew crashes; there are no survivors.

Flights continue without incident in 1998–2000.

PROPAIR, INC.: Box 220, RR #1, Rouyn Airport, Rouyn-Noranda, Quebec J9X 5B7, Canada; Phone (819) 762-0811; Fax (819) 762-1852; Code P6; Year Founded 1987. Following its June 1987 sale to Nordic Helicopters, Ltd., the former **Quebecair Inter, Ltd.** is reformed and renamed. Over the next decade, the company operates domestic and

international passenger and cargo charters, aircraft maintenance, and air ambulance services without fanfare.

A Swearingen Metro II with 2 crew and 11 passengers lands nose-gear-first at Puvimutuq on October 23, 1996, causing the turboprop to veer left off the runway and stop 200 ft. beyond the runway on a gravel airstrip; although the aircraft is badly damaged, there are no fatalities.

In 1997, President/General Manager Jean Pronovost oversees a 90-person workforce. The fleet includes 1 Beech King Air 90, 4 King Air 100s, 1 Super King Air 200, 1 Cessna 185, 1 C-310, 6 de Havilland Canada DHC-2 Beavers, 3 DHC-3 Otters, and 1 Fairchild SA-226 Metroliner. Revenues total C\$5.5 million.

Just after takeoff from Montreal (YUL) on June 18, 1998 for a flight to Peterborough, Ontario, the pilot of the Metroliner, with 10 other passengers (largely comprising an engineering team from General Electric Canada) and operating as Flight 420, reports fire in his left No. 1 engine. ATC instructs the aircraft to land at Mirabel Airport. Upon touching down, the plane explodes and its left wing and engine separate from the fuselage. The burning aircraft flips over, lands upside down, and cartwheels 2,000 ft., coming to rest 65 meters off the runway. There are no survivors from the worst crash in Canada since the May 1989 **Air Ontario, Inc.** disaster at Dryden, Ontario.

The company continues to offer both scheduled and charter services, without incident, during the remainder of the decade.

After several months of study, executives from **Air Alma, Ltd.**, **PropAir**, and **Air Satellite, Inc.** approach Quebec Finance Minister Bernard Landry on October 25, 2000 and request \$84 million to help them merge into a larger regional. If the arrangement can be concluded, the new airline, to be named **Air Quebec, Inc.**, will form a credible alternative to **Air Nova**, which enjoys the majority of local market share.

PROPAIR, LTD.: Canada (1981–1986). **Air La Sarra, Ltd.** and the subsidiary **Air Fecteau, Ltd.** are combined by **Quebecair, Ltd.** in 1981 to form the larger subsidiary, **Propair, Ltd.**, basing it at Rouyn. The fleet is comprised of the merger partner's aircraft, including 13 de Havilland Canada DHC-2 Beavers, 13 DHC-3 Otters, 2 DHC-4 Caribou, and several Cessna 207s. A contract is reached with the parent for the operation of commuter services over **Quebecair, Ltd.**'s low-density routes, such as **Quebecair Inter, Ltd.**

In December 1985, **Quebec Aviation, Ltd.** is purchased and merged. The two Caribou are now sold and beginning in early 1986, the company links its base to new destinations, including Montreal, Chibougamau, Bagotville, Ottawa, Nordanda, Val d'Or, Sherbrook, and Quebec City. An inherited route from Quebec City to Murray Bay is subcontracted to **Les Ailes de Charlevoix, Ltd.**

Operations continue with little change until June 1987 when the carrier is sold to Nordic Helicopters, Ltd. and is reborn as **Propair, Inc.**

PROPHETER AVIATION: United States (1986–1990). Robert Prophet establishes this small regional as the scheduled airline division of his Sterling, Illinois-based FBO. Employing a Piper PA-31-310 Navajo and a Cessna 402, the company inaugurates scheduled daily roundtrips in October 1986, linking the commuter's base with La Salle, Peru, and Chicago.

Unable to withstand recession, the company goes out of business on April 27, 1990.

PROSPAIR AIRCHARTER, LTD.: United Kingdom (1994–1996). Prospair is established at Birmingham Airport in 1994 to offer all-cargo regional services. Managing Director Michael G. Dowding begins revenue flights with a pair of Piper PA-31-310 Navajos that continue for two years.

PROTEA AIRWAYS (PTY.), LTD.: South Africa (1959–1980). Protea is established by Louis Malan, Peter Wilheli, and Willem Jordan at Rand Airport at Germiston, near Johannesburg, in July 1959 to operate air taxi and charter services throughout the country.

Initial services are provided with light aircraft and by the late 1960s the fleet includes 2 Piper PA-23 Apaches and 1 each Cessna 205, C-210, C-320, C-441, PA-31-310 Navajo, and Aero Commander 500B.

During the fourth quarter of 1970, Protea acquires **National Airways (Pty.), Ltd.**, then under the chairmanship of Richard Dunn. Destinations now regularly visited include Port Elizabeth, East London, Cape Town, Durban, Grahamstown, Port Alfred, and Virginia.

During the 1970s, Chairman/Managing Director J. T. Morrison acquires a single Vickers Viscount 700. Rising expenses led by fuel costs, force the company out of business in 1980.

PROTEUS AIR SYSTEM, S.A.: France (1990–2001). This commuter is set up at Vougeot in 1990 as the outgrowth of an air taxi operation started four years earlier by Bernard Stouff and Franklin Devaux. Stouff is appointed general manager and he assembles a fleet comprising 2 Beech King Air 90s and 1 Super King Air 200. Scheduled services are initiated to Dijon, Lille, and Nice. A Beech 1900C-1 is delivered to its French launch customer in December. The newly acquired Beechcraft is employed to inaugurate flights to London (STN) in the spring of 1991.

Three additional King Air 90s join the fleet in 1992. Operations continue in 1993 and in 1994 the company operates 1 each Beech King Air 90, Beech Super King Air 200, and Beech 1900C-1. The small regional operates a total of three routes, including frequencies from Dijon to Lille and Lille to the U.K.

Enplanements total 15,000.

The company becomes a unit of the **Air France** express regional network in 1995. The company takes over **Air Transport Pyrenees, S.A.** and its routes from Pau to Nantes, Saint-Etienne to Toulouse, and Castres to Rodez and Lyon. Orders are placed for a pair of Fairchild Dornier 328-100s and a Beech 1900D is delivered at year's end.

The new turboprops are delivered during the first quarter of 1996 and enter service in April on behalf of Europair, an **Air France/Air Inter** regional project. One Dornier is based at Marseilles–Provence Airport and flies to Bordeaux, Frankfurt, and Milan; the other, operating from Lyon's Satolas Airport, visits Frankfurt, Zurich, and Munich. Daily roundtrip Lorient to Lyon service begins in November. Intense competition from the high-speed TGV and Eurostar trains, forces the company to suspend its Dijon to Lille and Lille to London (STN) services.

Passenger bookings significantly advance, climbing to 24,000. A FFr 180 million turnover is generated.

The carrier's second Beech 1900D is delivered in February 1997. When during the first quarter, **TAT European Airlines, S.A.** withdraws from its daily Paris (ORY) to Chambéry route, Proteus takes it over in March. A third Dornier 328-100 arrives and in April, frequency on the former TAT route becomes twice daily. A code-sharing agreement is signed with **Regional Airlines, S.A.** in mid-month and on April 30 the company begins dual-designator flights from Rouen and Clermont.

During the Paris Air Show in June, the company replaces its options for 328-100s with a \$70-million request for six Fairchild Dornier 328JET regional jetliners, for which it becomes European launch customer. In mid-month, the carrier establishes a hub at Bouthéon Airport at Saint-Etienne and launches twice-daily Beech 1900 services to Lille, Bordeaux, Nantes, Reims, Annecy, Avignon, and Chambéry.

Early success in the new June markets leads Proteus in early July to begin flying from Dijon to Saint Etienne and Nice. At the same time, a Dornier 328-110 is leased for three months and is employed to inaugurate another former **TAT European Airlines, S.A.** route, from Paris (ORY) to Castres.

On July 31, the company agrees to become the third "Air France Express" franchise partner. In exchange for subsidy and other assistance, the company's aircraft will be painted in modified **Air France** livery and will undertake to fly certain medium- and low-density routes on behalf of Air France Groupe.

The initial dual designator Dornier 328-100 flights commence on September 1, thrice daily between Paris (ORY) and Chambéry, Savoie. Also in September, the company's seventh Beech 1900C and fourth

Dornier 328-100 are delivered. Fitted with pods, several Beech 1900Cs are employed during the month to launch a new evening air express service.

Enplanements for the year total 140,000 and operating income of FFr 220 million is generated.

The fleet at the beginning of 1998 includes 9 Beech 1900C/Ds and 5 Dornier 328-100s. Orders are outstanding for 6 Dornier 328JETs, 3 328-100s, and 10 Beech 1900Ds.

While on approach to Lann–Bihoué Airport at Lorient after a July 30 service from Lyons, a Beech 1900D, piloted by Capt. Jean-Christophe Barbe, is given ATC permission to descend for a better view of the 980-ft-long SS *Norway*, formerly the *France*, anchored near Lorient harbor. At an altitude of 2,000 ft., the airliner, with 13 other crew and passengers, collides with a Cessna 177 Cardinal piloted by retired **Air Inter, S.A.** A300 pilot Capt. Francis Gilibert. All aboard both aircraft are killed and the airframes sink to a depth of 50 feet.

During the fall, a French-language homepage is posted on the World Wide Web.

The fleet in 1999 includes 7 Dornier 328-100s, 4 Beech 1900Cs, and 10 Beech 1900Ds. Scheduled destinations visited include Annecy, Avignon, Bordeaux, Castres, Dijon, Lille, Lorient, Lyon, Nantes, Nice, Pau, Perpignan, Reims, Rodez, St. Etienne, Strasbourg, Toulon, and Toulouse.

Airline equity is increased from FFr 36 million to FFr 44 million during June, while a \$350-million order is placed for 18 Embraer ERJ-145s and 5 options. On July 9, Managing Director Mark Dugain announces that capitalization will be increased to FFr 135 million by the end of September.

In October, **Flandre Air, S.A.** is acquired. At the end of November, it is announced that **Air France** will merge Flandre, Proteus, and **Regional Airlines, S.A.** on April 1, 2001 into a unified large regional airline. **Region, S.A.** will operate 80 aircraft to approximately 400 domestic and European destinations and may earn as much as \$325 million in annual revenues.

PROVIDENCE AIRLINE CORPORATION: United States (1971–1983). James Dole creates this air taxi at North Kingstown, Rhode Island, in 1971 to undertake charter and contract Beech 18 service flights to Providence and other New England destinations. In mid-1980, the company obtains certification from the CAB to offer scheduled all-freight services, including overnight flights on behalf of air freight forwarders and express package firms. These operations begin with a Convair CV-240.

Flights continue apace during 1981, during which year the carrier obtains another Convairliner, plus five more Beech 18s. These are also employed in 1982 to operate 12.11 million FTKs. Unable to weather the recession, the aircraft and freight operation are sold to **Combs Freightair** in July 1983.

PROVINCETOWN-BOSTON AIRLINE (PBA): United States (1946–1988). One of the nation's oldest regionals at the time of its demise, PBA is founded as an FBO by John Van Arsdale Sr. at Marston Mills, Massachusetts, in February 1946. Employing a Cessna T-50A Bobcat, Van Arsdale begins several years of charter and air taxi flights under the original label of Cape Cod Flying Service. Van Arsdale acquires a Piper dealership and on October 1, 1948, moves his charter and sales operation to the newly built airfield at Provincetown.

The popularity of the company's charter service grows immensely during the next year. On November 30, 1949, President Van Arsdale creates Provincetown-Boston Airline as the airline operating subsidiary of CCFS, electing that title as he later recalls, "so I wouldn't have to tell people where I flew." Twice-daily T-50A shuttles are now regularly flown.

PBA's fleet is slowly enlarged but, throughout the 1950s the company's emphasis on seasonal resort trade continues; upwards of 70% of a year's traffic is accommodated between July 4 and Labor Day. Still,

this demand is sufficient to warrant introduction of additional capacity, first with a refurbished Lockheed Model 10A Electra.

During three fall congressional campaigns of this decade, the Democratic Party charters owner Van Arsdale's aircraft to fly a young John F. Kennedy around Cape Cod; JFK wins every contest.

The company is officially incorporated on February 13, 1953. While on final approach to Provincetown on July 8, a Stinson Voyager crashes into the sea 2 mi. offshore (two dead). In 1954–1956, the fleet is increased by the purchase of four Lockheed Model 10A Electras.

In the winter of 1957, Van Arsdale travels around Florida seeking carriers with similar seasonal problems with whom he might ally. J. L. "Joe" Brown's **Naples Airlines**, based at the Gulf Coast namesake, is the solution, and for three years, beginning on December 15, the two small companies lease planes and trade personnel among themselves.

In the manner of **Aeromarine Airlines** 40 years before, Brown, his planes and pilots, first migrate to Massachusetts to serve with PBA in the summer of 1958. Van Arsdale and Brown are able to launch a return afternoon shuttle service between Boston and Provincetown on Friday afternoons, in addition to the four-times-per-weekday roundtrips.

When the city of Naples refuses to renew the **Naples Airlines** airport lease, that transport company sells out to its Yankee associate in late 1959.

PBA becomes a dual-market airline on January 1, 1960, when it begins to operate its new acquisition as a subsidiary southern division. Cities in the Florida market include Ocean Reef, Naples, Miami, Marathon, Fort Myers, Sarasota, Jacksonville, and West Palm Beach. On December 15, 1961, the Naples–Miami route becomes a year-round service. The following year, the company begins construction of a new terminal building at Naples.

PBA will fly its resort-oriented routes apace for 15 years, adding a few aircraft (including Beech 18s) here and there and remaining profitable. New markets entered in Florida include Tampa, Punta Gorda, and Marco Island. On August 27, 1967, a Beech 18 with 14 aboard ditches off Humarock Beach, New York; the passengers and crew are all rescued.

Two Douglas C-53 Dakotas (military aircraft converted to DC-3 civil standard) are purchased in February 1968 to replace the Electras. With Vice President John E. Zate as pilot and President Van Arsdale as flight attendant, PBA inaugurates Naples to Miami revenue flights on March 22. During the winter season, a Naples to Tampa service is introduced. A third DC-3 is added in March 1970 and thereafter, one more Douglas transport is purchased, on average, every year until the fleet reaches a total of 12.

First delivered to **Eastern Air Lines** in October 1937, a DC-3 is purchased from that major on January 14, 1974; reregistered as N136PB, it will become the most-flown example of its type. By 1975, enplanements are 128,000.

Airline employment is increased by 20% in 1976 to an even 100 workers. James A. Vach is named vice president-operations.

In January, the company receives the 1975 "Regional Airline of the Year" award from *Air Transport World* magazine. Four former **Piedmont Airlines** Martin 4-0-4s are added to a fleet that now also includes 9 DC-3s, 1 Cessna 402, and 4 Piper PA-23s. Passenger boardings accelerate 20% to 160,000 while freight is up by an equal 20% to 15,000 FTKs.

The fleet is increased in 1977 by the addition of two more Martin 4-0-4s and two Cessna 402s. At the beginning of the winter season, a new service is introduced between Punta Gorda and Tampa. Enplanements during the 12 months total 193,065.

Bookings rise 25% to 241,049 in 1978 and 27% to 306,873 in 1979. Major expansion is avoided until two years after passage of the Airline Deregulation Act.

The employee population grows by 24% in 1980 to 217 and the company is reorganized on January 1; Chairman/CEO John Van Arsdale retires and is succeeded by his sons, led by President Peter H. The fleet now comprises 6 Martin 404s and 11 DC-3s. The 12th and last DC-3 is

purchased on March 12; all of the company's Douglas transports, which comprise the largest fleet held by any carrier in the world, were once operated by **Trans Texas Airways**.

Several months later, the corporation redeems its founder's stock at \$22 per share (\$660,000). In February, PBA inaugurates service to Key West and Marathon, Florida, and receives a subsidized EAS route connecting New Bedford and Nantucket with New York City.

After 20 years of operating **Naples Airlines** as a subsidiary, the carrier folds its southern division into itself and operates as PBA in both northern and southern markets. Four Embraer EMB-110s are now purchased, including the world's first SPAR-41 Bandeirante.

Passenger boardings increase 2.5% to 314,619.

When **Air New England** collapses in 1981, Provincetown-Boston steps in to pick up many of its routes and expands operations to the Massachusetts cities of Nantucket, New Bedford, and Martha's Vineyard, plus New York (LGA), as well as Sarasota and Fort Myers in Florida.

John C. Van Arsdale now reveals the secret to his success in a magazine article "Innovative, Flexible Management Key to Commuter Success in the '80s," *Commuter Air* 3 (April 1981): 20–28.

On August 27, the carrier's DC-3 N136P sets a record of 84,876 hours flown, surpassing the mark previously held by N21728, a Douglas owned by **North Central Airlines**.

Partially as a consequence, the number of travelers enplaned on the company's 6 Martin 4-0-4s, 6 EMB-110s, 12 Douglas DC-3s, and 20 Cessna 402s jumps 52.5% to 479,802. To help handle the new load, airline employment is boosted 94.9% to 423. Officials report a revenue increase of 58.6% (\$18.7 million) to the CAB.

Additional summer service is initiated in Massachusetts during 1982, including hourly shuttles that connect New Bedford and Hyannis with Nantucket and Martha's Vineyard. Three more major Florida routes are opened: Fort Myers to Tampa, Tampa to Tallahassee, and Miami to Ocean Reef. The DC-3 N136PB has now logged 85,544 flight hours.

Now classified under the CAB's classification scheme as a "large regional," and the fourth largest at that, PBA adds three NAMC YS-11As to its fleet.

Passenger bookings soar 51.7% to 727,716. Freight traffic skyrockets 695.6% to 771,862 pounds. Profits are \$4.74 million (operating) and \$2.12 million (net).

Employment jumps 40.6% in 1983 to 763. In January, the carrier receives the 1982 "Market Development Award" from *Air Transport World* magazine.

On September 19, a public stock offering is made that nets \$16 million. The year's most unique event is the October 8 marriage, aboard a static DC-3, of Mrs. and Mrs. Kenneth Hodges. Following the festive ceremonies, reported in a letter in the September–October 1999 issue of *Airliners*, the newlyweds and part of their party receive a champagne flight aboard the Douglas around Cape Cod.

The number of customers transported in these 12 months climbs 28% to 931,751 and cargo rises an equal percentage, 28.8%, to 994,000 pounds. The company now ranks second among all large regionals in terms of boardings. Meanwhile, revenues are also up 28% (to \$41.4 million), leaving a record \$2.3-million net profit atop slightly decreased operating gain of \$3.89 million.

The workforce is increased again in 1984, a large 70.4% to 1,300, some of it coming in January, when PBA acquires the assets of bankrupt **Dolphin Airways** and, shortly thereafter, inaugurates operations between New Orleans and Jacksonville and Pensacola. Later when two other Florida commuters fail, PBA picks up their authority between Melbourne and Daytona Beach.

Provincetown-Boston Airline's spectacular five-year rise now turns into a disastrous fall, and this for a company which, at the beginning of the year, has finally become the nation's largest regional. The first nine months; however, feature another spectacular rise. By Labor Day, 1.1 million passengers have been carried and a net profit of \$3.4 million banked.

A Cessna 402C loses power and crashes on September 7 while trying to return to the airport at Naples, Florida; six aboard are injured, one of whom later dies. It is later learned that the aircraft had been filled with jet-a-fuel rather than avgas.

This follows a nonfatal C-402 accident earlier in the summer. During October, a 10th nonstop YS-11A frequency is added from Jacksonville to Miami. The Florida operation is further enhanced in October through the purchase of **Marco Island Airways**. The purchase adds another five Martin 4-0-4s to the fleet.

On November 10, the FAA lifts the carrier's operating certificates for safety violations found as the result of a four-month investigation. The airline is thus grounded, but quickly files an appeal. At this same time, John Van Arsdale Jr. forces a company pilot to captain a YS-11 charter from Jacksonville to Naples, with himself as first officer. As neither man is qualified to hold those seats, the FAA pulls Van Arsdale's pilot's license.

Within two weeks, on November 25, the government allows the resumption of flights with its smaller aircraft under FAR Part 135 regulations. These under-30-seat aircraft are primarily Cessna 402s, which account for 20% of company capacity.

Just after departure from Jacksonville for a December 6 service to Tampa, the horizontal stabilizer separates from bulkhead No. 36 of Flight 1039, an EMB-110P1 with 2 crew and 11 passengers; the aircraft crashes 7,800 ft. beyond the end of the runway and there are no survivors. The accident causes further adverse public opinion of the airline and, within two days, load factors are cut in half.

The flight crew of a DC-3 fails to remove the lock from the elevator controls of their transport before takeoff on December 27; the oversight results in an emergency landing at Fort Myers 15 minutes later.

Perhaps the only bright spot by year's end is the recording of a noteworthy traffic increase of 52.9% (mostly before November); the million mark in annual boardings (1,331,491) is passed for the first time. Net profit of \$2 million is generated.

Airline employment is now 1,400. As 1985 dawns, PBA's ranking among large regionals is slipping fast and a severe cash flow problem is mounting, stemming largely from the shutdown when massive expenses were incurred against virtually no income. Peter Van Arsdale mortgages his house at the first of the year just to meet payroll. Meanwhile, throughout January, federal authorities investigate charges of drug use by PBA pilots; nothing is found.

On February 1, ownership control of the carrier passes from the Van Arsdale family to Tampa Bay Buccaneers owner Hugh F. Culverhouse Sr., who elevates former **Eastern Air Lines** executive and PBA board member C. Bill Gregg to CEO and board chairman. Culverhouse keeps Peter Van Arsdale on as president and asks John Van Arsdale Sr. to serve as "cheerleader without compensation." The world-renowned lawyer also guarantees \$1.1 million in bank loans, which significantly assist the carrier's cash flow position. On February 15, layoffs for 150 more employees are announced, leaving the workforce at 586. The number of flights is cut by 17% and Florida service is suspended at Daytona Beach, Fort Lauderdale, Gainesville, Melbourne, Orlando, Panama City, and Pensacola. The New Orleans market is also closed and services to the Bahamian destinations of Freeport, Marsh Harbour, North Eleuthera, Rock Sound, and Treasure Cay are also halted.

The reduced level of operations and income results in a Chapter XI bankruptcy filing on March 13, as service to a number of additional cities in the southern division is cut. The world's largest operator of Martin 4-0-4s reduces its fleet size to the 1983 level and institutes new controls on operational and financial affairs. Two YS-11As are sold for \$2.5 million and the remaining 7, plus 10 Martin 4-0-4s, are offered for sale.

After months of monitoring, the FAA reinstates the company's FAR 121 certificate on May 17, permitting flights with the larger (over 30 seats) airliners, primarily YS-11As, the Martins, and DC-3s, which have been grounded since the previous November. The government's move is, indeed, welcome as it allows the Nihon YS-11As to board 1,813 pas-

sengers at Nantucket on Memorial Day, bettering a one-day 1,598-person record set in 1984 before the FAA action.

On June 1, PBA's DC-3 N136PB *Old 36* records its 87,687th operational hour, making it commercial aviation's highest total-time aircraft ever. During the year, it will be filmed for inclusion in the Public Broadcasting System tribute to *The Plane That Changed the World*. With PBA still shaky despite his cash and loan guarantees, Culverhouse pulls out his support, returning the carrier to Van Arsdale control. An attempt is made to sell off the six YS-11As, but no buyers come forward and the surplus capacity is parked. Late in the year, **PEOPLExpress** files a reorganization and takeover plan with the U.S. Bankruptcy Court in Tampa.

Passenger boardings plunge 41.1% to 784,054.

The 680-employee carrier is so strapped that it nearly closes its doors in January 1986 before it receives a rejuvenating \$700,000 cash infusion from **PEOPLExpress** as the first step in its takeover. Once the PEOPLExpress arrangement is completed, PBA, as a subsidiary of the national, readies its YS-11As for a return to Part 121 operations.

Services resume in April with the company's first new routes in two years: PEOPLExpress feeder services from Newark to Philadelphia and Newark to Allentown. Four of the Japanese-made turboprops are transferred to New England to support the "Northern System," while two remain a part of the "Southern System" in Florida. In the spring, schedules are coordinated to maximize intrastate and feeder services.

Customer bookings rebound, rising 16.3% to 911,935.

PBA becomes a part of the Texas Air Corporation (TAC) empire on February 1, 1987 when **PEOPLExpress** is integrated into **Continental Airlines**. Management responsibility for the new acquisition is assigned by TAC to the "Eastern Express" carrier **Bar Harbor Airlines**. Bar Harbor officials, led by President Allyn J. Caruso, change the route network during the spring; the Florida division is shut down and flights to Cape Cod and the Massachusetts islands are either limited or assumed by Bar Harbor.

With its fleet of 10 DC-3s, 30 Cessna 402s, 7 Bandeirantes, and 6 YS-11As, the 630-employee PBA is made the "Continental Express" carrier feeding Boston and Newark. As a result of the makeover of the route structure, passenger boardings decline by 27.3% to 662,982.

Even though its operations were merged last year, PBA is legally merged into **Bar Harbor Airlines** in 1988. The company continues to serve 13 "Continental Express" markets in the Northeast and two in Florida. In the fall, parent **Bar Harbor Airlines** cancels the PBA service to the Massachusetts coastal islands. Unable to continue, the pioneer commuter parks its fleet and shuts its doors.

Upon the company's demise, its most famous aircraft, N136P, is sold to aviation enthusiasts Bob Irvine and Neil Rose, who transfer it to their hometown of Vancouver, Washington, and repaint it in **Eastern Air Lines** colors. Work to restore the aircraft to flying condition will continue into 2001.

There is an unofficial Web site for Provincetown-Boston Airline at <http://www.AIR-online.com/PBA>.

PROVINCIAL AIRLINES, LTD.: P.O. Box 29030, Hangar 4, St. John's International Airport, St. John's, Newfoundland A1A 5B5, Canada; Phone (709) 576-1800; Fax (709) 576-1802; <http://www.provair.com>; Code PB; Year Founded 1972. Provincial Airlines is established at St. John's, Newfoundland, in 1972, initially as an FBO, flight training, and air taxi operation. A significant number of non-scheduled operations are undertaken throughout eastern Canada. In 1974, a scheduled airline division, **Atlantic Airways, Ltd.** is established; it flies third-level frequencies throughout Atlantic Canada. In 1987, the parent purchases Halifax-based **Eastern Flying Service, Ltd.**, which is merged with **Atlantic Airways, Ltd.** under the PA banner.

In 1988-1990, the company continues scheduled passenger and cargo services that link its base with Halifax, Moncton, Gander, and a host of smaller markets. A large fleet is dedicated to these regular flights, although many of the aircraft employed also perform charters. Flight

equipment now includes 3 Fairchild Metro IIIs, 4 Beech Super King Air 200s, 1 Pilatus Britten-Norman PBN-2 Islander, 3 Piper PA-31-310 Navajos, and 6 Piper PA-31-350 Navajo Chieftains.

In 1991, a five-year, C\$50-million contract is signed with the Canadian Department of Fisheries; under its provision, a pair of Beech Super King Air 200s, outfitted with Litton maritime surveillance radar, inaugurate fisheries patrols from a base at St. John's, Newfoundland. Both scheduled and charter operations continue apace in 1992.

President Thomas Collingwood oversees a workforce of 190 in 1993. The company's 4 Metroliners, 4 Super King Airs 200s, 8 Navajos/Navajo Chieftains, and 1 Islander operate from hubs at both Halifax and St. John's. Destinations now visited include those two cities plus Deer Lake, Saint Anthony, Sydney, Blanc Sablon, Moncton, Saint John, Charlottetown, and the French island of Saint-Pierre.

The fleet is expanded in 1994 by the addition of two Merlin IVs; gone are two Navajos and the Islander. A hub is established at Vancouver and scheduled services are inaugurated to destinations in British Columbia.

While attempting to land at Sydney, Nova Scotia, after a flight from Moncton, New Brunswick, on April 14, Flight 703, a Metroliner, having failed to properly line up, descends to just 200 ft. above sea level and nearly impacts the Lingan power generating plant 1 mi. E of the runway. The plane goes around and successfully lands.

While landing at Fox Harbour, Newfoundland, on June 27 after a flight from Mary's Harbour, a Navajo Chieftain with five passengers suffers brake failure and ground loops, descending a 75-ft. embankment. The flight crew and three passengers, all uninjured, evacuate the wrecked aircraft and walk to the airport terminal.

The number of King Air fisheries patrols off Newfoundland is increased late in the year as the government, which has closed its Atlantic fishing areas due to over-harvesting, battles Spanish trawlers in the area of the 200-mile boundary.

The fleet is increased in 1995 through the addition of two de Havilland Canada DHC-6-300 Twin Otters. The company is now reformed into a holding company and a new airline division, Interprovincial Airlines, Ltd., is created to continue the carrier's scheduled services. President Collingwood becomes chairman/CEO, with Gus Oilerhead as president/chief operating officer. A commercial agreement is also entered into with Air Nova, Ltd.

Provincial Aviation Maintenance Services, Inc. is established in 1996 with emphasis on the modification of commercial aircraft into maritime surveillance platforms. Meanwhile, the Provincial fleet now includes 1 Convair CV-580, 2 Twin Otters, 3 Metro IIs, 3 Metro IIIs, 1 Merlin IV, 1 Islander, and 7 Navajos. Four Super King Air 200s continue to provide maritime reconnaissance services.

Operations continue apace in 1997-1998. While en route from Goose Bay to Davis Inlet on March 19, 1999, a DHC-6 Twin Otter freighter, with two crew, crashes near its destination. The aircraft is quickly located and both men are taken to the hospital, where the first officer dies.

Employment at the beginning of 2000 totals 300. An executive jet charter division is established at St. John's International Airport on July 5. Premier Brian Tobin presides over special ceremonies that officially launch the new unit. A newly purchased Cessna Citation II is employed on-demand to transport business passengers to points within its 2,000-mi. range, including Ottawa, Montreal, Toronto, Winnipeg, London, Ontario, Boston, Washington, Chicago, and New York.

On October 12, twice-daily roundtrips are initiated from St John's to both Gander and Deer Lake. These frequencies represent a return to markets from which the carrier had withdrawn five years earlier.

PROVINCIAL AIRWAYS, LTD.: United Kingdom (1933-1935). Provincial Airways, Ltd. is formed on October 12, 1933 to take over the assets (including 2 Monospar ST.4s) of bankrupt **International Air Lines, Ltd.**; the new entrant has initial capitalization of £10,000. Offering a West Country Air Service, the company initiates Monospar flights from London-Plymouth via Southampton on November 25.

Employing new de Havilland Fox Moths, weekday service is started on March 19, 1934 from London (Croydon)-Plymouth via Southampton and Haldon. A DH 84 Dragon is employed beginning in May. In order to connect with the Plymouth service, a new daily Hull-Southampton route is opened by the company's three Dragons on March 4, 1935, via Hull, Grimsby (on request), Nottingham, and Leicester.

In July, the Southampton terminus is switched to the Croydon facility, allowing the start-up of daily London-Paris flights; simultaneously, service is initiated from Nottingham to Paris via Leicester and Le Touquet. The company ceases operations in September and is liquidated on December 10.

PROVINCIAL HELICOPTERS, LTD.: Box 579, Lac de Bonnet, Manitoba R0E 1A0, Canada; Phone (204) 345-8332; Fax (204) 345-8679; Year Founded 1993. Provincial Helicopters, Ltd. is established at Lac de Bonnet, Manitoba, in 1993 to provide on-demand passenger and cargo charters throughout the province. Operations Manager John Gibson begins and continues services with a pair of Bell 206B JetRangers. Seven years later in 1998, the fleet also includes an Enstrom F28F.

PSA. See PACIFIC SOUTHWEST AIRLINES (PSA)

PSA AIRLINES: 3400 Terminal Drive, Vandalia, Ohio 45377, United States; Phone (513) 454-1116; Fax (513) 454-5828; http://www.psaairlines.com; Code TF; Year Founded 1995. To keep alive the name of the USAir merger partner **Pacific Southwest Airlines (PSA)**, the "USAir Express" carrier **Jetstream International Airlines** is renamed PSA Airlines in November 1995.

Headquarters are maintained at Vandalia, Ohio, and Richard Pfennig continues as president.

The PSA fleet includes 20 Dornier 328-110s, 5 Jetstream 31s, and 9 Embraer EMB-120 Brasilias. On December 16, thrice-daily flights commence between Columbia, South Carolina, and Pittsburgh.

Enplanements for the year under both titles decrease 8% to 876,748 due largely to route realignments implemented during the year.

The employee population stands at 945 in 1996 and fleet is increased by the addition of 5 Dorniers, which replace the Brasilias. Five of the German turboprops, now jointly manufactured with Texas-based Fairchild, remain on order. The last Jetstream 31 service is flown on February 14.

Ground is broken on a 45,000-sq.-ft. hangar and maintenance facility. A 4 1/2-year accord is reached with the company's ALPA-represented pilots, a 5-year accord is achieved with the unionized flight attendants, and a 4-year accord is signed with the mechanics. Negotiations are begun with the Teamsters, who speak for the carrier's customer service and stores agents.

Traffic recovers and passenger boardings leap upward 12.3% to 984,939 on 56,946 scheduled departures.

Airline employment stands at 850 at the beginning of 1997 and the company serves 33 cities in 15 states and D.C. On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express."

During the remainder of the year, this regional repaints its aircraft in a modified version of the major's new grey and dark blue livery.

Dornier 328-110 nonstop "USAirways Express" service between Washington, D.C. (DCA) and Martha's Vineyard becomes daily on June 15. At the same time, a third daily "USAirways Express" flight is begun between the nation's capital and Portland, Maine, and Knoxville, Tennessee. The carrier now operates a total of 13 weekly services from Martha's Vineyard, 11 from Knoxville, and 25 from Portland.

Customer bookings ascend 19.2% to 1,174,525 on 61,297 scheduled departures.

The fleet in 1998 comprises 25 Dornier 328-110s.

On October 4, daily nonstop "USAirways Express" Dornier 328-110 roundtrips are inaugurated between Asheville, North Carolina, and Pittsburgh and between Knoxville and Philadelphia. A second daily nonstop

"USAirways Express" roundtrip is also launched between Birmingham, Alabama, and Pittsburgh and additional nonstops are also laid on to Washington, D.C. (DCA) and Charlotte.

Passenger boardings during the 12 months climb 8.5% to 1.27 million.

By the beginning of 1999, the workforce has been increased by 25.2% to 963.

A second daily nonstop "USAirways Express" roundtrip is added on February 3, between Knoxville and Philadelphia. Simultaneously, new twice-daily "USAirways Express" Dornier 328-110 roundtrips commence between Washington, D.C. (DCA) and Greenville and Spartanburg, South Carolina.

Passenger boardings for the year dip 5.6% to 1,203,000.

Airline employment stands at 1,039 at the beginning of 2000, a 7.9% increase over the previous 12 months. In May, the "USAirways Express" operation at Pittsburgh is expanded to include nine gates at the end of Concourse A.

During the fall, personnel are seconded to North Carolina to participate in the operation of the new **Potomac Air**.

It will be reported by *The Charlotte Observer* on March 3, 2001, that PSA, with its sister "USAirways Express" carriers **Allegheny Airlines (2)** and **Piedmont Airlines (2)** are, tentatively, to be sold to **Atlantic Coast Airlines** if and when government regulators approve the pending takeover of **USAirways** by **United Airlines**.

PSKOV AVIA: Germana Str 34, Pskov, North West Zone, 180005, Russia; Phone 7 (81122) 34653; Fax 7 (81122) 25224; Code PSW; Year Founded 1993. Founded in its namesake city in 1993, Pskov recruits a workforce of 600 under the leadership of General Director Anatoly Sulimov. Regional passenger and cargo services are begun with an all-Antonov fleet of 1 each An-2, An-24, and An-26.

Business continues in 1995–2000, during which years the number of Antonovs flown grows to 15 An-2s, 10 An-24s, and 5 An-26s.

PTARMIGAN AIRWAYS, LTD.: Canada (1961–1995). Founded at Yellowknife in the Northwest Territories in 1961, Ptarmigan begins flying charter and contract service flights to destinations in the Great Slave Lake area. When **Wardair Canada, Ltd.** drops its scheduled services from Yellowknife to Snowdrift, Fort Resolution, and Hay River in the middle 1970s, these are taken over.

The first of five de Havilland Canada DHC-6-200 Twin Otters is obtained in 1976 to operate the scheduled services. Painted bright yellow with black titles, the turboprops supplement the earlier fleet of Piper PA-23 Aztecs and DHC-2 Beavers.

By 1986, President Clement F. Bekar's fleet has been upgraded to include not only the Twin Otters, but also 1 Piper PA-31-350 Navajo Chieftain, 1 PA-31-310 Navajo, and 2 Turbo Beavers. Destinations served include Fort Resolution, Hay River, Lac La Matre, Pine Point, Rae Lakes, Snowdrift, and Yellowknife.

One Twin Otter is withdrawn in 1987 as General Manager Cam Jordheim acquires a Cessna T-1040 and a Piper PA-31T Cheyenne. A Cessna Citation 550 executive jetliner is acquired in 1989.

George Simon becomes vice president operations in 1990.

A DHC-6-300 freighter with two crew fails its takeoff from Thistle Lake on June 6, banks right and smashes into a parked Bell 206B JetRanger helicopter; both flyers aboard the turboprop are killed and both aircraft are destroyed.

The T-1040 is withdrawn during 1991 in favor of a Grumman Gulfstream I. Two Beech Super King Air 200s join the fleet in 1992 and by 1993–1996, President Bekar oversees a workforce of 45.

Early in 1997, the Yellowknife-based carrier is sold to First Air, Ltd.

PUBLI-AIR, S.A.: Belgium (1980–1987). Based at Grimbergen Airfield, near Brussels, this charter and executive carrier has an initial fleet comprising 1 each Swearingen Metro, Beech 99, and Bell 206B JetRanger. Nonscheduled services continue for five years until 1986

when General Manager Georges Bertrand's company elects to open scheduled frequencies. These are inaugurated to Liege, London, and Ostend. Unable to generate sufficient traffic to cover expenses, the operation is closed down in 1987.

PUEBLAS AEROLINEAS, S.A. de C.V.: Mexico (1994–1996). Pueblas Aerolineas is established in 1994 as a feeder subsidiary of the nation's third largest airline, **TAESA (Transportes Aereos Ejecutivos, S.A. de C.V.)**. Two Boeing 737-3Y0s are transferred from the parent and are employed to inaugurate scheduled flights from Puebla. Flights cease in 1996.

PUERTO RICO INTERNATIONAL AIRLINES. See **PRINAIR (PUERTO RICO INTERNATIONAL AIRLINES)**

PUGET SOUND AIRLINES: United States (1967–1970). In an effort reminiscent of **B.C. Airlines, Ltd.** to the north, the owners of a number of small charter and scheduled airlines in the Puget Sound area of Washington State agree during the spring and summer of 1967 to combine their companies into a single large regional airline. On August 28, **Island Sky Ferries**, **Angeles Flying Service**, **Skyline Air Service**, **Bellingham-Seattle Airways**, and **Whidbey Flying Service** are merged.

Wes Lupien, who had founded **Whidbey Flying Service** in 1964, becomes president/CEO and the new airline's headquarters are set up at his old Oak Harbor base. The contract with **Island Mail, Inc.** remains in force.

Employing the Beech 18s, Cessnas, and Piper lightplanes of the merger partners, PSA offers passenger and cargo commuter flights over the inherited and now combined route network. Services continue until the carrier goes out of business on October 1, 1970. Lupien will join with Jerry Patterson the following year to form **Oak Harbor Airlines**.

PULKOVO AIRLINES (AVIATION ENTERPRISE PULKOVO): 18/4 Pidotov Str., St. Petersburg, 196210, Russia; Phone 7 (812) 104-3302; Fax 7 (812) 104-3702; <http://www.pulkovo.ru>; Code Z8; Year Founded 1932. Originally organized as the operating arm of the Leningrad air transport department on June 24, 1932, this government airline provides executive flights for officials over the next 60 years.

After the collapse of the Soviet Union, AEP is reformed in 1992–1993 into the international, regional, and domestic charter and scheduled carrier Enterprise Pulkovo. It becomes a part of the Pulkovo Aviation Enterprise, which also operates the city's domestic and international airports.

Boris Demchenko is appointed general director and his fleet comprises 8 Antonov An-12s, 9 Ilyushin Il-86s, 22 Tupolev Tu-154Bs, 5 Tu-154Ms, and 11 Tu-134s. These are employed to launch revenue flights from St. Petersburg's Pulkovo Airport to Amsterdam, Athens, Barcelona, Berlin, Brussels, Budapest, Burgos, Copenhagen, Dusseldorf, Frankfurt, Goteborg, Hamburg, Helsinki, Larnaka, London, Luxembourg, Madrid, Milan, Munich, Oslo, Paris, Prague, Rome, Shannon, Sofia, Stockholm, Tel Aviv, Vienna, Warsaw, and Zurich. In addition to flight operations, Demchenko also oversees the Pulkovo Aviation Maintenance Complex.

Airline employment stands at 7,086 in 1994–1996 as operations continue. During these years, the fleet is altered to comprise 7 An-12s, 9 Il-86s, 19 Tu-154Bs, 6 Tu-154Ms, and 14 Tu-134s. In 1995, twice-weekly roundtrips commence from St. Petersburg to Kiev via Moscow.

The company becomes a member of an Interline group, an organization that units 14 foreign airlines operating into Pulkovo Airport, as well as **Aeroflot Russian International Airlines (ARIA)**. *The St. Petersburg Times* reports on April 7, 1997, that Pulkovo, Aeroflot, and the other members of their Interline group have met with city tax authorities in an effort to unravel a vast web of regulations that violate international civil

aviation agreements. As the year wears on, Pulkovo and **Transaero Airlines** intensify competition on the route between St. Petersburg and Moscow, while the Ukrainian carrier **Aerosweet Airlines** places a single Boeing 737 on the route from Kiev to St. Petersburg.

During the year, the government puts forward a plan for the privatization of the Pulkovo group, which also includes St. Petersburg's airports. Director General Boris Demchenko immediately opposes the concept on grounds of efficiency and the number of jobs to be lost as the result of such a process.

Passenger boardings during the 12 months total 1,428,212 while 18.7 million FTKs are operated.

Early in **1998**, Pulkovo wins a contract from the UN to transport personnel and goods. The arrangement is one of many held by the world body with carriers around the globe. The first commission is undertaken on March 23 with the delivery of 400 Polish soldiers from the city of Katowice to Tel Aviv.

In late April, the carrier wins a \$465,550 technical assistance grant from Frankfurt Airport via the European Union's TACIS (Technical Assistance to the Commonwealth of Independent States) program. The funds will be available for a year and are to be employed to help Pulkovo overcome problems and challenges related to the privatization the government desires.

Customer bookings slide 3.9% to 1.37 million while cargo traffic falls to just 9 million FTKs.

Company employment stands at 7,000 at the beginning of **1999** and the fleet now includes 2 An-12s, 9 Il-86s, 10 Tu-134s, 15 Tu-154Bs, and 7 Tu-154Ms. Deputy Director Valery Gorbatenko admits on July 30 that the Russian economic crisis has had a significant impact upon the airline and that its operations had suffered accordingly. Because the airline is part of a municipal trust (and functions with the company that operates Pulkovo Airport), it cannot solve its financial problems by increasing airfares.

On December 28, a 50% stake in **Murmansk Airlines** is sold to RAO Norisk Nickel for \$5.1 million. It is understood that the energy concern has outbid a \$5 million tender from Baltinvestovsky, backed by Pulkovo Airlines.

Passenger boardings accelerate 8.2% on the year to 1,486,000. Revenues total \$15 million.

At the beginning of **2000**, Pulkovo operates scheduled services to over 130 cities with a fleet of 40 aircraft. The company is now universally recognized as Russia's second largest domestic carrier.

On March 10, it is reported by the Russian media that the entire fleet of **Murmansk Airlines** has been grounded. It is also noted that negotiations are underway which would have Pulkovo Airlines step in and take over the concern from its new owners. Murmansk's new owners and Pulkovo are, however, unable to come to an arrangement and discussions end.

At the end of March, Pulkovo enters into a direct, twice-weekly Tu-134A roundtrip competition with **MALEV Hungarian Airlines, Rt.** over the route between Budapest and St. Petersburg. Pulkovo will push its Hungarian opponent out of the market by October 29. In June, Pulkovo joins the International Air Transport Association (IATA).

During the summer, **MATK RusAvia** contracts with a capital tour operator to fly travelers to Thailand, Indonesia, and other Southeast Asian points in nine return flights late in the fourth quarter. Unhappily, the company does not have sufficient aircraft or funds to complete its obligation, leaving hundreds of people stranded. The civil aviation department of the Russian Ministry of Transport (GSGA) arranges for the repatriation of the defunct line's customers. Special return flights are operated under contract by **Aeroflot Russian International Airlines (ARIA)**, **Domodedovo Airlinesb**, **Rossiya Air Company (GTK Rossiya)**, and Pulkovo, with the latter operating the majority of roundtrips. GSGA then suspends the operating certificate of **MATK RusAvia**.

Following the conclusion of an aviation conference at St. Petersburg on November 24, the Russian media conjectures that a merger will soon

occur between Pulkovo and **Aeroflot Russian International Airlines (ARIA)**. The basis of the rumor are remarks by ARIA CEO Valery Okulov concerning the role of alliances in the air transport industry and reports that he had met with officials from Pulkovo and other domestic Russian airlines to discuss possibilities. Three days later, Okulov takes the air out of the growing story by indicating that the two carriers have only been discussing general cooperation.

On November 30, Pulkovo and **DHL Worldwide Express** introduce same-day delivery service of priority-express packages from Moscow to St. Petersburg. The urgent cargo is transported aboard Pulkovo's regular passenger flights. The arrangement allows the partners to assist companies which, in the past, have had to dispatch members of their staff to act as couriers for urgent items.

Pulkovo's position as the second largest airline in Russia will end on January 3, **2001**, when it is announced that Moscow-based **Vnukovo Airlines** is being taken over by **Siberia Airlines (Sibir)**.

In February 2001, the Moscow government reports that the total number of Russian air carriers has fallen from 328 in January 2000 to a current 294. It also reveals that **Kras Air (Krasnoyarsk Avialinii)**, **Siberia Airlines (Sibir)**, Pulkovo Airlines, and **Aeroflot Russian International Airlines (ARIA)** have, between them, carried half of all Russian passenger traffic in 2000.

In March, it will be announced that Pulkovo Airlines will join in an alliance with Moscow-based **Rossiya Air Company (GTK Rossiya)**, Kazan-based Aviation Production Association (KAPo), and the St. Petersburg International Bank. The new pact will reportedly sponsor an intensified timetable for production of the new Tu-214 at the Kazan plant, while Rossiya will coordinate its fleet with Pulkovo for commercial purposes. Sales and ticketing for the two airlines will be handled by Pulkovo.

PUNTA VIA AIRLINE DE DJIBOUTI, S.A.: Djibouti (1992–1997). PADD is established at Djibouti in late **1992** to provide scheduled and charter passenger services to regional destinations. Mousa R. Waberi is appointed managing director and is provided with a pair of leased Boeing 727-228s.

Revenue flights commence in **1993**. Destinations visited include Addis Ababa, Jeddah, Mogadishu, Sharjah, and Berbera. In **1994**, an Ilyushin Il-18D is chartered from **Aeroflot Russian International Airlines (ARIA)**.

In **1995**, a Boeing 727-214 is leased from **Air Charter Services, S.A.** of Zaire, but it is returned in **1996** and replaced by three Let L-410UVPs. Reports of the carrier's demise are greatly exaggerated.

Airline employment stands at 50 as a fourth Let arrives in early **1997**. At this point, the company is renamed **Djibouti Airlines, S.A.**

PURDUE AERONAUTICS CORPORATION: United States (1942–1971). PAC is formed at West Lafayette, Indiana on May 5, **1942** as an affiliate of the School of Aviation Technology, Purdue University. In **1949**, the operator receives a temporary CAB certificate to undertake scheduled passenger and cargo services linking West Lafayette with Chicago. Service is maintained until Indianapolis-based **Turner Airlines** is able to take it over on January 30, **1950**, at which time the temporary certificate expires.

Operations continue apace for the next 15 years with de Havilland DH 104 Doves in support of Purdue's aeronautics programs. To help defray expenses, several of the newly received Douglas DC-3s are leased out to other operators or undertake charter operations.

All three crew aboard a DC-3 are killed when it fails takeoff from Dallas, Texas, on April 18, **1962**. Incoming from Indiana on November 29, **1963**, a DC-3, leased by the West Virginia University basketball team and crashes near Morgantown, just before the team is scheduled to board, killing the three-man crew.

PAC, acting as a supplemental carrier, becomes one of 10 irregulars to win CAB certification in April **1966**. The achievement is followed by receipt of overseas operating authority to Canada on September 30.

Revenues for the year total \$1,400,407. Expenses are \$887,657 and the difference allows a net profit of \$143,599.

Purdue operates 3 DC-6Bs and 4 DC-3s during 1967 and its employee population rises to 106. An order is placed for three DC-9-30CFs.

Unable to obtain assistance from its university sponsor and losing money, the rapidly expanding carrier must be sold.

A total of 38,177 passengers are originated and 5,000 freight ton-miles are operated. Revenues drop to \$1,341,832. Losses are \$49,654 (operating) and \$36,448 (net).

On February 23, 1968, majority shareholding is purchased by Stephens, Inc. The fleet now comprises 4 Douglas DC-3s, 3 DC-6Bs, and 2 newly arrived jetliners, a DC-9-31 and a DC-9-32. When a door accidentally opens on a DC-3 flying near Vichy, Missouri, on June 28, an unsuspecting passenger falls to his death. The year's income ascends to \$1,837,283. Despite a change in ownership, losses continue to grow: \$124,479 (operating) and \$118,577 (net).

A new \$5-million DC-9-32, painted in an all-black livery with a white logo on its tail, is delivered to Playboy Enterprises as *Black Bunny* on February 24, 1969. Hugh Heffner's latest prize will be operated and maintained by PAC.

Revenues are \$3,732,534, but the carrier continues to offer negative income; this year's losses are \$1,397,548 (operating) and \$1,963,146 (net).

Despite a continuing flood of red ink, the flow is slowed somewhat in 1970. On increased revenues of \$5,510,440, the operating deficit is \$1,057,005 and the net is \$1,556,983.

Although the airline has successfully transported university teams and served as a laboratory for the school's noted aeronautical program, it has also lost a net total of \$3,675,154 since 1967. Unable to continue to absorb these losses, Purdue's administration orders the carrier closed down on May 1, 1971.

PUROLATOR COURIER: United States (1923–1987). Motor Improvements, Inc., is incorporated in Delaware on May 2, 1923, to provide ground transport of checks and bank documents. In September 1940, the company changes its name to Purolator Courier and, in April 1968, to Purolator, Inc.

Former Treasury Secretary Nicholas Brady becomes CEO and an oil filter division is acquired. In 1980, the company launches a small package delivery service, Purolator Sky Courier, which transports 16.21 million FTKs. A number of small all-cargo commuter airlines, such as **Mountain Air Cargo**, make the actual flights under contract. In 1981, the company signs a contract with **Air National** to operate cargo charters on its behalf. These commence with a DC-9-10 AN has leased from **Air Florida**.

Business improves by 10%; a total of 17.84 million FTKs are operated.

During the first 11 months of 1982, the courier's business increases 3.7% to 15.4 million FTKs.

Served by over 100 contract aircraft, Purolator acquires its first owned aircraft in the fall of 1983 when three B-727-100Cs arrive after September. A total of 75,466,000 shipments are accommodated and a net profit of \$31.8 million is earned.

In early 1984, the decision is taken to directly enter the small-package express delivery business. Purolator Courier is incorporated in New York on July 1 and merges Purolator, Inc.; William H. Waltrip is appointed president/CEO. The forwarder and small-package firm now acquires a fleet of 8 Douglas DC-9-15Fs to support the 3 Boeings received the previous fall. These will be flown under contract by **Orion Air**.

Thereafter, Purolator Courier directs the aerial portion of its vast resources toward breaking into the small-package express delivery busi-

ness dominated by **Federal Express**. An interim hub is established at Indianapolis International Airport.

The carrier transports a total of 87 million shipments (11.6 million by air), a 13.3% boost. Revenues earned by the corporation as a whole are \$790 million, but costs associated with the changeover to air express cut net earnings to \$15.5 million.

The workforce is increased by 10.7% in 1985 to 18,461. To save on immediate cash outlay, nine DC-9-15Fs and four B-727-100Cs are sold and then immediately leased back. Upwards of 90 other aircraft are operated nightly on behalf of the company by contract carriers. Work on the company's permanent hub continues at Indianapolis.

The number of packages flown increases 13.9% to 13.31 million; when ground transport is factored in, these account for only 14.8% of overall Purolator business. Revenues generated by the total corporation advance 3.6% to \$610.47 million, costs climb 13.7% to \$653.57 million, and an operating loss of \$43.1 million is taken by the combine's courier portion. A company-wide net loss of \$29.35 million must be suffered.

The fleet is unchanged in 1986 and so are the company's fortunes. Thereafter, traffic statistics are included as part of the company's overall annual report, and not broken out separately. Although traffic figures are not released, revenues do advance by 5.2% to \$841.4 million. Expenses skyrocket to \$888.48 million and force an operating loss of \$47.08 million. The net loss climbs to \$57.6 million.

A two-story facility and 50-ft. ramp are opened at the Indianapolis hub in January 1987, the last positive company action taken on behalf of the airline. Continuing to lose money monthly, the carrier is now put up for sale. The initial bid of \$35 per share is made by a group of eight Purolator officials calling themselves PC Acquisition and E. F. Hutton LBO.

Competing freighter **Emery Worldwide** steps into the picture with a \$40 per share bid, which equals \$310 million in cash and debt assumption. The acquisition gives Emery the chance to secure 10%–12% of the small package market. The leased aircraft are returned to their owners and the Purolator Courier ground distribution system is upgraded to handle an increased number of deliveries.

PUSHPAKA AIRLINES, LTD.: India (1978–1983). Pushpaka Aviation, Ltd. is founded at Bombay to undertake charter and contract helicopter operations. Employing two Sud-Est Caravelle VIRs, the company's air transport division, operating under the marketing name Pushpaka Airlines, Ltd., undertakes the transport of laborers to Sharjah in the Middle East five times per week.

Late in 1983, the Indian government refuses to renew the company's route license, thereby effectively putting it out of the flying business. Pushpaka withdraws its jetliners from service and downsizes into a local helicopter service.

PYRAMID AIRLINES, LTD.: Egypt (1977–1984). Owned by the Egyptian firm of Omar A. Falmy & Co. (51%) and U.S. interests (49%), Pyramid is established at Cairo in early 1977 (originally under the name Petroleum Aviation Charter Service, Ltd.) to provide passenger and cargo charters throughout Egypt in support of the oil industry. Revenue flight operations commence in June with a fleet of 7 Douglas DC-3s, 2 NAMC YS-11As, and 1 Aero Commander 560A.

At the end of the decade, the fleet is altered as two Douglas transports are withdrawn along with the Aero Commander and are replaced by two more YS-11As, a Fokker F.27, and a Piper PA-31-350 Navajo Chieftain. Rising expenses and lack of traffic cause the company to cease operations in 1984.

QANTAS (QUEENSLAND AND NORTHERN TERRITORIES AERIAL SERVICE [PTY.], LTD.): Australia (1934–1947). Unable to raise money required to participate in an England–Australia Air Race, ex-Flying Corps Lieutenants Wilmot Hudson Fysh and Paul J. McGuinness are commissioned by the government in spring 1920 to survey a last-leg route for the contest and prepare landing fields between Darwin and Queensland. In a Ford Model T touring car, the pilots bounce 1,354 miles through the trackless wilderness in the continent's northern half of Queensland and Northern Territory, taking days to cover the distances between such towns as Longreach, Winton, Cloncurry, Burketoun, and Darwin.

At one point, the men, by now convinced of the need for an aerial service to develop the region, pull the stuck car of grazeir Fergus McMaster free of Queensland's Cloncurry River. Arriving at Darwin in early November, Fysh and McGuinness are among those meeting Capt. Ross Smith and the crew of his Vickers Vimy, which had arrived on November 12 completing the first successful England–Australia flight.

During the summer of 1921, Fysh and McGuinness meet McMaster in Brisbane and easily persuade him to seek funding from his business acquaintances for a Western Queensland Auto Aerial Service, Ltd. As McMaster seeks subscriptions, an order is placed in Sydney with the Australian Aircraft and Engineering Co., Ltd., for two Avro 504Ks (only one of which will be delivered, as a war-surplus BE-2E is located and substituted). Having acquired A£6,037 capitalization, McMaster becomes first chairman as the Queensland and Northern Territories Aerial Service, Ltd., is formed at the base town of Winton.

Almost immediately known by its "QANTAS" initials, the carrier is registered for air taxi and regularly scheduled services at Brisbane on November 16. About this time, the head office is moved to a wooden building on Duck Street, Longreach. A hitching post at the edge of the wooden sidewalk outside of the front door accommodates drive-up customers.

Having taken delivery of their Avro 504K on January 6, 1922, pilot McGuinness (with Fergus McMaster and new engineer Arthur Baird as passengers) flies it Sydney–Winton via Barcaldine and Longreach, arriving on February 7. On March 7, a de Havilland DH 4 is purchased from Raymond "Battlin" Parer. On March 28, the Air Navigation Act takes effect and the new controller of civil aviation, H. C. Brinsmead, applies a series of assorted regulations while simultaneously inviting tenders for the operation of subsidized airmail routes.

Meanwhile in late winter and spring, QANTAS launches a period of charter, air taxi, and joy-riding demonstration flights designed to show the value of the new air service. Before these preliminary operations are completed, a total of 871 people will have flown charter over 34,000 miles without mishap. Also, 79 DH 4 taxi flights will have been made, one being the first maternity case in Australia to be flown to a hospital and another the first aerial turkey-shooting expedition.

In between these flights, Fysh foreshadows a later important company service by flying Dr. F. Hope Mielod on patient and emergency calls within a 200-mile radius of Winton. Simultaneously, Fysh, McGuinness, and McMaster seek the capital necessary to win and operate a government mail contract.

Having obtained the not inconsiderable sum of A£13,000 in additional subscribed capitalization by late spring, QANTAS bids on the 577-mile Charleville–Cloncurry mail route, winning it and the A£12,000 annual subsidy against heavy competition.

Initiation of the route is delayed as ordered aircraft are not delivered and plans for replacement planes fall through until, at last, an Armstrong-Whitworth FK.8 is obtained.

Finally, at 5:35 a.m. on November 2 and with much of the town's population present, McGuinness takes off from Charleville on the first leg of the Cloncurry-bound (via Tambo, Blackall, Longreach, Winton, and McKinley) aerial mail service. Aboard the FK.8 with him are engineer Baird (holder of ticket no. 1) and 108 letters. An overnight stop is made at Longreach, to avoid the worst of the diurnal heat. Early the next morning, 85-year-old supporter Alexander Kennedy, a West Australia

pioneer 51 years earlier, becomes the airline's first official fare-paying passenger on a regular company commercial service. He joins Baird and replacement pilot Hudson Fysh in concluding the 70-mph second stage, reaching Cloncurry at 11:20 a.m. The total time for this first through service, including all stops, is 29 hrs. 45 min. The only unhappy incident is the engine failure of the second FK.8, prepositioned at Longreach, which requires the entire trip be made with the original plane.

On November 9, the FK.8 has the honor of flying the company's first infant passenger and her mother from Cloncurry to Winton. The mother is outfitted in a full leather flying suit, with boots and helmet; the plane's pilot wears a suit and tie, helmet and goggles. His concession to the wind is a woolen sweater-vest.

The Charleville–Cloncurry route is maintained in 1923. During the year, the first two of three DH 9Cs join the fleet, together with a converted Bristol F2B Fighter, which is given Red Cross markings and a stretcher for use as an aerial ambulance.

The first DH 50A arrives at Longreach by rail on September 26, 1924; christened *Hermes*, it is placed on the Longreach–Charlesville segment of the mail route on November 17. The government subsidy is again renewed (as in 1923) and the carrier's first profit is posted—A£1,224. During the year, the last two FK.8s are withdrawn and S. M. Bruce becomes the first Australian prime minister to use a company aircraft for official business.

The first ground-air radio experiments are made in 1925. The Cloncurry route is extended to Camonweal via Mount Isa on February 7, entitling the carrier to an additional A£5,000 in subsidy. The first flight over the new segment is made that day by Lester Brain's DH 4. Rights are negotiated for the construction of DH 50As under license, with a A£100 royalty paid for each built.

In 1926, the Department of Civil Aviation nominates QANTAS to operate flying schools at Longreach and Brisbane. Following site preparation, the Longreach school is opened during the summer with students paying A£34.13 for 8 hours of dual control instruction and 3 hours of solo time. The first commercial aircraft to be built in Australia is the de Havilland DH 50A *Iris*, completed on August 15 at the carrier's Longreach workshop; five more are completed by year's end: *Perseus*, *Pegasus*, *Atalanta*, *Hermes II*, and *Hippomenes*. The airline will ever after enjoy the distinction of being only a handful in commercial aviation history to build its own airliners. The original Avro 504K is retired on November 6 and the first of several DH 60 Moths is received on December 22.

The third DH 9C is received on February 5, 1927 and enters service under the name *Ion*. In the company's first fatal accident, the first DH 9C, received three years earlier and piloted by A. D. Davidson, crashes on approach to Tambo on March 24 (three dead). The second and larger flying school is opened at Archer Field, Brisbane, also in March, with Lester J. Brain as chief flight instructor.

Flying the DH 50A *Perseus*, Hudson Fysh extends the Cloncurry route to Normanton, on the Gulf of Carpentaria, on July 1. The Bristol Fighter is retired on December 4 and, after expenses, depreciation, and taxes, the carrier's profit for the year is A£4,019.

The first DH 60 to be withdrawn is out of service as of April 1928. Flying a DH 50A, pilot E. J. Stephens opens the Commonwealth's first daily service, Brisbane–Toowoomba, on May 9. On May 15, Presbyterian Minister Dr. John Flynn and the Australian Inland Mission officially establish the Australian Flying Doctor Service at Cloncurry. The AIM supplies the first physician, K. H. Vincent-Welsh, and QANTAS the first aircraft, the original DH 50A *Hermes*, modified to carry two stretchers and renamed *Victory*, and the pilot, A. Affleck. Among the year's most significant evacuation flights is that of a man injured in a hunting accident, who is rushed 1,250 miles from Camonweal to a Brisbane hospital. The DH 9C *Ion* is withdrawn on August 21 and a DH 50J crashes just after takeoff from Adelaide on September 4 (one dead).

The first of four improved DH 60Gs is received on February 13, 1929, and the first of two DH 61 Giant Moths is delivered in March. Christened *Apollo* and flown by P. H. Moody, it is employed to inaugurate weekly Brisbane–Charleville and Normanton service via Toowoomba

and Roma, on April 17, thereby linking Brisbane with Queensland's northwest corner. The second DH 61 *Diana* enters service at approximately this same time.

The first of three improved DH 60Ms is acquired on December 22 and the carrier's millionth flying mile is logged on December 31. During the year, three DH 60s and two DH 60Gs are withdrawn.

The head office is moved to Brisbane in 1930. Two DH 60Gs are retired in April, followed by a third on September 16. Meanwhile, the DH 50As *Pegasus* and *Perseus* are retired on July 27 and December 4, respectively, along with an unnamed unit in the former month. Two DH 80A Puss Moths arrive during the fourth quarter.

In April 1931, led by Hudson Fysh, QANTAS personnel participate in the first U.K.–Australia and Australia–U.K. airmail experiment. The DH 61 *Apollo*, piloted by R. B. Tapp, carries the outgoing Royal Mail sacks Brisbane–Darwin on April 25–26, where they are turned over to Charles Kingsford-Smith of ANA (Australian National Airways [Pty.], Ltd.), who had just arrived with the incoming postal bags. The incoming mail is then flown Darwin–Brisbane on April 27–28. Flying the DH 50A *Atalanta*, Lester J. Brain opens an unsubsidized coastal Brisbane–Townsville route on May 7, flying via Maryborough, Bundaberg, Bladstone, Rockhampton, Mackay, Bowen, and Ayr.

During the second U.K.–Australia and Australia–U.K. experimental airmail flight, Tapp and Fysh fly postal sacks in the DH 50A *Hippomenes*, repeating the *Apollo*'s earlier Brisbane–Darwin–Brisbane operations on May 12–13 and May 17–18, respectively. Lack of traffic forces suspension of the Brisbane–Townsville route on September 25 after 81 flights. Daly Waters–Birdum Creek service begins on December 31.

A second DH 61 is obtained in 1932 and christened *Diana*. Internal routes and frequencies are improved and preparations are made for possible international services. Two DH 60s are withdrawn, on April 14 and November 16, respectively. Late in 1933, the Department of Civil Aviation recommends the establishment of an Australian concern to link-up with the forthcoming Imperial Airways, Ltd. U.K.–Australia regular service, agreeing that this company might take the form of a jointly owned company. Given the carrier's experience, QANTAS is nominated. One of the DH 80A Puss Moths is retired on December 7.

On January 18, 1934, QANTAS and Imperial Airways, Ltd. register Qantas Empire Airways (Pty.), Ltd. (QEA). With Sir Fergus McMaster as chairman, the new carrier is jointly established and capitalized, the first word of the new company name officially comprising the initialed letters of the Australian airline's name for the first time. While QEA undertakes foreign service, QANTAS will continue to provide domestic flights. The first of five DH 83 Fox Moths is received on February 15 and the last DH 60M is withdrawn on March 9. The DH 50A *Victory* is retired on April 20 and the DH 50J *Atalanta* on October 3.

On November 1, W. H. Crowther, flying the DH 50A *Hippomenes*, begins service on a Comooweal–Daly Waters route recently acquired from Australian Aerial Services (Pty.), Ltd. On December 10 in ceremonies at Brisbane's Archer Field, the Duke of Gloucester kicks off the start of regular Australia–England airmail service by handing the Royal Mail bags to Capt. Lester J. Brain of QEA. Accompanied by the QANTAS DH 50A *Hippomenes*, Brain's DH 61 *Diana* flies the post to Darwin where, due to the lack of a DH 86, Imperial Airways, Ltd. completes the flight to Singapore.

On December 18, the British arrive at Darwin with the incoming U.K. mail. They are met by the *Diana* and *Hippomenes*, which fly it as far as Comooweal. There the DH 61 is damaged, forcing the QANTAS machine to carry it to Mount Isa, where it is taken over by another DH 50A and flown to Brisbane, arriving on December 21.

The DH 61 Giant Moth *Apollo* is retired on February 2, 1935; she is followed out of service by the DH 50J *Hippomenes* on July 14 and the second DH 61, *Diana*, on July 22. Meanwhile, a second DH 83 Moth arrives on June 29.

The last two DH 50As, including the *Iris*, are retired on March 11 and October 6, 1936, respectively; however, a new DH 90 Dragonfly arrives on October 23. Two DH 83 Fox Moths join the fleet on February 2, 1937

and QANTAS now introduces two new unsubsidized DH 90 Dragonfly frequencies: Charleville–Longreach twice-weekly on February 11 and Longreach–Rockhampton weekly on March 5, the second being withdrawn on July 13 for lack of traffic. The last DH 60 is retired on April 5 and the final DH 80A Puss Moth on June 9; a Saro A17 Cutty Sark is acquired on October 15.

The first DH 83 Fox Moth to be retired is withdrawn on January 1, 1938 and the Saro A17 Cutty Sark is withdrawn on April 5. During the summer, Brisbane–Daly Waters via Mount Isa DH 90 flights are started. Operations continue apace in 1939 and a second DH 90 Dragonfly is delivered on October 3. The first de Havilland DH 84 Dragon is acquired in April 1940.

The first Lockheed Model 10A Electra is delivered on June 8, 1941; christened *Inlander*, it is employed on July 3 to reopen the Longreach–Rockhampton weekly service abandoned in 1938. One of the DH 90s has a propeller failure during a June 19 flight and is forced to make an emergency landing at Alexandra; no injuries are reported. When the *Inlander* develops engine trouble at Cloncurry on July 4 during this inaugural operation, the QEA DH 86 *Sydney* is pressed in as relief, completing the service the next day.

During the remainder of the war years, QANTAS maintains its domestic routes, albeit in a reduced fashion, and its scheduled and non-scheduled operations are increasingly coordinated with those of the overseas airline QEA. Piloted by D. H. Elphinstone, a DH 83 is badly damaged when it strikes a tree during take off from Helen Springs on June 30, 1942.

A DH 90 is damaged in a landing accident at Breddon on May 6, 1943, while another is also put out of service when a generator failure in flight forces it to make a forced landing at Daly Waters two days later. The DH 84 *John Flynn* is acquired on June 14 and although quickly repaired after the previous incident, the DH 90 damaged on May 8 is seriously injured on July 13 during a takeoff accident at Archerfield. The RAAF takes over a pair of DH 83 Fox Moths on July 27.

The *John Flynn* is badly damaged on October 4 as the result of a landing accident at Cloncurry. Another DH 90 crashes at Breddon on October 21 during landing, damaging its undercarriage and propellers. Interestingly enough, the carrier does not suffer any accidents in 1944. It is able to keep its safety record intact until a rash of accidents occur in October 1945, during which one DH 90 and two DH 83 are seriously damaged in nonfatal crashes at Cloncurry, Creswell Downs, and Wandoola, respectively.

Another DH 90 is seriously damaged in a landing accident at Cloncurry on January 28, 1946. The first of two DH 84s to be received on the year arrives in July while one of the two remaining DH 90 Dragonflies is retired on October 18.

Following a nonfatal takeoff accident at Cloncurry on January 16, 1947, the last DH 90 Dragonfly is withdrawn on February 25 and between March 26 and May 28, three more DH 84s arrive. One of these is seriously damaged in a landing accident at Kainantu on April 10. Having purchased British QEA interest in March, the Australian government, on June 30, buys out QANTAS and its interest, creating one state-owned flag carrier for overseas operations.

QANTAS AIRWAYS (PTY.), LTD.: Qantas Centre, 203 Coward St., Sydney, New South Wales, 2020, Australia; Phone 61 (2) 9691 3636; Fax 61 (2) 9691 3277; <http://www.qantas.com.au>; Code QF; Year Founded 1967. On August 1, 1967, Qantas Empire Airways (Pty.), Ltd., the world's second-oldest international airline, is given a new kangaroo logo and livery and renamed Qantas Airways (Pty.), Ltd. Airline employment is 10,297. Service is inaugurated to Amsterdam, Bahrain, and Port Moresby.

At year's end, the fleet includes 12 Boeing 707-338Cs, 9 B-707-138Bs, 2 DC-4s, 1 L-188, 2 DC-3s, and 2 new Hawker Siddley HS 748s. Orders are outstanding for 9 more B-707-338Cs, 4 B-747-100s, and options (never filled) are taken on 4 Anglo-French Concorde. Four B-707-138Bs are sold during the year, one to Pacific Western Airlines, one to British Eagle Airways, Ltd., and two to Standard Airways.

Enplanements this year climb to 461,009.

A newly remodeled air cargo terminal is opened at Sydney in 1968. Nine B-707-338Cs are added (one per month January–September) and four B-707-138Bs are sold, two to **Standard Airways**, one to **British West Indies Airways, Ltd. (BWIA)**, and one to **British Eagle Airways, Ltd.** As an extension of the Sydney to San Francisco service begun earlier in the year, Sydney to New York City cargo flights begin on July 11. The last B-707-138B service is completed on September 29.

The workforce stands at 11,064 in 1969. The last L-188 is retired, along with the surviving DC-3s and the final four B-707-138Bs, which are sold to **Braniff International Airways**.

En route from London (LHR) to the Bahamas via Bermuda on November 22, a Fiesta Route B-707-338C is forced to return to Bermuda after a bomb threat is received. No bomb is found and the perpetrator is discovered to be a citizen living next to the airport who had become displeased with jetliner noises.

A total of 633,312 travelers are transported this year.

The employee population is increased 11.4% in 1970 to 12,487. In management, a six-region organization is adopted. Aircraft are leased from **Irish International Airlines, Ltd.**, **Caledonian Airways, Ltd.**, and **Braniff International Airlines** to fill a gap until the Jumbojets arrive.

The fiftieth anniversary is celebrated on November 21 and following the opening of a new international airport, service is started to Melbourne. The company offers a declaration of intent to maintain its present 47% of traffic in and out of the county in the face of competition from 18 foreign airlines.

Cargo grows 8.4% and passenger boardings jump 18.5% to 777,069. In terms of freight carried, Qantas is now the 23rd largest airline in the world; its workforce ranks 19th.

A B-707-327C freighter arrives on February 28, 1971, on a 10-month charter from **Braniff International Airways**. The following month a B-707-349C is leased from **Aer Lingus Irish Airlines, Ltd.**; it will serve as the *City of Swan Hill* until its return to Ireland at the end of September. On May 26, the company pays A\$560,000 to a hoaxer, Mr. Brown, who convinces airline officials that there is a bomb aboard the B-707-338C *City of Broken Hill*, en route from Sydney to Hong Kong. The aircraft is called back, but no bomb is found. The first of four B-747-238Bs to be delivered on the year arrives at Sydney on July 30 where it is christened *Canberra*. It displays a new corporate color scheme, highlighted by a winged kangaroo on its red tail.

On August 4, police arrest two suspects, P. P. Macari and R. J. Pynting and recover A\$224,000 from May's bomb hoax. The two will plead guilty in court in December and receive prison sentences. The second B-747-238B is delivered on August 14 and is named *Melbourne*; while it is undergoing training flights, the *Canberra* is placed in service on the route from Sydney to Singapore via Melbourne.

Plans to inaugurate Jumbojet service to San Francisco are delayed by a FAA ban on new Australian services until a dispute, centering on increased U.S. flights "down under" by **Pan American World Airways (1)**, **World Airways**, and **American Airlines**. The *Sydney*, third of the new Jumbojets, arrives on October 21 while the *Melbourne* initiates Kangaroo Route service to London in November. The year's final B-747-238B, the *Perth*, is delivered on December 8. Meanwhile, the last two DC-3s are withdrawn on November 15 and December 15, respectively.

Unduplicated route mileage is now in excess of 150,000 miles and bookings accelerate to 779,328. Unhappily, strong competition from foreign carriers force the carrier to absorb an A\$4-million loss, only the second such downturn since 1924.

The employee population in 1972 is 11,831 and, with the American dispute settled, thrice-weekly San Francisco flights commence at the end of January. Two B-707-338Cs and a HS 748 are sold as another B-747-238B, the *Brisbane*, joins the fleet in August. To compete with charter carriers, an inclusive-tour charter (ITC) program is inaugurated to Singapore, Bangkok, and Malaysia. Sales break all Australian travel industry records. Low fare rates of A\$420 Sydney–London are initiated

and draw a large number of passengers. Due to heavy losses, transatlantic service San Francisco–London is suspended.

Service is retained to San Francisco from Sydney via Honolulu and round-the-world flights are continued through Mexico instead of the U.S. In November, a new computerized reservations system, QANTAM II, is introduced. The last Australian troops are returned home to Sydney from Saigon; since 1966, the company has flown over 200 return trips on behalf of the government's commitment.

Freight dips 2.3%, but passenger bookings increase 9.8% to 864,000.

Qantas passengers in 1973 now fly the longest average trip lengths in the world—4,217 miles. A Sydney–Tahiti–Vancouver route is opened in April. The QANTAM II reservations system is linked to U.S. and European areas during the year. The B-747-238B *Adelaide* is delivered on August 1, while two B-707-338Cs are sold.

The employee population numbers 12,760. Passenger boardings leap 28% upward to 1,113,131, passing the elusive million mark in annual boardings for the first time.

Airline employment in 1974 stands at 12,338. The fleet's large jets now include 9 B-747-238Bs and 15 B-707-338Cs. Three B-747-238Bs are delivered between March 19 and October 10 and are christened *Fremantle* (originally *Hobart*), *Parramatta* (originally *Newcastle*) and *Dubbo* (originally *Darwin*), respectively. The subsidiary, **Jetabout, Ltd.** is formed to operate package tours to nine countries. Service beyond San Francisco to New York and London is discontinued altogether, along with Fiesta Route service to London via Mexico.

The flight crew of a B-747-238B at Sydney on November 3 denies boarding to two Soviet diplomat couriers who refuse to undergo routine security checks prior to a London flight. The two had earlier in the day faced a similar standoff when attempting to board a **British Airways, Ltd. (2)** Boeing.

A B-747-238B evacuates 674 persons from hurricane-torn Darwin on one December 29 flight; the service is a record for the most persons flown on a single airplane at one time and a mark that will stand until broken by **El Al Israel Airlines** in May 1991.

Passenger traffic soars 32.4% as 1,219,544 passengers are flown; freight is up 25.1%.

The workforce is increased in 1975 to 13,222. Chairman Sir Donald Anderson dies and is succeeded by Sir Lenox Hewitt. Two more B-747-238Bs are added, the *Newcastle* (originally *Geelong*) on May 30 and the *Wollongong* on November 7, while four B-707-338Cs are retired. Service is introduced to Paris and Belgrade while computers are introduced at the Sydney cargo terminal.

Passenger bookings grow 3% to 1,434,000, and cargo climbs 8.2%.

The employee population in 1976 is 13,179. Capt. R. J. Ritchie retires as general manager and is succeeded by Keith R. Hamilton. On April 1, the last B-707-338C is removed from the transpacific route from Sydney to San Francisco. The L-188C *Pacific Electra* is sold to **Air California** in April.

On June 29, the twelfth B-747-238B, *Ballaarat* (originally *Townsville*) is delivered. In August, **Air California** also purchases the L-188C *Pacific Explorer*.

Beginning on December 12, businessman Dick Smith sells tickets for a sight-seeing tours of the South Pole to be made with a chartered Qantas B-707-338C.

Passenger boardings increase 5.4% to 1,492,514, and freight jumps 10.8%. An after-tax loss of \$A7.2 million is recorded.

Businessman Dick Smith's chartered B-707-338C makes an 11 1/2-hour flight from Sydney to the South Pole on February 13, 1977, and after making several low altitude passes over the region, returns to Australia. The B-747-238B *Gosford* (originally *Parramatta*) enters service on August 15 and later in the year, a new A\$7-million flight training center is opened, featuring a B-747 simulator. For the Christmas season, the B-707-338C *City of Winton* carries the message "Have a Qantastic Christmas" to world destinations; the plane is dubbed the "Flying Christmas Card." The year's second B-747-238B, the *Albury*, reaches Australia on December 20.

Enplanements advance to 1,587,210.

The workforce grows by 371 employees in 1978. The B-747-238B *Elizabeth* arrives on September 18, followed by the *Adelaide* (originally *Fremantle*) on October 16. The last B-707-338C sold to a commercial customer is the *City of Longreach*, disposed of to the Intel Corporation on October 30. With its huge fleet of B-747-238Bs, Chairman Sir Lenox Hewitt and General Manager K. R. Hamilton's carrier becomes the world's first all-Jumbojet operator. The first B-747-247B combi is acquired on November 1, but is quickly put up for sale and never receives a name.

Freight soars 28% and enplanements move upward 4.5% to 1,662,444.

A DC-8-54, chartered from **Air New Zealand, Ltd.**, begins service to Wellington and Auckland on March 26, 1979, following completion of the last B-707-338C transit, by the *City of Alice Springs*, from Auckland to Sydney the previous day. The last two B-707-338Cs, *City of Alice Springs* and *City of Ballarat*, are sold to the RAAF on March 30, at which point Qantas becomes the only all-Jumbojet airline in the world.

A proposal is made to the government for the operation of a Hobart-Christchurch route with B-727-200s leased from **Ansett Airlines of Australia (Pty.), Ltd.** and **Trans-Australian Airways (Pty.), Ltd. (TAA)**. Business-class is introduced on several long-haul routes. The company's authority to carry all international passengers on trips inside Australia is rescinded by the government; Qantas can now only carry foreigners to Australian points of entry, or on the same flight to other Australian points with no stopovers.

The B-747-238BC *Swan Hill* arrives on November 14 and the first Rolls Royce-powered B-747-238M, *Bunbury*, is delivered on December 11, bringing the fleet total of Jumbojets to 21, all of which are now configured with sleeper seats in first class. Fuel availability and cost become major concerns.

Passenger boardings climb 14.7% to 1,907,560, and freight is up 17.8%.

The oldest continuously operated airline in the English-speaking world celebrates its sixtieth birthday in 1980. James Leslie succeeds Sir Lenox Hewitt as chairman and General Manager Keith R. Hamilton becomes managing director/CEO. Airline employment is reduced by 0.9% to 13,702. Business-class service is extended to all routes and the Hobart-Christchurch route is inaugurated. There are now a total of 18 weekly Kangaroo Route flights to Europe and 10 services per week via Honolulu to the U.S.

A second B-747-238M, the *Hobart* (originally *Dubbo*) arrives on September 30 and is followed by the B-747-238BC *Shepparton* on October 15. The year's fuel bill triples while competition between the 20 international carriers serving the nation is intensified as overall traffic starts to shrink.

Passenger traffic rises a slight 3.3% to 1.97 million passengers carried, but cargo declines 1.6% to 410 million FTKs.

The employee population is reduced by 5.5% in 1981 to 12,942. The first of two B-747SP-38s to be delivered during the year arrives on January 19 and is christened *City of Gold Coast-Tweed*. Ground personnel and stewards strike for 10 days during February and in March, the new B-747SP-38 is placed on public exhibit for a day at its namesake city where visitors wait up to two hours for a tour.

Following delivery of the second Special Purpose Boeing, the *Winton*, on August 31, the leased Air New Zealand DC-8-54 is returned. Like the *City of Gold Coast-Tweed*, the new Jumbojet is employed on nonstop flights from Sydney to Los Angeles.

The airline's final Rolls Royce-powered Dash-238M Jumbojet, the *Longreach*, is delivered on November 30.

Effects of the world economic situation begin to be felt as passenger boardings dip 3% to 1,911,000; freight, however, rebounds upward by 8.2% to 443.51 million FTKs. Expenses advance and losses are suffered: A\$31.6 million (operating) and A\$16.9 million (net).

The workforce is reduced 4% in 1982 to 12,420. Services are inaugurated from Perth to Bangkok and Hong Kong, from Adelaide to Auckland and Singapore, and from Sydney to Perth and Harare, Zimbabwe. Joint services are launched with **Garuda Indonesian Airlines** between Port Hedland and Bali. The fleet now includes 22 B-747-238s and 2 B-

747SP-38s. The administrative offices are moved into a new corporate headquarters in Sydney.

The carrier is now one of six participating in an ICAO grant for personnel training for **Biman Bangladesh Airlines, Ltd.**

Passenger bookings jump 14% to 2,178,439 and cargo moves ahead by 2.2% to 453.25 million FTKs. On revenues of A\$978 million, expenses are A\$986 million, leaving an operating loss of A\$8.4 million, but a net profit of A\$57.7 million.

The employee population is cut another 8.2% in 1983 to 11,407. In April, the carrier's new cargo terminal (built at a cost of \$A21 million) becomes fully operational at Sydney. The Melbourne cargo terminal is also redeveloped in the fall. Service is extended to Manchester, England, and Noumea. In September, an A\$860-million order is placed for three B-747-338s and six B-767-238ERs.

During the year, a marketing agreement is signed with **SAS (Scandinavian Airline System)** that provides for joint fares and promotions around the world and between Australia and Scandinavia via Japan and Asia. Frequent flyer program cooperation between the two flag carriers will be a major feature of their arrangement.

Although freight is up 11.8% to 506.88 million FTKs, passenger boardings dip 3.8% to 2,094,961. Even though revenues advance 14.9% to A\$1.22 billion, expenses soar 20.1% to A\$1.29 billion, leaving a A\$67-million operating loss and only A\$32.3 million in net gain.

In 1984, the employee roll has 11,580 names, a 0.8% boost. In January, the carrier receives the 1983 "Technology Management Award" from *Air Transport World* magazine.

Boasting the new livery of an all-white fuselage and larger, wingless tail kangaroo designed by Tony Lunn of the Lunn Design Group in Sydney, three B-747-338s are placed in service in June. Routes are now opened from Cairns to Honolulu (the new mid-Pacific hub), Vancouver, San Francisco, and Los Angeles, from Sydney to Los Angeles, and from Sydney and Melbourne to Beijing.

The first women are added to the company's pilot ranks and six older B-747-238s, the *Canberra*, *Melbourne*, *Sydney*, *Perth*, *Brisbane*, and *Adelaide*, are sold in July-September, including four that pass through Boeing Equipment Holding Company refurbishment to **PEOPLEXpress**. The company's initial B-747-338, and the 600th Jumbojet built, arrives on November 13 and is christened *Canberra*. Managing Director Hamilton dies suddenly in December and is succeeded by Deputy Managing Director Ronald J. Yates.

Passenger boardings jump 12.2% to 2,350,488 and cargo leaps 17.9% to 597.7 million FTKs. On revenues of A\$929 million, expenses drop to A\$890 million, leaving profits of A\$51.8 million (operating) and A\$52.1 million (net).

The employee population in 1985 stands at 12,673, a 5.3% rise. The second B-747-338, *Sydney*, arrives on January 24 and the fiftieth anniversary of continuous international service is celebrated in public ceremonies on February 25, at which time a new corporate livery designed by Lunn Dyer and Associates is unveiled, although the world-recognized stylized kangaroo is retained.

A third B-747-338, the *Melbourne*, is delivered on April 15 and in the spring, a total of US\$70 million is dedicated to promotion, advertising, and commissions relating to pleasure travel service to Australia. The national parliament begins to consider the question of deregulation in a formal investigation known as the May Inquiry.

The first of six B-767-238ERs is received on June 30 and enters service Melbourne-Wellington on July 30. As others join the fleet, they are used extensively on flights to the smaller 10 Australian gateways and to and from the Singapore hub for the Kangaroo Route's European operations. The third B-747-338 has been placed into service by mid-August.

Passenger boardings for the year are up 8.5% to 2,549,000 (visitors to Australia exceed one million for the first time) and freight balloons 13.1% to 675.97 million FTKs. On revenues of A\$1.334 billion, expenses are A\$1.281 billion, producing an operating profit of A\$52.8 million and a record net profit of A\$125.2 million. Among all world airlines in 1985, Qantas now ranks 20th in terms of passenger kilometers flown

(17,311,999), 18th in freight carried, 21st in revenues earned, and 20th in operating profit.

The payroll is boosted 11.3% in 1986 to 14,107. The B-747-338 *Brisbane* arrives on March 31 and the sixth B-767-238ER enters service in April, flying, in cooperation with **Japan Air Lines Company, Ltd. (2)**, joint weekly services Tokyo-Perth and Tokyo-Cairns and Brisbane. On April 16, in the largest single office building sale in Australian history, the Sydney company headquarters property is sold to a bank for \$A200 million—and then immediately leased back. A fifth Rolls Royce-powered B-747-338 is also ordered in April.

By May, there are 16 flights per week over the Kangaroo Route to Europe, including 10 continuing to London; meanwhile, a ninth weekly flight is added from Australia to the U.S. A new B-747SP-38 service is initiated from Sydney and Melbourne to London via Bombay. Managing Director Yates retires on June 30 and is succeeded by Australian Department of Trade Director John L. Menadue.

On September 1, an **Air Lanka, Ltd.** B-747-238B, once the Qantas ship *Canberra*, is leased for 18 months to allow the Australian flag line to begin a two-year refurbishment of its 18 Jumbojets. The same month, the carrier signs an agreement to help maintain the Boeing fleet of **CAAC (General Administration of Civil Aviation of China)**. In the fall, direct service is resumed to Kuala Lumpur and a frequent flyer program is introduced. The airline assumes 75% shareholding in the Japanese tour operator Jetabout Japan, Ltd. on October 17.

A 49% interest is taken in Thomas Cook (Pty.), Ltd. on November 5 while the fifth B-747-338 is delivered on November 12 and is christened *Perth*. During the year, an agreement is signed with **American Airlines** that provides for frequent flyer program cooperation and code-sharing on AA routes from Los Angeles to Chicago, Washington, D.C., New York, and Boston. The American major obtains dual designator status on Qantas flights from Los Angeles to Sydney, Melbourne, and across the Tasman Sea to Auckland, New Zealand.

Customer bookings jump 14.9% to 2,905,000 and cargo increases by 7.9% to 729.21 million FTKs. Revenues decline a slight 0.5% to A\$1.32 billion as costs climb 1.2% to A\$1.29 billion. Profits for the year are down—operating to A\$30.55 million and net to A\$2.67 million.

Airline employment grows 3.7% in 1987 to 14,629. In January, the carrier halts its weekly Melbourne-Beijing via Sydney service, which is taken over by **CAAC (General Administration of Civil Aviation of China)**. The B-747-338 *Darwin* is delivered on May 1 and as the Australian tourist upswing continues, orders are placed for four B-747-438s. On July 17, a second **Air Lanka, Ltd.** Jumbojet is chartered, this one the former Qantas machine *Melbourne*.

A 20% interest (later cut by half) is taken in **Air Pacific, Ltd.**, the Fiji national carrier. Capacity is increased through leases in November as one each B-747-131 and B-747-130 are chartered from **Tower Air** and **Aer Lingus Irish Airlines, Ltd.** Roundtrip code-sharing flights with **Air Pacific, Ltd.** commence from Australia to Fiji in November using Australian aircraft and from Fiji to Los Angeles employing the *Darwin*.

Passenger boardings ascend 14.1% to 3,314,039 while freight jumps 17.8% to 858.7 million FTKs. Revenues accelerate 22.5% to A\$1.6 billion and with costs low, an operating profit of A\$68.7 million is generated, together with net gain of A\$42.1 million.

The workforce is increased by another 4.1% in 1988 to 15,226 and the fleet now includes 1 B-747-100, 14 B-747-200s, 2 leased B-747-238s, 2 B-747-238B/Cs, 2 B-747SP-38s, 6 B-747-338s, 7 B-767-238ERs, and 4 B-767-338ERs. Orders are outstanding for 10 B-747-438s and 1 B-767-338ER.

The unnamed B-747-238BC purchased in November 1977 is sold to **Air Canada, Ltd.** in January. The **Tower Air** and **Aer Lingus Irish Airlines, Ltd.** Jumbojets are returned in February and replaced with a B-747-123 chartered from Citicorp. A 19.9% share is acquired in **Air New Zealand, Ltd.** and services start to Buenos Aires. The flag carrier regains interline domestic rights from the Australian government in July, but is restricted to point-to-point domestic passenger transport for foreign-originating passengers only.

During the fall, a 60% interest is acquired in Creative Tours (Pty.), Ltd. and its American affiliate, Creative Vacations, while 66% shareholding is taken in Sun Tours (Pty.), Ltd.

Seeking a place in the *Guinness Book of World Records*, 59 employees pull a 226-ton B-747-238B a distance of 328 ft. across the tarmac at the company's Perth hub on October 22 in just 62.1 seconds.

In November, to avoid Mideast airspace, the carrier inaugurates daily London-Australia flights via the southern Soviet Union and Bangkok.

Customer bookings jump 18.9% to a record 3,941,729 passengers and cargo climbs 3.1% to 885.06 million FTKs. Revenues ascend 25.9% to A\$2.04 billion, which allows operating income to reach A\$106.8 million. Net gain is a record A\$92.5 million.

Despite unhappiness caused by the nationwide pilot strike, the payroll swells by 14.6% in 1989 to 17,481. Employing a Douglas DC-10-30CF leased from **World Airways**, the carrier in February inaugurates weekly all-cargo flights from Sydney to New York via Honolulu and Los Angeles. Marriott In-flight Services enters the airline catering market in Australia when it signs a contract on March 13 to provide meals for Qantas flights.

Thrice-weekly Jumbojet services are initiated from Los Angeles to Auckland in April, with continuing flights to Melbourne. Also in April, the carrier awards a A\$3.2-million, 7-week contract to **Aer Lingus Irish Airlines** for the overhaul of a Jumbojet. The first 3 of 13 ordered B-747-438s join the fleet as the cooperative agreement is established with **American Airlines** for joint services to Washington, D.C., New York, and Boston from Los Angeles is implemented.

In May, the company, part of a consortium with **American Airlines** and **Japan Air Lines Company, Ltd. (2)**, purchases **Air New Zealand, Ltd.** for NZ\$660 million (US\$403.7 million). It provides assurances to **Ansett NZ (Pty.), Ltd.** that it will continue to transport its passengers to New Zealand despite the takeover of its rival. Forced by the government to hold down wage levels, Qantas is required to delay certain of its expansion plans as the company's maintenance union fights the use of off-shore facilities and staff shortages increase.

In June, with guarantees from the national government, Qantas issues A\$200.1 million in Eurobonds (due in 1996) and A\$78.5 million in 5.2% bonds (due in 1999). In addition, flights begin to the Japanese city of Fukuoka and it is announced during July that the airline will expend A\$20 million to construct an aircraft servicing base at Melbourne's Tullamarine Airport. As of July, the average passenger trip covers 4,004 miles and is one of the longest in the world.

The first B-747-438, christened *Longreach* and with only 23 passengers aboard, arrives at Sydney's Kingsford Smith Airport on August 17 following a nonstop 20 hr. 9 min. flight of 11,156 miles from London (LHR). The record breaking operation—only 3 hrs. 6 min. more than a record time set by the Concorde—is the all-time longest subsonic commercial transport flight. Buffs note that the nonstop is made 54 years after the first London-Sydney flight. Nitpickers, however, point out that in order to conserve fuel, the aircraft had been towed to the end of the Heathrow Airport runway for its London takeoff. After a month of workup and demonstration flights around the nation, the *Longreach* is placed on the Kangaroo route to London on September 21.

Meanwhile, although the flag carrier is not initially shut down by the mass strike and resignation of pilots on August 24 from **Australian Airlines (Pty.), Ltd.** and **Ansett Airlines of Australia (Pty.), Ltd.**, the country, about to enter its annual tourist season, loses credibility as a holiday destination. The chaos that will be caused to the tourist industry will impact Qantas traffic.

Despite the government's need for domestic capacity, Qantas declines to take maximum advantage of the walkout, preferring only to continue exercising its newly regained domestic interline rights, largely for fear of offending its own pilots.

Twenty percent shareholding is acquired in **Australia-Asia Airlines (Pty.), Ltd.**, which is established in September to begin operations to Taiwan. Contesting the government's decision to grant only a 6% wage raise instead of their request for a 30% increase, the flyers of Qantas,

and their union brothers from **Australian Airlines (Pty.), Ltd.** and **Ansett Airlines of Australia (Pty.), Ltd.**, are suspended during the month, after which they resign en masse. Without pilots, Qantas is forced to shut down. In an effort to maintain essential air service, the government turns to the RAAF (with unhappy early results) and also invites those international airlines making more than one stop in Australia to begin carrying domestic traffic.

Under this cabotage invitation, **Cathay Pacific Airways (Pty.), Ltd.**, **Thai Airways International, Ltd. (THAI)**, **Garuda Indonesian Airlines, Malaysian Airlines, Ltd. (MAS)**, **Continental Airlines, Singapore Airlines, Ltd.**, **British Airways, Ltd. (2)**, **Martinair Holland, N.V.**, and **Olympic Airways, S.A.** are able to provide only 22,000 of the 250,000 seats required weekly.

Former Ford Motor Company official William Dix now becomes chairman, with John Ward as acting president following the resignation of John Menadue.

Passenger boardings move upward by 2.9% to 4,057,629 while freight does much better, zooming along by 16.8% to 1.03 billion FTKs. Revenues climb to A\$2.47 billion, expenses total A\$2.33 billion, and the operating profit is A\$141 million. The net profit jumps to A\$142.37 million.

Company employment is cut 0.7% in 1990 to 17,469 and in January, acting CEO Ward officially assumes the presidency, just in time to open the seventieth anniversary year. Rising fuel costs force the carrier to withdrawn the B-747SP-38s *Gold City* and *Winton* in March; both aircraft are put up for sale. Also during the first quarter, a A\$16.5-million contract is signed with the Hawker/de Havilland-owned Australian Aviation College for the training of 300 students, each of whom will complete a 16-month course of study. A number of routes are restructured during the second quarter and on May 3 it is announced that by fall, flights to several destinations will end. A **Martinair Holland, N.V.** Jumbojet in mixed-livery is withdrawn at the end of the summer tourist season, but will return annually thereafter.

The capacity saved when the B-747-328s complete takeover of the Kangaroo route in June is shifted to the Pacific, where several new markets are opened, including one to Seoul. The world economic situation, especially after Iraq's August 6 invasion of Kuwait, causes the flag carrier significant financial difficulty. Two days later, however, a B-747-438 is flown nonstop in the first commercial service from Vancouver to Sydney, covering 7,825 miles in a record 14 hrs. 27 min.

After 43 years of service, operations to India are suspended following the last roundtrip from Sydney to Bombay on October 21. During the final quarter, route rationalization continues with the cessation of services to other points. Conversely, and as the result of a code-sharing agreement signed with **Air New Zealand, Ltd.**, code-shared flights on the trans-Tasman routes begin employing both Qantas and ANZ aircraft and on the Sydney to Los Angeles service with Qantas Jumbojets.

During the year, Dick and Joyce Price publish the former's recollections of flying for both **Imperial Airways, Ltd.** and QEA in *Everybody's Different* (Lesmurdie, W.A.: Rodenhurts Press, 1990).

Although passenger boardings are up 3.9% to 4,217,082, freight does better, climbing by 8.6% to 1.12 billion FTKs. Only 15 other airlines in the world haul more cargo than Qantas. Revenues climb 3% to A\$2.55 billion, a figure bettered, again, by only 15 other carriers. Expenses, however, force the previous year's operating profit to turn into an A\$93-million loss. Net profit tumbles all the way down to A\$9.5 million.

The payroll is cut by 6.1% in 1991 to 16,400 and the fleet now includes 2 leased and 3 owned B-747-238Bs, 2 B-747-238B/Cs, 6 B-747-338s, 14 B-747-438s, 2 B-747SP-38s, 7 B-767-238ERs, and 12 B-767-338ERs. Orders are outstanding for 4 B-747-438s and 1 B-767-338ERs.

Flights are offered to 45 cities in 22 countries. At the beginning of the second quarter, the national government moves to prevent the pioneer from taking shareholding in soon-to-be-privatized **Australian Airlines (Pty.), Ltd.** At the same time, discussions are held with **Japan Air Lines Company, Ltd. (2)** concerning the possibility of seconding excess Qantas crews to the Japanese flag carrier, which is badly in need of experi-

enced B-767 and Jumbojet personnel. Plans continue for privatization. In April the airline is embarrassed when it is revealed that at the time of **Air New Zealand, Ltd.**'s privatization, the Australian carrier had negotiated standby purchase agreements with its **American Airlines** and **Japan Air Lines Company, Ltd. (2)** partners under which it would buy out their shares upon request. The revelation causes the resignation of ANZ's CEO as **American Airlines** elects to sell its 7.5% interest to Qantas, at a price of US\$23.3 million.

A code-sharing arrangement is worked out with **Canadian Airlines International, Ltd.** for flights from Sydney to Honolulu aboard Australian jetliners and from Honolulu to Vancouver and Toronto aboard those from CAI.

A 15th B-747-438 arrives on September 17 and is christened *City of Gosford*. To allow the carrier to return to full profitability before its sale, the government, in October, delays the formal privatization of Qantas "for at least six months."

Customer bookings fall 0.3% to 4,202,444 and cargo declines 0.8% to 1.11 billion FTKs. Revenues rise 6.7% to A\$3.04 billion, but expenses are more and the operating loss grows to A\$114.9 million. There is an A\$32.1-billion net profit.

The employee population is increased by 9.7% in 1992 to 17,997. In hopes of reducing in-flight deaths from heart failure, the carrier begins installing defibrillators on its aircraft on February 17. Two B-747-338s are leased to **Japan Air Lines Company, Ltd. (2)** as four more B-747-438s and a B-767-338ER join the fleet. The Jumbojets are sent to Japan in JAL livery (along with a third later in the year) as part of a multiyear contract with the Japanese airline, which is strapped for flight deck crews. The deal also calls for Australian crews to operate the aircraft on JAL's Tokyo to Cairns and Brisbane and Tokyo to Auckland routes.

The carrier also joins the frequent flyer program of **Alaska Airlines**. The government offers 49% minority shareholding privatization in June; however, the sale is hampered by political disagreements over Australian aviation policy.

In a surprise decision, the government reverses its ban on cross-shareholding between the country's airlines in July and as a result of Canberra's new "One Nation" commercial aviation policy, **Australian Airlines (Pty.), Ltd.** is purchased by Qantas from the government on September 14 for A\$400 million (US\$320 million). Plans are simultaneously unveiled to sell the combined airline in two stages.

During a flight from Los Angeles to Sydney in mid-August, a B-747-438, with 326 aboard is mistakenly targeted (and, unlike the Iranian Airbus downed earlier by sistership USS *Vincennes*, warned) by the U.S. missile cruiser USS *Cowpens* during Exercise Rimpac '92. The Jumbojet quickly changes course and heads away from danger. Another B-747-438 is delivered on October 16, the 100th Boeing airliner purchased by Qantas.

The merger with **Australian Airlines (Pty.), Ltd.** is completed in November; the arrangement instantly makes the combined company, which will be integrated under the pioneer's name, the 15th largest airline in the world in terms of ticket sales. One day a purely international flag carrier, Qantas now commands almost 50% of the nation's domestic market. Although an expected offer from **Air New Zealand, Ltd.** is not made, both **British Airways, Ltd. (2)** and **Singapore Airlines, Ltd.** make bids for 25% shareholding.

The Australian government in December selects the British tender, worth A\$466 million (US\$450 million), also granting BA three seats on the Qantas 12-person board of directors. The Australian government agrees to recapitalize Qantas prior to the closing to the extent of A\$1.35 billion.

Also during the year, the carrier disposes of its wholly owned subsidiary Fantasia Information Network, Ltd., formerly Qantas Distribution Services, Ltd. It also unloads Vanate (Pty.), Ltd., once known as Direct Reservations (Pty.), Ltd., as well as Creative Tours (Pty.), Ltd.

Passenger boardings recover and ascend 14.8% to 4,824,926 while freight shoots up 11.5% to 1.21 billion FTKs. Revenues jump 6.5% to A\$2.92 billion and expenses are A\$2.84 billion. As a result, there is an operating surplus of A\$98.4 million and net gain of A\$91.7 million.

In 1993, CEO John Ward oversee a workforce of 25,159, a 39.8% increase. Plans to implement the new agreement with the U.K. flag carrier are initiated in January. The two begin to work closely on route network planning, seeking the creation of services that will allow interlining. Additionally, joint product development is sought, including frequent flyer linkage (BA drops its arrangement with **Ansett Australia (Pty.), Ltd.**) and work starts on the joining of such other operations as ground handling, cargo, financing, engineering, equipment purchasing, and code-sharing or the joint usage of aircraft, particularly B-747-400s.

The government prepares to offer the remaining 75% of its shareholding to the public, but in February it injects \$A1.35 billion (US\$950 million) recapitalization into the airline. The arrangement is a debt-for-equity swap under the terms of which the government takes over all debt on the company's books. At the same time, it is decided, in light of the upcoming March 13 elections, to postpone the 75% market flotation to the final quarter.

The election does not affect the airline's sale, as all of the major political parties support the company's privatization. **British Airways, Ltd. (2)** finalizes its purchase of a 25% stake in March, following regulatory clearance from the U.K. Secretary of State for Trade and Industry, and receives three seats on the 12-member Qantas board. Gary Pemberton succeeds William Dix as Qantas chairman in April.

The fleet now includes 4 A300B4-203s, 16 B-737-376s, 16 B-737-476s, 1 of which is leased to **Air Vanuatu**, 3 B-747-238Bs, 2 B-747-238BCs, 6 B-747-338s, including 3 leased to **Japan Air Lines Company, Ltd. (2)**, 18 B-747-438s, 2 B-747SP-48s, 7 B-767-238ERs, and 13 B-767-338ERs, 1 of which is chartered to **Australia-Asia Airlines (Pty.), Ltd.**

International services are continued to 87 markets in 24 countries. At home, absorption of **Australian Airlines (Pty.), Ltd.** continues apace and is visibly witnessed on May 6 when a former Australian B-737-376, resplendent in Qantas' red and white livery, is rolled out in a public ceremony at the former Australian maintenance base at Melbourne. The combined carrier's assets make Qantas the second largest air transport concern in Asia.

In early June, the Australian government announces imposition of sanctions against **Northwest Airlines** as the result of a dispute concerning passenger ratios on the American major's thrice-weekly flights linking New York, Tokyo, and Sydney. Northwest is specifically charged with exceeding the normal 50% fifth freedom cap by picking up an excess number of passengers at the Tokyo (NRT) stop on its New York-Sydney route.

Northwest appeals to the Australian courts on June 5 and on June 6, the U.S. DOT bans Qantas from its three weekly services to Los Angeles. On June 13, Qantas attempts to circumvent the U.S. ban on its Los Angeles route by switching those flights to San Francisco. The government, on June 23, abandons its sanctions against Northwest in exchange for an agreement by the U.S. to drop its retaliatory action against Qantas. Also during the month, Qantas begins to integrate its frequent flyer plan with that of **British Airways, Ltd. (2)** on those routes where the U.K. airline does not fly in competition.

A total of US\$375 million in unsecured debt is sold in the U.S. public bond market during July. At the same time, the government postpones its flotation of the remaining 75% shareholding until late fall 1994. Airline officials are surprised when the Australian International Air Services Commission awards the majority of the new slots at Osaka's new Kansai Airport to **Ansett Australia (Pty.), Ltd.**

Managing Director Ward surprisingly resigns on July 30. In early August, the board of directors appoints former **Australian Airlines (Pty.), Ltd.** CEO James Strong his successor effective at the end of October; Chairman Pemberton acts as managing director during the interim.

The integration of **Australian Airlines (Pty.), Ltd.** is officially completed in October, at which time Qantas adopts a new corporate name: "Qantas: The Australian Airline." The carrier begins to coordinate its Kangaroo Route schedule with **British Airways, Ltd. (2)** on October 29.

Following the announcement in early November by Australian Finance Minister Ralph Willis that privatization must await until the air-

line is more profitable, probably in 1995, Chief Financial Officer Graham Jones, unwilling to wait further for the public float, resigns. In December, a new, three-year bilateral agreement is signed between Australia and the U.S. and both **Northwest Airlines** and **Continental Airlines** begin a retreat from Qantas' Pacific operations zones.

Overall passenger boardings (as compared to the previous year's returns by both carriers) swell 12.1% to 13,561,455 and freight rises 12.3% to 1.41 billion FTKs. Revenues increase 44.5% to A\$3.87 billion, but even after a 12.1% decline, expenses are still A\$4.14 billion. As a result, there is an A\$278.83-million operating loss. A net gain of A\$24.34 million is banked.

The workforce is cut 2.6% in 1994 to 24,500. With **United Airlines** now its only significant American competitor, Qantas, at the beginning of the year, is the only carrier serving the Honolulu-to-Sydney route. In February, code-sharing is inaugurated between Australia and Port Vila with **Air Vanuatu** employing Air Vanuatu jetliners chartered from Qantas.

Seeking an entry in the *Guinness Book of World Records*, David Huxley single-handedly pulls a 115-ton B-767-238ER a distance of 203 ft., 10 in. across the tarmac at the company's Sydney hub.

Now unprofitable, the historic, 40-year-old San Francisco service is terminated on March 27 in favor of increased frequencies from Los Angeles to Sydney and between Los Angeles and San Francisco flown under a code-sharing agreement with **USAir**.

At the same time, a new Darwin-Tokyo route is inaugurated and the two unsold B-747SP-38s, *City of Gold City-Tweed* and *Winton*, now rechristened *City of Traralgon*, are transferred to **Australia Asia Airlines (Pty.), Ltd.** In addition to black name titles on the forward portion of their white fuselages, the pair wears red tails with a ribbon rather than a kangaroo emblem.

During the month, former **Australian Airlines (Pty.), Ltd.** managing director, later the new parent's general manager-Australia, John Schaap, resigns.

Facing continued heavy losses, the Solomon Islands government on April 1 asks Qantas to take over a number of **Solomon Airlines, Ltd.**'s services, using a Qantas B-737-376, plus the lease of a B-737-4Q8 chartered from ILFC.

Qantas agrees to operate the services, but does not immediately agree to transfer the lease. That view changes, however, as the Australian major assumes the lease of the B-737-4Q8 and wet-leases back to Solair one of its own B-737-376s for use during 41 flying hours per week.

Charter flights over Antarctica, suspended after the **Air New Zealand, Ltd.** tragedy in 1979, are now resumed. Melbourne-based Croyden Travel will arrange 10 charter trips each year to be flown from Perth, Adelaide, Sydney, and Melbourne during the November-February summer tourist season. The flights over the eastern seaboard of the ice continent, from Davis to Mirny and Casey, provide passengers with the best views of Antarctica short of specialized air services that actually land at the Australian and Russian research stations seen below.

In July, Australian Finance Minister Kim Beazley announces that privatization has again been delayed in order that the company might demonstrate improved fiscal returns from its restructuring; the 75% stake will be sold through a public float during the spring of 1995. An order for nine A320s ordered by **Australian Airlines (Pty.), Ltd.** five years earlier is now cancelled.

In August, an A\$1-billion (US\$732-million) revenue-pooling agreement is signed with **British Airways, Ltd. (2)** under which Qantas and its U.K. equity partner will price fares and coordinate schedules jointly, beginning next April, on routes between Australia and Europe. Knowing of the Japanese love of colorfully liveried aircraft, a B-747-438A is rolled out at Sydney on September 3 in a bright red and green Aboriginal art scheme designed by the Balarinji studio at Adelaide and is christened *Wunala* (Kangaroo Dreaming). It is employed the next day to inaugurate the first company service to Osaka (KIX).

A code-sharing agreement is signed with **American Airlines** and under its terms, nonstop Los Angeles-Sydney roundtrips begin on November 15. AA places its designator on 12 of the nonstop Qantas flights

per week each way, while the Qantas designator is applied to a number of AA services between Los Angeles, Chicago, New York, Boston, and Washington, D.C.

Suggesting that it is not convinced that the BA plan will benefit consumers, the Trade Practices Commission in Canberra tentatively vetoes the agreement in December, requiring that the two continue price competition on the Kangaroo Route from Australia to Britain. Meanwhile, company employees prepare for the company's seventy-fifth anniversary, which will be celebrated throughout the following year. Special emphasis will be placed on the April 17th sixtieth anniversary of the first overseas passenger flight from Brisbane to Singapore, completion of privatization in July, and a series of dinners in various markets during November.

Overall, customer bookings leap ahead by 11.4% to 13,791,429, while cargo improves 12% to 1.58 billion FTKs. Revenues increase 4.4% to \$A4.84 billion while expenses climb 8.6% to \$A4.66 billion. As a result, there are profits of A\$223.33 million (operating) and A\$115.51 million (net).

Airline employment climbs 4.5% in 1995 to 29,350. The carrier celebrates its seventy-fifth anniversary throughout the year and is also named Airline of the Year by *Air Transport World* magazine. As part of the anniversary, Ken Cato designs a special logo that brings together the flying kangaroo symbol and the words "75 Years" to mark the airline's long contribution to civil aviation.

Early in the year, officials at **Cathay Pacific Airways (Pty.), Ltd.** publicly condemn **Qantas Airways (Pty.), Ltd.** for turning Hong Kong's Kai Tak Airport into an unofficial hub, where it picks up passengers to fly onward to Singapore and Bangkok. It is stated that the Australian carrier exceeds the normal 50% fifth freedom norm; there is also concern over Qantas' deep-discount fares.

Service to Paris is suspended at the beginning of March. On March 26, a new code-sharing connection service is inaugurated with **British Airways, Ltd. (2)**. Passengers on any of the thrice-weekly London (LHR) to Los Angeles services are able to transfer to a Qantas Jumbojet for nonstop service on to Auckland; the new route takes three hours off the twice-weekly frequencies to New Zealand offered by BA over a route east from London.

Negotiations between the Hong Kong and Australian government aviation ministries to resolve Cathay's fifth freedom charges are broken off in mid-April. On April 17, the sixtieth anniversary of the first overseas passenger flight from Brisbane to Singapore is celebrated.

During the first week of May, the Hong Kong Economic Service Branch decrees that, after July 1, no more than 50% of Qantas' passengers flying to Singapore and Thailand may originate at Kai Tak. The Australian transport minister now shortens Cathay's operating permit to Australia to June 30, at which point Hong Kong threatens to cut off all Australian flights to Hong Kong the same day.

The Australian Trade Practices Commission reverses its December decision during the third week of May and gives the carrier and its new part owner **British Airways, Ltd. (2)** permission to cease price competition on the Kangaroo Route from Australia to London.

During the second week of June, Qantas threatens to sue the Hong Kong Civil Aviation Department and Economic Service Branch for the July 1 proposal. The following week, the Australian Transport Minister Christopher Pratt weighs into the conflict between its national company and the foreign line. Offering to extend **Cathay Pacific Airways (Pty.), Ltd.**'s Australian operating permit through October 28, he also proposes that the number of seats allowed to the Hong Kong flag carrier in Australia be reduced by 60%.

Negotiators from the two countries resume talks on June 26. While neither gives into the assertions and demands of the other, a six-month "cooling off" period is imposed—during which time both sides will seek a solution to their differences.

Under the May TPC ruling, the Australian and British majors are able to launch code-sharing and joint operations in October at the beginning of the tourist season for the southern continent.

Discussions are held with **Emirates Airlines, Ltd.** in December concerning possible cooperation on services between Australia and the Persian Gulf.

A compromise arrangement in December ends the dispute with **Cathay Pacific Airways (Pty.), Ltd.** Under its terms, Hong Kong gains the principle of imposing a cap on uplift out of the Crown Colony. Qantas will only have difficulties if it increases Hong Kong-originating boardings beyond 50% of capacity or 200 passengers per day. At present, daily Qantas flights from Hong Kong to Bangkok and Singapore board between 150–180 local originations.

Passenger boardings accelerate by 12.6% to 16,054,000 while freight traffic rises to 1.66 billion FTKs. Revenues during the first 12 months as a public company advance 10.2% to A\$5.6 billion while costs rise an almost equal 10.5% to A\$5.36 billion. Operating profits move ahead to A\$246.7 million and net gain reaches A\$138.67 million. The profit figures are later adjusted upward to A\$253 million (operating) and A\$143 million (net).

The workforce is increased another 3.6% in 1996 to 29,627. As part of the seventy-fifth anniversary, the company commissions the painting of a second Jumbojet in an Aboriginal art-inspired livery. The B-747-338 *Nalanji* (Our Place) *Dreaming* joins the fleet in January.

Also during the first month, the company receives the 1995 "Airline of the Year" award from *Air Transport World* magazine.

It is announced that the company will invest A\$70 million (US\$56 million) to upgrade domestic terminal facilities at Melbourne's Tullamarine Airport over the next 18 months.

A new cargo terminal is opened at Brisbane during the spring and a new route is started to Bombay.

As a result of the company's privatization, the political implications of maintaining separate services to Taipei are lessened. The B-747SP-38s *City of Gold Coast-Tweed* and *City of Traralgon*, leased to **Australia Asia Airlines (Pty.), Ltd.**, are returned to the parent on June 27 and repainted in Qantas colors. Meanwhile, **Australia Asia Airlines (Pty.), Ltd.** is folded back into its parent, which now undertakes service to Taiwan under its own colors.

In August, Qantas launches its first direct flights between Shanghai and Sydney, twice per week. An agreement is reached with the Transport Workers Union of Australia on August 23 for an 8% wage increase over the next 2 years for 5,500 of the airline's employees.

A TCAS alert sounds aboard a B-747-438 en route over Miyake Island south of Tokyo during the month, when two USMC F/A-18s from Iwakuni come too close; the Jumbojet is forced to take evasive action. Japanese and Australian officials protest the near miss to U.S. authorities.

In early September, the carrier reaches a new agreement with **Japan Air Lines Company, Ltd. (2)** and begins to code-share 14 weekly nonstop flights from Brisbane and Cairns to Tokyo.

Qantas teams with **Burlington Air Express (BAX)** on October 5 to introduce "BAX Downunder Direct," a weekly roundtrip B-747F service from the American company's Toledo hub to Sydney and Melbourne, with connections to major cities throughout Australia and New Zealand.

An ambitious new summer schedule (winter in the Northern Hemisphere) begins in October. New thrice-weekly nonstop services commence from Sydney to Singapore, new twice-weeklies begin from Brisbane to Kuala Lumpur and Jakarta and from Melbourne to Jakarta, and a new weekly roundtrip is launched from Melbourne to Shanghai via Sydney. In addition, a third weekly roundtrip is added from Sydney to Ho Chi Minh City and a third weekly roundtrip is begun from Perth to Bombay via Singapore.

Also during the month, **Air New Zealand, Ltd.** is able to acquire a 50% stake in rival **Ansett Australia (Pty.), Ltd.** for A\$475 million.

To replenish its coffers after the Ansett purchase and to increase the number of shares held by foreign investors from 35% to 49%, **Air New Zealand, Ltd.** now offers a pro rata issue of 121 million shares for sale. The offering brings in NZ\$242 million, including NZ\$47 million (US\$32.9 million) from rival Qantas, which now holds a 19.4% stake.

In November, agreement is reached with **Asiana Airlines, Ltd.** for cooperative ground handling in Korea and Australia and for code-sharing on flights from Sydney and Cairns to Seoul; four weekly flights are offered.

As the result of soft market conditions during the first half, combined with a strong Australian dollar and soaring fuel costs, the company in mid-December determines to increase its cost-cutting target from A\$100 million (\$79 million) to A\$430 million.

As of December 21, travelers booking flights to Australia via the company may obtain permission to enter the country through a new program that issues electronic travel authority.

Enplanements slip slightly to 16,024,000. Revenues grow 7.7% to A\$6.03 billion while expenses rise just 6.8% to A\$5.71 billion. Operating gain reaches up to A\$319 million while a net A\$161.83-million profit is posted.

The workforce grows a slight 1.5% in 1997, up to 30,080.

Early in January, the company opens a new air cargo terminal at Los Angeles (LAX). Located in the former **Pan American World Airways (1)** cargo terminal, the US\$8.5 million facility includes 65,000-sq.-ft. of warehouse and office space.

Sydney Organizing Committee CEO Mal Hemerling announces on January 28 that seven carriers have been designated official carriers for the Sydney 2000 Olympic Games. In something of a surprise, Qantas is passed over in favor of **Ansett Australia (Pty.), Ltd.**

On February 25, the company and **Air New Zealand, Ltd.** cancel their six-year old "airshare" arrangement, involving shared seats on each other's services between certain cities, mainly Wellington and Christchurch, and promise to lay on extra flights between Wellington and Australia with the aim of improving trans-Tasman flight frequency.

The carrier sells its 19.4% stake in **Air New Zealand, Ltd.** to ANZ Securities, Ltd. on March 19 for A\$295 million. Daily code-sharing flights begin in April with **Japan Air Lines Co., Ltd. (2)** from Cairns and Brisbane to Tokyo (NRT). A new freight terminal is opened at Los Angeles and two-class service is offered over domestic routes.

With a first quarter loss anticipated, **Ansett Australia (Pty.), Ltd.** abandons its attempts to win away the rights to serve Bangkok presently held by Qantas. Qantas now undertakes negotiations aimed at the purchase of the country's largest travel concern, **Jeset (Pty.), Ltd.**, which has recently given the Australian major a contract for \$800 million worth of domestic and international tour and charter business.

Dual-designator flights with **Asiana Airlines** are increased in April from four to five per week. Also during the month, ticketless electronic travel is introduced. On May 3, a new weekly Brisbane-to-Wellington return service is initiated.

Also during the month, a cost-cutting layoff of 132 engineering and maintenance department personnel is announced.

At the same time, CEO Strong inaugurates a new A\$560 million (US\$500 million), three-year "Flying Toward 2000" service enhancement plan. Under this program, the company will add full sleeper seats to its first-class international cabins; equip the domestic fleet with new economy-class and business-class seats; recruit 350 new flight attendants to provide more "personalized" service; retain Sydney hotel executive Ted Wright to upgrade service standards throughout the company; appoint noted Australian chef Neil Perry to redesign all Qantas menus; and launch a new advertising campaign keyed to the national sporting image and based on the theme of the Peter Allen song "I Still Call Australia Home."

Following public opposition to all in-flight gambling by Australian Prime Minister John Howard, Qantas encounters great difficulty in winning approval for the introduction of gambling on international flights.

When the Australian travel industry threatens to take all of its business to Qantas, **Ansett Australia (Pty.), Ltd.** backs off a plan to cut commission rates by 20% for charter and domestic flights booked by travel agents; Qantas has not lowered rates. Unable to settle on a price for the **Air New Zealand, Ltd.** 50% stake, Qantas, itself, abandons plans to buy into the **Jeset Travel** and technology group. **Air New Zealand, Ltd.** will end up purchasing full ownership itself.

Throughout the first half of the year, merger discussions are held between the new leadership of **Ansett New Zealand, Ltd.** and the management of Qantas concerning a possible takeover of the New Zealand regional by the Australian major. Given the tight-money constraints presently at work within the major, a number of executives raise concerns.

At the beginning of June, Director of Operations Ian Oldmeadow and Regional Airline/Resorts Director Norman Fricker both resign. Their departure allows Managing Director Strong to reduce the number of group executives and to reallocate responsibilities for various activities.

The "airshare" agreement with the New Zealand major technically ends on June 17, at which time **Air New Zealand, Ltd.** puts on two extra weekly return flights per week between Wellington and Australia. For its part, Qantas introduces an extra weekly Melbourne-Auckland-Los Angeles return flight the same day, following it within days with an additional weekly roundtrip between Melbourne and Christchurch.

When merger discussions with **Ansett New Zealand, Ltd.** break down during the summer, Qantas gives consideration to moving the BAe 146 fleet of its **Nation's Jet System (Pty.), Ltd.** subsidiary to New Zealand and entering the Kiwi domestic market directly. It may also elect to compete only on the more profitable of **Ansett New Zealand, Ltd.**'s local routes.

On July 1-2, talks are held to stop a threatened wildcat strike by storemen and packers, who are displeased by the firing of an Aboriginal employee who is accused of working under the influence of drugs and alcohol.

Signaling a return to its core airline operation, Qantas, early in the month, sells three of its Great Barrier Reef resorts inherited from **Australian Airlines, Ltd.**, retaining only a leasehold interest in the Lizard Island resort.

The code-sharing Millennium agreement with **British Airways, Ltd. (2)** is expanded during July as both carriers now begin to sell seats on the other's services. Qantas begins dual-designator service with BA on the latter's flights from London (LHR) to Aberdeen, Amsterdam, Belfast, Edinburgh, Glasgow, Manchester, Paris, and Vienna. BA, in turn, is allowed to share its code on Qantas services from Sydney to Adelaide, Canberra, and the Gold Coast, from Melbourne to Adelaide and Hobart, and from Perth to Adelaide.

According to an article by Dave English, Qantas now operates one of the longest routes in the world, Los Angeles to Sydney—shared with **Air New Zealand, Ltd.** and **United Airlines**—the 7,489-st.-mi. distance is flown in 24 hrs. 35 min. out and 13 hrs. 25 min. back (*Airways* [July-August 1997]: p. 21). In the following issue, it is noted that the carrier's longest flying time route of 13 hrs. 45 min is Melbourne to Johannesburg.

In a further effort to cut costs, the carrier, in early August, invites external bids for the takeover of its ground-handling operations at the airports at Brisbane, Cairns, Coolangatta, Melbourne, Perth, Sydney, and Townsville. In-house tenders are made, along with presentations from the U.K.-based Serco and U.S.-based Airport Group International.

While preparing to land at Uluru on August 5, the pilot of Flight 92, a B-737-376 with 49 passengers, is alerted to landing gear problems. A safe emergency landing is made at Alice Springs Airport, with the inconvenienced customers later flown to Uluru on another service.

Qantas, on August 22, adds two weekly flights to Sydney from Shanghai, bringing the number of trips to four every seven days.

During August and September, company officials visit Toulouse to consult with Airbus Industrie officials concerning the acquisition possibilities of the A340-300E.

While en route from Cairns to Sydney on September 20, the crew of a B-737-476 is alerted to tire problems on the aircraft; a safe emergency landing is made at Brisbane and no injuries are reported.

Also during September, alliance partner **British Airways, Ltd. (2)** approaches the CAA seeking permission to lease B-747-476s from Qantas for daytime use. The idle Jumbojets arrive at London (LHR) in early morning and do not return until evening.

Counterprogramming for the new Ansett-ANZ-SIA alliance begins, with Qantas and BA seeking regulatory clearance to extend their code-sharing program to services on the Kangaroo Route from seven Australian cities to London via Singapore.

Plans to upgrade domestic aircraft seating announced in May are placed on hold in early October. At the same time, doubts are expressed concerning the possible development of an A\$325-million interactive IFE system.

On October 13, a code-sharing agreement is signed with **Reno Air**. When it takes effect on January 6, it will result in dual-designator service on routes from 23 Reno markets to Los Angeles and on to Sydney. Toward the end of October, \$475 million in orders are placed with Boeing for three more B-747-438s. During the last quarter, three additional weekly Sydney-Wellington roundtrips are introduced.

During November, the nation's International Air Services Commission (IASC), in a draft ruling, determines that the carrier's plans to code-share with BA over routes to London via Singapore will not prove beneficial and therefore rejects the request. It defers a similar application to fly to London via Bangkok. Not only will the airline further petition the government board, but the Australian Tourism Council and the state of Queensland will as well.

At the same time, the carrier enters into a code-sharing agreement with **Emirates Airlines, Ltd.** on a thrice-weekly service from Melbourne to Dubai that employs the Middle East line's B-777-21Hs.

The IASC, in December, reverses its November decision and grants authority for Qantas to code-share with **British Airways, Ltd. (2)** over routes from Australia to London via Singapore. The Asian currency and economic crisis causes company and tourism planners to downgrade by half their projections for flights into Australia the following year. Chairman Pemberton warns shareholders that the next period will be significantly difficult and that earnings may actually halt. Both Qantas and **Ansett Australia (Pty.), Ltd.** are, during the month, absolved of any legal responsibility to give up slots in favor of new entrants at any of Australia's airports.

Customer bookings accelerate 6.4% to 18,606,000 as operating revenues climb 3.1% to A\$5.13 billion. With costs held to A\$4.8 billion, there is an operating profit of A\$339.28 million (later revised down to A\$291.26 million) and a net gain of A\$174.86 million.

At the beginning of 1998, Qantas is the 11th largest airline in the world in terms of employee number (30,080), 14th in operating profit, 15th in operating income, 16th in passenger boardings, and 19th in net profit.

The fleet, all of which is Stage III certified, includes 97 airplanes: 37 B-737s, 30 B-747s, 26 B-767s, and 4 A300s.

Dual-designator flights with **Reno Air** commence on January 6. Noting that traffic is down by over 65%, the company, also in January, joins with **Air New Zealand, Ltd.** and **Ansett Australia (Pty.), Ltd.** in suspending service to Seoul and other Korean cities.

A block-seat code-sharing agreement is signed with **Vietnam Airlines** on January 16.

Also during the month, the carrier sells its Bedarra, Dunk Island, and Brampton resorts on Queensland Island to P&O Australia for A\$25 million.

In early February, the company, noting traffic dips similar to those in Korea, announces that it is cutting back on services from Brisbane, Melbourne, and Perth to Bangkok, Jakarta, and Kuala Lumpur. Still, over 50 weekly return services are maintained between Australia and Thailand, Indonesia, and Malaysia.

In March, the carrier announces that it will defer for at least a year the installation of a new interactive IFE system in its long-haul fleet.

Under terms of the January pact, Qantas and **Vietnam Airlines** launch twice-weekly code-sharing services on March 28 from Sydney and Melbourne to Ho Chi Minh City. The Australian line is able to secure and resell 100 seats on each flight by the Vietnam carrier's B-767-34AER, while **Vietnam Airlines** receives resale rights to 100 seats on the Qantas B-767-338ERs.

A cooperative agreement with **Ansett New Zealand, Ltd.** is signed during the first quarter. Under its terms, the two companies agree to link their frequent flyer programs. Although discussions concerning a possible takeover continue, no firm decisions are made.

In April, the company negotiates a wide-ranging strategic alliance with **Aerolineas Argentinas, S.A.** The pact will include dual-designator flights from Australia to South America.

Given the uncertainty of the Asian economic condition, the company's board of directors in a mid-month decision elects to defer a decision on whether the airline should purchase either the B-777-200 IGW or the Airbus A340-300E. Instead, negotiations are begun for the purchase of used B-747-400s from either **Asiana Airlines, Ltd.** or **Malaysia Airlines, Ltd. (MAS)**.

In May, the company acquires another 28.5% stake in **Air Pacific, Ltd. (2)**, bringing the Australian major's shareholding to 46%. Qantas also leases the Fijian national carrier a second B-747-238B.

At the same time, yet another new B-767-300 is ordered and negotiations are conducted with other carriers for the acquisition of at least three more B-747-400s.

On June 1, trans-Tasman services begin a three-month period of increase. In June, an additional weekly roundtrip service is offered from Brisbane to Christchurch and twice-weekly roundtrips are added from Brisbane to Auckland.

As the result of the temporary (it is hoped) discontinuation of operations to Australia by **Philippine Airlines (PAL)** on June 16, Qantas, on June 20-21, increases capacity on its Saturday and Sunday roundtrips to Manila by substituting B-747-338s for the B-767-338ERs normally employed.

On June 22, the Australian major increases its five weekly B-767-338ER Manila roundtrips to daily B-747SP-38 flights, effectively doubling the number of seats it offers to the Philippines.

Employing Jumbojets that normally layover in London during the scheduled twice-daily flights between Australia and the U.K., the first of nine B-747-476 charters flown on behalf of the P & O subsidiary Princess Cruises is operated on June 20 between London and Barcelona. There passengers connect with the 12-day Mediterranean cruises between that Spanish city and Istanbul on the new holiday ship *Grand Princess*. Through September, three more roundtrip charters to Barcelona and four to Istanbul will be flown.

When the government of Thailand announces in June that it will reduce its holding in **Thai Airways International, Ltd. (THAI)** from 80% to 72% via privatization, Qantas indicates its interest in acquiring a stake. Also during the month, it agrees to take over delivery of three B-747-400s from two other Asian carriers unable to take them, **Asiana Airlines, Ltd.** and **Malaysian Airlines, Ltd. (MAS)**.

A total of 29 domestic services are added to the schedule on June 27. Among these are two new weekend B-737-376 roundtrips between Sydney and Maroochydore, which bring to nine the number of flights between Sydney and the Sunshine Coast, and a new daily B-737-376 roundtrip between Brisbane and Townsville.

In support of the tourism industry, B-747-238Bs are placed on the roundtrip Sydney route to Cairns twice weekly and on the route from Sydney to Perth weekly. Additionally, one more B-737-376 daily service is laid on from Brisbane to Melbourne, four-times-a-week roundtrips begin from Sydney to Adelaide, one more weekly roundtrip between Perth and Melbourne is offered, as well as one more Saturday roundtrip between Melbourne and Perth.

Enhancement of the trans-Tasman routes continues at the start of July. One more weekly roundtrip is added from Brisbane to Wellington, one is launched from Melbourne to Wellington, one more from Melbourne to Christchurch, and yet another from Cairns to Auckland. On July 4, top level dignitaries and tourism officials from New Zealand are guests aboard a company B-737-376 when it inaugurates daily roundtrip service from Sydney to Queenstown.

A strategic marketing agreement is signed with **LanChile Airlines, S.A.** on July 22. The new alliance will allow customers of one airline to

participate in the frequent flyer program of the other. Qantas is able to place its codes on LanChile return flights from Santiago to Easter Island and Papeete, while the Chilean major affixes its code to Qantas services from Papeete to Auckland and Sydney.

A number of international Asian services are cut back on August 1. One of the two weekly roundtrips from Sydney to Tokyo is eliminated, along with the twice-weeklies to Vietnam. The twice-weekly Jakarta-Bangkok segments of the thrice-weekly Perth-Jakarta-Bangkok service is suspended and the Perth to Jakarta thrice-weeklies are flown twice weekly.

Route revision continues through the month. Two additional roundtrips are launched from Sydney to Wellington and two from Sydney to Christchurch. By this point, the number of weekly Qantas flights operated between Australia and New Zealand has climbed to 158. Kuala Lumpur is downgraded into a stop on the London route. A seventh weekly service is introduced from Sydney to Bombay via Singapore, while a fifth weekly roundtrip is launched between Adelaide and Singapore. Saturday and Sunday Brisbane to Bali B-767-338ER roundtrips begin on August 22.

While on descent to London (LHR) on September 4, a B-747-438 suffers an autopilot malfunction. The incident, reported in the September 23 issue of *The Australian*, is believed to have been caused by passengers employing a combination of electronic games, laptop computers, and CD players after having been asked not to.

A strategic alliance is signed with **Swissair, A.G.** on September 18. Dual-designator services and the linkage of frequent flyer programs are the main ingredients.

It is announced at a London news conference on September 21 that **Cathay Pacific Airways (Pty.), Ltd.** has joined its first airline alliance, the new "OneWorld" grouping established to compete with the "Star Alliance" headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by **American Airlines** and **British Airways, Ltd. (2)**, which continue their battle to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. **Canadian Airlines International, Ltd.** and Qantas, both of which already have marketing partnerships with AA and BA, are also charter members.

Leaders of the five companies indicate that they will coordinate ticketing and flight schedules, while cooperating on frequent flyer programs. Other carriers will be invited to join and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces its membership before the day is over.

One airline that will not be invited to join, **Virgin Atlantic Airways, Ltd.**, hires a truck with a sign painted on its side proclaiming "no way" and has it parked, illegally, outside the building where the "OneWorld" news conference is held. A spokesman for Virgin indicates that his airline will gladly pay the parking ticket to get its point over.

The final Airbus service is operated on October 24 between Sydney and Melbourne; thereafter, the last four A300B4-203s are withdrawn and sold to Pinnacle Air Cargo Enterprises (PACE) for conversion into freighters.

The five weekly frequencies to Fukuoka from Sydney and Cairns are suspended on October 25. New weekly trans-Tasman return services are introduced, also on October 25, from Melbourne to both Christchurch and Wellington and from Brisbane to Auckland. The same day, the northbound Melbourne to Hong Kong flights offered five times a week are switched from daylight to overnight services.

The Swissair-Qantas code-sharing pact takes effect on October 26, as the two begin to offer thrice-weekly connections from Zurich to Sydney via Singapore. The Zurich-Singapore leg is operated nonstop by **Swissair, A.G.** while the Singapore-Sydney portion is a Qantas operation.

Thrice-weekly B-747-438 roundtrips begin on October 26 from Sydney to Paris via Singapore; only one flight is operated separately by Qantas as the other two are code-shares with **British Airways, Ltd. (2)**. Simultaneously, new direct thrice-weekly roundtrips are inaugurated from Brisbane to Rome via Bangkok.

Two additional weekly services are added to Los Angeles from Sydney on October 28. On October 29, concerned over the apparent lack of success over new flight information and communication rules, Qantas suspends regional services to a number of eastern New South Wales communities.

A day later, additional Saturday services are added, one each from Sydney to Bali and from Bali to Singapore.

The three remaining weekly services to Osaka are suspended on November 1 and are replaced by a daily code-share over the route with **Japan Air Lines Company, Ltd. (2)**.

On November 20, the company launches twice-weekly B-747-438 roundtrips to Buenos Aires via Auckland.

Twice-weekly seasonal service to Vietnam begins in early December; it will continue through February.

As the result of a new air service agreement between Australia and Malaysia, Qantas is able to code-share, starting on December 10, aboard **British Airways, Ltd. (2)** thrice-weekly B-747-436 return flights from Sydney to London (LHR) via Kuala Lumpur.

Also on December 10, the *NSW Daily Telegraph* reports that the Civil Aviation Safety Authority is investigating charges that veteran Qantas Captain Lindsay J. Lobwein had, in mid-1990 and in September 1996, allowed passengers to take control of his aircraft for periods up to 20 minutes during scheduled flights. The newspaper prints photographic evidence of these serious violations of civil air regulations that will result in the pilot's demotion to first officer for a year and the loss of A\$100,000 in salary.

A fourth weekly service to Tahiti, timed to connect with a fourth weekly **LanChile, S.A.** code-share flight to Santiago via Easter Island, is added on December 15.

It is reported on Christmas Eve that the airline will issue further security directives to prevent a repeat of a recent incident in which three unaccompanied pieces of luggage were flown from Australia to Los Angeles on the same plane as George and Barbara Bush.

Passenger boardings inch up 1.8% to 18.86 million while revenues ascend 3.8% to A\$5.36 billion. Costs are up 3.2% to A\$5.05 billion, leaving an operating profit of A\$315.48 million. A net A\$201.3-million profit is reported.

On January 19, 1999, Qantas formally introduces to the U.S. its "new look" three-class configuration, together with restaurant-style in-flight cuisine, at a gala event at the Los Angeles Imperial Terminal. Invited guests are taken aboard the B-747-438 *Wunala Dreaming*, painted in a vibrant, predominantly red Aboriginal design, which is showcase for the changes.

Qantas on January 24, introduces its first television advertising campaign in the U.S. in over a decade. Featuring the Australian Girls and National Boys Choirs filmed at various locations, the ads will air during the Super Bowl on January 31 and over the next 2 months over 17 cable and broadcast networks.

It is announced during the month that the airline is expending A\$147 million to make certain that its computer systems are Y2K compliant.

The "OneWorld" global alliance is formally implemented on February 1 with **American Airlines, British Airways, Ltd. (2), Canadian Airlines, Ltd.,** and **Cathay Pacific Airways (Pty.), Ltd.**

The U.S. trade magazine *Aviation Week & Space Technology* announces its annual aerospace laureates awards on February 8; among those honored, in the category of commercial air transport, is CEO Strong. The winners will receive their prizes at a dinner given at the Smithsonian Air and Space Museum at the end of April.

On February 10, Qantas joins with **Ansett Australia (Pty.), Ltd.** in voicing opposition to the "open skies" aviation policy currently being studied by the government's Productivity Commission.

Discussions concerning the formation of a strategic alliance with **China Eastern Airlines Company, Ltd.** are announced, also on February 10. Under its terms, the two will begin code-sharing flights at the end of March. The Australian line will operate thrice-weekly B-767-338ER return flights from Sydney to Shanghai, while CEA will fly the

same number of flights using an A340-313 between Beijing, Shanghai, and Sydney. The CEA Beijing-Shanghai segment will replace the same segment that will be dropped by Qantas.

In a February 15 interview with *The Australian Financial Review*, Chairman Pemberton asserts that the federal government's proposed "open skies" pact could force Qantas to scrap its regional air services. Such an agreement, he claims, would allow foreign airlines to "cherry pick" lucrative air routes, requiring Qantas to cut back on its less profitable operations.

Most of the CEOs of the "OneWorld" alliance meet in Sydney, also on February 15. There, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** is formally welcomed into the group.

In mid-month, it is announced that Qantas will operate a special Millennium Flight sight-seeing tour over Antarctica that will depart on the evening of December 31, 1999 and return on January 1, 2000. The special flight will be sold out within days. It is also noted that, since the resumption of Antarctic tourist flights 5 years earlier, some 13,900 passengers have flown over the east coast of the ice continent during 50 flights.

On March 1, **American Airlines** begins to place its "AA" code on Qantas flights from Auckland to Sydney and Brisbane. The next day, Qantas presents a A\$350,000 check to the Starlight Children's Foundation. The funds have all been generated from the company's special holiday CD *Australia's Christmas Spirit*.

Having been retired from Qantas advertising in 1990, "Sydney," the cuddly koala "spokesperson" advertising icon of the '70s and '80s, is returned in three new commercials, beginning on March 22.

American Airlines also begins dual-designator service aboard Qantas flights from Sydney to Adelaide, Brisbane, Cairns, Melbourne, and Perth, beginning on March 28.

The new Northern Summer schedule takes effect on March 28 and will feature a number of additional flights. Another weekly B-767-338ER roundtrip is inaugurated from Sydney to Singapore via Jakarta (increasing the number from five to six) as is another from Melbourne to Singapore via Denpasar (three to four). Two more B-767-338ER roundtrips are started from Melbourne to Hong Kong (five times a week to daily) while the number of B-767-338ER roundtrips from Melbourne to Auckland is increased to thrice weekly.

The number of roundtrip flights from Melbourne to Bangkok is doubled to six; three days each week the service will continue on to Rome while on the other three it goes on to Frankfurt. The number of dual-designator services with **British Airways, Ltd. (2)** from Melbourne to London via Bangkok and Singapore will be advanced from 10 to 13.

Also on this day, B-747-438s replace B-767-338ERs on the carrier's four-times-a-week roundtrips between Sydney and Bali. Simultaneously, the three weekly roundtrip frequencies between Brisbane and Bangkok are discontinued. Three of the weekly B-747-438 roundtrips between Sydney and Nagoya are converted to nonstop, while the remaining three continue to operate via Cairns. The Beijing extension of the thrice-weekly Sydney to Shanghai service is now discontinued.

To provide additional Business Class seating, a B-767-228ER is assigned to the Sydney to Port Moresby roundtrip flown four times a week.

Having had increasing difficulties competing with the faster one-stop flights now offered by other carriers, **British Airways, Ltd. (2)** ends its daily two-stop flights to Melbourne, Australia, on April 1. BA customers are, however, able to travel on three new weekly flights to Melbourne, operated by Qantas, but flown by the two airlines carrying the BA code. The new flights connect at Bangkok.

A B-747-338 is forced to return to Sydney on April 20 after a warning light is activated in the cockpit. Once safely on the ground, the passengers are transferred to another aircraft and engineers investigate the incident.

The next day at the *Aviation Week & Space Technology* Laureate dinner at the Smithsonian Air and Space Museum at Washington, D.C., Al-istair J. Nicholas, consular trade commissioner from the Australian embassy, presents a Commercial Air Transport Laureate award to CEO Strong. Accepting on behalf of Mr. Strong, who cannot be present, is company official Catherine Sych.

Staff at the company's freight terminal at Perth must be evacuated on April 23 when a package containing radioactive Cobalt 60 is found to be leaking. No one is injured and the facility is reopened before the close of the business day.

The Flight Attendants Association of Australia criticizes the airline on April 26 for its decision, announced on April 19, to hire some 100 Thai flight attendants as part of its recruitment drive for 500 extra cabin crew. In the *Sydney Morning Herald* of April 22, the airline had defended its decision to recruit these personnel in Bangkok and Auckland on a strictly cost-cutting basis.

As the month draws to an end, Qantas and its rival, **Ansett Australia (Pty), Ltd.**, continue to find themselves on the same side in their continued opposition to the government's proposed "open skies" policy for domestic routes. Both companies hint broadly that they will reduce regional services if foreign airlines are allowed to operate internally.

The companies meet with the Australian federal transport minister, employing various commercial arguments to support their opposition. Their efforts are apparently made to no avail; indeed, on April 30, both airlines are publicly rebuked by the minister, whose spokesman informs the Australian Associated Press that the civil leader objects to their using services to regional Australians as a bargaining chip.

In response to an urgent request from the UN High Commissioner for Refugees, the Australian government, on May 1, quickly obtains enabling legislation permitting it to airlift in up to 4,000 Kosovo Albanian refugees and provide them with temporary housing for 3 to 6 months. The airlift will be the country's largest-ever humanitarian operation.

The same sorts of appeals have been made to the U.S., Britain, and Canada. Immigration officials are already working in Macedonia identifying potential transfers, who would be flown first to reception facilities at Sydney and on Tasmania.

On May 3, both carriers deny allegations that they are considering a blackout on discounts for domestic airfares before and during the 2000 Sydney Olympic games.

The commercial arrangement with **China Eastern Airlines Company, Ltd.** is formally signed on May 6. Having been transferred to Rome, the first group of 414 Kosovo refugees boards Flight 6301, a 15-year-old Qantas B-747-338, which departs in the evening and arrives at Sydney on the afternoon of May 7. The service is met by Prime Minister Howard and a large welcoming crowd.

En route from Sydney to Tasmania on May 11, a B-737-376 with approximately 200 Kosovo refugees aboard suffers a mechanical fault in one of its engines; a safe return to the point of origin is made, after which the passengers are transferred to another small Boeing.

On May 12, Qantas announces that it will invest A\$30 million (US\$33.9 million) in the construction of an aircraft maintenance and engineering facility at Avalon, west of Melbourne. Two days later and in celebration of the enrollment of the 2 millionth member of its frequent flyer program, Qantas awards 2 million frequent flyer miles to a woman in Melbourne who has won a competition.

Beginning on May 25, Qantas is able to place its code on **Alaskan Airlines** flights from Los Angeles to Portland and Seattle. Qantas begins code-sharing on **British Airways, Ltd. (2)** flights from London to Copenhagen, Stockholm, and Oslo starting on July 1.

Beginning on October 31, Qantas code-shares aboard **British Airways, Ltd. (2)** services from London (LHR) to both Hamburg and Berlin. The first service on a new schedule of thrice-weekly roundtrips from Sydney to New York arrives at JFK International Airport on October 31.

Under terms of a new code-sharing agreement with Qantas, which takes effect on November 1, **Polynesian Airlines, Ltd.** is able to expand its trans-Tasman services from three of its own flights to a total of eight, including five flights operated by Qantas. In addition, Qantas is able to have its own seats available on six Polynesian flights per week, including through-flights from Melbourne to Wellington and on to Apia and from Sydney to Auckland and Apia. Qantas also shares two flights per week from Sydney to Auckland.

Also during the fourth quarter, Qantas wet-leases two weekly B-747-212BF flights from **Evergreen International Airlines** in response to a new U.S.-South Pacific cargo partnership between **Air New Zealand, Ltd.** and **Polar Air Cargo**. The Evergreen arrangement replaces a wet-lease the U.S. cargo carrier has had with **Air New Zealand, Ltd.** and is anticipated to make money on the outbound leg to Hong Kong, which can now be routed via Australia and New Zealand. The new Qantas return services, with blocked-space sold to **BAX Global** from Ohio west, depart New York (JFK) twice weekly and fly to Hong Kong via Toledo, Chicago (ORD), Los Angeles (LAX), and the South Pacific. The new activity brings to five the number of weekly Jumbojet cargo services Qantas flies from the U.S., together with one operated with a DC-10-30 wet-leased from **Gemini Air Cargo**.

Passenger boardings rise 2% to 16,692,000 as revenues advance 3.9% to \$5,584,591,000. Although costs rise 2.6% to \$5.12 billion, profits climb to \$463.89 million (operating) and \$278.67 million (net).

Airline employment at the beginning of 2000 stands at 23,411, a 1.4% decline over the previous 12 months. Among the world's top 25 airlines, Qantas is 20th in passengers, 18th in employees, 15th in operating revenue, 10th in operating profit, and 13th in net profit. The "classic" B-737 fleet continues to include 16 Dash-376s, 20 Dash-476s, and 1 Dash-4L7, all owned, plus 1 Dash-4Q8 chartered from ILFC. The huge B-747 contingent includes 2 each SP-38s and Dash-4H6s, 5 Dash-238Bs, 6 Dash-338Bs, 20 Dash-438s, and 1 each Dash-436 and Dash-48E.

Having become lost, Japanese visitor Makoto Takahashi drives his car out onto the runway at Auckland International Airport on January 18; catastrophe is barely avoided when the captain of a Qantas B-767-338ER spots the automobile just 50 seconds before landing and is able to abort. Police quickly arrest the man, who is later released.

To promote the first Formula One automobile race of the new century to be held in Australia beginning on March 12, the B-747-438 *City of Melbourne* unveils a special livery at its namesake city on January 19. The dramatic color scheme, created by Cato Partners and requiring 16 days for the application of paint and decals, features a checkered flag and a Formula One race car on the fuselage and an "F1" logo by the nose. After reaching London (LHR) on its first service, the carrier participates in another media promotion, attended by Chairman Strong, Formula One superstar Bernie Ecclestone, Sir Frank Williams, and Guinness Peat Chairman Ronald Walker.

To accommodate travel on the Chinese New Year that begins February 7, Qantas adds 16 more B-747-338 roundtrips between Australia and Hong Kong for a week, along with 3 extra flights from Sydney to Taipei. It is revealed on February 23 that Qantas has begun negotiations with **British Airways, Ltd. (2)** for the lease of 7 B-767-336ERs. The aircraft will allow frequencies on the Qantas-BA code-shared *Kangaroo Route* to be increased.

Also during February, Qantas is involved in a case that will spark condemnation from and legal proceedings by the Royal Society for the Prevention of Cruelty to Animals. The airline is charged with animal cruelty after 68 rusa deer, being transported in containers on a flight from Bangkok to Sydney, all die aboard their freighter. Almost a year later, on January 29, 2001, the airline will plead guilty in a Sydney court to employing containers that were too small and at its sentencing within a month, it will be penalized up to the maximum allowed under the Australian Prevention of Cruelty to Animals Act—A\$4,400.

On March 1, the airline begins screening a 10–12 min. news bulletin on its afternoon domestic flights; the reports, supplied by 9 Network, cover both national and international events.

An A\$400-million (\$244) investment in product and service upgrades is unveiled at the end of the third quarter, including new food choices in economy class and new upgrades to the airport lounges at Sydney, Melbourne, and Singapore.

On March 30, the code-share with **Air Pacific, Ltd. (2)** is deepened on the Melbourne–Nadi route; the weekly Qantas B-767 service is replaced by a dual-designator flight by the Air Pacific B-747-219B.

Just into its takeoff roll for Bangkok from Rome on April 22, a strut of the main landing gear of Flight 016, a B-747-338, gives way, forcing one of the four engines into the runway as the Jumbojet comes to a stop. With fuel leaking, all 19 crew and 303 passengers aboard are quickly evacuated.

Signed on March 10, a new code-sharing agreement is begun with **EVA Airways, Ltd.** on May 1; the arrangement allows EVA to place its designator on the Australian line's thrice-weekly return flights from Sydney to Taipei and Qantas to place its code on EVA's thrice-weekly roundtrips from Taipei to Brisbane.

On May 21, the company enters into a code-sharing alliance with **Air Tahiti Nui, S.A.** under which the two will operate joint flights between Papeete and Auckland.

AMADEUS is chosen in May as the company's preferred information technology distribution and customer services systems provider. Also during the month, a new service is launched from Darwin to Dili, East Timor; it will be withdrawn in late January.

On June 1, a new code-sharing agreement begins with **Finnair O/Y**. Under its terms, the Australian line places its designator on Finnair return flights from Helsinki to both Bangkok and Singapore, while Finnair is allowed to assign its code to Qantas' roundtrips from Bangkok to Melbourne and from Singapore to Sydney.

On June 3, two additional frequencies are added between Sydney and Darwin and Saturday nonstops are resumed between Melbourne and Alice Springs. On the same day, a B-767-238ER replaces the B-737-476 employed on the Darwin to Singapore service.

June 3 also sees the start of a weekly, three-day, all-cargo service operated under contract by **Evergreen International Airlines** from New York (JFK) to Sydney. The Evergreen B-747-212F departs the Big Apple on Monday and reaches Australia on Monday, having operated via Chicago (ORD), San Francisco, Honolulu, and Nadi. The San Francisco stop is made possible when the American operator agrees to reroute one of its own five weekly South Pacific freighter flights.

Three Qantas aircraft are nearly involved in midair collisions on the same day, June 9. An **Ansett Australia (Pty.), Ltd.** A320-211 departing from Alice Springs is vectored by ATC onto the same path as a Qantas B-747-438 from Sydney; when their TCAS systems sound, both aircraft take emergency actions. Just south of Brisbane, two Qantas B-737-436s also escape a disaster path set for them by ATC. Following an investigation, two air traffic controllers are fired over the incidents.

During its takeoff from London (LHR) on a June 12 service to Bangkok, a B-747-438 operating as Flight 002 suffers the cracking of an outer cockpit window. A large bang panics both passengers and flight attendants and the crack grows larger as the Jumbojet climbs. After dumping 72 tons of fuel, the aircraft makes a safe emergency landing back at its point of origin.

Per the late winter announcement, the necessary paperwork and financial arrangements are completed by mid-June for the lease of seven **British Airways, Ltd. (2)** B-767-336ERs. These will be employed to boost services between Australia, England, and Singapore.

The new dual designator arrangement with **Air Tahiti Nui, S.A.** begins on June 21 with the Tahitian Airbus operating down from Papeete to Auckland and back weekly on Wednesdays and Thursdays with a Qantas return service between Auckland and Papeete offered on Sundays and Mondays.

Tasman Pacific Airlines of New Zealand, Ltd., the former **Ansett New Zealand, Ltd.** that had been purchased by new owners in March and renamed at the beginning of June, is awarded the first ever Qantas franchise and is rechristened **Qantas New Zealand, Ltd.** on June 26.

Having served as chairman for seven years, Gary Pemberton steps down on July 1 and is succeeded by Margaret Anne Jackson, who had been chairman of the board's audit committee. New board members include Qantas Deputy Chairman Geoffrey Dixon and **British Airways, Ltd. (2)** Chairman Sir Colin Marshall, who will be succeeded by the new BA CEO Rod Eddington in the fall.

The code-shared service to Canada must be replaced when **Canadian Airlines, Ltd.**, which has been taken over by **Air Canada, Ltd.**, departs

the "OneWorld" alliance. On July 3, Qantas initiates its own B-767-338ER thrice-weekly Southern Cross roundtrips from Sydney to Vancouver via Honolulu and from Sydney to Toronto via Honolulu four times a week.

Qantas is named 11th best-managed company among nonstate-owned, major-sized airlines in the "2000 Index of Competitiveness" published by *Aviation Week and Space Technology* on July 10.

During a service to London during the month, the carrier makes the first flight over the China West Route, employing FANS-1/A equipment. The new route, which largely overflies the ancient Silk Route between China and the Middle East, cuts approximately 30 minutes off the service time.

In response to deep-discount fares by low-cost start-up **Impulse Airlines (Pty.), Ltd.**, Qantas, in early August, joins with **Ansett Australia (Pty.), Ltd.** in offering cut-rate tickets over the routes from Sydney to Brisbane, Melbourne, and Newcastle. Protesting that the major is engaged in predatory pricing, Impulse objects to this obvious expansion into its potential core markets and protests to the Australian Competition and Consumer Commission. After reviewing the situation, the ACCC, in the person of its Chairman Allan Fels, informs Impulse, Qantas, and the media that there is no basis for legal proceedings because Impulse has not been harmed economically and Qantas has not breached accepted trade practices.

Also in mid-August, daily frequencies between Melbourne and Sydney are boosted to 12 southbound and 10 northbound. The fare wars occur at a time when Australians, who have been expected to travel to Sydney to view the XXVII Olympiad, opt to remain home and watch the games on television. During this time, it is learned that Qantas has been chosen to provide two Boeing BBJs and three Bombardier Challenger 604s to No. 34 Squadron of the Royal Australian Air Force (RAAF) by 2002, thereby permitting the military to replace the two aging B-707s in its VIP fleet.

In anticipation of intensified nationwide competition once **Virgin Blue (Pty.), Ltd.** joins the fray in September, the two majors, in late August, ratchet up the fare war by offering an 85% discount on 250,000 tickets to Australian destinations. The fares are all sold on a single day. At the same time, CEO Strong notes that Qantas presently has no plans to create a low-cost subsidiary to compete with Virgin.

Also in August, Qantas forms a separate company, Qantas Ventures (Pty.), Ltd., to pursue Internet growth opportunities in cooperation with the communications group Telstra. The flight kitchens in Sydney, Brisbane, and Cairns previously run under a joint venture with LSG Sky Chefs, are also taken over during the month.

In early September, Malaysian Transport Minister Ling Liong Sik confirms that **Malaysia Airlines, Ltd. (MAS)** is, indeed, negotiating the sale of an equity interest to Qantas. Following the announcement by **Virgin Blue (Pty.), Ltd.** in September that it will begin flying thrice-daily between Brisbane and Adelaide on February 1, Qantas increases its capacity on the route by 50%, diverting an aircraft from another route to operate the extra service. The major's move will be challenged by Virgin Blue when it files a "predatory pricing" complaint with the Australian Competition and Consumer Commission in January.

Qantas deputy CEO/Chief Financial Officer Gary Toomey is named CEO of **Air New Zealand, Ltd.** on September 28, effective in December. At the same time, new Qantas Deputy CEO-Commercial Geoffrey Dixon is named by the board to succeed Managing Director James Strong when that leader steps down on March 5, 2001.

On October 6, the Hazelton family sells a 20% stake in **Hazelton Airlines (Pty.), Ltd.** to the **Air New Zealand Ltd.**-owned Ansett Holdings, Ltd., cutting its stake in the carrier from 33.11% to 13.11%. Six days later, Ansett launches an A\$15.3-million (90¢ per share) takeover bid for the remaining shares of its regional affiliate. Although Deputy Chairman Charles Hazelton announces that the sale will be good for Australia, several minority shareholders do not believe that. Both Truegrip Aviation (10% stake), led by Peter Truegrip, and Hazelton Chairman Stan Quinlivan, who is also chairman of Skippers Aviation (Pty.), Ltd. (25%) be-

lieve the Ansett offer to be inadequate. Consequently, a bidding war will soon follow.

With both the carrier and **South African Airways (Pty.), Ltd.** losing money on their roundtrip routes from Johannesburg to Australia, the two agree to a new code-sharing agreement for the services on October 18. When the pact takes effect in mid-January, the two will divide the three-stop route between them, with each controlling 40% of the seats in all three classes on each other's aircraft. SAA will continue to operate from Johannesburg to Perth while Qantas will operate return flights from Sydney to Johannesburg via Perth. Due to the political problems in Zimbabwe, the twice-weekly Qantas service to Harare via Johannesburg ends on October 26.

On October 29, Qantas begins to code-share on **Alaska Airlines'** 19 weekly roundtrips between Los Angeles and Vancouver. Simultaneously, weekly roundtrip frequencies on routes from Australia to New Zealand are significantly boosted, including 12 to Brisbane to Auckland, 6 to Christchurch and 5 to Wellington, as well as 6 from Melbourne to Wellington. Flights from Sydney to both Christchurch and Wellington are increased to 14. In addition, Brisbane to Melbourne service is increased to 5 weekly return flights.

The dual-designator pact with **American Airlines** is enhanced on November 1 with AA allowed to place its code on Qantas frequencies from Sydney to Vancouver via Honolulu and from Sydney to Christchurch. Simultaneously, the carrier's Canadian routing is also changed. The thrice-weekly direct service from Sydney to Toronto is changed into a daily code-shared effort with **American Airlines**; the Australian line's designator is placed on AA frequencies from Toronto to Los Angeles, where they are reversed for the Qantas service to Australia. On the other hand, the direct B-767-338ER return service from Vancouver to Sydney is boosted in number from four to five every week.

Also on this date, Qantas begins to code-share on **American Airlines** flights from Honolulu to San Jose, San Francisco, Dallas (DFW), Chicago (ORD), and Los Angeles and from Los Angeles to San Jose and Phoenix.

The weekly return frequencies from the U.S. to Australia are also significantly increased, including Los Angeles to Sydney from 19 to 21, to Melbourne from 5 to 7, and to Brisbane via Auckland from 5 to 7. The number of flights from New York (JFK) to Sydney via Los Angeles also increases from 5 to 7 every week.

On November 10, a code-sharing agreement is signed with **South African Airways (Pty.), Ltd.** covering the Perth-Harare route from which the Australian line had withdrawn two weeks earlier. Wearing the "Denmark Wings" world theme color scheme and Qantas titles, a B-747-436 is leased from **British Airways, Ltd. (2)** on November 13; it will enter service on the route from Sydney to Hong Kong.

In mid-month, arrangements are completed and Qantas launches a three-year, A\$200-million, fixed-rate domestic, medium-term note issue. The float's lead manager is the Commonwealth Bank of Australia, while joint managers include UBS Warburg Australia, Westpac Banking Corporation, and Australia and New Zealand Banking Group. The company's eightieth birthday is officially celebrated on November 16.

On November 28, Qantas, through its wholly owned subsidiary Qantas Longreach (Pty.), Ltd., makes an off-market takeover bid for all of the shares in **Hazelton Airlines (Pty.), Ltd.** via a cash offer of A\$1.20 a share. According to Qantas CEO James Strong, this tender is a 33% increase over the Ansett price; the Hazelton board, led by Chairman Quinlivan, quickly endorses the Qantas bid as representing far better value for the company's shares.

Not to be outbid, Ansett soon returns with an offer of A\$1.35 a share. A massive equipment order is announced on December 1. Included are 7 A330-200s and 6 A330-300s for delivery between 2002 and 2005, 6 B-747-438LRs for delivery between 2002 and 2006, and 12 A3XXs for delivery between 2006 and 2011. As these Next Generation aircraft arrive, all of the classic B-747s and 767s will be retired.

The media in Australia and the U.K. speculates during the weekend of December 10-11 that **British Airways, Ltd. (2)** is seeking to acquire a larger stake in Qantas and suggests that BA lobbyists have approached

the Australian government seeking a repeal of the 25% foreign equity stake rule. On December 12, these rumors are denied by both BA CEO Rod Eddington and Qantas Deputy CEO-Commercial Geoffrey Dixon, who is CEO designate.

At the same news conference at which he handles the BA speculation, Deputy CEO Dixon also reveals that the carrier it is suspending long-running negotiations to acquire a stake in **Malaysia Airlines, Ltd. (MAS)** until the government of Malaysia indicates just exactly what equity percentage of the carrier is available.

Deputy CEO Dixon now also informs the press that his carrier will be revising its **Hazelton Airlines (Pty.), Ltd.** bid and urges the regional's shareholders not to accept the Ansett offer. Rivalry for the Hazelton slots intensifies in light of the government's decision not to proceed with plans to build a second international airport at Sydney, indicating that it will instead direct overflow traffic to an upgraded smaller airport at Bankstown.

On December 13, both **Impulse Airlines (Pty.), Ltd.** and **Virgin Blue (Pty.), Ltd.** come under renewed competitive pricing from Qantas and **Ansett Australia (Pty.), Ltd.** The majors both slash their summer domestic fares by 75% for the normally quiet booking period between Christmas and April.

The company's position as launch customer of the Boeing Longer-Range 747-400 is confirmed on December 18, based on the Qantas order for six of the aircraft, formerly known as the B-747-400X.

On December 20, the Australian Competition and Consumer Commission notifies Qantas that it will be coming out against the proposed ownership of **Hazelton Airlines (Pty.), Ltd.** by either **Ansett Australia (Pty.), Ltd.** or Qantas. It notes that a takeover by either major would stifle competition in New South Wales' regional market and by controlling Hazelton's 450 takeoff and landing slots, have an unfair advantage at Sydney Airport.

After informing the ACCC that it wishes to proceed anyway, Qantas, on December 27 informs the Hazelton shareholders that it wishes to purchase 20.1% of the shares, instead of the 20% originally sought. It will leave its offer open until January 24 in order to give it time to consult with the ACCC.

Overall Qantas passenger boardings for the year accelerate 7.8% to 21,32 million.

As the year ends, the Hazelton family prepares to accept the Ansett bid on January 2, boosting the stake of Australia's No. 2 carrier from 23% to 35.4% and bidding up Hazelton's value to A\$23 million (US\$22 million). The bidding war will intensify in early January 2001, with both sides topping each other "subject to ACCC approval." The ACCC will eventually disapprove the Qantas effort and the pioneer will bow out of the Hazelton bidding on January 22.

QANTAS EMPIRE AIRWAYS (PTY.), LTD. (QEA): Australia (1934–1967). Late in 1933, the Department of Civil Aviation recommends the establishment of an Australian concern to link-up with the forthcoming **Imperial Airways, Ltd.** U.K.–Australia regular service, agreeing that this company might take the form of a jointly owned company. This suggestion is carried to London by **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)** Managing Director Hudson Fysh, who enters into discussions with the British state carrier's Managing Director G. E. Woods-Humphrey. The Imperial Airways and QANTAS officials take it upon themselves to visit Sir Geoffrey de Havilland, and obtain his agreement to build, if asked, DH 86s for the enterprise.

Given the company's experience and initiation, QANTAS is not surprisingly nominated by the Australian government to be its agent in the matter of the England–Australia airmails. On January 18, 1934, the new carrier is jointly established and capitalized. Its assets include the paper airline Australian Empire Airways, Ltd., established the previous year, with a board made up of Imperial Chairman Sir Eric Geddes, Managing Director Woods Humphrey, and three Australians. The first word of the new company comprises the non-initialed letters of the Australian air-

line's name for the first time. While QEA undertakes foreign service, **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)** will continue to provide domestic flights. A DH 60M is retired on March 9.

In April, the joint enterprise is officially awarded the Singapore–Darwin and Brisbane and Cloncurry to Normanton portions of the Australian government's U.K.–Australia and Australia–U.K. airmail contract. Thereafter, six specifically designed DH 86 Commonwealths are ordered; their arrival will allow implementation of the Tasman Sea sector, the so-called Kangaroo Route.

The DH 60J *Atalanta* is withdrawn on October 3 and the first DH 86 is delivered on October 13; it will be christened *Canberra*. En route for delivery on October 19, the first DH 86, *Miss Hobart*, crashes in Bass Strait (12 dead). An unnamed DH 50J Moth, piloted by N. H. Chapman and with two passengers aboard, flies into the ground at Vindex on October 30; there are no survivors. Being delivered for participation in the Australia–England service, an unnamed DH 86 crashes at Bardale on November 15, killing the entire four-man crew.

On December 10 in ceremonies at Brisbane's Archer Field, the Duke of Gloucester kicks off the start of regular Australia–England airmail service by handing the Royal Mail bags to Capt. Lester J. Brain of QEA. Accompanied by the **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)** DH 50A *Hippomenes*, piloted by W. H. Crowther, Brain's DH 61 *Diana* flies the post to Darwin, where, due to the lack of a DH 86, the **Imperial Airways, Ltd.** Armstrong-Whitworth XV *Arethusa*, under contract to QEA, completes the Timor Sea flight to Singapore. On December 18, the same *Atalanta* arrives at Darwin with the incoming U.K. mail. It is met there by the *Diana* and *Hippomenes*, which fly it as far as Camonweal, where the DH 61 is damaged. The **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)** machine must now carry it to Mount Isa, where it is taken over by another DH 50A and flown to Brisbane, arriving on December 21.

Three DH 86s are delivered to Australia on January 7 and 22, 1935 and are christened *Melbourne*, *Sydney*, and *Adelaide*, respectively; the DH 61 Giant Moth *Apollo* is retired on February 2. On February 25, QEA's Western Operations Division is able to assume responsibility for the Darwin–Singapore segment; that day, the DH 86 *Canberra* departs Darwin for Singapore and the DH 86 *Melbourne* takes off from Singapore for Darwin—both planes arrive at their destinations on February 28.

A weekly service allowing the first transport of passengers on to England departs Brisbane on April 17 over the Kangaroo Route. The DH 86 *Brisbane* arrives on June 22 and a DH 83 Fox Moth is acquired on June 29. The last DH 50J, *Hippomenes*, is taken out of service on July 14, followed by the second and final DH 61, *Diana*, on July 22. The DH 86 *Loina* crashes at Flinders Island, Tasmania, on October 2 (five dead).

A total of 2,074 passengers and 24 tons of subsidized mail are carried by QEA during the year.

Beginning on May 6, 1936, the Australia–England service is increased to two flights per week (i.e., the route is "duplicated"). Total time for the 12,000-mile Brisbane–London journey is 12–14 days. In September, the Australian government approves, with reservations over implementation, the Empire Air Mail Scheme.

Bookings for the year are 2,749. Probably the most famous passengers counted in that number are the thespians Charles Chaplin and his wife Paulette Goddard, who, with her mother, make the trip down to Australia from England as newlyweds and are transported aboard a company DH 86.

To cope with increased Australia–U.K. traffic expected under the Empire Air Mail Scheme—50 tons of mail and 2,913 passengers will be carried by QEA in 1937—**Imperial Airways, Ltd.** recommends the introduction of larger capacity flying boats. In February, the British government accepts the Australian reservations. Surveys are begun in September by QANTAS for the identification of nine possible flying boat bases along the Australian coast. On December 24, the British flag line's Shorts S23 *Centaurus* arrives at Rose Bay in Sydney Harbor from Brisbane after having surveyed a route from Southampton.

Early in 1938, the corporate head office is transferred to Sydney; DH 86 QEA service to Singapore continues through late spring. During April, the government of New South Wales turns over to the federal government the land at Rose Bay required for construction of a flying boat base. The first S23 *Coolangatta* is delivered to QEA, also in April, followed by the *Coose* and *Carpentaria* in May and June. Meanwhile, the three British S23s *Challenger*, *Camilla*, and *Capella* have been sent out from Great Britain to assist in the inauguration of the England–Australia service.

Flown by Capt. G. U. Allen under contract to QEA, the **Imperial Airways, Ltd.** S23 *Challenger* departs Singapore with the first eastbound service on July 2, arriving at Sydney four days later.

The first flight of the regular Australia–U.K. QEA flying boat service departs Rose Bay on July 5; Capt. P. Lynch Blossie's *Coose* flies to Singapore via Townsville and Groote Kyland, where its passengers and mail are turned over to **Imperial Airways, Ltd.** Also at this time, the *Camilla* and *Capella* arrive at the second QEA base at Darwin, where seven British journalists traveling as passengers on the 2 flying boats are appalled by the underwhelming reception received by those aboard. The DH 86 *Canberra* is withdrawn on July 18.

Piloted by Capt. O. D. Denny, the *Carpentaria* departs Rose Bay (Sydney) on August 2 with the first all-up mail to be carried westward under the Empire Air Mail Scheme; the leased *Camilla*, piloted by Capt. Lester J. Brain, makes the first official Sydney departure on August 4. The weekly Australia–U.K. flying boat service's frequency is increased to thrice weekly on August 9, the same day that the DH 86 *Brisbane* is withdrawn; it will be followed out of service by the DH 86 *Adelaide* on September 14.

During the remainder of the year, three additional S23s (*Coriolanus*, *Corio*, and *Coorang*) are received. The *Coorang* is driven ashore by a gale at Darwin on December 12; the engines and mail are quickly salvaged. To help make up the loss and insure delivery of the Christmas mail from the U.K., three new Armstrong-Whitworth AW-27 Ensigns are briefly chartered by QEA as relief planes.

A total of 247 tons of subsidized mail plus 5,854 passengers are transported by the overseas airline during the year.

A year after its receipt of the land from NSW, the federal government, by April 1939, has yet to construct promised hangars at the Rose Bay flying boat base. The outbreak of war in Europe in September does not immediately impact upon the operations of either QEA or **QANTAS (Queensland and Northern Territories Aerial Service [Pty.], Ltd.)**

The flying boats transport a total of 8,454 passengers on the year.

Following the entry of Italy into the war on June 10, 1940, the **British Overseas Airways Corporation (BOAC)**, successor to **Imperial Airways, Ltd.**, on June 19 establishes a weekly U.K.–Australia and New Zealand Empire (“Horseshoe”) Route via Cairo and Durban. The first westward departure over this emergency course departs Sydney the same day. On July 27, the S23 *Coriolanus* begins a series of survey flights to Deli, Portuguese Timor. The DH 96 *Melbourne* is impressed into the RAAF on September 28. QEA bookings for the year drop to 7,333.

Timor becomes a stop on the Singapore route on January 19, 1941. With two S23s, the *Caledonia* and *Corio*, supplied by **British Overseas Airways Corporation (BOAC)**, QEA crews extend the Singapore route to Karachi on October 16; return flights to Singapore and Darwin commence on October 24. In the late fall, Qantas Empire personnel gain their first transpacific flight experience by transferring 19 Consolidated PB-Y Catalinas from California to Australia. QEA carries a total of 7,640 passengers as, after the December 7 Pearl Harbor attack, it finds itself—suddenly—a frontline airline at war.

As the Japanese advance on Malaya and the Dutch East Indies in early 1942, QEA aircraft mount a series of perilous supply and rescue missions. During a dawn evacuation flight of women and children from Surabaya to Darwin on January 30, the S23 *Corio*, piloted by Capt. A. A. Koch with 4 other crew and 13 passengers, is shot down by Japanese Zeros near Koepang (12 dead).

Piloted by Capt. W. H. Crowther, the last S23, the *Corinna*, lands at Singapore late on the evening of February 3. Taking aboard 40 passengers, Crowther departs the harbor early on February 4 by bright moonlight rather than the usual flares, making the last flight to or from the Malayan bastion by civil flying boat during the war.

The Horseshoe Route, closed east of Calcutta on February 13, is severed completely by the February 15 fall of Singapore.

Beginning the next day and continuing through the end of the month, QEA-crewed **British Overseas Airways Corporation (BOAC)** S23s fly a supply and evacuation shuttle from Broome to Tjilatjap, Java. On February 20, the DH 86 *Sydney* crashes shortly after takeoff from Brisbane (nine dead).

While en route from Tjilatjap to Broome on February 28, the S23 *Circe*, piloted by Capt. W. B. Purton with 3 other crew and 16 passengers, disappears approximately 250 km. from Java; no trace of plane or personnel is found and it is presumed that all are lost to enemy action.

Tied to her moorings, the S23 *Corinna* is one of several Allied aircraft caught and destroyed during a March 1 sweep of Broome harbor by Japanese Zeros of the Tainan Fighter Wing. Piloted by Capt. L. R. Ambrose, the S23 *Coogee* with 14 aboard, is destroyed as the result of a hard landing at Darwin on March 22 (2 dead).

The remaining S23s are withdrawn from the forward area to fly vital communications Brisbane–Darwin as the DH 86s, on May 10–24, are employed to rescue 78 people (in 15 flights) from Mount Hagen, New Guinea. QEA's DH 86s join airliners from the other Australian carriers during the same period in war support by supplying Australian troops at Port Moresby and Milne Bay. In October, the Brisbane–Darwin S23 route is reopened.

Flying the Consolidated PB-Y-5A *Guba*, the first Catalina received by **British Overseas Airways Corporation (BOAC)**, Capt. Gordon Taylor departs RAF Koggala Lake at Ceylon on November 3 for a proving flight across the Indian Ocean to Swan River, Perth, Australia. On November 22, QEA provides two DH 86s and two L-18s and in cooperation with **ANA (Australian National Airlines [Pty.], Ltd.)** and **Guinea Airways (Pty.), Ltd.** begins supply missions from Port Moresby to Allied troops beginning the Guna and Gona campaign. The *Coriolanus* and *Camilla* inaugurate daily Townsville and Cairns to Port Moresby flights on December 20.

Including evacuees, troops, secret agents, etc., QEA's enplanements for this year skyrocket to 18,231.

While on a New Guinea flight on April 22, 1943, the S23 *Camilla* is lost in bad weather off Port Moresby (13 dead); the QEA flying boat fleet is now reduced to one—the *Coriolanus*.

After months of lobbying for a route across the Indian Ocean (a British survey is carried out in May), five Consolidated PB-Y-5A Catalinas supplied by the British Air Ministry are converted to civil standard for such a purpose. Taking their names from stars in the sky, they are christened *Rigel Star*, *Spica Star*, *Altair Star*, *Vega Star*, and *Antares Star*.

A DH 84 Dragon is received on June 14 and is christened *John Flynn*. An apprentice engineer is killed on June 23 when he steps into a propeller of the DH 86 *Canberra* at Longreach.

On July 10–11, one of the PB-Y-5As, the *Altair Star* piloted by Capt. Russell B. Tapp and W. H. Crowther, inaugurates the world's longest (for its time) scheduled nonstop passenger airline route, a weekly service from Lake Koggala in southern Ceylon (now Sri Lanka) to Swan River at Perth. With a crew of 6, a maximum 1,200-lb. payload (3 passengers and mail) and a 3 1/2-ton fuel overload, the 3,513-mile “Double Sunrise” flights, made mostly in radio silence and without radio navigational aids or weather information, will require 27–31 hours. The Short S33 *Clifton* is acquired, also in July.

Meanwhile, QEA aircraft in the New Guinea area, now known as “Baby Beef Bombers,” continue to ferry troops and drop supplies. By September, 564 flights have been made covering 358,493 miles with 12,744 passengers and 200-plus tons of mail and freight transported. On September 21, the DH 86 *Melbourne* is seriously damaged in a takeoff crash from Roma; no injuries are, however, reported. The Ceylon–Perth
